Moreover, with respect to the cognition of past things, recent theologians spend much effort, especially in explaining the cognition of past things which is called memory. For memory or recollection is the consideration of a past thing previously known. Some indeed say that memory and recollection occur both in angels and in us by means of a certain species remaining from the past cognition, so that by it we know the thing and the past cognition of it, and this is to recall or to remember it. And in the same way they defend the rationale of memory and recollection in sense: for memory belongs not only to the intelligent part, but also to the sentient, according to the opinion of Aristotle in the book On Memory and Recollection.[1556] But since no sense can sense its own sensation, because a sensation is not itself something sensibly perceptible - otherwise I would sense in what part the sensation occurs, and even of what magnitude it is, which is absurd - it follows that it is not necessary that recollection and memory occur by means of the species of the past cognition; but just as in sense we can defend the rationale of memory and recollection without a species of past cognition, so also we could explain in the intellect recollection and memory without a species of the past cognition, even though memory is a cognition of a past thing and as previously known. To say this in passing - which we leave to be examined more fully by the philosophers - memory in sense occurs in this alone, that we apprehend a past thing with the same circumstances of time and place under which it was previously known to us; for thus we are said to know that thing as past and as previously sensed or known.

But whether an angel can know a past thing as past, which really was past, but which he did not previously know, presents a difficulty - namely, whether an angel, if now created, could by natural power know whatever has been done from the beginning of the world, which, if it were present,

1556. Aristotle, De memoria et reminiscentia.

would rightly be known by him, or not. And, to tell the truth, I find no reason to say that past things of this sort cannot naturally be known by an angel; for the Scholastics and the Fathers commonly deny to the angel, according to his own proper power, only the cognition of future things; therefore they hold that all other natural things are subject to his cognition. What then can prevent such past things from being known by an angel? First indeed, if we say that he does not need species infused or given by God; for thus by the natural power of the intellect alone, without species, he will know them. Then also, if he needs species for understanding natural objects, and naturally asks to have these infused by God, thus he will have the species of past things, and hence will naturally know them.

Finally, it must be explained how possibles are known by angels. I say, therefore, that the possibles which are in the natural potency of a creature are certainly known by an angel. For since the angel rightly understands and penetrates the force and nature of any creature whatsoever, he will also rightly know all the things that can be done by it. I do not say all individual possibles - for these are infinite - but all possibles diverse according to species. About individuals one must say that each can be known by an angel, not all at once, because they are infinite, but little by little, because there is nothing that he cannot know, if he wills to attend.

Second, I assert that an angel rightly knows all the things that do not imply a contradiction in a creature, as being able to be done by God in the creature itself; for example, whether he could cause cognition without any concurrence of the creature, whether he could again create a thing produced and annihilated, and other things of that kind. The reason is that an angel so perfectly understands the nature and properties of any creature whatsoever, that he also rightly knows what repugns to it or implies a contradiction with respect to it. Supposing also that he rightly knows already the nature of sin and of grace, he rightly knows whether by the absolute power of God they can be together, whether sin can be blotted out without grace or without any other intrinsic change.

Third and finally, I pronounce that the possible futures of substances which can be produced by God alone are not known by an angel - not only not all of them, but not even any one of them. And so an angel does not know whether God can produce this kind of beasts and brute animals, this rational creature, or another. I said in particular this kind or this species; for in general he rightly knows that it is possible...

Articulus IV - Whether angels know the thoughts of hearts

It seems that angels know the thoughts of hearts.

1. For St. Gregory says in the Moralia, on that word of Job 28: "Gold or glass shall not be equal to it," that then, namely in the beatitude of the risen, one will be transparent to another as he is to himself, and when the intellect of each one cleaves to another, at the same time his conscience is penetrated. But the risen will be like the angels, as is had in Matthew 22. Therefore one angel can see that which is in the conscience of another.

2. Further, as figures stand to bodies, so intelligible species stand to the intellect. But by seeing a body, its figure is seen. Therefore, by seeing an intellectual substance, the intelligible species which is in it is seen. Therefore, since an angel sees another angel and also a soul, it seems that he can see the thought of each.
3. Further, the things which are in our intellect are more like an angel than the things which are in the phantasy, since the former are understood in act, but the latter are in potency. But the things which are in the phantasy can be known by an angel, just as bodily things can, since the phantasy is a power of the body. Therefore it seems that an angel can know the thoughts of the intellect.

But on the contrary: What is proper to God does not befit angels. But to know the thoughts of hearts is proper to God, according to Jeremiah 17: "The heart of man is perverse and inscrutable, and who shall know it? I the Lord search," etc. Therefore angels do not know the secrets of hearts.

I answer: It must be said that the thought of the heart can be known in two ways.

- In one way in its effect, and thus it can be known not only by an angel, but also by a man, and so much the more subtly, the more occult the effect of this kind has been. For a thought is sometimes known not only through an outward act, but also through a change of the countenance. And even physicians can know certain affections of the mind by the pulse, and much more angels or even demons, insofar as they more subtly weigh these hidden bodily alterations. Whence St. Augustine says in the book On the Divination of Demons, that sometimes the dispositions of men, not only uttered by the voice, but even conceived in thought, when certain signs are expressed in the body from the mind, they learn with entire facility; although in the book of the Retractions he says that it ought not to be asserted how this happens.
- In another way thoughts can be known as they are in the intellect, and affections as they are in the will. And thus God alone can know the thoughts of hearts and the affections of wills. The reason of this is: because the will of a rational creature is subject to God alone, and He alone can operate in it, who is its principal object as ultimate end; and this will be made clearer below. And therefore the things which depend on the will alone, or which are in the will alone, are known to God alone. Now it is manifest that it depends on the will alone that someone actually consider something; for when someone has the habit of science, or intelligible species existing in him, he uses them when he wills. And therefore the Apostle says in 1 Corinthians 2 that "the things that are of man, no one knows but the spirit of man, which is in him."

Reply to the first: The thought of one man is not known by another on account of a twofold impediment, namely on account of the grossness of the body, and on account of the will shutting up its secrets. The first obstacle will be taken away in the resurrection, and it is not in angels. But

the second impediment will remain after the resurrection, and is now in angels. And yet by the quality of the mind, according as, together with the measure of grace and glory, the clarity of the body will represent it, thus one will be able to see the mind of another.

Reply to the second: Granted that one angel see the intelligible species of another by this, that the mode of intelligible species according to greater and lesser universality is proportioned to the nobility of substances; it does not follow that one knows in what manner the other uses those intelligible species, by actually considering.

Reply to the third: The brute appetite is not master of its act, but follows the impression of another cause, bodily or spiritual. Therefore, since angels know bodily things and their dispositions, they can through these know what is in the appetite and in the phantastic apprehension of brute animals, and even of men, insofar as in them the sensitive appetite sometimes proceeds into act by following some bodily impression, as it is always in brutes. Yet it does not follow that angels know the movement of the sensitive appetite and the phantastic apprehension of man insofar as they are moved by the will and reason; because the lower part of the soul also in some manner participates in reason, as an obedient subject to one commanding, as is said in Ethics I. Nor yet does it follow that if an angel knows what is in the sensitive appetite or in the phantasy of a man, he therefore knows that which is in the thought or will: because intellect and will do not lie subject to the sensitive appetite and to the phantasy, but can use them in diverse modes.

Conclusion: The thoughts and affections of hearts, as they are in the intellect and will, cannot be known by an angel by his natural power, but by God alone. Concerning this article not only the things which pertain to it itself seem to be to be examined, but also all those which concern question 107 about the speaking of angels, which are connected to this article. In the first place, however, we shall treat the things which the Holy Doctor teaches in this article.

- Whether the thoughts and affections of our heart are certainly known by an angel by his own power. Disputation 209.
- The thoughts of the heart, the volitions, to be known by angels, not only what they are, but also about what they are, was the opinion of Hervaeus and Durandus. Cap. I.
- That the secrets of hearts are not known by angels, the divine will hindering alone, was said by Scotus and others. Cap. 2.
- The common opinion, which asserts that the secrets of hearts cannot by their nature be known by angels, is explained by the Man of Strasbourg and by Aegidius. Cap. 3.
- The second and third mode by which the aforesaid common opinion is explained by Henry. Cap. 4.
- The fourth mode of explaining the same common opinion, from St. Thomas, Alexander, and others, is confirmed by the reasoning of Richard. Cap. 5.
- The same mode of defending the common opinion is otherwise proved by St. Thomas, Cajetan, and Ferrariensis; whom Scotus and Durandus impugn. Cap. 6.

- To Durandus's argument Ferrariensis replies. Cap. 7.
- To the same argument of Durandus Cajetan replies. Cap. 8.
- The common opinion is confirmed by another reason by St. Gregory. Cap. 9.
- The author's judgment in the present controversy.

Cogitationes cordis, and volitions to be known by angels, not only what they are, but also about what they are, was the opinion of Hervaeus and Durandus.

Disputatio CCIX - On whether angels know the thoughts of hearts

Caput I - Hervaeus and Durandus: that angels know thoughts and volitions, not only what they are but also what they are about

The present controversy is to be understood not only about the affections of the will (*voluntas*), but also about the thoughts of the intellect (*intellectus*); for by the name "knowledge of the heart" we now wish to understand both. We speak also not only of the cognitions of an angelic heart, but also of a human one; and we inquire whether one angel can know the secret thoughts of the heart of another angel, or of a man, before they are manifested by the will of that angel or of that man. In which question the opinions of theologians are so various that scarcely can we review each without prolixity. However, that we may elucidate this matter, it will be necessary to pursue not only what is proved for us, but also what is said by others.

The first opinion, then, is that of Hervaeus in the second book, distinction 8, question 3, asserting that the thoughts of our heart, or of one angel, can be so known by another angel that it is manifest to him not only what those thoughts are, but also about what they are, that is, about which object they are engaged; whether also they be after the mode of flight or of pursuit, of affirmation or of negation: only one thing indeed being hidden from one angel, namely to discern about which object the affection and thought of another angel or of a man is borne more intensely. The sole foundation of this opinion and of the following one is this, namely, that the thoughts and affections of the heart are certain natural entities, not otherwise than the substance of the very angel himself, indeed of far inferior account; what, then, can hinder that they should be most certainly known and understood by any angel who perfectly beholds the substance of another, even if they are not manifested?

Durandus makes mention of this opinion in the same distinction, question 5, number 10, and he not only judges it probable, but also adds that the thoughts and affections of one angel, or of a man, are altogether known by another angel: first, what they are; then, about what they are engaged, after the mode of flight or of pursuit, of affirmation or of negation; finally, about which object the man or the angel operates more intently. For he holds that no reason can be assigned why, when an angel knows the thoughts and affections of the heart, what they are and about which object, whether they be engaged after the mode of affirmation and negation, he should not also be able to

know about what they operate more intently; and since he deems sufficient the reason adduced above, that an angel be said to know affections and thoughts in the manner that Hervaeus said, he was induced to assert that affections and thoughts are altogether known by an angel.

This opinion, understood in either way, is opposed to the manifest testimonies of Scripture and of the Fathers. First indeed, Scripture plainly indicates that it belongs to God alone to know the thoughts of the heart: Psalm 7, "God, who searches hearts and reins"; Wisdom 1, "Because God is witness of his (namely of man's) affairs, and the searcher of his heart"; Jeremiah 11, "Who tries the reins and the heart." For if the hearts of men were manifest to all angels, or to the angels mutually among themselves, the Scriptures would not adduce this encomium as something great and proper to God Himself. But someone may say that this encomium is so attributed to God that it also befits angels, as that of Psalm 146: "Who numbereth the multitude of the stars, and calleth all of them by their names"; by which words the prophet seems to prefer the Lord to men. Yet in that Psalm something also peculiar is attributed to God. For when it is said, "and He calleth all of them by their names," Scripture denotes not only God's perspicuous intelligence, which comprehends all the stars by a certain number and so penetrates their nature that He can give them names expressing their properties and natures, but also that each single star is so called by God that it obeys His nod and will. Then too there are other places of Scripture in which it is openly said that it is of God alone to know the thoughts of the heart: Jeremiah 17, "The heart of man is perverse and inscrutable: who shall know it?" But if an angel could in the same way know it, it would be asked in vain, who shall know it; nor would Scripture reply, "I the Lord," and in 2 Paralipomenon 6, when Solomon besought God to hear those coming to the holy temple which he had built, he said: "Do Thou hear from heaven, etc., be propitious and render to each according to his ways, which Thou knowest him to have in his heart: for Thou only knowest the hearts of the sons of men."

But Durandus replies, in the aforesaid question, number 16, that it is proper to God to know all the thoughts of hearts present and future, which befits no creature. Yet the reply is frivolous. For Scripture speaks plainly also of present thoughts: for when Solomon said in 2 Paralipomenon 6, "For Thou only knowest," he was speaking of the thoughts of those who were to pray in the temple. Moreover, he asks that the Lord render...

The Lord renders to those praying in that place according to their ways, because He alone knows the hearts of the sons of men, that is, the things which they have in their heart when they pray: therefore He is not speaking of future thoughts, but of present ones, for which God is about to grant the petitions.

Moreover, Herveus in that question, in the solution to the first, replies that in these places of Scripture it is signified that it is proper to God to know fully, perfectly, and in every way the secrets of the heart; but to see and to know also certainly and evidently, yet not in all ways, is not the proper prerogative of God alone, but also befits the angels. But how frivolous this solution is is sufficiently clear from what has been said, and will be gathered from what we shall say below.

Then the same position is refuted by the Fathers. Among the Greeks, St. John Chrysostom, homily 30 on Matthew, on those words, "Why do you think evil in your hearts?" and homily 23 on Matthew on this, "And when He was at Jerusalem," says: The knowledge of human hearts belongs to God alone, who formed them. St. Cyril teaches plainly the same in book 9 on John, chapter 19, and book 3, chapter 3, and Athanasius in the book of Questions to Antiochus, question 27.[1557] Add also St. John Damascene, book 2 On the Faith, chapter 3, a little before the middle, who says that angels, without speech, mutually communicate to one another the counsels of their own heart.[1558] Among the Latins, St. Jerome, Epistle 40, which is about the two sons, speaks thus: For God alone stands in the sight of all sinners, from whom even sins meditated in the heart cannot be concealed. And on that passage Matthew 9, "Behold some of the scribes," etc., he says: But the Lord, seeing their thoughts, showed that He is God, who can know the secrets of the heart. But if angels could penetrate the secrets of hearts, neither would God alone be present to the hearts of men, nor would it be a sufficient argument of divinity to know the secrets of hearts. St. Ambrose agrees on that 1 Corinthians 2, "The Spirit searches all things." The author also of the work On Ecclesiastical Dogmas, among the works of St. Augustine, chapter 81, thus writes: We are certain that the devil does not see the inner thoughts of the soul.[1559] And St. Augustine, tractate 32 on John, a little before the middle, from that testimony 1 Corinthians 2, teaches that the secrets of the human heart are certainly known by no other than by the man himself and by God.

The reason also by which Herveus proves that it can indeed be known by an angel what the secrets of hearts are, and about what they are, and whether they are on the mode of affirmation or of negation about the object, yet not about which object the man, or the angel, operates more intensely, is rightly repelled by Durandus and is judged trifling by others, which reason is this. The more a species is distant from the thing represented, because it represents it remotely, the less it expresses it; but the species existing in the mind of one angel represents remotely the secrets of the heart of another angel or of a man; therefore it represents and expresses them less; hence it follows, says Herveus, that although an angel knows the secrets of another's heart, what they are and what they are about, nevertheless he cannot discern about what the man, or the angel, operates more intensely. Yet this reason, as Durandus correctly noted, only proves that a thing thought by one angel is not so well known by another angel as it is known by him who thinks it: because the cognition of a thought either represents remotely or is borne toward the thing thought; it does not, however, prove that it cannot be known by one angel about what another operates more intensely: for to this it is not necessary to know the thing thought by another angel as well as he himself knows it.

That the secrets of hearts are not known by angels, solely because the divine will prevents it, was said by Scotus and others.[1560]

1557. St. John Chrysostom, Hom. 30 in Matth.; Hom. 23 in Matth.; St. Cyril of Alexandria, In Ioannem, lib. 9, cap. 19; lib. 3, cap. 3; Athanasius, Quaestiones ad Antiochum, quaest. 27.

1558. St. John Damascene, De fide orthodoxa, lib. 2, cap. 3.

1559. Ps.-Augustine, De ecclesiasticis dogmatibus, cap. 81.

1560. Cf. Scotus, II Sent., dist. 9, q. 2; IV Sent., dist. 10, q. 4; and others cited below.

Thus thought Scotus in II, distinction 9, question 2; to the arguments of the second question, in the solution

to the first; and in IV, distinction 10, question 4, article to the arguments, in the solution to the third; Ockham in II, question 20, Quodlibet 4, question 13; Gabriel in II, distinction 9, question 2, article 2, and on the Canon of the Mass, lecture 31; Bassolis on the same distinction, question 2, 5, To the first principal, in the second and ninth solution; but against this mode Lichetus, question 1, which he puts in the third place in question 3; Holcot in II, question 4, to the second principal question.[1561] Furthermore, all the Doctors cited agree with Scotus in the first part of this opinion in the same way; in the latter part, however, not in the same way: for the others, besides Scotus, affirm that de facto the secrets of the human heart and of another angel are ignored both by good angels and by bad. But Scotus, although in the second book of the Sentences, in the place cited, he had taught that the secrets of one can be known with certainty by another angel by their own nature, nor can they be hidden by the will of the angel or of the man to whom they belong, later, in the fourth, in the question cited, asserts that evil angels are prevented by God, lest they can know the secrets of hearts: but as to the good, he seems to think that in no way are they impeded by God. By what manner, indeed, angels can speak with one another, below in disputation 211 we shall see.

They prove this opinion as to the former part, first, because cognition and affection, whether of this sort be natural or free, is a certain created natural being, true, and therefore intelligible: what then can hinder, that it not be known by an angel, who also quidditatively knows any created spiritual substance? Then he confirms the same part, because no sufficient reason can be assigned, for which we should say that the secrets of his own heart can be hidden by each man or angel, lest they be seen by another angel, and by the same thing be made manifest by will alone: thus, therefore, it must be said that the manifestation or hiding of counsels and affections of his will to another angel does not depend upon the will of a man or of an angel; and hence by their own nature, unless they be prevented by God, individual angels can know the secrets of others.

The latter part of this opinion these Doctors added chiefly for this reason, in order somehow to satisfy the testimonies of Scripture and of the Fathers. For, as we saw in the preceding chapter, they plainly pronounce that it is of God alone to know another's secrets. Besides these two points which we have said, Maior adds that it is necessary for an angel to be placed at a certain distance according to place, that he may be able to understand the secrets of the heart: just as also, that a man may see colors with the bodily eye, he needs such and such proximity according to place. But Maior understands that, with the impediment of the will of God removed, which impediment not being present, the angel by his own nature would know the secrets of a man or of another angel at a certain distance, but not at any distance whatsoever.

This opinion, although it teaches truly in this respect, that it asserts that the secrets of a man, or of one angel, are in fact not known by another: for this the testimonies of Scripture and of the Fathers manifestly demonstrate, as we said above: yet in this respect, that they assert that by their

1561. Scotus, II Sent., dist. 9, q. 2; IV Sent., dist. 10, q. 4; William of Ockham, II, q. 20; Quodlibet IV, q. 13; Gabriel, II, dist. 9, q. 2, a. 2; in Canonem missae, lect. 31; Bassolis, ad eandem dist., q. 2, 5, ad primum principale, solut. 2 et 9; Lichetus, q. 1 (posited third) in q. 3; Holcot, II, q. 4, ad secundum principale quaesitum.

own nature such secrets can be known by any angel, and that solely by the will of God they are prevented from being known by them, it is with very good right not approved by all other Theologians. But before I show its falsity, I am pleased to impugn, with this reason, that which Maior asserted about distance according to place. Although any creature, even a spiritual one, needs nearness of place to act upon some external matter, as we said in disputation 189, chapter 2, nevertheless to understand those things it does not seem to need it: both because an angel does not receive species or cognition from corporeal things, as we showed in disputation 200; and also because even if it were said that an angel receives cognition from things, we ought not to understand this as happening by the multiplied action of corporeal things through a medium as far as the angel. For the same reason, which below against some is to be proved, in the speech of angels nearness of place is not necessary. This, therefore, set aside, the opinion of Scotus and of the others is impugned as to its two parts.

First indeed from the testimonies of Scripture and the Fathers, adduced in the preceding chapter, since thus Scripture and the Fathers attribute to God the knowing of the secrets of human hearts, or even of angels, in such a way that it belongs to Him alone: therefore either they signify that these secrets de facto are known by God alone: and this would be false, because others besides God de facto know the secrets of the human heart, for guardian angels and saints know our prayers which we offer them, and good desires; therefore not God alone knows them: or Scripture and the Fathers signify that they are known by God alone by His own proper power, and in this way it is proper to God: and thus, against this opinion, it is gathered that the secrets of hearts cannot be known by angels by their own power.

Then by reason the same is proved, because it is not credible that by God perpetually both evil and even good angels are impeded lest they know the secrets of hearts, and that against their natural power He continually inflict this constraint on them. For that God hinders the power of demons, lest they do many things which they could accomplish by their own power, is not to be wondered at: for the order of this universe requires it, lest many things perish in a single moment; indeed to this end good angels are believed to be appointed as guardians, that they may resist demons and defend our affairs from their power: but that demons and angels are impeded from the knowledge of the secrets of the heart, I do not see by what reason it ought to be done. But if someone should say that they are impeded as a punishment of their sin, that is not sufficient: for by this same reason they ought to be impeded from natural cognition of other things: and since not all angels, even the good, know the secrets of the human heart, it must not be said that they are perpetually impeded by God, since neither as a punishment nor for another just cause ought that to be done.

This opinion of Scotus also is accustomed to be opposed by legitimate arguments; those by which it is wont to be confirmed by some reasons have been set forth; but the arguments against it are those which we have adduced hitherto.

Communis sententia, quae asserit secreta cordium non posse ab Angelis suapte natura cognosci; a Thoma de Argentina, et Aegidio explicatur.

Caput III - The common and much more probable opinion is that the secrets of the heart of one man, or of an angel, cannot be known by another angel.

Thus teaches St. Thomas in this article and in Contra Gentiles, book 3, chapter 53; and the Ferrariensis there; Alexander, part 2, question 26, member 3; St. Bonaventure in the second book, distinction 8, part 2, article 1, question 6; Richard, the same distinction, article 2, question 4; Capreolus, question 1, article 1; Durandus, question 5; Thomas of Argentina, distinction 7, question 1, article 2; Aegidius, question 2, article 2, and in the treatise On Angelic Cognition, question 1; Gregory in the second book, question 1; Marsilius in question 6, article 4; Henry in Quodlibet 3, question 13.[1562] The common and principal foundation of all of these is that which has hitherto been adduced from Scripture and the Fathers; yet in explaining this same opinion they do not a little differ: for although all say that something of the secret of the human and of the angelic heart lies hidden, what, however, that secret is, not all understand in the same way. I shall therefore relate various ways of defending and explaining this opinion, so that in the end I may leave to the judgment of some what in it is more probable. Nor indeed in a matter so difficult do I dare to pass judgment on anything.

It is not enough: for by this same reasoning the natural cognition of other things ought to be impeded; and since not all angels, even the good, know the secrets of the human heart, it must not be said that they are perpetually impeded by God, since neither as a punishment, nor for any other just cause, ought that to be done. This opinion of Scotus also is wont to be impugned by certain reasons by which the opposite is usually confirmed; yet the most powerful arguments against it are those which we have hitherto adduced.

The common opinion explained by Thomas of Argentina and Aegidius

The common and much more probable opinion is that the secrets of the heart of one man, or of one angel, cannot be known by another angel. Thus teach St. Thomas in this article and in Contra Gentiles III, chapter 154; and Ferrariensis in the same place, § Circa id, quod de occultis cordium; Alexander of Hales, Summa II, q. 26, memb. 3; St. Bonaventure, II Sent., dist. 8, pars 2, a. 1, q. 6; Richard of St. Victor, to the same distinction, a. 2, q. 4; Capreolus, q. 1, a. 1; Durandus, q. 5; Thomas of Argentina, dist. 7, q. 1, a. 2; Aegidius Romanus, q. 2, a. 2; the Treatise on the Knowledge of Angels, q. 11; Gregory, II, q. 1; Marsilius, q. 6, a. 4; Henry of Ghent, Quodlibet 3, q. 13.[1563]

The common and principal foundation of them all is what has been brought forward up to now from Scripture and the Fathers. Yet in explaining that opinion they do not a little vary: for although they all say that something of the secret of the human and angelic heart lies hidden, still what that

1562. St. Thomas, Summa theologiae I, q. 57, a. 4; Contra Gentiles III, c. 53; Francesco de' Ferrarisi (Ferrariensis), ad loc.; Alexander of Hales, Summa, II, q. 26, memb. 3; St. Bonaventure, II Sent., dist. 8, pars 2, a. 1, q. 6; Richard of St. Victor, ad eandem dist., a. 2, q. 4; Capreolus, q. 1, a. 1; Durandus, q. 5; Thomas of Argentina, dist. 7, q. 1, a. 2; Aegidius Romanus, q. 2, a. 2; Tractatus de cognitione Angelorum, q. 1; Gregory, II, q. 1; Marsilius, q. 6, a. 4; Henry of Ghent, Quodlibet 3, q. 13.

secret is, not all understand in the same way. I will therefore set forth various modes of defending and explaining this opinion, so that at length what in it is more probable I may leave for the judgment of others to decide. Nor indeed would I dare to prejudge anything in a matter so difficult.

Let the first mode be that of Thomas of Argentina in the place cited, who asserts that the act of intellection and the cogitation of the intellect of one man or angel are indeed known by another angel as to the signification of the terms, but not as to the composition and division; as if he should say that any angel by his native power knows what another apprehends and about what he is thinking; but he does not discern consent and dissent, that is, a composition affirming or denying. In the same way he philosophizes about acts of the will (*voluntas*): because the will pursues nothing by an act of complacency, nor flees by an act of displeasure, except what has been judged to be fitting or unfitting. Wherefore he concedes that the act of the will of another is known by one angel, as to the thing about which it is occupied; but whether it be of complacency or of displeasure, it is not known.

Of this opinion Aegidius seems to have been in the place cited, where he said that the cogitations of one angel can rightly be known by another in such wise that he knows what intelligible species (*species intelligibilis*) he uses for understanding, whether the species of white or of black, but he does not, however, discern what in particular he thinks. For since (he says) the same species of the same thing in the intellect of an angel or of a man can serve to know habit and privation, to composition affirming and denying about the same thing, it is not wonderful if one angel is ignorant what another angel or man is thinking, even if he knows what species he uses for understanding. Of acts of the will Aegidius said nothing, but perhaps he is in the same opinion.

Durandus mentions this opinion in the place cited, and also the opinion of Herveus, which differs little from this, and he judges both to be probable, and more conformable to the sense of the common Doctors and of Scripture. Herveus, however, refutes it at greatest length in the question cited, especially by this reasoning: it is impossible by the same concept or by the same expressed species (*species expressa*), altogether invariable, to understand various things successively, or about the same thing to know now affirmatively, now negatively; therefore, if an angel knows the concept and the expressed species in the mind of one, and knows about what thing it is, he must necessarily understand what about that thing the angel or man thinks, whether he affirms or denies. And since there is not given one and the same species which is of itself indifferent to knowing contraries or diverse things as one pleases, it must necessarily be said either that it is not known by one angel about what thing another is thinking, or else that it is altogether known what and how he thinks about that thing. Moreover, that it is not possible by the same expressed species, remaining invariable, to know different things successively, or to know in a different mode, is

1563. St. Thomas, Summa theologiae I, q. 57, a. 4; Contra Gentiles III, c. 154; Francesco de' Ferrarisi (Ferrariensis), ad loc.; Alexander of Hales, Summa II, q. 26, memb. 3; St. Bonaventure, II Sent., dist. 8, pars 2, a. 1, q. 6; Richard of St. Victor, ad eandem dist., a. 2, q. 4; Capreolus, q. 1, a. 1; Durandus, q. 5; Thomas of Argentina, dist. 7, q. 1, a. 2; Aegidius Romanus, q. 2, a. 2; Tractatus de cognitione Angelorum, q. 11; Gregory, II, q. 1; Marsilius, q. 6, a. 4; Henry of Ghent, Quodlibet 3, q. 13.

admitted especially by Thomas of Argentina and by Aegidius, since they say that there is not the same numerically quality and species which is of itself indifferent to things opposite or diverse or to be thought in a different way.

By an excellent reason Henry also proves it: because it cannot be that someone be reduced from potency (*potentia*) to the act (*actus*) of understanding with no change made in him. Therefore, if someone now thinks one thing in one way, he will not then be able by the very same quality altogether to think a different thing or the same in a different way. Nay rather, if we follow a more probable opinion, as often as we know diversely about some thing, we cannot but have a knowledge and cogitation expressed altogether diverse from the prior: nor can the same act, which is the complacency of one thing, be varied so as to be the flight and displeasure of the same thing or of another. Wherefore it is rightly inferred that there is not the same expressed species of itself indifferent to understanding various things; and therefore either in no way are the cogitations of another known by one angel by his own power, or else they are altogether known.

Someone will say that the change of a new relation supervening suffices, so that by the same species various things or in a various mode are known. This, however, is frivolous, as Herveus says: for no relation can begin unless a prior change has been made in the related, or in the very terminus. Since, therefore, the things thought by the angel are not changed when he himself begins to think what before he did not think, it follows that the change must be made in the cogitation itself. And if someone says that this can be done by a merely rational relation varied, this is the more ridiculous: both because a relation of reason or an extrinsic denomination cannot begin without a prior real change made in the related, or in the terminus, or in some other thing; and here no change seems possible unless it be made in the cogitation itself: and also because for a new real cogitation in us, an extrinsic denomination or relation alone does not seem sufficient; but some physical change in the species itself is necessary.

In exactly the same way it ought to be proved that the affect of the will about some thing cannot be known without its also being known in what way it is conversant about that thing: because there is no affect of itself indifferent so as to be complacency or displeasure, pursuit or flight. But if in the same act of the intellect we should concede affirmation and negation together, and in the same act of the will flight and pursuit, it cannot be that that act be certainly known, insofar as it is intellection, but not insofar as it is at once affirmation and negation; and that an act of the will be known as it is an affect about this thing, but not as it is pursuit or flight.

Durandus, overcome by the force of this argument in the question cited, yet so that he might defend as probable the aforesaid opinion of Aegidius and of Argentina, says at number 14 of the question cited, that it can be answered that all acts of the intellect and of the will are of the same species; to wit, whether they be affirmations or negations, pursuits or flights: yet that there is another difference besides the difference of intension and remission. And by this reasoning he thinks that in some way the opinion of Herveus can be defended, as we shall say, namely, that the cogitations and affects of another can be known by an angel as to what they are about, but not as to how they are.

But although we should concede to Durandus that cogitations and affects are not distinguished according to species, indeed nor even according to intension, nevertheless the argument made above would retain its force: for it is necessary to grant another distinction and change for this, that by the same quality the same thing be in a different way the object of cogitation and of affect successively, as has been shown: because the same quality, remaining in the same way, will always be conversant in the same way about the object, whether that quality be a cogitation or an affect.

Finally, someone could say on behalf of the opinion of Argentina and Aegidius that it is indeed known by one angel, certainly and evidently, what impressed intelligible species (*species intelligibilis impressa*) another angel or man uses; yet not what expressed species (*species expressa*) and cogitation he expresses: for the same impressed species is of itself indifferent to eliciting this or that cogitation about the same thing: wherefore it does not follow from this, that because one knows what species another uses, he also knows what he thinks. But this doctrine is altogether different from the aforesaid opinion. For Aegidius and Argentina plainly concede that the cogitation of another is known by one angel, and therefore the expressed likeness and species, which is the very cogitation. Wherefore according to their opinion, not only does one angel know what impressed species another uses to elicit a cogitation, but also what expressed species and cogitation he has. Moreover, it cannot be that one angel certainly knows what impressed species another uses to elicit a cogitation, unless he also knows the cogitation itself: for since no change is made in the impressed species from this, that an angel or a man uses it to elicit an intellection, it cannot be that one angel should know what species rather another angel uses, unless he sees the effect of it, namely the cogitation itself, for the eliciting of which the other uses the impressed species.

Furthermore, if this opinion of Argentina and Aegidius were true, all the testimonies of Scripture and of the Fathers could be explained. For if from one angel the affirmation or negation of a cogitation, the displeasure and complacency, the flight or pursuit of an affect, were hidden, even though the cogitation and affect were manifest, only in that respect in which they are conversant about such an object: then indeed it could rightly be said that the secrets of hearts, even affects and cogitations, are known and discerned by no one other than by God and by the very man or angel to whom they belong. For since he does not know the affirmation nor the negation, nor the flight, nor the pursuit, he is not said to know the affects and cogitations: because he does not understand of what sort the cogitation or affect is.

Caput IV - The second and third mode, by which Henry explains the aforesaid common opinion

The second mode of explaining the aforesaid common opinion, partly different from the preceding, is that of Henry of Ghent, Quodlibet 3, q. 13, who teaches two things. One is that the cogitations of a man, or of one angel, according to their own natures, can be excellently known by another angel and by a demon by their proper power, not only as to what object they are about, but

also whether they are affirmations or negations. The other is that it is not known by one angel to what end those cogitations are directed by another angel or by a man: and this he calls the secret of the heart, which can be known by God alone.

But, in order to explain how it is that from one angel it is hidden to what end the cogitations of another are directed, and therefore that even his affect is unknown, he notes that two things are of themselves considered in the will (*voluntas*), namely the very act of affection and of will which is elicited: and this he says is known to any angel not only in its exterior effect, but also in itself; and the relation (*relatio*) of the will to the object, which adds nothing of entity above the will - this relation Henry himself calls the intention of the will about the object, and the internal virtue - and he says that this is the secret of the heart, which is known to God alone and to the one having it.

Wherefore this author concedes that it is rightly known by one angel what another angel or man is thinking, indeed even about what he has an affect and an intent of mind: because he knows the substance (*substantia*) of the affect of the will: but to what end he directs the affect is altogether hidden. Accordingly, according to Henry, one angel knows whether a man thinks about a woman, and whether he has an affect about her; but whether to concubinage, or to another end, he is ignorant.

Moreover, he proves that the cogitations and affects even freely elicited by the will of one are rightly known by another: because they are certain qualities and entities of the natural order existing in the nature of things. What therefore can hinder, so that they cannot be evidently and certainly known by another angel? By which reasoning Scotus proved that every cogitation and affect of one angel or of a man is by its own nature known to another angel, unless he be impeded by God. Furthermore, that relation of the affect, which Henry called intention and internal virtue, to be unknown to another angel, he confirms by no reason; but seems to have contrived it solely so that he might reserve some hidden thing of the heart to God, which by its nature to any created intellect, other than to the one having it, would be unknown: and by this means on the one hand he would satisfy the places of Scripture and of the Fathers, in which it is said that the secrets of the heart are known to God alone; on the other hand he would concede, on account of the reasoning made, that the intellections and affections of one angel or man are known to another angel.

Yet this opinion seems no less without foundation than the preceding. First, because the intention of the will appears to be nothing other than the affect of complacency and of love or of hate: for intention is essentially an act (*actus*) of the will elicited by it. Therefore he who knows the affect elicited also knows the intention of the will about this or that object. For what can be more secret in the human heart than the love and affect of it? Wherefore, if an angel rightly knows that a certain man thinks about the beauty of a woman, and knows the affect of love or of hate about her: in the same way...

In the same way he will know whether he is thinking of embracing her, or of some other shameful act with her, and whether he loves or hates her; and accordingly he will know whether he is thinking of her with an intention of enjoying her embraces, or of fleeing her.

It is frivolous to assert that the intention of the will is that relation which Henry fabricates: for intention is an affect and an act elicited by the will (actus elicitus voluntatis), that is, an appetite (*appetitio*). Secondly, by what rationale, in the acts of the will (*voluntas*), is the act itself and the affect distinguished from that relation, and only in that relation is there said to be a hidden secret? By the same token in the intellect (*intellectus*) intellection (*intellectio*) ought to be distinguished from that relation, and in that relation a secret even of the intellect ought to be constituted, which would be known only to God and to the angel; and just as, in that relation of the will according to Henry, intention (*intentio*) is to be constituted: so too in the relation of the intellect would be constituted the ground of assent, of composition and division, of affirmation and negation. Wherefore, with Thomas of Argentina, we shall say that the intellections and thoughts of another can indeed be known by an angel, what they are and about what they are, not only of what sort they are - a point which Henry, as I judge, would not deny. Accordingly I said that his opinion differs little from the opinion of Argentina; but the latter has already been sufficiently refuted above.

Thirdly, that relation which is in the will besides affect and love, and is called intention, is either real (*realis*) or of reason (*rationis*), proceeding only from an extrinsic denomination of the very act of love and of the affect. If it is real, then either it is inborn to the faculty of the will, or it comes to it from without. If it is inborn, it follows that it is always entirely the same - which is absurd; for thus there would always be in us the same intention of mind. But if it comes to the power of the will, and can be absent from it (since a man does not always remain in the same intention), it follows that it is really distinct from the power, at least as a mode is distinguished from the thing of which it is the mode, according to what we noted above in disputation 217, chapter 5, and 219, chapter 3: because that, without which another can be, is distinguished from it by nature of the thing, and in some way really, or more than by reason. However it be said, for my part I do not see first by what account the very affect of love and of hate of one angel or man could be known by another, and yet that relation, since it is of the same order, could not be. Then, if this relation comes to the power and is not inborn to it, as is manifest, there must be some foundation of it: and no other seems to be than the act itself and the affect of love. But a relation founded on an affect is received rather in the affect itself, as in its proximate subject, than proximately in the very power of the will. He, therefore, who knows the affect clearly and as it is, as Henry admits is known by an angel, will also be able to know that relation, and accordingly the intention. Moreover, if that relation which is called intention were of reason, it would be known by an angel in the same way: for this denomination in the power would proceed from the very act elicited regarding such an object. Therefore, since one angel certainly knows the affect of another, he will also know such a denomination or relation, which Henry calls intention. From what other foundation such a relation could arise Henry cannot show.

Furthermore, if this mode of philosophizing and of explaining the common opinion were true, one could not ineptly defend what that common view maintains and what the testimonies of the Fathers and of Scripture signify, namely, that there is something hidden and secret of the heart of a man or of an angel which cannot be known by another angel.

Thirdly, the same Henry, in another way, explains and defends that common opinion in Quodlibet 5, question 15, where he treats of angelic speech and illumination, so that in the same concept and thought of one angel there is something which is hidden from another angel. For he thinks that by one and the same concept there is known by an angel the universal and the singular of the object: and that the concept is manifest to the other angel insofar as it concerns the universal; but hidden and unknown insofar as it is engaged with the singular. Yet this mode of philosophizing could be assailed in the same way as the preceding ones; and we shall discuss it more at length below in disputation 211, where there must be treatment of the speech of the angels.

A fourth mode of explaining the same common opinion, from St. Thomas, Alexander, and others, is confirmed by the reasoning of Richard.

On the same, as defended by later authors

Lastly, from writers the aforesaid points seem to be interpreted and defended in another way.

That the affections of the will and the thoughts are the "secrets of hearts" and are not certainly known by another angel

This common opinion of St. Thomas is defended by Cajetan and more recent theologians on this article; Alexander, St. Bonaventure, Marsilius, Gregory, Capreolus, and Ferrariensis in the places cited. They say, therefore, that the affections of the will of one angel or of a man cannot be known with certainty by another angel; and they call these affections the secrets of hearts. The same seems to be taught about thoughts by St. Thomas, Cajetan, Marsilius, Gregory, Capreolus, and Ferrariensis - except that, as is gathered from the reasons of St. Thomas, Cajetan, Ferrariensis, Richard, and Capreolus, they speak only about cognitions which depend upon man's free power, as will be clear in the next disputation, and on that account only inasmuch as they depend on the free will.

They vary, however, in confirming the common opinion, in which Alexander, St. Bonaventure, Marsilius, and Gregory agree: for they prove it only from Scripture and the doctrine of the Fathers, about which enough and more than enough was said in chapter one of this disputation.

Richard, however, proves it in this way. One angel is not intimately present to our soul, or to another angel: therefore he needs species (*species intelligibiles*) in order to know those singulars which begin to exist in the soul or in the angel, by species derived from them into his intellect - as we reported above in disputation 201, chapter 1. Therefore one angel cannot know the singular affections and thoughts of another angel or of a man unless he receives species from them. But those things which are voluntary in an angel or in our soul, such as affections and free thoughts, do

not of themselves produce species, unless by the motion of the will of him in whom they are. Therefore, unless the man or angel wills, they cannot send species into the intellect of another angel; and consequently they cannot be known for certain.

But this reason has no force.

It is refuted first. First, because distance according to place can in no way hinder something from being known by an angel, as was already noted above in disputation 204, chapter 2, and will be said in disputation 212, chapter 2; just as nearness according to place can in no way help. If this sufficed, that one angel could certainly know and behold the thoughts and affections of another angel or man, they could easily be known by an angel in this way: because one can be at the same time in place with another, as we showed in disputation 193, chapter 4. It would therefore be in the power of anyone to draw near to another and to gaze upon his heart.

Then, although an angel might understand through species of present things, yet he would not receive them from things, even spiritual things, but would have them from the beginning infused in him or inborn: why then would he not have species of thoughts and affections so as to understand them, if otherwise they were a natural and suitable object for the intellect?

Finally, if we were to say that in angels there are no species of singular things, but that they receive them from things present, there would be no reason why we should assert that an angel does not receive from present thoughts and affections, without the command and will of him in whom they are. For although these operations are free, and so are subject to the liberty of the will, so that one can elicit them and not elicit them, nevertheless, once elicited they do not obey the command of the will in what they produce of themselves. Wherefore, so as to produce a habit in the will itself, or in the intellect, they do not obey its command; but, whether the will wills or wills not, an affect and a thought once freely elicited cannot, against the will, fail to produce a habit. Therefore, since they of themselves produce a species in the intellect of another, if they produce it, it will not depend on the command of reason whether they produce it or not.

Add also that by this reasoning men who are rude and ignorant could never, nor even those who are learned and who would not follow this opinion, speak with angels and explain their mind to them. For if that were to be understood by the angel through a species derived from the affect and thought, and it were to be subject to the free will of the one having the cognition and the affect that some species be derived from them into the intellect of the angel, it would never be derived until the man wished such a species to be produced. But no ignorant person, nor even any learned one who would not follow this opinion of Richard, would ever will that such a species be produced, because either he would not attend to this, or in no way would he believe that this could be done; therefore he would never manifest his mind to an angel.

You may say perhaps that it is enough that a species of the thought and affect be produced at once in the other, if the man or the angel wills that the other know his mind, although he does not expressly will that a species of his thought or affect be produced in the intellect of the other. But this is frivolous. For who does not see that, for a thought to produce a species from itself, it matters

nothing at all whether the will of the one having such a thought wills to manifest it; as though the thought itself had intellect, and as soon as that will was posited it understood that it could not otherwise be manifested than by producing from itself a species in the intellect of the other?

Caput VI - Another way of proving the common opinion; and the attack of Scotus and Durandus

The same way of defending the common opinion is otherwise proved by St. Thomas, Cajetan, and Ferrariensis, whom Scotus and Durandus attack.

The common opinion, in the way we said it is interpreted, is proved by another argument by St. Thomas, Cajetan, Ferrariensis, and Capreolus in the places cited, which is as follows. A created rational will is subject to God alone, and he alone can act upon it; therefore those things which depend on the created will can be known by God alone, to whom the will itself is subject. Such are affections and thoughts; therefore they can be known by God alone. By this argument St. Thomas wishes to prove that the affections of the will and the thoughts of the heart are hidden by the very will so as not to be seen by angels; rather, he maintains that by their very nature, insofar as they proceed from free will, they are known to God alone. For if by their very nature they were known to another angel, they could not be hidden by the will of the one having them - which Scotus shows very well in the second place cited, by this argument: it cannot be that what is otherwise of itself intelligible to some intellect, without any other impediment, should by the will alone of the one having it be rendered not intelligible. Therefore, if thoughts and affections are by their very nature intelligible, they cannot be hidden from another angel by the will alone of the one having them. In this, however, Scotus is mistaken: he thinks the opinion of St. Thomas was the one he himself attacks; whereas the latter rather says that the secrets of the human and angelic heart are by their very nature unknown to another angel. Accordingly that which St. John Chrysostom asserts, homily 5 on Matthew, on those words, "Then the devil left him," is to be explained in a good sense. For thus he writes: "But according to the dispensation of God the good Angel withdraws; or rather, he does not withdraw, but hides himself, making himself invisible to the devil: for unless he wills, the good Angel will not be seen by the devil." This, however, is difficult if what we have said is true; especially because St. Chrysostom elsewhere teaches that angels are spiritual and incorporeal, as we reported in disputation 179, chapter 4. It must therefore be understood thus: that not by his own power does the good angel make himself invisible to another angel, but only by God's dispensation. For if by natural power this could be done, in the same way some demon of a higher nature could hide himself from a good angel of a lower nature; since in demons all natural endowments have remained intact, as Pseudo-Dionysius teaches, chapter four On the Divine Names.

Moreover, Durandus attacks the same argument as follows. If the affections and thoughts of one angel could not be known by another angel because they depend on the free will of the angel, upon which God alone acts, then by the same reasoning the substance (*substantia*) of the rational soul, and of the angel himself, could not be known by any other than by God; and likewise all other

things which depend freely on God alone. For if those things which depend on human free choice are unknown to angels, much more will those be unknown which depend on the free choice of God - which, however, is absurd. Therefore the argument of St. Thomas only proves that the acts of the human will, or free intellections, are rightly known by God because they depend on him; but that they cannot be known by anyone else than by God, or by the man himself or the angel who has them, does not seem to be sufficiently proved.

To the argument of Durandus Ferrariensis replies.

Caput VII - Ferrariensis' reply to Durandus

The argument of Durandus presses the Thomists not a little, and therefore they try in various ways to dissolve it. First, Ferrariensis replies in the place cited. About the middle of that place he says that the argument of St. Thomas does not rest on this proposition, "Everything that proceeds from God alone is known to God alone," but on another, namely: "Every operation and every affect of a creature which proceeds from no naturally acting cause, but only from a free one, from God, is known only to God and to the very agent, and to whom he shall have willed to manifest it." But not every effect which proceeds freely from God is of this sort. However, this reasoning of Ferrariensis does not satisfy me. First, for if St. Thomas were to assume that latter proposition, he would not argue rightly: he would assume in his argument what rather he ought to prove. Then the reason on account of which St. Thomas...

St. Thomas said that a free affect of the will, and an act of the intellect, are known by God alone; the reason is that this power of the will can be moved by him alone: therefore, by the same reasoning, whatever depends on God alone, will be known with certitude by him alone.

But come now, let us admit Ferrariensis's solution, and argue against it in another way: let us show that some inconveniences follow from it. First, it would follow that the motion of the heavens, which proceeds from an angel voluntarily, is not naturally known to another angel: so Durandus infers, and the same reasoning seems to have place here. But Ferrar. replies that the motion of the heaven does not depend on the angel's will alone, but also on the heaven's natural form; and on that account it can rightly be known by an angel. However, two reasons stand against this solution. One is that the motion of the heaven cannot at once depend upon an angel and upon the heaven's natural and intrinsic form; rather, if the sphere itself is moved by an angel, the form would concur only passively; otherwise, if its form is a natural efficient principle of the motion, the will of the angel is superfluous, just as it would be if fire burned. The other reason is that if the motion of the heaven were from an angel and from its own natural efficient form, and hence could be known by an angel, then by the same reasoning free cogitations too would be known to any angel; for although they depend on a free will, nevertheless they are elicited by a natural cause, namely by the intellect. But perhaps this reason proves what neither St. Thomas nor Ferrar. and the others of this opinion deny, namely that the cogitations of hearts, insofar as they are cogitations, are known to angels according to their substance; but that the end and intention from which they proceed, and according to which they are directed, is not known.

Second, it would follow that the motion of a stone upward, produced freely by one angel, cannot be known by another, because it depends on the angel's free will. Thus Ferrar. objects to himself, and replies that that violent motion of the stone is natural to another body; and on that account it is rightly known by an angel, because for this it seems sufficient if it have a natural connection with some natural body. Yet this solution has little weight: for now we are not treating of abstractive knowledge, whereby a thing is known according to itself abstracted from existence; but of the knowledge which they call intuitive, whereby an angel knows not only a motion or operation according to itself, but as existing in this or that subject. Therefore, although an angel rightly knows that upward motion is natural to air and to fire, this is not enough for him to know when such a motion inheres in some mobile contrary to its nature, unless he know the impelling cause. If therefore he cannot in this way know an affect of the will and the motion of the intellect, because they proceed from a free cause, namely from the will, by the same reasoning he will not know that the motion upward is then in the stone, if it depends solely upon the free will of an angel.

Third, it is inferred that an angel does not know a man's progressive motion, nor the motion of imagination; because these motions no less depend on the will than the intellect's very cogitation. For if it be said that these operations do not depend upon will alone, but also on some other natural faculty, either of imagination or of a mover according to place, we will say the same of the operations of the intellect. However, as I noted above, this reason proves what even the Doctors of this common opinion do not deny, namely that intellections, insofar as they are intellections, according to their substance are rightly known by an angel, and only their end and intention, for which they are done, is unknown; which we will propose below as probable. But if someone does not grant this, assuredly he can be pressed not slightly by the argument made above.

But someone might say: therefore not only free affections, but also the intellections and cogitations of one angel cannot be known by another, except by God and by the very angel who has them; because God alone works in the intellect, just as also in the will of a man or an angel. But against this there is another effective reason: for from this doctrine it would follow that not only could the cogitations existing in another's mind not be known by another angel, but neither could habits, nor intelligible species; because God alone produces these by infusing them, or at least God alone together with the intellect of the angel effects them; which however seems false, and contrary to St. Thomas himself, who in the reply to the second plainly confesses that intelligible species existing in another angel are known by one angel; but that the use of them alone is hidden, that is, the operation of the intellect to which the angel uses the species. And he says that the use of them, or the cognition by them, is hidden from another angel only for this reason, because each uses his species and thinks as he pleases, at the command or motion of the will. From this doctrine too we shall infer below that the act of intellect of one angel, from which he cannot cease at will, is naturally known to all the others.

Wherefore the opinion of Marsilius is not to be approved, in the place cited, corollary 2 after the second supposition, when he asserts that any habit existing in one angel can be hidden by him, lest it be seen by another.[1564] For this opinion has no solid foundation. Since the production of a habit

does not depend proximately but only remotely on our liberty, and its conservation in no way depends on liberty, there is no reason why we should say that a habit by its nature cannot be known by any angel. From which it follows that it cannot be hidden by the angel in whom it is, so as not to be seen by another.

To the same reasoning of Durandus Cajetan also replies.

Cajetan and Capreolus on St. Thomas's reasoning

Caput VIII - How Cajetan interprets St. Thomas's reasoning

In like manner Cajetan and Capreolus, in article 2 cited, against the first conclusion of Durandus, endeavor to dissolve the argument of Durandus which above was brought against St. Thomas's reasoning. They say, therefore, that the principle on which St. Thomas's reasoning rests is not that which Durandus supposed, namely, that the will is subject to God alone as efficient cause, so that from this he might infer that therefore the affect of the will is known to God alone; but that the principle is another, to wit: a motion of the will is not some nature having fixed being, as substance has, nor does it have a necessary and determined connection, nor does it necessarily and determinately depend on some natural cause, but on God alone; nor can it of itself move the intellect of another angel to the cognition of itself, either proximately or remotely, by impressing some species of itself; nor does another angel have species connatural to him by which the secrets of hearts would be represented. From this he rightly infers that the secrets of hearts cannot be known by another than by him whose they are, and by God, by whom alone the will is moved. Thus Capreolus reports the proposition on which the whole reasoning of St. Thomas seems to rest.[1565] Cajetan in truth says nearly the same principle is assumed by St. Thomas, namely, that free acts of our will, or of an angel, do not have a connection with any natural and necessary cause; and therefore they are not represented in connatural species in an angel, as other natural effects are; whence it is rightly inferred that they cannot be known by another angel, but by God alone and by the one to whom they belong. But Cajetan proves that the free acts of our will or of an angel are not represented in the species of another angel, because they are of a higher order than natural things are; therefore by species of natural things they cannot be represented. He calls "natural things" those which have a natural cause, that is, which acts in the mode of nature determined to one. Finally, to make this evident, Cajetan shows in his last words why free acts of the will are not known by another angel through species indited to him from the beginning, namely, because angels have species only of natural things; but since they do not have also species of free volitions and affections, he does not prove...

However, who does not see that both Cajetan and Capreolus supply many things to St. Thomas's reasoning which the holy Doctor himself did not think? Nowhere will you find in him any one of those propositions; but he only assumed what we recounted above, namely, that God alone works

1564. Marsilius, in the cited place, corollary 2 after the second supposition.

1565. Cajetan and Capreolus, on I, q. 57, a. 4, ad 1; Capreolus reports the proposition as the principle on which St. Thomas's reasoning rests.

in the will of a man or of an angel, so as to gather from this that the free affections and motions of that will are able to be known by God alone, who alone works in it. Then, from the proposition which Capreolus assumes, it is indeed rightly inferred that the secrets of the heart are not known by another angel, if angels understand things by the species of the things themselves; nevertheless that principle seems to have been assumed for the mere will of the author, without any other foundation: for it seems gratuitously said, and rather it ought to have been gathered in the reasoning than posited as a pronouncement, that the secrets of the human or angelic heart neither move of themselves the intellect of another angel so as to be known, nor do they produce a species of themselves in an angel, nor does another angel have from the beginning connatural species of them, by which he might know them. For those who say that the secrets of the human heart, or of an angel, can be known of themselves, teach this in one of these three modes: namely, either because they can be known of themselves without another species by the power of the intellect, as all other things; or because they of themselves produce a species in the intellect of the angel; or because the nature of the angel requires him to have species of these secrets, just as of certain other things, which, if he does not have them, he lacks them by God's will alone, though otherwise they would be connatural to the angel in the same way as the species of other things are.

In this the sum of the present controversy seems to be constituted.

In like manner it matters little what they assert, namely Cajetan and the others, that the secrets of hearts are not represented by the species of natural things, and that the intellect of an angel has only species of natural things. First, because it does not seem impossible that by the same species there might be represented to an angel many things of a diverse kind, as the substance and the accidents of a thing; why then will it be repugnant that the secrets of the heart and the affection of the will be represented, as well as the substance of an angel, if indeed by the same cognition and expressed likeness many things and all diverse things can be represented? Next, we also wonder that affects and free operations of the will are said to be known by species wholly distinct from the species of natural things; yet it needed to be proved that in the intellect of whatever angel there are no species of the secrets of hearts, or of other things if they are true; and if they are not true, this ought to have been proved, that an angel, by the power of his nature in creation, had his species of other things infused into him or generated as connatural to him, but not, however, of the secrets of hearts, so that all cognition of an angel would be through species, - or at least, if an angel can, without species, more clearly know other things, it ought to have been proved that by his natural power his intellect cannot know the secrets of hearts, as it can other things.

But if someone should say that cognitions come about through impressed species by which an angel's intellect elicits cognitions, and that by no species can the secrets of hearts be represented, because secrets are free, whereas species, whatever they be, are of the natural order: against this, there follows not even according to absolute divine power that impressed species of the secrets of the heart, or a proper knowledge of them, can be given - if indeed that species and that knowledge is of the natural order, and things of the natural order, that is, not free, cannot represent free

secrets. But if we grant that there can be species naturally representing the secrets of the hearts both in first act and in second, it needed to be proved why they are not infused naturally into an angel, as are the rest of the species of other things.

Finally, it is to be observed, according to the opinion of these Doctors, and joined with the reasoning to be urged against them, that the cogitations of the human heart, or of some angel, could be known by another angel insofar as they are cogitations, and according to their substance - which way they would be turned in the mind, and what he would affirm or deny about them - because they are elicited by a natural principle, and according to their nature they are of the order of things; yet they would deny that they are elicited by a natural principle, and according to their nature are of an order extrinsic, depending in that way upon a free will; for what connection could there be without some intrinsic change made in the very act of cogitation, from this alone, that by some reason, and with indifference, the will moves the intellect to think? Indeed liberty is formally not an affection of the intellect, but of the will. Therefore it seems only to be said, according to the opinion of these Doctors, that the free affections and intentions of the will are hidden from another, and principally also the very intention by which cogitations are directed; but the cogitations themselves, according to their substance insofar as they are operations of the intellect, are not hidden from another angel.

Caput IX - Gregory confirms the common opinion by another reason

Gregory confirms the common opinion by another reason.

He in the cited question, so as to defend the common opinion with St. Thomas and others, and at the same time to confirm it, notes that, for some sensible to be sensed, it is not enough that it be, in itself, sensible, and that a sensing power be present in something, but moreover it is necessary that the sensible be placed at a fitting distance according to place, in keeping with the nature of whatever sensing faculty. In the same way, he says, for some thing to be known by an intellect, even an angelic one, by a proper knowing, which they call intuitive, it is not enough that it be in itself intelligible, and that the power of the intellect be of itself potent to understand; but it is necessary that it be related in a certain manner to the intellect, so that it be known by its proper and intuitive concept. If it is impossible for it to be thus related, it will be impossible for the secret of another's heart to be known by a proper and intuitive concept. Wherefore, in order that the cogitation or effect of another be known by an angel as it is, and by a proper concept, it is not enough that it be, of itself, of the genus of intelligibles, and that the faculty of the intellect be potent for the genus of intelligibles; but it must have a certain special mode required, that it may be known by a sure and intuitive knowing: and this mode, says Gregory, is to exist as in a subject in that one by whom it ought to be understood and intuitively known. And because the secret of the heart of one angel does not inhere in the intellect of another, therefore it cannot be intuitively known by any other than by him in whom it is. Lest this reasoning seem assigned without foundation, he confirms it by this example: for if an angel were together with a rational soul, and they were to penetrate one another in the same body of a man, or soul with soul, as two men also would mutually penetrate

one another; nonetheless the soul would not understand the secret of the angel's heart, nor would one soul [understand] the secret of another, however near they might be according to place, for no other reason than that the secret of the one is not in the other: therefore it is a necessary condition for this, that the secret of the heart be understood, that it exist as in a subject in him by whom it ought to be understood. From which it is clear that thus Gregory embraces the common opinion, though by a reason other than that by which St. Thomas confirms it.

But Gregory's reasoning has no firm foundation. For although, in order that a sensing faculty operate, the natural power of the faculty itself and the nature of its proper object do not suffice, but some mode is necessary, namely propinquity; nevertheless from this it is not rightly inferred that the mode necessary for the secret of the heart to be known is that which Gregory assigned. First, in vision, and in other faculties and external senses, propinquity of place is required, yet for this reason, that the sensible may send its species into the potency; but once that [species] has been received in the faculty, propinquity of place is not necessary, as we proved above in disputation 207, cap. 3. But even if it were necessary, it would be required only that in some manner the operation of the sense be terminated. Next, when Gregory adds that the mode necessary for the secret of the heart to be known is to exist in him by whom it ought to be known, either he assumes this in his reasoning, or he infers it from that prior doctrine. If he assumes it, his reasoning is trifling, because in it he assumes what he ought to have inferred: for the whole controversy is about this, whether one angel knows the secret of a heart not his own, but what is in another angel or in a man. Therefore, when Gregory assumes in this way, that in order for the secret of the heart to be known it must be in him by whom it ought to be known, he assumes what is contradictory to the opposed opinion. Lastly, what he adduces in confirmation concerning a soul which would be together with another soul or an angel, is of no moment. For the reason why our soul, when it is in the body, would not understand another soul or the angel with whom it would be together, is that, when it is in the body, it needs species acquired through the senses. And because the secret of the heart of another soul or of an angel does not send its own species into the senses, even if another soul were near in place, as is clear, therefore the secret of that one would not be known. The same must be said for the secret of an angel existing together with the soul in the same body, and for the same reason. Distance or propinquity of place contributes absolutely nothing to whether the secret of the heart, or any other thing, be understood or lie hidden: nay rather, that it be in the intellect itself as in a subject makes no difference; for our intellect, though possessing habits (*habitus*) and the species themselves, does not understand by a proper concept, but by discourse from sensibles: therefore, even if the secret of an angel were set in the intellect of our soul, nonetheless it would not be understood by a sure and proper concept. Therefore Gregory's example has no force.

But if someone follow the opinion of Durandus, who thinks that neither our intellect nor the angelic knows anything through species, but proximately through itself: at least he cannot deny that our soul needs the operation of the senses for it to understand anything; since the secret of an angelic or a human heart cannot be perceived by our senses, even if it be near in place, it will not be able to be known by the intellect. Therefore we concede to Gregory that, for a thing that is

intelligible to be known, it is necessary that it exist in him by whom it ought to be known, because the secret of the heart can be known by no other than by him whose it is: for Scripture and the Fathers teach this. But Gregory's reasoning to prove this is of no moment.

Judgment of the author in the present controversy.

Caput X - The author's judgment

On this matter indeed my judgment is that nothing can be effectively proved by philosophical reason; this has been in some part shown above: for none of the arguments adduced sufficiently show that the secret of the heart of one angel or of a man cannot be known by another. Nor indeed could it be: since the nature of the angelic intellect is not sufficiently clear to us, we can scarcely understand what it is able by its power to know, unless we derive it from the Fathers and from Scripture; wherefore, led by natural reason alone, we are not fully able to understand of which things it naturally receives species and of which it does not have them. Nonetheless, since it is clear to us from the Fathers and from Scripture that the secrets of our hearts are not known by angels, it must not be said with Scotus that these secrets are by their nature known to any angel and are prevented by God alone from being known, as was proved above. Therefore, from Scripture alone and the doctrine of the Fathers it is clear to us that the secret of the human heart is not within the latitude of the natural object intelligible by an angel. Whence an easy answer is given to the reasoning of Scotus and of others who contend that by its own nature such a secret can be known by an angel. For we say that, even if they be of a natural and created order, not of a supernatural one, nevertheless they are not therefore perceived by an angel, because not every created thing is a natural object of the angelic intellect, as we also said above about future things. Although this does not stand by natural reason, from the doctrine of the Fathers and of Scripture, joined to the very strong reason which we established in chapter 2, we are compelled to admit it. It remains, however, that in the following disputation we explain what we understand by the name of secret or of knowings of the heart

On the secrets of hearts and angelic knowledge

For the nature of the angelic intellect not being sufficiently clear to us, we can scarcely understand what it is able to know by its power, unless we derive it from the Fathers and from Scripture; wherefore, led by natural reason alone, we are not fully able to understand of which things it naturally receives species and of which it does not have them. Nonetheless, since it is clear to us from the Fathers and from Scripture that the secrets of our hearts are not known by angels, it must not be said with Scotus that these secrets are by their nature known to any angel and are prevented by God alone from being known, as was proved above. Therefore, from Scripture alone and the doctrine of the Fathers it is clear to us that the secret of the human heart is not within the latitude of the natural object intelligible by an angel. Whence an easy answer is given to the reasoning of Scotus and of others who contend that by its own nature such a secret can be known by an angel. For we say that, even if they be of a natural and created order, not of a supernatural

one, nevertheless they are not therefore perceived by an angel, because not every created thing is a natural object of the angelic intellect, as we also said above about future things. Although this does not stand by natural reason, from the doctrine of the Fathers and of Scripture, joined to the very strong reason which we established in chapter 2, we are compelled to admit it. It remains, however, that in the following disputation we explain what we understand by the name of secret or of knowings of the heart.

What a cogitation (*cogitatio*), or the secrets of the heart, are - things which an angel by his own nature cannot know. Disput. 210.

Not in the same way about affections (*affectus*) and about cogitations is one to judge, some think probable. Cap. 2.

Objections against the aforesaid opinion. Cap. 3.

Disputatio CCX - What a cogitation or the secrets of the heart are, which an angel by his nature cannot know

Caput I - Preliminaries and the sense of "secrets of the heart"

On this controversy depends both a full understanding of the foregoing, and also a perfect knowledge of that locution by which angels open to one another the secrets of their heart. Concerning this the Scholastics did not differ much. The present controversy, therefore, is, what ought to be understood by the secret of the heart of a man or of an angel. The Doctors cited in the preceding disputation, for the common opinion, seem to understand by the secret of the heart the cogitations (*cogitationes*) of the intellect and the affections of the will. About the cogitations, however, of the interior sense they do not speak. Whether, however, by secret there is also understood the very cogitation of the intellect, insofar as it is a cogitation, or only by that reason which depends upon the affection of the will, they do not explain. Gregory of Rimini, however, in the place cited, from the same passages of Scripture alleged above, tries to prove that the secret of the heart is not only the affection of the will, but also the cogitations of the intellect, not only insofar as they depend upon the free will toward this or that end, but also insofar as they are cogitations. For in Matthew 9 it is said: "Cum vidisset Iesus cogitationes eorum," etc. From which place, says St. Jerome, the divinity of Christ is sufficiently proved: because it is proper to God to behold the cogitations of the heart. In that place, however, the discourse is not about affections or intention, but about cogitation. Then in 1 Paralipomenon 28 it is said, "Omnia enim corda scrutatur Dominus, et universas mentium cogitationes." There it is attributed to God not only, as to what is proper and peculiar to him, to understand and behold the affections of our will, but also the cogitations of our mind

Not in the same way about affections and about cogitations is one to judge, some think probable.

Caput II - Not to be judged the same way about affections and about cogitations; a probable opinion

To some, indeed, not without reason it seems that one ought to philosophize in another way about cogitations as to their very substance, insofar as they are cogitations of such an object, than about the affections of the will. Durandus reports that this opinion was held by certain Theologians. And although St. Thomas, Cajetan, and the Thomists in this article seem to speak in the same way about the cogitations of the intellect and about the affections of the will; yet their reasoning does not prove that the cogitations of the human heart are hidden from an angel as to their substance, but only insofar as they depend on free will, over which God alone has efficacy. By this reasoning they gather that the things which are free, insofar as they are free, are unknown to an angel. For cogitations of the intellect, as to their substance, are from a natural cause for us, just as the motion of walking is; and in the same way they depend on the will. From the opinion of these Doctors it follows that cogitations of the intellect are, in the same way, objects of the angelic intellect as also are the effects of walking, namely, that as to their substance they are the natural object of the angelic intellect. In the same way, too, it seems one must speak about the cogitations of the senses and of the imagination. For although, inasmuch as they proceed from the will and from reason, they cannot be known by an angel; yet in themselves they are beings in such a nature, that is, of a natural and not a free faculty; but precisely in that mode in which they are cogitations of the senses. That intellectual knowings are spiritual in no way hinders that they be known by an angelic intellect as they are: for the intellect beholds spiritual things no less than bodies.

In favor of this opinion these Doctors also add the Argentinensis, who, as we showed in cap. 3 of the preceding disputation, grants that the cogitations of one angel are known by another - what they are, and about what object they are - although under the ratio of composition and division they are not known; so that by this reasoning there be saved something secret which by its nature alone is known to God; which can be much better saved too, as we shall see below. Next there is Hervaeus, whom we saw in cap. 1 of the preceding disputation, who admits that the cogitations of one angel are known by another - what they are, and about what they are, and whether he affirms or denies; but not what he is intent upon in acting. Then this is plainly the opinion of Henry, when he concedes that the cogitations of the heart of one angel are known to another, not only what they are and about what they are, but also whether they be affirmations or negations; nay even, as regards the affections of the will, he asserts this too: that the intentions of the will alone are hidden. Although in this, what he asserts about affections, his opinion is not to be approved; because he himself badly distinguishes intention from affection of the will, as we showed in cap. 4 of the preceding disputation. Lastly, this opinion was publicly taught by our Alfonso de Vega, my master and the most eminent professor of Theology in our College of Complutum, in the year 1571; which indeed I myself judge no less probable, although I would more gladly hear the judgment of others about it: and these things commend its probability.

First, because no difference seems to exist between (a) cogitations of the heart which are exercised solely by liberty from the command of the will toward an end, and (b) the cogitations of sense or local motion, which we call progressive in man: but who will deny that the cogitations of the imagination in man and local motions are known to any angel whatsoever, yet the intentions from which they proceed are hidden? Next, the reasoning of St. Thomas and of others, as I said a little before, proves only that the affections of the will, taken in themselves, are unknown to angels; but cogitations only by that very reason which depends on affection, that is, insofar as they are moved toward one end or toward another. Lastly, since on this matter scarcely anything can be proved by philosophy, as we said in the last chapter of the preceding disputation, but we must only maintain that the secret of the heart is hidden from angels, so as to satisfy the testimonies of Scripture and of the Fathers; if by this way all things could be saved, the mode of speech among angels would be transmitted to us more suitably and more congruently, which by many other ways is scarcely explained or defended without inconvenience: therefore this opinion ought not to be judged improbable.

Objections, therefore, that the same manner of philosophizing which we have set forth does not square with the testimonies of Scripture, entirely fall away: we shall say that the cogitations of the heart, as to their substance, insofar as they are natural such as they are, are known to angels; but that the intention of the heart, that is, the cogitations themselves insofar as they fall under intention, or insofar as they are its cause, lie hidden from an angel's intellect.

Although taken absolutely the cogitations of the heart are nothing other than operations of the intellect (*intellectus*), nevertheless, when they are called cogitations of the heart, according to the phrasing of Scripture they are signified as cogitations together with affection (*affectus*) and such an intention (*intentio*); especially in that passage of Matthew 9, where Christ said to the Pharisees: "Why do you think evil in your hearts?" and "He saw their cogitations," etc. From which place, as we saw above, St. Jerome affirms that His divinity is proved. For it is the same thing in that place, to see their cogitations, and to see their perverse intentions arising from their cogitations. And it is the same to think evil in the heart, and to have a perverse intention. Similar is that of Matthew 15 and Mark 7: "Out of the heart proceed evil cogitations," that is, evil deeds, which are called evil cogitations as it were evil things thought, which proceed from a perverse affection. For the heart is said not only of cogitation, but as conjoined with the affection of the will (*voluntas*). And Luke 2: "That the cogitations of many hearts may be revealed." And Ecclesiasticus 8: "If perchance this cogitation of your heart be remitted to you." In which and in many other places by cogitations of the heart Scripture understands not only the operation of the intellect, but as it is conjoined to affection and intention. Therefore, when Scripture attributes to God alone the searching of the reins and hearts, or the cogitations of the heart, it does not understand only the consideration of the intellect according to its substance (*substantia*), but the affection from which that [consideration] proceeds, or of which it is the cause. For there are innumerable testimonies of Scripture, by which under the name of heart the will itself is signified. Wherefore the secret of the heart will be that affection of the will. Proverbs 4: "With all watchfulness guard your heart." Ecclesiasticus 8: "Do not entrust your heart to every man." And chapter 12: "In the mouth of fools

is their heart; in the heart of the wise is their mouth." But the heart which the wise man bids to be guarded, and not to be opened to every man, etc., is plainly the interior affection of the will. If, therefore, we were to say that the secret of the heart is reserved to God, that is, the free affection of the will, even if cogitations were known, insofar as they are certain intellections and knowledges, it would seem that satisfaction is given to the Scripture asserting that to God alone the cogitations and secrets of hearts lie open: for it understands the cogitations themselves according to the end to which they are directed, or from which they proceed.

For greater clarity in this matter, it must be noted that there is a twofold kind of operation in the will: one is about an object which does not move the will necessarily as to the exercise, but only freely; yet it is sometimes elicited necessarily and naturally from inattention or defect of cogitation on either side. But there is another kind with respect to an object toward which the will is borne necessarily as to the exercise, such as in us is the affection of love toward God clearly seen; and in angels also in the state of wayfarers (as some think) the love of their own self and of God as an ultimate natural end: whether this is true, we shall say in its place. If we speak of the former kind of affection, according to this opinion it would have to be said that every affection of this sort is unknown and hidden to an angel: because of itself it belongs to the genus of free [acts], although by accident, through a defect of full consideration, it may be elicited naturally and necessarily on either side. For, as we shall show more at length in chapter, question 71, article 6, one and the same affection of the will, altogether unchanged in itself, can be successively free and necessary, solely by an extrinsic denomination arising from attention or from the inattention of reason. But this extrinsic variation is not sufficient for the same substance of the affection, remaining unchanged in itself, now to be able to be known, now not to be able to be known: wherefore the same entity, unchanged in itself, ought always to be compared with the intellect in the same way. Therefore, since it must be maintained in accordance with those things which we have deduced from Scripture and the Fathers, that free affections of the will of one angel, or of a man, cannot be known by another angel; the same must be said of those [affections] that are natural and necessary by reason of mere inattention, which we have called in the first place: but on the other hand, it must be said that affections which by their nature are natural and necessary as to the exercise with respect to such an object, are always known by any angel whatsoever; because, according to the doctrine of St. Thomas and of others who follow the common opinion, as we reported in the preceding disputation, only the free affections of the will are hidden from angels.

By the same reasoning it would have to be said of acts of the intellect, insofar as they are cogitations according to their substance, whether they are elicited freely from full consideration, or naturally and necessarily from inattention, that they are known to angels: because they are always of the same nature. If, therefore, they are once known, they will always be able to be known, whether they are elicited naturally or freely.

But someone will object. The first movement of the will naturally follows from the impression and motion of the appetitive power in us, even if its nature is not necessary but can be elicited freely: therefore, since the demon and the angel know the motion of the appetitive power, they will also know the affection of the will with respect to the same object.

It is answered: An angel rightly infers from the sudden motion of the appetitive power even the motion of our will, since he knows that in sudden motions without liberty the heart of man and the will are touched: yet from this it does not follow that he intuits the very affection of the will as it is, but that he deduces it from manifest conjecture, and so he will not be able to know whether such an affection is from the will. But if he were to know it properly and by an intuitive knowledge, he would always be known evidently by an angel. The things which we have set down thus far do not lack probability: which, if they were admitted, we could easily assign below the mode of speech among angels according to this doctrine. If, however, someone contends that even the cogitations themselves, insofar as they are cogitations, are not known by angels, as to the speech of angels one would have to philosophize in another way, as we shall say below. Moreover, in a matter very difficult and far removed from our sense it has been enough to have proposed the various opinions of others; but in the meantime to prejudice nothing, and to leave entire to the judgment of other more learned men what is truer in this controversy, I have prudently determined.

Objections against the foregoing opinion

Against the things which we have said about cogitations of the intellect, someone could argue first in this way. If one angel knows what another angel or a man is thinking, and whether by his cogitation he affirms something or denies it, finally if he intuits the very cogitation, he will without doubt know first what he is thinking more intensely and more efficaciously: and since the affection of the will always follows intensity and the more perfect cogitation, the whole secret of the heart of one angel, or of any man whatsoever, will be known to another angel. Then, since the sin of infidelity consists in an error of the intellect against the faith, it will also be known by any angel whether a man falls into the sin of heresy

I answer: Neither [conclusion] is gathered from the foregoing doctrine. Not the first: because although a man, and an angel also, always follow with their affection the more efficacious and more express cogitation, this is to be understood thus, that whenever the affection is moved, it follows the more express and more efficacious cogitation; not, however, that the affection cannot fail to be moved by it: for it can resist any cognition whatsoever; therefore the angel does not know whether our will consents to the more intense cogitation or does not consent. Add also, that not every more intense cogitation moves the will, but that which with a certain peculiar expressness proposes the object in a certain proportion with the will; which proportion and expressness the angel cannot know and penetrate. Nor does the further inference follow which was added: because although the sin of infidelity is consummated in an error of the intellect, and the angel would know this insofar as it is a certain false enunciation in the intellect; nevertheless, since it also requires the consent of the will for it to be a sin, and this is not known to the angel, it clearly follows that an angel cannot know for certain the sin of infidelity in a man. However, from an excessive delay in thinking against matters of faith, and from other conjectures taken from sense and imagination, he can discern that a man has fallen into heresy: for all that, he never intuits the affection of the heart as it is, but only gathers by conjecture more or less certain.

Then someone could object St. Augustine, who, since in the book On the Divination of Demons he had said that the demons sometimes know the dispositions of men not only uttered in voice, but even conceived in cogitation, when certain signs are expressed in the body, retracts that in book 2 of the Retractations, chapter 30, as if he had said that with a rather bold assertion.[1566]

I answer: Augustine did not retract this, as though he judged false that cogitations and dispositions of men are known by demons from some effect; but [he retracted it] because he judged it uncertain whether in the body itself certain signs are expressed by which the internal dispositions of men are known. Augustine's words are: "That these things come to the knowledge of demons has been learned also through some experiments; but whether there are certain signs from the body of those thinking, sensible to them but hidden from us, or whether by another way and by that spiritual [way] they know these things, either it will be found only with great difficulty by men, or not at all." Therefore Augustine only thinks it difficult whether...[1567]

Objections against the preceding opinion

It is objected. First objection. Against what we have said concerning the cogitations of the intellect, someone could argue first in this way: If one Angel knows what another Angel or a man is thinking, and whether by his cogitation he affirms something or denies it, finally if he beholds the cogitation itself, he will undoubtedly know first what the other inwardly thinks and more efficaciously; and since the affect of the will always follows the intension and the more perfect cogitation, from that he will certainly know the affect: and thus the whole secret of the heart of one Angel, or of any man, will be known to another Angel. Then, since the sin of infidelity is in an error of the intellect against the faith, any Angel whatsoever will also know whether a man lapses into the sin of heresy.

I answer: Neither of these is gathered from the doctrine set forth above. Not the first: because although a man's more intense cogitation is more expressed, it does not follow that our will's affect is always moved in proportion to the expression of the cogitation, nor that the affect of the will consents to the more intense cogitation, or does not consent. Add also that not every more intense cogitation moves the will, but those that propose the object with a peculiar determination and proportion in respect of the will - a proportion and expression which the Angel cannot know and penetrate from the cogitation alone as it is in us; and therefore that which was being inferred does not follow.

Nor does the second follow: for although the sin of infidelity is formally in the error of the intellect as enunciating something false, nevertheless since it requires the consent of the will, if this consent of the will be not known to the Angel, it is plain that the Angel cannot certainly know the sin of infidelity in a man; but only by conjecture the more, from overlong dwelling in the cogitation concerning matters of faith, and from other conjectures taken from the disposition, he can discern that he has fallen into heresy: yet by conjecture only, rather than by certain knowledge.

1566. St. Augustine, De divinatione daemonum; Retractationes II, c. 30.
1567. The quotation is from St. Augustine, Retractationes II, c. 30.

Second objection from the words of St. Augustine in the Retractations. Then someone could object St. Augustine, who, whereas in the book On the Divination of Demons he had said that demons know not only men's dispositions, but also the cogitations conceived in their heart, when certain signs are expressed in the body, retracts that in book 2 of the Retractations, chapter 30, as though he had said it with a bolder asseveration.

It is answered: Augustine did not retract this because he judged false that cogitations and men's dispositions are known from some effect; but because he judged it uncertain whether in the body itself certain signs are expressed by which the internal dispositions of men are known. Augustine's words are: "That these things come to the knowledge of demons has been learned also through some experiments; but whether there are certain signs from the body of those thinking, sensible to them but hidden from us, or whether by another way and by that spiritual way they know these things, either it will be found only with great difficulty by men, or not at all." Therefore Augustine thinks that sensible signs in the body are given, by which Angels discern cogitations and the secrets of hearts; and this alone he says he had affirmed with a bolder asseveration.[1568]

In what way the Angels speak among themselves

Disputatio CCXI - One Angel's speaking to another is undoubted. cap. 1.

One Angel's speaking to another by impressing into his mind the cognition of the object known by himself, is maintained by Scotus. cap. 2.

Scotus's opinion is refuted. cap. 3.

Some have judged that one Angel speaks to another by impressing upon him the species of his own cognition. cap. 4.

The preceding opinion is confuted. cap. 5.

The reasons for the foregoing opinion are dissolved. cap. 6.

Ockham and Gabriel held that Angels speak among themselves in such wise, that one impresses the cogitation of his concept into the mind of another Angel. cap. 7.

Cajetan and Capreolus said that one Angel speaks to another by this alone, that he wills his secret to become manifest to him, without any other change in himself. cap. 8.

What Durandus held. cap. 9.

Aegidius and others held that angelic locution is effected by certain spiritual signs, which are not concepts and intellections. cap. 10.

Others judge the locution of Angels to be the word of the mind, or some intellection. cap. 11.

The arguments against the preceding opinion are resolved. cap. 12.

1568. St. Augustine, De divinatione daemonum 6; Retractationes II, c. 30.

Caput I - That Angels speak among themselves

Although St. Thomas below, in question 107, disputes about the locution of the Angels, nevertheless it is not amiss for me to examine that whole question in this article, and to gather into one whatever is worthy of note concerning the locution of Angels. Now among all the theologians it is without controversy that Angels speak, mutually expressing to one another their concepts and the secrets of hearts; although, as to the mode whereby they effect this, there is no small dissension among them.

It is proved first from Scripture that Angels speak mutually among themselves. Thus in Zachariah 2 it is said: "And the Angel who was speaking in me went forth, and another Angel went forth to meet him, and he said to him."[1569] In Apocalypse 7: "One Angel cried out to the four others, saying: Do not harm the earth, or the sea," etc.[1570] Moreover, Daniel and Micaiah saw Angels speaking among themselves, as is frequently recounted in their prophecies. However, since in these places the Angels appeared to the prophets and to John in the form and figure of a man, someone could say that that speaking was not spiritual, but with voices formed in the air, as though they had spoken. But since these bodily locutions in assumed bodies signify to men the spiritual locutions by which Angels speak among themselves, from these same places it is not obscurely gathered that Angels are able to speak among themselves; for if they did not spiritually speak among themselves, in vain also would they discourse in assumed bodies, or appear as discoursing.

Furthermore, this is plainly gathered from 1 Corinthians 13: "If I speak with the tongues of men and of Angels," etc. On this passage St. John Chrysostom, homily 32 on that Epistle, thus writes: "He says the tongue of Angels, not because he assigns a body to spirits; but, if I speak those things which they use among themselves."[1571] Theodoret, Ecumenius, and Anselm follow this sense of Paul, where they acknowledge that Angels speak among themselves and mutually manifest the secrets of their heart. St. Basil also in the homily on the beginning of the Gospel of John, about the middle, says: "For the Apostle indicates to us that even Angels have their proper language, when he says: If I speak with the tongues of men and of Angels." St. Ambrose too interprets Paul's places in the same way in his commentaries on that Epistle: for he says, "To speak with the tongues of Angels is to have known spiritually an angelic motion; that is, the secret of the heart."[1572]

But Theophylact, in the commentaries on that place, although he concedes that Angels speak among themselves, and that their language is the intellect, whereby they communicate divine meanings to one another, nevertheless explains Paul's sense with these words: "Nor did he say that Angels have tongues; but, wishing to express something better and more excellent, that would surpass human tongues." We could therefore interpret Paul in that place so, that his sense would be: If I speak with the tongues of all nations, nay also of Angels, if such there be, that is, if I speak with some more sublime language than human, but have not charity, etc. This sense seem to have

been followed by St. Jerome, Primasius, and Sedulius in that place. We could also explain that place concerning the language of Angels with Gagneius, as the most eloquent tongue named by the Apostle, in the same way that a fair face is commonly called an angelic face; and in Acts 12, when Herod, clothed in royal apparel, delivered a harangue to the people, all cried out, saying, "The voice of a god and not of a man"; in which sense Prosper, adducing this place of Paul, says in the Epistle to Demetrias: "For indeed it is possible that a manifold skill in speaking should reach not only to all the art of human eloquence, but even to that of the angelic tongue," etc.[1573]

But however you interpret this place, from Scripture it is manifest that Angels, by mutual speech, disclose to one another the secrets of the heart, as clearly appears from the testimonies adduced above.

Besides the testimonies of the Fathers brought forward, Augustine first plainly teaches this in the book On the Divination of Demons, chapter 6; for of the demons he thus speaks: "If they announce anything concerning that disposition of God, they hear in order to announce," etc.; therefore, since he says that they hear, he clearly holds that others also speak to them; for only the Supreme Angels are illuminated immediately by God, and they hear according to the doctrine of Pseudo-Dionysius, which we shall adduce in disputation 216, chapter 1.[1574] Next, St. John Damascene in book 2 On the Orthodox Faith, chapter 3, toward the middle, says of the Angels that they communicate their thoughts and counsels among themselves without having need of ears, but making use of the aid of speech: when he says that Angels do not need a tongue nor ears, he understands bodily ones. For since he says that they mutually communicate their counsels, he must concede to them of necessity spiritual tongues and ears. Finally, if that is true which Pseudo-Dionysius teaches (whom in those disputations 216, chapter 1, and 217 we shall cite), namely, that inferior Angels are illuminated by the superior, from whom new mysteries are known, and that which Isidore teaches, book 1 On the Supreme Good, chapter 10, namely that inferiors obey the superiors, it necessarily follows that they speak among themselves; for neither illumination, nor command and authority, can be without some locution being employed.

Finally, the same truth is confirmed by reason. For if Angels did not speak among themselves, there would be no society among them, nor could it exist; for this is prepared by communication, and without it cannot stand. But to say that Angels are not capable of society is absurd: for the natural aptitude for society seems to be the property of rational creatures; or else we must fall into another, greater absurdity, to say that Angels have no need of communication and speech, because all the secrets of one are manifest to any other - which in the preceding disputations we have shown to be false. The whole difficulty, therefore, of the proposed controversy consists in explaining the mode by which Angels speak among themselves. In which matter to be elucidated, the scholastic doctors are established in such variety that to rehearse the opinions of individuals and to examine them singly, as is fitting, cannot be done without prolixity. Yet, that the minds of

students, to whom it is pleasant to dispute about hidden things, may be exercised, and that the truth itself may be better elucidated, we have thought it worth the effort to pursue not only what is proved by us, but also what is said by others.

Caput II - That one Angel speaks to another by impressing into his mind the cognition of the object known by himself, as Scotus maintains

It did not seem out of place to me to set down in the first place the opinion of Scotus on this matter, and to expound it according to his manner of speaking; for other opinions, as rivulets from a fountain, are derived in part from it. He therefore asserts that one Angel speaks to another by this very fact, that he impresses into his intellect the intellection of the same object which he himself knows; and he calls the intellection impressed by one Angel into the intellect of another locution, insofar as it is the effect of the Angel impressing it; and he calls audition, compared with the Angel who receives it. Thus he teaches in the Second Book, distinction 9, question 2, in the disputation "To this question", and in "As to the manner of life." But, that we may understand this opinion according to the mind of Scotus, certain things from his doctrine must be noted.

First, that the intellection of some object in an Angel can occur in four ways: first, when the thing is intuitively known in itself. Second, when it is intuitively known by one Angel, then by the intellect of another knowing it. Third, it is abstracted through a species imparted to the Angel, or acquired: but none of these intellections in an Angel is audition or locution, because any one of them is from the object or from the species, or even proceeds from the intellect of the Angel understanding by it, as from an efficient principle. Fourth and finally, one Angel can so know some object, that he receives the intellection of it from another Angel as from an entire efficient cause; and he who receives it understands by it, doing nothing toward it; and this he calls audition with respect to the Angel receiving it and understanding by it; but it is locution with respect to the Angel efficiently causing and impressing it.

Second, according to the same Scotus, it must be noted that the efficient principle of this cognition in the mind of one Angel - which is locution and audition - is not the intellection existing in the intellect of the speaking Angel, but the intelligible species impressed, and the memory of the speaking Angel constituted in first actuality for understanding, that is, a potency by reason of the impressed species for eliciting intellection. And, in Scotus's view, this memory is one and the same subsisting intellectual principle, remaining alive indeed in the speaker himself, but passing over to the intellect of the Angel who hears; and with respect to him who receives, it is merely a passion. Moreover, the cognition actually existing in the mind of the speaking Angel is not the cause and principle of the cognition existing in the mind of the hearer; Scotus proves this, because actual intellection does not have the ratio of parent, as memory has; therefore rather memory and the species of the speaking Angel produce intellection in the mind of the hearer than the speaker's actual intellection does. According to the doctrine, therefore, of Scotus, the intellection in the mind of the Angel who hears is of the same object of which is the intellection in the mind of the speaker;

and it depends on the will of the Angel speaking, just as the intellection remaining in his own intellect depends on it. For as he has power to use that species to elicit a cognition which remains in himself, so also to bring about cognition in the intellect of the hearer.

Third, it is to be noted how an Angel who speaks to another can operate in three ways in the intellect of the hearer: first, by producing the act of intellection without imprinting a species. Second, by producing the species and the intellection together. Third, by producing only the species.

He speaks in the first way (says Scotus) when one Angel speaks to another Angel about a thing already known according to a habit of understanding: when the intellect already had the species, the Angel who speaks then produces only the intellection in the intellect of the hearer; for since he who hears already has the species, a new, other species cannot be impressed in that intellect concerning the same object, because several species concerning the same object cannot be in the intellect of the same Angel.

In the second way a superior speaks to an inferior, when he manifests something to him about which the inferior has no species and of which he had no previous knowledge: because then, as far as the inferior who hears is concerned, both causes must concur, namely, of the species and of the cognition; and the Angel superior who speaks to him can imprint both, and, consequently, thus speak to the inferior as to communicate to the intellect of the hearer both the species and the cognition together. This, however, in such order, that the intelligible species be first produced in the intellect of the hearer, and, after he has it, the Angel who speaks produce the intellection; for intellection is derived from the species as from its basis: the intellection, indeed, impressed in the intellect of the hearer by the Angel, is effected from the species together with the intellection of the Angel speaking, as from an intelligible light which shines, as is the intellection which the Angel who speaks has.

In the third way one Angel speaks to another, by imprinting in him only the intelligible species; because he does not wish to imprint the cognition, but only the species of the same object which he himself considers. In this way the inferior speaks to the superior when the superior did not have the species of that object which the inferior considered and wished to manifest (for if otherwise he had the species, Scotus would not concede that in the intellect of the superior a species of the same object could be produced); and this when the superior Angel is intent and actually considering something else: for then the inferior can imprint the species of the object which he himself knows in the intellect of the superior, but cannot produce the actual cognition of it, lest he distract the intellect of the superior from the consideration which he has and to which he is attending; yet if the superior were to speak more intently, even if the inferior were distracted in the consideration of another thing, he could not hinder the effect.

... and further, the superior is able not only to imprint a species, but also an actual consideration of the object which he himself considers and is able to express; because, by reason of the more perfect nature which he has, the superior has the power to hinder the inferior from the thought and consideration in which he is engaged, and therefore can imprint a wholly different one. But the

inferior angel, who speaks to the superior and cannot imprint an intellection but only a species, Scotus compares to a man speaking with his voice to another who pays no heed to the things that are being said, because his mind is distracted with the consideration of another thing. This is the whole doctrine of Scotus - though dispersed rather than set in order - which can be gathered from the question alleged Ad v. ... ad vlt. ... of the later ones. From these it is clear that, in his view, for one angel to speak to another is nothing else than to imprint an intellection of the same object in the intellect of the hearer.

Scotus proves this opinion, thus explained, in 9. Ad quaestionem: because he who speaks to another, if he could, by the very fact that he speaks, would proximately produce in the intellect of the hearer the concept and intellection of that matter about which he speaks; but men, on account of their imperfection and defect of power, while they speak with their voice, are only remotely - namely, by the uttered voice - the cause of the concept and thought in the hearer. Now an angel can proximately produce the cognition of the same object in the intellect of the hearer, because every agent constituted in first act can operate, and produce its effect, in any subject capable and suitable; but the angel who speaks is constituted in first act for producing intellection, and the angel who ought to hear is capable of such an intellection: therefore the angel who speaks can produce an intellection in the intellect of the hearer, and accordingly speak with another in this way.

Caput III - The opinion of Scotus is refuted

Greg. more at length refutes this opinion of Scotus, cited below; and first he proves false that which Scotus taught in the first place, namely, that one angel can see in the mind of another some thing (as he says) intuitively, after first seeing the cognition in that other's mind: for, as we have at length shown above,[1575] it is impossible through a medium first seen to see something else, unless in that medium there is the whole ratio of the other thing; and thus, through a previously seen cognition of another object, the object of that cognition cannot be clearly seen. But since Scotus himself has also handed down this doctrine in Quodlibet 14, as we there said,[1576] I think that in the place above alleged he did not teach what Greg. imputes to him; indeed, in the question cited Ad VI lectoris, toward the end he plainly teaches that, from the fact that an angel sees the vision of some object in the mind of another angel, he also in a certain manner sees the object of that vision; when he said, "In a certain manner," he clearly indicated that he does not behold clearly the object of that vision as it is.

Passing this over, Scotus's position, as to the remaining points which he teaches about the locution of angels, must be impugned.

1575. See above, Disputatio 38, cap. ..., where it is shown that it is impossible, through a medium previously seen, to see something else unless the whole ratio of the other is in that medium.

1576. Scotus, Quodlibet 14, as cited there; he says one sees "in a certain manner" the object of the other's vision.

First, because it is false that an intellection, which is a vital action and essentially depends upon that in which it exists - he who is said to understand through it - can be produced by one angel in the intellect of another, as we showed elsewhere;[1577] therefore one cannot speak to another by producing, in the intellect of the other, the cognition of that object which he himself knows.

Second, even if it were possible that an angel as well as a man should understand by an intellection which they did not produce in themselves but received from another, nevertheless it is still false that an intellection can be produced by one angel in the mind of another: for the common sentence of the Scholastics, in I, dist. 8, is that the soul of a man cannot be changed by an angel except only through the mediation of the imagination; and that not even the imagination itself can be changed by the impress of a quality, but only by the application of some agent, or at least by some motion according to place, whereby the humors of the human body can be stirred.[1578] On what foundation, then, could Scotus affirm that one angel is able to produce in the intellect of another an intellection and cognition?

Third, even if an angel could effect this, nevertheless on that account he would not be said to speak to him whose intellection he imprinted: for to produce an intellection in someone is rather to bring it about that he understand, than to speak with him. For to speak to another is not properly to bring it about that he understand the same thing which I also understand, but to explain to him my concept about that thing, that is, to make him understand that I have it in my mind. If, then, one angel were to speak to another by imprinting in him an intellection, as Scotus said, he would have to imprint the intellection of his own proper intellection, and not only of the thing which he himself understands. For if he imprinted only the intellection of the object which he himself also understands, not imprinting the knowledge of his intellection, another could not discern who was speaking to him: for he would only know the thing known by another, but would not know the intellection of the speaker. But if Scotus were to say that one angel imprints not only in the intellect of another the intellection of the same object which he knows, but also the knowledge of his own intellection; he would consequently have to assert that the principle imprinting in another angel that knowledge is not the intellect of the speaking angel together with the species, but the intellection existing in the mind of the speaking angel. For an intellect together with the species of the object can only be a principle for effecting the cognition of that object, either in the angel himself, or in another, if one could produce knowledge in another. If, indeed, the intellect together with the species of the object is not the principle of reflex cognition in the selfsame angel, and of the knowledge by which he knows that he understands, then, a fortiori, it cannot be the principle for producing in the mind of another the knowledge of his own intellection. Whether, however, the cognition existing in the mind of the speaker can be the principle of knowledge in the mind of the hearer, so as to produce it, we shall say in cap. 5.[1579]

1577. Cf. 1.2, quaest. 3, art. 1, where it is shown that intellection is a vital action essentially dependent on its subject.

1578. See the common Scholastic sentence on I Sentences, dist. 8, that a human soul cannot be changed by an angel except through the imagination, and that even the imagination is not changed by an impressed quality, but only by the application of some agent, or at least by some local motion stirring bodily humors.

1579. Below, cap. 5.

Fourth, this reason militates against Scotus's position. If one angel can by the power of his intellect and of the species which he has of the object imprint in another's mind the cognition of the same object, and in this way speak to him: he could effect the same also in our soul joined to the body, just as also in the separated soul. For the conjunction with the body and the body itself seem to offer no obstacle by which a spiritual intellection should not be produced in the soul. But who would dare to say that angels or demons speak to us thus? Therefore it is a sign that angels do not speak to one another in the way Scotus thought. And that the same reason holds for the separated and the conjoined soul we shall show more fully below in cap. 5. Moreover, either our separated soul could not speak with an angel; or, if it could speak, it could imprint in him the knowledge of the same object which it knows. But if, when separated, it could, then it could also when conjoined; because the same reason obtains for it in each state, as we shall say.

Fifth, Greg. argues thus: Since the angel who hears sees in the intellects of many angels the species of the same object of which he himself receives the impressed knowledge, whence can he discern that it comes from this rather than from that one? And if he cannot discern this, he will not be able to know which of them is speaking to him.

Sixth, that which Scotus teaches in that question alleged, 9. Ad argumenta secundae quaestionis, ad primum, does not please me, namely, that one angel can speak to another in the manner explained above, although his thought be to him [the hearer] known through itself, and the object of it likewise. This does not please me: for although one could properly speak to another, to whom his thought is known, by explaining to him his mind (as we daily speak to God, to whom our whole heart is open), nevertheless, if speaking takes place in the manner Scotus imagines, one angel seems to speak fruitlessly to another to whom the same object is known. For what does it matter if an angel imprint the knowledge of the object which he himself knows upon another angel to whom that object was already known through itself, and he understand the same thing by two cognitions, one elicited by himself, the other impressed by the speaking angel? Nay rather, if Scotus were to be consistent with his statements, he would have to aver that this is in no way possible. For on that ground he himself said that an inferior angel cannot speak to a superior who is understanding another thing, because he could not imprint on him the knowledge, since two knowledges cannot at the same time be in the same intellect. But I do not see why two different knowledges of different objects could be together, but of the same object they could be: since the one must be elicited by the intellect, the other only received in it, as is clear from what has been said.

Lastly, if what Scotus teaches were true, namely, that an inferior angel cannot speak to a superior when the latter is distracted and is not thinking of the same thing as the inferior, it would follow that the inferior could rarely speak to the superior - which is absurd: for it rarely happens that both think of the same thing at the same time.

As for the argument by which Scotus confirms his position, it is easy. One must answer, therefore, that the intellect of one angel, furnished with an intelligible species, is a sufficient principle of producing cognition or knowledge in itself, not in another: because it is only a principle of immanent and vital actions. By the same reason the intellect of the angel who hears is the cause ...[1580]

Caput IV - Statement and confirmation of the opinion

Some hold that one angel speaks to another by impressing in him the species of his own cognition (species intelligibilis).

A view akin to Scotus's is the opinion of certain more recent authors, who think that the speech of angels takes place in such a way that the angel who speaks, at his own will, impresses upon the intellect of the hearer not the cognition and knowledge of the object which he himself knows, as Scotus said, but the species of the knowledge which he has about some thing, so that he manifests to the other not only the object, but also the concept (conceptus) which he has about the object. And they say the same regarding the affection of the will, namely, that one angel, at his own will, produces in the mind of another the concept of his own will. Accordingly, on this view hearing is not the same operation as speaking, only considered under a different aspect, as Scotus had said; but speech is the impression of an intelligible species in the mind of the angel to whom the speech is directed, whereas hearing is the knowledge produced by the intellect of the recipient from that species and by the power of the species received in him.

The more recent writers who follow this opinion think they have as its patron Richard in II Sentences, distinction 9, article 2, question; yet he does not entirely agree with them. For he teaches that the species which the speaking angel produces of his concept is not received as in a subject in the intellect of the hearer; but that the angel who desires to speak draws forth, from a certain spiritual ray connatural to himself, a certain species of his concept, and transmits it by means of that spiritual ray to the intellect of the other angel to whom he has decided to speak. He says that this species always remains in that transmitted ray as in its subject, and in it is made present to the intellect of the hearer, so that the angel who is to hear uses it as an instrument, in order that from it he himself may elicit another [species], and infuse it into his own intellect, by which, now constituted in first act, he may elicit the knowledge of the concept existing in the mind of the speaking angel. And because it is in the power of the speaking angel to extend this spiritual ray with the species as far as the intellect of the hearer, therefore one angel can speak to one angel in such a way as not to speak to another, because he can, as he pleases, extend that spiritual ray to one angel and not to another; whence it will come about that one hears, but the other does not hear.

This opinion can be confirmed, first, because speech with all that is necessary for it cannot take place unless some change is made in the intellect of the hearer. Now for speech the first thing necessary is that the speaker make the hearer attend. Add that one angel can speak to another such

1580. segment.

that others do not hear; and all these things require some special change in the mind of the hearer. No more fitting kind of change can be assigned than the manner explained, as will be clear by induction; therefore let us philosophize about angelic speech on that basis. Next, one angel hears another speaking, and knows his concept, in a nobler way than one man understands the mind and the secret of heart of another man who is speaking - who would doubt this? Therefore, since a man, when he hears another man speaking, knows the secret of the other only with abstract knowledge and through alien species, an angel ought to know the mind and concept of another angel who is speaking with proper knowledge, as they say, quidditative and intuitive; and so he ought to have a proper species of it. But he does not have this from the beginning of his creation, otherwise he would know the concept of the other and the secret of heart without the other speaking to him and revealing it, which is absurd. Nor should one say that God would be at hand so that, as soon as one angel should speak and wish to manifest his concept to another, He would infuse into him the species; for this would be said gratuitously and without any probable foundation. What remains, therefore, is that the angel who speaks produce in the mind of the hearer a certain species of the knowledge which he has in his own mind, by which he may unfold his concept to him. For no other fitting way seems to remain for us to say that one angel speaks to another.

Præcedens opinio confutatur:

Caput V - Refutation of the foregoing opinion

The aforesaid recent authors seem to have been led to this opinion for this only reason, that they judged every other way of philosophizing about this matter to be full of difficulties; while this one would appear plausible and at first glance easy; whereas in truth it is no less entangled with difficulties, as we shall show in this chapter, where at the end we shall also briefly refute Richard's way of philosophizing.

First, therefore, against the aforesaid opinion common reason contends. For from the common sentence of the theologians with St. Thomas, below, question 110, article 3, an angel cannot change a corporeal creature as to the least genus of quality, but he can imprint upon it only local motion, as we shall say in Disputation 218, chapters 1 and 3; therefore much less will he be able to communicate an intelligible species to a spiritual creature.[1581] Next, St. Thomas also teaches below, question 110, articles 1 and 2, that one angel cannot act upon the intellect or the will of another; and this is the common sentence of the theologians, as we shall see in that disputation: therefore, in the same manner, one angel cannot speak to another.[1582] The adversaries, however, reply that indeed one angel cannot, by the mere command and nod of his will, imprint anything other than local motion, nor can he move the intellect and will of another; but that he can imprint a likeness and intelligible species in the mode of an object. Yet, besides the fact that this solution seems devised only to make an escape, it will be clear from the second reason that it has no weight.

1581. St. Thomas, below, q. 110, a. 3; and see Vazquez, Disputatio 218, cap. 1 and 3.
1582. St. Thomas, below, q. 110, a. 1 - 2.

The second reason against the same opinion is as follows. If one angel could imprint upon another the species of his concept and of his will in the other's intellect, either he would do this by the mere nod and command of his will, assuming nothing else as a principle for producing it; or he would do it by a command of his will, with the cognition and affection which he has being assumed as the principle from which to produce it. He cannot do it in the first way, as the adversaries plainly admit; otherwise it would follow that one angel could, at will, change the intellect of another angel in this or that way. Nor can he accomplish it in the latter way, namely, by his own intellection and affection as by an object producing the species of itself. For cognition existing in the mind of one angel and the affection existing in the will, if they produce anything of themselves, produce it naturally and necessarily, and in such a way that it is no longer in the power of the will to restrain the intellection or the affection, once produced, from producing anything of itself. For these qualities do not lie subject to the command of free reflexive will so as to produce this or that, in this or that manner. By this reasoning, since habits (habitus) are produced by acts as by their proximate efficient principle, the will cannot, just as it pleases, forbid or bring it about that its act, or an act of the intellect, once produced, should not produce a habit. Indeed, the will could refrain from eliciting an act within itself, and impede the intellect from eliciting one; but once such agents are produced, as they produce something of themselves, assuredly they produce it naturally and necessarily, nor do they stand in need of a new mandate of liberty and will. Hence, according to the opinion of these authors, it would follow that the secrets of hearts, by that very fact that they are, would naturally and necessarily be manifest to all the angels; nor would their manifestation depend upon a new choice of the will of him whose they are, but straightway of itself would produce a species in the mind of all the others; because there would be no greater reason why they should produce their species in the intellect of one angel rather than in the intellect of another.

The adversaries reply that the concept existing in the mind and the affection in the will of one angel do not, of themselves and naturally, produce the species of themselves in the intellect of another angel; but do so insofar as it pleases the angel to whom they belong, because he uses them, when he wills, for the production of the species. For we do not make use only of our powers when we will, but also of the habits and qualities existing in us; indeed, we employ species and habits at the discretion of our will. But this reply can easily be refuted, because we do not use everything that is in our power whenever we will, but only those things which our natural faculties, which are by their nature subject to the liberty of the will, use for acting - such as species and habits. For these do not operate of themselves, nor can they produce any effect, but only together with the faculties with which they are conjoined and to which they are assigned as assisting principles. A species does not operate except with the intellect; likewise a habit does not operate except with the intellect, or with another faculty which it renders apt for acting. And since the faculties themselves are naturally so constituted and connected with the will that they are moved by it, it follows that we also use species and habits at the discretion and liberty of the will.

But all the other effects which we know to be produced by our acts alone, whether of the intellect or of the will, do not proceed from some native faculty of ours; rather, they are produced in us by nature in such a way that it does not depend on the liberty of our will whether they be

produced or not from such a principle, although it is within the power of the will that there be such a principle from which they spring. Thus habits, which are generated and effected in our faculties by acts, proceed so naturally from the acts that the will cannot hinder an act from producing a habit or a disposition - though it can freely elicit or command an act which will generate the habit or disposition - for this sole reason, that the act is the complete cause of producing the habit, and does not produce it together with some native faculty of ours that lies under the free power of man. Likewise, effects which are naturally imprinted upon our body by acts of passions and affections do not lie under the election of the will, nor can the will prevent their being produced.

In the same way, if it is true (as the adversaries, unless I am mistaken, assert) that from an act of understanding in us there remains some species with respect to memory, that does not lie under our power; rather, once the act of intellect is posited, it arises naturally and necessarily. So too the multiplication of species from the external senses to the internal, and up to the intellect, takes place so naturally that it is not within our power, once a species is posited from which others are multiplied. For species do not produce other species together with natural faculties which are subject to the command of the will. For this reason, although it is commonly said that we use habits when we will, it is not said that we use acts when we will, because we do not use them at will for producing something. Therefore, if the concept existing in the mind and the affection in the will of one angel produce the species of themselves in the intellect of another, and do not produce it in cooperation with the intellect or with the will, as the adversaries admit, but are themselves the complete cause of such a species, it will not be wholly by a free choice of the will that he produces it or does not produce it; rather, the concept in the mind and the affection in the will of the angel, once produced, will thereafter of themselves naturally effect in the intellect of another the species of themselves. From this follow the absurdities which we were inferring above.

Moreover, that they may evade the force of this argument in any way, the adversaries reply that indeed habits are produced naturally by acts, and that from cognition there naturally remains an impressed species in the same object, and that the production of such a species or habit does not depend on the will of the angel or man in whom the habit or species is; because acts are naturally inclined to produce both. But, they say, an act existing in the intellect of one angel and an affection in the will are not naturally inclined to produce the species of themselves in the intellect of another; and therefore they require the command of the will of him in whom they are, so that freely they may produce such a species. Yet this solution seems no less a makeshift. For either acts of the intellect and of the will have from themselves the power to produce the species of themselves in the intellect of another, or they do not have it. If they have it, then they cannot fail to be naturally inclined to produce it; because acts of intellect and will do not have from themselves liberty for producing, but they themselves are only freely elicited; liberty with respect to acting is in the will itself. Next, the acts of the intellect and of the will are not faculties which by their nature are subject to the will for acting according to its free command. Finally, why shall we say that these acts obey the will so as to produce the species of themselves in another angel, and not so as to produce it in the very angel in whom they are? Since the power of an act of will as well as of intellect does not have liberty from itself, but is naturally inclined to produce its own species and likeness, no

reason seems to exist why we should attribute to the act of will and to the intellect what we grant to the other faculties of the soul, namely, to be subject to the will so that, by its command, it may operate that to which it has of itself a natural power; for this is proper...

It seems rather proper to the inferior faculties, which have their root in the same essence (*essentia*) of the soul or of the angel. But if we say that the act of the intellect and of the will of one angel does not of itself have the power of producing a species (*species*) of itself in the intellect of another, much less will it be able to produce it by the command of the will, as is manifest. Therefore in no way must it be said that by the command of the will a species is derived into the mind of another angel.

A third reason against the preceding opinion is no less effective, because from it there would follow that our soul could speak to an angel in this way, by impressing upon him the concept of its thought and of its will, not only when it is separated from the body, but also when it exists in the body. For since a separated soul speaks to another separated soul, as is clear about the soul of the rich man who spoke to the soul of Abraham (Luke 16), by the same reasoning it will be able to speak to another angel: nor, indeed, ought we to deny to souls this kind of life and society with the angels. Therefore, since spiritual speech, according to the opinion of these men, is brought about in no other way than by a species impressed upon the mind of the angel who hears, it follows that in the same way our soul, both when conjoined and when separated, can speak with angels. But they reply that so long as our soul is conjoined, it cannot thus speak with an angel, though truly it can when separated, because our soul, conjoined to the body, is itself impeded, so that it does not speak in that mode. Yet they must tell us what impediment that conjunction with the body can be, such that the soul cannot imprint the species of its concept or affection mentally upon another soul or angel. For it ought not to operate by means of the body, but by the power of the spiritual concept and affection alone, which do not need propinquity of place, or at least do not require contact with the body. What, I ask, can stand in the way, such that a concept existing in the human intellect, and an affection in the will, does not imprint a species of itself upon another soul or an angel, even at any distance whatsoever, if it does not require propinquity, or, if it does require it, at least at a fitting distance without any other contact such as is required among corporeal agents? For since the concept in the mind and the affection in the will are an entire and perfect cause for imprinting such a species, and each is the same in the soul when conjoined and when separated, it follows that such a species is produced either in both modes or in neither. For whenever the principle and the patient are the same, and there is no impediment either of place or of distance, the same effect follows, as is evident by induction. Led also by this reasoning St. Thomas, below, in Question 117, Article 4, said that if the soul by its own motion and command could move the body according to place when it is separated, it could also do so when conjoined, nor could its state in the body in any way impede this power of operating spiritually.[1583]

A fourth reason, from nearly the same principle, deduces another absurdity, namely this. If speech were brought about in this way, then even if the conjoined soul could not speak to an angel, nevertheless an angel and a demon could thus speak to our soul even when conjoined to the body.

And if they could, assuredly it would sometime have happened. For it would be frivolous to assert that God by his infinite power has up to now prevented demons or angels from speaking thus to men, since that would be affirmed without any foundation. Moreover, no one up to now has experienced in himself that an angel spoke to him in this way; therefore it is a sign that he cannot speak thus either.

Furthermore, from the aforesaid opinion what we said above can be inferred, and thus it is shown. For if an angel can imprint a spiritual species of his concept and affection upon another angel and upon a separated soul, by no lesser reason will he be able to imprint it upon a soul conjoined to a body: since the soul is just as spiritual when conjoined as when separated from the body, and by its own substance in the same way capable of a spiritual species when it is conjoined as when it is separated; and by that species once impressed, without any miracle, it could understand in the body without any ministry of phantasms, just as the soul of Christ, according to the opinion of all, operated by infused species.

Someone will perhaps reply (for to this point I have not read what the adversaries say) that our soul is not capable of such a spiritual impression for this present state, because as long as it is conjoined, it uses only the ministry of phantasms for understanding and for acquiring intelligible species. Yet this can in no way stand in the way, such that the soul in the body might not receive species in no way dependent upon phantasms, if there be a cause sufficient of itself to imprint them. For that our soul is tied to the senses as long as it is conjoined to the body can only impede that by its own power it acquire species in some other way than by the ministry of phantasms. Finally, the falsity of this opinion will be evident from the solution of the arguments by which it is confirmed. But before we go on to refute those, let us impugn the opinion of Richard, as we promised above.

Omitting, then, the reasons brought against the preceding opinion, which also fight against Richard, that which he imagined about that spiritual ray emitted by each angel who speaks all the way to the other who hears, can be much more easily overthrown. For either it is emitted outside the angel, like vapor or smoke from a body: and this is a fiction - first, if it be said to be a spiritual substance. For who would believe that a spiritual substance is derived from any angel whatsoever as often as he speaks, or especially that it would be created from nothing, since it would be produced according to itself as a whole, which is to be created? Or again, if it is said to be an accident: already there would be some accident outside a substance and without a subject, which is absurd. Or else that spiritual ray is an accident remaining in the intellect of the angel who speaks, so that it is only said to be transmitted to the angel who ought to hear, because it is present to him as an object - and thus to posit such a spiritual ray distinct from the concept and affection of the speaking angel, from whose power and virtue the species is drawn, is superfluous and fictitious; since it is better to say that the species is produced proxime by the affection and concept of the speaking angel, than by any other ray. Besides, what Richard adds is superfluous and imaginary, namely, that some species is produced from that intellectual ray by the speaking angel, and that it

1583. St. Thomas, below, q. 117, a. 4.

is offered to the angel who is to hear, in order that he draw from it another species. For, first, so great a multiplication of species does not seem necessary; and, next, because unless one species is received into another as into a subject, one cannot say that one is drawn from another by the angel's power. For that is said to be drawn forth from another which is received in another as in a subject. Certainly, nearly all the things that Richard has said seem to be so made up by him, that they appear more like dreams than to have any show of probability.

Caput VI - The arguments for the foregoing opinion are refuted

Now indeed it is not difficult to tear up the foundations of this opinion. To the first argument we answer that one angel cannot be compelled by another angel who speaks so as to hear, as we shall show below; whereas, however, one man, whether he wills it or not, is forced to hear another who speaks. For a man hears by the senses, which cannot but be moved by a present object; or at least, if the angel who hears is necessarily excited by the one speaking, we do not know in what manner. But I, for my part, hold as certain that by the bare impression of a species one angel can by no means be so excited by another, as the preceding opinion asserts, that he cannot but hear, that is, that he cannot but, by means of that species, actually understand. For even in the first instant of their creation the angels had impressed species of all things, according to a sufficiently common opinion; and yet no one asserts that an angel actually considered all the objects of those species: because the angel uses the infused species when he wills; and the first thought about some thing can be determined by no other agent than by God, as we shall also say below in Disputation 236, chapter 3.[1584] Therefore an angel could receive a species sent in by another angel from his concept and the affection of his will, and yet not operate by it; and hence he would not understand: and if he did not actually consider by that species, he would not hear.

To the latter argument I say that indeed one angel more perfectly understands the affection of another angel speaking to him than one man understands the concept and affection of another man; nonetheless that cognition of the angel never goes beyond the limits of abstractive cognition, which is through others' concepts: nor does any angel thus know the affection of another so as to behold his heart as it is, but only, as it were, from the report of the angel speaking. I said, the affection of the heart: for the thought and concept of the speaking angel, according to its substance, he would be able to know intimately, not by a species emitted by that one, but by the species which he has, or by the power of his intellect, and, even without species, to understand; and that sentence is true, which somewhere asserts that only the affection of the heart of one angel is hidden from another, not, however, the thought, according to substance. And therefore, until these things are made manifest to us and we are taught, we are not able to understand them.

Dixi the affection of the heart: for he would be able intuitively to know, according to its substance, the thought and concept of the speaking angel, not by a species emitted by that one, but by the species (species) which he has, or by the power of his intellect, if, even without species, he

1584. Vazquez, Disputatio 236, cap. 3.

understood other things; and that sentence is true which somewhere asserts that only the affection of the heart of one angel is hidden from another, not, however, the thought, according to substance.

But someone will ask, whether, just as we say that there are indeed species (species) of future contingent things, yet that by them future things cannot be known until they are present, in the same way we may say that there are indeed proper species of the affections and secrets of the hearts of one angel, yet that by them they are not known until they are made known by that angel to whom they belong. I answer, there is a different account. For even if we concede species of future contingents, nevertheless it does not follow that immediately the future, under the state of futurity, can be known: because, until they are present, they are not the natural objects of a created intellect, as was shown above in Disputation 208, chapter 4: but when the object is changed, even if on the part of the faculty the other requisites for understanding remain, there cannot be knowledge, as we showed there. But if an angel had the species of the secrets of another angel, although he would not understand them as future, nevertheless he could understand them as present; nor would there be need to wait for that angel, in whom they are, to reveal them: because revelation does not change the being of the thing; wherefore, if after revelation the object is accommodated, and the angel has the proper species of it, he will also know it before revelation. But not so of future things: for to be present and to be future are diverse, and they have a diverse account of the intelligible and of truth; wherefore this variation alone suffices, that under one state a thing can be known which under another cannot. We, however, therefore say that locution is necessary for the manifestation of secrets and affections of the heart, because the angel who ought to hear does not have the species of that thing, nor does he have it as his proper object, which he would be able to understand by a proper and quidditative concept, but only insofar as it is expressed by some speech and revelation; just as we too, who by revelation alone know many things among secrets which we cannot behold by a proper concept.

Caput VII - Angels speak among themselves by one angel's impressing the cognition of his concept into another's mind (Ockham, Gabriel)

That angels speak to one another by this, that one impresses the knowledge of his concept upon the mind of another angel, was the view of Ockham and Gabriel.

The third opinion is not altogether different from the two preceding, which Ockham teaches in the Second Book, question 20, and Gabriel in Quodlibet I, question 7, and again in Book II, distinction 9, question 2, article 4. In their explanation they suppose that to speak by the intellect is nothing other than to express within oneself an interior word or intellection, and to have it in the mind; but to hear by the intellect is the same as to see or to understand such a word in the mind of another: which they seem to gather for themselves from St. Augustine, On the Trinity XIV, chapter 10. This foundation laid, they assert that one angel speaks to another in this way: first indeed that one angel forms within himself the word of that which he thinks and desires, or has resolved upon; then that this thought, after the manner of an object, effects in the intellect of the other not a

species of itself, but a knowing and cognition; and when the other angel receives this, he is said to hear the word of the intellect uttered by another. This opinion agrees with the two preceding, inasmuch as it posits something derived from the intellect of the speaking angel into the intellect of the hearer: with the opinion of Scotus indeed, because he says that what is derived into the intellect of the hearer is not a species but an intellection; with the opinion of more recent authors, because it says that the impression in the mind of the hearer is made not by the intellect, but by the word produced in the mind of the speaker. But this opinion differs first from the opinion of Scotus, both because, whereas Scotus asserts that the intellection is derived into the intellect of the hearer from the intellect of the speaker constituted in first act by an intelligible species (species intelligibilis), this opinion says that the intellection in the mind of the hearer is produced by the word and intellection produced in the intellect and mind of the speaker; and also because Scotus says that the knowledge in the mind of the hearer is produced by the intellect alone and the species of the speaking angel as by a complete cause, and that the angel who hears is only passively disposed; but Gabriel and Ockham say that the knowledge in the mind of the hearer is produced by the word existing in the mind of the speaker, and by the intellect at the same time of the hearing angel, so that from these two there is one cause. Then this opinion differs from the other, the second opinion, both because that one teaches that from the intellect of the speaking angel there is not derived into the mind of the hearer an intellection but a species, which is for it the principle of intellection; whereas this opinion asserts that there is derived an intellection and cognition; and also because the second opinion affirms that the species in the mind of the hearer is produced by the intellect of the speaker freely at the arbitrement of the will; but Ockham and Gabriel teach that it is produced naturally and necessarily. And this opinion can be confirmed by almost the same reasons as the two preceding.

Nevertheless to me, in the same way as those, it is by no means proved. First indeed, because, as I showed above in Disputation 201, chapter 2, knowledge in the mind of an angel cannot be produced by an object existing outside the angel, whether it be corporeal or spiritual. Then, because on this supposition the true ratio of locution among angels cannot be defended: for locution, which is to another, ought to be free, that one may freely express and signify his concept to another; not natural and necessary: otherwise any angel would speak to any other, since, according to the opinion of Gabriel and Ockham, the concept of his mind is naturally known to another; nay, even a man would speak to any angel; it would follow also that man always speaks to God, because his concept and the secret of his heart are always known and manifest to God. Moreover, that the soul of a man, while it is in the body, can speak to an angel by naturally impressing upon him the knowledge of its concept; and conversely that an angel can speak to the soul in the same way (which is absurd), is made manifest from the things said against the preceding opinion in the foregoing chapter, nor is it necessary to tarry longer on that point.

To the argument just made Gabriel and Ockham reply that one angel cannot speak to another unless he wills, and therefore two things are required for locution, both an act of the intellect and of the will, so that locution signifies the formation of a concept in the mind and connotes the will of manifesting. However, this will is not necessary for this, that by its command and motion the act of

the intellect and the word which is in the speaker's intellect imprint its knowledge upon the hearer (for this it does naturally), but that the angel may voluntarily form a concept in himself with this intention, that it operate upon another angel. But this reply can easily be refuted. For since the word existing in the mind of one angel operates in the mind of another naturally, and not by the command or motion of the will, that intention of the angel will contribute nothing at all to locution and the expression of the concept in the mind of the other; and therefore it will in no way pertain to the notion of locution. For that will can only bring it about that the concept be expressed in the mind of the speaker; but that the same concept, once expressed, be locution, will in no wise depend on that will. It would pertain, however, to the ratio of locution, if the concept existing in the mind of the speaking angel were to produce freely and at his will knowledge of itself in the mind of the hearer; but that this depends not on the will of the angel, remains sufficiently proved in the preceding chapter.

Caput VIII - That an angel speaks merely by willing his secret to be manifested (Cajetan, Capreolus)

All the other Scholastics who differ concerning the locution of angels, by common consent conspire in this one thing against the preceding opinions, that they say one angel speaks to another with no effect produced in him. What, however, is necessary on the part of the speaker, they do not explain in the same way. Wherefore they too have divided into various opinions, which we shall forthwith recount one by one. The first of these opinions, which stands as the fourth in order, is that of Cajetan below, question 107, article 1, and of Capreolus in Book II, distinction 11, question 2, and of others whom we shall mention below; they teach that merely because one angel wills that the secret of his heart be manifest to another, it is rightly understood by him; and therefore that the ordination of this secret to another angel (as Cajetan speaks) is locution; and that the knowledge which thence is born in the mind of the other angel is not produced by the speaking angel, or by anything which exists in his mind, but that hearing is from the hearing angel alone. In support of this opinion the Holy Doctor is alleged below in that question 107, article 1; what, however, he himself says in that place, we shall see below.

This opinion is confirmed first, because it is proved that the secret of the heart of one angel is of itself hidden from another angel, as was proved in Disputation 209, chapter 10. Moreover, that this secret of the heart can, by the will of the angel to whom it belongs, be opened to another angel, no one will deny. Since therefore, as is clear from the foregoing, we ought not to say that anything is produced in the intellect of the hearer by the angel who speaks, no other way seems to remain. Cajetan confirms this next, because this very fact, that by the will of him to whom it belongs the secret of the heart is ordered to another angel, by that sole ordination of the will is among the things which pertain to another angel; but any angel can understand all things that pertain to himself; therefore also the secret of another's heart so ordered by that one's will.

Those who seem to have followed this opinion are Alexander in Part II, question 27, member 6; St. Bonaventure in Book II, distinction 10, article 3, question 1; and Albert in Part II, treatise 9, question 35, member 2; for although they assert that angels speak to one another by certain nods, nevertheless they understand those nods to be the very concept of the intellect of the speaking angel, and the secret of the will ordered by the will itself to another angel, that it might be manifest to him. Finally, according to the opinion of these men, in this way the secret of the heart is known after the will of manifesting, that it is seen not only with certitude, but also, as they say, by a quidditative and intuitive knowledge.

To me, however, to confess the slowness of my own understanding, as also to the Master Cano, a distinguished man from the Thomist school, the aforesaid opinion has always seemed difficult. First, indeed, it is difficult that by the will alone of the speaking angel the secret of the will or of the intellect, which before was altogether unknown, should be made manifest to another angel, with no change wrought in him, nor anything produced in the speaking angel himself, or in the hearer; for a thing wholly unchanged in itself stands in the same relation to the intellect now as before: for it would be marvelous if, on account of some extrinsic respect which it would receive from the will, it would become intelligible.

But someone will object that a thing is sometimes better understood on account of various media which are employed for its explication, with no change at all made in the thing itself: therefore it is not marvelous, if by reason of the will ordering the secret of the heart to another angel there is now known what before was unknown.

I answer: when a thing is not understood, or

I answer: when a thing is not understood, or is not known primarily, but by reason of something previously known, it can rightly happen that that which remains in itself unchanged is now understood and known, whereas before it could not be known or understood. Then, however, there is some change on the side of the object, at least of that which is primarily known. For this reason, from one principle known there is known that which before was altogether unknown. And the same happens if a change be made in some sign expressing the thing: for this change too is understood to have been made on the side of the known object. But in the present case, it is not so: for the will, by which an angel wills his secret to be known to another, is not a medium which, previously known either as a sign or as a medium, leads us to a cognition of the secret of the heart; nor does it change anything in the secret itself: therefore it contributes nothing to the secret of the heart being able to be known, upon the accession of that will so ordering it, when previously it was unknown.

But what Cajetan asserts, namely that for this reason the secret of the heart is known without any other change, solely because it is directed by the angel's will - since now it is among those things which pertain to the other angel to whom they are directed - matters little. Another reply to Cajetan is refuted. First, because if that will which is said to direct the secret of the heart cannot vary anything in the secret itself, it is idle to say that a secret which did not previously pertain, now thereafter pertains to another angel by reason of that will. Then also because from that doctrine it would follow that an act of hatred or of love by which one angel pursues another, is no less among

the number of those things which pertain to that other than the secret of the heart is after the aforesaid act of will: and consequently now a free act of one angel would of itself be as well known to another angel as to himself; which Cajetan and the authors of this opinion, as I think, do not grant. And if one free act, on the ground that it has another angel for its object, is known to him, by the same reasoning any other act will be known: for what does it matter that one angel's act is conversant about another angel as about its object, so that we should say that that act rather than another is known? What also does it matter that one angel's act now pertains to another angel by the mere will of the one ordering, so that what previously could not be known is now known?

From what has been said it is also clearly inferred that what Marsilius teaches is manifestly false, in the second question six, article two under the second supposition, corollary 2, namely that an angel can by his will hide a habit which he has, so that it cannot be known by another.[1585] He proves it in this way: if an angel can hide the act of his intellect and will, which are of themselves more intelligible because they have more act and less potency, then with much greater reason it must be said that he can also hide a habit which he has in himself. But since from what has been said it is established that by the mere choice of will, without any other change in the thing itself, or in the sign, or in the primary object, nothing is made intelligible which before was not, as we have proved, by the same reasoning it must be said that by the mere nod of the will it cannot be hidden. And if an act could be hidden, a habit also could be, as Marsilius infers.

Then the aforesaid opinion is refuted by this reason besides. Even if it were true what its authors contend, namely that the secret of the heart becomes manifest to an angel after the will and the ordering of the will, nevertheless in this way of opening the secret the true ratio of locution would not be preserved: for locution is not an act of will, but of intellect expressing something. Wherefore Theophylact and Theodoret, as we shall report below, rightly said that the tongue of the angels is their intellect; whereas according to the aforesaid opinion the tongue of the angels would be the will. Someone will perhaps reply that the locution of angels is the very concept which they had hidden in their mind, insofar as it is now manifest by the ordering of the will. Yet even on this account the true ratio of locution cannot be defended: for that concept, insofar as it is made manifest by the affection of the ordering will, is not the expression itself and signification which belong to the ratio of locution, but rather is the thing expressed and signified by the locution itself. Therefore by no force of a true ratio of locution can it be defended.

The reasons for this opinion can easily be dissolved. To the first we say that the secret of the heart of one angel is of itself hidden from another angel, nor can it be explained to him, or be made manifest to him by impressed knowledge, or by a species in that one's mind, as was proved above sufficiently; nevertheless, there is no need to recur to the aforesaid way of philosophizing which the preceding opinion follows: but it can be defended and explained by another, perhaps easier, way; or certainly, if no rationale of philosophizing should be available to us, in this difficulty we ought rather to confess our ignorance than to assert something without firm foundation. For the matter is most remote from sense; and therefore it is no wonder if it altogether escapes us.

1585. Marsilius, secunda quaestio sexta, articulus secundus, suppositio secunda, corollarium 2.

As to the second reason I say that both what Cajetan says is rather uncertain and without foundation: both that the secret of the heart of one angel after the ordering of the will pertains to another angel, and that all the things which in some manner pertain or are referred to any angel are known to him. For, as we said above, the hatred and love by which one angel pursues another are conversant about him and pertain to him no less than that ordering of the secret: and yet that affection of hatred and love is hidden from him about whom it is conversant.

Furthermore, as regards the mind of St. Thomas, almost all Thomists, not lightly nor without foundation, think that he is for this opinion. This is gathered especially from those things which we shall report below from the Doctor Saint in disputation 212; nevertheless, we could benignly interpret him. For he nowhere said that the secret of the heart of one angel becomes manifest to another, and is explained by speech, by the mere will of the one having it, without any other sign expressive; but in that first article, question I, q.107, in the body, he only said that the intellect is moved by the will from potency to act in two ways: first, that it may actually consider the things which it has in memory, and thus that an angel speaks to himself by command of the will, namely by an act of the intellect which is called a word; then he said that the intellect is moved by the will by the ordering of the concept of his mind to another: and thus one angel speaks to another. In which place St. Thomas does not suppose that locution is the very ordering of the will; for by this the angel does not speak to himself; but that it is the concept itself of the intellect; for this the angel speaks to himself. And by the same reason he said that the concept itself is locution to another when it is ordered to another: not because, when previously the concept had been produced in the angel and was unknown to the other angel, after the mere ordering of the will it becomes known to him, and is locution with respect to him; for not everything which is known to another, even if it be a word, is locution with respect to him, but that which is directed to him, as will be explained in chapter twelve. Therefore, from the ordering of the will St. Thomas said that the intellect is moved to speak to another, because it depends on its command that the intellect of one angel express a concept directed to another angel, which concept is locution with respect to him; just as it also depends on it that the intellect actually consider and speak to itself; and in the first reply he only assigns the difference between an angel and a man, namely that a man, because of bodily impediments, not immediately upon ordering his secret does he manifest it to another, but has need of the manifestation of an exterior tongue; an angel, however, has not this impediment, and immediately upon willing to manifest a secret, manifests it.

Whence St. Thomas does not teach that an angel, by the mere nod of his will, without any other sign, speaks to another angel. Nor did St. Thomas teach this anywhere. Rather, in II distinction 11, question 2, article 3, near the end, he clearly asserts that locution is effected by some sign which one angel can naturally know in another, namely by intellectual signs; and they seem to constitute no other intellectual sign than the very concept of the mind produced from that direction of the will which we have mentioned, as he expressly affirms in De veritate, question 9, article 4, reply to the fourth: "And if one angel shall speak to another by a sign, namely by a species, in whose act his

intellect is in order to another."[1586] In the body of the same article he taught what we have reported from other places. Wherefore St. Thomas rather seems to have handed down the opinion which we shall explain in chapter twelve.[1587]

Quid senserit Durandus.

Caput IX - What Durandus held

The fifth opinion is that of Durandus, who, while he asserts that one angel does not speak by impressing something on the other's intellect, nevertheless explains the locution of angels in this way.

First, he affirms that angels can speak to one another by some expressed voice in the air, as men speak with one another; which can only be true in assumed bodies, about which there has been hitherto no difficulty. As to spiritual locution, about which the whole controversy is, he then says: if that opinion is true which asserts that thoughts and the secrets of hearts are of themselves manifest to any angel, locution is effected by the mere ordering of the will of one to another, not because by that ordering he makes secret thoughts - or what before was unknown, since he supposes that the secrets of the heart are of themselves manifest to all - to be known; but the point will be that a concept and a secret, known to all, be directed to one angel and not to another; just as when someone in a loud voice speaks to one person in the presence of many, so that he is heard and understood by all, he is not said to speak to all, but to speak in the presence of all, to him to whom he directs the secret of his will and his words. But if the secrets of hearts are of themselves hidden from angels, says Durandus, I do not understand the way by which the mutual locution of angels can be rightly explained.

Against this opinion, however, Damascene is first opposed, De fide orthodoxa II, chapter 3 near the end; for concerning angels he says: "They are one with us, nor do they have need of ears; nevertheless they have, as it were, conferences of discourse among themselves; their communications among themselves are everywhere." By which he plainly pronounces that angels, in a spiritual manner, carry on communications with each other; and communication is the same as to explain and to make manifest. For what is of itself known to another cannot be brought out or communicated to another. And since Damascene says that this communication takes place, he clearly indicates that angels speak to each other in a spiritual mode and make secrets manifest to each other

He explains the locution of angels in this way. First, he affirms that angels are able to speak to one another with some voice expressed in the air, just as men speak among themselves: which can only be true in assumed bodies, about which up to now there has been no difficulty. But as to spiritual locution, about which the whole controversy stands, he then teaches that, if the opinion is true which asserts that the thoughts and secrets of the heart are of themselves manifest to any

1586. St. Thomas, De veritate, q. 9, a. 4, ad 4: "Et si unus Angelus per signum alii loquetur, scilicet per speciem, in cuius actu intellectus eius sit in ordine ad alium."

1587. St. Thomas, In II Sent., dist. 11, q. 2, a. 3 (circa finem); Summa Theologiae I, q. 107, a. 1 (in corpore).

angel, locution takes place by a mere ordination of the will of one toward another, not because by it he makes the secret to be known which before was unknown - for he supposes the secret of the heart to be of itself manifest to all - but because the concept and the secret, although known to all, are directed to one angel and not to another; just as when someone speaks aloud to one person in the presence of many, so that he is heard and understood by all, he is not said to speak to all, but to speak to one before all, to whom he directs the secret of his will and his words. But if the secrets of hearts are of themselves hidden from angels, Durandus says that he does not find a way by which the mutual locution of angels can be rightly explained.

To this position, first, St. John Damascene is opposed, in book II, chapter 3, a little before the middle: for he says of angels, "Not having need of tongue or of ears, they communicate their thoughts and counsels among themselves without the aid of speech." Where he plainly pronounces that angels in a spiritual manner communicate their counsels among themselves; but to communicate is the same as to explain and to make manifest: for what is of itself known to another cannot be brought forth or communicated to another. And since Damascene says that this communication takes place without speech, he clearly indicates that angels speak to each other in a spiritual mode and make their secrets manifest to one another.

Then an effective argument fights against Durandus. For if the sentence were true - as he himself supposes - which asserts that the secret of the heart of one angel is of itself manifest and known to another, there could be no locution among angels. For, as we said above, locution is an act of the intellect, or of a rational faculty, expressing and signifying that which it speaks; therefore, if an angel speaks about the secret of his heart, he ought to express and to signify it. And although it may sometimes happen that, without speaking by imprinting something on another's intellect, that of which one is speaking is nevertheless known to the other, still locution explains in this way. Durandus, however, meets this, and says that in exterior locution two things are necessarily found: both the thing which is expressed and made known through locution, and the sign itself, by which it is expressed and signified; for of a thing which is not expressed by a sign, but is only known of itself, no one is said to speak. But in spiritual and interior locution, certainly it is not necessary that those two exist, namely, the sign and the thing signified: rather, the very interior concept is called the locution by which a man speaks to himself while he understands; and apart from it there is not some other thing about which a man speaks to himself. In the same way, says Durandus, that concept existing in the mind of the angel who speaks can be a locution directed to another, even if it is of itself known to him, and in it we do not find those two, both the sign expressing and the thing itself expressed.

Yet if we attend to the true notion of locution, we shall easily discover that, both in interior locution by which an angel speaks to himself, and in that by which he speaks to another, those two which we have said ought to be present. For in our concept, by which we are said inwardly to speak to ourselves, those two are found. For there is an expression and signification of some thing - namely, the very word and expressed likeness; there is also the thing itself understood, as it were impressed and signified to the one understanding by the same intellection and by the expressed species of it. Wherefore, in this locution our concept is not the thing about which we speak, but

rather is the locution itself; but truly the concept existing in the mind of one angel, according to the sentence of Durandus, is not the expression itself, but rather the thing understood and expressed, which is known and is expressed to another: therefore that the will of the angel directs the concept to one angel rather than to another, although before it was equally known to all, is not a sufficient reason for it to be called locution.

I dismiss two other modes of locution, which Heruæus reports in the place to be cited below. One is of those who assert that the locution of angels is brought about by certain impressions in the imagination of some living thing, by arranging its species; another is of those who assert that locution takes place through certain figures imprinted in the Empyrean heaven: for these things are futile and empty, as is evident.

That the locution of angels takes place through certain spiritual signs which are not concepts and intellections, Aegidius and others held.

Melchior Canus also felt the same, who never could understand that one angel speaks to another in the way which the Thomists have taught. Moreover, the aforesaid Doctors thus assert that by these signs one angel speaks to another, in such a way that by no means do the signs pass over into the very angel who hears, but they remain in the one speaking. The contrary of which some more recent writers falsely impute to these authors. To these there are also wont to be numbered Nicolaus de Lyra on that passage of the First Epistle to the Corinthians, chapter 13, "If I speak with the tongues of men, &c.", where he says that in angels there is something naturally known to others, and when in one angel that is ordered to declaring to another that which is secret and hidden to him, then one angel speaks to another; and he calls the power of explaining in such a way a tongue. And the Ordinary Gloss on that place seems to think the same. Yet because they do not explain what that is by which the secret of one angel is expressed and explained to another, we cannot plainly judge what opinion they held. I think the foundation of this opinion to be nothing else than this: since it is agreed that one angel does not speak to another by imprinting in him a species, or some knowledge, or sign, no other mode of speaking seems to remain than this one, especially since it has a great likeness to the mode of exterior and bodily speaking by which men mutually use among themselves.

Caput X - On angelic locution by spiritual signs

All the other authors who remain agree in this one thing: that one angel speaks to another by the expression of some sign, not bodily but spiritual, after the manner of exterior and bodily locution. Yet they vary in assigning this kind of spiritual sign. Aegidius, in II Sentences, dist. 10, q. 3, a. 1, in the resolution of the article; Thomas of Argentina in the same distinction, q. 1, a. 2; Gregory, in II Sentences, dist. 9, q. 2; Marsilius, on the Second Book, q. 7, a. 2; and Clichtoveus, in book 2, chapter 3, of St. John Damascene's De fide, a little before the middle, teach that these spiritual signs, or gestures, by which angels speak among themselves, are not acts of cognition, but certain spiritual signs of such a nature that they manifestly signify to one angel the thoughts and secrets of the heart of another angel.[1589] Of this opinion see also St. Anselm on that passage of the First Epistle to the Corinthians, chapter 13, "If I speak with the tongues of men and of angels"; or Heruæus, who is thought to be the author of those commentaries, where he says thus: "By 'tongues' by which thus some speak to others are understood certain gestures or interior motions, by which they mutually intimate to themselves what they have wished to communicate"; although this author does not explain sufficiently whether these signs are certain concepts existing in the mind of the one speaking, or are signs which are not concepts. With these also Melchior Canus agreed, who never could understand that one angel spoke to another in the way the Thomists have taught. But the aforesaid Doctors thus assert that by these signs one angel speaks to another, in such a way that by no means do the signs pass over into the very angel who hears, but they remain in the one speaking. The contrary of which some more recent writers falsely impute to these authors. To these there are also wont to be numbered Nicolaus de Lyra on that passage of the First Epistle to the Corinthians, chapter 13, "If I speak with the tongues of men, &c.", where he says that in angels there is something naturally known to others, and when in one angel that is ordered to declaring to another that which is secret and hidden to him, then one angel speaks to another; and he calls the faculty of explaining in such a way a tongue. And the Ordinary Gloss on that place seems to think the same.[1590] Yet because they do not explain what that is by which the secret of one angel is expressed and explained to another, we cannot plainly judge what opinion they held.

I think the foundation of this opinion to be nothing else than this: since it is agreed that one angel does not speak to another by imprinting in him a species, or some knowledge, or sign, no other mode of speaking seems to remain than this one, especially since it has a great likeness to the mode of exterior and bodily speaking by which men mutually use among themselves.

Durandus, however, in that distinction 11, question 2, number 4, attacks this opinion by this reasoning. Either these signs signify naturally, or by institution: not naturally - for if such signs are of some thing, especially of affections and of the secrets of the heart: of these they cannot be; for affections and the things which are within the angel's intellect are naturally known to anyone to whom they are referred; but for those things which are naturally known, nature ought not to have

1589. Aegidius, II Sent., dist. 10, q. 3, a. 1 (in resolutione articuli); Thomas de Argentina, eadem dist., q. 1, a. 2; Gregory, II Sent., dist. 9, q. 2; Marsilius, in II, q. 7, a. 2; Clichtoveus, in cap. 3, lib. 2 Damasceni De fide (ante medium).

1590. Nicolaus de Lyra, on 1 Cor. 13, "Si linguis hominum"; cf. the Ordinary Gloss on the same place.

instituted some sign. In addition, by natural signs one is not said to speak; otherwise, he who would bring it about that a cause be known through effects, and he also who would lay open the secrets of his heart to another by some affection - such as shame, or another exterior passion - would be said to speak, which seems absurd. Nor can such a sign be from institution, because the things that are natural in an angel cannot be varied. But Durandus, from the sentence of those whom we just now reported, supposes that these signs are always in an angel by nature. Nay rather, from this it would follow that angels always speak, since they always have in themselves such signs; just as also he who would continuously utter voices would be said to speak continuously.

Nevertheless, Durandus's argument against the aforesaid opinion is weak. First, because although the authors cited say that these signs and motions naturally signify, still they do not assert that they are always in the angel, but that they are voluntarily produced by them when they speak. Moreover, Maior, to be cited in the following chapter, judges that there are certain spiritual signs from a free institution signifying the secrets of the heart; and these signs, he says, are certain concepts of reflexive knowledge, about which angels make agreement among themselves, that by them this or that be signified. This I do not see to be sufficiently impugned by Durandus's reasoning: for although by free institution concepts would not be varied in themselves - just as neither are voices changed by institution - nonetheless a free institution could bring it about that by those concepts the secret of the heart be mutually signified, just as by voices not varied things diverse, as it pleases, are signified.

For my part, however, I should rather think that such signs, if any could exist, would be natural, not instituted by free choice. For it seems frivolous that angels should first have come together among themselves in order that such signs be instituted for this or that signifying. Nay, such a convention and gathering into one seems among angels impossible unless there were some signs which naturally signified the affections and secrets of hearts. For, that they might come together, and treat about instituting some sign, they would have to understand one another and first in some way explain themselves and speak among themselves; just as if some men had dealt among themselves about the institution of a certain language, it would have been necessary that they had come together by naturally significant gestures, or by some prior language. But thus there would already be something prior by which angels could speak among themselves; and therefore they would not have needed gestures instituted by themselves in some way: for if among men a language is necessary, it is in order that they may the more easily understand one another, because by gestures they could with difficulty explain themselves; among angels, however, if any natural signs could exist, these would suffice in order that they might explain themselves no less rightly than by instituted signs, because of their supreme perspicacity.

Next, it is false what Durandus subjoins in his reasoning, namely, that therefore there are not some signs among angels which naturally signify the secrets of the heart, because the secrets of hearts are of themselves manifest to others. First, because it is absurd, as we showed in the preceding disputation, that the secrets of hearts are of themselves manifest to all angels. Next also because, even if they were so, nothing would hinder their having certain signs by which they would

be naturally signified; just as an effect always naturally signifies the cause from which it proceeds; although these signs would not be necessary to the angels, if otherwise the secrets of hearts were known of themselves.

Finally, Durandus objects against the aforesaid opinion that, if we could speak by any signs whatsoever, it would follow that by groans we also could speak, which is absurd. But the objection is frivolous. For if someone, with the intention of expressing his concept, were to emit groans, without doubt he would be speaking; just as also a mute is said to speak by gestures.

Wherefore this opinion is more probable than the others. For from it none of those inconveniences follow which follow from the others that I have thus far reported. Yet someone might argue against it by this reasoning: since locution is an operation of a rational faculty, and in an angel is an act of the intellect, it follows that, while an angel speaks, he produces in himself those signs by which he wishes to express the secret of his heart; for if they always existed in the angel, they could not have the nature of locution, unless one were to say that the angel always speaks by them. But the possible intellect seems to have no other operation than intellection, and through intellection the production of habits: why, therefore, ought we just now to fashion a new kind of operation in angels? One can answer, however, that this kind of sign was devised for no other reason than to explain the nature of locution, which one must assert in angels. But if we could explain it by an easier way, it would not be necessary to have recourse to this kind of sign. And if the mode which we shall immediately submit in the next chapter does not please, this one seems to me to be preferable to all the others.

Some, moreover, hold that an angel's locution is a word of the mind, or some intellection.

Caput XI - The final opinion in the present controversy: that one angel speaks to another by the expression of an interior word

The last opinion in the present controversy seems to be that of those who assert that one angel speaks to another, and lays open to him the secret of his heart by the expression of an interior word, that is, by a certain intellection, in which the other angel sees the secret of the one speaking, and by that very fact is said to hear. This opinion is handed down by Henry in his Quodlibeta, question 15, article 2; by Hervaeus in II, distinction 11, question 1; by Maior, distinction 9, the last question; and it does not seem to me improbable.[1591] Therefore these authors agree with the rest mentioned in the preceding chapter in this, that angelic speech is done by some spiritual sign; yet they differ from them, because those others assert that these signs are not acts of cognition and intellection, whereas these say that it is a certain cognition expressed in the mind of the one speaking, by which the secret of the heart is made manifest to the other. Nevertheless, they vary in some way in explaining this opinion. Maior teaches that this happens by an institution of the angels themselves, to whom it seemed good that by certain concepts they should mutually communicate their secrets; which institution we rejected in the preceding chapter.

1591. Henry of Ghent, Quodlibeta, q. 15, a. 2; Hervaeus, II Sent., dist. 11, q. 1; Maior, dist. 9, q. ultima.

Hervaeus, however, philosophizes in this way. First, he teaches that singulars are not known by an angel through a proper concept and species, but through a species of the universal; so that, the concept of the universal quiddity not being changed, the angel, as he wills, now understands this singular, now that one, according as he should wish to apply that concept. And Hervaeus understands this his opinion about those singulars which a higher angel knows only by revelation: for he was thinking of speech only about these things, not about other things known whether universal or singular; because he judges that all those things, and the concepts of them, are naturally known mutually to the angels themselves; about what is already known, speech would be vain.

Next he teaches that speech about singulars among angels takes place thus, that an angel who has known a singular by revelation explains to another the concept which he has about that singular, forming a certain other concept of a vague individual, which the other angel can understand; just as we, too, use words signifying a vague individual, expressing a determinate one.

I pass over other things which he himself brings forward in the explanation of this opinion, and the reasons by which he confirms it, which have little weight.

Scotus impugned this manner of thinking of Henry in II, distinction 9, question 2, in the section Circa istas quaestiones. First, in that he says that proper speech in angels is done through an intellectual word; in which, however, he does not seem to me improbable, as will be explained below. Second, because he teaches that one angel speaks to another only about singulars which he knows by revelation; in which this opinion is not at all approved. First, because from it it would follow that only a superior angel speaks to an inferior, since only the superior can reveal hidden things to the inferior. Next also, because that about which one angel can speak to another is not only the cognition of some singular which he communicates to an inferior by revelation, but also the secret of his will; and about this, in like manner, an inferior angel can speak to a superior just as a superior to an inferior; because even the secret of the will of an inferior is unknown to a superior; which Henry himself also concedes, as we saw in disputation 209, chapter 4.

Third, Scotus impugns Henry's opinion because it is false that through the same concept of a universal nature, remaining in the same mode and not changed, a singular can be known; and in this part we too judge this opinion false: because, as we showed above in disputation 209, chapter 3, against Thomas of Argentina, it cannot be that through the same cognition, or an unchanged concept, something begins to be known which before was not known.

Finally, Hervaeus, in the place alleged, says that speech is effected among angels by the word of the mind produced in the intellect of the one speaking, just as exterior speech in us is done by the word of the voice uttered; so that by that concept and word of the mind there is explained something which in another cogitation was hidden. For this author had said, as we reported in disputation 209, chapter 1, that the cogitations of one angel are known to another - what they are and about what they are; nay even whether they are engaged about the object by way of affirmation or negation; yet it is not known about what they are engaged more intensely. Therefore Hervaeus thinks that what was hidden in the cogitation itself and in the very intention of the will is expressed

and signified by another concept and word of the mind; from which opinion St. Thomas does not dissent in the places alleged by us in chapter 8; indeed he seems to have expressed it when he says that speech is effected by intellectual signs, and that these are an intelligible species, insofar as by its act it orders the intellect to another.

However, although Hervaeus's opinion is not approved by us in this, that he asserts the cogitations of one angel to be so manifest to another - namely, what they are and about what - so that nonetheless it is hidden about what they are engaged more intensely, for the reasons set forth in the place cited; I will nevertheless propose his foundations, insofar as he has asserted that one angel speaks to another by a word of the mind; in which he agrees with Henry and with Maior. But I leave the definition of this controversy to the judgment of others.

For the sake of this matter, it must first be premised the doctrine of those same doctors which we reported in disputation 209: namely, that the cogitations of the intellect of one angel are known to another according to their substance, insofar as they are cogitations, not however as to that from which the intention arises. And since cogitation about some object is a certain expression of it, and is called the word of the intellect or of the mind, it rightly follows that in this there is angelic speech: for if some angel by the concept of your mind were to say to another that you have such an intention in the secret of your heart, he would speak no less to him than if by an exterior word he signified it; for, as will be explained below, a concept of something is not only the cognition of that thing to the one who has it, but also to another who sees and contemplates it, and it can be compared as a sign.

Now this opinion is confirmed in general by the authority of the Fathers, and by reason. Theophylact, on that text of 1 Corinthians 13, "If I speak with the tongues of men," says: "For there is a certain power of understanding by which the angels mutually communicate divine perceptions; the tongue of angels is this." If, according to Theophylact's opinion, the tongue of angels is the faculty of their intellect, it follows that the word also by which they mutually speak is the concept itself of the intellect uttered; by which they speak not only with themselves, but also with others, and by this they signify their perceptions to others.[1592] Theodoret, on the same place, writes thus: "He calls the tongues of angels not those which are perceived by sound, but those which are perceived by intelligence, by which they praise the God of the universe and differ among themselves." But what, I ask, can there be in an angel by which he praises God and differs from another, if not the intellect? For praise and speech are acts (*actus*) of the intellect (*intellectus*), not of the will (*voluntas*), as is known. Moreover, to praise and to dispute about some matter is a work of intellection: therefore it follows that the word of angels is an interiorly uttered concept, which we call the word of the mind or of the intellect. Furthermore, if one angel can speak to another, he will also be able to supplicate and to praise: but supplication and praise are acts of the intellect, which really are intellection; therefore angelic speech likewise will be an act of intellection. What Gregory thinks, when he says that the speech of angels with God is the desire itself of the will, will be explained below. Bede, moreover, book 2 on Job, on those words at chapter 27, "If suddenly the

1592. Theophylact, on 1 Cor. 13: "Si linguis hominum loquar."

dawn shall appear," says that the speech of angels is consent, and he understands this not without the enunciation and utterance of the intellect: for below he says, "And what they will, they immediately enunciate; but enunciation is a certain intellection." He then adds, "Whence can it be that they have perceived similar motions through the subtlety of their nature; and this is called conversation: for the spirit cannot have any of its affections lie hidden from another; for simple creatures, having no bodily obstacle, are clear to themselves." He must, however, be cautiously explained, lest we say that every affection of the angel's will is known to another, but only that they are impeded by no bodily mass, lest it be seen what another speaks interiorly; for we, because we are corporeal, are impeded by the senses and the mass of the body, lest we see the hidden speech of an angel.[1593]

But indeed, in order that we may clearly understand this manner of philosophizing which, from Hervaeus and others, we have reported, two things must be observed. One is, that every concept and act of intellection is a certain speech; and in all of it a word and a spiritual discourse are found. And although every cogitation, insofar as it is a cogitation, is in itself known to God and to the angels, as this opinion maintains; nevertheless, not every cogitation has the nature of speech with God and with the angels, but only that which is, as it were, a certain reflex of the act, by which someone explains that he has such a concept about such a thing: because to speak to another is not to make that concept manifest to him; otherwise, when someone by divination or by some other way knows what we have in our heart, we would be said to speak to him, which is absurd. To speak to another is to express by some sign what we have in our heart: and since the word and concept of our cogitation is a sign of the thing cogitated, it follows that the act of the intellect by which one angel explains to another the secrets of his heart is speech with respect to that other. And for this reason I said that the speech of angels is, as it were, a reflex act of the intellect, because it is either an act of the intellect about a cogitation, or about an act of the will and the secret of the heart. I also said that every act of the intellect by which it understands itself is in a certain way called to speak; and on account of that which it expresses within, it is called the word of the mind itself.

Another thing to be noted is that the nature of speech does not consist only in the concept for explaining and expressing the secrets of the heart; but besides, it is necessary that such a concept be directed to someone, by whom we wish it to be heard or understood; just as happens in an exterior word: for although someone speaks in a loud voice, and is heard by many, nevertheless he is not said to speak to all, but only to those to whom he directs his words by a certain peculiar intention. Now speech to another can be made in many modes: namely, by way of command, of petition, of simple narration, or of teaching. And just as command is an act of the intellect manifesting to an inferior the affection and will of a superior, or matters of fact; whereas petition is an act of the intellect manifesting the desire of an inferior to obtain something from a superior and one who is able, as Prima Secundae, question 17, explains; so also simple narration and discourse is the manifestation of a secret in matters just as they are, merely for the sake of manifesting it.[1594]

1593. Bede, on Job, book 2, on the words at chap. 27: "Si subito apparuerit aurora."
1594. St. Thomas, Prima Secundae, q. 17.

Moreover, the way in which the act of the intellect that explains the secrets of the heart is always directed by some peculiar intention to him to whom it is said, will be explained below in a later place. From what has been said we gather, according to this opinion, that spiritual speech of the angels is a certain concept of the intellect, which they have about the secret of the heart, ordered by a peculiar intention toward another, by which there is signified to another what someone has in his heart; and this doctrine will be further elucidated in the following chapter.

Otherwise, if someone by divination or by some other way knows what we have in our heart, we should have to say that we are speaking to him, which is absurd. Rather, to speak to another is to express by some sign what we have in our heart. And since the word and concept of our thought is a sign of the thing thought, it follows that the act of the intellect by which one angel explains to another the secrets of his heart is, with respect to them, speech. I also said that I called the speech of the angels an act of the intellect as it were reflecting, because it is either an act of the intellect about a thought, or about an act of the will and the secret of the heart. I also said that every act of the intellect is speech, because the intellect that understands is said in a certain way to speak with itself; and therefore, because it expresses within itself, it is called the word of the mind itself.

Note moreover: the notion of speech does not consist only in the concept that explains and expresses the secret of the heart; but besides this it is necessary that such a concept be directed to someone by whom we wish it to be heard or understood, as happens in the external word. For if someone speaks in so loud a voice that he is heard by many, nevertheless he is not said to speak to all of them, but only to those to whom he directs his words by a certain peculiar rationale. Now speech to another can take place in many modes: it is by way of command, of prayer, of simple narration, or of teaching. And just as command is an act of the intellect manifesting to an inferior the affection and will of a superior, that something be done; while prayer is an act of the intellect manifesting the desire of an inferior to obtain something from a superior and one who is powerful, as will be explained in the Prima Secundae, question 17; so too simple narration and speech is a manifestation of an internal secret solely for the sake of manifesting it. Moreover, the mode by which the act of the intellect, explaining the secret of the heart, is always directed by some peculiar rationale to him to whom it is said, will be explained below. From what has been said, therefore, we gather, according to this opinion, that spiritual speech among the angels is a certain concept of the intellect which they have about the secret of the heart, ordered by a peculiar rationale toward another, by which there is signified to another what someone has in his heart; and this doctrine will be further elucidated in the following chapter.

Dissolution of the arguments against the preceding opinion.

Caput XII - The arguments against the preceding doctrine are dissolved

It remains that we set down certain arguments which can be brought against the foregoing doctrine, and by their solution we may explain the aforesaid position more and more.

The first argument: If every concept of one angel, insofar as it is a concept and a certain thought of the mind, is known to another, it follows that by such a concept one angel can indeed speak about the secret intention of his will, but not explain or speak about any thought other than the very one which he has in his mind; because speech ought not to be about things known and manifest, but about things unknown and hidden.

I answer first with Scotus in the second Distinction 9, question 2. To the arguments of the second question, in the solution of the first, he says that speech can also be about those things which are known to another: for we truly speak to God by prayer and by thanksgiving, explaining to him our affection and desire when we petition; although that very desire of the poor is manifest to him without any prayer and accepted, according to that of Psalm 19: "The desire of the poor the Lord has heard," etc. Perhaps for this reason St. Gregory the Great, book 2 of the Moralia, chapter 4, said that the angels speak to God by the fact that they are rapt into the movement of admiration; and he says that the voice of the angels is the very movement of admiration, whereas the voices of the saints who cry out to God are their desire: not because locution properly consists in affection alone, but because these things are known to God in themselves, no otherwise than if they were expressed by voice. Otherwise, just as the desire of the will alone is not properly prayer, so neither is it properly speech. But that the angels are able to speak with God by prayer, not because God needs their speech in order to understand something, but because they themselves can make petition, is manifest; and St. Thomas expressly hands this down below in question 117, article 2, reply to the first.[1595]

Then I say, according to this opinion, that the thought which one angel has is known to another only when it is present; but a past or a future one is not known, because unless he has memory of the past by the fact that he had known the present, it seems difficult that it can be known by an angel. Therefore, about this a given angel could speak to another as about a thing unknown; and so he would speak not only about the desire of his own will, but also about his hidden thought.

The second argument is of this sort: In the very way we said one angel would speak to another, the same angel could, at the same time and with the same discourse, speak to many without a certain bound and limit; for the same concept in the mind of the speaker, expressing the secret of the heart, is related in the same way to all; therefore all can hear, and so he would be said to be speaking to all of them.

Some say that one angel speaks to another from this, that he impresses upon him an intellection or the species of his concept; they grant nonetheless that one can speak to many without any limit. To me indeed - if their opinion concerning the mode of angelic speech were proved - about the number to whom an angel could speak one should philosophize otherwise. For just as an angel by his own power cannot move many bodies at once without a determinate number, even if he moves them by the mere nod of his will, because he has a power that is finite and limited; in the same way he could not, by a spiritual action, imprint upon many angels without a certain number and bound the species or cognition of his secret. For both in regard to spiritual action and in regard to

1595. St. Thomas, Prima Secundae, q. 17; and explicitly in the Prima Pars, q. 117, a. 2, ad 1.

corporeal, he has a finite power; but a finite power demands an effect determined not only in species but also in number, as was explained above in Disputation 103, chapter 2, so that he cannot at once, without a bound, produce many things. For that the very power, if it should persevere according to duration into infinity, can produce many things into infinity, does not sufficiently argue for a power infinite according to intensity, but only according to duration. For which reason, when Scotus had said that one angel speaks to another when he impresses upon him the thought of his secret, he consequently asserted in the second Distinction 9, question 2.

The third argument: From the foregoing opinion it follows that the angel who speaks has no power of arousing the hearer, if he produces nothing in that one's mind, but only proposes a word to him when he expresses it by his own intellect.

I answer first, if this argument has any force, it has force not only against the last opinion, but also against many others previously mentioned among those who say that angels so speak among themselves that one impresses nothing upon the intellect of another. The only one is Alexander, in the second part, question 27, member 7, who, while asserting that one angel speaks to another without impressing anything upon him, nevertheless affirms, in that same case when one speaks to another about the mysteries of grace, that he has the power of arousing him; although he does not have it when he speaks about other natural things. Yet he assigns no reason for the difference, nor can he assign one. Next, I say also that, even on the opinion of those who teach that one angel speaks to another by impressing upon him a species, it does not follow that one angel is necessarily aroused by another, as was shown above sufficiently against that opinion. Only in the opinion of Scotus, and of others who teach that one angel speaks to another by impressing upon him a cognition, must it be said that the angel who hears is necessarily aroused by the one speaking; yet we have impugned this opinion above. We confess therefore that one angel does not have the power of arousing another so that he necessarily hears, whether he speaks about natural things or about the mysteries of grace; for I find no difference between these two. Or else, if there is some necessary power of arousing from the angel that he may hear, we are ignorant of it.

Lastly, to all these things which we have said, two items are to be added. One is that not only can a superior angel speak to an inferior, but also an inferior angel to his superior, as St. Thomas expressly taught in question 107, article 2, and all the Doctors alleged above. And although, in the opinion of those who maintain that one angel thus speaks to another by impressing something upon him, the matter is not without difficulty - because it would seem difficult how an inferior angel could impress upon a superior - yet in the later opinion which we set down, and in the others, there is no difficulty at all. What we have said about angels is to be understood also of separated souls, insofar as they understand without conversion to phantasms, as the angels do: for if a soul is with another soul, or with an angel, the soul speaks to the angel, and the angel to the soul.

The other is that a soul and an angel can speak with God, as St. Thomas teaches, question 107, article 3; for although the secrets of the heart are known to God, nevertheless an angel, or a soul, can express that by the word of his mind, and propose it to God, as he does by prayer and by thanksgiving.[1596]

Disputatio CCXII - Whether an angel can speak with another at any distance

- Some have held that a determinate distance is necessary for one angel to speak to another. Caput I.
- Others have taught, more truly, that distance contributes nothing to one angel's speaking to another. Caput II.

Caput I - That a determinate distance is necessary for one angel to speak to another

In article 4 of question 107 St. Thomas disputes whether distance according to place contributes anything, that one angel speak to another: as among men, a certain and determinate distance is required. In this difficulty not a few Schoolmen affirm that distance contributes much, that one angel be able to speak to another; and hence that by reason of distance some locution is impeded. This opinion is handed down by Gregory in the second Distinction 9, question; by Scotus in the Reportata, in the same Distinction, question 8, and again in the same Distinction, question 2; by Richard, article ..., question ...; by Major, article ..., dub. ...; by ...; and indeed this author asserted that the opposite opinion favors the article condemned by the Parisian School, namely, that an angel is not in a place. The same is taught by Bonaventure in the second Distinction 10, article 3, question 2; by Basso in Distinction 9, question 2, article 2. The foundation of this opinion is of this sort: since the speech of an angel is a spiritual operation and yet limited and finite, it therefore demands a determinate distance; for bodily speech also presupposes this, not because it is bodily, but because it is of a finite and determinate power. Yet this reason, if it has any force, has it only in the opinion of those who assert that in the speech of angels there is impressed some form upon the mind of the one addressed - which opinion was held by Richard, Gabriel, Scotus, and Basso, although they otherwise followed it in different ways. But in the opinion of Gregory, Major, and Bonaventure, who maintain that one angel speaks to another without impressing anything upon him, whether by signs or in some other way, I for my part do not see what force it can have.[1597]

Accordingly the position of those who affirm that nearness contributes nothing at all to hearing, nor distance impede it, so as to prevent one angel from speaking to another in such wise that he can be heard, stands firm; as St. Thomas taught below at q. 107, a. 4, and as Caietan and recent Thomists there - Alexander, Second Part, q. 27, memb. 7, and Marsilius on the Second, q. 7, a. 2, to the fifth reason - likewise taught.[1598] And I, for my part, judge this view to be true not only if we follow those who say that locution takes place without any impression inhering in the hearer, but even if, with Scotus and others, we say that one angel speaks to another by some impression made in that one's mind. For bodily causes therefore require a determinate distance, because their effect

1596. St. Gregory the Great, Moralia, II, c. 4; Psalm 19; St. Thomas, Prima Pars, q. 107, a. 2; a. 3.

1597. Scotus, II Sent., dist. 9, q. 2; the Reportata on the same distinction; Richard; Major; Bonaventure, II Sent., dist. 10, a. 3, q. 2; Basso, dist. 9, q. 2, a. 2.

1598. St. Thomas, Prima Pars, q. 107, a. 4; Cajetan ad loc.; Alexander of Hales, Summa, II pars, q. 27, memb. 7; Marsilius of Inghen, In II Sent., q. 7, a. 2, ad 5; cf. Disputatio 189, cap. 2.

must be continuously diffused, nor can they act on the extreme part without acting through the whole space by a continuous action; but if they did not require a determinate distance, their effect would be infinite with respect to extension, which is impossible. Now although this reasoning, in the same way, proves concerning operations of angels that pass into external matter - since such an operation must of necessity be diffused continuously through the whole space, as was proved above in Disputation 189, ch. 2 - yet as regards a spiritual operation, such as locution is, it proves nothing. For when the operation is spiritual, if there is any from one angel into another, it does not pass through a medium; therefore it will not be greater or lesser for bearing upon an angel more or less distant. Rather, of itself it must be carried out and defined solely according as it is received in the angel. On this ground we said in that disputation that an angel could operate upon matter existing at any distance, if his operation were not continuously diffused through space; and I said the same concerning physical agents, if they could operate immediately upon the extreme without a medium.

Therefore this view, as I think, is true, by whatever line of philosophizing we wish to reason about the mode whereby one angel speaks to another - especially according to the common opinion, which says that nothing is imprinted in the hearer by the angel who speaks in order that he may hear. For just as an angel can, at any distance whatever, understand a thing existing outside himself, so in like manner will he be able to hear; for his hearing is a kind of understanding, and locution must be outside the one speaking.

Moreover, it should be observed that angels can indeed be distant from one another by a greater and a lesser bodily distance, if such were greater and lesser; yet never, even if the expanse were infinite, could they be situated at an infinite distance. The reason of the former is that, since by their own will they can change place without any fatigue, one could withdraw farther and farther from another without end; nor will we be able to mark out a place beyond which an angel could not be moved still further. The reason of the latter is that, since an angel must always be in a determinate and finite place, and it is impossible that between two determinate and finite places there should be an infinite interval, it follows that angels cannot be distant to infinity; for that interval will be bounded by termini and extremes.

Disputatio CCXIII - Whether one angel can speak to another in such a way that others do not hear, even if they wish

- That one angel can speak to another so that others cannot hear, some have taught. Caput I.
- That one angel cannot speak to another secretly in such a way that he is not heard by others, others not improbably maintain. Caput II.

Caput I - That it is possible for one angel to speak so to one that others cannot hear

That it is undoubted among the Scholastics that one angel can speak to many together is clear: for whether another hears or does not hear what is said, someone speaks only to him to whom he directs his discourse; just as if Peter were disputing with John before a crowd, he would be speaking only with him, and yet all the rest would hear.

The controversy is whether, as one man can so speak secretly to another that no one else hears, so too one angel can thus open the secret of his heart to another that he alone hears. In this difficulty the former view is that of not a few Scholastics, who think that one angel can indeed so speak secretly to another that others cannot hear. This is the view of St. Thomas below at q. 107, a. 5, and of Cajetan there; whom many recent Thomists follow; likewise Richard, in II, dist. 9, a. 2, q. 1 and 2; Ægidius, dist. 10, q. 3, a. 1; Bassolis, dist. 9, q. 2, a. 1, § Est igitur quartus modus; and Marsilius, on the Second, q. 7, a. 2, in reply to the third reason urged on the contrary.[1599]

However, since these authors differ about the mode of angelic locution, they do not confirm this conclusion in the same way. First, Cajetan and other Thomists use this reason: since one angel opens the secret of his heart to another angel solely by a nod of his will, once that is posited, the secret of the heart already has an ordination to the angel to whom by that very will it is directed; it follows that it can be opened to one in such a way that it remains hidden from the rest, and hence that one can thus speak to another that the others cannot hear, because to speak is nothing other than to unfold the secret of the heart, while to hear is to perceive and understand it.

St. Thomas hints at this reasoning not obscurely; and therefore they incline strongly to that opinion which we reported in Disputation 210, ch. 8, from Cajetan and other Thomists. Yet someone could interpret St. Thomas as not speaking of every kind of locution whatsoever, but only of that which is illumination, of which we shall speak in the following chapter - namely, that it can be perceived by an angel who is illuminated, in such a way that it is not perceived by others who are inferior; otherwise we are compelled to draw St. Thomas into that opinion, that by a mere nod of the will there is locution - a position we showed in that ch. 8 to be rather difficult.

Richard, and those who think that one angel speaks to another by imprinting in him the species of his secret, will easily be able to assign the rationale here: namely, either that the angel can direct the intellectual light to one and not to another, or that he can imprint upon one the species of his secret and not upon another. In the same way, those who, with Scotus, assert that one angel speaks to another by imprinting in him a cognition of his secret through the intellect - namely a species by which he himself also understands, as Scotus said - will also say that one angel can thus speak to another that he is not heard by others: for they affirm that this cognition is generated in the hearer's mind according to the will of the one speaking. Bassolis clearly held this view in the place cited, although he and Scotus say that the innermost things of hearts would of themselves, unless God prevented it, be manifest to all.

1599. St. Thomas, Prima Pars, q. 107, a. 5; Cajetan ad loc.; Richard of St. Victor, In II Sent., dist. 9, a. 2, qq. 1 - 2; Ægidius Romanus, In II Sent., dist. 10, q. 3, a. 1; Bassolis, In II Sent., dist. 9, q. 2, a. 1, § Est igitur quartus modus; Marsilius of Inghen, In II Sent., q. 7, a. 2, ad 3.

Third, although Marsilius says that locution is effected by signs distinct from thoughts and naturally signifying the affection and secret of the heart (whence it seemed to follow that one angel could not speak to another without being also understood and heard by others, if they wished), nevertheless he teaches that either occurrence is possible: both that an angel expresses his secret by such signs so as to be heard by all, and so as to be heard by one alone if the speaker so wills. For he thinks there are certain signs such that, if an angel uses them in speaking, he will be heard by all because they signify to all; and others so peculiar that they are understood by one alone, by the use of which the angel will be able to speak secretly to one alone and be heard by him only. But I do not see by what reasoning he proves this difference of signs, indeed I do not see that it can be proved.

Fourth and finally, although Ægidius teaches that one angel speaks to another by signs, nevertheless he asserts that one can so speak to another that the rest do not understand, but only in that locution which is at the same time illumination, whereby a superior illuminates an inferior. For since illumination concerns only things otherwise unknown, and angelic perspicacity is not the same in all, not all equally understand the things handed down by illumination: just as disciples, even if they perceive the sound of the master's words, do not in the same way grasp the sense. For this reason not all are indiscriminately illuminated by all; rather, each order is illuminated by the one closer to it. Wherefore, according to Ægidius's view, whenever an inferior speaks to a superior - since such a locution is not illumination but simple locution - it is heard by all the others. On which account, in part, Ægidius favors the later opinion, which we shall set forth in the next chapter.

Caput II - That one angel cannot so speak to another secretly that, if the others will, he is not heard - others not improbably maintain

But indeed some of the Scholastics, not without probability, affirm that one angel cannot so speak to another that, if the others will, he is not heard. Thus teach Gregory in II Sentences, distinction 9, in that second question; Gabriel in the same distinction, question 2, article 5; Major in that same question 2; Herveus in II Sentences, that distinction 11, question 1, to the first, from those which in the body of the question are brought forward; and Ockham, Quodlibet I, question 7. The foundations of these Doctors vary according to the various opinions about locution.[1600]

First, Gregory and Major say that angels speak through certain signs, whether these are natural - as Gregory says - or by free imposition, as Major thinks; and that these signs, however they signify, are equally known to all (for all know what those signs denote, either naturally or also by the free imposition of the angels). Consequently, they assert that one angel cannot speak secretly to another.

Next, Gabriel and Ockham follow the aforesaid opinion in another way: for they say that one angel speaking with another ought to be heard by all, unless God were to impede it. For, according to their opinion, one angel speaks to another by a cognition derived from the cognition which he

1600. Gregor., in II, dist. 9, q. 2; Gab., eadem dist., q. 2, a. 5; Maior, q. 2; Herueus, in II, dist. 11, q. 1, ad 1, from what is brought forward in the body of the question; Ocam, Quodlib. I, q. 7.

himself has; and that is derived naturally into the mind of the hearer. Hence it would be derived equally into all, unless it were impeded by God; but because in fact God impedes, lest the cognition existing in the mind of the speaker be derived into all, but only into those to whom the angel wishes to open his secret, now rightly one angel can speak to another without the rest hearing.

All these authors, and the others alleged for that opinion, speak consistently with their principles; and therefore they are to be refuted only in that way in which their principles, which we do not approve, are disproved - about which enough and more than enough has been said above. I except one Marsilius who, in my judgment, does not philosophize consistently. For when he has said that angels mutually speak among themselves through certain signs naturally significative, he could not deny that the angel who is speaking is heard by all. For that which he asserts - that there are some signs peculiar to one alone as signifying, and others to another - is frivolous and can by no reason be proved, once it is granted that those are natural signs; indeed, if they are natural, it follows that they are equally manifest to all. And since it seemed probable to us that angels mutually speak by certain signs that are not concepts, consequently the foundation of his for that later opinion is proved for us.

And if that opinion were true which we reported in Disputation 210, chapter 12, about angelic locution, from Herveus and others: by the same reasoning it would be probable that angels speak among themselves and express the secrets of their hearts in such a way that one could not speak secretly to another, but would be understood by all, if they themselves will. For since that opinion says that the secret of the heart and will is expressed by the intelligible word, which is a certain cognition, and that this is not naturally the angel's own, it will be known to one no more than to another. Yet I would judge that opinion concerning locution to be probable with Ægidius's limitation: who asserts that it is to be understood of common locution, in which one angel does not illuminate another. For about that in which there is a revelation of mysteries, one angel can be heard by some in such a way that he is not heard by some others - I do not say by all the others, but by some others. For all who are of equal perfection will be able to hear; since, as we shall say below, illumination is made by the superior angels by a certain division of universal concepts into singulars, so that each, according to his capacity, may perceive those mysteries; and thus it happens that those supernal mysteries, unfolded in a higher and more common concept, are not understood by all the angels; and consequently, in such locution the angel who illuminates cannot be heard by all.

Finally, even if the angel speaking can be heard by all, with Scotus it must be said that one angel can converse with one and not with others. For, that someone be said to speak with another, it is not enough that he be heard by him - as I said at the beginning - but he must also direct his speech to him.

Articulus V - Whether the angels know the mysteries of grace

It seems that the angels know the mysteries of grace.

1. For among all mysteries the mystery of the Incarnation of Christ is the most excellent. But the angels knew this from the beginning. For St. Augustine says, On Genesis, Book 5, to the effect that this mystery was hidden from ages in God, yet that it might be made known to the heavenly principalities and powers. And the Apostle says, 1 Tim. 3: that "great is the sacrament of piety, which appeared unto angels." Therefore the angels know the mysteries of grace.
2. Moreover, the reasons of all the mysteries of grace are contained in the divine wisdom. But the angels see God's very wisdom, which is his essence (*essentia*). Therefore the angels know the mysteries of grace.
3. Moreover, the prophets are instructed by angels, as the Father teaches through Pseudo-Dionysius in the fourth chapter of the Celestial Hierarchy. But the prophets knew the mysteries of grace. For it is said in Amos 3:7: "The Lord God does nothing without revealing his secret to his servants the prophets." Therefore the angels know the mysteries of grace.

But on the contrary: no one learns that which he already knows. But the highest angels also inquire about, and learn, the divine mysteries of grace. For in chapter 7 of the Celestial Hierarchy it is said that Sacred Scripture introduces certain heavenly essences asking a question of Jesus himself, and learning the knowledge of his divine operation for us, and Jesus teaching them without a medium; as is clear in Isaiah 63, where, when the angels asked, "Who is this that comes from Edom?" Jesus answered, "I who speak justice." Therefore the angels do not know the mysteries of grace.

I answer that in the angels there is a twofold cognition. One indeed is natural, according to which they know things both through their own essence and also through innate species (*species intelligibiles*). And by this cognition the angels cannot know the mysteries of grace. For these mysteries depend upon the pure will (*voluntas*) of God. For if one angel cannot know the thoughts of another insofar as they depend upon the latter's will, much less can he know those things which depend solely upon God's will. And in this way the Apostle argues, 1 Corinthians 2: "What things are of man, no one knows but the spirit of the man that is in him; so too what things are of God, no one knows but the Spirit of God."

But there is also another cognition of the angels which makes them blessed, by which they see the Word and things in the Word. And by this vision they know the mysteries of grace, yet not all of them, nor do all equally; but according to what God has willed to reveal to them, according to that saying of the Apostle, 1 Corinthians 2: "But to us God has revealed them through his Spirit." And yet the superior angels, contemplating the divine wisdom more perspicaciously, know more mysteries and higher ones in the very vision of God, which they manifest to the inferiors by

illuminating them. And some of those mysteries they knew from the beginning of their creation; others, however, they learned afterwards, according as it was congruent to their offices, being taught by the superiors.

Reply to the first: Concerning the mystery of the Incarnation of Christ it is possible to speak in a twofold way. In one way, in general. And thus it was revealed to all from the beginning of their beatitude. The reason is that this is a certain general principle, to which all their offices are ordered. For all are ministering spirits, as it is said Hebrews 1:14, "sent for ministry, for the sake of those who shall receive the inheritance of salvation" - which indeed was accomplished through the mystery of the Incarnation. Wherefore it was necessary that about this mystery all should be commonly instructed from the beginning.

In another way we can speak of the mystery of the Incarnation as to certain special conditions. And thus not all the angels were instructed from the beginning about all of them; indeed, some even of the superior angels learned afterwards; as is clear from the authority of Pseudo-Dionysius adduced.

Reply to the second: Although the blessed angels contemplate the divine wisdom, nevertheless they do not comprehend it; and therefore it is not necessary that they know whatever lies hidden in it.

Reply to the third: Whatever the prophets knew about the mystery of grace through divine revelation was revealed far more excellently to the angels. And although to the prophets God revealed in general those things which he was going to do concerning the salvation of the human race, nevertheless the Apostles learned certain special things about this which the prophets did not know, according to Ephesians 3: "As you reading may understand my prudence in the mystery of Christ, which in other generations was not known as it has now been revealed to his holy apostles." Among the prophets themselves also, those later in time knew what those earlier did not know, according to Psalm 118[119]: "I have understood more than the ancients." St. Gregory also says that by the successions of times there grew an increase of knowledge.[1601]

Disputatio CCXIV - Whether an angel can, by his natural powers, know the mysteries of grace

Caput I - Three diverse opinions of the Scholastics

The first opinion is that of Scotus in IV, dist. 10, q. 8, § Respondaco, and in the following places, who, disputing about the mode of existence of the body of Christ in the Eucharist and about the mode of existence of the accidents, says that these can be known by an angel by his own proper power; this opinion is embraced by Bassolis on IV, dist. 10, q. 8; by Maior on the same, q. 5; and earlier it had been taught by Ægidius in Theorem 16; by Gabriel in the Canon, lecture 43, letter X; and by Ockham in IV, q. (on the Eucharist), art. 3.[1602] Moreover, because this opinion, as far as this

1601. St. Gregory, Hom. 6 in Ezech., among other places.

part goes, is true, I shall set out below the reasons by which it is confirmed; for the present, however, I adduce only one, by which Scotus and others prove that all the mysteries of grace already effected, whatever they may be, are excellently known by the angels. The reason is of this sort: every created being is an object proportioned to the angelic intellect and to any separated intellect, so that it be known by it with cogitation (as they say) abstractive; therefore it also will be able naturally to be known with intuitive cognition: for the intuitive differs from the abstractive only in this, that the intuitive is of a present thing, while the abstractive is of a past and absent thing; but he who is able to know something absent and past will by far better know it when present. Furthermore, that the mysteries of grace are an object accommodated to a separated intellect so as to be known by abstractive knowledge, Scotus does not expressly affirm; but it can be proved from his doctrine in a twofold way. First, because if anything stood in the way so that they were not accommodated objects to be known naturally - especially because they are of a supernatural order (for they seem therefore to be called supernaturals because they are of another, higher entity) - yet this is false: for the natural and the supernatural do not differ in themselves, but only on the side of the efficient cause; because they are produced either by a natural efficient or by a supernatural efficient; whereas otherwise, in themselves, they have a nature of the same order. Thus Scotus himself taught in the place cited; and earlier he had said in Prologue I, the first question, Ad quaestionem igitur respondeo, and the following, where he asserted that there is no form which by its own nature belongs to any supernatural and higher order, but that according to their substance all things are natural, and that the ratio of the natural and of the supernatural befits things only on the part of the efficient cause. By which reason, too, he asserts elsewhere that there is in us a natural appetite for beatitude, as for a form natural to us, about which in I - II, q. 5, a. 8, there is to be a discussion. Then there can be added another confirmation of Scotus's, because it can happen that a natural being is much more perfect than a supernatural: for substance, which is a natural being, is much more perfect than any accident whatever; therefore an accident which is called supernatural can be no less rightly understood than a substance which is called natural. This opinion is favored by Henry in the Summa, article 33, question 2, to the third, where he asserts that the species of the divine essence cannot be produced, because if it were in the blessed intellect, the angel would see it by his own proper power; but the species of the divine essence, whether impressed or expressed, is something supernatural.[1603]

The second opinion is that no supernatural mysteries of grace can be known by an angel by his own proper power; and from this they further infer that the mode whereby Christ exists in the Eucharist cannot be seen by an angel by his own proper power. About the mysteries in general, St. Thomas teaches thus in this article, and Cajetan and the recent Thomists with him. But about the mode whereby Christ exists in the Eucharist, the same holy Doctor treats it in III, q. 76, a. 7; and there Cajetan; Soto on IV, dist. 10, q. 1, art. 7; Richard on the same distinction, art. 5, q. 1; Paludanus, q. 4, art.; and Henry, Quodlibet XI, q. 12. Bonaventure is also reported for this opinion

1602. Scotus, In IV Sent., dist. 10, q. 8, § Respondaco; Bassolis, In IV Sent., dist. 10, q. 8; Maior, ead. dist., q. 5; Ægidius, Theorem 16; Gabriel, In Canonem, lect. 43, lit. X; Ockham, In IV, q. (de Eucharistia), art. 3.

1603. Henry of Ghent, Summa, art. 33, q. 2, ad 3.

on the same distinction, part 2, art. 2, q. 1; and Alexander, part 4, q. 10, in the treatise on the Sacrifice of the Mass, memb. 7, art. 3.[1604] However, these two Doctors speak about the human intellect while it is conjoined to the body; and as to the intellect conjoined to the body, I do not see that there can be any controversy: for it is manifest that the body of Christ in the Eucharist cannot be perceived by the human intellect in the present state. Ockham, moreover, without any foundation, philosophizes in this matter by a certain peculiar reason; for he says that the body of Christ in the Eucharist would emit species into the eye so as to be seen, unless by a special providence of God it were hindered by God. But, this opinion being set aside, about which we must treat expressly in the place cited in the Third Part, the aforesaid opinion about the mysteries of grace in general is proved thus by St. Thomas: an angel cannot know things which depend on the free will of a man or of another angel, namely the secrets of the will; therefore neither can he know those which depend on the free will of God; of this sort are the mysteries of grace; therefore those cannot be known by an angel by his own proper power. Moreover, the holy Doctor speaks not only about future but also about present mysteries of grace: so that just as the secret of the heart, which is present, cannot be known, so neither can present mysteries of grace. But about the mode whereby Christ is in the Eucharist, they confirm their opinion thus: that mode is of the supernatural order, depending on the sole will of God; therefore it is not an accommodated object so as to be known by an angel by his own proper power. The aforesaid Doctors, who speak about the mode whereby Christ exists in the Eucharist, say nothing about the mode whereby the accidents exist without a subject in this sacrament - namely, whether an angel would be able to know the absence of the bread and of the subject of the accidents, and consequently the mode whereby they exist per se. Henry, indeed, speaks about the passing-away of the bread, namely whether an angel knows that there is annihilation or conversion, and by what mode Christ succeeds to the bread.[1605]

The third opinion is that of Durandus on IV, dist. 10, q. 4, n. 6, who teaches partly with the first, partly with the second opinion; for he says two things. One is that the existence of accidents without a subject could perhaps be known by an angel by natural power, because by his own nature an angel knows all natural beings, and accordingly he could know the absence and the corruption of any created substance; for it ought not to be of greater difficulty that the existence of a thing be known than that the non-existence of it be known, since they are of the same order. The other is that the existence of the body of Christ under the species of bread cannot be known by angels by their own proper power. He confirms this because this existence is not of a natural order but of a supernatural; indeed it is by no means subject to the course of natural things; and those things which are of a supernatural order cannot be known by angels by their own proper power. In this,

1604. St. Thomas, Summa Theologiae, III, q. 76, a. 7; Cajetan ad loc.; Soto, In IV Sent., dist. 10, q. 1, a. 7; Richard of Mediavilla, ead. dist., a. 5, q. 1; Peter of Palude, q. 4, art.; Henry of Ghent, Quodlib. XI, q. 12; St. Bonaventure, In IV Sent., dist. 10, pars 2, art. 2, q. 1; Alexander of Hales, Summa, pars IV, q. 10, in tract. de Sacrificio Missae, memb. 7, art. 3.

1605. Ockham's view is reported and set aside; on the mode of Christ's existence in the Eucharist, see the places cited in the previous note.

Durandus agrees with St. Thomas and with the other Doctors of the second opinion, namely in this point: that they teach that angels by their own proper power cannot know any mysteries which are of a supernatural order.[1606]

Caput II - Certain notes for the explanation of the truer opinion

Furthermore, in order from these three opinions to elicit distinctly that which to us seems more probable, two things must first be premised.

One is that a supernatural being is said relatively with respect to the natural, or the nature over which it is said to be, as is manifest. For this reason, in Disputation 44, chapter 1, I showed that it is not possible to create any substance of a supernatural order, as I there deduced at length from this principle.

Another thing to be noted is that this respect or relation (*relatio*) of the supernatural can be considered in a twofold way: first, by a comparison made with the subject; then with the cause. In the first way there are supernatural beings according to substance (*substantia*), such as forms and perfections which accrue to some nature, as the grace of the hypostatic union, beatitude, and virtues infused per se by their own nature. They are said to be supernatural in relation to the subject because they so come from without that neither the subject by its own nature nor anything else demands such perfections, but they are produced by God alone above the natural inclination of any subject.

Yet Scotus objects, in that first question of the Prologue, what Augustine says in the book On the Predestination of the Saints, chapter 2, namely, that to be able to have faith is of man's nature, but to have it is of the grace of God; whence Scotus himself proves that grace is a natural perfection of man, if indeed it is of man's nature to be able to have it. But Cajetan replies in I, q. 1, a. 1, § Unde ad primum, that Augustine did not say that it is natural to man to be able to have faith, but that it is of the nature of man to be able to have faith; and these two are different: for in the former way it would be signified that there is in man a natural inclination to grace; in the latter, however, there is only denoted that there is in man a capacity for grace, arising from the very substance and nature of man. I, for my part, would add that nothing is proved from Augustine's testimony, even if he were to say that it is natural to man to be able to have faith: for in that mode of signifying there would be denoted that that capacity for grace is natural to man, indeed relative to the principle from which it arises, not however to the form which it regards; and from a capacity of nature we do not gather that the form is of a natural order: for even to the hypostatic union...[1607]

Moreover, that from these three opinions we may elicit distinctly what seems to us more probable, two things must be premised.

1606. Durandus of St. Pourçain, In IV Sent., dist. 10, q. 4, n. 6.
1607. Cajetan, In I, q. 1, a. 1, § Unde ad primum; Augustine, De praedestinatione sanctorum, c. 2.

One is that a supernatural being is said relatively to the natural, or to the nature above which it is said to be, as is manifest. For this reason I showed in the first chapter of the foregoing disputation that no substance can be created under the sole relation to God. From this principle I there drew out at length that it is called supernatural relatively to the subject over which it is placed.

Another thing to be noted is that this respect or relation of the supernatural can be considered in two ways: first, by comparison made with the subject; then, with the cause. In the first way there are supernatural beings according to substance (*substantia*), such as forms and perfections which accrue to some nature - grace, the hypostatic union, beatitude, and the virtues infused by their very nature. They are called supernatural relatively to the subject because they come from without in such a way that neither the subject by its own nature, nor anything else, produces such perfections by its own natural inclination, but they are produced by God alone above the natural inclination of any subject.

It is objected, however, by Scotus in that first question of the Prologue, from what St. Augustine says in the book On the Predestination of the Saints, chapter 2 - namely, that to be able to have faith is of the nature of man, but to have it is of the grace of God - that hence Scotus proves grace to be a natural perfection of man, since it belongs to man's nature to be able to have it. Cajetan replies, in the First Part, question 1, article 1, § "Unde ad primum," that Augustine did not say it is natural to man to be able to have faith, but that it belongs to the nature of man that one can have faith - two different things. For in the former way it would be signified that there is in man a natural inclination toward grace; but in the latter is denoted only a capacity in man for grace, arising from his very substance and nature.[1608] I would add that nothing is proved from Augustine's testimony, even if he were to say it is natural to man to be able to have faith. For in this way would be signified and denoted that that capacity for grace is natural to man in relation indeed to the principle from which it arises, namely to the very substance and nature of man; yet from capacity we do not gather that the form is of the natural order: for even for the hypostatic union there is a capacity of nature, and yet the union itself is not natural.

Then an effect is said to be supernatural according to the mode, that is, on the part of the mode of the efficient cause (*causa efficiens*), because it is brought about beyond nature by God alone, no natural cause asking for it, even if the thing itself is of a natural order and otherwise could have a created cause and in another way could have it. Such is the restoration of a lost eye: for the eye itself is indeed a natural thing, which otherwise in generation itself is from a created cause operating naturally, and joined to the whole man it is according to his nature, just like the other parts; yet because it is restored by God alone, no created cause asking for this, we say it is done in an order above nature. By the same reason the healing of a sickness is a supernatural work on the part of the mode, when it is done either suddenly or little by little in such a way that no created cause could be its cause. Yet although the creation of the soul in the body is by God alone, nevertheless it is not called supernatural, even on the part of the mode of efficient causality:

1608. Cajetan, In I, q. 1, a. 1, § Unde ad primum; St. Augustine, De praedestinatione sanctorum, c. 2.

because a natural cause, which disposes the matter for the generation of man, asks that the soul be created so as to be infused into the body, which, if it were not created, would be beyond the natural order of things.

As to the corruption of the accidents of the sacrament of the Eucharist by burning or in some other way, it must be said, namely, that it is supernatural on the part of the mode of efficient causality: because no natural cause requires such a corruption or annihilation. For although the heat of fire by its natural activity disposes toward corruption, nonetheless this happens only when there is a subject apt to receive some opposite form. But in the sacrament of the altar matter is lacking, and that must be produced by God alone, no natural operation of a created cause asking for it: therefore it ought to be called supernatural. On the other hand, it is not called miraculous, because it is not rare, but is common to the sight of men, and appears according to the common course of causes. Nay rather, if those species were not burned, and if fire did not generate, or a worm did not generate, according to diverse dispositions, it would be called a miraculous thing.

From the same principle it is gathered that, if the heavens were annihilated, the annihilation or cessation of them would be supernatural, not because it would be above the power of the cause destroying them - for God alone can reduce a substance into nothing, and it is not above his power to annihilate and destroy it - nor because it would be above the nature of the thing destroyed: for every creature intrinsically does not repel being reduced to nothing, but by its very nature has that it can be destroyed, as we said above in disputation 182; but it would be called annihilation supernatural, because it would be by God in such a way that no natural cause in any way requested or demanded it, as the disposition in the matter of a conceived embryo asks for the creation of the soul. And hence we say that all those things which are perpetually conserved by God, and are immortal because they cannot be corrupted by a created cause, can be conserved naturally and endure perpetually.

But you will object: by the same reason the creation of things made in the beginning ought to be called supernatural on the part of the mode of efficient causality, because creatures were made by God in such a way that no natural cause asked for their creation. I answer: the creation of things cannot be called supernatural: because since then there was no created cause, but all things in the beginning had to be made by no one other than God, it could not be said to be above the nature of other causes, which then were none; wherefore neither could it be called supernatural according to substance, nor according to the mode of efficient causality.

From all these things it is clearly evident that Scotus's doctrine is false when he teaches that the natural and the supernatural are not distinguished otherwise than by the order to the natural agent, and that the supernatural - namely, not otherwise than by the manner of operating, in accordance with which an agent is said to operate naturally or supernaturally, according to those things which were said in the latter notation. But this opinion of Scotus is false, because it has been sufficiently proved that certain forms are by their very nature of a supernatural order, because they are natural to no subject; others, however, are supernatural only on the part of the mode by which they are produced. Moreover, when we say that certain effects are supernatural on the part of the agent, it is not to be taken as if one agent were supernatural and another natural: for the same God

is both a natural and a supernatural agent. He is called "natural" indeed when he operates in accordance with what other natural and created causes ask; "supernatural," however, when beyond the order which all other causes require he effects something.

The true opinion is set forth in general.

Caput III - On what of the supernatural an angel can know naturally

Therefore the opinion is set down in two points. One is that all those things which are supernatural in the former way - namely, by their very nature - cannot be known by an angel by his proper power, either by that knowledge which they call abstractive, as possible before they exist, or by that knowledge which is called intuitive, when they exist - unless by some divine revelation. The other is that all those things which are supernatural in the latter way - namely, which by their nature are of the natural order and are only supernatural on the part of the mode of efficient causality - can be known by an angel by his proper power, and by abstractive knowledge when they are only possible, and by intuitive knowledge when they actually exist. These two must be confirmed singly.

The first part can easily be proved from the things said: for if certain beings by their very nature are of another order, they ought to be above the grasp and natural intelligence of a created nature; otherwise, by the same account by which one mystery would be understood, any other supernatural thing could be known, and hence all mysteries would naturally be known to angels; wherefore even the union of human nature with the divine person would be known by the demons - which all deny. And if anyone should say that this mystery is therefore not known because it is necessary to know the persons, the Trinity in God, still it follows that it can be known by an angel that there is a union of human nature with God, whether in this or in that person. The reason set forth above not only proves that supernatural mysteries cannot be known with certitude when they are present, but also not even as possible before they exist: for both are above the grasp and the natural intelligence of an angel, since by their nature they are of a supernatural order.

There are, however, certain recent authors who say that the mystery of the Incarnation, which they grant to be by its very nature supernatural, can indeed be known by an angel as possible, but not as to whether it is in reality. They prove this by the following reason: because angels know the extremes of this union, namely human nature and God; since therefore it does not imply a contradiction that those extremes be united, such a union can rightly be known by an angel as possible; but on the contrary he cannot know whether such sanctification is possible. But their argument is weak and can be retorted against them. First, that it has no moment is shown thus: for it can happen that an intellect knows two extremes, and yet cannot understand the whole, which does not imply a contradiction in bringing together those two; nor is it necessary that an angel should know all the principles from which all things can be deduced which do not imply a contradiction among those extremes - at least those which can be done by God's power alone and are by their very nature supernatural. Then I retort the argument back on them: for if an angel knew that a humanity can be united to the divine person, he would also know that by that union

itself it would be sanctified and constituted just by God; for this does not imply a contradiction, indeed it necessarily follows upon that very union. Why then could he not know that a soul or an angel can be sanctified by some other gift? Lastly, this same our opinion can be proved from that passage of the First to the Corinthians, chapter 2, where Paul says: "For what man knows the things of a man, except the spirit of the man who is in him? So also the things of God no one knows, except the Spirit of God." And below: "Now we have not received the spirit of this world, but the Spirit who is from God, that we may know the things that are given to us by God." From which Paul intimates that the gifts of grace can be known only by the Spirit of God.

But indeed, although in this part we agree with St. Thomas, nevertheless his reason, which we reported in the previous chapter, does not prove it efficaciously. For from the fact that supernatural things, or grace, depend on the will of God alone as on a cause, it follows only that they cannot be known so long as they are future. But that when they are now present they cannot be known, he does not show: for many things, like the creation of the angel and of the universe, depend on the will of God alone; yet once produced, they are rightly known. And if this reason of St. Thomas had any moment, it would also prove that supernatural things on the part of the agent and the mode of operating could not be known by angels: because whether they are or are not, they depend on the will of God alone - such is the restoration of an eye.

The latter part of this opinion proposed above is also easily proved - namely, that beings supernatural on the part of the mode of efficient causality, such as a restored eye, can be known naturally by angels. For since these beings by their nature are of the natural order, and exist altogether just as if they were made in a natural way, by whatever reason they come to be, in the same way they can be known. Therefore not only by an angel, but even by a man, these beings are known with certitude: for who does not see and know that an eye has been restored by a supernatural work? And not only is it known with certitude by an angel that it has been done supernaturally, but also with certitude that it has been done by God, not by the forces and order of nature. For it is not hidden from angels that there is no created cause which could certainly restore an eye, while God, being omnipotent, can do it. Wherefore the angel rightly knows not only these supernatural beings on the part of the mode by which they are brought about when they are, but he also has abstractive knowledge before they are, that they can be done by God.

From this doctrine it will not be laborious to dissolve Scotus's reasons. To the first I reply that what is supernatural by its very nature, as being above the order of nature, is not an accommodated object of our intellect or of the angelic intellect, so that it should be understood by it without revelation. But that there are certain beings by their very nature supernatural, and not only on the part of the efficient cause, has now been proved more than enough. To the latter reason I say that every substance (*substantia*) in the genus of being is a perfection rather than any accident (*accidens*), if each of them be considered in itself; nevertheless there is some accident of a higher order which perfects the substance itself and raises it to a higher order. But it can happen that the intellect knows that which in the genus of being is greater, namely substance, and yet does not know that which in the genus of being is less, namely accident, because by a certain superior and more perfect reason it affects the substance. It is also evident that the substance of one angel is per

se manifest to another, not so an accident of his, which is much less perfect. But that common proposition, "What can be done or known in regard to the greater, can be done or known in regard to the lesser," must be understood of things which are of the same formal kind, as was set out at length above in disputation 118, the last chapter.

Corollaries of the foregoing doctrine.

Caput IV - What in the Eucharist angels can know naturally, and what remains hidden

Since from the foregoing it is clear that those kinds of beings which by their very nature are supernatural cannot be known by an angel, but those which are natural according to their nature and only supernatural on the part of the efficient cause can rightly be known by him, let us see which, in this sacrament of the Eucharist, are of the first sort, and which are hidden from him. This we shall explain more easily if we rightly distinguish those things which in this sacrament are by their nature supernatural from those which are supernatural only on the part of the efficient cause.

First, then, in this sacrament there is the union of the body and blood of Christ with the divinity.

Second, there is the power of the body and blood for sanctifying.

Of these, Scotus grants that the first can be known by an angel; about the second he does not teach, at least he will concede that the effect of this sacrament can be known by an angel when it occurs, even though in truth that effect is of a supernatural nature; but from that he does not concede that therefore the very virtue is known, because this depends on the will of God alone. But for us, in accordance with what has been set down above, it must be said that neither the union of the divinity with the flesh and with the blood, nor the power of this sacrament to sanctify us, nor its effect can be known except by the revelation of God: to be known by an angel's proper power - these three belong by their nature to the supernatural order; but supernatural beings cannot be known by an angel with certitude by his own power.

Third, in this sacrament there is the absence or cessation of the substance of bread. This, however, can rightly be known by an angel not only with certain knowledge by discourse and by alien species, but also by a proper and quidditative concept, just as all cognition about corporeal things judges privations and contraries. Herein the opinion of Scotus is proved, and Aristotle's testimony clearly confirms the reason for it: for, as Aristotle says, On the Soul II, chapter 7, text 103, sight is of light and of darkness, hearing of sound and of silence; that is, sight is conversant both with the visible and with the invisible, hearing with the audible and with the inaudible; which in On the Soul III, chapter 2, text 138, he explains in these words: "For since we do not see darkness, by the light of sight we discern" - that is, we judge between light and darkness - "not by any other sense than sight: not because sight actually perceives darkness and light; and between these two ..."

But that sight discerns the two not because it somehow acts upon darkness, but because, since sight is the proper subject for perceiving light, it is also the proper subject for the opposed privation, for which privation hearing or any other external sense is not capable: nevertheless,

from the privation of its proper object in sight, the intellect rightly judges the absence of that object. Therefore habit and the opposed privation are altogether of the same order and refer to the same potency; and consequently, habit and privation, or an opposed negation, when compared with the intellect, will be of the same account.

Yet light and darkness are referred to sight in a different way: for sight does nothing about darkness, whereas the intellect, by its own proper act, can so know the negation of substance (*substantia*), or of being, which it has for its object, just as it knows being itself - unless from elsewhere, on account of its conjunction with sense, the intellect be deceived about the non-being of a thing: for this cause we judge from what outwardly appears that something is, which in reality is not. Therefore, since the angel's intellect is impeded by no body or sense, but knows all things as they are in themselves; and since the being and the non-being of some thing fall under the same order and are referred in the same formal aspect to the intellect, it follows that, just as it understands and defines a thing, so also, even if in a supernatural manner it cease and be destroyed, it is plainly and clearly known by the angel, in the way in which negations can be known. Wherefore the angel will rightly know that under the species of the Eucharist there is not the substance of bread: because in very truth it is not there, even if by the supernatural power of God it has been destroyed.

We can illustrate this matter by manifest examples: if God, beyond the natural order of things, were to restore sight to a blind man, or were, in one having two eyes, to remove the other by His sole will; or if He were to produce light in the air without a luminous body, or, even with a luminous body present which would otherwise produce it, by His sole will were to hinder it and make the whole air dark; not only the angel, but even a man, would discern both the effect and its privation. If, then, an angel can with certitude know these two by his own power, he will also be able no less certainly to know the defect of the substance of bread in the Eucharist: for we, for our part, cannot know it because the things which we grasp by the intellect we must also know by sense, and we judge of the substance of the thing through the accidents that appear to sense; and, since we see the accidents of bread in the same way, we suppose the substance of bread to remain there. But when the angel gazes upon the natures and substances of things as they are in themselves, and not through accidents, by that same method he can know the absence of bread or its presence, just as we [know] the absence and the presence of light, even if each were brought about supernaturally: so too he can know the substance of another angel and its non-existence, even if, by a supernatural ordinance, it were reduced by God to nothing.

It may be said: It could happen that the substance of bread existing in the nature of things would not be known by an angel, because God would impede the cognition: therefore an angel could suspect that the substance of bread is there, yet that he is being impeded by God from knowing it; and thus it could not be evident to him that the substance of bread is not there.

But this objection is frivolous. First, because, if it had any weight, it could also be inferred that it is not evident to an angel that the air is deprived of light, and that a man has sight: for he could suspect that he is being impeded by God from knowing the light in the air and the sight in a man. Thus too we would not have evidence through the senses, because we could suspect that the things

we see are seen by us only through illusions of the eyes, as can happen. Therefore, just as no one prudently suspects this, and so nothing hinders one from having certitude of things through the senses, so too nothing can hinder an angel from rightly judging, in the sacrament, that the substance of bread is not there, from this very fact that he does not know it; even if it could be there, and he himself were impeded by God from knowing it.

Next, I say that the angel's intellect does not infer the cessation of an entire substance from the fact that he does not know that it is, that is, from a negation of a cognition of its being; rather, he knows the cessation of the substance by a positive act, as his proper object within the natural order, just as he knows being itself. Wherefore, just as by the very fact that some thing is, it is subject to the angel's cognition, so also the non-being of a thing is in the same way subject [to it], by the very fact that the thing itself is not.

Fourth, in this sacrament there are the accidents (*accidens*) of bread without a subject, and accordingly they exist per se. I judge, however, that this is something supernatural only on the part of the efficient cause, because it is beyond the order of created nature, but it is not supernatural by its own nature: wherefore, from the doctrine set out above it follows that they can certainly be known by an angel - not, I say, by a proper and quidditative concept, but at least certainly and evidently, yet by some discourse.

For the absence of the substance of bread and of wine is certainly known by angels, as has been proved thus far. Hence an angel cannot but evidently infer that those accidents are without a subject, and accordingly that quantity is altogether per se, while the other accidents are in quantity. Moreover, that the accidents remain there is certainly known by an angel; there can be no doubt: for if we truly perceive them by our sense and truly judge of them that they are there, much more certainly will an angel know that they remain there. This argument clearly proves that it is certainly known by an angel that the accidents remain there without substance, and accordingly that they exist per se in the manner explained - whether this certain cognition be through a proper species and a quidditative concept of that per se mode, or be only through alien species and concepts, yet by a necessary and evident discourse.

I add, nevertheless, that that positive mode of existing which the accidents have from the defect of a substance is known by an angel by a proper and quidditative concept; though this seems difficult to some. But the reason is manifest, because that mode is not supernatural by its own nature, but only on the part of the efficient cause: therefore it can be known by a proper and quidditative concept in exactly the same way in which something else is known by an angel which, by its nature, belongs to the natural order, though it is produced in a supernatural mode - such as a restored eye. Moreover, I am persuaded that the mode whereby the accidents exist per se is, by its nature, of the natural order, because it necessarily arises from the negation of some natural entity as from something prior: therefore it cannot be of the supernatural order; for if it were such, it could not have a necessary connexion with that negation. Yet from the removal of the substance of bread or of wine the per se being of the accidents that remain necessarily follows, and presupposes it as something prior: because, from the removal of the substance, it necessarily follows that the accidents which remain are per se.

It must be observed, however, that there are two negations which have a connexion with the per se being of the accidents: one of the substance, the other of the mode of inherence: yet these are compared to the per se mode of the accidents in a different way. For the negation of the substance is prior to the per se mode of the accidents: as we shall show below, it is not that the substance ceases because the accidents begin to be per se, but rather the contrary. But the negation of existing in a subject arises in the accidents from the positive mode of existing per se: just as the negation of a proper personality in the humanity of Christ arises from the fact that it exists in another person.

But some say that that mode of the accidents whereby they exist per se is supernatural not only on the part of the efficient cause, as is the restoration of an eye, but also by its own nature, as grace, the hypostatic union, and the like. And they gather the reason for the difference from this - that the restoration of an eye indeed is at the beginning brought about in a supernatural way, afterwards, however, it is wholly conserved naturally; but this mode of existing of the accidents is not only at the beginning produced supernaturally, but is also continuously conserved in the same way. Yet this difference has no weight: for from the continuous conservation of the accidents one can only gather that their mode of existing per se is supernatural not only on the part of the efficient cause in the beginning, but also in the continuous conservation. For instance, if God were to produce light in the air without a luminous body, He would continuously conserve it in a supernatural way; yet the light produced would be of an entirely natural order. Likewise, if, with a luminous body present, God were to hinder light from being produced in the air, the darkness made in the air would continuously be made in a supernatural way; yet they would be entirely of a natural order, and could be known by any created intellect. Therefore, that different mode of supernatural production - whether only in the beginning, or also in the continuous conservation - does not argue a difference of a thing's being natural or supernatural according to its own nature, but only a difference according to mode.

Someone will object next with this reason: that mode of existing per se does not naturally befit any other nature; therefore by its nature it is supernatural, according to the definition assigned by us in the second chapter. I answer: although a univocal mode of the same account does not befit other things besides the accidents of this sacrament existing without a subject, nevertheless, because the per se mode - by far of greater perfection - which befits substance is of the natural order, that mode also, when communicated to accidents, will by itself and by its own nature be of the natural order, and will be supernatural only on the part of the efficient cause. Thus, from the fact that an angel knows the accidents to be without a subject, and accordingly to be per se after the fashion of a substance, he will not from that know them to be supernatural by their own nature. Just as if the souls of brute animals were preserved by God separately from matter, they would subsist per se after the manner of substances, yet by their own nature they would still belong to the natural order.

Secondly, I add nevertheless that the positive mode of existing per se (modus per se existendi), which the accidents have from the absence of the substance, can be known by the angel by a proper and quidditative concept; although this seems difficult to some. The reason is clear, because that mode is not supernatural by its own nature, but only on the part of the efficient cause: therefore it

can be known by a proper and quidditative concept in exactly the same way as something else is known by an angel which, although by its nature pertains to the natural order, is nevertheless produced in a supernatural way, as a restored eye is. And I am persuaded that that mode whereby the accidents exist per se is by its own nature of the natural order, because it necessarily arises from the negation of some natural being, as from something prior: therefore it cannot be of the supernatural order; for if it were such, it could not have a necessary connection with that negation. But in fact it necessarily follows upon, and presupposes as prior, the negation of the substance of bread or of wine: for from the absence of the substance it necessarily follows that the accidents which remain exist per se.

But it must be observed that there are two negations which have a connection with the per se being of accidents: one is the negation of the substance, the other of the mode of inherence. These, however, stand in a different way to the per se mode of accidents. For the negation of the substance is prior to the per se mode of accidents: for, as we shall show below, substance does not cease to be because the accidents begin to exist per se, but rather the contrary; whereas the negation of existing in a subject arises from the positive mode of existing per se: just as the negation of a proper personality in the humanity of Christ arises from its being in an alien person.

Some say that the mode by which the accidents exist per se is supernatural not only on the part of the efficient cause, as is the restoration of an eye, but also by its own nature, as grace, the hypostatic union, and the like. They take the reason for the difference from this, that the restoration of an eye is at the beginning indeed produced in a supernatural way, but is thereafter conserved entirely naturally; whereas this mode of existing of the accidents is not only introduced in a supernatural way, but is also conserved in the same way. But this difference carries no weight: for from the continuous conservation of the accidents one can only gather that the mode of existing of those accidents is supernatural not only on the part of the efficient cause in the beginning, but also in their continual conservation; just as if God should produce light in air without a luminous body, and should continually conserve it in a supernatural way, still the thing produced would be entirely of the natural order; and likewise if, a luminous body being present, God should impede the production of light in the air, the darkness in the air would continually come about in a supernatural way; yet it would nevertheless be entirely of the natural order and could be known by any created intellect. Therefore that diversity - of a supernatural production in the beginning alone, or also in the continual conservation - does not argue a diversity between what is of the natural and what is of the supernatural order according to the nature of the thing, but only according to the mode.

It is objected then against this reasoning: that mode of existing per se of the accidents naturally belongs to another nature; for by our account given in the second chapter we assigned to it a nature of the supernatural order. I answer: although a univocal mode of the same account does not befit other things besides the accidents of this sacrament existing without a subject, nevertheless, because the per se mode - by far of greater perfection - which befits substance is of the natural order, that mode also, when communicated to accidents, will by itself and by its own nature be of the natural order, and will be supernatural only on the part of the efficient cause. Thus, from the

fact that an angel knows the accidents to be without a subject, and accordingly to be per se after the fashion of a substance, he will not from that know them to be supernatural by their own nature. Just as if the souls of brute animals were preserved by God separately from matter, they would subsist per se after the manner of substances, yet by their own nature they would still belong to the natural order.

From the fact that they are separated from matter, there would indeed be known by the angels clearly and by a proper concept that per se mode which they have when separated from a subject; and yet that per se mode does not belong univocally to another form: for the mode which befits a rational soul is of a different account from the mode which befits another. For this reason, therefore, these modes are known by the angel not only evidently, but also by a proper and intuitive concept, because, since the principal analogate - namely the per se mode which befits the whole substance and the separated rational soul - is by its nature of the natural order, by much greater reason will that mode which is communicated to accidents be so.

Secondly, a more difficult objection is raised. Finally, against the doctrine set forth above one can argue thus: if from the fact that an angel knows for certain that the substance of bread is not under the accidents he clearly infers that the accidents exist per se; by the same reasoning from the fact that he knows Christ's humanity not to have its own proper personality he will clearly infer it to have an alien personality. But since it is true that a created nature cannot be suppositum for any created person - as the more probable opinion holds - he will infer the humanity to be in the divine person. Moreover, that an angel knows for certain that the humanity in Christ lacks its own personality is proved in the same way in which we showed above that the absence of the substance of bread and wine in the Eucharist is known for certain by an angel: because it is of the very same order, and a natural form and the negation or privation of it can be known by an angel in the same way. Therefore, since the proper personality of human nature is of the natural order, and is known by the angel not only evidently, but by a proper and intuitive concept, by the same token the negation of it can be known.

I answer: the personality of human nature and of angelic nature is nothing other than a mode of existing per se (modus per se existendi), such that it is in none other in any way; and from this it is that human nature lacks its own personality, because it is in an alien person, such that the negation properly arises from the fact that it is sustained by another: just as the privation of one form in matter arises from the fact that there is another opposite form. But in the accidents of the Eucharist it is not so: for they therefore lack a proper mode of inherence in a subject, not because they have a mode of existing per se, but because they are deprived of and stripped of their subject; therefore they are despoiled of the proper mode of existing in another, and the mode of existing per se is necessarily communicated to them. Whence it happens that an angel, left to his own nature and faculty of knowing, is not deceived in knowing whether the accidents exist per se or in another; nevertheless he is deceived in the cognition of the mode and of the personality proper to the humanity, supposing that the humanity of Christ exists per se, whereas in truth it exists in another.

The reason for the difference is that, since the per se mode of existing of the accidents arises necessarily from the negation of a proper subject, and this is wholly of the natural order, and therefore is known by the angel by his own power; consequently that mode of existing per se of the accidents in this case can be known. But since the privation of proper personality befits human nature from the fact that it is sustained by another, and to be sustained by another - namely by the divine - is of the supernatural order, it follows that an angel does not know the privation of created personality; although he does know created personality, and the privation of it is of the same order as the personality itself. For what we said, namely that the privation of some form and the form itself are of the same order, and hence can be known in the same way by the same intellect, must be understood whenever the privation does not depend essentially on something positive of the supernatural order: as the privation of created personality does. Hence it comes about that an angel, left to his nature and power, is plainly deceived about created personality and the personality proper to human nature, and thinks it to be where in truth it is not: because he cannot grasp whether that nature is sustained by another person. Nor does it hinder that the angel has a proper and quidditative concept and species of proper personality: for in the judgment by which he affirms that it is or is not, he can nevertheless be deceived, because it depends on something supernatural about which he cannot give judgment. The angel, therefore, is deceived in the judgment of natural things, of which he has a proper species, because of their conjunction with something supernatural: and in this case we must speak in the same way, whether we say that created personality is merely the negation of existing in another, or a positive mode of existing per se; for in either way the absence of created personality depends on something supernatural.

Moreover, some more recent authors contend that the mode of existing per se of the accidents does not depend upon, nor follow from, the cessation of the whole substance, but rather the contrary: so that, just as from the union of the divine personality with the human nature, as from an opposite form, there arises the privation of created and proper personality; so also the per se mode of the accidents, as an opposite form, is the cause that the whole substance ceases, because by its own nature that substance requires to be conserved by such accidents; wherefore, since without them it would be praeter naturam, the very existence per se of the accidents demands that the whole substance cease; and since that per se mode of the accidents is supernatural, it follows, by what we have said, that the negation of the substance cannot be known, although taken in itself it be of the natural order, because it has a connection with something supernatural, namely with the per se mode of the accidents; just as the non-existence of created personality cannot be known because of the supernatural union of the divine personality. They also devised this manner of philosophizing in order to defend that the cessation of the whole substance is not an annihilation, because it comes from something positive as from an opposite form.

But, so that we may reserve for its own place the things that pertain to annihilation, as to our present purpose I answer first that that per se mode of the accidents is not of the supernatural order according to its own substance, but only on the part of the mode of being effected, as was shown above: and thus the argument proves nothing. Then I say that even if it were of the supernatural order, and were a contrary formal cause so that the whole substance of bread should

cease, nevertheless it would not prevent the negation of the whole substance from being able to be known, just as the union of the divine personality prevents the non-existence of created personality from being known, as we said above: because the privation of created personality in a created nature not only arises from the union of the divine personality with the created nature, but also so essentially depends upon it that it cannot occur in any other way, even according to the absolute power of God. Wherefore, since the union with the divine person, which is a necessary and essential cause of the privation of created personality, cannot be known, it is rightly inferred that that privation cannot be known. But if the negation of the whole substance should arise from the per se mode of the accidents as from an opposite form, it would not so necessarily arise that it could not happen otherwise: for the negation of the whole substance could take place without the per se mode of the accidents by God's absolute power, so that first the accidents would be corrupted and then the whole substance, or at the same time the substance together with the accidents. Therefore the very negation of the whole substance as a fact - that is, that there is not substance there - does not depend essentially on the per se mode of the accidents. And it matters little if one should say that the cessation of the whole substance takes place in a different way, either through the separation of the accidents or after the prior destruction of the accidents: for as regards the negation in fact of the whole substance, it is altogether the same whether done in this way or in that, and thus can be known in the same way.

Finally, I say that the per se mode of the accidents is not the formal cause of the opposition to the whole substance, so that from it there should arise the non-being of the whole substance, as the union of the divine personality is the cause of the negation of created personality: because the accidents are conserved per se outside a subject so much the more praeter naturam than the whole substance is without accidents; for an accident depends more on its subject than prime matter on an accident; or at least the reason of each dependence is equal. Therefore the per se mode of the one cannot be the cause of destroying the other: but only this, that the one be without the other - whatever be the case with the other, whether per se, or in another, or utterly destroyed - will be called praeter naturam. Moreover, there is no reason that should compel us to assert that, in order to destroy the substance of bread, God first willed to separate the accidents and then to destroy the whole substance of bread: since it is much more easily understood that first the destruction of the substance take place, then the accidents remain per se; if indeed the destruction of the substance is to be posited only so that the words of consecration be true and the body of Christ be present, from whose presence the destruction of the bread arises, as was said in Disputation 176, chapter 6.[1609] Since therefore the destruction corresponds to the positive effect of the words - namely the presence of the body of Christ - if the substance of bread remained, the words of consecration would not be true; another mode is devised in vain: which is also by no means necessary for defending that the cessation of the bread is not annihilation, which, as must be done, we will show in its own place.

Fifthly, in this sacrament there is the mode by which Christ exists under the species, namely, whole in all and whole in each part of them. This, however, I think can rightly be known by an angel by his own power. First indeed he can know that under the sacramental species there is the substance of the body and of the blood; although he may be ignorant that it is united to the Word of God: for the substance of the body and of the blood is of the natural order; therefore he can know where it is and when it is. Then he can know that the nature of Christ's body's quantity is such as to extend the substance in which it is in relation to place; whereas, on the contrary, since the substance of the body and blood remains there with its quantity, having in itself part outside part, but without the mode of extension in relation to place, it follows that by an angel can be known in no wise either effect of quantity - namely, that it extend the substance within itself - or the privation of the mode of quantity by which it would be extended together with place. For, as we were saying above, by the same power of intellect by which he can know the nature and substance of something, he can rightly know its privation; and since from the privation of that mode of quantity it follows that the substance is whole in the whole and whole in any part of the place, it also follows that there can be known by the angel that mode whereby the body of Christ exists in the Eucharist: whole in the whole quantity of the species, and whole in any part of them. The same would altogether follow, if we should say that the substance of the body in the same way remains whole under the whole quantity of the species and whole in any part of them, because it lacks its proper quantity: for once this is removed, those modes would seem naturally to follow, namely that the substance exist indivisibly under some quantity; but the privation of proper quantity is of the natural order, just like quantity itself.

But if someone should say that this mode which befits the substance - by which it exists whole in the whole and whole in any part of it - is of a different account from the modes which befit angels and spirits; I answer, even if it be of a different account, it does not on that account follow that it is of the supernatural order: for if there be found some mode of the natural order whereby some creature exists whole in the whole and whole in any part, a mode of this sort, according to its own nature, could not be of the supernatural order.

Lastly, it is to be observed that, although this mode which the body of Christ has in the Eucharist - for existing beyond its own nature - be of the supernatural order, nevertheless it will be possible that the body of Christ be known according to its substance without that mode. As Cajetan most aptly warned in the place already mentioned: for just as the humanity of Christ is now known by the demons, without the mode of the union being known, so too the body of Christ could be known, without that mode being known. For nothing is required that one thing not be known unless another be known, when the one neither belongs to the definition of the other nor is of the same order with it.

1609. Vazquez, Disputatio 176, caput 6.

Durandus answers that indeed the presence of the body of Christ under the species of bread can be known, and that individual mode whereby the whole body exists there in the whole quantity and whole in any part of it, as has been proved up to now; but whether this be by transubstantiation or by simple adduction, it is not known by an angel by its own natural power, but only by a revelation of God.

But for the explanation of this matter it must first be noted, as we said in Disputation 177, chapter 5, that the notion of transubstantiation is not this, that the substance - namely, that of which transubstantiation is said to be made - is produced or conserved by these things; indeed, those who in this manner defend the notion of transubstantiation in the sacrament of the Eucharist seem to reduce to a certain invented kind of philosophy, rather than to what is true and necessary, what has been defined de fide in the Council of Trent, session 13, chapter 4, as was said more fully in that place.[1610]

Then it is to be observed that, in the place mentioned, we said that the simple adduction of the body of Christ to the sacramental species differs from transubstantiation in this, that simple adduction must be done in one of these modes - either by leaving the prior place, or even by retaining it - yet in such a way that the presence of the body of Christ in the Eucharist either remains together with the substance of bread, or, if the substance of bread ceases, it does not cease by force of the presence of the body of Christ, but by the sole will of God, the presence not requiring it. Then, however, the presence of the body of Christ and the destruction of the bread stand concomitantly and without any connection, so that the one does not follow upon the other. But that there be that connection between the presence of the body of Christ and the destruction of the bread, it is necessary that the presence of the body of Christ have some opposition with the very substance of the bread, so that they cannot be together. Now this opposition is not between the substances themselves according to themselves, as is manifest, nor from some mode communicated to them, which some without foundation contrive, but from the mere truth of the words, which standing, it is impossible that the substance of the body of Christ be there and the substance of bread remain; for otherwise the pronoun "This" would not truly point out the body of Christ, as will be explained in its place. Nor indeed would it be enough for transubstantiation to be said, if the consecration were made by a copulative proposition, by saying in this manner, "Here be made my body," and "Here may the substance of bread not remain"; although in this case both would be done, and the species would truly remain consecrated together with the body and blood of Christ. But the reason why then there would not be transubstantiation is this, that then those two changes would be together or concomitant, and the one would not follow upon the other - namely, neither the change of the presence of the body of Christ nor the destruction of the substance of the bread. For for the truth of a copulative proposition it is not necessary that the truth of one part arise from the other part; and therefore, with Peter disputing in one part, and John running in the other, the proposition is true, "Peter disputes, and John runs," because these two things happen at the same time; but now transubstantiation is true, because by a single demonstrative enunciation, "This is my body," the body of Christ becomes present in such a way

1610. See Vazquez, Disputatio 177, cap. 5; Council of Trent, session 13, cap. 4.

that by this very fact the substance of the bread must necessarily be destroyed. Therefore, since the priest, by making the body of Christ present, destroys the bread, it is rightly said that the substance of the bread ceases into the body of Christ and passes into it, as will be declared more fully in its place.

Therefore, since an angel can by its own natural power know that, with these words uttered, all this comes about - namely, by reason of the truth of the words, that body is in the Eucharist, and consequently the substance of bread is destroyed - once the words have been uttered and the effect seen, which is wrought in the bread and in the presence of the body of Christ, it can rightly understand by its own power that that body is there by transubstantiation. Nor is this to know something natural by its nature and substance, but something supernatural only on the part of the efficient cause. Certainly, if in the body of Christ there were some mode, by reason of which the destruction of the substance of bread would follow, that would be supernatural according to its own nature, and hence could not be known by an angel by its own power; because, however, nothing else intervenes there than the efficacy of the words by the power of truth and signification, nothing hinders an angel from rightly knowing that Christ is there by transubstantiation. Moreover, the angel knows that those words were instituted by Christ even from the effect (for this is a matter of fact); it also sees that, whenever those words are pronounced, it thus comes about, nor can they be true otherwise: it therefore rightly knows the mode of transubstantiation.[1610]

Disputatio CCXV - On whether the mystery of the Incarnation was revealed to the angels in the state of wayfarers

Caput I - The common opinion is that the mystery of the Incarnation was revealed to the angels in the way

It is undoubted among all that the mystery of the Trinity was revealed to the angels in the way; and likewise the mystery of justification and of beatitude, as St. Thomas rightly warns in 2 Sent., dist. 11, q. 1, a. 1, ad primum, and in this 1, q. 64, a. 1, ad quartum. But concerning the mystery of the Incarnation there is some difficulty, whether it was revealed to all the angels from the beginning. Not a few doctors affirm that it was revealed. Thus Rupert teaches on that passage of John 8, "He was a murderer from the beginning"; Catherine in the book On the Special Predestination of Christ, and in another On the Glory of the Angels; Viguerius in the Institutes of Theology, c. 3, § 2, v. 15, and c. 20, § 1, v. 4; Jacob of Valentia on that Psalm 81, "Arise, O God, judge the earth"; Nicholas of Lyra and Dionysius Carthusian on that Isaiah 63, "Who is this that comes from Edom?" The Dean of Louvain in 2, a. 2, § 8, a. 8, also favors this opinion. St. Thomas too, although in this article ad primum he says that this mystery was revealed to the blessed angels, yet lower down in q. 64, a. 1, ad quartum, seems to teach that the demons also knew the mystery of the Incarnation, if his words be carefully inspected; and most clearly in 2 Sent., dist. 11, q. 1, a. 4, he

1610. See Vazquez, Disputatio 177, cap. 5; Council of Trent, session 13, cap. 4.

so taught. Bernard also seems to have said the same in Sermon 17 on the Canticles, although he does not assert it consistently. Some likewise gather this view from St. Augustine, 3 On Genesis to the Letter, c. 19, whom in that argument St. Thomas cites four times to prove this; indeed in 2 ad illud, a. 4, he plainly affirms that Augustine was in this opinion. Of the many reasons which only congruently show that knowledge of this mystery was communicated to the angels, that one seems to me the weightiest, that Adam in the state of innocence knew this mystery, as St. Thomas teaches in 3, q. 1, a. 3, ad quintum, and more clearly in 2-2, q. 2, a. 7, in the body, and it is not obscurely indicated by that of Genesis 2, "This now is bone of my bones," which Paul interprets at Ephesians 5 by these words, "This is a great sacrament, but I speak in Christ and in the Church."

There are, however, some more recent Thomists who assert that this mystery was not revealed to the angels in the way; to whom at first glance some testimonies of Scripture and of the holy Fathers seem to lend support, which must be interpreted in a good sense, so that we may defend the opinion set forth above. And it seems to have been the opinion of Alexander, 2 p., q. 25, memb. 1, and Gabriel, on 2 Sent., dist. 9, q. 2, a. 5, dub. 4, where they assert that this mystery was revealed only to certain angels, not indeed in the instant of creation, but of confirmation in grace; wherefore they understand of certain ones only that saying of Ephesians 3, "It appeared to the angels," etc.[1611]

Caput II - The testimonies of Scripture and of the Fathers which seem to oppose the foregoing opinion are set forth and explained

That the mystery of the Incarnation was not revealed to the angels from the beginning, several and weighty Fathers of the Church seem to have handed down; whose testimonies must in this chapter be reviewed and explained. Among the Latins is St. Jerome, tome 6, in the Great Commentary, on the Epistle to the Ephesians, at those words, chapter 3, "The mystery hidden from ages," where he thus writes: "But the mystery hidden from ages can also be understood otherwise, namely that the ages themselves were ignorant of it, that is, all spiritual and rational creatures." He had said the very same in chapter 36 of Isaiah; and lower down, at those words of the same chapter 3 to the Ephesians, "That it might be made known to principalities," etc., he seems to teach that from the preaching of this mystery made in the Church the angels learned the manifold wisdom of God. And he attributes to the angels also that expression of Psalm 23, "Who is this King of glory?" and that of Isaiah 63, "Who is this that comes from Edom?" - angels who, wondering at the mystery of Christ, were asking about Christ himself, "Who is this King of glory?" etc. - thus does the same Jerome interpret in that of Isaiah 63 and in that Psalm.

Then St. Ambrose, in the book On the Instruction of Virgins, c. 5, and in the fourth book On the Faith, c. 1, and in the book On Those Who Are Initiated, c. 7, understands in like manner both those places of the Old Testament, both Psalm 23 and Isaiah 63, of the angels, in such a way that he

1611. Rupert of Deutz, In Ioan. 8; Catherine of Siena, De eximia praedestinatione Christi; De gloria Angelorum; Viguerius, Institutio Theologica, c. 3 § 2 v. 15; c. 20 § 1 v. 4; Jacobus de Valentia on Ps. 81; Nicholas of Lyra; Dionysius Carthusian on Is. 63; Decanus Louaniensis, 2 a. 2 § 8 a. 8; St. Thomas, In 2 Sent. d. 11 q. 1 a. 1 ad 1; 1 p. q. 64 a. 1 ad 4; 2 Sent. d. 11 q. 1 a. 4; Bernard, Serm. 17 in Cant.; Augustine, De Genesi ad litteram 3 c. 19; St. Thomas, 3 p. q. 1 a. 3 ad 5; 2-2 q. 2 a. 7; Gen. 2:23; Eph. 5:32; Alexander of Hales, 2 p. q. 25 memb. 1; Gabriel Biel, In 2 Sent. d. 9 q. 2 a. 5 dub. 4; Eph. 3.

understands them as asking about the mystery of the Incarnation. From which doctrine an effective argument is drawn in this way: if the angels were asking about this mystery, it is a sign that they were ignorant of it; for about those matters which we know, we never ask.

Among the Greek Fathers the same opinion seems to have been followed by Justin, in the Dialogue with Trypho against the Jews, p. 27, when he explains that of Psalm 23, "Who is this King of glory?" of the angels, in the manner in which Jerome also and others explain...

They too have explained it; and Pseudo-Dionysius, ch. 7 of On the Celestial Hierarchy, where that of Isaiah 63, "Who is this that comes from Edom?" he understands of the same angels in precisely the same way.[1612] But St. John Chrysostom, in the preface to the Gospel of John, introducing that of Ephesians 3, "the sacrament hidden for ages," says that John the Evangelist speaks of things which not even the angels, before he declared them, knew; therefore he judges that the angels learned the mysteries from John's preaching; and in Homily 7 on the Epistle to the Ephesians he seems to assert that not only were the riches of Christ hidden from the angels, but even the very substance of the mystery: "This alone," he says, "did the angels know, that the portion of the Lord is his people."[1613] The same plainly is affirmed by Theodoret, Theophylact, and Oecumenius, on that passage of Ephesians 3.[1614] St. Cyril also, book 2 on John, chapter 3, interprets the same passage of Paul about the mystery of the Incarnation. And although he does not say that it was unknown to the angels before the preaching made to the Church, yet that seems to be gathered from the text of Paul, when he says, "that it may be made known to the principalities," etc.; for if Paul speaks, as Cyril says, about the mystery of the Incarnation, it is rightly inferred that it became known to the angels from the preaching made in the Church.[1615] Most clearly, however, St. Gregory of Nyssa, Homily 3 on the Canticles, after the middle, seems to have held the same; for there he speaks thus: For in the earlier times those powers set over the world above knew in this matter only that simple and uniform wisdom of God, fitting in a certain manner to the miraculous rule in nature of what was to be accomplished, etc. But about that diversified kind of Wisdom which consists in the interweaving of things that are opposed to one another, they now through the Church have been most clearly taught. He then explains what things they were taught, subjoining: "Who indeed is the Word made flesh, who would mingle life with death, in what way by his own stripe he would heal our wound." Afterward he expounds, one by one, those things which from Christ's Incarnation the angelic powers learned.[1616] They too have explained it; and Pseudo-Dionysius, ch. 7 of On the Celestial Hierarchy, where that of Isaiah 63, "Who is this that comes from Edom?" he understands of the same angels in precisely the same way.[1612] But St. John Chrysostom, in the preface to the Gospel of John, introducing that of Ephesians 3, "the sacrament hidden for ages," says that John the Evangelist speaks of things which not even the angels, before

1612. Pseudo-Dionysius, De caelesti hierarchia, c. 7, on Isaiah 63, "Quis est iste qui venit de Edom?"

he declared them, knew; therefore he judges that the angels learned the mysteries from John's preaching; and in Homily 7 on the Epistle to the Ephesians he seems to assert that not only were the riches of Christ hidden from the angels, but even the very substance of the mystery: "This alone," he says, "did the angels know, that the portion of the Lord is his people."[1613] The same plainly is affirmed by Theodoret, Theophylact, and Oecumenius, on that passage of Ephesians 3.[1614] St. Cyril also, book 2 on John, chapter 3, interprets the same passage of Paul about the mystery of the Incarnation. And although he does not say that it was unknown to the angels before the preaching made to the Church, yet that seems to be gathered from the text of Paul, when he says, "that it may be made known to the principalities," etc.; for if Paul speaks, as Cyril says, about the mystery of the Incarnation, it is rightly inferred that it became known to the angels from the preaching made in the Church.[1615] Most clearly, however, St. Gregory of Nyssa, Homily 3 on the Canticles, after the middle, seems to have held the same; for there he speaks thus: For in the earlier times those powers set over the world above knew in this matter only that simple and uniform wisdom of God, fitting in a certain manner to the miraculous rule in nature of what was to be accomplished, etc. But about that diversified kind of Wisdom which consists in the interweaving of things that are opposed to one another, they now through the Church have been most clearly taught. He then explains what things they were taught, subjoining: "Who indeed is the Word made flesh, who would mingle life with death, in what way by his own stripe he would heal our wound." Afterward he expounds, one by one, those things which from Christ's Incarnation the angelic powers learned.[1616]

But to defend the earlier opinion, the passages of Scripture from which arguments were taken against it must first be interpreted; then what the Fathers thought must be shown. First, therefore, that of Psalm 23, "Who is this King of glory?" is interpreted variously by the Fathers, and therefore little can be proved from it. For although St. Augustine understands it of the angels, nevertheless he thinks it was said not out of ignorance, but out of admiration.[1617] That of Isaiah 63, "Who is this that comes from Edom?" the Fathers do not explain in the same way: for Athanasius, in the book On the Saving Advent against Apollinaris, accommodates those words to the demon questioning Christ when he approached to tempt him; to which interpretation does not fit the response which the Prophet subjoins, "I who speak justice," etc.[1618] But Tertullian, book 4 Against Marcion, chapter 40, says that those were the words of the prophet, by a prophetic spirit contemplating the Lord in his passion, and saying, "Who is this," etc.[1619] Finally, St. Cyril, in his commentaries on that passage, even if he refers it to the blessed angels asking at the time of the Ascension, nevertheless says that question proceeded from astonishment at an unusual spectacle. Therefore, even if we admit Justin's interpretation, it is not necessary to assert that the angels were ignorant of some

part of the mystery and from this ignorance asked, "Who is this," etc.; which is clearly refuted by manifest reasoning: for the blessed angels, of whom that interrogation is said, before the Ascension did indeed know the mystery of the Incarnation and who was that King of glory, at whose Nativity they had said, "Glory in the highest to God" (Luke 2). Therefore they did not ask who he was out of ignorance. But if we say that they spoke that out of some ignorance, requesting that the knowledge of that mystery be made more illustrious and that they be taught, so it must be asserted, as will be explained below in the following disputation, chapter 6: that they were not altogether ignorant of the mystery of the Incarnation, but of certain circumstances of it, which they wished to be taught.[1620]

And indeed, as regards the place of Paul to the Ephesians 3, "that it may be made known to the principalities," it is not sufficiently proved from that passage that this mystery was unknown to the principalities and powers of the angelic orders; for before Paul's preaching and conversion not only the substance of the mystery of the Incarnation, but also the other circumstances of our redemption and of the Gospel could have been known to the angels from the preaching even of the other Apostles after the day of Pentecost. Wherefore, with such an occasion given, Paul seems to have said, "that it may be made known to the principalities," not the mystery of the Incarnation, but "the multiform wisdom of God"; nor did he say that it had been given to him to preach this mystery alone, but "the unsearchable riches of Christ," and "what is the dispensation of the sacrament"; by which he wished to signify that day by day new and marvelous things were being done in the preaching of the Gospel, in which the multiform wisdom of God would shine; but these things are said to "be manifested to principalities and powers" because, when they were being done in their sight, they were said to be made known to them: just as in 1 Timothy 3 he calls this "the great mystery of piety," "which," he says, "appeared to angels," that is, that which was done in the sight of the angels themselves, they too preaching it and glorifying; not because, before it was done, they had not known it, but because, they themselves beholding it, it appeared to the world and to all.[1621]

St. Augustine indeed interprets the passage adduced from Ephesians 3 in another way in book 5 On Genesis to the Letter, chapter 19, so as to defend that the mystery of the Incarnation was not then made known to the angels when it was preached, but before the preaching; whose interpretation is this, if we understand the words of Paul as he himself recites them more fully: "To me" (he says) "the least of all the saints has been given this grace to evangelize among the Gentiles the unsearchable riches of Christ, and to enlighten all what is the dispensation of the sacrament hidden from ages in God, who created all things, that it may be made known to the principalities and powers in the heavens through the Church the multiform wisdom of God." St. Augustine therefore refers that clause, "that it may be made known," to that, "hidden in God," so that the sense is, it has been granted to me to preach the riches and dispensation of the sacrament hidden in God, which was thus hidden from the ages, that nevertheless it might be made known to the angelic principalities, and had been previously known to them through the Church, namely his,

1620. Luke 2:14; see below, the following disputation, cap. 6.
1621. Ephesians 3:10; 1 Timothy 3:16.

because first among them was the Church: yet this exposition, although it favors more the prior opinion, seems to me forced; for it is better that that part, "that it may be made known," be referred to that, "to evangelize," so that the sense be, it has been given to me to evangelize, that through my preaching the multiform wisdom of God may be made known.[1622]

Then indeed I confess that, in this way, the testimonies of Scripture above alleged, and the interpretations which the Fathers applied to them, are satisfied, so that we may defend that this mystery was not hidden from the beginning from the angels: nevertheless I cannot deny that some Fathers from those alleged have taught the opposite and therefore that the opinion is not improbable which asserts that this mystery was not revealed to the angels from the beginning. Now the Fathers are Chrysostom, Theodoret, Theophylact, and Oecumenius, Jerome, and Nyssen in the cited places, who seem not only to have spoken about circumstances, but also about the very substance of the mystery, when they say that it was hidden from the angels. The reason too which we adduced for the prior opinion from Adam does not press much: because there was a much greater reason why in the state of innocence this mystery should be revealed to Adam than to the angels: both because from Adam's flesh human nature was to be taken; and also because the matrimony of Adam with Eve signified the mystery of Christ with the Church, and their union according to the flesh; therefore it would not be marvelous if this mystery were revealed to Adam, which was altogether unknown to the angels. Moreover, that the mystery of the Incarnation was revealed to Adam, common opinion asserts, nor do I see that anyone denies it.

Finally it must be added that, in whatever way we choose to philosophize in this matter, before the coming of Christ in the flesh the mystery of the Incarnation was known to the angels as to its substance at least, and its principal parts: for the prophets enlightened by the ministry of angels predicted it, and Gabriel the Archangel announced it to Mary: but from this it does not follow that it was revealed to them from the beginning.[1623]

Caput III - What mysteries the blessed angels have known in the Word

In this chapter we must not be disputing whether the angels see in the Word, by the same vision by which they see the essence (*essentia*) of God, any other created mysteries; for about this we have said more than enough above in Disputation 50: but here it is to be presupposed what we set forth there more fully, namely that all other created things, insofar as they are created, are seen by the blessed by another vision than that by which God himself is seen; and that they are not seen by force of the vision of the divine essence, but because God, revealing himself to the blessed, also reveals other things. By what account the blessed are said to behold those in the Word, there also it has been explained. Moreover, this doctrine is consonant with St. Thomas in the following question, article 7, where he concedes that the blessed angels, in the course of time, know many

1622. St. Augustine, De Genesi ad litteram, lib. 5, c. 19.
1623. On prophets illuminated by angelic ministry and Gabriel's annunciation to Mary, see Luke 1.

things in the Word which at the beginning of their beatitude they did not see: and yet the vision of the divine essence does not vary: a sign therefore is that, in the mind of St. Thomas, they are seen by another vision.[1624]

Further, as regards those things which the blessed angels from the beginning knew by God revealing by another vision, or by the same, first, no one doubts that they saw the mystery of the Trinity: because he who sees God cannot not see the things which are formally in God: and of this sort is the mystery of the Trinity. Then about the mystery of the Incarnation it must be said in the same way, that it was known by the angels in beatitude, as we said it was known in the wayfarer's state: although Jerome, Chrysostom, Nyssen, and the other Fathers alleged in the preceding chapter seem to deny this, yet it is most congruent to their state that from the beginning they knew this mystery; since indeed all are ministering spirits, as the Apostle testifies in Hebrews 1, "for the sake of those who are to receive the inheritance of salvation": there is no doubting that this mystery of the Incarnation, at least according to its substance, was revealed to the angels from the beginning of beatitude, although they may have been ignorant of certain circumstances. And that it was known to them before it was accomplished in act, we have already shown enough in the preceding chapter.

Finally it is to be observed what St. Isidore, in the book On the Supreme Good, chapter 12, teaches, namely that all those things which by the will of God are to be in the future are known by the angels in the Word before they are done (which seems to have been the opinion of St. Augustine in Confessions book 13, chapter 13, and in City of God book 9, chapter 22): this, however, is not to be understood universally; because some things too are understood by the blessed in the course of time when they happen, as we taught above in that disputation 50, chapter 7: which St. Thomas plainly held, as he teaches in the following question, article 7. And what Augustine says in the Enchiridion, chapter 58, that nothing is certain about this matter, is not wondrous: for Augustine did not see Dionysius; and Gregory, in his works, commemorates the doctrine of Dionysius about the hierarchies, and St. Thomas in that question gathers into one: nor could he have learned it except by revelation, as he himself attests, chapter 6 of On the Celestial Hierarchy, where he says that he learned all things from his teacher, namely Paul, whom he calls his initiator: which also Augustine in the Enchiridion, chapter 58, says, that nothing is certain here, unless what the manifest conclusions of the Church's doctrine contain.[1625]

1624. St. Thomas, in the following question, art. 7 (Summa theologiae I).

Disputatio CCXVI - Whether the intellect of one angel is enlightened by another

Caput I - The opinion of Durandus

All these things, therefore, are revealed by God immediately. In this reasoning Durandus seems to suppose that illumination only occurs about those mysteries which in some manner look to the state of beatitude; and since all the things which pertain to the state of beatitude ought to flow most immediately from God, it follows that angels are enlightened immediately by God.

But the latter part of his position, which he himself added so as to satisfy certain places of Dionysius, he sets forth thus: since all the angels are mutually conjoined among themselves in the irradiation of the divine light, whether natural or supernatural, that which is revealed to one angel is represented to the others according to a certain order of consequence: wherefore, although they are enlightened at the same time, nevertheless one is said to be enlightened earlier by nature or by dignity than another. In this way, however, Durandus does not explain in what the ratio of the enlightenment of one angel by another consists: for he thinks that one is not enlightened by another as by a master, since he maintains that all are enlightened by God as by the efficient cause; he will readily grant that an angel is enlightened, with his faculty for understanding strengthened, by an internal illumination.

Yet this view does not approve itself to me.

This opinion is rejected: First, because there are plain testimonies of Dionysius by which, according to the common teaching of the Schoolmen, he teaches that one angel is enlightened not only by God but also by another angel, not because one after another is enlightened by some order from God, but because one is truly instructed by another in the matters to be understood. The first testimony is in the book On the Ecclesiastical Hierarchy, chapter 5, under the title On Priestly Perfections, where he teaches that the lower things are at length reduced to God through the higher. The second testimony is in the Celestial Hierarchy, chapter 8, where he affirms that the angels of the second hierarchy are purged by the angels of the first hierarchy. The third testimony is in the same book, chapter 4, where he asserts that a certain angelic substance communicates to an inferior the understanding received from a superior. St. Thomas reports these three testimonies below in question 106, articles 1 and 4, in the argument On the contrary.[1626] But Durandus explains the last testimony in such a way that certain angels are enlightened immediately by God, and others by others, not in the order of cause but in the order of consequence, as above was set forth according to the mind of the same author.

This interpretation, however, can by no reason be accommodated either to the aforesaid third testimony or to the others. First, it is most manifest about the other two; as to the third testimony, it is proved thus: for in that same chapter 4 of the Celestial Hierarchy, after the midpoint, after he

1626. Pseudo-Dionysius, De caelesti hierarchia, c. 5, c. 8, c. 4; St. Thomas, Summa theologiae I, q. 106, a. 1; a. 4 (argument "Sed contra").

had said that the law was given through Moses by the ministry of angels, and that through their works it came to us, immediately he subjoins these words: "As though the order of the divine law were to ordain that the things which hold the secondary place be raised and stirred to the divinity by those which are first; for this law has been sanctioned by God not only in the highest and lowest minds, but also in those which are of the same order, that, in whatever hierarchy there are first, middle, and last orders, the superiors of the inferiors be their teachers, and, as it were, point the way with the finger and show the approach to divinity, illumination, and association."[1627] Where, when he says that the superior angels are teachers of the inferior, he plainly indicates that illumination is derived from one to another not only by an order of consequence but also by the order of cause; and in chapter 8 of the same book, at the beginning of the middle, he says that certain receive revelation from God immediately, but others through the work of others, and that these indeed have a less clear knowledge, but those a clearer: where he openly teaches that certain angels are enlightened by others, not only according to an order of consequence, but also according to a true cause.

Next, that interpretation which Durandus applies to the testimonies of Dionysius is fabricated and has no firm foundation of true doctrine, and therefore the latter part of his opinion is opposed to reason: for if illumination were derived from one angel to another in the order of consequence, there would necessarily be an order of cause between the illumination of one angel and another; for if there be no order of cause, there cannot be an order of prior and posterior, and therefore no one will be said to be enlightened by another. Perhaps someone will say that there can be the order of prior and posterior according to dignity, which is counted among the modes of the prior by Aristotle in the Categories, in the chapter On the modes of the prior. However, although according to the reason of dignity and nobility it may rightly be said that one is enlightened earlier than another, yet by this reason alone it cannot be said that one is enlightened by another, or that illumination is derived from one to another; and consequently it could not be said that one is remotely, but another immediately, enlightened by God: moreover, this does not sufficiently agree with the others who, against Durandus, affirm that one angel is truly enlightened and taught by another, as to the manner in which this illumination takes place.

Caput II - The second opinion explained in five ways

The second opinion generally affirms that one angel is enlightened by another by some change impressed in him by the one by whom he is enlightened. In this opinion were Scotus on the Second Book, distinction 9, question 2; to another question, Bassolis, question 1, article 2; likewise a certain Doctor, Gabriel, question 2, article 4; Ockham on the Second Book, question 20, article 2; Hervaeus on the same distinction 9, question 1, article 2; indeed, in this also St. Thomas below seems to be included, in question 106, article 1; and Capreolus on the Second Book, distinction 17,

1627. Pseudo-Dionysius, De caelesti hierarchia, c. 4 (near the middle).

question 2, article 1, conclusion 2, which he explains in article 3, in the solution to the first argument of Durandus against the first part of the same conclusion. They vary, however, in the explanation of this opinion.

- The first mode of explaining and defending this opinion is that of Scotus and Bassolis, who, following the opinion which they took on the locution of angels, teach first that not every locution is illumination, but only that which perfects and teaches the intellect of the hearer. They add, moreover, that the intellect of the hearer is not perfected by any thought of the true, but by the true which is known by divine revelation. Then they assert that this illumination occurs in the same way as locution is wont to occur, as was expounded according to Scotus in Disputation 210, chapter 2, namely, that knowledge is produced in the mind of the hearing angel who is enlightened, which he himself in no way produces. This opinion, explained in this way, seems probable as to its former part, as will be explained below; as to the latter, however, I judge it false for the same reason by which I proved in chapter 3 of that disputation that the locution of angels cannot be effected in that manner.[1628]
- The second mode of explaining the aforesaid opinion is that of Gabriel and Ockham, who likewise teach two things: one is, that inferior angels are enlightened only by their superiors about those matters which the superiors have received by revelation; in which they agree with Scotus and Bassolis. The second is, that illumination takes place in the same way as locution, namely, in this way: that the concept of the thing which is revealed, existing in the mind of the superior angel who is said to enlighten, produces knowledge of itself in the mind of the inferior angel who is enlightened. This opinion I consider probable as to the former part, as also the preceding: as to the latter, however, it must be attacked in the same way as also the opinion of the same authors which we reported and impugned in that Disputation 210, chapter 7, on the locution of angels.
- The third mode is that of others, who say that illumination is effected by the infusion of some supernatural light, or of some species impressed on the mind of the angel who is enlightened, or finally by this, that the angel who enlightens somehow modifies the species existing in the mind of the other. This opinion for the same reason does not approve itself to me as also that on the locution of angels, which, as we saw in that Disputation 210, chapter 4, asserts that one angel speaks to another by this, that he impresses a species of his concept in the mind of the other: and by much greater reason this opinion does not please me, insofar as it affirms that one angel is enlightened by another by receiving in himself some supernatural light: for if an angel cannot change the intellect of another by impressing a species, much less can he impress some quality which has the nature of light, especially a supernatural one.
- The fourth mode is that of those who assert that angels are enlightened by another through the derivation of a certain spiritual ray from that one, by whom the inferior angel is stirred up and forms in himself a likeness by which he understands the object about which he

1628. See Disputation 210, chs. 2 - 4, 7, on angelic locution.

is instructed and enlightened by the superior. Which mode, as I think, seems to be that of Richard, because he teaches in the same way that angels speak with themselves, as we reported in Disputation 210, chapter 4; for although, when treating of illumination in the Second Book, distinction 9, question 2, article 1, he only says that to enlighten some angel is nothing other than to manifest to him some truth looking to the truth of the intellect, and to sharpen the edge of that intellect; nevertheless he seems to suppose that this whole thing is done by the sending of a spiritual ray as far as the angel who is to be enlightened. Moreover, in the Second Book, distinction 10, question 2, article 2, speaking of the illumination by which an angel enlightens a man, he affirms that a man is not enlightened by an angel by receiving from him a species of some kind: I do not know whether he thinks the same of the illumination of a man and of an angel. However that may be, we refuted that opinion on locution in the aforementioned chapter 4; and this philosophical mode of illumination must be refuted in the same manner.

Caput III - St. Thomas's view (the fifth mode)

To all these modes there can be added a fifth, which St. Thomas follows below in question 106, article 1, where he asserts that illumination consists in two things: both in this, that the intellect of the inferior angel is strengthened by the superior; and in this, that the superior angel portions out, into manifold and distinct reasons, the truth which he himself knows distinctly by a single simple and common concept, so that the inferior may be able to grasp it. He explains the former part by the example of two hot bodies: for as one heat by the proximity of another becomes more intense, so too the power of the intellect of the inferior angel is corroborated by the turning of the superior angel toward him, since among incorporeals there is an order of approach by spiritual conversion of one angel toward another. He declares the latter part by the example of a master, who by many words and concepts unfolds to his disciples that which he himself understands by one or by fewer; and he collected this doctrine from Dionysius; we in what follows will explain it at greater length. [1629]

But in what way the intellect of one angel can be corroborated by another needs to be more carefully elaborated: for an angel cannot infuse any light or quality into our intellect, as we showed in Disputation 210, chapter 3, and we shall also show below; therefore in no way will he be able to corroborate the intellect of another by the advent of some natural or infused light: by such a mode he could operate in our intellect and enlighten another, which no one grants.

Then, against this same position of St. Thomas, Aegidius argues in the following way: if one angel's intellect were to be strengthened by another, that strengthening would be either in the other as in the subject, or in another by operation; but that an angel should enter into another, no one concedes; therefore he cannot operate in him by producing that strengthening. This argument has weight also in the case of those who assert that angels are in a body or elsewhere by operation.

1629. St. Thomas, Summa theologiae I, q. 106, a. 1; cf. Pseudo-Dionysius, De caelesti hierarchia. Also cf. Aristotle, Categories, ch. On the modes of the prior.

Moreover, one angel cannot be corroborated by another for the same effect and operation: for the same act of understanding cannot be from two intellects; for intellection is an immanent action, that is, which remains in the agent; and the same cannot be in two. From all which reasons - especially the last - he gathers force, which proves that the intellection of one angel cannot be corroborated by another through the impression of any quality or of any degree, since one angel cannot operate upon the intellect of another: otherwise he would operate also in our intellect.

Cajetan benignly interprets the opinion of St. Thomas.

...to the same work, that is, to the same cognition, not by the mode of nature, that is, not by physical action nor by a physical concurrence, but by the mode of art cooperating with nature: in which way a teacher by his art helps the disciple and corroborates that one's intellect. Moreover, to explain the mode of this teaching and discipline, Cajetan notes two further points, of which one I do not see as much to the purpose; the other is this: in the action of teaching, as such, the disciple is not first illumined before the truth is proposed, but first the truth, known and clarified, is proposed; then the intellect is illumined to see that truth, and consequently its own light is strengthened. To propose the truth, he says, is nothing else than to propose it as already known by the very Angel who proposes; but because sometimes the object as known by the superior Angel is not accommodated to the intellect of the inferior, therefore the superior's concept is sometimes divided into several concepts, that the inferior may perceive the thing better. From all which Cajetan gathers that in no other way is the inferior Angel illumined by the superior, nor in any other way is the intellect of the inferior corroborated by the superior, than the intellect of a disciple is illumined and strengthened by a teacher - not by physical action, but by the mode of art and discipline.

This opinion of Cajetan, although true as far as it goes (as I shall prove below), nevertheless seems little suited as an exposition of St. Thomas's mind. First, because St. Thomas says that in the illumination of Angels there are two things, namely, that the light of the intellect is corroborated and that the truth or object is proposed. If the corroboration of the light of the intellect had its origin from the proposition of the truth, as Cajetan explains, St. Thomas would not distinguish these two in this way. Second, when in q. 117, a. 1 he shows how one man can be taught by another, he says that this can happen in a twofold manner: first, by proposing to him some things by which he may be led little by little to the knowledge of an unknown truth; then, by strengthening his intellect. He explains this more at length in these words: Not indeed by any active power, as if of a higher nature, as was said above concerning the Angels who illumine; for all human intellects are of one grade in the order of nature; but insofar as the teacher proposes to the disciple the order of principles to conclusions, which perhaps the disciple would not have such power of gathering by himself, so as to be able to deduce the conclusions from the principles. These are the words of St. Thomas. From which it is evident, according to St. Thomas's own mind, that in the illumination of Angels there are two things - namely, the corroboration of the light of the intellect and the proposal of the truth or object - and that the one is not simply reduced to the other.[1630][1631]

1630. St. Thomas, De veritate, q. 9, a. 1, in solut. 2.
1631. St. Thomas, Summa theologiae I, q. 111, a. 1 (in corp.).

I freely admit that Cajetan's interpretation finds no small favor from St. Thomas in De veritate q. 9, a. 1, in solut. 2, and again in the body of the article in I, q. 111, a. 1: for there he plainly teaches that the intellect of the Angel who is illumined is corroborated solely from this, that he beholds something known in the superior Angel for the sake of knowing other things as well. There he likewise affirms that among men the intellect of the disciple and his light are corroborated from this, that he receives from the teacher some principle from which he can know certain things.[1630][1631] Wherefore, according to Cajetan's sense, we could interpret the mind of St. Thomas thus, that the corroboration of the intellect of the inferior Angel by the superior is nothing else than to receive some truth from him. Yet it is always difficult for me to reconcile this with what the Holy Doctor himself teaches in this part, q. 117, a. 1, where he marks the difference between a man who is taught by another and an Angel who is illumined by a superior, as we reported above. Moreover, that there is no difference between the illumination by which one Angel is illumined by another and that by which one man is taught by another, we shall show below.[1632]

Caput IV - Three other ways of explaining, and of defending, the prior opinion

Besides the mode set forth in the preceding chapter, which Capreolus proves in II, dist. 11, question 2, article 3, reply to Durandus's first argument against the second conclusion, Capreolus also defends the prior opinion in another way: he says, therefore, that the intellect of the Angel who is illumined by a superior Angel is corroborated because the superior inflows with his own light into the inferior by a certain power, which he himself calls "intentional," in the way in which the agent intellect inflows into the phantasms. He compares this intentional power to the species of colors in the medium and to the power of the principal agent in an instrument, by which the instrument is said in some way to be strengthened.[1633]

Impugned. Although this mode of philosophizing, in that it grants some peculiar influx in the intellect (*intellectus*) of the inferior Angel who is illumined - a thing it does not grant in the intellect of a man who is taught by another - may more agree with the mind of St. Thomas, nevertheless it does not persuade me. For either that power derived from the superior Angel into the inferior inheres in the intellect of the inferior Angel, as the species of color truly inheres in the medium - and this can be nothing other than some species; wherefore the illumination would be effected by the impression of a species in the intellect of the inferior Angel, as another author cited above asserted; which we impugned above in Disputation 210, chapter 5[1634] - or that power derived into the inferior Angel is merely the assistance of the illuminating Angel, as a principal agent assists an instrument and is said to strengthen or raise it; but this can be nothing other than the very proposition of the truth which the superior Angel, as a teacher, manifests; unless perchance one were to say that the superior Angel assists the inferior as a principal agent, or that he is as it

1630. St. Thomas, De veritate, q. 9, a. 1, in solut. 2.
1631. St. Thomas, Summa theologiae I, q. 111, a. 1 (in corp.).
1632. St. Thomas, q. 117, a. 1.
1633. Capreolus, In II Sent., dist. 11, q. 2, a. 3, ad 1 (against Durandus's second conclusion).
1634. See Disputation 210, ch. 5.

were an instrument for the same intellection - which is absurd. Therefore Capreolus must fall back into Cajetan's opinion, which he had previously impugned, so that the superior Angel stands to the inferior as, among men, the teacher to the disciple; although Capreolus himself concedes something more to the illuminating Angel than befits a human teacher. For he seems to suppose that this "intentional" thing derived from the illuminating Angel into the illumined inferior Angel is some quality according to the mode of a transient cause - just as he also thinks that something is derived into the sacraments when they are assumed as instruments of grace, and into every instrument in the same way; which we showed above to be a fiction in Disputation 176, chapter 3.[1635]

Finally, Hervaeus explains in three ways the manner by which one Angel is illumined by another; of which, in this chapter, we shall report only two. The first way is by an intensification of the natural light of the very Angel who is illumined; which way we impugned with Durandus's arguments in chapter 1 of this Disputation: first, because if the Angel who illumines another could increase the natural light of that one's intellect, he could also produce it absolutely; which is absurd. Hervaeus, however, replies that it can happen that some agent increases a form already produced, which it cannot produce from the beginning: for some agent, by rarefaction, can bring about a greater quantity than it can produce from the beginning. The reply, however, is frivolous; for the reason for producing quantity from the beginning is not the same as that for augmenting it after it has been produced: for it can be augmented without a new production of substance, but from the beginning it cannot be produced without a substance, even if only just produced. But the production of a quality and the intensification of it do not require a new production of substance; therefore an agent that can augment a quality will be able to produce it anew.[1636]

Next Durandus objected: If the light of the intellect of the Angel who is illumined were made greater by the light of the intellect of the Angel who illumines, it would follow that the intellect of the one Angel is of the same kind; for one form is not intensified by another unless it be of the same kind. But the intellect of the inferior Angel, who is illumined, and of the superior, who illumines, cannot be of the same kind, because they differ in species; therefore neither can the intellect of the one be made more intense by the intellect of the other. Hervaeus replies that from the fact that the intellect of the inferior Angel is rendered more intense by the intellect of the superior, it does not rightly follow that the intellect of the one and of the other is of the same kind: for although one form cannot be made more intense by another formally unless it be of the same kind with it, nevertheless it can well happen that one form is rendered more intense by another of a different kind, not formally, but efficiently. By this solution Hervaeus very well satisfies the difficulty; nonetheless his opinion does not persuade me. For since the intellect is the proper passion of a spiritual creature, it is a fiction to assert that it is made more intense in one way or another by another form, whether of the same kind or of a different: since the proper passion of a given nature does not admit of more and less.

1635. See Disputation 176, ch. 3.
1636. Durandus, In II Sent., dist. 11, q. 3; and see above, ch. 1 of this Disputation.

Second, Hervaeus explains in another way the mode by which one Angel illumines another, namely, because one Angel concurs with another in eliciting a cognition, by which he reveals hidden things to him. This way also Durandus impugns in II, dist. 11, question 3, by the argument we set out above in chapter 1 of this Disputation.[1636][1637]

Because understanding is an immanent action, it must remain in the operating principle; and therefore the principle of the intellection which is in one Angel cannot be in another. But for this argument to have any force, it must presuppose that the superior Angel who illumines the inferior is the proximate and proper principle of the intellection which the inferior receives in himself and by which he is illumined; otherwise it would not be repugnant that a common principle, such as God, be extrinsic to the intellection, and that the intellection not be received in Him. Moreover, not even in this way can the aforesaid opinion be defended: first, because one Angel cannot imprint anything on the intellect of another, as was said in chapter 1; second, because it does not seem how the intellect of one Angel could concur with the intellect of another as a partial cause, or be in any way subject to it: for one of them seems superfluous for the same operation. This is the first opinion, which, after setting it forth in various ways, we judged it proper to report and refute, so that it may be altogether established that illumination is not effected by any internal change in the Angel who is illumined.

I pass over the manner of speaking of Henry, Quodlibet, question 15, article 3, who explains the preceding opinion thus, that illumination occurs by some disposition, whereby one Angel is disposed by another to receive a knowledge of the things he reveals: for this mode of opinion can easily be refuted from what has been said.[1638]

That one Angel is illumined by another by an external proposition alone - the more probable opinion holds.

Caput V - That one Angel illumines another by an external proposition alone; confirmation of this opinion

For my part, I have always favored the opinion of those who say that one Angel illumines another by an external proposition alone (as among men the teacher is said to illumine the disciple), without anything being imprinted on the Angel illumined, as the prior opinion had claimed. This was the opinion of Alexander; St. Bonaventure; Ægidius; Thomas de Argentina; Marsilius; and finally Cajetan; add also St. Thomas, if we are willing to interpret him as Cajetan understood him.[1639][1640]

1636. Durandus, In II Sent., dist. 11, q. 3; and see above, ch. 1 of this Disputation.

1637. See above, ch. 1 of this Disputation.

Alexander of Hales, Summa, part 1, q. 38, memb. 3; St. Bonaventure, In II Sent., dist. 10, a. 1, q. 2; Ægidius (Giles of Rome), In II Sent., dist. 9, q. 1, a. 5; Thomas de Argentina, qq. 1 - 3; Marsilius, In II (Sentences), q. 7, a. 4, concl. 2, and in the solutions of the arguments; Cajetan, ad I, q. 106, a. 1.

1640. Add also St. Thomas, if we interpret him as Cajetan understood him.

But in order to explain and confirm this opinion, it must be noted that to illumine is not the same as to manifest just any truth; and hence not every locution is an illumination, but only that by which a truth is explained which is a second perfection of the intellect (that is, the knowledge of which is said to perfect the hearer's intellect). Such are the truths of mysteries and of future things which depend upon the will of God alone, even if they are of the natural order - for example, that God will punish someone, or will do something of this sort. This definition of illumination is approved also by the Doctors of the prior opinion - Scotus, Bassolis, and Ockham, Gabriel, Richard, Hervaeus, Thomas de Argentina in the cited places, and Ægidius in the place cited.[1641] But St. Thomas, below in question 109, article 3, teaches that to illumine is not the same as to manifest any truth whatsoever, but only that which leads to God. Whether it pertains only to supernatural things, or also to natural things that bear upon God, he does not determine.[1642] Wherefore, although an inferior Angel may reveal the secrets of his heart to a superior Angel, he is not said to illumine him, as Richard rightly warns in the place cited in reply to the second, but only to speak with him; just as if a disciple were to speak with his teacher and disclose to him the secrets of his heart, he would not be said to illumine him, but to converse with him. Illumination, therefore, is the explication of a truth which renders the hearer's intellect more perfect; for to know the secrets of another's heart does not perfect the hearer's intellect, as if it were something great to know those things. From the same principle it follows that illumination does not concern natural things and acts; for since each Angel beholds them by his own concept, he is not said to be illumined by another Angel, even a superior one, nor to be instructed about them.

This opinion, thus explained, is confirmed first by the testimonies of the Fathers. The first is St. Augustine, on Psalm 118, sermon 18, toward the end; after he had taught that understanding is given to us by God, he says: "But if for this He uses an Angel as minister, an Angel can indeed do something in a man's mind, that he may grasp the light of God and by this understand; but he is thus said to give understanding to man, and, as it were (so to speak), to intellectuate the man, just as someone is said to give light to a house, or to illumine a house, to which he makes a window." And later: "God, however, made the mind of man rational and intellectual, which could receive His light; and He made such an Angel, who could do something whereby the human mind might be helped to receive the light of God." These are Augustine's words, from which one may gather that man is illumined by an Angel in such a way that the Angel works absolutely nothing in that man's mind, nor in any way changes it; rather, he explains the truth from without, with merely the external office of a teacher. For Augustine says that the Angel, in order to illumine man, works in no other way than he who opens a window that the house may receive bodily light; such a one, however, does nothing within the house, nor does he produce the light; he only opens a way and removes external impediments. Therefore the Angel, too, illumines man only in this manner, so

1641. Scotus; Bassolis; Ockham; Gabriel; Richard; Hervaeus; Thomas de Argentina in the cited places; and Ægidius, art. illos, dub. 4.

1642. St. Thomas, Summa theologiae I, q. 109, a. 3.

that he does nothing in the man's intellect, but illumines by an extrinsic doctrine alone. And consequently, with much greater reason, he will do nothing in an angelic intellect, but, as a teacher proposing the truth from without, he will illumine it and, as it were, will teach him as a disciple.

Next, there is the testimony of St. Cyril of Alexandria, book 1 on John, chapter 9, where at the beginning he asks how it is true that every man coming into this world is illumined by God, since one Angel is illumined by another; and that one Angel is illumined by another he proves by many testimonies, such as that of Zechariah 2, where one Angel said to another: "Run and speak to the youth." Then he increases the difficulty, because men are illumined by Angels: for in Acts 10 Cornelius learned from an Angel. Finally, because one man also illumines another: for in Acts 8 the Eunuch learned from Philip; and in Matthew 10, for this reason the Apostles are called the light of the world. Since these things are so, how is it true that every man is illumined by God? Cyril answers in these words: "Thus, therefore, we also confess the Saints to be light; and we added this, that every rational creature, once illumined, illumines, and by transmission pours its doctrine from its own mind into the mind of another; since we call illumination rather the power of learning than revelation. But the Word of God illumines every man coming into this world, not by teaching, as men do, nor perhaps Angels, but rather by creating, as God inserts into each the seeds of Wisdom - that is, the roots of piety and of understanding." These are Cyril's words, by which he seems to have expressed our opinion in explicit terms - except that, by adding the particle "perhaps," he seems in some way to doubt whether Angels are said to illumine in any other way than by external doctrine. Yet on account of that particle "perhaps," we ought not to think that Cyril in any way doubted the matter. First, because a little earlier he had affirmed it without any doubt, when he said that the illumination of the Angels is rather called the power of learning than revelation; from which it follows that the illumination of the Angels is effected solely by the doctrine of the illumining Angel and by the proposition of the truth, together with the discipline of the hearer. Then also because the particle "perhaps," in Greek isos, which Cyril uses, although it be the particle of one doubting, is sometimes nevertheless accustomed to be added, for the sake of modesty, to signify something certain, as those skilled in the Greek tongue have observed, and Aristotle used it in this sense in Rhetoric, book 3.[1643] Moreover, that particle signifies "equally" or "in like manner"; in which sense Cyril seems to have employed it: for thus the context and the meaning stand better with themselves. For there he endeavors to establish a distinction between the Word of God and all rational creatures: because the Word of God illumines by moving inwardly; whereas any creature, proposing only from without after the manner of a teacher and doctor, is said to illumine. Finally, Cyril added "perhaps" because it is rarely that a man is taught by Angels: and what rarely occurs is said "perhaps" to happen. Yet for that reason he does not teach that, when it happens that a man is taught by Angels, he is illumined in any other way than by the proposition of doctrine alone.

But indeed the chief foundations of this opinion are all the arguments which were set forth above against the second opinion and the various ways of explaining it: for thus it follows that illumination is effected in no other way than by external doctrine alone and the proposition of the truth. However, not all who embrace our opinion philosophize in the same way: they vary in

1643. Aristotle, Rhetoric, III.

assigning the mode by which one Angel speaks to another; and since illumination is a kind of locution, as was noted above, they likewise do not agree in explaining the mode of this external illumination and proposition. Yet there is no need to report their various ways of thinking: for in Disputation 211 we recounted them individually. Therefore, in this present difficulty one should embrace that account which will seem more probable, in accordance with what we said there when we disputed about locution: for the reasoning is entirely the same, as has been said.[1644]

Caput VI - Corollaries of the foregoing doctrine

It remains that we add a few things by which the preceding opinion may be more illustrated. First, illumination can be effected in two ways by a mere showing of the truth: in one way, by a certain simple proposition of truth, as when one Angel reveals to another the decree of the will of God, which previously was unknown to him, for example, that he has decreed to destroy this city or that, to change kingdoms, etc. And this showing and revelation of the mystery cannot precisely and properly, but only in the common way of speaking, be called illumination, just as the narration of any history can also be so called. For this reason we noted above that it is not the same thing to manifest the secret of the heart to another angel and to illuminate him; otherwise we too should illuminate angels. In another way illumination can be made properly, and it is of this that Pseudo-Dionysius is to be understood; and this is not by a mere simple showing of truth, but because by a certain peculiar mode the mystery is proposed in such a way that it may be better perceived: in which kind of thing the Angel who illuminates plays the part of a teacher; but he who is illuminated has the part of a disciple. For just as a disciple, when he receives from the teacher first principles and the way of deducing conclusions thence, and just as, when he hears a difficult matter through analogy to another and through various examples, he may better understand it, he is said to be illuminated by the teacher; so too a higher Angel, explaining to an inferior the mysteries of faith not by a simple showing and narration but in a peculiar mode, so that he may better understand them, is said to illuminate him. About this latter mode we shall speak expressly in the following disputation.

Second, it must be noted that the three acts which we call hierarchical, namely to illuminate, to purge, and to perfect, about which Pseudo-Dionysius treats in the places cited, are not distinct in reality, but are the same act under a different formal ratio: for inasmuch as it removes ignorance in the angel who is illuminated, which is a defect of the intellect, it is said to purge; but inasmuch as it enlightens the intellect, manifesting to it the truth, it is said to illuminate; and because the knowledge of truth is a perfection of the intellect, it is also said to perfect. Moreover, that these three acts are not distinguished according to reality, but according to various respects, is taught by St. Thomas below in question 106, article 2, to the first, and by the other Scholastics above cited.[1645] However, although the various respects are not assigned in the same way by all authors, especially

1644. See Disputation 211, where the several modes of angelic locution are discussed.
1645. St. Thomas, Summa theologiae I, q. 106, a. 2, ad 1; and the other Scholastics cited above.

the respect of illuminating, on account of the various opinions above mentioned; nevertheless, in our opinion the ratio of illumination is completed solely under the respect of showing the truth on the part of the object.

Yet there are some Theologians who try to show, not by the authority of Pseudo-Dionysius alone, but also by Scripture, that certain angels are illuminated by others, indeed even purged. For in Job 41 it is said: "The angels shall fear, terrified they shall be purged." But in that place Job denoted something far different: for in that chapter, setting forth the ferocity of that sea-beast Leviathan, that is, the whale or balena, he says: "When he shall be lifted up, the angels shall fear, terrified they shall be purged"; that is, when this beast, being taken, shall appear upon the waters, the mighty also, the giants and the bold, by fear terrified, shall be purged. Therefore Job does not speak of a purgation of the intellect by which one angel is purged by another, but of the fear that is conceived from the sight of this beast; he says moreover "they shall be purged" either because in contrition and penance, through fear, they will ask for help and aid from the Lord, or because through fear they will clear the bowels. In either way, as Eugubinus rightly explains, it is also in our Spain a similar phrase by which notable fear is denoted. Furthermore, that by "angels" are signified the mighty and the strong is clear, first, because in the Hebrew is set down Elohim, which denotes "the powerful," as we taught above in disputation 179, chap. 4; then, because the mighty and the giants are called angels in Scripture, as was there noted.

Third, it should be observed that not only can one angel be illuminated by another, but also a man can be illuminated by an angel by the mere proposition of an object, yet the soul of man is illuminated in a different mode when it is separated and when it is conjoined: for when it is a separated soul, it is illuminated in exactly the same way as an angel; but when it is conjoined, it ought to be illuminated through the senses, as a disciple by a teacher. This, however, can be done in one of two ways: either because the angel uses some corporeal sign, either in an assumed body or without it; or because he changes the phantasy, or through it moves the intellect: what efficacy he has upon the phantasy and our senses, we shall show in disputation 217.

But Albert, in the book "De quatuor ...," in the first part, question 6, article 11, asserts that angels who illuminate have power over the intellect of man, so that they can insert light into it: for just as corporeal matter obeys the angel that he assume a body from it, so too he thinks that the intellect and sense of man obey the angel, so that from the phantasms which he has he abstracts intelligible species, and inserts them into the human intellect, and by this he is said to illuminate it; nay more, he affirms that phantasms can be newly produced by an angel, or those already produced be ordered; all of which he confirms by no reason at all. Bassolis also follows Albert in II, distinction 11, the only question, at § "Et tunc dicitur," on the fifth mode of operating, which he judges to be probable.[1646]

On the contrary, Richard, with most just right, taught the opposite in II, distinction 10, article 2, question 2, and commonly the Theologians whom we shall report in disputation 217, who assert that no creature can be changed by an angel except by local motion. Moreover, Alexander in the

Second Part, question 40, member 4, teaches that man is illuminated by an angel because the angel infuses his intellection into the intellect of man by a certain wondrous mode, and by a certain mighty power causes that his intellection be the man's intellection; he compares angels to mirrors, and therefore thinks that species and notions are derived from angels into men as from a mirror by a kind of irradiation or by a mirror carrying them; and he confirms this by the testimony of St. Augustine, book 12 On Genesis to the Letter, chapter 30, where in truth St. Augustine speaks only doubtfully in these words: "Whether the visions beheld by the angel (to wit) by some easy and overmastering conjoining or commixing also with our own, making them to be ours, whether knowing, I know not how, they inform our vision in our spirit - this is a thing hard to perceive and harder to say." Yet better St. Bonaventure, in the cited place, says that he does not sufficiently understand by what other mode than by the proposition of truth a man can be illuminated by an angel, as a disciple is taught by a master; but he does not admit that mode of irradiation or of a mirror carrying. And if the angel can be called a mirror, he is not therefore so called because from him the same cognition results into our intellect, but because, since he is an intelligence, he has in himself the similitudes of things; and since by the mode of a teacher he communicates the knowledge of the same things to us and to another angel, he can be called by a not inept reason a mirror

Disputatio CCXVII - Whether only an inferior angel can be illuminated by a superior, or also a superior by an inferior

- That only the inferior is illuminated by the superior is the common opinion. Cap. 1.
- Corollaries of the preceding doctrine. Cap. 2.

Caput I - That only the inferior is illuminated by the superior is the common opinion

Durandus, following a peculiar opinion, dared to affirm that all angels are illuminated proximately by God, as we noted in the preceding disputation, chap. 1; and therefore, in his view, no difficulty remained. But since it has been shown against him that not all angels are illuminated by God, but that some by others, others however by God himself, it remains that we see whether any angel can be illuminated by any other indiscriminately, or only the inferior by the superior. In this matter, among those who teach against Durandus that not all angels are proximately illuminated by God, there is no variety of opinions, but all with unanimous consent affirm that the inferiors only are illuminated by the superiors: thus assert St. Thomas, Cajetan, and the more recent Thomists, below in question 106, arts. 3 and 4; Ægidius in II, dist. 9, q. 1, art. 4, especially in dub. 2; Maior in the same distinction, q. 2; Hervaeus, q. 1, art. ...; Marsilius, in II, q. 7, art. 4, conclusion 2.[1648] Whether, however, this suits them by their own nature, or only by the will of God,

1646. Albertus, "libro de quatuor ...," I, q. 6, a. 11; Bassolis, II, dist. 11, unica quaest., § "Et tunc dicitur," on the fifth mode of operating.

1648. St. Thomas, Summa theologiae I, q. 106, aa. 3 - 4; Cajetan ad loc.; Ægidius (Giles of Rome), In II Sent., dist. 9, q. 1, a. 4, dub. 2; Maior, In II Sent., dist. 9, q. 2; Hervaeus, q. 1, art. ...; Marsilius, In II (Sentences), q. 7, a. 4, concl. 2.

they do not explain. Other Scholastics, while they agree in this general position against Durandus, yet say that, according to a law laid down by God, it does not so happen that inferiors alone are illuminated by superiors; and hence it can happen that inferiors are illuminated immediately by God, and superiors by inferiors: thus teach Scotus in II, dist. 9, q. 2, ad aliam quaestionem; Gabriel, q. 2, art. 4, conclusion 4; Bassolis, q. 1, art. 2. Therefore Richard says, article 2, q. 2 and 3, where he asserts that inferiors are illuminated by superiors, not conversely; and in that question 3, at the end, he says that God indeed can illuminate superiors through inferior angels.[1649] Therefore it must be explained what belongs to angels by their nature, and what can be communicated to them by the will of God alone. First, let us speak as to the simple explication and proposition of the truth of the mysteries of God or of his will itself: this can be communicated to inferior angels just as also to superiors; and this is clearly shown by Scotus's reason: for since this belongs to angels out of sheer grace and the gift of God, it can be given in such a way to the inferiors as also to the superiors by God: by which same reason it can happen that a man reveals mysteries to all the angels. In this sense not a few understand that [which is] to the Ephesians 3: "That it may be made known to the principalities, etc.," in that the angels were taught through the men who were evangelizing in the Church of God. Yet this simple showing and proposition of the truth is not precisely and properly called illumination, as was said in the previous disputation, at the last chapter.

Second, it must be said that there is something peculiar pertaining to the ratio of illumination which superior angels have by their nature, which cannot by nature befit the inferiors, namely thus to propose and explicate mysteries through the various concepts and similitudes of other things, as happens among men, so that they may be better perceived by inferior angels: as St. Thomas and Cajetan quite rightly taught in the place cited.[1650] Pseudo-Dionysius has beautifully described for us this natural virtue and faculty of the superior angels in the last chapter of the Celestial Hierarchy: for he applies to angels, by a certain metaphorical reason, human members; and thus he speaks of the teeth: "Teeth (so to speak) are that which, being applied to nourishment, divides it; for each essence which has been endowed with mind has received from a more divine source a certain power by which it consults for others by nature, divides, and amplifies according to the capacity and leading of the inferior." Therefore to divide a thing into many concepts, which is as it were to distribute nourishment, is the same as to explain it by more examples; which Pseudo-Dionysius affirms to belong to the angels by a power of their nature. In this kind of explication is completed the ratio of illumination, as was noted above. Moreover, this explication of mysteries belongs to superior angels by reason of natural perspicacity and acuteness, with which they abound: for he who is strong in genius knows excellently how to explain the same thing in various ways.

However, this genus of explication of a thing conceived has place only in those matters which are spoken of through another's concepts which the angels understand, such as are supernatural mysteries. For around natural things it cannot have place; for both inferior and superior angels

1649. Scotus, In II Sent., dist. 9, q. 2, ad aliam quaestionem; Gabriel, q. 2, a. 4, concl. 4; Bassolis, q. 1, a. 2; Richard, In II Sent., dist. 10, art. 2, qq. 2 - 3.

1650. St. Thomas; Cajetan, in the place cited.

behold and understand them as they are in themselves; but explication (by similitudes and the various concepts of them) can only be of things which are not known as they are, but in the likeness of other things - unless we say that certain natural things are not known by all angels, as Pseudo-Dionysius seems to indicate in the last chapter of the Celestial Hierarchy when he says that to superior angels a more universal science belongs than to inferiors: thus even around natural things there could be illumination by way of explication, as has been said. For it would be possible that one angel instruct another about natural things which he is ignorant of, and, dividing the concept of that thing into several, propose them; or, if we say that all natural things are known naturally by angels, yet not all their properties and effects: thus even around those [things] illumination could have place.

But Bassolis objects to us in the cited question, § "Contra ipsam opinionem," with this reason: if this explication of truth and illustration could be made by illumination, it would be done in one of two ways. Either thus, that the angel who illuminates and proposes the truth himself conceive it, and divide it into several concepts, changing the natural mode in which he knows things: and this cannot be done, because an angel who understands a thing by its proper concept cannot divide it into many others; for to this it would have been necessary to conceive it not by its proper but by an alien concept, after the manner of other things. Or thus, that the superior angel, who conceives that thing by his proper concept, signify it to the inferior by some signs, in the likeness of other things, and explain it by various similitudes, just as God can explain to us any thing at all by some voice in this manner: and this among angels is feigned, because, as was shown above in disputation 111, chapter 10, angels do not use signs of this kind when they speak to others, unless with an assumed body, or in some other way form certain voices in the air; which is not necessary...

From the foregoing it is not necessary that they speak to others or enlighten others. On this ground, confuted, Bassolis thus explains the testimony of Dionysius brought forward above: that for angels to divide their concepts, on account of which they are said to have teeth, is nothing else than to propose to others what they themselves conceive; and therefore they are said to divide their concepts, not because he grants to them several other concepts, but because he ministers them to individual angels.

Reply. Nevertheless, this reasoning proves nothing; and this author plainly did not understand the testimony of Dionysius. For he says that a superior angel divides and amplifies that single understanding which he has received, according to the capacity of the inferior, as we have above recited; which words, even if we speak simply, cannot signify what Bassolis contends. For to amplify an understanding and the concept of a thing is not to propose it to several angels, but to show it, variously explained, to one and the same inferior angel. But to his argument I reply that the superior angel does not change the mode which he has by which he knows the thing for himself, that is, he does not understand the same thing for himself in a different mode; nevertheless, because he rightly knows the suitable mode by which the interior angel can grasp that thing, namely, by the likeness and analogy of the thing, he can express it to him by the word of his mind, so that one thing may be known in the likeness of another, by saying that by this and that comparison that thing can be known; just as if an angel were to assume a body and put on the

person of a teacher, he could teach us and express by the word of his voice through likenesses and various concepts those things which he in simple knowledge beholds; because he rightly knows the mode by which we are led into the knowledge of something.

Thirdly, finally, that which we said befits superior angels by their nature can be granted to inferiors by the grace of God. For God could reveal to them by a higher mode not only the thing and the mystery, but also the mode by which they would expound and explain it to superiors; and by this pact the opinion of Scotus ought to grant it, nor would St. Thomas and his disciples deny it. For when they say that inferiors are enlightened only by their superiors, they understand this by their own nature, with special grace excluded; but by a special gift of God the contrary can happen, they do not deny. And that this grace was granted to Christ, I would not doubt, so that by it he enlightened the highest angels whom by his own nature he could not enlighten.

Caput II - Corollaries of the preceding doctrine

From the preceding doctrine several things can be gathered, by which it will be more and more elucidated. First, that the illumination of angels cannot be concerned with things which are said to be seen in the Word. Thus taught Capreolus in II, distinction 11, question, article 3, at the end, in the arguments against the third conclusion; and Hervaeus in II, distinction 9, question 1, articles, to the third argument. This, moreover, I truly hold, first if we speak of illumination, so far as it is a simple proposition of truth; then, if the discussion is about those things which are properly said to be seen in the Word. I say that properly and strictly that is said to be seen in the Word which either is seen by force of the knowledge and vision of the essence of God, or by a special revelation of God which is appropriated to the divine Word; whether this revelation be joined at the same time with the vision by which the Word is seen, or (which I think more probable) be distinct. The reason truly is manifest: because those things which the blessed see either by force of the vision by which they see God, or by God himself revealing, they do not receive from another angel; therefore, about those things he is not illuminated by another. I grant, nonetheless, that none the less, about things which are seen in the Word, one angel could be illuminated by another, if we say that a thing is seen in the Word in the mode in which Scotus and others said, namely, that those things are said to be seen in the Word whatsoever are known by the blessed by any cognition. For these, in their opinion, are said to be seen in the Word either because they are seen in such wise that at the same time there is known the connection which those things have with God, or because they are seen by the man who at the same time sees God: for some call the vision of things in the intellect of the blessed one seeing God the vision of things in the Word; in which way Cajetan speaks in the commentary on this article, and the authors immediately to be cited.[1651] Thus, then, it can happen that there is an illumination touching those things which are said in this manner to be seen in the Word, as teach Scotus in II, distinction 9, question 2, "To another question," and Bassolis, question 1; therefore Aegidius, question 1, article 5, and Aureol, as Capreolus reports in the place cited,

1651. Capreolus, In II Sent., dist. 11, q., art. 3, in fine ad argumenta contra tertiam conclusionem; Hervaeus, In II Sent., dist. 9, q. 1, art., ad tertium argumentum; Cajetan, ad St. Thomas, Summa theologiae I, q. 106, a. 3.

article "c.", at the end, add that they do not deny this illumination to be by a simple proposition of truth. I, however, think that even angels seeing God can be illuminated by superiors not only by a proposition of truth, but also by that special mode of explication, of which we spoke in the preceding chapter; moreover, those things, concerning which inferior angels are illuminated by superiors, strictly and properly are not said to be seen in the Word: because for a thing to be seen in the Word is nothing else than either to be known by the force of the divine vision of the essence, or to be known as revealed by God, as was shown above in Disputation 50, chapter 7.

Secondly, from the same doctrine it is gathered that the opinion of Scotus and Bassolis is false in that which they immediately teach about the illumination of angels concerning those things which are said to be seen in the Word; for they say that an angel is illuminated in three modes. First, inasmuch as an angel hears that thing from another angel speaking; for illumination is a certain locution; wherefore to be illuminated will be to hear. But this cognition, in their opinion, by the force of hearing alone, is only a certain belief, of a higher order indeed than human credulity, because the angel illumined sees that the superior angel, who illuminates him, cannot lie because he is blessed. Secondly, inasmuch as from this hearing the angel illumined is converted to see that thing in the intellect of the angel who illuminates; from which it comes to pass that he desires to behold it in God, and thus there is the third cognition, by which that thing is said to be seen in the Word. This doctrine, therefore, in general does not please me: for it seems to me fabricated that so many modes of cognition be contrived from the force of illumination and locution; and that from hearing alone in the angel illumined there can only be generated a certain assent of credulity; nor do I think it is anything else to know a thing in the mind of the angel illuminating, than to hear it itself. Therefore, although these two thoughts might be diverse, nevertheless in the doctrine of Scotus there would not seem to be posited another cognition of things in the Word; because, as we reported above, he calls the vision in the Word the cogitation of things existing in the intellect of the one seeing God: but such would be hearing. Finally, whatever Scotus may say, that hearing does occur; even if afterwards the inferior angel understand and know that thing in the mind of the superior angel speaking, nevertheless that cognition in the mind of another cannot exceed the limits of credulity. Wherefore, neither from that second cognition could another, higher one, arise which he himself called the vision in the Word.

Thirdly, finally, note that among demons, considered according to their own nature, there is a power such that the superior enlightens the inferior as far as the explanation goes, of which we spoke in the preceding chapter; but those things, about which inferiors are enlightened by superiors, strictly and properly are not said to be seen in the Word: because for a thing to be seen in the Word is nothing else than either to be known by force of the divine vision of the essence, or by God revealing it, as was shown above in Disputation 50, chapter 7.

Hitherto we have said in what way, by illumination, one angel can operate upon the intellect of another angel or of a man. It remained that we should say something about the efficacy of one angel upon the will of another; yet, because all without controversy admit that the will can be moved by God alone, but by an angel, or a demon, only by a change of the imagination, therefore

about this matter there is no need to delay further. In what manner, however, the imagination, or a corporeal creature, can be moved by angels with their native power will become clear in the following disputation.

Disputatio CCXVIII - Whether corporeal and material nature obeys an angel with respect to any form whatsoever

- That matter does not obey an angel with respect to a substantial form is the common opinion of all. Cap. 1.
- The preceding opinion is confirmed by reason. Cap. 2.
- What accidental form an angel can produce in matter. Cap. 3.
- What an angel or a demon can effect in our imagination. Cap. 4.

Caput I - That matter does not obey an angel with respect to a substantial form is the common opinion of all

There are three things to be examined by us in this controversy. The first is about a substantial form, in whatever nature. The second is about an accidental form, in whatever nature. The third is about the imagination of man and of animals. About the first, the common sentence of the Scholastics is the consensus of those asserting that matter does not obey an angel for a substantial form, that is, that it is not possible for a substantial form to be infused or produced by an angel in any matter. Thus expressly teach St. Thomas below, question 110, article 2; St. Bonaventure, in II, distinction 8, part 1, article 2, question 1, and in distinction 7, part 2, article 2, question 2; Albert, distinction 7, article 8, in the body and to the third; Durandus, question 4; Aegidius, question 3, article 1; Richard, article 4, question 1; Scotus, distinction 8, question unique; Thomas of Argentina, question in the middle of that of Thomas of Argentina, article first; Bassolis, question unique; and, finally, the Ferraran, in his Summa against the gentiles, cap. 103; to these add Albertus, who, from what precedes, asserts that things which are generated from putrefaction and of themselves are generated, cannot be made by angels without nature itself helping.[1652]

Caput II - The preceding opinion is confirmed by reason

St. Thomas, Aegidius, St. Bonaventure, Richard, Thomas of Argentina, and the Ferraran bring forward a certain argument taken from Aristotle's Metaphysics; another argument is proposed by others.

1652. St. Thomas, Summa theologiae I, q. 110, a. 2; St. Bonaventure, In II Sent., dist. 8, pars 1, art. 2, q. 1; and dist. 7, pars 2, art. 2, q. 2; Albert the Great, In II Sent., dist. 7, art. 8, in corpore et ad tertium; Durandus, In II Sent., q. 4; Aegidius (Giles of Rome), q. 3, a. 1; Richard, In II Sent., art. 4, q. 1; Scotus, In II Sent., dist. 8, unica; Thomas de Argentina, in medio illius quaestionis, art. 1; Bassolis, quaestio unica; Ferrarien. (Ferrariensis), Summa contra gentiles (cap. 103); add also Albertus, as cited.

Ferrariensis, in Book 3 of Contra gentes, chapter 103, adds Albert's point, that those things which come to be from the putrefaction of the earth and are generated spontaneously cannot be made by an angel unless nature itself aids. This was also the express position of St. Augustine, On the Trinity 3, chapter 8, whom St. Thomas cites in the argument But on the contrary, where Augustine compares angels to husbandmen, who do not bestow increase on plants, but only sow, or apply other things which are necessary. Nor does it stand in the way that Augustine there also compares the man in the generation of man to the husbandman: for he does not on that account compare them because in all respects they are similarly disposed, but because, once the seed has been emitted, he does nothing further around the thing generated, just as the husbandman does nothing further around the plants; rather, he is said to act only insofar as the part cut off from him acts. But God in a far more excellent manner produces all things, because in all He acts in act. Add also St. Ambrose in the first book On the Faith against the Arians, chapter 8, where he asserts that when angels assume bodies in which they appear, the substance is not changed. This truth is also defined in the First Council of Braga, canon 12, regarding the forming and conception of man: for it is said, If anyone says that the forming of the human body is a figment of the devil, and that conceptions in the wombs of mothers are fashioned by the works of demons, on account of which he does not believe the resurrection of the flesh, as the Manichee Priscillian said: let him be anathema. But universally, in canon 8, it seems to be defined in these words: If anyone believes that the devil has made some natures in the world; that thunder and lightning, tempests and droughts, the devil himself by his authority brings about, as Priscillian said: let him be anathema. Moreover, in rendering the reason for this conclusion the Scholastics differ among themselves, as we shall see in the following chapter.

But a more effective argument can be made against the reasoning of St. Thomas, Aegidius, and others, in this way: God is a form per se subsisting without matter, and He does not share with these lower things either in matter or in composition, but differs from them by more than a genus; nevertheless He produces all these lower things: therefore that major proposition is not true. Aristotle would perhaps have responded that no substance composed of matter is produced immediately by God: for he thought eternal things to be eternal by their very nature, and that they cannot be generated and corrupted, as he taught in On the Heavens I, chapters 10, 11, and 12, although in chapter 9 he concedes that other things have being and life from the first intelligence. Thus, perhaps Aristotle would judge that no substance not composed of matter and form is produced by God. However, in true philosophy reason itself demonstrates the opposite, namely, that all things are produced in act by God alone, or by Him together with created causes, as we shall show more fully below, I - II, question 79, articles 1 and 2. The foregoing argument therefore remains still in its force and strength.

A true reason on behalf of the proposed position is confirmed by Durandus, which, in my judgment, proves it effectively in this way: Of the forms which are in matter, the only one that is not educed from its potency, and which alone is created by God, is the rational soul; whereas all the other forms, both of animals and of living and of inanimate things, are sufficiently produced by a secondary cause composed of matter, as experience shows: so that if at any time it happens that

something is spontaneously generated from the earth, this is done by the sun and by other material causes, God aiding: therefore an angel would be vainly constituted the cause of the same things: for God and nature do nothing in vain. Bassolis also asserts another reason, which is this: if an angel were to produce some substantial form, he would not produce it by his nature and substance, but by an affection of the will and an act of the intellect: for if he produced it by his substance, then, insofar as he is, he would always and necessarily produce it, which is known to be false; but by the will and the intellect he cannot produce a substance, because the will, which would have to be the formal principle, is a certain accident, and no accident can be the formal principle of producing a substance: therefore an angel cannot move matter to a substantial form. Finally, the last reason is that, if for some cause we were to say that matter obeys an angel to a substantial form, it would be because he is of a nobler and more perfect nature: but by this same reason our soul could be the cause that by the mere nod of its will it would produce a substantial form, which manifestly is false: for our soul is more perfect than any material form. But this argument proves in the same way concerning our soul conjoined as also concerning it separated: therefore, if it ever happens by the works of a demon that men, or animals, or some similar thing, are generated, one must say that this is not done by the proper effective power of the demon of those forms, but by the application of seed, or of some other occult cause, which an angel can bring about by motion alone.

Caput III - What accidental form an Angel can produce in matter

It was the opinion of Avicenna, as St. Thomas reports, in Contra Gentiles 3, chapter 103, that a corporeal nature can be altered by an angel to an accidental form, beyond local motion, for example, to heat and another similar quality, not only by applying an agent cause to the patient, but even by the angel's own proper power operating proximally. He proved this on the grounds that, just as fascination takes place by the power of the imagination alone of the one who fascinates - and by fascination there is a change of qualities - so in like manner the cognition alone and the will of the angel can be the cause of some accidental form in matter.[1653]

However, the common opinion of the Scholastics is that a corporeal nature cannot be moved by an angel to any accidental form, beyond local motion. Thus explicitly teach, among the authors cited above, St. Thomas in the article there, Richard, Thomas of Argentina, and Ferrariensis; St. Bonaventure in the place cited in the solution to the third; Durandus in the question cited, to the first objection. But that bodies can be moved locally by angels is known to all, even from Scripture, in which it is often said that men have been carried by angels or by demons to various places; indeed, Christ Himself suffered to be taken up to the pinnacle of the Temple. But as to the reason why angels cannot move matter to any accidental form beyond local motion, I do not see it proved by the doctors alleged: perhaps they thought the same reason to hold as that on account of which an angel cannot move to a substantial form, and about the accidental form enough and more than enough was said in the preceding chapter. I, however, judge that to be a universal reason: for if for some cause an angel could move to an accidental form, this would be most of all, because he is

1653. St. Thomas, Summa contra gentiles III, c. 103.

much more excellent; for we have no other reason or cause on account of which we should assert this; and by the same reason we would have to say that a rational soul can move any body whatever to any accidental form whatever, which yet by experience is known to be false: therefore by that reason alone we ought not to attribute this to angels.

Hence it follows, first, that light cannot be produced by an angel, nor any sensible species, except by the application of a luminous body or of a sensible object: likewise an angel cannot produce form except by the medium of the motion of percussion in the air, which is its proper cause. Moreover, besides these accidents there are other accidental forms which are dispositions of substantial forms, or which follow upon the substantial forms themselves: and these accidents cannot be produced by an angel for the very same reason by which the substantial forms themselves cannot be made.

Then it is gathered that not only can local motion be impressed by an angel, but even impetus, which is a certain quality by which motion is made or impeded. This, however, I am persuaded of not from a motion which is by an angel - for such a motion could be easily understood by us without any impetus first impressed - but from this, that he holds back a heavy body lest it be moved: for he can hold a stone suspended in midair, and can move a heavy body not only when it is resting on the earth, as a sphere upon the ground, but even when it is lifted up: in which kind of motion it is necessary to move the stone in one direction and to sustain it lest it descend, as when an angel led Habakkuk. Now that an impressed impetus without motion is necessary, so that a stone or heavy body be held in the middle of the air, can be shown by this effective reasoning. For although God by the mere nod of His will can hold a stone, by subtracting only His concurrence, which is necessary for motion, nevertheless an angel cannot hold a body in this manner; because the concurrence of an angel is not necessary so that a body be moved, and therefore, even if an angel is unwilling to concur, the motion of the stone will not on that account be impeded. It remains, therefore, that he can only hold it by impressing something else contrary to the motion, whereby the motion is impeded. Wherefore false is the opinion of those who assert that a body can be held by an angel in the middle of the air with no impression made upon the body: for an angel cannot hold it, with his concurrence denied, as we have proved; nor by taking hold of it with his hand, as is manifest: how, then, will he hold suspended in the air that which leans on nothing and hangs from no body?

Lastly, concerning the power and motory faculty of an angel, against Cajetan above on question 54, article 5, it must be observed that his opinion is false when he asserts that this motory faculty is something distinct from the intellect and the will, so that in angels there is an executing faculty in the way in which in us there is one distinct from the intellect and will. Rather we ought to think that this faculty is nothing other than the intellect and will in act: for the angel, by understanding and willing, moves, nor does he need any other thing for the effect. The same I said about the omnipotence of God above, disputation 101, chapter 3, namely that there is nothing else in God, even according to reason, than intellect and will in act. In which view Cajetan agrees with us; although, in order to speak consistently with his own principles, he ought, in the same way as in

angels, to distinguish this power at least according to reason from the intellect and will in God also. As for the authors who taught our opinion about the power of God, I have commonly noted them in that chapter.

Caput IV - What an angel, or a demon, can do in our imagination

Since we experience marvelous effects in man to take place by the disturbance of the imagination caused by a demon, it remains that we say something about the power which the demon has over it. On this matter the opinion of Alexander was, in Second Part, question 40, member 4, who taught that not only can the animal spirits in man be moved by the power of a demon or an angel, by reason of which motion the phantasms are set in motion, but that the phantasms themselves can also be...

...to be produced by an angel and poured into our imagination, just as by the sensible things themselves; but he confirms this opinion by no reason at all.

But the truer opinion is that of others, who teach that our imagination cannot be otherwise altered by an angel than through the disturbance of the animal spirits. Thus affirm St. Thomas below at question 111, article 3, together with Cajetan and the Thomists there; Bonaventure in 2, distinction 8, first part, article 1, question 3; Thomas of Argentina, question 1, article 3; Durandus, question 4; Richard, in 2, distinction 10, article 2, question 1; Aegidius, Quodlibet 6, question 16.[1654] And that phantasms cannot be produced in us by an angel must be proved by the same reason by which we showed above that an angel cannot produce in matter any form except an accidental one. But that by the mere disturbance of the animal spirits the imagination can be aroused in us is expressly taught by Aristotle, On Dreams, book, chapter 3, a little before the middle: for he says that when much blood descends to the sensitive principle, motions of sensibles are at once aroused. He calls the sensitive principle the common sense, which he thought to be, as to the thing, the same faculty as the imagination - a point I myself proved by many philosophical arguments in On the Soul I, in a certain place. The same Aristotle taught a little earlier that in those with fever several apparitions arise from the commotion of the spirits.[1655]

Therefore, since demons either by applying active causes, whose nature they well know, or by local motion are able to stir in us the animal spirits, they can also bring about in us various apparitions of things and thoughts. Wherefore, as Bonaventure rightly warns, demons cannot arouse thoughts in us, even in this way, except of those things of which we have likenesses, yet in such a manner that from those likenesses we compose various things. Hence a blind man who has never seen colors and light can never be aroused so as to think about light and color. But whether the likenesses themselves and the phantasms are, as to their subject, in the spirits that are stirred

1654. St. Thomas, Summa theologiae I, q. 111, a. 3; Cajetan and the Thomists ad loc.; St. Bonaventure, In II Sent., d. 8, pars 1, a. 1, q. 3; Thomas of Argentina, q. 1, a. 3; Durandus, In II Sent., q. 4; Richard of Mediavilla, In II Sent., d. 10, a. 2, q. 1; Aegidius (Giles of Rome), Quodlibet 6, q. 16.

1655. Aristotle, On Dreams, c. 3 (middle).

up, or in another part of the organ from which they cannot be moved, is not certain. By experience, however, I have found that by this sole commotion of the spirits and blood various thoughts are aroused in us, as Aristotle said.

Moreover, authors also teach various points about this stirring of phantasms. First, Richard, in the place cited, says that by this kind of motion of the spirits it also happens that at times things a little distant from one another appear very far apart, because the distance of the phantasms themselves, which the commotion of the spirits effects in us, also makes the things which they represent appear distant. Yet Scotus attacks this opinion in 2, distinction 11, the single question, §9. First, because motion of the spirits does not make the phantasms move - a point that seems probable, if the phantasm is not in the spirits themselves; for thus it does not follow that the phantasm is moved when the spirits are moved. But it must necessarily be said that the phantasms are in the brain itself, whose substance is fluid and can easily be moved when the spirits are moved, and even if we once assert that they are not in the spirits themselves, it also follows that the phantasms are moved together with the substance of the brain. Still, Richard's opinion can be more easily refuted because the distance which the species and phantasms have in themselves does not represent the distance of things. From that it does not follow that things appear distant because the phantasms are distant; but since distance is nothing other than some space of an intervening body, it follows that then things will appear at a greater distance when another phantasm is at the same time moved which represents some intervening body.

Second, Aegidius thinks that phantasms, thus moved by an angel, act upon the intellect in a more excellent way than before - a point I do not see by what reason it could be proved.

Third, Thomas of Argentina teaches that our intellect can be moved by an angel when the imagination is moved, so that he does only this - namely, arousing the species as it were drowsing, and ordering them among themselves. But since an angel can only move the substance and the humors of the body according to place, I do not see how he could arouse the species, or order them, in any other way than by motion of the substance of the brain, in which the species reside.

Fourth, Bonaventure asserts in the second distinction 8, second part, article r, question 4, to the last, that it seems to him more probable that a man cannot be induced by an evil angel to think about an evil thing by the motion of his imagination, unless the man is idle. For this reason many - whom we shall cite at I - II, question 74, article 6, and 4 - thought that the first motions of the appetite, arising from mere thought without any bodily perturbation, are venial sins. Omitting, however, this opinion about sins, of which we shall discourse in that place, I do not see why a man's imagination could not be so moved by a demon that, whether he will or not, a thought springs up in the imagination, the previous one being left aside, upon which the man had been engaged; for that new rising motion could be stronger than the former.

Furthermore, Scotus asks in the place cited whether an angel can transfer the phantasms of one man into another, with the spirit and humor also transferred in which the phantasm resides, or not. But disputing on either side, he says that neither can be proved or shown. I for my part judge

that they cannot be moved; for the phantasm is in an organ, but an organ lives according to each of its parts, and therefore a living thing cannot be moved from one into another, although in the same man it can be stirred a little.[1656]

Quaestio LVIII - On the mode of the cognition of angels

After these things it must be considered concerning the angelic mode of cognition. And about this seven things are asked.

Articulus I - Whether the intellect of an angel is sometimes in potency and sometimes in act

To the first, the procedure is as follows. It seems that the intellect of an angel is sometimes in potency.

1. For motion is the act of that which exists in potency, as is said in Physics 3. But angelic minds are moved by understanding, as Dionysius says in On the Divine Names, book 4. Therefore angelic minds are sometimes in potency.
2. Further, since desire is of a thing not yet had but able to be had, whoever desires to understand something is in potency to it. But 1 Pet. 1 says: "Into which things the angels desire to look." Therefore the intellect of an angel is sometimes in potency.
3. Further, in the Book of Causes it is said that an intelligence understands according to the mode of its substance. But the substance of an angel has something of potency mixed in. Therefore sometimes it understands in potency.

But on the contrary: Augustine says on the Literal Meaning of Genesis II that from the time they were created the angels enjoy holy and pious contemplation in the very eternity of the Word. But a contemplating intellect is not in potency, but in act. Therefore the intellect of an angel is not in potency.

I answer that, as the Philosopher says in On the Soul 3 and in Physics 8, the intellect is in potency in a twofold way. In one way, as before learning or discovering, that is, before it has the habit of science. In another way, it is said to be in potency as when it already has the habit of science but does not consider. Therefore, in the first way, the intellect of an angel is never in potency with respect to those things to which his natural cognition can extend. For just as the superior bodies, namely the celestial bodies, do not have a potency to being that is not completed by act, so the celestial intellects, namely the angels, do not have any intelligible potency that is not totally completed by connatural intelligible species. But as to those things which are divinely revealed to them, nothing prevents their intellect from being in potency: for even the heavenly bodies are sometimes in potency so as to be illumined by the sun. In the second way, however, the

1656. Scotus, In II Sent., d. 11, quaestio unica, §9.

intellect of an angel can be in potency to those things which he knows by natural cognition. For he does not always actually consider all the things which he knows by natural cognition. But to the cognition of the Word, and of the things which he sees in the Word, he is never in potency in this way, because he always actually beholds the Word and the things he sees in the Word. For in this vision their beatitude consists. But beatitude does not consist in a habit, but in an act, as the Philosopher says in Ethics 1, chapter 8.

Reply to the first: Motion is not taken there according to that whereby it is the act of an imperfect thing, that is, of that existing in potency, but according to that whereby it is the act of a perfect thing, that is, of that existing in act. For thus understanding and sensing are called motions, as is said in On the Soul 3.

Reply to the second: That desire of the angels does not exclude the thing desired, but the satiety of it; or they are said to desire the vision of God as to the new revelations which they receive from God according to the fitting circumstances of affairs.

Reply to the third: In an angelic substance there is not any potency denuded of act. And similarly the intellect of an angel is not in potency in such a way as to be without act.

Notes on the article.

The first conclusion is this: If we speak of the first act for understanding with respect to those things which an angel can know, he is always in act and never in potency; yet with respect to those things which are divinely revealed, the angelic intellect is sometimes in potency.

The second conclusion: If we speak of the second act, which is intellection, the intellect is sometimes in potency even with respect to those things which he can know naturally; for not all things which he knows naturally does he always consider in act; but with respect to the cognition of God and of those things which are seen in the Word, he is always in the act of clear vision.

Concerning this third conclusion it should be noted that when the Holy Doctor says that the things seen in the Word are always actually seen by the blessed angel, he is not to be understood to mean that from the beginning of his beatitude - according to what he had taught at question 57, article 5 - but after they are reported as occurring in time. In the same way should be understood what he says in the following article, that all these things are seen together; of which we have said enough above in Disputation 6.

Disputatio CCXIX - How the intellect of an angel is in potency and in act

Caput I - On the first act of an angel for understanding supernatural things

In article 1 St. Thomas seems to have spoken thus about the first act of an angel for understanding supernatural things, that he did not understand by it supernatural habits; and now he said thus, that with respect to those things which an angel knows only by divine revelation, the intellect of the angel is not always in first act. Moreover, by the first act for knowing these mysteries he does not understand certain infused supernatural species; for the angel in the

wayfarer state knows supernatural mysteries by species of natural things; therefore by the first act he also understands by revelation: for the intellect needs, as a principle, not only species, but also divine revelation in order to know supernatural mysteries. Furthermore, although an infused supernatural habit should also be required, nevertheless St. Thomas made no mention of it. Some Thomists think it probable that the infused habit of believing in angels was not distinct from the intelligible species, or at least that it makes no difference to refer this one way or another, namely, to theologize that there was an infused habit in angels. My own view, however, is that it must be said the same way about angels as must be said about men: that in the way they had the infused habit of faith for believing supernatural mysteries; and that habit is infused for the efficacy of the act of believing and a loftier mode, about which we shall speak in its own place. Nor is the contrary reported by Cajetan or by others. Indeed, Cajetan himself, on I, question 50, article 6, thus interprets the holy Doctor in that article when he says that in angels there are intellectual habits both of natural and of supernatural things, and infused: because in the way they had the habit of faith, in the homeland indeed the habit of light; and the same must be said, moreover, about other infused habits in the will. And the reason is the same: for since in man such a habit is required in order that piety produce facility, or a mode of act...

Act is not taken there as the act of what is imperfect, that is, of what exists in potency, but as the act of what is perfect, that is, of what exists in act; so too "act," as is said in De anima III.

Reply to the second: That desire of the angels does not exclude the thing desired, but its satiety. Or they are said to desire the vision of God as to the revelations made to us, which they receive from God according to the fittingness of the affairs.

Reply to the third: In the substance of the angel there is not any potency stripped of act; and in like manner neither is the angel's intellect so in potency as to be without act.

Notationes circa Articulum.

The first conclusion is: If we speak of the first act (*actus primus*) for understanding with respect to the things which the angel can know, it is always in act, never in potency; yet with respect to those things which are divinely revealed, the intellect of the angel is at times in potency.

The second conclusion: If we speak of the second act (*actus secundus*), which is intellection, at times the intellect is in potency, even with respect to those things which it can naturally know; for it does not always actually consider all the things which it naturally knows.

The third conclusion: With respect to God, and to those things which are seen in the Word, it is always in the act of clear vision. But concerning this third conclusion it must be noted, when the Holy Doctor says that those things which are seen in the Word are always seen by the blessed angel in act, that one must understand this not from the beginning of his beatitude, according to what he himself taught in question 57, article 5, but after they have been revealed in time. In the same way one must understand what he says in the following article, that "all these things are seen at once," about which we have said enough above in disputation 54.

St. Thomas in article I seems to have spoken thus of the first act of the angel for understanding supernaturally, in such a way that he did not understand it of supernatural habits; and so he said, with respect to those things which the angel knows only by divine revelation, that the angel's intellect is not always in first act. Moreover, by the first act for knowing these mysteries he does not understand any infused supernatural species; for the angel on the way knows supernatural mysteries through the species of natural things; therefore by the first act he also understands a revelation: for the intellect needs as a principle not only species but also divine revelation, that it may know the supernatural mysteries. Furthermore, although besides species there is also required an infused supernatural habit, yet St. Thomas made no mention of that. Some Thomists think it probable that the infused habit for believing in angels was not distinct from the intelligible species, or at least that it makes no difference whether one holds this or some other way of theologizing about the infused habit in angels. My opinion, however, is that in angels, just as in men, one must say that there was an infused habit of faith on the way for believing the supernatural mysteries, whether that habit be infused for effecting the substance of the act of believing, or for some manner of the act - of which we shall speak in its proper place. Nor did Cajetan teach the opposite, as is falsely reported by some; rather, Cajetan himself, at I-II, q. 50, a. 6, thus interprets the holy Doctor in that article when he says that in angels there are habits, so that it be understood both of natural and of supernatural and infused [habits]: for on the way they had the habit of faith, but in the homeland the habit of light; and thus the same must be said concerning the other infused habits in the will. And the reason is the same: for in man such a habit is required that it may produce the substance or the mode of the act through a natural, intrinsic form inhering in him, by whose force he may operate connaturally, and not only by the aid of God assisting and cooperating; by the same reason in angels such a habit must be posited: for in the same way their potency is related to the supernatural act or to its mode.[1657]

Caput II - On the natural habits by which the intellect of the angel is in first act

Concerning the natural habits also by which the intellect of the angel is constituted in first act, Doctors do not think in the same way.

- Some Thomists teach, first, that there are in the angel's intellect some acquired habits distinct from intelligible species; they say these are habits of opinion and of acquired faith about those objects which he cannot naturally know - whether they be supernatural, such as the mysteries of grace, or natural, such as future contingents; for not all beings of the natural order, under every condition of theirs, can be naturally known by the angel without revelation. Then they assert that, with respect to other natural objects which can be clearly known naturally by the angel, there are not in angels habits distinct from intelligible species. Wherefore neither the habit of philosophy nor of mathematics is to be assigned to angels. Now the reason for this opinion is that, just as for those natural objects which we referred to in the second place the angel is carried with the highest promptness of intellect, and

1657. Cajetan, I-II, q. 50, a. 6.

therefore does not need a habit by which he may be determined and made apt; so too, for those objects which we set in the first place, the angel's intellect is not wholly determined, and consequently needs some habit by which it may be determined and made apt. Those who follow this opinion think it to be also St. Thomas's in I-II, q. 50, a. 6; for since a habit ought to be a quality distinct from species, it follows that St. Thomas posited, besides intelligible species, other habits of the intellect in angels.

- My true opinion, however, is that no natural habit, besides supernatural and infused ones, ought by its nature to be assigned to the angel's intellect as distinct from intelligible species. This opinion was handed on by Cajetan in the same article 6, nay even by St. Thomas himself, as Cajetan himself interprets him there: for when he had said that the angel, in the genus of intelligibles, is not pure potency nor pure act, but is partly in act and partly in potency, he then subjoins that the intellect, insofar as it is in potency, is habitually perfected by certain intelligible species, that it may operate, namely about intelligible objects other than itself; for to understand itself it is indeed partly in act through its essence, because it is in first act for understanding itself. Therefore St. Thomas teaches that the habit by which the angel's intellect is perfected and rendered in first act with respect to those things which it can naturally know (for of these he is speaking) is the intelligible species themselves; which, although they do not have all that another habit has - because they are not intensified and remitted - are nevertheless like habits in this, that together with potency they are principles of operating, and therefore are not undeservedly called habits.[1658]

The reason for our opinion is that a habit must be assigned to a potency in one of two ways: either for simply operating, that is, for producing the very substance of the act, or for facility, so that the intellect may operate more easily. Now at present I am not disputing whether supernatural habits are assigned to the substance of the act or to facility or to some other mode which some contrive. Concerning natural habits, then, it is true that they must be posited only in one of those two ways. But in neither way do natural habits seem necessary in the angel: therefore to posit them is vain.

- First, they are not necessary for the substance of the act; for for the cognition of the things which the angel can naturally know, he has within himself a sufficient and complete principle, namely the very faculty of intellect and the species, if indeed in us these two suffice for producing any acts whatsoever of natural understanding: for we understand before we acquire these [acquired] habits. Therefore, for the angel to believe by acquired faith and not infused, or to opine by some opinion and conjecture about those things which he cannot know with evidence, the sufficient principle for him is the very faculty of knowing and the species for producing the substance of the act: whenever there is a complete principle of some effect, another on the part of the cause is added in vain, and it can be of no efficacy.

1658. Cajetan, in the same place, ad loc., interpreting St. Thomas's teaching about species as "habits" constituting first act.

Therefore we add in vain to the angel's intellect, over and above the intelligible species, an acquired habit for believing by acquired faith, or an opinion, by which he might concur to the substance of the act.

- Nor, in the second way, can a habit be necessary or of any efficacy in the angel, namely for the facility of believing by natural faith, or of opining about those things which by the nature of the thing he cannot know: for the intellect of the angel is of itself so perspicacious, and free from every impediment, that with the highest facility it is carried to that which appears to it credible or probable, and it represents it to itself with the highest readiness; therefore it has no need of any acquired habit, by which with greater facility it might acquire this cognition. By the same reasoning the demons, who "believe and tremble" (Jas 2), do not need any acquired habit in order to believe; for they are so convinced by the very event of the matter that they cannot not believe; but for the affect which follows of necessity in this way no other facility and promptitude can be required.

Finally, observe with St. Thomas in the same article that in the angel there is no natural acquired habit which disposes toward being, such as in man is the disposition of health and soundness. The reason, moreover, is manifest: for since the angel is a simple essence in reality, and this kind of habit is only necessary for preserving the union of parts of an essence and substance, or of soul and body, it seems by no reason necessary in angels. And thus far concerning the first conclusion of the article.

Caput III - On the second act of the angelic intellect, which is to understand

Concerning the second conclusion, which is about the act of understanding - called the second act of the intellect - Scholastics also have various opinions. St. Thomas merely said that the angel, with respect to those things which he can naturally understand, is not always in second act, that is, he does not always actually consider the same things, but is at times only in potency to understand. From which opinion it does not follow that with respect to some of those things which he naturally knows he is always in the act of consideration.

There are nevertheless some Thomists and Scholastic theologians who teach that the angel always actually understands himself: thus teach Cajetan in the following article; concerning the fifth conclusion, and "For elucidation"; Ferrariensis on Contra gentiles, chapter 97; Hervaeus in II, dist. 3, q. 4, ad primum in oppositum; Aegidius on the same, dist. 2, pars, q. 2, a. 1, dub. 1, ad secundum argumentum; Capreolus, q. 2, a. 3, ad sextum; Gregory, against the ninth conclusion in the second solution; Durandus, q. 8, n. 9; indeed St. Thomas himself in that book II Contra gentiles, chapter 97, and in De veritate, q. 8, a. 6, ad 7, and a. 14, ad 6.[1659] And the first point can be confirmed because the knowledge of self in the angel hinders nothing of the knowledge of other

1659. Cajetan, in the following article; Ferrariensis, on Contra gentiles, c. 97; Hervaeus, In II Sent., d. 3, q. 4, ad 1 in oppositum; Aegidius, ead. dist. 2, pars, q. 2, a. 1, dub. 1, ad 2; Capreolus, q. 2, a. 3, ad 6; Gregory, against the ninth conclusion, in the second solution; Durandus, q. 8, n. 9; St. Thomas, Summa contra gentiles II, c. 97; De veritate q. 8, a. 6, ad 7; a. 14, ad 6.

things, since it is the foundation of all of them; why therefore shall we say that the angel sometimes ceases from it? Then, if the angel could cease from this knowledge of self, in the same way he could be idle from all other [knowledges], not only one by one but also all together; which seems absurd, since a living substance ought not to be without some operation of life. Lastly, the Holy Doctor proves this in that article 14, ad 6, because the angel knows himself through his own essence and is always informed by it; therefore through it he always understands. I omit other reasons which St. Thomas brings forward in the second book of Contra gentiles, chapter 97, because they are of less moment.

I indeed have not read any one of the writers who teaches the opposite; nor is there any reason which proves that an angel can cease from the knowledge of himself. Moreover, neither do the reasons brought forward for the opposite efficaciously demonstrate [it], as will be clear from their solution. To the first one it could be answered that the angel does not for that reason cease from the knowledge of himself because he is hindered by the knowledge of some other thing, but because he may freely be able to cease from it, since there is nothing which necessarily moves him to it; for the intellect not only ceases from the knowledge of one thing because it is hindered by the knowledge of another, but because it wills to cease altogether from it. Add that what is assumed is not sufficiently proved, namely that the knowledge of self in the angel is the foundation of other intellections.

To the second reason one could say that nothing hinders a purely understanding nature, such as a spirit, from ceasing from every operation of life, since every operation of this kind is from the will ...

...are voluntary, in a different way than in other living beings. For these latter have other necessary operations, from which they are not able to cease: thus an animal can naturally cease from every operation of sense; what wonder, then, if an angel can at will suspend himself from all knowledge of the intellect? How, moreover, an angel is brought back

to the first natural cognition, we have already said above in Disputation 211, cap. 6, and in Disputation 221, cap. 3; at the end we shall speak again. On this matter Gregory does not dare to define anything, in II, dist. 11, in the final words of the question, where he touched upon this difficulty. Then also one could reply to the second reason, that an angel cannot cease from all thought at once: yet he can cease from any particular one, as it happens in our imagination, from which we cannot by any means pluck out every thought, yet we can well remove any one whatsoever. The third reason too proves little: for that an angel is always informed by his essence is not sufficient for him always to know it, since even from the beginning of creation he has intelligible species of things, according to the view of St. Thomas, and yet he does not always know other things; but the essence of the angel, even in his opinion, is only in the place of an impressed species, which is a principle of cognition. The reason, however, would prove something, if the essence of the angel himself were to him not a species for eliciting knowledge, but knowledge itself, which St. Thomas and others expressly denied, as we saw in Disputation 198.

Moreover, some Theologians also teach not only that an angel cannot cease from the knowledge of himself, but not even from the natural knowledge of God. In this opinion Cajetan seems to be, and Capreolus in the places cited, and some more recent professors of Theology follow them; yet they judge it not to be as certain as the preceding. They prove, first, that if an angel knows himself always, it follows that he also knows whatever is represented in him; but God is represented in the essence of the angel: therefore He is always understood by the angel. Secondly, the angel knows himself with a comprehension of himself; therefore, if he always knows himself, he will also know the relation that he has to God, and consequently he will also always actually know God Himself. Thirdly, the very essence of the angel is, as it were, a species and a principle of cognition, not only of itself but also of God; therefore, by the same reason by which it brings it about that the angel always considers himself, it will also bring it about that he likewise always remains in the consideration of God.

I for my part see in this opinion no firm foundation, since it leans upon the preceding view, which is quite ambiguous; yet if once we admit that the angel is always engaged in the consideration of himself, it is rightly inferred that God also is always known by him, not indeed on account of the first and third reason, but on account of the second: because, since the essence of the angel is always actually known by the angel himself with a knowledge of comprehension, he cannot but actually consider himself as a creature and handiwork of God, and hence actually know God Himself. For an intellect that conceives a thing as it is cannot in it conceive one thing without the other, especially if they are not really distinct, as was said in Disputation 116, cap. 2. But the relation of the angel, by which he is referred to God, is not really distinct from the angel, neither by the nature of the thing; and even from those things that are really distinct one from another, the angel cannot consider one without the other, but the principle of knowing, naturally and not freely, inclines the intellect to understand both the one and the other. Now such is the essence of the angel, which - if we follow the higher opinion - so naturally inclines the angel to know himself that he cannot be free from the consideration of himself. Wherefore in neither this, nor in the preceding difficulty, can anything certain be had, although the common opinion is in itself plausible and quite probable.

Thirdly, some add that an angel is always engaged in the consideration of this universe; yet I see no foundation for this, any more than for the opinion of Durandus, who affirms that all natural beings are always actually known by an angel, as I shall say in the following disputation.

Articulus II - Whether an angel can understand many things at once

To the second question one proceeds thus.

It seems that an angel cannot understand many things at once. For the Philosopher says in III, q. 3, art. 2 of the Topics, that it happens that one can know many things, but understand only one.

1. Further, nothing is understood except according as the intellect is informed by an intelligible species, as a body is formed by a figure. But one body cannot be formed by diverse figures. Therefore one intellect cannot at once understand diverse intelligibles.

2. Further, to understand is a certain motion; but no motion is terminated to diverse termini. Therefore it does not happen to understand many things at once.

But on the contrary is what St. Augustine says, IV super Genesis ad litteram: The spiritual power of the angelic mind most easily comprehends at once all the things it will.

I answer that, just as unity of motion requires unity of terminus, so unity of operation requires unity of object. Now some things can be taken as many and as one: as the parts of a continuum. For if each one is taken according to itself, they are many; whence neither are they apprehended by one operation, nor if they are apprehended at once by sense and intellect. In another way they are taken according as they are one in the whole; and thus they are known at once by one operation both by sense and by intellect, when the whole continuum is considered, as is said in III De anima. And thus too our intellect at once understands the subject and predicate insofar as they are parts of one proposition, and two things compared according as they agree in one comparison. From which it is clear that many, according as they are distinct, cannot be understood at once; but according as they are united in one intelligible, thus they are understood at once. Now each thing is actually intelligible according as its likeness is in the intellect. Therefore whatever can be known through one intelligible species are known as one intelligible, and therefore they are known at once. But those that are known through diverse intelligible species, as diverse intelligibles are grasped, are not known at once. Therefore, by that cognition whereby they know things through the Word, angels know all things together by one intelligible species, which is the divine essence; and thus, as regards such cognition, they know all things at once: and in the fatherland our thoughts will not be volatile, going from one thing to another and returning, but we shall see our whole knowledge at once in one view, as Augustine says in XV De Trinitate, cap. 16. But by that cognition whereby they know things through innate species, they can at once understand those things that are known by one species, but not those that are known by diverse species.

Reply to the first: To understand many things as one is in a certain way to understand one thing.

Reply to the second: The intellect is informed by the intelligible species which it has with it; and therefore in this way by one intelligible species it can at once contemplate many intelligibles, just as by one figure a body can at once be similar to many bodies.

Reply to the third: As to the first.

Conclusion: Whatever things are known under the mode of one, even if they are many in themselves, can be known at once by an angel; but many things as many cannot be known at once. What, however, it is for many to be known under the mode of one, or under the mode of many at once, will be explained in the following disputation.

Disputatio CCXX

Caput I - That many things cannot be known at once by an angel except under the mode of one, various Theologians defend.

Not a few Theologians, with St. Thomas, affirm that many things cannot be known at once by an angel except under the mode of one. So the Angelic Doctor seems to hold in this article, and in Contra gentiles I, c. 55, and II, c. 101, and in De veritate q. 8, a. 14, in the body and to the sixth; whom Cajetan and Ferrariensis follow in the places cited, Aegidius in the treatise De cognitione Angelorum, q. 7, and in II Sent., dist. 3, part 2, q. 2, a. 3; Durandus, II Sent., dist. 8, q. 8, n. 70; and Capreolus on the same distinction, q. 2, a. 1, after the new conclusion and against the same conclusion. The foundations of this view are set forth thus in general; we shall gradually adduce them in the fourth way of explaining it, for although they follow it, they do not defend it in the same way: wherefore we shall also distinctly recount the several ways by which they explain it.

The first way is of Aegidius in the place cited, who teaches that indeed many things can be understood under the mode of many - that is, as altogether diverse among themselves and without order - if, however, they are understood in a different way; for if they are understood in the same way, they cannot (says Aegidius) be understood as many, unless under the mode of one. Now for many things to be understood in a different way and in the same way happens in three manners (says he). First, when one is seen through essence, and another through a species added to the essence: in this way the Angel understands himself through his essence, and other things through species added to the essence. Secondly, when one is known by grace, another by nature: thus God is seen by the Blessed by grace, and other things by nature. Thirdly, when one is known principally, but another less perfectly or consequently: in this manner the subject and predicate are known, cause and effect, the subject and its accidents; for of these parts, in whatever order, that which is known principally is first, the other later less perfectly and consequently. On the contrary, for certain many things to be known in the same way happens also in three opposite manners, as can be shown by induction.

This prefatory notation having been laid down, says Aegidius, many things can indeed be understood by the angel under the mode of many, yet such that they are not known in the same way, but in a different way. He further adds that it happens in three ways that certain things are known under the mode of one and under the mode of many. First, on account of the reason and principle of knowing: in this way the angel knows his essence and other things under the mode of many; because he knows his essence through itself, but other things through species. Secondly, on account of the act of understanding: and then many are known under the mode of many when each of them is known in itself and equally perfectly known; and in this way the subject and the accidents are not known as many, because they are not equally and principally understood. Thirdly, on the part of the object, when many are known under the mode of many, when of each of

them that which is the whole principal thing is known, and neither is one less principal with respect to the other. Conversely, in three ways it happens that certain things are understood under the mode of one.

From these it is clear, says Aegidius, in what way the angel understands many under the mode of many and under the mode of one: for he knows himself and other things under the mode of many in the first and third way, not, however, in the second; but the subject and the accidents, and the rest which are known by reference to something one, the angel does not know as many, nor in the same way, but in a different way and under the mode of one according to that second way. This discourse, so prolix and obscure, is supported by Aegidius with no reason; nor do I see in what way it can be upheld. Thus far, however, the point is that many things cannot be known under the mode of many in the same way by an angel - indeed they can in a different way - which seems not to agree altogether with the opinion of others.

The second way of explaining the aforesaid view is that of Durandus in the place cited, who teaches that many things cannot be known by an angel with one single act of the intellect under the mode of many; yet they can, if they are understood in an order, under the mode of one. Indeed, on this account, in a certain way the angel at once knows all the things that can naturally be understood by him, because they are his own - his very essence - and all natural beings present ...

The second way of explaining the aforesaid opinion is that of Durandus in the place cited, who teaches that many things cannot be known by an angel with a single act of the intellect (actus intellectus) under the mode of many; yet they can, if they are understood in an order among themselves: for thus they are known under the mode of one. Indeed, on this account he thinks that at once there are known by the angel all the things that can naturally be understood by him, such as the very essence (essentia) of the angel himself, and all present natural beings (not future contingents), at once, I say, by the same act of the intellect, and with a certain order of the inferior or of the superior to the angel's own essence. And since in question 1 of the Prologue, number 24, he holds that it is not possible for there to be naturally in the intellect distinct acts simultaneously, it follows, in his opinion, that it is thus possible for many things to be understood by the angel under the mode of one, that is, to be known with a certain order, so that they cannot, even with an order, be known by several acts. By what reason he judges that the angel is always in act considering all these things, we shall say in the following disputation. But Durandus proves this his opinion, or the foregoing mode of explaining it, by this argument: because of one action there can be only one single terminus: therefore also of one intellection there is one object: wherefore, if the angel understands many things, he must understand them under the mode of one; because it is necessary that by one and the same act he should know all things, of which act there ought to be one object: but many things without order cannot have the ratio of one object. This reason shows that many things without order cannot be understood by the same act; yet it does not prove that several acts cannot be simultaneously in the same intellect.

The third mode seems to be that of St. Thomas in this article, and above in question 12, article 10, and below in question 85, article 4, where he hands on the same doctrine about the human intellect; and in the first book against the Gentiles, chapter 55; and in question 8 of De veritate,

article 14, in the body, where he teaches that those things are understood under the mode of one which are by one intelligible species (species intelligibilis); but under the mode of many, those which are known by many species. Wherefore his opinion seems to be that many things cannot be considered simultaneously by the angel through many species, but only through one and the same. And in his doctrine I also judge it to be the same thing that many things be known by one species or by many: namely, that they be known by one or by many formal concepts (conceptus formales). And this happens universally, that whenever the principle of intellection is one simple species, the intellection itself, that is, the formal concept, which we call the expressed species, is also a simple quality (qualitas). Wherefore, since in the proposition and division which the intellect forms in itself about things, many are known, namely, the subject and the predicate - and these are known at once - it seems one must say, in St. Thomas's opinion thus explained, that those many things in a proposition are known by one species and a simple quality. Which the Holy Doctor himself said seems to him in Against the Gentiles I, chapter 55, at the end of the first argument, where he says that the subject and predicate are known at once, because by one species of the whole proposition all its parts are apprehended.[1660] He seems to have taught the same in this First Part, question 25, article 4, to the fourth, if it be compared with solution 3; for there he had said that the extremes of a proposition are known as parts of a whole.[1661] Ferrarensis followed this opinion in the same Against the Gentiles I, chapter 55. For the elucidation of these points, he says, when our intellect understands that man is not a horse in the proposition in which it understands that man differs from a horse, out of the species of man and of horse there is produced one species which represents the difference of man and horse.[1662]

This way of thinking is proved first by the reason which St. Thomas uses above in question 12, article 10: just as it is impossible that the same body be figured by diverse figures, so it is impossible that our intellect be informed by various intelligible forms: therefore, when it understands many things, it cannot express many species in the intellect of the angel, but it is necessary that by one only species it understand them at once. To this reason there seems to allude another reason which the same Holy Doctor uses in the first book against the Gentiles, that same chapter 55, and in this First Part, question 85, article 4, which is as follows. It is impossible that the same subject be at once informed by many forms of the same genus, as by diverse colors; although it can at once have diverse forms of diverse genera: therefore it is impossible that the intellect be at once informed by diverse cogitations and species. Then it can be proved by the reason of this article, which is of this sort: just as to the unity of motion unity of term is required, so to the unity of cognition unity of object is necessary: therefore many things cannot be understood at once, unless at least in the ratio of intelligible they be in some way one. This reason, that it may have some weight, presupposes that which the prior reason proved, namely, that the same intellect cannot be at once informed by many intellections and species.[1663]

1660. St. Thomas Aquinas, Summa contra Gentiles I, c. 55.

1661. St. Thomas Aquinas, Summa theologiae I, q. 25, a. 4, ad 4; compared with ad 3.

1662. Francis Sylvester of Ferrara (Ferrariensis), on Summa contra Gentiles I, c. 55.

1663. St. Thomas Aquinas, Summa theologiae I, q. 12, a. 10; De veritate q. 8, a. 14, corpus; Summa theologiae I, q. 85, a. 4; Summa contra Gentiles I, c. 55.

The fourth mode of defending the aforesaid opinion is that of Hervaeus in the tractate On the Motion of the Angel, question 1, to the third difficulty, of Cajetan in this article and below in question 85, article 4, and of Ferrariensis in the first book against the Gentiles, that chapter 35. They teach first that many things can indeed be understood at once under the mode of one; then they assert that many things which are understood under the mode of one can be understood by many species distinct in the genus of quality, yet representing different objects with an order among themselves - and that this is to know many things under the mode of one. Wherefore, in their opinion, of one affirmative or negative proposition there will not be one expressed species in the genus of quality, as one species is wont to be assigned to some whole representing its various parts, but there will be many species in the genus of quality representing many things, yet mutually ordered.[1664]

The former part of this opinion will be confirmed below by a common foundation. But the latter part, which asserts that the extremes of a proposition are understood by many species, even if they are understood under the mode of one, is proved first, because if the extremes of a proposition are always understood by one simple species in the genus of quality - since they are always understood, by whomever they are understood, under the mode of one - it would follow that there is never composition and division, even in our intellect. For this is the reason why we say that the angel does not compose and divide in his intellect, even if he understands many things at once, and one of them affirms of the other that it is this, or that it is not that, because he understands by one simple quality and formal concept; otherwise, if from the side of the things many were understood and the intellect knew them by many concepts, from the mere number of the things known composition and division cannot be inferred: for God too understands many things, yet he does not compose or divide in his intellect. Therefore, if composition and division in the intellect must be taken from the side of the concepts and species which we call formal concepts, and whenever many things are at once understood by the intellect by one simple quality and concept, there will never be composition or division in any intellect, which I by no means concede.

Second, from the opposite position it would also follow that there is never a whole syllogism and discourse at once in the intellect, because many things are understood in it: wherefore, if they must be known by one expressed species, so that they be said to be understood under the mode of one, and cannot be known otherwise than under the mode of one, it results that no syllogism can ever be made at once by anyone in an intellect: for by this reason we shall say below that a man, when he understands many things, knows them under the mode of one and by one quality; it would follow also that a man would never discourse.

Third, the same opinion is confirmed, because from the opposite there would also follow that the human intellect alone can compose and divide and form propositions from extremes distinct according to reality, as from man and whiteness, when one says, Man is white, but not from those things which differ only by reason: wherefore no intellect could say, Man is an animal; for these extremes differ only by reason. But that this rightly follows from the opposite opinion is proved,

1664. Hervaeus Natalis, De motu angelico, q. 1, ad 3; Cajetan, In Iam, q. 85, a. 4, and on this article; Francis Sylvester of Ferrara, on Summa contra Gentiles I, c. 35.

because in order that a proposition be made from those extremes which differ only by reason, it is necessary that they be distinguished by our reason; but those things which are the same according to reality cannot be thus distinguished, unless they be conceived as diverse - and this cannot be done unless they be known by diverse concepts, as we showed above in disputation 118, chapters 2 and 3. Therefore, if every proposition in the intellect were made by one simple quality and concept, no proposition could consist of extremes distinct only by reason.

But the former part of this opinion, in which all the other opinions mentioned agree, is wont to be confirmed by the testimony of Aristotle, Topics, chapter 4, place 32, where, in order to prove that to know and to think are not the same, he assigns the difference in these words: It happens to know many things; to think, however, not: for to know denotes a habit; wherefore even those sleeping are said to know; but to think denotes actually to contemplate: it happens, therefore (says Aristotle), to know many things by habit, as is manifest, but to contemplate many things actually does not happen.[1665] Then Cajetan, on this article, adduces Aristotle, Metaphysics IV, chapter 4, text 50, asserting these words: He who does not understand one, understands nothing; from which he infers that whoever understands something either understands only one thing to be true, or many under the mode of one.[1666]

Caput II - The more probable opinion, which even the Thomists embrace, consists in two points

One is that many things can be known under the mode of one, not only through one formal concept (conceptus formalis), which is one simple quality (qualitas), but also through many expressed concepts and species mutually, however, ordered, and representing the objects with a certain order among themselves. The other is that indeed many things can be known through many expressed species and through many formal concepts without any order among themselves, yet not so perfectly as if one object of them were understood through itself.

The first part of this opinion, in which together with Ferrariensis and with Cajetan we concur, has not obscurely been proved by us in the preceding chapter, where we showed that the extremes of a proposition and the propositions of a syllogism cannot be one simple quality and formal concept, but must be many, yet representing the objects themselves with an order. Now, however, the same part can be confirmed, first, because although according to the opinion of some a blessed soul with the same simple vision sees the divine essence and certain created things, nevertheless no one denies that some things also at the same time are seen by the blessed with a vision distinct from the divine essence. But if someone should respond that this indeed happens by grace, while it is only denied that it can happen by nature, still from this line of reasoning it is gathered that it is not so repugnant for many things to be known at once by diverse formal concepts, as it is repugnant for the same body to be figured at once by two figures: for this latter cannot be brought about even by grace and by the absolute power of God.

1665. Aristotle, Topics, book 1 (or 2), ch. 4, locus 32 (scholastic numbering).
1666. Aristotle, Metaphysics IV, ch. 4, text 50 (scholastic division); Cajetan, on this article.

Then the first part of this opinion is proved from the doctrine of St. Thomas: for the angel knows himself through his essence, as we showed above in disputation 204, chapter 2, as through a principle eliciting cognition; and from this cognition he never ceases, as the same Saint holds, and as we noted above. But besides his essence the angel knows other things, and not through the same formal concept by which he understands his essence: therefore at the same time he understands many things through many expressed species and concepts. Moreover, there is no one who is ignorant that other things are not known by the angel at the same time with his essence through the same species; especially if the common opinion is true which asserts that the angel understands things other than himself through infused species, but himself through his own essence: for since the principle eliciting the cognition is different, the species also and the expressed formal concept will be different.[1667] St. Thomas answers, in De veritate, question 8, article 14, to the sixth objection, that the angel indeed understands himself and other things under the mode of one, because he understands the rest by reason of his essence as by reason of the first-object of an imperfect cognition; for if we speak of perfect cognition, he says that other things are known by the angels through the proper species of those things infused into them.[1667] This solution, however, does not seem to satisfy. For we readily grant that many things can be known by an angel under the mode of one, in that they are known with some order among themselves. We contend, however, that those many things can indeed be known through many expressed species and formal concepts: which in the angel seems to be conceded at least when the angel would know other things through their proper species and not by reason of his essence. But that other things can be known perfectly by the angel at the same time even when he knows himself is beyond doubt. Add also that that twofold cognition of other things in the angel - one through the angel's essence, the other through the proper species of things - does not seem necessary: indeed, if we were to concede that imperfect cognition of other things in the angel by reason of his essence, we would be forced to attribute to the angel some discourse about natural things. For his essence could not be for him the ratio of knowing other things by the knowledge they call intuitive; and consequently the angel could not but in some way discourse: for, as we shall say below in disputation 222, discourse arises solely from this, that things are not known by an intuitive, proper, and perfect concept. Wherefore I would not hesitate, with Cajetan, Ferrariensis, and other Thomists, to interpret the holy Doctor so benevolently, that he understands the cognition of many things under the mode of one to be effected not only through one simple quality of a formal and expressed concept, but also through many [qualities] representing objects with a certain order among themselves; and that composition or division be effected in us not through one simple quality, as we clearly showed above, but through many qualities of concepts, which, by reason of the order under which they represent the objects, are called one concept, as it were integral, and the extremes of the proposition are represented as it were by parts of this concept in an integral way.[1668][1669]

1667. St. Thomas Aquinas, De veritate q. 8, a. 14, ad 6; see also Summa theologiae I, q. 12, a. 10; I, q. 85, a. 4; Summa contra Gentiles I, c. 55.

1667. St. Thomas Aquinas, De veritate q. 8, a. 14, ad 6; see also Summa theologiae I, q. 12, a. 10; I, q. 85, a. 4; Summa contra Gentiles I, c. 55.

1668. Hervaeus Natalis, De motu angelico, q. 1, ad 3; Cajetan, In Iam, q. 85, a. 4, and on this article; Francis Sylvester of Ferrara (Ferrariensis), on Summa contra Gentiles I, c. 35.

The latter part of our opinion is that indeed many things can at the same time be known by an angel, nay even by us, under the mode of many - that is, through many qualities and concepts - efficaciously and without order of the representation of the objects among themselves; yet not so perfectly as if the individual things were known through themselves, or as if those many things were [known] under the mode of one with a certain order; which opinion I am first persuaded of, because I find no reasoning that efficaciously proves this to be repugnant to the faculty and power of the angelic or human intellect, as we shall see in the following chapter. Besides, the aforesaid opinion is proved because sense, both external and internal, knows many things at the same time under the mode of many, not only because [it knows] through many species, but also because [it knows] without order of composition or division among themselves. And in this matter by experience in seeing it is plain that many things are seen by us under the mode of many: for we see many men, many animals, and many other things placed in the view; but no one would say that such various visible things are seen through one simple quality. Moreover, no one is ignorant that those things are seen without composition and division; for who ever said that sight composes or divides? Finally, those things are sometimes seen without even the order of local distance, which, in my judgment, would matter little for us to say that those many things are seen under the mode of one, which also we have learned by experience: because often we do not notice the distance of the objects among themselves, but simply apprehend the things themselves. Or if the example of sight does not please, let us bring forward the sense of hearing, which at the same time hears many sounds represented without any order among themselves; and likewise [consider] him who perceives many qualities in the same thing at once, namely, cold, hardness, or softness. In the internal sense also the same is manifest; for we perceive at the same time by the internal sense the objects of sight, of hearing, of taste, and of the other external senses, inasmuch as the common sense is said, in presence, to perceive only the objects. By the same internal sense we also think and remember many objects of the diverse senses; and yet sense does not compose nor divide, and hence neither does it sense those many things with a necessary order. Why, then, shall we not attribute this to the intellect, which is a much more perfect faculty?

Moreover, as I said, whenever a faculty, whether of the angelic intellect or of ours, whether of the external sense or of the internal, knows many things at once, it does not operate about the individual items, nor does it know them so perfectly as it would understand or sense the individual items through themselves. Indeed, the intellect has such a mode of operating by the collation of the things it knows, that it hardly understands many things without order, and hence almost always knows many things under the mode of one: which anyone can easily experience in himself. This, however, comes from that natural mode whereby our intellect, in this present state, understands by collation and relation. Nevertheless, I do not see anything that would hinder it from being able at times to understand certain things imperfectly at the same time under the mode of many; but this is done much better by an angel, who understands things by intuitive knowledge (as they say), as they are in themselves: although he understands individual things much less perfectly in this way than when he knows under the mode of one. This latter part of our opinion was followed by

1669. Aristotle, Metaphysics IV, ch. 4, text 50 (scholastic division); Cajetan, on this article.

Dominic Soto in book I of the Posterior Analytics, question 1, and in this sense he interprets the mind and opinion of St. Thomas, about which there is no need any further to contend.[1670] Our opinion is also favored by St. Gregory, whom in the next disputation we shall cite, inasmuch as he affirms that an angel can understand many things at the same time through many species and concepts.

Some try to prove our opinion from St. Augustine, On Genesis Literally, book 4, chapter 32, at the beginning, where he writes thus about the angel: "But according to the spiritual power of the angelic mind he embraces all the things he wills at once with most easy knowledge." These words, however, do indeed prove that many things are known by an angel, but not [that they are known] under the mode of one, or [that they are known] under the mode of many. Yet someone could gather from the following words of the same Augustine that he was of the opinion that the angel knew those many things under the mode of one - that is, with a certain order among themselves; for he says: "Nor, however, is it without order, by which the connection of preceding and consequent causes appears; for cognition cannot be effected unless the things to be known precede." But not even from these words can that opinion be gathered. For Augustine is not there treating of the order of objects among themselves, as if he were saying that they cannot be known at the same time unless with a certain order among themselves; but he teaches that things are known by an angel with the order of causes, so that first they are seen by the morning vision in the Word, then by the evening cognition in their proper genus and nature. For since, according to Augustine's judgment, the things to be known precede the cognition, they ought to be known in the order in which they themselves are: wherefore Augustine does not treat of the order of the objects among themselves which are known by an angel at the same time, but of the order of each thing according as it is in the Word and in itself, and of the order of morning and evening cognition: about which matters enough and more than enough has been said by us above in disputation 51.[1671]

Respondetur argumentis, quae videntur oppositum probare.

To the first, which was brought forward in the first chapter in the third way of explaining the opinion there mentioned, we say that there is a difference in nature between figure in quantity and intelligible species: wherefore, although the same body cannot be figured at the same time by many figures, nevertheless the same intellect can be informed at the same time by many species. For figure is, as it were, the extremity and terminus of quantity; but it is manifest that no body can have many termini of its quantity, but must necessarily be terminated by one; hence it cannot be figured at the same time by many figures. An intelligible species, however, whether impressed or expressed, is not a figure of quantity, but it is a certain quality which is called a figure because it is an image of the object; wherefore, since it is not repugnant for the same subject to be informed at the same time by diverse qualities, it will not be repugnant for it to have at the same time many species. And indeed no one to this day has denied that in the same intellect and in the same sense there are many intelligible or sensible impressed species, which constitute the faculty in first act, without any order among themselves: why then do we disallow that there can also be many

1670. Dominic Soto, In Posteriora Analytica, book 1, q. 1.
1671. St. Augustine, De Genesi ad litteram IV, c. 32.

expressed species, which are the very acts either of thinking or of understanding? I well see that there can be more species impressed at once than expressed in the same faculty: because there is greater difficulty in the faculty's actually operating than in its receiving and keeping the impressed species; and therefore its power for acting and expressing is lesser than for receiving them and at the same time retaining them. And thus the argument from forms as if they were figures does not pass from impressed to expressed [species]: for if it were repugnant to have many species expressed at once without order among themselves, because they are as it were figures, and a body cannot at once be figured by many figures; by the same reasoning it would be repugnant to be informed at once by many impressed species, which also are as it were figures and images of the objects.

To the second argument, which there in the same place was drawn about qualities of the same genus, it is answered that something false is assumed therein - namely, that many qualities of the same genus cannot be in the same subject. For it is clear that there can be many qualities at once of the same genus so long as they are not contraries: thus no one denies that in the same intelligent faculty there are many intelligible impressed species, by which we say the intellect is constituted in first act; which, nevertheless, are under the same genus. Therefore by this reasoning it is not repugnant that there be many species which we call expressed and [which are] in second act: although by some other reasoning this could not be.

And to the third, which in the same third mode of opinion was brought forward about opining, I say that one motion cannot be terminated to one terminus; whence, although it would follow that one cognition in the intellect, which is one simple quality, cannot be terminated except to one object, it does not follow that many objects cannot at the same time be known through many cognitions. For we do not contend that many things, as many, can be known through one simple cognition and quality; but through many, which occur at the same time in a human and in an angelic intellect: whose opposite the foregoing reasoning does not prove.

It remains to explain two testimonies of Aristotle, which are customarily adduced as a common foundation to prove that many things cannot at the same time be understood under the mode of many. The first testimony, which is taken from the fourth book of the Topics and is commonly cited under these words, "It happens that one can know many things; to think, however, many, not," is set out by Aristotle in this manner: "It happens that one can know many things; to think, however, not [so] with respect to all truths."[1672]

To the first, which in the first head was brought under the third way of explaining the opinion there mentioned, I say that the ratio differs between figure in quantity and the intelligible species (*species intelligibilis*): wherefore, although the same body cannot be at once figured by many figures, nevertheless the same intellect can at once be informed by many species. For figure of quantity is the extremity and terminus of that [quantity]: but it is manifest that no body can have many termini of its quantity, but must of necessity be terminated by one; therefore it cannot be figured at once by many figures. But the intelligible species, whether impressed or expressed, is not

1672. Aristotle, Topics, book 1 (or 2), ch. 4, locus 32 (scholastic numbering).

a figure of quantity, but is a certain quality, which therefore is called a figure, because it is an image of the object: wherefore, since it is not repugnant that the same subject be informed at once by diverse qualities, it will not be repugnant that it have at once many species.

And indeed no one to this point has denied that in the same intellect and sense there are many intelligible, or sensible, impressed species, which constitute the faculty in first act, without any order among themselves: why then shall we deny that there can also be many expressed species, which are the very acts of understanding or sensing? I see well that more impressed species can be together than expressed species in the same faculty: because there is greater difficulty in the faculty itself so as to operate, than truly to receive and conserve impressed species; and therefore its power for operating and expressing species is less than for receiving them and at the same time retaining them. But for that reason I took the argument from impressed to expressed species: because, if it were repugnant to have many species at once expressed without order among themselves on the ground that they are, as it were, figures, and a body cannot be at once figured by many figures; by the same reasoning it would be repugnant to be informed at once by many impressed species, which also are as it were figures and images of objects.

To the second argument, which there likewise was brought from qualities of the same genus, it is answered that it assumes falsely, namely, that many qualities of the same genus cannot be in the same subject: for it is plain that many qualities of the same genus can be together when they are not contrary. For no one denies that in the same intelligent faculty there are many impressed intelligible species, through which we say the intellect is constituted in first act; which nevertheless are under the same genus. Therefore, by this reasoning it will not be repugnant that there be many species which we call expressed and in second act; although by another reasoning it could not be so.

To the third, which in that same third way of opining was brought, I say that one motion cannot be terminated except to one terminus: whence, although it would follow that one intellection, which is one simple quality, cannot be terminated except to one object, it would not be licit to infer that many objects cannot be known at once, at least by many cognitions. For we do not contend that many, as many, can be known by one simple cognition and quality, but by many, which are at once in the human and angelic intellect: the opposite of which the aforesaid reasoning does not prove.

It remains that we explain two testimonies of Aristotle, which are commonly adduced as a common foundation to prove that many things cannot be understood at once by way of many. The first testimony, which is taken from the fourth book of the Topics, and is wont to be reported under these words, "It happens that one can know many things; to think, however, only one," is set out by Aristotle in this manner: "It happens that one can know many things; to think, however, not."[1673] By which words he does not signify that only one thing can be thought, whereas many can be known; but Aristotle denotes that it does not thus happen that one thinks many things, as it happens that one knows them.

1673. Aristotle, Topics, book 1 (or 2), ch. 4, locus 32 (scholastic numbering).

To know: for to know happens with things so various and diverse, that no man is able to think them at once: yet from this it does not follow that one cannot think more than one thing, as some contend. The later testimony from the fourth [book] of the Metaphysics, if we rightly consider Aristotle's plan in that chapter, has no weight: for there Aristotle is only striving to prove that whatever name we use signifies one thing only, in order that there may be disputation and refutation among men: wherefore, he says, when names are assumed which of themselves signify many and various [things], by the very use they are applied to signify some determinate thing; otherwise all disputation among men would be taken away. And Aristotle subjoins the reason in these words: "For it happens that they understand nothing, who understand nothing one."[1674] By which words Cajetan strove to prove that many cannot be understood by way of many;[1675] nevertheless Aristotle's sense is this: if names, when men speak with one another, do not signify some one determinate thing, all refutation and all disputation is taken away, because they cannot understand one another, who do not use names that signify some one determinate thing. For if they do not understand what one thing it is about which the disputation is held, they will understand nothing of the disputation. Therefore, and for this reason, he rightly said: "For it happens that they understand nothing (namely, of the disputation), who understand nothing one": that is, those who do not understand some one determinate thing, about which the disputation is undertaken.

Disputatio CCXXI

1 Quid sentiat Durandus. Caput I. Tres aliae Scholasticorum opiniones. Caput II. Probabilior sententia. Caput III. Dissoluitur argumentum primae opinionis. Caput IV.

Caput I - What Durandus holds

In the preceding disputation it was shown that an Angel can in his own intellect understand many things at once, and actually consider them even by way of many. Now indeed there is a greater difficulty, whether he is able to think at once not only many, but even all the things which by a certain succession he can consider by his natural power. In which controversy the first opinion is that of Durandus, on the Second Book, distinction 3, question 8. He first teaches that the Angel always understands some things at once, and some things he does not: and that he understands at once those that are present and exist in act; about past things he says nothing: perhaps he would think the same entirely, if he had remembered them.

He confirms this part by this reason: all things which actually exist are sufficiently present to the angelic intellect, and are compared to it as objects accommodated to it: but each thing is actually understood according as it is present to the intellect: therefore all these things are always actually understood.

1674. Aristotle, Metaphysics IV, ch. 4, text 50 (scholastic division).
1675. Cajetan, on this article.

Then he affirms that future things which depend upon free choice are not always known by the Angel: for, as we saw above in disputation 207, according to his opinion, these future things cannot be evidently known by the Angel by his own proper power.

But Durandus does not clearly explain whether from the cognition of the things which the Angel can naturally know he can freely cease, or rather whether he necessarily considers all those things in act in such a way that he cannot cease from the thought of any one of them. Perhaps he thought that this is not free to the Angel: for if it were free, he would not always consider all those things. Now this opinion can be proved thus: if the Angel should cease from the cognition of something present or past, he could not be brought back again to the cognition of that thing by any cause: for either he would be brought back by some external cause and object, or by some cognition of another thing, in which the Angel remains, because he never ceases from all cognition, or by the will of the Angel himself. Besides these, no other cause seems to remain by which he could be brought back. But by none of these could he be brought back, as will be clear by induction. First, not by any external cause: for if by any, especially by the object itself, as some think future things then begin to be known by the Angel when they begin to be present, because then the object determines the faculty of the angelic intellect, either by impressing a species, or by moving in another way, in which way it could not move when it was still future: but in this manner the intellect of the Angel cannot be determined by a present or past thing, because previously he considered that, from the consideration of which he ceased, since on the part of the thing itself no change has been made (for it is present or past in the same way as it was when previously it was considered). There does not appear, therefore, any greater reason why it should now determine and bring back the intellect to its consideration, than before. Next, the intellect of the Angel cannot be determined by some interior thought of another thing: for if, for example, he ceased from the consideration of a horse, which previously he was considering together with a man, and remained in the consideration of the man alone, from the sole consideration of the man he could not be brought back to the consideration of the horse which previously he was considering; and universally, from the consideration of one object to the consideration of another, by no reason can the intellect of the Angel be brought back: because there does not appear any greater reason why from the consideration of one [object] he should be determined to the consideration of this one rather than of that. Lastly, the intellect cannot be determined by the will: because the first thought about some object cannot proceed from the will, since thought by its nature ought to precede every operation of the will; and it is impossible for the will to apply the intellect to think about a man, unless it be aroused by some prior thought about that man, since the will cannot be carried to the unknown.

This opinion does not please me. For that created things existing in act are present, not only by real existence, but also (as it is said) objectively, that is, that they are objects accommodated and in due proportion to the Angel's intellect, indeed that the angelic intellect is constituted in first act for their intellection, is not sufficient for the Angel to understand all of them always at once: first, because nevertheless he can cease from the cognition and thought of some one of them; then also

because the Angel's power for understanding does not seem so efficacious that he can be carried by thought to all things at once. The argument truly which was brought for this opinion we shall solve below.

Caput II - The second opinion

The second opinion is that of St. Gregory, on the Second Book, distinction 11, question 1, who also asserts two things. One is, that an Angel can rightly understand at once and distinctly all those things of which he has species, and that by many acts and species and expressed and formal concepts. The other is, that an Angel can cease from the consideration of any particular thing, and be brought back to it again.

He proves the first part, both because it is not repugnant that there be many concepts together in the same intellect of the Angel, as was proved in the previous disputation - something which St. Gregory himself had taught in our first distinction 1, question 1, article 3 - and also because it is not repugnant that many acts be elicited at once by the same intellect through many impressed intelligible species, by which it is constituted in first act. For an agent, which is commonly called a partial cause, can elicit many operations at once, using many forms for operating, unless by its nature it be wearied in operating: but the intellect is a partial cause, which with the impressed species elicits the operation, and in operating is not wearied, as the phantasy or some other sense is: therefore it can at once understand all things of which it has species and principles. Then he confirms the same from St. Augustine, On Genesis literally explained, book 4, chapter 32, whose words we reported in the preceding disputation, cap. 2, and in the same book chapter 33 at the beginning, where he says: "But if the angelic mind can at once [embrace] all the things which speech distinguishes singly and in order by the nexus of causes," etc.[1676]

He proves the latter part of his opinion thus: because it is free to the Angel to use this or that species and principle of understanding in order to elicit an intellection: nor can any reason be adduced why we should say that it is necessary for the Angel to operate at once through all his species. For it is not less, but much more, in the Angel's power than in man's, to use habits and species when he wills. Now man is free to cease from the consideration of any thing whatsoever: and if sometimes he cannot, that is because phantasy does not so obey the beck of the will as to yield despotically and without repugnance: but the intellect, if it were not moved by phantasy, would obey the will without any resistance at all: therefore it is free to the Angel, when he wills, to cease from the thought and consideration of any object whatsoever.

Tertia sententia fit Ferrarienfis, on the second book of the Contra Gentiles, chapter 101, § Circa illud; where he teaches two things. One is, that the things which are known by the Angel through the same species can be known by the Angel at the same time, and that in the same thought. The other is, that even those things which can be known through the same species can indeed be considered by the Angel one without the other. This opinion seems to have been handed down by St. Thomas and Cajetan in this article, and by Capreolus on the Second Book, distinction 3,

1676. St. Augustine, De Genesi ad litteram IV, c. 32; see also IV, c. 33.

question 2, article 1, conclusion 9: when they assert that many things can indeed be known at once by the Angel by way of one; and that to be known by way of one is nothing other than to be known through one species. Yet none of them defines whether all the things, of which the Angel has various species, can be known by him at once, or not.

The first part of this opinion can be proved, since, if one impressed species is with respect to knowing many diverse objects, as representing them in first act, it does not seem doubtful for the Angel to use that same species for understanding at once all the things which by that species are represented in first act. The latter part Ferrarienfis shows thus: first, because we, through the species which we have of man, do not always consider all the things which we can think about man, but sometimes we think only certain [things], while we omit others: therefore the Angel too, through the same species, will be able to consider something represented in it in first act, and something not to consider; which is nothing other than to use that species to arouse the cognition of one thing and not of another. Then it is proved thus: because, although our intellect can by the same habit of a science consider one conclusion and not another of that same science; why cannot the Angel use the same species to consider one thing and not another? And it seems to have been the opinion of St. Thomas in De veritate, q. 8, a. 13, ad 2 and ad ultimum, where he concedes that the Angel knows the intelligible species in his intellect, yet not what by that species, or also by another, the intellect considers: because he can consider various [things] through the same species according to the adventitious determination of the angel's intellect.[1677]

A fourth opinion is that of many more recent theologians, who agree with Ferrarienfis in the foregoing: they add, however, that the Angel can through the same impressed species not only successively understand all those things of which that species is a species, by diverse expressed concepts and cognitions, but also that through the same species he can know all those things not only by one expressed concept and cognition, but indeed by various and diverse expressed concepts, according to the variety of the objects and things of which that species is; at the same time. Yet they do not teach that the Angel can think all the diverse things of which he has impressed species, at once. Moreover, that the Angel can through the same species at once express various concepts of the various things of which that species is, they think for this sole reason, that it is not repugnant that in the same intelligent faculty, or in one that holds various cognitions, there be together those which differ only in number, just as two accidents which differ only in number can exist together in the same subject.

Caput III - The more probable opinion

This opinion can be refuted in three ways. First, it is not sufficiently proved that the Angel can consider all the things of which he has species: this part I affirm against St. Gregory, whom Maior also attacks, on the Second Book, distinction 3, question 9. Likewise, that the Angel can think at once, to consider [all things] by us cannot be proven, just as neither can it be proven that they can

1677. St. Thomas, De veritate q. 8, a. 13, ad 2, ad ult.; Cajetan, on this article; John Capreolus, In II Sent., dist. 3, q. 2, a. 1, concl. 9; Francis Sylvester of Ferrara (Ferrariensis), on Summa contra Gentiles II, c. 101, § Circa illud.

be considered at once by way of one, and that they can be considered at once by the Angel by way of many. This in truth is poorly proved from that alone: for although Gregory's reason proves that nothing repugns on the part of the receiving intellect, that there be in it at once so many diverse intellections and of many things, nevertheless it does not prove that this is not repugnant on the part of the eliciting power which brings the intellection to act. Wherefore, if by God alone so many intellections could be infused into the Angel without the Angel's own power and efficacy, it would not be repugnant for him by those to understand all things at once. But since the more probable opinion is that intellection cannot at all be infused into an intellect from without, but of necessity must proceed from the efficacy of that intellect itself, and it cannot be proved what sort of power a created intellect has, that concerning all these created things it might be able to operate at once; this is not certain, nor can it by any probable reason be shown...

The third opinion is that of Ferrariensis, on Summa contra Gentiles, book 2, chapter 101, § Circa illud, where he teaches two things. One is that those things which are known by an angel through the same species can be known by the angel at the same time with one and the same thought; the other is that, from among those things also which can be known through the same species, it is possible that one be considered by the angel without the other. St. Thomas and Cajetan in this article, and Capreolus in the Second Book, distinction 3, question 2, article 1, conclusion 9, seem to have handed down this opinion, since they affirm that several things can indeed be known by an angel at once in the manner of one; but to be known in the manner of one is nothing else than to be known through one species: yet none of them determines whether all those things of which the angel has diverse species can be known by him at once, or not.[1678][1679][1680][1681]

The first part of this opinion can be proved. It is proved thus: if one impressed species is a principle of knowing diverse objects, and itself represents them in first act (actu primo), it does not seem difficult for an angel to use the same species for understanding at once all the things that are represented by that species in first act. Ferrariensis shows the second part in this way: first, because we, through the species we have of man, do not always consider all the things we can think about man, but sometimes we think only certain ones, and omit others; therefore the angel too, through the same species, will be able to consider something represented in it in first act, and not consider something else: which is nothing other than to use that species for expressing the cognition of one thing and not another. Then it is likewise proved, because just as our intellect can use the same habit of a science to consider one conclusion and not another of the same science: why could not the angel use the same species to consider one thing and not another? And this seems to have been the opinion of St. Thomas in De veritate, question 8, article 13, to the second and the last replies, where he grants that the angel knows the intelligible species (species

1678. St. Thomas, De veritate q. 8, a. 13, ad 2, ad ult.
1679. Cajetan, on this article.
1680. John Capreolus, In II Sent., dist. 3, q. 2, a. 1, concl. 9.
1681. Francis Sylvester of Ferrara (Ferrariensis), on Summa contra Gentiles II, c. 101, § Circa illud.

intelligibiles) in our intellect, yet not what our intellect considers by that species or another, because he can consider various things through the same species; and the same line of reasoning seems to hold of the angelic intellect.[1678]

The fourth opinion is that of more recent theologians, who agree with Ferrariensis in the preceding point. They add, however, that an angel can, through the same impressed species, not only successively understand, by distinct expressed concepts and cognitions, all those things of which that species is the species, nor only be able through the same species to know all those things by one expressed concept and cognition, but also, by various and diverse expressed concepts, according to the variety of objects and of the things of which that species is the species, know them at the same time. Whether, however, he can at the same time think all the things of which the angel has impressed species, they do not teach. And they think the angel can through the same species at once express various concepts of various things of which that species is the impressed species for this reason alone, namely because it is not repugnant that in the same faculty, whether intelligent or sentient, there be various cognitions at once differing only in number, just as neither is it repugnant that two accidents differing only in number be in the same subject.

A more probable opinion.

This more probable opinion consists in three positions. The first is that it is not sufficiently proved that an angel can consider all the things of which he has species. I affirm this part against Gregory, whom Major also impugns on the Second Book, distinction 3, question 8. Nor does it stand with us how many things an angel can consider at once, just as it does not stand with us how many things he can consider in succession in the manner of many. This part, in truth, is proved only on this ground, that although Gregory's argument proves that on the side of the recipient intellect there is no repugnance that there be in it at once so many intellections of diverse and many things, nevertheless he does not prove that this is not repugnant on the side of the virtue of the intellect as eliciting and expressing intellection. Wherefore, if so many intellections could be infused into the angel by God alone without the angel's own power and efficacy, then by means of them it would not be repugnant to understand all things at once. But since the more probable opinion is that intellection cannot at all be infused into an intellect from without, but of necessity must proceed from the efficacy of that intellect itself, and since it cannot be proved that the power of a created intellect is so great that, with respect to these created things, it can operate simultaneously; it is certain that it cannot be shown by any probable reason that an angel can at once understand all these created things. For since the efficacy of an angelic intellect is finite, of necessity it must have a terminus: and therefore it will be able to produce so many intellections at once that it cannot produce more. Whether these be four, or five, or more, can be defined by no reason. Wherefore without foundation would someone affirm that an angel can at once understand all the created things of which he has species in first act; without foundation likewise would someone assert that an angel has one only species impressed of all things and that through it he is able to consider all created objects at once.

1678. St. Thomas, De veritate q. 8, a. 13, ad 2, ad ult.

Response of Gregory. Gregory, however, responds that therefore an angel can at once understand all those things of which he has intelligible species impressed, because it is not a matter of greater power to understand one thing than many; therefore, since he can understand one, he will be able to understand many, indeed even all, at the same time. Furthermore, that it is not of greater efficacy to understand one thing with one species than many with many species, Gregory proves by this reason: because, although it be of greater power to produce a greater effect - just as to sustain a heavier weight requires a greater power in the agent than to sustain a lighter - yet this is understood only of a cause they call total, which alone produces the effect; for if we speak of a cause, as they call it, partial, it is not of greater efficacy to produce a greater effect with another partial cause than that which without the other it could not produce: just as it is not of greater efficacy to sustain a weight of eight with another partial cause helping as four, than to sustain four without that other. So, therefore, it is not of greater power in the intellect to produce more intellections with more partial causes, namely species, than to produce fewer by itself alone or with fewer partial causes and species.

It is refuted. But this solution has no weight. First, indeed, although in partial causes which they call non-subordinate, to which severally there corresponds some measure of weight or of intensity in the effect, such as is the cause sustaining or bearing a stone, we grant this - that some cause may be able to produce a double-greater effect with another assisting than it could by itself alone - nevertheless on that account we ought not to concede that subordinate partial causes can, more and more without terminus, operate at once together with other partial causes; otherwise they could also operate infinite things at once, if they were aided by infinite partial causes. But if some terminus must be prefixed, so that a partial cause of this sort may be able to operate at once with some and not with more, there will be no reason by which it can be proved that the angelic intellect can operate at once with all the species that it has. The School calls that partial cause subordinate which concurs together with another to the effect in such a way that there does not correspond to it some degree of intensity or of weight in the effect, but some common or particular reason which together with the other constitutes the effect: as we are wont to say that to the intellect there corresponds in intellection the formal reason of cognition and intellection; and that the reason of such, namely which is about such an object, corresponds to the species by which the intellect is constituted in first act as an integral principle of this intellection, as above was shown in disputation 43, chapter 4. Although, therefore, we say that a partial cause of the former kind, to which in the effect there corresponds a degree of intensity or of weight, can do something greater together with another partial cause than it could by itself alone; nevertheless it does not follow that a partial cause of the latter kind, which we call subordinate, does not have a determined power such that it operates at once with one or with several partial and subordinate causes: rather, it must necessarily be said to have a determined power such that it can operate with so many subordinate partial causes, and not with more. And this is especially true in the intellect: because intelligible species aid the intellect like partial causes subordinate to it, so that they receive from it a power and fecundity of concurring with it after the mode of a conjoined instrument; and since the

intellect has finite efficacy and power, it will not be able to communicate this force to many species without a terminus. But if a terminus must be prefixed to it, there is no reason why we should say that it can operate at once with all the species.

Another reason against Gregory. Then, if Gregory's argument had any force, it would also prove that the internal sense could operate at once with all the species which it has received from things previously sensed - which is absurd. But Gregory replies that the internal sense cannot operate with all the species because it grows fatigued, whereas otherwise, unless fatigue impeded, it could no less, in a much longer time, think on all things than the angelic intellect. About our intellect indeed he should say the same as about the internal sense, yet for a different reason: for although our intellect, considered in itself, cannot grow weary, yet because it needs for its operation the working of the imagination and of the internal sense, and this faculty of sense is wont to be fatigued in its operation, therefore it will not be able to use at once all the species that it has.

This reply of Gregory, however, can easily be refuted: for although the weariness of the sentient faculties has the result that a potency cannot last long in operation nor attend long to the same thing, nevertheless this does not prevent its being able, in the beginning, when the sense is not fatigued, to attend to all the things at once of which it has species, and to think all of them at once - if otherwise its power for operating is not limited. And the example Gregory employed can excellently be turned back upon himself. For just as a power that can sustain a weight of eight with another partial cause assisting as four, can at the beginning, before its strengths grow weary, sustain that weight, but afterwards, when fatigued, cannot: so likewise a sentient faculty, if it is not limited in itself, will be able in the beginning to think at once all the things of which it has species, although in their consideration it cannot persevere long on account of weariness.

The example Gregory adduces proves nothing, but rather effectively is turned against himself. For an agent of partial type, which can do something greater together with another agent than by itself, is of limited power, such that it cannot operate conjoined with many other partial agents. For one who can carry by himself a weight of four, and thus with another weight, as eight, will not be able at the same time with two equal carriers to bear a weight of sixteen; because his power, being finite, cannot be communicated to many partial agents; and thus Gregory's reasoning is undone.

The second part of our opinion is that an angel can at once think all those things for which he has one impressed species (as they call it) in first act; for nothing seems to stand in the way, such that by means of that species the intellect might not elicit an adequate act completing and actually representing at once whatever, after the manner of a habit, were in that species; otherwise, if he could never understand all those at once, in vain would one single species for many objects have been given to him by God or by nature itself. I understand this, however, only of objects which differ by specific nature; that is, if through the same impressed intelligible species many such specific objects are represented in first act, the angelic intellect can through it express the formal concept and expressed species, which they call in second act (actu secundo), by which he actually knows all those objects at once. But when through the same impressed species of a specific nature the angel knows the singulars and all the individuals of that nature, and could know infinite such individuals in the succession of time, if they were to be multiplied to infinity, it seems difficult that

the angel can through that species at once actually consider all the individuals of that nature: especially since the angel rightly knows by his own power all future individuals from natural causes without any intervention of free choice, as I noted in disputation 207, chapter 2. If, however, he could through the same species of a specific nature know at once all the singulars of that nature, he could also know at once all future, past, and present individuals - which are in great multitude - which seems difficult; indeed, even if the causes were to endure forever, the angel could know at once infinite of their individuals, which is the more incredible.

St. Augustine, however, in the places cited on behalf of Gregory's opinion, wished to establish only this difference between the angelic intellect and ours: that we understand through a process and the delay of time, because, by the difficulty of a body weighing us down, we first perceive through the senses of the body those things that have been done, and then our mind, according to its measure, takes their knowledge; afterward it seeks their causes, if in any way it can find them: but the angel at once understands what he wills - not because, if he wills, he is able to consider all the things of the world at once, but because those things which he can consider at once he considers without delay and without discursiveness, whereas man knows those things only by discourse. This difference Blessed Augustine wished to assign in book 4 of De Genesi ad litteram, chapter 32; yet in chapter 33 he seems to concede that all created things were at once in the angel's morning and evening knowledge, as he himself...[1682]

→ The third part of our position is that it lies within the Angel's power to consider one thing without another, if he wills, from among those which are represented in the same species. I understand this, however, after the Angel's intellect has been aroused by some natural cognition of some object: for we too use habits and species as we will. Yet by the same intelligible species representing many things as many, the angelic intellect cannot, even if it wills, elicit many cognitions at once; but if it wills actually to consider many things from among those which that impressed species represents, it ought to understand them by the same expressed knowledge. Therefore through that species not a double knowledge at once, but only one can be expressed: for the unity of intellection must be taken from the unity of its principle. For if an Angel should will to use an intelligible species according to the whole latitude of the objects which it represents in first act, he cannot but express another common species which represents all those objects in second act.

Solution of Gregory. To this argument Gregory, in the place cited above, endeavors to reply, which for the most part attacks his own opinion. He therefore answers in that question to the argument opposed against the second conclusion, not only that natural cognition, which comes about suddenly, is not from any antecedent act of the will, but also that there can be free cognition and consideration without its being commanded by a preceding free will. Wherefore, he says, it is possible for an Angel freely to apply himself to consider this rather than that after he has ceased from the consideration of them, even if no free will had preceded by which the Angel would will to think this rather than that. He proves this thus: because when someone freely perseveres in some

1682. St. Augustine, De Genesi ad litteram IV, c. 32; see also IV, c. 33.

thought, from which he can at any moment freely cease, he is not said freely to persevere in it because he has an express will of persevering in it; for he does not always have a reflex knowledge by which he would consider that he is thinking, and that it is good to remain in that consideration. For if he had a reflex knowledge, either the will would have been elicited before it, or it would not; if it were not, then there would be granted a reflex knowledge free without a preceding will of thinking - which Gregory maintains; but if it had preceded, before it there ought to be another reflex knowledge, and so on to infinity. Therefore there is granted a free thought, in which the Angel and man freely perseveres, and yet without a will of persevering in it: in the same way, therefore, the Angel will be able freely to reduce himself to his first thought, even if he had not previously had a will of reducing himself to it.

This solution, however, is not approved by Capreolus, In II, dist. 3, q. 2, a. 3, to the arguments of Gregory 2, in the place against the ninth conclusion, in solution 5; and he teaches that in this way there is no satisfaction given to the argument set forth above by us for the opinion of Durandus. And he proves it also from Henry, that before every act of the will there always precedes some act of the intellect: which neither Gregory nor any other denies; Gregory only contends to defend that the act of the intellect is free, even if it is not commanded, or depends on some express cause of the will, from this alone, that man, or an Angel, can cease from it at will.[1683][1684]

The argument of the first opinion is dissolved.

This argument Gregory, in the place cited above, strives to dissolve, as being urged chiefly against his own opinion. Therefore, he replies in that question to the argument opposed against the second conclusion, not only that natural cognition which happens suddenly is not from any antecedent will, but also that there can be free cognition and consideration without its being commanded by a preceding free will. Wherefore, he says, the Angel can freely apply himself to consider this rather than that, after he has ceased from the consideration of them, even if no free will had preceded by which the Angel would will to think this rather than that. He proves this for the reason set out above, namely because someone can freely persevere in some thought, from which he can at any moment cease, without having an express will of persevering in it, since he does not always have a reflex knowledge. If, however, a reflex knowledge preceded, before it there would have to be another reflex knowledge, and so to infinity: therefore there is granted a free thought, in which the Angel freely perseveres, and yet without a will of persevering in it; and likewise he will also be able freely to reduce himself to a first thought even when he had not previously had a will of reducing himself to it.

But this opinion and the solution of Gregory do not please me, because the case is not the same for an act of the intellect to begin freely as to be freely continued. For, that it may begin freely, I think an express act of the will is necessary; but that it may be freely continued, an express will of remaining in it does not seem necessary: it is enough if the intellect attend that it is remaining in that thought, even if the will do not have a positive act of continuing. But the intellect can attend

1683. John Capreolus, In II Sent., dist. 3, q. 2, a. 3, ad argumenta Gregorii 2, loco contra nonam conclusionem, in solutione 5.

1684. Henry of Ghent, Summa (ordinaria), lib. 1, q. 12; Quodlibeta, quodlib. 9, q. 5.

that it is engaged in such a thought either by a reflex act, or perhaps sometimes by the very direct thought itself, which is of itself manifest to the one thinking. A reflex thought, however, by which the intellect considers that it is engaged in such a thought, is not free, proceeding from a prior will - which would have to be preceded by some cognition, for thus there would be a progress to infinity - but it is natural, which naturally arises from the very direct thought in which the intellect is. Therefore, that some thought may be freely continued, there is no need that it be preceded by an express will of remaining in it: it is enough if the will, since it can hinder it, does not hinder it. But that some thought may newly begin in the intellect from liberty, a positive act of the will is required, by which the Angel or man wills to think: for if the will is disposed negatively, the thought cannot depend on it freely so as to begin, from this alone that the will could have forbidden the thought to begin: for the intellect ought to be applied positively to thinking whenever it is not applied by a natural principle; but whenever it is applied by a natural and of necessity determining principle, it is not in the power of the will to hinder the thought from beginning, but only that it not afterwards continue. Let then Gregory's solution stand.

Ferrarensis, however, on Summa contra Gentiles, book II, chapter 101, at "Ad secundum dicitur," contends to dissolve in another way the difficulty of the aforesaid argument. Therefore he grants that it is necessary that there precede some thought, either confused or distinct, before every elicited act of the will: and also that it is necessary that there precede an elicited will by which man or Angel wills to think about some matter, before he freely and distinctly think about it: but that an Angel be brought back by himself freely to a first distinct thought about some matter in this way: for since he is always naturally engaged in the consideration of himself, actually [engaged] with his own essence and perfections, he also always considers all the intelligible species which he has in his intellect in first act for understanding by them; whence also, consequently, he knows, at least confusedly, all the objects of which he has the species. For when the species and the formal concepts, which are in some intellect, are known, the objects of them are known, at least confusedly, though not clearly and by a proper concept, as was said in Disputation 38, chapter 4. From this, therefore, cognition, whereby he considers all the species which he has, it can happen that this or that species be applied, so that by it he distinctly consider this or that object of which that species is, which already by the species itself he had known confusedly, knowing that by that species his intellect can operate about such an object. Of man, however, he thinks there is another account: for since his operation depends on sense as ministering the object, he is also determined by it to consider this rather than that, according as it variously occurs to sense.[1685]

Truly, this solution does not seem to me to have a firm foundation: for it is not sufficiently certain that an Angel is always engaged in the consideration of himself; or, if he always actually knows his substance, it is not so certain that he actually considers all the intelligible species of his intellect, if he has them in first act. Therefore I answer that to the first thought about some object an Angel is determined neither by an external created object, nor by himself in any way, but by God the author of nature: and this is proper to a rational creature, that it is not determined by itself to the first thought, as is shown in I - II, question 109, article 4. And although man is sometimes

1685. St. Thomas, Summa contra Gentiles II, c. 101, at "Ad secundum dicitur."

determined by an object occurring and arousing his consideration, yet this determination ought to be referred back to God as the first author: because by his providence he made it that there should be such an order of natural causes that rather this object than that should occur on this rather than on another occasion. Sometimes, however, and no less frequently, without any external occasion the human intellect is aroused and determined to consider this rather than that, in accordance with the variety of the thoughts which are wont to arise in the imagination and internal sense: for we daily experience in ourselves that, while we are thinking about some matter, suddenly in the imagination there are aroused images of other things, which are wont to be so varied that they cannot be reduced to a natural cause which always operates in the same way. Wherefore I think that, by the ministry either of a good or of an evil Angel, such thoughts are aroused in us, or that we are moved by God immediately and sense is determined, although there can be an internal natural cause of some thought, why rather this than another has arisen in us.

But since an Angel can be determined by no other external created cause, natural or free, because none can act physically upon him, nor by any internal cause: both because there is no natural one, nor can one be assigned; and also because a free one cannot be: for we can scarcely explain in what way by his own will an Angel could be brought back to a first thought; it remains that he is determined by God alone: which solution of the present difficulty Capreolus indicated in the place cited, and St. Thomas inculcates this doctrine everywhere, especially in I - II, question 9, article 4, and question 109, article 2; and it is Aristotle's doctrine, as we shall show there.[1683][1686]

Articulus III - Whether an Angel knows by discursive reasoning

To the third, thus it is proceeded. It seems that an Angel does know by discursive reasoning. For discourse of the intellect is considered according to this, that one thing is known through another. But Angels know one thing through another. For they know creatures through the Word. Therefore the intellect of an Angel knows by discursive reasoning.[1687]

Furthermore, whatever the inferior power can do, the superior power can also. But the human intellect can syllogize and know causes in effects, according to which discourse is considered. Therefore the intellect of the Angel, which is superior in the order of nature, can do this much more.

Furthermore, Isidore says that demons know many things by experience. But experimental knowledge is discursive. For out of many memories one experience is made; and out of many experiences one universal is made; as is said at the end of the Posterior Analytics, and in the beginning of the Metaphysics. Therefore the knowledge of angels is discursive.[1688][1689]

1688. Isidore of Seville, commonly cited on the demons' knowledge by experience.

1689. Aristotle, Posterior Analytics II (at the end), and Metaphysics I (at the beginning).

But on the contrary: Pseudo-Dionysius says, in chapter 7 of On the Divine Names, that angels do not collect their divine knowledge from discursive words, nor are they led from something common to these particulars taken together.[1690]

I answer that, as has often been said, angels hold that grade among spiritual substances which the heavenly bodies hold among corporeal substances. For heavenly minds also are named by Dionysius. Now this is the difference between the heavenly and the earthly bodies: that earthly bodies, by change and motion, attain their ultimate perfection; but heavenly bodies have their ultimate perfection immediately from their very nature. So therefore do the lower intellects, namely of men: by a certain motion and discourse of intellectual operation they attain perfection in the knowledge of truth, when namely they proceed from one known thing to another known thing. But if, immediately in the very cognition of the known principle, they should look upon, as it were, all the consequent conclusions as noted, discourse would have no place in them. And this is the case in angels, because immediately in those things which they first naturally know, they behold all the things whatever can be known in them. And therefore they are called intellectual, because also among us those things which are immediately apprehended naturally are said to be understood. Whence the intellect is called the habit of first principles. But human souls, which acquire knowledge of truth through a certain discourse, are called rational. And this indeed happens from the weakness of the intellectual light in them. For if they had the fullness of intellectual light, as Angels have, then immediately at the first view of principles they would comprehend all the power of them, intuiting whatever could be syllogized from them.

Reply to the first:

Reply to the first: Discourse names a kind of motion. But every motion is from one thing prior to another posterior. Hence discursive cognition is attended according to this, that from something earlier known one arrives into the cognition of another later known which previously was unknown. But if, when one thing is looked upon, another is looked upon at the same time - as in a mirror the image of the thing and the thing itself are at once inspected - on that account the cognition is not discursive. And in this way angels know things in the Word.

Reply to the second: Angels can syllogize as those who know the syllogism. And in causes they see effects, and in effects causes; yet not in such wise that they acquire the cognition of an unknown truth by syllogizing from causes into caused things, and from caused things into causes.

Reply to the third: Experience in angels and demons is said according to a certain likeness, namely, that they know sensibles present, yet altogether without any discourse.

The conclusion is: Angels do not know by discursing; nor does St. Thomas limit this, so that it should have place only around intelligibles which the angel can naturally know, and not around supernatural mysteries; of both we shall dispute in what follows.[1691]

1691. For parallel Thomistic loci see, e.g., Summa contra Gentiles II, c. 44 and 91; De veritate q. 8, a. 15; Summa theologiae I, q. 24, a. 2 - 3.

Disputatio CCXXII - Whether an angel understands by discursive reasoning

Wherefore that which we understand by discourse is not of itself manifest and intelligible to us, but by another known previously in time or in causality. On the other hand, to understand something without discourse is for it to be for us through itself, not through another known before. Therefore the difficulty proposed is, whether the things which an angel knows he knows by discourse, or whether all things are for him known through themselves without discourse. It is, however, undoubted that certain things are for the angel through themselves known and without discourse - as also certain things are for men - such as the first principles are known in this way. But whether any things are for the angel known by discourse is the question.

The first opinion is of those who say that by an angel some things are known no less by discourse than by a man, even if those things are objects naturally and in a certain way known to him. Thus teach Scotus in II, dist. 7, quaestio prima, "Contra conclusionem," a little before the verse "Contra secundam viam," and in II, dist. 1, q. 6, 9 "Contra anima," at the verse "Item quaeritur," and in III, prologue, q. 4 and 5 lateral at the beginning; Greg. in II, dist. 7, q. 5, a. 2; Ockham in II, q. 16, against the second dictum of the first opinion, and the sixth conclusion at the end; Gabriel in II, dist. 3, q. 2, a. 3, p. 1, article, conclusion 9.[1692][1693][1694][1695] The chief foundation of this opinion is that to the ratio of discourse no delay or interval of time is necessary, but it can be in one moment of time; only it is required that the principle be prior by nature and be a cause of knowing another: but this happens in angels, as Gregory teaches, and in the blessed, as Scotus teaches in that question 3 of the prologue: for not all truths which an angel knows are without a middle and through themselves known; and the same must be said of the blessed, it seems. For if all truths were such as to be through themselves known and, as related to their intellect, were without, or vacated, a middle, for us also they would be through themselves known and would lack a middle. For example, this proposition, "The sun will be eclipsed," is indeed evidently known to the angel, but not otherwise than to the astrologer; to the latter, however, it is not through itself known and without a middle; otherwise, if for the angel or the astrologer it were through itself known and without a middle, it would be so for us all also, which is absurd. Therefore there will be some proposition known to the angel not through itself, but from another - for instance, this is known from that, because one knows that the sun will be at such a point and in opposition with the moon; but this is to discourse. Therefore the angel, even about objects naturally known to him, discourses. Moreover, this mode of discoursing is not in angels from known to unknown as if the notice of one had preceded in the angel before the other in time; rather, he is so disposed in his state, that from those things which are at once known in time, one is a cause of knowing the other.

1692. Scotus, In II Sent., dist. 7, quaestio prima, "Contra conclusionem," paulo ante versiculum "Contra secundam viam"; et In II, dist. 1, q. 6, 9 "Contra anima," versiculo "Item quaeritur"; et in III, prologi quaest. 4 et 5, laterali in principio.

1693. Greg., In II Sent., dist. 7, q. 5, a. 2.

1694. Ockham, In II Sent., q. 16, contra secundum dictu primae opinionis, et conclusione sexta in fine.

1695. Gabriel, In II Sent., dist. 3, q. 2, a. 3, p. 1, articulus, conclusio 9.

Further, Gregory adds - and with him come together Gabriel and Ockham - that in angels there can also be a discourse from known to unknown with some delay of time, which is the same. They prove this because, if the world and its motion were going to last unto eternity, there would be infinite eclipses, which the angel would not all know at once - I mean both the good angel and the bad, though Gregory speaks only of the bad - then therefore he could a little while discourse for a thousand years, and thereafter for another thousand, always proceeding from known things to unknown. If these reasons have any weight, they not only prove that the angel can, if he wills, discourse in either way, but even that each kind of discourse, about certain natural objects, so necessarily fits him that he cannot understand otherwise than by discourse.

Moreover, among supernatural objects, some have asserted that certain things are understood by an angel by discourse; since greater reason seems, that about supernatural objects the angel discourses, than about natural. But expressly about supernatural things, or about those which are known only by supernatural revelation, they grant to an angel a discourse, or conjecture - which is the same - Ockham in that question 16, conclusion 6, and Gabriel in II, part 1, conclusion 3. For as to the secrets of hearts they philosophize in this way, that although by the proper power of the angelic intellect they can be known, yet in fact they are not known by an angel with a clear and evident notice, but only with a certain conjecture, because they are impeded from an evident and clear knowledge of secrets by God. The same conjecture alone they concede to the angel about the mysteries of grace and about things that will be free in the future; and they add that by his own power they cannot be known by an angel. Finally, Marsilius in II, q. 6, a. 2, in the last notable and conclusion 1, teaches that the secrets of the human heart are known by angels only by discourse - and rightly indeed, because the conjecture which theologians grant to them alone is altogether the same as discourse. But it is proved by reason: for since these three which we have mentioned, namely the secrets of hearts, the mysteries of grace, and the future of free choice, are not through themselves known to the angel, it follows that they can be known by the angel only through another; but to be known through another is the same as to be known by discourse, as we noted at the beginning. But that they are not for the angel through themselves known is manifest: because they are not evidently known to the angel, as all grant; but whatever things are through themselves known to any angelic intellect are evidently known to it.

The second opinion is Cajetan's, on article 9 of this question. To this doubt, which he thinks to be that of St. Thomas - and Thomists readily embrace it - he asserts that both in supernatural things and in natural the angel understands without discourse; to which St. Thomas seems to favor, in De veritate q. 8, a. 15, ad 2, where he speaks of supernatural objects, and in solution 4, where he treats of the secrets of hearts.[1696][1691] But the Thomists' reason, which Cajetan seems to have insinuated when he disputed about composition and division with respect to the angelic intellect, is this: angels know supernatural objects in the same way as natural; because their intellect uses the supernatural light in the same way as the natural, and supernatural things are

1696. Cajetan, In I, q. 58, a. 9.

1691. For parallel Thomistic loci see, e.g., Summa contra Gentiles II, c. 44 and 91; De veritate q. 8, a. 15; Summa theologiae I, q. 24, a. 2 - 3.

known by an angel after the manner of natural things, just as we also know them; but an angel knows natural things without discourse: therefore also supernatural things. The minor proposition of this reason needed confirmation; but since I judge this opinion to be more probable on that side, I shall confirm it the more.

Caput II - The first, more probable part of the opinion

The more probable opinion, in my judgment, holding the mean between these two extremes, asserts two things. One is, that an angel understands all natural objects, of which he has the proper species, without discourse. The other is, that objects supernatural according to their substance, and those which are of the natural order according to themselves, are known to an angel only by revelation, so however that there be in their notice something of discourse, yet not everything which is found in our discourse. In this chapter I shall strive to confirm only the former part; in the following, the latter.

And the former part was handed down among the Scholastics by St. Thomas, Cajetan, and the more recent Thomists in this article; Ferrariensis, III Contra gentes, c. 91 at the end; Capreolus, In II, dist. 3, q. 2, a. 1, concl. 10; Aegidius, In III, dist. 3, part 2, q. 2, a. 3: and in this we oppose the first sentence of Scotus and of others.[1696][1697][1698][1699]

But some strive to confirm it by authority: and first from various places of Pseudo-Dionysius; yet there is none who, in my judgment, proves anything. Then from St. Augustine in IV De Genesi ad litteram, and there in c. 29 he indeed teaches only that angels, in the morning cognition in the Word, contemplate the rationes of creatures, but in the evening cognition in the creatures themselves they know the same rationes, which was to be understood by way of intellection; above I have explained that in its own place. But about the discourse with which our controversy is concerned, or which it indeed has: for that all those things are known at once does not take away the true ratio of discourse, as we shall show below. Finally, others confirm this opinion by the authority of St. Bernard in Sermon 5 on the Canticles, a little before the middle. But St. Bernard in that place only teaches that God is known invisibly through these visible things from the creature; this he says of man living in this world, but he does not speak of angels still wayfarers.[1700][1701][1702]

A different reason. It is also wont to be proved in various ways by seven reasons; and the same opinion St. Thomas in this article - especially in the reply to the first - seems to expound in such a way that the true ratio of discourse would import some time, so that from things earlier known the intellect would proceed to things later known: therefore, since an angel without delay of time understands whatever he can know, it seems to follow that no discourse is found in his intellect. But I deny the position's reason. Scotus and others of his opinion do not require, for the true ratio

of discourse, any delay of time, but that in the same instant there can be true discourse. For if in the same point of time he were to know one thing from another, not by one simple act but by two, and if the cognition of one were elicited from the cognition of the other, that cognition of his would have the true ratio of discourse.[1692]

Moreover, it is by no means repugnant that in the same intellect there be at once two items of notice, and that one arise from the other: for just as at once there is a luminous body and the light produced by it in the medium, in the same way there can be in the intellect a certain primary notice and another as it were secondary, arising in an order of causality from the primary. This foundation having been laid, we must strive to demonstrate that an angel cannot understand natural objects that are evidently known to him by natural power, by discourse.

Others, however, think that ignorance in the one who discourses belongs to the ratio of discourse, so that discourse is a process from known things to unknown; and for this reason St. John Damascene denies that there was deliberation in Christ (De fide orthodoxa II, c. 22). But although on this side it would not be repugnant that there be discourse in an angel - because he can be ignorant of some things - yet because ignorance is not of the ratio of discourse, unless when first it is the will's business to obtain, as is to be seen in the third part of the disputation, q. 2, c. 3, therefore by this reason it is not to be proved that there is no discourse in angels.[1703]

Therefore for two causes I think a full and perfect ratio of discourse is not to be found in angels. The first is, if we say - as the more probable opinion asserts - that any natural thing with its natural properties is by a single simple concept known by an angel. For the angel has an impressed species in first act, by which he can know the thing and its properties; yes, even that one and the same impressed species, in diverse natures residing in one understanding, elicits by that single formal concept the thing's own nature and its properties; which I now teach. And by the same reason discourse will not be in the angel about these objects - a discourse which consists in this, that one concept should arise from another as from a cause.

The latter cause, on account of which it must be said that there is no discourse in an angel about natural objects, which are evidently known by the angel by natural power, is this: because although an angel knows any thing and its properties or accidents by several concepts, yet the notice of one is not the cause of the notice of another. For an angel knows natural things, their properties and accidents, by a proper - and, as some say, intuitive - notice, in the very mode in which they are; on the part of the thing, each one of those is in such wise through itself and known through itself, that it does not appear through another...[1704]

[Within Quaestio LVIII]

By another, of the kind of knowing which we call intuitive and proper, one cannot know that which is known as cause, and in turn that which is known as effect, in such a way that the knowledge of the one would be the cause of the knowledge of the other, when each is known by a

1692. Scotus, In II Sent., dist. 7, quaestio prima, "Contra conclusionem," paulo ante versiculum "Contra secundam viam"; et In II, dist. 1, q. 6, 9 "Contra anima," versiculo "Item quaeritur"; et in III, prologi quaest. 4 et 5, laterali in principio.

1703. St. John Damascene, De fide orthodoxa II, c. 22.

1704. Aristotle, Posterior Analytics II (at the end), and Metaphysics I (at the beginning).

proper and intuitive knowing. For although that which is the cause of another is known in reality by the angel as the cause of it, and again that which is from another as from a cause is known by the angel as its effect; nevertheless the knowledge of the one is not the cause of the knowledge of the other when each is known by a proper and intuitive knowing, whether there be one knowledge of both or diverse. For example: an angel knows of fire such a nature of it, and such a property, namely, that it is hot and dry; yet it is per se known to the angel that fire is hot and dry, just as it is per se known to him that such is its substantial nature. And thus he cannot deduce the knowledge of one from the knowledge of the other, even if he rightly knows that the heat and dryness of fire arise from its very substance. For it is no less per se known to the angel that fire is hot than that water is hot when it is heated - who would doubt this? Now that water is hot is per se known to an angel's intellect just as it is to sense; but the knowledge of an object that is known per se is not deduced from another knowledge; otherwise that thing too would not be per se known to an intellect that reasons in such a way. In the same way, the melting of wax follows upon heat per se; and yet that wax is melted is per se known to the angel no less than that it is heated.

Wherefore, when the logicians say that among propositions some are per se known, which we call immediate or lacking a middle, while others are known through another, which we call mediate or having a middle through which they are known, this must be understood not comparatively with an intellect that beholds the thing as it is by a proper and quidditative concept, but with an intellect that knows a thing through alien concepts, as we know spiritual things by corporeal ones and substance by accidents. And although in reality the one is the cause that the other be, as the substance of fire is the cause of heat, nevertheless each effect has in itself its own proper entity formally, by which formally it is an object per se of the intellect; just as color, which has a cause of its being, has in itself the notion of such an entity by which it is per se an object of sight, not because it is seen through another previously seen, or because the vision of it is deduced from another prior. Therefore, since an angel's intellect, like an eye, clearly and distinctly beholds natural things, which by natural power it can know evidently, it will not be said to discourse, nor to pass from the knowledge of one thing into the knowledge of another, even if he knows that one thing is born from another.

But someone will ask in this way: how then do we say that certain propositions are mediate, that is, probable through another, with respect to us only and not in themselves, as are the first principles; while certain others are mediate according to themselves and with respect to us, such as are the propositions in which we enunciate proper passions of a subject? For these are demonstrable not according to themselves, but only to our intellect through some medium; yet for an intellect that sees the thing as it is, there is no mediate proposition, but every proposition is per se known; and only for an intellect knowing through alien species can a proposition be mediate.

I answer that a proposition is mediate - that is, probable through another - only with respect to an intellect that understands a thing through alien species, and not as it is. But there is a difference between the first principles, in so far as in our mode of understanding they can be proved through another, and the propositions in which passions are predicated of subjects. For although both kinds of propositions are per se and without a middle for an intellect that sees the thing as it is, and

for an intellect that does not see the thing as it is both kinds of proposition can be mediate, nevertheless it happens in different ways that first principles and other propositions are demonstrated. For first principles are proved only from effects and through something posterior, which we call demonstration a posteriori; but other propositions can be demonstrated through something prior by nature or by causality, as is manifest. And for this reason we say that the principles lack a middle according to themselves, because they do not have by their nature anything prior by which they may be known, but only in our mode of understanding are they proved by posteriors; whereas other propositions are mediate according to themselves, because by their own nature they have something prior that can be assumed as a middle for their demonstration.

This doctrine, namely, that we said every proposition is per se known to an angel and therefore that he has no discursive process, must be understood not only of necessary propositions, but also of contingent ones when they are actually true; for then it is per se known to the angel what is enunciated by such a proposition, as that Peter is white, that Peter is running, or that he is still living; just as to our sense it is per se evident, of such and such an object, what is actually sensed. For we ought to philosophize about the intellect (intellectus) of an angel as about the eye simply beholding its object, as we said above; and the same judgment in all things ought to be made of the separated human intellect, if it knows objects by infused species (species intelligibilis) with a proper and quidditative concept. For this reason also, in III, q. 11, a. 3, I shall show that Christ, by his infused knowledge, by which he knows the essences of things quidditatively, never understood by discursive reasoning; this I taught in this manner publicly in our college of Complutum in the year of our Lord 1585, and I later learned that it was ably proved and published by some of our theologians.[1705]

Caput III - The posterior part of the more probable opinion

The posterior part of our position is that, in knowing supernatural objects, or things known in a supernatural mode, the angel's intellect has not nothing of discursive process, though it does not have everything that is required for the true notion of discursive reasoning. In confirmation of which it must be observed that in every true discursus two things are found.

The first is this: among several objects that must of necessity be known by discursus, one is the cause or reason of knowing another, so that, the former not being known, it follows intrinsically that the other cannot be known. Now of those things which in the previous chapter we said are known by an angel per se and not through another, even if many are known at once, one is not the cause or reason of knowing another. This, however, can occur in one and the same simple act by which one is carried to two objects, of which the one is the reason of knowing the other; as, in the opinion of those who say that the blessed by the force of the vision of the essence of God as the primary object also see creatures by that same simple and individual vision.

1705. St. Thomas, Summa theologiae III, q. 11, a. 3.

The second, which is found in true discursus, is a plurality of cognitions and concepts; for not only is one object the cause of knowing another, but also the cognition of the one is the cause of a different cognition which is concerned with the other. And I therefore said that this is required for the true notion of discursus, because to discourse is not only to know one thing on account of another, but also to infer the concept of one from another. But where a concept is gathered from a concept, there must of necessity be found a plurality of concepts; for where there is only one knowing, it will not be said that one is deduced from another.

Of these two I think that the former can be found in an angel's intellect with respect only to an object known in a supernatural mode. For an angel can indeed so know several things that one is the reason of knowing another as the primary object. This is proved as follows: since an angel does not behold these objects by a proper and quidditative concept, nor evidently, but only by probable conjecture, or by the evidence of testimony alone - what one calls evidence in the attesting person - it follows that he knows all those things through another more known to him. For none of those things which an angel knows by conjecture or sole testimony is per se probable to him, but only through another more known: for that Christ is true God was probable to the demons from effects, not from itself; and in the same way it would be to any angel considered according to his nature alone. Likewise, that Peter now has such a secret in his heart and will is per se known to no angel by his own nature. Therefore, whenever an angel has some knowledge of this sort of thing, he relies on something prior and known as on a principle.

But the latter element, which I said is required for the notion of discursus - namely, that it require a plurality of formal conceptions and knowings - I think is not found in an angel when he knows these objects in a supernatural mode, or attains to them by conjecture alone. For if it is true, as we said above, that many things utterly diverse, as many natures of things, are known by an angel at once through one species and through one formal concept, why shall we not also say that by the same formal concept there is known, for example, Christ's miracle and his divinity which that miracle indicated? Likewise, the sign of the will and its secret? And on this ground one could defend the opinion of St. Thomas, who universally teaches that in an angel there is no discursus. But if someone were nevertheless to contend that, in the knowing of these matters, there are two formal concepts in an angel, and thus the entire notion of discursus, he could not easily be refuted; then we could interpret St. Thomas as speaking only of those objects which are evidently and quidditatively known by an angel - in which I in no way doubt, for the reason alleged above, that there is no vestige of discursus.

Caput IV - The argument of Scotus and Gregory is solved

Now the single argument which in the first chapter was advanced for the opinion of Scotus and Gregory can easily be dissolved. I concede that an angel sometimes comes to the knowledge of some thing or property previously unknown; for it can happen that he does not at once in the beginning consider all the properties. This we ought plainly to grant in the case posited in that argument about a future eclipse, if the world were going to last forever, as that line of reasoning

proves; nonetheless we say that an angel does not discourse, because discursus does not arise from this alone, that one thing is known after another, but because the knowledge of one is gathered from the knowing of another - which does not befall an angel, as we have already shown. Therefore, in the blessed with respect to the clear vision of God, there is no discursive process.

... that there is no discursive process; and Scotus himself admits this in that question of the Prologue. But, as to the species which they have received from phantasms, we admit that the blessed do discourse, as did Christ himself; because the blessed retain the mode of knowing which they had on the way (in this life). Yet someone will ask whether an angel, if he wishes, can discourse in those things which he knows naturally, or even in other things which he knows supernaturally. Some more recent authors think that an angel can, if he wishes, discourse; as also certain others, whom St. Thomas favors, judge that Christ and the blessed can use infused, quidditative species of things with a turning toward phantasms in the same way in which one uses species abstracted from phantasms.[1706] However that may be concerning the use of infused species with an order to phantasms - about which matter, in the place cited, we shall dispute - by no reasoning can it be proved that an angel can, if he wishes, use discursion (*discursus*) in understanding. Unless we speak of the things which he himself naturally knows by intuitive and proper knowledge, it is manifest that he cannot discourse with that kind of knowledge: because in that way all things are to him known per se, and quidditatively, as the first principles themselves are; but in the knowledge of things which are per se known, there can be no kind of discursive process, since nothing is known there through another. If, however, the discussion is about other things, which we said are not clearly known to an angel by nature: since the things which he knows with this kind of knowledge are connected among themselves, he knows them in such a way that, although the one is the ground of knowing the other, nevertheless he knows them by a single individual act; and this is the angel's natural mode of knowing. He cannot himself divide into many knowings those things which he knows by a single simple concept; for, as we said above, indeed an angel can understand many things which he understands through one impressed species, by many concepts expressed from that species - yet not simultaneously, but in succession. But in order to discourse, it is necessary that he at once retain in mind many conceptions, one of which he derives from another.

Articulus IV - Whether angels understand by composing and dividing

It is objected:

1) Where there is a multitude of intellections, there is composition of intellections, as is said in the third book On the Soul. But in the angel's intellect there is a multitude of intellections, since by diverse species he understands diverse things, and them at once. Therefore, in the angel's intellect there is composition and division.

1706. St. Thomas, Summa theologiae III, q. 11, a. 2.

2) Further, negation is at a greater distance from affirmation than any two opposite natures are from one another; for the first distinction is by affirmation and negation. But the angel does not know certain distinct natures by one [species], but by diverse species, as is clear from what has been said. Therefore it must be that he knows affirmation and negation by diverse [species]. And so it seems that an angel understands by composing and dividing.

3) Further, speech is a sign of intellect. But angels, speaking to men, utter affirmative and negative enunciations, which are signs of composition and division in the intellect, as appears from many places of Sacred Scripture. Therefore it seems that an angel understands by composing and dividing.

But on the contrary: Dionysius says that the intellectual power of the angels shines forth with the perspicacity of the simplicity of their intellect; but simple intelligence is without composition and division, as is said in the third book On the Soul.[1707] Therefore an angel understands without composition and division.

I answer: Just as in a ratiocinative intellect the conclusion is compared to the principle, so in an intellect that composes and divides the predicate is compared to the subject. For if our intellect immediately in the very principle saw [what follows] by the virtuality of the conclusion, it would never understand by discoursing or ratiocinating. Likewise, if the intellect immediately, in the apprehension of the quidditative nature of the subject, had knowledge of all the things that can be attributed to the subject or removed from it, it would never understand by composing and dividing, but only by understanding what the thing is. Thus, therefore, it is clear that from the same source it comes that our intellect understands by discoursing and by composing and dividing, namely, from this, that it cannot immediately, in the first apprehension of something first apprehended, inspect whatever is contained in it virtually. This happens from a weakness of intellectual light in us, as has been said. Whence, since in the angel the intellectual light is perfect, since it is most pure and most clear like a perfectly pure heaven, as Dionysius says,[1708] it follows that just as he does not understand by ratiocinating, so neither does he understand by composing and dividing. Nevertheless he understands the composition and division of enunciations, as he does ratiocination by syllogisms. For he understands composite things in a simple way, and changeable things in an unchangeable way, and material things immaterially.

Reply to the first: Not every multitude of intellections causes composition, but the multitude of those intellections of which one is attributed to another or is removed from another. But an angel, by understanding the quidditative nature of a thing, at once understands whatever can be attributed to it or removed from it. Hence, by understanding what a thing is, he understands whatever we are able to understand by composing and dividing, by one simple intellection of his.

1707. Pseudo-Dionysius, De divinis nominibus; Aristotle, De anima III.
1708. Pseudo-Dionysius, De divinis nominibus, c. 4.

Reply to the second: Although diverse quidditative natures of things differ less as to the notion of existing than affirmation and negation do, nevertheless, as to the notion of knowing, affirmation and negation are more closely conjoined: because immediately through the fact that the truth of the affirmation is known, the falsity of the opposite negation is known.

Reply to the third: That angels speak affirmative and negative enunciations manifests that angels know composition and division, not, however, that they know by composing and dividing, but by simply knowing what the thing is.

Conclusion: An angel does not understand by composing and dividing, but by a simple intuitive concept (*conceptus*) he knows whatever things do or do not befit any given thing.

Disputatio CCXXIII - Whether an angel knows that a thing is, or is not, by composition or by division

Caput I - On composition in the angelic intellect

Most familiar among logicians is composition and division in cognition, about which Aristotle treats in the first book On Interpretation.[1709] Now composition is an affirmation, whereby the intellect enunciates one thing of another, which we explicate by these affirmative propositions and the like: "Man is rational," "Man is white," etc. But division is a negation, whereby we deny one thing of another, and we express it by these propositions: "Man is not a horse," "Man is not black." The present controversy, therefore, is whether the angelic intellect, by a composition of concepts, affirms one of another; or rather by a simple concept says and understands that one thing is another; and the same difficulty obtains concerning division. Now about composition, of which we shall treat in this chapter, theologians commonly teach that an angel understands and enunciates that one thing is another, without any composition of concepts, but by a simple intellection only: thus St. Thomas teaches in this article; Cajetan and more recent Thomists; Aegidius in the Second Book, distinction 3, question 2, article 3 at the beginning; and the same is gathered from the doctrine of Durandus in the Second Book, distinction 3, question 3, number 7, for he affirms that by an angel all things present are understood together by one most simple act.[1710] St. Thomas proves this opinion, because composition arises from an imperfection of the light of the intellect which does not manifest all the things that can befit the thing, whence it comes about that with one concept he conceives the predicate, but with another the subject, and, comparing them to each other, by affirming one of the other, he composes. Since, therefore, when the angelic intellect sees any thing whatsoever, by the same concept it knows whatever can befit it, it follows that in understanding it does not compose. For my part, I judge first that those things which are distinguished only by reason cannot be known by the angel through composition, nor enunciated of one another; for there is no composition unless there are many formal concepts presenting

1709. Aristotle, De interpretatione I.

1710. St. Thomas, Summa theologiae I, q. 58, a. 4; Cajetan, ad loc.; Aegidius Romanus, In II Sent., dist. 3, q. 2, a. 3; Durandus, In II Sent., dist. 3, q. 3, n. 7.

diverse things. But when the intellect understands a thing as it is, by a proper and intuitive concept, it does not distinguish by many formal concepts those things which in reality are the same, as we showed in Disputation 118, chapter 2; and consequently, inasmuch as he does not conceive as many what we distinguish as many and know, but understands the thing by one simple concept, therefore he cannot compose those things which we, distinct only by our reason, compose. Next, I say that all things which befit some thing ...

Next, I say that all things which befit some thing as properties or common accidents, even if they are really distinguished from the subject itself, are known by the angel, and are predicated of the subject without any composition. For I think it more probable that all these are not understood by the angel through many species and formal concepts, but through one and the same: for since he understands any given thing by a proper concept, it is no wonder if by the same simple intuition he understands whatever things befit it.

I clearly see that this cannot be sufficiently demonstrated; for it is not manifest that an angel knows many things through one simple concept. Yet this seems more probable, and more consonant with the perspicacity of an angelic intellect. However, that we may still maintain that the angelic intellect does not compose, it is no obstacle that the very objects which he knows are really distinct among themselves. For if this sufficed for composition, the divine intellect too would compose, since it knows many things really distinct, and compares them among themselves. But because the notion of composition requires many formal concepts, and because God knows many distinct objects by the same most simple concept, which is his essence, therefore in him there is no composition. By the same reasoning, then, in the intellect of an angel there is no composition, even if he understands many distinct objects, since by one single simple concept he knows them together.

Lastly, it seems difficult to me that an angel, without composition, should understand all that can be predicated of some thing - whether natural or supernatural, whether intrinsic or extrinsic. For as to intrinsic natural things, it can easily be defended that there is no composition in the angel: for all these can be understood by the angel through one species and concept; this is not difficult. And indeed, concerning these, Cajetan said that they are understood by the angel through one species - such are the soul and body in man, proper passions, common accidents whether inseparable, separable, or fortuitous.[1711] But since an angel can know, concerning some thing, supernatural accidents, it seems difficult to assert these of a thing, and to understand them, without any composition - whether they be known by proper knowledge, or only by conjecture and through alien species. First, supposing a proper species: for we ought not to assert the same species to be that of a natural thing and of a supernatural thing, unless we say that into the angel there is infused an alien species distinct from the proper species of the natural thing which he had from the beginning, by which both the natural thing and the supernatural are known together. Next, if the supernatural thing is known by conjecture and through alien species, it seems difficult that, by the same species and concept, the natural thing itself be known by a proper and quidditative concept,

1711. Cajetan, on the articles of this question (ad hunc articulum).

and the supernatural thing not by a proper and quidditative, but by an alien one, and yet without any composition. For why must we say that into one simple quality there concur both the proper concept of one thing and the non-proper, merely conjectural, concept of another? And as to what Cajetan says in his remarks on the articles of this question - that the supernatural are known by the angel after the mode of natural things, and thus that there is no composition in them either - I do not know by what efficacious reason this could be proved.[1711]

Moreover, since an angel not only predicates of a given thing what is intrinsic to it, but also [predicates of it] things entirely diverse (for of one substance he predicates any other distinct species), it seems difficult in these matters not to concede composition to the angel. Furthermore, that a thing entirely diverse be predicated by the angel's intellect of another is manifest: for an angel not only denies one thing of another, by saying that one is not the other, but he also affirms that one differs from another, and that one is contrary to, or diverse from, another, or finally that it is in some way related to it - by a relation at least of the second genus. But this seems unable to be done through the same species and concept; otherwise the angel would have a single species of all natural things, which, by referring them to one another, he could also predicate of one another by a single simple concept. For it is evident that only those things are conceived by the angel with a simple concept of which he has only a single impressed species. Yet no one from the School of the holy Doctor has hitherto conceded that in any angel there is given one single species of all created things. Besides, this matter is of lesser moment and quite uncertain for us, since it is hidden from us whether the angel has proper species of each singular thing, or rather one species of all things.

On division in the same intellect of an angel

Caput II - On division in the same intellect of an angel

Now that an angel can understand by dividing is a greater difficulty. In this point indeed many Doctors, cited in the preceding doubt, who teach that an angel understands without composition, also assert that he knows without division; and St. Thomas in the present article plainly teaches that by one simple concept and intuition the angel understands a thing, and whatever befits it or does not befit it.[1712] This opinion has always seemed difficult to me. I shall therefore propose a reason drawn from the principles of St. Thomas's doctrine, which can bring difficulty to bear on this matter; and I shall report the solutions of others, and, if there be anything difficult in them, I shall explain it.

The reason is as follows. From the doctrine of the Angelic Doctor we hold that any angel understands many things through one species, though not all; even if the more perfect the angel is, the fewer species he understands through. Therefore he cannot by one simple concept deny of man all the things in the world which he cannot predicate of him. For, in order that he deny one thing of another and divide them both, he ought by a simple thought to apprehend both by one species.

1711. Cajetan, on the articles of this question (ad hunc articulum).
1712. St. Thomas, Summa theologiae I, q. 58, a. 4.

Although, then, he can deny one animal of another by a simple cognition, if he knows the natures of all animals through one species - which is still difficult - nevertheless he will not be able to deny in this same way, without division and plurality of concepts, any other thing in the world: since no angel understands every thing in the world through one species, and consequently neither through one expressed concept, except the supreme, as Caietanus thinks - a view which does not commend itself to us in this part, as we said in Disputation 203, chapter 2.

Solution of certain Thomists. Some Thomists answer that not all natures of things are known by an angel through one species nor through one simple concept; nevertheless it can happen that the angel, by a simple concept without division, knows that one thing is not another among those which the angel does not know through the same species and concept. Thus we would posit that man and horse are not known through the same species by an angel; nevertheless the angel will be able to know that man is not a horse, after the manner in which the common sense, without division, judges that color is not sound, perceiving by a simple operation the difference of the one from the other.

Refutation. But this reply is not without difficulty. First, because if the angel judged in the same way as sense judges, then as in sense there is not truth or falsity as in cognition, so neither would there be in the angel - which is absurd. Next, it would follow that the mode of knowing belonging to our sense, which by a simple operation judges that one thing is not another, would be more perfect, as is the angel's [mode], than that of our intellect, which cannot effect this without composition and division. Or if one must say that sense neither composes nor divides, nor judges that one is not another, but rather simultaneously understands many things in diverse ways - as necessarily must be asserted - then it follows that a different kind of judgment must be attributed to the angel and explained in a different way than by the judgment of sense.

Finally, as we were just saying, sense, both interior and exterior, thus simultaneously conceives many diverse sensibles as diverse, that it does not refer one to another nor compare it with that other, but conceives each thing by itself, and is altered by each in a different way and by a different cognition, without any mutual comparison. Yet the judgment of the angel, by which he understands that one thing is another or is not, cannot be made except by a comparison set between the objects; that is, in order to have such a judgment about them, he must conceive the one as referred to the other - whether this be done by one concept or by many - and the judgment of composition or of division must embrace both extremes. For when man and horse are apprehended, and the intellect judges that the one is not the other, it has a judgment about each of them. Therefore, if the extremes of a division are not known by the angel through one species and formal concept, the judgment about them will not be without division; for division is the enunciation by which we say that one is not another, with diverse concepts of the extremes compared among themselves.

Another solution. Secondly, other Thomists answer that sometimes indeed the extremes of a division are understood by an angel and apprehended through diverse species and formal concepts, about which the angel judges that one is not another, as the argument made shows; yet when the

angel knows these extremes as compared with each other, and by judging about them that the one is not the other, from the diverse intelligible species which the angel has of them he elicits one formal concept of division, in which he judges that the one does not belong to the other.

This, however, seems to me an evasion contrived without foundation. For as often as we dispute about diversity of formal concepts, whence can we gather that there are more expressed formal concepts than from the diversity of impressed species? And it is in vain that we begin to posit one formal concept...

...not only one by order, but simply one, if it is expressed by the intellect by virtue of many species. For that the intellect, through various species, understands many things in an ordered way is not a sufficient cause for it to express one simple-in-quality formal concept, but rather various concepts of various things, with, however, the order of one to another. Otherwise even man, through diverse species, would necessarily express one simple concept of division and of composition, by the very fact that he conceived the extremes in an ordered way; or, if to conceive them in an ordered way is not a sufficient cause in man, neither will it be in the angel, unless something further be added, which our adversaries ought to explain to us. Wherefore by this reasoning, as if compelled, Ferrar. grants that even in man, through various species of the extremes, there is produced by the intellect a simple concept of enunciation, by which we enunciate one extreme of the other; which indeed who would doubt is plainly false? For thus even in man there will be neither composition nor division of enunciation; but only in the simple apprehension of the extremes, before they are brought together by enunciation, there will be diverse concepts - which could also happen in angels; therefore there would be no difference between Angels and men in composing and dividing.[1713]

Others reply. Thirdly, other Thomists reply (whose reply I the more readily embrace): first, that the Angel does not understand by dividing, when he does not apprehend the extremes distinctly, but apprehends only the one confusedly; and this is all that St. Thomas wished to teach. Next, if the extremes are apprehended distinctly, the angel cannot without composition understand those extremes of which he has diverse species. Finally, those extremes of which he has a single species can be understood by the angel, and one can be denied of the other without division of concepts. They explain the first part in this way, that when the angel judges that man is a singular thing, and is not anything of the things that are irrational, or non-living, without division, by one simple concept he judges universally that man is not anything of those. This is not hard for me to believe; for in order that the Angel should judge thus universally that man is not inanimate, the species of man himself seems sufficient, by which he sees that he is animate, and so of the others; and in this sense it pleases me, with these Thomists, to interpret the mind of St. Thomas, lest we be forced to assert something against his doctrine on the multitude of species in the angelic intellect. But the second and third part of this position are sufficiently confirmed by those things which were adduced above, to which I judged it fitting to forbear.

Corollary of the preceding doctrine.

1713. Ferrar., Contra gentiles, I, c. 55.

Caput III - On composition, division, and discourse

Since the ancient and very common opinion has always been that composition and division and discourse are not one concept in the mind, but several ordered, there have not been lacking in our age some philosophical professors who said that both composition and division and the syllogism are one quality composed from several by a physical and real union, just as from two waters, by conjunction and continuation, there is made one water; so that the copula in composition and division have the force of a physical and real nexus, like a point between the parts of a line; and in the same way the particle of illation "ergo" should have entirely the same force in a consequence, connecting, to wit, the antecedent with the consequent and making one quality. And because in this way they philosophize, they must assert that all the things we have said are one simple quality - not that I say one quality so simple that it is not composite, nor has parts, but so one that there are not two having only an order between themselves. Now they persuade themselves of this position because it can happen that one apprehends the subject and the predicate and the copula of a proposition, not only each of them separately, but even the three together which we have mentioned, even if he has not yet come to judgment and assent. They add, moreover, that it cannot be understood and explained how those species representing the extremes and the copula of the proposition pass into judgment and assent, unless because the expressed species of the copula becomes really a physical nexus, by which those two expressed species of the extremes are connected and thus composition is made. Therefore, by the same proportion, he says this of the syllogism, namely, that it is a composition by physical conjunction and real nexus, which is denoted by the note of illation "ergo." But when it is asked of them how the judgment which the Angels have differs from ours, he answers that it is a simple quality without this composition and real nexus; whereas ours is composite by conjunction and real nexus.

This opinion displeases me exceedingly, first because it rests on a weak foundation, such that it cannot stand against the ancient and common view; then because it can be refuted by an efficacious argument; finally because in a much easier way the nature of composition and division and discourse will be explained by us, so that we may uphold the common opinion.

First, the argument of the preceding position is weak; for although we can apprehend the extremes of a proposition (add also, if you please, the copula) before we judge and give assent, it is not lawful to infer that judgment and assent are made because those concepts are bound by the concept of the copula as by a real bond and union, if it can be done in some other easier way. For the authors of this position ought to refute all the other ways by which it could be said that assent is made without this physical nexus and conjunction, in order to prove that it is made in the way which they contend.

Next, the aforesaid position is refuted by an efficacious reason: for either that nexus of the copula binds the integral concepts of the extremes which the intellect previously had in mere apprehension, or it does not bind integral concepts which of themselves were, or could be, integral and without conjunction, but the parts of one and the same concept, of which, the copula being loosed, neither part can be an integral concept. But this position cannot be defended in either way;

therefore that kind of composition is fictitious. Further, that this position cannot be defended in either way is easily proved. First, because that copula cannot bind integral concepts and physically unite them, since before they were divided. For although two corporeal substances, as two waters, or two quantities as in the sacrament of the Eucharist, can in reality be so conjoined that there be made either one water or one quantity, nevertheless it has hitherto been unheard of in philosophy that two accidents previously divided and distinct are afterwards so physically conjoined among themselves that one accident be made - unless the substances or quantities in which the accidents were be themselves conjoined and physically united among themselves, as when two coldnesses are united by two waters united and made one water, or by two quantities consecrated in the chalice; yet the accidents by themselves alone cannot physically be united so that one accident be made and a composite. Therefore neither can two concepts previously divided be physically united so that one composite concept be made. From which it is plain that it cannot be brought about that the same concepts of the extremes, which the intellect had separated among themselves in mere apprehension, should remain in composition connected by a real and physical union through the concept "is," conceived in such a way that assent be made. And although the same concepts of the extremes, namely of subject and predicate, which were in apprehension without judgment, could be connected by the concept of the copula "is," nevertheless one should not assert that by the same concept of the copula "is" which was in apprehension they are physically united; for if in apprehension there can be concepts of the extremes and of the copula without judgment and assent, as the adversaries themselves admit, certainly when afterwards there would be assent and the extremes would be connected by the copula, it would be necessary that the concept of the copula which was in apprehension be varied, and that by it something new be represented which was not represented in apprehension. But then it would not be the same concept of the copula, since it would not represent in the same way.

Moreover, if the concept of the copula is to unite not different concepts but parts of one and the same concept - so that there be one concept of composition and division having some extension of representation - it follows that composition could also be found in the intellect of an Angel; for he can have a concept having some extension of representation by the very fact that it represents a thing with extension, that is, as varied in its own being. And in the same way it follows that an Angel could understand all things by discourse, if indeed one composite concept can have what we can have; or rather it follows that neither can we discourse, if discourse is one composite concept, since in one concept the intellect cannot proceed from one thing to another. Add also that, although the conclusion of a syllogism could be connected with the antecedent by the particle "ergo," yet the two premises in a syllogism could by no copula be physically conjoined. Finally, although an affirmative copula could connect the predicate with the subject in a proposition, nevertheless I do not know by what reason a negative copula could connect by such a physical nexus.

Lastly, by a much easier account, according to the common position, we can explain the nature of composition and division: namely, that they are two concepts, one of the predicate, the other of the subject, by which the extremes are not conceived absolutely, but so relatively that one be represented as agreeing with the other, and that this, together with the other, make one judgment.

...to compose one: but to divide is to conceive the extremes, not absolutely, but in such a relative way that one is represented as not agreeing with the other, but as dissenting from it. Now the agreement of the extremes is denoted by us through the copula "is" affirmed; the disagreement, however, through the same copula negated; so that in our mind there does not correspond to the copula a peculiar concept of a thing, although we also have some concept of the word corresponding to the copula: rather, composition and division are of two concepts representing things in the way we said; and therefore it is called a composition of concepts, because the extremes are represented as agreeing in that way; but a division, because the extremes are conceived as divided, that is, as mutually repugnant and in no way agreeing. There is also in discourse, in the premises and the conclusion, a certain connexion, not physical and real, but of representation, in that a thing is represented by various concepts with some order: for the minor proposition represents the extremes conjoined with the major, because one extreme of the minor is in the major; and finally the conclusion represents its extremes under the same order with the premises, as it arises from them, which is denoted by the particle of illation, "therefore"; and thus rightly is preserved the notion of composition and division, namely of concepts in the proposition, and of consequence in discourse. Moreover, before composition and division there is not one concept, but several ordered and a discourse, as likewise the Schoolmen alleged in this disputation openly suppose, and those also cited above in the preceding disputation.

From what has been said it follows that there is never composition and division in mere apprehension without judgment and assent, because there is never composition unless the agreement of the extremes be known, and there is never division unless the intellect know the extremes to clash with one another and in no way to agree. Now in this cognition there is assent, as we shall expressly show 1.2, disp. 62, c. 3, and disp. 79, c. 3; whereupon Aristotle, in the first chapter of De interpretatione, numbers among the three acts and operations of the intellect apprehension, composition and division, and then judgment, and finally discourse; but if simple apprehension, composition, and division were all counted as one way, then he would not have numbered three acts of the intellect, but four, as is clear, by adding the simple apprehension. From which also is refuted the opinion of those who think that assent is a new act of the intellect after cognition even of the agreement of the extremes, as we shall show 1.3, disp. 79, c. 3.[1714]

Then it follows that the opinion of those is false, who say that in relatives the agreement of the one with the other in respect of order can be apprehended by a simple apprehension. First, because since assent and composition in us are nothing else than the concept of two things or natures agreeing with each other, and by that very fact, when one apprehends the Father as related to the Son, he knows the agreement between them, it follows that nothing is lacking for true composition

1714. Aristotle, De interpretatione, c. 1.

and judgment. Besides, because that cannot be called a simple apprehension of the relation of one to another, along with which there cannot be a dissent denying that thing to be referred to another; whereas with simple apprehension there can be assent and dissent about that thing in comparison with any other: but with the simple apprehension by which one apprehends the Father as related to the Son, there cannot be a dissent denying him to be the Father of that Son; therefore the apprehension of that relation was not simple, but a composite cognition with assent and judgment.

Articulus V - Whether falsity can be in the intellect of an angel

Objicitur. To the fifth the procedure is as follows. It seems that falsity can be in the intellect of an angel. For perversity pertains to falsity. But in the demons there is a perverse fantasy, as Pseudo-Dionysius says in On the Divine Names, book 4.[1715] Therefore it seems that in the intellect of angels there can be falsity.

1. Further, ignorance is a cause of false estimation. But in angels there can be ignorance, as Pseudo-Dionysius says in Ecclesiastical Hierarchy, book 6.[1716] Therefore it seems that in them there can be falsity.
2. Further, whatever falls away from the truth of wisdom and has the note of depravation, has falsity or error in its intellect. But this Pseudo-Dionysius says of the demons in On the Divine Names, book 7.[1715] Therefore...

But on the contrary: The Philosopher says in De anima III that the intellect is always true; and St. Augustine also says in the book of the 83 Questions that nothing is understood except what is true.[1717][1718] But angels do not know anything except by understanding. Therefore in angelic cognition there cannot be deception and falsity.

I answer: The truth of this question in some measure depends on what was premised. For it was said that an angel does not understand by composing and dividing, but by understanding what a thing is. But the intellect concerning what a thing is is always true, as also sense is concerning its proper object, as is said in De anima III.[1717] But by accident in us deception and falsity occur in understanding what a thing is, namely, according to the account of some composition: either when we take the definition of one thing as the definition of another, or when the parts of a definition do not cohere with one another. As if there be taken for the definition of some thing "a four-footed winged animal": no animal is such an animal. And this indeed happens in composites, whose definition is taken from diverse things, one of which is material to the other. But in understanding simple quiddities (as is said in Metaphysics IX) there is no falsity: for either they are not at all attained, and we understand and know nothing about them, or they are known as they are.[1719] Thus

1715. Pseudo-Dionysius, De divinis nominibus, c. 4; see also c. 7.
1716. Pseudo-Dionysius, Ecclesiastica hierarchia, c. 6.
1715. Pseudo-Dionysius, De divinis nominibus, c. 4; see also c. 7.
1717. Aristotle, De anima, III, texts 26 and 51.
1718. St. Augustine, De diversis quaestionibus octoginta tribus (83 Questions).

1719. Aristotle, Metaphysics IX, text 2.

therefore of itself there cannot be falsity or error or deception in the intellect of any angel. But by accident it happens, yet in another way than in us. For by composing and dividing we sometimes arrive at the intellect of the quiddity, as when by dividing and demonstrating we investigate the definition. Which indeed does not happen in angels: but by the what-it-is of the thing they know all the enunciations that pertain to that thing.

Now it is manifest that the quiddity of a thing can be a principle of knowing with respect to those things which naturally agree with the thing, or are removed from it: but not of those things which depend on the supernatural ordination of God. The good angels therefore, having a right will, by the cognition of the quiddity of a thing do not judge about those things which supernaturally pertain to the thing, except saving the divine ordination. Hence in them there cannot be falsity or error. But the demons, by a perverse will subducing the intellect from divine wisdom, sometimes judge absolutely about things according to natural condition. And in those things which naturally pertain to the thing, they are not deceived. But they can be deceived as to those things which are supernatural. As if, considering a dead man, he should judge that he will not rise again. And if, seeing the man Christ, he should judge him not to be God. And by this the answer to the things objected on both sides is evident. For the perversity of the demons is according to that by which they are not subject to divine wisdom. But ignorance is in angels, not with respect to natural knowables, but to supernatural ones. It is also clear that the intellect of what a thing is is always true, unless by accident according as it is unduly ordered to some composition or division.

Notes on the Article. The prior conclusion of the Article is this: In the intellect of an angel there cannot be falsity per se, that is, in the proper and quidditative cognition which he has of things naturally. And the reason is manifest: because if an angel understands a thing by a quidditative concept, it follows that he understands it as it itself is, and hence is not deceived in the cognition of it: for deception consists in this, that a thing be understood otherwise than it is, by asserting of it that something is which is not. And therefore Aristotle said in Metaphysics IX, text 2, that in the cognition of quiddity there is not falsity, because either a thing is attained wholly, or wholly ignored; about which testimony and the sentence of Aristotle enough and more than enough has been said by us above, disputation 75, chapter 2.[1719]

A later conclusion: By accident falsity can be in the intellect of an angel. St. Thomas says "by accident," that is, in the cognition of those things which he knows not by a proper and quidditative concept, but by conjecture, and from elsewhere than by supernatural revelation, such as are supernatural mysteries, if he were to know them by conjecture only; or likewise the secrets of hearts, or free future events. Nevertheless St. Thomas notes that the good angels in this conjecture are not deceived: because they behave so prudently that they do not dare to pass judgment about these things: but the demons, by their malice rashly judging, are sometimes deceived. Wherefore he does not deny that it belongs to an angel according to nature to incur per se deception about such objects thus known.

1719. Aristotle, Metaphysics IX, text 2.

Moreover, since falsity of the intellect is not found in the apprehension of simples, but in composition and division, as Aristotle teaches in the first book of De interpretatione, chapter 1, and, as we saw in the preceding disputation, an angel does not always judge by composition and division: Cajetan notes, in the commentary on this article, that in the simple apprehension which our intellect forms there is not truth or falsity as in an enunciating one: because neither is there composition on the part of the formal concept, since it is one simple quality; nor on the part of the object, since only one thing is apprehended; or if two are apprehended, they are not known as referred to each other: but truly, in the intellect of the angel judging that a thing is or is not, there is truth and falsity, as in one who enunciates: because although the intellect makes that judgment by a certain simple quality of the formal concept, and thus on the part of that there is not in the intellect of the angel composition and division, nevertheless on the part of the object there is true composition and division: because in reality, by the same simple quality the angel enunciates one thing of another.[1714][1720]

Yet this opinion of Cajetan, although it is true, whenever an angel knows diverse things, and enunciates one of another, or denies it, as when he predicates whiteness of man, and denies horse of lion (for thus on the part of the object there is a distinction of predicate and subject), nevertheless, because sometimes an angel can have a judgment about the same thing, in which he does not distinguish predicate from subject even on the side of the object, as we distinguish; and then he would say the truth no less than if we were to enunciate by composition: therefore I think that one should philosophize otherwise about truth. Furthermore, that an angel can have a judgment in which there is truth as in one enunciating, he proves from this, that he can no less judge that man is an animal and is rational than we judge: yet he cannot distinguish the notion of animal from man, as above in disputation 118, chapter 4, was shown: wherefore neither on the part of the formal concept, nor on the part of the known object, is there in the angel composition. Nevertheless there can be in him truth as in one enunciating, and there could be in him falsity in the same way even in those things which are distinguished by our reason alone, if about these he could be deceived by not distinguishing on the part of the object the notion of predicate from that of subject. In which matter I answer that therefore an angel by a simple concept can no less judge a thing to be or not to be than we by composition and division; and in him there can be found truth as in one enunciating something true; yea, and falsity, if some other thing did not stand in the way, as I said: because that simple cognition, on the part of the formal and objective concept, is equivalent to our composition, nay in many ways, as being more perfect, has the force of enunciation than that one. By this same reason, in the divine intellect there is found truth as in one enunciating, as in question 16, article 5, was said by us. But whether in the intellect of an angel there is practical falsity, or by what rationale there is in him the defect which always precedes sin, we shall say below in disputation 235, c. 3.

Articulus VI - Whether in angels there is morning and evening knowledge

To the sixth the procedure is as follows. It seems that in angels there is neither vespertine nor matutinal knowledge. For evening and morning have an admixture of darkness. But in the cognition of an angel there is no kind of obscurity: since there is in it neither error nor falsity. Therefore the knowledge of an angel ought not to be called morning or evening.

1. Further,

To the sixth the procedure is as follows. It seems that in angels there is neither vespertine nor matutinal cognition. For evening and morning have an admixture of darkness. But in the cognition of an angel there is no kind of obscurity, since there is in it neither error nor falsity. Therefore the knowledge of an angel ought not to be called morning or evening.

1. Further, between evening and morning night falls, and between morning and evening midday falls. Therefore, if in angels there is matutinal and vespertine cognition, by parity of reason it seems that in them there ought also to be meridian and nocturnal cognition.
2. Further, cognition is distinguished according to the difference of the things known: hence in De anima III the Philosopher says that the sciences follow, as things do, and are diversified accordingly. But there is a threefold being of things, namely in the Word, in their proper nature, and in the angelic intellect, as St. Augustine says in De Genesi ad litteram II. Therefore, if there be posited in angels a matutinal cognition and a vespertine cognition on account of the being of things in the Word and in their proper nature, there ought also to be posited in them a third cognition on account of the being of things in the angelic intellect.

But on the contrary: St. Augustine in De Genesi ad litteram IV, and in The City of God XI, distinguishes the cognition of the angels by morning and evening.

I answer that this that is said of morning and evening cognition in angels was introduced by St. Augustine, who wishes those six days in which God is read Genesis 1 to have made all things to be understood not of these customary days that are traversed by the circuit of the sun (since the sun is read to have been made on the fourth day), but of one day, namely, angelic cognition as set forth to the six genera of things. But as in the customary day morning is the beginning of day and evening its term, so the cognition of the primordial being of things is called morning cognition; and this is according to that whereby things are in the Word. But the cognition of the very being of a created thing, according as it subsists in its proper nature, is called evening cognition. For the being of things flows from the Word as from a certain primordial principle, and this outflow is terminated at the being of things which they have in their proper nature.

To the first, therefore, it is answered that evening and morning are not taken in angelic cognition according to a likeness to the admixture of darkness, but according to the likeness of principle and term. Or it must be said that nothing prevents, as Augustine says in De Genesi ad litteram IV, something from being called light in comparison to one thing, and in comparison to

another being called darkness: just as the life of the faithful and just in comparison to the impious is called light, according to that of Eph. 5:8, "You were once darkness, but now light in the Lord." Which life of the faithful, however, in comparison to the life of glory is called dark, according to that of 2 Pet. 1:19, "You have the prophetic word, to which you do well to attend as to a lamp shining in a dark place." Thus, therefore, the cognition of an angel, whereby he knows things in their proper nature, is day in comparison to ignorance or error, but is obscure in comparison to the vision of the Word.[1721]

Reply to the second: Morning and evening cognition belong to the day, that is, to the angels illuminated, who are distinct from darkness, that is, from evil angels. But the good angels, knowing the creature, are not fixed in it so that they would be darkened and make night; but they refer this very thing to the praise of God, in whom as in the beginning they know all things. And therefore after evening there is not placed night but morning, so that morning is the end of the preceding day and the beginning of the following, inasmuch as angels refer the cognition of the preceding work to the praise of God. Midday, however, is comprised under the name of day, as the mean between two extremes. Or midday can be referred to the cognition of God himself, which has neither beginning nor end.

Reply to the third: Even the angels themselves are creatures. Hence the being of things in the angelic intellect is comprised under evening cognition, just as the being of things in their proper nature.

Conclusion is affirmative.

To the seventh the procedure is as follows. It seems that vespertine and matutinal cognition are one. For it is said in Genesis 1: "There was evening and morning, one day." But by day angelic cognition is understood, as St. Augustine says. Therefore one and the same is the cognition in angels, morning and evening.

1. Further, it is impossible for one potency to have two operations at once. But the angels are always in act of matutinal cognition, because they always see God and things in God, according to that of Matt. 18:10: "Their angels in heaven always see the face of my Father." Therefore, if vespertine cognition were something other than matutinal, in no way could an angel be at once in act of vespertine cognition.
2. Further, the Apostle says in 1 Cor. 13:10, "When that which is perfect shall come, that which is in part shall be done away." But if vespertine cognition is other than matutinal, it is compared to it as imperfect to perfect. Therefore vespertine cognition cannot be together with matutinal.

On the contrary is what Augustine says in De Genesi ad litteram IV: that there is much difference between the cognition of any thing whatsoever in the Word of God and the cognition of it in its own nature, so that the former rightly pertains to day, the latter to evening

1721. St. Augustine, De Genesi ad litteram, IV, c. 23.

I answer that, as was said above, vespertine cognition is called that whereby the angels know things in their proper nature. Which cannot be so understood as though they receive their cognition from the things, as that preposition "in" would indicate a relation to the principle; because angels do not receive cognition from things, as was held above. It remains, therefore, that this "in their proper nature" be taken according to the notion of the thing known, according as it is subject to cognition, so that vespertine cognition in angels be said according to that whereby they know the being of things which things have in their proper nature. Which indeed they know through a twofold medium, namely through innate species and through the rationes of things existing in the Word. For by seeing the Word they do not know only that being of things which they have in the Word, but that being which they have in their proper nature, just as God by the fact that he sees himself knows the being of things which they have in their proper nature. If, therefore, vespertine cognition be said according as they know the being of things which they have in their proper nature by seeing the Word, then one and the same according to essence is vespertine and matutinal cognition, differing only according to the things known. But if vespertine cognition be said according as the angels know the being of things which they have in their proper nature by innate forms, then vespertine cognition is other than matutinal. And thus Augustine seems to understand it, when he sets it as imperfect in respect of the other.

Reply to the first: If the number of six days is, according to Augustine's understanding, taken according to the six genera of things which are known by angels, so the unity of the day is taken according to the unity of the thing known, which nevertheless can be known by diverse cognitions.

Reply to the second: Two operations can be at once of one potency, whereof one is referred to the other: as is clear when the will at the same time wills the end and the things that are to the end; and the intellect at the same time understands principles and conclusions through the principles when already it has acquired science. Now vespertine cognition in angels is referred to the matutinal, as Augustine says. Hence nothing prevents both being together in angels.[1723]

Reply to the third: When the perfect comes, the imperfect is done away, namely that which is opposed to it; as faith, which is of things that are not seen, is done away when vision comes. But the imperfection of vespertine cognition is not opposed to the perfection of matutinal. For that something be known in itself is not opposed to its being known in its cause. Nor again does it involve repugnance that something be known through two media, of which one is more perfect and the other less perfect. Thus to the same conclusion we can have both a demonstrative and a dialectical medium. And in like manner the same thing can be known by an angel through the uncreated Word and through an innate species.

Conclusion is: The vespertine cognition, whereby creatures are known according to their proper formal reasons by the same vision whereby the Word is seen, is not a distinct formal vision, although it is of a different object; nevertheless, the vespertine cognition, insofar as it is through the innate species of things proper to them, is different from the vision of the Word; and in this sense Augustine speaks. In this article only it seems worth noting that St. Thomas openly grants

1723. St. Augustine, De Genesi ad litteram, IV.

that by the same vision whereby God is seen, creatures also are seen according to their own proper reasons; the opposite of which we said seems to us more probable above in disputation 50, chapter 7. Concerning the matter of these Articles and concerning Augustine's mind about it, enough and more than enough has been said by us above in disputation 51.

Quaestio LIX - On the will of the angels

Consequently, what pertains to the will of the angels is to be considered. And first we shall consider the will itself; second, its movement, which is love or dilection.

Concerning the first there are four questions.

Articulus I - Whether in angels there is will

To the first the procedure is as follows. It seems that in angels there is no will. For, as the Philosopher says in De anima III, will is in reason. But in angels there is not reason, but something higher than reason. Therefore in angels there is not will, but something higher than will.

1. Further, will is contained under appetite, as is clear from the Philosopher in De anima III. But appetite is of the imperfect: for it is of that which one does not yet have. Since therefore in angels, especially in the blessed, there is no imperfection, it seems that there is not will in them.
2. Further, the Philosopher says in De anima III that will is a mover of motion: for it is moved by the intelligible appetible. But angels are immobile, since they are incorporeal. Therefore in angels there is no will.

But on the contrary is what Augustine says in the tenth book on the Trinity: that the image of the Trinity is found in the mind according to memory, understanding, and will. But the image of God is found not only in the human mind but also in the angelic mind, since the angelic mind also is capable of God. Therefore in angels there is will.[1724]

I answer that it is necessary to posit will in angels. For the evidence of which it must be considered that, since all things proceed from the divine will, all are in their own mode inclined by appetite to the good, but in different ways. For certain things are inclined to the good by a merely natural aptitude without cognition, as plants and inanimate bodies. And such an inclination to the good is called natural appetite. Certain things, however, are inclined to the good by cognition: those that apprehend by sense have sensitive appetite, while those that apprehend by intellect have will.

...they are inclined along with some cognition, not indeed so that they know the very notion of the good, but they know some particular good, as sense does when it knows sweet and white and the like. The inclination that follows upon this cognition is called the sensitive appetite. But some

1724. St. Augustine, De Trinitate, X (esp. c. 11 - 12).

are inclined to the good with a cognition by which they know the very notion of the good, which is proper to the intellect. And these are most perfectly inclined to the good: not in such a way as to be directed to the good only by another, as are those that are without cognition; nor only to a particular good, as are those in which there is only sensitive cognition; but rather they are inclined to the good itself in its universality. And this inclination is called will (voluntas). Hence, since angels by the intellect (intellectus) know the universal notion of the good itself, it is manifest that in them there is will.

Reply to the first: Reason transcends sense in one way, and intellect transcends reason in another. For reason transcends sense according to a diversity of things known: sense is of particulars, but reason is of universals. And therefore there must be one appetite tending to the universal good, which is owed to reason; and another tending to a particular good, which is owed to sense. But intellect and reason differ as to mode of knowing: for intellect knows by a simple intuition, whereas reason proceeds discursively from one thing to another. Yet by discourse reason arrives at knowing that which intellect knows without discourse, namely the universal. Therefore the same object is proposed to the appetitive power both on the side of reason and on the side of intellect. Hence, in angels, who are only intellectual, there is no appetite superior to will.

Reply to the second: Although the name of the appetitive part is taken from desiring things not had, nevertheless the appetitive part is not extended only to these, but also to many other things. Thus too the name of stone (lapis) is taken from the injury to the foot (laesio pedis), although this is not the only thing that belongs to a stone. Likewise the irascible power is denominated from anger, although in it there are many other passions, such as hope and daring and the like.

Reply to the third: Will is said to move as a movement according as willing is a certain movement, and so is understanding; and nothing prevents there being such a movement in angels, because such a movement is the act of something perfect, as is said in De Anima III.

Conclusion is affirmative. For its proof nothing worthy of note occurs beyond what we said above in Question 19, Article 1, about the reason by which St. Thomas proves that in God there is will; for all those same points serve to prove that there is will also in an angel.

Articulus II - Whether in angels the will differs from the intellect

It is objected that in angels will (voluntas) does not differ from intellect (intellectus). For an angel is more simple than a natural body; but a natural body by its form is inclined to its end, which is its good. Therefore much more so an angel. Now the form of an angel is either the very nature in which he subsists, or the species which is in his intellect. Therefore an angel is inclined to the good by his nature and by the intelligible species. But this inclination to the good pertains to will. Therefore the will of an angel is nothing other than his nature or his intellect.

1. Further, the object of intellect is the true, but the object of will is the good. But the good and the true do not differ really, but only according to the account. Therefore will and intellect do not differ really.

2. Further, a distinction between what is common and what is proper does not diversify powers. For the same visual power is of color and of whiteness. But the good and the true seem to stand as common and proper: for the true is a certain good, namely of the intellect. Therefore the will, whose object is the good, does not differ from the intellect, whose object is the true.

But on the contrary: In angels will is of goods only, but intellect is of goods and of evils; for they know both. Therefore in angels will is other than their intellect.

I answer that will in angels is a certain power or potency (potentia), which is neither their very nature, nor their intellect. And that it is not their nature appears from this: that the nature or essence (essentia) of a thing is contained within the thing itself; therefore whatever extends itself to that which is outside the thing is not the essence of the thing. Hence we see in natural bodies that the inclination which is to the being of the thing is not through something superadded to the essence, but through the matter, which desires to be before it has it, and through the form, which holds the thing in being after it has been brought to be. But the inclination to something extrinsic is through something superadded to the essence, as inclination to place is through heaviness or lightness. And the inclination to make something like itself is through active qualities. But will has an inclination to the good naturally. Hence there only is essence and will the same where the good is wholly contained in the essence of the one willing, namely in God, who wills nothing outside himself except by reason of his goodness. This can be said of no creature, since the infinite good is outside the essence of any caused thing. Hence neither the will of an angel nor of any other creature can be the same as its essence. Likewise neither can it be the same as the intellect of an angel or of a man. For cognition takes place through this, that what is known is in the knower. Hence for that reason the intellect extends itself to what is outside itself inasmuch as that which is outside is by its essence naturally apt to be in it in some way. But will extends itself to that which is outside inasmuch as, by a certain inclination, it in some way tends to the external thing. It belongs to a different power that something have within itself what is outside itself, and that it itself tend to an external thing. And therefore it is necessary that in any creature there be one thing as intellect, and another as will. Not so in God, who has both universal being and universal good in himself; hence both will and intellect are his essence.

Reply to the first: A natural body by its substantial form is inclined to its own being; but to what is external it is inclined by something added, as has been said.

Reply to the second: Powers are not diversified according to a material distinction of objects, but according to a formal distinction, which is attended according to the account of the object. And therefore diversity according to the account of the good and the true suffices for the diversity of intellect and will.

Reply to the third: Because the good and the true are convertible according to the thing, it follows that the good is understood by the intellect under the aspect of the true, and the true is desired by the will under the aspect of the good. Yet the diversity of the accounts suffices to diversify the powers, as has been said.

Conclusion is affirmative; concerning the confirmation of which Cajetan spends many words, which I have judged it worthwhile to pass over; for there is the same common difficulty concerning the intellect and will of angel and of man.

Articulus III - Whether in angels there is free choice

D. In the third way this proceeds. It seems that in angels there is not free choice (liberum arbitrium). For the act of free choice is to choose; but choice cannot be in angels, since choice is an appetite following upon counsel. But counsel is a kind of inquiry, as is said in Ethics III. Angels, however, do not know by inquiring, because this belongs to the discourse of reason. Therefore it seems that in angels there is not free choice.

1. Further, free choice is related to either side. But on the part of intellect there is not in angels anything that is related to either side, because their intellect is not deceived concerning intelligible things that are natural, as has been said. Therefore neither on the part of appetite can free choice be in them.
2. Further, the things that are natural in angels belong to them according to more and less; for in the higher angels the intellectual nature is more perfect than in the lower. But free choice does not admit of more and less. Therefore in angels there is not free choice.

But on the contrary: Freedom of choice pertains to the dignity of man; but angels are more dignified than men. Therefore, since freedom of choice is in men, much more is it in angels.

I answer that some things do not act by any choice, but as it were are acted and moved by others, as an arrow is moved by the archer to its end. But some act by a kind of choice, yet not by a free one, as irrational animals. For who flees the wolf by a certain judgment whereby he esteems it harmful to himself. But this judgment is not free to him, but is implanted by nature. Only that which has intellect can act by a free judgment, inasmuch as it knows the universal notion of the good, from which it can judge this or that to be good. Hence wherever there is intellect, there is free choice. And thus it is clear that there is free choice in angels, even more excellently than in men, as also intellect.

Reply to the first: The Philosopher speaks of choice as it is in man. But just as the estimation of a man in speculative matters differs from the estimation of an angel in this, that one is without inquiry, the other through inquiry; so also in practical matters. Hence in angels there is choice, yet not with the inquisitive deliberation of counsel, but by a sudden acceptance of the truth.

Reply to the second: As has been said, cognition takes place through this, that the things known are in the knower. But it belongs to the imperfection of a thing if there is not in it that which is by nature apt to be in it. Hence an angel would not be perfect in his nature if his intellect were not determined to every truth which he can naturally know. But the act of the appetitive power is through this, that the affection is inclined to an external thing. Now the perfection of a thing does not depend on every thing to which it is inclined, but only on what is superior. And therefore it

does not pertain to the imperfection of an angel if he does not have a will determined with respect to those things which are beneath him. It would pertain, however, to his imperfection if he were indeterminate with respect to that which is above him.

Reply to the third: Free choice is in a more noble mode in higher angels than in lower ones, as also the judgment of the intellect. Yet it is true that freedom itself, insofar as in it there is considered a certain removal of coercion, does not admit of more and less; for privations and negations are not remitted or intensified in themselves, but only by their cause, or according to some added affirmation.

Conclusion is affirmative.

Articulus IV - Whether in angels there is an irascible and a concupiscible

It is objected that in angels there is an irascible (irascibilis) and a concupiscible (concupiscibilis). For Dionysius says, in On the Divine Names IV, that in demons there is irrational fury and insatiable concupiscence. But demons are of the same nature as angels, because sin did not change their nature. Therefore in angels there is an irascible and a concupiscible.

1. Further, love and joy are in the concupiscible; but anger, hope, and fear are in the irascible. But these are attributed to good and evil angels in the Scriptures. Therefore in angels there is an irascible and a concupiscible.
2. Further, certain virtues are said to be in the irascible and in the concupiscible, as charity and temperance seem to be in the concupiscible, but hope and fortitude in the irascible. But these virtues are in angels. Therefore in angels there is a concupiscible and an irascible.

But on the contrary: The Philosopher says in De Anima III that the irascible and the concupiscible are in the sensitive part, which is not in angels. Therefore in them there is not an irascible and a concupiscible.

I answer that the intellectual appetite does not divide by the irascible and the concupiscible, but only the sensitive appetite does. The reason is that, since powers are not distinguished according to a material distinction of objects, but only according to the formal account of the object, if to some power there correspond an object according to a common account, there will not be a distinction of powers according to the diversity of the proper objects that are contained under that common [account]. Just as, if the proper object of some power were the white as white, the visual power would not be distinguished according to the white and black. But it is manifest from what has been said that the object of the intellectual appetite, which is called will, is the good according to the common account of the good. Nor can there be any appetite unless it be divided according to the distinction of certain particular goods, as the sensitive appetite is divided, which regards the good only under a common account or some particular good. Hence, since in angels there is only an intellectual appetite, their appetite is not distinguished into the irascible and the concupiscible, but remains undivided, and is called will.

Reply to the first: Fury and concupiscence are said metaphorically to be in demons; thus also anger is sometimes attributed to God on account of a likeness of effect.

Reply to the second: Love and joy, insofar as they are passions, are in the concupiscible. But insofar as they name a simple act of will, they are also in the intellective part: for to love is to will the good of another, and to rejoice is for the will to rest in something.

[from the preceding question, conclusion and notes]

...in some good possessed. And universally none of these is said of the angels according to passion, as St. Augustine says in City of God IX.[1725]

Reply to the third: Charity, insofar as it is a virtue, is not in the concupiscible, but in the will. For the object of the concupiscible is a good delectable according to sense. But of this sort the divine good is not, which is the object of charity. And the same reason is to be given that hope is not in the irascible: because the object of the irascible is some arduous thing which is sensible, about which there is not hope, which is a virtue, but rather about an arduous divine thing. Temperance, however, insofar as it is a human virtue, is about the concupiscences of sensible delights, which pertain to the concupiscible power; and likewise fortitude is about daring and fears, which are in the irascible. And therefore temperance, insofar as it is a human virtue, is in the concupiscible, and fortitude in the irascible. But in this mode they are not in the angels. For in them there are not passions of concupiscences or of fear and daring, which would have to be regulated by temperance and fortitude. But temperance in them is said insofar as they exhibit their will moderately according to the rule of the divine will. And fortitude in them is said insofar as they firmly carry out the divine will. All of which is done by the will, and not by the irascible and concupiscible.

Notations concerning the article, and the whole question.

The conclusion is: The intellective appetite in the angels is not divided by the irascible and the concupiscible as by two powers, but it is one and the same individual faculty.

St. Thomas does not deny that the faculty of the will in the angels has an act of appetiting, which pertains to the appetitive power, and an act pertaining to the irascible; but he denies that there are diverse faculties. Concerning the rationale of this article, recall what we said above, disputation 9, chapter 3, namely that the practical and the speculative do not constitute diverse faculties according to species, because they pertain to the same faculty according to reality; and varied respects to varied acts under one common account are in the same faculty, or habit according to reality, just as the respects to white and black in the faculty of seeing do not vary the faculties or habits according to species.[1726] The rest of the points worthy of disputation in this question commonly have their difficulty in man and in the angel; about which, God leading the way, when a more opportune time has been found in the matter of the soul, we shall speak more at length: but about the free decision of man, whether freedom be in it, we have said many things above, disputation 68, chapter 1; which, in the same way, are to be understood of the angel.[1727]

1726. See above, disputation 9, chapter 3.

Quaestio LX - On love, or dilection, of the angels

Then there is to be considered the act of the will, which is love or dilection. For every act of the appetitive virtue is derived from love or dilection. And concerning this five things are asked.

Articulus I - Whether in the angels there is natural love or dilection

It is argued that in the angels there is not natural love or dilection.

1. For natural love is divided against intellectual, as is clear from Pseudo-Dionysius, Divine Names, book 4.[1728] But the love of an angel is intellectual. Therefore it is not natural.
2. Further, those things which love by natural love are acted upon more than they act. For nothing has dominion of its nature. But the angels are not acted upon, but act, since they are of free decision, as has been shown. Therefore in the angels there is not natural love or dilection.
3. Further, every dilection is either right or not right. But right dilection pertains to charity; not-right dilection pertains to iniquity. Neither of these pertains to nature. For charity is above nature; iniquity is against nature. Therefore no natural dilection is in the angels.

But on the contrary: Dilection follows cognition. For nothing is loved unless known, as Augustine says in On the Trinity.[1729] But in the angels there is natural cognition.

I answer that it is necessary to posit natural dilection in the angels. For the manifestation of which it must be considered that what is prior is always saved in the posterior. But nature is prior to intellect. For the nature of anything whatsoever is its essence. Whence that which is of nature must be saved also in those that have intellect. Now this is common to every nature, that it have some inclination, which is a natural appetite or love. Yet this inclination is found diversely in diverse natures, in each according to its mode. Whence in an intellectual nature there is found a natural inclination according to the will; in a sensitive nature according to the sensitive appetite; while in a nature lacking cognition, according to the order of nature to something. Whence, since an angel is an intellectual nature, it is necessary that in his will there be natural dilection.

Reply to the first: Intellectual love is divided against natural, which is solely natural insofar as it is of a nature which does not add beyond the notion of nature the perfection of sense or of intellect.

Reply to the second: All the things that are in the whole world are acted upon by something other than the first agent, which acts in such a way that it is in no way acted upon by another; in which there is the same nature and will. And therefore it is not unfitting if the angel be acted upon insofar as the natural inclination is indited to him by the author of his nature. Yet he is not so acted upon that he does not act, since he has a free will.

1727. See above, disputation 68, chapter 1.
1728. Pseudo-Dionysius, De divinis nominibus, book 4.
1729. St. Augustine, De Trinitate.

Reply to the third: Just as natural cognition is always true, so natural dilection is always right, since natural love is nothing other than the inclination of nature given by the author of nature. To say, then, that the inclination of nature is not right, is to derogate from the author of nature. Yet the rectitude of natural dilection is one thing, and the rectitude of charity and of virtue is another, because one rectitude is perfective of the other: just as also the truth of natural cognition is one thing, and the truth of infused or acquired cognition is another.

Notations concerning the article.

The conclusion is: In the will of the angel there is natural dilection. Concerning which conclusion and the doctrine of the article, it is to be noted first that St. Thomas here treats of dilection which is an elicited act of the will: for he speaks of the angel's natural inclination according to the will, about which he had disputed in the preceding question; but about the angel's will he teaches that it is borne also naturally to its object, and he calls this operation natural love. Now the natural love of the will is said to be that which is after the mode of nature, that is, necessary and determined in some way, as nature is in its operation; not indifferent to either part, which is proper to the will. For the will is either free; in which respect St. Thomas, I - II, q.10, a.1, teaches that the will wills some things naturally, like sense and life: that is, necessarily and in some determinate way, as we shall explain more abundantly in that place. Moreover, this natural love is distinguished from elective love: for the elective is free and indifferent to either side; the natural, however, is necessary and determined to one part. And since in an act of the will there can be a twofold necessity, as we shall say in that place: one which they call as to exercise, when the will so loves or operates that it cannot not love or operate; the other which they call as to specification, when the will so loves that it cannot have hatred, or so hates that it cannot love: Cajetan rightly warns, in his commentary on St. Thomas, that here he is teaching only this universally, that there is some act of love natural, that is, necessary, in the will: but whether it be necessary as to exercise, or rather as to specification, he does not define. For that there be in the angel some act of natural love suffices that it be necessary as to specification.[1730]

Next, upon the reasoning of St. Thomas in this article, Cajetan spends many things which there is no need to repeat. This, however, is to be observed: by that reasoning it is proved not only that in the angel there is an elicited act of love, but also that some elicited act is natural: because where what is posterior is, there is always what is prior. But to love naturally and necessarily is something prior to loving from choice. Now by what rationale the will of an angel be borne to something naturally, that is, necessarily as to specification; and whether toward some object it can be borne naturally, that is, necessarily as to exercise - about this one must philosophize in the same way as about the human will: but about this we shall treat in the Prima Secundae in that question.

1730. Cajetan, Commentary on the Summa of St. Thomas, ad loc.

Articulus II - Whether in the angels there is elective dilection

To the second we proceed thus. It seems that in the angels there is not elective dilection. For elective dilection seems to be rational love, since choice follows counsel, which consists in inquiry, as is said in Ethics II. But rational love is divided against intellectual, which is proper to the angels, as is said in book 4 of the Divine Names. Therefore in the angels there is not elective dilection.[1731]

1. Further, in the angels there is nothing but natural cognition besides infused cognition, since they do not discourse from principles to draw conclusions. And thus, with respect to all the things which they can know naturally, they are disposed as the intellect is to first principles which it can know naturally. But dilection follows cognition, as was said. Therefore in the angels, besides gratuitous dilection, there is only natural dilection. Therefore not elective.

But on the contrary: By nature neither do we merit nor demerit. But the angels by some dilection of theirs do merit or demerit. Therefore in them there is some elective dilection.

I answer that in the angels there is a certain natural dilection, and a certain elective. And natural dilection in them is the principle of the elective; because that which pertains to what is prior always has the character of a principle. Hence, since nature is the first thing that is in anything whatsoever, it is necessary that that which pertains to nature be a principle in any order. And this appears in man as to the intellect and as to the will. For the intellect knows principles naturally; and from this cognition there is caused in man the science of conclusions, which are not known naturally by man, but through intention or teaching. Similarly, in the will the end ought in this way to follow the principle in the intellect, as is said in Physics II. Hence the will naturally tends to its ultimate end: for every man naturally wills beatitude. And from this natural will all other volitions are caused, since whatever a man wills, he wills for the sake of the end. Therefore the dilection of the good which a man naturally wills as an end is natural dilection; but the dilection derived from this, which is of the good that is loved for the sake of the end, is elective dilection.

The will so loves that it cannot have hatred, or so hates that it cannot love: rightly does Cajetan warn in his commentary that St. Thomas here teaches only in general that some act of love is natural, that is, necessary to be in the will; but whether it is necessary as to exercise, or rather as to specification, he does not define: for that in an angel there be some act of love that is natural, it suffices that it be necessary as to specification.

Next, as to St. Thomas's reasoning in this article, Cajetan expends much which there is no need to repeat: only this is to be observed, that by that reasoning it is proved not only that there is in the angel an elicited act of love, but also that some elicited act is natural: because where there is what is posterior, there is always what is prior; but to love naturally and necessarily is something prior to loving by choice. By what account, however, the angel's will is borne naturally toward something,

1731. Ethics II; Pseudo-Dionysius, De divinis nominibus, book 4.

that is, necessarily as to specification; and whether it can be borne naturally toward some object, that is, necessarily as to exercise, one must philosophize in the same way as about the human will; about the latter we shall treat in the First of the Second Part, question 10.

Whether in angels there is elective love.

Objicitur. It seems that in angels there is not elective love. For elective love seems to be rational love, since choice follows counsel which consists in inquiry, as is said in Ethics II. But rational love is divided against intellectual love, which is proper to angels, as is said in On the Divine Names, book 4. Therefore in angels there is no elective love.

1. Besides, in angels there is only natural cognition apart from infused cognition, because they do not proceed discursively from principles to acquire conclusions; and thus for all the things they can naturally know they are disposed as the intellect is to first principles, which it can naturally know. But love follows cognition, as was said. Therefore in angels, besides gratuitous love, there is only natural love. Therefore not elective.

But on the contrary: Naturally we neither merit nor demerit. But by some of their love angels merit or demerit. Therefore in them there is some elective love.

I answer: In angels there is a certain natural love (dilectio), and a certain elective love. And natural love in them is the principle of the elective, because what pertains to what is prior always has the account of a principle. Hence, since nature is what is first in each thing, it must be that that which pertains to nature be a principle in each. And this is evident in man both as to the intellect and as to the will. For the intellect knows first principles naturally; and from this cognition there is caused in man the science of conclusions, which are not known naturally by man, but through intention or teaching. Similarly, in the will the end in this way has the condition of a principle in the intellect, as is said in Physics II. Hence the will naturally tends to its ultimate end: for every man naturally wills beatitude. And from this natural will all other volitions are caused, since whatever a man wills, he wills for the sake of the end. Therefore the love of the good which a man naturally wills as an end is natural love; but the love derived from this, which is of the good that is loved for the sake of the end, is elective love.

This, however, stands differently on the side of the intellect and of the will. For, as was said above, the intellect's cognition is according as the things known are in the knower. But it is from the imperfection of intellectual nature in man that his intellect does not straightway have naturally all intelligibles, but certain ones, by which he is in a way moved to others. But the act of the appetitive power is conversely according to the order of the one appetiting to things: some of which are good in themselves, and therefore appetible in themselves; others, however, have the character of goodness from an order to another, and are appetible for the sake of another. Hence, it is not from an imperfection of the one appetiting that he should naturally desire something as an end, and something by choice as ordered to the end. Therefore, since intellectual nature in angels is

perfect, there is found in them only natural cognition, not ratiocinative; but there is found in them both natural and elective love. These things, however, are said passing over those which are above nature; for for those, nature is not a sufficient principle. About these, below will be said.

Reply to the first: Not every elective love is rational love, according to the division by which rational love is set against intellectual. For that love is called rational which follows ratiocinative cognition. But not every choice follows discourse of reason, as was said above when treating of free choice, but only the choice of man. Hence reason is not required.

Reply to the second: The response is clear from what has been said.

Notationes circa Articulum.

The conclusion of the Article is affirmative. Around that doctrine, however, it must be noted that by the name of natural love St. Thomas understands the love of the end; by the name of elective, the love of the means, which are of course subordinated to the end. Moreover, by the name of end he does not understand any end whatever, but beatitude universally, toward which any created will is borne necessarily as to specification, because no one can have it in hatred. Other ends, however, the created will does not all love necessarily as to specification: because in many of those, whether they be desired under the ratio of the honest or under the ratio of the delectable, there can appear the ratio of evil on account of which they can be had in hatred, even in the very work of virtue. I do not say that the very ratio of honesty can be had in hatred; but the work itself, which is desired under the ratio of honesty, can be had in hatred. Which objects are such that in themselves, and as such, they cannot be had in hatred, and thus are loved necessarily as to specification, we shall say in I-II, in that question 10, article 1. And elective love is called by St. Thomas the love of the means, which are useful for some end. But if it be so understood that choice be taken in its proper and primary signification, then truly elective love can only be of means, and not of one only, but among several, as we shall show in I-II, q.13, a.6; for choice, as choice, must be by consultation the choice of one means preferred to others. But if by the name of elective love we understand free love, then elective love will be whatever willing of a singular end of the honest or of the delectable, which is not desired necessarily as to exercise nor as to specification: although in a certain way this will is wont to be called of the means, insofar as the will is said to desire all things for the sake of the ultimate end of beatitude, as we shall explain according to St. Thomas's mind in I-II, q.1, a.6. But Alexander, as is gathered from II, q.30, memb.1, and q.31, memb.3, calls natural love in angels the love of something as fitting; choice, however, he calls the love of one rather than another.[1732]

Next, in this article it could be disputed why the angel wills one thing for the sake of another, and yet does not understand one for the sake of another: about this matter, however, we shall treat in I-II, q.1, a.4, where we shall elucidate the opinion of St. Thomas handed down in this present article.

1732. Alexander of Hales, Summa, II, q.30, memb.1; q.31, memb.3.

Articulus III - Whether an angel loves himself by natural love and by elective love.

Objicitur. It seems that an angel does not love himself by natural and by elective love. For natural love is of the end; as indeed it is said, natural love is of the end, but elective love is of the things that are for the end. But the same cannot be both an end and a for-the-end with respect to the same. Therefore there cannot be of the same both natural and elective love.

1. Besides, love is a uniting and concreting power, as Pseudo-Dionysius says in On the Divine Names, book 4.[1733] But union and concretion is of different things reduced into one. Therefore an angel cannot love himself.
2. Besides, love is a certain motion. But every motion tends into another. Therefore it seems that an angel cannot love himself by natural love nor by elective.

But on the contrary: The Philosopher says in Ethics IX that the lovable things which are toward another come forth from the lovable things which are toward oneself.

I answer: Since love is of the good, and the good is in substance and in accident, as is evident in Ethics I, something is loved in a twofold way. In one way as a subsisting good. In another way as an accidental or inherent good: that indeed is loved as a subsisting good which is so loved that someone wills good to it; but as an accidental or inherent good is loved that which is desired for another. Thus, science is loved, not that it be good in itself, but that it be had. And this mode of love some have named concupiscence, the former friendship.

Now it is manifest that in things lacking cognition each thing naturally seeks to attain that which is good for itself, as fire seeks the place above. Whence both the angel and man naturally seek their own good and their own perfection. And this is to love oneself. Whence naturally both angel and man love themselves, insofar as by natural appetite they desire some good for themselves. But insofar as they desire some good for themselves by choice, so far they love themselves by elective love.

Reply to the first: An angel or a man does not love himself by natural and by elective love according to the same, but according to different respects, as has been said.

Reply to the second: Just as it is more to be one than to be made one, so love is more one toward oneself than toward diverse things which are united to him. But therefore Pseudo-Dionysius used the name of union and concretion, so as to show the derivation of love from oneself to others, as unity is derived from the one.

Reply to the third: Just as love is an action abiding in the agent, so it is a motion abiding in the lover: not however tending of necessity into something else, but it can be reflected back upon the lover, so that he love himself, just as cognition is reflected upon the knower, that he know himself.

Notationes circa Articulum.

1733. Pseudo-Dionysius, De divinis nominibus, book 4.

The conclusion is that in both ways the angel loves himself. This conclusion St. Thomas thus explains: since to love is to will good to someone, from Aristotle, Rhetoric II, c.4, and from the same St. Thomas, I-II, q.26, a.4, and Cajetan there: it follows, as Cajetan most excellently noted, and as St. Thomas indicates in both places, that in every act of love there is a twofold respect: one toward the subsisting thing to which we will good; the other toward the good desired. With respect to the subsisting thing to which we will good, it is called love of friendship - understand, if it be a rational thing (for irrational things we do not love except with the love of concupiscence, as I showed in book 3 De Adoratione, disp. 1, c. 6, from Aristotle, Ethics VIII, c.2 and 7, and St. Thomas, Contra Gentiles I, c.91); with respect to the good which we will to someone, it is called love of concupiscence. That both respects are in the same act of love is evident from this, because the very concupiscence of the good is referred to some subsistent thing to which we will that good, and conversely there is no respect of friendship toward a subsistent thing unless in the concupiscence itself of the good.

Since these things are so, it follows that an angel can love himself with natural love and with elective: because he can will to himself some good by natural love and appetite, that is, so necessarily that he cannot not will it to himself, that is, hate it - thus he loves for himself beatitude, grace, and other things of this sort - and he can will to himself some good, not naturally but by choice, that is, so freely that in no way necessarily he desires it.

Cajetan notes, and well, that it is not only possible to love, that is, by concupiscence, some accident of a subsistent (as we love health for ourselves or for a friend), but also to love for ourselves or for another a distinct supposit thing, such as money, wine, and other things of this sort, which can be joined to us by some operation - of which sense I-II, q.4, a.1 treats at length - and in this sense he interprets St. Thomas in this article: from whose doctrine Aristotle in Ethics I, c.6, teaches that something can be loved in a twofold way, both a true subsistent, to which we will some good, and some other accidental good which we will to someone; understanding by accidental good even a thing that is a distinct supposit, to be conjoined, however, only accidentally by some operation.

Then from the doctrine premised of the love of friendship and of concupiscence it is gathered in what way the angel's love by which he loves himself is natural and elective. For if it be considered as love of friendship, it is always natural love, because natural love is that which is necessary in some way, that is, either as to exercise or as to specification: but the love by which the angel loves insofar as it is love of friendship is necessary as to specification, because he so loves himself that he cannot hate himself; "for no one ever hated his own flesh," says Paul to the Ephesians; for if some inflict on themselves evils of death or of punishment, which seems to induce some hatred toward themselves, they do not do so from displeasure at themselves, and thus they do not pursue themselves with the hatred of enmity, but rather they love themselves, desiring to free themselves from one evil by another greater.

But if the love by which the angel loves himself be considered as love of concupiscence, namely insofar as it is referred to the very thing and to the good which they desire for themselves, it can be natural and elective, according to the diversity of the things which the angels desire for themselves, in keeping with what in the preceding article was noted.

Moreover, there are some Thomists who think that the angel always and necessarily loves himself, not only as to specification, but even as to exercise - just as, according to some men's view, he always and necessarily understands himself. And this latter among them is the more approved, which also Ferrarensis taught on III Contra Gentiles, c.109. For evidence of this, the reason is manifest: as we shall say in I-II, ... then the will cannot fail to be in some act, but is borne of necessity as to its exercise, whenever in the very act there does not appear a ratio of evil. But an angel can apprehend a ratio of evil, or of a lesser good, in the very act of loving himself - namely, that he should love God with his whole heart, being even forgetful of himself. Add that in other objects which he loves for himself as good, nothing is found besides God clearly seen, from the love of whom he cannot cease: and so the source of the love of friendship by which the angel loves himself is not distinct from the love of concupiscence by which he desires some good for himself; whence it follows that no act of love of himself is necessary as to exercise, except the love by which he loves for himself God clearly seen; although of necessity it would follow, as to exercise, that he would love for himself some good - this at least still remains certain to me in these matters. Whether he always understands himself we said above, disputation 129, chapter 3.

Articulus IV - Whether an angel by natural love loves another angel as himself.

Ad quartum sic proceditur. It seems that one angel does not by natural love love another as himself. For love follows cognition. But one angel does not know another as himself. For he knows himself by his own essence, but another by that other's likeness, as was said above. Therefore it seems that one angel does not love another as himself

1. Besides, a cause is greater than the caused, and a principle than that which is derived from the principle. But the love which is toward another is derived from that which is toward oneself, as the Philosopher says in Ethics IX. Therefore an angel does not love another as himself, but himself more.
2. Besides, natural love is of ali... whose [text breaks].

Deinde note, with good reason, by Cajetan, that not only can something be loved with love insofar as it is concupiscence (concupiscence, as it were, being an accident of some subsistent supposit), as we love health for ourselves or for a friend; but also a single thing numerically distinct in supposit can be loved for us or for another, as we love money, wine, and other such things, insofar as they can be conjoined to us by some mediating operation, as we shall explain more fully at I - II, q. 4, a. 1; and in this sense he interprets St. Thomas in this article, since from the doctrine of Aristotle, Ethics I, c. 6, he teaches that something can be loved in two ways, both as a subsistent

thing to which we will some good, and as an accidental good which we will for someone: understanding by accidental good even a thing numerically distinct in supposit, yet to be conjoined accidentally by some mediating operation.[1734][1735]

Then from the foregoing doctrine on love of friendship and of concupiscence it is gathered in what way the angel's love by which he loves himself is natural and elective: for if it be considered as love of friendship, it is always natural love, because natural love is that which is necessary in some way, that is, either with respect to exercise or with respect to specification. Now the love by which the angel loves himself, insofar as it is love of friendship, is necessary with respect to specification, because he loves himself in such a way that he cannot hate himself: for no one ever hated his own flesh, as Paul says to the Ephesians (Eph. 5). For if some inflict on themselves the evil of death or of punishment, which seems some indication of hatred toward themselves, they do not do so from displeasure at themselves, and thus they do not pursue themselves with the hatred of enmity, but rather they love themselves, desiring to free themselves from one evil by another greater.

But if the love whereby angels love themselves be considered as love of concupiscence, namely insofar as it is referred to the thing itself and to the good which they desire for themselves, it can be natural or elective according to the diversity of the things which the angels desire for themselves, according to what was noted in the preceding article.

Moreover, there are some Thomists who judge that an angel always and necessarily loves himself, not only with respect to specification, but also with respect to exercise, just as he always and necessarily understands himself, according to the sentence and opinion of some. Yet the contrary is more probable to me - which also the Ferrariensis taught upon III Contra Gentiles, c. 109, in the section "Ad evidentiam" - and the reason is manifest. For, as we shall say at I - II, q. 4, a. 1, then the will cannot cease from some act, but is of necessity carried as to the exercise, whenever in the very operation and exercise the ratio of evil cannot be apprehended. But an angel can apprehend the ratio of evil, or of a lesser good, in the very act of loving himself, namely, that he love God with his whole heart, even to the forgetfulness of himself. Add that, as to other objects which he loves for himself as goods, there is found nothing, except God clearly seen, from the love of which he cannot cease; and therefore, since the love of friendship by which the angel loves himself is not distinct from the love of concupiscence by which he desires some thing as a good for himself, it follows that there is no act of self-love necessary as to exercise, except the love by which he loves for himself God clearly seen - although it would be necessary as to exercise to love some good for himself, this or that - which, however, is still not sufficiently certain to me, whether indeed he always understands himself; we said above, disp. 219, cap. 3.[1736][1735]

1735. St. Thomas Aquinas, Summa theologiae, I - II, q. 4, a. 1.

Whether an angel by natural love loves another angel as himself.

But on the contrary: Because that which is found in all things, even in those lacking reason, seems to be natural. But as it is said in Eccles. 13, "Every animal loves its like." Therefore an angel by natural love loves another as himself.

I answer that, as has been said, the angel and man naturally love themselves. Now that which is one with something is that very thing. Hence each thing loves that which is one with itself. And indeed, if it be one with itself by natural union, it loves that by natural love; but if it be one with it by a non-natural union, it loves it by a non-natural love. Thus a man loves his fellow citizen by the love of political virtue, but his blood relative by natural love, insofar as he is one with him in the principle of natural generation. Now it is manifest that that which is one with something in genus or species is one by nature. And therefore by natural love each thing loves that which is one with it according to species, insofar as it loves its own species. And this also appears in those which lack cognition. For fire has a natural inclination to communicate its form to another, which is its good; just as it naturally inclines to seek its own good, to be aloft. Thus therefore it must be said that one angel loves another by natural love, insofar as he agrees with him in nature. But insofar as he agrees with him in certain other things, or even insofar as he differs from him according to certain other things, he does not love him by natural love.

Reply to the first: That phrase "as himself" can in one way determine cognition or love on the part of the known and loved; and thus he knows another as himself, because he knows another to be, just as he knows himself to be. In another way it can determine cognition and love on the part of the lover and knower; and thus he does not know another as himself. For he knows himself through his own essence, but another not through his essence. And similarly he does not love another as himself, because he loves himself through his own will, but does not love another through that other's will.

Reply to the second: The word "as" does not designate equality, but likeness. For since natural love is founded upon natural unity, that which is less one with it, it naturally loves less. Hence naturally it loves more that which is one in number than what is one in species or in genus. But it is natural that it have like love toward another as toward itself, as to this, that just as it loves itself insofar as it wills a good for itself, so it love another insofar as it wills his good.

Reply to the third: Natural love is said to be of the end itself, not as of that to which someone wills a good, but as of the good which one wills for oneself, and consequently for another, insofar as he is one with oneself. Nor can this natural love be removed even from evil angels, so that they would not have a natural love toward other angels, insofar as they communicate with them in nature. But they hate them insofar as they are diversified according to justice and injustice.

Conclusion: One angel loves another by natural love, insofar as he agrees with him in nature. But insofar as he agrees with him in other things, and insofar as he differs from him, he does not love him by natural love, but by elective love. The doctrine of this article is from the preceding.

Articulus V - Whether an angel by natural love loves God more than himself.

To the fifth, the procedure is thus. It seems that an angel by natural love does not love God more than himself. For, as has been said, natural love is founded upon natural union. Therefore by natural love an angel loves God less than himself, or even than another angel.

1. Besides, that on account of which a thing is [loved], that is itself loved more. But by natural love each one loves another on account of himself. For each thing loves something insofar as it is a good for itself. Therefore by natural love an angel does not love God more than himself.
2. Besides, nature reflects back upon itself. For we see that every agent naturally acts for the conservation of itself. But nature would not be reflected back upon itself if it tended toward another more than toward itself. Therefore by natural love the angel does not love God more than himself.
3. Besides, this seems to be proper to charity, that someone love God more than himself. But the love of charity is not natural in angels, but is poured forth in their hearts by the Holy Spirit who is given to them, as St. Augustine says in the City of God, book 12. Therefore angels do not love God by natural love more than themselves.[1737]
4. Besides, natural love always remains as long as the nature remains. But to love God more than oneself does not remain in a sinning angel or man. For (as Augustine says in the City of God, book 14) two loves made two cities: the earthly, namely love of self even to the contempt of God; the heavenly, however, love of God even to the contempt of self. Therefore to love God above oneself is not natural.[1738]

But on the contrary, all the moral precepts of the Law are of the law of nature. But the precept of loving God above oneself is a moral precept of the Law. Therefore it is of the law of nature. Therefore by natural love an angel loves God above himself.

I answer that, some have said that an angel by natural love loves God more than himself by love of concupiscence, because namely he more desires for himself the divine good than his own good; and in a certain way by love of friendship, insofar as namely the angel naturally wills that God have a greater good than he himself has. For he naturally wills that God be God, but that he himself have his own proper nature.

But simply speaking, by natural love he loves himself more than God, because more intensely and more principally he naturally loves himself than God. But the falsity of this opinion plainly appears if one considers in natural things toward what things are naturally moved. For natural inclination in those things which are without reason, and in those which are according to reason, manifests a natural inclination in the will of an intellectual nature. Now in natural things, that which, according to nature, is what it is, is principally another's, and is more inclined into that of

1737. St. Augustine, De civitate Dei, XII.
1738. St. Augustine, De civitate Dei, XIV.

which it is, than into itself. And this natural inclination is shown from those things which are naturally done. For as a thing is naturally acted upon, so is it apt by nature to be acted upon, as is said in the Physics, book 2. We see that naturally a part exposes itself to the preservation of the whole body. Thus the hand exposes itself to a blow without deliberation for the preservation of the whole body. And because reason imitates nature, we find such an imitation in the political virtues. For it is the mark of a virtuous citizen to expose himself to the danger of death for the preservation of the whole commonwealth. And if man were a natural part of that city, this inclination would be natural to him. Therefore, since the universal good is God Himself, and under this good there is contained also the angel and man and every creature - for every creature naturally, according to that which it is, belongs to God - it follows that by natural love even the angel and man love God more and more principally than themselves; otherwise, if naturally they loved themselves more than God, it would follow that natural love was perverse, and that it would not be perfected by charity, but destroyed.

Reply to the first: That reasoning holds in those things which are divided equally, because one is not the whole of the other, nor the whole account of the other's existence (*esse*) and goodness. But in those where the one is the whole account of the existence and goodness of the other, that other is naturally loved more than itself, as has been said, namely that each part naturally loves the whole more than itself. And every singular thing naturally loves the good of its species more than its own singular good. But God is not only the good of one species, but is the universal good simply. Whence each thing in its own way naturally loves God more than itself.

Reply to the second: When it is said that God is loved by the angel insofar as He is good, if the phrase "insofar as" designates an end, thus it is false. For he does not naturally love God on account of his own good, but on account of God Himself. But if it designates the reason of love on the side of the beloved, thus it is true. For there would not be in the nature of any being that it should love God, unless from the fact that each thing depends on the good which is God.

Reply to the third: Nature is reflected upon itself not only as regards that which is singular to it, but much more as regards what is common. For each thing is inclined to preserve not only its own individual, but also its species; and it has a much greater natural inclination into that which is the universal good simply.

Reply to the fourth: Insofar as God is the universal good, on which every natural good depends, He is loved by natural love by each thing. But insofar as He is the good that beatifies all naturally with a supernatural beatitude, thus He is loved by the love of charity.

Reply to the fifth: Since in God there is one and the same being, substance, and common good, all who see the very essence of God are moved by the same motion of love toward the very essence of God, as it is distinct from other things, and as it is a certain common good. And because, insofar as it is the common good, it is naturally loved by all, whoever sees Him through His essence cannot but love Him. But those who do not see His essence know Him through certain particular effects

which sometimes are contrary to their will. And thus in this way they are said to hate God, whereas nevertheless insofar as He is the common good of all, each thing naturally loves God more than itself.

Notationes circa Articulum.

The conclusion is: An angel naturally loves God even with love of friendship (*amicitia*) more than himself. This conclusion, in my judgment, seems to be understood in two ways in St. Thomas. In one way, such that the angel loves God more than himself either by a supernatural love through charity, insofar as he loves Him as the end of beatitude; or by a non-supernatural love, insofar as he loves Him as the universal good upon which all things depend: and by both loves the angel is said to love God naturally, that is, by way of nature, or necessarily as to the specification, for the reason set forth above. In another way, the conclusion seems to be understood, so as to distinguish the love of charity, which is of the supernatural order and is referred to God insofar as He is the object of beatitude, from the love of the natural order, which is borne toward God as He is the universal good upon which all things depend; and in both ways the angel loves God more than himself. Moreover, as regards the twofold mode of the love of friendship toward God, as He is the end and as He is the universal good of all, and as He is the end of beatitude, whether it is necessary thus to distinguish, we shall say in I - II, q. 109, a. 3.[1739] But whether or not we make that distinction, we must never concede any act of love of friendship toward God without any aid of the grace of God, as will there be proved; nor indeed does St. Thomas in this article, in the solution, concede that in the demons there remains any act of friendship toward God: for this would seem too absurd. Rather, he says only that demons or men can hate God by reason of the effects which they experience as contrary to themselves; he adds, however, that insofar as He is the common good of all, each thing naturally loves God more than itself: that is, the demon or man cannot hate God according to Himself, because he naturally loves Him according to Himself, that is, necessarily, at least as to the specification, as was set out above: from which it does not follow that the demon now in any way remains in the love of friendship toward God.

From the authors, moreover, whom we shall adduce in I - II, q. 109, a. 3,[1740] asserting that God is loved by the angel naturally with love of friendship, insofar as He is our highest good, all say that God is loved by the angel by this love more than the angel loves himself, except St. Bonaventure, who makes no mention of this matter. Furthermore, in order that we understand how it can be true that an angel can love God more than himself by this love of friendship, it must be noted that in the same act of love there is that twofold respect of friendship and of concupiscence, as we noted in the second article. Moreover, as Aristotle and St. Thomas, there cited, say, the things that are loved with love of friendship are said to be loved per se; but the things that are loved with love of concupiscence are said to be loved per accidens. Wherefore, if they be compared with one another, although the respect of love is not the same, it must be said that those things which we love with love of friendship are loved more than those which we love with love of concupiscence. And for this reason alone the angel loves God more than himself when he loves God with love of friendship.

1739. I - II, q. 109, a. 3.
1740. I - II, q. 109, a. 3.

And I understand this whether the love of friendship be called natural or supernatural. Yet this does not hinder that an angel or man may love God for himself as a good for himself; then, however, he will love himself more than God, because he will love himself with love of friendship, but God as a thing desired with love of concupiscence. Nor in this love is there a perverse mind, or a preposterous order; otherwise to love for ourselves beatitude and the clear vision of God, or to hope for it, would be against the due order. For in this love we are ourselves the object of the love of friendship; but God, as our good to be united to us by a mediating operation, is the object of the love of concupiscence. And no one will dare to condemn such an affection: because we must necessarily concede that in some love the angel and man love themselves more than God. But as to the example used by the Holy Doctor to prove that an angel loves God more than himself - namely the example of the arm, which is inclined more to the defense of the head than of itself - we shall speak in I - II, disputation 26, chapter 5.

Finally, it is to be noted that some more recent theologians have thought that God, even obscurely known by the angel, is loved naturally, that is, necessarily not only as to the specification, but also as to the exercise - just as also concerning the love by which the angel loves himself, they philosophize, as we have seen above. But whether we speak of the love of friendship or of concupiscence toward God, there is no reason why we should affirm that God is loved necessarily as to the exercise, unless He be clearly seen: because in the exercise of such love the account of every good cannot appear: which indeed would have been altogether necessary, in order that the angel love God necessarily as to the exercise, as was said in art. 3.

Quaestio LXI - On the production of the angels into the existence of nature

After the things that have been set forth concerning the nature of the angel and their cognition and will, there remains to be considered their creation; either universally about their origin. And this consideration is tripartite.

Articulus I - Whether the angels have a cause of their existence

Ad primum sic proceditur. It seems that the angels do not have a cause of their existence. For of those things which are created by God, it is treated in Genesis, chapter one. But no mention is made there of the angels. Therefore the angels were not created by God

1. Moreover, the Philosopher says in Metaphysics VIII that if some substance is form without matter, immediately through itself it is being and one, and it does not have a cause which makes it being and one. But angels are immaterial forms, as was shown above. Therefore they do not have a cause of their existence.
2. Moreover, whatever is made by some agent, by the fact that it is made, receives form from it. But angels, since they are forms, do not receive a form from any agent. Therefore angels do not have an efficient cause.

But on the contrary is what is said in Psalm 148: "Praise Him, all His angels"; and afterwards it is added: "for He commanded, and they were created."

I answer that, it is necessary to say that both the angels and everything that is other than God was made by God. For God alone is His own existence (*esse*); but in all others the essence (*essentia*) of a thing and its existence differ, as is clear from the foregoing. And from this it is manifest that God alone is being through His essence, but all other things are beings by participation. Now whatever is by participation is caused by that which is by essence, just as whatever is ignited is caused by fire. Whence it is necessary that angels be created by God.

Reply to the first: St. Augustine says in book 11 of the City of God that the angels were not omitted in that first creation of things, but are signified by the name of "heaven," or even of "light." And they were either omitted, or signified by the names of corporeal things, because Moses was speaking to a rude people, who as yet could not grasp the nature of incorporeal things. And if it had been expressly stated to them that there are things above every corporeal nature, it would have been for them an occasion of idolatry, to which they were prone, and from which Moses especially intended to call them back.

Articulus II - Whether the angel was produced by God from eternity

Reply to the second: Substances which are subsisting forms do not have any formal cause of their existence (*esse*) and of their unity, nor an agent cause through a transmutation of matter from potency (*potentia*) to act (*actus*), but they have a cause producing the whole substance. And by this the solution to the third is clear.

Note on the Article. The conclusion is affirmative. The reason by which St. Thomas proves it is that God alone is his own existence (*esse*), and thus he alone is being by essence (*essentia*); whereas other beings, because they are not their existence, are beings by participation. But every being by participation ought to be made by that which is such by essence. In this line of reasoning the difficult point is how, in created things, existence is distinguished from essence; about which there is to be a disputation in III, q. 17. Therefore by a much easier reasoning this catholic position can be proved from the doctrine handed down above in disputation 19, where we established that there must be some being not having its cause; and also from what we said in disputation 25, that infinity by essence - that is, to lack a cause of oneself - agrees to God alone.

It is asked whether the angel was produced by God from eternity. And it proceeds thus.

1. It seems that the angel was produced by God from eternity. For God is the cause of the angel by his existence; for he does not act by anything added to his essence. But his existence is eternal. Therefore from eternity he produced the angels.
2. Further, whatever sometimes is and sometimes is not, is subject to time. But the angel is above time, as is said in the Book of Causes. Therefore the angel is not sometimes and sometimes not, but always.

3. Further, St. Augustine proves the incorruptibility of the soul from this, that through the intellect it is capable of truth. But as truth is incorruptible, so it is eternal. Therefore the intellectual nature, and that of the soul and of the angel, is not only incorruptible, but also eternal.

But on the contrary: It is said in Proverbs 8, in the person of begotten Wisdom: "The Lord possessed me in the beginning of his ways, before he made anything at the beginning." But the angels were made by God, as has been shown. Therefore there was a time when the angels were not.

I answer: One must say that God alone - the Father, and the Son, and the Holy Spirit - is from eternity. For the catholic faith holds this without doubting, and whatever is contrary is to be refuted as heretical. Likewise God so produced creatures that he made them from nothing, that is, after there had been nothing.

Reply to the first: The existence of God is his very willing. Therefore, from the fact that God produced the angels and the other creatures by his existence, it does not follow that he did not produce them by his will. But the will of God is not of necessity disposed with respect to the production of creatures, as was said above. And therefore he produced both what he willed, and when he willed.

Reply to the second: The angel is above time which is the number of the motion of the heavens, because he is above every motion of corporeal nature. He is not, however, above time which is the number of the succession of his being after not being, and also which is the number of the succession that exists in his operations. Whence St. Augustine says in book 8 On Genesis ad litteram that God moves the spiritual creature through time.

Reply to the third: Angels and intellective souls, from this very fact that they have a nature by which they are capable of truth, are incorruptible. But they did not have this nature from eternity; it was given to them by God when he willed. Whence it does not follow that the angels are from eternity.

Conclusion. The conclusion is negative, and it is of faith, as is clear from the things we have said in disputation 178, chapter 1, and as we shall say in the following disputation.[1742]

Articulus III - Whether the angels were created before the corporeal world

It is objected first: It seems that the angels were created before the corporeal world. For St. Jerome, on the Epistle to Titus, says: "Six thousand years of our time are not yet fulfilled. And what lengths of time, and what origins of ages, are we to think there were, in which the Angels, Thrones,

1742. Vazquez cross-references his own disputations (disp. 178, cap. 1; and the sequens disputatio).

Dominations, and the other orders served God?"[1743] St. John Damascene also says in book 2: "Certain people say that before every creation the angels were begotten, as the Theologian Gregory says: He first conceived the angelic and celestial powers, and the conception was his work."[1744]

1. Further, the angelic nature is a middle between the divine nature and corporeal nature. But the divine nature is from eternity, and corporeal nature is in time. Therefore the angelic nature was made before the creation of time, and after eternity.
2. Further, the angelic nature is further distant from corporeal nature than one corporeal nature is from another. But one corporeal nature was made before another. Whence also the six days of the production of things are described in the beginning of Genesis. Therefore much more was the angelic nature made before all corporeal nature.

But on the contrary: It is said in Genesis 1: "In the beginning God created heaven and earth." But this would not be true if he had created anything before these. Therefore the angels were not created before corporeal nature.

I answer: Concerning this a twofold opinion is found among the holy Doctors; yet the more probable seems to be that the angels were created together with the corporeal creature. For the angels are a certain part of the universe. For they do not constitute of themselves one universe; but both they and the corporeal creature concur to the constitution of one universe. This appears from the order of one creature to another. For the order of things among themselves is the good of the universe. But no part is perfect when separated from its whole. It is therefore not probable that God, whose works are perfect, as is said in Deuteronomy 32, created the angelic creature separately before the other creatures. Although the contrary is not to be reckoned erroneous, especially because of the opinion of Gregory Nazianzen, whose authority in Christian doctrine is so great that no one has ever presumed to cast blame upon his sayings, just as neither upon the documents of Athanasius, as St. Jerome says.[1745]

Reply to the first: St. Jerome speaks according to the opinion of the Greek Doctors, who all agree in this, that the angels were created before the corporeal world.

Reply to the second: God is not any part of the universe, but is above the whole universe, precontaining in himself in a more eminent mode the whole perfection of the universe. But the angel is a part of the universe. Whence the reasoning is not the same.

Reply to the third: The corporeal creatures are all one in matter (*materia*); but angels do not agree in matter with the corporeal creature. Whence, once the matter of the corporeal creature is created, all things are in a certain manner created; but the universe itself would not be created if the angels were not created. If, however, the contrary be held - because it is said in Genesis 1, "In

1743. St. Jerome, Commentary on Titus 1:2.
1744. St. John Damascene, De fide orthodoxa II; citing St. Gregory Nazianzen.
1745. St. Gregory Nazianzen; cf. St. Jerome's testimony of the authority of Nazianzen and Athanasius.

the beginning God created heaven and earth" - it must be expounded: "in the beginning," that is, in the Son; or "in the beginning" of time; not, however, "in the beginning," that is, before anything was made, unless it be said, "before anything in the genus of corporeal creatures was made."

Conclusion: The conclusion is negative; concerning which a disputation will be forthcoming for us.

Disputatio CCXXIV - On whether the angels were created before the corporeal world

- Angels were created at the beginning of duration, yet before the visible world - this is the opinion of not a few Fathers. Chapter 1.
- The aforesaid opinion cannot be openly condemned from Scripture. Chapter 2.
- Nor would there have been sufficient other foundation for that opinion to be condemned. Chapter 3.
- The words of the Lateran Council do not contain a condemnation of the foregoing opinion. Chapter 4.
- That the angels were created together in duration with the corporeal creature is perhaps the more probable opinion. Chapter 5.
- The reasons of the former opinion are answered. Chapter 6.

Angels were created at the beginning of duration, yet before the visible world - this is the opinion of not a few Fathers.

Caput I - Against Aristotle and other philosophers, it is a faith undoubted among the Fathers and the Catholic Church that no spiritual creature was from eternity, but had a beginning of its duration.

For in Proverbs 8 it is said: "The Lord possessed me in the beginning of his ways, before he made anything," according to the reading of our Vulgate; for the Septuagint, for "before he made anything," translated "his works," a reading followed by not a few Latin and Greek Fathers, whom we cited in III, q. 1, a. 3.[1746] This truth is also defined in the Lateran Council under Innocent III, and is reported in the chapter Firmiter, on the supreme Trinity and the catholic faith.[1747]

However, whether at some time before every corporeal creature, or truly together with it, the angels were produced, is not, among the ancient Fathers, beyond controversy. For many affirm that before the visible and corporeal world the angels were produced by God. In this opinion were, among the Greek Fathers, Origen, homily 4 on Isaiah "In principio" (although in the preface to the books Periarchon at the end he thinks the matter doubtful), St. Basil, homily 1 on Genesis before the middle, and homily 2 on those words "The earth was void and empty"; St. Gregory Nazianzen,

1746. On the Vulgate and LXX readings and patristic followers, see Vazquez's earlier citation at III, q. 1, a. 3.
1747. Fourth Lateran Council (1215), c. Firmiter, on the Trinity and the catholic faith.

in the panegyric oration on the Nativity of the Lord, which is the 38th, before the middle, "Sic nimirum," and the following, which Nicetas follows in the same place. Moreover the same Nicetas in oration 39 of Nazianzen, which is on the holy lights, on those words "At vero nobis," and the same Nazianzen in oration 42, which is the second on Easter, "Quoniam autem," where he repeats what he had said in that oration 38; and St. John Damascene judges Nazianzen's opinion truer, book 2 On the Faith, chapter 3, toward the end.[1748]

Among the Latins this same thing was taught by St. Hilary, book 12 On the Trinity, after the middle; St. Ambrose in the preface to Psalm 1, and book 1 of the Hexaemeron, chapter 5, after the middle; St. Jerome on the Epistle to Titus, in the large commentaries found in tome 6, on the words of chapter 1, "Which God, who does not lie, promised"; and Cassian, Conference 8, chapter 7, who not only considers this opinion truer, but also affirms that none of the faithful doubts it. Also usually referred to this opinion is the author of the book On Ecclesiastical Dogmas, cited by St. Augustine, chapter 10; there, however, he only teaches that when the darkness still concealed the very water which God had created out of nothing upon the earth, and the water itself hid the earth, then the angels and all the heavenly powers were made, so that the goodness of God might not be idle, but that God might have those in whom, through many spaces beforehand, he might show forth his goodness. By which words this author does not signify that the angels were created before every corporeal creature, since the earth and the water were already existent; but that they were produced before light, when as yet there were darknesses upon the face of the abyss, and before the earth was rendered visible by the light itself. St. Augustine is also referred in favor of this opinion on that Psalm 89, "Before the mountains were made," etc.; yet he does not teach it there. Finally St. John Chrysostom is usually alleged, homily 22 on Genesis; but in that place he only teaches that the angel sinned before our first parent was formed.[1749]

Nevertheless, the following seem to favor this opinion: St. Gregory, book 28 of the Morals, chapter 7, on that text "When the morning stars praised me," where he says: "First in time was the nature of rational spirits created." Add also Isidore, book 1 On the Supreme Good, chapter 12, sentence 4, who seems to hold this same; nay, he even adds that the devil was created before the good angels, and proves it from that Job 4 "He..."

... Moreover, many understand by the name Behemoth (namely Behemoth) the demon; and Bede also agrees, in the Book of Questions, q. 9, in the eighth tome, who reports the words of Isidore; yet he explains them in this way, that the devil is said to have been created before the good angel according to the order of the dignity of nature, not according to duration; and in this sense we can even interpret Bede himself, Isidore, and Gregory, in that in which they teach that the angel was created before the corporeal world, so that they be understood of the order according to dignity, not according to duration; from which explanation Gregory himself does not shrink, book

1748. Origen, Hom. 4 in Isaiam; St. Basil, Hom. 1 in Genesim; Hom. 2 on "Terra erat inanis et vacua"; St. Gregory Nazianzen, Or. 38 (In Theophania) and related orations; Nicetas the Paphlagonian on Nazianzen; St. John Damascene, De fide orthodoxa II, c. 3.

1749. St. Hilary, De Trinitate XII; St. Ambrose, Praefatio in Ps. 1; Hexaemeron I, 5; St. Jerome, In Titum 1:2; John Cassian, Collationes VIII, 7; Ps.-Augustine, De ecclesiasticis dogmatibus c. 10; St. Augustine on Ps. 89; St. John Chrysostom, Hom. 22 in Genesim.

28 of the Moralia, chapter 18, where he says of the devil that he was the first created, because God made him more eminent. But the foundations of that opinion which affirms that the angel was created before the corporeal world we shall allege below and refute.

But against what above we premised from the common sense of the Fathers - namely, that the angel was created at the beginning of duration and not from eternity - Basil seems to teach the contrary in the place cited above; for he says: "There was indeed a certain state older than the generation of the world, suitable to the supermundane powers, supratemporal, eternal, sempiternal; but the maker and artificer of all brought it to perfection." By these words he seems to hold that the supermundane substances (substances: substantiae), which he calls powers, were in an eternal age suitable to them. Yet I would understand Basil thus, that the angels existed before the motion of the heaven, which we call time; but before time there was an imaginary interval, as we explained above from the mind of certain Saints, disputation 31, chapter 6, which is conceived after the manner of a flowing now. In this sense, therefore, Basil says that the angels were, not because they were created without a beginning, but because as yet there was not time, which is in the motion of bodies: this indeed he denoted when he said that there is "a certain state older than time and generation, and supratemporal." I confess indeed that Augustine, in the imperfect work on Genesis, chapter 3, teaches that, if the angel had been before the creation of the corporeal world, nevertheless he would be in time; for he himself calls the succession of any operations of the angel "time": he would, however, admit that in this way the angel would be above our time, which consists in the motion of a body.

Caput II - That the aforesaid opinion cannot be plainly condemned from Scripture

More recent theologians not only follow the opposing opinion - which also to us seems much more probable than the aforesaid opinion of the Fathers which we reported in the previous chapter - nor do they hesitate to imprint upon it the mark of demerit: both because all the Scholastics, with the Master and many Fathers, follow the opposite; and also because there is not altogether satisfaction given to the testimonies of Scripture and of the Lateran Council which are alleged against it. However, every learned and prudent man ought to imitate the modesty of the Angelic Doctor, who in this article not only deferred to so many ancient and most weighty Fathers, but even yielded to one only, Nazianzen alone, so that he did not dare in any way to condemn the former opinion; by which his modesty the holy Doctor very gravely reproves the license of the theologians of our time in judging the opinions of others. There are indeed others also, theologians much more recent than the former, who dare to affirm that the aforesaid opinion of Nazianzen is manifestly confuted by Scripture, as if St. Thomas were ignorant of this Scripture. Others truly believe that it is manifestly condemned in the Lateran Council. But, that we may defend the authority of Nazianzen, of Hilary, and of so many Fathers, in this chapter and the following we shall show that their opinion was never condemned either in Scripture or by the Church; from which we shall also gather that it must not be branded with the name of demerit. And indeed to this point that the opinion of Nazianzen has not been condemned, Cajetan in this article, and Sixtus of Siena in the place to be alleged below, teach.[1750]

First, therefore, we shall show by induction that it cannot be proved from Scripture that the angels were not created before the corporeal creation. For there are three testimonies which seem able to be alleged against Nazianzen; yet they prove nothing. The first testimony is Genesis 1: "In the beginning God created heaven and earth": that is, by saying "in the beginning," he means before all the rest; because before the heavens and the earth were created nothing had been made. But it is not certain that "in the beginning" signifies a beginning of order in comparison with all creatures universally, but some take it to signify the beginning of time, which consists in the motion of a body, as if he said, "At the beginning of time God created heaven and earth"; or, if it denotes a priority of duration, it is not taken simply with respect to all creatures universally, but with respect to corporeal things, of which there is express mention in that chapter.

The second testimony is Ecclesiasticus 18: "He who lives forever created all things together." Here indeed, if the place has any weight so as to show that the angels were created together with the corporeal creation and not before, it also proves that all bodies of the elements and of living things were created together in duration, as Augustine wanted; whose opinion in this matter is commonly rejected by all: therefore we must all interpret this place so that it does not prove that all bodies, nor that the angels were produced together with all bodies in duration. The Doctors have variously understood the aforesaid testimony; Gregory, book 32 of the Moralia, chapter 9, elsewhere 10, explaining that Job 40, "Behemoth, whom I made with you," with these words expounds the aforesaid place of Ecclesiasticus: "Since heaven and earth are together described,

1750. Cajetan, on I, q. 61, and Sixtus of Siena, as cited below.

together, both spiritual and corporeal [things]; together whatever rises from the heaven; together whatever is brought forth from the earth, is indicated. Therefore it is said that God made all things together, because all the things which afterwards were made were made from these two." Therefore Gregory refers the particle "together" not to the corporeal and the spiritual, but to those things which afterwards were made by propagation: for these are said to have been together made in their cause. For the stars afterwards were made from the heaven; living things, however, from the waters and from the earth, as is clear from Genesis 1. This interpretation St. Thomas followed in this place, I, q. 74, article 2, reply to the second.[1751]

I indeed think that the aforesaid place also can be explained in one of two other ways, such that nothing against Nazianzen is proved from it: first, indeed, so that all things are said to have been created together because they were brought forth in a most brief time. For this reason Genesis 2 says: "These are the generations of heaven and earth, when they were created, in the day that the Lord God made the heaven and the earth," where the particle "in the day" is put for "in the days," on account of the short interval of time. And Mark 10: "From the beginning of the creation God made them male and female"; although they were not from the very first moment of the beginning of the world in the individual, but a little afterwards, as is clear from Genesis 1, since on the sixth day our first parents were created. And John 8: "He (namely the devil) was a murderer from the beginning"; nevertheless he was not from the very moment of the world's beginning a murderer, or a deceiver of our first parents, or the persuader of the murder of Abel by his brother Cain.

According to this interpretation someone could say that from that place it is sufficiently proved that the angelic spirits were produced together with the corporeal creation, but that the angels were created a little before. However, because many of the Saints and Fathers alleged for the preceding opinion not only said that the angels were not created together with the corporeal creation, but were brought forth much earlier, the aforesaid interpretation would not suffice to defend their opinion from the mark of error. Then the aforesaid place of Ecclesiasticus can also be explained in another, more fitting way, such that the particle "together" is not referred to the duration of time, nor denotes that "at the same time" all things were produced by God, but that it signifies the same as "equally" or "in common"; by which it signifies only a collection of things. In this sense then it would be: "He who lives forever created all things together," that is, he created all alike, with nothing excepted except himself; and the Greek adverb koinê, which our Vulgate has translated "simul" (together), signifies this. Moreover, the Latin adverb simul in Scripture itself and in the Vulgate edition is already used in this sense: Psalm 13: "They have all gone aside, together they have become useless"; Psalm 48: "Together the senseless and the fool shall perish."

Finally, someone could interpret the same place with Rupert, book 2 on Genesis, chapter 28, in this way: he created all things together not in their own proper natures, but in his own wisdom, so that afterwards he might bring them all forth outside. Because God first had in his mind all the things which he was going to make, by which he would bring them forth outside himself. Of these interpretations the one immediately preceding seems more probable to me.[1752]

1751. St. Thomas, Summa theologiae I, q. 74, a. 2, ad 2; Gregory the Great, Moralia in Iob, lib. 32, c. 9 (alias 10), on Job 40 "Behemoth, whom I made with you."

The third testimony against the opinion of Nazianzen could be that Hebrews 1: "Are they not all (namely the angels) ministering spirits, sent to minister...?" which Theodoret uses in the place alleged below, to prove that the angels were produced at the same moment of time with the visible world. For if they had been produced earlier, they would not be ministering spirits sent for the ministry of the corporeal creation: because they would have been before there was a corporeal creation to which they could minister. But this testimony is weak: for although the angels were constituted as ministering spirits of our salvation after Christ had been made conformed to us, nevertheless it was not necessary that this ministry should always have been assigned to them; especially since this does not befit the angel by his nature, but by office and duty; nor was man created for their sake, but only after he had been created were they deputed to this ministry. From which one may gather that there is no testimony of Scripture by which the Fathers who hold the aforesaid opinion can be convincingly refuted; which Epiphanius, who followed the opposite opinion, noted when he said that nowhere does Scripture clearly indicate the time of the creation of the angels.

That there was not sufficient other foundation whereby the aforesaid opinion should be condemned.

Caput III - That there was not sufficient other foundation whereby the aforesaid opinion should be condemned

From the Scholastic Doctors, Ferrar., book 2 against the Gentiles, chapter 83, § 9. But as to the last point, he judges that the aforesaid opinion of the Fathers was condemned, and that the opposite was plainly defined in the Lateran Council under Innocent III, and it is reported in the chapter Firmiter, on the Trinity and the catholic faith, where it is said thus: "The creator of all things visible and invisible, spiritual and corporal, who by his almighty power at once, from the beginning of time, created from nothing both creatures, the spiritual and the corporal, the angelic namely and the mundane." Wherefore Ferrar. judges that the aforesaid opinion of the Fathers cannot be defended without the sin of heresy after this definition of the Council. With Ferrar. some more recent Thomists agree, whom, as I said above, the modesty of St. Thomas does not lightly reprove, who pronounced openly concerning the opinion of the Fathers that it is not erroneous.

But Ferrar. thus interprets the holy Doctor, that he says that opinion is not erroneous directly, but indirectly. He calls that erroneous directly which is against those things which are plainly revealed to us in Scripture as articles of faith; but indirectly, that which is not against anything revealed as an article of faith; yet from it there follows something against faith and Scripture: which indeed, after the Church's determination, cannot be defended without the sin of heresy. Wherefore neither could the aforesaid opinion of the Fathers be defended without heresy, after the time when in the Lateran Council the opposite was defined de fide. But against this last point I show that in the Council of Lateran nothing was defined de fide against the opinion of Nazianzen.

1752. Rupert of Deutz, In Genesim, lib. 2, c. 28.

For that a council may define this truth, it must rest either on Scripture, or on tradition, or on a reasoning deduced from principles of faith: on none of these could it rest. First, not on Scripture, as was proved in the previous chapter. Secondly, not on tradition: for the tradition of the Church among the Doctors and Fathers of the Church is preserved when their common consent teaches something as a certain dogma of faith: but in this controversy the Fathers of the Church do not commonly consent; rather they are divided among themselves: for neither are fewer, nor less weighty, who follow the former opinion than those who follow the opposite; where then did the Church acknowledge the tradition? especially since Cassian, in the place alleged in chapter one, says that no faithful man doubts that the angels were created before the world and the corporeal creation. Furthermore Augustine, who thinks that the angels were created in duration together with the corporeal creation, admits that the matter is uncertain, in the book On the Incarnation of the Word, chapter 6 - if indeed that book is Augustine's; and in the imperfect work on Genesis, chapter 3, he says that it is impenetrable to conjectures; but in the City of God, book 11, chapter 23, speaking of the opinion of those Fathers who said that for many ages before the corporeal creation the angels had been created, at length he concludes in these words: "Accordingly let each one take it as he will: for it is so profound that, for the exercise of readers, it can generate several opinions not wandering from the rule of faith; provided, however, that no one doubts that the holy angels are not coeternal with God." Theod. also...[1753]

Caput IV - That the words of the Lateran Council do not contain the condemnation of the foregoing opinion

Even if we were to concede that the Church could have defined as certain, against the aforesaid Fathers, that the angels were produced together in time with the corporeal creature, and that for this it had an excellent and solid foundation; nonetheless, that this was not defined by the words of the council is judged not without reason by the weighty theologians of our age, with Cajetan in this article, and Sixtus of Siena in book 5 of the Bibliotheca sancta, annotation 5. They think that, just as Cajetan interpreted the words of the council cited in the preceding chapter, by which that sentence seemed to be defined against Nazianzen, one should attend, not so much to the words themselves of the council, as to its mind. But the mind of the council was to condemn the error of Origen, who said that God in the beginning made only spiritual creatures; afterwards, however, when certain of them sinned, He made bodies, so as to thrust them into them as into a prison-house and there to punish them; and on that occasion He made every corporeal creature, which in itself is not good, nor would it otherwise have been made except on account of the aforesaid occasion. That this error was condemned in the council St. Thomas expressly affirms in opuscule 23, a little before the middle.[1754] From this Cajetan infers as follows: although that Decretal in its words embraces both that the spiritual creature as well as the corporeal was produced by God, each

1753. Augustine, De Incarnatione Verbi c. 6 (attributed), In Genesim imperfectus liber c. 3, and De civitate Dei XI, 23. Theodoret is cited below on Heb. 1:14. Lateran IV (1215), c. Firmiter: "Creator omnium visibilium et invisibilium... simul ab initio temporis utramque de nihilo condidit creaturam, spiritualem et corporalem, angelicam videlicet et mundanam."

1754. St. Thomas, Opusculum 23, "Contra errores Graecorum" (attributed), a little before the middle, on the Lateran decree.

in itself and not on occasion of the other, and that the corporeal was made together in duration in the beginning of time with the spiritual: nevertheless, the former point is defined only as certain against Origen. But in that opuscule St. Thomas only asserts that in that Decretal of the Lateran Council that error of Origen is condemned; whether, however, the words of the council ought to be understood only in that sense, that the error of Origen is condemned, or also so that it is defined that both creatures were produced simultaneously in duration - this St. Thomas does not teach. And since, when explaining in that opuscule that Decretal, he says nothing about the production of the angels with the corporeal creature, he clearly indicated that nothing about this matter was defined therein. Add that, since in this article he openly says that nothing against the opinion of Nazianzen has been declared by the Church, about the mind of St. Thomas in this matter it is not permitted to doubt. It is also clear from that opuscule that, without foundation, certain Thomists, as Cajetan reports, said that therefore the Holy Doctor in this article thought that the Church had decreed nothing against Nazianzen, because he did not have knowledge of that decree of the Lateran Council; yet he explicitly expounded that decree in opuscule 23. Those Thomists, however, say that the aforesaid opuscule is not by the Angelic Doctor, and in this sentence Ferrara seems to consent in the place cited. Still, even if that opuscule were not St. Thomas's, he himself could not have been ignorant of the decree of the Lateran Council, both because that council was celebrated before the times of St. Thomas, and also because the decretal epistles had already been compiled in his time.

This interpretation of Cajetan and Sixtus of Siena, which he applied to the words of the council, some nevertheless impugn at the outset on the ground that that error of Origen had long before been condemned by the Church; therefore, in that council nothing against Origen was defined a second time. Next, because that council was not convened against the errors of Origen, but against Joachim the Abbot and Almeric, who thought ill about the Trinity. Yet these reasons against Cajetan's interpretation have little strength. For although that council was not convened against the errors of Origen, but against Joachim and Almeric, nevertheless the error of Origen could have been condemned by the way, since many other things also are defined in chapter 2 of that council, where the symbol of faith is set down, before in the second chapter the error of Joachim and Almeric is condemned. In the first chapter, in fact, many things about the sacraments are premitted, for the definition of which the council had not been convened. Therefore the council could also have condemned by the way the error of Origen, so that in this manner it might preface a complete symbol of faith. Moreover, that the error of Origen had been condemned in the fifth Council of Constantinople - whose canons Nicephorus reports in book 17 of the History, chapter 27 - would not have prevented its being condemned anew in the aforesaid Lateran Council. For in the Council of Trent too, session 6, in canons 1, 2, and 3, certain dogmas of Pelagius are confirmed which had long before been condemned in the Councils of Milevum and Africa.[1755]

For my own part I judge that that error of Origen was not condemned in the Lateran Council - in which matter I dissent from Cajetan; nor was it defined therein that the angels were created simultaneously in duration of time with the corporeal creature - in which I agree with the same

Cajetan; yet I am led to this sentence on a different ground. For if, with Cajetan, we once conceded that the very words of the council plainly contain that definition which the adversaries contend for, we should vainly divine about any other intention of the council. For, as we said above, although the council had not been convened for that end, nevertheless if in express words it had once defined it, it would not be permitted to doubt the truth of such a definition. But if that particle "simul" which the Lateran Council uses in its definition denoted duration of time, and hence that the angels were created simultaneously in duration with the corporeal creature, we could not but assert that this was defined by the Pontiff as a certain dogma of faith; for at the beginning of the chapter he premits: "We firmly believe and simply confess," etc., and under this form he subjoins that God created both creatures from nothing simultaneously. From which form it is plainly gathered that that dogma was defined by the council. I judge, then, that the council did not define that the angels were created simultaneously in duration with the corporeal creature. For the particle "simul," which seemed to signify this, is not always referred to duration, but sometimes signifies the same as "together" (pariter), as we noted in chapter 2. We can therefore interpret the mind and the words of the council just as in chapter 2 we explained that word of Ecclesiasticus 18: "He created all things simul." And this interpretation is most approved by me for this reason, that it in no way pertained to that symbol of faith which the council wished to preface, to define anew at that time that both creatures were produced by God simultaneously in duration; but that both were created together (pariter) by God very much pertained to the explication of the article of God the almighty and creator. And since, as was shown in chapter 3, there was no firm foundation for the council to define that all things were created simultaneously in time, we ought not to suppose that the council wished to define this. Wherefore advisedly did the council say: "Simul, ab initio temporis, utramque de nihilo condidit creaturam," and did not say "simul tempore," so as to define that each creature had the beginning of its duration together (pariter), although not simultaneously at the same point of time. In the same sense we shall explain below in the last chapter, in the reply to the fourth argument, the particle "with thee" (tecum) in that Job 40: "Behold Behemoth, whom I made with thee." Which particle indeed seemed to signify the same as "simultaneously in duration."

But someone may say that time began with the motion of the corporeal creature, and that the angel began from the beginning of time. For in this way Augustine says, City of God XI, 6, that before the world there was no time, because there was no creature by whose motions time might be measured; whom Hugo of St. Victor and the Master, to be cited in the next chapter, follow. Therefore, the angel began in the same moment of time with the corporeal creature. I answer: "beginning of time" is not used by the council for the beginning of that which we commonly call time, which is in the motion of the heavenly body and serves us as the measure of other motions and durations; but it took it for the beginning of any duration whatsoever, even of a permanent one, such as is the duration of the angelic substance. In this way, even if no corporeal creature had been created, we could say that the angel was created, not from eternity, but in the beginning of

1755. Nicephorus Callistus, Historia ecclesiastica, lib. 17, c. 27; Council of Trent, sess. 6, can. 1 - 3; on the prior condemnations of Pelagian propositions at Milevum and in Africa.

duration, if he had been created after not-being. It is therefore the same to be created "from the beginning of time," and "not to be created from eternity." And it seemed necessary to define this, so that the article of creation might be exactly explained.

Caput V - The more probable opinion is that the angels were created simultaneously in duration with the corporeal creature

A far more probable opinion is that of those who assert that the angels were created simultaneously in duration with the corporeal creature; yet, as from the foregoing is clear, the opposite sentence ought not to be branded either with error or with rashness. This is taught first, among the Latin Fathers, by St. Augustine in City of God XI, chs. 6, 9, and 21; in Contra Faustum XX, ch. 21; and in the book On Genesis ad litteram, chs. 7 and 8.[1756] Although in the book On the Incarnation of the Word, ch. 6, he says that it is uncertain when the angels were created - indeed that book is Augustine's - and in the Imperfect Work on Genesis, ch. 3, he calls this matter most secret and impenetrable to human conjectures. The same is handed on by Bede in the Hexaemeron, in the part after the beginning in tome 4; by Hugh of St. Victor, De sacramentis, book 1, part 1, chs. 8 and 4; and by Rupert in Genesis, book ..., ch. 10; and it is referred by St. Gregory the Great, Moralia, book 32, ch. 9 (alias 10), where he says that together both the corporeal and the spiritual creation are to be understood.[1757] Then among the Greeks consent Epiphanius, Heresy 65, against Aëtius, and Theodoret, Question 3 on Genesis.[1758] Finally the Scholastics, with the Master in II Sentences, dist. ..., whom there is no need to rehearse one by one; and the same sentence is held by St. Thomas with Cajetan, and by the Thomists, in this article.

Reasons more probable are also brought forward for this. First, they prove it from Nazianzen, Oration 39, which is on the holy Lights (In sancta lumina), "a little while from the beginning" (parvum ab initio); from Augustine on that Psalm 103, "That dragon"; from Isidore, De summo bono, book 1, ch. 12, sentence 7; which some confirm from that Apocalypse 12, "There was made a great battle in heaven," and so forth - although we shall see in the following disputation, in the chapter which follows, that from that place it cannot be proved.[1759] Next they prove the same from this, that for the angels who sinned "eternal fire" was prepared, as in Matthew 25: "Depart into everlasting fire, which is prepared for the devil and his angels"; and in 2 Peter 2: "For if God spared not the angels that sinned, but thrust them down into the darkness of hell, and delivered them to be tormented in Tartarus"; and in Jude: "The angels who kept not their first estate ... he hath reserved in everlasting chains under darkness unto the judgment of the great day." Therefore, if they then sinned, everlasting fire in hell - corporeal - was already destined; and hence they did not sin before the corporeal creature was established. Nor did they sin after the corporeal creature

1758. Epiphanius, Haeresis 65 (adversus Aëtian), and Theodoret, Quaestiones in Genesim, q. 3.

1759. St. Gregory Nazianzen, Oratio 39, In sancta lumina; Augustine, Enarratio in Ps. 103 (on "Draco iste"); Isidore of Seville, De summo bono, lib. 1, c. 12, sententia 7; Apoc. 12 "Factum est praelium magnum in caelo."

had been produced with any long interval; for then, by the opposite, it would follow that the evil angels persevered for a long time in the grace of God, which is not credible. It seems more in accord with reason that the angels are readier by nature for their operation and choice than men; therefore, if they were created before men and before bodies by many ages, they would either have sinned long before or been confirmed; and neither squarely fits the tradition that their fall followed very quickly upon their creation. But if one were to say that the angels were produced only a little before the corporeal creature, so that they would have been created a short while before the creation of bodies, it is more fitting, given the whole corporeal universe was created together, that those who by office are ministers with respect to corporeal things should also have been created together in duration with the corporeal creature, rather than a little before it.

If the good and the evil angels were created before the corporeal world, they were either created many ages before, or a little before. If many ages before, as the authors of the prior sentence expressly teach - Jerome and Cassian, to whom Basil would seem to consent - then they either sinned before the corporeal world was made, or after it was made. But it cannot be said that they sinned before the world was made; for as soon as the angel sinned, Michael and his angels fought with Lucifer in heaven, and from that Lucifer and his angels fell into hell - as the common and ancient opinion holds, which Chrysostom relates - so that their punishment, which belongs to a corporeal place and corporeal fire, would have been before the creation of corporeal things; which is absurd. Nor can it be said that they sinned after the world was made, but before man was created; for then they would have persevered for a notable time in grace before their sin, whereas their very promptitude in the operation of their nature makes it more credible that their probation was short. Therefore it seems more reasonable that the angels were produced at the same time in duration with the corporeal creature.

Caput VI - The arguments of the prior opinion are dissolved

The remaining reasons, by which the former party is supported, are to be refuted. Let the first reason be that which Cassian uses in the place cited, to this effect: it is not to be believed that God was for so many ages before the creation of the corporeal creature idle as it were and without the exercise of His power; therefore He created first the spiritual creatures, through whom He might exercise His governance, before He produced corporeal creatures. To this we must answer in due order.

A far more probable opinion is that of those who affirm that the angels were created simultaneously in duration with the corporeal creature; yet the opposing opinion, as is evident from what was set forth above, ought not to be branded either with error or with rashness. Among the Latin Fathers, St. Augustine taught this first, in the City of God, book 11, chapters 6 and 9 and 22; in Contra Faustum, book 20, chapters 1 and 21; in On Genesis according to the Letter, chapters 7 and 8; although in the book On the Incarnation of the Word, chapter 6, he says it is uncertain

when the angels were created - if indeed this book is Augustine's. And in the Unfinished Work on Genesis, chapter 3, he calls this matter most secret and scarcely penetrable by human conjectures.[1760]

The same was handed down by Bede in the Hexaemeron a little after the beginning in tome 4, by Hugh of St. Victor, book 1 On the Sacraments, part 1, chapters 3 and 4, and by Rupert, book On Genesis, chapters 10 and 11; it is also reported by St. Gregory the Great, book 32 of the Moralia, chapter 9 (alias 10), where he says that when "heaven and earth" are said to have been made together, one should understand both corporeal and spiritual things.[1761] Then among the Greek Fathers, Epiphanius in Heresy 65 (against Aëtius), and Theodoret in Questions on Genesis, question 3, agree.[1762] Lastly the Scholastic doctors together with the Master in II Sentences, distinction 2 - whom it is not necessary to set forth one by one - hold the same; likewise St. Thomas with Cajetan and the other Thomists in this article. And since, as we have shown above, this opinion is not plainly defined by Scripture, nor by tradition, nor by a decree of the Church, it remains that it be confirmed by us with this more solid and more probable reason.

If the good and bad angels were created before the corporeal world: either they were created many ages before, or a short time before. If many ages before - as Jerome and Cassian expressly taught from among the Fathers of the former opinion, to whom Basil seems to agree - then either they sinned before the corporeal world was made, or after it was made. But it cannot be said that they sinned before the corporeal world was created: because immediately upon the angel's sin, Michael and his angels were fighting with Lucifer in heaven, whence Lucifer and his angels were cast into hell, as the common opinion of the Fathers holds: St. John Chrysostom, Homily 3 on the words of Isaiah (after the middle), and Homily 15 on John (near the end); St. Gregory Nazianzen, Oration 39, On the Holy Lights; Augustine on that verse of Psalm 103, "Draco iste"; Isidore, On the Supreme Good, book 1, chapter 12, sentence 7; and the Apocalypse 12, "There was a great battle in heaven."[1763] Next, this same point is proved: because, when the angels sinned, there was prepared for them the eternal fire (Matt. 25). Likewise, "the eternal fire which is prepared for the devil and his angels" (Matt. 25); and 2 Peter 2, "For if God spared not the angels that sinned, but, dragging them down to the lower hell, delivered them to be tormented in chains of darkness"; and Jude in his canonical epistle says of the angels that sinned, that he did not spare them, but "reserved them under darkness in eternal bonds unto the judgment of the great day": therefore, immediately upon their sin, the eternal corporeal fire in hell was assigned to them, and consequently they did not sin before the corporeal creature was brought into being.

1760. St. Augustine, De civitate Dei XI, 6; 9; 22; Contra Faustum XX, 1; 21; De Genesi ad litteram, chs. 7 - 8; cf. De Incarnatione Verbi c. 6 (attributed), and In Genesim imperfectus liber c. 3.

1761. Bede, Hexaemeron (post initium), in tome 4; Hugh of St. Victor, De sacramentis, lib. 1, pars 1, c. 3 - 4; Rupert of Deutz, In Genesim, c. 10 - 11; and St. Gregory the Great, Moralia in Iob, lib. 32, c. 9 (alias 10).

1762. Epiphanius, Haeresis 65 (adversus Aëtian), and Theodoret, Quaestiones in Genesim, q. 3.

1763. St. John Chrysostom, Hom. 3 on the words of Isaiah; Hom. 15 on John; St. Gregory Nazianzen, Oratio 39, In sancta lumina; St. Augustine, Enarratio in Ps. 103 (on "Draco iste"); Isidore of Seville, De summo bono, lib. 1, c. 12, sententia 7; Apoc. 12, "Factum est praelium magnum in caelo."

Nor did they sin after the production of the corporeal creature, if they were created together with it many ages before: because on the contrary it would follow that for many ages the evil angels persevered in the grace of God; which is not credible: for it seems more consonant with reason that the road of the angels should be finished in a briefer span than that of men; since angels by their very nature are more prompt than men in operation and in choice. But if it be said that the angels were brought forth a little before the corporeal creature, this will be said without any foundation: for why, indeed, should they be created a little before, when they could be created together with the whole corporeal universe? Or by what reasoning could this be made plausible? Therefore it seems more probable and more consonant with reason to assert that the angels were not before the corporeal creature, but were brought forth simultaneously in duration with it.

The arguments for the prior opinion are dissolved

It remains to dissolve the reasons on which the prior opinion rests.

The first reason is that which Cassian uses in the place cited, in this way: one must not believe that God was idle for so many ages before the creation of the corporeal creature; therefore we must assert that God, by his goodness, communicated himself to spiritual creatures before he produced corporeal creatures. By this line of reasoning it would be empty and vain to hold that the angels were created together in duration with the corporeal world; for then it would follow that for many ages the world was without light, which is absurd.

I answer: if the argument had any force, it would certainly prove that the angels were produced by God from eternity, lest through an eternal duration God be idle. For however God had created spirits "from the beginning," even if he had produced them before the corporeal creature, it would follow that, for the eternal duration before their production, God would have been idle: but no Catholic will judge this an absurdity; on the contrary, according to the Catholic faith, it must necessarily be confessed, since it is certain that God created nothing from eternity. Some made use of this same argument of Cassian, as Augustine reports, City of God, book 11, chapter 5, to prove that the world was produced from eternity. But Augustine replies, first, that nothing is proved: for if it proved anything, by the same reasoning it would follow, as Epicurus said, that there were an infinite number of worlds produced by God, lest God be idle through those infinite imaginary spaces; how he infers this Augustine explained above, disputation 29, chapter 4. Then he also replies that no perfection accrues to God from his doing something outside himself; and on the contrary, no perfection is lacking to him if he does nothing; and accordingly it matters little that, through infinite ages, he produced nothing outside himself.

The second reason is: if the angels had been created together with the corporeal world, Moses would have made some mention of their creation; but he made no mention of them when he spoke of the creation of the corporeal world: therefore it is a sign that they were not created together with the corporeal world. Augustine, in the places cited in this disputation and above in disputation 51, and Bede in the Hexaemeron, think that the creation of the angels was not omitted by Moses, but that he signified it to us under the name of "light." Yet this opinion is commonly rejected, and with

good reason: because since Moses's Scripture was a historical narrative, its words should be used in their common and popular signification, not in metaphorical ones; wherefore the Doctors commonly, by the name of light, understand not angels but corporeal light. Augustine, however, understood Scripture in that sense in order to defend that all things were created in one day; but the days which are numbered in the first chapter of Genesis are distinguished only according to the light of angelic understanding; which opinion is deservedly exploded by all.

Others, however, think that Moses omitted the creation of the angels lest the people, too prone to idolatry, should adore angels as God: so Athanasius said in the Questions to Antiochus, question 2, and Theodoret in the Questions on Genesis. But this opinion does not commend itself to me: because by the same reasoning Moses ought nowhere to have made mention of angels; yet he speaks of them often in Genesis, Exodus, and in other books; therefore, by that reasoning, he would not have omitted their creation. Wherefore I judge more truly that Moses did not make mention of the angels' creation because the purpose of his work did not require it: for, as St. Jerome writes in epistle 139, Moses wished only to describe the order of the creation of corporeal things - either, as some think, because that people was rude; or, what is truer, because only in corporeal things created was there that series and variety of days which required explanation; that the angels had been produced by God was sufficiently established.

A third reason is taken by Cassian from the book of Job 38, where the Lord says to Job, "Where wast thou when I laid the foundations of the earth," etc.; and a little after, "When the morning stars praised me together, and all the sons of God shouted for joy"; and according to the Septuagint translation, as Cassian reads, "When the stars were made together, all my good angels praised me with a loud voice." Now those who are said to be present at the production of some thing and to praise the maker on account of it seem to have been before that thing: therefore the angels who stood by at the creation of the stars, and praised God the maker on account of it, preceded the creation of the stars.

I reply, first, that according to our Vulgate edition, which is deservedly received by all as authentic, nothing can be proved from that place; and our Vulgate fits the context and the Hebrew reading better. Then, even if we admit the Septuagint reading, Theodoret very well replies that those who argue from that place do not rightly consider that the stars were not created on the first day but on the fourth, as is manifest from the first chapter of Genesis, and consequently the angels could very well have been present at the creation of the stars, even if they had not been created before every corporeal creature. Add also that, even if the stars had been made on the first day, it would not be inept to say that the angels stood by at their creation and praised the Lord and maker because of it; for the angels too, on account of their own creation, in the very first moment, praised their God and returned thanks to him. We adduced this in the place cited from the author of the book On Ecclesiastical Dogmas among Augustine's works, chapter 10.

The fourth argument someone could make for the prior opinion is from Job 40, where of Behemoth it is said, "He is the beginning of the ways of God"; but by Behemoth is understood the devil. I reply that, even if by Behemoth the demon is figuratively understood, nevertheless in the primary and literal sense an elephant is signified, or some other terrestrial animal from the race of

dragons, as some judge; of that animal Eugubinus rightly expounds that it is rightly said to be "the beginning of the ways of God," that is, of the works of God and of his inventions - not because it precedes the rest of God's works in the order of duration (as is manifest), but because in vastness of body, magnitude, and strength, it excels the other brute animals; in which sense James 1 says: "Of his own will he has begotten us by the word of truth, that we might be some beginning of his creature." For "beginning" in Greek is ἀπαρχή, which signifies an offering, libation, and first-fruits; and the same can be signified by the word ἀρχή, for it is the same as principality and magistracy; this is the word found in Job in the place cited; for the first-fruits are the best part of the thing itself and hold the primacy among the rest. In this same manner we will explain that in Proverbs 8, "The Lord created me the beginning of his ways," as St. Thomas expounds, I, q. 3, a. 3, where the Seventy use the word ἀρχή. But if it be understood of the demon - something that ought to be taken only figuratively - then it must be understood likewise of the order, not of duration, but of dignity, as is evident from Bede and Isidore, whom we mentioned in chapter 1, whose opinion St. Gregory indicates, book 32 of the Moralia, chapter 18 (alias 24). But what is said in that same chapter 40 of Job, "Behold Behemoth, whom I made with thee," does not denote that Behemoth was produced simultaneously in duration with Job, or with man; but the particle "with thee" signifies the same as the particle "together," as we noted in chapter 4.

We could argue fifth from that in Titus 1: "Which blessed hope God promised before secular times": for if such a promise was made before these secular times, which are numbered from the beginning of the world (for the age of the world is called a "seculum," as I observed in disputation 35, chapter 1), it must have been made to some creature; and no other seems to have been that creature than an angel: therefore the angel was created before these secular times. I reply, as I said in that disputation, that the word "promised" does not signify some promise made by a spoken word, but the eternal predestination of God, as St. John Chrysostom and Anselm note on that place, and Augustine in the City of God, chapter 16. In what sense Paul says "before secular times" was explained in that same disputation.

Articulus IV - Whether the angels were created in the Empyrean heaven

Objicitur: It seems that the angels were not created in the Empyrean heaven. For angels are incorporeal substances (substance: substantia). But an incorporeal substance does not depend on a body either according to its existence (esse) or, consequently, according to its coming-to-be. Therefore the angels were not created in a corporeal place.

1. Furthermore, Augustine says, 3 On Genesis according to the Letter, that the angels were created in the higher part of the air. Therefore not in the Empyrean heaven.
2. Furthermore, the Empyrean heaven is said to be the highest heaven. If, therefore, the angels had been created in the Empyrean heaven, it would not have suited them to ascend thence; which is contrary to what is said in Isaiah 14 in the person of the sinning angel: "I will ascend into heaven."

But on the contrary: Strabus says on that text, "In the beginning God created heaven and earth," that "heaven" here is not the visible firmament, as he calls the firmament later, but the Empyrean, that is, the fiery or intellectual one, which is called fiery not from heat but from splendor. What was straightway made was filled with angels.

I answer: It must be said that, as has been said, from corporeal and spiritual creatures one universe is constituted. Whence thus were spiritual creatures created...

... I answer, even if by Behemoth a demon be figuratively understood; yet in the primary and literal sense an elephant is signified, or some other terrestrial animal of the dragon kind, as some think; just as by Leviathan is signified a whale of the sea, or some kind of fish. Concerning that animal Eugubinus rightly explains why it is rightly called the beginning of the ways of God, that is, of the works of God and of his devices: not because in the order of duration it precedes the other works of God, as is manifest, but because by the vastness of its body, its greatness, and its strength it excels the other brute animals; in which sense James 1 says: "Of his own will he begot us by the word of truth, that we might be some beginning of his creature" - beginning in Greek is aparchē, which signifies an offering and first-fruits; the word archē can signify the same, for it is that which is principality and magistracy, which word occurs in Job in the cited place; for first-fruits are the best of the thing itself, and they hold the primacy among the rest. In the same way we shall explain that of Proverbs 8: "The Lord created me the beginning of his ways," etc. But if it be understood of a demon - which is to be taken only figuratively - it must in the same way be understood of order, not of duration, but of dignity, as is clear from Bede and Isidore, whom we mentioned in chapter 1, whose opinion St. Gregory also indicated in book 32 of the Moralia, chapter 18 (alias 24). And what in that same book, chapter 40, is said in Job, "Behold Behemoth, whom I made with thee," does not denote that Behemoth was produced in duration together with Job, or with man, but the particle "with thee" signifies the same as "together," namely a collection of things, just as above concerning the particle "together" I noted in chapter 4.

Fifth, we could argue from that of Titus 1: "In hope of eternal life, which God, who does not lie, promised before the secular times." For if such a promise was made before these secular times, which are numbered from the beginning of the world (for the age of the world is called a saeculum, as I observed in Disputation 35, q. 1), it ought to have been made to some creature; but no other creature seems to have existed before the secular times. I answer that, as has been said, the universe is constituted of rational and spiritual creatures as well as corporeal; whence it was fitting that such a promise be referred not to a temporal promise then made to an actually existing creature, but to the eternal preordination of God. Hence Chrysostom and Augustine explain that word "before the secular times" as signifying the eternal decree of God rather than a temporal promulgation.[1764]

1764. St. John Chrysostom, Hom. on Titus 1:2; St. Augustine, De civitate Dei XI, 6; 9; 22; Contra Faustum XX, 1; 21; De Genesi ad litteram VII - VIII (passim), where "before the secular times" is taken of God's eternal decree rather than a temporal promissory act.

Whether the Angels were created in the Empyrean heaven

It is objected that Angels were not created in the Empyrean heaven, because: 1) Angels are substances incorporeal, and do not depend on a body either according to their essence (*essentia*) or according to their coming-to-be; therefore they were not created in a corporeal place. 2) Moreover, Augustine says that certain angels sinned in the superior part of the air; therefore they were not created in the Empyrean heaven. 3) Moreover, Heaven is said to be the throne of God; but the angel who sinned said: "I will ascend into heaven" (Isa. 14); therefore he was not in heaven.

But on the contrary: In the beginning God created heaven and earth: by "heaven" the firmament is here not named, but that highest heaven which is called Empyrean, not from fire, but from splendor; which heaven is filled with spiritual creatures, and with respect to the corporeal creation they have a certain order; and presiding over the whole corporeal creation, it was fitting that Angels be created in the highest body as presidents of the whole corporeal nature, whether it be called the Empyrean heaven or by whatever other name. Hence Isidore says that the highest heaven is the heaven of the Angels, upon that of Deuteronomy 10: "The heaven and the heaven of heavens are the Lord thy God's."

I answer: Angels were not created in a corporeal place as if dependent on a body either according to their essence or according to their becoming. For God could have created the Angels before the whole corporeal creation, as many holy doctors hold. But they were made in a corporeal place to manifest the order of their relation to corporeal nature, and what things they accomplish by their power concerning bodies.

Reply to the first: Augustine perhaps by "the highest part of the air" understands the highest part of heaven; for with heaven the air has a certain affinity because of its subtlety and diaphaneity. Or he speaks not of all the Angels, but of those who sinned, who according to some were of the inferior orders. Yet nothing prohibits us from saying that the higher Angels, having a power elevated and universal above all bodies, were created in the highest body of creation, and others, having more particular powers, were created in inferior bodies.

Reply to the second: There it is not speaking of any corporeal heaven, but of the heaven of the Holy Trinity; into which the sinning Angel wished to ascend, when he wished in some way to be made equal, as will be made clear below.

Conclusion: The Angels were created in the Empyrean heaven.

Various opinions

Summa Sententiarum, tract. 2, c. 1; the Ordinary Gloss also taught the same on the earlier words of Genesis. Their opinion is wont to be confirmed from this, that Lucifer and his Angels fell from heaven, according to Luke 10: "I beheld Satan like lightning falling from heaven," which place some understand of the demon's fall from heaven when he first sinned; Origen in book 1 of the Periarchon, ch. 5, Ambrose in the book De fuga saeculi, ch. 7 before the middle, St. John Chrysostom, Homily 10 De paenitentia in the fifth tome before the middle, Gregory, Moralia 13, ch.

4, Theodoret, book 5 of the Fables of the Heretics, on the devil, Prosper, the book De diurnis temporibus, ch. 3, Bernard, Sermon 2 Ad fratres, and Theophylact on that place, although he also applies another interpretation which we shall report below.[1765] Following, then, this sense, Gregory expounds the said place thus: when Christ saw his disciples - who had been sent endowed with the power of casting out demons - return with joy, saying, "Even the demons are made subject to us in thy name," in order, after the example of Lucifer who fell by the affection of pride, to repress their immoderate affection of vainglory, he said: "I beheld Satan like lightning falling from heaven"; then he subjoins: "Nevertheless in this rejoice not, that spirits are subject to you; but rejoice that your names are written in heaven" (Luke 10).

Likewise, the same opinion of the Scholastics is wont to be confirmed from that of Apocalypse 12, where the battle of Michael with the dragon is described in heaven; whence some infer that Lucifer fell from heaven through sin, and therefore that previously he had been there; whence they further conclude, not without probable conjecture, that he was first created there.

And yet, although the opinion of the Scholastics asserting that the Angels were created in the Empyrean heaven is more probable, nevertheless we have no firm testimony of Scripture from which we could certainly gather it. Therefore this opinion of the Scholastics seems to me probable, because just as man was created on earth, so likewise it seemed fitting that an Angel be created in heaven. But that there be two genera of Angels, and that demons were first produced outside heaven, but the good Angels in heaven itself - this they said without any firm foundation, as Augustine notes in the cited place. Moreover, that Angels were first produced outside heaven, then by grace translated into heaven, as Rupert thinks, is no less without reason. It remains, therefore, that they were produced in heaven itself as in their native and proper soil; and since the other heavens, besides the Empyrean, are moved, they were created in the Empyrean as in a quiet place.

The testimonies of Scripture by which some confirm that common opinion of the Scholastics, if we follow the more probable interpretation, are not of great weight. The first testimony is that of Luke 10: "I beheld Satan," etc. Even if it were understood of the first fall of the devil, as the above-cited in the preceding chapter understand it, it would only prove that all angels were in the Empyrean before they sinned; from this, however, it does not follow that they were also first created there. For someone could say with Rupert that he indeed fell from heaven, not because he had been created there, but because he had been translated there by grace, and afterwards fell from the state of grace and from heaven itself. Then, it does not seem that the Lord in that chapter of Luke 10 spoke of the first fall of the demon by sin, nor that he said those words to repress the affect of vainglory of the disciples, as Gregory thought. For, as Theophylact noted, from the things which are there narrated to have been done and said by the Lord's disciples, one cannot gather any spirit of vainglory or pride: for the disciples glory that demons were subject to them, but in the name of Christ, to whom they referred the glory of the victory; and therefore they said, "The demons are subject to us in thy name." But when Christ adds, "Nevertheless in this rejoice not, that spirits are

1765. Origen, Periarchon I, 5; St. Ambrose, De fuga saeculi c. 7; St. John Chrysostom, Hom. 10 De paenitentia; St. Gregory the Great, Moralia XIII, 4; Theodoret, Haereticarum fabularum lib. V, cap. De diabolo; Prosper, De diurnis temporibus c. 3; St. Bernard, Sermo 2 ad fratres; Theophylact on Luke 10.

subject to you; but rejoice that your names are written in heaven," he does not repress the joy of victory against the demons - as if it were of vainglory - but he shows that in which they ought principally to rejoice. For many were going to cast out demons in the name of Christ whose names were not written in the book of predestination, to whom he would say, "I know you not."

Therefore Theophylact interprets the aforesaid place, first indeed in this way, that along with the Fathers alleged by us in the first chapter he speaks of the fall of Lucifer from heaven, and thence he has no strength thereafter: as if Christ were saying, Do not marvel that demons are subject to you; for since Lucifer fell from heaven, he has no strength. Then the same Theophylact and Euthymius explain "heaven" as dignity which he had in the world before the Incarnation of Christ, besieging human affairs and being adored by them as God; to which exposition Basil in homily 9 seems to favor, where by "heaven" he understands the air, which he says is the place of the principality of the demon who dominated in the world.[1766]

For my part, I especially approve the interpretation of Jansen, chapter 80 of the Concordia Evangelica: that when the disciples were returning from preaching and said that they also had cast out demons in the name of Christ, Christ himself answered in this manner: "I beheld Satan like lightning falling from heaven" - that is, do not think you report something new to me; I also, with you, together with power, surely knew that all the forces of Satan were ruined. I further judge that when you were casting out demons, I was seeing Satan falling without any delay, like lightning is wont to fall swiftly from heaven; and the imperfect tense verb "I was seeing" indicates this sense not obscurely. The words ought then to be joined thus: "I beheld Satan falling like lightning from heaven"; wherefore that phrase "from heaven" ought not to be joined with "Satan falling," so that from that place it be sufficiently proved that Lucifer fell from the Empyrean heaven, but from bodies possessed he fell, as lightning is wont to fall down from the middle air.

Then that place of Apocalypse 12, where the battle of Michael is described with the Dragon in heaven, if it be understood of the first fall of Lucifer, only proves that the evil angels were in heaven before they sinned and then by sin fell thence; but from this one ought not to gather that Angels were created in the Empyrean heaven. Certain of the holy Fathers follow this sense, nor can it be proved from there that the first battle of the Angels was in the Empyrean with Michael, whom John saw fighting with the Dragon; some understand Christ by Michael, and by the Angels the Apostles of Christ fighting under Christ; and the Apostles themselves, when they cast out demons, drove from the world the idols with which the pagans were ensnared, and by death were victors with Christ and after Christ are alive. Others think that John did not see the first battle of Michael with Lucifer, when Michael, set over the proud angels, stood against them with those words, "Who is like God?" but the last battle of Michael with the demon for human souls, which was accomplished in heaven, that is, in the Church: and thus Anselm interprets that common sentence in Apocalypse; so also Augustine, in the book De vera et falsa poenitentia, does not think the "now is made" to

1766. Basil, Homily 9, where by "heaven" he understands the air as the seat of the demon's principality.

have been said by Angels in heaven, but by men on earth. However it be, according to the common opinion of the Fathers, we cannot from this place gather that Angels fell from heaven by sin, much less that they were created in heaven.[1767]

Quaestio LXII - On the perfection of the Angels in the state of grace and glory

Consequently, it must be investigated in what way the Angels were made to be in the state of grace or of glory. And concerning this there are nine questions.

Articulus I - Whether the Angels were in their creation blessed

To the first we proceed thus: It seems that the Angels were created blessed, because...

But, as I noted a little above, even if we follow the mind of the holy Fathers, it cannot be proved from that place that the battle of the Angels was in heaven. For Ambrose, on that passage, understands by Michael, whom John saw fighting with the Dragon, Christ; and by the Angels, the Apostles of Christ: therefore Christ and his Apostles fought against the demon and his Angels, because the demons stirred up the Jews against Christ, thinking they would overcome Christ by death; and they were overcome by the death of Christ. Others think that John did not there see the first battle of Michael with Lucifer, when Michael with those words "Who is like God?" resisted the proud evil Angels; but the battle of Michael with the demon for the souls of the just by a secret inspiration. It is said, moreover, to have been done "in heaven," that is, in the Church: thus the author of the commentary on the Apocalypse published among Augustine interprets that place; and in the ninth tome, Homily 6, Bede, Anselm, Primasius, Rupertus, Arethas, St. Thomas, Dionysius the Carthusian, Gagneius on that place of the Apocalypse, and Richard of St. Victor interpret it so.[1768]

Wherefore, rightly and at once there is subjoined in the same chapter an act of thanksgiving, wherein the Angels congratulate one another for the victory by these words: "Now is made salvation, and power, and the kingdom of our God, and the authority of his Christ: for the accuser of our brethren is cast down, who accused them before our God day and night. And they overcame him by the blood of the Lamb, and by the word of their testimony; and they loved not their lives unto death" (Apoc. 12). From which it is clear that "brethren" are there understood of men, who were being accused by the demon, and they themselves bravely resisted even to the shedding of blood and to death; or, as Anselm, Oecumenius, the Gloss, and the Scholastics explain, "they loved not their lives," that is, their animal life, "unto death," that is, so that souls should perish; but lest souls should perish, they did not hesitate to lose animal life - which cannot be said of Angels. The

1767. Cornelius Jansen, Concordia Evangelica c. 80; cf. Anselm, Oecumenius, the Ordinary Gloss, and the Scholastics on Apoc. 12, who understand "they loved not their lives unto death" of human martyrs, not of Angels.

1768. Primasius, Rupert of Deutz, Arethas, St. Thomas, Dionysius the Carthusian, Jacques Gagnée (Gagneius), and Richard of St. Victor are cited as interpreting Apoc. 12 of ecclesial conflict; cf. Richard of St. Victor, In Apocalypsim IV, c. 2; the "author of the commentary" printed among Augustine; Bede, Hom. 6 (ninth tome); Anselm.

author, indeed, of the commentary published among Augustine judges that that voice "Now is made" was not of Angels in heaven, but of men on earth. However it be, according to the common opinion we cannot gather from this place that the Angels fell from heaven through sin, nor therefore collect that they were created in heaven.

Consequently, there must be investigated in what manner the Angels were made to be in the state of grace or of glory. And concerning this nine things are asked.

Whether the Angels were in their creation blessed

Objection 1. It seems that the Angels were created blessed. For it is said in the fourth book On the Dogmas of the Church, that "the angels who persevere in that beatitude in which they were created, do not possess by nature the good which they have." Therefore the Angels were created in beatitude.

Objection 2. Further, the angelic nature is nobler than the corporeal. But the corporeal creature was, at the very beginning of its creation, created, formed, and perfected; nor did formlessness precede formation in it in time, but only in nature, as Augustine says in I On Genesis to the Letter. Therefore neither did God create the angelic nature formless and imperfect. But its formation and perfection is through beatitude, inasmuch as it enjoys God. Therefore it was created blessed.

Objection 3. Further, according to Augustine, On Genesis to the Letter, those things which are read to have been made in the works of the six days were made together. And so it is necessary that at the very beginning of the creation of things all those six days were at once. But in those six days (according to his exposition) morning was the angelic cognition, according to which they knew the Word and things in the Word. Therefore at the very beginning of creation they knew the Word and things in the Word. But Angels are blessed by this, that they see the Word. Therefore at the very beginning of their creation the Angels were blessed.

But on the contrary: Stability or confirmation in good belongs to the notion of beatitude. But the Angels, as soon as they were created, were not confirmed in good; which the fall of some shows. Therefore the Angels were not blessed in their creation.

I answer: By the name of beatitude is understood the ultimate perfection of a rational or intellectual nature; and hence it is that it is naturally desired. For each thing naturally desires its ultimate perfection. Now the ultimate perfection of a rational or intellectual nature is twofold. One indeed which they can attain by the power of their nature; and this is called, in a certain way, beatitude or happiness. And hence also the Philosopher teaches that the most perfect operation of man is contemplation, in which the best intelligible, which is God, can be contemplated in this life; he says that this is man's ultimate felicity: but above this felicity there is another felicity which we expect in the future, by which we shall see God as he is. Now this is above the capacity of any created intellect, as was shown above. Thus, therefore, it must be said that, as to the first beatitude which an angel could attain by the power of his nature, he was created blessed. For an Angel does not acquire such a perfection by some discursive motion, as man does; but it is at once present to him on account of the dignity of his nature, as was said above. But the ultimate beatitude, which

exceeds the capacity of nature, the Angels did not have immediately at the beginning of their creation: because this beatitude is not something of nature, but the end of nature. And therefore they ought not to have had it immediately from the beginning.

Reply to Objection 1. Beatitude is there taken for that natural perfection which the angel had in the state of innocence.

Reply to Objection 2. The corporeal creature could not at the very beginning of its creation have the perfection to which it is led by its operation. Whence, according to Augustine, the germination of plants from the earth was not immediately in the first works, in which only the generative power of plants was given to the earth. And similarly the angelic creature at the beginning of its creation had the perfection of its nature; but not the perfection to which it ought to reach by its operation.

Reply to Objection 3. The angel has a twofold cognition of the Word. One, natural; and another, of glory. Natural indeed, by which he knows the Word through its likeness shining in his own nature. The cognition of glory, by which he knows the Word through its essence. And by both he knows things in the Word. But by the natural cognition, imperfectly; by the cognition of glory, perfectly. Therefore the first cognition of things in the Word was present to the Angel from the beginning of his creation; but the second, not, but when they were made blessed by conversion to the good. And this is properly called "morning cognition."

Prior conclusion: The Angels were created in natural beatitude, that is, such as they were naturally able to have. Later conclusion: The Angels were not created in supernatural beatitude. The doctrine of these conclusions, and of this whole article, we shall examine in the following disputation.

Disputatio CCXXVI - Whether the Angels were created in beatitude only natural, or also supernatural

- Who have held that the Angels were created in natural beatitude. Caput I.
- The contemplation of the way in Angels does not have the true notion of beatitude, though it is akin to beatitude. Caput II.
- That the evil Angels were not created in the beatitude of the fatherland. Caput III.
- That it was not granted to the good Angels to have the beatitude of the fatherland from the first moment of their existence. Caput IV.

Caput I - Who have held that the Angels were created in natural beatitude

Not a few Scholastics with St. Thomas maintain that the Angels were created in a certain natural beatitude. Thus taught, with St. Thomas, Durandus in II distinction 4, question 1; and more recent Thomists in this article; the same also Scotus seems to have followed in II, dist. 3, question 9, Ad quaestorem, at the words "Quod autem talem," where he teaches that in the angel there was an evident cognition of God, which they call quiditative and proper, inferior indeed to an intuitive one,

of which we have said a little in disputation 134, chapters 1 and 3; and this they held to be the angel's natural beatitude. He taught the same in II, dist. 4, question 1, in the first argument, at the beginning of the question. And the same natural beatitude of the Angel St. Thomas, Durandus, and other Scholastics placed in the natural contemplation of God, with Aristotle, Ethics X, chapters 7 - 8, where he taught that the beatitude which he knew in men consists in the contemplation of God.

But because to some Thomists it seemed difficult to attribute to Angels any natural beatitude without rectitude of will; and this cannot be in the way by the sole contemplation of the highest good, such as can be had in this life: therefore some doctors of the School of St. Thomas said that to the natural beatitude of the Angel there pertains not only the contemplation of the highest good, but also the natural rectitude of the will, which they call a natural friendship-love and affection toward God, which accompanies the intellect's natural acumen in contemplating. They assigned, moreover, the difference between natural beatitude, which is granted in the way, and supernatural, which comes only in the fatherland, to be this: that the beatitude of the fatherland consists in the sole operation of the intellect clearly seeing God; because that clear vision of itself suffices to generate the rectitude of the will, which seems so necessary to beatitude that neither can one be blessed, nor be thought to be, with sin. But the beatitude of the way cannot consist wholly in the operation of the intellect alone contemplating God with whatever highest contemplation; because no contemplation of the way is sufficient of itself to generate rectitude of will, without which, as we have said, beatitude cannot consist. Therefore to the contemplation of God which is had in the way, there must be added the natural rectitude of the will toward God, so that from both there be made an integral state of natural beatitude.

Further, since perpetuity belongs to the notion of true beatitude, as we shall show in I - II, question 5, article 4, they say that that natural beatitude of the Angel is perpetual and cannot be lost, so that by this reason they may defend that the true notion of beatitude befits it. For the clarity of which they note that this natural beatitude can be considered in two ways. First, according to itself alone, as the ultimate perfection of a natural creature, not conjoined with nor constituted under supernatural beatitude; and in this way they say it is by its nature perpetual in angels, because there always remains in them the contemplation of that highest good, nay even the friendship-love natural toward it, as St. Thomas indicates in I, question 60, article 5, reply to the fifth. Then this natural beatitude can be considered as conjoined to the supernatural and, as it were, established under it: not because it is actually conjoined to it, but because, as is wont to be said, it is subordinated to it; and in this mode they say that only when the supernatural beatitude is lost, is that quasi-subordination also lost, by which the natural beatitude is ordered to the supernatural; and the natural remains in its prior mode, that is, according to itself.

Caput II - The contemplation of the way in Angels does not have the true notion of beatitude, though it is akin to beatitude

If we attend closely to the true and proper notion of beatitude, it will easily be clear that there is no natural operation in the way which can truly and properly make a rational creature blessed; but only a certain vestige and likeness of beatitude, which by a broader manner of speaking we can call beatitude. For I judge the difference to lie here between a rational and an irrational creature: that the irrational, if it can be blessed or have true felicity, can attain it by the gift of creation alone; either because by the very fact that it is created it would be created perfect and happy; or, if its perfection had to be acquired by operation, by the sole influx and concurrence of God owed by the gift of its creation, and provided no violence be done to its natural power, it could obtain it, unless it were impeded by some contrary extrinsic cause: because if an irrational creature were capable of grace and a benefit collated by God, or of a gift, it would only be capable of the gift or grace of creation; for the irrational creature, of narrow nature, is open to one thing and determined to one mode of operation: therefore, from the gift of its creation it could have the divine influx it needed for obtaining its perfection, and would need only a new gift and new grace for removing contraries by which it would be impeded from attaining its beatitude. But the rational creature, since by the gift of creation it is not determined to one mode of acting, but can be moved to diverse things by various objects, and by its nature has not its own determination, needs a new grace of God and protection, beyond the gift of creation - as we shall show more at length in I - II, question 109, article 6. And therefore it is of itself indifferent to fall into the height of the misery of sin, and to come to felicity and its beatitude. Since, then, saving the gift and grace collated to it in creation, it can fall into mortal sin, which is the greatest misery of a rational creature, and since true felicity cannot consist together with the highest misery: it follows that there is no true felicity and beatitude natural to an angel which should befit him from the gift of creation alone and which he could not lose. Although it be a lofty thing for him to have by nature the knowledge and consideration of God, and although it would necessarily befit the Angel to consider God, so that he could not but love him - as some are pleased to say - nevertheless, because from the will there can spring that highest misery of sin, it ought not to be called true beatitude.

Moreover, whether an angel can, without new grace beyond the gift of creation, love God with a love of friendship by a natural love, and whether for this he is always moved by new grace, will be clearly established from what we shall say at I - II, question 109, article 3. Meanwhile, if it be asked whether, even if by new grace he could love God in that mode, yet if together with that love there can be sin: then by no reason ought we to say that by it the angel's natural beatitude would be completed; since, as I said, the highest misery, which is sin, is at odds with true felicity.

Objection: They object, however, to this in this way. Even if the contemplation of God, which Angels can naturally have in the way, and the natural friendship-love by which he can love God as a friend, do not expel every misery and evil of his nature, nevertheless it can be called true beatitude: because to expel every misery seems to belong only to the notion of most perfect beatitude, such as is that of the other life; not, however, to the notion of beatitude simply, such as can also be had in

this life. For also Augustine, City of God XI, c. 11, teaches that the name "beatitude" is not to be used so strictly as to signify only the most perfect felicity of the other life, than which a greater cannot be.

I answer: It can indeed be called beatitude by a manner of speaking, and as bearing a likeness to beatitude; but not true and proper beatitude, in the rigorous and exact sense which the thing itself requires. For, as has been said, where there can stand together with it the greatest misery, there cannot be true beatitude; and thus the contemplation of the way in Angels, however lofty, together with natural love, does not suffice to constitute true beatitude.

By the beatitude of a rational creature we can understand some happiness of this life, even if it be not the highest: thus also St. Augustine calls blessed both our first parent in his creation and many other men in this life; yet he most rightly calls blessed only those, in chapter 11, who live according to reason. For since in this life that perfect beatitude toward which we tend cannot be had, we ought to be called blessed in this life only so far as we tend toward that perfect beatitude; and the notion of merit and of the way by which one goes to that supreme happiness fits only with a right life and good morals. Therefore with good reason Augustine called only him blessed in this life who lives according to right reason and virtue; and for the same reason we shall prove in I - II, question 3, article 4, that the beatitude of this life in men, if anything in this life deserves the name of beatitude, is set rather in charity and in good works, in which merit consists, than in contemplation of the intellect alone.[1769]

But what those Thomists cited in the preceding chapter were saying, namely, that the natural beatitude of the Angels is in the cognition of the true God joined with a natural love by which they love God with the love of friendship, is in no way proved to me.

- First, even if we were to distinguish a twofold love of friendship toward God - which we shall discuss below in I - II, question 109, article 3 - still we ought not to concede that any love can be had by an Angel without a new grace of God beyond the gift of creation, as we shall also prove there.[1770]
- Note: No love of God, even though natural, could be had without his grace.
- Next, to say that a right natural love of God exists and can never be lost, as those Thomists think, is altogether false and against St. Thomas: for although that love were right and good, nevertheless it ought not to be said to remain in the demons, since they persecute God with hatred; and, as St. Thomas says, in question 64, article 2, to the fifth, in all their operation they always sin.[1771] Moreover, that among Angels in via there was not a quidditative and proper knowledge of God in which their beatitude would consist, we showed above in disputation 206, chapter 2.[1772]

1769. St. Thomas, Summa theologiae I - II, q.3, a.4.
1770. I - II, q.109, a.3.
1771. St. Thomas, Summa theologiae I, q.64, a.2, ad 5.
1772. Vázquez, Disputation 206, cap. 2.

Furthermore, although no act of the knowledge of God in via is to be called the beatitude of the way, as if our beatitude were placed in it as in the principal operation, nevertheless an act of the intellect is likened to the beatitude of the homeland more than an act of the will, which is in via; but to the act of the will in via there more fittingly belongs the notion of the beatitude of the way, because it more closely approaches the true beatitude of the other life; and in this sense we can interpret the opinion of those who teach that the beatitude of the way consists in an act of the intellect.

But because all our merit, in which is the beatitude of this life, takes its beginning from knowledge, knowledge itself also deserves the name of beatitude: just as faith itself is called the grace of justification, as we noted above in disputation 88, chapter 1, because justification takes its beginning from it.[1773] For this reason it is said in John 17: "This is eternal life, that they may know thee, the true God," etc., which we shall show must be understood of knowledge through faith, in I - II, question 3, article 3.[1774]

Caput III - The bad Angels were not created in the beatitude of the homeland.

Among the Scholastics it is beyond doubt that the bad Angels were not only not created in the beatitude of the homeland, but also did not see God even in a passing manner. On purpose I distinguished between beatitude and the vision of God, when I said that the Angels were neither blessed nor saw God: for not every clear vision of God is the beatitude of the homeland, but only that which is perpetual; for that perpetuity belongs to the notion of beatitude must be proved in I - II, question 5, article 4.[1775] Moreover, when in this chapter and the next we speak of beatitude, the discourse is of the beatitude of the homeland, which theologians say is in the clear vision of God, or in the fruition of God clearly seen. For if we speak of the beatitude of the way, it is the same to say that the bad Angels were or were not blessed, as to say that they were or were not just, about which we must discuss in the following disputation.

It is proved:

- First, the bad Angels were not created in true beatitude. This is gathered first from the fact that, as we shall say below, the bad Angels never clearly saw God; therefore they were never blessed: for true beatitude of the other life cannot consist without the clear vision of God.
- Second, because even if the bad angels had seen God before they sinned, they would not have been blessed, since perpetuity belongs to the notion of beatitude, as we shall show in the place cited; and the bad Angels sinned; for thus they would have lost the clear vision of God shortly thereafter through sin, and consequently would not have been blessed before.

1773. Vázquez, Disputation 88, cap. 1.
1774. I - II, q.3, a.3.
1775. I - II, q.5, a.4.

- Third, Augustine argues thus in book 11 of the City of God, chapter 11, to prove that the demons were never blessed: because either in that state in which they were created they were foreknowing of their fall, and thus fear and anxiety about their fall did not allow them to be blessed; or they did not know that they would fall, and thus neither could they be blessed, because error took away the true notion of their beatitude. For Augustine thinks it to be against the true notion of beatitude to have that ignorance of one's fall, whether it were of pure negation, as they say, or of a perverse disposition, that is, conjoined with error, namely, that an Angel should think he would never fall: for it would not be a slight misery which would fight against the notion of true beatitude, either to waver with uncertain reasons to either side through ignorance, or to be deceived by some error about the state of his beatitude: all of which we shall show to be at odds with the notion of true beatitude in I - II, question 5, article 4.[1776]
- Note: The bad Angels did not see God clearly, not even for a short time.

Next, that the damned Angels never saw God clearly, not even for a brief time, can be proved no less easily: for it is certain that after sin, having fallen into hell, they no longer saw God; either, then, they ceased from the vision on account of sin, or solely by God's will, who, after he had shown himself clearly to them, afterward by his will alone hid himself. Neither of these can be said: not the first, because, as we shall show in I - II, question 4, article 4, those who see God can by no means sin, and hence cannot lose the vision by sin.[1777] Nor can the second be said: because it would be said without any foundation that God for a short or a long time clearly showed himself to the Angels, and then, without any demerit, hid himself from them.

But against what we have said there seems to be Augustine in many places, in which he teaches that the good and the bad Angels were created together in beatitude. Thus the author of the Ecclesiastical Dogmas, found among Augustine's works, seems to have taught this, in chapter 28, where he writes thus: Such were the Angels created, that if they willed, they would persevere in the light of beatitude; if, however, they willed, they could also fall: whence also Satan with the legions following him fell: but after the fall of the wicked he teaches that the good were confirmed so that they could not sin.[1778] And Augustine himself, in book 11 On Genesis to the Letter, from chapter 14 up to 26, handling this question, doubts greatly whether the bad angels were at some time in the company of the good, just, and equally blessed, or not; and finally in chapter 26 he concludes that the Angel sinned from the beginning, and thus was never blessed, but fell from that beatitude which he had not yet had but would have had; or that there are other Angels of an inferior order created in this world, among whom the demon lived in a certain state of beatitude without a foreknowledge of his fall: of which two, he says, the latter is not to be affirmed. For as he taught in that book, chapter 19, those two orders of angels are not to be asserted, of which the inferior would have been created in this world. But the former is marvelous (says Augustine), if it can be said: and immediately he subjoins, Or certainly a rationale is to be sought, how all the holy Angels - if the

1776. St. Augustine, De civitate Dei XI, c.11; cf. I - II, q.5, a.4.
1777. I - II, q.4, a.4.
1778. Auctor de Ecclesiasticis dogmatibus, cap. 28 (among the works printed under Augustine's name).

devil at some time lived among them blessed together with his own Angels - did not yet themselves have a certain foreknowledge of their perpetual happiness, but received it after his fall; or by what merit before his sin the devil was set apart from his own and from the other Angels, so that he was ignorant of his future fall, but they were certain of their own perseverance. So Augustine; who indeed seems to have been of this opinion: that, if it be not said that the evil angel sinned from the beginning - which does not seem to be said - then from the beginning he was a companion of beatitude with the good angels, whether he himself was ignorant of his fall while they were certain of their perpetual happiness, or all alike were ignorant of that which was going to happen to them, before the demon sinned; from which it seems that all the angels, even the bad, had previously clearly seen God.[1779]

And in book 11 of the City of God, chapter 13, he teaches concerning the bad angels that they had some beatitude, although without a foreknowledge of its perpetuity, if at some time, namely in the beginning, they were without sin - which we shall show with certitude to be the case in disputation 236, chapter 1 - or at least that all the Angels were in beatitude equally ignorant of their future perseverance or fall, until the wicked sinned. And in the book On Correction and Grace, chapter 10, he speaks thus of the bad angels: Yet fleeing his (that is, God's) goodness, by which they were blessed, they could not escape his judgment.[178017811782]

The passage of Augustine is explained:

I answer: Although Augustine in the places alleged - except in the book On Correction and Grace - remained in doubt whether the bad angels sinned in the first instant and were never blessed, or, if they were ever blessed, were nevertheless never foreknowing ...

Further, that the damned angels never clearly saw God, not even for a short time, is established: for it is certain that after their sin they no longer saw God; therefore either they ceased from the vision on account of sin, or solely by the will of God, who, after He had clearly shown Himself to them, thereafter by His own will hid Himself. But neither can be said. Not the former: because, as we shall show in the Prima Secundae, question 4, article 4, those who see God are in no way able to sin, and consequently cannot lose the vision through sin.[1783] Nor can the latter be said: because it would then without any foundation be said that God for a short or for a long time clearly manifested Himself to the angels, and then without any demerit hid Himself from them.

But against the things we have said, there seems to be a difficult passage of St. Augustine. Augustine in many places teaches that the good and the bad angels were created together in beatitude. Thus the author of the Ecclesiastical Dogmas, among the works printed under Augustine's name, seems to have taught this in cap. 28, where he writes as follows: "Such were the angels created, that, if they willed, they might persist in the light of beatitude; but, if they willed, they also could fall: whence also Satan with the legions following him fell: but after the fall of the

1779. St. Augustine, De Genesi ad litteram XI, cc.14 - 26, esp. c.19, 26.

1781. Vázquez, Disputation 236, cap. 1.
1782. St. Augustine, De correptione et gratia, c.10.
1783. St. Thomas, Summa theologiae I-II, q.4, a.4.

wicked, he teaches that the good were confirmed, so that they could not sin."[1784] And Augustine himself, in the book On the Literal Meaning of Genesis XI, and elsewhere on that question, discusses at length whether the evil angels sinned at some time together with the good, and finally concludes that the devil lived not yet blessed, and so never sinned from that beatitude which he would have had, but fell from a certain inferior beatitude without foreknowledge of his future fall; and that the other angels - among whom the demon's fall happened - were of an inferior order, and that among them there was some beatitude without certainty of perseverance; from which two things it is not to be affirmed that they were blessed with the beatitude which pertains to the fatherland.[1785]

It is therefore a constant doctrine of the Scholastic theologians that the evil angels never saw God, not even for a little time. What some more recent writers report for the opposite opinion - namely Alexander, Hugh, and Gabriel - I indeed have not been able to find. Gregory, however, in II, distinction 4, question 1, article 3, only teaches that the good and the bad angels were not created in perfect beatitude: not because he thought that the bad at the instant of their creation clearly beheld God, but because all were created in grace, and thus in a certain imperfect beatitude. For if he thought that the good had the clear vision of God, since they never lost it, he ought to have said that they were created in perfect beatitude.

Bonis Angelis non fuisse concessam beatitudinem patriae a principio sui esse.

Caput IV - That to the good angels the beatitude of the fatherland was not granted from the beginning of their being

Not less certain ought it to be to us that to the good angels, who persevered in the grace of God, the beatitude of the fatherland, or the clear vision of God, was not granted from the beginning; although Ludovicus Vives, book 11 on the City of God, cap. 9, because of words of Augustine ill-understood, which we shall explain below, said that the good angels from the beginning saw God, and always persevered in the vision of God.[1786] But in order to confirm the common and for the rest undoubted opinion, we must recall what we noted in the preceding chapter, namely, that "the beatitude of the fatherland" and "the vision" are not the same: for a vision without perpetuity does not have the true notion of beatitude. This posited, it will be sufficiently proved that the angels were not blessed from the beginning, if we shall first have shown that from the beginning the divine essence was not clearly revealed to them, but that they were created in the grace of God, which is a certain beatitude: this, however, is shown thus.

Reason is inferred. If the good angels were produced with the clear vision of God, then either that vision was granted to them for a short time and afterwards they were reduced to the state of faith, or they perpetually persevere in it. The first must not be said, because it is altogether without foundation, and for that sole reason is rightly rejected. The latter also cannot be: first, because it

1784. Auctor de Ecclesiasticis dogmatibus, cap. 28 (among the works printed under Augustine's name).
1785. St. Augustine, De Genesi ad litteram XI, with the discussion spread through cc. 14 - 26.
1786. Ludovicus Vives, In civitatem Dei, lib. 11, cap. 9.

would follow from it that the good angels were never in a state in which they could sin: for the clear vision of God is of such efficacy that it does not permit the one who sees God at all to cease from His charity, or in any way to sin, as we shall show in the Prima Secundae, question 4, article 4. But this is contrary to Augustine in the book On Correction and Grace, cap. 11, after the middle, where, speaking of the evil angels, he says that it was their fault that they did not remain, whereas it would have been their merit if they had willed to remain; he then adds: "As the holy Angels did, who, when others fell by free choice, by the same free choice stood firm themselves, and received the due reward of this abiding." What, I ask, is it to fall by free choice, unless to fall so freely that they could have stood? Therefore it will be the same to stand by free choice, as to stand so freely that one could fall. It is therefore false that the good angels were never in combat and struggle, with liberty left to them. Next, it would follow that the good angels were never in a state of meriting: because that state of the clear vision of God is incompatible with the merit of that very vision and of their own beatitude. That one who sees God can merit other things for others, as Christ merited for us, does not conflict, as I shall show in the Tertia Pars, question 19, articles 3 and 4; but that an angel should be at once a wayfarer and a comprehensor is not possible, as we shall show below in Disputation 228, cap. 3 and the following; and there it will be proved that no one can merit for himself beatitude by works subsequent to beatitude; otherwise a man would perpetually merit an increase of beatitude - which are all absurdities.[1787]

It remains for us to explain Augustine's meaning in some places where he teaches that the good angels were created "in beatitude": it must, however, be understood of the imperfect beatitude of the way, which is justice and holiness. And although in that book On the City of God he does not define that question, whether the good were secure from the beginning of their perseverance and rectitude, and the evil uncertain, or rather all were alike as regards knowledge of the future event, as we saw in the preceding chapter: nevertheless, in the book On Correction and Grace he plainly teaches that the good angels were not secure of their perseverance, but merited this by persevering in the state from which others fell. Thus he teaches in cap. 11, whose words we cited a little before; he had taught the same in cap. 10 of the same book. They are therefore said to have been created "in beatitude," not of the fatherland and perfect, but of the way, which is granted to the just: but Augustine never teaches that the clear vision of God was granted to them.

A more difficult is the place of the same Augustine, book 11 On the City of God, cap. 9, at the beginning, where of that part of the angels who remained good he teaches: "there is a great part more blessed, which has never sojourned abroad (peregrinata)"; by which words Augustine seems to denote that the good angels never walked by faith, which is proper to those who are far away from the Lord, according to that 2 Corinthians 5: "While we are in the body, we are pilgrims from the Lord: for by faith we walk, and not by sight." I answer that Augustine therefore said that the good angels were never "pilgrims," either because they walked by faith only for a short time, which, however, is reckoned as nothing; or because they were always in the place of the heavenly fatherland, namely in heaven, from which we are far; or finally - which more pleases me - because

1787. Vázquez, Disputation 228, cap. 3; cf. St. Thomas, Summa theologiae III, q.19, a.3 - 4; St. Augustine, De correptione et gratia, cc. 10 - 11; cf. 2 Corinthians 5:7; 1 Peter 4.

they never through sin departed from the state of grace: so that "to be a pilgrim" is not the same in Paul and in Augustine; but since "to be a pilgrim" is the same as to be alien, Paul refers it to the beatitude of the fatherland, whereas Augustine to the state of grace, in which the angels were created, and from which also we, when we sin, depart: as also Peter says that we are "pilgrims" when we sin, in the first epistle, cap. 4, using the same word "to be a pilgrim" in different senses, when he says: "Do not think it strange (ne peregrinari) concerning the fervor, which is to your temptation; but rejoice...": that is, do not be struck as by a new and foreign thing by the fervor and fire of temptation, by which you are tried and examined; the temptation is external and foreign to you.

But when the same Augustine, in the same cap. 5, says that the angels from the beginning were "partakers of the eternal light," he did not say this because by that light they saw God evidently and clearly: but because by their own nature they are light, since they are of an intelligent nature; which reason in all places exists in this disputation. Likewise the same Augustine explains that text of Genesis 1: "God said, Let there be light, and there was light." Finally, that which St. Thomas adduces here from Augustine in the article in the Argument "But on the contrary," by which Augustine seems to teach that there was in the angels a prior "morning" knowledge, which is the vision of the divine essence, than the "evening" knowledge, which is the cognition of creatures, we explained above in Disputation 1, cap. 2.

Therefore that the good angels had the clear vision of God after the battle with the evil, and after they persevered in grace by faith, is taught, together with St. Thomas in this article, by Alexander and the Scholastics all, each in his own place; but it is indeed the same: for they were equally left in the state of trial on the way, because of the common cause of perseverance, under the fear of falling, until they cooperated with divine grace, if they willed.

Articulus II - Whether an angel needed grace for this, that he might be converted to God

It is objected that it seems not. It seems that an angel did not need grace for this, that he might be converted to God. For to those things which we are able to do naturally, we do not need grace. But naturally an angel is converted to God, because naturally he loves God, as is clear from what was said above. Therefore an angel did not need grace for this, that he might be converted to God.

1. Further: We only need aid for those things which are difficult; but to be converted to God was not difficult for the angel, since there was nothing in him that would resist this conversion. Therefore an angel did not need the help of grace for this, that he might be converted to God.
2. Further: To be converted to God is to prepare oneself to grace by God. Whence Zechariah 1 says: "Be converted to me, and I will be converted to you." But we do not need grace for this, that we prepare ourselves to grace, because thus one would proceed to infinity. Therefore the angel did not need grace for this, that he might be converted to God.

But on the contrary: By conversion to God the angel attains to beatitude. If, therefore, he did not need grace for this, that he might be converted to God, it would follow that he did not need grace for having eternal life. But this is against the Apostle, Romans 6: "The grace of God is eternal life."

I answer that the angels needed grace for this, that they might be converted to God, insofar as He is the object of beatitude. For, as was said above, the natural motion of the will is the principle of all the things which we will. Now the natural inclination of the will is toward that which is fitting according to nature. And therefore, if there is something above nature, the will cannot be borne toward it, unless it be aided by some other supernatural principle. Thus it is evident that fire has a natural inclination to give heat and to generate fire; but to generate flesh is above the natural power of fire; wherefore to this it has no inclination; nor can it be moved to it except as an instrument of a higher agent. It has been shown above, when we treated of the knowledge of God, that to see God through His essence, in which the ultimate beatitude of a rational creature consists, is above the nature of any created intellect. Whence no rational creature can have a motion of will ordered to that beatitude, unless it be moved by a supernatural agent: and this we call the help of grace.

Objicitur 1. It seems that an angel did not need grace in order to be converted to God. For we do not need grace for those things which we can do naturally. But an angel is naturally converted to God, because he naturally loves God, as is clear from what was said above. Therefore an angel did not need grace in order to be converted to God.

Objicitur 2. Further, we seem to need help only for things that are difficult; but to be converted to God was not difficult for an angel, since there was nothing in him that resisted this conversion. Therefore an angel did not need the help of grace for this, that he might be converted to God.

Objicitur 3. Further, to be converted to God is to prepare oneself for grace. Whence in Zachariah it is said: "Be converted to me, and I will be converted to you" (Zech. 1). But we would need grace for this, that we might prepare ourselves for grace; otherwise one would go on to infinity. Therefore an angel did not need grace for this, that he might be converted to God.

Sed contra: By conversion to God an angel attains to beatitude. If therefore he did not need grace in order to be converted to God, it would follow that he would not need grace for having eternal life. But this is against the Apostle: Romans 6, "The grace of God [is] life everlasting."

Respondeo: It is answered that angels needed grace in order to be converted to God, insofar as He is the object of beatitude. For, as was said above, the natural motion of the will is the principle of all the things that we will. Now the natural inclination of the will is to that which is fitting according to nature (*natura*). And therefore, if something is above nature, the will cannot be borne toward it unless it be aided by some other supernatural principle. As is evident in the case of fire: it has an inclination to give heat and to generate fire; but to generate flesh is above the natural power of fire. Whence fire has no inclination to this, except insofar as it is moved as an instrument by the nutritive soul. But it was shown above, when the knowledge of God was treated, that to see God through His essence, in which the ultimate beatitude of a rational creature consists, is above the nature of any created intellect. Whence no rational creature can have a motion of will ordered to

that beatitude, unless it be moved by a supernatural agent: and this we call the help of grace (*gratia*). And therefore it must be said that an angel could not by his will be converted to that beatitude, except through the help of grace.

Ad primum ergo: An angel naturally loves God insofar as He is the principle of natural existence (*esse*). But here we are speaking of conversion to God insofar as He beatifies by the vision of His essence

Ad secundum: Difficulty is of that which transcends a power. But this can happen in two ways. In one way, because it transcends the power according to its natural order; and then, if it can be reached by some aid, it is called difficult. But if in no way, it is called impossible, as it is impossible for a man to fly. In another way something transcends a power, not according to the natural order of the power, but on account of some impediment added to the power. Thus to ascend is not against the natural order of the power of the motive soul. For the soul, as far as it is of itself, is by nature apt to move into any direction. But it is hindered from this by the heaviness of the body. Whence it is difficult for a man to ascend. But to be converted to ultimate beatitude is difficult for man both because it is above nature, and because he has an impediment from the corruption of the body and the infection of sin. For an angel it is difficult for this alone, that it is supernatural

Ad tertium: Any motion of the will toward God can be called a conversion to Him. And therefore there is a threefold conversion to God. One indeed through perfect love, which belongs to the creature already enjoying God; and to this conversion consummate grace is required. Another conversion is that which is the merit of beatitude; and to this is required habitual grace, which is the principle of meriting. The third conversion is that by which someone prepares himself for the having of grace; and to this there is not required any habitual grace, but the operation of God converting the soul to Himself: according to that of Lamentations 5: "Convert us, O Lord, to Thee, and we shall be converted." Whence it is plain that there is no proceeding to infinity

Conclufio est affirmans. In this article there was to be disputed the necessity of grace in angels; because, however, I judge the same reasoning to hold for them as for man in integral nature, we shall treat this question in I-II, q.109, a.1, and elsewhere. About the necessity of grace for moral works we shall dispute in q.109, a.2; about the necessity of grace for loving God, a.3; about the same for persevering, a.10; and so of the others. But what certain persons have said, that angels do not need the help of grace for consenting to a calling, but that this befits them from free choice alone, I showed to be false above in Disputation 98, c.2, and I proved that opinion manifestly to clash with the words of St. Augustine, from which he himself was trying to deduce it. By what reasoning habitual grace is required in angels for meriting eternal life we shall say at I-II, q.114, for the reason is entirely the same. The difficulty also that could be in this article around the solution of the third point will be handled likewise at I-II, q.113, a.8.[1788]

1788. Vázquez points forward to discussions parallel to St. Thomas: I-II, q.109 (a.1 - 2), q.113 (a.8), and q.114; and back to his own Disputation 98, cap. 2, against the view that angels could consent to vocation by free choice without grace.

Articulus III - Whether the angels were created in grace

D tertium sic proceditur. It seems that the angels were not created in grace. For Augustine says in the second book On Genesis to the Letter, that the angels in their nature were first created informally, and the heaven was so called; afterwards however they were formed, and were called light.[1789] But this formation is through grace. Therefore they were not created in grace.

1. Further, grace inclines a rational creature toward God. If therefore an angel had been created in grace, no angel would have been turned away from God.
2. Further, grace is a mean between nature and glory. But the angels were not blessed in their creation. Therefore it seems that neither were they created in grace; but first in nature only; then afterwards they obtained grace; and finally they were made blessed.

But on the contrary: St. Augustine says in the twelfth book of the City of God, chapter 9: "Who made a good will in the angels, unless He who created them at the same time with their will, that is, with the chaste love by which they adhere to Him, creating their nature and bestowing grace?"[1790]

I answer: Although concerning this there are different opinions, some saying that the angels were created only in natural endowments; others indeed that they were created in grace; yet this seems more probable to be held, and is more consonant with the sayings of the saints, namely, that they were created in grace making-pleasing (what we call "grace that makes one acceptable"). For thus we observe that all the things which in the course of time were produced by the operation of divine providence out of created nature by God were, in the first establishment of things, produced according to certain seminal reasons, as Augustine says upon Genesis to the Letter, like trees, and animals, and other things of this sort. But it is manifest that grace making-pleasing is related to beatitude in this way, as a seminal reason in nature to a natural effect. Whence in 1 John 3 grace is named the seed of God. Therefore, just as according to Augustine's opinion it is posited that immediately in the first creation of the bodily creature seminal reasons of all natural effects were implanted in it, so immediately from the beginning the angels were created in grace.

Ad primum: That formlessness of the angel can be understood either in comparison to the formation of glory; and thus the formlessness preceded the formation in time; or in comparison to the formation of grace; and thus it did not precede in the order of time, but in the order of nature: just as Augustine also posits about bodily formation

Ad secundum: Every form inclines its subject according to the mode of its nature. But the mode of the intellectual nature is to be borne freely toward those things which it wills. And therefore the inclination of grace does not impose necessity, but one having grace can sin

1789. St. Augustine, De Genesi ad litteram II (on the initial "inform" creation of angels as "heaven," and their later "formation" as "light").

1790. St. Augustine, De civitate Dei XII, c. 9.

Ad tertium: Although grace is a mean between nature and glory in the order of nature, yet in the order of time glory ought not to have been given together with nature in a nature newly created, because it is the end of the operation of the nature itself aided by grace. But grace does not stand as the end of operation, because it is not "of works," but as the principle of acting well. And therefore it was fitting at once to give grace together with nature

Conclusion: The angels were created in grace; and this is to be understood of the grace which we call making-pleasing, by which we are constituted just and holy before God, and heirs of the heavenly kingdom. Yet about this there is some controversy among the doctors, which we shall postpone to the following disputation.

Disputatio CCXXVII - Whether the angels were created in sanctity and justice before God, or in pure nature

Caput I - Setting aside the opinion that the evil angels sinned in the first instant

Setting aside the opinion of those who think that the evil angels sinned in the first moment of their creation (about which we must differ in Disputation 236), between those who teach that the angels did not sin from the beginning, concerning the proposed controversy there are two opposing positions. The first is that the angels were not in justice and sanctity before God, but were created in pure nature, neither just nor unjust. Thus thought Hugh of St. Victor in the first book On the Sacraments, part 5, chapter 29, and in the Summa of Sentences, tractate 2, chapter 2; and Rupert in the first book On Genesis, chapters 14, 15, and 16: for although he says that the angels were created innocent, that is, without sin, nevertheless he adds that they did not at once have the love of God; indeed, of the evil he asserts that they never had it. But what he further teaches in the same book, chapters 11 and 17, namely, that the angels were created in this lower world and afterwards by the grace of God were translated into heaven, is not to be understood of the grace of justification, but of that by which, by God's gratuitous gift, those heavenly seats were granted to them; and that the wicked, before they sinned, were translated into heaven he expressly teaches; and yet, he says, they never had the love of God.[1791]

For he also expressly teaches that even the wicked, before they sinned, were translated into heaven; and yet, he says, they never had the love of God.[1792] The Master is also reported as holding this opinion in II, dist. 4; although, in my judgment, he ought rather to be alleged for the contrary, unless he taught it more clearly in dist. 5, cap. c., for there he asserts that the angels were not created in conversion to God, but only in potency so that they could be converted; and in cap. 4 and 6 he affirms that a cooperating grace was given to them so that they might be converted to God, because the good persevered without sin by free choice, whereas to the wicked such grace was never granted, since by sin they merited to be without it; he taught the same in dist. 3, cap. 6. Yet in

1791. Hugh of St. Victor, De sacramentis I, V, c. 29; Summa sententiarum, tract. 2, c. 2. Rupert of Deutz, In Genesim I, cc. 14 - 16 (and cf. cc. 11, 17).

1792. St. Augustine, De Genesi ad litteram XI, c. 3; cf. the Master (Peter Lombard), II, dist. 4.

this opinion, insofar as he asserts that the angels were not created in holiness and grace, he agrees with the Master. To this opinion agree: the author of the Summa of Sens, book 2, tract. 1, cap. 1; Henry, Quodlibet 4, q. 10, after the middle; although he says nothing certain can be had about this matter, still he affirms that this is more probable. Likewise agree St. Bonaventure on II, dist. 4, art. 1, q. 2; Richard, art. 2, q. 2; Thomas of Argentina, q. 1, art. 2; Basso, q. 1, art. 3; Aegidius, quaest. 1, art. 4; Marsilius on II, dist. 4, art. 1, conclusion 1, and in the second proof of that conclusion; Scotus indeed, on II, dist. 5, q. 1, no. 9, To inquire, toward the end, although at the beginning he follows the opposite opinion when he assigns the morals of the angels on the way, nevertheless assigning the same later, seems rather to incline to this opinion; finally Alexander, II, part, q. 19, m. 2, although he defends both as probable, yet says that this one is more probable. All the Doctors cited agree in this, that the evil angels were never in grace.[1793]

This opinion is proved first by authority, then by reason.

By authority, first, by the testimony of Pope John, in cap. Visis litteris, 16, q. 2, where speaking of the devil he says: "I grieve enough, that he blushes to hold in the earth men constant out of clayey nature with that charity which he was not able to have in heaven." But men on earth have the charity by which they are justified before God; therefore the devil did not have that in heaven; and since it is the more probable opinion that all the angels were created in the first instant of their being in the same manner, the same must be said for the good angels for that first instant. Second, St. Augustine, De Genesi ad litteram XI, cap. 3, in the same place teaches of the demons that they never tasted the sweetness of the blessed and angelic life; and yet he says that heavenly seats had been granted to them not by the grace of justification, but by God's gratuitous gift; and he plainly feels that the evil angel was never in God's grace - especially since he seems to think that the evil angels fell as soon as they were created.[1794] Third, St. Gregory, book 32 of the Moralia, cap. 18, alias 25, explaining that of Ezekiel 28, "Thou art the signet of the likeness of God," says: "Accordingly, in the day of his creation the sockets for this stone were prepared," that is, he was created as one capable of charity, as it were wishing to be filled, so that, the angels standing like stones set in the ornament of a king, he could have cleaved to them. By which words he seems to signify that the evil angel was created only capable of divine charity, but did not wish to receive it.[1795] Fourth, the same is proved from Scripture: for in Job 4, where the Vulgate has, "And in his angels he found perversity," the Hebrew text says, "And in his angels he put not praise," or "light"; and by the name "light" grace and justice before God seem to be signified. And since the same reason obtains for the good and the wicked as to their first condition (as was said above), it follows that even those who persevered were not created in grace.

Then by reason the same opinion is recommended.

1793. Author of the Summa of Sens, II, tract. 1, c. 1; Henry of Ghent, Quodlibet IV, q. 10; St. Bonaventure, In II Sent. d. 4, a. 1, q. 2; Richard (of Mediavilla), d. 4, a. 2, q. 2; Thomas of Argentina, q. 1, a. 2; Basso, q. 1, a. 3; Giles of Rome, q. 1, a. 4; Marsilius, In II Sent. d. 4, a. 1, concl. 1; Scotus, In II Sent. d. 5, q. 1, n. 9; Alexander of Hales, II, p., q. 19, m. 2.

1794. Pope John, cap. Visis litteris, 16, q. 2 (in Gratian); St. Augustine, De Genesi ad litteram XI, c. 3; cf. ibid. c. 28.

1795. St. Gregory the Great, Moralia, lib. 32, c. 18 (alias 25), on Ezekiel 28.

First: because our first parent was not created in justice and holiness before God; therefore neither was the angel. For since man holds a lower place among rational creatures and has greater incentives to evil, he ought rather to have been created in grace, in order that against greater incitements he might also have from God greater remedies. But that the first parent was not created in grace is proved by Thomas of Argentina, Aegidius, and others who use this reasoning from St. Augustine, De civitate Dei XI, cap. 12, where he teaches that, as regards the delight of present good, the first man in paradise was more blessed than any just man in fallen nature, because then he felt no evil; but as regards the hope of future life, the just in fallen nature are more blessed. Which could not be true if the first parent had been created in God's grace and justice, as is clear enough.

Second: if the evil angel had been created in grace, he would not have fallen in the way in which he fell; because, as St. Augustine says, De Genesi ad litteram XI, cap. 28, "swollen with pride and corrupted by delight in his own power, he did not taste the sweetness of the blessed and angelic life." But if the demon had been created in grace, he would have known full well that he was in grace, and that it was for him a necessary means to attain beatitude; and hence he would not have been proud, corrupted by delight in his own power.

Third: if the angels had been created in grace in the same moment in which they were created, they would have merited eternal life; wherefore, immediately after the first merit they would have obtained eternal life, just as the evil angels, after the first sin, were condemned.

Tam malos, quam bonos Angelos in gratia fuisse creatos, auctoritate Scholasticorum, et Patrum probatur.

Caput II - That both bad and good angels were created in grace, justice, and holiness before God; and that this is proved by the authority of the Scholastics and the Fathers

A much more probable, and in the schools more received, opinion is that all the angels, both bad and good, were created in grace, justice, and holiness before God. This opinion is plainly followed by St. Thomas, Cajetan, and more recent Thomists on this article; by Albert, II part of the Summa, tract. 4, q. 18, m. 1; by Durandus on II, dist. 4, q. 2; by Capreolus, q. 1, art. 3, ad 1, against the fifth conclusion; by Gregory the Great? Major, q. 1; by Holcot on II, q. 3; by Jodocus Clichtoveus, book 6 on John, cap. 6, which is among the commentaries of St. Cyril on John; and Gabriel, indeed, on II, dist. 4, q. 1, art. 2, judges both opinions to be probable, since he thinks neither can be proved by an efficacious reason. Among the Fathers, both Greek and Latin, very many can be alleged for this opinion.[1796]

From the Greeks, indeed, St. Basil, on that Psalm 32, "And the spirit of his mouth all their power," thus writes: "For the angels at the beginning, that they might be, the craftsman of all things, the Word, created; sanctification, however, at the same time the Holy Spirit bestowed upon

1796. St. Thomas Aquinas; Cajetan; Albert the Great, Summa, II, tract. 4, q. 18, m. 1; Durandus, In II Sent. d. 4, q. 2; Capreolus, q. 1, a. 3, ad 1, contra quintam conclusionem; Gregory (of Rimini?) Major, q. 1; Holcot, In II Sent. q. 3; Jodocus Clichtoveus, In Ioannem VI, c. 6 (among the commentaries on St. Cyril); Gabriel (Biel), In II Sent. d. 4, q. 1, a. 2.

them. For they were not created in infantile stature, then afterwards by degrees awakened and made perfect, and so judged worthy of reception by the Spirit; but at their first constitution, and, as it were, by a certain sprinkling of their own substance, they at once had their sanctity." These words are so very clear for our opinion that they need no explanation.[1797] No less clearly did St. John Damascene, De fide orthodoxa, book I, cap. 3, teach the same in these words: "Through the Word, therefore, all the angels were created; and through the sanctification of the Holy Spirit they all received the measures of perfection, yet so that, according to each one's dignity and rank, they became partakers of light and grace." The same is gathered from the same Damascene in the following chapter, when he says that the devil lost the splendor and honor with which he was created by God. For since he did not lose natural splendor, as all admit, it plainly follows that Damascene is speaking of the splendor of grace.

To these we can add first the testimony of Anastasius, in the Questions on Sacred Scripture, q. 61, in tome 6 of the Bibliotheca sacra, where, speaking of the demons, he says that the better as well as the worse fell, and thus were cut off and deprived of the honor which had been given them from the beginning; which would not be the case if they had been created in pure nature, for then they would not have been deprived of any good or gift which they had had from the beginning - for the natural endowments have remained intact in the demons, as will be proved below from Pseudo-Dionysius. Then let us add Theodoret, in the book On the Cult of God, whom the same Anastasius cites, and in the book against the heretical fables, in the chapter on the devil and demons, where he too teaches that the angels fell from the state in which they were created, and did not remain in it, according to that of John 8, "He did not stand in the truth."[1798]

From the Latin Fathers also many can be alleged for this opinion. Chiefly St. Augustine is usually cited, whom, however, we shall set forth below, so as to show expressly what he thought in various places on this matter. St. Jerome, therefore, in the first chapter of the Preface among the commentaries on St. Cyril on John, openly handed down this opinion; for he says: "Just as the demons who fell from their own dignity, possessing nothing of their ancient grace, are dry"; and on Job 4, "In his angels he found perversity," he says that these words are to be understood of the devil who once was holy and fell from that angelic height, and yet in book 15, cap. 13 of the same work he teaches that the evil angels were created in the truth.[1799]

But if anyone objects that from these places of Jerome it is proved only that the demon was at some time just and holy, not, however, that he was created in holiness, I say first that at least by these testimonies the Doctors of the preceding opinion are openly refuted, insofar as they affirm not only that the demons were not created in grace and holiness, but that they never had it. Then, if they themselves concede that the demons were just and holy before they sinned, there is no reason why they should deny that they were created in justice and holiness.

1797. St. Basil, On Psalm 32 (33): "Et spiritus oris eius omnis virtus eorum."

1798. St. John Damascene, De fide orthodoxa I, c. 3 - 4; Anastasius, Quaestiones in Sacram Scripturam, q. 61 (in Bibliotheca sacra, tom. 6); Theodoret, De cultu Dei; idem, Haereticarum fabularum compendium, cap. de diabolo et daemonibus; cf. John 8: "In veritate non stetit."

1799. St. Jerome, Preface I among the commentaries on St. Cyril on John; and on Job 4: "In angelis suis reperit pravitatem."

Most clearly, however, St. Gregory, book 32 of the Moralia, cap. 18, alias 25, when explaining that of Ezekiel 28, "Thou didst walk perfect in the midst of the stones of fire," expressed this opinion in these words: "Because, among the hearts of the angels, set ablaze with the fire of charity, he stood out bright with the glory of his condition." He speaks of Lucifer, and by the aforesaid words plainly bears witness that he was created glorious with charity. Nay more, in the following words he pronounces that he was rightly called "the haughty" (extensus), because by the cooperation of his brightness he overshadowed the brightness of others. And of the same Lucifer, in the same chapter, alias 24, he says: "For what good did he not have, if he was the signet of the likeness of God? Very much, however, would have been lacking to him, if he had not been created in the grace of God."

Prosper also seems to have taught the same, book 3 De vita contemplativa, cap. 3, where he says that all the angels were created without sin and appointed to serve God happily; which could not have been done except through justice and grace. Add Isidore, book 1 of the Sentences, or On the Highest Good, cap. 12, sentence 7, where he says of the devil: "He was one who was constituted in the Truth, but not standing he straightway fell from the Truth"; but among the Fathers "truth" is called justice and holiness before God. Likewise St. Anselm, in the book De casu diaboli, cap. 4, 17, and 27, openly supposes that both the evil and the good angels were created in justice, which they did not have from themselves but from God; the evil, however, at their beginning lost it.[1800]

But truly St. Augustine, who is chiefly alleged for this opinion, taught variously about this matter. For in book XI of De Genesi ad litteram, cited in the preceding disputation, cap. 3, he either thought that many angels sinned in the very first instant of their being, or left that point in doubt; about the good angels, however, he seems to think that they were created in grace and in the beatitude of this life, that is, in grace and justice before God. He seems to think the very same in book 21 of De civitate Dei, cap. 13; and in book 12 of the same work, cap. 9, after the middle, after he has said of all the angels that they were created in the love of God, and that God created their nature and at the same time bestowed grace, he subjoins: "Whence it is not to be believed that the holy angels ever were without good will, that is, the love of God. But those who, though created good, are evil, are so by their own evil will, which the good nature did not make. Either they received a lesser grace of divine love than those who persevered in it, or, if indeed they were created equally good, then, these falling by an evil will, those, being more helped, arrived at that fullness of beatitude whence they were most certain that they would never fall." In which place he does not hesitate to assert that all angels, both good and evil, were created in grace. Quite wrongly, however, does Basso interpret this testimony of Augustine as not about grace that makes pleasing (gratia gratum faciens), but about some grace gratuitously given (gratia gratis data), that is, about some habit or supernatural species for understanding; for Augustine speaks in express words of the grace of charity and divine love, which exists only in the holy and just before God. In the same way

1800. Prosper of Aquitaine, De vita contemplativa, lib. 3, c. 3; St. Isidore, Sententiae I, cap. 12; St. Anselm, De casu diaboli, cc. 4, 17, 27.

must the same Augustine be understood in the book De correptione et gratia, cap. 10, when elsewhere he says that all the angels and demons were created in the beatitude of this life, which, as we said in the preceding disputation, consists in holiness and justice of works before God.[1801]

One could object St. Augustine, who in De correptione et gratia, cap. 10, says in these words: "Thus indeed did God ordain the life of the angels and of men, that in it he might first show what free will could do, and then what the benefit of his grace could do." Therefore, first the angels and the first man were created in pure nature, that they might receive grace from God. I answer: in that place Augustine is not disputing about the first creation, and about justifying grace, whether in it the angels were created, or in pure nature; but about the life of the angels and of men, that is, about perseverance in the state of grace. About this he very well says that it was thus disposed by God - that he might first make trial in them of what their pure free choice could do without the help of congruent grace, since both sinned; then what free choice helped by grace could do. He is speaking, however, not of all the angels, but only of those who sinned.

Caput III - The aforesaid opinion is confirmed by testimonies of Scripture and by reason

Nor indeed did St. Augustine teach that, in the case of the evil angels, God first tried what their free choice could do - namely, by sinning - and then the benefit of his grace by calling them back to repentance; for he did not believe that the apostate angels were converted to penitence. Therefore he added, "then what the benefit of his grace and the judgment of his justice could do," for the reason that in man God afterwards experienced the benefit of his grace by bringing him himself back to repentance; but in the apostate angels, what the judgment of his justice and of punishment could do, by condemning them forever.

The aforesaid opinion is confirmed by the testimony of Scripture and by reason.

Some of the more recent Scholastics are wont to pile up testimonies of Scripture so as to confirm the preceding opinion; it will not be useless briefly to report and weigh them, so that at length it may be clearer to us whether the aforesaid view has some firm foundation. Then indeed we shall commend it by reason.

The first testimony is usually Ezekiel 28, where the devil is said to have been "full of wisdom and beauty" and to have "walked perfect in the midst of the stones of fire"; which would certainly give outstanding approval to this opinion, if it were to be understood of the devil according to the literal sense. Whether however it ought to be understood thus we shall see below in Disputation 231, cap. 4.

Second, some allege that testimony of John 8: "He" (namely the devil) "did not stand in the truth," that is, in grace and holiness with God, which the Fathers are wont to call "truth," he did not persevere; for "to stand" signifies "to remain"; but what remains in some state is understood to have previously been in it. Therefore it is the same to say that an angel "did not stand in the truth" as to say he "did not persevere" or "remain" in the holiness in which he was created. By the name of

1801. St. Augustine, De civitate Dei XII, c. 9; De correptione et gratia, c. 10.

"truth" in that place they understand rectitude of life, as St. John Chrysostom in homily 53 on John, and Euthymius, on those words, so that the devil is said not to have stood in the truth because he did not persevere or did not rest in rectitude of life.[1802] In which sense no slight argument can be drawn from the aforesaid testimony. But, since the other Fathers variously understand the cited words, in my judgment little strength can be derived from that testimony. St. Cyprian in the book On the Lord's Prayer, in the beginning, explains that passage this way: "He did not stand by fidelity." And St. Augustine, in the book against Adimantus, cap. 4, uses "truth" for a law given to the angels, so that the sense is, "he did not stand in the law given to him"; which indeed could have happened even if an angel, created not in God's grace but in pure nature, had received a law to be observed and had not observed it. Finally, not a few, nor less weighty Fathers, understand by "truth" veracity itself, which the Scholastics call truthfulness in speaking. Thus explains St. Irenaeus, book 5 against heresies, cap. 22; St. John Chrysostom, homily 1 on the fall of the first man, a little from the beginning; St. Epiphanius, heresy 38; and Theophylact on that place in John. And their interpretation, as being most agreeable to the Evangelist's context, greatly pleases me; for Christ willed in that place to lash the Jews, because they were liars and murderers, and therefore he said to them: "You are of your father the devil, and the desires of your father you are willing to do." And what those desires were, and in what they wished to imitate their father the devil, he presently explained in these words: "He was a murderer from the beginning, and he did not stand in the truth; there is no truth in him: when he speaks a lie, he speaks of his own, because he is a liar, and the father of it." He therefore called the devil a liar, indeed the father of lies, because the first lie, which we know was said in the world, was invented and uttered by the devil, when he said to our parents in paradise: "You shall not by any means die: for God knows that on whatever day you shall eat of it, your eyes shall be opened, and you shall be as gods, knowing good and evil." Behold the first and remarkable lie. Therefore John rightly inferred that, when the devil lies, he does not borrow the sin from others but "speaks of his own": that is, he takes up the lie which he himself first contrived and introduced into the world. Since therefore the Jews were plainly lying, as is clear from that chapter - for they pretended the intention not to kill Christ, while secretly they were plotting his death - he rightly said, "You are of your father the devil," both because in the lie they were imitating him, who was the author of the lie, and chiefly in their intention of killing Christ himself; because the devil, from the beginning of the world, has been a murderer of men, that is, a seeker after and suggester of the death of men, and a persuader to Cain of the first homicide, namely of Abel his brother, as will be explained below in Disputation 236, cap. 1. Therefore the Fathers alleged rightly understand "truth" in John as "veracity."

Moreover the verb "stood" does not always in Scripture denote perseverance. For that of Psalm 1, "He did not stand in the way of sinners," some take, by a figure of speech, as equivalent to what in the same verse is said, "he did not walk in the counsel of the ungodly," as if it were said, "he was not in the counsel of the ungodly, nor in the way of sinners." Much more clearly "to stand" is used for "to be," as in St. Paul, 2 Corinthians 13: "In the mouth of two or three witnesses shall every word stand," that is, "shall be." In Scripture also "to stand" is taken for "to be firm" and "to

1802. St. John Chrysostom, Hom. 53 in Ioannem; Euthymius Zigabenus, In Ioannem, ad 8:44.

subsist," which is the same as "not to fall," as in Romans 14: "He stands or falls to his own Lord." Therefore the devil is said not to have "stood" in the truth not because he had first been in it and then did not remain or persevere in it, but because by the lie he fell, even if before he had fallen by pride. And if "truth" in that place is taken for veracity, the verb "stood" cannot denote perseverance in some earlier state or work; for before he spoke those words to our parents he had neither spoken a lie nor anything true in which he ought to have persevered: therefore, when he first lied to our parents, he is said "not to have stood in the truth," that is, to have fallen by a lie.

Therefore there remains only the testimony of Jude, which, in my judgment, not slightly confirms the aforesaid opinion; for he says in his Epistle: "The angels who kept not their principality, but forsook their own habitation, he has reserved under darkness in eternal bonds, unto the judgment of the great God." For he states that the apostate angels did not lose the "principality" which by its nature befitted them toward others; for in angels the natural endowments remained intact, and consequently the natural dignity by which one excelled others - their own natural principality - remained intact. Therefore by "habitation" and "principality" Jude understood the dignity of grace, by which one was more excellent than others.[1803] I know that certain of the more recent men explain that place of princes of the land of promise, whom, he says, were reserved to eternal judgment because they did not keep their royal dignity which they had: but the common exposition, which we have followed, is to be preferred.

Finally, this opinion can be commended by reason: because it is much more probable that the first man was created in grace than in pure nature without grace and justice; therefore the same must be said of the angels. But concerning man the more recent theologians prove this: indeed they think it is of faith, from the Council of Trent, Session Five, in the decree on original sin, Canon One, where it is said that Adam by sin lost the justice and holiness in which he had been established by God - as though it were the same "to have been established in justice" and "to have been created in it." But from that place this cannot be sufficiently proved; for "to have been established" does not signify "to have been created," but "to have been ordered." Wherefore in the Council only this is defined as certain, that Adam, before he sinned, had justice and holiness. However, that the first parents also were created in holiness is held from the Greek Fathers by Pseudo-Dionysius, cap. 3 of the Ecclesiastical Hierarchy, part 3; by St. Irenaeus, book 3 against heresies, cap. 37, explaining what it is "to have been made according to the image of God," and more clearly book 5, cap. 20; by St. John Chrysostom, homilies 8 and 9 on Genesis; by St. Cyril, book 1 on John, cap. 9; and book 2, cap. 3; and book 11, cap. 25; and book 12, cap. 56; and book 6 of the Dialogues with Hermias; and in the book On Adoration in Spirit. Among the Latins, St. Cyprian in Sermon 3 De patientia; and St. Ambrose, book 6 of the Hexameron, cap. 7, explaining the image according to which man was made; St. Augustine, book 14 of the City of God, caps. 11 and 17; and book 13, cap. 19; and On the Spirit and the Letter, cap. 27; and Prosper, Response 8 to the Capitula of the Gauls, which he made together with 214 priests.[1804] Scripture also not obscurely testifies to it, Ecclesiasticus 7: "God made man right." For "rectitude" in Scripture is holiness and justice with God. For although to "do right" in the sight of God is said in Scripture also of certain

1803. Jude 6.

sinners who did some good works of virtues (for those are called "right" before God which are according to his will), nevertheless to "be right" before the Lord is the same as to be just and holy before him; for "to be right" embraces not one or some work, but every work; but "the doers of the law are just before God," Romans 2. Since therefore the first parent was created in holiness and justice before God, it follows that the angels too were created in God's grace and justice: since God's perfect works are such.

This moreover is asserted in the same way of the angels who were to sin as of those who were to persevere: for of both reason proves it. But what was alleged for the contrary opinion in the first reason set out in cap. 10 avails nothing; for although man by his own nature feels the rebellion of the flesh against the spirit, which an angel does not feel, it does not follow from this that man rather than the angel was created in justice and holiness; for the sanctity of the soul did not remove in the first parent that rebellion of the flesh (as we shall show in Disputation 231, cap. 8), but a special protection and care of God did. Therefore, that reason would prove only this, that God, as a helper, should come more to the aid of man who is more in need; not that it was necessary that he be created in holiness and justice, but in a certain integrity of nature, which would come from that special protection of God, not from a state of sanctity which could not exist before God without justice and holiness.

Caput IV - The foundation of the prior opinion is overthrown

So then, in order to overthrow the foundations of the prior opinion, let us first set forth the testimonies which are brought forward for it and explain them, and then let us give reasons.

First among the testimonies was that of Pope John, whose words some Scholastics, together with the Gloss on that chapter, expound as though John were speaking of the consummate charity of the fatherland, which the demon did not have, and not of the charity of the way. I reply, however, first, that John did not say that the demon had not had that charity, but that he "could not have" it; therefore it is still difficult to determine of what sort of charity he speaks in that testimony. Further, since he said of that same charity, namely of charity, "which he could not have," it is hard to understand this of the charity of the way; for it seems true that the demon, before he sinned, really had the charity of the way; and that he could truly have had the charity of the fatherland, to which he was tending. And again, because of that same charity - both of the charity of the way and of the consummated charity of the fatherland - he said, "which he could not have": therefore, if we follow that letter, which also stands in the aforesaid testimony, about which charity it is difficult to decide; for the demon either did not have or did not retain the charity of the way, and did not consequently attain to the charity of the fatherland; yet nevertheless he could

1804. Pseudo-Dionysius, De ecclesiastica hierarchia, cap. 3, pars 3; St. Irenaeus, Adversus haereses III, c. 37; V, c. 20; St. John Chrysostom, Hom. 8 - 9 in Genesim; St. Cyril of Alexandria, In Ioannem I, c. 9; II, c. 3; XI, c. 25; XII, c. 56; Dialogi VI cum Hermia; De adoratione in spiritu; St. Cyprian, Sermo 3 De patientia; St. Ambrose, Hexaemeron VI, c. 7; St. Augustine, De civitate Dei XIV, cc. 11, 17; XIII, c. 19; De spiritu et littera, c. 27; Prosper of Aquitaine, Responsio 8 ad capitula Gallorum. See also Council of Trent, Session V, De peccato originali, can. 1; Ecclesiasticus 7:29 (Vulg. 7:30): "Deus fecit hominem rectum"; Romans 2:13.

have had, retained, and obtained it. Wherefore I think the sense of that decretal is clearer if the verb be not read "could not have had" in the past, but "cannot have" in the present - which reading also is found in some codices - and then it will be most true, of charity in general, that the demon cannot now have charity, because he is destitute of all help of grace, as we shall see in Disputation 239.[1805]

But if the verb "could not have had" be put in the past, we ought to understand that impotence, with respect to the demon, as consequent and penal, which does not take away free choice; for, since the demon did not have a congruous vocation, he could not have a charity that would remain; to have charity indeed he was able, but not to retain it: and thus he did not have it.

The second testimony is that of St. Augustine, whose mind on this matter we have now sufficiently set forth, and we have shown that in some places, concerning this question, a doubt remained.

The third testimony is that of St. Gregory; and it is clear that this Doctor, in that same chapter, plainly says that all the angels were created in charity; when therefore he says that the demons "had not" the "connexions" of charity prepared, he is to be understood of the consummate charity; and thus he said that the demon had indeed been deprived of charity - which signifies the habit - and that he did not have that charity such as could cohere with the other angels; and therefore he could not be confirmed in charity, which, once separated from the others, he cannot now obtain; which belongs only to the blessed. Finally, those places of Ezekiel 28, "You were the seal of the likeness of God," which Gregory explains, are to the same purpose.

This, moreover, is asserted of the Angels who were going to sin in the same way as of those who were going to persevere; for the reasoning proves it of both. But what was alleged for the prior opinion in the first reason set forth in chapter 1 is worth nothing. For although man by his own nature feels the rebellion of the flesh against the spirit, which an Angel does not feel, it does not follow from this that man rather than the Angel was created in justice and holiness. For the holiness of the soul did not take away in the first parent this rebellion of the flesh, as we will show in I - II, disp. 12, c. 7; but it was taken away by a special protection and care of God. Therefore, for this reason, so that aid might be given more to man as more needy, it was not necessary that he be created in holiness and justice, but in a certain integrity of nature, which, together with that special protection of God, would be provided - not from a state of sanctity, which could not subsist with God apart from justice and sanctity.

The foundations of the prior opinion are overthrown

It is clear that we must overturn the foundations of the prior opinion that were brought in chapter 1. And first indeed let us explain the true meanings of the testimonies that are alleged for it; then let us dissolve the reasons.

1805. The decretal cited under the name of Pope John is transmitted with variant readings "nequivit" (could not have had) and "nequit" (cannot have). The author judges the latter to express more clearly the present impotence of the demon, deprived of grace.

Of the testimonies, the first was that of Pope John, whose words some Scholastics, together with the gloss upon that chapter, explain in such a way that John is speaking of the consummated charity of the homeland, which the demon did not have, and not of the charity of the way. Two things, however, stand against this response: one is that John did not say "which" - namely, charity - "the demon did not have," but "which he could not have." But this, as it seems false of the charity of the way, so also of the charity of the homeland; for just as he really had the charity of the way, he could also have had the charity of the homeland, toward which he was striving. The other is that concerning the same charity which the demons try to take away from men and to hinder, he said: "Which he could not have"; but this is charity absolutely and universally, whether it be of the way or of the homeland. If we follow that letter as it is cited in the aforesaid testimony, it is difficult to understand the aforesaid testimony of any charity whatsoever: for the demon thus either did not have or did not retain the charity of the way, or he did not obtain the charity of the homeland, yet in such a way that he could have had, retained, and obtained it; and yet John in the aforesaid words said "which," namely charity, "he could not have": therefore it is still difficult to understand those words of any sort of charity at all. And although we should say that the demon did not have the charity of the way in the first instant of his condition, because he had no previous calling and grace to it, nevertheless we could not interpret the words of John in this way. For when he says of the demon "which he could not have," he attributes it to the vice of the demon himself that he did not have grace; from which part also the aforesaid testimony is rendered difficult: because if by his own fault he did not have charity, it follows that he could have had it; otherwise it could not be attributed to his fault that he did not have it.

Wherefore I think the clearer sense of that decretal is had if the verb is not put "could not have" (nequivit) in the past tense, but "cannot have" (nequit) in the present, as it is had in some codices; and thus it is most true, concerning charity in general, that the demon cannot now have charity, because he is deprived of every aid of grace, as we will see in disp. 239.[1806] Or if the verb "could not have" (nequivit) is put in the past, we ought to understand by this the consequent impotence of the demon, which does not take away free choice, as we have shown at length elsewhere.[1807] For since the demon did not have a congruent calling so as to remain in charity, he consequently could not have charity; then, however, the word "to have" ought not to signify "to obtain in any manner," but "to retain what once was had."

The second testimony was Augustine, whose mind we have already sufficiently explained in c. 2, and we have shown that in some places a doubt remained about this difficulty. The third testimony, which was Gregory's, ought to be explained of confirmed grace and charity. For since this Doctor, in the same chapter, plainly says that all the Angels were created in charity, when afterwards he says that the demons had cavities prepared so that they might be connected with the others by charity, this ought to be understood of consummated charity; and therefore the demon was indeed

1806. The decretal cited under the name of Pope John is transmitted with variant readings "nequivit" (could not have had) and "nequit" (cannot have). The present reading expresses more clearly the demon's impotence now, as deprived of grace.

1807. See the extended treatment of consequent impotence and free choice in disp. 98 and disp. 80.

capable of the charity which the gold signifies - and this is "to have had prepared cavities" - but he did not wish to be filled with this gold of charity so as to be forever connected with the other Angels; but "to be filled with the gold of charity" is to be confirmed in charity, so that henceforth he cannot be separated from the others, which is granted to the blessed alone. As for the sense of that place of Ezekiel 28, "You are the seal of the likeness of God," Gregory himself explains it in the same place; we shall speak to it in disp. 236, c. 4.

The fourth testimony is Job 4 according to the Hebrew reading, from which indeed a slight argument can be drawn. For our Vulgate, to which as to a rule we must stand, has thus: "And in his Angels he found perversity," from which words it cannot be proved that the evil Angels were not created in grace. Moreover, even if we read according to the Hebrew text, "And in his Angels he did not put praise," nothing can be proved from it; for in Hebrew for "praise" there is תהלה, Tahalah, which some render "light," "splendor," but others "foolishness." And if you render word for word from the Hebrew, that testimony must be read thus: "He will not believe his servants," for what is read in the Vulgate, "Behold, those who serve him are not stable." Then it follows in the same Hebrew text, "And in his Angels he will put light" (or "foolishness"), for what is in the Vulgate, "And in his Angels he found perversity." Nor indeed is it read with a negation, as it is cited - namely, "he will not put" - but affirmatively, "he will put." The sense, however, as regards that former part, "He will not believe his servants," is of men; or, as the Chaldean renders, "He will not entrust to the Prophets his secret counsels," because he does not deem them faithful to whom he might worthily commit all his secrets and counsels. Which sense the words of the Vulgate can bear, "Behold, those who serve him are not stable," that is, they are not faithful to whom God might commit all his secret counsels. Or certainly that part, "those who serve him," can also be referred to the Angels, so that there is a repetition when it is said, "and in his Angels," etc.; or if the former part is referred to men and the latter to Angels, the sense is the same. But when it is said in the Hebrew text, "And in his Angels he will put foolishness," it signifies what he had said of men - namely, that God does not entrust to the Angels all his counsels and secrets, because he knows them to be weak; as if he were to say, as Eugubinus interprets that chapter, "and in his Angels he will put," that is, "he will discover foolishness" or "perversity," which our Vulgate renders, "He found perversity": which ought not to be understood of the perversity of sin, but of the weakness of nature, on account of which God ought not to entrust to them all his secrets. Or, if we interpret the Hebrew word Tahalah as "light" (for it signifies either), the sense is: since Angels of themselves are nothing, their knowledge and light are from God, who reveals his mysteries to them. But if we read it with a negation thus, "And in his Angels he will not put light," so that the prior negation which is in the prior part, "Behold, he will not believe his servants," is repeated, the sense comes to the same thing, as if he were to say, "And he did not reveal to his Angels the hidden things of his counsel," which is "not to put in them light," namely, of revelation. And this sense coheres best with the preceding: for he had said, "Shall man, in comparison with God, be justified, or be purer than his maker?" scarcely, or, so to speak, by no means. Which he excellently confirms by what follows in

this way, "Behold, he will not believe his servants," etc., by which he shows the weakness of creatures, even spiritual ones, such as the Angels, in comparison with God, to such a degree that even to them God does not commit his secret counsels.

Reply to the first reason: I answer that the first parent was constituted in grace, as was proved in the preceding chapter. Wherefore it ought not to be a wonder if we say that the Angel too was created in grace. Nor indeed did Augustine, in the place alleged in the first reason, say that a just man in this state is more blessed than the first parent in paradise with respect to the hope of future life, as the authors of the prior opinion falsely report. Rather, he said as follows: "Therefore, as far as the delight of present good is concerned, the first man in paradise was more blessed than any just man in this mortal infirmity; but as far as the hope of future good is concerned, more blessed is any man in whatever torments of the body, to whom it is manifest not by opinion but by certain truth that he will have without end the society of Angels, lacking all trouble, in the participation of the Most High God," whereas that man, being uncertain of his fall, was in that great felicity of paradise. Thus far Augustine; and by these words he does not compare any just man whatsoever with the first parent because the first parent had not grace and holiness before God as long as he was in paradise, but he compares them only as concerns certainty about future perseverance in good and in felicity. Nor does he assert that a just man in this life is certain of his perseverance - of which the first Adam was not - but that those just men of this state are more blessed, who, even if they are in torments, have nevertheless learned by revelation and are certain of their future perseverance. For Augustine does not there deal so much with the delectable and pleasant state lacking all trouble as with justice and the certainty of perseverance in it, for constituting man as blessed.

Reply to the second reason: I answer that although the Angel was created in grace, he did not know his state evidently, because the mysteries of grace are not evidently known to him; yet he had a most certain knowledge of it. Or, if he had evidence, since he could evidently know the act of charity by which he was cleaving to God, nevertheless, since he did not have charity and the love of God from the clear vision of him, he was not so firm in charity that he could not be moved from it by a contrary love. For his own excellence could be set before him more efficaciously than that divine goodness which was revealed through faith and which moved him to the charity of God; but only charity arising from the clear vision of the goodness of God, which thus appears under every aspect of good - even in the very exercise - cannot be overcome by contrary love, as we shall see in disp. 231, c. 4. As to the third reason - why, after the first merit, the demons did not immediately receive the beatitude of glory, and whether the good obtained it after one merit or after more - we shall speak in the following disputation, c. 10.[1808]

1808. On the invincibility of charity from the clear vision of God's goodness, see disp. 231, c. 4; on the timing of the reward after the first merit, see the following disputation, c. 10.

Disputatio CCXXVIII - Whether all the Angels were created equal in sanctity and justice

- The truer opinion is that the Angels were disposed by their own operation aided by grace unto justification. c. 1.
- Angels more perfect by connatural dignity obtained greater grace from God. c. 2.
- The foregoing doctrine is illustrated by certain notes. c. 3.
- The truer opinion is that the Angels could not have been disposed by their own operation without grace unto justification. c. ...

Caput I - On the disposition of the Angels to grace

Concerning the inequality of grace among the Angels, St. Bonaventure disputes in this question (q. 3, a. 8); and we too have resolved to treat it in this disputation, because it seems connected with the matter of the preceding disputation: first, however, about the disposition of the Angels unto grace. On this point, among those Theologians who teach that the Angels were created by God in sanctity and justice, it is not sufficiently certain whether the Angels were disposed unto their justification by some proper operation of theirs proceeding from the aid of grace, from the inequality of which disposition the inequality of sanctity itself and of grace making [them] pleasing would be determined. For Capreolus in II, dist. 4, q. 1, a. 3, ad 1, contra 4, concl. 8, ad 1 contra quintam, and some Thomists, affirm that indeed in the first instant of their existence the Angels were justified, but that they had no disposition unto justification. And their reason is this: just as St. Thomas teaches (De malo q. 16, a. 4, ad 3), the operations of the Angel ought to have such an order among themselves that the natural and without-grace operations come first, before the supernatural or from grace; but no operation not proceeding from the aid of grace can be a disposition unto grace, as we have clearly proved above (disp. 91, c. 11 and the following). Therefore, if the Angel in the first instant was created in grace making [him] pleasing and in holiness, he did not have it from his own disposition; because then he could not have had any other operation than a natural one and not from the aid of grace. This opinion, if he should wish to defend that an Angel was created in grace, ought also to be favored by Alexander; for he posits both questions as problems. For he, according to the doctrine which he follows,[1809] must affirm that in the first instant the Angels could not operate, because, as he teaches in the solutions of the arguments, the same thing cannot in the same instant be produced and operate. In which, in part, he embraces the opinion of Hugh of St. Victor, in the Summa sententiarum tract. 1, c. 2, where he teaches that no thing can operate freely in the first instant of its being. The same Henry would be compelled to assert, if he were to say that the Angels were created in sanctity and justice; for he also held (lib. 8, q. 10) that an Angel could not in the first instant sin, nor merit, nor operate freely;

1809. See Alexander, II, q. 29, m. 1, a. 2, a. 7 (as cited), along with his principle that "the same thing cannot be produced and operate in the same instant." Also Hugh of St. Victor, Summa sententiarum, tract. 1, c. 2; Henry of Ghent, Quodlib. 8, q. 10.

but if he had had some disposition, it ought to have been free. Concerning their opinion, as it pertains to free operation in the first instant of a thing, we have spoken above (disp. 68, c. 6), and we shall speak (disp. 236, c. 3).

But I for my part judge far truer the opinion of those who say that the Angels were not justified without some disposition of their own operation; they grant, indeed, that in the first instant the Angels had an act of charity and of meritorious glory; and that act of charity, which together with it is the infusion of the habit, all the Scholastics call a disposition. Yet about the order which that act has with the habit there is among them no slight controversy. We shall explain this opinion...

I for my part judge far truer the opinion of those who say that the angels were not justified without some disposition (*dispositio*) of their own operation, which was present together in the same first instant with the very infusion of habitual grace. Thus taught Cajetan in 2.2, q. 24, a. 3, around solution 3; and the same opinion is also reported for Ferrarien. on III Contra Gentiles, c. 110; for although there he only asserts that the angels in their first instant were and merited, yet according to the doctrine of St. Thomas which I shall explain below, he ought consequently to teach that that merit of life eternal was a disposition to justification; and the same are forced to affirm, whoever concede that in the first instant an angel had an act of charity and merited glory: for the act of charity, which is together with the infusion of the habit, all the Schoolmen call a disposition - though as to the order which that act has with the habit there is among them no slight controversy. In order to explain this opinion, note that "disposition to justification" is employed variously among the Doctors.

For "disposition" is said of any operation by which a man little by little tends to justification and obtains for himself other help all the way to the remission of sins and justification itself; and of this sort alone I think the Fathers of the Council of Trent spoke in session 6, c. 6, and session 14, c. 4, where the contrition which they there call a disposition to grace, they do not use for sorrow for sins from love of God above all things precisely, but for sorrow from another end, or for sorrow in general. For in that c. 4, when they speak of contrition formed by charity, they do not call it a disposition to grace, but they say that by it a man is reconciled with God; of which relation we shall speak better elsewhere.[1810]

Therefore, if we speak of this kind of disposition which precedes in time: for all who teach that the angel was created in grace, it is indubitable that he was not disposed by any kind of operation to grace and justification, as is clear enough. For if at some time the angel had been without justice and holiness, so as to be gradually disposed by some works, he would have needed the help of grace for those works; for the same reasons and testimonies which we have at length adduced in disputation 91 altogether prove of the angels, as of men, that no one can even be disposed to the grace of God by his own powers. There is also another disposition which is wont in time to precede

1810. Council of Trent, sess. 6, c. 6; sess. 14, c. 4. On reconciliation and formed contrition, see the loci adduced by Vazquez to I - II, q. 113, a. 8.

justification, and which by itself alone cannot justify, nor of itself is necessarily conjoined with justification, as attrition, whereas with the sacrament it always brings justification with it and has it conjoined, as is decreed in the Council of Trent, session 14, c. 4.

A disposition to justification is also called by the Schoolmen the act of charity and of contrition, which in the justified is together in time with grace itself habitual. Whether, however, this act proceeds as from an efficient cause by help alone, and in the genus of efficient cause precedes the habit; or rather proceeds from the very habit as from an efficient [cause], and thus supposes the infusion of the habit on the part of the efficient cause but precedes the reception of the habit on the part of the patient, is a very great question. In the same way, in the order of philosophizing, we must proceed; about which we shall speak more fully elsewhere; for now it is enough for us to show that this kind of disposition existed no less in the angels than it is asserted to be in men who are justified by their own act - although in men after sin this disposition has the special feature that love of God is conjoined with sorrow for sins. And this first is proved from St. Augustine in the place cited in the preceding disputation, where he plainly says that the angels were created in love of God and with the love of charity. Then, because if once we admit that the angels were just in the first instant, there is no reason why we should deny that they also had from the beginning the love of charity toward God. For what Capreolus used to say - that prior in duration there must be an act natural from pure nature than an operation from grace - I do not see on what grounds it is asserted. I admit that St. Thomas taught so in the place cited, in favor of Capreolus's opinion; yet he clearly felt the opposite in this work, I, q. 63, a. 5, ad 4, where he admits that the angels in the first instant merited glory: why, then, shall we deny that from the beginning they also loved God by charity? Moreover, what Alexander said, that in the first instant in which a thing is produced it cannot operate; and what Hugh and Henry said, that a rational creature in its first instant cannot operate freely or by deliberation - we shall show below in disputation 236, c. 3, to be false; and about liberty in the same instant against those same authors we have already said above.[1811]

Caput II - That the angels who by natural dignity are more perfect obtained greater grace from God

As in the preceding chapter we supposed as indubitable that in the angels there preceded no natural disposition, nor from their own powers, by reason of which they might obtain from God the grace of justification; now in like manner we must suppose that the natural perfection of each, in which they were created by God - what is called the grace of creation (gratia creationis), as we explained in disputation 68, c. 1 - was in no way a cause of obtaining from God the grace of justification. But in the angels this is proved by altogether the same reason which has place in men, about which above in disputation 91 more than enough has been said. And for the same reason I

1811. Alexander of Hales, II, q. 29, m. 1, a. 7; Hugh of St. Victor, Summa sententiarum, tract. 1, c. 2; Henry of Ghent, Quodlib. 8, q. 10; cf. Vazquez, disp. 236, c. 3.

think it is no less a matter of faith in angels than in men, that this natural dignity was not the cause of the grace bestowed on them, just as a good natural disposition and talent in men was not the cause of their grace.

However, whether God by His will, in no way regarding the dignity of creation as a cause, distributed His grace of justification in varying measure to the angels according to their dignity and natural excellence, or not, can be called into question. I have read none of the Schoolmen thus far who disputed about this, except the Master in II, dist. 3, and St. Thomas, and Cajetan, and more recent Theologians on article 6 of this question and on 2.2, q. 24, a. 3, ad 3. But all, by a common sentence, teach that to the higher angels in their very creation a greater grace of justification was bestowed. And this was openly the opinion of St. John Damascene, De fide orthodoxa II, c. 3 (before the middle), where after he has said that all the angels in their creation were perfected by the grace of God, he subjoins: "Yet so, that according to each one's dignity and rank they are made participants of the grace and light." It is also clear from the doctrine of Pseudo-Dionysius, who distributes the hierarchies of the angels and orders in beatitude according to the measure of natural perfection, as is seen in c. 6 of the Celestial Hierarchy and the following, and in that same chapter he teaches about the first hierarchy that none is more divine, and that it is more occupied in divine illuminations; which doctrine of the hierarchies he testifies he received from his master, namely Paul; and in c. 7, on the first hierarchy, he says again: "Rightly, therefore, is the first of the heavenly hierarchies administered over the highest and most excellent natures by merit." Add also St. Basil, On the Holy Spirit, c. 16 (a little from the beginning), who says that the angels, according to the proportion of their preeminence among themselves, received from the Holy Spirit the measure of sanctification. Nor indeed have I read thus far anyone who defended the opposite. Wherefore a different distribution of grace is observed among angels than among men. For among men there are many of nobler disposition and native ability to whom less of the grace of God is communicated, as was noted in disputation 91. Whether, however, the first angel who fell by sin was by his nature the most outstanding of all, and therefore received from God a greater grace of justification, we shall see below in disputation 237, c. - . Yet this opinion about the distribution of grace I judge true not only in the angels who remained, of whom Dionysius and Basil seem to speak, but also of those who fell: both because Damascene seems to speak universally of all; and also because there does not seem greater reason to be had for those who persevered than for those who fell - at least as regards the first instant of their creation, in which all were just, and loved God, and merited life eternal. For they did merit: for in the following instant the evil angels had less preventing help of God than the good; this those ought to admit who assert that men who do not respond to God calling are prevented by a lesser grace than those who respond; about which in disputation 98 we have said more than enough.[1812]

1812. Damascene, De fide orthodoxa II, c. 3; Pseudo-Dionysius, De caelesti hierarchia, c. 6 - 7; Basil, De Spiritu Sancto, c. 16; cf. Vazquez, disp. 91; disp. 98.

Caput III - The foregoing doctrine is illustrated by certain notes

First, so that we may sincerely understand the foregoing doctrine of the Fathers and of the Schoolmen, and that we may have no occasion for error, certain observations are to be noted. First, not only did God without any debt bestow grace on the angels, but also on their side nothing worthy, nothing congruent, preceded which might be the cause of the bestowal of grace. For thus God conferred those gifts that He did not regard the gift of creation as a cause; for thus grace of justification from first help all the way to the last would have the character of retribution, and not of mercy or of wholly liberal donation, as we set out in that disputation 91, c. 15; which, as we noted there, is against the nature of divine grace whereby a rational creature is justified.

Second, the doctrine of Cajetan on 2.2, q. 24, a. 3, around solution 3, must be examined. For Cajetan says that charity was distributed to the angels by the will of God as by a per se cause: because although to an angel of more perfect nature, who of himself works more perfectly and endeavors, a greater grace was given, this was (Cajetan says) per accidens, because God so willed to make the striving of a more perfect angel more worthy as a convenient disposition to a greater grace, according to the proportion by which a higher angel strives more perfectly than a lower; yet God could, if He had so willed, have made the striving of some angel more worthy for a greater grace than the striving of a superior. This doctrine, however, needs explanation. First, if Cajetan understands the natural endeavors and works of the angels as made worthy effects by the favor and acceptance of God according to the proportion of one angel's nature to another, so that they were dispositions to grace, that is, to charity - absurd is the doctrine, whether you understand by grace habitual charity, by which a man is just and sins are remitted, or the first calling of operative grace: because no action from pure nature can be a worthy or congruent disposition to obtain grace; for thus the true notion of grace would be destroyed, as we have sufficiently shown in that disputation 91, c. 15. Therefore, if Cajetan understands that the natural endeavors of an angel were rendered worthy to a greater or lesser aptitude for grace and charity according to the proportion of the nature of one angel to another, or in some other way - namely, that a more perfect angel, who has more perfect natural endowments, was more powerfully prevented by grace, so that by its strength he might cooperate more efficaciously, and thus his consent might be a more congruent disposition to grace and habitual charity - his opinion is true: for that ultimate disposition, of which in the first chapter of this disputation we spoke, which precedes the infusion of the habit on the side of the efficient cause (or, if you separate the infusion on the side of the efficient cause, precedes the reception of the habit on the side of the patient), as we shall say elsewhere, is always an elicited act in us; and in the angels there was some congruent thought pertaining to operative, that is, preventing grace, and from that also a cooperation of free choice in each, so that the consent might be free, with both concurring, and not from free choice alone.

Their opinion, therefore, however you take it about any sort of grace, is absurd. First, if we speak of grace and habitual charity, and of the ultimate disposition to it which the Schoolmen posit, it cannot without error be said that the angels could be disposed to it by their own powers.

Thirdly, I shall report the opinion of certain theologians of our time, who, concerning the disposition to grace in the angels, in my judgment did not think rightly. For they asserted that the angels were justified from the disposition of free choice alone, without the gift of God: because they thought that to receive and to retain grace is not in the angels a gift of God; and they held the same about the grace given to the first man in the state of integral nature. Wherefore they also said that the measure of justification and of habitual charity ought to be taken from the measure of the disposition proceeding from free choice alone. Thus indeed did they philosophize, leaning upon the authority of St. Augustine, whose mind they did not follow.

The opinion of these men, however it is taken about any sort of grace, is absurd. First, if we speak of grace and habitual charity, and of the ultimate disposition to it which the Schoolmen posit, it cannot without error be said that an angel could be disposed to it by his own powers from the sole gift of creation, without any other gift of the grace of God; because that ultimate disposition is said to consist of certain acts of charity: but this cannot be from free choice alone. For no one doubts that the affection of charity exists even in the angels and in a nature entire only by the gift of God. Nay rather, St. Basil, in the book On the Holy Spirit, chapter sixteen, a little from the beginning, teaches that the angels could not have said that, "Glory in the highest to God," etc., unless they had received from the Holy Spirit the power, that is, grace: because no one, not even an angel, can say, "Lord Jesus," except in the Holy Spirit. Who then would dare to assert that the angels could, by their own powers, without the grace of God distinct from the gift of creation, love God, and by this love be disposed for receiving habitual justice and charity?[1813]

Now the testimony upon which the adversaries rely is from St. Augustine, in the book On Correction and Grace, chapter eleven, after the middle, where he says that the first man did not need help so as to receive the good, namely holiness: and therefore, since an angel is of the same virtue, neither ought he to have needed the help of grace for this affect. But, as we said above in Disputation 98, chapter two, and as we shall say in 1 - 2, question 109, article 10, Augustine said that the first man did not need the help of grace so as to receive the good of holiness, because he already had it from his first origin; and thus there only remained that he should need help in order to retain and to persevere. But we, because we have lost that good, have needed help also in order to receive it back restored.[181418151816]

Next, it is also absurd to assert that for retaining this grace of justification and persevering in it the angels did not need the special help of the grace of God, but were able to effect it by their own powers. For even in integral nature perseverance is the gift of God, as the Second Council of Orange defines in canon nineteen. But if the angels could persevere by their own virtue, they could glory in themselves, nor could we say to them that of 1 Corinthians 4: "What have you that you have not received?" - which indeed, as of men, so also of angels, Anselm rightly thinks must be understood, in the book On the Fall of the Devil, from chapter 1 to 3.[18171818]

1813. St. Basil, De Spiritu Sancto, cap. 16 (paene ab initio).
1814. St. Augustine, De correptione et gratia, c. 11.
1815. Disputatio 98, cap. 2 (Vázquez).
1816. 1 - 2, q. 109, a. 10.
1817. Second Council of Orange (Arausicanum II), can. 19.

Finally, all the reasons and testimonies which prove that the help of God is necessary for men in order that they persevere, prove also that it was necessary likewise for the angels. Now the reasons are taken from prayer, by which not only men, but even angels could profitably ask for the help of grace to persevere; similarly, they could and ought to give thanks to God for the perseverance granted to them. But from the usefulness of prayer and thanksgiving we rightly gather the necessity of grace, as in 1 - 2, question 109, article 2.[1819]

But if the aforesaid moderns speak not of habitual grace, but of what they call actual grace, when they say that the angels did not need the help of the grace of God for receiving grace, either they speak of operative grace, or of prevenient grace, as it is received before consent, as I explained sufficiently in Disputation 88; and for receiving this it is rightly said that another grace is not necessary: because the very calling, bestowed by God alone without our consent, is received in us without another grace. Or they speak of receiving this grace by consent, as they plainly seem to assert; and their opinion is absurd, inasmuch as they assert that an angel can receive grace, that is, consent to it, by his own powers without any help of grace itself. For one who has once been called by God cannot consent to the calling save by the power of that very calling cooperating, as we have amply shown above in Disputation 97, chapter 2.

But the aforesaid Doctors bring forward for themselves as testimony St. Augustine, in the book On Correction and Grace, chapter 11, where concerning the first man (and the same reasoning seems to be about the angels) he says: "He gave help, without which he could not remain in it (namely, justice), if he wished; but that he should wish, He left to his free choice": therefore Augustine says that to retain grace is the work of free choice alone. I answer: Augustine did not say that it is the work of free choice alone without the help of grace, but that it was left in the liberty of free choice; which indeed is rightly said, even if it is done by the help of grace. For the consent which we render to grace by its help is placed in our liberty, since we are also able to resist grace.

Someone will object again from the same Augustine in the same chapter 11, near the end, those words: "But what will be freer than free will, when it will not be able to serve sin?" which was to be for man in the future, as it was made the reward of merit for the holy angels; now, however, by sin, when the merited good was lost, in those who are freed it has been made the gift of grace which was to be the reward of merit. From which someone could in this way argue: Not to be able to sin happens only in beatitude: therefore Augustine said that beatitude was to be in the future for man in integral nature as a reward, just as it was also for the angels, if they had persevered; now, however, he says that for man after fallen nature it is grace. But in fallen nature grace is not simply grace, but grace for grace, because although it rises from grace, it also has the ratio of reward and retribution. Therefore, if in integral nature and in the angels it was to be a reward and not grace, then it was not to be grace for grace; and yet it was to be and to be given back to those persevering: therefore perseverance in grace was not then to be grace.

1818. Anselm, De casu diaboli, cap. 1 - 3.
1819. 1 - 2, q. 109, a. 2.

I answer: In integral nature future glory was both a reward and grace for grace, and likewise in the angels. For, as I said, in both glory was to be from perseverance; but perseverance was to be from grace, as we have proved. After fallen nature also, future beatitude for those who will persevere is both a reward and grace: nevertheless Augustine said with a special reason that the beatitude which to the first parent and to the angels was to be a reward, to us after fallen nature was grace. Because, since angels and man in integral nature already had grace, it only seemed that beatitude remained as a reward. But because to man after fallen nature grace was restored, which had been altogether lost, and upon which, as upon a root, glory depended, Augustine, with deliberate purpose, called glory grace by reason of the gratuitous restoration and the new grace which was bestowed upon man.[1814]

Articulus IV - Whether the created angel merited his beatitude

Objicitur 1. It seems that the created angel did not merit his beatitude. For merit arises from the difficulty of a meritorious act. But the angel had no difficulty in doing well. Therefore his good operation was not meritorious.

Objicitur 2. Further, we do not merit what is natural. But it was natural to the angel that he be converted to God. Therefore by this he did not merit beatitude.

Objicitur 3. Further, if the blessed angel merited his beatitude, then either before he had it, or after; but not before, because (as it seems to many) before he did not have grace, without which there is no merit; nor even after: for thus he would even now merit. Which seems false. For thus a lesser angel, by meriting, could attain to the rank of a superior angel; and the distinctions of the degrees of grace would not be stable; which is incongruous. Therefore the blessed angel did not merit his beatitude. And similarly, if someone were to say that in some fashion he had grace before glory; but if he did not have grace before he was blessed, then one must say that he had beatitude without merit, as we have grace. But this is against the nature of beatitude, which has the nature of an end, and is the reward of virtue, as even the Philosopher says in Ethics 1. Or one must say that the angels merit beatitude by those things which already blessed they perform in divine ministries, as some have said. But this is against the nature of merit. For merit has the nature of a way to the end. But for one who is already at the term it is not fitting to be moved to the term; and indeed no one merits what he already has. Or one must say that one and the same act of conversion to God, inasmuch as it is from free choice, is meritorious, and inasmuch as it attains to the end, is the fruition of beatitude. But neither does this seem fitting: because free choice is not a sufficient cause of merit. Hence an act cannot be meritorious inasmuch as it is from free choice, unless inasmuch as it is informed by grace. Now it cannot at once be informed by imperfect grace, which is the principle of meriting, and by perfect grace, which is the principle of enjoying. Hence it does not seem possible that one should at once finally enjoy and merit his enjoyment. And therefore it is better to say that the angel had grace before he was blessed, by which he merited beatitude.

1814. St. Augustine, De correptione et gratia, c. 11.

But on the contrary: In Apocalypse 21 it is said that in that city Jerusalem "the measure of the angel" is "the measure of a man." But man cannot attain to beatitude except through merit. Therefore neither can the angels.

I answer that, to God alone perfect beatitude is natural, because for Him to be and to be blessed is the same. But for any creature at all, to be blessed is not natural, but is the ultimate end. Now anything whatever attains to its ultimate end through its operation. And an operation leading to an end is sometimes easy, when the end does not exceed the power of that which operates for the sake of the end, as medical treatment is an easy means to health; and sometimes it is difficult, when the end exceeds the power of the one acting for the end; then the work counts as meritorious of the end when, in order to reach the end, the agent operates by a help given from another. But ultimate beatitude exceeds both the angelic and the human nature; wherefore it cannot be given by nature. Hence it remains that both man and angel merited their beatitude.

Reply to the first: The difficulty of acting well is not in the angels from any contrariety or hindrance of natural power, but from this, that the good sought is above natural power; whence there is need of a help superadded.

Reply to the second: By natural conversion the angel did not merit anything of God; but by the conversion of charity, which is through grace.

Reply to the third: The reply is evident from what has been said in the body of the article. And indeed, if the angels were created with grace, without which there is no merit, it is plain how to speak. But if anyone should say that he did not have grace before he was blessed, one must say that he had beatitude without merit, as we have grace. Which, however, is against the nature of beatitude, which is an end and a reward of virtue, as the Philosopher says in Ethics 1. Or if one were to say that angels merit beatitude by what already blessed they do in divine ministries, that is against the ratio of merit, which is a way to the end; and no one merits what he already has. Or if one were to say that the same act, inasmuch as it is from free choice, is meritorious, and inasmuch as it reaches the end, is fruition, that is not fitting; for free choice is not a sufficient cause of merit, so that an act cannot be meritorious as from free choice unless it is informed by grace. But it cannot at once be informed by imperfect grace, which is the principle of meriting, and by perfect grace, which is the principle of enjoying. Hence it is better to say that the angel had grace before he was blessed, by which he merited beatitude.

Articulus V - Whether the angel immediately after one act of merit had beatitude

The conclusion is affirmative.

Objicitur 1. It seems that the angel did not immediately after one meritorious act have beatitude. For it is more difficult for man to act well than for an angel. But man is not at once rewarded after one act. Therefore neither is the angel.

Objicitur 2. Further, the angel at once in the beginning of his creation was able to have some act in an instant; since even natural bodies, in the very instant of their creation, begin to be moved; and if bodily motion could be in an instant, intellectual and voluntary operations have motion in the first instant of their generation. If therefore the angel by one movement of his will merited beatitude, in the first instant of his creation he merited beatitude; therefore if at its rise beatitude was not delayed, at once in the first instant he would have been blessed.

Objicitur 3. Further, between a mean and an end there ought to be many means. But the state of the angels' beatitude is far distant from the state of their nature. Now the mean between both is merit. Therefore it was necessary that through many means they should be advanced to beatitude.

Sed contra: The soul of man and the angel are similarly ordered to beatitude. Whence to the Saints equality with the angels is promised. But a soul separated from the body, if it have the merit of beatitude, at once attains beatitude, unless there be some other impediment. Therefore by like reasoning an angel also. But in the very first act of charity he had the merit of beatitude. Therefore now there remains for him no other impediment; hence he attained to beatitude through one meritorious act alone.

I answer that, after the first act of charity by which he merited beatitude, the angel was at once blessed. The reason of which is this. Grace perfects nature according to the mode of nature, and every perfection is received in what can be perfected according to its own mode. Now this is proper to angelic nature, that it does not acquire its natural perfection by discourse, but at once by nature it has it, as was shown above. And as from his nature the angel has an order to natural perfection, so from merit he has an order to glory; and thus immediately after merit beatitude was placed in the angel. Moreover, the merit of beatitude can be not only in an angel but even in a man by one act; for any act informed by charity merits beatitude. Whence it remains that immediately after one act informed by charity the angel was blessed.

Reply to the first: Man, according to his nature, does not at once receive his perfection, as the angel does; and therefore to man a longer way is given for reaching beatitude than to an angel.

Reply to the second: The "instants" which regard angels are not taken as divisions of time in corporeal change, but only according to succession in their own acts. Now it cannot be that in them there should be at once the meritorious act of beatitude and the act of beatitude which is fruition, since the one is of imperfect grace and the other of consummate grace. Hence it follows that distinct instants must be posited: in one of which he merited beatitude, and in another he was blessed.

Reply to the third: It is of the nature of an angel that he should obtain his entire perfection, to which he is ordered, without many steps of discursus; and therefore there is not required more than one meritorious act, which by the ratio of a means can be so called, because according to it the angel is ordered to beatitude.

To the fifth we proceed thus. It seems that the angel did not have beatitude immediately after one meritorious act. For it is more difficult for a man to act well than for an angel. But man is not rewarded immediately after one act. Therefore neither is the angel.

1. Further, an angel could at once in the beginning of his creation have some act in an instant, since even natural bodies begin to be moved in the very instant of their creation. And if the motion of a body could be in an instant, then the works of intellect and will would have motion in the first instant of their generation. If therefore the angel by one motion of his will merited beatitude, he merited beatitude in the first instant of his creation. Therefore, if their beatitude is not delayed, they were blessed in the first instant.
2. Further, between things greatly distant there ought to be many means. But the state of the angels' beatitude is greatly distant from the state of their nature. Now the mean between the two is merit. Therefore it was necessary that through many means the angel should arrive at beatitude.

But on the contrary: the soul of man and the angel are alike ordered to beatitude; whence to the Saints equality with the angels is promised. But the soul separated from the body, if it has the merit of beatitude, at once attains beatitude, unless there be some other impediment. Therefore by the same reasoning also an angel. But at once in the first act of charity he had the merit of beatitude. Therefore, since in him there was no impediment, straightway he arrived at beatitude through one meritorious act alone.

I answer: it must be said that the angel, after the first act of charity by which he merited beatitude, was immediately blessed. The reason of this is that grace perfects nature according to the mode of nature, just as every perfection is received in what is perfectible according to its mode. Now it is proper to angelic nature not to acquire natural perfection through discursus, but to have it immediately by nature, as was shown above. But just as by his nature the angel has an ordination to natural perfection, so by merit he has an ordination to glory. And thus immediately after merit, beatitude ensued in the angel. Moreover, the merit of beatitude can be not only in an angel but also in a man through a single act. For by any act informed by charity man merits beatitude. Whence it follows that immediately after one act informed by charity the angel was blessed.

Reply to the first: Man according to his nature is not born to acquire his ultimate perfection immediately, as an angel is; and therefore to man a longer way has been appointed for meriting beatitude than to an angel.

Reply to the second: The angel is above the time of bodily things. Hence diverse instants in matters that pertain to angels are taken only according to succession in their own acts. Now there could not be in them at once the meritorious act of beatitude and the act of beatitude, which is fruition, since the one belongs to imperfect grace and the other to consummate grace. Whence it remains that distinct instants must be taken: in one of which he merited beatitude, and in another he was blessed.

Reply to the third: It belongs to the nature of an angel that he should immediately attain his perfection to which he is ordered. And therefore there is not required more than one meritorious act, which for this reason can be called a mean, because according to it the angel is ordered to beatitude.

Disputatio CCXXIX - Whether the angel obtained beatitude after one act of merit, or after several

The conclusion is affirmative. Concerning these two articles the matters that are difficult we shall examine in the following disputation.

- Angels were meritorious of beatitude. Cap. 1.
- That angels, by works following beatitude, merited that beatitude for themselves, was the opinion of the Master and others. Cap. 2.
- The foregoing opinion is refuted. Cap. 3.
- That, at the same time as in duration, angels were blessed and merited their beatitude, was taught by many other Scholastics. Cap. 4.
- The foregoing opinion is explained and defended in various ways. Cap. 5.
- What Cajetan and others think about this matter. Cap. 6.
- The latter part of the foregoing opinion is rejected. Cap. 7.
- Other opinions of the theologians. Cap. 8.
- The opinion of the Ferrarian. Cap. 9.
- The more probable opinion. Cap. 10.
- The foregoing opinion is confirmed. Cap. 11.

Caput I - That the angels merited beatitude

Before we proceed to dispute that which among the Scholastics is set in controversy, it must be premised that the angels truly were meritorious of their beatitude, which no one until now has dared to deny: and this was expressly taught by St. Thomas in the first article, and more recently by the theologians together with Cajetan in the same place, and by all the Scholastics in the places to be alleged below. It was also the express sentiment of St. Augustine in De correptione et gratia, chapter 11, after the middle, where he says that the good angels stood fast, others falling; and that they merited to receive the due reward of such stability, namely so great a plenitude of beatitude that they are most certain they will not fall from it of themselves. This follows from the position which we pursued in Disputation 223, namely, that the angels were not created in beatitude. Nor ought it be held more or less certain that the angels merited beatitude than that they were not created in it: for if they had been created in beatitude, they could not have merited it. But if they were not created in beatitude, and later attained it, it follows that they merited it, as men do: for neither is glory given to the angels without merits, as it is not given to men without merits, as is held.

St. Thomas, moreover, adduces in article 4, in the argument But on the contrary, to confirm this truth, that passage of Apocalypse 21: "The measure of a man, which is of an angel," where John describes the measurement of the holy city which he had seen. From which place he thus argues: the measure of that city is the same in a man and in an angel; but in a man the measure is merit: therefore also in angels. Yet this sense is entirely alien to the context of the chapter; for when John had said that the one who spoke with him had measured the city, and that the measure was of cubits, lest anyone should suppose that it was a man who had measured the city by cubits, he adds, "The measure of a man, which is of an angel," as if he said: although that measure may seem to be a man's, yet in truth it was an angel under the appearance of a man measuring the city - not by an intellectual measure, but by a human measure, which is of cubits. Thus does Arethas explain this passage. Others indeed expound it of Christ, who was at once man and the angel of great counsel, and whose measure, namely wisdom and justice, measured the holy city. Others finally expound it so that the sense is, that in the same way God protects the state of a blessed man, so also that of an angel; for in this place the "measure" of the holy city seems to denote protection. Next it must be observed that what Nicetas taught in Oration 42 upon St. Gregory Nazianzen, question 2, on Easter, is true, in the words: "I stood and looked," treating namely that passage of Apocalypse 12: "And I heard a loud voice in heaven saying: Now is made salvation, and strength, and the kingdom of our God, and the power of his Christ"; he says that salvation was wrought for the visible and the invisible world, that is, for angels.[1820] But in explaining what kind of salvation was made for the angels, he proposes various modes: first, as some say according to the parable of the lost sheep, because what was lacking to the celestial angels through sin was made up from men. Second, that the angels, who before had it that they could be moved to evil, although with difficulty and with reluctance, after the resurrection of Christ can no longer be moved to evil. A third mode he assigns, which seems to fall back into the first. Yet the second is manifestly false, because before Christ's resurrection the angels saw the essence of God, according to Matthew 18: "Their angels always see the face of my Father" - which place we proved in Disputation 37, chapter 5, against St. John Chrysostom and other Greek Fathers, is to be understood of the clear vision of the divine essence; and the clear vision of God renders the blessed immovable from good to evil. Therefore before Christ rose from the dead, the angels had been confirmed in good. And if from the clarity of the vision of the essence of God that immobility should not follow, as Scotus thinks, about which we shall speak below at I-II, q. 4, a. 4, at least since beatitude brings that immobility from another source, and the angels were blessed before Christ's Resurrection, it follows that before it they had been made immovable from good to evil.[182118221823]

Caput II - That the Master and others held the angels to have merited beatitude by works following it

Among the Scholastics who clearly held that the angels merited their beatitude, there is no controversy except about how they merited it. Whose opinions it is necessary to pursue in detail, so that at length what is approved by us we may more easily set forth.

The first opinion is that of the Master, who in II, dist. 5, in the last chapter, teaches that the angels were first blessed, and then by their subsequent works merited that beatitude for themselves. This opinion was afterwards followed by the author of the Summa of St. Victor (Antissiodorensis), in book 3, tract 1, chapter 7, at the beginning and before the middle and in the solution of a certain argument; and Albert thinks it probable in III, dist. 18, a. 4; and for it also Marcellus reports Praepositivus.[1824][1825][1826][1827] Now the works following beatitude, by which the angels merited it, he says, are the ministries exhibited in the grace of men out of obedience to God.

The first reason for this opinion, which is of this sort, can be proved most readily by the argument of Albert: Works which follow from grace can merit grace itself, from which they proceed, as Alexander expressly also held; just as a soldier can be given a horse because of the good future use which the king hopes for from him: therefore the works even following beatitude could in the angels have been merits of beatitude. Nor does it stand in the way that such works are later in time than beatitude itself: for the merit of Christ too was later in time than the grace given to the ancient Fathers, and yet that grace was bestowed on them from the future merits of Christ.[1828][1829]

Second: Angels, while they minister to us out of charity, merit something, just as Christ too, who in this mortal life was a comprehensor, merited something by the ministry which he exhibited toward the grace of men: therefore either by such ministry the angels merit glory to be newly conferred upon themselves - and thus their beatitude would increase excessively, which must not be conceded - or they merit the glory already given to them, which is what this opinion maintains.

Third: the great glory which the angels have was bestowed upon them only on account of great merits: but they could not have great merits on a road so short, closed within a narrow span of time: therefore we must necessarily have recourse to merits following beatitude itself.

Moreover, it must first be observed that, in the opinion of these doctors, it is not necessary to assert that the angels were created in beatitude: for as we saw in Disputation 226, chapter 1, the Master plainly taught that all the angels were created in pure nature, and afterwards had grace; and thus either they must say that they had grace and glory together, or, if first they had grace without glory, and through grace they merited glory, they are consequently compelled to say that the merits preceding glory were not sufficient to merit so great a glory, and therefore that they

1829. The grace given to the ancient Fathers was collated from the future merits of Christ.

merited it also by subsequent merits. And since no one besides Ludovicus Vives has up to now said that the angels were created in the beatitude of the fatherland, as we noted in Disputation 225, chapters 3 and 4, it remains that those who follow this opinion affirm one of the two which we have said.[1830][1831]

Wherefore, if they divide the instants, or the delays, by which the way of the angels was completed, in such a way that they say there was a common one instant of the good angels before beatitude, they ought also to assert that in that instant they did not merit anything of beatitude, but after beatitude had been obtained. If however they say that they merited something of beatitude before they attained it, they ought also to assert that there were at least two instants in the way of the angels, in the first of which they existed in pure nature, and in the later that by grace they merited something of beatitude: for, according to what we shall say below, one instant cannot be assigned to pure nature and to grace.

Caput III - The preceding opinion is refuted

St. Thomas rightly refutes that opinion in this question; so too St. Bonaventure, Scotus, and others to be cited below. And first, that line of reasoning of Scotus in II Sentences, dist. 5, q. 1, and in the first article, and of Richard in ar. 2, q. 2, can be impugned as follows.

First, even if man had not been created for whom the angel might minister, nevertheless the angel would have obtained the beatitude which he now has; and then he would not have had it by merits that were still future: therefore neither does he now have it by such merits. This reason can be confirmed by a similar one: for if men had been created, but the first parent had not sinned, much less would there be the ministry of angels in the defense and custody of men than there is now, because temptations would be fewer; therefore they have not obtained the beatitude which they now have on account of the merits of a future ministry. For when something is granted on account of certain merits that are also in the future, one must say that otherwise it would not have been granted, unless such merits were going to be future; for when the cause is taken away, the effect is taken away: just as he who concedes that the coming of Christ had as its cause the remedy for sin, consequently affirms that, sin being removed, Christ would not have come.

Second, against the aforesaid opinion there fights that doctrine which we have at length pursued against Alexander above, Disputation 91, cap. 6, namely, that the principle of merit cannot fall under the very merit of which it is the principle; and so neither can grace, which is the principle of the good use, fall under the merit of the good use: although otherwise it does not repel that merit be later in time than that which is given on account of merit. But all the works subsequent to beatitude are in some way from beatitude itself as from a principle: therefore an angel cannot by those subsequent works merit his beatitude. This reason most excellently shows the falsity of the preceding opinion, if we shall show that works subsequent to beatitude are from beatitude itself as

1830. See Disputation 226, cap. 1; and Disputation 225, cap. 3 - 4.

1831. Ludovicus Vives, who alone is said to have maintained that the angels were created in the beatitude of the fatherland.

from a principle. For if we say that beatitude consists in the clear vision of God, the work of charity arises from that very vision: therefore by charity one could not merit the vision. But if we say that beatitude is in the act of charity, then by the same reasoning beatitude is not from the merit of charity itself; because the same thing cannot merit itself. Moreover, the works of the other virtues also arise from charity itself and from vision, or else they presuppose them as something prior, as we shall show below: therefore those works too cannot be meritorious of glory which they presuppose as prior. Now the other works arise from charity itself in the blessed: because they are commanded by charity, or at least they somehow presuppose it as prior, as we shall also say below.

Third, the same opinion is rejected because it would follow that any blessed person could day by day, by new works, merit greater glory; and thus men would obtain glory not only by the good works which they did in this life, but also by works done in beatitude itself - which is absurd. But if you say that to the notion of merit there is required not only condignity in the works, but also a pact and a promise; and therefore the blessed do not merit greater glory by subsequent works - this we shall easily impugn in I-II, q. 14, a. 2, where expressly we shall show that to the true and perfect notion of merit a promise is not necessary, nor any pact or acceptance; something which we have shown by some reasoning above, Disputation 85, cap. 4. Wherefore he who once concedes that works subsequent to beatitude are condign of greater glory, is forced to concede in the blessed a merit condign of beatitude, or of an increase of beatitude, which is the same. And truly, even if a promise or pact between God and the creature were required so that a condign work might have the notion of merit, it would be ridiculous to assert that such a pact intervened between God and the angels, to the effect that he would at once, without preceding merit, give them glory on this condition and pact, that in glory they should keep watch in the ministry of men. Add also that, if the works subsequent to beatitude were in themselves condign in men of greater glory, it ought not to be asserted that God would deny to them the increase of which they themselves, being blessed, were worthy: for God does not deny that of which someone is worthy. Why, however, works done in beatitude are neither meritorious nor worthy of greater glory and increase, we shall say more abundantly in the article cited.

Fourth, if God had given glory to the good angels because of subsequent works, and had made no election to glory between the good and the bad from merits of grace in time, God would not seem to have kept equity in the distribution of glory: since the bad likewise would not less have merited those things by good subsequent works, if glory had been given to them before merits, than the good; for both would have labored as much as was necessary for so great a compensation of glory. And although in the distribution of grace God so behaves freely that he denies to one what he grants to another, this is not a wonder: because he distributes grace without any regard of merits either preceding or subsequent. But if indeed he assigns glory to certain ones because of future merits, why did he not assign the same to others, in whom he knew that there were to be so great and so notable future merits as would have deserved glory? And although God could have

done this without injustice, nevertheless it does not seem consonant with his doctrine, who promised his glory not to those neglecting the commandments, but to those doing rightly, and to those who by good works distinguished themselves from others.

- From these things indeed the arguments which in the previous chapter were brought forward for that opinion can easily be dissolved. To the first, what must be responded is manifest from what we have said in Disputation 91, cap. 6, where we showed that the principle of merit cannot fall under the merit itself; and hence neither can works from grace merit grace itself, nor can works subsequent to beatitude merit beatitude. But what Durandus replies in II Sentences, in the distinctions and questions, namely why it is that a soldier obtains from a king a horse as a reward on account of the future good use of it, but that no one can obtain from God glory on account of consequent works - we have reported and impugned in that same place, and we have assigned the true difference of each.

To the second I say that Christ, because he was a comprehensor, could not merit for himself essential glory, nor an increase of it; but for others he could rightly merit by certain free works. Why indeed he who is already blessed, and Christ, do not merit for themselves eternal life, we shall say in I-II, q. 114, a. 4, and III, q. 19, a. 5. Wherefore also the angels can merit for us many gifts, just as one wayfarer for another wayfarer, and as Christ merited for us: for the fact that Christ was a wayfarer by reason of the body mattered little for his being able to merit for us, although otherwise a blessed angel cannot merit for us, as in that article 3 we shall show at length.

To the third we say that, in one instant of discrete time, which corresponds to our time, an angel could by one or by several acts merit so great a reward of recompense as he now has in beatitude.

There are many and very weighty Scholastic Doctors who followed another opinion not much different from the preceding: for they say that the angels were created in the first instant in pure nature, and then in the second, not earlier in time, they merited eternal life, but simultaneously in duration were blessed, and merited it for themselves, yet in such a way that the merit, in the order of cause and (as they say) by nature, preceded the beatitude. This opinion was handed down by Albert the Great; St. Thomas; St. Bonaventure; Aegidius; Richard; Marsilius; John Maior; and, finally, Thomas of Argentina, who teaches that it is in fact hidden whether the merit was prior or simultaneous in duration with the beatitude itself, so that no mortal can know it unless God reveal it; and he adds that all the things which are alleged against this opinion are of no weight; wherefore he also judges it to be probable. Add also Maior in the place to be alleged below, who at least in this agrees with the Doctors of this opinion, namely that even if it did not thus happen, nevertheless it could have been that the merit of eternal life was simultaneous in duration with the thing itself. All the authors of this opinion agree with the Doctors of the preceding in this, that the merit of eternal life was not prior to the very attainment of beatitude. Its common foundation is this, that all of them think, first, that the angels were not created in grace: wherefore also in the first instant they were neither blessed nor had they merited eternal life; then, that nothing prevents the merit and the reward from being simultaneous in duration, as happens in the increase of charity and in the merit of it: therefore, the merit of eternal life could have been simultaneous in duration with

eternal life itself, or beatitude. Not without foundation, it seems, was it said that the merit of beatitude and beatitude itself were simultaneous in duration in the angels; nay indeed, Aegidius adds that one ought to philosophize in the same way even in the opinion of those who say that the angels were created in grace, namely that they were simultaneously in duration created in grace and in beatitude with the merit of that very beatitude. Moreover, because all the doctors alleged teach that the angels were not created in grace or in beatitude, the course of the angels, according to this opinion, is set out by distinct instants of discrete time, as we shall say below: in the first instant they were in pure nature; in the second instant they were converted to God in grace, with merit and with beatitude; but the wicked in the first instant were in pure nature, in the second were stained by sin, in the third were consigned to judgment.

They explain this opinion in various ways, and the defenses of its doctors; but before in the following chapter we bring forward each one's reasons with their explications, and examine them, it has pleased us in this present place to impugn it universally, insofar as it affirms that the angels were not, prior in time, promised beatitude such as beatitude is. It is plain that men first in time merit eternal life than obtain it; and thus they are said to labor in the state of wayfarer by faith and hope for eternal life: and the same thing could have been the case in the angels; and if it had been so, it would seem most in accord with the providence of God concerning a rational creature, namely that he should first distinguish between good and bad, than that he should assign to them either reward or punishment: therefore it must be asserted that it was done thus; especially since no reason compels us to assert that it was done in the opposite way. For the reasons alleged which they think prove the opposite opinion show only this, namely, that nothing repugns to merit and reward being simultaneously in duration in the angels; which is enough for us, if it be allowed that the state was such.

But this most greatly fights with the true ratio of the merit of eternal life, as we shall show more at large in the following chapter. This is, I say, what most truly refutes the aforesaid opinion. Yet there are also other doubts which the doctors who propose it are wont to offer; before we proceed to those, it has seemed good briefly to examine certain points.

The prior reason is that of Scotus, and of Gabriel, and of Maior in the places cited above, in this fashion: to the notion of merit there seems necessary a will which operates mutably, that is, a free will which is able to will the opposite; but the will, the seat of perfect charity, in the state of beatitude does not operate mutably: therefore, in that state one cannot merit beatitude itself. But this reason proves nothing: for the blessed Christ, accepting a precept, merited in the world, and yet his will did not then operate so mutably that it could will the opposite. Finally, for the ratio of merit some sort of liberty is necessary; and it suffices as regards the exercise: a liberty, namely, of acting freely; the liberty of sinning and of willing the opposite is by no means required; indeed, if that were present, it would seem absurd: for from such an opinion it would follow that Christ could not have merited by works of precept, because he could not sin against them; as the Third Part, q. 9, a. 9 shows at length. Moreover, I cannot but marvel at Scotus, that, since he himself plainly holds - as I shall report in I-II, q. 4, a. 4 - that it is not necessary for the blessed man's will, from the

clear vision of God, to be free for deliberation and choice so that he can suspend his act and will the contrary and sin; for thus rather he ought to infer that angels in beatitude could have merited for themselves beatitude, even if that mutability of will were necessary to the notion of merit.

The later reason is that of St. Thomas in this question, article 4, whose tenor is this: every merit of glory presupposes grace that is imperfect and not yet consummated, for it is as it were the root of its own effect; but he who is in beatitude already has grace consummated; therefore he cannot merit. Scotus impugns this reason in the place alleged, because it can happen that one in the way has as much grace as another has in the fatherland; therefore, from that side nothing prevents him who is in the fatherland from meriting, just as he who is on the way. But truly the sentiment of St. Thomas is not sufficiently broken by this reply of Scotus: for St. Thomas does not therefore call the grace, which is the principle of merit, "imperfect and not yet consummated" because it is remiss in degree when compared to the grace of beatitude, but because it is not yet consummated in this, that it has not yet reached its term, and the state of beatitude is a consummate state. Therefore, even if according to intensity someone on the way might have as much grace as another has in the fatherland, nevertheless, because in the blessed there is the state of consummation and possession of the end already attained, and in the wayfarers there is the state of tending toward the end, not of possession, St. Thomas rightly infers that no merit can be found simultaneously in duration with the state of beatitude, whose very notion excludes merit and posits consummation; for grace which is the principle of merit is ordered to remission of sin and to the grace of beatitude, which is given only when the state of the way is ended and the state of beatitude is confirmed. Consequently, although in other ways one might frame an intellectual proposition, the mind of the Saint remains firm: the merit of augment in grace cannot at the same time in duration be the cause of an increase of glory. For the rest, as we shall show, the increase of beatitude does not befall in the blessed by any meriting state; and thus, neither could angels in beatitude merit beatitude itself, even if a mutability of will, to the notion of merit, were thought necessary.

Notes on the prior opinion (from the preceding context):

- They said moreover that the works subsequent to beatitude, by which the angels are said to have merited it, are ministries in grace offered to men out of obedience to God. This opinion, they think, can be proved first by the reasoning of Albert: works that proceed from grace can merit the very grace from which they proceed, as Alexander expressly also thought; just as a horse can be given to a soldier on account of the future good use of the horse which the king expects from him; therefore, the works even that followed beatitude could have been in the angels merits of beatitude. Nor does it at all stand in the way that such works are later in time than beatitude itself: for the merit of Christ also was later in time than the grace given earlier to others from Christ's future merits. Second, they urge that angels minister out of charity; and Christ likewise, though already a comprehensor, undertook the ministry: not that his glory might newly increase by that ministry - which is not to be conceded - but with glory already given; and thus, they conclude, there is nothing repugnant if in the angels also ministry and glory were conjoined. Third, they press the magnitude of the glory given: a

great reward is not assigned except on account of great merits and much exercise; therefore, since the way was most brief, the merits, they say, must necessarily have been subsequent. Finally, they are accustomed to explain the matter by positing two instants in the angels' course: that before beatitude there was one common instant of the angels in pure nature, in which they merited something proportioned to nature; then a later instant in grace, in which they merited beatitude; or else that before beatitude they did not merit anything condign, but only after beatitude they merited something consequent upon it.

- But we have plainly taught elsewhere that the angels were created in pure nature, and thereafter had grace without at once having glory, and that they merited glory; hence it is false to say that merits sufficient for such a reward preceded as to priority of time, or that they obtained it without meriting, save for the paradox of Ludovicus Vives alone, who is said to have maintained that the angels were created in the fatherland. What remains of that opinion we leave to the following chapters, where we shall establish what is to be established, and refute what is to be refuted: namely, that those who divide the course of the angels should say that there were two instants, one in which they were in pure nature, and a second in which they were in grace; not that anything was merited after beatitude such as to be its cause, as will be said more fully below.

They variously explain and defend this opinion; but before, in the following chapter, we examine the reasons of each as they explain and defend it, it has seemed good in this present chapter to impugn it universally, insofar as it affirms that the angels did not first in time merit their beatitude. For it is established that men first in time merit eternal life before they attain it; and then they are said to be on the way and to labor in hope of eternal life. And this could have been done in the angels; and if it had been done, it would have seemed most consonant with divine providence concerning a rational creature, especially so as first to distinguish between the wicked and the good before assigning to them either reward or punishment. Therefore it must be asserted that it was done thus, especially since no reason compels us to assert that it was done in the opposite way; for if the opposing reasons prove anything, it is surely only this, that there is no repugnance in merit and reward being simultaneous in duration in the angels, which is not enough for us to assert that it was actually done thus. Moreover, this very much conflicts with the true ratio of merit for eternal life, as we shall not obscurely show in the following chapter. This, in my judgment, is the most weighty reason which refutes the aforesaid opinion universally. Yet two other reasons that are commonly brought against it, before we proceed to other matters, I have thought should be briefly examined.

Objicitur: The first reason is Scotus's and Gabriel's, and of others in places to be cited below, in this way: for the notion of merit there seems necessary a will that operates mutably, that is, a free will which can will the opposite or desist from its proposal; but in the state of beatitude the will does not operate mutably; therefore in that state beatitude itself cannot be merited.

Respondetur: This reason proves nothing. For that liberty does not seem necessary for the notion of merit: indeed, Christ, accepting the precept of dying, merited, and yet his will did not then operate so mutably as to be able to will the opposite. Finally, although some liberty is indeed necessary for the notion of merit and suffices as to the exercise, nevertheless the liberty of sinning and of willing the opposite is in no way required; indeed, to assert this seems absurd, because from such an opinion it would follow that Christ could not have merited by the works of precept, since he could not sin against them, as is shown at length in the Third Part, question 19, article 3.[1832] Moreover, I cannot but wonder at Scotus, that he uses his own reasoning here; for he himself plainly holds, as I will report below in I - II, q. 4, a. 1, that the blessed is not necessarily moved to the love of God from the clear vision, but can cease and will the contrary and sin; thus rather it ought to be inferred that the angels in beatitude could have merited beatitude for themselves, even if that mutability of will were necessary for the notion of merit.

Objicitur: The second reason is St. Thomas's in this question, article 4: every merit of glory presupposes imperfect and not yet consummated grace as its root; but he who is in beatitude already has consummated grace; therefore he cannot merit.

Respondetur: Scotus impugns this, in the place cited, because it can happen that someone on the way have as much grace as another has in the fatherland; therefore on that score nothing prevents him who is in the fatherland from being able to merit, just as he who is on the way.

But Scotus did not sufficiently understand St. Thomas's mind in this argument. For the holy Doctor does not therefore call the grace which ought to be the principle of merit imperfect and not yet consummated because it is more remiss than the grace of beatitude, but because it is not yet in the term and confirmed in the state of beatitude. However, even so understood, from the major proposition which St. Thomas assumes one could rightly infer that there can be no merit simultaneous in duration with the state of beatitude; yet that major proposition ought first to have been made good; for around it seems to lie the principal difficulty in the aforesaid opinion. I pass over a third reason which some use against this opinion, assuming as its principle that merit must universally be prior in duration to the reward. For this proposition is manifestly false, as is clear from the foundation of this opinion which has been adduced above, since the merit of an increase of grace can be simultaneous in duration with the increase of grace itself.

Note: Nevertheless, all the doctors cited teach that the angels were not created in grace nor in beatitude; so, according to this opinion, the course of the angels ought to be so disposed that the good had only one instant of discrete time, according to what we shall say below, in which they were in pure nature; in a second instant they were in grace, merit, and beatitude. But the wicked were in the first instant in pure nature; in the second, stained by sin; in the third, consigned to punishment.

Note also: If someone should wish to posit an act of love of God that is free - even as is attributed by some to Christ - terminated to God not as clearly seen but as known by another kind of cognition, we shall easily show in the Third Part, question 19, article 3, that this cannot stand.[1832]

1832. St. Thomas Aquinas, Summa theologiae, III, q. 19, a. 3.

Caput V - Various ways in which the preceding opinion is explained and defended

Since the preceding opinion is not a little difficult, the Doctors who follow it do not defend it in the same way, but they try by various methods to elucidate it and render it easier. Indeed Ægidius explains it not in one way but in many, of which I have proposed here to recount and impugn three principal ones.

First mode of Ægidius. He understands it thus: that the reward of beatitude does not consist in any operation of the blessed - neither of the intellect nor of the will - but that it is God himself, who is the object of the vision and love which the blessed has, and so it should be called the objective beatitude; but the merit of beatitude is the very act of love by which he loved God as his beatitude. Wherefore this author, explaining the opinion in this way, does not constitute the notion of merit in other operations of the blessed, but in the very love of God clearly seen, so that the love of God be the merit, but God himself, whom it has for object, be the reward.

Refellitur: But this explanation rests on a false foundation, constituting the reward, which is beatitude, not in operation but in God himself whom the blessed has for his object; whereas from the common teaching of all the Scholastics it is established that our formal beatitude ought to be our operation, as we shall see below in I - II, question 3, articles 2 and 3.[1833] Therefore that which ought to fall under merit is not God alone, but the operation by which God as our highest good is conjoined to us. For neither are we formally blessed by God himself taken alone, nor by the attainment of God Himself - which is our operation - or by the fruition of Him - which likewise is our operation. Whence also it results that, although one may obtain a greater reward of beatitude than another, nevertheless, if God taken in Himself were the reward of our merits, it could not be understood how one would obtain a greater reward than another. Nor can we say, as Ægidius thinks, that the principal reward of our beatitude is God, but in a less principal way our operation about Him; for, as we shall show in I - II, question 4, article 1, there are not two ends, God and our operation, but from both together there is constituted one single entire end and our good. For God cannot be our good unless He be conjoined by operation; and thus neither is God alone our end, nor is operation without its object our beatitude. How, however, from both there is made one entire end, must be explained in its proper place.

Grant, however, to Ægidius that God according to Himself is our beatitude and our essential reward principally; nevertheless, by no reason can he defend that the love of God in the fatherland is the merit of God Himself whom it has for object and is prior in nature to God Himself. First, because in the very term act is said that which is conversant about some object to be meritorious of that object. Next, because an act cannot be prior in its own nature to the object about which it is conversant; for it is impossible in any way to understand or conceive an operation of love without the object about which it is conversant; therefore the operation of love cannot be meritorious of God, whom it has for object. And although an operation which is motion and production of some

1832. St. Thomas Aquinas, Summa theologiae, III, q. 19, a. 3.

1833. St. Thomas Aquinas, Summa theologiae, I - II, q. 3, a. 1 - 3; q. 4, a. 1. Also Aristotle, Physics III, c. 2; see above Disputation 141, cap. 4.

terminus be prior by nature as a way than the terminus is in actual being, because it is an imperfect act of a being in potency as potency, as is defined in Physics III, chapter 2, and is called Entelecheia, nevertheless the operation of the will and of the intellect is not of this sort, nor is it thus compared with the object about which it is conversant; because it is not the production of the object itself, but is conversant about objects already produced, namely by knowing or by loving, and therefore it is called a grammatical action, as we explained above in Disputation 141, chapter 4.

Second mode of Ægidius. He also defends and explains the same opinion by distinguishing the act of love of God in the fatherland, and he considers it in two ways - both as merit and as reward - so that the very same act of love be according to itself both reward and merit, lest he assert that God according to Himself is our reward. And he considers the love of God in the fatherland, in one way indeed as it is elicited first in nature by grace and charity, and in this respect he says it is merit; in another way, as it is terminated in God as object, by whom God is conjoined and had as reward, and in this respect he says that the very act of love also has the notion of a reward compared to itself considered in the former way.

Rejicitur: But this mode likewise is no less false and is demonstrable without any foundation. First, because merit and reward are universally distinguished according to reality, as is clear by induction in all other cases; therefore in the angels the same thing must not be said. Second, from the aforesaid opinion thus explained it would follow that men also merit beatitude for themselves by the same act by which they are blessed, or by which in the fatherland they love God; for in them too that act can be considered in those two modes, just as in the angels. Nor will it do to reply that in the angels it had the nature of merit by reason of the pact which is required for the notion of merit, but not in men because no pact intervened; for it is ridiculous to admit a pact of such a kind that the very work be meritorious of itself - who does not see this? Third, it is altogether feigned to distinguish the act of love in this twofold way, as though such a distinction could be made in an act that is elicited by the intellect or will before it is considered as terminated to the object. For however you wish to consider love, it must include and regard its object, since love is the love of something as an object. Wherefore there is altogether one and the same indivisible notion of the act, both as elicited by the will and as respecting its object; and although two diverse notions can be conceived, at least it cannot happen that one be understood before the other; but both would of necessity be included in the same act of love, insofar as it is love.

By these reasons it remains proved that by the very act of love of God in the fatherland no one can merit beatitude, if we say that it consists in the very act of love, as Ægidius thinks. But if we say that it is in the vision itself, it can easily likewise be shown that the blessed cannot merit beatitude by the love of God clearly seen, for this reason, that a principle of merit cannot fall under merit. Wherefore, since the act of charity about God clearly seen arises from the vision as from a principle, it rightly follows that one cannot merit beatitude, if beatitude is constituted in the vision of God, as we have proved above. Lastly, if someone says that beatitude is in the act of love, the same is proved: for although delight follows the act of love of God, it could not be ascribed to the merit of love, because delight arises by a certain natural necessity most closely from the vision.

Third mode - Richard. A third mode of defending the aforesaid opinion is Richard's, who, when he says that in the angels there were simultaneously in time the reward in the blessed and the merit, assigns this order between them: first there was a movement of free will into God, in which the angel's conversion to God began; second, the habit of grace was infused; third, the habit of glory was infused, by which his conversion was confirmed. In which manner he seems to teach that the reward which the angels merited in the fatherland was the infusion of the habit of grace and of glory.

Refellitur: But this mode of explaining the aforesaid opinion is less sufficient. First, because it is not the same thing to merit beatitude and to merit the habit of grace and of glory; for our beatitude is not placed in habits, but in operation, as we shall say in I - II, question 3, article 1, from the common teaching of the Scholastics.[1833] Next, because neither can the infusion of these habits in the fatherland be merited by the blessed through an act of conversion into God, which is love of Him; for the act of love of God in the fatherland, as we were just saying, is necessary both as to specification and as to exercise; therefore it cannot be meritorious of the infusion of the habit of grace or of glory. I grant indeed that by such an act the angels could have merited such an infusion, if in the order of the efficient cause that act had preceded and had been free; but because it was necessary, they could not merit by it. Moreover, even if they had merited the infusion of these habits, they could not be said to have merited beatitude itself; for beatitude is not in a habit, but, as we said a little earlier, it is constituted in the operation of the intellect or of the will. But the operation of the intellect cannot fall under the merit of an act of charity, because charity arises from vision, and the principle of merit does not fall under the merit of which it is the principle. Then the operation of the will, which is love of God, cannot fall under the merit of beatitude itself. And in general, nothing after what has been proved above can be the case: finally, if someone should say that beatitude is in the act of love, the same thing is proved; because, although delight follows the act of love of God, it cannot be attributed to the merit of love, inasmuch as delight by a certain natural necessity most closely arises from the vision.

The fourth way of explaining the aforesaid opinion is that of John Mairon, in the place cited, where he teaches that the blessed angels merited their beatitude, not by an act of love and charity toward God, but by other acts - not, however, by acts to come later, as the Master and others said, whom in the third chapter I refuted, but by other acts which were simultaneous in duration with the vision and with charity. For then the blessed angels could have had the will to render obedience to God in procuring the salvation of souls, and in other things which God might have commanded.

Non placet. But in this way also I judge it impossible that the angels were meritorious of their beatitude, whether that beatitude be placed in the vision or in the love of God. First, if we say that the beatitude of the angels was placed in the love of God, they could not have merited it by other works: for, in order that some work be meritorious of some reward, it must be, at least in order according to nature, prior to the reward itself. Now this order of priority ought not to be assigned from a free will - even the free will of God - but from the very nature of the work and the reward

1833. St. Thomas Aquinas, Summa theologiae, I - II, q. 3, a. 1 - 3; q. 4, a. 1. Also Aristotle, Physics III, c. 2; see above Disputation 141, cap. 4.

considered in themselves. Yet the other works of the blessed, apart from love, cannot by their nature be prior to the reward itself inasmuch as they are worthy of it, by which very reason they would have to be prior. For, in order that some work of the blessed be worthy of life eternal, by its very nature it demands that it proceed from a man who is just and existing in charity, as is manifest to all. Therefore, in order that one who is blessed, by some work simultaneous in time or subsequent in time, merit beatitude, he must already be considered holy by grace and charity. But charity is previously the principle of love, which is its proper operation, rather than that the subject having charity be understood to perform other works; or at least it cannot be understood that a holy man, by a priority of nature, should perform other works before the proper work of the charity that he has - especially since by the very fact that we suppose charity in some angel, we suppose also the principle of the knowledge of God, which in the blessed is the clear vision. And since, naturally and necessarily, without any other operation being awaited, the light of glory, which is given for seeing God, moves the intellect to the vision of God; and the vision of God is at once followed, naturally and necessarily, by love, no other operation being awaited; it cannot be that by other works the blessed should merit the vision itself or love, in one of which, or in both of which, we say beatitude is placed. And the same argument can be made if we say that beatitude is in delight: for, in order that by other works someone should merit beatitude, it would have been necessary that those prior works be in some way prior to the very vision and love or delight. But, as has been proved, without any other operation being awaited, in no way does one who is endowed with the light of glory fail to see, love, and delight in God. Therefore by no other work can anyone merit any of those operations.

Add that, since these operations of the vision of God, of love, and of delight follow one another altogether necessarily, once the light of glory has been posited, it seems altogether superfluous, indeed impossible, to grant in the same instant of time any merit of those operations, since the things which follow necessarily are not given out of merits. Hence we can assign merit only as obtaining the light of glory, which the rest follow necessarily. And although the angels may have merited the light of glory in the same instant, it would not be said that they merited beatitude, as we noted above against Richard. Whether, however, love of God in patria in some way operates or exerts an influence upon the other works of that instant and of the following one, by reason of which love itself cannot fall under the merit of those works, we shall say in the ninth question, article 4; for there we must also dispute concerning Christ, whether he could have merited his own beatitude, which he had from the beginning of his conception.[1834]

Two other ways of defending the aforesaid opinion are noted by Aegidius in the place cited. One is that the act of love, insofar as it is from free choice, is merit; but the same act, insofar as it is informed by grace, is the reward. The other way is that in the blessed there was, by a priority of nature, imperfect grace, and in this respect it was the principle of merit; afterwards it was consummated and perfected, and in this respect it was the principle of reward. This latter way indeed seems to have been that of St. Bonaventure and St. Thomas in the places cited. However, Aegidius with good reason makes nothing of these two ways: for they are manifestly absurd. The

1834. See below Disputation 229, quaest. 9, art. 4; and on Christ, the same place.

former indeed, because love of God, especially in patria, cannot be considered as from free choice alone: for the consent of the will, which is a work of grace, is wholly from free choice and wholly from grace, not inversely but simultaneously; not separately, but conjointly, as we noted above from Bernard, disputation 88, chapter 5. The latter way also is absurd: because perfect grace, that is, consummated grace, which is the principle of reward, and imperfect grace, that is, not consummated, which is the principle of merit, do not differ by intensity and remissness, but by the state of wayfarers and of the homeland: for grace of the way is called not consummated; but grace of the homeland is called consummated. But it is impossible that in the same instant of time the same grace be in patria and in via; for this would be to be at once in the homeland and outside the homeland. Therefore it is impossible that grace be simultaneously in duration both consummated and not consummated; and, by a priority of nature, that it be not consummated and be the principle of merit.

From what has been said it is gathered that the second opinion which we reported in the preceding chapter, however it be explained, is false. It is also clear that the persuasive argument for the aforesaid opinion which was brought in the preceding chapter is very weak. For although it is not repugnant that merit and some reward - such as an increase of charity, which can rightly exist together with the merit itself - be simultaneous in duration; nevertheless merit cannot be simultaneous in duration with every kind of reward: for it is altogether repugnant that merit be simultaneous with the reward of beatitude, as has been proved up to now. Wherefore all the other Doctors, who dispute concerning the way and the reward of the angels, to be cited below, agree in this, that the angel ought to have merited beatitude prior in time and duration to having it.

Caput VI - What Cajetan and others think concerning this matter

Although, as I said, the other Doctors agree in this, that the angel first, in duration, merited eternal life before he obtained it, yet they differ in assigning this way and merit of the angels, as we shall consider in detail. Moreover, the Doctors whose opinions we shall report below speak not only of the merit of the good for beatitude, but also of the way of the wicked, and they compare the one with the other.

The third opinion, then, is that of Cajetan, below in question 63, article 6,[1835] who teaches first that the way of the good angels lasted only one instant, in which they were created and merited beatitude, but did not yet obtain it; afterwards, however, in the following instant, the merit of those angels was terminated, and at the same time beatitude was granted to them. In which point Cajetan seems in some sense to agree with the preceding opinion. He says, moreover, that in the second instant the merit of the angels was terminated, because it was as it were on the threshold and in act, which however was still in via, as in becoming. Cajetan supports this part of the opinion by no reason, nor do I see how it could be confirmed. It only seems to have been devised by Cajetan in order to explain the mind of St. Thomas below in q. 63, a. 6, where he asserts that the good angels by one meritorious act obtained beatitude, which nevertheless they would have obtained

1835. St. Thomas, Summa theologiae, I, q. 63, a. 6.

after the first instant in which they merited, had they not put the impediment of sin; for Cajetan thinks that there could have been no other difference between the good and the evil, since both were created in grace in the first instant and merited glory, except that the evil did not consummate their merit nor had it terminated; but the good had it all the way to the term of beatitude. In the same opinion Cajetan thinks St. Thomas to have been in Quodlibet 9, a. 8, according to this opinion and the difference assigned between the good and the evil.[1836]

Some more recent theologians, who agree with Cajetan, teach further that the way of the evil angels was so disposed that in the first instant they merited glory with the good, in the second, however, they sinned, and at the same time were at the term of damnation and punishment; yet in such a way that sin and damnation were indeed simultaneous, but by a priority of nature sin was the merit of damnation. They speak, however, of the damnation which is called the punishment of loss, not of the punishment of sense, which is the punishment of fire. Wherefore, consequently, they affirm that in the second instant, in which the angels sinned, they still remained in heaven; and in the following, namely in the third, they descended to the fire of hell. In this manner, therefore, some recent authors philosophize about the wicked, so as to seem to keep a parallel observation of reason in the way of the good and of the evil.

Yet this opinion does not at all commend itself to me: for besides the fact that it can be supported by no foundation, nor is it necessary for explaining the mind of the holy Doctor, it manifestly contradicts reason. First, if we speak of St. Thomas in that Quodlibet, he was certainly of the opinion which we just now impugned, namely, that at the same time there were the merit of the good angels and the reward of beatitude; nor does he there say that the merit of the good angels was terminated in beatitude and begun in via, but he plainly taught that their meriting began at once, and at once their very beatitude - and not before. How what we cited from him is to be understood in article 6 of the following question will be explained below.

Next, however Cajetan may understand the consummation and termination of merit in patria, his opinion cannot be defended, as will be clear by induction. For either by the consummation and termination of merit in patria he understands something other than the attainment of the reward itself, by which merit seems to be, as it were, confirmed and determined by its own end: and in this sense it is indeed true that every merit, not only of an angel but also of a man, is confirmed in patria; but in this way nothing peculiar would have belonged to the merit of the good angels which did not belong to the demons, on account of which beatitude was given to the good and denied to the demons; for if to both parties there had belonged in via such and such shares with respect to faith and charity and merit (that is, to virtue and holiness), and if their way had been of equal duration in both, then to the demons also there would only have been owing, after their first merit, the retribution of glory, by which their merit would have been terminated - just as the merit of the good would also have drawn after it consummation and termination.

Or else, by the consummation and termination of the merit of the good in patria and in beatitude, Cajetan understands some continuation of the preceding merit, or at least some new merit added to the merit of the way; and in neither manner can the aforesaid opinion be defended.

First, because it has been sufficiently proved that there can be in the blessed no merit at all; therefore neither a new merit nor a continuation of the prior. For if a continuation could exist, the very same conditions would be required for the continuation of the old merit as for some new merit. Next, because if, after the merit of the way by which they would have been made capable of the good things, beatitude had been given to the demons, at once there would have been granted to them, in the same way, merit consummated and terminated; wherefore the judgment of the Lord would not have been equitable in the distribution.

Moreover, let us see by what reason one might conceive some continuation of merit in the angels, and a termination coinciding with liberty in the first instant of beatitude. For my part, I do not see how such a continuation and consummation in that first instant could be devised, unless one should also grant what we have very recently impugned, that merit and the reward of beatitude were simultaneous in time; or else that in that same instant there remained in the blessed a liberty for sinning, so that the merit might then be brought to its term. But this cannot be said: for although a rational creature, considered according to its own nature, is free for sinning, and on this side nothing hinders the consummation of merit; nevertheless, because that liberty cannot remain in a rational creature together with the clear vision of God, in no way could it be that, in the same instant of duration and time, even with a priority of nature, an angel seeing God should be able to sin. Therefore, neither can there be in that first instant of beatitude any continuation or termination of merit that requires liberty for sinning. Consequently, the whole device collapses with which Cajetan endeavored to support that opinion.

Moreover, that by the clear vision of God every liberty for sinning is impeded, St. Thomas teaches in I-II, question 4, article 4, and Cajetan himself in the same place; for only with an obscure knowledge of God does the rational creature remain free for sinning, as we shall prove more fully in that place.[1837]

It matters little that we were saying that an angel is by his own nature free; so as to affirm that, in the first instant of beatitude, prior by nature he could have sinned, and thus could have consummated merit. First, because, as we noted immediately above, if we were to say that in him there remained a liberty prior by nature, it ought in that instant to be without impediment. Second, because if for that sole reason it were said that an angel, prior by nature, remained free for sinning together with the vision, it would not only be said that in the first instant of beatitude according to duration he could have consummated merit, but also that for the whole time of beatitude he could merit, since for the whole time the angel remained by himself free to sin. Third, for the same reason we could say that Christ, in the first instant, indeed for the whole following time, was in fear for his essential beatitude; for his humanity by itself was always free to sin.

On account of these considerations lately set forth, it must be observed that therefore the angels could not in beatitude remain free for sinning, and for consummating merit together with the clear vision; because sin could not be simultaneously with the clear vision, but the latter necessarily

1836. St. Thomas, Quodlibet IX, a. 8.
1837. St. Thomas, Summa theologiae, I-II, q. 4, a. 4; Cajetan, ad loc.

draws one back from sin; and this necessity is antecedent to our liberty (libertas), in no way depending on it; therefore, with such a necessity he could not sin freely; for an antecedent necessity is contrary to liberty, as was said in Disputations 88 and 99. Hence, although God from eternity decreed to produce some man, and such a decree cannot be changed, and once it is posited he necessarily wills that which he decreed, nor was his will ever without this necessity, since from eternity he had it, just as he decreed from eternity; nevertheless we say that God simply and freely willed that, because of itself it was indifferent for willing and for decreeing the opposite, so that he could have willed the opposite, and under no antecedent necessity's impulse did he will it, but only under a consequent necessity, which follows upon the position of the determination of his will: and therefore there is another account of the necessity which the rational creature has from the clear vision of God; because it is antecedent. Finally, according to this opinion of Cajetan, the way of the Lord does not appear equal which he observed with the good and the evil angels: for if it was not enough that both in the first instant had merited their beatitude, but it was necessary that the merit be consummated by them; why, just as he waited for the good, granting them beatitude, that in the same they might consummate their merit, while they could sin, did he not in the same way wait for the wicked? And if any reason could be assigned for this inequality; but certainly none can be assigned, so that we should say that God waited for the good angels and for their merit, good or evil, in beatitude: for how could he wait for those whom he already beatifies? By these reasons Cajetan's opinion remains refuted as to the former part; but as to the latter, it will be impugned in the following chapter

Caput VII - On the way and the term of the wicked angels, as posited by the aforesaid opinion

Now as to that which pertains to the way and the term of the wicked angels, as the preceding opinion posits, it too will easily be refuted. Thus it is shown that an angel could not have sinned and at the same time, in duration, incurred eternal punishment: for either the discussion is about the punishment of sense, or about the punishment of loss. The aforesaid opinion is not understood of the punishment of sense; indeed by no reason could that be said, nor has anyone thus far affirmed it. First, because the angels, in the first instant in which they sinned, were in heaven, whence they were excluded and sent to the torments of hell; then also because the punishment of sense is a certain incentive to sin against God, which God never inflicts for a first sin, but on account of one's own sins. But about the punishment of loss the same is shown: for if by some reason one could say that in the same instant the demons sinned and incurred this punishment - especially since this punishment consists in the privation of justifying, or habitual, grace - this reason does not suffice. For such a privation, taken in any manner whatsoever, is not the eternal punishment of loss; otherwise even men, when they sin in this life and deprive themselves of habitual or justifying grace, would be said to incur eternal punishment; especially those who are now not going to rise again from sin, nor will they ever have justice; which, however, no one will

concede. Since therefore this privation is only the punishment of loss from that point of time at which, by the law of God, it cannot be restored, and this law does not begin to condemn a man or an angel ...

But as to what pertains to the way and the term of the wicked angels, as the preceding opinion establishes them, this too will easily be refuted. Accordingly, that the demons could not have sinned and incurred eternal punishment at the same time in duration is shown as follows: for either the question is about the punishment of sense, or about the punishment of loss. About the punishment of sense that opinion is not intelligible, and indeed by no reason could it be said, nor has anyone hitherto affirmed it. For the angels in the first instant in which they sinned were in heaven, whence they were cast out, and sent to the fire of hell; further, because the punishment of sense is a certain incitement to sinning against God, which God never inflicts in the first sin, but on account of subsequent sins. But about the punishment of loss the same is shown: for if by some reason one could say that in the same instant the demons sinned and incurred this punishment - especially since this punishment consists in the privation of justifying, or habitual, grace - this reason does not suffice. For such a privation, taken in any manner whatsoever, is not the eternal punishment of loss; otherwise even men, when they sin in this life and deprive themselves of habitual or justifying grace, would be said to incur eternal punishment, especially those who are now not going to rise again from sin, nor will they ever have justice; which, however, no one will concede. Since therefore this privation is only the punishment of loss from that point of time at which, by the law of God, it cannot be restored, and this law does not begin to condemn a man or an angel from the first instant in which he begins to sin, but only in the subsequent time: it follows that the angel did not incur the punishment of loss in the first instant, even if in that instant he was deprived of habitual or justifying grace. Wherefore the angels are not said in the first instant to have lacked sufficient help, since they were still in the way; but only from the subsequent time of sin. What moreover this sufficient help is, of which the damned are deprived, we shall say in disputation 240 and the following.

Moreover, those who follow the preceding opinion try to prove it by three Fathers. First, by St. Augustine - or rather Fulgentius - in the book On the Faith to Peter, chapter 3, about the middle, where he writes thus: "A part of the angels withdrew from their Creator God (by whom alone they had been blessed) by a wholly voluntary aversion; and by the judgment of supernal equity found the beginning of their damnation in the very aversion of the will, so that nothing else was for them to begin now to be punished than to be deprived of the love of that beatific good." These words of Fulgentius seem to express the aforesaid opinion.[1838] I answer, that the first sin of the angel can be understood to have been the beginning of damnation in a twofold way. In one way extrinsically, as afterwards damnation closely followed upon it. In another way intrinsically, as if the very voluntary aversion had been an intrinsic part of damnation. I say, therefore, that Fulgentius spoke in the former way, that the beginning of damnation was in the aversion itself; not, however, in the latter way. And I speak of that voluntary aversion which was first, so that this could not have been the intrinsic beginning of damnation in the first instant - not of discrete time, but corresponding to our

1838. Fulgentius, De fide ad Petrum, cap. 3 (circa medium).

time. For the same instant of discrete time can correspond to our time; but on that part by which it corresponds to the first instant of our time, it could not be the intrinsic beginning of damnation, for the reasons adduced; although the same aversion, enduring on into the subsequent time, could have been the punishment of loss, as will be explained in disputation 240. Wherefore, what Fulgentius said, that the angel begins now to be punished, is nothing else than to be deprived of the love of God; and in the same way it must be understood of the extrinsic beginning of damnation.

Then our adversaries object to us St. Gregory of Nyssa in the first book of Philosophy, chapter 3, and St. John Damascene, in the second book On the Faith, chapter 4, at the end, who teaches that for the angels the fall was the same as death is for men. But at the very point of death men are already damned; therefore also the angels in the very moment of the fall incur damnation. I answer: Damascene and Nyssa are not speaking of death as a thing-in-act, that is, of that moment of the separation of the soul from the body, but of the prior dispositions which proximate a man to death: then indeed a man is said to be dying; but in the instant of separation he is said already to be dead; and to this instant he compares the fall of the angels. This I gather from the words which Damascene subjoins, whose sense Nyssa also expressed in other words. For Damascene says: "After the fall indeed every faculty of repentance is now shut off to them (that is, to the angels), just as to men after they have departed from this life." He did not say that to the angels in the very fall the way of salvation was shut off, but after the fall; nor to men in the very migration and death, but after death. Now it is established that for men the way of salvation is shut off at the very point at which the soul is separated from the body; therefore by "state of death" he did not understand the separation itself, but the prior dispositions which we have mentioned; and to these he compares the fall of the angels. In the same way Elias of Crete, on the third oration of St. Gregory Nazianzen, which is the third invective against Julian, on those words, "Quocirca cum potentia, etc.," said: "After the fall there is no place of repentance for the angels, just as neither for men after death." He did not say, "in the very fall," nor "in the very death," but "after the fall" for the angels, and "after death" for men.[1839]

Caput VIII - Other theologians' opinions

A certain opinion is that of Capreolus in the Second Book of the Sentences, distinction 4, question 1, conclusion 5; and he more expressly hands it on in article 3, reply to the first, against the fifth conclusion; which the more recent Thomists gladly embrace. And, as to the assigning of instants by which the way of the angels was completed, Scotus also followed it in III Sentences, distinction 1, question 9, to the first question; Gabriel in the same distinction and question, article 4; Baiolis, question 1, article 3; although Gabriel and Baiolis assign otherwise the instants of the angels' way: yet they reckon this opinion among the more probable ones; they all differ, however,

1839. St. Gregory of Nyssa, Philosophiae l. 1, c. 3; St. John Damascene, De fide orthodoxa l. 2, c. 4 (in fine). See also Elias Cretensis, in Oratio III S. Gregorii Nazianzeni (Invectiva III contra Iulianum), ad verba: "Quocirca cum potentia..."

from Capreolus only in assigning the first instant, because Capreolus thought that all the angels were created in grace and in it did not merit glory; whereas the others thought that all the angels were produced in pure nature.[1840]

Capreolus thus establishes three instants of discrete time for both good and bad angels: in the first and second both classes were in the way, yet in a different mode: in the first, both were created in grace, but none merited beatitude, because they received grace without a proper act and disposition; in the second, the good merited beatitude by acting from grace, but the evil sinned, losing grace; in the third, the good received beatitude as reward, but the evil incurred damnation. Capreolus furthermore judges it impossible that the angels in the first instant could have merited beatitude, even if they had been created in grace; whereas Scotus denies to them such a merit, because he holds that they were created in pure nature.

As far as the first instant is concerned, as it is defended by Scotus, this opinion has been impugned above in disputation 226, chapter 2, and the following, where we proved that all the angels were created in grace; then against Capreolus we showed in disputation 227, chapter 1, that the angels by a proper disposition of free will, from the grace of God, received grace as a habit (habitus), which very last disposition in man is meritorious of eternal life; this we shall expressly demonstrate at II-II, q. 113, a. 8; and the same reason will hold in the angels. Moreover, that the angels were able to merit in the first instant will be proved below, in disputation 236, chapter 4. From all which it is clear that the aforesaid opinion is false.

There are, besides, three other ways by which Scotus and Gabriel, in the places cited, assign those instants in the angels - ways which, in my judgment, are improbable. The first way is that in the first instant all were in pure nature; in the second, the good with merit and the evil with sin; in the third, finally, the good received grace and glory, but the evil were damned. Now as to that merit for grace and glory which Scotus and Gabriel concede in the second instant, they say it was not condign to eternal life, but what they call "of congruity" toward grace, and they admit that it was from their own powers. But this way of philosophizing, besides what it teaches about the first instant - of which enough has been said - contains two other absurdities. One is that a congruous merit toward grace should be from one's own powers; which is no less condemned in angels than it is in men: for thus the true notion of grace is taken away, as in disputation 91, chapter 12, and the following, has been sufficiently proved. The other absurdity is that grace and glory were simultaneously conceded to the angels; for thus they are forced to assert that glory was given to the good angels without any condign merit, which is absurd: nor indeed is there greater reason why glory should not be given to men unless they condignly labor and merit, while to angels it should be granted without any condign merit. Moreover, that absurdity follows manifestly from what we established in chapters 5 and 6, where we showed that merit and beatitude could not have coexisted in duration at the same time.

1840. Capreolus, In II Sent., dist. 4, q. 1, conclus. 5; ibid., art. 3 ad 1 contra quintam conclusionem. Scotus, In III Sent., dist. 1, q. 9, ad primam quaestionem. Gabriel (locis citatis). Baiolis, q. 1, art. 3.

The second way of assigning those instants in the angels is brought forward also by the same Scotus, so that four instants or delays (as he himself calls them) are assigned: in the first of which all were in pure nature; in the second all in the same way persevered; in the third the good merited beatitude through grace, but the evil sinned; in the fourth the good received the reward of good works, but the evil received punishment. In this way, besides what he says of the first instant, this also does not approve itself to me - nor do I see by what reason it could be proved - namely, what he says about the second: from which it can in no way be established or gathered that in the second instant all still persevered in pure nature without grace and without sin. Add also that there is no need to divide two instants in the way of the good angels, as we shall show in chapter 10 from the mind of St. Thomas.

The third way of assigning instants, also found in Scotus, is that there were four delays or instants: in the first all were created in pure nature; in the second, in which all were in grace without merit; in the third, the good both merited and persevered in grace, but the evil sinned; in the fourth the good received the reward of beatitude for good works, but the evil the punishment for sin. Now this way - besides what it asserts of the first instant, which has already been refuted often - what it says of the second and third is not probable: for in the same instant grace can begin and merit, as we have shown above.

Caput IX - The opinion of Ferrariensis

Of these opinions, which do not approve themselves to me, the last is that of Ferrariensis, on III Contra Gentes, chapter 10 and following; where he teaches that the whole way of the good angels up to beatitude consisted of two instants: in the first of which they merited beatitude; in the second, they received it. About the first, however, he philosophizes thus, that he affirms the angels were so meritorious of their beatitude in it that in it they could not sin - about which we must defer to disputation 235. In the latter, in which the blessed attained glory, he says they did not merit, nor could they merit, supposing the state of beatitude; because merit cannot be with beatitude itself, as has already been shown. Absolutely speaking, however, they could have merited and sinned, if they had not attained beatitude.

The way, moreover, of the wicked angels up to damnation he likewise completes in two instants: in the first of which, created in grace, they merited glory; in the latter, however, they sinned, and at the same time incurred the punishment of damnation. This, however, he proves by no other reason, except that no other mode seems to remain more probable by which we might assign the angels' way; and so as to defend in part the sentence of St. Thomas, who teaches that the good angels, after one act of merit, received beatitude, of which we shall speak below.[1841]

1841. Ferrariensis, In III Contra Gentes, cap. 10 sqq.

This opinion commends itself to me by no reason, since from it certain absurdities follow. First, from it there follows that the good angels never had liberty to sin. For in the prior instant, according to Ferrariensis' own doctrine, they could not sin; nor yet in the latter, inasmuch as in it they attained the glory of the blessed, in which any blessed person cannot sin, but is detained from sin by a necessity preceding from the clear vision of God.

However, Ferrariensis replies that the good angels had a faculty of liberty, by which they were able to sin in the first instant; but after the supposition of the clear vision of God, they could not sin; yet that this supposition does nothing to harm the natural liberty of the angels - as, for example, from the fact that Peter is sitting, his liberty is not removed nor hindered, although from this supposition some necessity follows.

This reply, however, is of no moment. For although the supposition of a present operation does not take away the liberty by which that operation is said to be done - even if, the supposition being made, some necessity should follow - yet the same reasoning does not seem to hold about the clear vision of God, considered together with the liberty of sinning. For the necessity by which we suppose a present free operation is a consequent necessity, as has often been said in disputation 68 and 99 and elsewhere. Now consequent necessity, as we there proved from the doctrine of Anselm, does not take away, nor impede, nor harm liberty; but the necessity of not sinning, which follows from the vision, is assuredly a necessity preceding liberty: because the necessity proceeding from cognition - since it is prior to the liberty of the will and to indifference - is always a preceding necessity; and this impedes liberty, as from the same Anselm and the reason there set forth we have proved. Wherefore, since in the first instant the angels were in no way free to sin - either Ferrariensis supposes (and this indeed not only the supposition being made that they did not sin, but absolutely, because the first instant of creation is not capable of sin); and then in the second instant the angels were endowed with the clear vision, with which the will cannot sin but necessarily perseveres in grace by a preceding necessity - it follows that the good angels were never free to sin. Therefore they could not be praised for the fact that they never transgressed the precept of God and in no way sinned, but only for the fact that they acted well. But if this is true, they were not worthy of praise because they did not imitate the example of Lucifer, as the others who are said to have sinned after his example. Moreover, that an angel so kept justice that he could not lose it by sin, Anselm plainly judges absurd in the book On the Fall of the Devil, chapters 5 and 6; because otherwise, by necessity and not by liberty, the good angels would have kept justice; which Anselm thinks absurd, and he gathers it from Augustine, in the book On Rebuke and Grace, chapter 11, where he places the merit of the holy angels in this, that, the wicked falling, they themselves stood - as if he were saying: since they could transgress, they did not transgress.[1842]

Secondly, from the aforesaid opinion it is gathered that -

1842. St. Anselm, De casu diaboli, cc. 5 - 6; St. Augustine, De correptione et gratia, c. 11.

This opinion is proved to me by no reason, and from it no absurdities follow. First, in fact, it follows from it that the good angels never had freedom to sin: for in the first instant, according to the doctrine of the same Ferrariensis, they could not sin; nor even in the second: for in that instant they obtained beatitude, and no blessed one can sin, but by a necessity antecedent arising from the very power of that vision he is withheld from sinning.

But Ferrariensis replies that the angels, although with beatitude itself, had the faculty of liberty, by which they could sin; yet, on the supposition of the clear vision of God, they could not sin: and a supposition harms nothing by its nature; just as from the fact that Peter is seated, the faculty of his standing is not taken away nor hindered, although from that supposition another necessity follows.

However, this reply has no weight. For although the supposition of the operation of an agent does not take away the liberty by which that action is said to be done - even if, the supposition being made, some necessity follows - nevertheless not the same account holds of the clear vision of God as of liberty to sin: because the necessity which we suppose in the present case is a consequent necessity, as was often taught in disputations 68 and 99 and elsewhere. But a consequent necessity, as we proved in the same place from the doctrine of St. Anselm, neither takes away, nor hinders, nor harms liberty: whereas the necessity of not sinning which follows from the vision is surely an antecedent necessity and harms liberty, because the necessity arising from cognition, since it is prior to the liberty of the will and to indifference, is always antecedent; this, as we proved there from Anselm and by reason, impedes liberty. Wherefore, since in the first instant the angels were in no way free to sin, as Ferrariensis himself supposes (and this, indeed, not on the supposition being made that they did not sin, but absolutely, because the first instant of creation is not capable of sin), and then in the second instant the angels were endowed with the clear vision, with which the will cannot sin, but necessarily perseveres in grace by antecedent necessity, it follows that the good angels were never free to sin: wherefore neither could they be praised for the fact that, when the precept of God was laid upon them, they did not sin at all, but only for the fact that they acted well. But if this is true, they were worthy of praise because they did not imitate Lucifer, as the others who are said to have sinned by his example; rather, they kept their rule so, their justice so, that they judged that they ought never to lose it by sin - which St. Anselm plainly thinks in the book On the Fall of the Devil, chapters 5 - 6 - otherwise the good angels would have kept justice by necessity and not freely, which he judges absurd; and he gathers this from St. Augustine, in the book On Correction and Grace, chapter 11, where he places the merit of the holy angels in this, that, the wicked falling, they themselves stood - as if he were saying: since they could transgress, they did not transgress.

Secondly, from the aforesaid opinion it is gathered that God would have kept an unequal mode of retribution between the good and the wicked: for since to each party in the first instant beatitude had been promised, there does not seem to have been a greater reason why God should have conferred beatitude in the second instant upon some and by it have confirmed them in justice, while leaving others in their liberty so that they could sin - whence it happened, in point of fact, that they sinned. This we judge absurd in merit: for although God by his absolute power could have done this, nevertheless to assert that he did so is not to be done without the greatest foundation,

since God is said, in retribution, to have regard to merit and perseverance; and in the wicked there was not less merit nor lesser perseverance, before they sinned, than in the good. For in the good angels beatitude was conferred in the second instant without any regard to the work which was done then or was to be done afterwards, because together with beatitude neither merit nor the consummation of merit could be, as was proved above. But that the way of the good and of the wicked angels was equal is gathered from St. Gregory the Great, book 34 of the Moralia, chapter 7 (elsewhere 4), where he teaches that the good angels were confirmed so that now they could not sin by the fall of the wicked angels - as if the fall of the wicked came first, and the confirmation of the good followed it, which is effected by merit consummated in the way and by beatitude in the homeland.[1843]

A third absurdity, which is expressly conceded by the aforesaid opinion, is that, in the same duration, there was in the wicked angels both evil merit, that is, sin, and their damnation; this was sufficiently impugned in chapter 7.

A more probable opinion is explained. More true and probable to me has always seemed the opinion which assigns the instants or little instants (*instans*, morula) of the angels' way in this manner: that in the first instant both the good and the wicked, created in the grace of God, merited life eternal; but the good, prolonging their merit and persevering in merit, preserved grace, although they could at the same time lose it by sin; the wicked, however, interrupting the merit of grace, sinned in the second instant corresponding to the first instant of the good angels, who persevered in merit. Finally, in the second [instant] the good received the reward of beatitude; in the third, however, the wicked were consigned to eternal punishment and were perpetually damned; so that in that third instant, and not before, the pain of sense and of loss began, because the law of damnation begins from that instant, even if the privation of grace was in the second instant. That there is, besides the privation of grace, another punishment of eternal damnation we proved in chapter 7. Gregory indicated this opinion not obscurely, in 2, d. s., q. 1, art. 3, after the fourth conclusion, at the words "Their reason does not conclude," where he teaches that, whether an angel acquires his natural perfection in the course of time or not, nevertheless he always attains supernatural beatitude by merit - not by any merit whatsoever, but by some perseverance confirmed, as it pleased God to expect the duration of perseverance. About the wicked angels he teaches nothing peculiar; but that there were in them those three instants will be shown clearly below; for about these there is scarcely any difficulty. And St. Anselm, in the book On the Fall of the Devil, chapter 6, plainly teaches that the wicked angels who fell would have been better if they had not sinned, by persevering in the sanctity and justice received - he understands this in the way up to beatitude. This opinion, as we have proposed it, is now common in the schools, even among Thomists; indeed, it is very much conformable to the doctrine of St. Thomas.[1844]

1843. St. Gregory the Great, Moralia 34, c. 7 (elsewhere counted c. 4).

1844. Gregory, in II Sent., dist. 1, q. 1, art. 3, after the fourth conclusion, at the words "Ratio eorum non concludit"; St. Anselm, De casu diaboli, c. 6. Also Gregory (loc. cit.) and Almain, Quaestio de libertate voluntatis, art. 7, in the second opinion, arg. 3.

In the explanation of which, however, two things must first be premised, then it must be confirmed by its own reasons. First, then, it is to be noted that the instants or little instants of the angels' way are not the indivisible instants of our successive time, such as are the instants of our time and the indivisibles of any successive motion, but are certain durations without succession and indivisible, not conjoined to successive motion, yet coexisting with some successive motion and lasting through successive time - just as the angels' existence (*esse angelorum*), which in itself is indeed indivisible, as we said in disputation 33, nevertheless coexists with our divisible time, indeed we can measure it by successive time, as we noted in disputation 35, chapter 2. Now one "mora," or one instant for an angel, which is called an instant of "discrete time," is one operation of the angel, whether of the intellect or of the will; which can coexist with greater and lesser duration and time, inasmuch as the angel can, more or less, without any intrinsic succession in the operation itself, persevere in it. I judge it much more probable that no operation of an angel - just as no thing in the world - can be defined by the last instant of its being, and so cannot last for only an instant of our time, but must of necessity coexist with our successive time. Thus Gregory taught in 2, 1, 3, q. 1, art. 2, ad 4; and Almain in the question On the Liberty of the Will, art. 7, in the second opinion, argument 3. Not that the angel, when he is in a continuous action, does not have liberty - as some falsely impute to the aforesaid doctors - for it is manifest that the angel can at any instant of time after the first cease from an operation, nor is there any [instant] in which he cannot cease; but because the same instant cannot be the first and the last of the action, rather the action must end by the first non-being; and between the first instant in which the action is and begins, and that in which it is not when it ends, there must be a middle time. The reason indeed is that, in the cessation of any thing and operation, it is necessary that there be given a first non-being, and hence, since two instants of our time cannot be immediate or even conceived as such, the same thing cannot be finished by its last being and at the same time by its first non-being: for the last being of that thing would coexist with one instant of our time, and the first non-being ought to correspond to another next to it, because it could not to the same; and thus there would be two instants immediately following - an impossibility.

Furthermore, for any thing and operation whatsoever it must necessarily be granted that the first non-being is given corresponding to the first instant of our time; this is proved in this way. The non-being of a thing is a whole at once and without any succession; but whatever begins whole at once and without succession necessarily begins in a first instant; therefore the first non-being of any thing that ceases is given. I do not know on what foundation some more recent men, against the common opinion of philosophers, have not hesitated to assert that the being or non-being of a thing, which is whole at once, can begin successively and not necessarily in some first instant. For if the whole is at once and not successive, the whole also ought to begin at once and not successively; but what begins at once begins by a first being and in an instant begins. But they argue thus: permanent things, since they are wholly at once, nevertheless last through successive time without intrinsic succession in themselves; therefore they also can begin in time. I reply that the account of beginning and of remaining is different: for since in order to begin it is necessary "to have being after non-being," the thing which begins, on that side of its duration, ought to be bounded; and the

terminus ought necessarily to be intrinsic in the thing which has its whole being at once. For an extrinsic terminus is assigned only to a thing which, since it is successive, has not in itself the first part nor the first extremity of its duration; it ought to be terminated by some extrinsic extremity, which we call non-being. But the duration and perseverance of a permanent thing only requires an extremity in which it ceases; but in itself it has neither succession, nor can any extremity coexist with successive time; nay rather, it cannot but coexist with it, because it ought to last up to the first non-being. Wherefore the argument drawn from permanence and duration to inception is taken from a dissimilar [case]. Add, that, for a thing which is wholly at once to begin in time "by the last non-being," which is apt by nature to begin in an instant, it ought in some way to vary in itself: for the same thing, remaining altogether the same, cannot at once, as to inception, correspond to our time, and correspond to the instant of its indistinction, merely by the nod and will of God. However, from this rule and doctrine of cessation I except the instant of our time and the changed being of any motion: for the non-being of these is not per se, but necessarily conjoined with the being of the part that succeeds. For the non-being of this changed being or instant is the being of the part that succeeds in time or in motion; and because these begin successively "by the last non-being," therefore the instants themselves and the changed beings cease by the last being, so that the last being of them be the last non-being of the succeeding part.

But someone will object in this manner. The substantial generation of a thing lasts only for an instant and thus ought to end by the last instant of its being; therefore an immanent operation of the will or of the intellect could be defined in the same way. The same is true of creation, which, after the first instant of the thing created, no longer is; and therefore it ends by the last being. I answer that the account of creation and of the generation of any thing is different. For creation, since it is the same as the thing created, lasts always together with that thing and remains as long as the created thing remains, unless that relation which they call the dependence of the creature upon the creator - although it be altogether of the same kind - is called, in the first instant, creation, and in the remaining time conservation: yet it is always a relation of the production of some thing out of nothing, and never ceases until the thing itself is annihilated, as is evident from those things which we said above in disputation 175, chapter 3. But substantial generation, which is a relation, or a "way" by which the thing generated comes to be, depends upon the agent, and it ceases by the last being, and yet in an instant; for the production, in its continuation, depends upon the efficient cause; just as conservation depends upon it, and that order which the philosophers call the dependence of the thing generated upon the generator, does not regard proximately the substance of the cause as such, but its action and the disposition of the qualities which prepare matter for the form: because in successive generation - which consists in the eduction of form from the potentiality of matter - the operations are in matter, and the dispositions and alterations of it which prepare it are successive; therefore generation is terminated by the last being, because, the eduction being then completed, that way no longer remains by which the thing was tending to its terminus; but it had truly existed in the prior time. For which reason generation, although it is said

to be in an instant as to its formal terminus, nevertheless, as to the dispositions which are ordered to the form, is successive, and is said to cease by the last being with respect to that way which was then completed.

This, moreover, is the philosophical mode concerning the way of the good and of the bad: nothing else is required ...

Substantial generation, which is the relation or way whereby the generated thing comes to be and depends upon the agent, is defined by the ultimate existence, and is only for an instant, if the thing produced does not depend in its conservation upon the efficient cause, as the light produced in the air depends upon the luminous body. For that order which the Philosophers call the dependence of the generated thing upon the generator does not look immediately to the substance of the very cause that begets and generates according to itself, but to generation and to the accounts of dispositions and qualities which by creation were gradually prepared for the reduction into the form of the generated thing; to which there also correspond certain things that are in the very one generated which are similar in ultimate existence: but they do not remain in the same state; rather, as soon as the generated thing begins, it begins to operate and to be changed inwardly by a certain non-existence. Therefore, since the same is not the generation as the existence of the generated thing, not absolutely and in the first instant, but as already thereafter operating within itself and changing the dispositions which remain in it, on that account generation is defined by the ultimate existence; from which it follows that its non-existence results from some successive existence which is in the generated thing, as we have explained. But this is true only in the generation of animals and living things, which is in an instant in a determinate part; for I do not think non-living things are always generated successively; because through contact and conjunction with the substance of the generator the nearer part is first disposed, then the more remote; and thus there is not a determinate part in which first the form of the non-living is introduced. The things we have said are true of the natural mode of generation both of living and of non-living things. Wherefore, since the operation of the will and of the intellect is not like substantial generation through some successive existence to which its non-existence is joined, it must of necessity endure through time. And although by absolute power the operation of the will could end at an ultimate existence, nevertheless the created will and intellect of themselves cannot cease from operation at the last instant of that operation. The reason is that the instants, or pauses, in this time must be assigned in such a way that one wholly succeeds another; but an operation which in part coexists with another is not said to succeed it; therefore neither will it be said to constitute a diverse instant or pause on that account.

With these things posited we say, the first instant of the way of the good angels was the operation of a certain love of God, in which they persevered in the way; whereas the bad angel in the first instant loved God, and in the second instant sinned. And although the good angel in that first instant would have had other operations under that one which persevered, nevertheless there was always for him one instant on account of that one operation, as we have said. This, moreover, seems to me a philosophizing consistent with reason concerning the way of the good and of the bad. First, because it is necessary to assign an instant of the way distinct from the instant of

beatitude and of punishment, since merit and reward cannot be at the same time; as has been sufficiently proved above; and by this mode we rightly assign in the good and in the bad angels instants distinct from the term of beatitude and of damnation. Second, because in this way we can rightly explain how God behaved toward the good and the bad by waiting, so that to those persevering in the precept He might render beatitude: which in other opinions cannot be explained; for in this way God so waited for the good angels persevering in their merit in the precept, that with the same duration He also waited for the bad, who, just as the good could have persevered in the same merit, by their own malice lost it through sin, while the good persevered. Third, because in this way we rightly explain the mind and sense of St. Thomas, who in the following Question, Article 6, taught that the good angel after one act of merit obtained beatitude: because he persevered in the love in which he was created, until he was crowned by God with beatitude; whereas on the contrary what he taught of the bad is explained and defended by the same plan without any difficulty: for he says that the bad angels immediately after the first merit which they had would have received the reward of beatitude, had not the obstacle of sin been interposed. For he understands that to be about to happen after one act of merit continued with perseverance, as it was in the good angels. But whereas in the bad it was indeed begun, it was not sufficiently continued, as God had disposed to wait for their way, but meanwhile, while God waited, it was broken off by sin: therefore in the following instant they were damned.

Therefore even if the ways of the good and of the bad angels were equal, in the way of the bad we assign two instants and a third of damnation; in the way of the good one instant, and another of beatitude bestowed as reward.

But someone may ask whether it could have so happened that there would be only one instant of the way that was continued together with beatitude for the good angels. For in angels on the way and blessed the instants must be distinguished by their operations, and one love of God could have been continued up to beatitude, and to remain therein. I answer, that it cannot be said that there was one instant of the way and of the fatherland by reason of the same love: because although the same would remain in the fatherland which was in the way, it could not remain in the same mode, but of necessity had to be intensified in beatitude, since it had its origin from clearer knowledge. The same must be said in the bad: for although the same sin which was in the way could remain at the term of damnation, nevertheless with the addition of the pain of sense, a new sin would always be committed, or that same sin in a different mode, on account of diverse incentives. It could be better understood that there would be one instant under the same sin continued in the way and at the term of damnation without the pain of sense, with only the pain of loss: thus indeed there would be no new incentive to sin, if the angel were ignorant of his damnation, as truly he could have been. From this, however, we do not fall into the opinion of those who said that the sin of the angel and damnation were simultaneous: for they used to say that they were together as being in the same instant of our time. But when we say that there can be the same instant of sin and of damnation, we do not mean of our time, but of discrete time; that is, that the same operation of sin which was in the way can persevere and be continued until damnation is added, which is not only the privation of grace, but with the law of God damning the angel perpetually on account of sin;

nonetheless, by an order to God's law and by an extrinsic constitution there would be some succession between the way and the term of damnation; although not on the part of the operation of the angel. Wherefore on that side two instants would not incongruously be assigned.

Moreover, two things remain to be observed. The one is, that what we have set forth concerning the disposition of the way of the good and of the bad angels must be understood in such a way that it cannot be established for us by a certain reason that it was thus, and not otherwise; since this is not clear from Scripture or from the tradition of the Fathers, and it could have happened otherwise; for who will deny that it could have happened that a good angel through two or more merits altogether sufficient and antecedent could have reached glory, and again that an evil angel after several merits of grace committed sin? And if it could so have happened, I do not see whence it can be proved that it was done in this way or that. As for the bad, this is certain: after only one sin (as we have reported above from Nyssen and Damascene, and we shall see below from the teaching of the Fathers and of Scripture) they were immediately damned. But that they had several merits of grace succeeding each other in diverse instants before they sinned, certainly cannot be established. Another thing must be held, that the way of the bad and of the good was brief: for, as Bernard says in Sermon 1 on Advent, the devil fell in a moment, in the twinkling of an eye; and the Gloss also on that of Genesis 1, "God divided the light from the darkness," teaches that the demons fell on the first day. It is proved also from that which is most certain, that the devil fell before our first parents sinned. For the angels were on the first day along with the visible world, as we have shown in Disputation 224, chapter 5; but man fell a little after the seventh day, as is evident from Genesis 3. There are indeed some Fathers who think that the angel fell before our first parents were created. Thus taught Cyprian in the book On Fasting and the Temptations of Christ, St. John Chrysostom in Homily 22 on Genesis, the author of the book On the Marvels of Holy Scripture cited by St. Augustine in the third volume, Isidore, book 1 On the Supreme Good, chapter 12, sentence 7, and Bede in book 8 of the book of Questions, question 9.[1845] Therefore, since man was created on the sixth day, according to this opinion the devil fell before the sixth day. But they prove this opinion from that of John 8: "He (namely, the devil) was a murderer from the beginning, and he did not stand in the truth." From that, however, I do not see how it can be proved that the angel sinned before our parents were formed; and first, in Disputation 236, chapter 1, we shall plainly show that the speech there is not about the first fall of the demon. Next, if anything is proved from there, it would be only that the devil sinned before our first parent sinned; for this is why it is said that the devil did not stand in the truth, because by a lie he deceived our first parents; nor does "from the beginning" there signify from the very first instant of his being, but shortly after the beginning of the world. But Gregory of Nyssa in the Oratio Catechetica, chapter 6, thinks that the angel sinned from envy after he saw man created by God to His likeness and image; of which we shall treat more fully in Disputation 233, chapter 1. I, however, am certainly persuaded that the devil sinned a little after his creation.

Articulus VI - Whether the good angels obtained grace and glory according to the quantity of their natural endowments

It seems that the angels did not obtain grace and glory according to the quantity of their natural endowments. For grace is given from the mere will of God. Therefore both the quantity of grace depends on the will of God and not on the quantity of natural endowments.

1. Moreover, human act seems more proximate to grace than nature does: because human act is preparatory to grace. But grace is not from works, as is said in Romans 11. Much less therefore is the quantity of grace in the angels according to the quantity of their natural endowments.
2. Moreover, man and angel are equally ordained to beatitude or grace. But to man more grace is not given according to the degree of natural endowments. Therefore neither to the angel.

But on the contrary: the Master says in the third book of the Sentences, distinction 2, that the angels who by nature were created more subtle and more perspicacious in wisdom, these also were endowed with greater gifts of grace.

I answer: It is reasonable that according to the degree of their natural endowments there were given to the angels the gifts of graces and the perfection of beatitude. The reason for which can be taken from two sources. First, indeed, on the part of God Himself, who by the order of His wisdom constituted diverse degrees in the angelic nature. But just as the angelic nature was made by God to obtain grace and beatitude, so also the degrees of angelic nature seem to be ordered to the diverse degrees of grace and glory. As, for instance, if a builder polishes stones for the construction of a house: from this very thing that he fits some more beautifully and becomingly, he seems to ordain them to the more honorable part of the house. Thus, therefore, it seems that God ordained the angels whom He made of higher nature to greater gifts of grace and to ampler beatitude.

Second, the same appears on the part of the angel himself. For an angel is not composed of diverse natures, so that the inclination of one nature would impede or retard the impetus of another, as happens in man: in whom the motion of the intellectual part is either retarded or impeded by the inclination of the sensitive part. But when there is nothing that retards or impedes, nature is moved to that according to its whole virtue. And therefore it is reasonable that the angels who had the better nature were also more strongly and efficaciously converted to God. This also happens in men: because according to the intensity of conversion to God there is given greater grace and glory. Whence it seems that the angels who had better natural endowments had more of grace and glory.

Reply to the first: If grace is from the mere will of God, so also is the nature of the angel; and just as God's will ordained nature to grace, so also the degrees of nature to the degrees of grace.

Reply to the second: The acts of a rational creature are from itself; but nature is immediately from God. Whence it seems more fitting that grace be given according to the degree of nature than from works.

Reply to the third: The diversity of natural endowments is one way in angels, who differ by species, and another way in men, who differ by number alone. For difference according to species is on account of form, but difference according to number is on account of matter. In man also there is something that can impede or retard the motion of the intellectual nature, but not in angels. Hence there is not the same reason for both.

Conclusion: The more perfect angels according to nature had more grace and glory. Concerning this conclusion and the matter of this article enough has been said by us above in Disputation 228.

Articulus VII - Whether in the blessed angels there remains natural cognition and love

The seventh is argued thus. It seems that in the blessed angels there does not remain natural cognition and love; for it is said in 1 Corinthians 13: "When that which is perfect is come, that which is in part shall be done away." But natural love and cognition are imperfect with respect to blessed cognition and love. Therefore, when beatitude comes, natural cognition and love cease.

1. Moreover, where one thing suffices, another exists superfluously. But in the blessed angels suffice the cognition and love of glory. Therefore it would be superfluous that in them there remain natural cognition and love.
2. Moreover, the same power does not have two acts at once, just as neither is one line terminated on the same side at two points. But the blessed angels are always in the act of blessed cognition and love. For happiness is not according to habit but according to act, as is said in the first book of the Ethics. Therefore never in the angels can there be natural cognition and love.

But on the contrary: when the nature of a thing remains, its operation remains. But beatitude does not take away nature, since it is its perfection. Therefore it does not take away natural cognition and love.

I answer: In the blessed angels remain natural cognition and love. For as the principles of operations stand to one another, so also do the operations themselves. Now it is manifest that nature is related to beatitude as the first to the second, because beatitude is added to nature. But it is always necessary that the first be saved in the second. Hence it must be that nature be saved in beatitude. And likewise it must be that in the act of beatitude the act of nature be saved.

Reply to the first: A perfection that comes takes away the imperfection opposed to it. But the imperfection of nature is not opposed to the perfection of beatitude; rather, the privation which is opposed to form is taken away, not the potency. Likewise, the natural imperfection and defect are not opposed to the perfection of the cognition of glory. For nothing prevents something from being known at the same time through two media, just as at the same time something can be known

through a probable medium and a demonstrative one. And similarly an angel can at once know God through the divine essence, which pertains to the cognition of glory, and through his own essence, which pertains to natural cognition.

Reply to the second: Those things which belong to beatitude suffice for beatitude itself; yet for these to be present, those things which pertain to nature are presupposed: since no beatitude is self-subsisting, unless the uncreated beatitude.

Reply to the third: As to operations, the same power cannot be actually in two diverse acts at once, unless one be ordered to the other. But natural cognition and love are ordered to the cognition and love of glory. Hence nothing prevents in an angel there being at the same time the acts of natural cognition and love together with the act of glory, insofar as the one is subordinated to and perfected by the other.

However, in the angels it is otherwise. Hence there is not the same account of both. The conclusion is: The angels more perfect according to nature had more grace and glory. About this conclusion and the matter of this article enough has been said by us in Disputation 228.[1846]

Whether in the blessed angels there remain natural cognition and love

It is objected: It seems that in the blessed angels there does not remain natural cognition and love. For as it is said in 1 Corinthians 13: "When that which is perfect has come, that which is in part shall be done away." But natural love and cognition are imperfect with respect to blessed cognition and love. Therefore, when beatitude comes, natural cognition and love cease.

Further, where one thing suffices, another exists superfluously. But in the blessed angels the cognition and love of glory suffice. Therefore it would be superfluous that there remain in them natural cognition and love.

Further, the same power does not at once have two acts, just as one line is not terminated on the same side at two points. But the blessed angels are always in act of blessed cognition and love. For happiness is not according to habit, but according to act, as is said in the first book of the Ethics.[1847] Therefore never in the angels can there be natural cognition and love.

But on the contrary: As long as any nature remains, its operation remains. But beatitude does not take away nature, since it is its perfection. Therefore it does not take away natural cognition and love.

I answer: In the blessed angels there remains natural cognition and love. For as the principles of operations are related to each other, so are the operations themselves. Now it is manifest that nature is related to beatitude as the first to the second, because beatitude is added to nature. But one must always preserve the first in the second. Hence it is necessary that nature be preserved in beatitude. And in like manner it is necessary that in the act of beatitude the act of nature be preserved.

1846. Disputatio 228 (in this work) is cited by the author for prior treatment.
1847. Aristotle, Nicomachean Ethics I, c. 8.

Reply to the first: An adventitious perfection takes away the imperfection opposed to it. But the imperfection of nature is not opposed to the perfection of beatitude, rather it is underlain by it, as the imperfection of potency is underlain by the perfection of form. Nor is potency taken away by form, but the privation which is opposed to form is taken away. And likewise the imperfection of natural cognition is not opposed to the perfection of the cognition of glory. For nothing prevents one and the same thing from being known at once through diverse media, as at once something can be known through a probable medium and through a demonstrative one. And similarly an angel can at once know God through the divine essence, which pertains to the cognition of glory, and through his own essence, which pertains to natural cognition.

Reply to the second: Those things which belong to beatitude suffice of themselves; but for these to be present, those things which pertain to nature are presupposed: since no beatitude is self-subsisting, unless the uncreated beatitude.

Reply to the third: Two operations cannot at once belong to the same power, unless one be ordered to the other. But natural cognition and love are ordered to the cognition and love of glory. Hence nothing prevents in an angel there being cognition and love of nature, and also cognition and love of glory.

The conclusion is: In the blessed angels there remain natural cognition and love.

Articulus VIII - Whether a blessed angel can sin

It is objected: It seems that a blessed angel can sin. For beatitude does not take away nature, as was said. But it belongs to the notion of nature to be able to fail. Therefore a blessed angel can sin.

Further, rational powers are with respect to opposites, as the Philosopher says. But the will of the blessed angel does not cease to be rational. Therefore it is related to good and to evil.[1848]

Further, it belongs to the freedom of choice that a man can choose good and evil. But the freedom of choice is not diminished in the blessed angels. Therefore they can sin.

But on the contrary is what St. Augustine says in the first book On Genesis according to the Letter: that nature which cannot sin is in the holy angels. Therefore the holy angels cannot sin.[1849]

I answer: The blessed angels cannot sin. The reason for this is that their beatitude consists in this, that they see God through his essence. But the essence of God is the very essence of goodness. Hence the angel seeing God is related to him in the same way as anyone not seeing God is related to the common notion of the good. Now it is impossible that anyone should will or do anything except by attending to the good, or that he should will to turn away from the good as such. Therefore a blessed angel cannot will or act except by attending to God; but one willing or acting thus cannot sin. Hence a blessed angel can in no way sin.

1848. Aristotle, Metaphysics IX, text 3.
1849. St. Augustine, De Genesi ad litteram, book I.

Reply to the first: A created good considered in itself can fail. But from perfect conjunction to the uncreated good, such as is the conjunction of beatitude, it acquires that it cannot sin, for the reason already stated.

Reply to the second: Rational virtues are related to opposites in those matters to which they are not ordered naturally. But with respect to those to which they are ordered naturally, they are not related to opposites. For the intellect cannot not assent to principles naturally known. And similarly the will cannot not adhere to the good insofar as it is good: because it is naturally ordered to the good as to its own object. Therefore the will of the angel is related to opposites as regards many things to be done or not done. But with respect to God himself, whom he sees to be the very essence of goodness, it is not related to opposites; rather, according to him all things are directed, whatever of the opposites they may choose. And this is without sin.

Reply to the third: Free choice is related to choosing the things which are for the end, as the intellect is related to conclusions. Now it is manifest that it pertains to the virtue of the intellect to be able to proceed to diverse conclusions according to given principles. But that it proceed to some conclusion while neglecting the order of principles, this is from a defect of the intellect itself. Hence that free choice can choose diverse things with the order of the end preserved pertains to the perfection of its freedom. But that it choose something by turning aside from the order of the end, which is to sin, pertains to a defect of freedom. Hence there is greater freedom of choice in the angels who cannot sin than in us who can sin.

The conclusion is negative, about which there is here no need to dispute: because the First Part of the Second Part, question 4, article 4, universally shows that the blessed can by no account sin, even venially; and that the cause of impeccability comes from the clear vision of God.[1850]

Articulus IX - Whether the blessed angels can make progress in beatitude

It is objected: It seems the blessed angels can make progress in beatitude. For charity is the principle of merit. But in the angels charity is perfect. Therefore the blessed angels can merit.

Further, with merit increasing, the reward of beatitude increases. Therefore the blessed angels can make progress in beatitude.

Further, St. Augustine says in the book On Christian Doctrine, that God uses us for our utility and for his goodness; and similarly the angels, whom he uses in spiritual ministries, since they are ministering spirits sent for ministry on account of those who shall receive the inheritance of salvation, as is said in Hebrews 1. But this would not be to their utility if by this they did not merit nor make progress in beatitude. Therefore the blessed angels can both merit and make progress in beatitude.[1851]

1850. St. Thomas, Summa Theologiae I - II, q. 4, a. 4.
1851. St. Augustine, De doctrina Christiana I, c. 32; see also Hebrews 1.

Further, it pertains to imperfection that he who is not in the highest cannot make progress. But the angels are not in the highest. If therefore they cannot make progress to something greater, it seems that in them there is imperfection and defect - which is unfitting.

But on the contrary: To merit and to make progress pertain to the state of wayfarers. But the angels are not wayfarers but comprehensors. Therefore the blessed angels cannot merit nor make progress in beatitude.

I answer: In every motion the intention of the mover is borne toward something determinate to which he intends to lead the mobile. For intention is of the end, to which the infinite is repugnant. Now it is manifest that, since a rational creature cannot by its own power attain its beatitude, which consists in the vision of God, as is clear from what has been said above, it needs to be moved by God to beatitude. Therefore there must be something determinate to which each rational creature is directed as to its ultimate end. And this determinate cannot be, in the divine vision, on the part of that which is seen - for the highest truth is beheld by all the blessed according to diverse grades - but it is preassigned on the part of the mode of vision, and diversely the term is fixed by the intention of him who directs to the end. For it is not possible that, just as the rational creature is produced unto seeing the supreme essence, so it be produced unto the supreme mode of vision, which is comprehension. This mode can belong to God alone, as is clear from what was said above. But since infinite efficacy is required for comprehending God, whereas the creature's efficacy in seeing can only be finite, and since from the infinite any finite thing is distant by infinite degrees, it happens in many ways that the rational creature understands God, more clearly and less clearly. And as beatitude consists in the very vision, so the grades of beatitude consist in a determinate mode of vision. Thus therefore each rational creature is led by God to the end of beatitude, in such wise that it is also led, by God's predestination, to a determinate grade of beatitude. Wherefore, once that grade has been obtained, it cannot pass to a higher.

Reply to the first: To merit belongs to that which is being moved to an end. Now the rational creature is moved to the end not only by suffering but also by operating. And if indeed that end fall under the virtue of the rational creature, that operation will be called acquisitive of that end, as a man by meditating acquires science. But if the end is not in its power, but is expected from another, the operation will be meritorious of the end. But it does not befit that which is in the ultimate term to be moved, but rather to have been changed unto it. Hence, to merit belongs to imperfect charity, which is of the way; but to perfect charity it does not belong to merit, but rather to enjoy the reward. Likewise, in acquired habits the operation preceding the habit is acquisitive of the habit; but that which is from the habit already acquired is an operation now perfect with delight. And in like manner the act of perfect charity does not have the notion of merit, but rather is of the perfection of the reward.

Reply to the second: Something is called useful in two ways. In one way, as that which is on the way to the end: and thus the merit of beatitude is useful. In another way, as a part is to the whole in a civil thing, as parts are to a house. And in this way the ministries of the angels are useful to the blessed angels, inasmuch as they are a certain part of their own beatitude. For to diffuse the perfection one possesses into others is of the notion of the perfect, as perfect.

Reply to the third: Although a blessed angel is not in the highest grade of beatitude simply speaking, yet he is in the ultimate with respect to himself according to the divine predestination. Nevertheless, the joy of the angels can be increased concerning the salvation of those who are saved through their ministries, according to Luke 15: "There is joy before the angels of God upon one sinner doing penance." But this joy pertains to the accidental reward, which indeed can be increased even until the day of judgment. Whence some say that, as regards the accidental reward, they can even merit. But it is better to say that in no way can anyone who is blessed merit, unless he be at once wayfarer and comprehensor, as Christ alone was both wayfarer and comprehensor. For the aforesaid joy they rather receive from the power of beatitude than merit it.

The conclusion is affirmative. About this there is some controversy among the Scholastics, which we shall examine in the following disputation.

Disputatio CCXXX - Whether the blessed angels can grow in essential beatitude, or only in accidental

Caput I - That the blessed angels do not grow in essential beatitude

It occurs to me, however, that testimony of 2 Corinthians 5: We must all be manifested before the tribunal of Christ, that each may receive the proper things of the body, as he has done, whether good or evil. From which the Master can plainly be refuted: for all the Fathers thus expound this place, that man will render account to Christ only for those things which, while he lived, he did, whether that be good or evil; so that for these works alone he receives reward or punishment. For that phrase, "the proper things of the body," amounts to the same as "what he did while he lived."

Wherefore also the Greek Fathers, with whom St. Augustine agrees in the Enchiridion, c. 110, and in De praedestinatione Sanctorum, c. 12, do not read, "the proper things of the body, as he has done," but "the things which he has done through the body." Therefore the things which a man has done outside the body are not to be judged by Christ; and hence for them man is to receive neither reward nor punishment. But the things which a man does in glory and beatitude after this life, before the day of the resurrection, are not the proper things of the body: therefore for them he will not receive a recompense, nor will he be judged concerning them. Since then the souls of the blessed in the fatherland ask and pray for our salvation, and nevertheless for this prayer are not going to receive the recompense of essential beatitude (*beatitudo essentialis*), why should the angels, for the guardianship and vigilance by which they procure our salvation, receive an increase of essential beatitude? The aforesaid likeness, by which we argue from just souls to angels, can by no reason be denied.

That men alone are to receive a reward on account of the works of the present life, besides the testimony adduced from the Epistle to the Corinthians, other testimonies also confirm. First, from that to the Galatians 6: Therefore, while we have time, let us do good, etc. Expounding this passage, St. Jerome in the great commentaries which are had in the sixth tome, says: "The time of

sowing (as we have said) is the present time, and the life which we run." Which sense the very context of Paul plainly indicates: for he had immediately said, But in doing good let us not fail: for in due season we shall reap. Therefore Paul means that one time is that of sowing good works, namely the time of the present life; but another, that of gathering the fruit of eternal life, namely after death. He then subjoins: Therefore, while we have time, etc., designating clearly the time of the present life. Rightly, therefore, did St. Jerome say: "When this life shall have passed away, the time of sowing is taken from us."

But it is proved also from that of John 9: Work while it is day. Like to it too is that of Ecclesiastes 9: Whatsoever thy hand is able to do, work instantly: because neither work, nor reason, nor wisdom, nor knowledge shall be in the infernal regions, whither thou art hastening, that is, in the sepulcher and in death: for not all hasten to hell, the place of punishments, yet all hasten to the sepulcher. Therefore "inferi" in that place signify the sepulcher, which place in this sense St. Jerome interprets in those commentaries; and in Ecclesiasticus 14 it is said, Before thy death work justice: because there is no finding food in the infernal regions. The same is constantly taught by St. Ambrose and Theophylact on that of Luke 16, "Render the account of thy stewardship"; St. Jerome, book 6, to Algasius, Epistle 151; and St. John Chrysostom, Homily 2 on Lazarus, and 37 on Matthew.[1852][1853]

Why indeed are works done in beatitude not meritorious of eternal life? Some refer this to the divine will: because he did not promise any reward for those works; for they think promise to belong to the notion of merit. That this reason, however, is not sufficient, we have already noted above in Disputatio 228, cap. 3; and we shall expressly show in I - II, q. 114, a. 2, etc.; where also we shall show that from the nature of the state of beatitude (because it is the state of the fatherland and of reward, not of the way and of combat, or struggle) the works done there are not worthy of the remuneration of the vision of God and of beatitude, but are fruits of it. Which indeed does not hinder but that one blessed can merit for another, as we shall say more fully in III, q. 19, a. 3. By this very reason St. Thomas is to be understood in this article, when he says that the blessed angels no longer merit further, because they are at the term.

Nor is it a wonder that the Master was of that opinion, asserting that the angels grow in beatitude until the day of judgment: since he himself had already held that an angel merited beatitude for himself by subsequent works, and not by works preceding beatitude. But if a promise were necessary for the merit of beatitude, whence could the Master prove that an increase of beatitude was promised to the blessed angels on account of subsequent works? Or, if it was promised, whence could it have been clear to him that this promise was only until the day of judgment? But if promise is not necessary, why then would the glory and merit of the angels not also grow after the day of judgment? For indeed they will have more works, by which they could no

1852. St. Augustine, Enchiridion, c. 110; De praedestinatione Sanctorum, c. 12.

1853. St. Ambrose; Theophylact on Luke 16, "Redde rationem villicationis tuae"; St. Jerome, Ep. 151 ad Algasiam (book 6); St. John Chrysostom, Homily 2 on Lazarus, and Homily 37 on Matthew.

less merit than by the care and guardianship which they have of souls. That which, moreover, can be adduced for this opinion, from 1 Corinthians 6, Do you not know that we shall judge angels?, will be explained in the following chapter.

Caput II - In what way the accidental beatitude of the angels grows

The unanimous agreement of all the Scholastics, except for the opinion of the Master, is that the angels' accidental glory grows until the day of judgment. They call "glory," or accidental beatitude (*beatitudo accidentaria*), the joy from any other thing besides God; but essential beatitude, the vision and fruition of God himself. Thus teach St. Thomas, and the more recent Thomists on this article; Albert, in the second part of the Summa, treatise 4, question 19, in the incidental question; St. Bonaventure in II, distinction 11, article 2, question 2; Gabriel, question 1, article 3, doubt 2; Ricardus, article 2, question 1, to the fourth; Thomas of Argentina, question 1, article 4: whose opinion, thus universally understood, is expressed in Luke 15 by these words: Thus I say to you, there will be joy before the angels of God upon one sinner doing penance, rather than upon ninety-nine just men who need not penance. For since this joy begins in the angels only from that time when the sinner in this life does penance for his sin, from which time alone the angels begin to see the penance of that man, it follows that the angels in heaven are day by day heaped up with new joys; and since these new events of penance are to last only until the day of judgment, it follows that even until that day similar joys will newly be in heaven.

But when it is said, Rather than upon ninety-nine just men who need not penance, with whom the sinner who repents of having sinned is compared, either it must be understood of those who, judging themselves just, do not do penance, when nevertheless in truth they no less need it than other sinners - against whom Christ seemed in that chapter to be speaking, namely against the Pharisees (for these despised him because he ate with sinners, with whom they therefore disdained to converse, because they reckoned themselves just) - then the particle "than" is not one of comparison, nor does it denote that joy is taken in heaven of both, but more of sinners doing penance; rather that particle has the force of negation and exception, to denote that indeed the penance of one sinner brings great joy to the blessed, but that from the arrogance of those who without cause think themselves just there will be no joy to the blessed. Or if we interpret the aforesaid place of truly just men, Christ is to be understood as speaking after the manner of men: for since from the penance of a sinner joy newly begins in heaven, but of the just it does not begin, but already before was there, among men that joy is accounted the greater which newly begins from some thing, than that which before was had from a thing long possessed; therefore Christ said: There will be joy before the angels of God upon one sinner doing penance, rather than upon ninety-nine just men - as if he said, "a greater joy" - and the particle "than" has the force of comparison, yet in the sense explained.

Moreover, that this increase of accidental joy will not be after the day of judgment is manifest: for since nothing new can come to the blessed, but all things are to remain in the same state, there will be nothing that can newly bring joy to the blessed.

However, although it is most certain to the Scholastics that the blessed are daily heaped up with new accidental joy until the day of judgment, not all agree in the same way in this opinion. For Ricardus and Thomas of Argentina teach only that accidental joy grows in the blessed; whether, however, the blessed merit that increase, or not, they by no means determine. The others, however, in this difficulty are divided among themselves: Albert, St. Bonaventure, and Gabriel judge that the blessed daily merit for themselves that accidental reward, which they newly receive each day. The reason, however, which is wont to be brought for their opinion, we shall resolve below. But St. Thomas, and his disciples - whose opinion seems to me more probable - affirm that the blessed, now established in beatitude, do not newly merit for themselves that increase of beatitude, but already on the way merited it together with the essential reward. Which St. Thomas confirms by this reasoning: for someone to merit for himself any accidental reward of beatitude, it stands much in the way that he is in every respect a comprehensor; for if some blessed person could merit anything for himself, as Christ merited for himself the exaltation of his name and the glory of the body, it would be necessary that he, in that respect in which he merited, were not a comprehensor and blessed, but still a wayfarer, as Christ was. Since therefore the blessed angels are wholly comprehensors, and in no way on the way, they could not merit anything for themselves, even of accidental joy.

Yet another, easier reason presents itself to me for confirming this: for that it was necessary that Christ be a wayfarer in that respect in which he merited something for himself, seemed necessary only for this reason, that he lacked that perfection which he had to merit for his own body. For if he had already had it, he could not have merited it.

non could not have done so. Add that if he had been a comprehensor (comprehensor) and blessed according to the body, nothing would have seemed to prevent him from meriting by good works among the nations the exaltation of his name: for the fact that he was already blessed would only seem to hinder his being able to merit for himself the beatitude which he had, as we shall show more at length in the Third Part, question 19, article 3.[1854] Therefore, with that reason set aside, which is not without some difficulty, there is another, easier reason: because that joy of the angels over the conversion of souls is an act of charity, or arises from an act of charity, and hence has rather the character of a fruit of beatitude than the character of merit. But no fruit of beatitude merits another new fruit; otherwise there would be a process to infinity in merits and in retribution, and that increase would not only last until the extreme day of judgment. We say, then, that the blessed angels and men, while they were on the way, merited for themselves by good works done on the way not only essential beatitude, which consists in the vision of God and in fruition, but also accidental beatitude, which lies in that joy. They merited, moreover, in this life that such joy be granted to them in its time, knowledge also of such penitence having been granted to them, according as was fitting to each one by reason of his state, according to what we said in Disputation 51, chapter 2.

1854. St. Thomas, Summa theologiae, III, q. 19, a. 3.

Moreover, someone will ask why blessed men cannot in beatitude merit for themselves the glory of the body, or at least an increase of it: for it is not repugnant to the state of the blessed to merit the glory of the body which they do not have. I answer that the glory of the body simply does not fall under any merit performed in beatitude: because in this life the blessed person merited for himself not only the glory of the soul, but also of the body. Then I say that a blessed person cannot merit an increase of the glory of the body by new merits performed in beatitude: because the glory of the body is set down as the accidental and secondary reward of good works, but in a measure and due proportion with the glory of the soul; wherefore, since that cannot grow by subsequent merits, as was said above, neither can the glory of the body grow, nor can the Blessed in the other life merit an increase of it.

Furthermore, against our foregoing doctrine there seems to be that passage, 1 Corinthians 6: "Do you not know that we shall judge angels?" For if on the day of judgment the Apostles, sitting upon twelve thrones, are to judge... However, as to good angels, inasmuch as the custody of souls has been entrusted to them, rewards too will be assigned to them, as also to the other just, on whose account judgment will be held that day. But as regards essential beatitude, it is manifest that the angels are not then to be judged. For since they did not have that through Christ, just as neither grace, as the more probable opinion holds, which we shall defend in the Third Part, question 8, article 4,[1855] it follows that they are not to be judged by Christ as to essential glory. It remains, therefore, that they be judged concerning the custody of souls and the accidental reward, as St. Thomas teaches in the Third Part, question 19, the last article.[1856] I answer: on the day of judgment the angels also will appear, not that they may be judged concerning the custody and care which they had of souls (for they will have no reward thence), but that God may show his justice in the spiritual care and governance of souls. Whether, however, he will in some way judge the life of the angels and the works which they did on the way, as to substantial or accidental reward, we shall speak in the Third Part in the place cited. This, however, is certain: that good angels will not be judged concerning any merit which they had after beatitude, even as to accidental reward: since in beatitude they merit nothing further, nor anything accidental to their glory. Wherefore, although in this Article 9 St. Thomas says that the angels after beatitude do not merit even an accidental reward, yet afterwards in the Third Part, question 59, where he says that the judgment of angels, as regards a certain accidental reward, pertains to Christ inasmuch as he is man, this ought not to be understood as though Christ retributed to the angels some reward for the custody of souls: for this he expressly denies in this article; but because the reward of joy over the penance of the sinner in a certain way, namely consequently, pertains to Christ, by whose merit the gift of penitence is conferred.[1857]

Moreover, that passage, 1 Corinthians 6, is not about the last judgment, in which the living and the dead are to be judged by Christ and by the just, but, as the Greeks expound it, it is to be understood otherwise: for there "our judging angels" is nothing else, as all the Greeks expound,

1855. St. Thomas, Summa theologiae, III, q. 8, a. 4.
1856. St. Thomas, Summa theologiae, III, q. 19, a. 12 (ad fin.).
1857. St. Thomas, Summa theologiae, III, q. 59.

than that the demons - who were previously good angels - or those who are angels by nature are convicted and refuted by our good life. And this sense suits the intention of Paul in that place. For he undertakes to show the Corinthians that they do wrong in referring their cases and judgments to the Gentiles, since among them were many Christians who could do this much more conveniently. He argues thus: "Do you not know that we shall judge angels? how much more secular matters?" as if he said: if the life of Christians in mortal flesh will be sufficient to convince and to refute in judgment (for this is what "to judge" there signifies) evil angels, who by nature are angels and spiritual, then surely also a Christian will be sufficient to compose lawsuits and contentions arisen among us. Then, commending the dignity of Christians for this task, he subjoins: "If then you have secular matters, set them to judge who are contemptible in the Church" - to your shame I say - "Is there not among you any wise man who can judge between his brethren?" as if he said: if need be, and you have contentions about secular things, and there is not found among you someone very wise, appoint rather the lowest and most abject Christian than an unbeliever to judge: for it is better to plead causes before a less wise Christian than before the most wise unbeliever. But I have said this to make you blush, because up to now you have carried your cases to unbelieving judges: but is there not found among you also a wise man, as among the unbelievers, that he be appointed judge? as if he said: surely one will be found. Incidentally it is to be observed here that Paul does not will that the jurisdiction of unbelievers be usurped by Christians: for a Christian is not exempted by baptism from such jurisdiction as regards civil and secular causes; but he is speaking of arbitral judgments, which are held by judges chosen by the consent of the litigants: for in Romans 13 and 1 Peter 2 he bids that we obey kings and princes, even pagans, and pay them tribute.[1858]

Quaestio LXIII - On the malice of the angels as to fault

Then it is to be considered how the angels were made evil. And first as to the evil of fault; second, as to the evil of punishment. Concerning the first, nine things are asked.

Articulus I - Whether the evil of fault can be in the angels

Objicitur primo: It seems that the evil of fault cannot be in the angels. For the evil of fault cannot be in those things which are in potency, as is said in the ninth book of the Metaphysics; for the subject of privation is being in potency. But the angels, since they are subsisting forms, do not have existence in potency. Therefore in them the evil of fault cannot be.

Objicitur secundo: Further, angels are more noble than the heavenly bodies. But in the heavenly bodies evil cannot be, as the philosophers say. Therefore neither in the angels.

Objicitur tertio: Further, that which is natural is always present. But it is natural to the angels to be moved with the motion of love toward God. Therefore this cannot be removed from them. But by loving God they do not sin. Therefore angels cannot sin.

1858. Romans 13; 1 Peter 2.

Objicitur quarto: Further, appetite is only of the good or of the apparent good. But in the angels there cannot be an apparent good which is not a true good, because there can by no means be error in them, or at least error cannot precede fault. Therefore angels cannot appetite except that which is truly good. But no one sins by appetiting that which is truly good. Therefore the angel does not sin by appetiting.

Sed contra est quod dicitur Iob 4: "In angelis suis reperit pravitatem."

Respondetur: I answer that both the angel and any rational creature, if it be considered in its own nature, can sin. And if it befit any creature that it cannot sin, it has this from the gift of grace, not from the condition of nature. The reason of this is that to sin is nothing other than to deviate from the rectitude of the act which it ought to have, whether sin be taken in natural things, or in artificial, or in moral. Only that act fails from rectitude whose rule is not the very virtue of the agent. For if the hand of the craftsman were itself the rule of incision, he could never cut wood except rightly; but the straying of the rectitude of an incision always comes from some other rule. Now the will of any creature is not of itself the rule of its act, because it is not ordered to the ultimate end as principal; but every will of an inferior ought to be regulated according to the will of a superior: as the will of a soldier according to the will of the general of the army. Thus, then, in the divine will alone sin cannot be; but in any created will there can be sin, according to the condition of its nature, inasmuch as it is regulated by the divine will, to which the ultimate end pertains.

Reply to the first: In the angels there is no potency to natural existence; yet in them there is potency, according to the intellective part, to be turned to this or to that; and as to this there can be evil in them.

Reply to the second: The heavenly bodies have no operation except natural. And therefore, as in their nature there cannot be corruption except natural, so neither in their natural action can there be the evil of inordination. But above natural action in the angels there is the action of free choice (*liberum arbitrium*), according to which it happens that there can be evil in them.

Reply to the third: It is natural to the angel to be turned with the motion of love toward God, inasmuch as he is the principle of natural existence. But to be turned to him as the object of supernatural beatitude is from gratuitous love, from which he could be turned away by sinning.

Reply to the fourth: Sin in the act of free choice happens in two ways. In one way, from this, that some evil is chosen: as a man sins by choosing adultery, which in itself is evil. And such sin always proceeds from some ignorance or error: otherwise that which is evil would not be chosen as good. One errs, to be sure, in the particular, choosing this pleasure of an inordinate act as some good to be done now, because of the inclination of passion or of habit, even if in the universal he does not err, but holds the true judgment about this. In this way, however, sin could not be in an angel: because neither are there passions in angels by which reason or intellect may be bound, as is clear from what was said above; nor again could a prior habit precede the first sin so as to incline to sin. In another way it happens to sin through free choice, by choosing something which in itself is good, but not with the order of due measure or rule: so that the defect inducing sin be only on the part of the election, which does not have due order, not on the part of the thing chosen; as if someone were

to choose to pray, not attending to the order instituted by the Church. And a sin of this sort does not presuppose ignorance, but only the absence of consideration of those things which ought to be considered. And in this way the angel sinned, turning himself by free choice to his own good without order to the rule of the divine will.

The conclusion is affirmative, and of faith, as is evident from those same places in which it is said that the demons sinned: John 8, "He" (namely, the devil) "was a murderer from the beginning, and he did not stand in the truth." Which passage I treated more fully in Disputation 227, chapter 3. St. Thomas proves it from that Job 4, "In his angels he found depravity"; around which passage we said many things above in that disputation cited, chapter 4.

Ad the first, therefore, it must be said that in the angels there is no potency to natural existence (*esse naturale*). And yet there is in them a potency, according to the intellectual part, for this, that they be turned to this or to that. And in so far as this is so, there can be in them evil

Ad the second it must be said that the heavenly bodies have no operation except a natural one. And therefore, just as in their nature there cannot be corruption, so neither in their natural action is there to be evil of inordination. But above natural action in the angels there is the action of free choice (*liberum arbitrium*), according to which it can happen that there be evil in them

Ad the third it must be said that it is natural to an angel to be turned by a motion of love to God, in so far as he is the good principle of natural existence. But that he be turned to him in so far as he is the object of supernatural beatitude: this is from gratuitous love, from which he could turn away by sinning

Ad the fourth it must be said that sin in an act of free choice happens to be in a twofold way. In one way, from the fact that something evil is chosen: thus a man sins by choosing adultery, which in itself is evil. And such a sin is always from ignorance or error, because the will is not borne to that which is evil as good. He errs indeed at least in the particular, choosing this delight of an inordinate act as some good for acting now, on account of the inclination of passion or of habit: even if in the universal he does not err, but holds the true judgment. But in this way sin could not be in the angel, because in them there are no passions by which the intellect be bound, as is clear from their condition: nor again could the first sin be preceded by another sin. In another way, sin can happen in an act of free choice by choosing something which in itself is good, but not with the order of due measure and rule: so that the defect inducing evil on the part of the choice - which does not have due order - be not on the part of the thing chosen: as if someone should choose to pray, not attending to the order required. And a sin of this sort does not require ignorance, but only the absence of consideration of those things which ought to be considered. And in this way the angel sinned, turning himself by free choice to his own good without order to the rule of the divine will

But on the contrary: The conclusion is affirmative, and of faith, as is evident from those same places in which it is said that the demons sinned: John 8, "He" (namely, the devil) "was a murderer from the beginning, and he did not stand in the truth." Which passage I treated more fully in Disputation 227, chapter 3. St. Thomas proves it from that Job 4, "In his angels he found depravity"; around which passage we said many things above in that disputation cited, chapter 4.

Disputatio CCXXXI - Whether there can be made by God some rational creature "Anamartetos," that is, impeccable

Caput I - Two scholastic opinions

The present controversy is not whether some rational nature can be made impeccable by the grace of God: for about this elsewhere it must be disputed. First indeed, whether the potency and liberty (*libertas*) of sinning be impeded in the humanity by the substantial union with God: this must be treated in the Third Part, q. 15, a. 1. Then, whether by the blessed virtue of the clear vision of God they are perpetually impeded, so that they cannot sin: we shall see in I-II, q. 4, a. 4. Lastly, whether in another way than by the clear vision of God, or by union, our liberty be impeded, namely by divine predetermination: above we spoke in Disputation 99, cap. 8, and Disputation 100, cap. 2. About those also who are confirmed in grace, whether they have necessity not to sin mortally, and for what reason they are said to be confirmed in grace, was said by us in that Disputation 90, cap. 2. There remains therefore only the controversy whether any rational creature, with none of the aforesaid modes of grace put, but by its own nature, can be created by God impeccable, that is, without liberty and potency (*potentia*) of sinning. In which question there have been various Scholastic positions, of which two we shall report in this chapter, that in the following we may set forth the truer opinion.

- The first, then, is the opinion of those who teach that there can be produced a rational creature which is by its own nature impeccable around the matter of virtue and the natural end: not, however, around the end and the matter of supernatural virtue. Thus taught Durandus in II, dist. 23, q. 1; indeed he even affirms that perhaps angels were produced of such a nature; which can be gathered manifestly also from his reasoning, and in II, dist. 6, q. 1, n. 16 he had openly pronounced it; whose opinion is embraced by Capreolus in II, dist. 22, the sole question, art. 3 from the beginning, and Cajetan in this article, no. 9. Concerning the consequence take note.[1859]

The reasoning of Durandus, in which Capreolus consents, conceding whatever it endeavors to prove, is of this sort. That from which in a rational creature sin is known is a defect in the intellect (*intellectus*), either of error or of inconsideration: without this, however, it is impossible that there be a defect in the will (*voluntas*), as by the common sense of the Scholastics we shall prove in I-II,

1859. Durandus of St.-Pourçain, In II Sent., dist. 23, q. 1; dist. 6, q. 1, n. 16; Capreolus, In II Sent., dist. 22, q. unica, art. 3 (a principio); Cajetan, on this article, no. 9.

q. 77, a. 2. But the angel is so perspicacious in intellect that, around the natural end and the moral virtue of the same order, he cannot have a similar defect: for indeed he can have neither error nor inconsideration: therefore neither can he sin about such matter. Moreover, that an angel cannot suffer such a defect in the intellect concerning those objects Durandus proves thus. For as among bodies grades are constituted, so ought they among spirituals: and yet among bodies there is something which in its operation does not fail, nor can fail, but is always perfect both in substance and in operation, namely the heaven: therefore among spirituals there ought to be some nature, namely a pure spirit, as the angel, which in its substance and operation cannot suffer defect. However, that every creature and pure spirit around its supernatural end and the virtues of that order can fail, he shows by a contrary reasoning. For around all these there can precede a defect in the intellect of the angel, either by error or by inconsideration. Since the angel understands and considers these by a supernatural light, with principles more exalted than natural ones, he can easily fail about those. For about those the intellect of the angel is disposed in no other way than ours is about spirituals of the natural order, about which it has a thousand defects daily. To this St. Thomas alludes by his reasoning in the third book Contra the Gentiles, chapter 110, when he replies to the first argument by which in chapter 109 it was being contended to prove that angels could not sin, because in their intellect error or defect cannot be. For he answers that they sinned from inconsideration of the superior good. He understands indeed the supernatural, which is of a superior order.[1860]

- The second opinion is Gabriel's, in II, dist. 25, arts. 1 and 2, who asserts that the rational will can be double: one which is moved freely by the object; and in this mode it cannot be created impeccable, because that would be against the notion of liberty, which is able to be bent to either part: another which is moved necessarily by the object, even if the object be proposed to it by reason and intellect: and in this mode a rational creature can be produced impeccable, because no creature without liberty can sin. This opinion had previously been set out by Ockham, in I, dist. 44, q., ad 1 dub., where he deems it probable that there can be produced an angel, or a man, of another species than he who is produced, who cannot sin. Major followed the same in II, dist. 23, q. 2, conclusions 4 and 5, in such a manner indeed, that a man, or an angel, of another species would be impeccable, because he would be created without liberty. It can be confirmed moreover by the testimony of Augustine, whose sentence the Master reports in I, dist. 44, cap. 2, in these words: "Such a man God could have made, who neither could sin, nor would sin: and if he had so made him, who doubts but that he would have been better?" To this opinion likewise there assent those who in our age teach that there can be produced some rational creature, to which the light of glory and to see God clearly be connatural; for thus also grace would be connatural to it.[1861]

1860. St. Thomas, Summa contra gentiles, III, c. 110, in reply to the first argument proposed in c. 109.
1861. Gabriel Biel, In II Sent., dist. 25, arts. 1 - 2; William of Ockham, In I Sent., dist. 44, quaest., ad 1 dubium; John Major, In II Sent., dist. 23, q. 2, concl. 4 - 5; Augustine as reported by the Master of the Sentences, I, dist. 44, c. 2.

Caput II - No rational creature can be impeccable, and to be without freedom: it is proved by authority

To me the common sentence has always so much pleased, which affirms that no rational creature can be created impeccable, that I have judged the opposite to have no foundation of probability, since it can be persuaded neither by any authority of the Fathers, nor even by a slight theological reason. I say, moreover, that no rational creature can be impeccable absolutely; even with respect to the end and supernatural virtue: for with respect to the natural end, and moral and natural virtues, that they can sin, I hold so much the truer and more probable against Capreolus, Cajetan, and others of the first opinion - and in the following chapter I shall prove it - that I do not judge their sentence to be grounded on so light a foundation as is the opinion of Gabriel and the other Nominalists. This opinion, therefore, understood universally, has been expressly handed down by the Scholastic Doctors: St. Thomas and the more recent Thomists in this article; Scotus in II, dist. 23, q. 1; Basso in article 3; Ricardus in article 1, question 1; Thomas of Argentina, question t., article 4, which he had also taught in dist. 6, q. 1; Aegidius also follows in that distinction, question 1, article 1; the Carthusian, question 1, around the end. Then for the same sentence one can allege Bonaventure in the same distinction 23, article 1, question 1, who indeed says that God made man assailable, nor did he wish to confirm him in good, that the man himself might experience that only God is he who cannot be assailed, nor fail; he holds, therefore, that no one can be made, except God, who cannot sin. The same teaches Holcot in II, question 2, article 6, to the arguments of the third doubt; Hervaeus in II, distinctiones, question 1, article 1, and distinction 7, question 1. To these also number Alexander, part II, question 91, mem. 1, article 2, § 3: who although he teaches that there can be made by God's absolute power a rational creature impeccable, yet he understands it by grace, not by nature. Moreover, of these Doctors none, except Scotus, expressly says that there cannot be made a rational creature which cannot sin around its natural end. But neither is there anyone who openly affirms the opposite. Scotus pronounces Durandus's sentence, that the created will in pure nature cannot be immutable in the good and in sin; and he plainly understands this to be about natural precepts and the natural end; which about angels already produced Paludanus not obscurely asserts in IV, distinction co., question 1, article 2, around the natural end. But if about angels already produced this is to be asserted, about any creature whatsoever which can be produced by God, the same also seems to be said, since the reason is the same for all. And from the reasons of the Doctors whom in this chapter we have alleged for this sentence, this too is not obscurely gathered.[1862]

1862. St. Thomas and later Thomists on this article; John Duns Scotus, In II Sent., dist. 23, q. 1; Basso, art. 3; Richard [of Mediavilla], art. 1, q. 1; Thomas of Argentina, q. t., art. 4, and dist. 6, q. 1; Aegidius (Giles of Rome), in the same distinction, q. 1, art. 1; the Carthusian, q. 1, on the end; St. Bonaventure, In II Sent., dist. 23, art. 1, q. 1; Holcot, In II, q. 2, art. 6, ad arg. dub. 3; Hervaeus Natalis, In II, distinctiones, q. 1, art. 1, and dist. 7, q. 1; Alexander of Hales, Summa, II, q. 91, mem. 1, art. 2, § 3; Paludanus (Peter of Palude), In IV Sent., dist. [co.], q. 1, art. 2. For the patristic testimonies: St. Ambrose, De fide ad Gratianum, l. 3, c. 2; Elias Cretensis, Or. 3 in St. Gregory Nazianzen (Apologia I in Julianum); St. Jerome, Comm. in Gal., c. 6; Ep. 146; St. Augustine, De civitate Dei, l. 12, cc. 1, 6; Contra Maximinum, l. 3, c. 12; Fulgentius, De fide ad Petrum, c. 3 and c. 23; St. Gregory the Great, Moralia, l. 25, c. 5; St. John Damascene, De fide orthodoxa, c. 3.

It can be confirmed, moreover, first by the testimonies of the Fathers, then by reason. First indeed Ambrose, book 3 On the Faith to Gratian, chapter 2, after the middle, proves that immortality suits God alone: because he alone cannot sin: but that immortality does not suit the creature, because it can die through sin. The same teaches Elias of Crete in the third oration of Nazianzen, which is the first Apology against Julian, on those words, "And then how," etc. But true immortality, which is a proper attribute of God, can suit to no creature, even a possible one: therefore neither to be immutable with respect to sin. Then St. Jerome in the great commentaries on the Epistle to the Galatians, chapter 6, immediately in the beginning, says: "Knowing that Paul, except for the Trinity, every creature, although it does not sin, nevertheless can sin," etc. And in Epistle 146, near the end, explaining that Psalm 143: "In thy sight no man living shall be justified," he says that attention has been given to say "every living one," not however, "every man," so that he might comprehend all men and angels. He subjoins then thereafter: "God alone is he upon whom sin does not fall: the rest, since they are endowed with free will, made to the image and likeness of God, can bend their own will now to the true and now to the false." Finally, in this sense he explains that 1 Timothy 1, where God is called immortal, namely for this reason immortality is attributed to God, as Ambrose was saying, because neither can he be changed by sin. Nor does it matter that in these places St. Jerome speaks only of men and of angels who have been created: for from his very reasoning it plainly follows that no angel, and no rational creature, can be created which cannot be bent to either part of virtue and of sin: for every rational creature must be created to the image and likeness of God, by this very fact that it is rational, and accordingly free. Wherefore when St. Jerome says that only God is he into whom sin does not fall, he does not speak only with a comparison made with creatures which have been produced, but also with possibles, attributing to God this peculiar attribute: for if this could suit to any creature, it would not be said to be proper to God alone.

Lastly, St. Augustine in book 12 of the City of God, chapter 1, thus writes: "We say therefore that the immutable good is not except the one true blessed God: but the things which he made are indeed good, because from him; yet, however, mutable, because they were made not from him, but from nothing." The same sentence, and confirmed by the same reason, he delivered in the same book, chapter 6. In which places indeed he treats of the mutability of sin by which the creature is turned away from its good. Wherefore also in that chapter 6 he proves that sin can have no other cause than the created will, not in so far as it is good from God, but in so far as it has been produced from nothing. The very same and for the same reason has Fulgentius in the book On the Faith to Peter, chapter 3, and St. Gregory in book 25 of the Moralia, chapter 5; from which St. Augustine in book 3 against Maximinus, chapter 12, and Fulgentius in that book, chapter 23, gather the same in this way: "Whenever it is bestowed upon a rational creature that it cannot sin: it is not of its own nature, but of grace." Which they understand openly not only of creatures which are made, but also of possibles: for the same common reason belongs to all, namely to be from nothing. For if creatures which are made cannot by their own nature be outside the hazard of the mutability of sin, because they are from nothing: this very thing will suit to any other possible creature. To these also add St. John Damascene, who in De fide, chapter 3, at the beginning, speaks

thus about creatures: "Whatever has been created is necessarily subject to change: for that one thing is outside the hazard of change which has nothing from which it has been created." But Damascene speaks about the change of sin, according to which a rational creature can be changed, as is clear from the context of the chapter. He thinks therefore, with the other Fathers already alleged, that God alone cannot sin: because he alone has not been made by another: the rest, indeed, therefore can sin, because they have the cause of themselves: but that which has the cause of itself has also that it has been created from nothing: it suits therefore in doctrine and reason with the other Fathers alleged. And since every possible creature, by this very fact that it is a creature, has the cause of itself and ought to be produced from nothing: it cannot be, according to the sentence of these Fathers, that it be by its own nature outside the hazard of the mutability of sin. But before by reason we prove this sentence, it is to be observed from the doctrine of these Fathers, not only that which is against the second opinion, that a rational creature cannot be produced altogether impeccable around the supernatural end: but also, that none has been produced nor can be produced which, around the end and natural law, be by its own nature impeccable. For the Fathers indeed speak in the same way of all creatures which have been made and of those which can be made, since the same reason of all is, namely that they are from nothing.

The same is taught by Elias the Cretan, Oration 3 on St. Gregory Nazianzen (Apology I against Julian), on those words, "But immortality is truly a proper attribute of God; it can befit no creature, nor any possible being." St. Jerome in the great Commentary on Galatians, chapter 6, says at once: "Paul knowing that, except God, every creature, even if it does not actually sin, can sin," etc. And in Epistle 146, explaining that of Psalm 143, "No one living shall be justified in your sight," he says that by "every living one" Scripture said not only "man" but so that it might also be understood of all men and Angels. He adds, however, that God alone is he "into whom sin does not fall," although men and Angels are of free choice, made to the image and likeness of God and placed on the razor's edge, so to speak, of the will to turn either way. Finally, he applies to this that of 1 Timothy, where God is said to be immortal - that is, he has immortality as a proper attribute; as Ambrose says, because not even by sin can he die. Nor does it matter that in these places Jerome speaks of men and Angels who have been created; for from this it plainly follows that no Angel, nor any rational creature possible to be created, could be such that it could not be bent to either part of virtue and vice: for every rational creature must be created to the image and likeness of God as such, and therefore be free. Hence Jerome, when he says that God alone is he into whom sin does not fall, speaks not only by way of comparison with creatures already made, but also with possible ones: that this peculiar attribute of God could not agree to any creature; for if it could agree to any creature, it would be no longer the proper attribute of God alone. Lastly, St. Augustine in The City of God, book 12, chapter 1, thus writes: "The immutable good is not created; God alone is truly blessed. Those things, however, which are, are so because of that which is - "[he proceeds] - but the things that are mutable are those which are made not of him, but of nothing. He hands on the same doctrine, confirmed by the same reason, in the same book, chapter 6, where in those places he treats of the mutability with respect to sin (*mutabilitas peccati*), by which the creature is turned away from its own good. And so also in that chapter 6 he proves that sin can have no other cause

than a created will, not insofar as it is good from God, but insofar as it is produced from nothing. The very same, and for the same reason, is held by Fulgentius in the book On the Faith to Peter, chapter 3, and Gregory [the Great] in book 25 of the Moralia, chapter 5; from which Augustine in book 3 against Maximinus, chapter 12, and Fulgentius in that book, chapter 23, gather the same in this way: Whatever is granted to a rational creature, that it cannot sin, is not of its own nature, but of grace. And they clearly understand this not only of creatures that have been made, but also of possible ones: for that common reason applies to all, namely, that they are from nothing. For if creatures that have been made cannot by their own nature be outside the hazard of the change that is sin, because they are from nothing: this very thing will agree to any other possible creature. To these also add St. John Damascene, who, book 2 On the Orthodox Faith, chapter 3, speaking from the beginning about creatures, says thus: "Whatever is created must needs be subject to change: for there is one thing alone outside the hazard of change, that which has nothing from which it is created." Now Damascene speaks of change with respect to sin, according to which a rational creature can be changed, as is clear from the context of the chapter. Therefore Damascene thinks that God alone cannot sin, because he alone is not made by another; the rest indeed can sin because they have a cause of themselves; and what has a cause of itself has also that it is created from nothing. Therefore he agrees in doctrine and in reason with the other Fathers alleged. And since every possible creature, by the very fact that it is a creature, has a cause of itself and ought to be produced from nothing: it cannot happen, according to the sententia of those Fathers, that by its own nature it be outside the hazard of the change that is sin. But before we prove this sententia by reason, it is to be observed from the doctrine of those Fathers, not only that a rational creature cannot be produced altogether impeccable with respect to a supernatural end; but also that none has been produced nor can be produced which by its own nature is impeccable with respect to the end and law of nature. For the Fathers, making no distinction, speak absolutely of the change that is sin, from which they exempt no creature.[1863]

They will perhaps reply, on behalf of the Doctors of the second opinion, that the Fathers speak of a rational creature which would be of free choice: and of this they most truly taught that none can be made by God which by its own nature is impeccable; but that they do not dispute about a rational creature without liberty, but necessarily determined to one part only; and that of this the second opinion is true which asserts that some rational nature can be made impeccable, namely without liberty and determined to one [part]: for if it were of free choice, the Doctors of that other sententia would not deny that any rational creature, even if only possible, must be peccable.

Reiicitur. But this objection is frivolous. First, because Jerome, cited above, plainly supposes that a creature, by the very fact that it is rational, is of free choice: for a rational creature is therefore said to be made to the image and likeness of God, according to his opinion, because it is endowed with free choice. Then also because, as we shall prove in the following chapter, it is

1863. St. Ambrose, De fide ad Gratianum, l. 3, c. 2; Elias Cretensis, Or. 3 in St. Gregory Nazianzen (Apologia I in Julianum); St. Jerome, Comm. in Gal., c. 6; Ep. 146; St. Augustine, De civitate Dei, l. 12, cc. 1, 6; Contra Maximinum, l. 3, c. 12; Fulgentius, De fide ad Petrum, c. 3 and c. 23; St. Gregory the Great, Moralia, l. 25, c. 5; St. John Damascene, De fide orthodoxa, l. 2, c. 3.

impossible to produce a rational creature which is necessarily bound to one part with respect to whatever objects can be proposed to it: but, unless it be an irrational brute, it must be free with respect to at least some genus of object: but by this very fact, that it has the least share of liberty, it cannot be free with respect to virtue and vice, because it is made from nothing: for this alone we concede to God, that he is of free choice, but that with respect to good and evil he has no liberty. The reason of this difference between us and him we shall set forth in the following chapter.

Caput III - The foundation of the reasons for the preceding sententia

Let us confirm the preceding sententia by reason, and plainly show that a rational creature, by the very fact that it is a creature made from nothing, cannot be impeccable: first it must be proved that no rational creature can be made without free choice (*liberum arbitrium*). For those who follow the second sententia concede this at least universally, that no creature endowed with reason can be produced without some liberty with respect to at least some genus of object. But this is proved first by the authority of Damascene, book 2 On the Faith, chapter 3, where he writes thus: "Again, whatever uses reason is also endowed with freedom of choice. Therefore the Angel, as a partaker of reason and intelligence, has free choice; but as created, he was in that condition, that he could receive change, and it was free to him to remain either in good or in evil." He is speaking, as is manifest, of the change that is sin; and in chapter 27 of the same book, after he said that brute animals lack freedom of choice, and are led rather by nature than they lead it, and are naturally borne into action as soon as they have desired something, he adds these words: "Man, on the contrary, as one who partakes of reason, leads nature rather than is led by it." And below: "Moreover we must know that Angels, as endowed with reason, are of free choice, both as created and as liable to change." Therefore Damascene gathers liberty in man and Angel from reason: not because of some special kind of reason, but because they are endowed with reason as such. From the fact, however, that they are created from nothing he gathers that they can be changed by sin. So also Augustine gathers in the passages cited in the preceding chapter.

Furthermore, that Damascene does not prove that Angels and men are free because they have a peculiar kind of reason, but because they are simply endowed with reason, is clear from the reason which he gives in that chapter 27, which is as follows. Where there is reason, that force, that rational faculty is conversant partly in contemplation, partly in action: it is placed in action which deliberates and prescribes a mode for things to be done; but he who deliberates, deliberates just as if the choice of things to be done were in his own power. Therefore he who has reason, by that very fact is of free choice. And this reason plainly holds in every rational creature, of whatever kind of reason it be endowed, because there is none that cannot compare two goods among themselves and deliberate of them, which of them is more expedient.

Then this very point is proved by reason: for among those rational natures which now exist - even if I include the uncreated nature of God - there is none which does not have some liberty. By what foundation, then, could the Nominalists have been moved to imagine another kind of possible rational nature which would have no liberty at all? Lastly, since there is no thing besides God which

so appears good that in it, and in the love of it, there cannot appear a reason of evil: it follows that a rational nature, considering that reason of evil, is free both to love it and not to love it, and also both to love it and to hate it: for from this variety of cognition, which they call indifference (*indifferentia*), there arises in the appetitive faculty itself liberty. But if some particular good, which is not God, is so constituted as to be thought by some nature in such a way that it cannot fail to move the affection, it is a manifest sign that such a nature does not have reason but sense only: for either that nature which, according to the Nominalists' opinion, can be created, is so necessarily determined to virtue that it cannot sin - then it is superior to man and the Angel and inferior to God - or it is inferior to man himself and the Angel. If it is inferior to God and superior to man and Angel, it cannot lack liberty at least with respect to some object: since the most perfect rational nature, which is God, has some liberty; nor indeed because it would be more perfect than man and Angel should it lack liberty: rather it ought to have it; since the supreme God of all is free with respect to certain things. But if it were inferior to the Angel and superior to man, in the same manner as the Angel it would be free: for to lack liberty altogether would not be a greater perfection than to have some. And since a superior rational nature and an inferior are free, the middle one also, whether by reason of perfection or of imperfection, ought to be free. But if it were inferior to man: either it would be brute, or it would have liberty to sin: for how could it be that the most perfect and a more perfect rational creature, as an Angel and a man, should have liberty to evil, but an inferior be impeccable, and always necessarily determined to good? It remains, therefore, that there is no possible creature endowed with reason which is not of free choice with respect to some [objects].

Caput IV - The opinion opposed to the second sententia is confirmed by reason

Thus far we have only proved that no creature endowed with reason can be produced which does not have liberty with respect to some objects, a point which by no reason can the Nominalists deny. But since there is in God a certain liberty of will with respect to some objects conjoined at once with a necessary determination to virtue and without liberty to sin; it remains to be proved that a created liberty, by the very fact that it is created, cannot be conjoined with a necessary determination to virtue as it is in God. For Damascene, from a different principle, proves liberty of nature absolutely, and liberty to sin. He proves indeed liberty of nature absolutely with respect to some universal object from the fact that it is rational; but liberty to sin from the fact that it is a rational creature created. This principle the other Fathers also handed down with Augustine, as we saw above in chapter 2. Upon this single and most solid foundation seem to me to rest the reasons which St. Thomas and Scotus use in confirmation of the preceding sententia, if we expound them rightly: although Scotus, thinking the reason of St. Thomas less sufficient, impugns it.

Now the reason of the holy Doctor in this article is of this sort: to sin is nothing else than to turn aside and deviate from the rectitude and rule which one ought to follow in acting, as much in things natural as in things moral. But that operation alone cannot deviate from rectitude whose right rule is the very virtue of acting: just as, if the hand of the craftsman were itself the straight rule of the art, a work not right could not proceed from the hand. But in no rational nature, except

God, is the just rule of acting morally the agent's will itself: for the rule of all human and angelic operations is the divine will. Therefore no created will is impeccable, not able to deviate from rectitude and rule.

But this reason seemed less sufficient to Scotus in the place alleged, and against it he objects in this way. Although some operative faculty is not itself the rule of acting, nevertheless nothing hinders its being so necessarily determined by the rightness of the rule that it cannot decline from it: thus the intellect about first principles, which are to it the rule of knowing, cannot err; and yet the faculty that understands principles is not itself the principles. And other things of this sort he adds.

To this we say, explaining the mind of St. Thomas, that his argument proceeds thus: namely, if an operative faculty were of itself a sufficient cause in acting, and had in itself a sufficient cause by which it should be immutably constituted, then indeed either, first, it would be its own rule formally; or, second, it would have its own rule in such wise as to be necessarily conformed to it. But St. Thomas's intent is that neither of these befits a created faculty. And because in God alone the love of every good is immutable, whereas in creatures the contrary is easily observed: therefore in creatures the operative faculty is not itself the rule, which is the love of all good, neither in the former way nor in the latter. And thus far seems to go the reasoning of Scotus in the place cited, which can be put thus: whatever nature is not its own rule, and is not of necessary conformity to its rule, can fall away from the rule; but such is the rational created nature: therefore it can fall away from its rule, and consequently sin.

Yet this very reasoning needs confirmation: for it still remains to be proved why a created will, even when adhering to God by the clearest vision, could be impeccable; or rather, why it is not from its own nature necessarily and immutably conformed to the rule. Moreover, the mode by which Cajetan explains the reason of St. Thomas, not less than the very reason of Scotus, requires confirmation. For Cajetan ought to attend to this: by what reason the love of good according to its own nature, which is the principle of right acting, cannot of necessity and immutably agree to a rational creature. Then too Scotus ought to prove what he assumed in the minor proposition, namely, that a rational creature is neither its own rule nor necessarily conformed to its rule.

Scotus also employs another reason to prove this same thesis, which runs thus. Every will that is not yet steadfast enough in its appetition - because it has not yet its fixed good, namely God - to which it always can prefer some apparent good that is in truth against reason and against that highest good, is such that it can will an apparent good which is against reason, and so can sin. But the human will is of this sort. Therefore it can will some apparent good which is against reason, and consequently sin. This reason likewise needs confirmation: for it still remains to be proved why a created will, once adhering to God by clear vision, should be impeccable; and that, if it be impeccable, this is not from its created nature as such, but from that most efficacious vision by which the divine good is proposed as supremely lovable, moving the intellect efficaciously and, through the intellect, sweetly and victoriously inclining the will, so that it cannot be effectively withdrawn by any opposite appearance of good from the consideration of the true good according to reason. For that clear vision of God (as we shall show below in its place) by its very nature

inserts an efficacious consideration in every operation and choice of good to be done, which consideration, being joined with the love of the divine will, so establishes the will that it cannot be perturbed by any contrary operation in such wise that it should efficaciously depart from that knowledge born of the vision, which the blessed grasp, and from the will of God bound to it; nor can the will, unless first the cognition be darkened and the efficacious consideration of the good be taken away, depart from the rule of reason, and so sin.

But that [argument] seemed less sufficient to Scotus; and against it he objects in this way: although some faculty of acting is not its own rule (*regula*), nevertheless nothing seems to stand in the way why it should not be so necessarily determined with respect to its rule that it cannot deflect from it: just as the intellect concerning first principles, which are themselves the rule of knowing for it, cannot err; and yet the intellect, which is the faculty of understanding principles, is not the principles themselves.

Cajetan, in this article, says to this, and he explains St. Thomas's mind thus, namely, that it is the same thing to say that some power of acting is its own rule in acting, and to say that it has a cause immutably conjoined that is like a rule. In the former way, says Cajetan, the will (*voluntas*) in acting is its own rule formally; in the latter way it is its own rule virtually. And because in God alone the love of every good is immutable, whereas in creatures it can easily change, therefore in creatures the faculty of acting is not the rule itself, which is the love of every good, neither in the former nor in the latter way. The same also seems to be Scotus's reason in the place alleged, which is of this sort: every nature which is not its own rule, nor necessarily conforming to its rule, can fail from the rule; but such is created rational nature: therefore it can fail from its rule, and accordingly sin.

But both Cajetan's reason, or the way in which he explains St. Thomas's reason, and Scotus's reason itself, need stronger confirmation. For Cajetan ought to have considered by what account the love of the good, which is the principle of acting rightly, could not necessarily and immutably agree by nature itself to a rational creature. Then too Scotus ought to have proved what he assumed in the minor proposition, namely, that the rational creature is not its own rule, nor necessarily conforming to its rule.

Scotus's reason. Scotus employs another reason to prove this very point, which is of this sort: every will that is not satiated in desiring, because it does not yet have its good, namely God, to whom it aspires, can desire some apparent good which in reality is against reason, and against that highest good, until it inseparably cleaves to that highest good; but the human will is of this sort: therefore it can desire some apparent good which is against reason, and accordingly sin. This reason too stands in need of confirmation: for it still remains to be proved why a created will, so long as it adheres to God by clear vision, cannot be impeccable.

But in truth we can confirm almost in the same way all these reasons: wherefore they also seem to agree solidly with us. In confirmation of them we must first premise that the proximate rule (*regula*) of human actions is the operation of reason (*ratio*) proposing that which is right, as we shall show in I-II, question 19, article 3.[1864] For although rational nature itself is the first rule of the

just and the unjust, the good and the evil in morals - for that is called good which is agreeable and fitting to rational nature as rational; but that evil which is unfitting to rational nature as rational - nevertheless, because this fittingness and unfittingness is imputed to us to the extent that it is proposed through reason, therefore I would say that the proximate rule of these actions is reason proposing that which is to be done.

Then note that by the clear vision of God (*visio clara Dei*) God is proposed to us so efficaciously to be loved above all things that we not only cannot hate him, or even fail to love him, but he also efficaciously moves the intellect (*intellectus*) so that it much more efficaciously apprehends that which is according to reason and according to the will (*voluntas*) of God, than the opposite: so that by reason of some apparent good it cannot be diverted from the more efficacious consideration of the true good, which is according to reason. For that clear vision of God, which shows how it is just and equitable to love God above all things, by its very nature necessarily inserts the most efficacious consideration of each operation and of the particular good which is according to the will of God; and just as the clear vision of God itself cannot be perturbed by any contrary operation, in the same way that efficacious knowledge born of the vision, by which the blessed apprehends that which is according to reason and the will of God, cannot be overcome by any other more efficacious cognition by which a delectable good would be apprehended that is against reason. But as we said in Disputation 98, chapter [x], and as we shall say in I-II, question 77, article 2, the will cannot sin unless there first precedes on the part of the intellect a defect of consideration: therefore, with the vision remaining, and with that efficacious consideration of the good which cannot be overcome by the contrary, the will will not be able to fail and to sin.[1865][1866]

Lastly, it must be observed that as long as a rational creature does not see God clearly as he is, it is so disposed by its own nature on the part of the intellect that it can apprehend particular goods and God himself in various ways, now this one more intensely and efficaciously than that one, now the opposite: because particular goods are by nature apt to appear in one way and another; indeed even God himself, as long as he is not seen as he is. And since the root of the liberty of the will lies in this indifference of the intellect and of reason, as the holy Doctor teaches below, question 8, article 3, it follows that in this life the will can be determined by no thing; but thus it can be borne to this or that, that it can also not be borne to it, and similarly to the opposite: because there is no cognition so manifest and clear representing every aspect of good in the object for this state, that a certain aspect of evil could not appear in it more efficaciously than the aspect of good; and that some opposite apparent good could not appear more efficaciously and move the will.[1867]

From these foundations an efficacious reason of our opinion is gathered. For since the ratio of virtue is a particular good, that which is according to virtue cannot so clearly appear under every aspect of good as to draw to itself necessarily a will that is free of itself: because it cannot be represented under every aspect of good more efficaciously than the opposite; but when the will is

1864. St. Thomas, I-II, q.19, a.3.
1865. Disputation 98, cap. [as cited in the author].
1866. St. Thomas, I-II, q.77, a.2.
1867. St. Thomas, below, q.8, a.3.

freely enticed by something opposite to virtue, it already fails from the rule, and sins. Therefore rightly from the liberty of the created will with respect to some objects we gather its liberty with respect to virtue and vice. For if the will is free with respect to some things, by its very nature it is free: now a faculty that is free of itself has this, that it cannot be necessarily drawn by a good which is not proposed more efficaciously under every aspect of good; and since the good of virtue is such, it follows that with respect to that it ought to be free...

Hence it is evident first that those Fathers rightly said, cited above, that the creature, by this very fact that it is rational, is free; but by this very fact that it is from nothing, it is peccable. For by this very fact that it is from nothing, it can apprehend the good of sin more efficaciously than the good of virtue: because it does not always consider the good of virtue more efficaciously, in that it does not see God clearly and as he is.

Then by our reason the position of St. Thomas can be confirmed: because any nature which is not the rule itself, namely the very consideration of the good, just as God is his own goodness and his own knowledge, cannot immutably be conformed to the rule itself, because the consideration of the good, by which it is led, can vary in it, as we have said.

Lastly, Scotus's later reason also can be strengthened and made clear by ours: because a nature which of itself is not satiated with the highest good, until it attains it and adheres to it immutably, can desire other particular goods in various ways, just as it can apprehend them variously: but every rational creature has this as long as it sojourns away from the Lord, and does not look upon him clearly, but beholds him through an enigma.

But in truth the aforesaid reason supposes that there is no rational creature which by its own nature and from an intrinsic principle necessarily sees God clearly and as he is, without a new gift and benefit of God, beyond the gift of creation; which I do not see can be denied by any reason. Indeed, some Theologians in our age have said that it is a matter of opinion whether some rational creature could be created to which the light of glory (*lumen gloriae*) for seeing God is connatural, which indeed nature would be of the supernatural order; whose opinion we refuted above in Disputation 6: because it is inept to imagine some created substance which would be called of the supernatural order, since this is proper to an accidental form, as we showed there. Then also, because if to some creature some light for seeing God clearly were connatural, the vision of God and the light itself could not be said to be of the supernatural order according to their substance and nature, but only according to the mode on the part of the efficient cause: for as we said above in Disputation 214, chapter 2, that alone is said to be supernatural according to substance, which no creature by its nature demands. But it is frivolous to understand this only of the creatures which actually exist: for if fewer creatures had been made, we could say the natural perfections of those which were not created to be called supernatural according to substance; which is absurd.

But surely no one so far has said that there can be created some creature to which it so naturally and necessarily from intrinsic principles would belong to behold God clearly that it would not need some light added to its nature: which, although it would be connatural to it as species of things are said to be connatural to the angels, yet it would not belong to it necessarily and from intrinsic

principles to have that light, or to behold God clearly; but nevertheless it would be communicated to it by God so freely that without any violence it could be denied: just as even now the natural species of many things are not granted to me, which I could have, either because the presence of the object is not granted, or for some other reason. Although therefore that creature would be of such an order that the light of glory would be connatural to it, nevertheless it would be a new benefit to it, beyond the gift of creation, if such a light were granted to it for seeing God. But with God left only under the veil of faith, it could not be impeccable: therefore no rational creature by the sole gift of creation, as has been proved, can by its nature be impeccable; but to become impeccable would be the effect of a particular gift. Nay rather, although some creature could be produced which by the sole gift of creation would necessarily see God, nevertheless it could sin: for God could impede its intellect that it not see him: and thus, deprived of the vision and with him left only under the veil of faith, it could sin. Wherefore it would not be repugnant to its nature to sin: although, if left to its own virtue and not impeded, it could never sin.

However, this solution does not please me. First, because if an Angel were by his nature impeccable with respect to the natural law, by no end or incentive could he be moved to sin against that law: yet Angels hate God himself and men; they also envy the divine providence and majesty: which are against the natural law. Now the motive cause for these affections is to see themselves tormented by him. And this would suffice, even if they did not see themselves deprived of supernatural beatitude, but only tormented by God.

Moreover, even if they sin against the natural law by hating God on the ground that they see themselves deprived by God of supernatural beatitude, it does not therefore follow that they sin consequently against the natural law because they first sin against the supernatural law: for then they do not sin against the supernatural law itself directly, but from the privation of the supernatural gift they are moved to hatred and envy against God.

But someone may say on behalf of Capreolus and others of the first opinion that they did not deny that Angels can sin against the natural law absolutely; but that they cannot be moved to sin within the limits of the natural law except from some motive of another order. Yet I for my part do not see by what reason, if an Angel's will can sin against the natural law with a preceding defect on the part of the intellect from that incentive of the higher order, as in the example just given, the Angel could not also, within the limits even of the natural law, without consideration of any other thing of a higher order, sin against the natural law itself. For since the defect on the part of the intellect, which ought to precede every sin, is not necessarily an error, but a defect of consideration suffices, namely because the delectable which moves to sin is considered more efficaciously than the honesty of virtue, or the evil of punishment, which ought to hold the will back from sin; therefore I do not see why an Angel could not suffer such a defect of perfect consideration within the limits of the natural law, and thus sin against it. From which doctrine the argument of Capreolus for that first opinion is plainly dissolved. For although the Angel's intellect is perspicacious, nevertheless because it is created and can be drawn to diverse [objects], it could also consider more remissly the good of virtue and the things which ought to remove it from sin, than the opposite.

Caput V - Lastly, against the first opinion

Lastly, against the first opinion, which was that of Capreolus and others, it remains to be proved that Angels also can sin against the law and precepts of nature: whence our view too will be confirmed. And this is clearly gathered from the fact that after the fall they daily sin against natural precepts, by persuading men to all kinds of sins and by pursuing men with hatred.

But the more recent Thomists, who embrace Capreolus's opinion, respond that Angels indeed can sin, not primarily and per se against the natural law, but concomitantly or consequently, because they sin against the supernatural law, and from that they are moved also to violate the natural law. This solution, however, does not please me. First, because if an Angel were by his nature impeccable with respect to the natural law, by no end or incentive could he be moved to sin against that law: yet Angels hate God himself and men; they also envy the divine providence and majesty: which are against the natural law. The moving cause to these affections is to see themselves tormented by him. And this would suffice, even if they did not see themselves deprived of supernatural beatitude, but only tormented by God. Moreover, even if they sin against the natural law by hating God on the ground that they see themselves deprived by God of supernatural beatitude, it does not therefore follow that they sin consequently against the natural law because they first sin against the supernatural law: for then they do not sin against the supernatural law itself directly, but from the privation of the supernatural gift they are moved to hatred and envy against God.

But someone may say on behalf of Capreolus and others of the first opinion that they did not deny that Angels can sin against the natural law absolutely; but that they cannot be moved to sin within the limits of the natural law, unless from a motive of some other order. Yet I do not see by what reason, if an Angel's will can sin against the natural law with a preceding defect on the part of the intellect from that incentive of the higher order, as in the example just given, the Angel could not also, within the limits even of the natural law and without consideration of any other thing of a higher order, sin against the natural law itself. For since the defect on the part of the intellect, which ought to precede every sin, is not necessarily an error, but a defect of consideration suffices, namely because the delectable which moves to sin is considered more efficaciously than the honesty of virtue, or the evil of punishment, which ought to hold the will back from sin, therefore I do not see why an Angel could not suffer such a defect of perfect consideration within the limits of the natural law, and thus sin against it. From which doctrine the argument of Capreolus for that first opinion is plainly dissolved. For although the Angel's intellect is perspicacious, nevertheless because it is created and can be drawn to diverse [objects], it could also consider more remissly the good of virtue, and the things which ought to remove it from sin, than the opposite.

But lastly, against the first opinion, which was that of Capreolus and others, it remains to be proved that Angels also can sin against the law and the precepts of the natural [law]: whence our position too will be confirmed. But that is plainly gathered from this, that after their fall they daily

sin against the natural precepts, persuading men to all kinds of sins, and pursuing the men themselves with hatred. And if by their nature an Angel were impeccable against the natural law, he could not incite to such things.

However, some more recent Thomists, who embrace the opinion of Capreolus, reply that Angels can indeed sin, not primarily and per se against the natural law, but concomitantly or consequently, inasmuch as they sin against the supernatural law, and thence they are moved to those affections against God. Yet even if they do not see themselves as deprived of the supernatural but only - (so they say) - to be suffering under some motion toward acts which are against the natural law, and to be tormented by God himself, and although they would not see themselves to be deprived of the supernatural but merely to be punished, nevertheless even if they sin against the supernatural law by hating God and men, and the divine providence, and what things are against the law of nature, the mover to these affections is the deprivation of the supernatural gift; from that they are led to hatred and envy. And thus, they add, although they do not sin directly against the natural law, yet they are moved against God by the deprivation of the supernatural, and consequently they sin against the very law of the supernatural, from whose privation they are brought to hatred and envy.

These things nevertheless are rejected. First, because, if an Angel by nature were impeccable, he would be impeccable without any end or incentive to sin. Next, I do not approve this solution, namely that the Angel by his own nature within the limits of the natural law could not be moved by any incentive contrary to that law. For although all sin, on the part of the intellect, does not necessarily require an error, still a defect of consideration suffices, namely that the delectable which moves to sin is considered more efficaciously than the honesty of virtue, or the evil of punishment which ought to hold the will back from sin; therefore I do not see why an Angel could not suffer such a defect of perfect consideration within the limits of the natural law, and thus sin against it. From which doctrine the argument of Capreolus for that first opinion is plainly dissolved. For although the Angel's intellect is perspicacious, nevertheless, because it is created and can be drawn to diverse objects, it could also consider more remissly the good of virtue, and those things which ought to remove it from sin, than the opposite.

In reply to Durandus's argument for the same opinion, I answer that among bodies indeed there is something most perfect, which can in no respect fail: first, because there is nothing extrinsic to it which can impede its operations, since nothing is so efficacious as itself; next, because every body from within is determined to one side, nor can it operate indifferently in one side and another: but a rational creature, since it is free, even if by nothing extrinsic it can be compelled to sin, can nevertheless from within operate to whichever side it shall have pleased; and it would be against the nature of a rational creature not to be free, and therefore not to be able to sin, as was proved above.

To the testimony of St. Augustine which the Master adduces in I, distinction 44, chapter 10, 2, in confirmation of the same opinion, I reply that those words are not in Augustine, book 11 On Genesis according to the Letter, chapter 7; but in that chapter Augustine only says that the created nature which does not will to sin is better than that which not only can sin but even wills to sin. [1868][1869]

Others finally argue for the aforesaid opinion in this way: An Angel does not have a natural inclination to sin; therefore within the limits of the natural law he could not sin. But this reason has no weight, as we shall also say below in disputation 236, chapter: for that a nature sin, a natural inclination to sin is not required; but liberty suffices and is necessary.

Articulus II - Whether in Angels there can be only the sins of pride and envy

It seems that in Angels there cannot be only the sin of pride and envy. For wherever there falls the delectation of some sin, there the sin itself can fall. But demons are delighted even in the obscenities of carnal sins, as St. Augustine says in the fourteenth book On the City of God. Therefore in demons even carnal sins can be present.[1870][1871]

1. Further, just as pride and envy are spiritual sins, so also sloth and avarice, and anger. But spiritual sins befit the spirit, just as carnal sins befit the flesh. Therefore not only pride and envy can be in Angels, but also sloth and avarice.
2. Further, according to St. Gregory in the Moralia, from pride many vices arise, and similarly from envy. But when the cause is posited, the effect is posited. If therefore pride and envy can be in Angels, by equal reason other vices can be in them.[1872]

But on the contrary: St. Augustine says in the fourteenth book On the City of God that the devil is not a fornicator or a drunkard, nor anything of this sort. Yet he is proud and envious.[1871]

I answer that a sin can be in someone in a twofold way. In one way according to the guilt; in another way according to the affect. According to guilt indeed all sins happen to be in demons, because while they induce men to all sins, they incur the guilt of all sins. But according to the affect only those sins can be in evil Angels to which it befalls a spiritual nature to be affected.

But it does not befall a spiritual nature to be affected to goods which are proper to the body, but to those which can be found in spiritual things; for nothing can be affected except to that which is in some way suitable to its nature to be. But in spiritual goods there cannot be sin while someone is affected to them, except insofar as in such an affection the rule of a superior is not observed; and this is the sin of pride, namely not to be subject to the superior in that in which one ought. Whence

the first sin of the Angel cannot be anything other than pride. But consequently there could also be in them envy. For it is of the same account that the affect tend to something to be desired, and that it resist the opposite. Now the envious man grieves at the good of another, insofar as he esteems another's good to be an impediment of his own good. But the good of another could not be esteemed an impediment of the good affected by the evil Angel, unless insofar as he affected a singular excellence; and that singularity ceases by the excellence of another. And therefore after the sin of pride there followed in the Angel the sin of envy: he grieved over the good of man; and also over the divine excellence, insofar as God uses that good against the will of the devil himself unto divine glory.

Reply to the first: Demons do not delight in the obscenities of carnal sins, as if they themselves were affected to carnal delights. But this whole thing proceeds from envy, namely that they are delighted in whatsoever sins of men, insofar as they are impediments of human good.

Reply to the second: Avarice, insofar as it is a special sin, is the immoderate appetite of temporal things which come into the use of human life, whatever things are estimated by money. And to such things demons are not affected, just as neither to carnal delights. Whence avarice properly so taken cannot be in them. But if by avarice is said every immoderate cupidity to have and possess any created good whatsoever, then avarice is contained under pride which is in the demons. But anger is a passion, as concupiscence is. Whence anger cannot be in demons, except metaphorically. Sloth moreover is a certain sadness by which a man is rendered slow to spiritual acts by reason of bodily labor, which does not befit demons. And thus it is clear that only pride and envy are purely spiritual sins which can befit demons: yet so that envy not be taken for a passion, but for a will resisting the good of another.

Reply to the third: Under envy and pride, as they are posited in the demons, all the sins which are derived from them are comprehended.

Notes concerning the doctrine of the Article.

The prior conclusion is: All sins, according to guilt, can be in demons. The posterior conclusion is: In demons there can be formally two genera of sins, namely pride and envy. For whose perspicuity it is to be noted first, when a sin is imputed formally to the agent, when not only the malice itself is imputed to him, but also the proper act of that sin is from him as from a cause. Then indeed the sin is imputed according to guilt, and not formally, when to the agent there is imputed only the malice, yet he is not the proper cause of the act and operation to which that malice is annexed; for example, if someone persuade another that he should kill an enemy, and he kill, the sin of homicide is said to be imputed to the persuader according to guilt only: because he is a partaker of the same malice by his persuasion, since persuasion takes its species from the same [source] whence homicide itself takes [its species]; but to the killer inflicting death by the sword or some other instrument the sin is attributed formally. Therefore St. Thomas says that in Angels there can be found all sins according to guilt, because an Angel can persuade any genus of sin and

move to it; but formally, that is, according to the proper act, there can be found in an Angel only those two genera of sins, namely pride and envy: because only the proper acts of those sins can be done by Angels as a proximate cause.[1873]

Then it is to be noted that when it is said that some sin is attributed to an agent according to guilt, this is to be understood not only of the guilt of punishment, but also of the guilt of fault, that is, of the very malice of the sin, which is said to be imputed to someone. For, as we shall show in I-II, question 73, article 8, a work which is the cause of someone's sin - for example, a seduction, persuasion, and the like - has the same species of malice as the very sin of which it is the cause: nor ought we to constitute a peculiar species of scandal without a special intention of the neighbor's ruin, as we shall show there; but then, when a like intention is present, the work by which one is the cause of sin is, first indeed, in that species of malice in which is the sin to which it invites; then in the peculiar species of scandal from a direct intention of the ruin of one's neighbor.[1874]

But whether a work which is the cause in another of a sin which is consummated in a lower affect - such as of hatred, envy, and the like - depends, in the same species of fault, upon hatred or together with envy, hinges on those things which are treated in II-II, question 18, article 6, and in the treatment concerning whether the reflex act of the will be of the same malice as the interior act of the same will which it has for its object, and whether a will having hatred be of the same malice as the very act of hatred. Let this at least be certain: to him who is the cause of hatred in another, the sin of hatred is not imputed formally, but according to guilt - either in the same species of malice or in another. And from these things which we have noted, the prior conclusion of this article remains sufficiently explained, namely, that in an Angel there can be every kind of sin according to guilt.

Moreover, Cajetan endeavored to expound the mind of St. Thomas, in such a way that he understands the Doctor to have spoken not universally of whatsoever sins which can be in Angels, but of sins with which the Angels who sin first turned themselves, and from which they begin.[1875] Yet to me it still seems difficult enough to accommodate this interpretation to the mind of the holy Doctor: both because there is not at hand an efficacious reason by which we might prove that the first sin of the Angel necessarily had to be pride or envy; and also because the reason of St. Thomas seems to prove, not only of the first act, but of any other as well. For the reasoning is of this sort: in Angels there cannot be sin except spiritual - that is, about spiritual objects. But in spiritual objects there cannot be sin, while one is affected to them, unless in such an affect the rule of the superior be not observed; and this is the sin of pride, not to be subject to the superior in that in which one ought. Therefore the first sin of the Angel cannot be anything but pride; and consequently there could be in them also envy, of the same account as has been said.

Yet this reasoning - besides that, by very clear steps, it would prove in an Angel no other sin could in any way be than pride - still is not without difficulty. For not every transgression of the superior's rule is pride, since this can happen by the special sin of disobedience alone, which is a

1873. St. Thomas, I-II, q. 73, a. 8.
1874. On scandal and intention, see the discussion indicated by the author at II-II, q. 18, a. 6.
1875. Cajetan.

distinct sin from pride and envy; indeed, the transgression of the rule, precisely as such, seems rather to pertain to the sin of disobedience than to pride. For the affection of pride consists, as will be explained in the following disputations, not in the proximate transgression of a rule or precept, but in an appetite of excellence beyond due measure; in which there appears a certain kind of transgression, not indeed of a rule and precept, but of the measure of one's own dignity. If, then, one were to speak...

Moreover, we shall number among these also the sin of special disobedience, which consists in a like intention, the direct intention of not obeying a superior, as we shall say at I-II, q. 73, a. 8; for by this intention the Angel could transgress the precept of God.[1876]

But as to whether a work which is the cause of sin in another, a work which is consummated in an interior affection, as hatred, envy, and the like, is in the same species as the hatred itself or as envy, depends upon what we shall say at I-II, q. 18, a. 6, where we shall treat of whether a reflex act of the will (*voluntas*) is of the same malice as the interior act of the same will which it has for its object; for example, whether the will to hate hatred is of the same malice as the very act of hatred. This is certain: he who is the cause of hatred in another is not imputed the sin of hatred formally, but according to guilt, either in the same species of malice or in another. And from these things which we have noted, the prior conclusion of this article remains sufficiently explained, namely, that in the Angel every kind of sin can exist as to guilt and affection.

However, the later conclusion, namely that other sins besides pride and envy cannot be formally in the Angel, but that only two genera of sins can be formally in him, to wit, pride and envy, in my judgment does not lack very great difficulty. First, because in an Angel there can be formally the sin of injustice, and he himself can be formally unjust: not indeed against another Angel, but against a man, not only persuading some man to something unjust, as theft and homicide, but also doing it himself, or inflicting damage on some man in domestic matters, or defaming him in reputation, or killing him against his will. Although God sometimes permits all these things, nevertheless they are sins of the Angel himself, and none of them is of pride or envy.

Then too, among the sins which are consummated within, there can be in an Angel the sin of hatred against God and the neighbor, which is contrary to charity and beneficence; but those [other sins] are of pride and envy, [which are] contrary to humility. Manifest it is that God can be held by an angel in hatred. There can also be in an angel the sin of idolatry, if he praise another Angel as his God, and pray to him as his God, and vow to him: all which, from their object, would be against religion and against the worship of the true God, transferring it to a creature; and thus it would come to idolatry.

St. Thomas defines pride in II-II, q. 162, a. 1; Isidore agrees, book 10 of the Etymologies, ch. 28, when he says: "He is called proud who wishes to seem greater than he is." Although therefore an Angel could sin only about spiritual objects - which, however, as has been said, is also difficult - nevertheless he could sin by another sin, namely disobedience, and not only by pride and envy.

1876. St. Thomas, I-II, q. 73, a. 8; see also I-II, q. 18, a. 6.

Add that the sin of hatred is not evil because it exceeds some rule set and established, below which it would not be sin; rather, in whatever least degree it is sin. I confess these things to be difficult, the solution of which I would gladly hear from others.

The doctrine also seems to me difficult which the holy Doctor has in the reply, namely, that in Angels there cannot be the sin of anger, because (he says) anger is with a certain passion, which nevertheless cannot befit Angels. This, however, is no less difficult for me: both because it does not sufficiently agree with the doctrine which St. Thomas himself handed down above in question 20, article 1, to the first; and also because it seems to be against the formal definition of anger. For, as he himself says in the same place, and as we proved in disputation 84, chapter 4, to the formal notion of anger there does not pertain a stirring of passion; nor do we deny anger to God by a defect of this; but of the formal notion of anger is the appetite (*appetitus*) of vengeance, or the recrudescence for sadness on account of an evil which one has suffered from another. And according to this notion we said that it does not befit God, because he can be suffered from by no one. Since therefore an Angel can be affected by sadness by another, he can also desire vengeance for that, and accordingly be angry. But if the stirring of the body were of the notion of anger, then, in like manner, of the notion of mercy would be the same stirring; and therefore mercy would not properly befit God - which is false, as we showed there.

Furthermore, Cajetan has tried to explain the mind of St. Thomas in this way, that he is to be understood as having spoken not universally of whatever sins which can be in Angels, but of those sins which could be first, and from which the Angel who sins begins.

Yet to me it still seems difficult that this interpretation can be accommodated to the mind of the holy Doctor: both because there does not present itself an efficacious reason by which we might prove that the first sin of the angel necessarily had to be pride or envy; and also because St. Thomas's reasoning seems to prove not only about the first sin, but also about whatever other [sin]. For the reasoning is of this sort: in Angels there cannot be sin unless it be spiritual, that is, about spiritual objects; but an affection about spiritual objects cannot be sin unless such be the affection that, the rule of a superior being contemned, it be borne toward such objects. For, as Cajetan says explaining this reasoning, spiritual objects in themselves, the greater they are, the better they are; and thus in themselves they cannot be loved too much, except inasmuch as in their love the rule of a superior is contemned; but to contemn the rule of a superior is a sin of pride; therefore in Angels there can only be the sin of pride, and that which arises therefrom, which is envy.

However, this reasoning, besides that - if it is of any weight - it proves that in the Angel no other sin can in any way exist than that of pride, still does not lack difficulty. For not every transgression of the rule of a superior is pride, since this can happen by the sin of special disobedience alone, which is a distinct sin from pride and envy; indeed, a transgression of the rule, as such, pertains rather to the sin of disobedience than to pride. What sort of affection of pride it is which disdains to be subject to another will be explained in the following disputations. For the proper pride is not the transgression of a rule set by a superior in the mode of a precept, but the appetite of excellence beyond due measure; in which there appears a certain kind of transgression, not indeed of rule and precept, but of the measure of one's own dignity.

Articulus III - Whether the Angel desired to be as God

It proceeds in the third way as follows. It seems that the devil did not desire to be as God. For that which does not fall under apprehension does not fall under appetite, since an apprehended good moves appetite, whether sensible, rational, or intellectual; for it is only in appetite of this sort that sin happens. But that any creature be equal to God does not fall under apprehension: for it implies a contradiction, because it is necessary that the finite be infinite, if it be equalled to the infinite. Therefore the Angel could not desire to be as God.

Further, that which is the end of nature can be desired without sin. But to be made like to God is the end toward which every creature tends naturally. Therefore, if the Angel desired to be as God, not by equality but by likeness, it seems that in this he did not sin.

Further, the Angel was created in a greater fullness of wisdom than man. But no man, unless altogether out of his mind, chooses to be equal to an Angel, much less to God: because choice is only of things possible, about which there is deliberation. Therefore much less did the Angel sin by desiring to be as God.

But on the contrary: it is said in Isaiah 14, in the person of the devil: "I will ascend into heaven, and I will be like the Most High." And St. Augustine says in the book of Questions on the Old Testament that, puffed up with elation, he wished to be called God.[1877]

I answer: the Angel, beyond all doubt, sinned by desiring to be as God. But this can be understood in a twofold way. In one way, by equality. In another way, by likeness.

In the first way, indeed, he could not desire to be as God, because he knew this to be impossible by natural cognition. Nor did the first act of sinning in him have either habit or passion going before it, binding his cognitive power, so that, failing in a particular, he would choose an impossible thing, as sometimes happens in us. And therefore, granted even that it were possible, this would be against the natural desire: for to each thing there is a natural desire to preserve its own being; which would not be preserved if it were changed into another nature. Whence no thing which is in an inferior grade of nature can desire the grade of a superior nature, just as an ass does not desire to be a horse: because, if it were transferred into the grade of a superior nature, it would no longer be itself.

But imagination deceives in this matter. For because man desires to be in a higher grade as to some accidentals which can increase without the corruption of the subject, it is judged that he can desire a higher grade of nature, to which he could not attain unless he ceased to be. But it is manifest that God exceeds the Angel not according to certain accidentals, but according to the grade of nature; and likewise one Angel [exceeds] another. Whence it is impossible that an inferior Angel should desire to be equal to a superior, much less that he should desire to be equal to God.

1877. St. Augustine, Quaestiones in Vetus Testamentum.

To desire, however, to be as God by likeness happens in a twofold way. In one way, with respect to that in which a thing is born to be made like to God. And thus, if someone as to this desires to be like to God, he does not sin, provided he desires to attain the likeness of God in due order, that is, that he have it from God. But if someone were to desire, according to right order, to be like to God as though by his own power, and not by the power of God, he would sin.

In another way, one can desire to be like to God as to that in which he is not born to be made like: as if one were to desire to create heaven and earth, which is proper to God; and in such a desire there would be sin. And in this way the devil desired to be as God, not so that he should be made like as to this, namely, to be subject to none simply - for to desire this would not stand, since no creature can exist save by this, that it participates in being under God - but he inordinately desired to be like to God, because he desired as last end the beatitude to which by the power of his nature he could attain, averting his appetite from supernatural beatitude, which is of the grace (*gratia*) of God. Or, if he desired as ultimate end that likeness of God which is given by grace, he willed to have this by the power of his own nature, not by divine aid according to God's disposition. And this agrees with the sayings of Anselm, who says that he desired that to which he would have come had he stood.

And these two things in a certain way come back to the same, because according to either he desired to have final beatitude by his own power, which is proper to God. And because what is per se is the principle and cause of what is by another, from this there also followed that he desired to have some principality over others, in which too he perversely wished to be made like to God.

And by this the reply to all the objections is clear.

The prior conclusion is: The Angel did not desire to be God by nature. The later conclusion: The Angel sinned by desiring to be like God in some respect exceeding the mode of his own excellence and perfection. About which doctrine there are many controversies that must be disputed by us.

Disputatio CCXXXII - Whether the sin of the Angel was pride, or of another kind

- What Scotus and Gabriel held. Cap. I.
- The opinion of Scotus and Gabriel is impugned. Cap. 2.
- That the first sin of the Angel was pride, the true and common opinion of the Fathers and the Scholastics. Cap. 3.
- Certain testimonies of Scripture for the same opinion are weighed. Cap. 4.

We read that indeed difficult things about the first sin of the Angels have been written by the Doctors; nor is it a wonder, the matter being withdrawn from the senses and far remote from human reasoning. But because the plan of our work does not allow us wholly to decline the treatment of this topic, we shall, so far as it can be done, take pains, when inquiring into the sin of the Angels, to affirm nothing as certain except what can be gathered either from Scripture, or from

the doctrine of the Fathers, or from certain reason; but where our disputation cannot rely on one of these foundations, let us assert nothing rashly, led by mere human conjecture. For it is better ingenuously to confess the smallness of one's talent in any matter, much more in hidden ones, than to pronounce anything rashly; and since, concerning the things which in very fact happened in the sin of the Angels, bare reason without authority avails nothing, we will indeed use reason only to show in what way an Angel could sin, about which matter there is no small dissension among the Scholastics, and in it reason itself has very great weight. First, then, we must in general investigate the kind of sin by which the Angel fell. Then, in particular, we must inquire what that was in regard to which the Angel transgressed.

Now, in the present controversy, in which we investigate in general the kind of sin of the Angels, there was not one single opinion of all the Scholastics. The first opinion was that of Scotus in II, distinction 6, question 2, § Quantum ad secundum, and in IX, Ad argumenta, solution 1, who affirms that the sin of the Angels was not pride, which is constituted as a proper sin, but lust; not, as some Fathers, whom we reported above in disputation 178, chapter 2, said, thinking that the Angels burned for the daughters of men and from them begot Giants (for this opinion is with good reason exploded by all the Scholastics, as we said in that place); but spiritual lust, which consists in a certain excessive delight or desire. This is the opinion of Scotus, which Caietan reports otherwise in this article; yet the one which he himself reports is Gabriel's, which we shall adduce below.[1878]

For the confirmation and explanation of this opinion, Scotus himself notes in that question, § In ista quaestione, the doctrine received from Gabriel, to be cited below, namely, that in the acts of the will there is a twofold love: one of concupiscence, which is conversant about a thing and the good which we will for someone; the other of friendship, which regards the person for whom we will a good. He subjoins that the love of concupiscence proceeds from the love of friendship as from a prior cause. This notation premised, Scotus says that the first sin of the Angel was an excessive love of friendship, by which he loved himself, that is, a certain immoderate self-complacency. He proves it thus: an excessive love of friendship could not be toward God; for God cannot be loved immoderately by an excessive intensity: for this love cannot exceed its due mode; nor could it be immoderate in any other way. But it is likely that the Angel did not love another besides himself: therefore the first sin was an excessive love of friendship, which it pleased Scotus to call spiritual lust. He next adds that from this inordinate love of friendship there arose also an inordinate love of concupiscence, by which he desired for himself some good beyond due measure; and that this was the love of beatitude.[1879]

Cajetan, indeed, in this article judged that Scotus was of the opinion that the first sin of the Angel was pride in that immoderate affection of love of friendship; but that the second sin, properly of lust, was in that love of concupiscence. But in truth Scotus said that both the love of friendship and of concupiscence were the first sin of lust, not of proper pride; yet that by a certain common reason it can be called pride, as can plainly be seen by one who reads that § Quantum ad

1878. Scotus, In II Sent., d. 6, q. 2, § "Quantum ad secundum"; and In IX, Ad argumenta, sol. 1. For the Fathers' opinion see above, Disputatio 178, cap. 2.

1879. Cajetan, In I, q. 63, art. 3, on this article, ad secundum dubium.

secundum, and in that solution of the first argument. For although Scotus says that that sin was presumption, nevertheless he does not concede it insofar as presumption is said to be the special sin of pride, but in a certain general way, inasmuch as an excessive love of oneself is wont to be called the sin of presumption. And when in that §, about the middle of it, he says that the first species of pride, which is called presumption, does not consist in this, that someone should wish to prefer himself to others, but in an appetite of excellence in oneself, that is, of one's own dignity in oneself, he does not understand that to be the proper species of pride, but to be numbered among the degrees of pride, although it is pride according to the common and general notion, as he plainly concedes in that § and in that first solution. This is Scotus's opinion faithfully reported, as far as I could gather from that place.[1880]

The foundations of that opinion are these. First, he proves that that sin of the Angel was not the sin of pride properly so called, because it is of the same nature to love oneself too much with the love of friendship and to love another too much with the same kind of love; but to love another too much is not the sin of pride; therefore neither is it to love oneself too much. Next he proves that the sin of pride is thus an inordinate appetite of one's own excellence as to be borne toward an excellence not absolutely, but relatively to others whom one desires to surpass; but the Angel did not desire an excellence relatively to others, but an excellence absolutely in himself; therefore he did not sin by the sin of pride properly. From which reasons it is plainly gathered that Scotus never held that the first sin of the Angel was the sin of pride properly so called, but only in a certain common sense.

Then he shows that the Angel's sin was the sin of lust, because this kind of sin consists in an excessive delight, such as also is wont to be that which someone takes from the speculation of some geometrical conclusion, which sin he himself calls the lust of spiritual delight. Nor does it stand in the way that Scotus himself dissolves these arguments in a mitigated fashion, so that we should not say that he was of the opinion which we have reported. For he dissolves those arguments only in order to defend that that sin was of pride, not in its proper and peculiar notion, but only commonly; and he shows that the aforesaid arguments prove nothing against this, as Lichetus notes in the place to be cited below. Wherefore he only grants that the aforesaid arguments prove that the sin of the Angels was not pride in its proper and peculiar notion; not, however, that it was not pride in the common sense. That this was Scotus's mind is gathered from the same Scotus in the questions reported in II, dist. 6, q. 1, near the end, where his opinion is thus plainly had. So also Basolus understood Scotus in II, dist. 6, q. 1, art. 5, especially in the reply to the first, in solution 5, which opinion, although he himself leaves under doubt, he nevertheless asserts can be defended. Lichetus likewise in the same distinction, question, conclusion, article 2, interprets Scotus's opinion in the same way. The same opinion was followed by Holcot in II, q. 3, when he says that the sin of the Angels can be called the sin of lust, insofar as they loved themselves too much; but insofar as they desired their own excellence, it can be called the sin of pride, indeed even the vice of ingratitude.[1881]

1880. Scotus, loc. cit., and again In II Sent., d. 6, q. 1, near the end.
1881. Basolus, In II Sent., d. 6, q. 1, art. 5; Lichetus, eadem d., q., conclus., art. 2; Holcot, In II Sent., q. 3.

The second opinion is that of Gabriel in II, dist. 6, q. 1, art. 1, who, in almost the same way as Scotus, teaches that the first sin, in the order of cause, was an excessive love of friendship toward himself, according to the altitude of his own nature above the supernatural of God; or, if he desired a likeness of the divine countenance by grace, he willed to have this by the power of his own nature, not by divine assistance, as we shall say below. And the second sin, in the order of cause, was the sin of concupiscence, whereby the Angel immoderately desired for himself beatitude. Only in this does he differ from Scotus, that he asserts that first sin of love of friendship toward himself to have been pride, not in the common sense, but a special pride, diverse in species from avarice and the other vices. Nor does it stand in the way that in the third conclusion he asserts that sin to be reduced to the sin of pride, by which he seems to insinuate that it is not pride properly and directly, but (as they say) reductively; this, I say, does not stand in the way, for afterwards he expressly affirms that sin to have been a sin of special pride. Gabriel also differs from Scotus because, in conclusion 4, he says that that love of concupiscence, which was the second sin in the order of cause, was the sin of lust commonly so called, as it befits any immoderate appetite of carnal or spiritual delight; but Scotus said only that it was the sin of lust of spiritual delight, in which, in my judgment, they differ little or not at all.[1882]

Caput II - The opinions of Scotus and Gabriel are refuted

It will not be difficult manifestly to refute the opinions of Scotus and Gabriel. First indeed by the reasons of Cajetan, which fight against each in the same way; then by a peculiar reason which has force against Scotus's opinion.

- First, therefore, Cajetan argues in the preceding article, to the second doubt, against the common foundation of both opinions: that there is never found any act of love of friendship which is a pure complacency in some person unless it has mixed with it an affection of concupiscence, by which some good of the person is loved; whether that good is really distinguished from the person loved, or whether it is apprehended by reason alone as a good of that person; whether it be a future good or a present good. Nor, indeed, can one love exist without the other; rather, neither is really distinguished from the other as if it were an act toward a different object; but in the same individual act are found both the respect to the thing desired - by reason of which it is called the love of concupiscence - and the respect to the person to whom we will the good - by reason of which it is called the love of friendship. This is rightly taught also by Cajetan in I-II, q. 26, a. 4, and by St. Thomas above in q. 37, a. 3, as we noted in that article and in the book On Adoration, disputation 1, c. 6.[1883] The reason indeed is manifest: for to love is universally defined by Aristotle, Rhetoric II, c. 4, in this way: It is to will a good to someone; in which act it is necessary that both respects be included.[1884]

1882. Gabriel (Biel), In II Sent., d. 6, q. 1, art. 1, concl. 3 - 4.
1883. Cajetan, In I-II, q. 26, a. 4; St. Thomas, In I, q. 37, a. 3; cf. our De adoratione, disp. 1, c. 6.
1884. Aristotle, Rhetoric II, c. 4.

- From this we lay down this proposition, which is common, as St. Thomas sets forth in the said places, and we also noted: that in every act of love of friendship, the complacency is not in the person taken absolutely, unless together with the will of some good for that person; indeed the complacency itself arises from this, that the person is judged good, pleasant, or useful to us, or that we judge it fitting to will some good for him: hence it is easy to see that the name "good" pleases, and "not pleasing" does not please; but a good that pleases someone is someone's good; therefore every good that pleases is a good of someone; and so in the same complacency both respects are included.
- Second, those Doctors are in error when they assert that love of friendship is compared with love of concupiscence as love of the end is compared with love of the means. For from our demonstration in I-II, q. 26, a. 1, it is plainly to be understood that the person, to whom we will some good, is loved as an end; but the good which we will for someone is loved as a means for that person's good: yet if that good be a delight, or a state, and if because of that delight or state the person is loved, then the delight is loved on account of the person; and the person is loved on account of himself, and thus the same relation of end remains. Nevertheless, both respects - of love of concupiscence and of friendship - are in the same act of love.
- Third, and rightly does Cajetan argue further, that even if love of friendship and of concupiscence were two distinct acts of love, yet they would not be two sins differing in species. For that love of friendship, by which the Angel loved himself with a mere complacency in himself, unless he also willed or desired for himself some inordinate good, no matter how intense it might be, would not be a sin (for what malice can there be from the object in a pure complacency with oneself?). Moreover, whenever some affection is not evil from its object, it cannot be evil merely because it becomes more intense: for intensity alone cannot give first malice, but can only augment a preexistent one, as we shall show in common doctrine in I-II, q. 18.[1885]
- Fourth, with their foundation removed, these Doctors say that in any genus of immoderate delight the sin of lust is found; for when delight is in venereal matters, it is called lust; but where it is not lust, if it tends toward empty praise it is the sin of vain glory; and if it tends toward excellence, it is pride. Besides these species I do not see what other species of lust can be devised. Further, delight without proportion to its object would be called lust of spiritual delectation, as Scotus seems to have spoken; but that inference is false, that such delight is sin, or if it is sin, that it is of the species of lust. For sometimes delight arises from knowledge: whence also there arises the sin of curiosity; and on the contrary, the studious pursuit of knowledge belongs to the virtue of studiosity by reason of the object, about which vice St. Thomas treats in II-II, q. 167. Therefore by the same reason, if delight should be spiritual, and according to the same measure added, there is no sin, however much the delight grows, unless there be the cause and occasion of another sin, as the desire of

1885. See below on the common doctrine: I-II, q. 18.

another's praise, or some omission of a due good; but by itself it has no other malice than that. Wherefore, although inordinate delight must be denied to be the first sin, as if standing by itself; and although, as Cajetan says, from its nature it does not of itself constitute determinate species of sin; nevertheless, those Doctors have wrongly named it lust; or at least, if it pleased them so to speak, they ought to have assigned the first sin of the Angel not according to a general notion, but in some determinate species.

Third, as Cajetan rightly argues, even if the love of friendship and of concupiscence were two different acts of love, nevertheless they would not be two sins different in species: for that love of friendship by which the Angel loves himself solely from complacency in himself, unless he should will or desire for himself some disordered good, however intense it might be, would not be sinful; for what malice could there be in a pure complacency with oneself? Moreover, as often as some affection is evil, it is evil from its object, not from becoming more intense: mere intensity cannot confer the first malice, but can only increase a prior malice, as we shall show in the First of the Second, question, article 11.

Wherefore, although in every sin the love of friendship and of concupiscence is included - because by whatever sinful affection we desire or will some good for ourselves or for others against reason - nonetheless a twofold species of sin, or a double sin, is not found, one in respect of friendship, the other in respect of concupiscence; rather, from the very good desired and from the love, insofar as it is a love of concupiscence, the species of the sin in the affection must be considered.

Fourth, I do not know on what foundation these Doctors say that, in any kind of immoderate delight whatsoever, the sin of lust is found. For although delight in venereal matters is lust, in food and drink it is not lust but gluttony; in the appetite for praise it is the sin of vain glory; in the appetite for excellence it is pride; in the appetite for a neighbor's evil it is hatred. Beyond these species I do not see what other species of lust could be devised. Moreover, the delight in knowledge - for example, in a geometrical demonstration - of which Scotus speaks, is ineptly called lust; but if that is sometimes a sin, or some similar delight in knowledge, it is so because it is against right reason and against the due mode of learning: by its object it will pertain to the sin of curiosity against the virtue of studiousness, as St. Thomas treats of that vice in II-II, question 167. But if the knowledge be according to right reason and the right mode of learning, there will be no sin, however much the delight grow, unless it be the cause and occasion of another sin, such as vain glory or the omission of a precept; then, however, it will have no other malice than that of that act. Wherefore, although we cannot deny that inordinate delight is, as it were, a genus with respect to various species of sins, just as sadness is with respect to others - which Cajetan, though by reason he refuses to concede, in fact acknowledges - nonetheless it is inept that this common ratio should be called by these Doctors "lust"; or at least, if it pleased them to use the term, they ought to have assigned the first sin of the Angel not according to a generic notion, but in some determinate

species, as indeed Scotus and Gabriel wished. However, this cannot be lust even of spiritual delectation, because in it there is found no sin of lust distinct in species from the others which are commonly assigned according to species.

Moreover, against Scotus we shall bring forward a peculiar reasoning, and we shall show him that love of one's own excellence can be the sin of pride not only in that sense in which it is commonly so called, but properly so, although in that love one's own excellence is not desired in comparison with others and in relation to others, but absolutely - which indeed Gabriel readily admits, and in this part he opposes Scotus himself. The reasoning is of this sort: pride properly consists in this, that one should crave for himself a higher degree of excellence than befits him or than can befit him according to right reason, as St. Thomas teaches in II-II, q. 162, a. 1; but this can be considered in itself absolutely, without reference to others whom he might wish to surpass. For this reason Gregory, in another enumeration of the modes of pride, puts first presumption, which happens when one thinks the good which he has he has from himself, and rejoices or delights in it so apprehended; secondly, when he thinks he has received it for his merits, and in this complacency he is pleased with himself - in which two modes there is not expressly a reference of excellence to others whom someone should desire to surpass. Therefore, Scotus wrongly denies the sin of pride in the appetite for immoderate excellence without relation to others whom someone should desire to surpass. Nor do the things which we reported from Scotus stand in the way, namely, that Scotus himself concedes in this appetite for excellence absolutely the sin of pride and of presumption: for he concedes this only according to a certain generic and common ratio, not according to the specific ratio which we contend for against himself to prove. And this suffices against the opinions of Scotus and of Gabriel. From which is also refuted that which Holcot followed, insofar as he agrees with the aforesaid. For what he added - that the sin of the Angels was the sin of ingratitude, because they did not render thanks to God for benefits - will be refuted in the following disputation.

The universal definition of loving is handed on by the Philosopher in this way: to love is to will good to someone. In this act, of course, it is necessary that both respects be included, as is manifest. Moreover, no love of complacency toward any person can exist unless either we will some good, or through that person as delightful or useful we will something for ourselves; anyone can easily know this by experience: for everything that pleases, pleases as good, and every good that pleases is some good of someone; therefore every good pleases as someone's good, and hence in every complacency toward a person that twofold respect is included. Of which we shall also speak in the First of the Second, question, article 1, against the same Gabriel and Ockham.[1886][1887] Therefore Scotus and Gabriel are wrong in enumerating as two sins and as two acts the love of friendship and of concupiscence.

Second, the aforesaid Doctors, when they assert that love of friendship is compared with love of concupiscence as love of the end is compared with love of the means, are manifestly deceived, as we shall more at large show in the First of the Second, question, article 1. Now I prove thus: the

1886. Cajetan, In I-II, q. 26, a. 4; St. Thomas, In I, q. 37, a. 3; and our De adoratione, disp. 1, c. 6.
1887. See below, in the First of the Second, question, article 1, against Gabriel and Ockham.

person for whom we will some good is the "end to whom" (finis cui); but the good which we will for him, if it be an honest or a delightful good, is the "end for the sake of which" (finis cuius gratia): for thus it is desired for the person's sake, on account of himself, and not for the sake of another good. But the "end to whom" and the "end for the sake of which" do not stand as end and means: rather, means are goods useful to the end "for the sake of which"; but the "end to whom" is necessarily conjoined with the "end for the sake of which," just as the respect of love of friendship with the respect of love of concupiscence, because there is no "end for the sake of which" unless in respect of some person for whom it is desired; for every honest or delightful good - which alone has the rationale of an end - is someone's honest or delightful good.

Note also, as is rightly taught by Cajetan in I-II, q. 26, a. 4, and by St. Thomas above at I, q. 37, a. 3, and as we have noted in this article and in our book On Adoration, disputation 1, c. 6.[1888] The reason indeed is manifest, for to love is universally defined by Aristotle in Rhetoric II, c. 4 as this: it is to will good to someone.[1889]

Caput III - The same common and true opinion: that the Angel first sinned by pride; but as to what sort that was, this will be shown later

Which sort or around what genus of excellence that was, we shall show in the following disputations.

This opinion has been handed down by the most weighty and most learned among the Scholastics - Albert in the Summa, second part, tract 5, q. 21, m. 2; Anselm of Canterbury, book 2 of the Summa, tract 2, c. 2; St. Thomas in the preceding article - and it is gathered from the doctrine of this very article, which Cajetan and more recent Thomists follow; Alexander of Hales also agrees in the second part, question 98, m. secundo, where he plainly teaches that the first sin was pride, which constitutes a special sin. But when he says that the root was cupidity and avarice, he does not mean the special sin of avarice, which is about money and spiritual things, but cupidity taken generally for inordinate love, which in truth was not the root as cause, but because in the very sin of pride it was included implicitly. The same had earlier been handed down by the Master in II, dist. 6, c. 2; which was afterwards followed by his commentators - St. Bonaventure in II, dist. 6, a. 1, q. 1; Aegidius, q. 1, a. 3, in the body, where he speaks of Lucifer, and without doubt literally, where he speaks of the others; Richard, a. 1, q. 1, where he speaks of Lucifer, and q. 2, where he speaks of the other Angels. The same is gathered from the doctrine of Durandus, question 1, article 2, when he asserts that the demon sinned by an immoderate appetite for beatitude. The same is the view of Thomas of Argentina in II, dist. 6, q. 5, a. 2, and of other Scholastics, whom we shall relate in the following disputation, who assert that the demon sinned by envy of men - a sin which, without pride, is never found.[1890]

From the Fathers, both Greeks and Latins, all agree in this one point. Among the Greeks, besides those whom we shall cite in the next chapter in the exposition of certain places of Scripture, are Athanasius in the book of Questions to Antiochus, question 14; Nazianzen in the sixth poem

1888. Cajetan, In I-II, q. 26, a. 4; St. Thomas, In I, q. 37, a. 3; and our De adoratione, disp. 1, c. 6.

and in the oration 27, which is against those who said that he sought the see of Constantinople; Elias of Crete in the third oration on Nazianzen's Apology against Julian, on those words "Quocirca," etc.; St. John Chrysostom in the homily on the words of Isaiah, and the homily on Adam and Eve, and the homily on the fall of the first man in the first tome, and the homily 15 on John in the third tome; Cyril, book 1 on Genesis, after the middle, and on Isaiah 11; St. John Damascene, book 2 On the Faith, c. 3. Of the Latin Fathers: St. Ambrose on that of Psalm 118, "Thou hast trodden down the proud," and epistle 84; St. Augustine, book 11 On Genesis to the Letter, c. 14, and City of God, book 12, c. 1, and book 14, c. 11, and book 22, c. 1; Prosper, book 1 On the Contemplative Life, c. 3; St. Gregory, book 4 of the Moralia, c. 17 (alias 14), and book 3, c. 18 (alias 23); St. Isidore, book 1 On the Supreme Good, c. 126, sentence 8; Bede in tome 8 of the book of Questions, q. 9; St. Anselm, book On the Fall of the Devil, c. 4; St. Bernard, sermon 17 on the Canticles; and Leo I in epistle 91, c. 6, when he says that the devil was made evil by himself, because he misused his proper excellence. The authority of all these Fathers and of the Scholastics is of great weight for me, especially in this question, which is a matter of fact and is controverted.

And although more Scriptural testimonies are wont to be adduced by the Scholastics to confirm this opinion - which must be examined by us in the following chapter - yet it has pleased me in this chapter to confirm it by one testimony only and by a single reason. The testimony is Tobit 4, where Tobias said to his son: "Never allow pride to rule in your mind or in your word, for from it all perdition took its beginning." There he said that the beginning of all sin that is committed in this world was pride. But before any other sin there was the pride of the Angel; from which it also came about that the first man, tempted by the devil, fell. And although someone could refer these words only to the sins of men - of whom pride was the first - yet it is more fitting to refer every sin, even of the Angels, since Scripture says absolutely that the beginning of all perdition was pride. But a single reason should suffice for us, taken from Damascene, book 2 On the Faith, c. 3, after the middle, where he says that Angels by their nature are scarcely able to be moved to evil. He said "scarcely" because they lack the repugnance of that lower part which inclines to evil and contrary to right reason. Elias of Crete taught the same in almost the same words in the oration on Nazianzen, which is the first Apology against Julian, on those words "At hec quomodo." Since this is so, to no sin does it seem that an Angel could be moved with less difficulty than to pride and the appetite for his own excellence. For although there can be other sins in an Angel besides the sins of pride and envy, as we noted above in article 2, nevertheless the Angel is not so easily moved to those as to pride, and consequently to envy: for that an Angel could attack a man by killing him or by destroying his property proceeds from hatred toward him; but the demon would hardly be moved to hatred against man in the first sin, unless for this reason, that he apprehended man as in some way contrary to his honor and excellence; by the same reason neither would the Angel conceive

1890. Albert the Great, Summa, II, tract. 5, q. 21, m. 2; Anselm of Canterbury, Summa, II, tract. 2, c. 2; St. Thomas, in the preceding article; Cajetan ad loc.; Alexander of Hales, Summa, II, q. 98; the Master, II, dist. 6, c. 2; St. Bonaventure, In II Sent., d. 6, a. 1, q. 1; Aegidius, q. 1, a. 3; Richard, a. 1, q. 1 and q. 2; Durandus, q. 1, a. 2; Thomas of Argentina, II, dist. 6, q. 5, a. 2.

1889. Aristotle, Rhetoric II, c. 4.

hatred against God, unless he apprehended God as somehow contrary to his honor. Therefore there would have been no fault and sin in the Angel, if he had not been held by an excessive desire of his dignity and excellence.

Caput IV - Certain Scriptural testimonies are weighed for the same opinion

There are not a few testimonies of Scripture which the Scholastics use in the confirmation of this opinion, which I judged it necessary to examine more deeply. The first is Luke 10: "I saw Satan like lightning falling from heaven," which words Christ seems to have said to repress the elation of the disciples, as Gregory sets forth in Moralia 23, c. 7, when they were returning rejoicing that they had cast out demons in Christ's name. However, I have proved above that to be the sense of that place in disputation 225, c. 2.[1891]

The second testimony is that of Job 41, at the end: "He sees every high thing: he is king over all the sons of pride"; which words some interpret of the demon, as if he were the prince of all those who are proud. But this place is understood literally of the great beast Behemoth (that is, Leviathan), about whom he had spoken in the preceding chapter. Of him, however, he says: that he was made so that he should fear nothing, "he sees all sublime things," that is, he looks down on all things outstanding in magnitude and strength, and as it were sees them as inferior to himself; it follows, "he is king over all the sons of pride," that is, among the robust and the powerful he himself holds the principality. He is speaking chiefly about the sea beasts, among which Behemoth occupies the first place.

Although in an Angel there can be other sins besides the sin of pride and of envy, as we noted above in article 2, nevertheless an Angel is not so easily moved to those as to pride, and consequently to envy. For that an Angel can assail a man, either by killing him or by destroying his property, proceeds from hatred against him; now the demon would with great difficulty have been moved to hatred against man in the first sin, unless for this reason, that he apprehended man as contrary to himself; and man would not have seemed contrary to him, unless he were in some way opposed to his honor and excellence. By the same reason, neither would an Angel conceive hatred against God, unless he apprehended God as in some manner contrary to his own honor. Therefore no fault and sin would have been in the Angel, unless he had been held by an excessive desire of his own dignity and excellence.

There are some testimonies of Scripture weighed in favor of the same opinion.

There are, moreover, not a few testimonies of Scripture which the Scholastics use in confirmation of this opinion, which I judged it necessary to examine more deeply. The first is Luke 10: "I saw Satan like lightning falling from heaven," which words Christ seems to have said to rebuke the elation of the disciples, as St. Gregory expounds, Moral. 23, c. 7, when they returned rejoicing that they had seen demons expelled in the name of Christ. Yet I have proved above that the sense of that place is another, Disputatio 225, c. 2.[1892]

1891. Gregory the Great, Moralia 23, c. 7; see above, Disputatio 225, c. 2.
1892. St. Gregory the Great, Moralia 23, c. 7; and see above, Disputatio 225, c. 2.

The second testimony is that of Job 41 at the end: "He sees every high thing; he is king over all the sons of pride." Some interpret these words of the demon, as though he were the prince of all those who are proud. But this place is understood literally of Behemoth, the great sea-monster, of which he had spoken in the preceding chapter. Concerning this he says that he was made so that he should fear none; "he sees every high thing," that is, he despises all things outstanding in greatness and strength, and as it were sees himself their superior; it follows, "he is king over all the sons of pride," that is, among the strong and the mighty he himself holds the primacy. He is speaking especially of sea beasts, among which Behemoth holds sway, as the Hebrews explain; which exposition agrees with the translation of the Seventy, which has thus: "King of all things that are in the waters." If these words be taken of the devil by accommodation, they could not from themselves prove that his first sin was pride, but only that he is king and prince among all the proud; for no one denies that now the demon sins by the sin of pride, and that among all the proud he is the proudest.

The third testimony, very celebrated among Scholastic doctors, is Isaiah 14: "How have you fallen from heaven, O Lucifer, who rose in the morning? who said in your heart: I will ascend into heaven, above the stars of God I will exalt my throne; I will sit in the mount of the testament, on the sides of the North; I will ascend above the height of the clouds, I will be like the Most High." Not a few recent writers understand this place of the fall of the devil by the sin of pride from the heaven in which he was created; yet not all explain it in the same way. Some interpreters of Scripture even expound the aforesaid place so of Lucifer that it cannot be understood of any other according to the literal sense. For if we could interpret it of any other, most of all of Nabuchodonosor king of Babylon; but they prove that it cannot be understood of him, because that king did not fall from heaven, nor did he say in his heart, "I will ascend into heaven, above the stars of God I will exalt my throne," as in that testimony it is said of Lucifer. These recent writers in this explanation have followed Origen, On First Principles, book 4, c. 2, who plainly teaches that the Prophet's words cannot fit any man, but only the demon; and Tertullian, Against Marcion, book 5, c. 17, who asserts that the Prophet's words fit no one more than the demon. The remaining statements, which even seemed difficult to befit the demon, they explain thus: "I will sit on the sides of the North" signifies, "I will sit in the higher part of heaven"; "in the mount of the testament" denotes "in the Church of God," in which the demon wished to be adored as God and to be worshiped. And not only do the aforesaid Doctors wish the place cited to be understood according to the letter of the demon alone, but they even contend that the whole chapter can be explained of none other than Lucifer and of the redemption effected by Christ, but in no way of the Babylonian redemption. However, this interpretation is so devoid of foundation that it seems unworthy to linger much on its refutation; for all the other Doctors, as well ancient as recent, understand several parts at least, if not all, of that chapter of the king of Babylon. For a little before in that chapter it is said: "And it shall be in that day, when the Lord shall give you rest from your labor, and from your confusion, and from the servitude in which you formerly served, you shall take up this parable against the king of Babylon and say..." The parable indeed was: "How has the exactor ceased, the tribute ceased," etc. Who, then, will deny that the Prophet in that chapter

spoke, according to the letter, of the king of Babylon and of the redemption of the Babylonian captivity; although in figure he signified the redemption of the captivity of sin wrought by Christ? For the history of the redemption of the Babylonian captivity is so manifest that it plainly seems unworthy to deny that Isaiah predicted it.

Moreover, those words alleged above from Isaiah 14, "How have you fallen," etc., most of the Fathers understand of Lucifer: thus Origen and Tertullian in the places cited; likewise Origen, On First Principles, book 5, c. 5, and book 8 on the Epistle to the Romans on that of chapter 10, "I say then: Have they not stumbled?" And St. Gregory, book 1, epistle 3, now placed in order 30; Eusebius, Preparation for the Gospel, book 4, c. 9; Athanasius, book On the Passion of Christ and the Cross; St. Ambrose on that of Psalm 118, "You have rebuked the proud," and on that of the same Psalm, "Take your servant unto good"; Prosper in the book entitled "De vocatione" (books 1 and 2); and St. Bernard in the sermon on St. Benedict the Abbot, and sermon 8 for the octave of Easter, and elsewhere very often. These Fathers, however, except Origen and Tertullian, of whom we spoke above, interpret this testimony of Lucifer in such a way that they do not deny it can also be understood of that king of Babylon.[1893]

But St. Augustine, On Christian Doctrine, book 2, c. 37, according to the seventh rule of Ticonius, which he himself approves, namely, concerning the devil and his body (for the devil is the head of the impious), expounds this testimony of Lucifer under the figure and person of the king of Babylon, of whom Lucifer himself was the head: just as those things which belong to the body of the Church are attributed to Christ according to the first rule of the same Ticonius; in the same way, those things which belong to the king of Babylon as a member of the devil, are attributed also to the devil himself.[1894] Yet that which follows in the same chapter, according to the reading of the Augsburg edition, "He is broken on the earth who sent unto all nations" - but according to the Vulgate, "You have fallen to the earth, you who wounded the nations" - Augustine himself explains of the body of the devil alone, not of the devil himself. With Augustine agree Jerome and Haymo on that place, who understand it literally of the king of Babylon, but by figure of Lucifer. The same was altogether taught by Augustine himself, On Genesis ad litteram, book 11, c. 24, where he expressly proves that those words, said under the figure of the king of Babylon, fit Lucifer by reason of his body; and the Author of the first book On the Marvels of Sacred Scripture, among the works of Augustine, in tome 3, c. 2, plainly teaches that from that place the fall of the devil and its occasion are not proved, because the historical narration is understood of the king of Babylon, but by allegory, he says, and figure, it is transferred from the body to the head. Jerome, however, expounds this testimony of Lucifer only by figure, or parable, because the Prophet says, "You shall take up this parable," as we have cited above. Finally, Haymo interprets these words only in a

1893. Origen, On First Principles 5, c. 5; Origen, Homilies on Romans 8, on Romans 10: "Dico ergo: numquid non offenderunt"; St. Gregory the Great, Epist. 1.3 (now numbered 30); Eusebius, Praeparatio Evangelica 4.9; St. Athanasius, On the Passion of Christ and the Cross; St. Ambrose, Expositio in Psalmum 118 (on "Increpasti superbos" and "Suscipe servum tuum in bonum"); Prosper, De vocatione (books 1 - 2); St. Bernard, Sermon on St. Benedict the Abbot; Sermon 8 in the Octave of Easter.

1894. St. Augustine, De doctrina Christiana 2.37, receiving the seventh rule of Ticonius concerning the devil and his body.

mystical sense; nor do either Jerome or Haymo say that such a figurative sense is expressed by the Holy Spirit. To all these there is to be added St. Cyril on that chapter of Isaiah in the words, "But you were saying," etc., who, after he had explained the whole prophecy of the king of Babylon, subjoins: "One may adapt, and very deservedly, these things which were said historically, by a certain accommodation, to the dragon, I mean the prince of evils" - namely, in this following the rule of Ticonius, which Augustine also embraced.[1895] From which it is clear that from this place, when it is explained according to the letter and history, the sin of Lucifer is not gathered, but only by a certain kind of application or figure, as the aforesaid Fathers have taught, and as Adam notes on that place, who learnedly warned, against Jerome, that this figurative sense, by which we apply these words to Lucifer, is not rightly collected from the Prophet's saying, "You shall take up a parable," etc. For "parable" in Scripture does not always signify a similitude containing a parabolic sense, but sometimes is called a tale or a proverb of the common people used in derision, as Psalm 68: "I am made to them a parable," that is, they used me as a proverb, for my reproach; and 2 Paralipomenon 7: "The house which I have built I will make into a parable." In like manner Job 17 says, "He has set me for a proverb of the people." In the same sense the Prophet Isaiah said, "You shall take up this parable against the king of Babylon." For the king of Babylon was in derision of all, when the people captive under his power was set free, and all, hissing, said: "How has the exactor ceased?"

It remains to show briefly that each of the prophetic words fits rightly in the king of Babylon, and that there is none which cannot fit him. For if there were any which could not be understood of him, most of all those, "I will ascend into heaven, above the stars of God I will exalt my throne; I will sit in the mount of the testament, on the sides of the North," would be of that sort. These, however, as Adam rightly expounds, wonderfully fit the king of Babylon. First, he is aptly called Lucifer, that is, the herald of the dawn; for Lucifer is that morning star which by brightness very much excels the rest. By this name the Prophet, by a metaphor, addresses the king of Babylon, to denote the splendor of his dignity, just as if we were to call a king or emperor the very bright Sun, or the star of Europe or of some other region. Nor in the least does it hinder this exposition that these words are used by a metaphor. For if we applied the same to the demon, they would have to be understood only by a metaphor. The sense, therefore, is: You, who are the king of Babylon, who were most illustrious like the Sun and the most shining morning star, have fallen from your kingdom and majesty, after the manner of stars, which seem to men to fall from heaven. But the words, "I will ascend into heaven," Adam judges to have been said by hyperbole, as also, "I will ascend above the height of the clouds": as if that king were saying, I, as far as shall be possible, will strive to exalt the throne of my kingdom. But when it is said, "I will sit in the mount of the testament, on the sides of the North," it signifies that king's excessive desire of ruling: for he desired to occupy the citadel of Jerusalem, which was called Sion, which for that reason he called "the mount of the testament," because it was on the mount in which the temple was, in which the ark of the testament was; and since that was toward the northern region, it is rightly also said, "on

1895. St. Cyril of Alexandria, on Isaiah 14: "Tu autem dicebas," adapting the historically spoken words to the dragon, the prince of evils, according to the rule of Ticonius.

the sides of the North." For of the same city Sion it is said in Psalm 47: "Mount Sion, the sides of the North, the city of the great King," where all those are set by apposition as epithets of the city Sion.

Let the last testimony be that of Ezekiel 28: "You the seal of the likeness of God, full of wisdom and perfect in beauty; in the delights of the paradise of God you were: every precious stone was your covering, sardius, topaz, jasper," and below, "And your apertures on the day you were made were prepared; you a Cherub outstretched and protecting: I placed you on the holy mount of God; you walked in the midst of the fiery stones; perfect were you in your ways from the day of your creation, until iniquity was found in you." And describing the sort of sin and iniquity of him, the Prophet says: "In the multitude of your traffic your inner parts were filled with iniquity, and you have sinned." And below: "And your heart was lifted up in your beauty," etc. This place St. Gregory interprets of the demon, Moral. 23, c. 18 (also c. 24 and 25); Tertullian, Against Marcion, book 2, c. 10; and Origen, On First Principles, book 1, c. 5; indeed Tertullian and Origen so expound it of the devil that they think it cannot be understood literally of any man, because, says Tertullian, no man was born in the paradise of God; and because all those words which we have recited cannot fit any man. But St. Ambrose, in the book De paradiso, c. 2, St. Jerome, and Theodoret, explain that place of Ezekiel itself according to the literal sense of the prince of Tyre, but figuratively of the devil: which is recommended to us by the words placed at the beginning of the chapter: "Son of man, say to the prince of Tyre: Thus says the Lord God: Because your heart is lifted up, and you have said, I am God, I sit in the seat of God, in the heart of the sea; whereas you are a man and not God; and you have given your heart as the heart of God," etc.; and again, "Son of man, take up a lamentation over the king of Tyre, and say: Thus says the Lord: You the seal of the likeness, full of wisdom," and the rest which we have cited above. Surely these words are so manifest that no one, unless rashly, could deny that the Prophet is speaking with the prince of Tyre. For if he had wished to speak with him, I know not how he could have signified it more clearly. And since the other things which we cited at the beginning can very well be interpreted of the very king of Tyre, there is no reason why we should take refuge in metaphors, understanding the aforesaid words only of the devil and Lucifer. And this will be made manifest, if we explain each of the following words, which seem to have difficulty, of the prince of Tyre himself.

First, when the Prophet says, "You the seal of the likeness," he exalts him, so that thereafter he may appear the more pitiable. He calls him the "seal," that is, the signet and exemplar expressed by God, in order to show his power, greatness, and wisdom. Secondly, "In the paradise of God you were," that is, in a place of delights and in great abundance of things; which words, properly speaking, fit a man rather than an Angel: for the Angels were not in paradise, but established in heaven. Thirdly, "Every precious stone was your covering," that is, you were adorned with gems and precious garments. Fourthly, "And your apertures on the day you were born were prepared," that is, the laces or openings of your garments, from the day you were born, were joined with gems and adorned; or he understands the pits in which gold and gems were enclosed. Fifthly, "You a Cherub outstretched and protecting," that is, you were as it were a Cherub who with his wings protected the ark of the testament. For you spread your power and your name far and wide, and

you defended your city, as it were the ark of the testament, from enemies, with the wings of your power. Sixthly, "I placed you on the holy mount of God," that is, you were on your island Tyre, as if you were placed like a Cherub on Mount Sion. For oftentimes in Scripture the particle "as" or the particle "as it were" must be supplied; or by the "holy mount of God" he understands the island of Tyre itself, which more agrees with what follows. Seventhly, "You walked in the midst of fiery stones," that is, you went forth adorned with shining gems. Eighthly, "And I cast you out from the mount of God, and I destroyed you, O Cherub," that is, from your flourishing estate in which I placed you; and from the midst of the gems with which you went forth adorned I hurled you down. But the earlier words, "Because your heart was lifted up, you have said, I am God," are understood as spoken by hyperbole, in order to express that prince's excessive pride and arrogance, so that he seemed to esteem himself as a god; not, however, that he uttered such words. Therefore, since we have on our side the testimonies of the Fathers whom we have cited, and since all the words fit aptly the very prince of Tyre, we shall, without any foundation, refuse to understand them of him, especially since at the beginning of the chapter and thereafter the Prophet directed his words to the prince himself.

To all these add St. Augustine, On Genesis ad litteram, book 11, c. 25, where he expressly strives to prove that the aforesaid testimony cannot be understood of the demon.[1896]

The place Ezekiel 28: "You are the seal of the likeness of God, full of wisdom and perfect in beauty; in the delights of paradise you were; every precious stone was your adornment, Sardius, Topaz, Jasper, ..." and below: "And your perforations were prepared on the day on which you were created; you, the outspread Cherub protecting; I set you on the holy mountain of God; in the midst of fiery stones you walked; perfect were you in your ways from the day of your creation, until iniquity was found in you"; and describing, moreover, the kind of sin and iniquity, the Prophet says: "In the multitude of your trafficking your inner parts were filled with iniquity, and you sinned." And further on: "And your heart was lifted up in your beauty," etc. This passage is interpreted of the demon by St. Gregory, book 23 of the Moralia, chapters 18 (elsewhere 24) and 25; by Tertullian, book 2 against Marcion, chapter 10; and by Origen, book 1 of the Periarchon, chapter 5. Indeed, Tertullian and Origen so expound it of the devil as to judge that it can be understood to the letter of no man, because, says Tertullian, no man was born in the paradise of God; and because all those words which we have recited cannot fit any man.[1897]

But St. Ambrose in the book De paradiso, chapter 2, St. Jerome, and Theodoret explain the place of Ezekiel itself according to the literal sense of the prince of Tyre, but figuratively of the devil; which the words set at the beginning of the chapter persuade us to do: "Son of man, say to the prince of Tyre, Thus says the Lord God: Because your heart is lifted up, and you have said, I am God, I sit in the seat of God in the heart of the sea; whereas you are a man and not God; and you have set your heart as the heart of God," etc.; and again: "Son of man, take up a lamentation over

1897. St. Gregory the Great, Moralia 23, cc. 18, 24 - 25; Tertullian, Adversus Marcionem 2.10; Origen, De principiis 1.5.

the king of Tyre, and you shall say: Thus says the Lord, You are the seal of likeness, full of wisdom," and the rest which we have recited above. These words truly are so manifest that no one, unless rashly, could deny that the Prophet is speaking to the prince of Tyre. For if he wished to speak with him, I know not how he could have signified it more clearly in any other way. And since the other things which we cited at the beginning can most fittingly be interpreted of the king of Tyre himself, there is no reason why we should take refuge in metaphors, understanding the words said above only of the devil and Lucifer. But this will be made manifest if we explain one by one the following words, which seem to have difficulty, of the prince of Tyre himself. First, when the Prophet says, "You are the seal of likeness," he extols him, that thereafter he may appear the more wretched.

Further exposition of Ezekiel 28 concerning the prince of Tyre

Moreover he calls him a seal, that is, an image and exemplar expressed by God, to point out his power and greatness and wisdom. Secondly, it is said, "You were in the paradise of God," that is, in a place of delight with great abundance of things; which fit a man rather than an Angel according to propriety; for Angels were not in paradise, but were established in heaven. Thirdly, "Every precious stone was your adornment," that is, you were adorned with precious stones and garments. Fourthly, "And your perforations were prepared on the day on which you were born," that is, the doors of the tower, or the slits of garments, on the day on which you were born, were joined to the gems and were fittingly adjusted; or he understands the sockets in which also the gems were set. Fifthly, "You, the outspread Cherub protecting," that is, you were as it were a Cherub who with his wings protected the Ark of the Testament. For you enlarged your power and propagated your name, and defended your city as the Ark of the Testament from enemies by your power. Sixthly, "I set you on the holy mountain of God," that is, you were on your island, as if you were set like a Cherub in Zion. For oftentimes in Scripture the particle "as" is to be understood, or the particle "like," or by "the holy mountain of God" the island of Tyre itself is understood; which agrees with what follows. Seventhly, "In the midst of fiery stones you walked," that is, you went forth adorned with glittering things. "And I cast you out from the mountain of God, and I destroyed you, O protecting Cherub," that is, I threw you down from your flourishing state, and I cast you out from the midst of gems, among which you walked adorned. Those earlier words, "Because your heart was lifted up, you said, I am God," are spoken by hyperbole, to express the pride and arrogance of that prince, as if he held himself to be seen as God; not, however, that he spoke like words. Since therefore we have on our side the testimonies of the Fathers whom I have related, and all the words aptly agree to the very prince of Tyre, we shall not without any foundation deny that they are to be understood of him, especially since at the beginning of the chapter and thereafter throughout the Prophet directs the words to that prince himself. To these add St. Augustine, the books De Genesi ad litteram, chapter 25, where he strives earnestly to prove that the aforesaid passage cannot be understood of the demon.[1898]

1898. St. Augustine, De Genesi ad litteram 11.25.

Disputatio CCXXXIII - Whether the Angel sinned by desiring the hypostatic union with God, or by envying it to man

Angel to have sinned by the appetite of the hypostatic union, and by envy of it, is what certain more recent authors maintain. Caput I.

Angel to have been able to sin by the appetite of the union, but not to have sinned: the truer opinion holds. Caput II.

Caput I - The opinion that the Angel sinned by the appetite of the hypostatic union, or by envying it to man

With the kind of sin already explained in the preceding disputation, by which the Angel first fell, it remains that we investigate that, by the immoderate appetite of which he fell into the sin of pride. Now since that kind of sin consists in the appetite of one's own excellence beyond the due measure, it is beyond doubt that it could have happened not in one, but in many ways. In what way, however, it happened, no one can so easily define. Therefore, as we run through the individual ways, we shall show two things: first, what it was possible for an Angel to desire; for even about this no light controversy will at times occur. Then, by the appetite of what excellence he first sinned.

Concerning the proposed controversy there have been various opinions of Theologians. The first is of those who said that the Angel not only could have sinned, but also did sin by the appetite of the hypostatic union, whereby he desired his own nature to be united to the divine person, and at the same time transgressed by envy of the union of the human nature with the Word. The authors of this opinion were Catherinus in the little work On the glory of the good Angels and the fall of the bad, and on that Genesis 3, "The serpent was more crafty"; Jacobus de Valentia on Psalm 82 explaining those words, "Arise, O God, judge the earth," etc.; Viguerius in the Theological Institutions, chapter three, question two, verse 15; there is also alleged in favor of this opinion by some Jacobus Naclantus on the Epistle to the Ephesians; and Alexander, third part, question two, m. 13; and, which is capital, St. Bernard, sermon 17 on the Canticle.[1899] But Alexander and Bernard in those places teach only that Lucifer sinned by envy of the union of the human nature with the Word. Yet it could happen that the Angel envied the hypostatic union granted to man, even if he did not desire it for himself. For envy can arise merely from this, that someone is saddened at another's good, even if he does not desire it for himself, but elsewhere delights excessively in his own excellence, desiring that it not be diminished by a greater excellence in another: therefore the Angel could, desiring that by his own nature and excellence he be placed over all men as their teacher, envy man the dignity granted from the hypostatic union. And thus only, says Bernard, the demon took ill the mystery of the Incarnation, and said, "To what purpose is this waste?" as if he said that the Divine Word was to be incarnate in vain for the restoration of men. Wherefore, in the

1899. St. Ambrose Catharinus, De gloria bonorum Angelorum et lapsu malorum; idem on Genesis 3; Jacobus de Valentia on Psalm 82; Viguerius, Institutiones theologicae, cap. 3, q. 2, v. 15; Jacobus Naclantus on Ephesians; Alexander (third part, question 2, m. 13); St. Bernard, Sermon 17 on the Canticle.

same sermon Bernard affirms only that the Angel desired to preside over men as their teacher, and for that reason said, "To what purpose is this waste," etc. Bernard himself is also cited to this in the first sermon on the Advent of God; but neither there did he teach such a thing. He only said that man and the Angel sinned by the proud appetite of equality of knowledge and of the wisdom of God; which things being attributed to the Son, Bernard brings in the very Son of God saying, "If for my sake this storm has arisen, cast me into the sea," namely, of the human flesh which he assumed. Nor did William of Paris in the book De universo, first part of the second of the principal parts, from chapter 106 to 110, nor Dionysius the Carthusian in the second book, distinction five, question one, teach anything else, who are reported in favor of this opinion, than that which Bernard said in that sermon 17.[1900] Finally, Rupert is wont to be cited for the same opinion, book 8 on John, near the end, on that of chapter 8, "He was a murderer from the beginning." There, however, he only says that the devil sinned by the sin of hatred against Christ as soon as he knew the mystery of the Incarnation, and thereafter contrived his death, and for that reason was said to be a murderer from the beginning.[1901]

This opinion is approved by some more recent Theologians, and in the Schools is not a little plausible. Moreover, it can be confirmed by testimonies of Scripture and of the Fathers. First, Catherinus gathers it from that place to the Hebrews 1: "And again, when he brings the first-begotten into the world, he says, Let all the Angels of God adore him." Paul says "again," because the eternal Father had already once brought in Christ and set him forth to be adored by the Angels, when from the beginning he revealed this mystery to them. Therefore the eternal Father brought in Christ again when truly he sent him to be incarnate. Therefore, in that former proposition and revelation Lucifer and his Angels, unwilling to adore Christ and to subject themselves to him, sinned. Then it can be proved in this way: from the common doctrine of the Fathers it is certain that the demon sinned by envy of men; but it is more probable that he sinned before man was created, as we noted from the opinion of Isidore, Cyprian, and Bede in disputation 229, chapter 11. Nor ought we to think that the Angel sinned by envy of human excellence according to its own proper nature. For by what reason would the demon envy that man was created to the image and likeness of God? for thus he would more easily envy another Angel. Therefore it is more plausible that the demon sinned by envy of human dignity, which he foresaw would be raised to the dignity of hypostatic union, rather than by envy of man's natural excellence. Moreover, that the Angel sinned by envy of human dignity, more and graver Fathers bear witness: Cyprian in the little work On zeal and envy, a little from the beginning, affirms this in these words: "What an evil it is, brethren most beloved, by which the Angel fell, by which that lofty and eminent sublimity could be circumvented and overthrown, by which he himself was deceived who deceived; whence thereafter envy runs riot on earth, while one who is to perish with the lynx's eye obeys the Master of perdition: while he imitates the devil who is jealous; as it is written, By the envy of the devil death entered into the world." And Irenaeus, book 4 against heresies, chapter 78, explaining that of

1900. William of Paris, De universo, prima pars secundae partis principalis, cc. 106 - 110; Dionysius the Carthusian, book 2, dist. 5, q. 1.

1901. Rupert of Deutz, In Ioannem, book 8, on John 8:44 ("He was a murderer from the beginning").

Matthew 13, "An enemy has done this," teaches the very same: "From then on" (he says) "the Angel is apostate and an enemy, from the time when he was jealous of the formation of God's handiwork, and undertook to make that thing an enemy to God." Tertullian agrees in the book On patience, chapter 5, where he teaches that the devil bore it impatiently when he saw man made by God to his likeness, and from this impatience he envied: whether indeed he was evil before he was impatient, he does not wish to inquire; wherefore he does not determine whether envy was the first sin. The same is taught by St. Basil in the homily On envy, a little from the beginning, and by St. Gregory of Nyssa in the Catechetical Oration, chapter 6, before the middle; to all of whom add Bernard in the place alleged above. Their opinion St. Augustine recounts, book 11 of the Literal Genesis, chapter 14, and he does not disapprove it, but only warns that, if thus the Angel sinned, envy arose from pride, not the other way round.[1902]

The second opinion, altogether opposed to this, is of certain more recent writers, who affirm that the Angel could not have sinned by the proud appetite of the hypostatic union. They confirm it by a twofold reason. First, because if the Angel had desired for his own proper nature, in another individual, the hypostatic union, he would have desired his own destruction; but this it is not possible to desire unless some error first precede in the intellect. But in the intellect of the Angel no error could be; therefore neither such a desire. Catherinus, following the opinion of Scotus, who asserts that a person above nature in creatures adds nothing real but only a negation, replies that even if the Angel had desired the hypostatic union, he would not have desired any corruption of himself, but only the supplement of a certain negation. But because, as we shall show in the third part, question four, article two, a person above nature does not only add a negation, but also a positive mode per se, the aforesaid argument still seems to retain its force. Then they prove the aforesaid opinion because in the desire of such sanctity there does not seem to be sin: for who could not desire the highest degree of sanctity, which is through the hypostatic union, if he desired it and expected to have it from him who could confer it, unless some positive precept stood in the way? But no precept was imposed on the Angel - it is manifest, since none is known - and by the nature of the matter there was no such precept. Nay rather, those Doctors add that, if such a precept had existed, the Angel could not have sinned by the sin of pride, but by another kind of sin; because the sin of pride is conversant only about one's own excellence.

Caput II - The truer opinion: the Angel could have sinned by the appetite of the union, yet did not

A middle way seems to me much more probable, and safer. First indeed, let us say against the second opinion, that the Angel could have sinned by the proud appetite of the hypostatic union. Then, let us say that by this appetite he did not sin at the first when he fell from heaven and from that most happy state. To establish each of these will not require much labor. As to the first part,

1902. St. Irenaeus, Adversus haereses 4.78; Tertullian, De patientia 5; St. Basil, Homily on envy; St. Gregory of Nyssa, Oratio catechetica 6; St. Bernard, loc. cit.; St. Augustine, De Genesi ad litteram 11.14.

two things must be proved for us: first, that nothing stood in the way by reason of which the Angel could not desire such a union; second, that in such an appetite there could have been the sin of pride. These two things, once proved together, overthrow the foundations of the second opinion.

Therefore, that such an appetite was possible to the Angel is shown thus. If anything had hindered the Angel from being able to desire this union, that would chiefly have been lest he should aim at his own destruction; which without error - of which the Angel is not capable - he could not do. But in fact this would have stood in the way not at all. First, because by such an appetite the Angel would not have desired the corruption of his nature, but only a certain mode which we call perfection; that is, he would have desired that his nature not exist "of itself" and "in itself": but this the Angel could have desired without error; since it is better for the nature of each thing to exist in the Word than to exist in itself alone by itself. Moreover, that there can inhere in the Angel an appetite of some excellence, from which there would necessarily arise the "destruction," that is, the not-being of his own nature, without any error in the intellect, we shall show more fully in the following disputation, chapter two. Nothing therefore would have stood in the way whereby the Angel could not have desired the hypostatic union, if he were to desire it and expect to have it from him who could confer it, unless some positive precept stood in the way; but no such precept was imposed on the Angel, as is manifest since none is known, and by the nature of the case there was no such precept. Nay rather, the aforesaid Doctors add that, if such a precept had existed, the Angel could not have sinned by the sin of pride, but by another kind of sin; because the sin of pride is conversant only about one's own excellence. Nothing, therefore, would stand in the way ...

First indeed, if we say, against the second opinion, that an angel certainly could have sinned by the proud appetite for the hypostatic union. Next, if we say that by this appetite he did not sin at the first moment when he fell from heaven and from that most happy state. To confirm each part will not be laborious.

As to the first part, two things must be proved for us: one is that nothing hinders an angel from being able to desire such a union; the other, that in such an appetite there could have been the sin of pride. By proving these two together, we shall undermine the two foundations of the second opinion.

Therefore, that such an appetite was possible for an angel is shown thus. If something stood in the way, so that the angel could not desire this union, that would most of all be lest he should aim at his own destruction, which without error (of which an angel is not capable) he could not do. But in fact this would not hinder: both because by such an appetite the angel would not have desired the corruption of his nature, but only a certain mode which we call of personality, that is, he would have desired that his nature not be per se and in se; and this an angel could have desired without error, since for the nature of any given thing it is better to be in the Word than to be in itself alone and per se. Then too, an angel could have had an appetite for some excellence from which there would necessarily arise the destruction or the non-being of what is proper to his own nature, without any error in the intellect; in the subsequent dispute, in the next chapter, second, we shall

show this more at length. Therefore nothing would hinder an angel from having desired the hypostatic union: which we had proposed first to be proved, in confirmation of the first part of our position. Whence also the prior reason of the second opinion remains weakened.

Moreover, that in such an appetite for union there could be the sin of pride is proved. First indeed, if a precept had been imposed, not to desire such an excellence; then it is altogether manifest that the appetite for that would be a sin of pride - so much so that I do not at all understand on what basis those more recent authors affirmed the opposite: for the sin of pride is not in an excessive appetite for natural excellence, that is, for what naturally befits us, as those Doctors seem to assert. Rather, in the appetite for this thing there does not seem to be sin, since then a man desires only that which naturally befits him - unless he should desire it in contempt of others; for the desire of this perfection seems to be within the bounds and measure of reason. But the sin of pride is rather in the appetite for an excellence that does not naturally befit one: for he who desires that beyond measure seems to desire the dignity of an excellence, which is proper to pride; nor would it be any less, indeed it would be a much greater, kind of pride to desire the dignity of a divine excellence. Wherefore, since the devil could, under this ratio, desire the hypostatic union, he could also sin proudly in the desire of it.

I grant indeed that one could, with a moderated affection and according to right reason, desire the hypostatic union of his nature with God - not out of envy, and not that he might be over others, but that he might be joined to God in a closer mode of holiness and impeccability. If, however, he were to desire such a dignity either contrary to a positive precept, or out of an affection that he might excel others - even if there were no positive precept forbidding such an appetite - it would indeed be a sin of pride. This is clear by natural right: because here there would be an appetite for one's own excellence, not indeed for that which would naturally befit the one desiring, but for that which someone would desire as proper to himself. And this is understood when pride is defined as an inordinate appetite of one's own excellence. By positive law too this is manifest: because a positive law, whatever it forbids, constitutes within it the nature of some particular vice; and its transgression is not a special sin of disobedience, unless it be done with the expressed intention of transgressing the precept with contempt, as we shall show in I-II, question 73, article 8, from the doctrine of St. Thomas; and consequently a simple transgression of a positive precept ought to be weighed according to the nature of the matter. And since the appetite for union is an appetite for excellence, if it be against the precept, it will be a sin of pride. From these considerations the later reason of the second opinion remains dissolved, and the former part of our position is sufficiently confirmed.

The latter part of our position, namely, that the angel did not sin by the appetite for the hypostatic union, can also be proved in two ways. First, by an argument taken from the common doctrine which, in the Third Part of St. Thomas, question 8, article 4, will be more fully confirmed by us: namely, that Christ was not predestined in the order of divine foreknowledge prior to the justification and sin of the angels. For in the order of cause, or of occasion, the foreknowledge of Adam's sin was prior to the predestination of Christ. And since the sin of the angels was, in the order of cause, prior to the sin of the first parents - because the first parents were driven to sin by

the devil's temptation - it follows that the predestination of Christ, in divine foreknowledge according to the order of cause or of occasion, was later than the sin itself of the angels, by which they first fell. But if the angel had first sinned from envy of Christ and of the hypostatic union of the human nature with God, the predestination of Christ to come would be prior to the sin of the angels, and consequently to the sin of the first parent: which is against what we have supposed. For then Christ to be would, in the order of cause, precede as the matter about which the sin of envy would be conversant; nor indeed is it to be believed that the angel sinned with envy of a union apprehended only under opinion, if he sinned with this kind of envy and pride, but with envy of the union of the human nature in the Word already revealed by faith. And since that sin, in the order of cause, would presuppose the revelation and the thing revealed as future, it would follow that, prior in the order of cause in divine foreknowledge, there was Christ to come, rather than the sin of the angels and of the first parents. This is the most weighty reason for this part of our position.

For what some more recent authors say against it - that it is the common opinion of the Fathers asserting that the sin of the angels was pride, as we saw in the preceding disputation, and therefore that they did not sin from envy of the Incarnation - is of no moment. For if the angels had sinned in that way, the common doctrine of the Fathers, who say that their sin was pride, could also be saved: because in the appetite for the hypostatic union there would be pride, as we explained above.

Moreover, the same part of our position will be confirmed when we shall have shown that no testimony adduced in favor of Catharinus's opinion has any weight. And indeed the testimony of Scripture, which the adversaries greatly esteem, is, for two reasons, weak and has no weight at all. First, because the particle "Again," when it is said, "And when again he introduces the first-begotten," etc., does not signify a second introduction of Christ into the sight of the angels, as if it supposed some other prior introduction; but, as Adamus rightly notes, the particle "Again" is of one citing another testimony: wherefore it does not pertain to the testimony alleged itself. As if Paul were saying, as Erasmus renders it, "And again, when he introduces," etc. - that is, "And in another place of Scripture, when he introduces the first-begotten," etc., he says, "And let all his angels adore him." Wherefore also the Greek interpreters do not expound the particle "Again" as if they saw that it pertained to the testimony cited itself.

Then also, even if we were to concede that that particle pertains to the testimony, and that there were two introductions of Christ before the angels - one in the beginning, when the mystery of the Incarnation was revealed to them by faith before they sinned, the other when the thing itself occurred in time, when he was incarnate - thence it does not follow that the angels sinned from envy of the Incarnation and by the proud appetite of the hypostatic union of their nature with the Word: for this is not said in that testimony; but from it only this can be gathered, that an angel could indeed have sinned by that kind of sin, which we do not deny. Add that Genebrard interprets that Psalm 96, from which Paul cited the testimony, of the last coming of Christ, when he will come to judge: with which sense the exposition cannot stand that the adversaries followed in order to uphold the aforesaid opinion.

I am amazed, moreover, that the testimonies of the holy Fathers whom we have cited are alleged for this opinion: for although all, except Tertullian, speak of the first sin of the angel, by which he became apostate, nevertheless none of them said that the sin of the angel was an appetite of pride for the hypostatic union, or envy of the Incarnation; but only that he sinned from envy of human dignity, in that he had seen a corporeal creature created to the image and likeness of God, namely a participant in reason and free will. Wherefore, according to the opinion of these Fathers, the angel did not sin before the first parent was created; nor ought it to be reckoned impossible that an angel could have sinned from envy of human dignity, namely that man was created to the likeness of God. And he would be more easily moved by this affection than by envy of another angel, since he would see a man far inferior to himself created in so great a dignity. But whether the angel would more easily have sinned through envy of the Incarnation, since he would see this to be the greatest dignity of all, cannot easily be determined: for since the affection of sin depends very much on the manner in which the object is proposed on the part of the intellect, human dignity could certainly be more efficaciously proposed as contrary to the angel - since it is natural to man and common to all men - than the dignity of the Incarnation, which was not natural to human nature nor common to all human natures. Since these things are so, and the holy Fathers cited for this opinion made no mention of any other envy-sin than the aforesaid, the adversaries cannot use their testimony to confirm this opinion.

But as to what the Author of De mirabilibus sacrae Scripturae says, cited under the name of Augustine, book 1, chapter 2, that an angel could not have sinned by the affection of envy of human dignity unless he himself had lost his own by sin: I do not see how that is true; for in either way the angel could have sinned: who can doubt it?

Angel could not have sinned by an appetite for equality of nature with God, not a few have taught. cap. 1.

Others of the Schoolmen probably judge that it was equality with God according to nature. cap. 2.

That the angel sinned by an appetite for equality with God according to essence is not certain. cap. 3.

Disputatio CCXXXIV - Whether the angel sinned by the proud appetite of equality with God

Caput I - Not a few have taught that an angel could not sin by an appetite for equality of nature with God

No small part of the common opinion among the Schoolmen and the Fathers is that the angel sinned by the proud appetite of some equality with God. This is taught by all the Schoolmen whom we shall cite in this disputation; and among the Fathers, St. Ambrose on that Psalm 118, "Thou hast rebuked the proud," and Epistle 84, before the middle; St. Gregory Nazianzen, Oration 27, which is

addressed to those who said he was hankering after the Constantinopolitan chair, and poem 6; and his commentator Elias of Crete on Oration 3, which is the first invective against Julian, explaining those words, "Wherefore with power," etc.; St. John Chrysostom, Homily 3 on the words of Isaiah, after the middle, in tome 1; St. Gregory the Great, book 34 of the Moralia, chapter 17 (elsewhere 14); Isidore, book 1 De summo bono, chapter 12, sentence 8; Bede, tome 8, in the Books of Questions, question 9; St. John Damascene, book 2 De fide, chapter 4, when he says that the devil "exalted himself against his Maker God and wished to rebel against him": which is the same as to have aimed at some equality with God.[1903]

But among the Schoolmen there is no small controversy whether the angel sinned by an appetite for equality with God according to nature, or only according to some likeness. Of these, not a few say that the angel could not sin by an appetite for equality with God according to nature, but only according to likeness. Thus teach St. Thomas, Cajetan, and the recent Thomists on this article; and the same holy Doctor in De malo, question 16, article 3; Alexander, II Pars, question 98, member 3; Albert in II, dist. 5, question 2, article 3; St. Bonaventure, article 1, question 2; Giles, question 1, article 2; Hervaeus, question 1, article 3; Durandus, question 1, no. 13; Marsilius, in II, question 5, article 2, conclusion 7; Capreolus, in II, distinction 4, question 1, article 10, conclusion 2, and article 3, in the solutions.[1904]

But on the contrary: William of Paris argues against the foregoing in the First Part, Second Principal Part, On the Universe, cap. 109.[1905]

The first reason for this opinion is of this sort. The demon was not so dull of wit that he did not see it was impossible for him to attain equality with God according to nature: therefore he could not will and desire that; for no one desires what he sees to be impossible; or it must be said that there was an error in the angel's mind about this matter, which is not to be believed. For which reason Anselm employed the words in the book On the Fall of the Devil, chapter four: "If God cannot be thought except as so uniquely one that nothing like unto Him can be thought, how could the devil will what he could not judge? For he was not of so obtuse a mind as not to know that nothing else like unto God could be thought."[1906]

But if someone were to say that the will also can be of impossibles, as Aristotle teaches in the third book of the Ethics, chapter two,[1907] against this we can first object what Aristotle himself says in the same chapter, that the will indeed can be of impossibles - this is the simple affection, which some call velleity - whereas choice, however, cannot be of impossibles; but the angel sinned by a will of choice, because by a free will: therefore he could not sin by desiring equality with God.

1906. St. Anselm, De casu diaboli, c. 4.

1907. Aristotle, Nicomachean Ethics III, 2.

Secondly, because (as St. Bonaventure says) if the angel had desired equality with God according to nature, since in his intellect he could feign it to himself, it would follow that the angel only desired a certain figment of his own thought, not however equality with God in reality.[1908] Thirdly they object - St. Thomas in that question 16 of De malo, article 3, to the third; Hervaeus in the place cited; Capreolus in that solution of the second; William in this way: although there can be some will of impossibles, nevertheless it is only the imperfect one which is wont to be called velleity, or a conditional will; but this is not capable of merit or demerit: therefore by such a will the angel could not sin.[1909]

The subsequent reason is, as St. Thomas, Giles, and Marsilius say: in each thing there is a natural desire of its own being (*esse*); but if the angel were to desire to be God by nature, he would desire not to be himself; which would be against the natural desire. But this, however, could not happen: therefore neither could the angel desire equality with God by nature. To explain and confirm this argument, one must set forth what the natural desire (*desiderium naturale*) is. Now natural desire is, first, the inclination of a passive potency (*potentia*) to its perfection, as water is inclined to coldness: and of this we are not speaking at present. Next, there is the natural desire of an active faculty for its act, and of this we are not speaking: for it is manifest that we are able to desire beatitude, and a life in which the faculty of nourishment does not need food, nor has its own distinct operation. Finally, there is the natural desire elicited, namely of the will, by which we desire something after the mode of nature, as we will show in the First Part of the Second [Part], question 5, last article, and question 10, first article; now the mode of desiring after the mode of nature is a mode of desiring something either necessarily as to exercise, or with a determination to one part, as St. Thomas teaches in the First of the Second [Part], in that question 10, article 1, namely because we love something in such a way that we cannot fail to love it, or as to specification, namely when we so love something that we cannot hate it at all, which kind of desire makes us seek sense and life. And for this reason Aristotle in the first book of the Metaphysics, chapter 1, and St. Thomas in the First of the Second [Part], question 10, article 1, said that man naturally desires to know, and in this same way to love sense and life.[1910]

Therefore the angel naturally desires his own being, in such a way that he cannot hate it, or that he cannot fail to desire it - which is the same thing. This is what Aristotle seems expressly to have taught in the ninth book of the Ethics, chapter 4, where, after he had said that each one desires to be and to live, and that part by which he understands, he subjoins these words: "For it is a good for a man to be earnest; and each man wills goods for himself. But as for another, no one desires to have all that which has been made his." As if he were saying: each one desires goods for himself that he may be better; but if he were to be changed into another, he would not desire to be made better nor to have goods - not, indeed, for any other reason than that no one can desire to be

1908. St. Bonaventure, In II Sent., d. 5, a. 1, q. 2, cited by later authors.

1909. St. Thomas Aquinas, De malo q. 16, a. 3, ad 3; Hervaeus Natalis, loc. cit.; John Capreolus, In II Sent., d. 4, q. 1, a. 3, in solutions; and William [of Paris] as above.

1910. Aristotle, Metaphysics I, 1; St. Thomas Aquinas, Summa theologiae I-II, q. 10, a. 1.

another; for if he were to desire to be another, he would also desire that other, into whom he were being transformed, to have all goods, just as he desires them for himself, and he would desire him to become better, just as he also desires to become better.

Angelum potuisse peccare superbo appetitu aequalitatis Dei secundum naturam, alii Scholastici probabiliter censent.

Caput II - With deference to so many, that the angel could sin by the proud desire of equality with God according to nature is sufficiently probable

With due reverence for so many Scholastics whom we alleged in the preceding chapter, I cannot but judge it sufficiently probable that the angel could sin by the proud desire of equality with God according to nature. Thus taught Scotus in the Second [Book of the Sentences], distinction six, question one, s. dicitur and s. quia tamen; Gabriel in the same distinction, question one, article three, second doubt; Major, question one; Bassolis, question one, § Quia tamen ad primum.[1911] The opinion of these men will be able to be confirmed only if we shall have shown that the reasons for the aforesaid opinion do not sufficiently prove such a desire in the angel to be impossible. And indeed, as to the former reason, we readily admit, in the first place, that equality with God according to nature is impossible for any creature whatsoever. But as to this impossible object, that even when known as impossible there could have been in the angel some will with respect to it, does not seem able to be denied.

In the confirmation of this I presuppose what Aristotle teaches in the third of the Ethics, chapter two - and the adversaries frankly admit - that with respect to impossibles, which are even known as impossibles, there can be some will, which they are wont to call either velleity (*velleitas*), or a simple affection, not however efficacious: that is, a will which consists in a certain complacency in the thing apprehended, and is not an efficacious principle of procuring it; which we will prove expressly against Cajetan in the First of the Second [Part], question 13, article 4, and, against the same, we will show that this is true of will with respect to the impossible per se, just as it is true of will with respect to the impossible per accidens. Now what is called impossible per se is that which, considered according to its own nature, is impossible in any state, as that a man be equal to God, or that God be a creature according to essence (*essentia*). But impossible per accidens is said of what was of itself possible, considering the nature of the thing - as that Peter had not sinned - but by reason of time, because he has already sinned, it is impossible that he has not sinned now, after he sinned. For this cause Aristotle said in that same chapter, that will indeed is of impossibles, understanding a simple complacency; but that choice is not of impossibles, because choice is a will efficaciously seeking that which is chosen.[1907] Moreover, that Aristotle is speaking of impossibles which are in truth judged to be impossible, is clear: for with respect to the impossible which is judged possible, there can be not only will but even choice. Now this impossible which was

1911. John Duns Scotus, In II Sent., d. 6, q. 1 (s. dicitur; s. quia tamen); Gabriel [Biel], In II Sent., d. 6, q. 1, a. 3 (dub. 2); John Major, In II Sent., q. 1; Bassolis, In II Sent., q. 1, § Quia tamen ad primum.

1907. Aristotle, Nicomachean Ethics III, 2.

judged truly impossible could nonetheless be apprehended by the angel after the mode of being and of the suitable - not, to be sure, by a judgment of assent, but by a simple cognition and apprehension, which is sufficient to move the will, as we will show in the First of the Second [Part], question 14: just as one can take delight in thinking that God is not, even if he sees that to be impossible, by apprehending that as suitable to himself. Wherefore I do not know by what reason St. Bonaventure and Giles said that the angel could not desire equality with God, because such a thing could not come into his mind: for this could have happened without error in the intellect of the angel, as will be made clear in the following disputation.[1910]

What things, however, were urged in confirmation of this first reason for the preceding opinion can easily be dissolved. To the first we admit indeed that the angel sinned freely; but when it is inferred, therefore he sinned by choice, we judge that a distinction must be made. For either by the name of choice, or of elective (as they call it) will, we understand only a free will, and in this way he sinned by choice; and, if he was going to sin, he was necessarily going to sin in this way. But this genus of elective will can be inefficacious and a simple affect of delectation; as when someone hates God, by a simple affect of hatred desiring evil for Him, he indeed sins, even if that affect be not efficacious, because he sees it to be impossible that such an evil befall God. Or by the name of choice we understand an efficacious will, which tends to the thing in execution; and this is not required for sin, as is manifest from what has been said. About this kind Aristotle said that choice is not of impossibles, as we will show in the First of the Second [Part], question 13, article 4, where we will also reprehend Scotus, because in the place cited he teaches that there can be choice of impossibles. By what reason he is worthy of reprehension we will show there. The angel, therefore, could sin freely and by choice, insofar as is required for sin, even if he should desire equality with God according to nature.[1912]

To the second we say: if the angel had desired equality with God according to nature, he would indeed have desired a figment which he himself would have fabricated to himself by his intellect; nevertheless even in this way he could truly have sinned: for even in such figments a most grave sin can be committed; as if someone were to imagine that he inflicts some evil on God, so that in that he would take delight out of hatred; though his appetite were detained by a figment, nevertheless his sin would be grave. Thus, therefore, even if that equality with God were only a figment of a created thought, nothing could stand in the way why the sin about it should not be grave.

To the third we admit that the angel could not sin about that equality of God, except by a simple affect which they call velleity. What those Doctors further add, to whom also Albert agrees, in 2. part, treatise 5, question 21, m. 1, to the next to last and to the last, namely that in such an affect there cannot be merit, good, or evil - I do not know by what reason this could be true. For who denies that there is an act of most perfect charity and very great with God, whereby (as is commonly read) St. Augustine, speaking with God, used to say: "If I could be God, I would prefer that Thou, rather than I, be God"? But this act is of simple complacency and of velleity, and concerns an impossible. Moreover, an act is meritorious when someone, after he has sinned, thinks

1910. Aristotle, Metaphysics I, 1; St. Thomas Aquinas, Summa theologiae I-II, q. 10, a. 1.
1912. St. Thomas Aquinas, Summa theologiae I-II, q. 13, a. 4; cf. Scotus, loc. cit.

that he has sinned, and takes delight in this, and yet that act is a simple affection which they call velleity. In a similar affect too there can be a most grave sin, as we said above: as when someone takes delight out of hatred against God, by thinking some evil about Him; in which kind of sin now also the demons are engaged, there is no doubt.[1913]

Capreolus, however, replies that the angel after the fall, because he had a disturbed reason, could sin by this kind of delectation; but his first sin could not consist in such an affect. Yet even if I were to grant him this, the force of our solution remains: for in such a simple affect, if it be granted, there could be a most grave sin, as there is now in the demons. That such a simple affect could have been then, the first Doctors of that third objection readily admit, only wishing to assert that in such an act there cannot be sin. Next, from the nature of the thing this is sufficiently manifest. For if now the demons sin by this kind of sin, it is not on account of an error which they have about God; for in them the natural powers have remained entire: but without error, apprehending that as good, as will be explained in the following disputation, they take delight in it. Why, therefore, could not this same thing have happened to them in the first sin?

But someone will say: since the angel knows himself as he is, by what reason can he feign, as if it were his perfection, that which on the other hand he rightly knows can in no way befit him? For in disputation 118, chapter two, we said that the intellect, seeing a thing as it is, cannot distinguish many things in a thing which are not really distinct: because such a distinction is a figment which cannot fall upon the intellect regarding a thing as it is.

I answer: although the angel knows himself as he is, nevertheless since he does not understand God as He is, he can apprehend himself as if he were God, that is, as if he had not above himself God; and he could be displeased at being subject and inferior to God, and contrariwise take delight in thinking himself not inferior to any other than God, which is to will in a certain manner equality with God according to nature.

And let these things suffice about the first reason of the preceding opinion.

The latter reason can also easily be dissolved. We therefore concede that, from the fact that the angel were in reality God, it would follow necessarily that he would not be an angel; nevertheless from the fact that the angel desires to be God, it does not follow that he desires not to be himself: for although these two are in reality conjoined indivisibly, yet the angel's reason can propose to the will one without the other; and thus it can present to the angel the goodness which he conceives in equality itself with God, without proposing or thinking the evil...

Moreover, as to the evil which consists in one's not being oneself, this can also be desired without any judgment affirming or denying; for it is not necessary that an error in the intellect precede, in order that the will may sin, as we shall show in the following disputation and in I-II, q. 77, a. 2. For the defect on the part of the intellect which is necessary for sin, as we shall there show, consists only in this, that the good which entices to sin be proposed more efficaciously than the good or evil which ought to draw one back from sin, as we shall prove there from Aristotle: and thus we see men every day take delight by thinking of themselves as changed into spirits, nay even

1913. Albert the Great, De anima, pars 2, tract. 5, q. 21, m. 1, ad penult. et ult.; John Capreolus, In II Sent., d. 4, q. 1.

into birds or beasts, on account of some convenience or pleasure which they consider in that figment. And in what way that axiom is to be understood, "he who wills the antecedent, wills the consequent," we shall also explain in I-II, q. 13, a. 4: namely, that one is said to will the consequent only virtually (as they say), not because he always expressly wills it, the antecedent being willed. Wherefore, although someone should expressly desire to be changed into something else, it is not necessary that he should also expressly will not to be; although this latter follows upon the former.

Furthermore, what was said in that argument, that there is in man a natural desire eliciting the act by which he wills his own existence, so that he cannot hate it, must be understood of his own existence by reason of itself; for by reason of an accompanying evil nothing prevents someone from being able to desire not to be. For men, too, sometimes grieve so much on account of infamy or some other grave evil, especially those who see themselves consigned to the perpetual torments of hell, that they would rather wish to be reduced to nothing than to suffer them; although otherwise life and existence, considered in themselves, cannot be the object of anyone's hatred, and for this reason there is said to be a natural desire of them, that is, a desire necessary as to its specification, as we declared above. Thus, therefore, the angel also could will equality with God according to nature, because he could apprehend himself as to be changed for the better; for I see no reason why this should be repugnant to a created mind, even an angelic one. Nay rather, even now the demon, since he sees himself damned by God and consigned to eternal torments, so hates God that without doubt he desires to have himself changed into a nature better than the divine, and expressly wills not to be, in order in this way to oppress God himself. I do not say that this is procured by the angel, or efficaciously desired, but that in this vain thought his will, out of hatred against God, lingers.

But as to the testimony of St. Anselm, which in the same argument was adduced, I answer that the words there cited, by which he seems to teach that the angel could not have desired equality with God according to nature, are not Anselm's in his own person, but in the person of the disciple whom he introduces in that dialogue. The teacher, however, who speaks there in Anselm's person, only answers that the angel desired a certain equality with God, not according to nature, but in another way, as we shall see in the following disputations; neither granting what the disciple had objected, nor denying it, but only asserting that in which the angel seemed more probably to him to have sinned.[1914]

Finally, that which in confirmation of the latter reason was brought from Aristotle, Ethics IX, chapter twenty-one, has a sense far different. For, as Eustratius explains in his commentaries, and Lambinus in his Scholia on that place, Aristotle's meaning is this: although each one desires goods for himself; yet if someone were turned into something else, as into a stone or an ass, he would not wish, having been made an ass or a stone, to abound in all human goods, but only in those which befit the nature of an ass or of a stone; so that in this way Aristotle shows, not indeed, as the adversaries were saying, that no one can desire his own non-existence, but that each one desires for

1914. St. Anselm, De casu diaboli, c. 4.

himself only those goods which he has judged to be suitable to his own state: wherefore, the state being changed, the appetite for things is also changed; because things themselves are not judged good in the same manner.

But someone will ask whether to desire to be God by nature, and to linger in that thought, is a sin of pride against the natural precept. I answer: if someone should linger in such a delight, thinking that he is God, but should be delighted for this reason alone, namely that he would be free from sin, he would not sin with the sin of pride; but if he should linger in that thought because he would take it ill that he is under the power of God, or for that reason should desire to be preeminent over all: this would be a most grave sin of pride.

Caput III - That it is not certain that the angel sinned by the desire of equality with God according to essence

Although by a reason not to be disapproved it has been shown that the angel could have sinned by the proud desire of equality with God according to nature; nevertheless, whether his sin, by which he first fell from that most happy state, was of that sort, has not yet been explained by us. In this controversy, which is a matter of fact, strong reasons are not at hand: for in everything and everywhere reasons or demonstrations are not to be demanded. I shall nevertheless relate what the Doctors have thought in this difficulty.

Of the authors cited in the preceding chapter, who say that the angel could have sinned by this kind of pride, there is none, besides John Major, who affirms that the angels sinned by such pride. But Major proves that the demon desired equality with God according to nature from that Isaiah 14: "I will ascend into heaven, I will be like the Most High"; which, he says, cannot be understood of the corporeal heaven, since the angel who fell was already in heaven when he sinned; but of the spiritual heaven of the Trinity. But since those words are historically said of the King of Babylon, as we already showed in the preceding disputation, chapter 4, it is necessary to understand them of the corporeal heaven; not that that king wished really to be lifted up into the bodily heaven, but so that by a turn of phrase and figure of speech the Prophet might explain by hyperbole the excessive affection of pride by which that king sinned. Now in that figure the same words ought to be accommodated to the demon, and not otherwise, as we there also taught.

From the Fathers adduced in the first chapter, who teach that the demons desired some kind of equality and likeness with God, none is found, besides St. Gregory Nazianzen, who seems to speak of equality according to nature: for in the oration about himself, against those who were saying that he was aiming at the chair of Constantinople, which is Oration 27, number 8, he thus writes: "This (namely envy) clouded Lucifer on account of the puffing up of his mind by measures; a fall: for it was unworthy and intolerable to him, since he was divine, not to be thought God too." By which words the proud appetite of equality with God according to nature, which the angel had, seems to be described. Nor does that word "to be thought" stand in the way, which seems only to denote an appetite not of equality according to the thing, but according to appearance and mere estimation: for that word can signify either a true or a false estimation; and more easily would the angel's

appetite be borne toward a true estimation of deity, than toward a false one with an appetite of simple complacency. Moreover, the same Nazianzen in Poem 6, which is "On substances endowed with mind," expressed this opinion more clearly by these words:

"Wherefore, first swelling with an unsound mind, Lucifer (for that he enjoyed eminent honor, He was hoping for the royal throne and glory of God), Fell, his cheap splendor lost, miserably, While he desired to be God, he was entirely overwhelmed by earthly darkness."[1915]

Add also the Gloss on that Psalm 68, "What I did not seize, then I paid back." Where it says that the devil and our first parents sinned, wishing to seize divinity; and the Master in II Sentences, distinction six, chapter one, who affirms that the angel sinned because he wished to be like God.[1916]

But although it would be by no means absurd to affirm that the angel sinned by the proud desire of equality with God according to nature, since this too was possible; nevertheless, because we have no firm foundation for asserting this, it is not to be affirmed thus without reason; but the aforesaid testimonies, and whatever others there are, are to be expounded about some equality through likeness, which is found in a certain way in any sin of pride. For since it is certain that the angel sinned the sin of pride, it will also be certain that he aimed at some likeness of God.

- What the Scholastics think without controversy. Cap. 1.
- Three ways of explaining and defending the common opinion. Cap. 2.
- A more probable way of defending the common opinion. Cap. 3.
- An objection against the foregoing doctrine. Cap. 4.
- By what reasoning the angel could sin by the appetite of natural beatitude. Cap. 5.
- How the angel could sin by desiring to be preferred to others. Cap. 6.

What the Scholastics think without controversy

Among the Scholastic theologians there is a no less certain and uncontroversial opinion, that the angel sinned by an immoderate appetite of his beatitude, than that he sinned by the sin of pride. For all establish, in this kind of excellence, an affection of pride by which the angel first sinned; just as all also have said that the angel's first sin was pride. But all those whom I shall here cite speak of supernatural beatitude, which a rational creature hopes for as the reward of good works. For of natural beatitude they scarcely make mention, as we shall see below.

Therefore that the angel's first sin was an immoderate affection of his supernatural beatitude is taught among our Scholastics by the Antissiodorensis in the second book of the Summa, tractate 2, chapter 2; by Albert the Great in the Summa, part 5, tractate 5, question 21, member 1; by Alexander of Hales in part 2, question 98, member 3, in the body and to the fifth, and in the same

1915. St. Gregory Nazianzen, Poemata dogmatica 6 (De substantiis mente praeditis), lines cited in Oration 27, n. 8.

1916. Glossa ordinaria on Ps 68:5 (Vulg. 68:5), "Quae non rapui, tunc exsolvebam"; Peter Lombard, Sentences II, dist. 6, c. 1.

member 9, to the first and to the fifth; by St. Thomas, by Cajetan, and by recent Thomists on this article; Albert also, in the Book of Sentences, distinction 5, article 3; Aegidius, question 1, article 2; Richard, article 1, question 3; Durandus, question 1, number 14; Hervaeus, question 1, article 6.[1917]

Likewise, at the end and in the solutions of the arguments, Thomas of Argentina, on II Sentences, distinction 6, question 1, article 1; and on the same distinction Scotus, question 2, especially at "Ad videndum"; Bassolis, question 1, § "Quantum ad secundum"; Gabriel, question 1, article 2, after the second conclusion; Major, question 1, near the end, in solution 4; Capreolus on II Sentences, distinction 4, question 1, article 1, conclusion 1 and 2, and article 2, in the solutions of the arguments against the first conclusion; Marsilius in II, question 1, article 5, conclusion 6 and the following corollaries; Holcot on II, question 3; the Ferrariensis, Contra gentes, cap. 109, § 9, "Circa id, quod dicitur." Of the Fathers, moreover, I do not doubt that Ambrose in Epistle 84, Augustine in City of God, book 22, chapter 1, and St. Gregory in Moralia, book 34, chapter 17 (alias 14), and book 3, chapter 18 (alias 23), were of this opinion, whose words we shall relate below; nor do I doubt it.[1918] Some also of the Scholastics allege that the aforesaid opinion is gathered from Anselm in the book On the Fall of the Devil, chapter 4, from which they report these words: "The demon desired that which, if he had attained, he would have stood fast." The words, however, by which the preceding opinion could be more clearly confirmed from Anselm are others. For when he had said that the angel could have desired only two kinds of goods, either the just, or honest, or the advantageous, which we commonly call the delectable, which two alone can be desired for their own sake, he subjoins these words: "He sinned, therefore, by willing some advantage which he neither had, nor then ought to will, which nevertheless could have been for him an increase of beatitude." From these, however, the Scholastics' opinion cannot be gathered. For Anselm does not say that the angel sinned by desiring beatitude itself, but by desiring some particular good, advantageous and delectable, which could have pertained to the piling up and increase of his beatitude. Now this could have been some kind of excellence, by which he would be preeminent over the others: for this too, as a peculiar good, if granted to him by God, could have looked to the increase of beatitude.

But Scotus, thinking that it was Anselm's opinion that the angel sinned by the appetite of beatitude, tries to prove it by three reasons; the first of which, in Scotus's judgment taken from Anselm himself, is of this sort: Either the angel sinned by the appetite of the honest, or by the appetite of the advantageous, which we commonly call the delectable: for the appetite of the ...[1919]

Disputatio CCXXXV

Caput I - What the Scholastics hold without controversy

"By a useful good," says Scotus, "he could not have sinned; because this is not appetited first and of itself, but for the sake of the honorable (honestum) or the pleasurable (delectabile), since it is a good only as a means," as St. Thomas taught above, First - Second, question 5, article 6. But he could not have sinned by an appetite of the honorable, as is clear: therefore he sinned by an appetite of the useful or pleasurable; and consequently by an appetite of the supremely pleasurable; because this appetite must be first. Yet this reason is not Anselm's, as from what was said is manifest; nor does it prove anything: for even if he sinned by the appetite of some pleasurable object, it was not necessary that that pleasurable be the supremely pleasurable. For the first appetite can be occupied with some particular pleasurable good. Add that even the first sin can be about the useful (utile). For although the useful has goodness only as a means, and a means is not appetible for its own sake, but for the honorable or the pleasurable: nevertheless it can happen that the first malice comes not from a pleasurable end, but from a useful means; as if someone, in order to relieve the distress of his family or a friend, should wish to steal: he does indeed appetit theft as useful, and yet the first malice, indeed the whole of it, comes from that. The same will also happen if someone, for the sake of recreation, seeks money, and not finding it by a loan, is willing to steal it. I pass over Scotus's second reason, which proves nothing other than the preceding.

The third reason comes to the same, which is as follows: The appetitive faculty, which follows upon the cognitive faculty, first appetites the most fitting pleasurable; just as the appetite that follows taste first appetites what is supremely pleasurable to taste: wherefore if sight were to sin, it would sin indeed about the supreme visible; but the supreme pleasurable for the will is beatitude: therefore about that the Angel sinned. But this reason is no less weak than the preceding: because neither with animal appetite, nor with rational, is that first appetited which is supremely pleasurable; but with animal appetite, that which first occurs; with rational appetite, according as the will (voluntas) freely moves itself: now something other pleasurable than beatitude could present itself first to the Angel; and whatever should first present itself, he could have willed it in an ordered way, and some other particular pleasurable have appetited in a disordered way.

For my part, it is indeed most certain that the Angel could have fallen into the sin of pride by an immoderate affection for his own supernatural beatitude; as will be made clear below. Yet that he sinned by some other affection, on account of the authority of so great men, is to me certainly probable. That, however, it can be confirmed by some certain reason, or tradition, I do not see. Nor in this matter ought we to be overly solicitous, when the human mind, destitute of such supports, cannot at all attain unto it. For since it is a matter of fact, and very far removed from sense, it ought not to seem strange that it be hidden from us.

Moreover, in defending the common opinion which we have reported, the scholastics cited do not philosophize in the same way. The variety of opinions bears also, in a certain way, upon the question of possibility; wherefore, that at least it may be clear to us in what manner the Angel could have sinned by the sin of pride, appetiting for himself supernatural beatitude with an immoderate affection, it will be necessary to examine the several opinions.

Caput II - Three ways of explaining and defending the common view

Various are the ways by which those Doctors who embrace this common opinion explain and defend it. The first is of those who say that the appetite for supernatural beatitude in the Angel was inordinate and pertained to pride, because they appetited the excellence of it, not considering that it was to be obtained with the help and grace (gratia) of God, whereas they ought to have considered that. Thus philosophize the Antisiodorensis, Hervaeus, Durandus, Thomas de Argentina, Holcot, Marsilius, and Major in the places cited; and Ferrarensis in Contra Gentiles, book 3, chapter 109, § "Ad huius sententiam," and likewise in chapter 110 at the beginning; and in the same way Caietan presupposes this in question 64, article 2.[1920] Briefly to this. They add, moreover, that it is all the same to appetite supernatural beatitude without considering that it is to be obtained through the means of grace, and to desire to obtain it by one's own powers. And since to desire it in this latter way is a sin of pride and presumption, it will also be a sin to desire it without considering the means of grace by which it is to be attained.

The aforesaid authors had recourse to this sort of inconsideration, lest they should be compelled to concede some intolerable error in the angelic intellect, which it seemed to them necessary to admit, if their sin had been pride by appetiting beatitude beyond the due mode of excellence. But to concede an error in the Angel before the first sin seemed to them incongruous. Therefore they devised that such a sin was committed through a defect of inconsideration.

However, this way of defending the common opinion can be refuted, in my judgment, by two efficacious reasons. The first of which is: Such a sin could not have befallen the Angel, unless he transgressed some precept by which he was bound to appetite beatitude from an express consideration of the divine help: but the Angel had no such precept: therefore, in appetiting beatitude without a consideration of the divine help, he did not sin. Now that the Angel was bound by no such precept can be shown not obscurely. For either such a precept was natural, that is, arising from the very nature of the thing, although it was about a supernatural object; or it was posited for the Angel by God's will alone, which we call positive in the Schools. First, that it was natural could not be: because the precept of desiring beatitude in due mode obliges only to this, that we do not expressly desire to attain it without the help of God by our own powers alone: for daily we desire to be blessed and to contemplate God clearly, considering nothing about the grace of God, by whose help we are to attain it. But if someone should say that, although not always, at least at some time it is necessary to hope for and to desire beatitude from the help of God: surely

1920. Antisiodorensis (William of Auxerre), Hervaeus Natalis, Durandus, Thomas de Argentina, Holcot, Marsilius of Inghen, and John Major, in the loci cited; Franciscus de Ferrara (Ferrariensis), Contra Gentiles, book 3, ch. 109, § "Ad huius sententiam," and ch. 110 init.; Caietan, In Iam, q. 64, a. 2.

this can hardly be persuaded. But if he should prove it, it will nevertheless suffice once, especially within a brief space of time, to desire beatitude in this way. And yet already in the first instant in which he loved God above all things, the Angel had this mode of love of beatitude: for then he loved God by faith, and he had the hope of eternal life, as was proved in Disputation 227, cap. 2; every good received, and what he hoped would be in the future, he referred to God the author of all. In vain, therefore, shall we contrive such an obligation of a natural precept on account of which the Angel ought always actually to remain in that consideration and reference.

Next, such a precept was not positive: because neither by reason, nor by authority can it be proved that such a precept was imposed upon the Angel: nay rather, some of the Fathers expressly teach that the Angel fell with no precept imposed upon him. Thus teach Origen, book 3 on the Epistle to the Romans, on that of chapter 3, "Scimus autem, quoniam quaecunque lex," etc.; and St. John Chrysostom, tome 1, in the homily on Adam and Eve, before the middle, and in the homily on the fall of man, near the beginning; in which Chrysostom assigns the difference between the fall of man and of the Angel: for the Angel sinned with no precept imposed upon him; but man sinned with a precept imposed. Wherefore, when Durandus says in the cited question, no. 15, that it could have been that the sin of the Angel was in the transgression of some positive precept, he does not contradict our opinion. For he does not affirm that he so sinned, but that he could have sinned: which is quite another thing.[1921]

The later reason against the same opinion and the way of explaining the common opinion is of this sort: either that inconsideration was such that no thought at all preceded of that which the Angel ought to consider, namely, that beatitude is to be desired only from the help of God; or at least some thought in general preceded about that. If none at all, not even in general, preceded thought about that matter, such inconsideration, or an act arising from it, could not be imputed as fault: for, as we shall say in the First - Second, question 76, article 2, where no thought about some matter preceded, an action which is from that, or together with that, cannot be imputed as fault on account of that very inconsideration: for by deliberation or by freedom a man cannot reduce himself to a first deliberation, as we shall also show in the First - Second, question 14. But if some consideration of the divine help, at least confusedly and in general, preceded in the Angel, it follows that the Angel did not sin from inconsideration, as the Doctors of this opinion contend: and hence it is necessary to admit that there was an error in the Angel's intellect: or, if he could have sinned without error and without inconsideration, there is no need to have recourse to this mode of philosophizing.

Someone could indeed say that the Angel, in the first instant, considered the necessity of the divine help for obtaining beatitude, and in the second instant freely ceased from this consideration; and thus in that same he sinned from inconsideration. But this response is of little moment: because while the Angel in the first instant considered the necessity of the divine help, either he also in some way considered it necessary to remain in that consideration; and thus, ceasing from it,

1921. Origen, In Ep. ad Romanos, book 3, on Rom 3: "Scimus autem quoniam quaecunque lex..."; St. John Chrysostom, Hom. de Adam et Eva (t. 1, before the middle), and Hom. de lapsu hominis (near the beginning), where he distinguishes the fall of man from that of the Angel.

he would not have sinned from inconsideration: or he did not in any way think it necessary to remain in that consideration; and thus the same difficulty returns which was set above. I pass over the argument of certain men, by which they strive to prove that the Angel could not have sinned in any other way than from inconsideration, because since the Angel cannot appetite anything pleasurable, inasmuch as he has no sense, but only the honorable, and around the honorable one cannot sin save from inconsideration, it follows that he could not have sinned except from inconsideration. This argument, therefore, I omit, because it is utterly frivolous. For the pleasurable is found not only with respect to the body, but also with respect to the spirit. Then too it would follow that now the demon does not sin, when he pursues God with hatred, except from inconsideration, and around the honorable object - which is absurd. Add also that around an honorable object there can occur sin in another way than from inconsideration, namely from a bad circumstance; as is sufficiently plain.

The second way of defending and explaining the common opinion is that which Scotus assigns in question 2, "Ad videndum," whom Gabriel follows in the place cited. They say, then, that the Angel therefore sinned by an immoderate appetite of beatitude, because he loved his own beatitude more intensely than he ought, by loving God as his beatifying good with the love of concupiscence more intensely than he loved God with the love of friendship as good in himself. Yet this opinion is frivolous: for to love an object which of itself can be loved without sin, can never be sin merely on account of intensity. For the circumstance "How" (Quomodo), which is put by St. Thomas in the First - Second, question 7, and by the Scholastics among the circumstances, never gives an act its first malice, but only increases that which it finds; as from the same St. Thomas we shall show in the First - Second, question 18, article 11 - unless perhaps when a precept had been imposed that no one should act more intensely than up to a certain degree; but this alone can be positive, as is clear: because by natural law, a work of virtue, however much it grow, can never be evil. But that no positive precept was imposed upon the Angel we have shown above: nay rather, such a kind of precept, namely, that no one act more intensely, is to me difficult [to admit]. Moreover, that someone should love God more intensely with the love of concupiscence, as his own good, than with the love of friendship, as he is good in himself, is not contrary to the nature of the love of friendship, which is called love above all. For when it is said "above all," it is not understood (as they say) intensively, but appretiatively; which consists in this valuation, that one love nothing against true friendship with God; not however that he love nothing else more intensely; as we shall explain more fully in the First - Second, question 109, article 3. Wherefore I judge that in this way not only did the Angel not sin, but also that he could not have sinned.

The third way of defending the same opinion (it was of the same Scotus in the same place) asserts that therefore the Angel sinned because, in desiring beatitude, he wished to obtain it sooner than God willed. But although in this way the Angel could have sinned, if he had had a precept not to desire beatitude except at such a time appointed by God, or if he bore it indignantly that beatitude was not immediately granted to him - because this would be an appetite of his own dignity and excellence beyond the measure granted to him - nonetheless it is ridiculous to affirm that the Angel sinned in this way.

Caput III - A more probable way of defending the common opinion

Although, as I said at the beginning of the disputation, it is sufficiently uncertain that the Angel sinned by a proud appetite of his own beatitude, since the matter rests on a fact, the firm foundation of which we can scarcely have; nevertheless a more probable way, by which the Angel could have sinned with respect to his beatitude by an affection of pride, is that which the older and graver Scholastics followed in explaining the common opinion which we set forth in the first chapter. They say, then, Alexander, Albert, St. Thomas, St. Bonaventure, Aegidius, and Bassolis in the places cited, that the Angels sinned by an excessive desire of their supernatural beatitude, because they longed to attain it by their own powers; and although the aforesaid Doctors...[1922]

The second mode of defending and expounding the common opinion is that which Scotus asserts in question 2, and Gabriel follows in the place cited. They say that the Angel therefore sinned by an immoderate desire of beatitude, because he fixed on his own beatitude - which he ought to have sought by loving God as his supremely blessed good - with the love of concupiscence more intensely than he loved God with the love of friendship as good in Himself. Nevertheless this opinion is frivolous. For to love an object which of itself can be loved without sin can never become evil merely on account of the intensity; since a circumstance, "how," which is posited by St. Thomas in the Prima Secundae, question 7, among the circumstances, is not that which gives an act its first malice, but only augments that malice which it finds already present, as we shall show from the doctrine of the same St. Thomas in the Prima Secundae, question 18, article 3.[1923] Perhaps, indeed, if there were a precept not to act more intensely beyond a certain degree; but this kind of precept could only be positive, as is clear, because by natural right an act of virtue, however much it increase, can never be evil. But that there was any positive precept for the Angel, we showed above that there was none; nay rather, a precept of such a kind - namely, that no one should act more intensely - is difficult to conceive. Moreover, that a man should love God more intensely with the love of concupiscence as his own good, than with the love of friendship as He is good in Himself, is not contrary to the ratio of the love of friendship, which is called love above all things; for when we say "above all things," we do not understand it (as they say) intensively, but appretiatively; which is settled in such a way that nothing is against true friendship with God if one love Him, though not so that one may not love something else more intensely - as we shall explain more fully in the Prima Secundae, question 109, article 3. Wherefore I judge that in this way not only did the Angel not sin, but also that he could not have sinned.

A third mode of defending the same opinion, and it too is that of the same Scotus in the same place, asserts that the Angel therefore sinned because he desired beatitude, and wished to obtain it sooner than God willed. But although in this way the Angel could have sinned, if he had had a precept not to desire beatitude except at such a time set by God, or if he had taken it ill that

1922. Alexander of Hales; Albert the Great; St. Thomas; St. Bonaventure; Aegidius (of Rome); Bassolis, in the loci cited.
1923. St. Thomas, Summa theologiae, I - II, q. 7; I - II, q. 18, a. 3.

beatitude was not granted to him immediately - for that would have been an appetite of his own dignity and excellence beyond the measure granted to him - nevertheless it is quite ridiculous to affirm that in this way the Angel sinned.

A more probable mode of defending the common opinion

Although, as I said at the beginning of the disputation, it is sufficiently uncertain whether the Angel sinned by a proud desire of his own beatitude - since the matter is one of fact, the firm foundation of which we can scarcely have - yet the more probable mode, by which the Angel could have sinned concerning his own beatitude with the affect of pride, is that which the more ancient and graver Scholastics followed in explaining the common opinion, which in the first chapter we reported. They say, therefore - Alexander, Albert, St. Thomas, Bonaventure, Aegidius, and Bassolis in the places cited - that the Angels sinned by an excessive desire of their supernatural beatitude, because they longed to attain it by their own powers; and although the aforesaid Doctors, except Aegidius, do not explain whether the Angel sought expressly by desire to have beatitude in this mode, or whether only on account of a lack of consideration of the divine aid, to which he ought to have leaned, it is said that he sinned by seeking beatitude by his own powers as it were interpretatively (as they say); nevertheless, since they speak absolutely, they clearly seem to understand that the Angel expressly sought beatitude from his own powers, and not only interpretatively, on account of lack of consideration of the divine aid on which he had to rely, as Aegidius plainly taught in the place cited; nay more, Aegidius adds that the Angel not only sought beatitude by his own powers, but was also deceived by an error of the intellect. For he holds that the Angel cannot err concerning natural things, but can err well enough concerning supernatural objects. A similar error also seems to be attributed to the Angel by St. Thomas in question 64, article 2, reply to the third, and by Bonaventure in the second book, distinction 7, first part, article 1, question 2, when they say that the first sin remained indeed in the demon as to the affect, whereby he sought his own excellence, yet not as to this, that he judged he could attain it.[1924]

But I, as I said, judge this mode of defending the common opinion to be much more true, so that I firmly believe that in this way the Angel could have sinned with the express affect of seeking beatitude by his own powers, as I shall show below; yet not that he fell in this kind of sin deceived by an error of the intellect. Whether indeed the Angel in fact sinned by this kind of sin is not known to me. Nevertheless, besides the Scholastics cited, there are some Fathers who so favor this last way of thinking as to assert plainly that he sinned in this way. First indeed St. Ambrose, Epistle 84, a little before the middle, where, describing the kinds of pride, he speaks thus: "For some are puffed up in one way, who by a desire for singular eminence strive to be preferred before all; others swell in another way, who, rejecting the aid of God in those things which cannot be done without His working, contend to be perfected by their own virtue, and withdraw their hope from God: this kind of pride took its beginning from the devil, who, because he was pleased by his own power and dignity, which he had received from the Creator, compared himself to the author of his own glory; with those Angels whom he drew into consent with his impiety he was cast down from heavenly

1924. St. Thomas, Summa theologiae, I, q. 64, a. 2, ad 3; St. Bonaventure, In II Sent., dist. 7, pars 1, a. 1, q. 2; Aegidius (of Rome), in the place cited above.

height." By which words nothing could be said more clearly to show that the first sin by which the Angel fell was a proud appetite of obtaining supernatural beatitude by his own powers.[1925] Then St. Augustine no less clearly hands down the same in book 22 of the City of God, chapter 1, in these words: "He (namely, God), since He foreknew that certain Angels by an elation, whereby they would wish to suffice themselves for the blessed life, would be deserters of the Good, did not take away from them this power," etc.[1926] Finally St. Gregory expressed the same in book 34 of the Moralia, chapter 7 (otherwise 14), in this way: "For having left the principle to which he ought to have adhered, he (namely, the demon) in a way made himself a kind of principle: having left Him who truly could suffice for him, he indicated that he himself could suffice for himself." And although these Fathers seem to admit an error in the Angel when he sinned by that sin of pride, nevertheless they must be interpreted in a good sense, as we shall say below.[1927]

Therefore we must first explain by what reason there can be in the Angel and in man an affect of pride and presumption by arrogating to oneself the supernatural gifts of God, and by seeking beatitude itself to be attained by one's own powers without error. For the explanation of this, we must note what in the Prima Secundae, question 14, article 1, and question 77, article 2, will be proved more fully, namely, that the will of man and of the Angel is moved to a good work and to evil out of freedom without a judgment of composition and division in the intellect, but by the mere simple proposal of the object. And since in such a simple apprehension error cannot exist: it could also have happened that a man or an Angel sinned by this affect of pride and presumption, seeking to attain beatitude by his own powers without any error. By the same reason it could have happened that an Angel or a man sinned by the proud appetite of equality with God according to nature, without any error in the intellect: I do not say without defect, but without error. But the defect which always precedes - as in that question 77, article 2, we shall explain, and as we have already in part said in disputation 230, chapter 4 - is that those things are represented to us more efficaciously which move to sin than those which ought to draw us back from sin. The Angel, therefore, could apprehend his beatitude as full and absolute, as if it were suitable for him from his own powers, and in this way he could take complacency in it; and, on the contrary, he could be saddened seeing that he could not in reality by his own powers attain it. And each affect would be of pride and presumption, both the one which would consist in the affect of prosecution and complacency, and the one which would consist in the affect of flight and displeasure; and in this the same reason would exist of contraries. But each would be inefficacious and, as it is wont to be said, simple, as in the preceding disputation, chapter 2, was noted when we assigned the difference between an efficacious and a simple affect.

1925. St. Ambrose, Epistle 84, near the middle.
1926. St. Augustine, De civitate Dei, book 22, ch. 1.
1927. St. Gregory, Moralia, book 34, ch. 7 (alias 14).

But, with an efficacious affect and will, the Angel could not seek to attain his beatitude by his own powers: because, as I said in the place cited, and as in the Prima Secundae, question 13, article 4, it will be proved, an efficacious will, which tends to effecting a thing in deed, cannot be of impossibilities; but immediately when the intellect sees the impossibility of a thing, it ceases from consultation, election, and from any efficacious will, retaining only the will of simple complacency.

Then it must be proved that the Angel did not sin in this kind of sin deceived by any error, or by any similar one. For either he erred because he did not know that beatitude was above his powers, and this had not yet been revealed to him; and in that way it would not have been that sin to seek expressly for himself beatitude to be attained by his own powers: because by ignorance he would desire it for himself in that mode, and thus would be excused from sin. Or already the Angel knew that he could not attain his beatitude, either because it had been so revealed to him, or because he was plainly convinced that he could not reach with the sight of the intellect to the clear vision of God; for however much he might try, he would in himself experience that by his own power he could not attain to the vision of God; and in this way the Angel could not err in the way by judging that he could by his own powers attain his own beatitude: since even the demons have no such error; indeed neither can they have it: for they "believe and tremble," being convicted by the very truth, as James 2 says, and they believe nothing contrary to the faith.

But someone will say that indeed there could have been some error in the Angel's intellect which in no way would be contrary to our faith, in the way in which St. Thomas, in the Secunda Secundae, question 162, article 4, to the first, teaches that the presumption whereby someone presumes that he has a good which is not from God, or that grace was granted to him from his merits, is not necessarily conjoined with an error against the faith, because an error against the faith is only an estimation in universal and not a singular estimation: thus if someone should think universally that not every good is from God, and that grace is given to us from our merits, he would err against the faith. St. Thomas further adds an example: just as when someone should judge universally that fornication is good, he would be an unbeliever; but if he should judge in a particular case that it is good for him to fornicate, such a judgment would not be against the faith. The same doctrine is had by the same holy Doctor in the Secunda Secundae, question 20, article 2, in the body, and to the second, to show that despair can be without infidelity.

Yet it is difficult for me to excuse from an error against the faith that singular judgment, just as also the universal judgment, if under the same formal ratio each is held, as I shall show more at length in the Prima Secundae, question 77, article 2. For if someone should judge that fornication is good - that is, that it is honest and according to reason - not only would he sin against the faith in judging this universally, but also in judging this of a singular fornication. But if someone should judge that fornication is good - that is, that it is delectable - neither by judging universally, nor by judging this of a singular fornication, would he err against the faith. In the same way in the sin of presumption it seems that one ought to say this: either the universal and common judgment is not against the faith, and then the singular judgment is not; or if the universal judgment is against the faith, the singular is also, if under the same formal ratio each is held. For if someone in his intellect should judge that he can by his own powers attain beatitude and merit grace for himself, whether

he should judge this universally, or specially and singularly in a particular case, he would err against our faith: for the faith teaches in the same way universally that no creature suffices to itself for attaining its beatitude and for meriting grace for itself from God, and specially and singularly in any particular case whatsoever; therefore he who would judge the contrary either universally, or in a particular case, would err against the faith in the same way.

It remains, therefore, that we say that the Angel could have sinned concerning beatitude by seeking it immoderately from his own powers by a mere simple apprehension, whereby beatitude would be proposed to him in that mode as if it had been acquired by his own powers, as was explained above; or at least, if some judgment of composition preceded in the Angel, he could only have judged that it seemed to him a delectable good to have beatitude in that mode; which judgment indeed would have been sufficient to move the affect to simple complacency, not however to an efficacious desire of attaining beatitude: for to that efficacious affect a judgment was necessary affirming that it was possible for the Angel to attain beatitude by his own powers, as we noted above.

Caput IV - An objection against the foregoing doctrine

To what has been said up to this point a man could not without difficulty object as follows. If the Angel sinned by the sin of presumption, he did not sin by one sin of pride alone, but by a threefold kind of sin. First, against hope; because presumption also is opposed to hope, which has its beginning from grace and merits, as St. Thomas teaches in the Secunda Secundae, question 21, article 2; for because he hopes to attain beatitude without the merits of grace, he hopes vainly, and is said to presume. Secondly, he would sin against magnanimity, which consists in this, according to Aristotle, Ethics 4, chapter 3, and St. Thomas in the Secunda Secundae, question 129, namely, that it moderates the affections about great honors and dignities, which it seeks according to reason; wherefore presumption is opposed to magnanimity in respect of excellence, as St. Thomas teaches in the Secunda Secundae, question 130, article 2, in so far as a man seeks great things beyond the mode of right reason and beyond his measure. Thirdly, the Angel would have sinned by the sin of pride against humility; because presumption also is a species of pride, as St. Thomas holds in the Secunda Secundae, question 162, article 4, and as St. Gregory hands down in book 34 of the Moralia, chapter 14 (otherwise 4).[1928]

The objection is resolved

First I answer, if we say that the Angel sinned by the sin of presumption, nevertheless we must say that the Angel did not sin by that sin of presumption which is opposed to the virtue of hope. For, as St. Thomas rightly observes in the Secunda Secundae, question 21, article 1, the presumption which is opposed to hope is of this sort, namely, when someone hopes for something from God by His power and mercy, but not in that mode and order in which God willed to bestow upon His fallen ones - for example, the remission of sins without penance, or glory without merits

1928. St. Thomas, Summa theologiae, II - II, q. 21, a. 2; Aristotle, Nicomachean Ethics, book 4, ch. 3; St. Thomas, II - II, q. 129; II - II, q. 130, a. 2; II - II, q. 162, a. 4; St. Gregory, Moralia, book 34, ch. 14 (alias 4).

from grace. For hope, which is a theological virtue, regards God as its formal object; and its formal act is to ask something of God, which is proper to the formal object of a theological virtue: wherefore the opposite vice of presumption must also regard God as the one of whom we hope, so that in a peculiar way it may be opposed. But the presumption which is opposed to the virtue of magnanimity is borne only toward one's own excellence through one's own powers, as if it did not defer to God.

Next it must be said that, to the ratio of the sin of presumption which is opposed to hope, there must belong not only desire and a simple affect of complacency, but also an affect of attaining that which is desired: for hope can never exist unless someone believes that what he asks is possible, indeed in some way assured; but the Angel did not believe, indeed could not believe, that it was possible for him to attain his beatitude by his own powers; and thus he did not hope, and consequently neither did he sin against hope; but he only desired by a simple affect - which indeed is not opposed to hope, but to another virtue, as will be explained below. For that certain persons constitute the habit of hope as if it flowed into a certain simple complacency and into a delight concerning it in the fatherland, and therefore say that this habit remains in the fatherland, is against the common sentence; and the reason for that opinion we shall treat in its proper place.[1929]

Finally, although it is true that there can be a sin against theological hope, not only by hoping for something from God contrary to the due mode, but also by hoping from man or from an Angel for what ought to be hoped for from God alone; nevertheless this is not properly called the sin of presumption, but would be called by another name: yet in no way could someone sin against hope by hoping to attain by his own powers what he ought to hope for from God - namely, from the help of God, of which he stands in need.

From what has been said thus far, someone could propose this difficulty. If the Angel had sinned with the sin of presumption, he would not only have sinned by one sin of pride, but also by a threefold kind of sin. First, against hope: for presumption also is opposed to hope, which rests upon grace and merits, as St. Thomas teaches in the Second Part of the Second, question 21, article 2: for he who hopes to attain beatitude without the merits of grace, hopes vainly and is said to presume.[1930] Second, he would sin against magnanimity, which consists, as Aristotle testifies in Ethics 4, chapter 3, and St. Thomas in the Second Part of the Second, question 129, in moderating the affections concerning great honors and dignities which it seeks according to reason. Wherefore presumption is opposed to magnanimity on the side of excess, as St. Thomas teaches in the Second Part of the Second, question 130, article 2, in so far as a man desires great things not simply, that is, not as great in themselves, but relatively, that is, as great for his own powers. Third, the Angel would have sinned with the sin of pride against humility: for presumption also is a species of pride, as St. Thomas acknowledges in the Second Part of the Second, question 162, article 4, and St. Gregory taught in book 23 of the Moralia, chapter 4 (alias 7).[1931]

1929. On this question see the treatment of the state of the virtues in patria (e.g., whether hope remains in the blessed), as commonly discussed by theologians in their loci; cf. Summa theologiae, I - II, q. 67; III, q. 4, a. 4.

1930. St. Thomas, Summa theologiae, II - II, q. 21, a. 2.

1931. Aristotle, Nicomachean Ethics, bk. 4, ch. 3; St. Thomas, II - II, q. 129; II - II, q. 130, a. 2; II - II, q. 162, a. 4; St. Gregory, Moralia, bk. 23, ch. 4 (alias 7).

It is answered first, if we say that the Angel sinned by that sin of presumption: nevertheless it must be said that the Angel did not sin with the sin of presumption which is opposed to the virtue of hope. For, as St. Thomas rightly warns in that same Second Part of the Second, question 21, article 1, the presumption which is opposed to hope consists in this composite, that one should hope from God for something by His power and mercy, yet not in the way and order in which God willed: as if someone should hope from God for the remission of sins without penance, or for glory without merits by grace.[1932] For hope, which is a theological virtue, regards God as its formal object, from whom we hope for some other thing, which is proper to the formal object of a theological virtue; and therefore the vice of presumption opposed to it ought to regard God precisely as Him from whom we hope, that it may be set in opposition to Him under that peculiar ratio. But the presumption which is opposed to the virtue of magnanimity is borne only toward an excellence beyond one's proper power, as though that excellence were one's own when in fact it is not of one's proper virtue.

Then it must be said that, for the notion of the sin of presumption which is opposed to hope, there is required not only a desire and simple affection of complacency in the hope of obtaining that which is desired, but also a hopeful estimate that it will be obtained: for hope can never exist unless someone believes that what he hopes for is possible, indeed in some way future. But the Angel neither believed, nor indeed could he believe, that it was possible for him to attain his beatitude by his own powers; and so he did not hope, and therefore neither did he sin against hope, but he only desired with a simple affection; which indeed is not opposed to hope, but to another virtue, as will be explained below. For what some posit as the habit of hope by adding to faith a simple affection of hoping for beatitude and of delighting in it in the fatherland, and therefore say that this habit remains in the fatherland, is against the common opinion and we will easily refute it by reason in the Second Part of the Second, question 10, and in the Third Part, question 7, article 4.[1933]

Lastly, although it is true that one can sin against theological hope, not only by hoping to receive something from God contrary to the due mode, but also by hoping from man, or from an angel, that which is to be hoped for from God alone (for thus a peculiar irreverence would be shown to God, from whom it ought to be hoped: which certainly would not be called the sin of presumption, but ought to be named otherwise), nevertheless no one can sin against hope by hoping to obtain by his own powers that which he ought to hope for from God: because no one can hope from himself to do anything by his own virtue, except in so far as he trusts that, with the help of God of which he stands in need, he will act rightly.

The reason indeed is, that every act of hoping has as its object something arduous; but the arduousness and difficulty lies in this, that we hope to receive from another what we desire; whereas what we desire to be brought about by ourselves, we do not hope for, in so far as it is going

1932. St. Thomas, II - II, q. 21, a. 1.
1933. St. Thomas, II - II, q. 10; III, q. 7, a. 4.

to be from ourselves alone: for on that score it is easy, nor can it be the object of hope, as I noted above in Disputation 84, chapter 1. We do, however, sometimes hope for something to be from ourselves, by reason of the removal of impediments which must be removed by another.

As to that which in the same difficulty was proposed - namely, in what way the sin of presumption is distinguished as it is opposed to magnanimity and to humility, and whether humility is the same virtue with magnanimity, or a different virtue - it is not for this place to define. Nevertheless I will set forth the things which I have read written on this matter, and I will leave the defining of the thing to its place in the Second Part of the Second. St. Thomas, in the places cited of the Second Part of the Second, and Cajetan there plainly teach that magnanimity and humility are two distinct virtues; and consequently that presumption is a sin in a twofold respect opposed to these two virtues. Cajetan, in the Second Part of the Second, question 161, article 1, explains the ratio of the virtue of humility, so as to distinguish it from magnanimity, in this way, that humility formally consists in due subjection to God, not as to one commanding (for this is obedience) but to God simply as God: wherefore presumption, in the sentence of Cajetan, so far as it pertains to the sin of pride and is opposed to the virtue of humility, will be a not willing to be subject to God. Magnanimity, on the other hand, in his view, is a virtue which is conversant about dignities and honors according to a due and fitting mode; and thus presumption opposed to magnanimity will be an immoderate affection for honor and dignity beyond the measure that is due and fitting. But this way does not assign sufficiently the discrimination between these two virtues and between those two vices. For humility is not only in due subjection to God, but also in moderating the affection for honor and dignity. In like manner pride is not only a not being subject to God, but also an appetite and complacency in honor and dignity beyond the due measure. Therefore, in another way, magnanimity and humility must be distinguished: the presumption that pertains to pride, which is opposed to humility, and the presumption opposed to magnanimity.

St. Thomas, in that Second Part of the Second, question 161, article 1, among those two virtues assigns this difference, that humility restrains the mind lest it tend immoderately to sublime things; but magnanimity impels, against despair, toward the attainment of great things according to the due mode. From which difference it seems difficult to gather the discrimination between the presumption opposed to humility, which is a species of pride, and the presumption opposed to magnanimity.

Finally, Martinus de Magistris, in the first question on humility, thinks that humility and magnanimity are the same virtue. He proves it thus, because they have one and the same contrary, namely presumption under the same precise notion, to wit, in so far as it is the appetite for honor, excellence, and dignity beyond the due measure. For this opinion, first, the authority of Aristotle makes for it, who, concerning honors and dignities, never established any other virtue than magnanimity holding the mean, which he treats in Ethics 4, chapter 3; nor does he anywhere else treat humility as a distinct virtue. The extremes and vices opposed to magnanimity he clearly posits: pusillanimity on one side by defect, because it does not care for the dignity and honor that is due; the other extreme by excess he calls the vain man (ventosus), whom we can call the proud and presumptuous; of which below we will speak in its place. But these two vices are opposed to

humility: by defect indeed it is pusillanimity. Second, St. Thomas in the Second Part of the Second, questions 131 and 132, assigns as vices opposed to magnanimity by excess, vainglory and ambition. Who, however, would doubt that these vices are opposed to humility? Third, for this opinion this reason can be formed: the mean is the same between the same extremes; that which is kept by magnanimity and humility alike, namely, between excessive honors and dignities and abject tasks; and each virtue has two acts of the same kind: for both humility and magnanimity impel the soul, lest, from fear of going too far in honors and dignities, it should not dare great things; and each restrains the appetite, lest it should tend to greater things: therefore the same is the virtue of magnanimity and humility. For the mean between extremes is the formal object constituting any virtue and distinguishing it from the others. It matters little, therefore, that there are two acts, one of restraining the appetite, the other of impelling: since these acts are conversant among extremes to constitute a due mean between them. For every virtue that is conversant about an object consisting in a mean between extremes has two acts in the same way, as is evident.

But someone will object: Christians often, by the virtue of humility, choose for themselves the most abject state, and treat themselves as most vile; which does not seem to be of magnanimity, since it rather inclines to the extreme of pusillanimity; and yet it is a work of Christian humility, which Aristotle and the philosophers did not know: therefore it is necessary to distinguish humility from magnanimity.

I answer, this kind of Christian humility is not alien from the true magnanimity which the philosophers knew: because Christians considered themselves, not in so far as they are worthy of such an honor in the commonwealth, or of the office which they exercise, but in so far as they recognize themselves sinners before God: they plainly see and judge that it is not smallness but greatness of soul to treat themselves thus. Nevertheless, along with this, on the other side they ought to have regard to the office which they exercise, whether of a Bishop or of a King, or another in the commonwealth, lest in such works of humility, assumed from the consideration of sin, they decline into the vice of pusillanimity. Although therefore the philosophers did not know this cause of humility, namely the consideration of sins before God, yet they do not seem to have been ignorant of the rationale of humility in general. These are the things which occur to me in passing to be proposed in this difficulty; the definition and force of which are deferred to the Second Part of the Second.

Caput V - By what reason the Angel could sin by the appetite of natural beatitude

We have explained thus far in what way the Angel could have sinned by the appetite for his own supernatural beatitude. Now it remains to be examined, whether he sinned by the appetite for natural beatitude, or at least could have sinned. St. Thomas, whom also Caietan follows in this article, and the Ferrariensis, in the third book Contra gentes, chapter 109; Hervaeus, and Bassolis, in the places cited, teach that the Angel sinned by an immoderate appetite for natural beatitude: because that pleased him as an ultimate end in such a way that he turned himself away from supernatural beatitude. With these also makes for the same Aegidius; and Richard seems to agree,

although they do not agree in the explanation of this opinion. Richard understands it thus, that the Angel by deliberation preferred his own excellence to the divine; in which respect indeed he seemed to constitute as his last end his own excellence and natural beatitude rather than the divine. But by what comparison there was a greater love of his own excellence than of the divine, namely than of the divine beatitude which he was going to receive from God if he persevered, Richard does not explain.

St. Thomas sets out his opinion in this way, that the Angel sinned by desiring the likeness of God in such a way that he rested in his natural perfection as in a last end; but he turned away his appetite from the supernatural beatitude which he was going to receive from God. Yet because it seemed difficult that the Angel first, by his own sin, expressly willed to avert himself from his last supernatural beatitude - whence there would seem to have to be conceded an error in the intellect of the Angel, so that he sinned by such an affection, which is absurd - therefore Hervaeus, Caietan, the Ferrariensis in that cited chapter, and more recent Thomists, to whom add also Aegidius and Bassolis in the place alleged, interpret the mind of St. Thomas thus: that the Angel did not sin with an express will of averting himself from supernatural beatitude, but because he so loved his natural beatitude and excellence that he did not refer it to the supernatural, to which he was bound to refer it. And that the omission of this reference arose from inconsideration, they affirm...

We have explained above how the angel could sin by a proud appetite of his own supernatural beatitude. Now there remains to be examined whether he sinned by the appetite of natural beatitude, or at least could sin thus. St. Thomas, whom Cajetan also follows in this article, together with Ferrarensis in the third book Contra gentes, chapter 109, Hervaeus, and Bassolis in the places cited, teach that the angel sinned by an immoderate appetite of natural beatitude: because that pleased him in such a way as an ultimate end that he averted himself from supernatural beatitude.[1934] With these Aegidius also agrees, and Richard seems to consent, although in their explanation of this position they do not agree.[1935] Richard understands it thus: that the angel by deliberation loved his own excellence more than the divine; by which reasoning he seemed to constitute his ultimate end in natural excellence and beatitude. But by what comparison that love of his own excellence was greater than the divine - namely, than the divine beatitude that he was to receive from God if he stood firm - Richard does not explain.

St. Thomas sets out his view in this way: that the angel sinned by so seeking a likeness of God as to rest in his own natural perfection as in his last end; but he averted his appetite from the supernatural beatitude which he was to receive from God. However, because it seems difficult that the angel in his first sin expressly willed to avert himself from ultimate supernatural beatitude - whence an error in the angel's intellect would seem to have to be conceded, which is absurd - therefore Hervaeus, Cajetan, Ferrarensis in the cited chapter, § Ad evidentiam rationis, and recent Thomists (to whom they also add Aegidius and Bassolis in the place alleged) interpret the mind of St. Thomas in such a way that the angel did not sin with an express will of averting himself from

1934. Cajetan, ad hunc articulum; Ferrarensis, III Contra gentes, c. 109; Hervaeus; Bassolis.
1935. Aegidius; Richard.

beatitude, but because he so loved his natural beatitude that he did not refer it to the supernatural, to which he was bound to refer it. And that the omission of this reference arose from inconsideration, Hervaeus and Ferrarensis affirm; others say nothing about inconsideration.

Yet to me this way of explaining the angel's sin by that omission of reference is refuted as false. First, by no means, if it be said that it came from inconsideration: for, as was said in chapter 2, a sin could not befall the angel from inconsideration. Next also, because such a sin would not be pride (*superbia*), if the angel had sinned from the sole omission of reference: and so in this way one cannot defend the common view which asserts that the first sin of the angel was pride. For if the angel were to advert that there was a precept to him of referring his own excellence and natural beatitude to the supernatural, and he did not refer it, he would not sin by the sin of pride: because to take delight in one's own excellence and natural beatitude - without attributing it to oneself as author, either by thought or by affection, even a simple one - is not a sin of pride: for that sin is the appetite (*appetitus*) of an excellence beyond one's proper dignity. But he who delights in his own natural beatitude and excellence, as in that whereby he is made to the likeness of God, capable of grace (*gratia*) and gifts, does not seek an excellence beyond his own dignity. Therefore, if the angel had thus taken delight in his natural beatitude and perfection, while otherwise rightly acknowledging that he had received all that from God as author, he would not have sinned by the sin of pride. Nor indeed would he have sinned by the sin of pride because he omitted to refer his own beatitude and natural perfection to supernatural beatitude. For if there had been a precept of referring natural beatitude to the supernatural that obliged the angel, and he had so omitted to refer that the omission were imputed as culpable, it would not have been a sin of pride: because it would not have been an appetite of excellence beyond his own dignity; and no sin of pride consists in omission, but every sin of pride is of commission. Therefore it would have been an omission-sin either against hope or against charity, from which that obligation of referring would have arisen: because in truth it would not have been merely an omission of a circumstance, but the omission of an act of some virtue. Moreover, even if that complacency in one's own natural excellence were the cause of not referring, and thus of transgressing the precept of another virtue, nevertheless it would not on that account have been a sin of pride - just as, if someone, delighting in his own natural excellence, should not attribute it to himself as author, neither by thought nor affection even simple, it is not a sin of pride: for that sin is the appetite of an excellence beyond one's proper dignity.

Add also that by no reasoning can it be proved that the angel in the first instant had a precept of referring his own natural beatitude to the supernatural, as in chapter 2 we said about another like precept. For there was neither a positive precept, since none was imposed on the angel, as we proved from the sentiment of the Fathers; nor can it by any reasoning be shown that there was a precept of order from the very nature of the thing, as we also deduced there about another like case.

My opinion therefore is that the angel's sin could indeed be one of pride in the appetite and complacency of natural beatitude, but with an express aversion from supernatural beatitude, as will immediately be explained - in which point this opinion is most consonant with the doctrine of St. Thomas: but that the angel did sin by such a sin cannot be held as certain.

And to begin with this latter part: in the first place it is certain that by reason alone it cannot be inferred what sort the angel's sin was, since this matter consists in the fact. Wherefore it must be established for us by authority alone. Now, as has been sufficiently shown above, the common sense of the Fathers teaches only that the sin was pride: which, to be sure, could have occurred in a thousand ways. But that it was this or that sin about this or that object, certainly we do not have from their common doctrine. And if some, as we have seen above, assign some object and mode of this pride in the angel, yet no one says that the angel sinned by the appetite of his natural beatitude, averting himself from supernatural beatitude. But Cajetan at the end of this article holds himself persuaded that the angel sinned by this sin of pride: because the proud are more impelled to the sin of pride by delight in a natural good and perfection. I for my part do not see why we ought to affirm this assertively: especially in an angel, to whom, since he clearly saw that the natural perfection he had was from God, it would not easily have displeased him to be able to have another greater from the same.

But as to the former part, which is only about the possible, we can by sure reason explain and prove that the angel could sin with a sin of pride. For it could so please the angel - his own nature and natural perfection - that it would displease him to need another supernatural and extrinsic perfection which he would have to expect from God by merits: in which there would indeed be an express aversion from supernatural beatitude, not by an efficacious act but by a simple affect of displeasure: and there would be a manifest affect of pride, and an appetite of one's own excellence beyond a due mode: which, however, would be a sin of pride not by reason that there was complacency over one's own excellence, but by reason of the aversion from supernatural beatitude. Now such an affect could indeed occur without error of the intellect, from a merely assumed proposition (as we explained above), proposed under the appearance that he somewhat needed further extrinsic perfection, and that his intrinsic and natural perfection, which he had, did not suffice him.

However, that we may defend that in the appetite and complacency for natural beatitude there could have been a sin of pride, Ferrarensis notes that it could do no harm that the love of natural perfection is necessary as to its specific line. For since it is free as to exercise (*exercitium*), this suffices, that in it there be freedom sufficient for sin. But since this sin of pride would have occurred from this, that it displeased the angel to need extrinsic beatitude, and in this affect there would be freedom as to exercise and as to specification, there is no reason for us to have recourse to what Ferrarensis notes.

Caput VI - How the angel could sin by desiring to be preferred to others

Finally, to explain the nature of the sin by which the angel is said to have sinned from pride, the Doctors discuss whether he desired to be preferred to others or to preside over others, or at least to be subject to none: and it will be clear below that by these two modes he could sin by an affect of pride. Not a few scholastic Doctors, and some holy Fathers as well, have held that the sin of the angel was this, that he desired to preside and to be subject to none. Of the Scholastics, Alexander teaches this in the Second Part, question 98, member 3, in the body; and he at the same time also teaches that he sinned by an immoderate affect of beatitude.[1936] The same is affirmed by St. Bonaventure on II, dist. an., q. 2; by Nicholas of Lyra on Isaiah 14, "I will ascend into heaven"; by Burgensis in the addition to that chapter; by Toringus in the reply to the same; and by William of Paris, De universo, part 2 of the principal part, chapters 109 and 110.[1937] Among the lesser ones, first St. Augustine in book 14 of the City of God, in one chapter with the words, "After that proud angel, and thereby the world, by the same pride turned himself from God to himself, to exercise over his subjects a certain as it were tyrannical dominion, he cast himself out of the spiritual paradise."[1938] Second, St. Basil in Oration 17, which is on humility, where he speaks thus: "He (namely the demon), when he had lifted himself above men, dragged down all men."[1939] Third, St. Gregory in book 34 of the Moralia, chapter 17 (alias 14), says thus: "He (namely the demon) lusted for the license of liberty, to be preferred to the rest, that he might be subject to none."[1940] Fourth, St. Bernard in Sermons 17 and 69 on the Canticles plainly asserts that the demon desired to preside over men as master and head, and that he was indignant that, for the remedy of men, the divine Word should take flesh; and therefore that he said, "To what purpose is this waste of ointment?" as if he were to say that so great a remedy was not needed.[1941]

Whether the angel desired to preside over angels, or only over men, is not taught in the same way by the Doctors: Basil and Bernard seem to assert that the angel desired to preside only over men, for they make no mention of the angels; others, however, seem to speak with respect to the angels. I for my part think that the angel could have sinned in either way. But whether he sinned in this way or in that, I do not know for certain, nor do I see whence we might be able to gather it.

Moreover, by what rationale the angel desired to preside over men or angels, the Doctors alleged do not explain. This nevertheless we can assert by certain reasoning: that their sin, in order to be one of pride, had to be in the appetite and complacency, not of the excellence that is natural, by which he naturally excelled others (for this complacency would not have been a sin of pride - for that a man rejoices to be superior to brute animals is not a sin of pride), but it had to be in the appetite of some excellence which by its very nature did not befit him: for thus he would have desired some excellence beyond his proper dignity. Whether therefore that excellence was that of

the redeemer, which the angel desired for himself, or that of the teacher of men, to lead them into life eternal, or some other beyond his proper dignity, it would indeed have been a sin of pride; and it could befall him without error of the intellect, as we showed above about the appetite of equality with God according to nature, and of attaining beatitude by one's own powers.

Finally, to an angel who by nature was subject to another as being inferior to him according to nature, there could befall a sin of pride from a displeasure at such subjection; because it would displease him to be inferior to another according to nature: and this also would be pride, as is clearly gathered from the definition of pride. Whether the angel sinned in this way no one can define.

Lastly, among some of the Doctors alleged in this chapter there is a dissent about whether the angel could desire not to be subject to God; and by this rationale sin from pride. For the Fathers alleged, who say that the angel desired not to be subject, do not explain whether to God, or to the other angels. But as to the supreme case, if he sinned, it must be certain that he did not sin from this, that he desired not to be subject to others by nature: since by his own nature he excelled all. The rest indeed could sin by this appetite, as we have said, and it would be a sin of pride. But whether the angel could sin by desiring not to be subject to God, is a question among some Doctors. Nicholas of Lyra and Toringus in the places alleged judged that the angel desired not to be subject to God as a rule of operations; but that not to be subject to God according to existence he could not desire: because the former was possible, and so could fall under appetite; but the latter was not possible, and therefore the angel could not desire it. "For there cannot be a will about impossibles according to the order of making," says Toringus; "but there can be a will about the impossible in the order of doing: because many things are in the order of things which are in themselves possible, yet are impossible for someone." Of this kind are what Cajetan, as we saw in chapter 2 of this disputation, calls "impossibles per accidens": as not to have sinned, when now the sin is past.[1942]

Yet the opinion of Burgensis pleases me in the place cited, who affirms that the angel could will to be subject to God in no way, and in this way sin by pride: not only not to be subject to God commanding, but also not to be subject to God according to existence: not by efficacious desire, because the angel saw this to be impossible, and there is no efficacious will of the impossible; but by a simple affect, by reason that it displeased him to be inferior to God according to nature: and this indeed would be a sin of pride, as is clear. That there can be a simple affect of complacency or of displeasure about an impossible, and without error in the intellect, has been sufficiently proved by us above in chapter 2.

Moreover, the appetite by which the angel would will not to be subject to God as preceptor could occur in various ways. First, the angel could will not to be subject to God according to power, that is, to be so free from God's dominion that God could not impose a precept upon him: and this is as impossible as that God should not be superior to him according to essence: and accordingly, the very same must be said about this affect as about the preceding one, namely, that it could be a

1942. Cajetan, on chapter 2 of this disputation, on "impossibilia per accidens."

simple affect: which assuredly would be a sin of pride. Next, the angel could desire not to be subject to God actually commanding; and this in two ways. In one way, by transgressing his precept; and this affect could be efficacious: but it would be a sin, not of pride, but of the special inobedience, if it were done from an express intention not to obey, according to what we shall say in I - II, question 73, article 8: for if it were done without this express intention, it would only be a sin in that species in which the matter of the precept was constituted, according to what we shall also note there. In the other way, the angel could desire not to be subject to a precept, bearing it indignantly that a precept be imposed upon him, as though he judged it unworthy that anything should be commanded him by God: and this would be an affect of pride. Let these things suffice about this whole controversy, in which by enumeration we have shown in what ways the angel could sin. And as to the fact and the sin by which he sinned - what is certain, and what is not so certain - we have also pointed out incidentally.

Articulus IV - Whether some demons are naturally evil

To the fourth we proceed thus. It seems that some demons are naturally evil. For Porphyry says, as St. Augustine reports in book 10 of the City of God, that there are certain ...[1943]

...displeasure at such subjection; for it would be displeasing, if it could happen, to will not to be subject to God; and this too would be pride, as is clearly gathered from the definition of pride. Whether in fact the Angel sinned in this manner no one can determine.

Lastly, among some of the Doctors adduced in this chapter there is disagreement whether the Angel could desire not to be subject to God, and for this reason sin by pride. For the Fathers alleged, who say that the Angel desired not to be subject, do not explain whether not to God, or not to other angels. As to the supreme [angel], if he sinned, it must be certain that he did not sin on the ground that he desired not to be subject to others by nature; for by his own nature he was pre-eminent over all. The rest, however, could sin by this appetite, as we have said, and it would be a sin of pride. But whether the Angel could sin by desiring not to be subject to God is a question among certain Doctors. Nicholas of Lyra and Toringus, in the places cited, thought that the Angel desired not to be subject to God as the rule of operations; but that not to be subject to God as to existence he could not desire, because the former was possible and therefore could fall under the Angel's appetite, whereas the latter was not possible and therefore the Angel could not desire it. For, says Toringus, with respect to impossibles in the order of bringing-into-being there cannot be will; with respect to impossibles in the order of doing there can be, because many things in that order are in themselves possible which are nevertheless impossible for someone. Such are those which Cajetan called, as we saw in chapter 2 of this disputation, "accidental impossibles," as, after sin has already been committed, not to have sinned.[1944]

1943. Porphyry, as introduced by St. Augustine, De civitate Dei, l. 10. The following scholastic reference string in the margin is to the Sentences: II, d. 7, q. 1; and commentators, c. 107.

1944. Cajetan, on chapter 2 of this disputation, on "accidental impossibles."

However, the opinion of Burgensis in the place cited pleases me, who affirms that the Angel could will in no way to be subject to God, and in this manner sin by pride: not only not to be subject to God when commanding, but also not to be subject to God according to being; not by an efficacious will of effecting, but by an affection of displeasure at being inferior according to nature; and this, too, would be the sin of pride, as is clearly gathered from the definition of pride. Whether indeed the Angel sinned in this manner no one can define.

And such an affection of displeasure could occur, and without an error in the intellect, as was proved above in chapter 2. In various ways, moreover, this affection - by which the Angel might here desire - could occur.

- First, the Angel could desire to be exempt from God's dominion, so that He could not impose [His command]; a thing impossible as regards the order of being - just as God is not subject according to essence - and thus this would be a simple affection, which indeed would be a sin of pride.
- Next, the Angel could desire not to be subject to God commanding; and here the affection could pass into a transgression, and this affection could be a special sin of disobedience, if a precept were given with an expressly formed intention of not obeying; and then the sin would be in that species in which is the matter of the precept, according to what we shall note.
- In another way, he could desire not to be subject to one imposing a precept upon him, judging it unworthy that anything be imposed upon him by another; and here the affection would be of pride.

Let these things suffice concerning this whole imagining, in which we have shown in what modes the Angel could sin. As to the fact itself, and the sin, that he did sin is certain; what indeed he willed, we have also shown.

Whether some demons are naturally evil

Objicitur that some demons are naturally evil.

1. For, as Augustine introduces Porphyry, there is, as he says, a certain kind of demons by nature deceitful, feigning themselves gods and the souls of the dead. But to be deceitful is to be evil. Therefore some demons are naturally evil.
2. Further, just as angels are created by God, so also are men. But some men are naturally evil, of whom it is said (Wisdom 12[17]): "Their malice was natural to them." Therefore some angels too can be naturally evil.
3. Further, some irrational animals have certain natural wickednesses: as the fox is by nature sly, and the wolf by nature rapacious; and yet they are creatures of God. Therefore demons also, although they are creatures of God, can be naturally evil.

But on the contrary: Dionysius says in book 4, chapter On the Divine Names, that demons are not naturally evil.

I answer: Everything that is, insofar as it is and has some nature (*natura*), tends by nature toward some good, as existing from a good principle; for the effect is always converted into its principle. But it happens that some evil is adjoined to some particular good, as this evil is adjoined to fire, that it consumes other things. But no evil can be adjoined to the universal good. If, therefore, there be something whose nature is ordered to some particular good, it can naturally tend into some evil, not insofar as it is evil, but per accidens, insofar as it is conjoined to some good. But if there be something whose nature is ordered to some good according to the common notion of the good, this according to its nature cannot tend into any evil. Now it is manifest that every intellectual nature (*natura intellectualis*) has an order to the universal good, which it can apprehend, and which is the object of the will (*voluntas*). Hence, since demons are intellectual substances, in no way can they have a natural inclination into any evil whatsoever. And therefore they cannot be naturally evil.

Reply to the first: Augustine there reproves Porphyry for having said that demons were naturally deceitful; saying that they are not naturally deceitful, but by their own will. Now Porphyry on this account supposed demons to be by nature deceitful, because he posited that demons are animals having a sensitive nature (*natura sensitiva*). But the sensitive nature is ordered to some particular good, to which evil can be conjoined. And according to this they can have some natural inclination to an evil per accidens, namely insofar as the evil is conjoined to some good.

Reply to the second: The malice of some men can be called natural either on account of custom, which is a second nature, or on account of a natural inclination on the part of the sensitive nature to some inordinate passion; as some are said to be naturally irascible or concupiscent. Not, however, on the part of the intellectual nature.

Reply to the third: The souls of brute animals, according to the sensitive nature, have a natural inclination to certain particular goods, to which some evils are conjoined: as the fox to procure sustenance sagaciously, to which craftiness is adjoined. Hence, to be crafty is not evil for the fox, since it is natural to it; just as to be furious is not evil for a dog: as Dionysius says in book 4, chapter On the Divine Names.

Notationes circa Articulum.

The conclusion is negative and, beyond controversy. Concerning which it is to be noted that a double sense of "to be able to be" is possible. The prior sense is that angels are not evil according to their nature and substance; and this is defined de fide in the Lateran Council under Innocent III, and it is reported in the chapter Firmiter, on the supreme Trinity and the Catholic faith; and in the First Council of Braga, canon 7; and by Leo I in Epistle 91, which is to Turibius, chapter 6, where he defines the same thing against the Priscillianists, who in this erred with the Manichee, and used to say that the demon is by his nature evil and the author of every evil, and was never good nor made good by God, but welled up out of chaos and darkness. In this error was Manichaeus, as Augustine testifies in the book On Heresies, chapter 46.[1945] The posterior sense of the conclusion is that the Angel is not naturally evil; and in this sense also the conclusion is true, because in very truth in the Angel there is no natural inclination to evil.

Passing over the reason of St. Thomas which you have in the text, another no less easily can be proved, which is as follows. In an angel there cannot be an inclination to sin except by reason of the will, which alone is the principle of sinning; but the will of a rational creature cannot be naturally inclined to evil. For a natural inclination of the will can be nothing else than an inclination according to the mode of nature, that is, by a necessary determination to one part, either as to exercise or as to specification: but no created will can be inclined of necessity to any sin, neither as to exercise - for there is no object of sin which is so loved by the will that it cannot fail to be loved - nor as to specification, for the will so loves no sin that it cannot hate it. Therefore in no way is a created will inclined to sin. Nor can a natural inclination to sin be said to exist in a rational creature by way of an innate potency merely to receive a form: for this inclination is said to be natural only when it is to a natural perfection. Nor is it enough to have a capacity arising from proper principles; for with respect to a supernatural form this capacity is wont to be called not natural but obediential. Wherefore, with respect to sin, which is against nature, it ought not to be called natural. But in man, by reason of sense, there is a certain natural inclination to a work which, with the accession of free consent of the will, would be sin (as will be explained in I - II, q. 71, a. 2). Therefore in demons there is a free inclination to sin, and in no way a natural one.

Further, concerning the doctrine of Aristotle against certain more recent theologians, observe that it is wrongly gathered by them, from the fact that an angel cannot sin in pure nature against the natural law, that he has no natural inclination to evil. For, in order that he be able to sin, such an inclination is not required, but the freedom of the will suffices. Otherwise even man could not sin against the natural law; because although he has a natural inclination on the part of the appetite to a work which, with consent supervening, would be sin, nevertheless he does not have a natural inclination to the very consent of sin, on which the ratio of sin essentially depends.

1945. Lateran IV under Innocent III, cap. Firmiter (on the supreme Trinity and the Catholic faith); First Council of Braga, canon 7; Leo I, Epistle 91 to Turibius, cap. 6; against the Priscillianists and Manichees. Augustine, De haeresibus, c. 46.

Articulus V - Whether the devil was evil in the first instant of his creation, by the fault of his own will

Dico quinto sic proceditur.

It seems that the devil in the very first instant of his creation was evil by the fault of his own will. For it is said in John 8 of the devil: "He was a murderer from the beginning."

1. Further, according to Augustine on Genesis ad litteram, the formlessness of a creature did not precede its formation in time, but only in origin. But by "heaven," which is read to have been first created (as he says in the second book), the formless angelic nature is understood. By what is said, that God said, "Let there be light," is understood its formation through conversion to the Word. Therefore at once the angelic nature was created, and was made light; but at the same time that it was made light, it was distinguished from the darkness, by which the sinning angels are understood. Therefore, in the first instant of their creation, some angels were beatified, and some sinned.
2. Further, sin is opposed to merit. But in the first instant of its creation any intellectual nature could merit, as the soul of Christ, or even the good angels themselves. Therefore the demons also in the first instant of their creation could sin.
3. Further, the angelic nature is more virtuous than a bodily nature. But a bodily thing in the first instant of its creation begins to have its operation, as fire in the first instant in which it is generated begins to move upward. Therefore the angel too in the first instant of his creation could operate. Either therefore he had a right operation, or not right. If right, since they had grace, by it they merited beatitude. But in angels the reward follows immediately upon merit, as was said above. Therefore they would have been at once blessed, and thus would never have sinned. Which is false. It remains, therefore, that in the first instant, by not operating rightly, they sinned.

But on the contrary is what is said in Genesis 1: "God saw all the things that He had made, and they were very good." But among them were also the demons. Therefore even the demons at some time were good.

I answer that some have held that straightway the demons in the first instant of their creation were evil, not indeed by nature, but by the sin of their own will; because, from when he became the devil, he refused justice. To which opinion, as Augustine says in the City of God, some have assented; not with those heretics, namely the Manichees, who say that the devil has a natural evil. But because this opinion contradicts the authority of Scripture - for it is said under the figure of the prince of Babylon of the devil, Isaiah 14: "How has Lucifer fallen, who did rise in the morning?" and Ezekiel 28: "Thou wast in the delights of the paradise of God," said to the devil under the person of the king of Tyre - therefore among the Masters this opinion has been rejected as irrational. Hence others have said that the angels in the first instant of their creation were able to sin, but did not sin. But this opinion also by some is reproved for this reason: since when two

operations follow one another, it seems impossible that in the same now both operations should be terminated. But manifest it is that the sin of the angel was an operation posterior to creation. Now the terminus of creation is the very existence (*esse*) of the angel; but the terminus of the operation of sin is that which was evil. It seems therefore impossible that in the first instant in which the angel began to exist, he was evil.

But this reason does not seem sufficient. For it has place only in temporal motions, which are carried out successively; as, if local motion follows upon alteration, in the same instant the alteration cannot be terminated and the local motion begin. But if the changes are instantaneous, the first and second terminus of the change can be together in the same instant: as in the same instant in which the moon is illuminated by the sun, it is illuminated by the moon. Now it is manifest that creation is instantaneous, and similarly the motion of free choice in angels; for they do not need weighing and discourse of reason, as was shown above. Hence nothing prevents terminus of creation and terminus of free choice from being together in the same instant. And therefore it is to be said otherwise, that it is impossible that an angel should have sinned in the first instant by an inordinate act of free choice. For although a thing in the first instant in which it begins to be can at once begin to operate, nevertheless that operation which it at once begins together with the being of the thing is to it from the agent from which it has being: as to be moved upward inheres in fire from the generating agent. Hence, if some thing has being from a deficient agent, which can be the cause of a defect of action, it can in the first instant in which it begins to be have a defect in its operation: as if a leg-bone, which is born lame from a defect in the seed, at once begins to limp. But the agent which produced the angels into being - namely God - cannot be the cause of sin. Therefore the angel could not sin in the first instant; rather he was at first good, and then sinned.

Wherefore it cannot be said that the devil was evil in the first instant of his creation.

Reply to the first: As St. Augustine says in De civitate Dei XI, when it is said that the devil sinned from the beginning, he is not to be understood to have sinned from the beginning from which he was created, but from the beginning of his sin, namely because he never departed from his sin.

Reply to the second: That distinction of light and darkness, in so far as by darkness the sins of the demons are understood, is to be taken according to God's foreknowledge. Hence Augustine says in the same book XI of De civitate Dei, that he alone could discern light and darkness who could also, before they fell, foreknow that they would fall.

Reply to the third: Whatever there is in merit is from God. And therefore the angel could merit in the first instant of his creation. But the case is not similar as regards sin, as has been said.

Reply to the fourth: God did not make a distinction among the angels before the aversion of some and the conversion of others, as Augustine says in De civitate Dei XI. And therefore all, having been created in grace, merited in the first instant. But some of them at once supplied an impediment to their beatitude, mortifying the preceding merit. And therefore they have been deprived of the beatitude which they merited.

The first conclusion is: The evil angels did not sin in the first instant of their creation. The second conclusion: No angel could sin in the first instant.

Disputatio CCXXXVI - Whether an angel could sin in the first instant of his existence

Angels did not sin in the first instant: this is the common and truer opinion. Caput 1.

That angels could have sinned in the first instant: some affirm this, others deny it. Caput 2.

Judgment concerning each opinion. Caput 3.

That in the first instant of their creation the angels could merit. Caput 4.

Caput I - The common and truer opinion: that the angels did not sin in the first instant

From the things we said in Disputation 226 it was clear that the angels did not sin in the first instant of their existence. For we showed, against not a few Scholastics, that the angels were created in grace, with which sin could not exist, not even by God's absolute power - a point that ought to be most certain for us who, against the heretics of our time, defend the true justice and sanctity inhering in the just, as we will show in I - II, q.113, a.2.[1946] But because among those Doctors who deny that the angels were created in grace, many also think that nevertheless the angel did not sin in the first instant, whereas one or another alone teaches the opposite, therefore, before we examine the proposed question concerning possibility, it seemed good first to establish how certain it ought to be that the angels did not sin in the first instant.

Accordingly, among those who teach that the angels were not created in the grace of God, Augustine Eugubinus in book 8 of De perenni philosophia, chapter 38, did not hesitate to affirm that the evil angels sinned from the beginning of their creation. He cites in favor of his opinion a certain Latin theologian, Theodore by name, and the words by which he expressly asserted this. The same opinion had previously been defended as probable by Alexander in 2, q.98, m.11, though not quite consistently with his own principles, as we shall see below.[1947] Among the Fathers, Augustine would seem to have been uselessly pressed into service, in book XI of De Genesi ad litteram, chapter 23, where he says that the devil fell not from what he had received, but from what he would have received had he willed to be subject; and in book XI of De civitate Dei, chapter 13, when he affirms that whoever thinks that the angels sinned by their own will from the beginning of their creation does not agree with the Manichee: for the Manichee taught that the angels are evil not only by their own will, but also by their very nature; whereas he would assert only this, that the angels from the beginning of their creation were evil by their will alone, and fell. But, as Augustine admonishes in that same book XI of De Genesi, chapter 23, if the angel by his nature from God had

1946. St. Thomas Aquinas, Summa theologiae, I - II, q.113, a.2.
1947. Alexander of Hales, Summa, part 2, q.98, memb. 11.

been made evil, he would not be said to have fallen. In Scripture, however, I find no foundation for this opinion that has any appearance of probability except that saying of John 8: "He" (namely the demon) "was a murderer from the beginning," and "he did not stand in the truth."

The opposite opinion, however, is most certain and confirmed by the common vote of all the Scholastics, who all, in II, distinction 4, in the places cited by us in Disputation 226, agree with St. Thomas in this article that the angels did not sin in the first instant, although they disagree among themselves whether they were created in grace or in pure nature. And St. Thomas and St. Bonaventure deem this opinion so true that St. Thomas insinuates the opposite to be erroneous, and Bonaventure says it borders upon heresy. Bonaventure and Thomas of Argentina also report that it was condemned by the bishop of Paris together with all the theologians of that university; and in confirmation of that condemnation more recent theologians heap up many considerations, which must be examined one by one. But first, from Augustine let us have it as certain that he does not fall into the Manichaean heresy who would say that the angel sinned by his own will from the beginning of his creation - which also we above have demonstrated by the best reasoning.

But let us see what Scriptural testimonies some bring forward by which they strive to condemn the opinion of Eugubinus. One is Isaiah 14: "How art thou fallen, O Lucifer, who didst rise in the morning." To this is similar that of Ezekiel 28: "Thou wast in the delights of the paradise of God," by which it seems to be proved that the angelic deserter had first been in the grace of God. Yet that these testimonies are not to be understood in the literal sense about the demon has been more than sufficiently shown above in Disputation 223, chapter 4; but to understand them of the demon by figure and accommodation does not seem sufficient to define a matter of faith, unless it is clear that the Holy Spirit willed by some fact of the one to signify the fact of the other.

Another testimony is that of John 8: "He did not stand in the truth," that is, in the holiness in which he was constituted. From this, however, it is not sufficiently proved that the angel had first been in grace before he sinned; this we showed at greater length in Disputation 227, chapter 2; and from that the foundation of the opinion of Eugubinus is also overthrown, who for this reason proves from that testimony that the angel sinned from the beginning of his creation, because it is said, "He was a murderer from the beginning." For that phrase "from the beginning" does not denote the very individual instant of his creation, or of the whole world; but a little after the beginning of the world, by reason of which small distance it is said "from the beginning"; either because, deceiving our first parents in paradise, he killed them spiritually, or because not long after he deceived Cain so that he killed his brother Abel. This sense, in my judgment, more fits the text of John. For there to the Jews who wished to kill Christ corporally, Christ said, "You are of your father the devil, and the desires of your father you wish to do: he was a murderer from the beginning," that is, from the beginning of the world he instigated to homicide. For the same John in his First Epistle, chapter 3, when he had said, "In this the children of God and the children of the devil are manifest: everyone who is not just is not of God, and he who does not love his brother; for this is the announcement which you have heard from the beginning, that you should love one another," to persuade them to brotherly love, subjoins, "Not as Cain, who was of the evil one, and killed his brother." There he opposes this, namely "to be of the evil one," to that which is "to be of

God"; and thus for John it comes to the same, "to be of the evil one," which he said in that chapter 3 of his First Epistle, as "to be of the devil as father," as he had said in the Gospel, chapter 8 - namely alluding to that deed by which, at the devil's persuasion, Cain killed his brother - so that for this reason the devil is said to be a murderer "from the beginning." In the same way Augustine, book XI of De civitate Dei, chapter 13, explains that saying of John 3, "the devil sins from the beginning," so that the phrase "from the beginning" signifies the same as "around the beginning of the world" or "of his condition."

Next, more recent theologians bring forward, to the condemnation of the opinion of Eugubinus, the Church's definition in the Lateran Council under Innocent III, and it is reported in the chapter Firmiter, De summa Trinitate et fide catholica, where it is said: "For the devil and the other demons were indeed created by God naturally good, but they themselves by themselves became evil." From this place, however, Eugubinus's opinion cannot be so clearly noted. For the council there only defines that the demons were by their nature created good, in order to show against the Manichee that the angels are not evil by nature.[1948]

Caput II - Authorities and divisions of opinion

...not by nature evil, but made evil by their own will. Whether, however, they were good earlier in time before they sinned, the Council does not explain.

Wherefore two testimonies alone seem to me to remain by which the truth of the common opinion is sufficiently proved, and by which the falsity of Eugubinus's opinion is shown to deserve no light censure. The first testimony is Scripture, Jude in his Epistle, where about the evil angels it is said: "But the angels who did not keep their principality, but deserted their own habitation" etc. [1949] For if the evil angels had never been good, but always evil, they would not be said to have abandoned a habitation, namely that of innocence: for they would never have had it; nor would they be said not to have kept their principality, since they would never have been in it, but always from the beginning would have been in the abject and most vile state of sin. I know indeed that some recent interpreters of Scripture understand by those angels the princes and kings of the land of promise; but the former interpretation is the common and truer one.

The second testimony is the Council of Braga, canon 7, which is the sixth canon of Leo the Great's Letter 91 against the Priscillianists. For in that Council the aforesaid Letter, with all its decrees, was read, and received by the consent of the whole Council, and confirmed under the malediction of anathema. In that Canon therefore it is thus defined: If anyone says that the devil was not first an angel made good by God, nor that his nature was God's handiwork, but says that he emerged from darkness, and that he has no author, but that he himself is the principle and substance of evil, as Manichaeus and Priscillian said, let him be anathema.[1950] Someone could

1948. Fourth Lateran Council (1215), under Innocent III, cap. Firmiter (De summa Trinitate et fide catholica): "Diabolus enim, et alii dæmones a Deo quidem natura creati sunt boni, sed ipsi per se facti sunt mali."

1949. Jude 6: "Angelos vero, qui non servaverunt suum principatum, sed dereliquerunt suum domicilium..."

1950. Council of Braga (Concilium Bracharense), canon 7, receiving Leo the Great, Epistle 91, against the Priscillianists; definition cited verbatim in that canon.

indeed say that in that canon it is not defined whether the angel was earlier in time good and without sin before he sinned, or not, because in this there was no controversy with Manichaeus and Priscillian, but only that he be condemned who would say that the demon is not God's handiwork, but emerged from darkness. And as to Leo, this is manifest, since he wrote that Letter only against Priscillian. As to the Council of Braga, the same is gathered from its proemium, where it is plainly said that the mind of the council was to eradicate utterly the errors of Priscillian, which were still flourishing in Spain. Yet I do not see by what reason it can be denied that in the Council of Braga it is also defined, or at least supposed as true, that the angels were previously good, not only according to nature, but also earlier in time without any fault. Wherefore I judge him deserving of no light censure who with Eugubinus would assert that the angels sinned in the first instant of their creation. St. Augustine, moreover, in the places alleged by them by no means holds that the angel sinned in the first instant; rather, when in that book 11 On Genesis literally, chapter 23, he said that the angel did not fall from what he had received, but from what he would receive, he indicated that the angel fell from the state of beatitude, to which he would have come if he had willed to obey God. Whether, however, he fell from the state of grace, or of pure nature in which he was before sin, Augustine does not treat there. And what he said in that book 11 On the City of God, chapter 13 - that he does not agree with the Manichee, who says that the angel sinned in the first instant of his creation - we indeed grant, as also above we have shown; yet on that account one would not be free from every other censure who should affirm it, especially after the definition of the Council of Braga and of Leo.[1951]

Angels in the first instant could sin, some affirm, others deny.

The theologians alleged in the preceding chapter, who by common consent, against Eugubinus, teach that the angels did not sin in the first instant of their creation, do not philosophize in the same way concerning the proposed controversy whether at least they could have sinned, but are divided into opposite opinions. Some of them have held that the angels could not sin in the first instant. Thus held Hugo of St. Victor in the Summa sententiarum, title 2, chapter 2; Alexander in the second part, question 29, member 1, article 7, in the body and in the solution of the arguments; St. Thomas, Cajetan, and later theologians on this article; and more suavely the same holy Doctor in De malo, question 16, article 4; Albert the Great in II, distinction 3, article 14, to the second; St. Bonaventure in the second part of the distinction, article 1, question 2, to the third; Richard in article 2, question 2; Durandus, d. 5, q. 2; Capreolus, question 2, article 2, and in distinction 4, rare question, conclusion 4, and article 3 in the solution of the arguments against the fourth conclusion; Thomas of Argentina in II, distinction 6, question 1, article 2; Henry in Quodlibet 8, question 10; Holcot in II, question 3, to the ninth; the Ferrarian in Contra gentes, book 3, chapter 109, n. 9.[1952] But concerning the foregoing: although they agree as to the very same conclusion which we have

1951. St. Augustine, De Genesi ad litteram XI, 23; De civitate Dei XI, 13.

1952. Hugo of St. Victor, Summa sententiarum, tit. 2, c. 2; Alexander of Hales, Summa, pars 2, q. 29, m. 1, a. 7; St. Thomas Aquinas on this article, and De malo q. 16 a. 4; Cajetan, ad loc.; Albert the Great, II, d. 3, a. 14, ad 2; St. Bonaventure, II, dist., pars 2, a. 1, q. 2, ad 3; Richard, a. 2 q. 2; Durandus, II (or V), q. 2; Capreolus, q. 2 a. 2; idem, dist. 4, quaest. rara, concl. 4, et a. 3 (solut. arg. contra 4. concl.); Thomas de Argentina, II, d. 6, q. 1, a. 2; Henry (of Ghent), Quodl. 8, q. 10; Holcot, II, q. 3, ad 9; the Ferrarian, Contra gentes III, c. 109, n. 9.

stated, nevertheless, since they were led to it by diverse reasons in order to defend that it was impossible for the angel to sin in the first instant, I judge that they are not in one and the same mind. Their various foundations we shall report in the next chapter and examine one by one.

Others, however, said that the angel could sin no less in the first instant of his creation than in the subsequent instants. Thus taught Scotus on II, distinction 5, question 2, I. Respondeo primo and in the following; and on III, distinction 18, question 1, to the fourth; Gregory on II on the same distinctions, question 1, article 2; Balliolus, question 1, article 2; Major, question 3, conclusion 2; Gabriel on the same, distinction 4, question 1, article 3, doubt 1; Marsilius on II, question 3, article 2, in the responsory conclusion.[1953] Whose opinion is to be understood thus, that the angel in the first instant of his creation not only could elicit an action with a defect, but even one which would be imputed as guilt. This I have noted on account of Aureolus who, as Thomas of Argentina reports in the place cited, taught that the angel could have an action with a defect, but not an action which would be imputed as guilt: which two do not cohere together, as Thomas rightly noted.[1954] This opinion rests on this single foundation: The angel in all other instants, except the first, could sin; therefore also in the first: for in the first instant he had nothing which in the others he would not have, and conversely; therefore, if in the others he had a ready potency to sin, he also had it ready in the first. Moreover, that he did not have in the other instants anything which, in order that he might be able to sin, he would not have had in the first, will be made clear by induction in the next chapter.

Caput III - Judgment on the two opinions

Although the authority of the Doctors who followed the former opinion ought to be esteemed by all as great, yet I candidly confess that the reasons by which they try to show that the angel could not sin in the first instant are not so effective as to convince adversaries manifestly; nay, some of them are so frivolous that they have long since been exploded by the schools, as in this chapter we shall show one by one.

The first reason, which indeed Alexander used, is of this sort: In the same instant in which a thing is produced, it cannot operate by any kind of operation; rather, the production of the thing must first be terminated in duration before there is the operation of that thing, because two operations (such as the generation of the thing and the operation of the thing itself), of which one follows the other, cannot be together; therefore the creation of the angel ought first in duration to have been terminated to the existence of the angel himself, before the angel operated. And since sin consists in operation, or in the omission of a due operation, it follows that the angel could not in the first instant sin, since he could not co-operate.

St. Thomas rightly rejects this reason, although he agrees with Alexander in the conclusion, for it manifestly contradicts philosophy. For who has denied that in the same instant in which the luminous body was created, it illuminated the air? Alexander's reason about operations, of which

1953. Scotus, In II Sent., d. 5, q. 2, and d. 18, q. 1; Gregory (of Rimini), In II Sent., ead. dist., q. 1, a. 2; Balliolus, q. 1, a. 2; Major, q. 3, concl. 2; Gabriel (Biel), ead. dist. 4, q. 1, a. 3, dub. 1; Marsilius (of Inghen), II, q. 3, a. 2, in conclus. responsali.

one follows upon another, holds only in successive motions, of which one is the cause of another, as motion according to place is the cause of heating; but one action which is in an instant can very well be simultaneous in duration with another action which follows it only in the order of cause, as the production of the luminous with the illumination which proceeds from the luminous. The reason for the difference is that the production of a thing which is done in an instant is together with the thing itself produced; but the thing produced, by the very fact that it is, can operate. A successive motion, however, from which, as from a cause, another motion arises, ought for the most part to precede; because in these motions, in order that the form and term produced by one be the cause of another following, it must first arrive at a certain grade, which it cannot reach in an instant; and therefore it is necessary that some time intervene until from the prior motion the posterior follows. I said "for the most part," because sometimes a twofold successive motion is also simultaneous, of which one arises from the other as from a cause: for the production of sound is born from the beating of the air, which is made by motion according to place; yet there is no time of the beating or of the motion according to place in which there is not a motion toward the sound, and conversely.

The second reason is that of Hugh, which Holcot embraces in the places alleged to this purpose: For sinning liberty is required; but in the first instant the angel could not have liberty in operating; therefore in the first instant the angel could not sin. Moreover they prove that in the first instant there could not be liberty by this: because liberty is only with respect to the future as it is future, for about the present it cannot be, as also the Master felt in II, distinction 25, chapter 2, and Hugh himself had taught earlier in book 1 De sacramentis, part 5, chapter 22.[1955] And from the sentiment of these Doctors it follows that, for the will to operate freely, it must be first in duration before it operates, so that in the prior duration it may be indifferent and free toward the future operation.

This second reason is easily refuted; its foundation is refuted by the whole School, as we have shown at length above in disputation 68, chapter 7. For it is enough that the will be free, even if prior by nature, considered in itself, it be indifferent, so that it can operate in this way or another; that it be prior in duration makes absolutely nothing to the point. Therefore an angel could in the very first instant of his creation operate freely, because his will of itself is indifferent, whether it operate in this way or, on the contrary, in that way.

The third reason of Albert, St. Bonaventure, and Henry, which, although akin to the preceding, differs, is this: The notion of sin requires liberty; but liberty cannot be in an operation unless deliberation precede; again, deliberation cannot be without time; therefore an angel in the sole first instant of his creation could not sin, since he could not even deliberate. Henry adds that, if there could be deliberation in an instant sufficient for liberty, then an angel could also sin in an instant; and the same those must assert, as many as are brought by this reason to defend the prior opinion.

This third reason is frivolous: for although in us, who understand only by discursus, time is required that we consult about means, after comparing them inter se; yet in angels even for the choice of means time does not seem necessary, since they understand without discursus and

compare many things among themselves, as was said above in disputation 221. Add that sin does not necessarily require consultation and choice of means inter se: for sin can happen in the very will of an end, as in the will of the delectable and of the advantageous, which has the character of an end and is desirable for its own sake; but that the will freely tend to the advantageous or delectable, there is required only the proposal of the object with indifference. And this is posited when the intellect attends not only to the ratio of the delectable and of the advantageous, by which the will is enticed, but also to the ratio of malice and of sin which can be in the prosecution of that object, as we shall note at 1 - 2, q. 74, arts. 6 and 7.

The fourth reason is that of Richard in the place cited, and of Capreolus in that article 3 cited, in the solutions of the arguments against the fourth conclusion and article 3. In the proof of the same conclusion it runs thus: A natural will must precede a deliberated one; but the natural, however, is not capable of sin; therefore the first operation could not in an angel be sinful; and consequently neither in the first instant, in which the first operation of the angel ought to have preceded, could the angel sin. And thus Capreolus explains the reason of St. Thomas, which we shall report below, who therefore said that in the first operation there could not be sin, because he judges the first to be from the author of nature, to whom in no way can sin be referred. Capreolus therefore explains it thus: because the first operation ought to be natural, and therefore from a natural inclination; and since the inclination is from the author of nature, the operation of such inclination ought to be from the same author.[1956]

But this reason has no more force than the preceding ones refuted by us, because the natural operation of the will need not precede the free one; rather both can be together in duration, even if the natural be the effect of a free cause. For the angel can at one and the same time love himself with a natural love, and God with a free love, or by another ordering toward his own perfection. Next, the operation of the will in life is not called natural because it is necessary as to exercise, but only as to specification: for there is no object toward which in an instant necessity moves the will as to exercise.

Secunda ratio is that of Hugh, which Holcot embraced in the places cited to this purpose: for sin there is required liberty; but in the first instant the angel could not have had liberty in acting; therefore in the first instant the angel could not sin. Moreover, that in the first instant liberty could not have been, they prove from this: because liberty is only with respect to the future as future; it cannot be about the present - thus also the Master felt in the second book, distinction 25, chapter 2, and Hugh himself had taught before, in book 1 of De sacramentis, part 5, chapter 22. Wherefore, according to the sentiment of these Doctors, in order that the will (*voluntas*) operate freely, it must first be in duration before it operates, so that in a prior duration it be indifferent and free to the future operation.

1954. Aureolus; cf. Thomas de Argentina, loc. cit., reporting Aureolus's view that an angel could have an action with a defect, but not one imputable as guilt.

1955. Peter Lombard, Sentences II, dist. 25, c. 2; Hugh of St. Victor, De sacramentis I, p. 5, c. 22.

1956. Richard (of St. Victor or of Mediavilla, as cited), loc. cit.; Capreolus, In II Sent., art. 3 (solutions against the fourth conclusion), explaining St. Thomas's reason.

But this reason rests on a false foundation, and is by now refuted by the whole School, as has been set out at length above in disputation 68, chapter 7. For that the will be free, it is enough if, considered in itself, it be indifferent so as to be able to operate in this or in the opposite way; to be prior according to duration matters not at all. An angel, therefore, could, in the very first instant of his creation, operate freely; because of itself his will is indifferent to operate thus or contrariwise.

The third reason of Albert, St. Bonaventure, and Henry, which differs little from the preceding, is this: to the notion of sin liberty (*libertas*) is required; but this cannot be in an operation unless deliberation (*deliberatio*) precede; and deliberation cannot be without time: therefore the angel in the first instant of his creation could not sin, just as neither could he deliberate. Henry adds that, if there could be in an instant a deliberation sufficient for liberty, then the angel could also sin in an instant. And the same must be asserted by as many as have been induced by this reason to defend the prior opinion.

This reason, however, is trifling. For although in us, who understand only by discourse, time is required in order that we take counsel about means, after comparing them among themselves; yet in angels time does not seem necessary even for the choice of means, since in one intuition they understand and compare many things among themselves, as was said above in disputation 221. Besides, sin does not necessarily demand consultation and election among means; for it can happen by the very will of an end, as in the will of the pleasurable and the expedient, which has the notion of an end and is appetible for its own sake. In order that the will be borne toward the expedient and the pleasurable, the mere proposal of the object with indifference suffices; this posited, so that the intellect attend to the notion of the pleasurable and the expedient, the will is allured - though also to the notion of felicity and of sin which can be in respect of itself - as we shall treat in I-II, q. 74, a....

Another illustration: when there are simultaneously two successive motions, one of which has its origin from the other as from a cause, as the production of sound is born from the striking of the air, which is by motion according to place - there is no time of the striking or of the motion according to place in which there is not motion toward sound, and vice versa.

The fourth reason is Richard's in the place cited, and that of Capreolus in that article 3 cited in the solutions against the arguments against the fourth conclusion, and in article 1 in proving the same fourth conclusion; it runs thus: the natural will must precede the deliberated; but the natural [will] is not capable of sin: therefore the first operation could not in the angel have been sin; and accordingly neither in the first instant, in which the first operation of the angel ought to have preceded, could the angel have sinned. And in this way Capreolus explains the reason of St. Thomas, which we shall report below, who for this reason said that in the first operation there could not be sin, because the first is attributed to the author of nature, to whom in no way can sin be referred. Capreolus, then, explains it thus: because the first operation ought to be natural, and therefore from natural inclination; and since the inclination is from the author of nature, the operation of such an inclination ought to be from the same author.

But this reason has no more weight than the preceding ones. First, because the natural operation of the will ought not in time to precede the free [operation], but both can be together in duration, even if the natural were the cause of the free. For the angel can at the same time love himself with natural love, and God with free love, or the intermediate things ordered to his perfection. Next, an operation of the will on the way is not called natural because it is necessary as to exercise (*exercitium*), but only as to specification (*specificationem*). For there is no object, except God clearly seen, which necessarily moves a created will as to exercise.

And thus even in an angel, as we noted above in question 60, article 3, there could be liberty as to exercise; therefore in the natural will there could be liberty with respect to exercise, and consequently in it there could be sin and merit (*meritum*). This reason seems to have been approved by Cajetan, and that he also understood the mind of the holy Doctor thus: for he says in this article that the prior action of the will is natural, and that this cannot be evil. But since he plainly concedes that in the first instant the angel could have merited - indeed also did merit - by an act of charity, as we shall see in the following chapter, in his sentence the foregoing reason can have no force. Capreolus, however, used this reason consistently with his own conclusions; for he plainly defends that the angel in the first instant could neither sin nor merit.

The fifth reason, which Durandus mentions in the question cited, number 5, should be framed thus: no one can sin unless he apprehend an apparent good, about which alone sin can be; but an apparent good cannot be apprehended unless first the true good be apprehended: therefore the angel ought first to have operated about the true good rather than about the apparent good.

Durandus judges this reason less sufficient, and deservedly so. But, omitting Durandus's refutation, it can easily be refuted thus: it is not necessary first to apprehend the honest good before the delectable; rather the delectable can occur first, and from it the affection be moved; and if such delectation be against reason, as very often happens, there will be sin in regard to it. And this happens without any error at all, as we showed above in the preceding disputation, chapter three, and shall prove in the Second Part, question 77, article 2, from this alone, that the delectable is proposed more efficaciously than the opposed honestum, or than that which ought to draw back the affection from the delectable and the expedient.

The sixth reason, which Durandus himself uses, is of this sort: either the angel is created in the grace of God, or in pure nature. If in the grace of God, it plainly follows that he cannot sin; because he cannot at once sin and be in the grace of God. Or he is created in pure nature; and then either with only natural knowledge, or with supernatural. If with only natural knowledge, it follows that he cannot sin: because the angel cannot sin in regard to the law that is altogether natural. If with supernatural knowledge, it is likewise brought about that he cannot sin: because he could not have sinned in regard to the supernatural law except from inconsideration, as above from the same Durandus we reported in disputation 230.

Yet this reason is less effective than the preceding. First indeed, although it be true that with grace there cannot be sin, yet the present controversy is only whether of itself the angel can sin. Next, even if in pure nature he be left without any supernatural cognition concerning the

supernatural law, he can rightly sin, as in the same disputation against Durandus and others was proved. Lastly, because in regard to the supernatural law he can sin in a way other than by inconsideration; indeed by mere inconsideration he cannot, as we showed in disputation 235, chapter two.

The seventh and last reason, and the most effective of all that are wont to be adduced for this side, is that of St. Thomas in this article 5. He attempts to prove that the angel could not sin about supernatural objects just as also about natural ones, in this way: the first operation of the will ought to be from God, and to it the will cannot determine itself; therefore that cannot be sin; otherwise sin would be attributed to God, who determined the will of the angel to such an operation; or at least, if it be not attributed to God, in such a way that fault be imputed to him (as the heretics of our time say, that our will is inclined and impelled by God to sin, and yet that fault is not to be imputed to God, since he is not capable of fault), at least it follows that fault cannot be imputed to the angel, if in his first operation he is determined by God to the work of sin, just as above in disputation 99, chapter 4, we inferred that a man cannot have fault imputed in individual operations, if he himself be determined by God to the work of sin and be applied first to it. Next, that the first operation of the will is from God, and that the created will does not move itself to it, is the doctrine of Anselm in the book De casu diaboli, chapter 12, where he teaches that the angel could not have his first will from himself; and the same must he say of man. The foundation, moreover, which Anselm uses is, that in order that someone be said to move himself to some act of will, it does not suffice to elicit the act of will to which he is said to move himself; but there is need first to have another act of will, from which he may move himself to the subsequent one; wherefore he says: therefore he who wills nothing can in no way move himself to willing. And from this he gathers that the angel's first will is from God. Which in chapters 13 and 14 he pursues further.[1957]

This reason seems to me difficult. I confess indeed that, through slowness of mind, I do not fully grasp the force of this argument. I shall therefore propose what is difficult to me about it, and I shall gladly listen to the judgment of others in this matter. First, I for my part do not sufficiently understand that the first act of will is from God by a more peculiar reason than that the first cogitation is from God determining, as I shall show at length in I-II, question 9, article 3, and as I have already shown above in disputation 221, chapter 4; because to the first cogitation the will cannot apply the intellect. And this is not only true in that operation of the will which in origin of time was the very first of all, but also in any first one which, in an angel or in a man, begins about some genus of business or of object. Yet this does not seem to stand in the way, so as to prevent the angel from being able to sin by consent of the will to such an object thought upon; just as, in the first volition about a new object which first presents itself, he can sin. For such proposal of the object, even if it be proposed by God or determining the intellect, nevertheless leaves the will free so that it can consent or not consent. Therefore the angel could, the object having been proposed which by precept was to be pursued, not pursue it, and hence sin. He could also have the intellect determined by God to propose to the will, by the same cogitation, an object in the pursuit of which there would be sin, and in the flight and displeasure of which there would be merit before God; and

1957. St. Anselm, De casu diaboli, c. 12 - 14.

the will by its first act could pursue that object and, by pursuing, sin, which it ought to have shunned. In neither case, however, would sin be attributed to God, even if he himself determined the intellect to that first cogitation from which the consent of sin was going to result. For such a proposition and cogitation, to which God determined the intellect, left the will free to follow whichever part it wished; just as we said in disputation 95, chapter 10, that God sometimes offers us occasions from which he sees that sin will be future, and yet sin is not imputed to God, nor on that account are we excused from fault; because such a cogitation leaves the will free, so that it stretch forth the hand to what it wills.

Next, what Anselm asserts - that to the first operation the will cannot move itself - does not lack difficulty. For, that the will be said to move itself to willing, there does not seem necessary another will by virtue of which it impels itself, as Henry observed against Anselm. This the example which Anselm himself objects to himself clearly convinces: for sight is said to move itself to seeing, not by virtue of some prior vision, but, in individual operations, by this alone, that the operation itself of seeing is from sight itself as from a principle. By the same reason Scotus, in the place cited, teaches that the first operation is no less from the will moving itself than the others, since in the same way all proceed from the will as efficient.[1958]

I pass over other reasons by which it is wont to be proved that the angel could not sin in the first instant, such as that the action both of sin and of merit ought to begin in time, and others like it, which are founded on false principles: such as Scotus has in the place cited. Gregory very well solves how sin and merit ought to begin, in the question cited: because since the operation of the will can be wholly at once, there is no doubt that it can begin in an instant of our time. Add also that, even if it could begin in time, some Authors of the posterior sentence would say that such a first operation cannot be sin - namely, all who defend that in the first operation sin cannot be.

Caput IV - In the first instant of their creation the angels could have merited

Since the Doctors who hold that the angels could not have sinned in the first instant were brought to that opinion by diverse reasons, the result is that, about their good merit - namely, whether in the first instant they could have merited eternal life - they have not thought in the same way. Some of them affirm that, in the first...

That in the first instant an angel could not have merited, Hugo of St. Victor, Alexander, Holcot, and Capreolus expressly taught in the places cited in chapter 2; and from their reason this is necessarily deduced. First indeed, from the reason of Hugo and Holcot, who think that in the first instant the angel was not free for that same instant, but only for a future time. Then by Alexander's reason the same is proved: because, according to his opinion, no thing can operate in the same instant in which it is first brought into being. Finally, from Capreolus's reason the same is gathered: because he thinks the angel's first operation must necessarily be natural, in which, according to his opinion, merit (*meritum*) cannot be. Albert, St. Bonaventure, and Henry would be forced to admit this very point, who hold that in the first instant there could not have been

1958. Scotus, in the place already cited.

freedom: because there could not be consultation and deliberation. Lastly, Richard ought to be in the same opinion, although he does not assert that very thing: because, with Capreolus, he proved that the angel could not have sinned in the first instant, since the first operation had to be natural, capable of neither sin nor merit.

Much truer, however, is the opposite opinion, which affirms that the angels could have merited eternal life in the first instant. Whether in fact they did merit it depends on that controversy, whether they were created in grace (*gratia*), or in pure nature, which above in disputation 226 we treated at length. But as regards the potency (*potentia*) of meriting, all those embraced this opinion whom in chapter e. we adduced for the posterior view. And of those who followed the prior, Ferrariensis likewise handed it down, 3 Contra gentes, chapter 110, n. 9. After these things were said, Cajetan and Durandus in the places there cited; and it is the express opinion of St. Thomas, as Ferrariensis rightly observed: for, as we shall show below, he plainly taught that the angels not only could have merited, but also did merit eternal life. Moreover, this opinion is proved from this: because, if something stood in the way so that the angels could not in the first instant merit, such would be the reasons of Hugo, Alexander, St. Bonaventure, or Richard, by which they tried to prove that the angels could not have sinned in the first instant; for if by those reasons it were proved that the angels could not have sinned, it would also be proved that they could not have merited: because for both there would be altogether the same rationale, as is clear. But by those reasons nothing is proved against the angel's potency to sin, as was more than sufficiently shown by us in the preceding chapter: therefore, by altogether the same reasoning, it remains shown that, those reasons notwithstanding, the angels could have merited eternal life. And other reasons cannot be devised which in any way would prove that the angels could not have merited: therefore there is no cause why we should deny to the angel in that instant the potency to merit.

Furthermore, that Blessed Thomas was in this opinion Ferrariensis rightly proves. For in this article 5, ad 3, he writes thus: "Whatever is in merit is from God: and therefore in the first instant of his creation an angel could have merited; but the case is not similar with sin."[1959] And in the following article he says thus: "Since the angels arrive at beatitude through a single meritorious act, as was said above: if the devil in the first instant of his creation merited, he would have received beatitude immediately after the first instant, unless immediately he had set an impediment by sinning."[1960] He had said, moreover, in that article, and in question 62, article 3, that the angel created in grace had a motion of free choice.[1961] But to these testimonies Capreolus replies, in that article 3, in the solution against the fifth conclusion, that St. Thomas only said that the demons in the first instant were worthy of glory by the grace in which they were created, not by any merit. However, this answer is quite frivolous: since St. Thomas plainly grants that there was in the angels a motion of free choice in the first instant, and that they too, being just, stood by the grace of God:

1959. St. Thomas, in this article 5, ad 3.
1960. In the following article.
1961. Question 62, article 3.

but a good work done in the state of grace, especially if it be of the love of God - as St. Thomas grants it to have been in the angels - is a merit of eternal life. As to the other requisites for the notion of merit we shall speak in 1 - 2, q. 114, arts. 1, 2, 3, and 4.[1962]

Articulus VI - Whether there was any delay between creation and the fall

To the sixth, we proceed thus. It seems that there was some delay between the creation and the fall of the angel. For it is said in Ezekiel 28: "You walked perfect in your ways from the day of your creation, until iniquity was found in you." But walking, since it is a continuous motion, requires some duration. Therefore there was some delay between the creation of the devil and his fall.

Moreover, Origen says that the ancient serpent did not straightway walk upon his breast and belly. By which is understood his sin. Therefore the devil did not sin immediately after the first instant of his creation.[1963]

Moreover, to be able to sin is common to man and to angel. But there was some delay between the formation of man and his sin. Therefore by equal reasoning there was some delay between the formation of the devil and his sin.

Moreover, there was a different instant in which the devil sinned from the instant in which he was created. But between any two instants a mean time falls. Therefore there was some delay between his creation and his fall.

But on the contrary: it is said of the devil in John 8 that "he did not stand in the truth." And as St. Augustine says in De Civitate Dei XI, we must take this thus, that "he stood in the truth, but did not remain."[1964]

I answer that there is a twofold opinion on this matter. But the more probable and more consonant with the sayings of the Saints is that immediately after the first instant of his creation the devil sinned. And this it is necessary to say, if it be posited that in the first instant of his creation he burst forth into an act (*actus*) of free choice (*liberum arbitrium*), and that he was created with grace, as we said above. For since the angels reach beatitude through a single meritorious act, as was said above, if the devil, created in grace in the first instant, merited, he would have received beatitude immediately after the first instant, unless immediately he had set an impediment by sinning. But if it be posited that the angel was not created in grace, or that in the first instant he could not have an act of free choice, nothing prevents there having been some delay between creation and the fall.

Reply to the first: By bodily motions, which are measured by time, sometimes in Sacred Scripture are understood metaphorically instantaneous spiritual motions. And thus by walking is understood the motion of free choice tending to the good.

1962. 1 - 2, q. 114, arts. 1 - 4.
1963. Origen, Homilies on Ezekiel, hom. 10 (tome 2), near the middle.
1964. St. Augustine, De Civitate Dei XI.

Reply to the second: Origen says that the ancient serpent did not from the beginning, nor straightway, walk upon his breast on account of the first instant in which he was not evil.

Reply to the third: The angel has free choice inflexible after election. And therefore unless immediately after the first instant, in which he had a natural motion toward the good, he had set an impediment to beatitude, he would have been made firm in the good. But it is not similar with man. And therefore the reasoning does not follow.

Reply to the fourth: That between any two instants there is a mean time has truth insofar as time is continuous, as is proved in Physics VI.[1965] But nevertheless in angels, who are not subject to the celestial motion which is first measured by continuous time, time is taken for the very succession of the operations of the intellect, or also of the affections. Thus, then, the first instant in angels is understood to correspond to an operation of the angelic mind, by which it turns to itself by vespertine cognition, because in the first day evening is commemorated but not morning. And this operation indeed was good in all. But from this operation some were turned by matutine cognition to the praise of the Word, whereas others, remaining in themselves, were made night, swelling with pride, as St. Augustine says On Genesis ad litteram IV.[1966] And thus the first operation was common to all. But in the second they are distinct. And therefore in the first instant all were...

[conclusion carried over]

And therefore in the first instant all were good, but in the second they were distinguished, the good from the evil; and its brightness, as it surpassed, was by comparison the clearer.

The conclusion is: Immediately after the first instant of their creation the Angel sinned; but this must be understood not of an instant of the duration of our time, but of an instant of discrete time, as if it were said that after the first operation he straightway sinned. The truth of this conclusion has been sufficiently explained by us above in Disputation 126, chapters 10 and 11.

Articulus VII - Whether the highest angel among those who sinned was the highest among all

It is proceeded to the seventh as follows.

It is objected that the angel who was highest among the sinners was not the highest among all. For it is said in Ezekiel 28: "You are the extended and protecting Cherub; I set you on the holy mountain of God." But the order of the Cherubim is beneath the order of the Seraphim, as Pseudo-Dionysius says on the angelic hierarchy.[1967] Therefore the angel who was highest among the sinners was not highest among all.

Further, God made the intellectual nature for the obtaining of beatitude. If, therefore, the angel who was highest among all sinned, it follows that the divine ordering was frustrated in the most noble creature. Which is unfitting.

1965. Aristotle, Physics VI.
1966. St. Augustine, De Genesi ad litteram IV.
1967. Pseudo-Dionysius, De coelesti hierarchia (on the angelic hierarchy).

Further, the more something is inclined toward a thing, the less can it fall away from it. But the higher an angel is, the more he is inclined toward God. Therefore he is less able to fall away from God by sinning. And thus it seems that the angel who sinned was not the highest among all, but of the lower.

But on the contrary: Gregory says in the homily on the Hundred Sheep that the first angel who sinned, while he was prelate over all the ranks of the angels.[1968]

I answer that in sin two things are to be considered, namely, proneness to sin and the motive for sinning. If, therefore, we consider in angels a proneness to sin, it seems less that the higher angels sinned than the lower. And for this reason St. John Damascene says that the greater part of those who sinned held preeminence over terrestrial order; and this opinion seems consonant with the position of the Platonists, which St. Augustine recounts in the City of God, books 8 and 10: for they say that all the gods were good, but that of the demons some were good and some evil, calling "gods" the intellectual substances which are above the lunar globe, and "demons" the intellectual substances which are below the lunar globe, superior to men in the order of nature.[1969] Nor is this opinion to be rejected as alien from the faith: for the whole corporeal creation is administered by God through angels, as St. Augustine says in book 3 On the Trinity.[1970] Whence nothing prevents our saying that the lower angels are divinely distributed to administer lower bodies, the higher to administer the higher bodies, but the supreme to assist God. And according to this St. John Damascene says that those who fell were from the lower, in whose order also certain good angels remained.[1971]

If, however, the motive for sinning is considered, a greater one is found in the higher than in the lower. For the sin of the demons was pride, as was said above. The motive of which is excellence, which was greater in the higher. And therefore St. Gregory says that the one who sinned was higher than all. And this seems more probable. For the angel's sin did not proceed from any proneness, but from free will (*liberum arbitrium*) alone. Whence the account to be considered seems rather that which is taken from the motive to sinning. Yet this does not prejudice the other opinion, because even in the prince of the lower angels there could be some motive to sinning.

Reply to the first: "Cherub" is interpreted "fullness of knowledge," "Seraphim" is interpreted "burning" or "intending." And thus it is clear that "Cherub" is denominated from knowledge, which can be with mortal sin, but "Seraphim" is denominated from the ardor of charity (*caritas*), which cannot be with mortal sin. And therefore the first angel sinning is not denominated "Seraphim," but "Cherub."

1969. St. Augustine, De civitate Dei 8 and 10, reporting the Platonists' position.
1970. St. Augustine, De Trinitate 3.
1971. St. John Damascene, De fide orthodoxa 2.4 (on the fall of angels of the lower order).

Reply to the second: The divine intention is not frustrated, neither in those who sin nor in those who are saved. For God foreknows both outcomes and from each has glory, since he saves these out of his goodness, but punishes those out of his justice. But the intellectual creature, when it sins, falls away from its due end. Nor is this unfitting in any sublime creature whatever. For the intellectual creature is so established by God that it is placed in its power to act for the end.

Reply to the third: However great the inclination to the good was in the highest angel, nevertheless it did not induce necessity. Hence he could, by free will, fail to follow it.

The conclusion is: It is more probable that the one who was the highest among all the angels was the highest among those who sinned.

Is Lucifer, the first among the rebel angels, from the supreme orders, or did he hold preeminence? Disputation 237.

Disputatio CCXXXVII - Two opposite opinions

Conclusion of Article 7; although it is approved by all the scholastics, yet among the ancient Fathers it is not without controversy

For St. John Damascene, book 2 On the Faith, chapter 4, thinks that the angels who fell were not from the highest, but from the lowest order. For he says: "Of these angelic hosts, he who held the principate of the terrestrial order, to whom by God the care of the earth had been entrusted, not created evil by nature, but endowed with goodness and created for the sake of the good, and such that not even the slightest trace of life impressed by the Creator failed him - he, not preserving by free will the splendor and honor which he had obtained by the Creator's beneficence, was changed from that which was according to nature into that which was against nature."[1972] St. Augustine makes mention of this opinion in book 3 On Genesis to the Letter, chapter 10, and inflicts on it no censure. Of the same he also makes mention in book 11 On Genesis to the Letter, chapter 19, and immediately subjoins that he does not see from what place of Scripture that opinion can be proved. Finally, in the same book 11, chapter 26, he says that it cannot be defended.[1973]

Yet many Fathers affirm that the angel who was supreme among those who fell was also supreme among the rest. Thus Tertullian teaches, book 2 Against Marcion, chapter 10, far from the beginning, where he expounds those words of Ezekiel 28, "You are the seal of the likeness of God, etc.," by which he thinks the fall of the demon is described, of the most eminent of the angels, of the Archangel, of the most wise of all - understanding the name "Archangel" not according to the order of the lowest hierarchy, but as the prince of all the angels; otherwise he would not call him most eminent and most wise.[1974] The same is the sentiment of St. John Chrysostom, in tome 7, in the homily on Adam and Eve, not far from the beginning: for he says, "One angel first, who was

1973. St. Augustine, De Genesi ad litteram 3.10; 11.19; 11.26.
1974. Tertullian, Adversus Marcionem 2.10, on Ezekiel 28.

called Sathahel, assumed a wicked presumption," etc.; and in the Homily on the fall of the first man, he says that Sathahel held the principate among the angels.[1975] In the same opinion were St. Jerome on that passage Job 40, "He is the beginning of the ways of the Lord" - because in Ezekiel 28 it is written, "You walked in the head of the fiery stones"; St. Gregory in book 4 of the Moralia, chapter 13 (elsewhere 12), and in book 9, chapter 2, where he calls the demon "the highest spirit"; the author of book 1 On the Marvels of Holy Scripture; St. Isidore, book 1 De summo bono, chapter 12; and St. Bernard, Sermon 1 on Advent, where he calls the demon the first of the angels.[1976] Some also report for this opinion Origen, tractate 9 on Matthew, on those words, "The last shall be first," etc., where he calls the angel who fell "first" in relation only to man, but the man himself he calls "last"; and they understand by those words, "The last shall be first," the things aforesaid.[1977]

Caput II - Judgment concerning both opinions

Assuredly, the opinion of these Fathers and of the scholastics seems probable on account of their authority. However, from Sacred Scripture nothing certain can be gathered, as will be made plain by induction.

The first place from which some deduce the aforesaid opinion is Ezekiel 28, where St. Jerome, in the place cited, thus reads: "You have walked on the head of the fiery stones." But he thought that the "fiery stones" are called angels, among whom Lucifer was placed as first in the head. But this reading was not followed by St. Jerome himself in that place of Ezekiel in his translation, nor did the Seventy so render; but according to both readings, "You have walked in the midst of the fiery stones," etc. Moreover, as to how much that place proves about the fall of the devil, enough and more than enough has been said by us in Disputation 232, chapter 4, where we showed that, according to the literal sense, those words are to be taken of the prince of Tyre, and only in a spiritual sense can they be accommodated to the demon. But of that prince it is said, "You have walked in the midst of the fiery stones," so as to show the precious adornment of his garments, which he previously had in the glory of his kingdom: for he used to walk adorned with precious stones, which he calls "fiery" on account of the color of fire. But they must be accommodated to the angel thus: because, before he fell from his most happy state, he was adorned with virtues and the gifts of grace. But if by the fiery stones you wish to understand other angels, from that place it cannot be proved that Lucifer was the first of the angels, if the common reading and that of the Seventy interpreters be followed; but only this follows, that Lucifer was in the midst of the angels who are called "fiery stones."

The second testimony customarily adduced for proving the common opinion is that Ezekiel 31: "The cedars in the paradise of God were not higher than he; the firs did not equal his height." This place, however, is understood of the king of Egypt, in order that the power and majesty of his kingdom, whose ruin the Prophet threatened, might be shown, as is manifest from the text itself.

1975. St. John Chrysostom, Homily on Adam and Eve; Homily on the fall of the first man (tome 7).

1976. St. Jerome, on Job 40; Ezekiel 28; St. Gregory the Great, Moralia 4.13 (alias 12) and 9.2; Author of De mirabilibus sacrae Scripturae 1; St. Isidore, De summo bono 1.12; St. Bernard, Sermon 1 on Advent.

1977. Origen, Tractate 9 on Matthew, on "The last shall be first."

A third testimony could be Job 40: "He is the beginning of the ways of the Lord," which place is to be understood not of the beginning according to duration, but according to dignity, as we have noted above in Disputation 224, chapter 6. Nevertheless even from this testimony, even so understood, nothing can be proved. For in that chapter Job does not speak of the demon, but of Behemoth, which some think to be a terrestrial animal, others a kind of serpent living in the waters or in moist places.

But if we inquire after the ground of the aforesaid common opinion - since the matter is one of fact - I do not see that anything can be supplied for its confirmation; for it could have happened this way or otherwise, although there are not lacking congruent reasons on account of which, if it happened so, we should say that God by his supreme wisdom rightly permitted the first angel to fall into sin; which reasons I have judged it worthwhile for now to pass over.

Now indeed, the sentence of those Fathers and Scholastics, on account of their very authority, seems probable. However, from Sacred Scripture nothing certain can be gathered, as an induction will show.

The first place whence some derive the aforesaid opinion is Ezekiel 28, where St. Jerome, in the place cited, thus reads: "Thou hast walked on the head of the fiery stones." They suppose, moreover, that the fiery stones are called Angels, among whom Lucifer, as the first, was placed at the head. But Jerome himself did not follow this reading in that place of Ezekiel in his own translation, nor do the Seventy so render it; rather, according to both readings it is: "In the midst of the fiery stones thou didst walk," etc. Furthermore, how much that place proves concerning the fall of the devil we have more than sufficiently said in Disputation 232, cap. 4, where we showed that, according to the literal sense, those words are to be taken of the prince of Tyre, and can be applied to the demons only in a spiritual sense. Of that prince it is said that "he walked in the midst of the fiery stones," to show the precious ornament of his garments which he formerly had in the glory of his kingdom; for he walked adorned with precious stones, which he calls "fiery" on account of the color of fire. But the passage ought to be accommodated to the Angel in this way: that, before he fell from his most happy state, he was adorned with virtues and the gifts of grace. And if by the fiery stones you wish to understand the other Angels, from that place it cannot be proved that Lucifer was the first of the Angels, if one follows the common reading and that of the Seventy interpreters; rather only this follows, that Lucifer was in the midst of the Angels, who are called fiery stones.

In the same chapter that other phrase, "Thou an extended and protecting Cherub," is adduced, which some apply to Lucifer. This, however, does not prove the opinion. First, because there, too, it is said of the king of Tyre, as is manifest from the very text; and therefore, if these things are accommodated to Lucifer, they ought to be accommodated only so far as they can agree with an Angel, namely, that he was once happy and powerful. Moreover, if those words were to be understood literally of Lucifer, they would at most prove that he was a Cherub, and not a Seraph. On this point St. Thomas replies in this article, ad 1, that he would not therefore have been of the supreme order of the Cherubim; for although he is called a Cherub, nevertheless "Seraphim" signifies "burning," and denotes the ardor of charity; but "Cherub" signifies "knowing"; the ardor of

charity did not remain in the demon, whereas knowledge did remain. If, then, one were to argue from this testimony that he belonged to the supreme order, or to infer from it that he was supreme among the Cherubim, the conclusion would not follow.

According to the common opinion one might also adduce Ezekiel 31: "The cedars in the paradise of God envied him," and similar statements there. By this, however, the majesty of the Babylonian king is understood, and his impending ruin threatened, as is clear; and thus the place concerns the majesty of a kingdom, not directly the case at hand.

Something perhaps could be inferred from Job 40; but that place, as we noted above in Disputation 224, cap. 6, is to be understood according to duration; nothing, however, in this way pertains to the issue. Nor in that chapter is speech made of Behemoth in such sort as to concern an angelic nature; some indeed hold him to be an earthly beast; others take him for some of the animals endowed with earthly abodes and endowed with sense. But since the matter is such that other reasons could be supplied for this and in another way it could be explained, and since reasons for the contrary are not wanting, let us say that God in his supreme wisdom rightly permitted him to fall headlong, for reasons which I have judged fitting to set forth.

Articulus VIII - Whether the sin of the first angel was the cause of the others' sinning

It seems that the sin of the first sinning Angel was not the cause of the others' sinning.

1. A cause is prior to what is caused. But all sinned at the same time, as St. John Damascene says. Therefore the sin of one was not the cause of the others' sinning.[1978]
2. Further, the first sin of an Angel cannot be anything but pride, as was said above. But pride seeks excellence. Now it is more repugnant to excellence that someone be subject to an inferior than to a superior. And thus it does not seem that the demons sinned by willing to be subject to some superior among the Angels rather than to God. However, the sin of one Angel would have been the cause of the others' sinning if he had induced them to this, namely, that they be subjected to himself. Therefore it does not seem that the sin of the first Angel was the cause of sinning for the others.
3. Further, it is a greater sin to will to be subject to another against God, than to will to be set over another against God, because the former has less of a motive for sinning. If, therefore, the sin of the first Angel was the cause of the others' sinning in this, that he induced them to be subjected to himself, the inferior Angels would have sinned more gravely than the supreme; which is contrary to that of Psalm 103. In the Gloss: "This dragon, whom thou hast formed," is said to be he "who was more excellent than the rest in being, [but] was made greater in malice."[1979] Therefore the sin of the first Angel was not the cause of sinning for the others.

1978. St. John Damascene, De fide orthodoxa 2.4.
1979. Gloss on Psalm 103(104): "This dragon, whom thou hast formed..." cited in the scholastic tradition.

But on the contrary: It is said in Apocalypse 12 that the dragon drew with him the third part of the stars.

I answer: The sin of the first Angel was the cause of the others' sinning, not indeed by compelling, but by inducing with a certain quasi-exhortation. A sign of this appears from the fact that all those demons are subject to the supreme one, as is made manifest by that word which the Lord says in Matthew 25: "Depart from me, you cursed, into everlasting fire, which is prepared for the devil and his angels." For such is the order of divine justice, that he to whose suggestion someone consents in fault be subjected to his power in punishment, according to 2 Peter 2: "By whom a man is overcome, of the same also he is the slave."

Reply to the first: Although the demons sinned at the same time, nevertheless the sin of one could be the cause of the others' sinning. For an Angel does not need delay of time for choosing, exhorting, or even consenting, as does man, who needs deliberation for choosing and consenting, and vocal locution for exhorting - both of which are performed in time. But it is manifest that even a man, when he has conceived something already in his heart, in the same instant begins to speak. And in the last instant of locution, in which one seizes the sense of the speaker, he can assent to that which is being said, as appears especially in the first conceptions which each one approves upon hearing them. With time of locution and deliberation removed, which in us are required, in the same instant in which the first Angel expressed his affection by intelligible locution, it was possible for the others to consent to it.

Reply to the second: Other things being equal, one more readily wills to be subject to a superior than to an inferior. But if some excellence is to be obtained under an inferior which cannot be attained under a superior, one prefers to be subject to an inferior rather than to a superior. Thus it was not contrary to the pride of the demons that they willed to be subject to an inferior, consenting to his principate, desiring to have him as prince and leader, so that by his natural power they might attain their beatitude; especially because by the order of nature even then they were subject to the supreme Angel.

Reply to the third: As was said above, an Angel has nothing retarding him, but according to his total power he is moved to that to which he is moved, whether to good or to evil. Therefore, since the supreme Angel had a greater natural power than the inferiors, he fell into sin by a more intense motion. And thus he was also made greater in malice.

The conclusion is: The first sin of the Angel was a cause of the others' sinning, not by compulsion, but by inducement. Concerning this, a controversy will be had by us.

Disputatio CCXXXVIII - An peccatum primi Angeli fuerit aliis causa peccandi

- Two opposed opinions. Caput I.
- Judgment concerning each opinion. Caput II.
- That the inferior Angels and the supreme sinned at the same time. Caput III.

• What the sin of the inferior Angels was. Caput IV.

Caput I - Two opposed opinions

Although it has been set in controversy whether the supreme Angel among those who sinned was first among the rest or not, as we saw in the preceding disputation, yet it is certain and without controversy among all that among those who sinned there was someone supreme and of a more perfect nature. Now, therefore, the difficulty is proposed concerning this Angel, whether by his sin he was to the others a cause and occasion of sinning, not indeed by compulsion, but either by persuasion or by inducing them in some way. In this difficulty too the Scholastic Doctors are divided. For certain ones assert that no Angel inferior was induced by the supreme, but that each one sinned of himself without the persuasion or occasion of another. Thus teach Albert,[1980] William of Paris,[1981] and Alphonsus de Castro against the heresies under the word "Peccatum," heresy 3; also reported for the same opinion is Alexander, 2 p. q. 99, m. 2, where he only says that the sin could indeed be by imitation - something which does not seem otherwise possible, unless the superior insinuated his will to the inferiors. The same, and nothing else, is affirmed by the author of Auxerre, book 2, tract. 2, cap. 3.[1982] For this opinion there seems to be only a single reason: because it is not without some foundation to assert that the Angels sinned by imitation and persuasion; yet we have no foundation for asserting this, as will appear below: therefore it is not to be asserted.

A more common opinion among the Scholastics affirms that the inferior Angels sinned by the persuasion of the first. Thus think St. Thomas, Cajetan, and the more recent Thomists on this article; St. Bonaventure in 2, d. 5, a. 2, q. 4, a. 2; Richard, ar. r., q. 2, ar. 2, conclusion; Giles in 2, d. 6, q. 1, ar. 3; Thomas of Argentina in the same, q. 1, a. 3, dubium 3; Gabriel; Maior, q. 2, near the end, to the second doubt; and Durandus confesses this to be the common opinion in q. 2, although he affirms that nothing certain in this matter can be had. There are indeed testimonies of the Fathers for this sentence: St. John Damascene, 2 De fide, c. 4, after he has described the sin of the first Angel, subjoins: "Together with him there was torn away, and added as a companion to him, and together there fell, an innumerable multitude of Angels of his ranks"; and moreover St. Ambrose, epistle 84, about the middle; and St. Gregory, book 3 of the Moralia, c. 18, alias 23, who expressly affirm this; the same seems to have been said by St. Jerome on Isaiah 14: "Thou hast lost thy land," etc.; for expounding these words of Lucifer he says: "Those, namely, who believed thee to be their governor," who, in my judgment, seem to be none other than the inferior Angels.[1983]

1980. Albert the Great, on 2 Sentences, d. 6, a. 3.

1981. William of Paris, Summa de universo, part 1, principal part 2, c. 112.

1982. Alexander of Hales, Summa, 2 p., q. 99, m. 2; Author of Auxerre (Anselm of Laon/Alexander of Villedieu tradition), lib. 2, tract. 2, cap. 3.

1983. St. John Damascene, De fide orthodoxa 2.4; St. Ambrose, Epistle 84; St. Gregory the Great, Moralia 3.18 (alias 23); St. Jerome, on Isaiah 14.

Caput II - Judgment concerning each opinion

In this controversy I for my part think that it was possible for the inferiors to be induced in some way by the superior, as will be explained below: nevertheless, nothing certain can be defined in this matter. And first, to take my starting-point hence, it can easily be proved by an induction that nothing certain is had here, if we run through the several places which authors are wont to use.

The first testimony which we can use to show that the other, inferior Angels were by a superior induced in some way is Ezekiel 31: "They have emulated him from all the trees of pleasure which were in the paradise of God." This, however, is a weak testimony: for there the speech is with Pharaoh, king of Egypt, whose ruin the Prophet threatens, because his heart was lifted up in his altitude. To this end he first describes the loftiness of his kingdom under the likeness of trees, and compares it to a most lofty tree and very leafy, whose beauty was such that the other trees, even those of paradise itself, seemed as it were most greatly to admire its beauty or to imitate it. Of the fall of the devil the Prophet does not speak in that chapter; nay rather, even if he did speak of it, nothing could be proved therefrom, for by those words not the sin, but the beauty of the devil would be described, after the manner of a most beautiful tree whose beauty other trees imitate.

The second testimony is Isaiah 14: "Thou hast fallen down to the earth, thou that didst wound the nations"; and: "Thy land is lost, thy people are slain"; this some would interpret thus: that thou hast destroyed the other Angels beneath thee; "thy land is lost," that is, the inferior Angels to thee; "thy people are slain," that is, those inferior to thee. From this place, however, nothing certain can be had; because all those things, according to the literal sense, are to be understood of the king of Babylon, as we proved in Disputation 232, cap. 4, and, as far as some reason can accommodate these words to the demon, we there said as much as was necessary concerning the things which must be applied; there too we declared that whatever the Babylonians were saying of their king according to the literal sense, we return and apply to the king of Babylon; namely, that because through pride he had lost the favor of his people, this is on account of his superb bearing, by which his own people were destroyed by him, as St. Jerome expounds.[1984]

Third, Giles proves it from Job 41: "He is king over all the sons of pride": for one is called king of others because by his will and command he moves others, as it were. But this testimony has little weight: because Job is not speaking there of the devil, but of Leviathan, a sea-beast, which he calls king over the sons of pride; that is, the greatest among the other great sea monsters, which by their magnitude he calls "proud."[1985]

Fourth, Giles adduces that of Apocalypse 12, where it is said of the dragon that with his tail he drew the third part of the stars; which otherwise cannot be understood than that he drew them by his own force and example. But this testimony too is rather weak: for, as we showed above in Disputation 232, cap. 2, there is no mention made of the first fall of the devil, but of the battle

1984. See Disputatio 232, cap. 4; St. Jerome, comment on Isaiah 14.

1985. Job 41:34 (Vulg. 41:25): "He is king over all the children of pride" - here applied by some to Leviathan in the literal sense.

waged with him in the Church, in which he was cast down, and drew with himself the third part of the stars, that is, he seduced a good part of the men who in the Church of God, as it were stars of the firmament, shone with sanctity and virtue.

Therefore it is established that there is no firm foundation in Scripture from which it can be gathered that the inferior Angels were induced by a superior to sin. Moreover, it is manifest that in tradition there is no foundation; wherefore in this controversy, reason, with the authority subjoined, must have place. Durandus recently said, whose opinion we approve in this matter, that nothing certain in this controversy can be defined.[1986]

Next, to what we proposed earlier, namely, that it could so have happened that the inferior Angels, by the example or persuasion of the superior, were provoked to sin, we can easily offer proof. For the supreme Angel could in many ways have sinned, and the very thing aimed at by him would be something which, by his own sin, could have been for the others an occasion of sinning.

First indeed, if the supreme Angel, out of pride, desired a hypostatic union to his own nature, he could have persuaded the others that they too should desire that same union; because their nature, too, seemed to them worthy of it. Yet that he actually did this is not credible; for if out of pride he desired a hypostatic union, he desired it for himself alone. And even supposing he desired a union for his own nature as being the highest, the rest would rather take complacency in the union of his nature than in the union of the human nature with the Word. Whether, however, this would have been a sin of pride, we shall see below.

Second, if the supreme Angel sinned by an immoderate appetite for supernatural beatitude (*beatitudo*), namely, because he wished to attain it by his own powers, with a certain affect of complacency, in that he took it grievously to stand in need of God's help for attaining it, as we explained above in Disputation 235, cap. 3, then he could certainly have induced and moved the others to the same kind of desire and complacency. But if he had only immoderately desired beatitude out of inconsiderateness - of which some think, whom we recalled in the same Disputation, cap. 2 - then he could not have caused the superiors to assent to his persuasion, nor by his example provoked them to sin; for to that sort of inconsiderateness, from which a sin ought to arise, no one is moved by another's persuasion or by example.

The pleasure which was in the paradise of God. This testimony is weak: for there the discourse is with Pharaoh king of Egypt, whose ruin the Prophet foretells, because his heart was lifted up in his own height. To this end he first describes the loftiness of his kingdom by the likeness of trees, and compares it to a most tall and most leafy tree, whose beauty was so great that the other trees, even those of paradise itself, seemed to rival or imitate its beauty as the greatest. But the Prophet in that chapter does not speak of the fall of the devil; nay rather, even if he did speak, nothing could be proved therefrom: because by those words not the sin, but the beauty of the devil would be described, like a most beautiful tree whose beauty the other trees imitate.

The second testimony is Isaiah 14: "Thou art fallen to the earth, who didst wound the nations," and lower: "Thou hast destroyed thy land, thou hast slain thy people," that is, the Angels inferior to thee. Yet from this passage nothing certain can be had: for all those things must be understood, according to the literal sense, of the King of Babylon, as we proved in Disputation 232, chapter 4; and although in some way these words may be accommodated to the demon, as we said there, nevertheless it is not necessary that each single thing which, according to the literal sense, is said of that king, be applied to the demon. But those which we cited were said of that King of Babylon, namely, that by his pride he destroyed his people, that is, that on account of his pride his people was destroyed, as St. Jerome expounds.

Third, Giles proves it from Job 41: "He is king over all the children of pride"; but one is called the king of others, because by his will and command he somehow moves them. Truly this testimony has little weight: for Job is not speaking of the devil, but of Leviathan, a sea-beast, whom he calls king over the children of pride, that is, greatest among the other great sea-beasts, which by their greatness he calls "proud."

Fourth, Giles adduces that of Apocalypse 12, where it is said of the dragon that "with his tail he drew the third part of the stars," which cannot be understood otherwise than of persuasion and example. But this testimony is weak enough: for, as we showed above in Disputation 225, chapter 2, there is no mention there of the first fall of the devil, but of the battle waged with him in the Church, in which he himself cast down, dragged with him the third part of the stars, that is, he seduced a good part of the men who in the Church of God shone like the stars of the firmament by holiness and virtue.

It is clear, therefore, that there is no firm foundation in Scripture from which we might gather that the lower Angels were induced to sin by a superior. Moreover, it is manifest that there is no foundation in tradition; and reason, in this controversy when not supported by authority, can have no place. Rightly, therefore, said Durandus, whose opinion in this matter we approve, that nothing certain can be defined in this controversy.

Next, what we proposed before, namely, that it could have happened in such a way that the lower Angels were provoked to sin by the example or persuasion of a superior, we can easily prove. But because the supreme Angel could have sinned in various ways, it must be seen in detail by what ways even by his sin he could have been to others an occasion of sinning.

And, first indeed, if the supreme Angel out of pride desired the hypostatic union for his own nature, he could certainly persuade others, and move them to desire for themselves also that same union, because it was fitting to their nature; which, however, is not credible that he did: for if out of pride he desired the hypostatic union, he desired it for himself alone. And that the others should rejoice over the union of his own nature, as being supreme, rather than over the union of human nature with the Word - whether this sin would be of pride, we shall see below.

Second, if the supreme Angel had sinned by an immoderate appetite of supernatural beatitude, because he would wish to attain it by his own powers with a certain complacency of affection, in that he would bear it indignantly that he needed God's help for the attainment of that, as was explained above in Disputation 235, chapter 3: he could indeed have invited and moved the others to the same kind of desire and complacency. But if he had immoderately desired beatitude only out of inconsideration, as some have thought, of whom we made mention in the same disputation, chapter 2, then he could not by persuasion or his example have moved the others to sin: because to inconsideration, from which the sin would have had to be, no one is moved by another's persuasion or example. The same, and in the same proportion, must be said if the supreme Angel sinned by an immoderate appetite of natural beatitude, according to what we said in that same disputation, chapter 3.

Third, if the supreme Angel desired some excellence and dignity of mastership, or over men, or over Angels, he could indeed induce others to a similar affection; but it is rather to be believed that he did not do this: because if he had sinned in this way, he would rather have affected that dignity for himself alone than have proposed it as desirable also to others. For a proud man never does this.

At the same time the lower Angels and the supreme sinned.

Caput III - Whether all sinned at the same time, or first the supreme, then the rest

Among those who affirm that the lower Angels were induced to sin by the supreme, it has been placed in controversy whether all sinned with the supreme at the same time in duration, or whether the supreme sinned before the rest. Bonaventure, in the place cited above, teaches that Lucifer sinned earlier in time than the other Angels who by his imitation fell. He confirms it by this reason: because, just as in the supreme Angel himself who sinned there was earlier in time the cogitation of the object than the sin in the will about it, so that the will might be freely borne toward the foreknown; so also in the lower Angels the insinuation of Lucifer's will was earlier in time known than that they imitated the affection itself: therefore, earlier in time did Lucifer sin than the rest.

The opposite opinion was followed by Giles, Durandus, and the Argentine in the places alleged, where they affirm that only in the order of cause did Lucifer sin earlier than the rest who imitated him. Yet into this opinion they have been led by certain frivolous reasons. Giles proves it thus: if the first Angel had sinned earlier in time than the rest, he would have been condemned earlier in time than the others, and therefore could not induce them to sin. And although he could move others to sin, just as even now, after he has been condemned, he induces men, nevertheless no Angel would be deceived by him, seeing his misery and the punishment for sin - just as neither could men be induced or persuaded by him to sin, if they clearly saw his misery and punishment.

But this reason is weak: for an angel could, for some span of time, persevere with the first sin, just as indeed he persevered, before he was thrust down into the prison of hell and was given over to the torments of fire. And although from the very beginning of the sin he would fall into the punishment of obduration, of which in the whole following question we are going to treat, nevertheless this could be hidden from the other angels, because this came from God's will abandoning the Angel without any help of grace. Besides, as we shall say in Disputation 241, chapter 4, not from the very beginning of the sin, but a little after, did the demon fall into the punishment of obduration; therefore, for that time the lower angel could be persuaded by the superior, the sin having already been committed, before the supreme fell into the punishment of obduration.

Then, to confirm the same opinion, Durandus uses this reason: No one, looking at evil, acts and sins; but if the sin of the first Angel had preceded in time, his malice would be manifest to the inferiors; therefore, they themselves, looking at his malice, would not sin. This reason, understood universally both of angels and of men, is frivolous. For that proposition, "No one, looking at evil, acts or sins," is not to be understood in such a way that no one can sin knowing the malice of the sin which he pursues with affection: for men for the most part sin knowingly; but to sin knowingly is nothing else than not to be ignorant, but to know and to attend to the malice of the sin, and nonetheless, with the affection drawn by some reason of utility, advantage, or delight, to pursue and embrace the very work of sin. The true sense, however, of that proposition - both in angels and in men - is that no one's will is carried to a sinful work drawn by the malice of it, but by some reason of utility, advantage, or delight, which the intellect apprehends as conjoined with the malice of the sin, as we shall show in I - II, question 77, article ... But if that proposition be understood of the angels alone, so that none of them could first sin knowingly and prudently, but the first of them must have sinned out of inconsideration, as some contend: in this way Durandus's reason seems to have some weight; because if the first angel could not first sin knowingly and prudently, but out of inconsideration, it was necessary that he sin earlier in time than that he could induce and persuade others to sin, and that others sin by his persuasion. But since already above, in Disputation 235, chapter 2, it has been shown that an angel could not sin out of inconsideration, this reason does not seem supported by a firm foundation.

Therefore the true reason, on account of which it seems to me that one must say that the first Angel did not sin earlier in duration than the rest, even if they sinned by his persuasion and example, is that in any instant of time there can be first the cognition of the object and a free consent about it, in which the sin consists. For the liberty of the will is not only with respect to the future; but in the very same instant in which the Angel begins to be, he can also act freely, as in Disputation 235, chapter 3, was noted by us. Then also, in the same individual instant of time, there can be both the sin of the supreme Angel and the insinuation of his will, which would be made to the rest. Moreover, the other Angels could, in the same instant, know the insinuation of

1986. Durandus of St.-Pourçain, In 2 Sent., q. 2.

the will of the supreme Angel, and follow it. Why, then, ought we to assert that there intervened a delay of time between the sin of the supreme Angel and that of the others, since in the same instant all could sin with the supreme, and all are of a most acute nature in understanding and acting?

Caput IV - What was the sin of the lower Angels

What, then, was the sin of the lower Angels, in the opinion of those who assert that they sinned by the persuasion or imitation of the supreme Angel, is a question. In which Bonaventure, in 2 Sentences, distinction 7, article 2, question 1, and Richard, article, question 2, Alexander, and Gabriel, and Maior, in the places cited in the first chapter, hold that the sin of the lower Angels was pride. Yet they do not all set forth this kind of sin in the same way. Alexander and Bonaventure say that the lower Angels sinned by an appetite of their own excellence, which, without merits - just as also the first Angel - they desired. Bonaventure adds that they, in the same way, also desired it for the supreme Angel, because they saw that it would not be granted to them unless it were granted also to him. What, however, this excellence was, Bonaventure does not explain: he had said, however, in the same distinction, article 1, question 2, that it was the excellence of presiding over others. Yet I do not see how each would desire for himself and for the supreme this dignity, when one of them ought to be subject to the other: unless he would desire that he and the supreme together be placed over the rest; which does not seem credible: since a proud man, greedy of dominion, scarcely endures a companion and partner with himself.

Richard judged that their pride was in this, that they desired to have, without merits, the excellence to which they were created - like a proud man; and by excellence he understands supernatural beatitude: because to this indeed all Angels were created. And indeed, that the lower Angels could have sinned in one of these two ways by the induction of the supreme, I showed in the first chapter of this disputation; and the manner also by which they could have been induced by the supreme, I there explained.

Moreover, Gabriel and Maior placed the sin of the lower Angels in this, that they coveted for the supreme Angel this excellence, that to him, not to God, all should be subjected. And although this may seem a sin of pusillanimity, nevertheless they say it was a sin of pride: because they did not wish to be subject to God, but to the supreme Angel, that they might live more freely. Yet I do not see by what reason this sin could have been one of pride, if by this assent they refused to be subject to God. This sin could indeed have been pride, if they had desired for the supreme Angel this excellence, disdaining to be subjects of God: in the way that it happens that someone of an inferior order is chosen prince by electors because they bear it ill to be subject to another whom they see to be near to being elected. The sin of the lower Angels could also have been pride, if they had desired for the supreme the hypostatic union, which he also himself would desire for himself, that by it their own nature might obtain the highest honor, because they would bear it ill that their nature be so subject. But to define that their sin happened in this or that way - who can do so, or on what foundation will he rely to assert this or that?

Quaestio LXIV - On the punishment of the demons

Article 1 (Articulus 1)

Explanation of the Article.

The first conclusion is: that, as regards natural cognitions, the intellect of the Angel is not harmed. Saint Thomas proves this from Dionysius (chapter 4 of De Divinis Nominibus, part 4), where he asserts that natural things remained intact in the demons. The second conclusion: that speculative supernatural cognition, which comes from the mysteries, was not altogether taken away from the demons, but diminished. The Holy Doctor proves this: because concerning the mysteries and divine secrets they are revealed to them as far as is needful, either by means of good angels, or by certain signs and effects of divine power. The third conclusion: that supernatural practical cognition which moves one to act well does not remain in the demons.

Concerning the first conclusion I see no difficulty at all; because that doctrine of Dionysius, once confirmed, is approved by all Scholastics. Concerning the second conclusion there could be controversy, whether theological faith remained in the demons in that way and from the same principle as it was in them. The reason for the difficulty, on the one hand, is that in the demons no supernatural gift of grace remained; therefore, since faith is a supernatural gift of grace, it seems to follow that faith did not remain in them. On the other hand it seems to have remained in them, because in the Epistle of James, chapter 2, it is said, "The demons also believe and shudder." But so that the argument of James may have some force, it must be understood of divine faith. For by the example of the demons he argues against Christian faithful who wished to be content with divine faith alone, in order to show them that this does not suffice for them, since indeed even the demons believe. Of this matter, however, we shall treat more conveniently in I.2, quaest. 5, art. 2. Concerning the third conclusion there could be a difficulty, about which we shall discuss in disputation 241.

Article 2 (Articulus 2)

The conclusion is. Damon's will is so obstinate in his sin that they are to remain in it for eternity.

Disputation 239 (Disputatio 239)

What is the cause of the perpetual obduracy of demons (Quaenam sit causa perpetuae obdurationis daemonum)

Disputation 239. What is the cause of the perpetual obduracy of demons.

State of the controversy, chap. 1. No one refers the cause of the obduracy to their nature, chap. 2. The Damascene and Fulgentius are objected against the foregoing reason, chap. 3. Against the same reason it is shown that angels can change their wills and their elections, chap. 4. Another cause of the demons' obduracy in evil from a perverse disposition of nature, chap. 5. The opinion of Henry concerning the same matter, chap. 6. The true cause of the demons' obduracy, chap. 7.

Caput I - (Chapter I)

CHAPTER I. State of the controversy.

Besides the tremendous torments by which, as the Catholic faith teaches, demons are to be punished forever, there is another and much greater punishment for demons, which theologians call the penalty of loss.

This punishment consists in the perpetual privation of glory, and in the demon's perpetual obstinacy in evil.

By "obstinacy" I mean not that which consists in a perverse hardening of the mind in evil and in a fixed purpose always to sin, but that which consists in the privation of divine grace, by which one could both rise again from sin and perform some good; for obstinacy may be taken in both senses, as I showed above, Disput. 95, chap. 10.

And I demonstrated that obstinacy which is a fault God is not the cause of, whereas obstinacy which is a punishment God is the author of.

But the obstinacy which is a punishment, about which we must now speak, is twofold.

One part consists in that demons cannot rise again from sin and be justified a second time; and of this we shall discourse in the present and following disputations.

The other part consists in that demons cannot perform any good; and of this we shall treat in Disput. 240.

The present controversy, however, about the impotence of the demon to be converted to God, is not about God's cause; for it is confessed by all that conversion to God cannot be effected without grace, and that no one can deny that God, even by his absolute power, could by his grace so prevent demons that they would turn to him and truly repent of their sins.

For there is no will so rebellious and hardened in evil that God by his mercy could not convert and soften.

Although Anselm in Book 1 of Cur Deus Homo, chap. 16, judges it impossible that angels once fallen into sin could be reconciled with God - which he does not prove by any sound reason, nor can he prove it in any way.

But the question to be explained alone will be this: why, whereas God delays long and much for sinful men and expects that after many sins they may return to their heart and does not withdraw his grace from them so that they may be able to convert, yet with the angels immediately after one sin He has withdrawn his grace and deserted them perpetually so that they can no longer return to their former state.

For no one doubts of their perpetual damnation after one sin.

As to the time of their obduracy and damnation, whether it began at the first instant when the sin began, or after some duration of it, and whether it begins on the way or only in hell, this has been said above, Disput. 228, chap. 7.

Caput II - (Chapter II)

CHAPTER II. Some refer the cause of obduracy to the nature of the demons themselves.

In the aforesaid difficulty some scholastic authors judged that for this reason God denied his grace to the demons after one act of sin and left them perpetually obstinate, namely because the angel's will is from itself so free with respect to election that it remains immovably attached to that which it once chose with full deliberation.

For since God confers his grace according to the manner of the subject, this opinion seemed most agreeable to reason, that immediately after one sin committed from a full election He would deny his grace perpetually to the demons.

For the authors of this opinion do not think it impossible for God to give to the demons grace so that they might convert to him by repentance; but they only assert that God observed the due manner of denying to the demons his grace of conversion immediately after one sin, because this was according to the mode of their nature, as has been explained.

Those have followed this opinion: Alexander (?), [text: Alex. 3. p. q. 1. m. 2.], St. Thomas, Cajetan and the more recent Thomists in this article 2, Capreolus in 2 d. 7. q. 1. art. 1, concl. 2, art. 8 against the arguments of Scotus, brought in the third place against the same conclusion; but especially Ferrara in Contra Gentiles chap. 95 § 4. (note: references preserved as in the text).

Secondly it must be noted what reason St. Thomas also touched on at the end of that chapter; Paludanus in 4th Distinction 50 q.1 also refers to the same reason, yet he himself assigns a different reason, which we will also recall below.

But how an angel after a free election should adhere immovably to the thing which he has chosen, they explain in this way.

The appetitive faculty has proportion in its operation to the cognitive faculty by which it is moved, just as a mobile has proportion to its mover.

But the apprehension and cognition by which an angel grasps and knows something differ from the apprehension which a man has; for the angel apprehends all things so that the first principles are known to him immediately;

because whatever an angel knows he knows without discursiveness, whereas man knows first principles in this immediate way, the remaining things he understands only by way of discourse.

Therefore, just as a man is immovable in relation to first principles because he knows them without discourse, but can be moved with respect to other things because discourse can alter them,

in the same manner an angel in his intellect not only adheres immovably to first principles but to all the rest of the things which he knows.

And since the will and the appetitive faculty have a proportion in their operation to the cognitive faculty, it follows that after an election of some thing the will will adhere immovably to it, just as the intellect would adhere to a thing which it once understood.

Marsilius, reporting this reasoning of St. Thomas in 2 Quaest. 5, art. 5, thus interprets his meaning, that he speaks of God's ordained power, not that an angel, considered according to his nature, could not be turned from what he once chose.

Caput III - (Chapter III)

CHAPTER III. The Damascene and Fulgentius are objected against the preceding reason.

The foundation of the aforesaid reason, namely that an angel adheres immovably to the thing which he once freely chose, has seemed to many difficult to understand and not sufficiently firm upon which the said reasoning could rest.

Aegidius and a disciple and auditor of St. Thomas, Scotus, Duranus, and Gregotius openly attack it in places which will be cited below;

of whose objections we shall first set them forth, so that from them, if possible, we may interpret the presented reasoning in a more favorable sense.

First indeed the interpretation which Marsilius used must be rejected, since it manifestly contains (as they say) a petitio principii, as he himself also observed.

For when we ask why so quickly after one act the demons remained obdurate perpetually; if the aforementioned doctors respond that therefore the angel is obdurate after one act because by the ordained power of God refusing his grace to repentance he cannot be turned, nor moved from what he once chose,

certainly their account is less sufficient, for we seek the reason of this, and there is such controversy among the Doctors about why God so quickly denied the aid of his grace so that not a single angel could be recalled to repentance.

The doctors cited in chap. 2 try to assign a corresponding reason, namely that God so quickly denied his grace perpetually to the demons because it was fitting to their nature that that which they freely chose would adhere to them perpetually.

But, as I have said, the principle of this supposition, namely that an angel adheres immovably to an election once made, seemed difficult to many.

First, Damascene in Book 2 On the Faith, chap. 3, near the beginning, seems to teach the opposite plainly.

For there he defines the nature of the angel with these words.

Therefore the angel is a participant in the nature of reason, understanding by perpetual motion, endowed with the liberty of the will and mutable according to the reason of judgment; that is, having a free will towards either party.

There is in Greek the word ἀκίνητος, which he rightly translated. Bilius renders it "endowed with perpetual motion," for in Greek ἀκίνητος, if you render word for word, is entirely the same as in Latin: always movable.

But Damascene means that the angel is so of free will that not only before election he can embrace either party, but also that after election he can be moved into the contrary party.

First, because, as will be proved below, free will which from itself can incline to either part before election can also after election; because immutability in the will cannot arise from a free election.

Moreover, because if the angel were only free before election to choose either part as he wished, and then afterwards adhered immovably to the part he chose, he would not rightly be called ever movable or endowed with perpetual motion; for, having made the election, he could no longer be moved from it.

Further Damascene did not only say that the angel is always movable, but also mutable in judgment (Greek τρεπτή κατὰ γνώμην), that is, mutable according to judgment; he also says that the angel is mutable in will (Greek ἐθελότρεπτος), that is, mutable in will.

But from the fact that an angel is free toward either part, it is not said that his judgment and will are mutable;

for it is the same to say that someone's judgment and will are mutable as to say that they can change the judgment and will which he once had;

for he who cannot change the judgment or will which once he freely chose, by what reason can it be said that his judgment and will are mutable?

Otherwise even God, who freely discerns and determines many things whose opposites He could will, would be said to have mutable judgment and will, which is absurd.

They confirm from that which Damascene said in this way: Whatever is created is necessarily subject also to mutation.

For one thing is outside the hazard of mutation, which has nothing from which it is created.

Since therefore the angel's will is created, and only the divine will is uncreated, it follows that the angel's will can be changed, and the divine alone cannot.

And having said that the angel is endowed with the liberty of free choice, he adds: the angel therefore, being a participant in the force of reason and intelligence, is of free choice, and as a created being was in that condition that change could be received.

And it would be free to him either to remain in good and to make progress, or to be bent into evil.

Therefore he establishes the mutability of the angel's will in the fact that he can remain in good begun and can decline into evil.

But to abandon the good begun is to change the will toward good.

Therefore in the same way he could relinquish his will and purpose of evil and be changed from it - not, I say, by true and salutary penitence by his proper powers, but by some withdrawal of the bad will by his own nature,

for neither can a man by his own powers withdraw a bad will by true salutary penitence;

yet for this reason he is not said to be by his own nature inflexible from that evil which he once chose.

Someone will reply that this mutability is only from good into evil:

because concerning supernatural objects the angel is not inflexible:

and so it is possible that he change from a begun supernatural good, while the immutability of his will is about natural objects, good or bad.

But this response can be easily refuted.

First, for at least from this we would have that the angel's will can be turned from good to evil by his own powers, but from evil to good by the grace of God; and therefore grace would not have been denied to him because his nature was altogether inflexible.

Second, because Damascene draws from the fact that the angel's will is created that it is mutable; but it is created with respect to natural objects; therefore it is mutable with respect to those.

Third, because in Disput. 231 chap. 4 we showed sufficiently clearly that an angel, because he is a creature, can sin not only concerning supernatural precepts but also concerning natural ones, as he does not sin every day; therefore his will can be turned from a natural good to evil: why then would he be inflexible from evil to good, I do not say by salutary penitence by his own powers, but by any kind of turning back?

Secondly someone might reply that the angel cannot be turned from what he once fully chose; and therefore the fact that he willed in the first instant to sin could have been changed in the second instant by the sin.

I will show below that this response is frivolous.

Third, someone might object to us the same Damascene, who in the cited chapter says: moreover he is by no means capable of penitence for this reason, because he is without a body.

By these words he seems to teach that by his nature an angel is not capable of penitence.

Damascene's reply is that by the name "penitence" he does not understand any retraction of a prior will: for he plainly concedes this to the angel, since he said that his judgment and will are mutable.

But he clearly understands penitence as the gift of the Holy Spirit by which sin is wiped away.

Of this Damascene says that the demon is not capable, that is, this penitence is not given to him, whereas it is given to men.

Because the demon lacks a body, that is, he sinned without carnal incentives.

He uses the Greek word ἀνετίδεκτος, which signifies "not capable, not admitting"; not to deny the capacity and penitence of receiving such a gift in an angel (for no one can assert that with any kind of probability), but to denote that such a gift was not granted to the angel.

Furthermore against the same reason alleged above one may object the very saying of Damascene in the same chapter near the end, where, having said that angels by their own nature can be moved with difficulty toward evil, he adds:

"Now however (that is, when they are already in beatitude) they are in such a condition that they can scarcely be moved or bent at all; which nevertheless is to be attributed not to their nature but to grace."

But if what the doctors mentioned in chap. 2 suppose in their reasoning were true, namely that angels by their nature are inflexible from that which they once chose, it would follow that angels, after their merit is confirmed and perfected on the road, could no longer sin; and thus that would not be to be attributed to the grace of God, as Damascene says.

That all inflexibility belongs to the creature by the gift of God's grace we showed at length from the doctrine of the Fathers above in Disput. 130.

Against the same reason we could object Fulgentius in the book On Faith to Peter, chap. 3 before the middle, where, having said that the faculty to know and to love God was so given by God to angels and men that each could have it and lose it, he adds:

"If, however, someone were to lose it voluntarily, he would not be able thenceforth by his own arbitrium to recover it, so that he could reinfuse the beginnings of holy thought gratuitously by the gift of goodness to those whom he wished, which was his to ordain in the very outset of creation for spirits and bodies, places and affections, as he wisely wished, fittingly and wonderfully."

In that passage Fulgentius says there is an equitable reason in both cases: not to recover justice by penitence, because to recover it belongs to the divine gift, not to nature.

And therefore St. Fulgentius does not refer the impossibility of recovering it to the flexibility of nature, but to the perpetual privation of grace.

Fulgentius then proves it with these words: "He evidently shows that the beginning of good will and of holy thought is not born in man from himself but is divinely prepared and granted by God in him;"

"because neither the devil nor any of his angels, from whom by the merit of that ruin they have been thrust into this lower darkness, could or will be able to recover the good will."

"If it were possible that the human nature, after being turned away from God and having lost the goodness of will, could again have it from itself, it would be much more possible for the angelic nature to have it, which, insofar as it is less weighed down by the burden of a terrestrial body, would be endowed with this faculty to a greater extent."

These are Fulgentius' words.

From which I gather two arguments against the reason advanced in the preceding chapter.

The first is: if it were true what the cited doctors there affirm, namely that the angel is by himself inflexible from that which he once chose, Fulgentius would not rightly prove that the lost good will is recoverable by divine grace from the fact that the demon did not recover it; for anyone could easily say that the angel did not recover the previous state by penitence because once having made his election he cannot repent for that reason, because he is inflexible.

But that a man can be restored by penitence to his former state is due to the fact that by his own nature he can be made penitent, and that he is flexible from that which he once fully chose.

The second argument is: if the forementioned proposition which the reasoning in the preceding chapter supposes were true, Fulgentius would not rightly infer from the fact that man can by his own powers recover his former good will that the highest angel could do so more easily.

For although a man, weighed down by the mass of a body, could do it, it would not be right to say that it would be possible even for the angel if a man can be turned from that which he once willed: whereas the angel cannot be turned from that which he once chose.

Therefore Fulgentius supposes that the angel could also be changed, as he infers directly; it would be easier for an angel to recover a former good will than for a man, if a man can recover it by his own powers.

Caput IV - (Chapter IV)

CHAPTER IV. Against the same reason it is shown that angels can change their wills and their elections.

Against the foundation of the preceding reason we can act not only by authority but also by effective arguments, and above all demonstrate that not only could an angel have changed his election which he once had, but in fact did change it

First indeed, because it is evident that demons changed their election and judgment which they previously had concerning the death of Christ:

for the devil before, when he put it into the heart of Judas to betray Christ to the Jews (John 13), diligently procured Christ's death;

afterwards he tried by Pilate's wife (Matthew 27) to persuade Pilate not to crucify Christ.

For the woman wrote to Pilate as he sat on the tribunal: "Nothing to you, and to the just one, etc." (text preserved as in source).

Cajetan responds in this article § to the preceding doubt, whom the more recent Thomists follow when they say that the doctors cited mean the angel's will to be immutable from that which he once indicated and chose, understood as a full judgment and election;

whereas the demon when he first urged Judas to betray Christ to the Jews did not judge fully nor act from a full election, and therefore afterwards it was changed.

But who does not see that Cajetan devised this escape without foundation?

From what then could he divine that the demon did not judge fully and choose fully what he first decreed concerning Christ's death;

but let us reason against him.

Either Cajetan understands by full judgment and election that which suffices for mortal sin, and in this sense one cannot deny that the angel by full election and deliberation decreed to induce Judas to betray Christ to the Jews, as is manifest;

or by full election he understands that which proceeds from judgment without any inadvertence of some circumstance and without defect;

And certainly, if according to Cajetan the demon sinned by his first sin from inadvertence, as we reported in Disput. 234 chap. 2, it follows plainly against him that the demon could not less well have revoked the will of the first sin than that other will of persuading Christ's death, if he had willed and induced it not by full election but by some inadvertence.

If however he could revoke the will of killing Christ because he sinned from some defect of intellect, since it is certain that every sin is born from some defect of the intellect (as I noted Disput. 231 chap. 5), and must be proved in 1-2 q.77 a.2, it follows that the demon does not adhere by himself immovably to the sin which he committed from election.

Then it is also certain that all angels who sin changed the prior will in which they were created.

For according to the opinion of St. Thomas, which I showed to be truer in Disput. 227, all were created in grace and in the love of God, and yet afterwards sinned and followed God with inward hatred;

therefore angels do not adhere immovably to the thing which they once chose.

Perhaps someone will reply that the angel can be turned from good to evil because this can be without God's grace; but not from evil to good, because for this he needs the grace of God.

But this response does not in the least harm the proposed argument, because when we contend here that the angel can be turned from what he once chose, and does not adhere immovably to it, we speak not of conversion by salutary penitence but of any kind of retraction whatsoever, from whatever end, which is sufficient to remove in us any adhesion of the will to what it once chose.

For if the speech were of conversion to a prior good will by fruitful penitence, the same would be said of man as of the angel, namely that he cannot truly repent of sin.

(References: Cajetan in this article § a doubt against the foregoing and Ferrara cited chap. §).

It must be observed however that the doctrine of St. Thomas is to be understood of the will of a perfect and complete election, from a perfect apprehension of judgment, so that from this election once made the angel cannot be moved.

And they call perfect election that which is with indifference and liberty toward both evil and good.

And because the angel in the first instant could not sin, and therefore did not thus choose perfectly, he could not be moved from that election.

But this solution can be easily refuted.

First because that the angel could not sin in the first instant is very difficult, as I showed above Disput. 235.

Then if the whole reason why the angel cannot be moved from an election once perfectly made is because perfect election is made from perfect judgment, in the same way the angel could not be moved from the election which he made in the first instant without the liberty of sinning, just as from that which he afterwards would have made with that liberty:

because even that which was done in the first instant was from a full and perfect judgment;

for nothing prevents the plenitude and perfection of judgment from the impotence of sinning;

otherwise there would not be a perfect judgment in God, which is absurd.

Therefore, when in the first instant the angel chose the good perfectly and without deliberation and without any defect of intellect, he could never be torn away from this election by any perversity.

And certainly if the first act in the angels, by which they loved God, had been natural and not at all free, as the doctors who think the angel could not sin in the first instant contend,

it would be more difficult for the angel to be moved from that first will than from any other which were not natural.

If you say that therefore the angel could be separated from the love with which he loved God in the first instant and could hate God because he could newly consider some reasons by which he would have hatred of him, which he did not consider at first, against this we would object that the angel could also revoke his sin which he committed first by some new consideration.

Moreover in the opinion of those who say the angel sinned from inadvertence, among whom are Cajetan and Ferrara as we saw in Disput. 234 chap. 2 (against whom we are now disputing), thus the angel could afterward consider that which he considered.

Also this is in all opinions: for there is no sin which is not committed from the defect of some perfect consideration by which one could be drawn back from sin, as we said above.

Then from these things a not slight other argument is taken against the aforesaid reason, which at least has force against Cajetan and Ferrara.

For if the angel sinned from inadvertence, as they assert, and afterwards the angel saw that he had not considered what he ought (for demons believe and tremble, James 2, chap. 10, and could not be ignorant that they had not considered what they ought), he easily had in that very judgment of reason the principle whereby he could revoke that perverse election and retract it by any fruitful penitence, if God would grant him grace.

Cajetan however answers in this article §: in brief he says that the angel indeed sinned from inadvertence; and afterwards, when he perceives that inadvertence has ceased in him speculatively but not affectively (so he speaks), that is, the inadvertence was not supplied by a fruitful consideration which would move the affective state in the contrary direction.

The response, however, is frivolous: for the argument does not contend that after a sin from inadvertence the demon had had such a consideration whereby it would move the affectus to penitence; for this is outside the controversy, since without God's grace that cannot be had, and grace has been denied to the angels perpetually after the first sin;

but the argument contended that the angel had seen speculatively his inadvertence from which he sinned, and therefore did not have in that sin from the part of judgment the principle of perpetual adhesion; rather he had the principle by which he could retract the prior election, having known the defect of his prior judgment:

If indeed according to the opinion of the doctors whom we mentioned in the first chap., the immutability of election in angels must arise from a perfect judgment without defect.

Finally, as we said above, since every perverse affection of the will, even in angels, proceeds from some defect in the intellect by which one considers those things which ought to withdraw the soul from sin less than those which move it to sins, it follows from the part of judgment that even in angels there remains the principle of mutability from that which the angel once chose.

And this also has place in all elections in which there is no sin, in the angels:

otherwise he could not be moved away from an honest thing which the angel chose rightly according to virtue as from that which he once perversely chose and cannot be torn away from, which is absurd.

Rather, if the angel's judgment were always so perfect that he could not be changed from an election once made, it would also follow that there is not in the angel a liberty toward either part before election.

For if immediately by that perfect judgment the angel can choose into one part, in the same way, having once made the election from that perfect judgment he could recall into the contrary that part which he judged.

For there does not seem a greater reason why the will from such a judgment would be left free to either part before election and not after election.

If however, with that perfect judgment standing, he cannot revoke the made election but is bound necessarily to the part which he chose, it follows that liberty is taken away from him before election from that judgment, which is absurd.

For to have chosen or not to have chosen does not determine the will nor take away its liberty.

Especially since the authors cited reduce the entire root and cause of immobile adhesion to one part not to the made election but to the perfection of the judgment.

Scotus seems to have touched this reasoning in 2 d. 7. q. 1. §.

Against that conclusion thus: the will is not the cause of willing except insofar as it is prior according to the nature of the operation of willing: therefore it is compared in the same manner with some volition and object so long as it does not vary in itself

Further Scotus proves that the will, insofar as it is the principle of willing, has the same manner in itself before and after election; because to produce various effects from itself in that it produces one does not impede the production of another.

Add also that if the will after election remained in itself entirely unchanged, it would not remain free; this at least should arise from a varying apprehension of the reason.

For the will of the blessed, being in itself entirely unchanged, does not remain free because the cognition of the object is varied.

But the cognition of the angel on the road, whether before election or after it, does not vary;

therefore, if with that kind of thought and judgment the will was free to choose whichever part it wished, it will also remain free so that it can be moved from an election once made no less than it was before free toward either part.

Caput V - (Chapter V)

CHAPTER V. Another cause of the demons' obduracy in evil from a perverse disposition of nature.

St. Thomas also assigns another cause of the demons' obduracy from their own part in Contra Gentiles 4 chap. 95 in this way.

The end with respect to the will stands as the first principles do with respect to the intellect in speculative matters.

But error in speculative matters must be corrected otherwise than error concerning conclusions.

For an error concerning conclusions can be corrected by true principles rightly disposed in argumentation;

whereas an error concerning principles cannot otherwise be treated and corrected than by removing the perverse disposition from which it arises.

Likewise in the will it happens concerning the end:

for everyone has a natural desire for the ultimate end, and thus the desire of beatitude is natural to every rational nature.

That this or that is desired under the reason of the ultimate end and of beatitude proceeds from some particular disposition of nature;

which Aristotle rightly indicated in Ethics 3 chap. 4 in that sentence: "As each one is, such an end seems to him."

Therefore, if this disposition of the will, from which it proceeds that something is desired by a rational creature as the ultimate end, as happens in any sin, cannot be removed, the will cannot be amended concerning the ultimate end nor retracted.

But from a man living in this life that perverse disposition can be removed, though not from a soul in another life; and for the same reason neither from an angel.

This reasoning, however, does not satisfy the difficulty if one wishes to assign something peculiar on the part of the demon which is not in man, on account of which God would deny the help of his grace and thereby the demon remain obstinate.

First then, the perverse disposition on the part of the intellect, by which it happens to err concerning principles, is posited only in this way: that man does not apprehend the extreme proposition which is the first principle, or if he apprehends it, because nevertheless he knows it through alien concepts and not as they are, the power of the intellect does not attain that express form of knowledge by which those extremes are represented to itself appropriately.

But concerning the ultimate end it happens to err in one of two ways: either from an error of the intellect, because it judges that in some created thing the complement of all good is to be found, as many philosophers thought; and in this way the angel cannot be deceived, but man can while he is in this life;

however the separated soul is easily convicted of this error by the very experiment; therefore from this part it will not adhere immovably to the ultimate end which it once thus chose.

If the angel also in this way had erred at any time concerning the ultimate end, without doubt by the very event of damnation he would have been convicted and removed from the error of the intellect; and therefore from this part he would not adhere immovably to the end which he once chose.

But we speak of the retraction of a prior election not by fruitful penitence and according to virtue, but from any other end, as we warned above.

Or concerning the ultimate end it happens to err through any mortal sin, by which we say the ultimate end is constituted in a creature:

and in this way most angels and men have sinned: for few were those who erred in constituting the highest happiness in some created thing.

In whatever mortal sin the ultimate end is constituted, not indeed of felicity, but of a certain apparent good, because something is loved for the sake of itself against God, beloved by the love of charity, precisely because it is loved against his precept, and such a love is notable that it dissolves the bond of charity with God, as will be explained in R. 2 quaest.1 art.5 and quaest.113 art.2.

And in this way the will of the angels erred concerning the end without an error of judgment in the intellect, but either from inadvertence, as the Thomist authors say in Disput. 234 chap. 2, or, which is truer, from a defect of the intellect more effectively presenting that which inclined to sin than that which ought to draw away from sin.

This defect of the intellect is not of its nature immutable: indeed the created intellect even of an angel is such that at one time it proposes one thing more effectively, at another time another: therefore the error of the will concerning the end arising from such an error of the intellect, by its own nature is not immutable in the angel, as it is in man.

But some Thomists explain this disposition of the separated soul or of the angel, by which they adhere immovably to the thing which they once chose, in this way:

not that it is some quality left from sin inducing necessity to the will (for who would say that!), but because just as a heavy thing tends downward while it is outside its proper place and requires the concurrence of the first cause so that it be kept down according to the due order of nature, and otherwise it would be contrary to nature:

when however it is in its center, no further concurrence is owed to it:

likewise to an intellectual nature when it is in its terminus no concurrence is due: but rather it is so ordered that it rests in its end which it has chosen for itself.

And this is that the perverse affection concerning the end to which the angel adhered on the way cannot be removed.

But these Thomists do not defend the reason of Saint Thomas but apply a new one:

for St. Thomas did not say that therefore angels cannot repent because they are in the terminus, but because their disposition of the will concerning the end cannot be removed from them, so that he demonstrates from this that they are already in their terminus.

Moreover we will inquire from these doctors whether the angels after sin are in a natural terminus, as a stone is in the center, or in a terminus beyond nature, God so disposing because of their sins, although he could have granted them a longer way so that they might be converted to penitence?

Certainly it cannot be said that they are in the terminus as a stone is in its natural center:

for it is not natural that an angel be punished with the penalty of loss and obstinacy, but supernaturally beyond nature:

although their sins do most justly merit that punishment.

Therefore one must say that the angels are in the terminus from the mere will of God denying them perpetually his grace because of their sins:

not because the angel by his own nature adheres to that perverse disposition so that in no way can he be torn away from it, not only by salutary penitence but by any end whatsoever.

Caput VI - (Chapter VI)

CHAPTER VI. Henry's opinion on the same matter.

Finally Henry in Quaestiones quodlibetales 3 q.11 reports the opinion of some who said that the demons' and souls' obstinacy in evil proceeds from this, namely because the more free and more perfect the will is, the more vehemently it immerses itself in the pleasure and thing which it chooses; that is, the greater the love with which it adheres to it.

Since therefore the nature of the angel and of the separated soul is so perfectly free that, if without any carnal stimulus they are moved from themselves to the thing which they love, they so vehemently immerse and fix themselves in it that they cannot in any way be moved away from it.

Although Henry consents to this opinion, he adds that in this way the mode of the angels' and separated souls' obstinacy in evil is not sufficiently explained.

Concerning which he himself tries to explain it further with these words.

"When the will being in perfect liberty, having had complete deliberation, runs into sin with such force as to place in it the ultimate end, that, coming to the obstacle of synderesis, it not only does not stop there but despising it rushes upon it, and there it is so fixed that it neither wants nor can withdraw itself."

"Just as an acute iron, piercing the flesh into the inner parts of the bones, is blunted so that it cannot be drawn out."

On the contrary a man pilgrim, because he cannot strike with such force, can therefore always return as long as he is on the way

So far Henry.

This mode of philosophizing therefore agrees with the first, insofar as it teaches that the angel from himself so freely bears toward that which he follows with full deliberation that afterwards he cannot be torn away from it; and thus in general the intellect suffers entirely the same difficulties as the first mode.

But it differs from it in that the latter refers the whole cause of this immutability after election to the perspicacity of the intellect, against which mode in chapters 3 and 4 we proposed some difficulties.

But this mode reduces all immutability to the great and most free impetus with which the will of the angel and of the separated soul is carried toward the thing it loves.

But the author of that [opinion] tries to explain this matter by a parable, as Scotus rightly noted in 2 distinct. 7 q.1 § contra conclusionem in the verse "Against the second way", so that no reason can be understood and the thing itself becomes more difficult.

For it was necessary to explain what the free will of the angel and separated soul has after election that it be blunted and thus remain fixed so that it cannot be torn away.

For that example of a sharp iron is too gross and in no way explains the matter.

Then it is false that he says that the more free the will is the more it is always carried with greater impetus into the object;

for since it is perfectly free, it is in its power more or less to be carried into the object.

Moreover that this sentence seems to say that the separated soul contracts obstinacy by some act after separation is no less false, as Scotus rightly noted in the cited place.

For if by an act in another life he contracted obstinacy, especially by the first act, and therefore the first act did not proceed from obstinacy, it would follow that the angel could retract by that first act the sins which he committed on the way, and there would be a place for penitence in the other life.

For this reason Scotus uses this against the aforesaid mode of Henry.

Caput VII - (Chapter VII)

CHAPTER VII. The true cause of the demons' obduracy

In this difficulty I first judge the unique and proper cause of the inflexible obstinacy of the demons, that they cannot resume a good will, to be the subtraction of divine grace which by a just judgment God removed on account of their sins.

Then from the part of the angel himself there was also some reason of congruity, on account of which God, although he could have sustained them for a longer time, so soon closed their way, as will be explained below.

The former part is taught by Antisiodorus in book 2 of the Summa tract. 2 t.6; Albertus (2 p. tract.5 q.25 art.4); Bonaventure in 2 dist.7 p.1 art.1 q.1; Ricardus art.2 in the body and solutions of the arguments; Durandus q.2; Scotus q.1 § (I say in the second); and in the quoted places of the same d. q.3; Gregor. q.1 art.2; Bassolus q.1 art.2; Maior q.1; to whom also we could add Gabriel and Occham whom we will cite in the following disputation, Marsilius in 2 quaest.5 art.3; and Paludanus in 4th distinction 50 question - all of whom refer the obduracy of angels to the sole will of God in denying the help of his grace, not to any immutability of their nature.

They speak of the demons' obstinacy not insofar as it consists in a mind hardened to sin (for they themselves are the proper cause of that, nor can God be the proper cause of it) but of the inflexible state of them and the impotence of resuming a good will.

Indeed the aforementioned doctors Scotus, Paludanus, Gregotius, Gabriel, Occham and others expressly refute that cause which in chap. 2 we assigned from the opinion of some, which consists in the immutability of the angels' nature after election; but we will expound that in a favorable sense below.

Therefore there is no doubt that this is the proper cause of the demons' immutability from the state of sin, nor has any of the cited doctors taught the opposite.

For no Catholic denies that the angel's free will cannot by itself be recalled to the prior state in which it was before sin, or that the prior good will which it lost be recovered by itself.

Moreover all confess that God could have granted the demons the grace of penitence; if granted without doubt they would rise again.

For what seems to be demonstrated by Anselm in Book 2 Cur Deus Homo chap. 21, that an angel once fallen could not be freed from sin if understood with regard to God's absolute power, is too severe an opinion which scholastics commonly do not approve.

Finally they concede that demons could now have some good will if God did not deny his grace to them.

Therefore the proper cause of the demons' immutability and inflexibility, so to speak, is the removal of divine grace; as the impediment or removal of the object is the proper cause that an eye which could see does not see.

Furthermore the holy Fathers assign many causes of congruity whereby, after so brief an interval, God denied to demons the grace which he could have liberally granted, with the best and most fitting justice and dignity immediately after one sin; whereas he waits long and long for fallen men and grants his grace to them.

And first those who assert that the angels were obdurate after one sin, some Fathers affirm this, indeed the matter is most certain of faith.

Thus they thought from the Fathers: Nyssen (or rather Nemesius, who is believed to be the author of that book) book 1 philosophical chap. 3; and Damascene 2 On the Faith chap. 4, who compare the fall of the angels to the death of men since no place for penitence is granted.

Gregory likewise held it in Book 2 of the Morals chap. 3 and elsewhere 4 and in Book 4 of the Morals chap. 9 and 10 where he says God by no means ever recalls the apostate spirit to penitence.

Chrysostom said the same expressly in the Homily on Adam and Eve before the middle; the author De Mirabilibus Sacrae Scripturae in Augustine Book 1 chap. 2; and Cassian in Collation 4 chap. 13 and 14; and it is plainly evident from 2 Peter 2 ("For if God did not spare the angels when they sinned..." etc.) and from that which Judas says in his canonical [writings], "But the angels, who did not keep their principality but left their own dwelling, he has reserved in eternal bonds under darkness for judgment" etc.

Why therefore angels did not obtain pardon and grace from God after sin as man does, the Fathers are wont to explain variously.

The first reason is that man obtained mercy because of the weakness of the flesh, that is, because clothed in the garment of the flesh he sinned.

But the angel because, being a pure spirit, he fell (in which the gravity of his fault is more manifest) therefore did not obtain pardon from God.

Nyssenus in that book 1 of Philosophy chap.3; Cassian in Collation 4 chap.14; Damascene Book 2 On the Faith chap.3; Gregory the Great in Book 4 of the Morals chap.9; Isidore in De Summo Bono chap.12 sentence 11 assert this reason; but Bonaventure in the cited place attacks it: because man obtained pardon even though he did not have carnal incentives to sin, so that he might sin.

Moreover those aforesaid Fathers do not say that man obtained pardon because he sinned being attracted by the flesh: but they establish the difference between angel and man in this, that the angel, being without the garment of the flesh, had greater perspicacity to avoid sin;

whereas man, though not enticed by the flesh and having sinned without its incentive, because his spirit was covered by the garment of the flesh, was not so perspicacious so as to avoid sin;

therefore on account of this weakness he obtained mercy from God.

The second reason is that the angel sinned by no suggestion; but man even in paradise was deceived by the suggestion of the demon.

This reason is attributed to Cassian; but in truth he did not hand it down thus.

It is in Gregory Book 4 Morals chap.10 and else 9; and Prosper in the book entitled Dimidium Temporis chap.2; and Alexander 2 par. question 99 member 7; however St. Thomas in this article ad 4 and Bonaventure in the cited place refuted it: because although the supreme angel did not sin by another suggesting to him, the others nonetheless fell by suggestion and example of the supreme.

But it is not so certain; we noted this above Disput. 238 chap. 2.

The third reason is that in the angels not the whole nature has fallen but a part of it; whereas in man the whole nature fell.

Augustine used this in the Enchiridion chap.29, and Richard follows in the cited place in the Magister in 2 dist.21 chap. penultimate and Alexander 2 p.q.99 memb.7.

To this reason however there seems to stand an objection, that not only Adam, in whom the whole human race sinned, found a place of penitence, but also afterwards individual men who sinned found it.

This objection, however, is not of great moment: for conceding once the remedy of penitence to Adam, it ought also to have been conceded to the whole posterity, since all were from the same stock.

Quarta ratio, quam sequutus est Ricard. loco ad tato, est huiusmodi, quia angelus corruit toto co natu a

Disputation 240 (Disputatio 240)

How God by what means perpetually denies to demons the grace of justification, so that they may not be converted (Quo pacto Deus suam gratiam iustificationis daemonibus perpetuo deneget, ne conuertantur)

Opinio Scoti, cap. 1. Duae aliae Scholasticorum sententiae, cap. 2. Vera opinio, ca. (Opinio Scoti, capit. 1. Duae aliae Scholasticorum sententiae, cap. 2 Vera opinio, ca)

Chapter 1 (Caput I) - The opinion of Scotus (Opinio Scoti).

We have said that the principal cause, on account of which a demon cannot be converted to God by penitence, is the perpetual privation of divine grace. However, among the Doctors who refer the obstinacy of demons, that is, the impotence to do penance, to this single privation as to the cause, it is still disputed in what way by the subtraction of God's grace a demon is rendered impotent so that he may not return to the heart and obtain from God the grace of the remission of sins. Scotus in his reports on the 2nd distinction, 7 q. 3 art. 2, who answers the second question, teaches two things. The one is that an angel cannot perform any meritorious work, nor have meritorial contrition: because he is perpetually lacking the habitual grace which is necessary for merit. The other is that this habitual grace is never to be given to demons: because they will never have the due disposition. How moreover the angels will never have the due disposition he explains according to his doctrine, which he delivered explicitly in the 4th distinction, question 14, question 2, section "De secundo." There he says first that, with the natural and general concurrence, without any gift of grace distinct from the gift of creation, a man, and therefore also an angel, can repent of his sins, even insofar as they are offenses against God, a sorrow which Scotus himself does not call contrition but attrition during the whole time in which he is not yet joined with habitual grace: for that which after the arrival of habitual grace Scotus calls contrition. Scotus furthermore teaches that such a sorrow, drawn forth from the powers of mere nature, is such a disposition to justification that, by congruity, it merits the remission of sins through the infusion of habitual grace, which God will most certainly confer, if that contrition should grow up to a certain degree of intensity.

According to this doctrine therefore Scotus explains how God, after the fall, denies His grace to the angel so that he may not be able to be justified and amended from sin. He says moreover that this can be understood in one of two ways: in one way, because the angel could not elicit that act of attrition which Scotus said is a disposition for habitual grace, because God would deny to him the natural and general concurrence due; and therefore God would deny habitual grace to the angel because the angel would not be duly disposed. But this mode does not please Scotus: because this would be a perpetual damnable miracle, and a certain perpetual force imposed on the angel; just as it would also happen to a stone lying outside a hundred, if the due concurrence, by which it ought to be moved downward, were denied it. In the other way it could be understood that God denies to the angel his habitual grace: because although the demon, from his own powers, would grieve for the sins committed, God would not accept this as attrition as a disposition for habitual grace; and thus even though the demon is grieved from his own powers, God would forever deny his grace; since God would not accept the demons' attrition, they would not be said by it to be disposed to habitual grace. Whether however according to Scotus's opinion demons now have or ever have had this sorrow for sins or not, we will see in the following disputation. And Scotus judges that this latter mode is easier to understand by what arrangement God can perpetually deny his grace to demons without any force or miracle.

This opinion of Scotus is in many respects not acceptable to me. And first indeed it has already been sufficiently and more than sufficiently attacked by us in Disputation 91, chapters 10 and 11, insofar as he asserts that some disposition can be from us even of congruity to habitual grace; and that same judgment ought to be about angels is gathered from the reasons brought by us in that disputation, chapters 14 and 15. Then that which he asserts, that God cannot impede the act of contrition in demons without some force and miracle, is manifestly false: for although we would say that for this sort of attrition the supernatural help of God is not necessary according to substance, yet we cannot certainly deny that a prior cogitation is necessary, and that this cogitation may be such that it would not move the will to consent, and also such that it would move it. Moreover it must be confessed that it is in God's hand to introduce various cogitations by which that cogitation moving toward attrition is so delayed that the will does not consent, even though it might, as is gathered from Disputation 65 ch. 10 and Disputation 98 ch. 6; and this without any violence or miracle: for although it would be violent and against the impulse of the will to deny him the concurrence to consent whenever he is so prepared by a fitting cogitation that he would immediately consent of himself, nevertheless to deny him such a cogitation, by which the will would in fact be moved, by arranging all things and introducing various cogitations, is not violence to the will: for since the first cogitation about some thing is determined to the intellect - both human and angelic - by God, as was shown above in Disputation 235 chapter 3, God could introduce various cogitations about other things while the angel was thinking of the pain of sins. Add also that since the blessed angel's first cogitation about some thing is determined by God, God could so dispose the angel's intellect without any violence that it would never come into his mind that it is good to grieve over sins.

Finally, since the aforementioned doctrine of Scotus, as applied to angels, rests in part on the ground that an angel sometimes performs a moral good from every circumstance - which thing in the following disputation is to be attacked - therefore this opinion of Scotus is in no way acceptable to us.

Chapter 2 (Caput II) - Two other opinions of the Schoolmen (Duae aliae Scholasticorum sententiae).

Others however think that the impotence of demons, so that they cannot grieve for sins and thereby be justified and cleansed, proceeds from something produced in them by God, by reason of which they are altogether affected so as not to grieve for sins. In assigning, however, the reason from which this impotence originates, they differ among themselves. Marsilius in the second question 5 art. 3 reports the opinion of Aureolus, who said that therefore a demon after sin cannot be converted to God by penitence, because God poured into his will a certain vehement habit of malice inclined necessarily the will to evil, and hatred of God, by reason of which they are not permitted to retract the former will by penitence and be converted to God. The Major regards this opinion as probable in Distinction 7 question 1, who also reports the same opinion from Aureolus. For he thinks that God can produce some habit in which the will, otherwise free, is determined by necessity to one side.

But Marsilius does not approve Aureolus's opinion: because from it would follow that God is the author of sin: for he alone would infuse into the will a habit which necessarily would move it to sin. Nevertheless Marsilius's reasoning is of little weight. For if there were such a habit which could necessarily move the will to hatred of God, it would follow that hatred of God in demons would not be sin: for the reason of sin cannot in any way be conceived without voluntary freedom; moreover hatred of God would be in demons no otherwise without liberty than in madmen: therefore although God would be the author of such hatred, nevertheless he would not be the author of sin.

Nevertheless the aforementioned opinion of Aureolus is not approved by me: for, besides that such a habit seems altogether to lack any foundation from considerations, since we can explain this demon impotence by an easier way, there cannot be any habit which necessarily moves the will to evil or hinders its freedom. For we have shown in Disputation 90 ch. 2 and Disputation 99 ch. 8 that a rational creature cannot suffer any violent necessity other than that which would impede its freedom except by a clear vision to love God, and to not sin by the hypostatic union likewise to not sin; and in men by disturbed senses and impeded use of reason.

The foundation of this teaching is that, whatever habit be infused into the will, the intellect remains indifferent, so that it proposes various objects and none under every respect of good, except by clear vision; but an object which is not proposed under every respect of good on its own part and on the part of exercise concerning itself cannot necessarily move the will, as we will show in 1st Part, 2nd Question 10 article 2; therefore with whatever habit infused, freedom still remains in the will. Add that there can be no habit which, although it cannot be with the act of good and of contrition, could so impede the will that it would have the good act less, and thereby drive out such a habit: just as habitual grace, which by its own nature, even considered in absolute potency, cannot be with sin, nonetheless cannot prevent the will from sinning so that the grace itself be expelled by that sin. This peculiarity belongs to the hypostatic union, so that not only is it impossible for true sin to be with it, but also the will of the assumed nature cannot by sin itself destroy the union, as we shall show in 3rd Part, Question 14 article 2.

Moreover, if it were true what Aureolus teaches, that such a vehement habit is poured into the will of the angel that it would necessarily move it to hatred of God, it would follow rightly that the angel cannot be converted to contrition and penitence: not because hatred of God would be contrary to penitence, as guilt is to holiness - for in truth such hatred would not be sin, as has been shown - but because it is impossible for someone at the same time to hate God with the hatred of enmity and to repent with true contrition of his sins insofar as they are offenses against God; for true contrition, which is said to be for the sake of God most beloved, regards God also as the object of friendship, not only by a distinct act of love which contrition seems to presuppose, but also because contrition itself is essentially love of God, as I will show in 3rd Part, Question 85: hatred of God however is opposed to love of him.

Others again exist who hold that demons cannot be converted to penitence because God infuses something into their will in another manner - they explain differently. They say therefore that God (which is His omnipotence) infuses into the demons' will hatred of Himself, and preserves that perpetually in them: but since penitence for sins cannot be at the same time with hatred of God, as

has been explained above, Ockham embraces this opinion as probable in 2 q. 19 and Quodlibet 1 q. 14, and Gabriel in the 2nd distinction 7 q. 1 art. 1 after the second conclusion; for they think the acts of the will and intellect can be produced by God alone. And as I will recall in 1st Part, 2nd Question 4 article 4, by this same reasoning the aforementioned authors teach that the blessed cannot sin: because with the love of God no one can commit sin; and God infuses and perpetually conserves the love of Himself in the blessed: for if the love of God in the blessed were produced by God as from an efficient cause, the doctors reckon that one would have to suppose the blessed could be deprived of it by Him, and thus be able to sin.

This opinion is usually attacked by some for this reason: because in this way we would make God the author of the greatest sin. But this reasoning is firm: because if in that way God produced in the will of demons the act of hatred, even though thereby the will might hate God, yet it would not be sin: for that act would not be free; but liberty is necessary to the nature of sin.

Nevertheless the aforesaid opinion greatly displeases me. First, because I consider it impossible that an act of hatred, or any other vital act of intellect and will, be produced by God alone, as I will show in 1st Part, 2nd Question 3 article 2; secondly, because even if it were possible that God produce such an act, we would be mistaken to say it is produced by God in demons, when we can explain the impotence of demons to penitence by another, easier way. And if the opinion of those doctors were true, it would follow beyond doubt that the demon could not repent of his sins by penitence, because penitence with regard to God cannot be together with hatred of God.

Chapter 3 (Caput III) - The truer opinion (Verior opinio).

Much truer, and much easier to understand, is the opinion of those who refer the whole cause of the demons' impotence to penitence and justification from sin to the privation of divine grace which God has perpetually denied as a punishment for their sins. This is the opinion of all those whom I cited in the previous disputation, chapter 7, except Ockham and Gabriel, who say that the impotence of the angel proceeds from the act of hatred which God produces and preserves perpetually in them; although Gabriel also says that therefore the demon cannot do a meritorious work, because God perpetually denies to him the help of his grace: Marsilius said the same, and those who will think similarly about contrition. But when we reduce the demons' impotence so that they might repent of their sins to the subtraction of divine grace, we speak not only of habitual grace, but also of the help of divine grace by which demons ought to be prepared for grace either beforehand in time or at the same time in nature with the habitual grace itself. For the authors alleged do not clearly explain of which grace they speak, except Aegidius, who plainly also speaks of the help of grace, which he calls "impetus." By the name "help" however we understand not only the help of cooperating grace, which is simultaneous with the cooperation of the will, but also the help of operative and exciting grace, about which we have said more than enough in Disputation 88. By this very mode, without any violence done to the demon, he remains perpetually impotent to be converted to God. For if he were preceded by an exciting or operating congruous grace, and was denied the concurrence of God by which that grace would become cooperating, manifest

violence would be done to the demon's will, as we noted in this Disputation chapter 1. But if the demon is denied not only the help of cooperating grace, but also the help of operative and even prevenient grace, which consists in a holy cogitation and in an undeliberated motion of the will, without any violence the demon is rendered impotent to penitence and justification.

Fulgentius indeed seems to have expressed this cause in the book On Faith addressed to Peter, chapter 3 before the middle, with these words: "He evidently shows that the beginning of good will and cogitation does not arise in man from himself but is prepared and bestowed in him divinely: for neither the devil nor any of his angels, by whom because of that ruin they are justly plunged into this lower darkness, can or will be able to resume a good will." By these words he plainly shows that the demon cannot recover a good will or be purified from the state of his sin: because the beginning of good will, namely the holy cogitation, is from God, which he perpetually denies to the demons. Isidore likewise indicated this in Book 1 On the Highest Good ch. 12 sententia 9 when he says, "The Devil therefore does not ask for pardon, because he is not moved to penitence." To be moved to penitence, according to Isidore, seems to be the first undeliberated motion of compunction, born from holy cogitation, in which the operative or prevenient grace, as we said in Disputation 88, is present. Therefore Isidore says that the angel does not repent of sins nor seek their pardon: because he is not moved, that is, the grace of God is not prevenient.

In the same sense Prosper in his book On the Contemplative Life ch. 3 says that the demon has lost the will to return and the faculty - namely by 'faculty' understanding not the natural power of the will (for this remained intact, as we noted from Dionysius in Question 1) but the faculty and virtue which prevenient grace provides - just as Fulgentius also said in his book On the Incarnation ch. 13 that our first parent by his sin lost the faculty of thinking about those things which pertain to God.

This same cause is for souls separated from the body, on account of which they cannot be converted to penitence. For this reason I willingly pass over many things which more recent writers invent to explain some particular reason in souls which does not befit angels. For I do not see by what reason souls contract this impotence from some act elicited in this or in another life: which is manifestly refuted by the same reasons by which I proved that this does not happen in angels.

But as for what Cajetan says in this article - that separated souls by the first act deserve their obstinacy, that is, deserve the impotence of rising again from sin - I say they deserve it not as on the way but as at the term, as he had said about angels in q. 63 art. 5, which we have already sufficiently contested in Disputation 128 ch. 7; and indeed concerning souls I think it is expressly stated in Scripture that rewards are merited only in this life as long as they are in the body, since Scripture says in 2 Corinthians 5 that each one receives in another life the reward or punishment which he had prepared in the body.

But someone may ask whether God denies to demons the holy cogitation effective for penitence, which I called "congruous" in Disputation 88, or also the uncongruous which is only sufficient but would not have effect. If we say that a sufficient one is indeed granted, but that only the efficacious and congruous one is denied, we seem to place the demons in the same state as reproved men in

this life within a certain period; for it is certain that for a certain final period of life the reprobate are not granted an efficacious vocation but only a sufficient one. I answer that even if we said that a sufficient cogitation is granted to demons just as to the reprobates at the extreme time of life, nevertheless it would not be the same state of the two, as we will see in the following disputation. Moreover, if we speak of the cogitation to penitence which is of supernatural order, I hold it much truer that not even the smallest such cogitation is granted to demons. For it seems to me that they lack entirely even the minimal help of grace, and the reason is not the same as to grant it to demons as is the case for reprobate men in this life: for to the latter it is given so that they may be justifiable when they are judged; this reason does not apply to demons.

Disputation 241 (Disputatio 241)

Whether the will of demons is so depraved that it can will no good work, even a moral one (An voluntas daemonum ita sit deprauata, vt nullum bonum opus, etiam motale, possit velle)

Disputation 241. Whether the will of demons is so depraved that it cannot will any good work, even a moral one? Most judge it far more probable that demons cannot perform any moral good. Chapter 1. The reasons of Aureolus and the Nominalists by which the aforesaid sentence is commonly supported. Chapter 2. Three other reasons of the same opinion. Chapter 3. The aforesaid sentence is confirmed by the best reason. Chapter 4. The arguments of Scotus are dissolved. Chapter 5.

Chapter 1 (Caput 1)

Chapter I. Most judge it more probable that demons cannot perform any moral good. If indeed to a demon the grace of vocation by which he is converted to God is denied, as was shown in the preceding disputation, he could nonetheless remain able to other good moral works which are said to belong to the natural order and according to every necessary circumstance. Wherefore a new controversy remains, whether the demon is so confirmed in every kind of sin that he can perform absolutely no moral good according to any circumstance; in which our Scholastics are also divided. Scotus in 2 d. 7. q. 1. § "Restat nunc dicendum" and q. 3 in the reports in the same distinction; Bassolis in 2 d. 7. q. 1. art. 1; Durandus q. 2 num. 12 affirm that a damned Angel can indeed perform some moral good from some circumstance: nor has the opposite been sufficiently proved hitherto. They add nevertheless that Scotus, who in that first § "Quantum ergo ad istum", and Bassolis in the place cited, teach that the demon, because of his great malice, can never act well. But Durandus teaches nothing at all as to the question of fact. This opinion is first proved because a moral work, good in every moral circumstance, is not above the natural faculty of an Angel. And natural faculties remain intact in demons, as I noted in article 1 of this question from Dionysius: therefore a demon will be able to do some moral good. Moreover from this same principle we can press the adversaries and prove not only that demons can perform a moral good, but also that they can sometimes perform some. For a power which will have no act in infinite time seems to be in vain. If therefore demons have a native power of operating good, they cannot in the infinite time

during which their damnation will last be entirely without any good work. Further it is proved at least that the demon does not always and continuously sin: because it is in the power of a free will to suspend every act. Therefore since the demon is of free will, he can cease from every act and consequently for some time cease from sin by ceasing from action. And a sin cannot be without an action unless it is a pure omission. But this does not happen among demons, because they are rarely or never bound by any affirmative precept. But most of the Scholastics much more probably affirm that a demon cannot perform any moral good good in every circumstance. They say "good in every circumstance", for all admit that a demon can do a good deprived of some circumstance. Thus teach Antisiodorensis book 2 Summa tract 2 ch. 7 q. 1; St. Thomas in this article ad 5; Caietanus and the more recent Ferrar in the cited places, Contra Gentes ch. 95; and the Master in 2 d. 7. cap. seem to agree. "Now therefore," he says, "the evil angels are so obdurate in vice that they cannot live well." The same Scholastics embrace the same opinion in like manner. Thus: St. Thomas q. 1 art. 2; Bonaventure 1st part art. q. 2; Aegidius q. 1 art. 2; Richard art. 2 q. 2; Gregory q. 1 art. 2; Capreolus q. 1 art. 1 conclusion 2 on the obstinacy of demons; Maior q. 1 conclusion 5; Marsilius in 2 q. 5 art. 3 in the opinion, especially in the solutions of arguments; Scotus in 4th distinction 51 q. 1 a. 5; Holcot in 2 q. 4 letter RR - although not all concur in the same way with this opinion. Antisiodorensis, St. Thomas in this article, Bonaventure and Marsilius alone say the demon never acts well: which Scotus does not deny, indeed he thinks it more probable: whether he can do some moral good they do not discuss. However others, and the same Holy Doctor in the second cited place, not only assert that demons never act well, but also that they cannot, although they are led to this by different reasons, affirm it.

Chapter 2 (Caput 2) - The reasons of Aureolus and the Nominalists by which the aforesaid sentence is usually supported

The latter opinion, which I said in the preceding chapter to be more probable, is commonly supported by various reasons. The first of these is that of Aureolus, which I mentioned in the preceding disputation, chapter two, and which Holcot used in the cited place: because into the will of demons a certain habit is infused by God necessarily inclining their will to do evil; mention of which reasoning Scotus and Gabriel made in the cited places. When therefore the will is necessarily inclined to evil, insofar as something will meet it according to its power, the angel will not be able to act well. Holcot however proves that the freedom of an angel can be altogether impeded when some necessity from a habit is imposed, because the freedom of the Angel is finite, and through a vicious habit can be diminished day by day, as St. Thomas teaches I-II q.85 art. 1. Therefore finally it can be ended: for every finite thing, if continuously diminished, will at last be exhausted. Yet this reasoning is frivolous. First, because, as I showed in the preceding disputation ch. 2, no habit can impede the native freedom of the will. What Holcot adduces in confirmation has no weight: for as we will show in I-II q.85 art. 1 & 2, the freedom of the will to the good is not diminished intrinsically by perverse and vicious habits; but it is said to be diminished extrinsically only in that it is more inclined to evil by reason of the habits. This extrinsic diminution, however much it increases, could never entirely impede and extinguish native freedom; for since it takes away

nothing of it but only diminishes it by inclining it to the opposite, yet leaves it intact in itself, it can never wholly remove it, as we will more fully show there. Otherwise not only could God infuse such a habit that would altogether impede freedom, but every demon and man could, by multiplied sins, acquire such a vicious habit for themselves that would altogether obstruct their freedom on the way - which is absurd. Further, if such a habit were infused into a demon which necessarily inclined him to evil without liberty, it would follow that the demon would never sin: for there cannot be sin without liberty. Finally, since such a habit seems contrived without foundation, it seems rightly to be rejected for this sole reason. The second reason is that of Ockham and Gabriel, which is this. Since God by Himself alone produces in the will of the demon hatred of God, without the concurrence of his will, from which the demon can never cease, as we reported from the same Doctors in the preceding disputation ch. 2, it follows that the will of the demon can never perform any good that is good in every circumstance: for among the circumstances required for goodness there is one, the end. This reasoning, however, in the same way does not please me. First, because, as I noted in that chapter, the act of hatred cannot be produced by God alone. Secondly, because although God could produce hatred of Himself in the will of an angel, without the foundation mentioned by the aforesaid Doctors that would seem to be an impious suggestion, as I said there. Third, even if such an act of hatred were produced by God alone, it would not necessarily follow that every other act of the demon would be evil. For if other acts were evil, that would be either because they lacked the circumstance of the ultimate end, namely love of God above all, as Gabriel says, since simultaneously God cannot be hated and loved; otherwise by that account no act would be evil. For as will be proved against Gregory in I-II q.109 art. 2, the circumstance of the ultimate end, namely God, is not required for the moral goodness of an act, since it suffices to have as object the good of the particular virtue. Or the other acts would be evil, as Ockham indicates, because they would be tainted by that act of hatred of God: but neither would they be evil in this way; because that act of hatred, since it would be from God alone, would not be a free human act capable of sin and guilt, and therefore could not taint any other human act. For a human act cannot be infected by any malice of the will's end unless that will from which it is infected is a free and human act. Moreover, although hatred of God would be a human act and sin, nevertheless it would not be repugnant for there to be at the same time some act of moral virtue which is good in every circumstance. For it is possible for the will to be displeased with God and at the same time to take pleasure in the good of one's neighbor for its own sake out of mercy; just as although one cannot love God with the love of friendship above all and at the same time mortally sin against God's will. The reason of the distinction is this: because love of friendship toward God and toward a friend is of such a nature that it does not permit with itself anything that is notably against the will of God and of the friend. For it prefers the friend and his will to every other thing; and therefore it does not permit with itself a mortal sin, which is a notable offense against God and against his will. But hatred of God does not necessarily bring with it every kind of sin and offense against God: because hatred of someone is not a desire of every evil that is against his will. Therefore although hatred of

God does not permit with itself an act of virtue insofar as it pleases God, nevertheless at the same time there can be an act of a particular virtue which possesses the honesty of virtue itself alone without any order toward God.

Chapter 3 (Caput 3) - Three other reasons of the same opinion

The third reason which Gregory assigns is of this kind. Since the demon is in perpetual torment and punishment, he is always sorrowful; and this sorrow is the cause of perpetual murmuring against God, who is the cause of such punishment: and since with such murmuring the demon cannot act well, therefore he can never do any good. Gabriel also proves this reason in the cited place in his second conclusion concerning the obduration of demons. Moreover he adds that demons sin perpetually, because they continually desire their own beatitude and the absence of the punishment which they suffer, while God always wishes to deny them beatitude and to inflict punishment perpetually: therefore they sin, says Gabriel, because they do not have their will conformed to the divine. This reasoning, however, is weak. And first indeed, let us begin from that which Gabriel adds: it is frivolous to assert that demons sin in that they continually desire their own beatitude. For if they do not will effectively to strive for it (for truly they cannot will it, because to will what is impossible is impossible, and the will cannot be efficacious toward the impossible, as was proved above in Disputation 234 ch. 2 from Aristotle), they will not sin from that alone because they desire for themselves in mere affection beatitude and to be without the punishment which they suffer, unless they desire them from pride against God and from hatred toward that same thing. Moreover, if an angel has either will necessarily and not freely, as Gabriel says because he can cease from none of them, it follows that none of them is sin, for sin cannot be without liberty. But likewise this author does not sufficiently show here why the demon cannot cease from any of those volitions. Then, what Gregory and Gabriel say, that from the continuous torment it follows that demons perform no good, is not sufficiently proved. First because it has not been sufficiently shown for what reason the demon could not cease from the act of sorrow and hatred against God, if it is elicited by his will. Second because although demons are perpetually saddened against God, and hate Him, it does not follow from that that every other operation of the demon is evil, as we showed in the previous chapter. The fourth reason, which Saint Thomas assigns in that second distinction 7, and Capreolus, Caietanus, Ferrariensis, and Richard in the cited places, is this: whatever will of the demon either is the will of the end which he first desired, or proceeds from that will: therefore every will of the demon is evil either according to itself, if it is the will of the end which he first desired, or because it is vitiated by that will. Moreover they prove that every will of the demons is either that of the end which he first desired, or born from the will of that end thus: the first will, with which the angel sinned, was not the will of some particular end, but of the ultimate and most universal end. But every will is either of the ultimate end or for the sake of the ultimate end: therefore every will of an Angel is either the ultimate end, which he constituted to himself in the first act, or for that ultimate end at least virtually (as Caietanus says). Caietanus and other recent ones explain how demons are said to act for the end which they first set for themselves not only because the will is said to remain according to the habit turned toward that end which it

first proposed to itself, but because the other wills by virtue participate in that will of the first end which the will proposed to itself, just as the will of any particular good by virtue participates in the will of the ultimate end, namely beatitude. This reasoning, if it has any weight, proves that the demon wills all things which he wills because of the end which he set for himself through the first sin, so that he cannot but will them for that end: otherwise it would not prove that the demon cannot but act badly. In my judgment, however, this reasoning is not only weak, but also something absurd seems to follow from it. And first indeed from it it seems to be gathered that a man sins by whatever subsequent will after the first with which he sinned morally and set the ultimate end in a creature for himself; and so he cannot perform any moral good in every circumstance, because in every subsequent will his first will will remain by virtue as long as it has not been retracted by penance; and therefore it will corrupt all the remaining wills by its depravity, if it does this even in the demon; or they must assign a difference between a man sinner on the way and an Angel at the terminus, on account of which the works of the man on the way are not tainted by that first will, but those at the terminus are vitiated. Then the infirmity of the aforementioned reasoning is shown by a prior reason. For in order that some past will of the end, which does not move actually, is said to influence subsequent wills and taint them, it is necessary that at least something be operatively carried into them, as I will show from the sentences of Bonaventure, Scotus, Richard, and Gabriel in I-II q.1 a.6 and q.8 art. 2 and q.114 art. 4 and 3 p. in the treatise on Confession. But only is the will of the end said to operate in subsequent wills when the subsequent ones are derived by some continuous connection from the first, at least through another intermediate will which proceeded from the first. For if the will of the end has no more than the relation of cause with respect to the subsequent ones, it cannot be a circumstance of them. And moreover it cannot have the relation of cause unless it moves the will of the subsequent ones by itself or through others. But the demon so constituted the ultimate end for himself by the first sinful will that that will neither by itself nor through another moves all the subsequent ones. Therefore it cannot be compared with them as a circumstance of them, and therefore it is not said to remain by virtue in the subsequent [wills]. What Caietanus adduces about the will of beatitude, which they say all particular wills participate in somehow, is not to be understood thus, that some first will of beatitude preceded in general which afterwards remains in the subsequent ones by virtue and is their proximate or remote cause, as we said; because it can happen that such a will of beatitude did not precede, or if it preceded, it does not in any manner influence all the other particular wills, and therefore it would not be true that in every particular will the will of beatitude participates as St. Thomas contends I-II q.1 a.6; but it is said that the will of beatitude is participated by other particular wills because whatever we desire, we desire it under some notion of good. That we lack some evil; in this however there is a certain similarity and imitation of beatitude, which consists in it that we lack every evil and have every good. From this it cannot be inferred that the first will by which the demon by sin constituted for himself the ultimate end in a creature is participated as a circumstance by all the remaining subsequent wills, by reason of which participation it would be said that the demon sins.

Chapter 4 (Caput 4) - The aforesaid sentence is confirmed by the best reason

Since acting well, not only in man but also in an Angel, depends on the aid and motion of God as the first cause, it does not seem to me that any better reason remains by which demons cannot act morally well than that God, by His just judgment, denies them His aid with which they could act well. This is so whether that aid be the aid of grace distinct from the gift of creation, or whether it be the aid which some theologians call general, which they think is not the aid of grace. This reason was touched upon by Paludanus and Marsilius in the cited places. Paludanus adds that this happens without miracle: just as there will be no miracle of the elements acting after the day of judgment - for just as the elements were only necessary for generations and corruptions, and since after the day of judgment there will be no future generation and corruption, without any miracle God will deny the elements the aid with the elements by which they were needed to act - in the same way, because demons are already at the terminus, as the elements after the day of judgment would be, without any miracle God denies them His aid, without which they could not act well, which had been granted to them when they were on the way. However the aforementioned authors do not explain whether God withdraws from demons His operative aid, or only His cooperating aid, since much difference is involved in speaking of this or that kind of aid. Therefore it must be explained what aid God denies to demons so that they may not be able to act well. Now operative aid (whether it be of grace, or whether it be not of grace but called general and common) is a certain suggestion of the intellect and motion of the non-deliberate will which precedes the free consent of it. This is said to excite, to precede, and to prepare the will for consent. The cooperating aid, however, is the same suggestion and motion of the non-deliberate will inasmuch as it cooperates with the will to consent, in which cooperation the concurrence of God as the first cause is also required, whose operation and the cooperation of any created cause operate. I say therefore that demons cannot act well, not because God, after their wills are prepared to act, denies to them the concurrence of His cooperation (for that would be violent, as we noted in Disputation 139 ch. 1), but because He denies them the operative and preceding aid of whatever kind it is; that is, because He does not precede them with the suggestion and motion not deliberated which they need in order to act rightly. It should be noted moreover the distinction which we there introduced between other natural agents, as the elements, and Angels or men who are called "agents from a propos", namely that natural agents by their natural constitution, without any other extrinsic principle, are at hand and (so to speak) in first act to act, so that they do not need anything extrinsic except the concurrence of God as first cause and the proximate matter about which they operate. But every rational creature by creation is not constituted to be in first act; it needs a suggestion, after which sometimes necessarily follows a motion of the will not deliberated. And furthermore, in order to be brought to act, it needs the concurrence of God as first cause: and we said that the determination of the suggestion comes from God. Moreover any suggestion that a rational creature has can be delayed by God with other various suggestions, so as not to allure the will to consent, and this is in the hand of God, who can insert various suggestions without at all violating our freedom, and that of the Angel. Therefore if God were to deny the concurrence at any time to the elements remaining in their natural disposition and with proximate matter, it would be

violence to the nature of the elements, as is plainly gathered from the things we will say in I-II q.6 a.2.4; likewise if to a rational creature a congruous suggestion prepared for consent were given and God denied His concurrence, it would be violent. But to deny a rational creature the suggestion by which the will would be prepared to consent is not at all violence, as is manifest. It is therefore easier to assert that the demon cannot act well because God denies to him the operative aid of preceding suggestion necessary for acting rightly. Since this can be done without any violence, and if the suggestion of a good action is taken away, it is impossible for anything to be done rightly. However the suggestion by which the will can be anticipated to the good work is twofold, according to what was noted in Disputation 88 ch. 11 and Disputation 98 ch. 6: some congruous, which God knows will have the effect considering all circumstances; and some not congruous, which God knows will not have the effect, which however is commonly called sufficient, because with it the will can consent though it is not consenting. Hence the difficulty is which suggestion God denies to demons so that they do not bring about any good work, whether congruous only, or also the non-congruous and sufficient. The reason of the difficulty is this. For if God denies the congruous only, it follows that the demon cannot act well from mere consequent impossibility: just as any reprobate in all the time during which only a merely sufficient suggestion is granted to him and the congruous is denied - and likewise the predestined in that occasion of temptation which is sometimes overcome (for then a congruous suggestion is not denied) - thus the impotence of reprobates in this life and of those who are overcome by temptation would be of the same kind as the impotence of demons and the damned in another respect; which seems false. Therefore it seems to be said that God denies to demons not only the congruous suggestion but also the non-congruous sufficient suggestion so that, by the preceding impossibility, they cannot perform any good.

On the other hand it seems impossible that every good suggestion, even a sufficient one, be denied to a demon

For it is impossible that some temptation occur to a demon which invites to sin without the reason of evil and good in the temptation being proposed to him by the intellect as indifferent. For this naturally occurs in any temptation; indeed this is necessary that the free will be left (to choose). Since therefore the will of the demon, even in hell, follows sin in such a way that his will is moved by no necessity but freely, it is necessary that every temptation occurring to the will of demons propose both good and evil indifferently; that is, that not only the thing which is sin but also the opposite good be proposed to the demon. On account of this argument I think that not every good moral suggestion is denied to demons, not even the non - congruous, but only the congruous and efficacious one; and thus by the consequent impossibility the demons cannot perform moral good Nevertheless they differ from the reprobate and the predestined who are overcome by temptation in this life not by way of impossibility, because that is the same in both, but because to demons after the first instant the congruous suggestion is so denied that the law of God already manifested denies them, and so nothing remains for them; nor can hope remain. But in the case of the reprobate and the predestined, because they are overcome by temptation in this

life, the congruous call from the manifest law of God is not denied, and thus no hope of salvation and of congruous vocation is taken away, as is from the demons at the first instant. About the preceding and consequent impossibility we have said more than enough in Disputation 68 ch. 4.

Chapter 5 (Caput 5) - The arguments of Scotus are dissolved

Now I shall not be unwilling to dissolve the arguments of Scotus. To the first we concede with Dionysius in the chapter on the divine names that the natural capacities remain intact in demons. This however is not sufficient that demons act well; but also the preceding suggestion which God bestows as He wills is required. And by His manifest law God denies to demons that suggestion which would be congruous and efficacious: which being denied, it is impossible by consequent impossibility that the demon act well. To the second I say it cannot be that an Angel ceases from every operation of the will: and his liberty is not understood in this that he can not act, but in that he can choose or will this or that. And although we would concede that the demon can cease from every operation of the will, from that it would nevertheless not be permitted to infer that he can sometimes act well, but only that he can cease from every act of sinning. But to the third someone might object to us that passage of Luke 16 where the soul of the rich man in hell begged Abraham that he would send someone to his brothers who would warn them not to come into that place: which act seems to have been good. The same reasoning seems to apply about demons and about damned souls, that they can, or cannot, perform some good. Scotus in the cited place responds first that in that example Christ wished only to show the bitterness of torments, not the mercy of that soul of the rich man toward his brothers. Then he responds that that act could have been good in respect of the object, yet it was vitiated either by an evil end of vainglory toward other men, whom he knew to be saved - because he bore it hard that his brothers should be damned while others were saved - or by an evil end of hatred of God, lest God find in his brothers someone whom He could rightly punish. Finally someone might ask whether the sins and evil works of demons in the state of damnation merit a new punishment. I do not say whether thereby a new kind of fiery punishment is inflicted, but whether they merit a new punishment. I indeed have not read anyone who asserted that demons by those works merit a new punishment. Someone could say, however, that therefore they do not merit a new punishment because the reason of merit not only depends on the dignity of the work but also on the law and promise or threat of God; and therefore the works of demons in hell do not merit a new punishment because God has not threatened by His law a punishment to those who do evil in that life but in the present. However by that reasoning we cannot say that the works of demons in hell are not meritorious of punishment. First because, as will be proved in the first part of the second question 114 article 3, the reason of merit does not depend on the promise or threat of punishment, but on the dignity of the work itself. Also especially because with sins it is certain to all that a threat is not required for the reason of merit. For truly a man by sin is said to deserve his annihilation, although God has threatened nothing such to him, which we will more fully show in that place. Therefore I answer that the evil works of demons are not meritorious of a new essential punishment, just as we said that the good works of Angels in beatitude are not meritorious of a new reward, because both kinds of works are not done

in the way but at the terminus. And thus, as good works are fruits of beatitude, not merits of it, so also evil works are fruits of damnation, not merits. Therefore when it is said that the reason of merit follows the goodness or wickedness of the work, it must be understood not absolutely of the work, but of works in the way and in the struggle; about which more will be discussed at length in the cited place.

Article 3 (Articulus 3)

The conclusion is an affirmation, and concerns faith, as we shall see in the subsequent disputation, chapter 1.

Disputation 242 (Disputatio 242)

On the sadness and pain of demons (De tristitia, et dolore daemonum)

DISPUT. CCXLII. On the sadness and pain of demons.

It is certain that demons are afflicted by spiritual pain. Every sadness which demons suffer pertains to the punishment of sense. Such is the pain and sadness of demons that they do not experience any true delight. That the demon cannot not be saddened.

Chapter 1 (Caput 1)

Proposition I. It is certain that demons are afflicted by spiritual pain.

Pain in living beings has two things, namely the formal reason of pain, and a passion or bodily commotion joined to it; that which is common to every affect, as we noted in Disputation 84. Moreover, when we inquire concerning any genus of affect, whether it belongs to God or to a spiritual creature, we do not understand it according to the bodily passion which it has joined to it in animate beings, but only according to the formal reason of such an affect; and in that sense there we show that some affections are to be attributed to God, and others to creatures. Therefore it is most certain among the Scholastics that pain and sadness belong to demons, and this can be confirmed from many places of Scripture. First St. Thomas proves it in this article in the argument Sed contra from that passage of the Apocalypse ch. 18: "As much as she glorified herself and was in delights, to that extent give her torment and mourning." For St. Thomas draws this argument from the major premise: for if man is to be tormented by pain in Hell, a demon ought to be tormented much more. Secondly it can be proved from Apocalypse ch. 20 where it is said that the devil is sent into the lake of fire and sulfur, where the beasts were tormented day and night. Thirdly the same is most clearly proved by 2 Peter 2 in those words, "For if God spared not the angels that sinned, but cast them down to hell and delivered them into chains of darkness to be reserved unto judgment," etc.; and to be crucified does not happen without pain.

But perhaps someone will say that these places are not to be understood according to propriety and without metaphor: for it is said in Genesis 6 concerning God, "He regretted in the inward pain of his heart," and yet these words are to be understood by metaphor, insofar as it is said that he regretted because he manifested himself outwardly, as if led by sorrow and punishment he had retracted that which he had done when he destroyed all flesh; for he who destroys that which he had earlier made seems to indicate sorrow and punishment of his soul. Why then shall other places which speak of angels be understood without metaphor? This objection, however, is vain. First, because when places of Scripture can be conveniently understood in their proper sense without any absurdity, they ought not to be explained metaphorically; and because of God one cannot understand pain or punishment without some absurdity - for we showed in Disputation 84 that God is not capable of pain - and because his will is immutable, and potency is not without pain and change of will, therefore we are compelled to interpret the aforesaid places metaphorically. But to understand the testimonies alleged concerning angels without metaphor is not absurd, as will be clear from the definition of pain; therefore they are to be understood without metaphor. Moreover, even if we wished to understand these things concerning angels by metaphor we could not. For concerning God we interpret thus because we see something done by God which seemed to indicate sorrow and repentance; but in angels we do not see this. Add that since 2 Peter 2 speaks of the pain of the damned demons as a punishment of their sins, and no metaphorical pain can be a punishment, it is necessary to explain the aforesaid testimonies without metaphor.

Furthermore, that pain and sadness cannot be attributed to God according to propriety, but rightly befit angels, it is necessary to expound the definition and the formal reason of pain. In this matter, before we bring it from our own opinion, we will briefly recount what others hold. Some more recent writers say: therefore there is no pain in God according to proper reason, but there is in angels, because no one grieves except about those things which happen against his will; but against God's will nothing happens, whereas many things happen against the will of a demon; therefore demons can be saddened, but God not likewise. Yet by this reasoning they cannot sufficiently explain what we contend. For many things happen against God's will, as the sins of men: why then would God not grieve? If you say that these happen only against God's inefficacious will, and that pain is only about those things which are against an efficacious will, another manifest reason opposes this answer: for penitence, which is a certain pain about committed sins, is about those things which are against the simple will and not the efficacious will of him who grieves; for he who grieves about sins does not have an efficacious will by which he would wish not to have sinned - for that is already impossible for him; and the will is not efficacious with respect to impossibilities, as was shown in Disputation 234, chapter 2.

A much easier reason can be assigned why sadness and pain cannot be attributed to God in propriety, but do befit angels. The reason is taken from the definition, the formal nature of the affections, in this way. Delight, as St. Thomas teaches in I-II, question 35, article 1, which is opposed to sadness and pain, is about a good joined and known as joined. But on the contrary sadness and pain must be about an evil which is in some way judged to be joined. I say this because one can be saddened about the evil of a friend which he deems his own. But God cannot have an

evil joined to himself in any manner, nor can he deem another's evil to be his own; therefore he cannot grieve nor be saddened, as I also noted in that Disputation 84, chapter 1, where I also spoke of fear and other affections which cannot be fitting to God.

On the contrary, when an angel can have an evil proper and joined to himself, he can also be saddened and grieve about it

Such is the punishment which he suffers in Hell.

Chapter 2 (Caput 2)

Chapter II. That every sadness which demons suffer pertains to the punishment of sense.

No one doubts that this pain and sadness pertain to the punishment of the demons. But whether every pain pertains to the punishment of sense, or whether some also pertain to the punishment of loss, is a question among the Doctors. Some of the more recent ones judge there to be a pain which regards the punishment of loss and one which regards the punishment of sense. For they say the pain arising from the consideration of the punishment of loss is also a punishment of God; but the pain coming from the fire is the punishment of sense.

But to me the opinion of Scotus in 4th Distinction 56, question 1, article 4, conclusion 2 is approved, who affirms universally that every pain which arises from any apprehended evil is a punishment of sense. For the sake of this matter it must be noted that every punishment is an evil, and sometimes proceeds from some evil. Now something can be an evil to someone in two ways. First, actually, without any cognition and without the sadness which arises from cognition; and this evil has the nature of loss for the one to whom it is evil and the nature of the punishment of loss whenever it is inflicted because of sins. Such a punishment and evil can be suffered by children and the insane: because the nature of this evil does not depend on cognition and sadness, but consists in the privation of some good, as in the privation of some spiritual gift or some temporal convenience; and therefore this punishment is not a punishment of sense, because its malice does not depend on sense or cognition. Such in demons is the privation of beatitude: therefore demons are said to suffer this punishment, not insofar as, feeling it, they are saddened, but insofar as by that thing itself they suffer injury and loss.

But another kind of evil is such only insofar as it is felt or known, and the knownness brings about known sadness; and this evil, whenever it is inflicted because of sins, is called the punishment of sense - not because it is only by bodily sense, but because it is also by cognition, which we commonly call sense, because the punishment of bodily sense is more notable. Therefore every object is said to bring the punishment of sense insofar as it brings sadness; and because one suffers it insofar as he is saddened, he is said to be punished insofar as he is sad. Hence it is clear that every sadness even arising from the thought of the punishment of loss is a punishment of sense; or else one must contrive another definition from his own brain.

What Scotus says, namely that there is another punishment greatest of all for the damned, namely perpetual hatred with which they pursue God, and that it is the more culpable and therefore the greatest of all, is by no means established in true doctrine which St. Thomas teaches (I-II q.87 art.2), and we will confirm the same more fully. For according to St. Thomas's doctrine a sin, insofar as it is sin, cannot be the punishment of a prior sin; that is, the malice of sin cannot be the malice of a punishment even when related to some prior sin; although a subsequent sin, besides the malice of the fault, can have joined to it another malice of punishment, for instance of infamy, disease, and other such things, by reason of which it can be a punishment of the prior, as will be explained there. Therefore the hatred by which demons continually pursue God can be a punishment of the prior sin only insofar as it brings the torment and pain which it carries with it; for everyone who hates someone is tormented by that very thing, that the evil which he desires does not follow, which he desires; but hatred, insofar as it has malice insofar as it is sin, cannot be a punishment. From which it also follows that hatred of God is not the greatest punishment of all.

Chapter 3 (Caput 3)

Chapter III. Such is the pain and sadness of demons that they do not experience any true delight.

Since the sadness by which demons are perpetually vexed is very vehement, a difficulty may arise. Can they rejoice about anything? St. Thomas in 4 d.45 q.2 art.2 q.1 ad 4 admits that demons sometimes rejoice about something, namely from the fact that they overcome men in temptation; and it seems that this was Augustine's opinion in book 3 against the Manichaeans, chapter 17 in book I, which St. Thomas cites in this article in the first argument. And the same Augustine felt in the resolution of that question; and Alexander likewise in 2 p. q.100 m.4 art.1 & 2. But St. Thomas called this joy or delight phantastic, that is, not real but apparent. Alexander called it joy full of bitterness. And this opinion can be proved: because in demons there is hope and desire, which are about a future good; but to hope and desire corresponds delight after that which was desired has been obtained; therefore there is delight in demons.

I indeed first think that there is in a demon no such delight as in any way to alleviate or make milder the pain and torment which he suffers for his sin; for as the punishment of sense in demons is eternal, so likewise in the same way it will always persevere, and this must be undoubted by all. Next I say that no true delight arises for demons from any event, although they may have a burning desire for some future thing, which they apprehend as their good. Therefore, even if they ardently desire to overcome men by the temptation to sin, nevertheless I judge that they do not truly rejoice about that which they attain, for this doctrine is manifestly gathered from Aristotle in Nicomachean Ethics, book 7, chapter 14. For after the middle of the chapter he says: "Pleasure, or any of its contraries, provided it be vehement, drives away pain," that is, not only pleasure which is of an object considered under one respect necessarily drives away the pain of the same object apprehended under the same respect (for these are contraries), but also any pleasure, namely either about the same object considered under another respect, or about any other whatever, if it

be vehement, does not suffer any sadness with it; for the more someone delights in one thing, the less he is saddened about any other thing: because he estimates any other occurring evil the less, the more clearly the good which he possesses appears; which is verified by experience. Therefore delight can be such that it drives away every pain, as Aristotle says.

And by exactly the same reasoning it will be true for sadness and pain, that if they are greatest they drive away all joy, especially if the joy does not arise from a vehement object. Therefore, since the sadness of demons is most vehement, and those things which are able to bring them joy are of lesser moment and have no good except as apprehended by mere thought (for example, to overcome men in the temptation to sin), it must be said that demons take no delight at all even if they obtain that which they eagerly desired. Gabriel follows this opinion in 2nd Distinction 7 question 1 article 3 doubt 1; Ockham in 2 question 19 ad 7, the doubt at the end of the question. They prove moreover that demons never rejoice over that which they desired because God withdraws his concurrence so that they cannot rejoice in the good now obtained which they desired. This reasoning, however, is not to be admitted: because this would be a certain perpetual violence, as I noted in Disputation 239, chapter 1, which it is not necessary to admit. Then they prove that that state of the utmost sadness endures with a desire about a future good apprehended, but not with joy. This reasoning pleases me most. For the greatest sadness, such as the demons have, does not allow delight with it for the reason given; but it does not conflict with desire: indeed the more someone is delighted, the more he can fear; and the more he is saddened, the more he can desire: for he who is very sad very strongly desires to be rid of that evil about which he is sad; but vehement sadness does not permit delight in any good. And hence the solution of the argument which was brought for the prior opinion is clear. For from what was said it is evident why someone can, with the greatest sadness, have desire but not joy: because the good which is the object of desire is absent, and thus can be apprehended so as to be pleasing as future; however when attained it is not esteemed as a good in such great sadness, and therefore it does not delight.

Finally I judge the opinion of St. Thomas to be true and in no way contrary to our opinion insofar as he asserts that demons take some delight from the victory which they obtain against men: yet that delight is not real but only apparent, which he himself calls phantastic; which, however, is not to be understood as if demons seem to themselves to be delighted when in truth they are not delighted (for such deception cannot happen to them), but because they stand in the temptation of men as if, when victory is obtained, they were truly delighted. For although they may conquer a man once and again and take no will from it for the reason given above, nevertheless they are so perversely affected that they attack him again or another man, apprehending in a future victory a new cause of joy for themselves which they did not find in the preceding victory: in this they are like those who rejoice. And this can rightly happen because of their perverse disposition, from which it follows that from past victories, from which they obtained no pleasure, they do not become more cautious. Augustine is to be understood in the same way.

Chapter 4 (Caput 4)

Chapter IV. That the demon cannot not be saddened.

Finally in this disputation must be treated whether demons are so saddened that it is in their power not to be saddened; on this difficulty the Doctors do not all agree. Scotus in 2 Distinction 7 q.1 § "Restat nunc dicere," and in the reports of the same Distinction question 3 judges that the damned can cease from the act of the will. From this opinion it follows that they can also cease from pain and sadness, which are acts of the will. For although Scotus himself in 3 d.1 § "Aliter potest dici" and in 4th Distinction 49 q.7 thinks that sadness formally is not an action elicited by the appetitive faculty but a passion from the object (which opinion I will refute in 2nd Quaest. 4 art.1), and from this side the damned could not cease from sadness, yet since he also thinks there that prior to this passion of sadness there is a certain act of the will elicited, without which sadness would not be, it plainly follows from his opinion that the damned can cease from sadness: because they can cease from that act which must necessarily precede sadness.

Gregory in 2 Distinction 7 question 1 article 2 and Bassolis in question 1 article 3 remembered this opinion and judge it to be false. For if it were true, it would follow that demons could free themselves from the punishment of sense; which opinion would indeed be in some respects worse than the error of Origen, for Origen so said that the punishments of the damned would be ended, that this would occur not from their own will but from God's mercy. But Scotus in the reported notes on that question 3, in order to defend himself, teaches that the act of sadness by which demons are saddened is produced and conserved by God alone, and thus demons cannot cease from it. However, as we said above in Disputation 139, chapter 2, it is impossible that an act of intellect or will be produced by God alone; and so the aforesaid opinion cannot be defended on that ground.

One might indeed concede that demons cannot cease from sadness because of a consequent impossibility: because God always injects such a thought as he knows will be the future cause of sadness, and removes those by which a demon could be induced to cease from sadness; which impossibility is consequent on the knowledge with which God sends in various thoughts and removes others. To me, however, it seems much truer that a demon cannot cease from sadness because of an antecedent impossibility, which is called an impossibility from the part of the preventing cause, about which we said enough in Disputation 68, chapter 4. That is, by such a cogitation of present evil in which by God's will to remain in the cogitation one is moved to sadness, so that from that sadness no other cogitation, except the sole beatific vision, can cause cessation; just as a blessed man by the clear vision of God is so necessarily delighted that he cannot but be delighted, by an antecedent impossibility from the part of the cause and of cogitation.

But someone may object in this way: that for the will to love something or to be delighted in it necessarily with respect to the exercise, that is, so that it cannot cease from love and delight, it must not only appear in the object with the highest ratio of good, but also in the exercise there must appear no ratio of evil; for if some ratio of evil could appear, then in that very way the will could cease from the exercise: and yet in the very exercise and operation of sadness the ratio of a

most grave evil appears; therefore the demon can freely cease from it. I respond: then the will can cease from the act of love and of delight even if there is the highest ratio of good in the object, if in the exercise there appears some ratio of evil which can remove from the intellect the consideration of the object from which love or delight arises; if however one were compelled to remain in that, he could not not love and delight; and because demons are compelled to remain in the cogitation of the evil and the punishment by which they are damned, and such an evil thought cannot fail to bring sadness, therefore they cannot fail to be saddened: however much they find in the very act of sadness the ratio of evil, and therefore cannot be freed from it.

Article 4 (Articulus 4)

This is the conclusion. Some demons are in hell, as in the place of punishment destined for them: others, however, remain in a murky air.

Disputatio CCXLIII - How demons suffer from fire (Quo pacto daemones patiantur ab igne)

Disput. 243. How demons suffer from fire (Quo pacto daemones patiantur ab igne).

Some think that demons are tormented only by the apprehension of apparent evil (Damones torqueri solum apprehensione appare nonnulli autumant). cap. 1. Some think that demons are tormented in Hell only by the apprehension of despoiled good, others think (Daemones torqueri in inferno sola apprehensione nis desidorati boni, alij existimant). c. 2. Some have taught that demons are tortured by fire through a species or a cognition derived from it (Daemones ab igne cruciari per speciem aut cognitiones eo deriuatam, nonnulli docuerunt). c. 3. Henry and Scotus supposed that demons and separated souls are tormented by fire in the same manner in which souls in the body are tormented by fire (Daemones & animas separatas eodem modo ab igi queri, quo animae in corpore cruciantur, Henricu Scotus putarunt). c.4. The more recent authors affirm that demons suffer from fire by a quality derived from the fire (Daemonem pati ab igne per qualitatem ab ign recentiores affirmant). c. 5. A more probable opinion is that demons are tormented by fire in a certain occult manner and by a kind of alligation (Daemones occulto quodam modo per alligationem ac torqueri probabilior sententia est). c. 6.

It is undoubted among Catholics that demons are tortured by some kind of torment, although what kind of genus of torment and pain this is has been much disputed among the scholastic doctors.

But before we refer to the opinions of individuals, it must first be supposed as certain that, as St. Thomas teaches in the conclusion of the article, there is a place of Hell in which demons are tortured, of which place it is not necessary here to treat at length (Verum an tequam singulorum sententias referamus, est in primis supponendum tanquam certum id, quod S. Th. in conclusione art. docet, nempe esse locum infernum, in quo daemones cruciantur, de quo hic non est ex professo disserendum).

Alphonsus de Castro against the heresies, and Sixtus of Siena in book 5 of the Annotated Bible, dispute about that place; but in this place most hold that demons remain there, although many also have remained in this air until the day of judgment (Disputant autem de illo Alphonsus de Castro contra haereses verbe Infernus, & Sixtus Senensis lib. 5. Biblioth sanctae annota tione 141. in hoc autem loco daemones plerique detinentur, tametsi multi etiam manserint in hoc aëre, vsque ad diem iudicij).

Next it must be premised that the fire of Hell is corporeal, which opinion is common to all the scholastics (Deinde praemittendum est, ignem inferni esse corporeum, quae sententia est communis omnium Scholasticorum).

See the fourth part, distinction 44 of Scotus, in the fourth part, distinction 50, question 1, article 1, and although the more recent writers say the opposite and assert that this is an error, yet it does not seem to have been expressly defined by the Church (in 4. d. 44. Scoti in 4. d. 50. q. 1. a. 1. & quamuis recentiores dicant, errorem esse, op positum assere; tamen non videtur id adhuc defi nitum expresse ab Ecclesia).

Indeed, when the Greeks in the Council of Florence asserted that the fire of Purgatory is not true and corporeal fire, in the last session in the definition of the faith, where many things are defined against them, nothing is said about the fire of Purgatory (imo cum Graeci in Concilio Florentino assererent, ignem purgato rij non esse verum & corporeum ignem, in sess. vlt. in definitione fidei, vbi multa contra ipsos de finiuntur, nihil de igne purgatorij dicitur).

The foundation of this opinion is firm in Scripture, in which fire is often called the fire into which the damned are destined (Firmu tamen huius sententiae fundamentum est in Scri ptura, in qua saepius vocatur ignis in quem desti nantur damnati).

And the words of Scripture ought to be explained in their proper sense when this can be done without some absurdity (Verba autem Scripturae in pro prium sensum explicanda sunt, quando sine ab surdo aliquo id fieri potest).

Clidhoueus disputes in the last chapter of book 4 of Damascene's De Fide whether the fire of Hell and the fire of Purgatory are of the same species as our fire; of this there is no need to treat here (Disputat autem Clid houeus in caput vlt. libri 4. de fide Damasceni, an ignis inferni, & purgatorij sit eiusdem speciei cum no stro: de quo in hoc loco disserendum non est).

Having set these things, the first controversy arises about those who say that demons are tormented by cogitation or by apprehension, not by anything contrary or disconvenient in reality, but only by the apprehension of apparent evil, as men in dreams are wont to be greatly saddened by cogitations of imagination alone (His constitutis in praesenti controuersia prima sententia fit eorum, qui dicunt, daemones torquer cogitatione, siue apprehensione non aliculus com trarij, aut disconuenientis, quod reipsa patiantur sed apprehensione tantum apparentis mali, sicut homines in somnis ex sola imaginationis cogita tione vehementer tristari solent).

They say, therefore, that demons are indeed tormented by fire, not because the fire is in truth contrary to them or disconvenient to them, but because demons apprehend it as disconvenient to themselves (Dicunt igitur daemones quidem ab igne torqueri, non quod reuera ignis ipsis contrarius aut disconueniens sit: sed quod daemones eum vt sibi disconue nientem apprehendant).

This was the opinion of Vicenna in Metaphysics book 9, where he teaches that separated souls imagine the punishment which they suffered in this life and are tormented by that imagination; Albert also seems to assent in the fourth part, distinction 44, article 20, to the Last, and Bonaventure regards it as probable, as will be alleged below (Haec fuit sententia ui cennae 9. Metaphysicesc. vlt. vbi docet, animas separa tas a corpore cogitare poenam, quam in hac vita perpessae sunt, & ea imaginatione vehemente torqueri: consentire etiam videtur Albertus in 4. d. 44. art. 20. ad vlt. idque probabile censet Bona. loco inferius allegando).

But Aegidius is falsely cited for this opinion; for in another place he was openly against it, as we shall see below (Falso tamen pro hac opinione refertur Aegidius: in alia enim ipse aperte fuit, vt inferius videbimus).

It can be proved from Gregory in book 4 of the Dialogues, chapter 29, where of the spirit that is tormented in Hell he says, "For he suffers the fire by that very fact, because it is given to him, and, because he sees himself to be burned, he is burned" (Probari autem potest ex Gre in 4. libro dialog c. 29. vbi de spiritu, qui cruciatur in inferno, inquit, Ignem namque eo ipso patitur, quod vi detur, &, quia cremari se aspicit, crematur).

He judges that all grief and passion arises from the mere apprehension of apparent evil (Omnem igi tur tristitiam & passionem ex sola apprehensione apparentis mali esse existimat).

For if he is saddened only because he sees that he is being tortured, then not because he is truly tortured and endures anything from the fire, but because he apprehends the fire as if it were burning him (Nam si tristatur tantum, quia aspicit, se cruciari: ergo non quia reuera cruciatur, & aliquid vere ab igne patitur, sed quia ita ignem apprehendit, ac si ab eo cre maretur).

And it can be confirmed by reason because this way is much easier for explaining the torment of demons; for it is scarcely understandable, much less explicable, what evil a demon can suffer from fire in reality; but a form apprehended by thought alone is no less able to affect the soul with sadness than a true one (Ratione vero confirmari potest: quia haec via multo facilior est ad explicandum crucia tum daemonis. Vix enim intelligi, nedum expli¬ cari potest, quid mali daemon ab igne reipsa pati queat: forma autem sola cogitatione apprehensa non minus potest animam tristitia afficere, quam vera).

This opinion is rightly rejected by theologians of the highest authority (Haec sententia a Theologis iure optimo reij citur).

For although we cannot deny that a form apprehended by thought and imagination can affect the mind no less than if it were true, nevertheless two reasons in the case of demons forbid granting this (Nam quamuis negare non possimus, for mam sola cogitatione & imaginatione apprehen sam non minus animum torquere, quam si vera esset: nihilominus duabus de causis in daemoni bus, id concedi non debet).

The first is that the angelic intellect cannot be so deceived as to apprehend as evil something which in reality is not, especially so as to torment it so violently as men are daily tormented by imagination (Prior est, quia intelle ctus Angeli non potest ita deludi, vt possit appre hendere tanquam malum, aliquid, quod reuera non est: praesertim quod ita vehementer cruciet ipsum, sicut homines imaginatione quotidie de cipiuntur).

For although the angelic intellect can apprehend as possible what is impossible and thus may be tempted, for that reason we said in Disputation 234 cap. 2 that an angel could have sinned by the appetite of equality with God; and although an angel can be deceived by a perverse affection, by the apprehension of future evil or good, as we said in the preceding disputation cap. 3, yet to be tormented with sadness, especially so vehemently, the angel must apprehend present evil not in any way but with some opinion; for this is required to bring pain or sadness as to the reason of fear; therefore he must judge that that is evil to himself in some way, which cannot fall into the intellect of an angel (Nam quamuis intellectus Angeli ap prehendere possit, vt possibile sit, quod impossi bile est, & ita ei placeat: qua rattone diximus disp. 234 cap. 2. potuisse peccare appetitu aequalitatis Dei; & quamuis Angelus deludi possit ex prauo affectu, apprehensione mali, aut boni futuri, vt praeced. disput. cap. 3. diximus: tamen vt crucietur tristitia: praesertim tam vehementi, apprehendere debet malum praesens non quomodocunque sed cum aliqua opinione: hoc enim requiritur, vt afferat dolorem aut tristitiam sicut ad rationem etiam timoris: quare existimare debet, illud sibi aliqua ratione malum esse: hoc autem non potest in intellectum Angeli cadere: neque enim in rebus naturalibus decipi potest, nisi apprehendat Deum tanquam minitantem sibi, aliquod malum: quod non tam esset causa tristitiae, quam timoris).

The second reason is that this opinion does not satisfy the Scriptures which assert that demons are tormented by true fire; and for this reason Matthew 25 says that that fire is prepared for the devil and his angels for the purpose of tormenting them, and the soul of the rich man said in Luke 16, "I am tormented in this flame" (Posterior ratio est: quia secundum hanc senten tiam non satisfit Scripturis asserentibus, daemo nes a vero igne torqueri. Qua etiam ratione Mat thaei 25. dicitur ignis ille paratus diabolo, & An gelis eius, nempe ad cruciandum eos, & anima epulonis Lucae 16. dicebat, Quia crucior in hac flam ma).

Similarly, according to this opinion, the testimonies of the Fathers, by which below it will be proved that demons are truly tormented by fire, cannot be made to agree (Similiter etiam iuxta hanc sententiam satis fieri non potest testimonijs Patrum, quibus inferius probabitur daemones verae ab igne tor queri).

To the testimony of Gregory brought for this opinion I reply that he explained himself sufficiently in the same chapter (Ad testimonium Gregorij allatum pro ha sententia, respondeo, se satis explicuisse in eodem capite).

For besides the words cited above, by which he seemed to assert that demons are tormented by the mere apprehension of apparent evil, he subjoins that visible fire draws forth an invisible ardor and pain, and that by corporeal fire an incorporeal mind is also tormented by an incorporeal flame

(Nam praeter verba superius citata, quibus videbatur asserere, daemones torqueri sola appre hensione apparentis mali, subiungit, igne visibili ardor ac dolor inuisibilis trahitur, & per ignem corporeum mens incorporea etiam incorporea flamma cruciatur).

By these words, although Gregory refers the torment of demons to apprehension, as to a cause which, since it is spiritual, is also called by Gregory invisible ardor and incorporeal flame, yet as he says that the flame is derived from corporeal fire, so he also teaches that the spiritual apprehension arises from the fire itself, and he calls that spiritual flame what he more clearly explained subsequently by these words (Quibus verbis quamuis St. Gregory referat cru ciatum daemonum in apprehensionem, sicut in causam, quae cum sit spiritualis, dicitur etiam a Greg. ardor inuisibilis, & flamma incorporea: ta men sicut dicit flammam ab igne corporeo deri uati, sic etiam docet apprehensionem spiritualem ab ipso igne oriri, eamque flammam spiritualem appellat id quod multo clarius explicuit deinde his verbis).

"Although we are able to collect from the said evangelic words that the soul suffers the conflagration not only by seeing but also by experiencing it" - by which he plainly teaches that a demon is tormented not by an apparent evil but by an evil which he himself truly experiences - and as we shall see below, all the Fathers attribute to that very fire and flame the true cause by which demons are tormented (Quamuis colligere ex dictis euangelicis possu mus, quia incendium anima non solum videndo, sed etiam experiendo patiatur. Quibus aperte docet, daemo nem non apparenti malo, sed malo quod revera ipse experitur, cruciari: & vt inferius videbimus, Patres omnes in ipsum ignem & flammam tanquam in veram causam reserunt daemones cruciatum).

The second opinion is of those who affirm that separated souls and demons in Hell are indeed tormented in cogitation by some evil which they really suffer, but not by any other than the privation of the desired good (SEcunda opinio sit eorum, qui affirmant, ani mas separatas, & daemones in inferno torque ri quidem cogitatione alicuius mali, quod reuera patiuntur: sed non alterius, quam priuationis de siderati boni).

Therefore they think that there is no other punishment of demons and separated souls than the pain of loss which consists in the privation of the beatitude, and a sensory pain arising from the consideration of that (Quare existimant, nullam aliam esse poenam daemonum, & animarum separatarum, quam poenam damni, quae in priuatione beatitu dinis consistit, & poenam sensus ortam ex consi deratione illius).

Richard makes mention of this opinion, being cited below, and it is commonly ascribed to Al-Ghazali in book 5 of the Physics, chapter 5, where he speaks of the punishment of souls (Huius sententiae mentionem fecit Ricardus loco inferius allegando, & tribui so let Algazeli 5. Physic. cap. 5. vbi de poena animarum loquitur).

In this way Ambrose also seems to have been in book 7 on Luke chapter 14 near the end, where after saying that the outward darkness which the damned suffer is nothing else than being without Christ, he adds: "Therefore neither will there be any other clashing of teeth in the body, nor any fire of the corporal flames, nor corporal worms; but these are so because, as from much crudity and fevers worms arise, so if anyone does not ripen his sins by a certain soberness of interposition but

contracts old and recent sins by mingling sins with sins like crudity of the old and the new offenses, he will be consumed by fire proper to him and by his own worms" (In ea etiam fuisse videtur Ambros.lib. 7. in Lucam cap. 14. prope finem, vbi postquam dixit, tenebras exteriores, quas patiuntur damnati, ni hil aliud esse, quim esse sine Christo: subdit. Ergo nec corpor alium stridor aliquis dentium: neque ignis ali quis perpetuus flam narum corporalium, neque vermis es corporalis; sed haec ideo, quia sicut ex multa cruditate & febres nascuntur, & vermes, ita siquis non decoquat pec cata sua velut quadam interposita sobrietate abstinentiae sed miscendo peccata peccatis tanquam cruditatem quan dam contrahat veterum, & recentium delictorum, igne aduretur proprio, & suis vermibus consumetur).

And a little later: "Fire is that which is produced by the sorrow of sins; worm is that which gnaws the mind by reason of the irrational sins of the soul and in some way consumes the entrails of conscience" (Et paucis interpositis, Ignis est, quem generat moestitia delictorum vermis est eo quod irrationabilia animae peccata mentem rei, sensunque compungunt, & quadam exedunt viscera conscientiae).

Jerome mentions this opinion in the last chapter of Isaiah while explaining the words "Their worm dieth not," where he writes thus: "The fire which is not quenched is for the most part taken from the conscience of sins, which torment those placed in punishments, because by their vice and sin they have been deprived of the good of the elect, according to that which is written, I was occupied in misery, while a thorn is fixed in me" (De hac opinione meminit Hieron. in cap. vlt. Isaiae explicans illa verba, Vermis eorum non morie tur: vbi ita scribit, Ignis, qui non extinguitur, a pleris que conscientia accipitur peccatorum, quae torquent in su plicijs constitutos, quare vitio suo atque peccato caruerint electorum bono, iuxta illud quod scribitur, versatus sum in miseria, dum configitur mihi spina).

Jerome does not disapprove of this opinion but seems to admit it with this limitation, that they do not in any way deny the eternal punishments of the transgressors and of those who deny the Lord; he said this because of the error of those who said that the punishments of Hell would not be perpetual (Quarum senten tiam non improbat Hieronym. sed cum hac li mitatione eam videtur admittere, Ita duntaxat v. non negent praeuaricatorum, & dominum negantium aeterna suplicia: quod dixit, propter errorem eorum, qui dicebant, poenas inferni non futuras perpe tuas).

For a similar opinion appears to be that of Isidore in book 1 of De Summo Bono chapter 13, the first sentence, where he says that the damned have a twofold punishment in Gehenna, "whose mind is burnt by sorrow, and whose body by flame" (Pro eadem sententia videtur esse Isid. lib. 1. de summo bono, cap. decimo tertio, sententia prima, vb ait, duplicem esse damnatorum poenam in ge henna, Quorum & mentem vrit tristitia, & corpus flamma).

Finally, Innocent III in book 3 of De Contemptu Mundi chapters 2 and 6 teaches that there are only two kinds of punishments in Hell, one from the memory of sins, as has been explained by us, the other from fire, and this latter is derived only to bodies (Demum Innocentius III. in libro 3. de

Contempti Mundi cag 2. & 6. duo tantum genera poenarum docet esse in inferno, vnum ex memoria peccato rum, vt a nobis explicatum est: alterum ex igne, & hoc posterius tantum in corpora deriuari).

Therefore it is possible to feel that the spirit alone is tormented by remorse for its offenses (Videtur igitur sentire, spiritus solum torqueri me moria suorum delictorum).

This opinion seems to be interpreted among the scholastics by Durandus in the fourth distinction 44 question 11, when he says that demons are tormented by the memory of sins and can be said by a certain accommodation to be tormented by fire, because every pain is compared to fire, which among sensible things torments most (Quam opinionem ex Scholasticis interpretari videtur Durandus in 4. distinctione 44. quaestione vndecima, cum inquit, ex memoria delictorum daemones torqueri, & per accommodationem quandam dici posse ab igne cruciari: quia omnis dolor comparatur igni, qui inter alia sensibilia maxime cruciat).

He confesses, however, that demons are tormented not only in this way but also by true fire, which we will report below (Fatetur tamen non solum hoc modo, sed etiam a vero igne alia ratione daemones torqueri, vt infra refe remus).

This opinion, however, has by now been properly rejected in the schools; for the common opinion of all theologians, whom we will refer to below, is that demons are tormented not only by cogitation of loss but also by true fire (Haec tamen sententia merito iam in Scholis reijcitur, Communis enim Theologorum om¬ nium, quos infra referemus, opinio est, daemones non solum cogitatione, sul damni, sed etiam a ve ro igne torqueri).

And the Fathers thus explicitly hand down: Origen in Periarchon book 2 chapter 11, Nyssenus in the disputation on the soul and resurrection a little before the middle, Augustine book 21 of De Civitate chapter 10, Gregory in book 4 of the Dialogues chapter 29, in book 9 of the Morals chapter 38 (or 46) and chapter 39 (or 48), where he plainly teaches that demons in Hell are tormented by corporeal fire (Et patribus ita expresse tradunt Orig. lib. 2. Periarchon c. 11. Nyssenus in disputatione de. anima & resurrectione, paulo ance medium, August. 21. de ciuitate cap. 10. St. Gregory 4. lib. dialog. cap. 29. c. lib. 9. moral. cap. 38. alias 46. & cap 39. alias 48. vb. plane docet, daemones in inferno ab igne corpo reo cruciari).

He adds, at the end of chapter 35 (or 50), these words: "And although the nature of angels and men is far different, yet one punishment implicates those whom crime binds together in one guilt" (Subdit autem in fine capitis 35. alias 50. haec verba, Et quamuis Angelorum, atque hominum longe sit natura disssimilis: vna tamen poena implicat quos vno in crimine reatus ligat).

To the same opinion agrees Hugh of Saint Victor in question 3 of the Epistle to the Thessalonians, where he says that the damned are tormented not only by the remorse of conscience but also by fire (Eidem sententiae consen tit Hugo de S. Victote qu 3. in epist. ad Thessal. vbi ait, damnatos non solum remorsu conscientiae, sed etiam igne torqueri: loquitur autem de spiri tibus, vt constat ex quaest. 4).

Add also Laurentius Justinianus in the book De Casto Connubio Verbi et Animae chapter 16, where speaking of the fire of Hell he says: "Burning bodies, not heating but tormenting" (Adde etiam Lauren tium Iustinianum in libro de Casto connubio verbi, & animae capite 16. vbi de igne infermi sic loquitur, Corpora concremans spiritus, non calefaciens, sed crucians).

He adds moreover that this is done by divine power, because he had said of that fire that it did not need fuel of woods and matter, and therefore by divine power it can burn bodies and torment spirits (Addit vero, id fieri diuina virtute, eo quod ille de illo igne dixerat, non indigere fo mento lignorum & materiae, ob idque diuina virtute posse corpora cremare, & spiritus tor quere).

It is proved by reason. For although grief arising from the cogitation of punishment pertains to the punishment of sense, as we saw in the preceding disputation cap. 2, and thus for this reason alone we could assign to demons the punishment of loss and of sense, nevertheless because Scripture manifestly indicates that demons are tormented by fire (for otherwise the fire would not be said to be prepared for the devil and his angels, and those other things which we above recounted), therefore it is not sufficient to assign to the demons the punishment of sense arising from mere cogitation of loss; but it is necessary also to attribute to them a punishment derived from fire (Ratione vero probatur. Nam quamuis tristi tia orta ex cogitatione poenaedamni, ad poenam sensus pertineat, vt disp. praecedenti c. 2. monstra uimus, & ita hac sola ratione possemus daemoni bus assignare poenam damni, & sensus: tamen quia Scriptura manifeste indicat, daemones ab igne cruciari (nam alioquin ignis non diceretur para tus diabolo, & Angelis eius, & alia, quae supra re tulimus) ideo non satis est, poenam sensus ortam ex sola cogitatione damni daemonibus assignare: sed opus etiam est, paenam ab igne deriuatam ipsis tribuere).

All the scholastics whom we refer to in this chapter and the following agree that a demon suffers from corporeal fire (IAm vero Scholastici omnes, quos in hoc cap. & sequentibus referemus, in eo conueniunt vt daemon ab igne corporeo patiatur).

But as to the manner in which he is tormented by the fire, they vary in opinion (Verum de modo, quo ab igne torquetur, varie sentiunt).

Therefore the third opinion is of those who say that a demon is crucified by the fire through some species or through a cognition derived in him from the fire (Ter tia igitur sententia sit eorum, qui dicunt, cruciari, daemonem ab igne per speciem quandam, aut cognitionem ab ipso igne in eum deriuatam).

Thus Aegidius taught in quodlibet 2 question 9 and quodlibet 4 question 15, and Scotus in the fourth part distinction 44 question 2 paragraph; and of the second mode and following Ricardus art. 2 question 3 supplement, Gabriel in question 3 article 2 conclusion 5 to which Ockham refers in quodlibet 1 question 19, from which doctors Aegidius and Ricardus said that by the force of God burning fire as an instrument derives into the angel a certain intelligible species, which they call intentional, and that this is the cause of sadness (Ita docuit AEgidius quodlib. 2. quaest. 9. & quodlib. 4. q. 15 Scotus en 4. d. 44. quaest. 2. §. De secundo modo, & sequq Ricardus artic. 2. quaest. 3. supplementum, Gabrielis quaest. 3. art. 2. conclusione 5. in quam sententiam re fert

Ocamum quodlib. 1. quaest. 19. ex quibus Docto ribus Aegidius, & Ricardus dixerunt, virtute Dei vrente igne vt instrumento, speciem quandam intelligibilem, quam vocant intentionalem, in Angelum deriuari, & hanc esse cansam tristitiae).

How the impression of that species is the cause of sadness in the angel they do not explain in the same way (Quomodo autem impressio illius speciei sit causa tristitiae in Angelo, non eodem modo explicant).

Richard says that that species is produced so violently that it disturbs the intellect of the angel and prevents it from the consideration of other things; the fire detains him, and this is the cause of annoyance and sadness in the angel (Ricardus inquit, speciem illam adeo vehemen tem produci, vt perturbet intellectum Angeli, & impediat ab aliarum rerum consideratione ignis detineat: atque hoc sit Angelo molestiae, & tri stitiae causa).

Aegidius says that from the mere impression of that species the demon is sad, although in us there is no cause of sadness from a species derived from a phantasm by the active intellect, because our possible intellect which receives species produced by the active intellect from the phantasm depends on it only as to operation not as to being; and therefore in the reception of a species produced by that power the virtue itself is not saddened; but our intellect and that of the demon depend on God not only as to operation but also as to being (Aegidius vero ait, ex sola impressione illius speciei ideo daemonem tristari, cum tamen nobis nulla sit causa tristitiae species a phanta¬smate deriuata vittute intellectus agentis, quia in tellectus noster possibilis, qui recipit species ab intellectu agenti ex phantasmate productas, pen det ab eo solum quoad operationem, noij quoad esse; & ideo in receptione speciei productae vir tute ipsius non tristatur: at vero intellectus no ster, & daemonis pendet a Deo non tantum quo ad operationem, sed etiam quoad esse).

Pain and sadness, they say, cannot be derived into the appetitive faculty except from that from which the faculty itself depends as to being; just as in the senses annoyance is not derived except from sensible qualities from which the faculty depends as to being (Dolor au tem, & tristitia non potest deriuari in facultatem appetentem, nisi ab eo, a quo ipsa facultas pen det quoad esse: quemadmodum in sensibus mo lestia non deriuatur, nisi a qualitatibus sensibili bus, a quibus ipsa facultas pendet quoad esse).

But Scotus, Gabriel and Ockham say that the demon is tormented by the fire not by the impression of an intelligible species but by the impression of an actual cognition which God by his power derives into the angel through the fire as through an instrument (Ar vero Scotus, Gabr. & Ocam dicunt, daemonem ab igne torqueri, non per impressionem specier intelligibilis, sed per impressionem cognitionis actualis, quam Deus virtute sua per ignem, tan quam per instrumentum, in Angelum deriuat).

From this impression they say it follows that the demon's intellect is determined to that cognition so that, whether he wills or not, by it he perceives perpetually and vehemently; from which it also follows that demons are saddened because they would now consider this, now that, and so as they would wish to cease consideration of the one object and then of the other (ex qua impressione dicunt prouenire, vt daemo nis intellectus ad eam cognitionem determine tur, vt, velit,

nolit, per eam perpetuo vehementer intelligat: ex quo etiam efficitur, vt daemones tri stentur, quia vellent nunc hoc, nunc illud consi derare, & vt placuisset nunc ab huius objecti nunc ab illius consideratione cessare).

Moreover they explain such a determination derived from God by the example of the active intellect and the phantasm, from which our possible intellect is determined (Porro ta lem determinationem a Deo deriuatam expli cant exemplo intellectus agentis, & phantasma tis, a quibus noster intellectus possibilis determi natur).

And since Scotus concedes that demons are also tormented by an alligation in which they are detained in the fire, he nevertheless says that when explained in this way demons are tormented by the fire more than if they were tormented by it only through alligation; because in the said manner the fire is the cause of sadness and pain in demons in two ways: first by imprinting a cognition of itself and thereby determining the intellect of the demon; secondly by the manner of an object, while the angel is compelled to know the fire itself and to remain in that knowledge; but by mere detention it torments not so violently, because it torments only as an object (Cumque concedat Scotus daemones etiam cruciari per alligationem, qua detinentur in igne inquit tamen, hoc modo explicato magìs daemo nes ab igne torqueri, quam si solum per alligatio nem cruciarentur ab eo: quoniam praedicto mo do ignis est causa tristitiae, & doloris in daemoni bus dupliciter, primum imprimens cognitionem sui, & per eam determinans intellectum daemo nis: deinde per modum obiecti, dum cogitur Angelus ipsum ignem cognoscere: & in eius co gnitione manere: at per solam detentionem non tam vehementer ignis torquet daemones, quia solum per modum obiecti torquet).

Moreover Scotus proves that greater torment in a demon arises from the impression of the cognition derived from the fire than from alligation, because the nobler the faculty of understanding in the angel compared to the faculty of moving, the greater is the sadness which arises from a force applied to the intellectual faculty to understand, than the sadness which arises from a force applied to the motor faculty, to prevent the angel from moving as he wishes; for the latter hinders a smaller perfection in the angel than the former (Praeterea ma iorem esse cruciatum daemoni ex impressione co gnitionis ab igne deriuata, quam ex alligatione probat Scot. quia quanto nobilior est facultas in telligendi in Angelo, quam facultas se mouendi tanto est maior tristitia, quae nascitur ex vi allata facultati intelligenti ad intelligendum, quam tri stitia, quae oritur ex vi illata facultati motrici, ne moueatur angelus quo voluerit: quia haec impe dit minorem perfectionem in Angelo quam illa).

This opinion, however explained, is not approved by me (Haec sententia quocunque modo explicata mihi non pro batur).

And first, as it is explained by Scotus, it can be refuted by the reason which I proved above in d. 176 c. 3, that a thing cannot be taken by God as a physical instrument to any effect except that which has some prior action in some way conducive to the effect, as I explained there; the fire of Hell does not have such a prior operation in itself; therefore it cannot be taken as an instrument to imprint a species or cognition in the angel's intellect (Atque inprimis contra illam pu gnat ratio,

qua sup. d. 176. c. 3. probaui, non posse assumi a Deo vt instrumentum physicum quam cunque rem ad quemcunque effectum: sed eam duntaxat, quae habet aliquam praeuiam actionem aliquo modo conducentem ad effectum, vt ibid explicui: ignis a. inferni non habet talem opera tionem praeuiam ex se: ergo assumi nequit vt in strumentum ad imprimendam speciem, aut co gnitionem in intellectu Angeli).

Add that although God could assume fire as a medium instrument to produce a species, yet he could not produce and instill into the possible intellect a notion and knowledge (notitia and cognitionem) by that means (Adde, quod, licet posset Deus assumere vt instrumentum ignem ad producendam speciem, tamen non posset ad pro ducendam & infundendam in intellectu possibil notitiam & cognitionem).

Secondly, because it seems difficult that by the impression of an intelligible species a demon should be tormented, since a species is the intelligible form perfecting the intellect (Secundo quia difficile videtur, per impressionem speciei intelligibilis torqueri daemonem, cum species sit forma intel ligibilis perficiens intellectum).

Thus St. Thomas argues against this opinion in the fourth, chapter 9 contra gentiles: for that the angel should receive it from God by means of the fire as a medium is not a sufficient cause of any, much less of so violent a sadness as the demon suffers; and the same applies to cognition if it were impressed by God by means of an instrument (Sic arguit contra hanc opin. S. Th. 4. c. 9. con. gen. nam, quod eam recipiat Angelus a Deo medio igne tanquam in strumento non videtur sufficiens causa vllius, nedum tam vehementis tristitiae, quam patitui daemon: atque eadem ratio est de cognitione, si ea imprimeretur a Deo medio instrumento).

I say this against the more recent some Thomists who make the whole cause of sadness to be that the demon receives a species from a certain lowest nature, namely from the fire as an instrument (Hoc dixerim propter recentiores, aliquos Thom. qui in eo constituunt totam causam tristitiae, quod daemon speciem recipiat ab infima quadam na tura, nempe ab igne tanquam instrumento).

But some say, whom Richard mentions, that demons are saddened by the impression of that species because it is some excellent species, just as an excellent sensible species is wont to be the cause of annoyance in sense (Sed dicunt aliqui, quorum meminit Ricard. ideo dae mones tristari impressione illius speciei, quia est species quaedam excellens, quemadmodum species etiam excellens in sensu solet esse causa molestiae).

However, as Richard rightly observed, in sense it is indeed an excellent species, or rather an excellent sensible, that is the cause of pain or annoyance because it harms the sense; but an intelligible species, however excellent and of the most excellent object, cannot harm the intellect, as is evident; therefore it cannot be the cause of sadness; otherwise the species of the divine essence (if any) would produce the greatest sadness, which no one will say (Ceterum, vt ipse Ricar. recte obseruauit in sensu potest, quidem species excellens aut potius (vt ego arbitror) sensibile excellens esse causa dolo tis, aut molestiae, eo quod laedit sensum: at species intelligibilis, quantumuis sit

excellens, & excel lentissimi obiecti, non potest laedere intellectum, vt patet: ac proinde nequit esse causa tristitiae: alioquin & species essentiae diuinae (si aliqua, maxime tristitiam afferret: quod nemo dicet).

I said that the harm to the sense is produced rather by the sensible object than by the species, because every harm which arises from some natural intemperance is made by a physical and real action of some quality in the organ coming from the sensible object rather than from the species, as I have shown at length in De Anima book 2 and will show below in this second part (Dixi a. laesionem sensus prouenire potius a sensi bili obiecto, quam ab specie: quia omnis laesio quae fit per naturalem aliquam intemperiem, fi actione physica & reali alterius qualitatis in or gano ab obiecto sensibili proueniente, quam ab specie, vt late ostendi in 2. de Ani. & Deo duce in ferius in hac 2. par. monstrabo).

The reason therefore which the defenders allege for this opinion, that the impression of a species or of that knowledge is the cause of sadness, is that the angel is compelled to persevere in the cognition of such an object against his will (Ratio igitur ob quam Dd. alleg. pro hac sententia, dicunt. impres sionem speciei, aut notitiae illius esse causam tri stitiae, est, quia cogitur Angelus in cognitione ta lis obiecti contra voluntatem suam perseuerare).

Although this seems difficult to some, at least to be effected by mere impression of a species, yet let us at least concede that it can be done by an impressed notion or by an impressed species (quod quamuis aliquibus difficile videatur, saltem per solam impressionem speciei: tamen id liben ter concedamus, siue per impressam notitiam, siue per speciem impressam fieri posse).

Nevertheless it does not seem a sufficient cause to be assigned for so violent a sadness as the demon suffers (nihilo minus non videtur sufficiens causa assignari tam vehementis tristitiae, quam patitur daemon).

First, if it were for some reason a cause of great sadness because by that cognition the cogitation of other things and their consideration would be impeded in the angel, this is against experience, for demons, as appears from those possessed, consider many other things (Pri mum quidem si aliqua ratione esset causa tristi tiae, maximae quia ea cogitatione aliarum rerum cogitatio & consideratio in Angelo impediretur: at hoc est contra experientiam: nam daemones, vt constat ex energumenis, multa alia considerant).

Then if the notion were impressed by God as Scotus asserts, the angel could not be hindered by it from thinking other objects, because the power of understanding is not distracted by that cognition; nothing of power is contributed by it for eliciting that cogitation, but only that he suffers and receives it (Deinde si imprimeretur notitia ab ipso Deo, vt asseruit Scot. non posset Angelus per illam impe diri, ne alia obiecta libere cogitaret: quia virtur intelligendi nihil per eam cogitationem distra hetur: cum nihil virtutis ad eam eliciendam in tellectus conferret, sed solum eam pateretur, & reciperet).

Finally, even if only an intelligible species were impressed, there could not be such an intensity of thought by that species that consideration of other things would be impeded; for with the understanding of that thing which the angel clearly understands he can without labor consider

many other things (Postremo etiamsi impressio solum esset speciei intelligibilis, non posset esse tanta cogita tionis intensio per illam speciem, vt aliarum rerum consideratio impediretur; nam cum intellectione eius rei, quam Angelus clare intuetur, potest sine labore plura alia considerare).

The reason why Aegidius said that the angel is tormented by a species which he receives from God, but our intellect is not tormented by the species which it received from the active intellect, is frivolous: for that the substance of the angel depends on God is not a sufficient cause that a species impressed by God should produce sadness, unless that species be contrary and disconvenient to the angel, as against our possible intellect we would be tormented by a species given by our active intellect if we received a species contrary to us even if the substance of our possible intellect did not depend on the active intellect (Ratio v. ob quam dicebat Aegid. Angelum tor queri ab speciei, quam recipit a Deo, intellectum, a. nostrum non cruciari ab specie, quam accepit ab intellectu agenti, friuola est: nam quod sub stantia Angeli pendeat a Deo non est sufficiens causa, vt species impressa a Deo afferat tristitiam, nisi illa sit contraria & disconueniens Angelo: sicut contra etiam intellectus possibilis, & nos torqueremur a nostro intellectu agenti, si reci peremus speciem nobis contrariam, etiamsi sub stautia nostri intellectus possibilis non pendeat ab intellectu agente).

That which is to be considered about our sense being affected by sensible quantities is not for that reason, because the substance of the sense depends on those as efficient causes, but because qualities can impress on the sense the species of an object that is contrary, troublesome and disconvenient in nature (Quod V. sensus noster a quan tatibus sensibilibus affici possit tristitia: non ideo est, quia ab illis pendeat substantia eius vt ab effi cientibus, sed quia qualitates imptimere possunt sensui speciem obiecti contrarij molesti & dis conuenientis naturae).

The fourth opinion is that of Domingo de Soto in the fourth part, distinction 50 question 1 article near the end, who teaches that souls outside bodies and demons are tormented in the same way by fire as souls in the body are tormented by fire, and that this power is communicated to the fire by God; and that this is what Augustine said: "in wondrous, yet true modes demons are tormented by fire," as we will report below (QVarta sententia sit Domin. de Soto in 4. d. 50. q. 1. cart. sub fin qui docet, animas extra corpora, & daemones eodem modo torqueri ab igne, quo animae in ipso corpore ab igne cruciantur: & hanc virtutem communicatam esse igne a Deo idque esse, quod dixit Angust. miris, veris tamen modis daemones ab igne torqueri, vt inf. referemus).

Whether from this any quality is derived from the fire into demons or souls, or in some other way, he does not explain (Vtrum a hoc fiat deriuata aliqua qualitate ab igne in daemones, aut animas, an alio modo, ipse non explicat).

Hent. agrees with Soto in part in book 8 q. 34 which teaches that a demon suffers from fire insofar as the fire is hot, and he rejects that it is a true passion like that which the senses receive; Hent. therefore seems to think that the passion which torments the demon by the fire is of the same reason as that which the sense would receive (Cum Soto conuenit ex parte Hent. quod li. 8. q. 34. qui docet, daemonem ab igne pati, qua tenus ignis calidus est: ac proiude vera passione, qualem sensus reciperet, daemonem ab igne tor queri. Videtur autem hic autor existimare passio nem, quae daemon ab igne torquetur, eiusdem esse rationis cum ea, quam sensus pateretur).

But Soto does not concede that the pain and passion of the soul or demon are of the same reason as those of the sense of a body; rather he says that a separated soul and a demon are tormented in the same way as the soul in the body is tormented, not by the passion of bodily punishment, but by something else derived from the body (At Sotus non concedit eiusdem esse rationis dolorem, & passionem animae, seu daemonis, & sensus corpo rei: sed animam separatam, & daemonem eodem modo torqueri, quo anima in corpore cruciare tur non passione poena corporea, sed quadam alia a corpore deriuata).

Moreover Henticus and in this perhaps differs from Soto, that that passion of demons from fire is derived by the proper virtue of the fire itself, while Soto teaches that it is by the virtue of God communicated to the fire, from which the fire is assumed as an instrument; Henticus however adds that some other virtue is communicated to the demon by God so that it is capable of suffering and of being tormented which is derived from the fire; thus both acknowledge a supernatural virtue of God in the punishment of demons: but Soto concedes it from the side of the fire, Henticus from the side of the demon (Addit praeterea Henticus & in hoc forsan a Soto differt, illam passionem dae monis ab igne deriuari virtute propria ipsius ignis: cum tamen Sot. virtute Dei igni commu nicata, a quo ignis assumitur vt instrumentum, id fieri doceat: subiungit tamen Hen. virtutem ali quam communicari daemoni a Deo, vt capax sit doloris & cruciatus, qui ab igne in ipsum deriua tur. Itaque vterque in poena daemonum agnoscit virtutem Dei supernaturalem: sed Sot. eam con cedit ex parte ignis Hen. a. ex parte daemonis).

This opinion when explained in either way is not approved by me (Haec opinio vtroque modo explicata mihi non pro batur).

First as explained by Soto it can be refuted thus. The sadness which the demon experiences from the fire is a certain act of the will consisting in some displeasure; therefore it must be directed around some object as evil and disconvenient; therefore either it has for its object some quality derived from the fire into the demon, or it has the fire itself as object (Primum quidem vt explicatur a Soto hac ratione refelli potest. Tristitia, quam patitur dae mon ab igne, est actus quidam voluntatis in dis plicentia quadam consistens: quare circa aliquod obiectum malum & disconueniens versari debet ergo aut habet pro obiecto qualitatem aliquam ab igne in ipsum daemonem deriuatam, aut habe ipsum ignem).

First it cannot have a quality derived from the fire into the demon; for besides that such a quality is chimerical, as will be shown below, the sadness of the demon and of the separated soul would not be of the same reason as the sadness of the soul conjoined to the body (Primum non potest habere quali tatem ab igne in ipsum daemonem deriuatam: nam praeterquam quod talis qualitas commenti tia est, vt c. seq. ostendemus: tristitia daemonis, & animae separatae non esset eiusdem rationis cum tristitia animae coniunctae corpori).

For the sadness of the soul conjoined to a body which it suffers from fire by the touch of the body when the body is burned has for its object some corporeal quality which they call dolorific, impressed on the body itself; or at least, as some prefer, the division of the continuum (which I do not approve) from which the species and pain in the sense is produced, and thence into the

sentient appetite and thence into the will the sadness is derived: a quality impressed into an angel or separated soul would be of another reason; it would be spiritual; therefore the sadness and the pain about it would be different from the sadness which the soul in the body suffers from fire (Nam tristitia animae coniunctae, quam patitur ab igne per ta ctum corporis, quando corpus comburitur, ha bet pro obiecto qualitatem quamdam corpoream quam vocant dolorificam, impressam ipsi corpori: vel certe vt alijs placet diuisionem continui (quod mihi non probatur) ex quibus prouenit species, & dolor in sensu tactus, & inde in appetitum sen tientem, & inde in voluntatem deriuatur: quali tas a. impressa Angelo, aut ansmae separatae alte rius esset rationis: esset enim spiritualis: ergo eti tristitia, & dolor de illa diuersus esset a tristitia, quam anima in corpore ex igne patitur).

Then if the sadness of the demon or separated soul had for its object the fire apprehended by it as an evil and disconvenient to itself, it would not be of the same reason as the sadness of the soul in the body when the body is burned; for the sadness of the soul in the body is not from the fire apprehended as an evil disconvenient, but as I said from a quality derived from the fire in touch (Deinde si tristitia daemonis, & animae separatae haberet pro obiecto ipsum ignem apprehensum vt malum, & sibi disconuenientem, non esset eius dem rationis cum tristitia animae in corpore, dum ab igne comburitur: nam tristitia animae in corpore non est ab ipso igne apprehenso vt malo discon ueniente: sed, vt dixi, de qualitate ab igne in ta ctum deriuata: nam tristitia de aliquo extrinseco malo alterius rationis est, quam de qualitate, & alteratione intrinseca ab extrinseco agente deri uata).

A separated soul, indeed, receiving nothing actually from the fire except the memory of the pain which it suffered from the fire by touch, could be tormented; and then as object it would not have the fire but a quality and passion derived from the fire in the body of which it retains memory; but a demon, who has never been experienced in a body nor can experience such a kind of sadness and pain, cannot be tormented by memory of that (Posset quidem anima separata nihil actu re cipiens ab igne, tantum ex memoria doloris, que ab igne per tactum passa esset, cruciari: & tunc pro obiecto non haberet ignem, sed qualitatem, & passionem ab igne deriuatam in corpus, cuius retineret memoriam: at daemon, qui nunquam in corpore expertus est, nec experiti potest tale ge nus tristitiae, & doloris, non potest memoria illius torqueri).

Moreover when a separated soul is in Hell, it would not be said to be tormented by the fire of Hell but to be tormented from the mere memory of the fire by which it was burned in the body; for as one who is near a fire and not burned by it but remembers that he was burned by another fire, and by the apprehension of a past burning grieves, it would not be said that he is tormented by the present fire but by an absent and past one (nihilominus anima separata a corpore, cum esset in inferno, non diceretur ab igne in ferni torqueri, sed ex sola memoria ignis, a quo in corpore passa est, cruciaretur: veluti qui esset iuxta ignem, & ab eo non combureretur, sed re cordaretur, se fuisse ab alio igne combustum, & apprehensione praeteritae combustionis tristaretur: non diceretur ab igne praesenti, sed ab absenti & praeterito torqueri).

Then this opinion as defended by Henry can be more easily impugned (Deinde esam sententiam vt ab Henr. defenditur, facilius potest impugnari).

First, as Scotus and Durandus note below in the cited place against Henry, either that virtue which gives to the spirit the capacity so far that it may suffer from the fire is corporeal or spiritual; if spiritual, it cannot receive anything and make the demon a suitable subject to be suffered by corporeal fire; for if the substance of the angel who is spiritual is not from itself able to be suffered by corporeal fire, it cannot be made suitable to be suffered by it even by a spiritual quality; if the quality were corporeal it cannot be received in a spiritual substance, as is manifest; therefore such a quality is altogether fictitious (Primum, vt notant Scotus & Durand. loco inferius citando, contra Henr. aut virtus illa, quae datu spiritui, vt possit ab igne pati, est corporea au spiritualis. Si spiritualis, non potest aliquid reci pere, & daemonem facere idoneum subiectum, vt ab igne corporeo patiatur: nam si substantia ipsa angeli, qui spiritualis est, ex se capax non erat, vt ab igne corporeo pateretur, non poterit per qua litatem etiam spiritualem idonea reddi, vt ab eo dem igne patiatur: qualitas vero illa corporea esse non potest: quia in substantia spirituali corporea qualitas recipi nequit, vt manifestum est: ergo talis qualitas omnino commentitia est).

Moreover if we concede that the substance of the angel is capable in itself, or at least by a quality communicated by God, to be made capable that it may suffer from the fire, nonetheless the sadness of the demon or separated soul derived from the fire cannot be the same as that which the soul conjoined to a body has when the body is burned (Praeterea etiam si concedamus, substantiam Angeli esse ca pacem ex se, aut saltem per qualitatem a Deo con municatam capacem effici, vt ige patiatur nihilo minus tristitia illius, & animae separatae deriuata ab igne, non potest esse eadem cum ea, quam ha bet anima coiuncta corpori, quando ab igne cor pus crematur).

For either the object of this sadness would be the fire itself or something derived from the fire; if the fire itself, the sadness would not be of the same reason as above against Scotus; if something derived from the fire into the substance of the angel, that thing would be either spiritual or corporeal; if spiritual, besides being undefendable (because a spiritual effect cannot be derived from a corporeal agent by its own power), the sadness from that would not be of the same reason as the sadness which the soul in a body has when the body is burned; for the sadness of the soul in the body from burning is from some corporeal quality, namely from intemperance or division of the continuum or from a sensible quality called dolorific; sadness of the demon in that way would be from some spiritual quality (Nam vel obiectum huius tristitiae esset ipse ignis, vel aliquid ab igne deriuatum. Si esset ipse ignis, tristitia non esset eiusdem ratio nis, vt supra contra Scotum demonstrauimus. Si autem esset aliquid ab igne deriuatum in substan tia Angeli: vel illud esset spirituale, vel corporeum. Si dicas esse spirituale, praeterquam quod id de fendi non potest (quia ab agente corporeo pro pria virtute non potest effectus spiritualis deri uari) dolor tristitia de illo non esset eiusdem ra tionis, cum tristitia, quam habet anima in corpore quando ab igne corpus comburitur: quia tristitia animae in corpore ex combustione ignis est de aliquo corpore, nempe de intemperie, aut diui sione continui, aut qualitate sensibili, quam dolo rificam vocant: tristitia a. daemonis eo modo esset de qualitate aliqua spirituali).

If you say that that which is derived from the fire into the spirit is corporeal, yet the pain would still not be of the same reason as the pain of a soul in the body from combustion; for the pain of a soul in the body from combustion is of some sensible quality; but a corporeal quality impressed

into a demon would not be sensible; therefore the pain from that would not be of the same reason as the sadness of the soul from combustion (Si v. id, quod deriua retur ab igne in spiritum, esset corporeum, adhuc dolor non esset eiusdem rationis cum dolore ani mae in corpore ex combustione: nam dolor ani mae in corpore ex combustione, est de qualitate aliqua sensibili: qualitas autem corporea impressa daemoni non esset sensibilis: ergo dolor de illa non esset eiusdem rationis cum tristitia animae ex combustione).

But someone might say that the demon's will could be elevated so that it is saddened by that sensible quality which arises from combustion and perceives it as if it were in the body (At dicat aliquis, eleuari, quidem voluntatem daemonis, vt tristetur de qualitate illa sensibili, quae nascitur ex combustione, & illam percipiat, ac si esset in corpore).

This can be easily confuted. No appetitive or cognitive faculty can be elevated to operate about an object which is not contained somehow within its proper latitude; for example, the eye cannot be elevated to hear, the ear to see, the intellect to sense; otherwise every faculty could be elevated to any genus of operation which is absurd (Verum hoc facile confutari potest. Nam nulla facultas appetens, aut cogno scens, eleuari potest ad operandum circa obiectum aliquod, quod intra latitudinem proprij aliquo modo non continetur. veluti oculus ad audien dum, & auris ad videndum, & intellectus ad sen tiendum eleuari nequit: alioquin & quaeuis res eleuari posset ad quoduis genus operationis virae quod est absurdum).

That the created intellect is elevated to see God clearly is because God is in some way contained within the latitude of the object of created intellect; for God can naturally be known by the created intellect, at least not in a proper concept nor quiditatively; and therefore from one kind of cognition about the same object it can be elevated to another kind more perfect; but to that which in no way is contained under the object of some faculty the faculty cannot be elevated (Quod vero intellectus crea tus eleuetur ad videndum clare Deum, est, quia Deus intra latitudinem obiecti intellectus creati aliquo modo continetur: nam & naturaliter Deus cognosci potest ab intellectu creato; saltem non proprio conceptu, nec quiditatiuo: & ideo ex vno genere cognitionis circa idem obiectum, ad aliud genus perfectius eleuari potest: ad id tamen quod nullo modo continetur sub obiecto alicuius facul tatis, non potest facultas eleuari).

Thus likewise an apprehending faculty cannot be elevated to operate about that which is not in any way contained in analogy and latitude of its object (etiam eodem modo facultas apperens eleuari non potest ad operan dum circa id: quod aliquo modo intra analogiam & latitudinem obiecti sui non continetur).

Since therefore the pain which is in the will of the soul conjoined with the body from the burning of the body is of this sort - that first the touch itself is affected by a troublesome cognition of that quality which we call dolorific, or as the more probable opinion carries, of intemperance or a division of the continuum; then the animal appetite is saddened about the same object as disconvenient; lastly the will is affected with pain and sadness about the same thing by a certain sympathy - it follows that a demon cannot be tormented in this way by any quality derived from the fire into him (Cum igitur dolor, qui est in voluntate animae coniuncta cum corpore ex conbustione

corporis ab igne, hoc modo fiat vt primum afficiatur ipse tactus molesta quadam cognitione qualitatis illius, quam doloriferam vocamus, vt probabilior opinio fert aut intemperiei, aut diuisionis continui, vt ali existimant: deinde appetitus animalis tristetur de eodem obiecto tanquam disconuenienti: postre mo voluntas dolore, & tristitia de eadem re affi ciatur per sympathiam quandam: efficitur, demo nem non posse hoc modo torqueri quacunque qualitate ab igne in ipsum deriuata).

The fifth opinion is of the more recent who assert that a certain quality is derived from the fire into the demon by the virtue of God using it as an instrument, and that the demon suffers from and is saddened by that quality, not indeed by the same kind of sadness as that which a soul united to a body suffers when the body is burned, but because the demon sees that that quality is most unsuitable to him and contrary to him as a stain, shameful and deformed - as the human body is by intemperance or that dolorific quality (QVinta sententia est recentiorum qui autu mant, qualitatem quandam ab igne virture Dei vtentis ipso vt instrumento in daemonem de riuari, & ab ea daemonem pati, & de ea tristari: non quidem eodem genere tristitiae, quo tristatur anima coniuncta corpori, cum ab igne corpus cre matur: sed quia videt daemon, se ea qualitate sibi minime conuenienti, & contraria quasi macula tum, turpem, & deformem: sicut corpus anima lis per intemperiem, vel qualitatem illam dolori feram mase se habet).

This opinion is indicated by Albert in the fourth part, distinction 44, article 20 to the Last, although he considers the first opinion (that mentioned above) more probable (Hanc sententiam indicat Albertus in 4. d. 44. a. 20. ad vlt. quamuis existimet probabiliorem prima, quam supra cap. 1. retuli mus).

The same opinion is ascribed to the more recent Durandus, so that he has some ancient scholastic as patron, although Durandus in the last question of distinction 44 number 15 only reports it as of others and from intention attacks it (Eandem quoque opinionem tribuunt recen tiores Durando, vt aliquem ex Scholasticis anti quioribus habeant patronum: cum tamen Dura in 4. distinct. 44. q vlt. num. 15. eam solum tanquam aliorum referat, & ex professo impugnet).

It can be confirmed by testimonies of Fathers and Scripture cited in chapter 2 of this disputation, in which it is said that demons are burned and tormented by fire; which cannot comfortably be understood in any other way than in that which this opinion defends, as is clear by induction from those things we have said against other opinions (Confirmati autem potest testimonijs Patrum & Scri pturae cap. 2. huius disp. citatis, quibus dicitur, dae mones ab igne cremari, & cruciari: quod nullo alio modo commode videtur intelligi posse, quan hoc, quem haec opinio defendit, vt inductione constat ex ijs, quae contra alias sententias diximus).

But especially it can be corroborated by the authority and words of Gregory in book 4 of the Dialogues chapter 29: "For the soul suffers the conflagration of fire not only by seeing but also by experiencing it" (Sed praesertim authoritate, & verbis Gregor. 4. dia log cap. 29. comprobars potest: inquit enim, ani mam pati incendium ignis, non tantum videndo, sed etiam experiendo).

Add also places of Scripture in which this kind of torment is explained: Luke 16, the soul of the rich man said "I am tormented in this flame"; Apocalypse 20 says that the beast and the false prophets shall be tormented day and night in the lake of fire (Adde etiam loca Scripturae. in quibus hoc genus tormenti explicatur Luc. 16. anima diuitis dicebat. Quia crucior in hac flamma: Apocal. 20. dicitur bestiam, & Pseudoprophetas cruciandos die ac nocte in stagno ignis).

This opinion in the schools has appeared the more plausible inasmuch as it follows sense; for since those things which we experience by sense we more easily understand, and our manner of understanding is commonly most led by sense, as soon as we hear that spirit is tormented by fire we conceive its sadness like corporeal pain (Haec sententia eo plausibilior in Scholis visa est, quo magis sensum sequuta videtur. Cum enim ea quae sensu experimur, facilius intelligamus: & noster modus intelligendi communiter sensu maxime ducatur: simul atque audimus, spiritum ab igne torqueri, tristitiam eius instar corporei doloris concipimus).

But if in this spiritual matter we desert sense and are led only by reason so that we ought to philosophize, the aforesaid opinion is not less difficult than the others; and omitting the reasoning of Durandus in that cited question number 16, sufficiently explained by us in disputation 177 cap. 3, in which he effectively refutes the aforesaid opinion because no thing of the world can be assumed by God as a physical instrument unless it has a prior operation, which the fire does not have in regard to spirit, another proper reason may refute it (Si tamen in hac re spirituali deseramus sensum, & sola ratione ducti, vt opor tet Philosophemur: praedictam opinionem non minus, quam alias, difficilem iudicabimus, omissa vero ratione Durandi quaest. illa citara nu. 16. satis superque a nobis explicata dispur. 177. cap. 3. qua praedictam sententiam efficaciter ille confutat, quia videlicet quaeuis res mundi non potest assumita Deo vt physicum instrumentum, nisi habeat prae uiam operationem, qualem non habet ignis in spiritum: alia ratione huic materiae propria refelli potest).

But first it must be supposed about pain and sadness arising in us from the sense of touch, that it is either the cognition of touch itself by which the disconvenient quality is perceived, or it is the flight of the appetite and will derived from that cognition of touch; for speaking about pain in one way or the other is not much a difference of things but of words, provided that it is confessed that that contrary quality is a cognition in touch, and a flight or displeasure in the appetite and will (Supponendum autem in primis est, dolo rem & tristitiam ortam in nobis ex sensu tactus, vel esse ipsam cognitionem tactus, qua percipitur qualitas disconueniens: vel esse fugam appetitus & voluntatis deriuatam ex illa cognitione tactus, qua percipitur qualitas disconueniens: hoc enim aut illo modo de dolore loqui, non magna rerum, sed parua vocum dissenssio est, dummodo fatea mur illius qualitatis contrariae esse cognitionem in tactu, & fugam seu displicentiam in appetitu & voluntate).

This supposed, it is easily shown that there cannot be flight and displeasure in the will of an angel proceeding from the impression of some quality derived from the fire; for if in us some sadness arises from the impression of some extraneous quality, this only happens because that extraneous quality is contrary to the natural temper of our proper nature or because it in some way makes us deformed; in the former way not only is sadness in the will produced by mere cognition

and apprehension of the intellect and the sensation, but nature also provides in the sense the faculty to perceive such a disconvenient quality and hence into the appetite and will as I have said; in the latter way sadness occurs in the will by itself, or in the appetite without the external sense being touched, from the fact that someone considering himself deformed by such a quality would grieve, as one would grieve if he saw himself stained by some quality by which he would be made shameful (Hoc supposito facile ostenditur, non posse esse fugam & displicentiam in voluntate Angeli prouenientem ex impressione alicuius qualitatis ab igne deriuatae: nam si in nobis aliqua tristitia oritur ex impressione alicuius extraneae qualitatis: ea solum contingit, quia extranea illa qualitas est contra naturalem temperiem debiti nostrae naturae: aut quia aliquo pacto deformes nos efficit. Priori modo non solum efficitur rristi tia in voluntate media solum cogitatione & ap prehensione intellectus: sed etiam natura proui dit in sensu facultatem, vt disconuenientem il lam qualitatem, quam doloriferam vocant, per cipiamus, & inde in appetitum, & in voluntatem eo modo, quo diximus deriuetur. Posteriori vero modo contingit tristitia solum in voluntate, aut appetitu absque eo, quod sensu externo tactus qualitas illa percipiatur, ex eo solum quod quis per tam qualitatem deformem se considerans tristatur, veluti siquis videret se maculari aliqua qualitate, qua turpis efficeretur, doleret sane, & tristaretur).

But neither in the former way can it be that a demon be saddened by an impressed quality; indeed, those who admit the former way confess ingenuously and are convinced by reason: because no quality can be printed on an angel against the nature of his constitution so as to dispose him to some corruption, as is evident (Et quidem priori modo daemonem non tristari, ad uersarij, ingenue fatentur, & ratione ipsa conuin citur: quia nulla qualitas imprimi porest Angelo contra naturam illius constitutionem ad corru ptionem aliquam disponens, vt constat).

But neither in the latter way can it be that he be saddened: first because no reason can be devised by which some quality impressed would make a demon deformed unless to avoid present difficulty; and also because as no quality can be to anyone the cause of deformity unless it takes away some quality necessary for the preservation of his beauty, so also no quality impressed by God can make the angel deformed, since being infused supernaturally it cannot be of any created natural nature according to the principles required; it follows that it would be supernatural according to its substance; and by what reason could an angel be made deformed by a quality supernaturally infused and supernatural according to its substance? nay if any such existed it would rather pertain to the beauty of the angel (Sed neque posteriori modo tristari potest: tum quia nulla potest excogitari ratio ob quam qualitate aliqua impressa daemon efficiatur deformis, nisi vt praesentem difficultatem effugiamus: tum etiam quia sicut nulla qualitas esse potest alicui contra ria disponens ad eius corruptionem, nisi quae tol lat aliquam qualitatem necessariam ad conserua tionem ipsius; sic etiam non potest aliqua esse a licui causa deformitatis, nisi quae tollat qualitate aut substantiam necessariam ad illius pulchritu dinem: si enim integre reliquit omnia necessaria ad pulchritudinem, integra manebit pulchritudo, & nulla erit deformitas: atqui nulla qualitas An gelo inprimi potest a Deo, quae tollat aliquid ne cessarium ad eius pulchritudinem: ergo nulla hu iusmodi qualitate reddi potest deformis).

Add that since that quality would be infused by God supernaturally and could not be natural to any created nature according to the principes naturaliter required, it follows that it is supernatural according to its nature and substance, and how could a quality thus supernaturally infused and supernatural in its substance render the angel deformed? indeed it would rather add to his beauty (Adde, quod cum qualitas illa infundatur a Deo superna turaliter, & nulli creatae naturae possit esse natura lis ex principijs ipsius naturaliter requisita: se quitur, esse supernaturalem secundum suam naturam & substantiam: qua ergo ratione fieri poterit, v Angelus deformis reddatur qualitate supernatu raliter infusa, & secundum suam substantiam su pernaturali? imo vero si talis aliqua esset, potius ad pulchritudinem Angeli pertineret).

To the testimonies of the Fathers and of Scripture which we alleged for this opinion there is one-word answer: demons are indeed tormented by fire, as we showed above in chapters 1 and 2 against the first and second opinion; nevertheless they are not tormented in the same way as this opinion contends, but in another easier way, which we shall explain in chapter 6 according to the opinion of St. Thomas (Ad testi monia vero Patrum, & Scripturae, quae pro hac sententia allegauimus, vnico verbo respondetur, daemones quidem ab igne torqueri, vt supra etiam c. 1. & 2. contra primam & secundam sententiam ostendimus: tamen non cruciari eodem modo, quo haec sententia contendit, sed alio faciliori, quem c. seque ex sententia S. Thomae explicabimus).

A much easier and more common among Thomists is the opinion which many of the ancient theologians handed down, namely that demons are tormented by the fire by an alligation from which they suffer against their will and from which they cannot free themselves (MVlto faciliot, & apud Thomistas commu Inior sententia est, quam non pauci ex an tiquis Theologis tradiderunt, nempe daemones ab igne torqueri per alligationem, quam contri suam voluntatem patiuntur, & a qua non possunt se ipsos liberare).

This opinion was followed by St. Thomas in this article in the third solution most clearly in the fourth contra gentiles chapter 90, and by Bonaventure in 4. d. 44 part 2 art. 3 question 2; though he assigns elsewhere another mode of torment to angels, namely that they flee the heat of the fire, although it cannot harm them, and they tremble with fear where there is no fear; and that this is done by divine omnipotence, a way by which he seems to fall into the opinion which we have refuted (S. Th. in hoc art. in solutione tertia clarissime tamer 4. contra gentes c. 90. & Ferrariensis, ibi. Bona. in. 4. d. 44. p. 2. art. 3. qu. 2. tam etsi ibidem alium modum cruciatus angelis assignet, nempe vt refugiant ca lorem ignis, quamuis nocere non possit, & trepi denttimore vbi non est timor: idque fieri ex di uina omnipotentia: quo pacto incidere videtur in opinionem 1.c. a nobis impugnatam).

In the same opinion about alligation were Scotus and Gabriel in the places cited, although they also assign another mode of torments, as was said in chapter 3 (In eadem sententia, de alligatione, fuerunt Scotus, & Ga briel locis allegatis, quamnis alium etiam modi torquendi igni assignent, de quo capite 3. dictum est).

Durandus in the fourth distinction 44 last question, Paludanus question 7 in the fifth opinion, Major question 6, and perhaps Hugh of Saint Victor wished nothing else in question 4 of the Epistle to the Thessalonians when he says that spirits are tormented by the fire even if they are not touched by it; for it is not possible that any corporeal thing be suffered by someone receiving nothing from it (namely being not touched) unless by alligation (Idem senserunt Durandus in 4. d. 44. q vlt. Palud quaestione 7. in quinta opinione. Maior quaestione 6. nec aliud videtur voluisse Hugo de Sancto Victore in quaestione quarta in Epistolam ad Thessaloni censes, cum ait spiritus ab igne, etiamsi ab illo non contingantur: nam fieri non potest, vt ali quis ab aliquo corpore patiatur, nihil ab eo reci piens (quod est ab eo non contingi) nisi per alll auiouem).

This opinion is to be confirmed by no better foundation than that there seems to remain no other mode whereby demons are tormented by fire except those enumerated, each of which has many difficulties as we have hitherto seen; but this alligation seems to have none; therefore until something else is made known to us by revelation (for otherwise it cannot be known), it will be permissible to explain to ourselves the punishment which demons suffer from the fire in this way (Haec opinio nullo alio meliori fundamento confirmari debet, quam quia nullus alius videtur superesse modus, quo torqueantur daemones per ignem, praeter enumeratos: ex quibus nullus est, qui multas non habeat difficultates, vt hactenus vidimus: hic autem nullas videtur habere. Erg. quandiu alius nobis non constat reuelatione D (aliter enim constare non potest,) hoc pacto li cebit nobis poenam, quam daemones patiuntur ab igne, explicare).

Moreover by this mode we can easily defend two things which must necessarily be asserted (Porro hoc modo facile de fendere possumus duo, quae necessario asserenda sunt).

One is that the pain of the fire is not equal in all demons; for by the virtue of God it can be that one is tormented more vehemently than another (Vnum est, aequalem non esse poenam ignis in omnibus daemonibus, nam virtute Dei fieri potest, vt vnus vehementius, quam alius torquea tur).

The other is that demons who remained in this air are not less tormented by the fire than if they were in the fire itself, as St. Thomas says in the third solution, namely by this, that they apprehend themselves to be destined to be always allied to the fire; and God can send such an apprehension into a demon so efficaciously that it torments him no less than when he sees himself afterwards detained in the very fire (Alterum vero est, daemones, qui in hoc aëre manserunt, non minus cruciari ab igne, quam si in ipso igne essent, vt ait Sanctus Thomas in so lutione tertia, nempe per hoc, quod apprehen dant, se destinatos esse, vt igni sint perpetuo alli gati: quam quidem apprehensionem potest Deus immittere Daemoni adeo efficacem, vt non mi nus cruciet; quam cum se videat postea in ipso igne detentum).

By this reason it must also be asserted that the punishment of these demons is not to be increased after the day of judgment, which Caietanus seems falsely to indicate against that passage in 2 Peter 2 (Qua etiam ratione asserendum est, poenam horum daemonum non esse augendam post diem iudicij: cuius oppositum falso indi care videtur Caietanus in illud 2. Petri 2).

If God did not spare the angels who sinned, etc., indeed... (Si enim Deus Angelis peccantibus non pepercit, &c.). We must however defend this opinion so that we do not deny that demons are tormented by fire in ways other than by alligation; but only assert that another mode of their torment is altogether unknown to us, and with Augustine in the place cited say "in wondrous but true ways," that is, in true modes but unknown to us, demons are tormented by the fire (Verum hanc sententiam defendere debemus, vt non nege mus, daemones alio modo ab igne cruciari, quam per alligationem: sed solum assetamus alium mo dum cruciatus nobis plane esse ignotum: & cum Augustino loco citato in secundo capite dica mus, miris, veris tamen modis, hoc est, veris mo dis, nobis tamen ignotis, daemones ab igne tor queri).

For from the modes of torment which we have enumerated hitherto no one can be defended without some inconvenience; and so it will be better to confess our ignorance in this matter than to affirm anything without a firm foundation (nam ex his modis cruciatus, quos hacte nus enumerauimus, nullus absque vllo incom modo defendi potest: & ita satius erit, nostram in hac re fateri ignorantiam, quam absque firmo fun damento aliquid affirmare).

Concerning separated souls there is no doubt that they are also tormented by the fire in a way other than by alligation, and that the manner of such torment is manifest to us; for when they are conjoined to a body and the body is burned by the fire, they suffer not only by alligation but also by a dolorific quality inserted to the sense of touch and known by them, from whose cognition sadness is derived into the sentient appetite and into the will, which we call pain (De animabus separa tis dubitandum non est, eas etiam alio modo ab igne torqueri, quam per allegationem: & modum talis cruciatus nobis esse manifestum: nam quando corpori coniunctae sunt, & corpus igne crematur, non solum patiuntur per alligationem, sed per doloriferam etiam qualitatem immissam sensui tactus, & ab eis cognitam, ex cuius cognitione deriuatur in appetitum sentientem, & in ipsam voluntatem tristitia, quam & dolorem vocamus).

Therefore by this same sort of pain from the apprehension of that dolorific quality which causes pain in touch separated souls will be tormented; for before the body is actually burned God could in the meantime send so efficaciously into a separated soul such an apprehension as if the fire present were burning the body, as I think must be necessarily asserted, lest we be compelled to concede that the sensory punishment is derived from the fire in the bodies after union with the souls (Hoc igitur eodem doloris genere ex apprehen sione illius qualitatis doloriferae, quae dolorem gignit in tactu, torquentur animae separatae: nam antea quam corpus ab igne comburatur actu, po test Deus tale genus apprehensionis non minus efficaciter animae separatae immittere, quam s ignis praesens corpus cremaret: hoc autem exi stimo necessario asserendum, ne cogamur conce dere, poenam sensus ab igne deriuatam angell in animabus post vnionem cum corpore).

But this kind of torment cannot suit an angel, whether the fire be absent or present, as touch likewise cannot suit him, from which this kind of pain necessarily derives (Ceterum hoc genus cruciatus Angelo conuenire non po test, siue absente igne, siue praesente, sicut nec ta ctus ei conuenire potest, ex quo hoc genus do loris necessario deriuatur).

Therefore separated souls and demons agree in this, that they are not only tormented by alligation but also in another way by the fire; they differ however because the manner in which, besides alligation, demons suffer is unknown to us, whereas the manner by which souls are tormented is sufficiently manifest (Conueniunt igitur ani mae separatae, & daemones in eo, vt non tantum per alligationem, sed etiam alio modo ab igne cru cientur. Differunt tamen, quia modus, quo praeter alligationem daemones patiuntur, ignotus nobis est: modus autem, quo animae torquentur, satis est manifestus).

Finally it must be added that although the element of fire is most apt by its nature to torment souls, because by its nature it is most effective on bodies, and it torments more vehemently than another element, and from the torment of the body sadness and pain are derived into the soul, still there is no reason available to prove that by its nature this element is more apt to torment demons than any other element (Postremo addendum est, quamuis elementum ignis aptissimum sit ad cruciandas animas, quia natura sua efficacissimum est in corpora: eaque vehementius, quam aliud elementum cruciat: et cruciatu autem corporis tristitia, & dolor in ans mam deriuatur: tamen nullam nobis suppetere rationem ad probandum, aptius olementum esse natura sua ad cruciandum daemones, quam sit quodcumque aliud elementum).

First because by the reason of alligation the same reason would hold for other elements as is evident (tum quia ratione alligationis aequa esset ratio aliorum, vt constat).

Secondly because another mode in which demons are tormented by fire is unknown to us (Tum quia alius modus quo ab igne daemones torquentur, nobis ignotus est).

But God in the best right prepared especially this element as the punishment of demons, since also it was to be for the souls of the damned a cause of torment (Deus autem iure optimo hoc elementum praecipue supplicio dae monum praeparauit: cum futurum quoque esset animabus damnatorum causa tormenti).

Thus far we have not only elucidated what St. Thomas teaches in this first part question 50 up to 64, but also what he treats below from question 106 up to 112; for those things which he disputes about illumination questions 106, 108, 109, 111 and about the illumination by which men are enlightened by angels and the power of angels over created bodies we have sufficiently examined in disputations 215, 216, 217; what the Doctor treats about the speech of angels question 107 we have treated from presupposition in disputations 211 and 213; it only remains that we say something about the mission and custody of angels and about the assault of demons, about which St. Thomas treats below questions 112, 113, 114 (Hactenus non solum elucidauimus, quae docet S. Th. in hac 1. p. a q. 50. vsque ad 64. sed etiam ea, quae tractat infra a qu. 106. vsque 112. nam quae disputat de illuminatione q. 106. 108. 109. 111.& de illuminatione, qua homines ab Angelis illu minantur, & de virtute Angelorum supra creatu ram corpoream, satis superque examinauimu. disput. 215. 216. 217. quae S. Doctor tractat de lo cutione Angelorum q 107. tractauimus ex pro feslo disp. 211. & 213. solum restat, vt de missione & custodia Angelorum, & de oppugnatione dae monum aliqua dicamus, de quibus disserit S. Th. infra q. 112. 113. 114).

Disputation 244 (Disputatio 244)

Which angels are sent into the service of men (Quinam Angeli in ministerium hominum mittantur)

Disput. 244. Which angels are sent into the service of men.

Two opposite opinions. ch. 1. Judgment concerning each opinion. ch. 2.

Chapter 1 (Caput I). Two opposite opinions.

From all these things which have been said by us up to now it is plain that there are two classes of angels, one of the good, which adheres to God by a clear vision and perpetual charity, the other of the evil, which is attached to the eternal torments of hell. From which two others are divided, one of the evil, whom God permitted to be set against the salvation of men; the other of the good, whom he constituted as guardians for us, that not only against the snares of demons our spiritual salvation might be defended, but that the human race might be preserved safe from other evils as well. Therefore concerning the guardianship of the good and the assault of the evil we must in this last place discourse, about which St. Thomas disputes in q. 112, 113 and 114. Whereby it will come to pass that all which he notes from q. 50 up to 64 and from q. 106 up to 114 we will elucidate in these our commentaries and disputations.

But that we may proceed in the disputation about the guardianship of angels, it must be explained at present which angels are sent to us from heaven into the ministry of men; about which St. Doctor treats in that question 112. It is above all certain among all that angels are sometimes sent to men. For this is established by Scripture: Exodus 23, "Behold, I will send my angel who shall go before thee"; and Luke 1, "The angel Gabriel was sent from God"; and Acts 12, "Now I perceive truly that the Lord hath sent his angel and hath delivered me out of the hand of Herod." From the Fathers moreover they explicitly teach this as certain: Dionysius ch. 13 of the Celestial Hierarchy, and Gregory in Book 2 of the Morals ch. 3 and Homily 24 on the Gospel, and many others incidentally; and they suppose it as most well-known together with St. Thomas below in q. 112, article 1.

St. Thomas proves it in that article 1, because, as he taught above in q. 43, art. 1, that which is said to be sent by another is that which proceeds from another in some manner, namely to begin to be somewhere where it was not before, or where it was before in another manner: but an angel proceeds from God in this manner; for, when he is in heaven, he comes to us, and this by the nod and command of God, who governs all things in the lower things, which is to proceed from God: therefore he is sent also by God. The distinction however between the sending of angels by God and the sending of one divine Person by another is manifestly collected from what was said in disputation 170; for the sending of one divine Person by another is a procession from it, not

according to command but according to substance, connoting with respect to a new manner of presence in place, as we explained there: but the procession of an angel is according to command, about which there is no doubt.

But among the doctors it is brought into controversy whether all angels are sent, even those of the highest hierarchy in which Seraphim, Cherubim, and Thrones are reckoned, or not. Some theologians have judged that by ordinary law angels are sent to us only from the inferior orders, and by extraordinary law sometimes also sent from the highest hierarchy; nay, even from the supreme order of the supreme hierarchy. Durand in 2d dist. 10 q.1 judges this opinion probable; Scotus q.1, Marsilius in 2 q.7 a.3 in the 2nd part, along with others assert that sometimes the supreme angels are sent to us. More recent theologians confirm that opinion in many ways.

First, because it is established that Gabriel was sent to the blessed Virgin (Luke 1) and elsewhere in Scripture. And Gabriel was supreme, or one of the supreme angels, according to Bernard in Homily 1 on that "He was sent" (Luke 1) and the Magister in 2d dist. 10, whose opinion Scotus follows in that distinction q.1 and Durand q.1, and Gregory seems to favor them in Homily 34 on the Gospel when he says that Gabriel was one of the supreme angels: for by "angels" it is not permitted to understand only spirits of the lowest order of the lowest hierarchy, whom we commonly call angels, but the whole angelic nature. And this seems most fitting: for as the mystery of the Incarnation and of Christ is the greatest, so it was fitting that the greatest among all the angels should be sent to announce it. And an angel Gabriel was never sent except to Daniel, to whom he revealed this future mystery, and to the Virgin Mother of Christ, to whom he immediately announced that which was to be done; as the same Bernard in the same sermon senses, to Joseph spouse of the virgin and foster-father of the same Christ, when in dreams he strengthened him (Matt. 1) so that he might take Mary as his wife; and finally, as I also judge, it was fitting that to Christ himself, when he was set in agony and prayed to the Father (Luke 22), an angel should come: for it was fitting that Gabriel, who is called the "strength of God," should be sent either to strengthen Christ's humanity against the agony of death, or to praise his eminent strength. Many indeed rightly and in agreement with divine letters think that the angel delegated to comfort Christ was not sent to corroborate the weakness of the flesh, but to praise his extraordinary strength; and they contend that this is signified by the name "comfort" in Scripture: of whose opinion we more fully confirmed at length in the year 1585, when in the 3rd part of St. Thomas, a. 4 q. 12, at Complutense in our college we were interpreting, which things we will publish printed to that place, God willing.

Secondly, Isaiah 6 says, "One of the seraphim flew to me and touched my mouth." Therefore one seraph was sent to Isaiah, who without doubt is placed in the supreme order of the first hierarchy. Third, Tobit 12 has Raphael, who had been sent to Tobit, saying, "I am Raphael, one of the seven who stand before the Lord." These seven however seem to be supreme, or among the supreme: for Revelation 1 says, "Grace to you and peace from him who is and who was and who is to come, and from the seven spirits who are before his throne, and from Jesus Christ who is the faithful witness"; by these words the seven spirits seem to be signified as the principal seven among those who attend God, from whom peace is implored for the faithful to whom he writes: moreover it would

not be more fitting to implore peace from the seven spirits than from others, since it had been implored from God and Christ, unless those seven spirits were principal. Fourth, Daniel 10 says, "Behold Michael, one of the chief princes, came to help me": where the Scripture testifies Michael to be of the chief princes, that is, of the angels; and yet he is said to have been sent to the help of the people of God. Fifth, Hebrews ch. 1, when Paul said, "To which of the angels did he ever say, 'Sit on my right hand'?" he contends by these words to prefer Christ above all the angels; he adds, "Are not all ministering spirits sent forth to minister for those who shall inherit salvation?" which certainly, unless understood of all the angels, would not in this way have sufficiently commended the glory of Christ by comparison with the angels.

Against these things, however, St. Thomas below in q. 112, art. 2 first contends that higher angels are never sent to us, but only lower ones. Then in art. 4 he teaches that the superiors who are not sent are Seraphim, Cherubim, and Thrones, which St. Thomas himself in q. 108 a.6 places in the first hierarchy according to the opinion of Dionysius; and furthermore Dominations, which in the same a.6 are placed in the second hierarchy: for he judges that the remaining orders are sent down to us, two of the second hierarchy namely Virtues and Powers, and all three of the third hierarchy namely Principalities, Archangels, and Angels. St. Thomas proves the former part of this opinion from the argument "But against (this) by the authority of Dionysius," which Gregory reports in Homily 34 on the Gospel after the middle, where he writes thus: "Dionysius the Areopagite, ancient and venerable father, is said to say that from the hosts of the lesser angels they are sent forth to accomplish ministry either visibly or invisibly, namely because to human consolations either angels or archangels come: for those higher hosts never depart from the intimates." The same Saint Thomas furthermore confirms this opinion by reason: because if the order of grace sometimes omits the order of nature, this is because it is expedient so for the confirmation of faith, as we see in miracles which are done beyond the order of nature; otherwise it seems fitting that the order of grace should preserve the order of nature. But it does not seem at all that sending some superior angel to us conduces to the confirmation of faith, because this is not evident to us; and on the other hand a sufficient number of inferior angels is enough that they come to us: therefore it is not to be said that the highest orders are sent to us as well: which seems naturally to suit the inferiors. That there is a sufficient number even fit to announce the greatest things is most assuredly confirmed by the fact that one of the archangels, namely Gabriel, as Gregory testifies in the same homily, was sent to announce the highest and greatest of all mysteries: therefore from this it will be permitted to conjecture that the number of inferior angels is sufficient so that some of them are sent to us. The latter part of this opinion St. Thomas proves from the signification of the names: for the names of two orders of the second hierarchy and three names of the third seem to denote some ministry; the names of the other orders do not

Chapter 2 (Caput II). Judgment concerning each opinion.

My opinion in this matter is that there is no firm foundation neither in the Fathers nor in Scripture so that we should confidently maintain one part or the other. Although anyone may without inconvenience defend whichever he wishes. Therefore the Master of Sentences in 2d dist.

10, having set down both opinions and shown the manner by which each might be defended from the objections of the opposite, prudently did not define anything in this matter. And indeed, first, if we had any firm foundation from the Fathers for the opinion of St. Thomas as he himself contends, there would be Gregory the Great in that Homily 34 on the Gospel and Dionysius. But Gregory the Great does not dare to affirm anything: he only reports the opinion of the great Dionysius from the report of others, as is evident from the words quoted above; and the passage of Isaiah by which it seemed to be proved that seraphim are sent to us likewise is interpreted in such a good sense that we are not forced to assert that the highest angels are sent to us: and that interpretation was indeed that of a certain theologian, as Dionysius recounts. He nevertheless adds: "But because in certain places of Scripture we learn that some things are done by cherubim, and in others by seraphim, whether these do them by themselves or act through their subordinate hosts, which, as is said, come from the greater and receive the names of their superiors, we do not wish to assert that, for we do not approve that which is not supported by clear testimonies."

But Dionysius in chapters 7 and 8 of the Celestial Hierarchy, where he is often cited, has not a single word about this matter: chapter 9, however, has these words by which he seems to have expressed the opinion reported by Gregory. For concerning the order of the Archangels he says, "It receives divine illuminations in the manner and institution of the first [orders], and it kindly proclaims them to the angels, and through the angels declares them to us." Thence about the angels he adds, "And therefore rather angels are called by us interpreters of the superiors than the superiors of the superiors, by which their most holy principality is engaged in clearer and more evident things and more nearly touches the world," or as another translation has it, "it almost touches the world." Concerning the supreme hierarchy he then adds, "For the highest, as has been said, description of spirits which is nearest to God in the hidden order ought to preside obscurely over the second." These words, however, if they have any bearing on the present matter, also prove that archangels are never sent to us: which no one has hitherto said. Therefore it must be said that here Dionysius only said that angels are illuminated indeed by archangels and are sent to us by them; because through angels more, or at least almost, all these lower things are administered; and that the highest hierarchy ought to preside obscurely over the second; but he does not say, nor lightly insinuate, that from it none is sent to us.

Lastly chapter 13 of the same book is commonly brought forward where this question seems to be explained expressly. But in that place he treats only the passage of Isaiah which we adduced for the prior opinion, "One of the seraphim flew to me," etc. There he does not dispute whether angels of only the lower hierarchy are sent to us or whether also the supreme are sent; but why a seraph is said to have been sent to purify the prophet Isaiah and not some inferior angels. Of other missions whether in them inferior angels only are sent, or whether sometimes also supreme ones are sent, Dionysius does not dispute. He expounds the place of Isaiah two ways; we shall relate both interpretations below. And although he says that the former interpretation is that of some, and the latter he had heard from some other, yet he accepted neither from his initiator in sacred doctrine, namely from Paul, from whom he himself testifies in chapter 6 that he received the doctrine of that book, as is manifest from the fact that near the end of that chapter 13 when he addresses Timothy

to whom he writes that book he treats of both interpretations: "Now for thee, Timothy, to whom I write that book, to understand and to distinguish the causes of the things which have been set forth, and to explain one before the other," etc. He therefore does not definitively approve either but leaves that to be judged by Timothy. If he had learned any of these things from his master Paul, he would without doubt have boldly affirmed it. From these things it is clear that among the holy Fathers there is no firm foundation for definitively pronouncing anything; rather they have given us an example that in so secret a matter we should not presume to define.

Furthermore the reasoning of St. Thomas does not prove that the supreme angels are never sent to us. For although they are superior by their nature, and the order of nature should not be set aside except for the confirmation of faith, yet there may nonetheless be some reason that supreme angels are sent to us, namely that they might announce to us some extraordinary message and Gospel, such as the mystery of the Incarnation: for kings also are accustomed to observe that when they wish to bring about some great thing with those absent, for example if a king wished to consummate the marriage of his son with someone's daughter, they send one of the princes and chiefs of the realm who are accustomed to stand continually within the royal palace. What then is wonderful if God, wishing to make a marriage of his Son with the Church and to unite his person to humanity in the womb of a virgin with a closer bond than that of marriage, were to send one of the first and not the lowest angels, who are perpetually in the sight of his throne?

But that which the holy Doctor says, namely that from the inferiors only two orders of the second hierarchy and three orders of the third are sent, cannot be certain either. For although the names of these seem more to denote ministry than the others, this does not prevent that sometimes other orders also, albeit more rarely, are sent. What he said, that if anyone were ever to be sent to the Virgin it should have been a seraph, we rather admit that for this mystery one ought to have been sent; yet even this is not certain, as will be shown in due order: nor can it be certain that it was only an archangel of the third hierarchy as Gregory calls him; for Gregory himself did not dare to define whether some of the highest spirits were sent. Perhaps therefore he called him "archangel" by a certain common term to signify a certain principal angel, as he earlier said "a certain highest angel." From these things it follows that there is no effective argument or firm foundation of authority for the latter opinion, that we should say that none of the supreme angels were ever sent to us. But nor is there any for the prior opinion, as we will presently show by way of induction, dissolving each of its arguments.

The first argument was about Gabriel, which is alleged that he was sent to the Virgin and that he was of the supreme, as Bernard testifies, since the very nature of the embassy required it. Yet this argument has not much force: for Bernard did not explicitly say that he was one of the supreames, but said, "I do not think this angel is of the lesser ones, who are often wont for various reasons to perform legations upon the earth." And this could be true even if he were of the order of the Archangels, who are in the lowest hierarchy. From Bernard's reasoning it seems to be collected that he was of the supreames; for he says he was therefore said to be sent by God because he was not of the lesser: for the lesser, according to the opinion of the scholastics, are not sent directly by God but by other superiors. Moreover Bernard adds another reason why he is said to be sent by God;

therefore he does not so assert with certainty that Gabriel was of the supreames that we should be bound to pronounce it definitively. Nor could Bernard be a firm foundation for definitively asserting that Gabriel was one of the supreames, because Scripture says "The angel Gabriel was sent by God": for inferior angels as well, who are sent by God through middle superiors, are said to be sent by God. For Exodus 23 says of God, "Behold, I will send my angel," namely to Moses to lead forth the children of Israel, whom the doctors infer to have been Michael the prince of that people from Daniel 10, about which we shall speak below. And in Acts 12 Peter said, "Now I know for sure that the Lord hath sent his angel," which certainly was the guardian angel of Peter; this is most probable: yet no one dared to affirm that he was certainly one of the supreames. Gregory, however, did not say of Gabriel that he was the highest angel of the order of the seraphim, since plainly he says he was an archangel: but he could understand "highest angel" by comparison with those who are numbered in the inferior order. And although the excellence of announcing the mystery would befit the supreme angel, if he were sent by God, nor could he by any means be unworthy; yet it would not be incongruous if it were announced by some archangel. For in either way it could be revealed and announced from God; therefore from congruity we are not compelled to affirm definitively what was done.

The second locus, Isaiah "One of the seraphim flew to me," etc., which was brought for the prior opinion, does not compel that the angel sent to Isaiah was of the supreme order of angels; but, as Dionysius says in chapter 13 of the Celestial Hierarchy, one may answer that he is called a seraph as though "fiery" from the office and duty of purifying; especially since the prophet's purification was to be by fire: and thus it was said to be one of the seraphim, that is, of those expiatory virtues which preside over us, which interpretation seems to me most probable and which the same Dionysius testifies to be that of other theologians. Thus that angel was called a seraph because he attributed his power and knowledge of expiation to God as author, and to a seraph as to the chief pontiff of sacred things, just as we attribute the expiation of sins not only to God as author but also to Christ according to the humanity as to the first priest: which exposition Dionysius brings from a certain theologian, as we said above. Saint Thomas also proves both these things in q.112 a.2 ad 2. Moreover, since Isaiah's vision was so much in the spirit and not with bodily eyes, as was said in disputation 55 ch. 5, from that place one cannot prove that a seraph was actually sent to Isaiah in reality, but only that he was present in an imaginative vision.

The third scriptural place for the prior opinion was Tobit 12 where Raphael, who was sent to Tobit, says he is one of the seven who stand before the Lord: yet this place has less weight. For we admit that Raphael is one of the seven princes who stand before God: nevertheless we say these spirits are not seraphim but seven angels placed over the whole world who have the care of it, as was largely shown above in disputation 180 ch. 1; from whom also John implores peace and grace for the faithful as from ministers, to whom he writes in Revelation ch. 1. He therefore prays from them first rather than from Christ either that he might show that Christ according to the humanity was in some respect less than the angels, or because, since he would afterwards speak many things about Christ, he preferred to mention him at the later place so that thenceforth he would speak only about him. But what some contend, namely that by the seven spirits there are not meant

angels but the seven principalities of the earth, or that the reference is not to prefer Christ in the prayer to angels but rather to the Holy Spirit or his charisms, does not please me; partly because John would express the Holy Spirit ineptly by "seven spirits": for although he is said to be sevenfold in spirit, he is nevertheless never called "seven spirits"; partly also because the charisms of the spirit would not be fitly signified: for we do not pray for grace and peace from gifts, nor are the gifts themselves said to stand before the throne of God.

The fourth place Daniel 10 concerning Michael, who is said to be one of the first princes, is to be understood in the same manner, that the princes are called those seven spirits set over the whole world. The fifth place is Hebrews 1 "Are not all ministering spirits?" Saint Thomas first responds in question 112 article 2 ad 1 that indeed all angels are ministering spirits, because they are sent into ministry either by an interior mission to other lower angels to whom they reveal mysteries, or by an exterior mission to us so that they might work some external act: and thus Christ is compared to all the angels. This solution, however, is not without difficulty. For illumination is not an invisible sending: for a superior angel illuminating an inferior does not come to him, nor does he depart, because he is not moved in place; and for him to be sent it is necessary that he come according to place or appear in a new manner. Moreover it cannot be said that he is "sent" because something is effected to the sending of the inferior: for that would be very improperly said; and the Apostle says "all are sent."

Then the holy Doctor answers that Paul there compares Christ not to all the angels but only to those by whom the law of Moses was given. Yet in my judgment this would be insufficient. For Paul intends simply to preeminent over all in order to show that he himself is truly the Son of God: and therefore he prefaced those words, "To which of the angels did he ever say, 'You are my Son'?" and again, "To which of the angels did he ever say, 'Sit on my right hand'?" and afterwards he adds, "Are not all ministering spirits sent forth to minister?" etc. If Christ were not compared to all the angels, he would not prove him to be the Son of God: because Paul would not have shown that God could not have said the same to some angel.

Wherefore I answer: those words "Are not all...?" are indeed to be referred to all orders and hierarchies: yet by those words "sent to minister" it is not signified that angels from all hierarchies are actually sent into ministry; for just as the word "all" refers to all hierarchies and orders, so it also refers to individual angels of whatever order. For Paul intends to prefer Christ against individual angels of whatever order no less than against individual orders and hierarchies in the whole: yet no one will say that individual angels of the supreme, middle, and inferior are all sent; therefore from that passage it cannot be proved that anyone from the supreme hierarchy was sent.

Moreover Paul's argument is the best: for by showing the condition of one angel, even the lowest, he rightly shows the nature of each; and if one is by nature and condition a minister and servant sent into ministry, the others also will be of the same condition so as to be sent, although they have not yet been sent: for nor does a king, who has many ministers in his house, send each of them separately to some place; yet each is by condition such that he can be sent, nor is any one of them said "Sit at my right hand." This solution has force not only especially if we say all angels are of the same species, but even if we judge them to differ in species it proves in the same way: for

Paul says of all that they are ministering spirits sent into ministry because they are fit to be sent. Therefore since we cannot deny that it is fitting to any angel by his proper nature that he could be sent into ministry, and the question whether some supreme one was sent or not is a question of fact about which nothing is certain for us, it will be wiser to pronounce nothing definite in this matter.

Disputation 245 (Disputatio 245)

On Guardian Angels and Attacking Demons (De Angelis tutelaribus, et daemonibus oppugnatoribus)

Disput. 245. On guardian angels and attacking demons.

On the guardianship of good angels, chap. 1. On the assault of demons, chap. 2

Chapter 1 (Caput 1)

From the angels who are sent to us it is indubitable from Scripture that some are guardian spirits by which men are wont to be delivered from evils. For it is said, Gen. 19: "The angels brought Lot out and set him outside the city, saying, Save thy soul." And in Gen. 48 Jacob says, "The angel who delivered me from all evils"; the same is found in Tobit 12 and Acts 12; and in Psalm 90 it is said, "He commanded his angels concerning you, that they should keep you in all your ways." Nevertheless Calvin in Book 1 of the Institutes, chap. 14, section 7, thinks that the popular opinion - namely that single angels are appointed to the custody of individual men - is merely a vulgar opinion. From the Fathers, however, Origen in his fifth homily on Matthew, treating that passage "their angels always behold the face [of the Father]" etc., reports two opinions: one of those who said that angels are only delegated to the custody of the predestined from the instant of their nativity; another of those who thought that guardian angels are deputed only to holy men, from the day of baptism. Both opinions, moreover, St. Thomas recalls from Origen in Question 5 (cf. Quaest. 113 in another place), as is seen in his work. Besides these, Hilary on that place of Matthew, and Cyril in his fourth book against Celsus, and Chrysostom in Homily 70 on Matthew assert that individual angels are given to righteous men for guardianship; concerning wicked men they say nothing.

But the common opinion of the Fathers and of the Scholastics - which it is not permitted to deny without a mark of grave temerity - is that to each individual man, of whatever quality and condition he may be, single angels are deputed for guardianship: for from Matthew 18 "their angels always behold the face of the Father" the Fathers collect that to each individual man from the day of his nativity single angels are deputed. Moreover, in Acts 12, when Peter, fleeing from prison, knocked at the door of the house of Mary the mother of Mark, and the maid said it was Peter, the others, not believing - since they thought him still in prison - said "It is his angel"; therefore they believed that to Peter, and to any other, an angel had been assigned for custody. Indeed the Fathers testify to the

same so plainly: Origen in his third book Periarchon ch. 2 after the middle, Basil in his ninth homily on Psalm 33 and in his thirteenth on Psalm 48 and in his third book against Eunomius at the beginning, and his follower Gregory of Nyssa in the book On the Life of Moses, Theodoret in Oration 10 on Daniel, where he also cites that place Matthew 18, Theophylact on that passage in Matthew. From the Latins, Jerome in his commentary on that chapter of Matthew, Anselm and Bede, and the more recent interpreters all on the same passage. Wherefore I do not see for what reason the Master in the second distinction of 11 doubts whether single angels are deputed to single men, or whether one angel of many may have the care of many men as well.

But there is no Scholastic who, in that distinction, does not assert that single angels are deputed to the custody of single men. St. Thomas taught the same in Question 113, Article 2; moreover this seems to be the most ancient tradition of men, which the Gentiles likewise seem to have received from the Hebrews, as many other things. By what other method could they have learned this truth? for some of those whom we shall cite in the following chapter report that to each individual man a good and an evil daimon attend on the day of his nativity. Calvin, unjustly and without foundation, stigmatizes Catholic Doctors as if they so referred the guardianship of each man to one guardian angel that they denied men could be aided by other angels; for no Catholic affirms this: but all contend that one is deputed to the peculiar care and tutelage of each man; from which it does not follow that sometimes some men are not aided by angels other than their own guardian.

Furthermore Jerome and St. Thomas, Article 5, and the rest of the Scholastics in that distinction, plainly taught that an angel is deputed to the custody of each one from the origin of his nativity; nor only after baptism, as some have erroneously thought, whom St. Thomas records in that article; otherwise the Gentiles would not have a guardian angel, which is contrary to the doctrine of the Fathers, who attribute guardian angels not only to Christians but to all individual men. Nor does the guardianship of an angel endure after the death of a man: for its custody is only necessary for the time during which we peregrinate in this life, as is manifest. But an angel is not seen to be necessary in the custody of an infant before birth, since he is conveniently guarded by the same angel by whom his mother is guarded: for then he is as it were part of the mother, as St. Thomas rightly noted in that article; and therefore he ought to fall under the care and custody of the same.

Moreover certain things must be observed concerning the manner of guardianship. First, it must be noted in general that the manner of guardianship is twofold: one, by the removal of those things which, even without our knowledge, can harm us - and these are removed by angels without us; the other, by instruction and discipline, whereby they teach and admonish us to flee evils and to pursue goods, and this they do in us in the manner which we said in Disputation 217, chap. 4 - for in no other way can they directly change our will. Secondly, note that there are various modes of changing our will, as we said: by terror, by love, by hope; finally by every kind of good affection to which they can excite us; concerning which Gerson treats more fully in Treatise 8 on the Magnificat, the third part, which is in the 83rd Alphabet. Thirdly it must be noted that men are so guarded by angels that sometimes they permit them to fall: for in this guardianship the angels themselves govern by the will of God; when therefore they see that it is the will of God to permit

men to fall, they permit it: nor is this a desertion of their care, for they do not permit from negligence and forgetfulness, but knowing and prudent for the reason just given, as St. Thomas rightly admonishes in that question 113, article 6. From which it follows that when some evil happens to men the guardian angels are not saddened, as the same holy Doctor teaches in article 7, for when they see that it did not happen by their negligence but that by the will of God men were thus left, there could be no reason of sadness for them.

Add also that since they see God clearly, they can be sad about nothing. For the highest delight drives away all sadness, as we said above in Disputation 241, chap. 1.

Moreover, guardian angels are not only charged with the care and custody of men, but also offer the prayers of their own to God, according to Tobit 12: "When you were proving with tears and burying the dead, I offered your prayer to the Lord." and Revelation 8: "The smoke of the incense of the prayers of the saints ascended from the hand of the angel." Guardians are indeed said to offer the prayers of those they guard when they at the same time present their supplications; not that they make those prayers manifest to God, since nothing is hidden from Him, but that they themselves together pray on our behalf.

What we have hitherto said about men, namely that single angels are deputed to the custody of single persons, some also not unreasonably apply to cities, provinces, and colleges; and St. Thomas in Q.113, a.2 - indeed the same holy Doctor asserts - that it is probable that to single species of things single angels are set over them. Plato, indeed, in the book On the State says that to each god single regions of the world are committed; moreover even to each kind of animals. But Origen (Hom. 14 on Numbers) says there is need of angels who are over beasts, and who rule hosts, and over the nativity of animals, of shrubs and plantations; and he cites the book of the Pastor; Clement of Alexandria also in book 6 of the Stromata assigns angels to nations and cities.

Augustine moreover seems to assert, not only to single species but even to individuals, that angels are appointed as prefects, when he says in book 83 Questions 74: "Each visible thing in this world has an angelic power appointed over it." These words however may be explained not that single angels stand over every other thing besides man, but because one angel has the care of the whole species. And therefore in Apocalypse ch. 14 mention is made of an angel having power over fire, and in ch. 16 another is called the angel of the waters. From that place Aretas gathers that angels preside not only over nations but also over the elements. And Andreas, bishop of Caesarea in Cappadocia, explaining that passage of Revelation 14 in his not-yet-published commentaries, "Who had power over fire," says: "Hence we learn that angelic powers are placed over creatures - this indeed over waters, that over fire, that over birds, another over some part of creation."

Finally Damascene, book 2 On the Faith ch. 3, affirms that angels are rulers of parts of the earth, of places and of nations. Whether single angels are placed over single species of things, or whether only those seven spirits who have the care of the whole orb are assigned to these things, the Fathers do not explain; yet it seems probable that there are others distinct from those seven. But these matters are not so certain as that which we said before about men. Nevertheless it is far

more certain that the government of the whole earth has been entrusted to the seven principal spirits, as was said in the preceding disputation chap. 2, than that, besides these, there are also other single angels distinguished for each species of things and for each college and city.

Lastly it must be observed, although it is doubtful whether the highest angels are ever sent to us for some particular business, that no one has hitherto said that guardian angels are deputed to custody ex officio from the supreme hierarchy; but all the ancient writers confess them to be of the lowest order of the lowest hierarchy; wherefore some recent men are mistaken who say that the ordinary custody of some man is sometimes committed to the highest angels: and they prove their opinion from Chrysostom Homily 60 on Matthew where he says that "their angels always behold the face" was spoken of the most eminent angels. But if this testimony had any weight, it would prove that all guardian angels are of the supreme order, which no one has yet said: for Chrysostom speaks of all. Therefore it must be said that Chrysostom called all guardians "supereminent" not by comparison with other angels, but either by comparison with men, or absolutely.

Chapter 2 (Caput 2)

Chapter II. On the assault of demons.

The Catholic faith teaches that demons, insofar as they are permitted by God, assail our salvation with snares in the same manner in which the good angels provide for our salvation; for it is evident from Genesis that men were led into sin by the suggestion of the demon. And John 13 says, "When Satan had already put into the heart of Judas to betray him." Ephesians 6: "For we wrestle not against flesh and blood, but against principalities and powers, against the rulers of this world," etc. And 1 Peter 5: "Your adversary the devil walks about seeking whom he may devour."

Moreover that to individual men some demon is deputed to assail them, as an angel is to guard them, is not certain in the same manner; nevertheless among the Scholastics the Master in the second distinction of 11 affirms that to single men single demons are delegated to attack. From the Fathers indeed they teach thus: Origen in his third book Periarchon ch. 2 after the middle; Gregory of Nyssa in the book On the Life of Moses before the middle; Plutarch also in the book On Tranquility and Serenity of Soul (folio 3 at the end) reports Menander as saying that to every man a good daemon immediately assists from the day of his birth; whose opinion he refutes and approves the opinion of Empedocles, who asserted a twin daemon, one good and one bad, appointed to each man from the day of his nativity.

Plato also posited a good genius with no mention of evil, in the Phaedo, in the Theages, and in the Apology to the Athenians; and Pythagoras, as Iamblichus reports in his Life, and Iamblichus likewise in The Mysteries of the Egyptians, segment 3, chs. 3 and 6. That to individual men, besides a good angel, an opposing demon is assigned seems to be gathered from 2 Cor. 12: "A thorn was given me in the flesh, a messenger of Satan to buffet me"; and indeed if sufficient number remained in this dark air I would not doubt that the supreme demon is solicitous in assigning to individual men individual opponents, as God is in assigning to individual men individual

guardians. For although demons existing in the air are tormented in the same way as those existing in hell are tormented, yet it is not to be said that so many demons are sent to us from hell; but that men are assailed by those existing in this air.

There is, however, a distinction between the delegation of the good to guardianship and of the bad to assault. For the delegation of the good is effected by God designating them to guardianship: but of the bad it does not happen by God so ordaining, but by permitting. And it is effected by some chief demon, which Paul seems to indicate in 2 Corinthians 12 when he called the demon by whom he was assailed "an angel of Satan." Moreover, as St. Thomas teaches in Q.114 art.1, although the assault of the demon is not from God, nevertheless its order is from God. Which must be understood in this way: not because God constituted or commanded such an order by which demons are to attack us; but because the assault by which they use against us is referred by God to the ends of his providence, just as He does not will that sins be done, yet He refers things done to the end of his providence, as we showed in Q.22 art.2. The manner, however, in which demons attack us is not by directly changing our will or understanding, but through phantasy, in the way which we said concerning guardianship. Whether indeed every sin arises from the assault of demons, which St. Thomas discusses in Q.114 art.3, we will treat in II, q. 80, art.4.

The same St. Thomas also teaches in that question and article 5 that a demon, when he has been overcome by one man whom he was assailing, withdraws somewhat from him. He collects this from Luke 4: "And when the devil had ended every temptation, he departed from him until a time" - where "until a time" is said, lest we think that demons never again returned to assail him whom they had once been overcome. How, however, he departed from Christ "until a time" Theophylact explains "until the time of the Passion," when again the devil attacked Christ. Cajetan, however, on that passage of Paul says that he reads nowhere how the devil by himself again attacked Christ, although he often tempted him by means of apparitions.

Moreover James 4 plainly teaches that the devil withdraws from us when resisted, when he says "Resist the devil, and he will flee from you": but that he withdraws not so as never to return is evident from Matthew 12: "I will return to my house whence I came out."

These things we have had concerning the nature, properties, grace, sin, beatitude, and punishment of angels, which we undertook to treat for the elucidation of the doctrine of St. Thomas: if we have not attained his mind and truth as correctly as was required, pardon is to be granted us; for the matter is very obscure and has always seemed so difficult to human reason that in it many grave theologians, with no small labor, have been divided into various opinions. That we might choose the truer and that which more agrees with reason I have labored not a little: both on account of the authority of those who, though agreeing among themselves, were of contrary opinions, and because of the diverse weights of the reasons upon which the opponents relied to teach opposites.

To God the Father of lights, in whose light we see light, be glory and dominion for ever. Amen.

INDEX

INDEX OF SCRIPTURE

Genesis — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput III, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput II, Disputatio CXLIV, Quaestio XXXV, Articulus II, Caput I, Disputatio CXLIV, Quaestio XXXV, Articulus II, Caput IV*

Peter of Aragon — *Disputatio CXXXIV, Quaestio XXXII, Articulus II, Caput II, Disputatio CXXXIV, Quaestio XXXII, Articulus III*

Prosper of Aquitaine — *Disputatio CCXI, Quaestio LVII, Articulus IV, Caput II, Disputatio CCXXVII, Quaestio LXII, Articulus III, Caput II*

Pseudo-Dionysius — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXVI, Quaestio XXVIII, Articulus III, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIV, Quaestio XXXII, Articulus II*

R

Richard — *Disputatio CLV, Quaestio XXXIX, Articulus III, Caput III, Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput IV, Disputatio CLXXIX, Quaestio L, Articulus II, Caput III, Disputatio CLXXXII, Quaestio L, Articulus V, Caput III, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput VI, Disputatio CXCV, Quaestio LIII, Articulus I, Caput V, Disputatio CXCVII, Quaestio LIII, Articulus III, Caput III, Disputatio CCI, Quaestio LV, Articulus II, Caput I, Disputatio CCII, Quaestio LV, Articulus III, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II*

Richard of Mediavilla — *Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II*

Richard of Middleton — *Disputatio CLXXIII, Quaestio XLV, Articulus III, Caput III, Disputatio CLXXXI, Quaestio L, Articulus IV, Caput III, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput II, Disputatio CXCV, Quaestio LIII, Articulus I, Caput III, Disputatio CXCIX, Quaestio LIV, Articulus IV, Caput I, Disputatio CCIII, Quaestio LVI, Articulus I, Caput II, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput I*

Rupert of Deutz — *Disputatio CXLIV, Quaestio XXXV, Articulus II, Caput IV, Disputatio CLXXVIII, Quaestio L, Articulus I, Caput II, Disputatio CLXXX, Quaestio L, Articulus III, Caput I, Disputatio CCXV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXXIV, Quaestio LXI, Articulus III, Caput III, Disputatio CCXXIV, Quaestio LXI, Articulus III, Caput VI, Disputatio CCXXIV, Quaestio LXI, Articulus IV, Disputatio CCXXVI, Quaestio LXII, Articulus I, Caput II, Disputatio CCXXVII, Quaestio LXII, Articulus III, Caput I, Disputatio CCXXXIII, Quaestio LXIII, Articulus III, Caput II*

S

Scotus — *Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II*

Simon of Tournai — *Disputatio CXLIX, Quaestio XXXVII, Articulus II, Caput I, Disputatio CXLIX, Quaestio XXXVII, Articulus II, Caput III*

St. Cyril of Alexandria — *Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput IV, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CLXXVIII, Quaestio L, Articulus II, Disputatio CLXXXII, Quaestio L, Articulus V, Caput III, Disputatio CLXXXII, Quaestio LI, Articulus I, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCXV, Quaestio LVII, Articulus V, Caput III*

St. Gregory of Nyssa — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXXIV, Quaestio XXXII, Articulus III, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput VI, Disputatio CLXXI, Quaestio XLIV, Articulus IV, Disputatio CLXXVI, Quaestio XLV, Articulus VIII*

St. Hilary of Poitiers — *Disputatio CXXXIX, Quaestio XXXIII, Articulus IV, Disputatio CXL, Quaestio XXXIII, Articulus IV, Caput II*

St. Thomas — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I*

T

Tertullian — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CXLI, Quaestio XXXIV, Articulus II, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput II, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CLXXI, Quaestio XLIV, Articulus I, Caput I, Disputatio CLXXI, Quaestio XLIV, Articulus II*

Theodoret — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIII, Quaestio XXXII, Articulus I, Caput II, Disputatio CLXXI, Quaestio XLIV, Articulus I, Caput I, Disputatio CLXXI, Quaestio XLIV, Articulus II*

Theophylact — *Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CLXXXV, Quaestio LI, Articulus II, Caput II, Disputatio CLXXXVI, Quaestio LI, Articulus III, Caput I, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput XI, Disputatio CCXV, Quaestio LVII, Articulus V, Caput III, Disputatio CCXXX, Quaestio LXII, Articulus IX, Caput II*

Thomas de Argentina — *Disputatio CLXXXI, Quaestio L, Articulus IV, Caput III, Disputatio CXC, Quaestio LII, Articulus II, Caput III, Disputatio CCI, Quaestio LV, Articulus II, Caput II, Disputatio CCIII, Quaestio LV, Articulus III, Caput II, Disputatio CCIII, Quaestio LVI, Articulus I, Caput II, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput X, Disputatio CCXVI, Quaestio LVII, Articulus V, Caput V, Disputatio CCXIX, Quaestio LVIII, Articulus I, Caput I, Disputatio CCXXX, Quaestio LXII, Articulus IX, Caput II*

Thomas de Vio — *Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXXIV, Quaestio XXXII, Articulus II, Caput II*

W

William of Auxerre — *Disputatio CLIX, Quaestio XL, Articulus III, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III*

William of Ockham — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CLIII, Quaestio XXXVIII, Articulus II, Caput II, Disputatio CLXXVII, Quaestio XLVI, Articulus III, Caput III, Disputatio CLXXVII, Quaestio XLVI, Articulus III, Caput V, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCXXXI, Quaestio LXIII, Articulus I, Caput II*

William of Paris — *Disputatio CCXXXIII, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXV, Quaestio LXIII, Articulus IV, Disputatio CCXXXVIII, Quaestio LXIII, Articulus VIII, Caput II*

INDEX OF TOPICS

A

Absence — *Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CLXXVII, Quaestio XLVIII, Articulus III, Disputatio CXC, Quaestio LII, Articulus II, Caput I, Disputatio CCII, Quaestio LV, Articulus III, Caput I, Disputatio CCIII, Quaestio LVI, Articulus II, Caput II, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV*

Abstraction — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXXVIII, Quaestio XXXII, Articulus IV, Disputatio CXXXVIII, Quaestio XXXIII, Articulus I, Disputatio CLIX, Quaestio XL, Articulus III, Disputatio CLX, Quaestio XLI, Articulus II, Caput III, Disputatio CLXI, Quaestio XLI, Articulus II, Caput I, Disputatio CXCIX, Quaestio LIV, Articulus IV, Caput I, Disputatio CC, Quaestio LV, Articulus II, Caput I*

Absurdity — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXI, Quaestio XXXII, Articulus I, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput III*

Accidens — *Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CXLIX, Quaestio XXXVI, Articulus IV, Caput II, Disputatio CLVII, Quaestio XXXIX, Articulus V, Disputatio CLVII, Quaestio XXXIX, Articulus VI, Disputatio CLVIII, Quaestio XL, Articulus II, Caput VII*

Accident — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXX, Quaestio XXXI, Articulus II*

Action — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput II*

Addition — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput III*

Affection — *Quaestio XXVII, Articulus IV, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CLXXVII, Quaestio XLVIII, Articulus III, Disputatio CXC, Quaestio LII, Articulus II, Caput I, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput VIII*

Affirmation — *Disputatio CXL, Quaestio XXXIII, Articulus IV, Caput II, Disputatio CXLVIII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CLIV, Quaestio XXXIX, Articulus III, Disputatio CXXXVI, Quaestio XXXIX, Articulus IV, Caput I, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput II, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput IV, Disputatio CLXXXII, Quaestio LI, Articulus I, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput IV*

Angel — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXVII, Quaestio XXVIII, Articulus III, Disputatio CXXVII, Quaestio XXX, Articulus III, Disputatio CXXX, Quaestio XXXI, Articulus IV*

Annihilation — *Disputatio CLXXII, Quaestio XLV, Articulus III, Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput IV, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput III, Disputatio CLXXVI, Quaestio XLV, Articulus VI, Disputatio CLXXXII, Quaestio L, Articulus V, Caput III, Disputatio CLXXXII, Quaestio LI, Articulus I, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV*

Appetite — *Disputatio CLXI, Quaestio XLI, Articulus II, Caput III, Disputatio CLXXII, Quaestio XLV, Articulus I, Caput II, Disputatio CLXXXII, Quaestio L, Articulus V, Caput I, Disputatio CLXXXII, Quaestio LI, Articulus I, Disputatio CLXXXVI, Quaestio LII, Articulus I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput VII, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXIX, Quaestio LVIII, Articulus I, Caput I*

Application — *Disputatio CLXXXV, Quaestio LI, Articulus II, Caput II, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput I, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput II, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput V, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput VI, Disputatio CLXXXIX, Quaestio LII, Articulus I, Caput I, Disputatio CXC, Quaestio LII, Articulus II, Caput I, Disputatio CXCII, Quaestio LII, Articulus II, Caput II, Disputatio CXCIII, Quaestio LII, Articulus III, Caput III, Disputatio CXCIII, Quaestio LIII, Articulus I*

Apprehension — *Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VII, Disputatio CXXVII, Quaestio XXX, Articulus III, Disputatio CXCIX, Quaestio LV, Disputatio CCVI, Quaestio LVII, Articulus II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I*

Appropriation — *Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput IV, Disputatio CXLIV, Quaestio XXXV, Articulus II, Caput IV, Disputatio CXLIX, Quaestio XXXVI, Articulus IV, Caput II, Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLII, Quaestio XXXVIII, Articulus II, Disputatio CLIII, Quaestio XXXVIII, Articulus II, Caput II*

Aptitude — *Disputatio CLII, Quaestio XXXVIII, Articulus II, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput IV, Disputatio CLXXVII, Quaestio XLVIII, Articulus IV, Disputatio CLXXVII, Quaestio XLIX, Articulus I*

Argument — *Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVIII, Articulus I*

Authority — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III*

B

Beatitude — *Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CLIX, Quaestio XLI, Articulus II, Disputatio CLXI, Quaestio XLI, Articulus II, Caput III, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput II, Disputatio CCIII, Quaestio LVI, Articulus I, Caput II, Disputatio CCVI, Quaestio LVI, Articulus III, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I, Disputatio CCXIII, Quaestio LVII, Articulus V, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II*

C

Capacity — *Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CLIV, Quaestio XXXVIII, Articulus II, Caput III, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CCIII, Quaestio LVI, Articulus I, Caput I, Disputatio CCXIII, Quaestio LVII, Articulus V, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV, Disputatio CCXVIII, Quaestio LVII, Caput II, Disputatio CCXXVI, Quaestio LXII, Articulus I, Caput II, Disputatio CCXXXV, Quaestio LXIII, Articulus V*

Causality — *Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput V, Disputatio CLIV, Quaestio XXXIX, Articulus I, Disputatio CLXXVI, Quaestio XLV, Articulus VI, Disputatio CLXXVI, Quaestio XLV, Articulus VIII, Disputatio CLXXVII, Quaestio XLVII, Articulus II, Disputatio CXCII, Quaestio LII, Articulus III, Caput I, Disputatio CXCVII, Quaestio LIII, Articulus III, Caput III, Disputatio CCIII, Quaestio LVI, Articulus II, Caput II*

Cause — *Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V*

Certitude — *Disputatio CLVII, Quaestio XXXIX, Articulus VIII, Disputatio CCVII, Quaestio LVII, Articulus III, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput VIII, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV, Disputatio CCXXVI, Quaestio LXII, Articulus I, Caput III*

Charity — *Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLIV, Quaestio XXXVIII, Articulus II, Caput III, Disputatio CLIV, Quaestio XXXIX, Articulus I, Disputatio CLVII, Quaestio XL, Disputatio CLXX, Quaestio XLIII, Articulus V, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput IV, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput II, Disputatio CCXXIII, Quaestio LX, Articulus II, Disputatio CCXXIII, Quaestio LX, Articulus V*

Christ — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXIII, Quaestio XXIX, Articulus I*

Church — *Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III*

Circumstance — *Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXV, Quaestio LXIII, Articulus IV, Disputatio CCXLIII, Quaestio LXIV, Caput VI*

Cogitation — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput IV, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput VIII, Disputatio CCX, Quaestio LVII, Articulus IV, Caput II, Disputatio CCX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput II, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput XI, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXVIII, Quaestio LVII, Caput II, Disputatio CCXXXVI, Quaestio LXIII, Articulus V, Caput IV*

Cognition — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXXI, Quaestio XXXII, Articulus I*

Command — *Disputatio CXLI, Quaestio XXXIV, Articulus II, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput II, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput IV, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CXLVIII, Quaestio XXXVI, Articulus III, Disputatio CLXIX, Quaestio XLIII, Disputatio CLXX, Quaestio XLIII, Articulus I, Caput II, Disputatio CLXX, Quaestio XLIII, Articulus III, Disputatio CLXXXV, Quaestio LI, Articulus II, Caput II, Disputatio CXCV, Quaestio LIII, Articulus I, Caput III*

Community — *Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput I, Disputatio CXXXI, Quaestio XXXII, Articulus I, Disputatio CXXXVI, Quaestio XXXIX, Articulus IV, Caput I, Disputatio CLV, Quaestio XXXIX, Articulus IV, Caput IV, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput II, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput V, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput II*

Complacency — *Disputatio CLII, Quaestio XXXVII, Articulus II, Caput II, Disputatio CLIX, Quaestio XLI, Articulus II, Disputatio CLX, Quaestio XLI, Articulus II, Caput III, Disputatio CLXI, Quaestio XLI, Articulus II, Caput I, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput IV, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput I, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput IV*

Composition — *Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III*

Conception — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Disputatio CXLIV, Quaestio XXXVI, Articulus II, Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLIX, Quaestio XLI, Articulus II*

Conclusion — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXIII, Quaestio XXIX, Articulus I*

Concupiscence — *Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CCXXIII, Quaestio LIX, Articulus IV, Disputatio CCXXIII, Quaestio LX, Articulus IV, Disputatio CCXXIII, Quaestio LX, Articulus V, Disputatio CCXXIII, Quaestio LXI, Articulus I, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput IV*

Concurrence — *Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput III, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput IV, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput V, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CLXXXII, Quaestio LI, Articulus I, Disputatio CXCII, Quaestio LII, Articulus II, Caput II, Disputatio CXCII, Quaestio LII, Articulus III, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCVIII, Quaestio LVII, Articulus III, Caput II*

Condition — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput I, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput III, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput III, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VII*

Confession — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXVII, Quaestio XXX, Articulus III, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput I*

Confirmation — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput IV, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput V, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VI, Disputatio CLX, Quaestio XLI, Articulus II, Caput III, Disputatio CLXIX, Quaestio XLIII, Disputatio CLXXIII, Quaestio XLV, Articulus IV*

Conjecture — *Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput III, Disputatio CLXXXI, Quaestio L, Articulus IV, Caput I, Disputatio CLXXXIV, Quaestio LI, Articulus II, Caput IV, Disputatio CCIII, Quaestio LVI, Articulus I, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput I, Disputatio CCVII, Quaestio LVII, Articulus III, Caput II, Disputatio CCVIII, Quaestio LVII, Articulus III, Caput II, Disputatio CCVIII, Quaestio LVII, Articulus III, Caput IV, Disputatio CCX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput II*

Conjunction — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXI, Quaestio XXXII, Articulus I, Disputatio CXXXIX, Quaestio XXXIII, Articulus III, Disputatio CXL, Quaestio XXXIV, Articulus I, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput III, Disputatio CXLVIII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput III, Disputatio CLXXVII, Quaestio XLVII, Articulus II*

Connection — *Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus II, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CXLIV, Quaestio XXXIV, Articulus III, Caput I, Disputatio CLXXVI, Quaestio XLV, Articulus VI, Disputatio CCI, Quaestio LV, Articulus II, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput VIII, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV, Disputatio CCXV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXVIII, Quaestio LVII, Caput II*

Consent — *Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CLXIX, Quaestio XLII, Articulus V, Caput II, Disputatio CLXIX, Quaestio XLIII, Disputatio CLXXI, Quaestio XLIV, Articulus I, Caput I, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CLXXVII, Quaestio XLVI, Articulus III, Caput V, Disputatio CLXXVII, Quaestio XLIX, Articulus I*

Perseverance — *Disputatio CLXXIV, Quaestio XLV, Articulus IV, Caput IV, Disputatio CCXXVI, Quaestio LXII, Articulus I, Caput III, Disputatio CCXXVI, Quaestio LXII, Articulus II, Disputatio CCXXVII, Quaestio LXII, Articulus III, Caput IV, Disputatio CCXXVIII, Quaestio LXII, Articulus III, Caput I, Disputatio CCXXVIII, Quaestio LXII, Articulus V, Disputatio CCXXIX, Quaestio LXII, Articulus V, Caput XI*

Person — *Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II*

Personality — *Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VII, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXVI, Quaestio XXVIII, Articulus III, Disputatio CXXVII, Quaestio XXVIII, Articulus III, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput III, Disputatio CXXX, Quaestio XXXI, Articulus II*

Persuasion — *Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CCXXXI, Quaestio LXIII, Articulus II, Disputatio CCXXXVIII, Quaestio LXIII, Articulus VIII, Caput II, Disputatio CCXXXVIII, Quaestio LXIII, Articulus VIII, Caput IV*

Plurality — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III*

Position — *Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI*

Potency — *Quaestio XXVII, Articulus II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXXXVIII, Quaestio XXXIII, Articulus I, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput VI, Disputatio CXL, Quaestio XXXIV, Articulus I*

Power — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V*

Precept — *Disputatio CCXXIII, Quaestio LX, Articulus V, Disputatio CCXXIX, Quaestio LXII, Articulus V, Caput IV, Disputatio CCXXIX, Quaestio LXII, Articulus V, Caput V, Disputatio CCXXIX, Quaestio LXII, Articulus VII, Disputatio CCXXXI, Quaestio LXIII, Articulus II, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput I, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXIII, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput I, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III*

Predicament — *Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXIX, Quaestio XXX, Articulus III, Caput II, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput I, Disputatio CXXXVIII, Quaestio XXXII, Articulus IV*

Predication — *Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput III, Disputatio CXXXI, Quaestio XXXII, Articulus I, Disputatio CXXXIV, Quaestio XXXII, Articulus II, Caput II, Disputatio CXL, Quaestio XXXIII, Articulus IV, Caput III*

Preposition — *Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CXLIV, Quaestio XXXIV, Articulus III, Caput I, Disputatio CXLVIII, Quaestio XXXVI, Articulus III, Disputatio CXLVIII, Quaestio XXXVI, Articulus IV, Disputatio CLII, Quaestio XXXVII, Articulus II, Caput II, Disputatio CLVII, Quaestio XL, Disputatio CLXII, Quaestio XLI, Articulus III, Caput II, Disputatio CLXX, Quaestio XLIII, Articulus V, Disputatio CLXXII, Quaestio XLV, Articulus I, Caput II*

Presence — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CXLIV, Quaestio XXXIV, Articulus III, Caput I, Disputatio CLXX, Quaestio XLIII, Articulus V, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CLXXVI, Quaestio XLV, Articulus VI, Disputatio CLXXXIV, Quaestio LI, Articulus II, Caput IV, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput I, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput II, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput V*

Presumption — *Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput V*

Priority — *Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXXVIII, Quaestio XXXIII, Articulus I, Disputatio CXXXIX, Quaestio XXXIII, Articulus IV, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput IV, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CXLIV, Quaestio XXXIV, Articulus III, Caput I, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVIII, Quaestio XXXVI, Articulus III, Disputatio CXLVIII, Quaestio XXXVI, Articulus IV, Disputatio CLV, Quaestio XXXIX, Articulus IV, Caput IV*

Privation — *Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXIX, Quaestio XXX, Articulus III, Caput II, Disputatio CXXXIX, Quaestio XXXIII, Articulus IV, Disputatio CXL, Quaestio XXXIII, Articulus IV, Caput III, Disputatio CLXXII, Quaestio XLV, Articulus III, Disputatio CLXXVI, Quaestio XLVI, Articulus I*

Procession — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V*

Production — *Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II*

Propinquity — *Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput I, Disputatio CLXXXVIII, Quaestio LII, Articulus I, Caput II, Disputatio CLXXXIX, Quaestio LII, Articulus I, Caput I, Disputatio CCX, Quaestio LVII, Articulus IV, Caput II, Disputatio CCXI, Quaestio LVII, Articulus IV, Caput VI*

Proportion — *Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput III, Disputatio CXXX, Quaestio XXXI, Articulus II, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXI, Quaestio XXXII, Articulus I, Disputatio CXLVIII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVIII, Quaestio XXXVI, Articulus III, Disputatio CLIV, Quaestio XXXVIII, Articulus II, Caput III*

Proposition — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXIX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXX, Quaestio XXVIII, Articulus II*

Punishment — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CLXXVII, Quaestio XLIX, Articulus I, Disputatio CLXXVII, Quaestio XLIX, Articulus III, Disputatio CLXXVII, Quaestio L, Articulus I, Disputatio CLXXXV, Quaestio LI, Articulus II, Caput II, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput III, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput IV, Disputatio CCXXIII, Quaestio LX, Articulus V, Disputatio CCXXVII, Quaestio LXII, Articulus III, Caput IV, Disputatio CCXXIX, Quaestio LXII, Articulus V, Caput V*

Q

Quality — *Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXVII, Quaestio XXVIII, Articulus III*

Quantity — *Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXVII, Quaestio XXX, Articulus II*

Quaternity — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXXVIII, Quaestio XXXII, Articulus IV, Disputatio CXXXVI, Quaestio XXXIX, Articulus IV, Caput I, Disputatio CLV, Quaestio XXXIX, Articulus IV, Caput IV*

R

Reality — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I*

Rectitude — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CCXXIII, Quaestio LX, Articulus II, Disputatio CCXXVI, Quaestio LXII, Articulus I, Caput II, Disputatio CCXXVI, Quaestio LXII, Articulus II, Disputatio CCXXVII, Quaestio LXII, Articulus III, Caput IV, Disputatio CCXXX, Quaestio LXIII, Articulus I, Disputatio CCXXXI, Quaestio LXIII, Articulus I, Caput IV*

Reference — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VII, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXL, Quaestio XXXIV, Articulus I, Caput IV, Disputatio CCXX, Quaestio LVIII, Articulus II, Caput I, Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput IV, Disputatio CCXXXV, Quaestio LXIII, Articulus III, Caput III*

Refutation — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXXVIII, Quaestio XXXII, Articulus IV, Disputatio CLXI, Quaestio XLI, Articulus II, Caput III, Disputatio CXCIII, Quaestio LII, Articulus III, Caput III, Disputatio CXCIII, Quaestio LIII, Articulus I*

Relation — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXV, Quaestio XXVIII, Articulus II*

Representation — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXL, Quaestio XXXIV, Articulus I, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput III, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CXLIV, Quaestio XXXIV, Articulus III, Caput I, Disputatio CXLIV, Quaestio XXXV, Articulus II, Caput I*

Resistance — *Disputatio CLXXV, Quaestio XLV, Articulus V, Caput I, Disputatio CLXXXIV, Quaestio LI, Articulus II, Caput IV, Disputatio CXCVII, Quaestio LIII, Articulus III, Caput III, Disputatio CXCVII, Quaestio LIV, Disputatio CCXXI, Quaestio LVIII, Articulus II, Caput III*

Resurrection — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CLXII, Quaestio XLI, Articulus IV, Disputatio CLXXVIII, Quaestio L, Articulus I, Caput II, Disputatio CLXXVIII, Quaestio L, Articulus I, Caput V, Disputatio CLXXXIV, Quaestio LI, Articulus II, Caput IV, Disputatio CLXXXVI, Quaestio LI, Articulus III, Caput I, Disputatio CLXXXVI, Quaestio LII, Articulus I, Disputatio CXCVII, Quaestio LIV, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I*

Revelation — *Quaestio XXVII, Articulus II, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus II, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput III, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VIII, Disputatio CLV, Quaestio XXXIX, Articulus IV, Caput IV, Disputatio CLXVI, Quaestio XLI, Articulus V, Caput II, Disputatio CLXXVI, Quaestio XLVI, Articulus II*

S

Sacrament — *Disputatio CXL, Quaestio XXXIII, Articulus IV, Caput II, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CXCV, Quaestio LIII, Articulus I, Caput IV, Disputatio CXCV, Quaestio LIII, Articulus I, Caput V, Disputatio CXCVI, Quaestio LIII, Articulus II, Caput III, Disputatio CCXIII, Quaestio LVII, Articulus V, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXIV, Quaestio LVII, Articulus V, Caput IV, Disputatio CCXV, Quaestio LVII, Articulus V, Caput II, Disputatio CCXV, Quaestio LVII, Articulus V, Caput III*

Sadness — *Disputatio CCXXXII, Quaestio LXIII, Articulus III, Caput I, Disputatio CCXLIII, Quaestio LXIV, Caput VI*

Science — *Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIX, Quaestio XXXIII, Articulus III, Disputatio CXLII, Quaestio XXXIV, Articulus III, Caput III, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput III, Disputatio CLVII, Quaestio XXXIX, Articulus VIII, Disputatio CLXXI, Quaestio XLIV, Articulus IV, Disputatio CXCIX, Quaestio LIV, Articulus IV, Caput I, Disputatio CC, Quaestio LV, Articulus II, Caput I, Disputatio CC, Quaestio LV, Articulus II, Caput III, Disputatio CCIX, Quaestio LVII, Articulus IV, Caput I*

Scripture — *Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III*

Sentence — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V*

Session — *Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXVI, Quaestio XXVIII, Articulus III, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput III, Disputatio CXXXIX, Quaestio XXXIII, Articulus I, Caput VI, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CXLVII, Quaestio XXXVI, Articulus II*

Signification — *Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput III*

Simplicity — *Quaestio XXVII, Articulus II, Disputatio CXV, Quaestio XXVIII, Articulus II, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput I, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III*

Singularity — *Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput III, Disputatio CXXX, Quaestio XXXI, Articulus II, Disputatio CXXX, Quaestio XXXI, Articulus IV, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput I, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VI, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VII, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VIII, Disputatio CLVII, Quaestio XXXIX, Articulus IV, Caput II, Disputatio CCVI, Quaestio LVII, Articulus II*

Solution — *Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput II*

Species —
Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VII, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II

Specification — *Disputatio CLIX, Quaestio XL, Articulus II, Caput II, Disputatio CLIX, Quaestio XL, Articulus II, Caput IV, Disputatio CLXI, Quaestio XLI, Articulus III, Disputatio CCXXIII, Quaestio LX, Articulus II, Disputatio CCXXIII, Quaestio LX, Articulus IV, Disputatio CCXXIII, Quaestio LX, Articulus V, Disputatio CCXXIII, Quaestio LXI, Articulus I, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput II, Disputatio CCXXXIV, Quaestio LXIII, Articulus III, Caput I, Disputatio CCXXXV, Quaestio LXIII, Articulus V*

Spiration — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXVII, Quaestio XXVIII, Articulus III*

Spirit — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I*

Subsist — *Disputatio CXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXVI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXVI, Quaestio XXVIII, Articulus III, Disputatio CXXVII, Quaestio XXX, Articulus II*

Subsistence — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXIV, Quaestio XXVIII, Articulus II, Caput IV, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXV, Quaestio XXVIII, Articulus II, Caput V*

Substance — *Quaestio XXVII, Articulus II, Quaestio XXVII, Articulus IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III*

Succession — *Disputatio CLXXV, Quaestio XLV, Articulus V, Caput I, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CLXXVII, Quaestio XLVI, Articulus III, Caput I, Disputatio CLXXVII, Quaestio XLVI, Articulus III, Caput V, Disputatio CLXXVII, Quaestio XLVII, Articulus II, Disputatio CXCV, Quaestio LIII, Articulus I, Caput III, Disputatio CXCV, Quaestio LIII, Articulus II, Disputatio CXCVI, Quaestio LIII, Articulus II, Caput I, Disputatio CXCVII, Quaestio LIII, Articulus III, Caput I, Disputatio CXCVII, Quaestio LIII, Articulus III, Caput III*

Suggestion — *Disputatio CCXLIII, Quaestio LXIV, Caput VI*

Supposition — *Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CXLVI, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput II, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput V, Disputatio CXLVII, Quaestio XXXVI, Articulus II, Caput VII, Disputatio CXLVIII, Quaestio XXXVI, Articulus IV, Disputatio CXLIX, Quaestio XXXVI, Articulus IV, Caput IV, Disputatio CXLIX, Quaestio XXXVI, Articulus IV, Caput II*

Syllogism — *Disputatio CXVII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXI, Quaestio XXVIII, Caput V, Disputatio CXXI, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXVIII, Articulus III, Caput II, Disputatio CXXIII, Quaestio XXVIII, Articulus IV, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXXIII, Quaestio XXXII, Articulus I, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus II*

T

Testament — *Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXXVI, Quaestio XXVIII, Articulus III, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CLXX, Quaestio XLIII, Articulus VIII*

Theology — *Quaestio XXVII, Articulus II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXIII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXX, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXXI, Quaestio XXVIII, Articulus II, Caput VI, Disputatio CXXXI, Quaestio XXXI, Articulus IV, Caput III, Disputatio CXXXII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIII, Quaestio XXXII, Articulus I, Caput II, Disputatio CXXXIII, Quaestio XXXII, Articulus I, Caput III*

Torment — *Disputatio CXCIII, Quaestio LIII, Articulus I, Disputatio CCXLIII, Quaestio LXIV, Caput VI*

Transubstantiation — *Disputatio CLXXII, Quaestio XLV, Articulus III, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput IV, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI, Disputatio CLXXVI, Quaestio XLV, Articulus VI, Disputatio CCXV, Quaestio LVII, Articulus V, Caput II*

Trinity — *Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CIX, Quaestio XXVII, Articulus V, Disputatio CXI, Quaestio XXVII, Articulus V, Caput I, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II*

V

Virtue — *Disputatio CXIII, Quaestio XXVII, Articulus V, Caput VI, Disputatio CXVI, Quaestio XXVIII, Articulus II, Caput V, Disputatio CXXVII, Quaestio XXX, Articulus II, Disputatio CXLVIII, Quaestio XXXVI, Articulus III, Disputatio CXLIX, Quaestio XXXVII, Articulus I, Disputatio CLIV, Quaestio XXXIX, Articulus III, Disputatio CLVII, Quaestio XXXIX, Articulus VIII, Disputatio CLVII, Quaestio XL, Disputatio CLXI, Quaestio XLI, Articulus II, Caput III, Disputatio CLXIV, Quaestio XLI, Articulus V*

Vision — *Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II, Disputatio CXVIII, Quaestio XXVIII, Articulus II, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus I, Caput III, Disputatio CXXXIV, Quaestio XXXII, Articulus II, Disputatio CXLIII, Quaestio XXXIV, Articulus III, Caput V, Disputatio CLXVI, Quaestio XLI, Articulus V, Caput II, Disputatio CLXX, Quaestio XLIII, Articulus VII, Disputatio CLXX, Quaestio XLIII, Articulus VIII, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput V, Disputatio CLXXVI, Quaestio XLV, Articulus V, Caput VI*

W

Whence —
Quaestio XXVII, Articulus II, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput I, Disputatio CVIII, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput I, Disputatio CIX, Quaestio XXVII, Articulus V, Caput II, Disputatio CIX, Quaestio XXVII, Articulus V, Caput IV, Disputatio CXII, Quaestio XXVII, Articulus V, Caput II, Disputatio CXII, Quaestio XXVII, Articulus V, Caput III, Disputatio CXIII, Quaestio XXVIII, Articulus I, Disputatio CXV, Quaestio XXVIII, Articulus II, Caput II

Whiteness — *Disputatio CXX, Quaestio XXVIII, Articulus II, Disputatio CXXIII, Quaestio XXIX, Articulus I, Disputatio CXXVIII, Quaestio XXX, Articulus III, Caput II, Disputatio CXXX, Quaestio XXX, Articulus IV, Caput III, Disputatio CXLIX, Quaestio XXXVII, Articulus II, Caput I, Disputatio CLV, Quaestio XXXIX, Articulus III, Caput VIII, Disputatio CLVIII, Quaestio XL, Articulus II, Caput VII, Disputatio CLIX, Quaestio XL, Articulus II, Caput II, Disputatio CLIX, Quaestio XL, Articulus II, Caput IV, Disputatio CLX, Quaestio XLI, Articulus II, Caput III*
