Add also St. Jerome, Dialogue 3 against the Pelagians, about the middle, where he thus says: "Where there is mercy and grace, free choice in part ceases; which is in this only, that we should will and desire, and give assent to what pleases." He did not say that free choice altogether ceases, but in part; because the mercy of God begins by holy cogitation, when as yet there is not free consent: for he said that free choice is only in this, that we will, desire, and give assent to what pleases. Therefore Jerome concedes that before we give assent, the mercy of God is first - surely for no other reason than because, by cogitation, those things are proposed to us to which we ought to give assent.[1638]

I now pass over Augustine's testimonies; for I will report them in the following chapter. Also in confirmation of our opinion, and in the explanation of those which Gregory brought forward for himself, it will be shown plainly against Gregory that Augustine, in order to dispute against Pelagians and Semi-Pelagians, had no consideration of asserting another beginning of grace in us besides holy cogitation and the first motion of the will, or, as he himself says, vocation. Nor do the testimonies cited thus far show anything else.

Moreover, that a non-deliberated motion of the will pertains to prevenient grace, both the testimonies of the Fathers and reason demonstrate. First, Augustine manifests this in Ad Simplicianum, book 1, question 2, not far from the end, when he says that our will cannot be moved to good unless something occurs that delights; but this he attributes to divine grace in such wise as to say that it is not in our power. This testimony we shall recite in the following Disputation, chapter 6; and in the second book On the Merits and Remission of Sins, chapter 19, he calls the grace of God which so goes before us as to make us consent "a conquering delight."[1639] [1640]

1638. St. Jerome, Dialogi contra Pelagianos, lib. 3 (circa medium).

Then Prosper, in the place a little before cited, when he attributes terrors to prevenient grace and the affect of faith, plainly concedes that operating grace is some non-deliberated affect of the will.[1641]

Finally, reason itself demonstrates the same. For an illumination on the part of the intellect is wont naturally to excite an affect before deliberation, although that does not always occur: when therefore it so happens, that affect will pertain to operating and prevenient grace, because it takes place without us freely consenting.

The same truth is confirmed by Augustine's testimonies.

Caput VII - The same truth is confirmed by the testimonies of St. Augustine

Augustine's testimonies for this our sentence are far more perspicuous, especially because he himself expressly explained that mode of speaking: "God makes that we do," about which we have controversy with Gregory of Rimini. In the book therefore On the Dogmas of the Church, the first testimony of Augustine...[1636]

Admirable indeed was the genius of St. Augustine in proving the necessity of grace against Pelagius; but against the Semipelagians - men otherwise distinguished and of eminent sanctity, and not so openly straying from the truth - far more admirable. Against both alike he so magnified the inspiration of holy cogitation, that, since we can believe, hope, or love nothing unless we first think it, he straightway recognized in that very holy cogitation the grace of Christ; and from this he showed not only, against Pelagius, the necessity of that grace for the whole life of man, but also, against the Semipelagians, that the beginning of our salvation is not from any of our good works, but from God, and he proved this effectively.

Accordingly Augustine, and those who afterwards followed his doctrine, teach that operative grace (gratia operans), which they say to be God working in us without us, is that very holy cogitation which is before consent, and likewise the sudden motion of the will, arising from that pious cogitation without our liberty, by which we are deterred from evil and stirred to good; and thus the sentence of Gregory of Rimini is excluded. But they say that cooperative grace (gratia cooperans), by which God is said to work with us, is in free consent, in which there is already found either merit, or something condign to eternal life, or impetratory of some gift. Finally, Ruardus judges that in every consent which is said to pertain to the help of grace, cooperative grace is found (art. 7. 9. the tenth proposition, near the end). And Bernard most elegantly expressed in a few words the account of ours set forth above in his book On Grace and Free Choice: speaking indeed of grace he says, "To this end, namely, by prevening, that thereafter it may cooperate (to wit, with free choice); and that what is undertaken by both may likewise be perfected by both; so that they may work together for each advance, in mixture, not separately; at the same time, not by turns; and

1636. Gregory of Rimini (St. Gregory Ariminensis) is intended.

so that they may not accomplish by an individual act partly grace and partly free choice." By which words he teaches not only that neither works anything in consent without the other, but that from the beginning consent proceeds indivisibly from both.

And he even called that prevenient grace "operative," according to Augustine's phrase. For straightway he says: "Therefore God works in us these three things, namely, to think good, to will, and to accomplish. The first indeed (to wit, cogitation) without us; the second (to wit, affection and consent) with us; the third (to wit, the act, or the very work to which he brings us) through us." He says moreover that the work is done by God through us, because we are as it were instruments moved inwardly by God through affection, just as a king is said to work through a minister whom he appoints concerning affairs to be done. Whether in the work itself there is another grace which is called subsequent, we shall see below in c. 10.

Thirdly, Prosper too comes in, himself the more ancient disciple of Augustine, who in book 2 On the Calling of the Nations, c. 26 (or, according to another division, c. 9), after he said that the grace of God is preeminent in justification (that is, prevenes) by persuading, warning, terrifying, inciting, giving understanding - which are the works of operative grace - adds: "But also the will of man is subjoined to it (namely, to grace that operates and prevenes) and is conjoined, and to this very thing previously is aroused by helps, that it may cooperate with the divine work within itself, and may begin to exercise unto merits that zeal which, conceived from a heavenly seed, tends to study." By which words, first, when he says that our will is aroused by "helps," he designates by the name of grace that excites the very "helps" by which it was aroused, namely, persuasions, warnings, terrors, and understanding, which are holy cogitation and the first motion of the will. Afterwards, when he says that our will is conjoined and subjoined, that it may cooperate with the divine work, that is, with operative grace, he denotes that then the will cooperates with grace when it consents. Therefore he assigns the whole consent to cooperative grace, but to operative grace the other things enumerated above which precede consent.

Add also St. Jerome, Dialogue 3 against the Pelagians, about the middle, where he says thus: "Where there is mercy, there is grace, free choice in part ceases, in that it is only in this, that we will, and desire, and give assent to what pleases." He did not say that free choice wholly ceases, but in part, because the mercy of God begins with holy cogitation, when as yet there is not free consent: for he said that free choice is only in this, that we will, and desire, and give assent to what pleases. Therefore Jerome concedes that, before we will, there is the mercy of God - surely for no other reason than that by cogitation those things are proposed to us to which we ought to give assent.

I pass over now the testimonies of Augustine; for I shall bring them forward in the following chapter. In confirmation also of our sentence, and in the explication of those which Gregory brought forward for himself, I shall show clearly against Gregory himself that it was of no consideration to Augustine, when disputing against the Pelagians and Semipelagians, to assert in us any other beginning of grace than holy cogitation and the first motion of the will, or, as he himself calls it, calling (vocatio). Nor do the testimonies cited thus far show anything else. Moreover that a non-deliberate motion of the will pertains to prevenient grace, both the testimonies of the Fathers and reason demonstrate. First, Augustine clearly indicates this in book 1,

To Simplicianus, q. 2, not far from the end, when he says that our will cannot be moved to the good unless something occurs which delights; and he attributes this to divine grace, so as to say that it is not in our power. We shall recite this testimony in the following disputation, c. 6; and in book 2 On the Merits and Forgiveness of Sins, c. 19, he calls the grace of God, which thus prevenes us as to make us consent, a conquering delectation. Then Prosper, in the place just now cited, when he attributes terrors and the affect of faith to prevenient grace, clearly concedes that there is, under operative grace, some non-deliberate affect of the will. Lastly, reason itself demonstrates this: for an illustration on the part of the intellect is wont naturally to arouse affect before deliberation, although this does not always happen; when therefore it so happens, that affect will pertain to operative and prevenient grace, because it is done without our freely consenting.

The same truth is confirmed by testimonies of Augustine.

Clearer testimonies of St. Augustine for our position

Much more perspicuous are Augustine's testimonies for this our sentence, especially because he himself expressly explained that manner of speaking, "God causes us to do," about which we have the controversy with Gregory of Rimini. In the book therefore On the Dogmas of the Church, c. 21, "There remains (he says) for seeking salvation the liberty of the will, but with God first admonishing and inviting to salvation, that it may either choose or follow; and we have the beginnings of our salvation from the mercy of God, in order that we may acquiesce in the most health-giving inspiration - this is in our power." Therefore he said that the beginning of a good work is in this only, that God invites; but God is said to invite to consent by holy cogitation and the first non-deliberate motion; therefore he holds that operative grace is there; for this everywhere he says is the beginning of a good work. But to acquiesce in the holy inspiration, which by cogitation was inviting to consent, he says is already in our power - he understands, with the grace of God. He therefore holds that the grace of God is a companion of our consent, and that we ourselves cooperate when we consent. Now this happens also in the first free motion about the end. We must therefore assert, against Driedo, that in every free consent there is cooperative grace, and not only in the second [consent] and in exterior work; and, also against Gregory, that in Augustine no other beginning of salvation and of a good work is found which he calls operative grace, besides holy calling, by which we are invited to consent. But what he straightway subjoins, "That we may obtain what by acquiescing in admonitions we desire is a divine gift; that we may not totter in the gift of salvation obtained is the care as well of our solicitude as of heavenly aid," is to be understood thus: that, as to this - that he so wills - the obtaining of what is desired is of grace alone, because he alone offers the opportunity of the work by subsequent grace, as we shall see in c. 10. But this book is not reckoned to be by Augustine; and there are some who think it is by Gennadius, who felt with the Semipelagians, as Augustine recognized; we shall speak in disp. 91, c. 11. Wherefore perhaps he meant that the attaining of that which we desire is of grace alone, which the Massilians used to confess; but of the beginning of our salvation he speaks rightly.

But against Driedo there is a second testimony of the same Augustine, more manifest, in book 2 On the Good of Perseverance, c. 13, in this way: "We therefore will; but God works in us to will. We therefore work; but God works in us to work." In which place Augustine speaks in the very same way about exterior work and about interior free consent; and of the latter he says that God causes that we will; of the former, that he causes that we do. Just as therefore from these words it is not lawful to gather that there is some exterior free work which is of operative grace alone, and that God works in us without us; so neither from these same [words] will it be lawful to gather that there is some free consent in us which is from God alone and from his operative grace, without us. Augustine, however, speaks in the same way not because in the first free consent about the end God alone is said to operate; nor because to consent and to the work he first applies us in that mode which Gregory imagines; but because by calling in us, without us, he works such [a thing] when it pleases him, so that through those [helps] he elicits from us the consent and the work. And this plainly he taught in book 1 To Simplicianus, q. 2, about the middle, in these words: "But this I know not how it can be said, that God has mercy, unless we will. For if God has mercy, we also will. To the very same mercy it pertains that we will. For it is God who works in us both to will and to accomplish according to good will. Unless someone should arm himself against the man of God and deny that a good will is God's gift; which would be strange indeed if anyone should dare to deny. But, since a good will does not precede calling, but calling precedes a good will; therefore it is attributed to God calling that we will well; but it cannot be attributed to us that we are called. Therefore I would not say, 'not of him that wills, nor of him that runs, but of God that has mercy,' because without his help we cannot obtain what we will; but rather because without his calling we do not will." Therefore Augustine clearly teaches that the work of our own - whether of will, that is, that we will - is of God alone having mercy, because he alone bestows and works in us calling, by which we are drawn to will. In this, therefore, alone is operative grace, which is said to be of God alone; but not in consent itself, even the first about the end, nor in that application which Gregory contrived. Augustine knew of no other application of our will to consenting, to be attributed to God alone and by reason of which our work of salvation should be said to be of God alone having mercy, besides calling, which is nothing but cognition.

Those others who follow the opposite sentence with Gregory reply that Augustine, indeed when he was younger, although already a bishop and following that mode in the matter in hand, yet elsewhere speaks plainly of that application which is the beginning of consent, distinct from mere cogitation and the first non-deliberate motion. But this evasion can easily be cut off. For in those places cited by Gregory (and if there are any others) Augustine only asserts that God makes that we will, and that we do. Which mode of speaking he kept also in that question to Simplicianus. Nor did he there only explain that this is said because God works in us calling, by which he causes that we will; but also in other places which he wrote when older, to which the adversaries cannot in any way object; and nowhere else did he teach the opposite, nor did he even lightly insinuate that application distinct from calling - unless that...[1642]

1642. See Vazquez, Disputatio 99, c. 3 - 4, 8; Disputatio 100, c. 3.

Fourthly, taking his stand against Pelagius, who, granting only the grace of external preaching, said that God makes us will when his sayings are made known to us, he says thus: If therefore God willed, he would so prepare and would so work in the will of man, that he might make us will and might bring it about that we do what he commands. For if that free choice of his were brought in, and by that calling, if it were secret, he would so move the sense, that he would bring it about that assent be accommodated to the law and to doctrine; without doubt he would read it, or understand it while reading, or even expound it, and preach it; nor would there be need to pray, etc. Where he opposes to Pelagius, who said that by preaching alone God prepares and works in us the will, a higher and secret calling, by which God so moves the sense that he makes us give assent to the preaching.[1643]

Fifthly, on that, to the Philippians: God is he who works in us to will, which Pelagius was misunderstanding.[1644] And in the book On the Predestination of the Saints, chapter 19, about the middle, he says: Not because we believe, but that we may believe, we are called; and by that calling which is without repentance and irrevocable, this is wholly brought about, that, once moved, we may believe. And at the end: Therefore God works in the hearts of men by that calling according to his purpose, of which we have spoken much, so that they may not hear the Gospel in vain, but may come together to the faith. In the same way he teaches in the book On the Spirit and the Letter, chapter 34, when he says: Moreover God acts also by the suasion of visions, that we may will and that we may believe. And he signified nothing else when he said in the Enchiridion, chapter 32, that the will of man is prepared by God to be helped, and, when prepared, is helped: namely, prepared by that high, secret, and congruent calling. Therefore Augustine attributes to calling alone - which he calls either without repentance, or according to purpose - and to the suasion of visions that which we contend, namely, that God works in us to will, and to work.[164516461647]

But of any other application you will not find a word there, or elsewhere, in Augustine. Moreover, how greatly Augustine commends the doctrine which he delivered in that question to Simplicianus, we will see below in the following disputation, chapter 7.[1648] Add also the Council of Trent, session 6, chapter 5, where it says that the beginning of justification is to be taken from prevenient grace; and explaining what this prevenient grace is, it says: "This is from his calling": and he assigns nothing else to prevenient grace. Wherefore Alphonsus de Castro, Against Heresies, under the word Grace, heresy 1, somewhat before the end, says that what is said, "God draws men to himself," is nothing else than the calling and exhortation by which God moves our will.[16491650]

However, some object to us this reasoning. If God only were to prevent our wills by the grace of his calling, and not by that peculiar application prior to our consent, it would follow that divine providence is not infallible and certain; because, that calling being posited, it would still be free to

1643. St. Augustine, Epistula 107, near the beginning.

us to consent and not to consent; and therefore, in order that the effect of divine providence may follow infallibly, it would be necessary for there to be something depraved on the part of God, which being posited in us, the effect of divine providence would follow necessarily and infallibly.

I answer: one thing is infallible, another necessary or immutable, as I noted above in disputation 68, chapter 3. For infallible is referred to knowledge and to the intellect: and although something be contingent and free in its coming to be, nonetheless with respect to it the knowledge of God is said to be infallible; because that which in very deed will be cannot be not known by God; and this is the perfection of divine providence. Moreover, although from divine providence, by which God predefines the aid only prevening, our consent does not arise by a necessity preceding - for the providence of God does not clash with our liberty, nor does it impede it, and thus, with the providence of an aid only prevening posited, it does not repel that our free choice not consent - yet, because, as we shall show in disputation 99, God also determines in detail, by his providence, to concur with our free choice unto consent, and the providence of God cannot fail to attain that which it wills to be done, it comes about that, that providence being posited, our consent necessarily follows. But because, as we shall show, this necessity is not preceding, but consequent, or accompanying, our free choice, therefore it preserves our liberty.[16511652]

From all which it is clear that the opinion of Gregory has a weak foundation not only in the doctrine of Augustine, but also in human philosophy.

The testimonies of Augustine which Gregory of Rimini adduced for his case are explained.

Caput VIII - The testimonies of Augustine which Gregory of Rimini adduced are explained

With Augustine's mind now explained, it remains that we reply to the arguments which Gregory of Rimini cited for his own opinion.

I answer therefore to the first, taken from On Grace and Free Choice, that Augustine said, "God works that we may will, and when we will, and so will that we may do, he works with us," for this reason: because by that secret calling he prepares our will in such a way that it easily elicits consent; as up to now we have sufficiently shown from that same Augustine.[1653]

But in the second and third testimony he seems to have used contrary words, and therefore something more must be noted in their explanation. In the book On Grace and Free Choice, chapter 17, he says, "that we may will, he works without us; when we will, and so will that we may do, he works with us." Therefore Augustine acknowledges that when we will, God is already working with us, and hence, from the beginning of free consent, there must be cooperating grace (gratia cooperans), and not by any means is the whole part of it to be attributed only to operating grace (gratia operans). But he says that God works "that we may will, without us," because for this

1650. Alphonsus de Castro, Adversus haereses, verb. "Gratia," haeresis 1 (near the end).
1651. Vazquez, Disputatio 68, c. 3.
1652. See Vazquez, Disputatio 99, c. 3 - 4, 8; Disputatio 100, c. 3.
1653. St. Augustine, De gratia et libero arbitrio, c. 17.

end he prepares, fosters, and disposes the will by his secret calling; not that God alone makes the consent of the will when we already will: for Augustine openly said the opposite, namely, that when we already will, God works with us, which is cooperating grace. Wherefore the particular cause final is denoted here, as was said above.

He signified the same in the third testimony, although the words seem contrary and are a little more obscure. In whose explanation a few things which he subjoins there must be added. He says therefore: "He bestows 'that we may will' in one way, and 'what we shall have willed' in another way. For 'that we may will,' both he willed to be his and ours by calling us; but 'what we shall have willed,' he alone bestows: that is, to be able to act well, and to live always blessedly." Therefore he confesses that, when we will, God already works with us, and consequently, from the beginning of free consent, we must acknowledge cooperating grace, and by no means attribute to operating grace alone even a small part of it. But he says, "that we may will, God works without us," because for this end he prepares, fosters, disposes the will by his secret calling; not that God alone makes the consent of the will when we already will. For Augustine openly said the opposite, namely, that when we already will, God works with us.

But observe in this second testimony, that the word "we shall have willed" is not of the past tense of the subjunctive mood, namely, "we may have willed," but of the future perfect of the same mood, "we shall have willed": first, because otherwise the sense could not stand with the common doctrine of Augustine, and with those things which in that question he teaches and we have already reported. For if Augustine had said that what we may have willed before, he alone bestows, he would exclude our cooperation from the free consent in us already past, in which beyond doubt grace itself already works with us. Then also because, if "we shall have willed" were of past time, Augustine would not have said "he alone bestows," but "he alone bestowed." He speaks therefore of the present, because God always bestows that which each is about to will in the future. What therefore we are about to will in the future, he himself bestows. Add that he himself sufficiently explains that he is finally speaking of the preparation and disposition unto willing, when he said, "but what we shall have willed, he alone bestows": for he subjoins immediately, "that is, to be able to act well, and to live always blessedly," this, namely, he bestows. Since therefore he says that the power of living well is from God alone, he indicates that which we have said up to now, namely, the preparation and disposition, to wit of the will, which is made by secret calling, to be from God alone, and to be referred to operating grace alone.

Hence it is easy to understand the sense of the Apostle to the Philippians: "God is he who works in us to will and to accomplish for good will." But of that to the Romans 9, "It is not of him that wills, nor of him that runs," etc., let us say a few things. This place is thus interpreted by Gregory of Nazianzus, oration 31, number 8, by Chrysostom, and the other Greek Fathers in those words of Paul, as if it were said that it is not ours, but of God alone who has mercy, that the heart of man be softened and not hardened; because will alone does not suffice, unless it be helped by the grace of God. But this exposition, with the author's name suppressed, Augustine impugns in the Enchiridion, chapter 32, and in that first book to Simplicianus, question 2, a little before cited, on the ground that if that were true, by the same reason it could be said, "it is not of God's having

mercy, but of man's running and willing"; because unless human will answer to grace, man will not be softened: wherefore divine grace alone does not suffice. Augustine therefore says that on that account it was said by Paul that "it is not of man's running and willing, but of God's having mercy," because there is something which God alone works, not with man willing, nor with him running: whence it comes about that his heart is softened and answers - namely, the high and secret calling. I have already set down Augustine's words above in this chapter; therefore there is no need to repeat them. But of what sort that calling is, by reason of which God is said to have mercy, to prepare the will, and to make that we will, we shall speak in the last chapter.

However, against that which we brought from the book On Grace and Free Choice, chapter 17, some object thus. Augustine did not say there, "But when we will, God works with us"; but thus, "But when we will, and so will that we may do, he works with us." Therefore not any will whatsoever, but that alone which works outwardly, pertains, according to Augustine's sententia, to cooperating grace. He had, moreover, distinguished in that place two wills: one small, that is, ineffective, by which we desire to act well, but do not yet will to carry it out; and this he had said to be also from God operating: another robust and effective, by which one proceeds to work; and this he said to be with us from God. And who (says Augustine) began to give even that small will, unless he who prepares the will, and, by cooperating, perfects what, by operating, he begins?

And in this way they still try to defend the way of philosophizing of Gregory of Rimini - namely, that that application to consent is from God alone, since to God alone working with us is attributed the consent of the will, not any whatsoever, but an effective one, and one which tends to the work.

But the manner which Gregory devised, and which not a few of the more recent follow, cannot be defended in this way. For he did not think that the application to consent is some act of will and free consent, such as is that small or ineffective will; but in the individual acts of will by which we freely consent and can merit, he thought there to be that prior application: wherefore even in that small will Gregory concedes that prior application. Then Augustine not only says that God makes that we will, but also that we do. Therefore he is said to make not only that we will by reason of a small and ineffective will, but also that we do by reason of a robust and effective will: for that ineffective and small will does not make that we do, nor does it move to effectiveness; and therefore it cannot be the application which Gregory of Rimini imagines. Augustine therefore in that place only says that that small will is also from God operating, who, by cooperating, perfects what, by operating, he begins. For that small will is from God operating through calling; just as also the effective will in this way is said to be also from God operating. On account of this, however, Augustine does not deny that in that small will, when consent is present, there is also cooperating grace; but he only said that it is from God operating, lest anyone think that it is only from us, not from God.

From what has been said it is clearly established that the opinion of Andreas de Vega must be rejected, in book 6 on the Council of Trent, chapter 7, when he says that sometimes we do many things, by which we are disposed to justification, without operating grace, by the help of cooperating grace alone. For this sentence is in the first place contrary to the Council of Orange II, canon 9, where it is said: "As often as we work good things, God works in us, and with us, that we

may work." That, "in us," denotes operating grace; that, "with us," denotes cooperating, as I noted in chapter 1. It is also contrary to Augustine, On Grace and Free Choice, chapter 17: "Without him operating that we may will, or cooperating when we will, we can do nothing for the works of piety." By which words he does not signify that the one of those suffices; but the one, that we may will; the other, when we already will. And indeed in the works of grace, whatever they may be, since they cannot be done without a pious thought which was not in our power, operating grace is as necessary as cooperating; indeed that very holy thought is in both ways called grace, as was explained by us above.

Caput IX - On the various names of operating and cooperating grace

Hitherto, from the Fathers, we have sufficiently shown what operating grace (gratia operans) and cooperating grace (gratia cooperans) are. It remains now that we say something about the various names by which each is wont to be called. Therefore first, that grace which is first of all, namely the holy thought and calling, is wont to be called operating grace, or rather, as Augustine speaks, it is called the grace which God works in us without us: for we never read that Augustine called grace "operating" and "cooperating," but [called it] that which God works in us without us, or that which ...[1654]

Objicitur Ceterum, against that which we adduced from the book On Grace and Free Will, chapter 17, some object after the manner of Gregory of Rimini, thus. St. Augustine did not say there in these words, "When, however, we will, God works with us," but thus: "When, however, we will, and so will as to do, he works with us." Therefore, not any will whatsoever, but only that which is brought forth into an outward work, according to the sentence of St. Augustine, pertains to cooperating grace. Moreover, in that place he had distinguished two wills: one small, that is, inefficacious, by which we desire to do well but do not yet will to effect; and this he had said is also from God operating: the other robust and efficacious, by which one proceeds to the work; and this he had said is from us with God. "And who (says St. Augustine) would even have begun to have a small will, unless he who prepares the will; and by cooperating he perfects what by operating he begins?" And in this way they still strive to defend Gregory of Rimini's manner of philosophizing, namely that the application to consent is from God alone, since to God alone operating they ascribe the consent of the will - not any consent whatsoever, but that efficacious one which tends to the work.

Respondetur But the manner which Gregory devised, and not a few of the more recent follow, cannot be defended in this way. For he did not suppose that the application to consent is some act of the will, and a free consent, such as that small or inefficacious will; but that in individual acts of the will, wherein we freely consent and could merit, there is thought to be that prior application - even he, Gregory, concedes that prior application in that small will. Then too, St. Augustine does not only say that God makes that we will; but also that we do. Therefore he is said to make this not only by reason of a small and inefficacious will, that we may will; but also by reason of a robust and

1654. St. Gregory Nazianzen, Oration 31, n. 8; St. John Chrysostom and other Greek Fathers on Rom 9.

efficacious will: for that inefficacious and small will does not make that we do, nor does it move to the efficacious; and so it cannot be the application which Gregory of Rimini imagined. St. Augustine, therefore, in that place only says that even that small will is from God operating; just as also that robust will, since consent is present, is from God cooperating, but not from us alone, not from God alone. Hence it is clear that we must reject the opinion of Vega,[1655] when he says that, by that small will which begins under God operating, since we cooperate when we will, that same will is to be said to be from God cooperating. As we noted above in chapter 1, this is contrary to the Council of Orange II, can. 9, where it is said: "God works in us, and works with us." That "in us" denotes operative grace; that "with us" denotes cooperating grace.[1656] Likewise it is contrary to St. Augustine, On Grace and Free Will, c. 17: "Without him operating, when we will, we can do nothing." By which words he denotes one of those two; namely, that we may will: but denotes the other - that we may do - cannot be done without cooperating grace. And thus it was not within our power that there be operative grace, although some holy thought arise in us; but that there be cooperating grace, as we have explained above, is so called with various names.

Actenus ex Patribus satis ostendimus quid sit gratia operans et cooperans: superest nunc, ut de variis nominibus, quibus utraque gratia nuncupari consuevit, aliquid dicamus. Primum omnium prima, sancta cogitatio et vocatio, dici solet gratia, ut loquitur St. Augustine, operans; sed et cooperans, sed fine nobis, aut nobiscum: gratia, quam Deus in nobis operatur; et quam operatur nobiscum. He said, moreover, that God works without us (sine nobis), not because without us making it effective he makes it to be effective, as Vega thought, nor because without a preceding will, as Driedo taught; but because, in the common and popular way of speaking, those things are said to be done "in us without us" which are done in us without our consent, or before it. But vocation is of this sort: for, according to the doctrine of St. Thomas,[1657] there is one thing called an action "of man" (actio hominis), another an action "human" (actio humana), or "of man as he is man." Now only a free action is called human, or "of man as he is man," because in it the peculiar mode of operating of man and of reason shines forth, namely indifference; whereas in other actions there is found only a mode of operating with determination to one part, which is the mode of nature, not of reason.

In this manner of speaking the Apostle uses language to the Romans, chapter 7, where he says, with respect not only to sudden motions of the flesh, but also of the will: "Now I do not do that, but sin that dwells in me" (Rom 7). For no other reason, surely, than that such motions are stirred up in us before we offer them any consent. For in that place Paul considers in each of us two men: one exterior, the other interior. He calls the latter rational and spiritual, who operates freely and attends to eternal rules and reasons, and considers them; but he calls the former animal, who, without liberty, is carried headlong into what pleases. And because the interior and free man is the

1655. Andreas de Vega, Commentaria super Concilium Tridentinum, lib. 6, c. 7.
1656. Council of Orange II, can. 9.
1657. St. Thomas, Summa theologiae, I-II, q. 1, a. 1.

principal, therefore those things which are done in us without him are simply said to be done "without us," and we are simply said "not to do" them. Of this sort is vocation, namely holy thought and the first good movement, which are not in our power.

The second grace, however, is cooperating, which God works with us. And that this is present in any of our free consents, even of the first acts of the will about the end, has by now been sufficiently proved from the testimonies of the Fathers, who in every consent say that we are co-workers of divine grace, and that it also works with us; so that, against the manner of explaining of Driedo and others, we hold that we have not only cooperating grace in the second act of the will about the means, or in the exterior work, but also in the first interior consent about the end - a thing which from the testimonies of St. Augustine is also most clear.

Second, the first grace, namely holy thought or vocation, is called prevenient grace, because it prevents (goes before) us - not because it prevents every one of our operations (for that grace is a certain vital operation of ours by its nature and essence depending upon us, and thus cannot be without our concurrence), but because it goes before every free operation. Wherefore, just as it is said to be done "in us without us," that is, without our free consent, so also it is said to "prevent us," that is, our free consent. The second grace, however, is called accompanying (comitans), which is also wont to be called cooperating: because now it accompanies us, that is, our free consent. For neither is that without our consent, nor is our consent without it.

Third, for this same reason which we said above in chapter 2, that first grace is called infusion, or inspiration, because what is infused into us, or breathed into us, appears altogether to be from without and to be done in us without us; and because the first grace is of this sort if it be compared with our consent, without which it is said to be conferred upon us; therefore it is said to be infused or inspired into us "without us." But the second grace can be called governance (gubernatio), because when we cooperate with it, we are rightly said to be governed by it.

Fourth, finally, the first grace is called exciting, because it, as it were, performs the task of rousing someone from sleep. For our will, which is in the sleep of sloth or of sin, is roused by the cry of vocation and holy thought; and just as an awakening is done without the consent of the sleeper, so also exciting grace is done in us without our liberty. This office of grace is hinted at in that place of the Apocalypse, chapter 3: "Behold, I stand at the door and knock; if anyone opens to me, I will enter to him and will sup with him" (Apoc 3). To stand at the door and to knock - that is, by holy thought - is God's alone, and belongs to the one exciting from without. The second grace, however, is called helping (adiuvans), which already begins from that moment in which someone opens the door of his heart and, awakened from sleep, freely responds to the one calling; and it is denoted by those words: "If anyone shall have opened, I will enter, and I will sup, not alone, but with him." For the same is denoted in Ephesians 5: "Awake, you who sleep, and rise from the dead." To this grace of God, which calls and excites us that we may rise from sleep, these words pertain. Yet I am pleased briefly to interpret this place of Paul, because although at first glance it presents no difficulty, nevertheless, if we attend more closely to the context, it is difficult.

Note, therefore, first, that St. Jerome says this sentence, which Paul cites as of some ancient writer, is found in none of the Hebrew volumes; wherefore he judges it to be some popular sentence which was current on the lips of men, which Paul by his own authority made canonical. But that we may explain it, we must weigh the context. Paul had said: "All the things that are reproved are made manifest by the light; for everything that is made manifest is light" (Eph 5). Namely, the evil works of unbelievers which he had above recounted; these, therefore, he had said to be made manifest by the sons of light, that is, by the sons of the faithful whom he calls sons of light, when by their good morals they are reproved and rebuked. Then it follows: "Wherefore he says: Awake, you who sleep," that is, awaken, you who lie in the sleep of sinners; "and rise from the dead," that is, from the death of sin; "and Christ shall enlighten you," that is, he will regulate your life according to the norm and law of Christ, which is the fruit of light and of true faith; he will enlighten, and he will reveal the turpitude of your neighbor, so that it may be seen by others and reproved, which on account of the darkness of ignorance did not appear.

It must be observed, moreover, that the word "he will enlighten" in this place does not denote what it commonly signifies, namely the same as "to illuminate by light" in any way whatsoever, as happens to a body which does not have in itself a native light, nor so receives it in itself as to be able to illuminate others; but just as in the same Epistle, a little earlier, Paul took "light" for that which is illuminated and made bright, when he says, "everything that is made manifest is light" - that is, illuminated and made bright - so also, against the cited sentence, he took "to be enlightened" for that which is "to be made so luminous as also to be able to enlighten," even if it receives the light from another: as a mirror, which by reflection, or as the moon, which, having received light from the sun, can enlighten and disclose those things which were in darkness. In the Greek it is ἐπιφαύσει σοι ὁ Χριστός; and if you render it word for word, "Christ will shine upon you," or "rise upon you"; and the sense comes to the same. For when it is said "Christ will rise upon you," it is understood that, by his light communicated to you, as to the moon by the sun, you may rightly be able to enlighten others and bring to manifestation from the darkness the sins of others, having been made a mirror of the divine light. For sinners also in another way are said to be enlightened, namely when by the light of the honest life of their brothers their sins are disclosed and reproved. Moreover, another exposition does not please me, of those who refer that "he will enlighten" to the proper turpitude of those who are enlightened, so that the sense be: "He will enlighten your turpitude, that you yourself may be able to see it"; for this sense does not agree with the things which Paul had said above, namely that the shameful deeds of the sons of darkness are manifested and disclosed by the honest life of the sons of light.

We return, therefore, to our purpose. That second grace is called helping, because to rise from sleep is not of the one rising alone, but of him and of the one exciting him. To open the door also, at least in spiritual matters, is not solely of the one consenting, but of the one knocking and exciting: for to both grace is required. But that will be clear when we have shown whether one and the same thing is called operative grace and cooperative; prevenient and accompanying; exciting and helping; inspiring and governing, or not. From all of which we shall also easily understand, against the aforementioned opinions, how in any free consent, even about the end, there is in us grace that

cooperates and helps and accompanies and governs; but operative and exciting is only in holy thought, not however in that application which Gregory posited, which is neither according to the mind of the Fathers, nor, according to true philosophy, seems possible.

Observandum igitur est, eandem vocationem, et cogitationem sanctam, et primum motum voluntatis sub ratione boni, dici gratiam operantem et praevenientem, et cooperantem et comitantem - the same thing, I say - considered in a diverse mode: for insofar as it precedes our consent, it is operative and prevenient; but insofar as, remaining in us, it effects consent with us, it is cooperative and accompanying. For thus our consent is from God and from us, so that God not only immediately and physically concurs to it, but also by the same thought is said to bring it about in us in the way in which the intellect moves and allures the will. Wherefore, just as in James 2 and in the Council of Trent, session 6, chapter 10, it is said that faith cooperates with good works, and therefore faith itself ought to be called "cooperating grace," so holy thought, insofar as it cooperates with us, ought to be called "cooperating grace"; yet not for that does...

...yet not for that do we affirm the cooperating grace to be altogether the same grace as the operating; but we say that it is new and different from the operating and the prevenient in the genus of grace (*gratia*), gift, and benefit, and that it has something new in the order of reality, namely, an effect. And accordingly we said that the very influx of vocation into consent pertains to the cooperating and accompanying grace, just as the act of the same belongs to it. From which there is also clearly inferred that any free consent, even with respect to the end, which can be meritorious and pertains to piety, is of grace already cooperating and accompanying us, as was said above.

Yet some more recent authors say that helping grace is not only the vocation together with the concurrence of God, but also the supernatural habit of grace. I for my part admit that by this habit we are helped to certain works; nevertheless, since helping and exciting grace are necessary for other works for which such a habit is not required, therefore those of the Augustinian school, under the name of helping grace, understood only the vocation of God, insofar as it brings it about that the will consents. But if we keep the phrase and manner of speaking of St. Augustine, who nowhere called grace "operating" and "cooperating," but only said that God works certain good things in us - without us - and certain other things with us, one ought to say that the gift or grace which God works in us without us is a thought and a non-deliberate motion of the will; whereas the grace which He works in us with us is the free consent. For our operation is called the gift of God, and therefore grace: for, as Augustine says in book 1 On the Predestination of the Saints, "The grace of God is the very giving."[1658] Moreover, I find in Augustine that grace also works something in the arousing of the will, namely without us: for he reproves Pelagius in book 1 against the two letters of the Pelagians, chapter 19 at the beginning, because he had denied that. This, however, I would understand of the thought, which, insofar as it arouses in the will the first non-deliberate motion, is

1658. St. Augustine, De praedestinatione Sanctorum, lib. 1.

said to work something without us toward the arousing of the will. Yet for that reason it is not called by Augustine "operating grace," nor is it anywhere found to be called thus by him as distinct from cooperating grace.[1659]

The third member of the division which we adduced in chapter 2 is not only of the Scholastics, but also of the ancient Fathers, whom we shall cite, although the Scholastics understand it in another way than the Fathers understand it. It is therefore to be explained what is signified by the name of subsequent grace (*gratia subsequens*), not only by the Scholastics, but also by the Fathers: for it will contribute not a little to a clearer understanding of the necessity of grace, around which predestination is occupied.

The Scholastics, therefore, with St. Thomas in I-II, question 111, article 3, understanding this member especially of habitual grace (*gratia habitualis*), say that there are five effects of grace: first, to heal the soul with respect to willing the good; second, to do the good; third, to persevere in the good; fifth, to attain to glory. And they say that any later effect with respect to the preceding is fittingly called the effect of subsequent grace. For this opinion St. Thomas alleges Augustine in the book On Nature and Grace, chapter 31. Another, however, is the sense of that passage, as we shall show forthwith; and universally, whenever the Fathers speak of prevenient and subsequent grace, they do not so name the one as referred to the other, but both as referred to us: namely, they call that "prevenient" which goes before us, and "subsequent" which follows us - although they do not always distinguish prevenient and subsequent grace in the same way.[16601661]

Moreover, that these Fathers do not distinguish habitual grace into prevenient and subsequent, as the Scholastics distinguish, is manifest. For, as we noted from Augustine's letter 105, they did not dispute against Pelagius about the grace of the remission of sins, but about the help of God's grace moving: and that grace, about which they contended with Pelagius, they divided into prevenient and subsequent. Therefore the aforesaid division of habitual grace into prevenient, accompanying, and subsequent grace is not according to the mind of Augustine and of his disciples, although it can be true and very customary among Scholastic theologians.[1662]

Accordingly Augustine in that place, and Fulgentius book 1 to Monimus, chapter 11, taking that third member as help only of grace, which they call actual, not as habit, which they call the grace of the remission of sins, distinguish prevenient and subsequent grace thus: that "prevenient" is said not of that which goes before consent for each good work, even in the justified, but of that which precedes justification, that we may be healed from sin; "subsequent," however, is said of any other which is given to us, even for individual works, before our consent, in order that we may persevere in justification, be quickened, and attain to glory. The words of Augustine in that chapter are: "It goes before (namely the grace of God) that we may be healed; and it follows, that, healed, we may be quickened: it goes before, that we may be called; it follows, that we may be glorified: it goes before, that we may live piously; it follows, that we may always live with Him." When he says, "it

goes before, that we may be healed," he does not understand the healing from sin itself to be the formal effect of prevenient grace, but he says that the help of grace goes before us, that we may be prepared for justification. Wherefore he did not say, "it goes before by healing," but "it goes before that we may be healed." Then grace follows healing, that in it we may be quickened, persevering in good works. Yet I do not deny that in Augustine there is sometimes found the healing of our will prior to justification by the help of grace alone, whereby we are prepared for well doing. This healing, however, he understands not from sin, but from the infirmity which we contracted through sin. In this sense he often says that free will avails nothing for works of piety unless it is first healed - because in the first parent we merited to lose every help of grace and holy thought - as Fulgentius says in the book On the Incarnation and Grace, chapters twelve and thirteen; wherefore, since through Christ it is restored to us, we are healed of infirmity. In the passage, however, just cited, by "healing" Augustine understands justification itself, and therefore he said, "It goes before, that we may be healed; it follows (namely, justification itself) that we may be quickened." Then he says, "it goes before that we may be called" (to justification, that is); "it follows that (persevering) we may be glorified." "It goes before that we may live piously" (until, namely, we are justified); "it follows" (the justified) "that we may always live with Him": that is, so that, persevering in that justice, we may obtain eternal life with Christ.[16631664]

Fulgentius distinguished more clearly in that same chapter eleven the prevenient and subsequent grace: "It goes before," he says, "the impious, that he may become just; it follows the just man, lest he become impious. It goes before one cast down, that he may rise; it follows the one lifted up, lest he fall." And hence it is evident that "subsequent grace" is not said with respect to "prevenient," nor conversely; but, as referred to us, that is called "prevenient" which goes before our justification, and "subsequent" which follows justification.

In another way, the Fathers also use "prevenient" and "subsequent" grace: so that "prevenient" is said because it goes before our consent for each work - on which account, as we said above, it is also called "operating" and "exciting"; "accompanying" is said because it is together with the consent of our will, for which reason it is also called "cooperating" and "helping," about which we have spoken sufficiently above; lastly, the third, "subsequent grace," is so called because it follows the consent of the will by supplying the opportunity and occasion of the good work which the will desired to accomplish. Whence it is also clear that these three graces are thus named with respect to our consent, and not because they are compared among themselves.

In this signification the Council of Trent uses "subsequent grace," denoting it in session 6, chapter 16, where concerning the influx of the grace of Christ into the justified it says: "Which virtue always goes before, and accompanies, and follows their good works." For it is manifest that the Council does not speak of habitual grace: first, because it says that it is derived continually from Christ into the justified, as from a head into members, and from the vine into the branches; but habitual grace is not thus continually derived into the justified, so that it would be certain that all the deeds of the just follow therefrom - for this is still among the Scholastics a matter of

1663. Fulgentius of Ruspe, Ad Monimum, lib. 1, c. 11.
1664. Fulgentius of Ruspe, De incarnatione et gratia, cc. 12 - 13.

controversy; again, the Council says of the grace which Christ continually pours in, that it "goes before, accompanies, and follows"; whereas the increase of habitual grace, even if it were given continually, would not go before nor accompany good works, but would follow them. Therefore, since that threefold influx of power from the head Christ continually derived into His members cannot be distinguished in habitual grace, but only in actual help, because habitual grace is not given continually so as to go before and accompany good works, it follows that that threefold division of grace must be understood of the actual help of grace. Add that, since the Council there speaks of the application of Christ's merits to individual merits, which is effected by the helps of grace which are conferred upon us for individual merits - as we shall show in I-II, question 114, article 4 - by no means can it be understood of habitual grace. The remainder therefore is that it speaks of the help about which it said those three things; by which not only did it express the triple grace which we reported, but also it plainly indicated that each of them is so called with respect to our consent. In the same way Scripture speaks, Psalm 58: "And his mercy shall go before me." Psalm 22: "And his mercy shall follow me." And the Church in the Sunday Collect for the Sixteenth after Pentecost: "May thy grace, O Lord, always go before us and follow after, and make us ever intent upon good works" - where "prevenient" and "subsequent" are said with respect to our consent.[16651666]

Moreover, that subsequent grace is so called because it supplies the opportunity of a good work which someone conceived in desire, and prevenient because it precedes the desire, is gathered from Augustine in the Enchiridion, chapter 32: "A man's good will precedes many gifts of God, but not all: for both are read in the sacred oracles: 'His mercy shall go before me,' and 'His mercy shall follow me.' He goes before the unwilling that he may will; he follows the willing lest he will in vain": this is subsequent grace, which supplies the opportunity of the work. For what is it to will "in vain," unless to carry out by the work that which one desires? Therefore, according to Augustine, it is called "subsequent" because it follows consent and because it supplies to the will the opportunity of the work. This seems also to be indicated in book 2 against the two Letters of the Pelagians, chapter 9, about the middle and near the end, when he says that "by subsequent grace our endeavor is helped, although even it cannot begin without grace." Likewise St. Gregory the Great, in Moral. book 2, chapter 10, said in the same sense that holy men, when they act well, are debtors to God for the gift received: "Who both, by going before, gave them the good will which they did not have, and, by following after, granted the good ability which they will." When he says, "he gave the good to will, which they did not will," he marks out prevenient grace as to their consent, that they might will - just as when Augustine said, "He goes before the unwilling that he may will." But when he adds, "by following after he granted the good ability," he signifies subsequent grace, insofar as it brings it about that, the opportunity of the good work having been offered, they can carry out what they desire.[166716681669]

1665. Council of Trent, session 6, c. 16.
1666. St. Thomas, Summa theologiae, I-II, q. 114, a. 4.
1667. St. Augustine, Enchiridion, c. 32.
1668. St. Augustine, Contra duas epistolas Pelagianorum, lib. 2, c. 9.
1669. St. Gregory the Great, Moralia in Iob, lib. 2, c. 10.

Finally, Fulgentius, the zealous disciple of Augustine himself and one well deserving concerning his doctrine, book 1 to Monimus, chapter 9, speaks thus: "For He Himself (namely God) freely bestows upon the unworthy the grace by which the impious man, having been justified, is illumined with the gift of good will and with the ability of good operation, so that by prevenient mercy he may begin to will the good, and by subsequent mercy he may be able to do the good which he wills": than which nothing could be said more clearly for our opinion. And in the same book, chapter 11, he says: "He goes before (namely God), giving to man good will; he follows, acting in him the capacity of the work."[16701663]

However, someone will ask: After the good desire of a work, if it is efficacious and robust, as Augustine says, what other new grace can there be which supplies the opportunity of the good work? For an efficacious purpose without the work, when the opportunity is not granted, is of as great merit before God as it would be with the work, as is the common opinion of the Scholastics with St. Thomas, II-II, q. 20, a. 4.

I answer first: Other things being equal, I affirm that an efficacious purpose of a work, without the work itself when it is not in our power to act, is of as great merit as it would be if it had its effect. But because, when the opportunity of acting is not present, a man easily ceases from his desire, and no longer thinks about that matter; whereas, once the opportunity is offered, he is strengthened in his purpose and perseveres more fervently in it: therefore the opportunity of acting, which God, without our own effort and diligence, sets before our very hands, is a new gift and benefit, and therefore a new grace, which is called "subsequent," because it is bestowed upon us after our desire.

Moreover, there is another effect of subsequent grace not to be despised: for a firm purpose conceived about a matter can be disturbed by many and various impediments, as much external - of other things that can occur - as internal - of diverse thoughts...

Caput XI - On the efficacious and the sufficient help of grace

Accordingly, since our desire can be hindered and delayed, it belongs to God's grace that He remove for us all these impediments, and preserve in us holy thought, and stir it up unto the work; and this ought most justly to be numbered among the graces of God.

To this doctrine St. Jerome seems to allude, Dialogus 3 contra Pelagianos, in the middle, when he says: "Where the mercy of God is, on the part of free choice there is free access; and afterwards, it is in the Lord's power that what we desire, what we labor and strive for, we may be able to accomplish by His help. In which he acknowledges a new grace, as often as we carry into execution what we desire." He proves it by the example of Assuerus the king, who, distracted by various thoughts, after a banquet - when sleep is wont to be much easier - could not sleep, thus disposed by God on account of the redemption of His people.[1671]

1670. Fulgentius of Ruspe, Ad Monimum, lib. 1, c. 9.
1663. Fulgentius of Ruspe, Ad Monimum, lib. 1, c. 11.
1671. St. Jerome, Dialogi contra Pelagianos, dialogus 3.

Of this grace is understood that of Psalm 16: "Perfect my steps in Thy paths, that my footsteps be not moved"; and that of Proverbs 16: "Man prepares the soul, and the Lord governs the tongue." And again: "Man's heart disposes his way; but the Lord directs his steps." In which the particles "but" and "and," which seem to divide what is ours, or in which we have a part, from those things that are of God alone, denote that the governance of the tongue after the cogitation and purpose, and the directing of the steps, is of God alone, according to the sentence of the Apostle in Romans 9, as St. Augustine explains, lib. 1 ad Simplicianum, q. 2, as we have seen above: "It is not of him that runs nor of him that wills, but of God that shows mercy"; and he signifies "but of God that shows mercy" - that is, of God alone that shows mercy.[1672]

Therefore, this is most justly called subsequent grace (*gratia subsequens*), by which man is confirmed by the very work, and is perfected in his good purpose, and, impediments having been taken away, he perseveres even unto the deed. This exposition of the aforesaid testimony of Proverbs 16 is excellently gathered from the doctrine set down by St. Augustine, which we adduced above; and thus it is approved by me, although this place seemed difficult to Augustine himself, lib. 2 contra duas epistolas Pelagianorum c. 8, and therefore he attempts to carry it over in another way, so as to interpret it himself.[1673]

Finally, it is to be noted that this grace, which is called "subsequent" when referred to our desire, is sometimes also, when conferred together with the work itself, called "companionship" (comitas), because it accompanies the work itself. Thus, in the secret prayer the Church, when it prays for those making a journey, says: "And may Thy grace, going before them, direct their way, and, following after, deign to be their companion." There, when it says "to accompany the way," it indicates that that grace is a companion of the way which, if it be compared with desire, is subsequent. And Bernard also distinguished this threefold grace in another way, in the book whose title is "The Manner of Living Well," in Sermon 3: one, which prevents consent; another, which accompanies; another, which is together with the very work. He calls the first antecedent, the second accompanying, the third co-operating, which hitherto from other Fathers we have called "subsequent." And let what has been said about the various modes and names of grace suffice, so that, understanding the phraseology of the Saints and of Scripture, we may know what is to be attributed to God and what indeed to our liberty in the works of grace, and may altogether keep it unharmed. For to which works grace is necessary will be treated more fully below, 1.2.q.109. One thing remains over, namely, that we hand on briefly another division of grace, which also in this matter of predestination is frequent, and which will be set out in the following chapter.

Of the efficacious and the sufficient help of grace

Prevenient help, by which we are called and invited unto the good, is assigned as twofold by scholastic theologians. One is efficacious (*efficax*), which has effect in us; the other, which could have effect and yet does not have it. Whether the efficacious has its effect in such wise that

1672. St. Augustine, Ad Simplicianum, lib. 1, q. 2.

nevertheless free choice (*liberum arbitrium*) can resist it, we shall say below, disp. 98, c. 6. The inefficacious help is wont to be called sufficient (*sufficiens*). Of both kinds St. Augustine makes mention in De correptione et gratia, c. 11, about the middle, in these words: "This grace the first man (Adam) never had, so that, whenever he wished, he might be evil; but he assuredly had that, in which, if he wished to remain, he would never be evil; and without which neither even by free choice could he be good: yet that grace he could by free choice desert." And a little further down: "He had given an aid (namely to Adam), without which, in that (to wit, good will), he could not remain, if he should will. But that he should will, He left to his free choice: he could therefore remain, if he would, because aid was not lacking by which he could; without which he could not hold perseveringly the good which he would."[1674]

It ought, however, to be observed that what the Schoolmen call "efficacious" help is sometimes by the Fathers called "sufficient." Thus Prosper, lib. 2 De vocatione gentium c. 1 (alias 3), so calls it, when he says: "A certain supernal measure of doctrine is always applied to all men, which, although of a more sparing and more hidden grace, is nevertheless sufficient, as the Lord indicates, to some for remedy, to all for testimony: that it may plainly appear that, unless where sin abounded grace also should abound, now also the whole human race would be blinded by a like impiety." When Prosper distinguishes those to whom it is sufficient for remedy from those to whom it is sufficient for testimony, he plainly indicates that those to whom it was sufficient for testimony could, by such help, have been saved, but they were not; while others, to whom it was sufficient for remedy, by it were in fact brought to salvation.[1675]

Otherwise, St. Augustine distinguishes the twofold help of grace, lib. 1 ad Simplicianum q. 2. For he says there is a twofold vocation: one "congruous," to which free choice is so fitted as to respond. For since those who are thus called are said by Augustine to be "congruently called," we can call that a congruous vocation. And from the year 1578, in which I first publicly taught the matter of predestination, thus I have always named it; which name indeed did not displease other more learned men thereafter. But because others are so called that they do not "concur" nor fit themselves to the vocation, the other vocation of those who do not respond and do not fit themselves to the vocation can be called "not congruous." Of this he says in that Question: "To others indeed the vocation came, but it was of such a kind that they could not be moved by it," etc. Which words indeed are somewhat harsh; but about this and other testimonies of Augustine we shall speak at length, disp. 97, c. 6.[1676]

That congruous and efficacious vocation, which Augustine extols in a remarkable way as often as he disputes about the necessity of grace against the Pelagians and Semi-Pelagians, he calls by many names and assigns to it many proper epithets. He calls it secret and high vocation, in Epist. 107, because by God's high and secret judgment it is conferred to some out of mercy; he calls it also "according to purpose," lib. 1 De praedestinatione sanctorum, cc. 3 and 19, and De correptione et

1673. St. Augustine, Contra duas epistolas Pelagianorum, lib. 2, c. 8.
1674. St. Augustine, De correptione et gratia, c. 11.
1675. Prosper of Aquitaine, De vocatione gentium, lib. 2, c. 1 (alias 3).
1676. St. Augustine, Ad Simplicianum, lib. 1, q. 2.

gratia c. 7, and in the book Contra duas epistolas Pelagianorum c. 9. The "purpose" is understood of justifying, as is explained in lib. 1 ad Simplicianum, q. 1, before the middle. Because therefore by this vocation justification is effected, he called it "according to purpose." But in lib. 1 De praedestinatione sanctorum c. 19, in a certain general way he called it "vocation without repentance"; because "the gifts of God are without repentance," that is, God does not repent of that which He once decreed or granted.[167716781679]

Finally, in lib. 2 De peccatorum meritis et remissione c. 19, he calls it "certain knowledge," because God knows most perfectly that it will have its effect, or because by a certain knowledge altogether untroubled the good itself is shown to us by that vocation. He also calls it "victorious delight," because it conquers the will and draws it freely to itself by delight, all difficulties having been overcome. For he had said that sin happens either because there is ignorance in the intellect - that is, a defect of knowledge - or because the good thought, which ought to withdraw one from sin, does not delight.[1680]

By this, says Augustine, God's having mercy on those on whom He has mercy is first spoken of; nor is His not having mercy on others described as if He were not merciful, but because this grace always obtains its effect in him upon whom it is bestowed, understanding that saying in Exodus 33 and Romans 9: "I will have mercy on whom I will have mercy." So he speaks in lib. 1 ad Simplicianum, q. 2. Secondly, it is said by Augustine that by this grace the will is prepared by the Lord. In this manner Augustine also speaks lib. 2 contra duas epistolas Pelagianorum c. 9 in principio, and lib. 1 De praedestinatione sanctorum c. 6; and the Council of Orange, can. 4, from that Proverbs 19 according to the translation of the Seventy: "And the will is prepared by the Lord," where the Vulgate reads, "and salvation is of the Lord." The will is said to be "prepared," that is, disposed; but because God makes in time that we should will, when He prevents us with congruous vocation, as was noted c. 8; therefore, by prearranging that congruous vocation, He prepares by His eternal decree - that is, He predestines - our will; as Fulgentius notes, lib. 1 ad Monimum c. 8, whom we shall refer frequently.[168116821683168416851685]

Thirdly, it is also said by Augustine that by this there is conferred on us the power to become the sons of God: thus lib. 2 De bono perseverantiae c. 8 and lib. 1 Retractationum c. 22.[16861687] Lastly, by reason of this grace of preventing and exciting the will, Augustine understands that saying of the Gospel of John 6: "No one comes to me unless the Father who sent me draw him"; and in lib. 1 De praedestinatione sanctorum c. 8; and concerning the same, Fulgentius lib. 1 ad Monimum cc. 8 and

14 explains that of Ezekiel 36: "I will make you to walk in my statutes"; and St. Augustine, lib. De praedestinatione sanctorum c. 11. And we also can explain that of Proverbs 21 in the same way: "As divisions of waters, so is the heart of the king in the hand of the Lord." And let this suffice to have said about grace.[1688][1689][1690][1691]

Pars I - On those things that pertain to predestination

Apropos of the doctrine of the several articles, let us examine it. In the exposition of which we shall not keep the order which St. Thomas held; but first about those things we shall dispute which he treats in those articles in which he deals with predestination; then about those in which he deals with reprobation; finally about those which contain doctrine common to both. Yet around the several articles we shall pass over nothing which may be worthy of note or disputation; and thus I judged it worthwhile to divide the whole question into the three aforesaid parts.

Articulus I - Whether men are predestined by God

Proceeding thus: It seems that men are not predestined by God.

1. For Damascene says in lib. 2: "We must know that God indeed foreknows all things, but does not predetermine all things. For He foreknows those things which are in us, but He does not predetermine them: but merits and demerits are in us, inasmuch as we are masters of our acts by free choice. Therefore the things which pertain to merit or demerit are not predestined by God." And thus the predestination of men is taken away.
2. Moreover, all creatures are ordered to their ends by divine providence, as was said above. But other creatures are not said to be predestined by God. Therefore neither are men.
3. Moreover, angels are capable of beatitude, just as men are. But to angels, as it seems, it does not befit to be predestined, since in them there was never misery; but predestination is the purpose of having mercy, as St. Augustine says. Therefore men are not predestined.[1692]
4. Moreover, the benefits bestowed by God upon men are revealed to holy men through the Holy Spirit, according to that of the Apostle, 1 Corinthians 2: "But we have not received the spirit of this world, but the Spirit which is of God, that we may know the things that are given to us from God." If therefore men were predestined by God, since predestination is a benefit of God, their predestination would be known to those predestined. Which is plainly false.

But on the contrary: It is said in Romans 8: "Whom He predestined, them also He called."

I answer that it must be said that it is fitting to God to predestine men. For all things are subject to divine providence, as was shown above. Now it pertains to providence to order things to an end, as was said. But the end to which creatures are ordered by God is twofold. One is that which

1688. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 8.
1689. Fulgentius of Ruspe, Ad Monimum, lib. 1, c. 14.
1690. Ezekiel 36:27.
1691. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 11.

exceeds the proportion of the created nature and faculty, and this end is eternal life, which consists in the divine vision; for to see God as He is surpasses by far the proportion of any created nature and likewise of any created habit. But another end is proportionate to created nature, which created things can attain by their own natural powers, according to the virtue of their nature. Now to that end which something cannot attain by the virtue of its nature, it is necessary that it be brought by another, as an arrow is sent to the target by the archer: whence, properly speaking, the rational creature, which is led into its end beyond its nature, is brought into that end as though "sent" by God. And the reason of this "sending" exists beforehand in God, just as in Him there exists the reason of the ordering of all things to the end, which we have said to be providence.

It is objected: It seems that men are not predestined by God.

1) For Damascene says in the beginning of book 2, chapter 30: One must know that indeed God foreknows all things; yet He does not predetermine all things. For He foreknows the things that are in us, but He does not predetermine them; for merits and demerits are in us, inasmuch as we are masters of our acts by free will. Therefore those things which pertain to merit or demerit are not predestined by God. And thus the predestination of men is done away with.[1693]

2) Besides, all creatures are ordered to their ends by divine providence, as was said above. But other creatures are not said to be predestined by God. Therefore neither are men.

3) Besides, angels are capable of beatitude, just as men are. But angels, in whom there never was misery, are not properly said to be predestined, since predestination seems to be the purpose of leading some out of misery. Therefore men are not predestined.

4) Besides, benefits bestowed upon men by the Holy Spirit are revealed, according to 1 Corinthians 2: "But we have received the Spirit that is from God: that we may know the things that are given us from God." If therefore men were predestined by God, since predestination is a benefit of God, predestination would be known to the predestined, which is clearly false.

But on the contrary: It is said in Romans 8: "Whom he predestined, them he also called; and whom he called, them he also glorified."

I answer: It is fitting to God to predestine men. For all things are subject to divine providence, as was shown above. Now to providence it belongs to order things to an end, as has been said. But the end to which created things are ordered by God is twofold. One end surpasses the proportion and capacity of created nature, and this end is eternal life, which consists in the divine vision; this is above the nature of any creature, as has been said above. Another end is proportionate to created nature, namely, that which a created thing can attain by virtue of its own nature. Now for that to which a thing cannot arrive by the power of its own nature, it must be brought by another, as an arrow is sent by the archer to the mark. Hence, properly speaking, the rational creature, which is capable of eternal life, is led to it as it were by being sent from God. And the account (ratio) of this sending pre-exists in God, just as there is in Him the account of the ordering of all things to their end, which we have said to be providence.

1692. St. Augustine defines predestination as "the purpose of having mercy": cf. De praedestinatione sanctorum, lib. 1.
1693. St. John Damascene, De fide orthodoxa, lib. 2, c. 30 (in principio).

But the account of something-to-be-made existing in the mind of the maker is a certain pre-existence of the thing-to-be-made in him. Hence the account of the aforesaid transmission of the rational creature to the end of eternal life is named predestination (*praedestinatio*). For to predestine is to send beforehand. And thus it is clear that predestination, as to the objects, is a certain part of providence.

Reply to the first: Damascene names by "predetermination" an imposition of necessity, as is the case in natural things which are predetermined to one. This is clear from what he adds: "for He does not will malice, nor does He compel virtue." Hence predestination is not excluded.[1693]

Reply to the second: Irrational creatures are not capable of that end which exceeds the capacity of human nature. Hence they are not properly said to be predestined; though sometimes "predestination" is abusively named with respect to any other end whatsoever.

Reply to the third: To be predestined befits the angels just as it does men; although the angels were never miserable. For movement does not take its specific character from the term whence, but from the term whither. For it makes no difference as regards the notion of being "made white," whether the one who is made white was black, or pale, or red. And similarly it makes no difference as regards the notion of predestination, whether one is predestined to eternal life from a state of misery, or not. Although it can be said that every conferral of a good beyond the due of the one upon whom it is conferred pertains to mercy, as was said above.

Reply to the fourth: Even if to some, by a special privilege, their predestination should be revealed, nevertheless it is not fitting that it be revealed to all; for thus those who are not predestined would despair, and security in the predestined would engender negligence.

The conclusion is affirmative, and of faith, on Romans 8. As to the doctrine of the article, if anything there was to be noted, we treated it above in disputation 87, chapter 3, namely, what "to predestine" signifies, whether it is an operation of the intellect or of the will, and in what way it is compared with providence universally.

Articulus II - Whether predestination posits anything in the predestined

It is objected: It seems that predestination (*praedestinatio*) posits something in the predestined.

1) For every action of itself induces a passion. If therefore predestination is an action in God, it must be that predestination is a passion in the predestined.

2) Besides, Origen says on that passage of Romans 1, "He who is predestined," etc.: "Predestination is of him who is not, but destination is of him who is." And St. Augustine says in the book On the Predestination of the Saints: "What is predestination, if not the destination of someone existing?" Therefore predestination is only of someone existing, and thus it posits something in the predestined.[16941695]

1693. St. John Damascene, De fide orthodoxa, lib. 2, c. 30 (in principio).
1694. Origen, Commentary on Romans, on Romans 1.

3) Besides, Preparation is something in the thing prepared. But predestination is the preparation of the benefits of God, as Augustine says in the book On the Predestination of the Saints. Therefore predestination is something in the predestined.[1695]

4) Besides, What is temporal is not put in the definition of what is eternal. But grace, which is something temporal, is put in the definition of predestination. For predestination is said to be the preparation of grace in the present and of glory in the future. Therefore predestination is not something eternal. And thus it must be that it is not in God, but in the predestined. For whatever is in God is eternal.

But on the contrary: St. Augustine says that predestination is the foreknowledge of the benefits of God. But foreknowledge is not in the things foreknown, but in the one foreknowing. Therefore neither is predestination in the predestined, but in the predestiner.[1696]

I answer: Predestination is not something in the predestined, but in the predestiner alone. For it has been said that predestination is a certain part of providence. But providence is not in the things provided for, but is a certain account (ratio) in the intellect of the provider, as was said above. The execution of providence, which is called governance, is indeed passively in the governed, but actively it is in the governor. Whence it is clear that predestination is a certain account of the ordering of some persons to eternal salvation existing in the divine mind; but the execution of this order is passively indeed in the predestined, and actively in God. Now the execution of predestination is calling and glorifying, according to that of the Apostle to the Romans 8: "Whom he predestined, them he also called; and whom he called, them he also glorified."

Reply to the first: Actions that pass over into exterior matter induce of themselves a passion, as heating and cutting; but actions that remain in the agent, such as understanding and willing, do not, as was said above. And such an action is predestination. Hence predestination does not posit something in the predestined; but its execution, which passes into exterior things, posits some effect in them.

Reply to the second: "Destination" is sometimes taken for the real sending of something to some term; and thus destination is only of that which is. In another way "destination" is taken for the sending which one conceives in the mind, according as we are said to "destine" what we firmly propose in mind. And in this second way it is said in 2 Maccabees, chapter 6, that Eleazar "destined" not to admit illicit things for love of life. And thus destination can be of what is not. Nevertheless, predestination, by reason of the priority which it imports, can be of that which is not, in whatever way its "destination" be taken.[1697]

Reply to the third: Preparation is twofold. One is of the patient, that it may be acted upon; and this preparation is in the thing prepared. Another is of the agent, that it may act; and this is in the agent. And such a preparation is predestination, inasmuch as some agent is said by the intellect to

1695. St. Augustine, De praedestinatione sanctorum, lib. 1.

1695. St. Augustine, De praedestinatione sanctorum, lib. 1.

1696. St. Augustine, "predestination is the foreknowledge of the benefits of God"; cf. De praedestinatione sanctorum, lib. 1.

1697. 2 Maccabees 6.

prepare itself for acting, insofar as it pre-conceives the account of the work to be done. And thus God, from eternity, prepared by predestining, conceiving the account of the order of certain persons to salvation.

Reply to the fourth: Grace is not put in the definition of predestination as something existing of the essence of it, but insofar as predestination imports a relation to grace, as cause to effect and act to object. Hence it does not follow that predestination is something temporal.

First conclusion. Predestination is nothing in the predestined, but in the predestiner.

Second conclusion. Governance is passively in the things governed, but actively in the very governor.

On both conclusions, as far as was needful, we have spoken above, q. 22, article 3

Articulus IV - Whether the predestined are chosen by God

It is objected: In the fourth place thus it is proceeded. It seems that the predestined are not chosen by God.

1) For Dionysius says, book 4, chapter on the Divine Names, that just as the corporeal sun, not by choosing, infuses light into all bodies, so too God [infuses] His goodness; but divine goodness is communicated chiefly to some, according to the participation of grace and glory. Therefore God communicates grace and glory without election; which pertains to predestination.[1698]

2) Besides, election is of things that are ...

It is objected: 2) Besides, election (*electio*) is of things that are; but predestination (*praedestinatio*) is from eternity also of things that are not. Therefore some are predestined without election. 3) Besides, election imports a certain discrimination. But God wills all men to be saved, as is said in 1 Timothy 2. Therefore predestination, which ordains men unto salvation, is without election.

But on the contrary: It is said in Ephesians 1: "He chose us in Him before the foundation of the world."[1699]

I answer: Predestination, according to its formal ratio, presupposes election, and election presupposes love (*dilectio*). The reason is that predestination (as was said above) is a part of providence. Now providence, just like prudence, is a rule existing in the intellect prescribing the ordering of certain things to an end, as was said above. But nothing is prescribed to be ordered to an end unless a will of the end pre-exists. Hence predestination of some to eternal salvation presupposes, in its formal ratio, that God wills the salvation of those persons. To this belong election and love: love, inasmuch as He wills to them this good of eternal salvation - for to love is to will good to someone, as was said above; and election, inasmuch as He wills this good to some rather than to others, with certain persons being reprobated, as was said above. Yet love and

1698. Pseudo-Dionysius, De divinis nominibus, c. 4.
1699. Ephesians 1:4.

election are ordered otherwise in us than in God, because in us the will, by loving, does not cause the good, but from a pre-existing good we are incited to love. And therefore we choose someone whom we love; and thus in us election precedes love. But in God it is the other way round. For His will, by which He wills a good to someone by loving, is the cause that that good be had by him rather than by others. And thus it is clear that love is presupposed to election according to its formal ratio, and election to predestination. Hence all the predestined are chosen and loved.

Reply to the first: If the communication of divine goodness be considered in general, He communicates His goodness without election, inasmuch as, namely, there is nothing that does not participate something of His goodness, as was said above. But if the communication of this or that good be considered, it is not granted without election, because He gives certain goods to some which He does not give to others. And thus, in the bestowal of grace and of glory, election is observed.

Reply to the second: When the will of one choosing is moved to choose by a good pre-existing in the thing, then it must be that election be of things that are - just as it happens in our choice. But in God it is otherwise, as has been said. And therefore, as Augustine says: "They are chosen by God who are not, nor does He err who chooses."[1700]

Reply to the third: As was said above, God wills all men to be saved antecedently; and this is not a simple will, but qualified, not however consequently - which is the simple will.

Explanation of the Article.

The conclusion is: According to its formal ratio, predestination presupposes election and love.

For the explication of this article, it must first be noted that these three are distinguished by St. Thomas - love, election, and predestination. Love is the will by which God wills a good to someone absolutely, not in comparison with another. But election is the will by which He wills a good to one rather than to another - that is, to one rather than to another; for this signifies the comparison of one with another. But because election can be to different things, according as God wills different goods to one person rather than to another - namely eternal life, or grace - therefore we must distinguish a twofold election: one to eternal life, the other to the gifts of grace; as Augustine expressly distinguished, as will be clear in the following disputation. For the present, St. Thomas seems to understand only election to eternal life, namely an efficacious will of giving to one eternal life rather than to another; and of this the conclusion of the proposed article is understood, as some are pleased to say.

Next it should be noted that in this way election is plainly distinguished from predestination: the latter is about the means of grace, but the former about the end, namely about eternal life. Thus St. Thomas clearly distinguishes them, as is gathered from this article and the following, and so do all the older Scholastics. For there are some more recent writers who, without reason, confound these two and take them as the same thing - our predestination having been made without merits, and the election to eternal life - whereas these two differ widely, as will be seen in the following

1700. St. Augustine, Sermon 11, De verbis Apostoli (tom. 10): "Eliguntur a Deo qui nondum sunt; nec tamen errat qui eligit."

disputation and in Disput. 91. Moreover, that predestination is the will of conferring the means of grace, Augustine plainly hands down, book 1 On the Predestination of the Saints, chapter 10 at the beginning; and so do the Fathers commonly, whom we shall recall in the places cited.[1701]

Disputatio LXXXIX - Whether the election to beatitude preceded the predestination of merits

Caput I - Sententia quorundam Scholasticorum

Electionem efficacem ad gloriam factam fuisse ex meritis gratiae praevisis, auctoritate Scholasticorum, et Scriptura probatur. Cap. 2. Quibus Patrum testimoniis eadem sententia ab aliis probetur. Cap. 3. Quid contra Pelagianos et Semipelagianos de electione nostra contendat St. Augustine. Cap. 4. Notantur aliqua, quibus magis aperta fiat sententia Semipelagianorum. Cap. 5. Electionem ad gloriam ex meritis gratiae praevisis factam putat St. Augustine. Cap. 6. Exploduntur oppositiones, quibus recentiores haec Augustini testimonia infirmare nituntur. Cap. 7. Nihil contra hanc electionem ex meritis docuisse Augustinum. Cap. 8. Electio ad gloriam post merita a priori probatur. Cap. 9. Eadem sententia ex libertate arbitrii ostenditur. Cap. 10. Eadem opinio ex virtute et efficacitate meritorum monstratur. Cap. 11. Respondetur testimoniis, quae probant electionem ad gloriam factam ante merita. Cap. 12. Diluuntur duae rationes eiusdem opinionis. Cap. 13.

The opinion of certain Scholastics

From all the things we have said in the exposition of the article, it is clearly evident that the present disputation is undertaken about this point - namely, about the absolute and efficacious will of God to give to some eternal life, which He decreed not to give to others - whether this was prior to predestination, that is, to the preparation of the means of grace, or not. Now when it is asked whether it was prior, it must be understood in the way in which above, in Disputation 8, chapter 5, we explained that "prior" and "posterior" in our manner of consideration must be taken in the works of God, namely from the order of the objects among themselves. For just as among objects one is said to be on account of another, or because of another, and consequently that one is prior to another; so too God is said to will one thing because of another, or that one thing be for the sake of another, and consequently that He will one thing prior to another. When, therefore, it is asked whether election to eternal life preceded the predestination of merits, it is the same as if it were asked whether the election is said to have been made on the basis of merits, or with no consideration of merits, but so gratuitously that merits rather followed from it. For since merits are the effects of predestination, it is the same to ask whether election was prior to predestination, and whether it was prior to foreseen merits, or not.

In a question understood in this way, the prior opinion is that of Cajetan and of not a few Thomists on this article, which teaches that election to eternal life, that is, the efficacious will of beatifying some, is indeed prior to their predestination, that is, to the will of preparing the means of grace unto this beatitude. This opinion was also taught by Scotus in I Sentences, distinction 41, question 1, number 9 ("Potest aliter"); Durandus, question 1, number 8; Giles in the same place, question 1, article 2, number 2; Major on I Sentences, distinction 40, question 2, after the first conclusion; Soto on Romans 9, in the digression on predestination; and Antonio of Cordoba, book 1, question 56, opinion 5, in the second part. On behalf of this opinion St. Thomas is wont to be alleged; but what he himself holds we shall see below in chapter 12.[1702170317041705170617071]

The more recent authors try to commend this view now by Scripture, now by the Fathers, and now by reason. It is proved, then, in the first place by Scripture: first indeed because in Ephesians 1 it is said, "He chose us in Him" (namely, in Christ) "before the foundation of the world, that we should be holy." It does not say, "because we were going to be holy," but "that we should be holy." But if He had chosen us on account of our merits, He would be said to have chosen us because we were going to be holy: therefore He chose us in order to give merits, not because He foresaw our merits. Augustine explains this passage in this way, as we shall report below. Secondly, because in Romans 9, concerning the two brothers Jacob and Esau, it is said: "Before they had done anything good or evil, that according to election the purpose of God..."[16991708]

It is proved therefore in the first place from Scripture: first indeed, because to the Ephesians it is said, "He chose us in him" (namely, in Christ) "before the foundation of the world, that we should be holy" (Eph. 1). Not "because we were going to be holy," but "that we should be holy." If, however, he chose us on account of our merits, he would be said to have chosen us on this account, that we were going to have merits; therefore he chose us that we might have merits, not because he foresaw our merits: thus St. Augustine expounds that place, as we shall cite below.

Next, because in Romans 9, concerning the two brothers Jacob and Esau, it is said, "Before they had done anything good or evil, that according to election the purpose of God might remain, not from works, but from the One calling"; and, "The greater shall serve the lesser." Therefore, since he says that "according to election the purpose of God" does not "from works" remain, but from the mere grace of the One calling, and saying, "The greater shall serve the lesser," it follows that the election was before all merits foreseen (Rom. 9:11 - 12).

Third, because Paul in Romans 3 and 4, in Galatians 4, in Ephesians 2, and in Titus 3 teaches that grace is not from works or from merits, which indeed is the same; but election to the blessed life is grace, nay, the first of all graces: therefore that election cannot be from works and merits;

otherwise it would not be grace. Wherefore in Romans 11 he says: "So therefore in this time the remnant are saved according to the election of grace. But if by grace, now not by works; otherwise grace is now not grace. What then? What Israel sought, this it has not obtained; but the election has obtained it." That is, just as in the time of Elijah (of whom he had shortly before made mention) by gratuitous election God chose for himself seven thousand men who had not bowed the knees to Baal, so now from the people of Israel the remnant (that is, the few, in comparison with the multitude of those who are damned) have been made safe by the election of grace without merits. For if it were from merits and works, it would not be grace: and so that which the greater part of Israel attempted to attain by their own merits they did not obtain; but the election of grace without merits obtained its effect, namely, the salvation of the remnant, that is, a few from Israel (Rom. 11:5 - 7).

Fourth, in John 15 Christ said to the Apostles, and, in their person, to us all, as Augustine understands in Tractate 86 on John: "You have not chosen me, but I have chosen you" (John 15:16). Which would not be true, if Christ had chosen us from merits. For indeed, the merits of him whose merits are chosen rather choose that which is chosen. From which place Augustine, with strong arguments, contends to prove that our election was without merits, lest we be said rather to have chosen Christ than that he be said to have chosen us.

In the second place they adduce various testimonies of the Fathers, and especially of Augustine, whose opinion some theologians think to be this: in the book Soliloquies, chapter 28, for thus he says: "You make, from among us sons of men, those in whom it pleased you to dwell," and a little later he says, "those whom you had already chosen by your sole will, that you might dwell in them." Likewise, book 6 of Hypognosticon, a little after the beginning: "For we have said that, out of the damnable mass of the human race, God anticipated by mercy, not by merits, those whom by the election of grace he predestinated to life." And book 5 against Julian, chapter 3; Tractate 86 on John; and in On Predestination and Grace, chapter 7; and in On the Predestination of the Saints, chapters 17, 18, and 19, he expressly proves that election was before merits. For otherwise that saying would not be true in John 15, "You have not chosen me, but I have chosen you"; nor would that be true in Ephesians 1, "He chose us, that we might be holy." Finally, in Epistle 106, a little from the beginning, and in Epistle 107, Enchiridion, chapter 107, and book 1 to Simplicianus, question 2, he refutes those who assert that from the mass of perdition men were made good on account of works, against that in 1 Corinthians 4, "Who separates you?" (1 Cor. 4:7). Therefore, since the separation seems to have been made by election to glory, it follows that this was not from works and merits.[1709]

Lastly, in this way we can argue for this opinion from the Epistles of Prosper and Hilary, which are had in tome 7 of Augustine, before the books On the Predestination of the Saints. It is well known that the doctrine of Augustine about election without merits was ill-spoken-of among the Massilians in the time of Cassian, and among many others also bishops of Gaul and of Africa; indeed, the Massilians attacked Prosper so sharply, because he defended this doctrine of

1709. Augustine, Ep. 106; Ep. 107; Enchiridion, c. 107; De diversis quaestionibus ad Simplicianum, lib. 1, q. 2; cf. Tract. 86 in Ioannem; De praedestinatione et gratia, c. 7; De praedestinatione sanctorum, cc. 17 - 19.

Augustine, that he was compelled to depart from Marseilles to Rome to consult Celestine, as their history narrates, and Celestine writes in his Epistle 1. But concerning this very election before merits which Augustine taught, the Massilians, in that Epistle of Prosper, thus used to say: "This, however, purpose of the calling of God, which either before the beginning of the world, or in the very condition of the human race, is said to have made a separation of those to be chosen and those to be rejected, so that, according to what pleased the Creator, some vessels might be created for honor, others for contumely, and, by this, care for rising be taken away from the fallen, and an occasion of sloth be brought to the saints, so that on either side the labor be superfluous, and that neither the rejected by any industry can enter, nor the elect by any negligence can fall away": and below he gives the reason: "For if, indeed, as to him whose merits are chosen, the intention of the One choosing ought rather to be removed, then all industry and all virtues are taken away, if by the constitution of God a certain fatal necessity be imposed on human wills, and, under the name of predestination, a fatal necessity be introduced." They also exclaimed that passage in Romans 9, cited above, which Augustine alleged for himself, that it had never been thus understood by the holy Fathers as he himself interpreted it of election before works, but that all had understood it from the foreknowledge of merits, so that God chose both good works and faith. Since, therefore, all these rightly understood the mind of Augustine - although they did not approve it - neither Prosper nor Hilary, the most zealous disciples of Augustine, nor Augustine himself in his responses, in the book On the Predestination of the Saints and On the Good of Perseverance, ever denied that he had said that, or said that the Massilians had wrongly interpreted his mind.[1710]

That they so interpreted him, there is no doubt; that Augustine taught that election was made by the gratuitous will of God, not from merits. To the same purpose, that Faustus of Riez, after some years, a great defender of the doctrine of the Massilians, in the book On Grace and Free Will, having suppressed the name of Augustine, severely censures him with these words: "It was said, 'Not from works, but from the One calling,' etc. In these words the impiety of gentile persuasion is understood, that God, without any examination of a moderator between good and evil, not by the order of one ruling, but by the right of dominion, should make this one an object of favor, that one an object of hatred, receive this one by purpose, exclude that one by command, and that, between two lost men, no consideration of labor, no proof of desert be had, but that one be taken up without reason to ceasing duties, the other be condemned without discretion; and thus, in either one, neither the account of merit exists nor of fault; all future cause of judgment is taken away." In the same chapter, he calls this election-before-works "fatal," and in the last chapter On the First Man, whom God made immortal, he says: "It was the justice of God that he should not choose before he approved." And book 1, chapter 12, he calls the election which we have quoted from Augustine, before works, "original" and "fatal": "original," because it would be before works; "fatal," because it would take away liberty. And in chapter 4 of that same book, against this election he says: "For what would one hope for, whom grace has already made its own? in whom, on the contrary, there is no despair, whom the violence of predestination drags? in this, fault; in that, grace has no place."

1710. Prosper and Hilary, Epistles (in Augustine, tom. 7, ante libros De praedestinatione sanctorum); cf. the narrative about Prosper and Pope Celestine, Ep. 1.

And at the end of the chapter: "If one is appointed to life, another to perdition, as he asserts, as certain one of the Saints said (he certainly means Augustine), then we are not born to be judged, but judged. And he adds: If thus we are destined to the kingdom of heaven by the sole will of God, without our merits, why are we judged concerning works, if indeed, without them, we are destined to the kingdom?"[1711] That they so interpreted him, there is no doubt; that Augustine taught that election was made by the gratuitous will of God, not from merits. To the same purpose, that Faustus of Riez, after some years, a great defender of the doctrine of the Massilians, in the book On Grace and Free Will, having suppressed the name of Augustine, severely censures him with these words: "It was said, 'Not from works, but from the One calling,' etc. In these words the impiety of gentile persuasion is understood, that God, without any examination of a moderator between good and evil, not by the order of one ruling, but by the right of dominion, should make this one an object of favor, that one an object of hatred, receive this one by purpose, exclude that one by command, and that, between two lost men, no consideration of labor, no proof of desert be had, but that one be taken up without reason to ceasing duties, the other be condemned without discretion; and thus, in either one, neither the account of merit exists nor of fault; all future cause of judgment is taken away." In the same chapter, he calls this election-before-works "fatal," and in the last chapter On the First Man, whom God made immortal, he says: "It was the justice of God that he should not choose before he approved." And book 1, chapter 12, he calls the election which we have quoted from Augustine, before works, "original" and "fatal": "original," because it would be before works; "fatal," because it would take away liberty. And in chapter 4 of that same book, against this election he says: "For what would one hope for, whom grace has already made its own? in whom, on the contrary, there is no despair, whom the violence of predestination drags? in this, fault; in that, grace has no place." And at the end of the chapter: "If one is appointed to life, another to perdition, as he asserts, as certain one of the Saints said (he certainly means Augustine), then we are not born to be judged, but judged. And he adds: If thus we are destined to the kingdom of heaven by the sole will of God, without our merits, why are we judged concerning works, if indeed, without them, we are destined to the kingdom?"[1711]

From the more recent authors indeed, Driedo, in the book On the Harmony of Free Will and Predestination, book 1, part, chapter 2 and 4, Ruard Tapper in 1, argument 1; Ruarus, a. 7, p. 245 toward the end; Sixtus Senensis, book 6 of the Sacred Library, annotations 251 and 252, confess that Faustus and other Fathers, the Massilians, and the Gauls, nay even the Greeks, taught against Augustine that election and merits were foreseen, and, against the Manichee, that liberty was to be defended. Augustine, on the other hand, that he might extol grace against Pelagius, said that it was before any merits.[1712]

1711. Faustus of Riez, De gratia et libero arbitrio, esp. lib. 2, c. 6; lib. 1, c. 12; and c. 4 of the same book, where he censures the doctrine of election ante opera and calls it "fatal" and "original."

1711. Faustus of Riez, De gratia et libero arbitrio, esp. lib. 2, c. 6; lib. 1, c. 12; and c. 4 of the same book, where he censures the doctrine of election ante opera and calls it "fatal" and "original."

1712. J. Driedo, De concordia liberi arbitrii et praedestinationis, lib. 1, p., cc. 2 & 4; Ruard Tapper, a. 7, p. 245 (circa fin.); Sixtus Senensis, Bibliotheca sacra, lib. 6, annott. 251 - 252.

From which things, for this opinion it may be gathered, that this was the mind of Augustine: that he said that election was before foreseen works, since so many Fathers thus understood him and impugned him, nor did his disciples ever answer the adversaries, truly that the opinion had been falsely imputed to him. Nay, neither did Augustine himself excuse himself anywhere by this plea, but everywhere endeavored to defend that opinion to the utmost, as is evident in the book On the Predestination of the Saints. Much better, however, is it for us to think with Augustine than with others. He who, as I said, in the matter of grace and predestination among the other Fathers of the Church, shines forth as the sun among the other lesser stars.

Add that this opinion, which we said to be Augustine's, has been defined as Catholic, and opposed to be condemned as heretical in the Church. For Peter the Deacon, book On the Incarnation, chapter 5, which is had among the works of Fulgentius, thematizes, along with many other Greek deacons and monks of the whole East of the Church - whose faith he has professed at Rome - the books of Faustus of Riez, because they teach against the doctrine of Augustine, nay even of the Apostle; the same are condemned by John Maxentius in his Response to the Epistle of Hormisdas, which is had in Celestine's sacred library; nay even Celestine, Epistle 1 to the bishops of Gaul, defends Prosper and Augustine from the suspicion of evil doctrine against the Massilians, and vigorously rebukes the Massilians themselves because they dared to note the doctrine of Augustine.[1713]

In the third place, this same opinion is proved by reason. First argument: the will of the end is prior to the will of the means in the order of causality and of reason; but the will of choosing men to glory is the will of the end, because glory is the end of merits; and the will of giving merits is the will of the means: therefore the will of giving glory is prior to the will of giving merits. Therefore God decides, before he sees the future merits which he himself will give, to give eternal life as the end. Moreover, the common will, by which he wills to give eternal life to all, does not suffice antecedently to that simple will, about which has been said sufficiently in Disputation 82, to exist, it is proved. Because the will of giving the means of grace to the predestined, that they may merit, is efficacious; nay, there is a will of giving the means efficaciously by giving glory. Besides, unless the predestined are distinguished from the reprobates by that will concerning the end, they will not be able to be distinguished by divine providence concerning the means of prevenient grace, until their consent be seen. Therefore predestination, which is a peculiar providence concerning those who are saved, will not begin except at consent; and, since of this we are the cause, the very first effects of predestination, by which the predestined begin to be distinguished from the reprobates, will be caused by themselves. That therefore the predestined may be distinguished by prevenient grace from the reprobates, it is necessary that the calling of the predestined be from an efficacious will of the end.

Caput II - That efficacious election to glory is made from foreseen merits of grace: proved by the authority of the Scholastics and by Scripture

Although this matter down to our times has been little in dispute among the Doctors, I have thought it worth the effort to set forth in the open the opposing opinion, approved by not a few, nor unlearned, professors of theology in Germany, Gaul, and Spain in our age, and to lay its foundations in this chapter and the following, which, to speak truth, have no little weight. The opinion contains two parts: the prior is, that there was no efficacious election to glory from the sole will of God before merits were foreseen from grace, but that each person was chosen to glory from merits foreseen which God by his grace was going to bring about. The posterior is, that before the merits of grace were foreseen, God had no peculiar affection of giving glory for the predestined, but that concerning all, even the reprobate, he had a common, simple, and antecedent will, by which he proposed to all equally eternal life as a reward and a common prize, and desired it.

The former part from this chapter down to chapter 12 will be confirmed by authority and by reason for us; the latter indeed we will confirm by authority and by reason in chapter 13, and demonstrate in the following chapters.

Therefore, concerning the first the following teach: Bartholomaeus Cameracensis in Dialogus, chapter 5; Peter Auriol; Francis of Mayronis; Turrianus in the little work On Election; and William of Ockham, in 1 Sent., dist. 41, q. 1, art. 1 and art. 2; and many others, who affirm that predestination has a cause, namely merits wrought by grace, understanding by the name "predestination" the will only of giving eternal life, not the preparation of the means of grace. The same was felt by Maior in 1, dist. 40, q. 2; Ockham in 1, dist. 41, q. 1, when he asserts that predestination to the kingdom of heaven was from merits of grace foreseen; for he speaks of predestination not as the other Scholastics speak, in so far as it is the preparation of the means of grace, but of the will only of giving glory, which others call "election" to the kingdom of heaven; yet he excepts some whom he calls preeminently predestined, such as the Blessed Virgin, the Apostles, and others; for he asserts that they were chosen to eternal beatitude gratuitously, not from the foreknowledge of merits. With which distinction Gabriel follows the same opinion with the same distinction, q. 2, a. 1; and Catherinus, in the little work On the Predestination of God, book 1, last chapter, and book 3, chapters 1 and 2. Nevertheless that the same reasoning applies to all, we will expressly show in the following disputation; for now it will be enough in general to prove that this efficacious election to the kingdom of heaven was made from foreseen merits which God by his grace was going to bestow.[1714]

First, therefore, this opinion is gathered from that of Matthew 25: "Come, blessed of my Father, possess the kingdom prepared for you from the foundation of the world." Where Christ offers the kingdom prepared from the foundation of the world, that is, from eternity - for by this phrase eternity also is designated - he gives the reason why they ought to receive a kingdom prepared and

1714. Bartholomaeus Cameracensis, Dialogus, c. 5; Peter Auriol; Francis of Mayronis; Turrianus, Opusc. de electione; William of Ockham, In I Sent., d. 41, q. 1, a. 1 & a. 2; Maior, In I Sent., d. 40, q. 2; Gabriel Biel, q. 2, a. 1; St. Ambrose Catharinus, Opusculum de praedestinatione Dei, lib. 1, c. vlt., lib. 3, cc. 1 - 2.

destined: "For I was hungry, and you gave me to eat," etc. By which words he not only renders the reason for which they are going to receive the kingdom, but also why they are going to receive it as prepared; which is to indicate the cause of the preparation. For if it were prepared by another reason, and not on account of the merits themselves, the cause he assigns would be vain; which by the reason that we shall assert for this opinion in chapters 9 and 11 will be more confirmed.

Nor indeed does St. John Chrysostom at all prejudice this, in Homily 54 on Matthew, where, explaining this place, he says: "Now, since he has established the reward of the saints not according to the recompense of men, but according to his own liberality, therefore before they had labored he prepared the kingdom of heaven for those who were to be saints in the world; on that account, for those whom he had before determined to be his, when they had accomplished their merits, he in due right bestowed the crown, when they were made fit for the kingdom of heaven." This, I say, in no way impugns our position, since when he says that he "constituted the reward of the saints not according to the recompense of men, but according to his own liberality," he understands that God did not constitute the reward of the kingdom of heaven according to merits from our own powers; for by the words immediately following he shows that, after the merits were accomplished (which clearly are wrought by grace), the crown is given in right.

But in the words immediately preceding he says thus: "For the kingdom of heaven is not a thing created such as the justice of men can merit, but such as the power of God could prepare. This, therefore, is 'not according to the recompense of men'." When, however, he says that he "constituted the reward according to his own liberality," he plainly denotes that he prepared it from merits of grace; for if it is a reward, it ought to be from merits. He says, however, "according to his liberality," because he too has bestowed, whence we merit that reward. Finally, when he adds that those whom he knows to be his "before the constitution of the world" he burdens with labors until they are made worthy of the kingdom, he does not signify that he knew them to be going to be his before he had decreed to give them grace and had foreseen their merits; but he says that those whom he knows will be such he has burdened with such labors that they may be made worthy of so great a reward - on no other account, indeed, except because the kingdom of heaven, as a reward, was set forth. For if he had decreed to give it gratis and from himself alone, he would vainly wait until he should make them worthy, as in cap. 9 and 11 will be proved not obscurely. There is added, that the same St. John Chrysostom, homily 6 on that place Matthew 20 "But for whom it is prepared by my Father," thus says: "It is not mine to give that, but for whom it has been prepared by labor and sweat." There he plainly teaches that the kingdom is prepared - he understands, however, by an eternal predefinition - on account of labor and sweat.[1715]

Secondly, Paul no less expressly hands on this same cause of the preparation of the kingdom of heaven through merits, in 1 Corinthians 2, with words taken from Isaiah 64: "Eye hath not seen, O God, what God hath prepared for those who love him." In which place that clause, "for those who love him," according to the common mode of speaking, indicates the cause of the preparation. For if one were to say that a king had destined a horse or a garment, or some other precious thing, for

1715. St. John Chrysostom, Homily 6 on Matthew 20 ("Sed quibus paratum est a Patre meo").

those ascending the walls of a city or fighting in such a way, he would indeed signify that he had decreed to give it in no other way than from merits in war. Yet that mode of speaking does not denote that, in the execution, God will act so as to confer it with a view to merits alone, but also that in his very definition and first decree, considered under any aspect, he had established it in no other way. For if he had destined to give it to someone gratis, then even if afterwards he understood that he had well deserved of him, he would not be said to have "prepared" it for the one who has deserved well or fought well, but to have willed to give it to Peter or to John - whom nevertheless he afterwards knew to be worthy of such a reward. The remaining words of Isaiah likewise not slightly confirm our sense. For, in place of what Paul has, "for those who love him," Isaiah according to the Vulgate has, "for those who wait for thee," and he subjoins, "Thou didst meet him that rejoiceth and doeth justice." But the Seventy render, "For he will meet those who do justice." In which place that expectation for which God prepares good things, and that meeting, manifestly signify the cause of merits.

It is objected from Paul to the Hebrews 5, who thus speaks of Christ: "He became to all who obey him the cause of salvation"; where the dative "to those who obey" does not signify a cause; for neither did Christ become the cause of salvation because someone obeyed Christ, but rather that he might obey. However, this matters little, for that very mode of speaking - "he became to those who obey the cause of salvation" - plainly indicates that Christ was the cause of their obedience and that they obey; for their salvation, of which Christ is said to be the cause, consists in their obedience. As if Paul were to say that, for those who obey - in which their salvation lies - Christ was the cause that they should obey, and therefore he is accounted the author of their salvation. But to say that God has promised or prepared the kingdom for those who love him is certainly a far different mode of speaking, by which it is plainly denoted that he has appointed the kingdom, not gratis, but on account of love and good works, and finally that he has defined the kingdom on account of another thing.

Thirdly, the same is proved from that of James 2: "Has not God chosen the poor in this world, rich in faith and heirs of the kingdom which God has promised to those who love him?" For although St. Augustine interprets this place otherwise (lib. 1 De praedestinatione Sanctorum, cap. 17), namely, that "to choose the rich in faith and heirs of the kingdom" is the same as "to make rich and to make heirs," nevertheless the context of the Apostle does not so conveniently admit that interpretation as the one which we shall immediately give. For if "to choose one rich in faith" is "to make one rich in faith," "to choose also the poor in this world" will be "to make poor in this world." But James does not signify that the Lord "made" the poor in this world (though it is true that he also "made" them by counseling them to leave all things for his sake); rather, he says that those who in this world were poor and abject - because they lacked temporal riches - but were rich in faith, he chose for himself, so as to show that the poor are not to be despised in the distribution of seats and places, since they are held in such honor by God if they are rich in faith and heirs of the kingdom. But if "the rich in faith" have been chosen, it follows that he chose their faith - not, indeed, unto grace; for unto this even those who are poor in faith and not yet heirs of the kingdom

are chosen - but unto glory. And in order to indicate that he was speaking of that eternal election, he subjoined: "which God has promised to those who love him," that is, to those rich in faith and in works.

Moreover, in the eternal prescience of God, it is vain to assign a twofold election, one before merits, another after merits; in cap. 7 and 11 this must be proved at greater length. For the present, however, let these testimonies of Scripture, alleged for this opinion, suffice.

Caput III - By what testimonies of the Fathers the same opinion is approved by others

Sixtus of Siena, in the place cited above, who thinks that the common opinion of the Greek Fathers - and even of some Latins - in this matter is opposed to St. Augustine, has gathered many testimonies of the Fathers, in order to prove that this election unto eternal life (which he himself judges to be predestination) was made from merits foreseen. First, therefore, among the Greeks is Origen, book 7 on the Epistle to the Romans, not far from the end, who about that passage of chapter 9, "Does not the potter have power, etc.," says that Jacob was chosen to be a vessel unto honor because he cleansed himself; for, seeing the purity of him from that same evil of Adam, God made him a vessel unto honor. Then St. John Chrysostom, homily 16 on the Epistle to the Romans, and Theodoret on those words, "Not only so, but also Rebecca"; likewise Theophylact and Oecumenius on that place Romans 8, "Whom he foreknew he also predestined"; and again Theophylact on that of the same chapter, "They who are called according to purpose, saints" - they plainly teach that the election was made from merits foreseen.[1716]

Yet, although the authority of these is of the greatest weight, I would not wish to confirm this opinion by it. For I think that they, as also some Latins whom we shall refer below, thought against the doctrine of St. Augustine - not, indeed, in this controversy about which we are disputing, but in another which will be treated in Disputation 90. For Augustine speaks of election not unto glory from merits of grace, but unto first grace from merits of free choice; and this Origen expressed more clearly on those words of the same chapter: "Who has resisted his will?" These Fathers, then, speak of that election unto first grace, which they thought to be given also in time from the merits of free choice; in the following chapter this will be made clear. Wherefore Driedo, Sixtus of Siena, and Ruardus - whom we cited in cap. 1 - ought not to set these Fathers in opposition to the sentence of Augustine in this question now at hand, namely, of election unto glory from merits of grace; for about this matter there never was any disagreement with Augustine, but only in the question of election unto grace, in which I shall show in the following chapter and in Disputation 91, cap. 7 and 8, that they felt differently, yet less rightly.

From the Latins, moreover, the first who is brought forward on behalf of this opinion is Ambrose on those words to the Romans 9, "Jacob I loved," where he says thus: "The prescience of God is demanded in these causes; for knowing what each of them would be, he said," etc.; and

1716. Origen, Hom. (or Comm.) in Ep. ad Romanos, lib. 7 on Rom 9; St. John Chrysostom, Homily 16 on Romans; Theodoret, Commentary on Romans 9 ("Non solum autem, sed et Rebecca"); Theophylact, Commentary on Romans 8 ("Quos praescivit, et praedestinavit"; "Qui secundum propositum vocati sunt"); Oecumenius, Commentary on Romans 8.

again: "One he chose by prescience, the other he rejected"; and below: "For he condemns no one before he sins, and he crowns no one before he conquers." And on that: "We know that to those who love God," etc., he says: "Those whom he foreknew would be devoted to himself, those he chose to receive the promised rewards." By which testimonies the aforesaid opinion can be proved much better. For in the cited words Ambrose openly speaks of election unto eternal life. Nor does it at all harm that, when he treats of election unto grace, he somewhat favors the sentence of the Greeks on those words of Paul to the Romans 8 cited, and on that of chapter 9, "I will have mercy on whom I will have mercy," when he asserts that the vocation of God, which is according to purpose, by which God is said to have mercy by preventing, namely by his grace, is given to those who are known to be about to be worthy, so as to answer the text. For although he felt quite with the Greeks about election unto grace, saying that it is from works of free choice, yet he never taught that election unto glory is made from these merits, but from merits proceeding from grace.

Nor indeed did the Greek Fathers anywhere say that election unto glory is from merits of free choice. For if they said something less correctly about grace, they did not altogether think with Pelagius, who openly taught that by our own powers we can be justified and merit eternal life - far from it; they only said that the help of grace (which they said to be necessary for justification and for the merits of eternal life) is given to us while our industry first labors and, in a certain way, merits it. But when they speak of the retribution of eternal life, which is made in time, they confess with full mouth that it is given to the sons of God, justified by his grace and, with the help of grace, well meriting it. But as for election to glory, from eter-

Had speech fallen upon this, that election was made not in the mind of God, they would plainly have said that from eternity God chose the just to the kingdom from the merits of grace. For, as we shall say below also in chapter 4, about this matter there was no controversy in the Church, nor could there be among the Fathers who at the same time teach that in time glory is given only from merits. Moreover, although those commentaries are by many judged not to be of Ambrose, nevertheless they must by all means be maintained.

In the second place Jerome is adduced, in the epistle to Hedibia, which is 150, question 10, where, explaining that of Malachi 1, "Jacob have I loved," etc., he says: "God does not save irrationally and without the truth of judgment; but on account of preceding causes: for whereas some did not receive the Son of God, others would not receive him of their own will." And below: "From their words it is shown that not nations are chosen, but the wills of men." Certainly Jerome either speaks of election to the remission of sins, which can be made from merits de congruo, not of bare free choice but with the help of grace - for to those who by faith received the Son of God and believed, he gave power to become the sons of God and to be justified - wherefore Augustine admits in epistle 105, long from the beginning, that remission of sins is not without the merits of faith, if faith obtains it; or Jerome speaks of election to eternal life - which to me is more probable - and of this he said with very good right that it is not made without the truth of judgment, and that in it there are not chosen naked men, that is, without works, but the wills of men, that is, men adorned with works and merits on account of the works and merits themselves.[1717]

It is also wont to be alleged, the same Jerome, on that of Galatians 1, "When it pleased him," etc. Yet nothing in this favors the aforesaid view of the Greeks. But on those words to the Romans 9, "On whom he wills he has mercy," he seems, with Chrysostom, to subjoin grace to human labor; which is the sentence of the Greeks; which below we shall see plainly to be against Augustine, nor sufficiently defended. Yet this ought to hinder nothing, why the aforesaid opinion about election to glory should not rightly be confirmed from Jerome, as we were just now saying of Ambrose.[1718] [1719]

In the third place Sedulius comes in, who on those words to the Romans 8, "To those who are called according to purpose," thus speaks: "According to what he purposed, he saves by faith alone those whom he foreknew would believe; and those whom he gratuitously called to salvation, he will much more glorify as working." And on the following words: "Those whom he foreknew would be devout to himself, these he chose to receive the promised rewards." And on that to the Romans 9, "That according to election," etc.: "For-knowing what each one of them was going to do, he said: that one will be worthy who will be the lesser; and he who will be the greater will be unworthy of salvation. This, as one foreknowing, he said, not as an accepter of persons." And on that of the same chapter, "Jacob have I loved," etc.: "What wonder, if justice loves innocence and also spits out iniquity, with whom things future are as if done?"[1720]

All these things I have reported, that we may see how this author favors the Greeks and the Massilienses; with whom he seems on the one hand to teach that God had regard to our own labor and industry, that he might give us his grace - although a little below he has certain words of Augustine from the Quaestio ad Simplicianum, by which the sentence of the Greeks is altogether refuted - and therefore the rest of this author can be explained in a good sense; and on the other hand let it be established in what way he speaks rightly about election to glory, when he says that "those whom he foreknew to be devout, he chose to receive the promised rewards"; and again: "If he gratuitously called to salvation, namely by his grace, those whom he knew would believe, much more will he glorify them as working"; that is, much more those whom he foreknew by his grace would work rightly, he chose to the kingdom of glory.

Fourthly, Faustus of Riez is also wont to be adduced, whose testimonies were recited in chapter 1 of this disputation; but that this author, in the Greek manner, held the threefold opinion and delivered it against Augustine in those places, we shall show below in the following chapter. Yet this I am persuaded of: if he speaks of election to eternal life, he would not speak otherwise than the rest, namely, that it was made from merits, because in time glory is to be given from merits, as we have just noted.[1721]

1717. St. Jerome, Epistle 150 to Hedibia, q. 10, on Malachi 1, "Jacob dilexi," etc.

1718. St. Jerome, Commentary on Galatians 1, "Cum placuit ei."

1719. St. Jerome, on Romans 9, "Cuius vult miseretur."

1720. Sedulius, on Romans 8 - 9: on Rom 8, "Iis qui secundum propositum vocati sunt"; on Rom 9, "Ut secundum electionem," "Iacob dilexi."

1721. Faustus of Riez; his testimonies were cited above in ch. 1 of this disputation.

Caput IV - What Augustine contends against the Pelagians and Semipelagians concerning our election

Although the authority of other Fathers ought to be of great weight with all men in every controversy, yet in this one which is now in hand, Augustine will always be one for many to me - not only because, in the judgment of all who think well, he stands out very much among the rest, but because, speaking more severely than others for the grace of God against free choice and our own merits, he affirms that this election is made from the merits of grace, and plainly shows that there is nothing common to our controversy with that, about which he disputes, namely, whether grace is given from merits; which two questions, however, not a few of the theologians of our time, without reason, confound.

I will therefore endeavor by Augustine's testimonies in a twofold way to confirm this sentence. First, I will show that in some places he taught these things in express words. Moreover, nowhere did he set the opposite, or even slightly insinuate it. But that the things which we shall bring from Augustine may be better understood, I judged it worth the effort, before all, to set forth in a few words the matter concerning which there arose, between himself and his disciples on the one part, and Cassian, the Massilienses, and the other Gauls on the other part, a dissension about the predestination of grace.

It is asked what errors Augustine attacked. In this controversy, then, about the predestination of grace, Augustine fought against two errors. First, against Pelagius and Celestius, who asserted these things about grace. First, that a man is able, by the powers of nature alone, without any other grace than that of creation, of preaching, and of commandment - which they said are given without merits - to keep the whole law, to be justified, to persevere in justice even unto death, and to attain glory. Thus it is gathered from letters 96 and 95 among Augustine, and letters 105, 106, and 107; from the Council of Milevis, canon 4; and from the African council around the times of Boniface, canon 79.[1722]

Secondly, that the grace of Christ indeed is given as interior, but that it is only useful for doing more easily and better and for accomplishing what we said; yet that it is not necessary that we simply do those things. Of this error Augustine makes mention in epistle 106, which he discovered in the writings of Pelagius after the crafty retractation which he made of his error in the Palestinian council; and against it is established canon 5 of the Council of Milevis, and 80 of the African, around the times of Boniface.[1723]

Thirdly, they said that this grace is given according to our merits, that is, from our own powers condignly, for the sake of doing better and more easily. This error Pelagius craftily retracted in the Palestinian council at Diospolis, as we shall say below, disputation 91, chapter 9, understanding by the grace of God which he admitted to be given without merits the gift of creation, as is clear from epistles 90 and 95 among Augustine, and from epistle 105.[1724]

1722. Augustine, Epistles 95 - 96, 105 - 107; Council of Milevis, can. 4; African council around the times of Boniface, can. 79.

1723. Augustine, Epistle 106; Council of Milevis, can. 5; African council, can. 80.

Against these Augustine contended that, in time, the interior grace of Christ is necessary for us, besides the commandment and the gift of creation and of preaching, that we may be able to keep all the law, to be justified, and to obtain glory; and that it is the beginning of every merit, and thus is given from no merits of ours. "To this end," he says, "we are not fit (he understands out of ourselves) to be justified and to merit glory, and therefore the help of God is necessary: at least, by asking and by the importunity of knocking let us make ourselves pleasing." For he understands the merits of free choice, and grace not second, but first, which is conferred on us from the beginning. Nor, indeed, does he deny that we can merit second grace and subsequent helps, if first we are moved by a prior grace to merit them. In this same way he spoke everywhere of the predestination of God, which in his opinion, book 1 On the Predestination of the Saints, chapter 10, is the preparation of the gifts of grace, so that it was not from foreseen merits; but as God in time gives grace without merits, so in his eternal providence he has disposed to give it without merits. For, as we shall see below, between merits and that which is given from merits, according to Augustine's sentence, God establishes the same order in the eternal disposition that he is to observe in time: so that, if he is going to give from merits, he disposes to give from merits; another order would be perverse

And just as Augustine never shows against Pelagius that glory is given from merits (for this Pelagius did not deny), but that glory as to its attainment is conferred from the merits of grace, not from the merits of free choice - as Pelagius said - so also he never shows against Pelagius that election to glory, or the will of glorifying, was in God from a foresight of merits and altogether gratuitous; but that it was from merits foreseen which he by his grace was going to bestow; and as, against Pelagius, he contends that in time grace is not given from the merits of free choice, so also he proved that the predestination of grace is not made from those. Against these - namely Pelagius and Celestius - and their disciples, the Council of Milevis and the other African councils were gathered; but the Second Council of Orange was celebrated chiefly against the Semipelagians, about whom we shall presently speak.[1726]

Now, when Pelagius, disputing about grace, asserted that it is not necessary, he was not speaking of habitual grace, or only of the grace of the remission of sins, but of the help of grace, which he denied to be necessary, but said that free choice with the knowledge of the precept suffices. And when the Fathers contended with him that he should confess that the grace of God is necessary without merits, they did not only contend that he should concede the grace of the remission of sins to be necessary (for Augustine, epistle 105, says that this is not without merits, since faith obtains it), but that he should concede the help of grace, "from which," Augustine says there, "the work of our justification begins," as we will cite in its place, which help Augustine attributes to faith.[1727]

1724. The Palestinian council at Diospolis; cf. Disputation 91, ch. 9; Augustine, Epistles 90, 95, 105.

1726. Second Council of Orange (Arausicanum II), celebrated chiefly against the Semipelagians.

1727. Augustine, Epistle 105, on the remission of sins not being without the merits of faith, if faith obtains it; and on the help of grace, from which the work of our justification begins.

Then Augustine disputed against another error, namely of those who by Prosper and Hilary are reckoned among the remains of the Pelagians and are commonly called Semipelagians. These were the Massilienses, whose head and the author of the doctrine objecting against Augustine was Cassian, as is clear from the letters of Prosper and Hilary to Augustine, which are before the book On Predestination; and from the epistle of Pope Celestine the First, where the name being suppressed, mention of him is made; and from Prosper in the book Contra Collatorem, chapter 1. Their sentence was followed by many bishops throughout Gaul, to whom Celestine wrote that epistle. Among whom Vincent of Lérins is said to have been. The objections of all of these are in Prosper Against the Doctrine of Augustine, the book To the Gallic Chapters, and the book To the Objections of Vincentians, to which Prosper himself excellently replied; nay rather, as Prosper with Hilary bears witness, many bishops throughout Africa thought ill of Augustine's doctrine.[1728]

All these men - being otherwise Catholics and religious against Pelagius and Celestius - confessed the grace of Christ, not only of preaching, but interior also, of inspiration; not only useful, but also necessary for justification, perseverance, and the merits of eternal life, without which our endeavors would not only be difficult in their success, as we claim, but would be utterly ineffectual, and vain for justification and for achieving eternal life. Nevertheless they added that there are in us certain beginnings from our own proper labor without the interior grace of Christ moving; by which we begin, so that afterwards the grace of God may help us for promoting our endeavors and desires. Hence this was their proposition: Human labor goes before grace; the assistance of grace is joined to labors of this sort; our consent - namely, from our own powers - arises first; unless it be helped by the grace of God, it is not brought forward or promoted.

This doctrine is gathered from the whole thirteenth Collation of Cassian; and from Prosper's book Contra Collatorem; and from the book De incarnatione et gratia Domini nostri Iesu Christi, chapter 8, of Peter the Deacon; and from Faustus of Riez, the whole first book; and from many places reported in the letter of Pope Hormisdas to Possessor; and from John Maxentius in the response to the same epistle which is had in the Roman Library. In all these places the doctrine is manifestly this: that grace follows upon, assists, and helps the will of man beginning of itself; that desires, endeavors, and obediences first arise from ourselves, and then that divine aid is added; as will be said below.[1729]

And in the Second Council of Orange, whose canons Leo the First by the work of Prosper - then his secretary - published, both the very style and the material against the Semipelagians, and the history of Prosper himself, indicate: the Liber Sententiarum compiled by Prosper from Augustine's doctrine shows plainly that all are from Augustine's doctrine, as we shall say below, disputation 91, chapter 11. In can. 6 it is condemned, "whoever shall say that without the grace of God mercy is given to believers, willing, desiring, endeavoring, laboring, watching, studying, asking, knocking; or who joins the help of grace to human humility or obedience." For with these words those were

1728. Prosper of Aquitaine, Contra Collatorem c. 1; Ad capitula Gallorum; Ad objectiones Vincentianas; and letters of Prosper and Hilary to Augustine; Pope Celestine I's epistle.

1729. John Cassian, Collationes (esp. Coll. 13); Prosper, Contra Collatorem; Peter the Deacon, De incarnatione et gratia Domini nostri Iesu Christi, c. 8; Faustus of Riez, book 1; Pope Hormisdas, epistle to Possessor; John Maxentius, Response to the same epistle (in the Roman Library).

speaking who were of the remnants of the Pelagians. Thus Cassian, book 10 De Incarnatione, can. 14, says that "the grace of God is given to those who ask, opened to those who knock, and found by those who seek." This error, because it had not yet been detected in the Church of God, is not mentioned in the Council of Milevis and the Africans, in which it was acted against Pelagius. Moreover, as is related in the Life of Prosper, and in the epistle prefixed to his works recently published at Louvain, Cassian took up this doctrine from the Greek Fathers, especially from Chrysostom, whom he had as teacher; yet the Massilienses asserted, opposing the authority of them all, that those Fathers understood otherwise that of Romans 9, "Not of works, but of him that calls," etc., as Prosper and Hilary report in those letters, alleging many places from Chrysostom.[1730] [1731]

He assigns to us our own penitence, which, he says, will not be worthy of the pardon of sins unless it be promoted by the grace of God; and in this manner he speaks of dispositions on our part in book 5 of the Institutes of the Coenobia, chapters 13 and 14; and, as Hilary writes (whom we shall report in Disputation 91, chapter 12), some of the Massilians granted some compunction from ourselves for our past life, whence the grace of God would take an occasion in us.[1732][1733]

From these things, by the way, it is fitting to note how, without foundation, certain more recent writers, not having sufficiently understood the mind of these Fathers, use their testimonies to prove that the work of perfect contrition, formed by charity from the help of prevenient grace, does not of itself suffice for justification without some new grace and favor. For these Fathers speak of penitence brought forth from one's own powers - something which, apart from Pelagius, no one said suffices for justification. Of the other sort we shall dispute in its own place.

And the same doctrine is had in St. John Chrysostom: homily 2 on Psalm 50; homily 12 on the Epistle to the Hebrews, in the moral exposition; the homily, "No one is harmed except by himself," not much before the end, speaking of the three boys; homily 13 on John, on "Jesus turned," etc.; and sermon 1 on the words of the Lord, "Having the same spirit." With him also the Greek Fathers cited above have felt the same, for the first opinion, as from their words is clear: they all teach, therefore, that we begin by our own industry, then the help of the grace of God follows, so that at length we may be justified, and, persevering in grace, may merit the kingdom of heaven.[1734]

And likewise Faustus of Riez, in book 1 on grace and free will, and especially chapter 14, strongly proves the necessity of grace against Pelagius; nor does he teach this only in fallen nature, but even in an integral state it was necessary, so that man might persevere, as is seen in book 1; and that the Massilians themselves affirmed this, Hilary testifies in that epistle cited. He says, in De gratia Dei, chapter 17: "It invites the willing, draws the desiring, lifts up the one who strives"; and below he

1730. Second Council of Orange, can. 6: condemnation of those who make mercy given without grace to believers, willing, desiring, etc., or who subjoin grace's help to human humility/obedience.

1731. The Life of Prosper and the epistle prefixed to his works (recently published at Louvain) relate that Cassian took this doctrine from Greek Fathers, especially St. John Chrysostom.

1732. John Cassian, De institutis coenobiorum V.13 - 14; XII; and Collationes 13, passim.

1733. Hilary and Prosper to Augustine; see the epistles prefixed to Prosper's works.

1734. St. John Chrysostom, Hom. 2 in Ps. 50; Hom. 12 in Hebr., in the moral exposition; Hom. "Nemo laeditur nisi a seipso" (toward the end, on the Three Boys); Hom. 13 in Ioann. on "Conversus Iesus"; Sermo 1 De verbis Domini, "Habentes eundem spiritum."

says that "the grace of God first asks from us the obedience of the precept, so that, as it were by a little handle, it may take hold of us"; and in book 2, chapter [sc. on penitential remedies], among the remedies for obtaining pardon, he assigns from our side our own penitence, which, he says, will not be condign for the pardon of sins unless it be promoted by the grace of God. In this way he speaks of the dispositions on our part.[1735]

In that place he says that we are not (of ourselves) competent to be justified and to be glorified, and therefore the help of God is necessary: "At least," he says, "let us please by the opportunity of seeking."

The opinion of this author Peter the Deacon gathers when he writes, in De incarnatione et gratia Domini nostri Iesu Christi, chapter 8: "We anathematize the books of Faustus, bishop in Gaul, who came forth from the monastery of Lérins; which books, written against the sentence of predestination, we in no way doubt. In which, not only coming into contradiction against these holy Fathers, but also against the very Apostle himself, he subjoins to human labor the help of grace," etc.[1736]

Likewise in the Council of Orange, whose canons were, by the work of Leo I and then-secretary Prosper, published - as both the very style and the matter against the Semipelagians, and the history of the time itself, indicate; and that they are all from the doctrine of Augustine, the book of Sentences collected by Prosper clearly shows, as we shall say in Disputation 91, chapter 11 - the same is condemned in canon 6: it condemns the one "who says that the mercy of God is given without the grace of God to those who believe, will, desire, attempt, labor, keep watch, study, ask, knock; or who subjoins the help of grace to human humility or obedience." For in these very words those were using themselves who were of the remnants of the Pelagians.[1737]

Thus Cassian in Collation 13, and likewise in book 12 of the Institutes of the Coenobia, chapters 13 and 14, says that grace is given to those who ask, is opened to those who knock, and is found by those who seek.[1738] This error, because it had not yet been detected in the Church of God, is not mentioned in the Councils of Milevis and of Africa in which there was action against Pelagius. Moreover, as is related in the Life of Prosper and in the epistle prefixed to his works, recently published at Louvain, Cassian took this doctrine from the Greek Fathers, especially from St. John Chrysostom, whom he had as his master. But Augustine opposed the authority of them all to the Massilians, or else that they understood that passage otherwise, Romans 9: "Not of works, but of him that calls," etc., as Prosper and Hilary report in those letters. Notable places of Chrysostom are: homily 40 on Genesis toward the end, and homily 27 on Genesis, column 8, when he speaks of penitence; for this author grants certain penitence from ourselves, and therefore love and hope, which nevertheless of themselves do not suffice to wash away sin unless the grace of God be added,

1735. Faustus of Riez, De gratia Dei c. 17; and De libero arbitrio, esp. book 1 - 2, c. 14.

1736. Peter the Deacon, De incarnatione et gratia Domini nostri Iesu Christi, c. 8 (against Faustus of Riez).

1737. Second Council of Orange (529), can. 6; commonly held to have been issued under Leo I's authority and, by the work of Prosper, then secretary; the style and matter target the Semipelagians, and Prosper's Sentences from Augustine confirm the doctrine.

1738. Cassian, Collatio 13; and De institutis coenobiorum XII, cc. 13 - 14, on grace being given to those who ask, knock, and seek.

which may move us to more perfect acts. The same was taught by Cassian in Collation 20, chapter 8, where among the remedies for obtaining pardon he assigns from our side our own penitence, which, he says, will not be worthy of the pardon of sins unless it be promoted by the grace of God; and thus he speaks of dispositions on our part.[1739][1740][1741][1742]

Caput V - Some notes by which the opinion of the Semipelagians is made clearer

First, therefore, it must be observed that - just as we said at the beginning - these authors, otherwise pious and religious, did not think of grace as Pelagius and Caelestius taught: for they openly enough professed that it is necessary, not only for external preaching but also for internal inspiration; not only useful, but also necessary for justification, perseverance, and the merits of eternal life - without which our endeavors would not only with difficulty attain what we contend, but would indeed be altogether vain and empty for justification and for meriting eternal life.

Nevertheless, they added that in us there are certain beginnings from our own proper labor without any grace of Christ moving within us, by which we begin, so that afterwards the grace of God be granted to us to promote our endeavors and desires. Therefore this was one of their propositions: To human labor grace is subjoined; and another like it: Our endeavors, that is, from our own powers, are ineffectual unless they be aided and promoted by the grace of God. This doctrine is gathered from the whole of Cassian's Collation 13, and from the book of Prosper against the Collator, and from book 12 of the Institutes of the Coenobia, chapters 13 and 14, and from Faustus of Riez throughout book 1 and 2 On Grace and Free Will, in many places; likewise from what Pope Hormisdas reports in his epistle to Possessor, and from John Maxentius in the Response to that epistle, which is had in volume 1 of the sacred Bibliotheca. But in book 1, chapter 17, and in the places cited in chapter 1, he clearly hands down this doctrine: "It invites the willing, draws the desiring, lifts up the one who strives"; and below he says that "the grace of God first asks from us the obedience of the precept, so that, as it were by a little handle, it may take hold of us"; and in the second book, chapter [sc. on remedies], among the remedies for obtaining pardon he assigns from our part our own penitence, which, he says, will not be worthy of the pardon of sins unless it be promoted by the grace of God. In this way he speaks of dispositions on our part.[1743][1735][1744][1745]

Second, note that, according to their sentiment, this beginning thus precedes from us: yet some were thinking it was not necessary always to precede, but that sometimes even the divine grace is prior. Thus plainly teaches Cassian - this sect's chief author - in Collation 13, chapter 12 near the

1739. The Life of Prosper and the epistle prefixed to his works (recently published at Louvain) relate that Cassian drew this doctrine from the Greek Fathers, especially St. John Chrysostom.

1740. Prosper of Aquitaine and Hilary, epistles to Augustine, reporting Romans 9: "Not of works, but of him that calls."

1744. Pope Hormisdas, Epistle to Possessor.

1745. John Maxentius, Response to the same epistle (in the Roman Library).

end, and chapter 15, and he confirms it by various testimonies of Scripture. For he asserts that Zacchaeus first knocked and asked before grace was given to him that he might knock, and thus by his solicitude anticipated Christ; but that Matthew and Paul and other Apostles were anticipated by the grace of God. Wherefore that Collation 13, chapter 15 thus begins: "And so the grace of God always cooperates with our will for the good part, and it helps it in all things, protects, and defends it, so that sometimes also it either exacts or expects certain endeavors of a good will." Where, when he had said that God always helps and promotes our efforts, he did not say "always" but "sometimes" he expects them; and in chapter 17 he says that God is the "undertaker" of some, because he helps their endeavors; but the "savior" of others, because he altogether anticipates them. This doctrine, however, Prosper eruditely and acutely refutes in his book Against the Collator, chapter 13; and from this variety in that same book, chapter 33, Prosper noted that Cassian had taught things contrary to himself. Now the Massilian orations which defended his opinion, which we shall report in Disputation 91, chapter 17, have some weight: they prove that our free choice always begins, and then the grace of God promotes its endeavors. Prosper also reports in that book the words of the Collator, Collation 13, chapter 3, by which he was attributing the beginnings of a good will to God; and against him he thus says: "And indeed we think that you are taking precautions against the calumnies of the Pelagians, if you concede to us, in part, that which is to be held concerning the universality of those who are called; but you have full agreement neither with the heretics nor with the Catholics. They maintain the beginnings of free will in all the just works of men; we always believe that the beginnings of good thoughts proceed from God; but you have weakly discovered I-know-not-what third thing, by which you neither gain the assent of our adversaries nor remain in the understanding of our own."[17461747]

Third, it must be premised that among these Massilians there were some who even confessed that the beginning of a good work is from God and from his grace through Christ, as Augustine reports, book 1 On the Predestination of the Saints, chapter 1: "They have come (he says of some Massilians) even to confess that the wills of men are anticipated by the grace of God, and that for no good work, either to be begun or to be completed, is anyone sufficient to himself; therefore, with this retained, to which they have come, they differ very much from the Pelagian error. Accordingly, if they walk in it, let them rejoice in him who gives understanding; if they think otherwise concerning predestination, he himself will also reveal it to them." From which someone perhaps will think that therefore they were thinking wrongly concerning predestination, not because they were saying that grace was prepared for us from eternity to be subjoined to human labor - since they were saying that in time also it is the beginning of a good work - but because they were confessing that election unto glory had been made from the merits of grace. For what else contrary to Augustine's true sentiment could they have thought, if he already confessed that the beginning of a good work is not from us?

1746. Cassian, Collatio 13, cc. 12, 15, 17 (on prevenience and cooperation of grace).

1747. Prosper, Contra collatorem c. 13, citing the Collator's own words (Coll. 13, c. 3), and replying with the "tertium" reproach.

But this is of no moment, although at the first glance to those who have read little about this error it may appear rather difficult. It must therefore be observed that these indeed were still involved in the same error, namely, that grace was to be subjoined to industry or human labor; and for that reason, concerning the doctrine of predestination, they were deceived, asserting that God by his eternal prescience had prepared grace for those who would somehow begin from themselves. But concerning election unto eternal life from the merits of grace, they taught nothing against Augustine, as is manifest from that whole book On the Predestination of the Saints and what follows; where Augustine never refutes their opinion that eternal life is prepared from the merits of grace, but that they were confessing some beginning from ourselves to which grace is to be subjoined. He erred, therefore, but less than others - not only the Pelagians, but also such as were said to be of the remnants - for the others confessed many and various works, even external, from ourselves, on account of which grace would be given us, such as labors, vigils, observances even of precepts, as is seen in Cassian in the places cited. But indeed, the one who seemed to Augustine to think better granted to us only this beginning: namely, to be willing to be healed. For they did not reckon this will among the works whose beginning he said is from the grace of God. Of these, then, Hilary thus reports, writing to Augustine in that epistle cited, a little after the beginning: "But as to any work, either to be begun or to be completed, they hold that no one is sufficient to himself. Nor do they count among the works of healing any man's terrified will to be healed. For when it is said, 'Believe and you shall be saved,' they assert that one thing is required, another offered: so that, for that which is required, if it shall have been rendered, that which is offered may thereafter be bestowed. It is not consequent, they think, that faith be required of him whose nature has by the Creator's will been granted the capacity; and they do not think that nature so depraved or extinguished that it ought not or cannot will to be healed." So far Hilary. Where he says that they think the following thing not consequent - namely, that from what is said, "Believe and you shall be saved," one should infer that faith is to be required of each of us from our own powers - this by no reason follows.[1748]

We have also from Hilary that, among the good works by which, according to their sentence, men are justified, there is not to be reckoned either faith, or prayer, or the will by which one desires to be healed; and to this beginning from ourselves they subjoined grace, which they also affirmed to be necessary for the beginnings of the subsequent works, and not only for bringing them to completion.

Indeed, they compared the grace of God to a public fountain, from which anyone who wished could draw water; or to the sun, which illumines all, provided that they open their eyes; or to a most generous physician, who is prepared first to cure all those willing, as will appear below from Prosper's epistle. Therefore, with the remaining Semipelagians, they conspired in this one thing: that from ourselves there is some beginning, in view of which God confers his grace; and for that reason Augustine, straightway in chapter 2 of that book, begins to prove against them that both faith and the will of salvation are to be numbered among the gifts of grace, so that he may thus

1748. Hilary's epistle to Augustine (cited above), arguing that, from "Believe and you shall be saved," it does not follow that faith is to be exacted from our own powers.

correct their error concerning predestination, by which they were saying that God by his eternal predestination had prepared grace for us on account of faith or on account of that will of salvation.[17491750]

Fourth, it is most to be noted that these Semipelagians never said that that beginning from ourselves, to which they subjoined grace, was meritorious condignly, so that grace should be given back as condignly due. For who would not see that thus it would not be grace? But neither did they say, moreover, that the grace of God is most certainly promised to us when we begin; nor will you find this noted in any ancient author. Nay rather, Cassian - who was the author of this sect in the West and its most eager defender - in book 12 of the Institutes...

Cassian in the Institutes of the Coenobia, c. 11 and 13, near the end, plainly confesses that neither that beginning nor any work of ours is condign to divine mercy and grace. Wherefore in c. 14 he speaks thus: "For we say, according to the Savior's sentence, that indeed it is given to those who ask, and opened to those who knock; but that our asking, our seeking, and our knocking are not condign, unless the mercy of God gives that which we ask," etc.; "for the occasion of good will having been set before us, the highest is ready to be bestowed and to be joined to these things." He had said the same in c. 11; and in Conference 13, c. 13. Nor will you find anywhere that the Massilians assign a condign beginning on our part, or that they erred by saying that God most surely promised grace to those who, by their own powers, offer good will; they said only that His mercy is at hand for those who are willing.[17511752]

I admit indeed that Augustine, Prosper, and Fulgentius are wont to argue against them that grace would not be grace if it were given to anyone on account of some very small merit and beginning on our part, because it would by then be rendered as a debt, which they deem absurd. But they themselves do not condemn a debt arising from promise; for this does not take away the ratio of grace: if the promise was gratuitous, the gift will be as well; but they infer that it would not be grace, because it would be rendered rather to the beginning and to our merit; which rightly follows, even if our beginning and merit were not condign, as will be proved in Disputation 91, c. 15. It is not, therefore, against the ratio of grace that it be given on account of a promise, and on the score of the promise it cannot be denied; but it is against grace that it be given on account of some merit, even the least, as we will show in the same place: for in that case it is rendered; whereas if no merit at all had preceded, it would not be a rendering.[1753]

For this reason the Massilians did not hesitate to call "called gratuitously" those whom God calls by His grace, even if they supply a beginning by their own diligence: because if at the beginning there was no condignity, it seemed to them that the ratio of grace was not evacuated. And that they called such persons "gratuitously called" is gathered from Prosper in that epistle, when he reports their words, which we shall quote below. Cassian too said this most clearly in Conference 13, c. 13,

1749. Prosper's letter comparing grace to a fountain, sun, and physician.
1750. Augustine, De praedestinatione sanctorum, esp. c. 1 - 2 (faith and the will of salvation among the gifts of grace).
1751. Cassian, De institutis coenobiorum c. 11; 13; 14.
1752. Cassian, Collatio 13, c. 13.
1753. Vazquez, Disputatio 91, c. 8 - 11; 14 - 15.

with these words: "While God imparts grace under the color of a certain desire and toil, nevertheless the grace of God remains gratuitous, when He attributes with inestimable bounty to such small endeavors and slight efforts so great a glory of immortality, so great gifts of everlasting beatitude" - where he calls it grace even if it be given on the occasion of our labor, because the labor is minimal and not condign.[17541752]

Whether this error has anything in common with the opinion of certain Scholastics who, down to our own times, assert that, if one does what lies within him, God gives His grace; and whether the Greek Fathers can in any way be excused; and by what reasoning this error was condemned - we shall speak in Disputation 91, c. 9, 10, and 11. For the present, let these things suffice, that we may understand Augustine's mind in this question.[1753]

Finally it must be observed that by the name of grace these Massilians do not understand the remission of sins and habitual grace, by which we are formally justified, but all the helps of grace, by which we are promoted and disposed to justification. For they did not attempt to contend that by our free choice alone we can have the ultimate disposition whereby sins are remitted to us, but only some disposition on account of which the helps of grace are granted to us toward a greater disposition of justification; as we shall explain in that same Disputation 91, c. 8, 9, 10, and 11. Nor indeed did the Massilians teach so foolishly as to assert that prayer, faith, or the will of salvation, or the will to believe, or similar works which they said are only beginnings of justification, are the ultimate disposition to habitual grace or to the remission of sins. But, as it is clear from the things we have so far alleged from them, they conceded only certain very minimal beginnings, which God by the help of grace would promote all the way to justification: and in this sense they strive to refute Augustine and his disciples; and the reasons which Augustine and others frame against the Massilians prove that not even the least beginning, even remotely, can be on our part, as we shall see in Disputation 91, cap. 14 and 15.[1753]

Moreover, it seemed necessary to them to call this beginning, which they said precedes on our part, some kind of merit; because by that they thought other gifts are impetrated from God; for that by which something is impetrated from God ought to be called impetratory merit, which now the Scholastics name congruous. And some also assert that it cannot be called congruous merit, nor impetratory, which is in a sinner, against Augustine's doctrine in epistle 105, where, in order to prove against Pelagius that some grace must be conceded without merits, he says that this cannot be the grace of the remission of sins: he gives the reason in these words: "Nor is the remission of sins without some merit, if faith impetrates this; for faith is not no merit, by which that man was saying, 'God, be propitious to me a sinner'." Therefore Augustine concedes some merit in a sinner, but from the aid of God.[1755]

1754. Prosper, the epistle in which he reports the Massilians' words (see above).
1752. Cassian, Collatio 13, c. 13.
1753. Vazquez, Disputatio 91, c. 8 - 11; 14 - 15.
1753. Vazquez, Disputatio 91, c. 8 - 11; 14 - 15.
1755. Augustine, Epist. 105.

From all these things it is clear not only that there is a manifest difference between Pelagians and Semipelagians, but also what Augustine is arguing when he disputes about predestination against both and teaches that the election was not made from the foreknowledge of any merits. For he never disputes with them whether the election to glory was made from merits of grace foreseen, but whether grace was prepared from some good beginning, or merit foreseen, of free choice (*liberum arbitrium*). For since they said that in time grace is given from merits, or must be joined to human labor, or devotion, or faith (*fides*), or obedience, it would necessarily follow that one must speak in the same way about eternal election; namely, that God had regard to all those things in view of which He was going to give grace in time. Therefore Augustine proves that eternal election was made so gratuitously that God did not regard any beginning on our part: I mean the election about which there was controversy with the Pelagians and Semipelagians - namely, of grace; because they would join God's grace in time to human labor; and thus too they would be forced to say that in eternity it was made on account of human labor.

For there was one and the same controversy between Augustine and the Pelagians or Semipelagians about grace and about predestination (*praedestinatio*): nor did they teach any other error about predestination than about grace. For this reason Peter the Deacon, whose words we reported in the preceding chapter, said that the doctrine of Faustus against the sentence of predestination which the Fathers taught (he means Augustine and his disciples) and against the Apostle had been written. He immediately gives the reason, because he subjoined grace to human labor and obedience. On the other hand, when it was a question of glory, there was little dissension between the Semipelagians and Augustine: for all of them were bearing that it is given in time from merits of grace, and must be joined to labor by grace; therefore they themselves, which Augustine consistently did, ought to have said that election to glory was made with a view to merits; for in time it was to be conferred in consideration of those.

For, as we shall say below, if once Augustine had conceded to the Semipelagians that grace in time is conferred on account of some labor of ours or our good will (*voluntas*), he would never have denied that in eternal election also it was so determined that it should be given from labor, just as formerly he himself held, as we shall set forth in c. 7. For when he asserted that grace is given from the merits of faith, because he thought faith was not a gift of God, he also said that in eternal election God prepared grace from faith; indeed that He chose faith itself. Augustine commends this also in other places, as we shall see in c. 7 of this disputation.[1756][1757][5][1758][1759]

Further, if we are willing to attend even a little, we shall easily discover in the words of Prosper and of the Massilians that they erred in saying that the beginnings are from us and that grace is given to us from those beginnings. For, first, this error is contained openly in their words when they say that salvation is proposed to all, so that whoever wishes to approach may be saved; thereby they suppose the disposing of the will of salvation to be from ourselves, as we have shown

1756. Peter the Deacon, cited in the preceding chapter, on the doctrine of Faustus against the predestination taught by the Fathers and against the Apostle.

1757. Augustine, De praedestinatione sanctorum, esp. lib. 1; c. 4; 10.

1758. Augustine, De bono perseverantiae.

1759. Augustine, Ad Simplicianum, lib. 1, quaest. 2.

above. Next, the same error is in what they add, that God, before the constitution of the world, foresaw those who would believe, and those who by the grace of God would thereafter remain in that faith, and predestined to His kingdom those whom, being gratuitously called, He foresaw would be worthy of the future election, to depart from this life with a good end. By these words Prosper does not seem to mark any other error of theirs than that they said those were elected to the kingdom of heaven whom, being gratuitously called, God knew would be worthy of this election.

Lastly, concerning the Semipelagians in general, Prosper gathers in the same epistle in these words: that all are found to err alike in this one sentence, namely, that they received the profession of the predestination of God according to foreknowledge, as though thus God made some vessels for honor and others for contumely, because He foresaw them by His diverse counsels. And he added the particle "almost," to temper the variety of their mode of speaking; because although all taught truly that the beginning is from us, yet some ascribed more, others less, to free choice; as we have seen above. And thus, though varying more or less about our beginning, yet all conspired in the same opinion, that the beginning is from us. Now, when they supposed predestination in general to be according to foreknowledge, by the name predestination they understood the preparation of grace (as Augustine defines it), not the will of glorifying; and by foreknowledge they understood not the merits of grace unto attaining life, but the good of free choice, as Prosper had more than once inculcated.

As to the rest, if some often used the words "election to honor" and "vessels of contumely" of one's own purpose, if they understood this of the end of the whole life, namely, that by the grace of God in the kingdom of heaven there are vessels for honor, but by sinful purpose and internal punishment there are vessels for contumely, they were not in error: for although to be made a vessel for honor in some is the work of God's grace as commanding, nevertheless it is also by this very grace that a man, sinning by contempt, makes himself to be a vessel for dishonor. Thus speaks Paul to Timothy: "If anyone shall have cleansed himself from these, he shall be a vessel unto honor, sanctified and useful." And thus, in like manner, some consent to grace and are advanced to honor; others, by resisting grace, make themselves vessels unto dishonor.

Now certain later theologians think that Prosper made mention of other Semipelagians in these words: "But some of them depart so little from Pelagian paths that they ascribe all progress, even with the grace of Christ, which is made in every good work and in all the merits of good conversation, to the beginnings of good will; and they are admonished by grace as it were from the outside, to this end that they may use the powers of their own will; so that they set down in this sense that grace confers honors, indeed, but does not cause worthy men; that it offers helps, indeed, but leaves to free choice, reasonings, and counsels of men to determine the good; and from the knowledge of God and of His gifts which are in us they suppose that we ourselves can draw the beginnings of better wills." From these words they collect that, together with the Pelagians in some sense, these men thought that such grace is given to all; but they did not concede equal assistance to all. But to be sure the very addition Prosper plainly shows, namely, that they acknowledged that those attain the grace of Christ who accept this grace and consent to it; and that they attributed to

this grace the justifying of men and the crowning with glory; yet they subjoined that the beginning is ours. Augustine and the other Fathers refute this: that grace which in Christ causes us to be born again, to persevere, through a natural faculty, namely by asking, seeking, and knocking, is not to be obtained unless it be accepted from God; and it is not obtained from ourselves: rather we are to be born anew by grace, which alone sufficiently begins salvation, imparting the initial motion, not merely preventing.

From this is clear what Augustine constantly urges against Pelagius: that in his followers among the Semipelagians it is seen that they assign some grace apart from merits, as a gift of creation; and they call it rational, so that it may be called both initial and rational; as is clear from the very words and their citations.

Finally, he gathers, concerning the Semipelagians, from Prosper in that epistle, in these words: that all in common find fault in this, with one sentence, that they received the profession of predestination according to foreknowledge: "that God in this has made some vessels for honor, others for contumely, as if by His diverse counsels He foresees." Therefore he added the particle "almost," that he might temper the variety of their expressions: because, although all equally taught that the beginning is from us, yet some attributed more, others less, to free choice; as we have said. Hence, varying more or less around our beginning, all nevertheless conspired in one opinion, that the beginning was from us. And when he says that they "received the profession of predestination according to foreknowledge," he understands that, by their own stating, predestination was said to be made according to foreknowledge of our free choice; but not, as Augustine in the book to Simplician, q. 2, teaches, according to the foreknowledge of the grace by which we attain life, or of the divine will of glorifying. For they referred predestination to the preparation of grace in time, not to the eternal purpose of glory.

As to what remains, if some frequently spoke about "election to honor" and "vessels of contumely" from one's own purpose, if they understood it about the end of the whole life, they were not at fault: for although to be made a vessel unto honor in God's kingdom is by the grace of God, nevertheless from one's own sinful purpose there is a becoming of a vessel unto contumely. Hence also Paul says to Timothy: "If anyone shall have cleansed himself from these, he shall be a vessel unto honor, sanctified and useful" - so that, as regards honor, some, consenting to grace, make themselves vessels unto honor; as regards contumely, those who resist grace make themselves vessels unto contumely.

... they erred in this, that they said the beginnings are from us, and that grace is given to us because of them. First, this error is openly contained in their words when they say that salvation is proposed to all, so that whoever wishes to approach may be saved: for they posited the will of salvation as from us, as we showed above. Next, the same error lies in what they add, that those who were going to believe (namely, from themselves), or were going to remain in faith with the help of God's grace - that is, in a faith to be advanced by God's grace which had been begun by their own powers (for this was their common opinion, that God helps our efforts, and follows up with his grace the beginnings of faith which are from us) - that these, I say, were to be advanced by the grace of God unto justification: which Augustine expressly refutes in the books cited, written in

answer to Prosper and Hilary.[1760] But what they say in the words that follow - that those who were foreseen to persevere by this grace of God were elected to the kingdom of heaven - he nowhere disapproves. Nor does it much matter that the Massilians called "freely called" those who were chosen to the kingdom, so that we might say they denied that the beginning of grace is from us. For although indeed they asserted that the beginning of grace precedes from us, nevertheless, as we saw a little above, they said that the grace of God is given entirely gratis; and therefore they called those "freely called."

Then the aforesaid theologians think Prosper remembered other Semi-Pelagians in these words: "But some of these do not so far decline from the Pelagian paths that, when they are forced to confess that grace of Christ which anticipates all human merits - since, if it is rendered to merits, in vain is it called grace - they want this condition to belong to each individual man, in which one, with no previous merits (for he did not yet exist), is established by the Creator's grace as of free choice and rational nature, so that, by the discernment of good and evil, and to the knowledge of God, and to the obedience of his commandments, they may be able to direct their will." From which they gather that these men felt altogether with Pelagius, in that they granted grace only of creation. But they are mistaken: for from the words which Prosper immediately added it is manifest that they also conceded the grace of Christ, besides this grace of creation, by which men are justified and attain to glory. For he subjoins of them: "And that to this grace, by which we are reborn in Christ, one comes through the natural faculty, namely, by asking, seeking, knocking; and therefore he receives, therefore he finds, therefore he enters, because by a good use of nature an initial grace works that he may come to the just, saving grace." They therefore admitted, against Pelagius, the grace of Christ as necessary for justification over and above the gift of creation; but in co-operators they seemed like other Semi-Pelagians: for, in order to assign some grace without any merits, in addition to the gift of creation they fled with Pelagius; and this they called "initial" and "rational," as is plain from the words cited.

Finally, concerning all the Semi-Pelagians together Prosper gathers at the end of the epistle in these words: "Plainly a like measure is found in all, and one sentence, by which they received the purpose and predestination of God according to foreknowledge: so that for this reason God has made some vessels unto honor, others vessels unto contumely, because he foresaw the end of each man." He added the particle "plainly," which moderates the universality of that expression, because although all in very truth taught that the beginning is from us, some nevertheless attributed more, others less, to free choice, as we saw above. And so, while varying more or less about our beginning, all conspired into one sentence, that the beginning is from us. Now when he says "they received the purpose according to foreknowledge," he understands that, in their opinion, justification was made from the foreknowledge of the good use of free will: for "purpose" in Augustine, as is clear from book 1 to Simplicianus, question 2, is the purpose of justification.[1761] But when they also spoke of predestination according to foreknowledge, by the name "predestination"

1760. Augustine, the books cited above in which he replies to Prosper and to Hilary: namely, De praedestinatione sanctorum and De bono perseverantiae, addressed to them.

1761. St. Augustine, Ad Simplicianum, lib. 1, quaest. 2.

they understood the preparation of grace, as Augustine defines it in book 1 On the Predestination of the Saints, chapter 10, not the will of glorifying; and by "foreknowledge" they did not mean the merits of grace unto eternal life, but the good use of free will, as Prosper had often inculcated.[1762]

As to the rest: that some were made vessels unto honor, others vessels unto contumely from a foreseen end - if they understood this of the end of the whole life, namely, that with God's grace they would be vessels unto honor in the kingdom of heaven, but from their own sin, in eternal punishment, vessels unto contumely - they did not err. For although a man is said to be made a vessel unto honor by the grace of God which goes before him, he himself, aided by this grace and giving consent to it, is also said to make himself a vessel unto honor. Thus speaks Paul, 2 Timothy 2: "If, therefore, anyone shall have cleansed himself from these things, he shall be a vessel unto honor, sanctified and useful." So then each one, freely consenting and aided by it, is said to cleanse and sanctify himself; 1 John 3: "Everyone who has this hope in him sanctifies himself": thus also he is said to make himself a vessel sanctified and cleansed for honor - except that, in order that such a vessel be made, the gratuitous will of God and grace goes before him, by which he may be cleansed and sanctified, so that he may be a vessel unto honor. And therefore at Romans 9 Paul says that God could freely make from the same mass of Adam one vessel unto honor - namely, by preventing a man with his congruous grace, that he might be sanctified - and another unto contumely - often by permitting that the man himself should defile himself with sins - whence he would be appointed unto contumely and punishment; and at least as to the vessel of contumely, there is no doubt that each one becomes such by the merit of his own sin. For in the first permission, until he consents to sin, he is not called a vessel unto contumely. In this latter part of the sentence, therefore, the Semi-Pelagians judged rightly, nor were they ever noted by Augustine in that point.

Caput VI - Augustine holds that election to glory is made from foreseen merits of grace

Perhaps it will seem to someone that we have digressed more than was just up to this point. But since among the Schoolmen these matters are not yet sufficiently well-worn and public, and, through ignorance of them, anyone does not hesitate to drag Augustine into his own opinion, and since many questions daily arise about the divine election and about the predestination of grace, it was necessary to explain these points thus minutely and in detail, so that we may be able more easily to understand the ancient Fathers of the Church and to find the safer way. Meanwhile, let us, as we promised, confirm by testimonies of Augustine the election unto eternal life from the forevision of the merits of grace.

But before we bring those forward, it must be premised that, although election (as we said in the exposition of the article, from the doctrine of St. Thomas) is the love of one rather than another, nevertheless in Augustine a twofold election is found: one with a prior examination of those to be chosen and rejected; and this is according to justice, namely, that he is preferred who is found worthier, and he is rejected who is found less worthy: the other, however, with no examination premised; and this is that of grace - yet it is still of one rather than another: for this is intrinsic and

1762. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 10.

proper to any election precisely as it is election; whereas to have a prior examination is accidental. For one can also choose someone else wholly gratuitously from among many, in order to confer his gifts upon him rather than upon others. One can likewise choose one above others, who may seem more worthy to him, for a reward and a crown. Now in Augustine I manifestly show both elections, yet to different ends; and from him I also demonstrate the opinion set forth above.

First, therefore, in book 1 to Simplicianus, question 2, a little before the middle, he thus interprets that place, Romans 9, "When not yet born." When those two brothers Jacob and Esau were not yet born, nor had they done any good from themselves on account of which one, rather than the other, upon a prior examination from his own good works, might be chosen unto justification - so that the purpose of justification should be from works - since, I say, it was not thus, it was done, not from works of free choice, but from grace, that the lesser was preferred to the greater: he understands this about the grace of justification. And he concludes in these words: "Therefore not according to election does the purpose of God stand, but according to purpose is there election; that is, not because God finds good works in men, by which he may choose, therefore the purpose of justification remains; but because that remains, that he justify believers, therefore he finds works which he now chooses for the kingdom of heaven: for if there were not election, there would not be the elect; nor would it be rightly said, 'Who shall accuse against the elect of God?' Yet election does not precede justification, but with election comes justification. For no one is chosen unless as set apart from him who is rejected: whence what is said, that God chose us before the foundation of the world, I do not see how it is said, unless by foreknowledge. But here where it is said to him, 'not from works, but from him who calls,' etc., he wished it to be understood not of the election of merits, which come after justification by grace, but of the liberality of God's gifts, lest anyone be puffed up about his works." Thus Augustine.[1761]

Concerning these points two things are to be noted. One is that that testimony of Romans 8, "Who shall accuse against the elect of God?" can be explained of those elected to grace without an examination of works; and especially that, Ephesians 1, "He chose us in him," must necessarily be understood of this election; as Augustine himself, book 1 On the Predestination of the Saints, chapter 19, interprets; for it is added, "that we should be holy," which cannot be referred to an election unto glory made from merits. This, however, does not hinder that, in this testimony and in Augustine's doctrine, the aforesaid opinion be approved: for now we are arguing not from Scripture, but from Augustine's authority. The other thing to be observed is that here Augustine is not speaking of the election which God is going to make in time, whereby, as from a dragnet, he will choose the good into vessels, and cast the bad out, but of the eternal election of God, which, according to the foreknowledge of merits, was made from eternity. For thus he plainly bears witness when he says, "I do not see how it is said unless by the foreknowledge of merits"; and to these points he aptly tries to apply that testimony, Ephesians 1. Then also, when he speaks of election and of the elect, of whom it is rightly said, "Who shall accuse against the elect of God?" - which cannot be understood of those elected after they shall have been elected on the day of judgment - plainly it must be understood of those elected by an eternal election. Since, therefore,

1761. St. Augustine, Ad Simplicianum, lib. 1, quaest. 2.

the election (arising, namely, from the purpose to justify - for this purpose the whole question understands) has sprung from the purpose, and thus men were elected by God unto eternal life, because God, after justification, found good works in men which he would choose unto glory; and since he says that in that place at Romans 9, "not from works," he is not speaking about the election of merits which is made after justification; and finally, that no one is chosen unless he be found distinct from another - he shows clearly enough that he posited in the eternal foreknowledge of God this order of prior and posterior, as we noted from this place above in Disputation 82, chapter 3; and that the election to the kingdom of heaven was made with the examination of merits premised according to reason. What Paul himself holds at Ephesians 1, "He chose us in him," we shall say in chapter 12.[1763]

Next, near the end of the same question 2 to Simplicianus, always dealing with the election which is made among certain persons with a preliminary examination - by which kind of election some were contending that men are chosen to God's grace - he says: "But if there is some election there, so that we may understand what is said (The remnant are saved according to the election of grace), not that the election of those already justified is made unto eternal life, but that those may be chosen who are to be justified; certainly this election is so hidden that, in the same intermixture, it cannot at all appear to us; or, if it appears to some, in this matter I confess my infirmity. For I do not have what I might look to in men to be chosen unto saving grace, if I am led beforehand by some consideration to an examination of this election, unless either greater talent, or fewer sins, or virtues; let us add also, if you will, uprightness and useful doctrines, etc." Therefore, since he denies that you can find any election unto grace, if an examination be premised - because before grace one cannot more differ from another in such wise that, because he has a greater talent, or fewer sins, or uprightness of discipline, he be elected unto grace - he rightly judges this absurd: nor does he deny that election of those justified unto eternal life which he had above affirmed; and there he excepts it, when he says: "Not that the election of the justified be made unto eternal life." He therefore concludes a little after, saying: "It remains, then, that wills be chosen; but will itself, unless something occur which delights or invites the mind, can in no way be moved. But that this occur is not in man's power." Where, when Augustine says - just as I cited Jerome, chapter 3 - that the wills of men are chosen by God, this means that in the election a reckoning has been had of merits: he does not understand this of the election whereby one is chosen to grace - for he had just denied that such an election be with a prior examination - but of the election of those justified unto eternal life; for this whole question, again and again, had taught as much: and, to show that no examination was premised in order that men might be chosen unto grace, he said that these wills, which are chosen unto eternal life, cannot be unless first there occur in thought something which delights. He holds, moreover, that this is granted wholly gratis, when he says that it is not in our power. Therefore, disputing most keenly for grace against the Pelagians, he openly affirms the election unto glory from merits.

Furthermore, Augustine, book 1 of the Exposition of certain propositions of the Epistle to the Romans, chapter 60, said that there cannot be election among equals, because he thought that grace is conferred from the merits of free choice; which opinion he retracted in book 1, chapter 23 of the Retractations, and in On the Predestination of the Saints, chapter 4.[176417651766] Afterwards, moreover, he grants everywhere that election is made wholly gratis from the same mass and intermixture among the lost; yet he asserts that this was unto grace, not unto glory. In the question at hand, however, he seems to admit only that election which is made with a prior examination; for as yet he did not seem to acknowledge another among equals. Nevertheless, he feels most rightly about grace, when he asserts that unto grace there is no such election; which, however, unto glory he grants: and thus he corrects that in which earlier, when speaking of the election of grace, he had erred. And what he teaches about the election unto glory he nowhere retracts, as we shall immediately say. It could nevertheless seem to someone that, in that question, he also recognized another election unto grace, without merits and without examination; since about its middle he calls those "elect" who have been called congruently. But he does not explain enough whether he says they are elect because to that very calling they were elected without examination, or because, being disposed by the calling, they afterwards had merits from which they would obtain eternal life, and would be chosen to it with a prior examination.

Then, in Sermon 7 on the words of the Lord according to Matthew, throughout, he now admits a twofold sense of that testimony ...[1767]

Caput VII - On recent attempts to overturn Augustine's testimonies, and their refutation

Then, in Sermon 7 on the words of the Lord according to Matthew, throughout, he now admits that twofold kind of that testimony, and with it he says thus: "But God chose, as the Apostle says, both according to his own grace and according to their justice." He says "according to his own grace," because God chose them freely without any prior examination, in order to give them the gifts of grace which he denied to others, for this sole reason, because it so pleased him. But what is "according to their justice," unless that he chose their good works, which by his grace he had prepared in them - he chose them, I say, unto eternal life - where now necessarily an examination precedes, which in an election unto grace could not have been. That this was Augustine's mind is clear from the following: expounding that place to the Romans, "The rest were saved according to the election of grace" (Rom 11), he speaks thus: "I chose them, because I saw their minds presuming on me, not on themselves, nor on Baal. They have not been changed; such are they as they were made by me. And you who speak - unless you presumed on me, where would you be?" Wherefore, even if he concedes an election of works unto eternal life, or unto a greater grace, he nevertheless asserts nothing against the dignity of grace, but attributes to grace those works which

1767. St. Augustine, Sermo 7 de verbis Domini secundum Matthaeum.

he says were chosen by God "according to justice," when he says, "Such are they as were made by me"; and in the same commendation of grace he straightway subjoins: "Beware, O Christian, beware of pride: though you be an imitator of the saints, always reckon the whole to be grace; for in order that there might be something remaining, God's grace, not your merit, has made it." He calls "the remaining" those good works which were to be chosen, so that it might be said that "the rest were saved by election."[1768] [1769]

Although, however, that place in Romans can be otherwise expounded - of the election, namely, of grace which prevents all examination and is unto grace itself, not unto glory - and this seems to be the native sense of Paul, which he follows in the book On the Predestination of the Saints, chapter 16; nevertheless the doctrine which he delivers in that sermon has nothing against the dignity of grace, nor is it found to have been retracted by him in the least part. Now, however, we have resolved to argue only from his authority. I pass over the testimony of Augustine, in the book On God's Predestination, chapters 2 and 3, which below, in chapter 8, we will cite.[1770]

Finally, Prosper too - himself altogether Augustinian and a most keen defender of grace - in the book On the Calling of the Gentiles, book 2, chapter 35, not less plainly establishes both elections with these words: "Therefore God gives to those whom he chooses without merits that whereby they may be adorned also with merits." Behold the prior election unto grace without examination. "And it is said in vain that the reason for working, that is, the zeal and solicitude for working, is not in the elect, when they even work to this very end, that they may be chosen." Since, therefore, he says that men are chosen unto grace without merits, and adorned with merits to this, that they may be chosen, he ingenuously concedes the latter election with a prior examination of merits - not unto anything other than unto glory and to the increase of grace. For the former, which he said to have been "without merits," he understands only of grace, that from it they might be adorned with merits. He denies, however, that these merits were the cause of the first election, because none could be other than of free choice, from which it could not be effected.[1771]

Explosions of the objections by which more recent authors strive to weaken these testimonies of Augustine:

There are no lack of machinations by recent men, by which they try to overturn such clear testimonies. First, indeed, some plainly confess that an election unto glory from merits is taught in those places, but that the contrary is taught elsewhere by Augustine; especially in the book On Rebuke and Grace, chapter 7, where he concedes that the election unto reigning with Christ was altogether gratuitous and without merits. But in the following chapter we shall show not obscurely that Augustine nowhere, neither in that chapter 7 nor in the books to the same purpose, wished even lightly to insinuate the contrary.[1772]

Second, others - not a few learned in Augustine - proclaim that book to Simplicianus to have been written by him in his earlier age, though he was already a bishop, and therefore to have cared little about the grace of God, nor to have doubted to concede some election from merits, at least merits of grace; but that afterwards, when he had to dispute with the Massilians and fought more keenly for grace, so that not the least consideration of merit was conceded to election, he denied any election, even from merits of grace, as in the books On the Predestination of the Saints, On Rebuke and Grace, and others. I for my part indeed grant that book to have been published by Augustine in his first age after his episcopate, as he himself bears witness in the Retractations, book 2, chapter 1. I grant also that in that book he never acknowledged any election except with a prior examination, as I noted above. Nevertheless, since he makes mention of that book in the second book of the Retractations, chapter 1, he retracts nothing that he had taught in it; rather, he marvelously approves the doctrine about grace there delivered, and he deems the question of such weight that, disputing against the Massilians in book 1 On the Predestination of the Saints, chapter 4, he even refers them to that book, if they wish to understand the true opinion about grace. And, lest anything be suspected, or be deemed to have been less rightly said there, which he had delivered that might seem to favor the sentence of the Massilians when he said that the election unto glory had been from merits - either he would have retracted that, or would have interpreted it in a good sense, or certainly would by no means have alleged that question in favor of Catholic doctrine against the Massilians.

Accordingly, in that chapter 4, at the beginning, he retracts what, as a presbyter, he had said, namely that grace is given from the merits of faith, which would be from our own powers, and that thus men are chosen unto grace from the merits of faith foreseen by God; thus he says: "You see what I then thought of faith and works, although I labored to commend God's grace, in which sentence I now perceive those brethren of ours to be; because they have not cared so to profit with me in those books of mine as to profit in them with me. For if they had cared, they would have found that question solved according to the truth of the divine Scriptures in the first book of the two which, for commemoration, I wrote to the blessed memory of Simplicianus." And in book 2 of the Retractations, chapter 1, concerning that question he says: "In the solution of which question, it was labored in favor of the free will of the human will; but the grace of God prevailed." Therefore he proves against the Massilians that whatever he said of grace in that question, he thinks indeed that their error is there sufficiently refuted: and if there were anything, even the least suspicion, that might seem to favor them, either he would have retracted it, or he would not remit them to that question. He also commends the same question to Simplicianus, and the doctrine of that book, in the work On the Good of Perseverance, chapter 20, where responding to Hilary of Arles he marvels that the Massilians said that for a long time the Church of God defended the Catholic opinion concerning predestination without this doctrine, which Augustine against them began to preach, teaching that no beginning of grace is from us going before; and he says: "I greatly wonder that they say - lest I speak of other things here - that our own books, written and published before the Pelagians began to appear, and see how in many places of them, not knowing that the Pelagian heresy would arise, we had to preach grace, by which God frees us from evil errors and our morals,

not from preceding good merits of ours, doing this according to his gratuitous mercy; which I began for the most part to taste in that disputation which I wrote to the blessed memory Simplicianus, bishop of the Church of Milan, in the very beginning of my episcopate, when I also learned that the gift of faith is God's." And in chapter 21 of that same book, of that question he thus writes: "Let them see, however" (namely, the Massilians) "whether in the latter parts of the first book of those two which I wrote to the blessed memory of Simplicianus, bishop of Milan, at the beginning of my episcopate, before the Pelagian heresy appeared, there remains anything whereby it may be called into doubt that the grace of God is given according to our merits; and whether I have there sufficiently treated that even the beginning of faith is the gift of God; and whether, from the things which are said there, it does not consequently shine forth - though it be not expressed - that even perseverance unto the end is granted by him alone who has predestined us unto his kingdom and glory." Augustine thus judges that he disputed concerning the grace of God in that question as exactly as in the rest of his later works after the Pelagian heresy arose. Let the aforesaid theologians be silent, then, and humbly acquiesce to Augustine's doctrine; and the doctrine of the same concerning grace and predestination is thus proved to them.[1773] [1774] [1775] [1776]

Third, others say that Augustine is speaking not of the order of intention, but of the order of execution - not that in time, when executing, he keeps a prior examination of merits (for he is speaking of the election itself present before God, as is plain from the words recited in the preceding chapter), but of the order of execution which God keeps in his mind and eternal foreknowledge. They say, namely, that in God's foreknowledge there is a twofold order, one of intention, the other of execution; just as in any craftsman, when he undertakes a work or consults about it. The former order proceeds from the end to the means: for from this, that one wills to build a house, he first decrees to build the house, then consults about the various means. But when he has now found the means, he considers the other order, namely that of execution, in which, such means being foreseen, he at last decrees to construct the house. Thus, therefore, God first decreed to beatify this man, not yet with merits foreseen; then to give the merits as means to that beatitude: and thus the order of intention was complete. But in the order of execution, through the means of grace and merits foreseen, he again decreed to lead him unto beatitude. For he saw that the man, being prevented by this and that grace, would so work and would be worthy to be beatified. Therefore he predetermined through those means, and from those foreseen, to repay such a reward. Of this latter order they say Augustine spoke, not of the former. With which it agrees well, that God first of all, before foreseen merits, in the order of intention, decreed to give eternal life.

1773. St. Augustine, Retractationes, lib. 2, c. 1.
1774. St. Augustine, De bono perseverantiae, c. 20.
1775. St. Augustine, De bono perseverantiae, c. 21.
1776. St. Augustine, De praedestinatione sanctorum, c. 4.

But certainly, if this manner of philosophizing had any foundation in Augustine, I would readily embrace it; nor would I care, though our philosophers or theologians set something different against us, provided we interpreted Augustine's mind; it would suffice. However, I judge this to agree neither with Augustine nor with the Scholastics' doctrine, nay rather to be altogether at variance with the common sense of philosophers; and so this evasion is of no moment.

And first, indeed, in Augustine it has no foundation, since he nowhere posits another order of intention in which men would be chosen unto eternal life before foreseen merits. Wherefore, since he, wherever he speaks of this will of conferring glory, alleges that glory was granted for works and merits of grace, that distinction is not Augustine's doctrine, but a device coined for the sake of evasion. Nowhere, moreover, does Augustine say that this intention of conferring glory was before merits; in chapter 6 and in those adduced just before, where he speaks of election unto glory, he openly testifies that it was made from merits. Whence, then, could we even suspect that that double order was assigned by Augustine?

Second, there is an axiom, quite familiar and most true among philosophers and theologians, that two orders are assigned there: one of intention, the other of execution; and the order of consultation, which is ours, is called the order of resolution, and the order of generation is called by Aristotle that which we usually call the order of execution - as we shall see in the Prima Secundae, question 14. Now execution keeps the order of efficient causes; and that is prior which is more remote (for what is more remote moves what is nearer more), and therefore it begins from remoter things. This Aristotle expressly set down in Ethics 3, chapter 8, in these words: "And that which is last in resolution is known to be first in generation." He calls "the order of resolution" the order of consultation and of intention; the "order of generation" he calls that which we commonly name the order of execution. But that in either order there should be what mode of speaking about the divine will - who ever taught this? In consultation and intention, or in the decree of the will, that a double opposed order can be assigned - one of execution, the other of intention - so that what is first in the one is last in the other: who ever, whether philosopher or theologian, has taught this? I except certain recent professors of theology, who, that they might defend their opinion by their own or by others' arguments, have contrived these two orders; which, indeed, for this sole reason does not lack suspicion, that you will never find mention made of them by approved philosophers or scholastics.

Third, we hardly ever repeat what we have once disposed in the order of intention; but we keep it in memory, without any new consultation, and we determine what is to be done, unless perchance some new circumstance supervenes in the work's execution, which demands a new consultation - a thing which cannot befall in the perfection and providence of God. If, then, in us, after any consultation and decree, the order of execution, as far as it depends on us, proceeds from the intention and does not require a second order of intention: how much less should we assign in God a double order in one and the same decree of the will, since in him, after consultation, there is no room for a new or repeated decree; but what he once most wisely conceived and decreed, he

forthwith and without impediment executes? Hence it is evident that, in God, from the order of intention there proceeds immediately the work, so that there is no place to interpose some new "order of intention" after the execution has been disposed.

Fourth, even if we should concede that a double order is considered by the craftsman, we never therefore speak in that manner which they here feign, as though someone said thus: first he decreed the end simply, without any respect to the means, and only afterwards decreed the means because he had previously decreed the end. Rather, we always say: because he willed the end, therefore he at once willed the means - not that one order of intention succeeds another order of intention - but that one and the same act of intention respects both the end as end and the means as means. Thus, even a physician, when he intends health, at once intends the purgation or the incision, and afterwards in execution he begins from what is fitting to be done first. In the same way, therefore, when we speak of God's election unto glory "from merits," we speak according to that very consideration under which God ordained the end together with its due means; and nothing is obtained for those who would transfer these words from the order of intention to the order of execution.

... execution will proceed, he sees that from such an incision there will follow an evacuation of the malignant humor, and with it removed there will ensue health: we do not say, therefore, that he willed to heal because he foresaw the incision; but we only say, he saw that from the incision health would follow. If, however, we were to say that he both willed and decreed to heal because he saw that an incision could be made, without doubt the convenience of the means would have impelled him to the will of the end, which otherwise he would not have willed. This, indeed, sometimes happens, as we shall say in the following chapter: when, namely, a unique means is discovered for conveniently attaining the end, such that desire of the end was not fixed apart from regard for this or that means; but if there are many means and the will of the end was determined not in view of this or that, never, when we consider the order of execution and revolve it in the mind, do we say: therefore the end was willed because such a means was foreseen or chosen; but on the contrary, because the end was willed, such a means was chosen and foreseen as to be applied: we still affirm that from such a means there will follow that same end. The reason for the distinction is that the kind of causality in willing is different from that in doing and executing: for in willing that is cause which moves as end; therefore we never say, the artisan willed such an end because he foresaw such a means - unless in the case mentioned, in which the means redounds into the very ratio of the end; yet we do say, the intellect sees that in the thing there will follow such an end from such a means: because then only the causality of an efficient cause is attended to. These things, in my judgment, are most certain. From which I show that Augustine was not speaking of the order of execution considered in the mind. For if, in the order of intention, God had already willed eternal life to some men before merits had been foreseen, absolutely and of itself; even if we were to say that He then considered the order of execution, namely how merits, as means, should be obtained, nevertheless we would never say: therefore God willed to give glory because He foresaw merits, when He had already absolutely willed it, not in view of merits. Just as of one who in the order of intention sets the end before the means, we never afterwards, not even in the order of execution,

assert that he willed the end from foreseen means, as remains proved. Wherefore, since Augustine in that question to Simplician, and Prosper in the place cited, say that therefore men are chosen because their merits were foreseen, it follows that they also spoke plainly concerning any order of intention and will. Augustine says, "Because that (namely, the purpose of justifying) would stand firm, namely to justify believers, therefore He found the works by which He now chooses to the kingdom of heaven." Prosper, moreover, says of the predestined: "Since it is certain that they also work to this end, that they may be elect." If, therefore, they are for that reason chosen by the will of God, because they are foreseen to have merits, or work to this end and are chosen, then with respect to the will merits were prior. On the contrary, we do not say, "to this end, that one may will to be healed, the vein is opened," because the will of being healed is prior in intention and will; yet we do say, "to this end, that one may be healed, the vein is opened," because here only efficacy in the thing is signified, and the particle "to this end" denotes the final cause prior in intention, but in the thing itself posterior in the execution of the efficient cause.

Fifth, whenever the means to be applied for obtaining some end are merits, and someone proposes to another the end to be obtained by those, then for the proposer the merits are prior to his decreeing to give the end, for such an end is not given except in view of merits and after the mode of a reward. The one, however, to whom such an end is proposed, is first moved toward the end; then he applies merits so as to attain it. And therefore I noted in disputation 82, chapter 5, that whenever the means to some end is moral, that means is foreseen as prior to the will of conferring such an end. It is understood, however, with respect to the will of the one who proposes the end, as when God proposes beatitude to men, not with respect to him who ought to attain it by his own merits; this will be explained more fully in chapter 9.

Finally, the very mode of speaking in causal propositions explains to us the thing itself and Augustine's meaning. For we say, "God willed to give eternal life to Peter, because He saw that he would be holy," not, "He willed to give eternal life, so that he might be holy." But if beforehand in intention He had willed to give beatitude, and then merits and holiness, it would follow that He decreed to give beatitude to this end, that afterwards He might give holiness. From that, therefore, mode of speaking - "He decreed to give glory, because He saw that he would be holy" - it is gathered that He had the ratio of merits; just as if we should say, "He therefore called Peter, because He knew that he would be holy," we would be admitting that He had the ratio of merits in order to call. Now, however, because He did not have it, we say: "He called, not because He knew he would be holy, but so that he might be holy." Augustine taught nothing against this election from merits.

Caput VIII - On testimonies of Augustine for predestination and the sense in which they are to be taken

Not only with the testimonies alleged in chapter 1 do our adversaries strive, but also with numberless others, to prove out of Augustine an election to eternal life - that is, an efficacious will of placing men - that existed before merits. Therefore now, that Augustine's mind may be made

much more perspicuous (as we promised later on), let us show that he taught nothing, namely, against an election to glory from the merits of grace, even when he disputed more sternly for grace against the Pelagians and Semipelagians. But before we produce and examine some passages one by one, let us show universally why certain persons have been deceived in Augustine.

First, then, not a few, thinking with Ockham and Gabriel (whom above in this disputation, chapter 2, we reported), that predestination is only that will whereby God efficaciously decreed to beatify some, when they saw Augustine everywhere loudly proclaiming that men are predestined freely and without merits - indeed, that they are so predestined to eternal life that, in book 6 of the Hypognosticon about the middle, to which the Council of Valence under the Emperor Lothair consented in chapter 3, they said that he plainly felt that men were chosen by that efficacious will to eternal life without merits even wrought with grace, and that in this Augustine was opposed to the Greek Fathers. Thus Augustine was understood by Driedo, Ruardus, and Sixtus of Siena, whom we cited in the last chapter of this disputation; and in this sense they follow his view. Thus also was Augustine interpreted by Catherinus, Camerarius, Osorius - alleged by us there. Although, as we saw in the same chapter, they by no means acquiesce in Augustine's opinion thus explained.

Yet these authors were manifestly deceived in two points. One is that they confound election to eternal life with predestination, which St. Thomas in this article 4 and the following plainly distinguishes. For election to glory is the will of conferring glory upon someone; but predestination is the eternal preparation of the gifts of grace: which two are far different. Furthermore, that election is an efficacious will to give grace we now suppose, and it is certain among all, for about this we are disputing. But that predestination is a preparation of the gifts of grace, besides St. Thomas and other Scholastics whom we shall mention, Augustine expressly teaches, in the book On the Predestination of the Saints, chapter 10, where he says thus: "Between grace and predestination this only is the difference, that predestination is grace prepared (he understands this in God's foreknowledge), but grace is already the very donation."[1777] And in the book On the Good of Perseverance, chapter 14, he thus defines predestination: "This predestination of the Saints is nothing else than the foreknowledge and preparation of the benefits of God, by which most certainly are delivered all who are delivered."[1778] So also other Fathers, whom in that disputation, chapter 3, we shall cite, number grace among the effects of predestination. Therefore predestination is a giving of the gifts of grace; and grace and predestination differ only in this, that grace is the object, but predestination is the act of God's will and intellect decreeing and disposing it. And Augustine understands an eternal preparation, as is clear from the text, and Fulgentius noted it, in the book to Monimus, chapter 8, with these words: "Accordingly the recognition of predestination itself is instituted when Scripture says, 'and the will is prepared by the Lord' (namely Proverbs 19, according to the Septuagint translation); nor is it said to be prepared for anything else, except because it is declared that it is to be given. For by whom it is prepared through everlasting goodness, by Him it is given through unowed grace."[17791780] And why, by reason

1777. St. Augustine, De praedestinatione sanctorum, c. 10.
1778. St. Augustine, De bono perseverantiae, c. 14.
1779. Fulgentius of Ruspe, Ad Monimum, c. 8.

of congruous vocation, the will itself is said to be prepared and to be predestined, will be explained in disputation 88, the last chapter. The same thing Augustine understood in that book, book 1, chapter 9.[1781]

Wherefore the controversy was always the same for Augustine with the Pelagians and Semipelagians concerning grace and concerning predestination, whenever there was question of merits - namely, whether it would be from merits; and he judged the same rationale to apply to each. Indeed, in order to show that grace is not given in time from merits, he showed that predestination was made without the foreknowledge of merits, by the mere nod and will of God. On the contrary, when he said in the Exposition on the Epistle to the Romans that grace is given in time from the merits of free choice, he also taught that these merits were chosen for grace in the eternal predestination of God, as we shall report in the following chapter.[1782] But just as he never strove - neither against the same nor against others - to prove that glory is given in time gratis and without any merits (for Augustine could not think this, nor any Catholic), so too for proving this he never anywhere assumed that an election to glory before merits had been made: whereas, to show that grace in time is given without merits, it mattered little that God had decreed to give glory before all merits as the end. Wherefore, since in Augustine predestination is not called grace, because grace is the very donation itself...

Election to glory is not the same as predestination, nor the effect of predestination, but a gratuitous will; yet election to glory, which is that will of conferring eternal life, is neither called grace, nor can it altogether be called a gratuitous will. For a will is called gratuitous from its effect; but the effect of that election, namely glory, is not altogether grace, but grace for grace, as Augustine frequently calls it.

I admit, however, that Augustine sometimes calls predestination the very will of retribution, namely of giving eternal life, as we shall see in chapter 9; yet he does not call this absolutely predestination, but predestination of retribution. Nor is that book by all received as Augustine's, although in my judgment it contains nothing contrary to his own doctrine, as we shall say there. Nevertheless, the preparation of the gifts of grace is called predestination unto life, or unto eternal life, not because it is a bare will of giving glory and from that predestination begins, but because the gifts that are prepared order man unto eternal life. Thus also, in order that they may order unto glory, it suffices that that will be a simple antecedent will, as in this chapter and in the last chapter we shall again note.

Another point in which these authors were plainly deceived is that they thought the Greek Fathers had taught contrary to Augustine, as if Augustine asserted that men were chosen to glory without merits. Whereas in truth the Greek Fathers, and the Massilians who relied on their testimony, never so much as dreamed of impugning Augustine on that head, as we showed in chapter 4; nor has Augustine ever taught that, as will presently be evident. The Massilians merely contended that grace in time is given in view of some labor, industry, or our will; and in view of

1780. Prov. 19 (LXX): "Praeparatur voluntas a Domino" ("The will is prepared by the Lord").
1781. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 9.
1782. St. Augustine, Expositio quarundam propositionum ex Epistola ad Romanos, c. 60.

that they understood that men had been chosen to grace from eternity. They also understood Augustine to have pronounced against the Greeks that election to grace had been made without merits, just as grace itself is given in time without merits. For their dissension with Augustine was about this, as we plainly proved in chapter 4, not about election to eternal life. By what reasons, moreover, they argued against Augustine, and how he himself replied to the testimonies of the Greeks that were alleged against him, we shall see in disputation 91, chapters 9 and 17. What remains is to show that there is no place in Augustine where he says that election to eternal life was made before merits; and because it would be burdensome to set out all the places, I have decided to cite only the more difficult ones and those that are more frequently alleged; the rest can be explained in the same way.

First testimony is from book 5 against Julian, chapter 3, after the middle, where he first adduces the words of Romans 11: "Who has first given to him, and it shall be recompensed to him?" and says: "He chose no one worthy, but by choosing he made him worthy." And a little below: "Accordingly, this even before the constitution of the world, but a selection by the election of grace. Whence the same Doctor says, 'So then at this present time also there is a remnant according to the election of grace'; and lest perchance they should be thought to be elected before the constitution of the world from foreknown works, he followed on and added, 'And if by grace, now not by works.'" Here he clearly speaks of the election of grace, by which one is elected by God not by an efficacious will of giving eternal life, but by a gratuitous will preventing with his grace. This he urges against the Semipelagians, who said there is in us some beginning; because if it were so as they thought, then grace would not be grace. In what way this is true we shall say in that disputation 91, chapter 14.

But from the fact that one is elected to glory from the merits of grace, what follows therefrom? that grace is not grace? It follows only that glory is not grace, but reward. Nor is this absolutely gathered; for in order that it have no account of grace at all, it would have to be conferred from merits, not of grace, but of bare free choice. Otherwise, since it is from the merits of grace, even if it is the reward of good works, it is nevertheless called "grace for grace." Thus Augustine calls it in the book On Grace and Free Choice, chapters 8 and 9, and tractate 3 on John around the middle; and Fulgentius, book 1 to Monimus, chapter 10.[178317841785] Therefore the Council of Trent, session 6, chapter 16, says: "To those who work well unto the end and who hope in God, eternal life is to be proposed, both as a grace mercifully promised through Jesus Christ to the sons of God, and as a recompense, to be faithfully rendered according to the promise of God Himself to their good works and merits." It is called grace by reason of the principle from which it is born; but a crown of justice only, because it is rendered to merits, as Augustine explains in those very chapters 8 and 9.[1786]

A second testimony is from the book On the Predestination of the Saints, chapter 19, where against the Pelagians and Semipelagians he adduces that of Ephesians: "He chose us in him," etc., and shows with that witness that the Pelagian error is plainly refuted, who said that we were

1783. St. Augustine, De gratia et libero arbitrio, cc. 8 - 9.

1785. Fulgentius of Ruspe, Ad Monimum, lib. 1, c. 10.

predestined because we were going to be holy. For they thought that by our own free choice we could keep the law, be justified, and persevere. But Augustine says that testimony confutes them, because, says he, Paul wrote: "That we might be holy," not "because we were going to be holy." He adds immediately these words: "But our men (namely the Massilians or Semipelagians) perhaps say that this apostolic testimony refutes the Pelagians, where it says that therefore we were chosen in Christ, and predestined before the constitution of the world, that we might be holy and immaculate; for they (namely the Pelagians) think that after receiving the precepts, by our own selves, by the free choice of the will, we are holy and immaculate. Which future God, since He foresaw (they say), therefore He did not before the constitution of the world choose and predestine in Christ. But we (namely the Semipelagians) say (they say) that our God foreknew nothing except faith, by which we begin to believe; and therefore that He chose us before the constitution of the world that we might already be holy and immaculate by His grace and work. But let them themselves also hear in this testimony, where it is said, 'We have obtained a lot, being predestined according to purpose, who works all things.' He therefore works that we begin to believe, who works all things. For that calling of which it is said, 'The gifts and the calling of God are without repentance,' and of which it is said, 'Not of works, but of Him that calls,' when he could have said, 'but of the believer'; by the election by which the Lord signified, saying, 'You have not chosen me, but I have chosen you,' even faith itself does not precede: for He did not choose us because we believed, but that we might believe, lest we should be said to have first chosen Him." These are Augustine's words.[178717881789]

Explanation of the foregoing election to grace. From these things who does not see that Augustine only wished here to exclude the opinion of the Massilians, who said that we are chosen unto grace on account of the merit of faith, which we would have from ourselves? But about election to eternal life from foreseen merits of grace, he has not a word; for about these there was no controversy with the Massilians. Nor throughout that book and the following, where he expressly disputes against them, can anything else be found. And if against the Pelagians in that testimony he contends that we were not elected to eternal life from merits, he understands the merits of free choice: for that from the merits of grace he never denied. For they asserted that in time eternal life is given to us from the merits of free choice. What wonder, then, if also in election they asserted that God looked to these merits? This very thing he taught in this chapter in the same book, chapter 17, where also near the end he thus explains that passage of James 2, "Has not God chosen the poor in this world, rich in faith, and heirs of the kingdom?": "By choosing, therefore, He makes rich in faith, just as heirs of the kingdom. Rightly indeed in them this is said to be chosen, which He chose, in order that He may make it to be in them." God, therefore, is said to choose without merits, that He may make faithful, because He makes faithful without merits; and rightly this is said to be chosen, which He Himself makes. In this way in book 5 against Julian, chapter 3, he says: "He chose no one worthy, but by choosing He makes him worthy." And so in the book On

1786. Council of Trent, session 6, c. 16.
1787. St. Augustine, De praedestinatione sanctorum, c. 19.
1788. Eph. 1:4 - 5.
1789. Rom. 11:29; 9:12; John 15:16.

Predestination and Grace, chapter 5, at the end, he says: "In God these three are at once, to foreknow, to make, and to choose"; and thus, by His immutable foreknowledge, God chooses those to be made, and makes those to be chosen. As if he were saying: He chooses in order to make holy by grace, and He makes holy by choosing them; unless also this last be referred to election to eternal life from merits, when he says "to make those to be chosen," as Prosper cited in chapter 5 at the end said, "God to give to us whence we may be adorned with merits, and ourselves to work to this, that we may be chosen." In the same sense he said in sermon 11 On the Words of the Apostle: "They are chosen who are not; nor does he err who chooses. Nor does he choose in vain. He chooses, however, and has the chosen, whom He is going to create to be chosen."[1790]

There are also wont to be alleged Augustine, On Predestination and Grace, chapter 7; tractate 86 on John; epistle 105 and 106 a little from the beginning; in the Enchiridion, chapter 107; On Correction and Grace, chapter 10; and Prosper, by the Excerpts of the Genoese, to the 4th and 5th objection; Fulgentius, in the book On the Incarnation and the Grace of Our Lord Jesus Christ, chapter 18. But still Augustine and his disciples, wherever they speak of an election without merits, only strive to exclude the merits of free choice alone from that election which is unto grace.

However, two other testimonies of Augustine are more strongly urged by the more recent authors for the aforesaid opinion, which, if they be read with moderate attention, will bring in no difficulty. Another testimony is from book 2 On the Good of Perseverance, chapter 14, where about the Tyrians and Sidonians he says: "But because it was not given to them to believe, even that from which they might believe was denied to them": from which they infer that some have in their very natural genius a divine endowment of understanding, by which they are moved to faith, if they hear words or behold signs congruent to their own dispositions, and yet by a higher indication of predestination's grace they are not separated from the mass of perdition; and the very divine words or deeds by which they could believe - if they heard or saw such things - are not applied to them. From which they infer that congruent helps are therefore conferred on the predestined, because by that efficacious will of giving eternal life they are distinguished from the reprobate; but, on the contrary, that these helps are denied to the reprobate, because by such a will they have not been separated, but are left in the mass of perdition. Wherefore they say that someone is first distinguished from the reprobate by the will of giving him the kingdom of heaven, than that a congruent calling should be afforded him, which is proper to the predestined; and on the other hand, that first he is thus distinguished by that will, than that such helps should be denied them.

Explanation. I answer, briefly, by referring to Augustine himself, who in that very book On the Predestination of the Saints, chapter 10, and in the place proposed a little above, had premised such things that, if they had been heeded, one would easily have perceived these objections to be frivolous. First, because Augustine does not say that a congruent calling is not given to them because they are not already distinguished, nor that that calling is given because they are already distinguished; which is most true, even if the will of denying eternal life - even after previous works, as the adversaries also admit, and as all must concede. In like manner one can say that a

1790. St. Augustine, Sermo 11 de verbis Apostoli.

congruent calling is conferred on those who are distinguished; and yet the distinction take place after works: because recall is not given except to those who with it work; and by reason of works they obtain eternal life, although the calling is not therefore granted because they are going to work.

Moreover, Augustine nowhere makes the distinction to consist in a will of giving eternal life, but in the predestination of grace. Predestination is the preparation of grace, not the will of giving eternal life. Thus he defines predestination in that book, chapter 10; and with the matter already stated Augustine said that the distinction is made by the predestination of grace, in the testimony cited above. By the name, therefore, of predestination of grace those Doctors understand, not rarely, a will of glory; which is not grace, save by reason of the principle, but is "grace for grace," as was said. When therefore Augustine says that to some it was denied whence they might believe; because it was not given that they should believe; and that signs or words are denied to them who are not distinguished; he is speaking (if one considers the thread of his discourse there) not of the interior grace moving to believe - for of these he elsewhere treats - but of exterior words and signs from which it commonly comes about that one believe, be converted, be preserved: as it happened with the Tyrians, not however with interior grace being wanting. Of these he rightly says that those exterior signs or words were denied, because it was not granted to them that they should believe; but to men it is granted that they believe through a congruent prevenient calling. Likewise, those signs or words were not granted to some, because they had not been beforehand distinguished by the predestination of grace from the mass of perdition; for in that whole work, and wherever he treats of distinction, Augustine attributes it to prevenient grace, just as he also attributes election unto grace to it, and not to a will of giving glory. Whence, then, do those Doctors gather that Augustine is speaking of a will of giving eternal life, by which the good are distinguished from the bad, and not of the predestination of prevenient grace; or that, by the reason of that interior grace, by which the wills of those who are to be made blessed are distinguished by God, he speaks not of interior grace but of exterior signs; nor of a will of giving them glory, but of preparing interior grace, does Augustine speak?

Another testimony is taken from On Correction and Grace, chapter 7, where, after he has shown that election was made before works, he says of that election that it was made according to grace, not according to works: "Therefore those are elected out of men's mass who perish, whom God has chosen to be delivered; man perishes of himself, God of himself saves; a man, if he will, perishes, no one if God wills remains un-saved: God therefore chose them unto obtaining the kingdom," and so forth. And in the same book, chapter 9, he speaks everywhere such that anyone who carefully goes through the whole context will see that concerning that election to grace, which he everywhere calls according to grace, he is contending, not of a will of giving eternal life; nor that glory is given to man apart from the merits of his free choice; but, as Augustine himself says a little above in that same chapter 7: "They are therefore the elect who are called according to His purpose, not according to our merits before one is called; because men are chosen before works, not from preceding merits of their own, but through the gift of grace, by which He makes the impious just," which he subjoins.[1791]

Explanation of Augustine's sense. First, it is there treated, that no one can deny that glory is given out of works that have proceeded from grace; who would dare to deny that it is given out of works, where Augustine also grants it? Then also, nowhere does he understand, as something absurd, that glory is not grace if it is given out of works; rather, he deduced this about grace alone against the Semipelagians, according to the doctrine of Paul in Romans 11, not about glory. As we have seen above, he himself and Augustine often call glory "grace for grace," which, although it is conferred out of the merits of grace, is still grace proffered for grace already received. To this point what he says about the election of grace ought not to be understood of an election and a will of giving eternal life, but of the election which is unto grace itself.

It is denied, because by such a will they are not set apart, but left in the mass of perdition. Wherefore they say that someone is first distinguished from the reprobate by the will of giving him the kingdom of heaven, than that a congruent calling be prepared for him, which is proper to the predestined; and, conversely, it is first the case that one is not distinguished by this will, than that helps of this sort be denied him.

Explicatur. I answer: if the adversaries had attended to the phrase of St. Augustine which he had premised, book 2 of On the Predestination of the Saints, chapter 10, and if they observed what he says here,[1792] they would easily have detected this objection to be frivolous. First, because Augustine does not say, "therefore a congruent calling is not given to them, because they are not distinguished," nor, "therefore that calling is given, because they are distinguished"; but rather, "it is not given to those who are not distinguished" - which is most true, even if the will of denying eternal life is after foreseen works, as the adversaries also admit, and all must concede. In like manner he could have said that a congruent calling is conferred on those who are distinguished, even if the distinguishing takes place after the works: because in fact it is not given except to those who will work with it, and who on account of works will attain eternal life; although the calling is not on that account granted because they are going to work.

1791. St. Augustine, De correptione et gratia, cc. 7 and 9.
1792. St. Augustine, De praedestinatione sanctorum, lib. 2, c. 10.

Besides, Augustine does not understand by "distinguishing" here a will of giving eternal life, but the predestination of grace; for predestination is the preparation of grace, not a will of giving eternal life. Thus he defined predestination in book 1, chapter 10; and, when the occasion was given, Augustine said that the distinguishing is done by the predestination of grace, in the testimony cited above.[1793] Therefore, under the name of predestination of grace these men vainly understand the will of glory, which is not grace except by reason of its principle, but [is] grace on account of grace, as has been said. When, therefore, Augustine says that to some it is denied whence they may believe, because it has not been given that they believe; and thus that signs or words are denied to them who are not distinguished, nothing would oppose the doctrine preached, even if the denial of the signs were causal. For in that place Augustine sets the discourse concerning external signs and words, whence it comes about that someone believes and is converted, as the Tyrians did, but not concerning the interior grace that moves within. Concerning these he rightly says that therefore these external signs or words were denied, because it had not been granted to them that they believe; but to men it is granted that they believe by a congruent prevenient calling. Likewise these signs or words were not granted to some, because by the predestination of prevenient grace they are not distinguished from the mass of perdition. For, in that whole work and wherever he treats of distinguishing, Augustine attributes it to prevenient grace, as also election to grace, not to a will of giving glory. Whence, then, do those Doctors gather that Augustine is speaking of a will of giving eternal life, by which the good are distinguished from the evil, and of interior prevenient grace, so that for this reason this interior grace is given to some, because by the will of making them blessed they are distinguished by God - when Augustine is speaking not of interior grace, but of external signs, and not of a will of giving them glory, but of preparing interior grace?

Aliud argumentum; Alterum testimonium est in On Rebuke and Grace, chapter 7; where, after he has at length shown that election was made before works, he speaks thus concerning the elect: "If any of these perish, God is deceived; but no one will corrupt [Him], because God is not deceived. If any of these perish, God is overcome by human fault; but no one will corrupt [Him], because God is overcome by nothing. Moreover, they are elected to reign with Christ; not in the way Judas was elected to the work, when it was fitting." And again of them he says: "These therefore He chose to obtain His kingdom." He speaks in the same way in that book, chapter 9.[17941795] But whoever shall run through the context of the whole chapter, or even read it lightly, will immediately see that Augustine is speaking not of election to glory, as the adversaries contend, which is the will efficacious for leading to eternal life, but of the will of giving grace, to which men are chosen without merits of free choice. For a little before in that chapter 7 he had said: "Assuredly they are elected by the election, as has been said, of grace, not of their preceding merits; because grace is for them every merit." And above: "Who also chose them in His counsel before the

1793. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 10.
1794. St. Augustine, De correptione et gratia, c. 7.
1795. St. Augustine, De correptione et gratia, c. 9.

foundation of the world, by the election of grace. But if by grace, now not by works; otherwise grace is no more grace." If, however, he were speaking of election to eternal life, he would not deny that it is given from the merits of grace, nor would he say, "if by works of grace, now it is not grace."

It is proved first, because no one can deny that glory is given from works perfected by grace, just as he ought to deny that grace is given from works, as Augustine there contends. Then also because nowhere does he infer, as if it were absurd, that glory is not grace if it is given from works; but he deduces this only concerning grace against the Semipelagians, according to the doctrine of Paul in Rom. 11. For glory, as we saw above, Augustine himself often calls "grace for grace," because it is conferred from the merits of grace. Moreover, since he speaks of the election of grace, it ought not to be understood of election and a will of giving glory, but of grace.

Furthermore, in the same chapter he says of the same elect: "Therefore they are elect, because they have been called according to purpose": which he repeats again. But if the discourse were of election to eternal life, which the adversaries wish to be prior to any foreknowledge of merits, he would not rightly say: "Therefore they are elect, because they have been called according to purpose"; but: "therefore they are called according to purpose, because they are elect." For the calling "according to purpose," as is clear from Disputation 88, cap. last, is said of that which is congruent; and it is frivolous indeed, nay unworthy, to suppose of so great a man that, in so few words, he either changed his opinion or spoke variously, now of election to grace, now of election to glory; or at least, since from the context it plainly appears, that he constantly spoke always of the same kind of election. Therefore, when he says, "they are therefore elect, because they have been called according to purpose," he renders the cause as it were formal, so that they are said to be elect inasmuch as they have been called according to purpose. He speaks in the same way in book 1, On the Predestination of the Saints, c. 17: "They are elect by that calling by which God accomplishes what He has predestined." Of that same election to grace he surely must be understood also in that chapter 9 that was cited.

Explicatio notanda Augustini. But why, when speaking of the elect to grace, did he say that they are elect "to reign with Christ," or "to eternal life," if indeed in that election of grace there was not yet an efficacious will of giving them the eternal kingdom? I answer: because grace is eternal life, and the seed of it; therefore with the best right, speaking of the elect to grace, he said that by this very thing they are elect to glory and to reign with Christ. In the same way must Augustine be understood wherever he shall have said that "the kingdom of heaven is predestined without merits." For since predestination is the preparation of grace, and this is given without merits of free choice, and is from eternity prepared, and in it there is the kingdom of heaven, indeed in Scripture it is called "the kingdom of heaven"; it is rightly also said that "the kingdom of heaven without merits is predestined." Yet this does not hinder but that God has decreed to confer eternal life only from merits foreseen of grace.

From what has been said it is gathered that Augustine, in the places cited, did not teach things contrary to himself in this, that he asserts that election was made "from works," or that "the wills were elect," and in turn that "no one was elect from works." First, because Augustine does not speak in both places of the same kind of works: in this part he does not contradict himself. For

when he asserts that "the wills of men were elect," he does not mean works of free choice alone, but those brought forth from grace; but when he says that "election was not made from the foreknowledge of works, but from grace," he excludes the works of free choice against the Pelagians and Semipelagians, as has now been sufficiently explained; although Augustine himself, while still a presbyter, taught the opposite.

By the same reasoning I think that Paul is to be reconciled with James: Paul in Rom. 3, 4, and 11, and in Gal. 2 and 3, affirming that man is not justified from works, but from faith; and James in c. 2 when he says that man is justified not from faith only, but from works. For Paul excludes works, not ceremonial only, but also moral, which are from free choice alone; and he teaches that from these a man is not justified; because justification is not grace. This, however, he understands as much of the first justification as of the second, that is, of the increase of the first: for of both justifications, both to be acquired and to be increased, there is the same ratio, so that in neither way can it be from free choice alone. For as often as a man, by good works, is either promoted to acquire justification, or in the justification acquired grows, he always works by the help of the grace of God; and therefore Paul brought forward the example of Abraham, who, at the time when he believed God and it was reputed to him unto righteousness, was already just before God. But James says that a man is not justified from faith alone, whether we understand him of the first justification or of the increase, but from works proceeding from faith; because it is not enough to believe, but one must work from faith; and therefore he brought forward examples both of the first and of the second justification: for Rahab by works of mercy proceeding from faith obtained the first justification, obtaining from God to be numbered among the people of Israel, and true compunction of sorrow. Then he says that Abraham, whose example Paul also had adduced, was justified from works, whom nevertheless Paul had said, not from works, but from faith; because both for acquiring and for increasing justification, in this there is an equal reason.

Perperam, therefore, some think that Paul spoke of the first, but James of the second justification; since each of them uses one and the same example of the second justification, and James also adds an example of the first. Nay rather, when James says, "And the Scripture was fulfilled, which says, Abraham believed God, and it was reputed to him unto righteousness," he interprets the Scripture of Genesis 15, where that is said, "Abraham believed," etc.; and Paul, who uses that testimony, in such a way that works done from faith are not excluded; but are proved from Scripture itself, because Abraham not only believed, but from faith also offered his son; by which deed, says James, the Scripture, which seems to attribute justification to faith alone, ought to be supplied, so that it be understood of working faith.

Then also from another point Augustine is not contrary to himself: because when he says that election was made from justice with the examination of works premised, he understands it of eternal life; but when he says that "without examination, and not from works, but by grace men were elect," he understands it of grace.

Caput IX - Election to glory after merits is proved a priori

It is fitting that we confirm this same opinion by reasons, and first propose in this chapter those which show the matter a priori. The first is taken from the common doctrine of the Theologians, who with one voice admit that God by His primary and antecedent will willed to give to all eternal life, and therefore that will is common to all: but the antecedent and primary will is before the forevision of merits: therefore the will of God before foreseen merits is equal to all. Wherefore, since God did not decree by an efficacious will to give glory to all, it follows indeed that no one was elected to it by an efficacious will except from the foreknowledge of merits. Moreover, that antecedent will is that which is from God alone, without any foreknowledge of merits, has already been sufficiently proved by us in Disputation 83, cap. 3, where we also showed that it is not for this reason called antecedent because it is simple and inefficacious, but because it is from God alone; nor consequent because it is efficacious, but because it comes after our works foreseen, and takes occasion from us.[1796]

No less efficacious reasons can be brought forward from the doctrine handed down in Disputation 82, c. 5, namely, that in the decree and in the prescience of God the ratio of prior and posterior, according to our mode of understanding, can be assigned in no other way than in one of two ways. One is by analogy and likeness to the human mind, which deliberates about things and determines them, so that we assign to God also the order which He may observe in things when He proceeds in an orderly way. The other is on the part of the objects which God is said to foreknow and to foreordain: for although He does not will one created thing for the sake of another, that is, because He wills another; yet He does will one to be for the sake of another, as was proved in the preceding chapter; when, therefore, we must constitute, according to our mode of understanding, an order in the divine prescience and foreordination, we must constitute that which the objects have among themselves. From either head we shall not obscurely show that election, and the efficacious will of giving eternal life, was from the foreknowledge of merits; indeed, if it could be done in this way, it could not have been done otherwise, if in time glory was to be given from merits.[1797]

The second reason, then, can be from human things to divine. For if some king should propose some prize to those who compete well, and with this condition, that no one should obtain it unless he were victor, certainly he would never determine with himself to confer that prize for certain upon someone - however much he loved him and desired the prize for him - before he saw him to be victor. He could indeed give him better arms, a better horse, and other things necessary for the contest; but to determine with himself to confer that prize would surely be foolish, if he wished to propose it as a prize. But if he were prescient of the outcome, and knew that he would be victorious; from the foreknowledge of the victory he could determine with himself to give the prize: but if he were not prescient of the victory, he could not but in time await the victory, so that in view of it, and on account of it, he might determine to award the prize. Therefore, since God proposes

1796. Vázquez, Disputatio 83, cap. 3.
1797. Vázquez, Disputatio 82, c. 5.

eternal life to all as a prize, and promises it lawfully only to him who strives according to the rules on account of victory and perseverance, He could not but await the victory, so as to determine to confer such a prize in view of it. But because He is prescient of future things, and sees them clearly as if present, He indeed awaits the victory, not in time, but according to reason in His eternity, so that in view of it He may confer [glory]: for it would be foolish to foreordain the prize without respect to it, if He promises it only on account of victory, as we said of the king. Although therefore God should desire the prize of eternal life more for some than for others - even before He sees the victory - namely, for those to whom He has decreed to confer better grace for meriting glory, who are called predestined: nevertheless by no reason must it be affirmed that to them He efficaciously decreed glory before He saw the victory.

It is fitting that we confirm this same position with reasons, and first bring forward in this chapter those which show the matter a priori. The first is taken from the common doctrine of the theologians, who with one voice confess that God by His primary and antecedent will willed to give eternal life to all, and thus that will was common to all: but an antecedent and primary will is prior to the forevision of merits; therefore God's will before merits were foreseen is equal toward all. Wherefore, since God did not decree by an efficacious will to give glory to all, it follows clearly that none was chosen to it by an efficacious will, except from the foreknowledge of merits. Moreover, that antecedent will - since it is from God alone, without any foreknowledge of merits - has already been sufficiently proved by us in Disput. 83, cap. 3, where we also showed that it is not called antecedent because it is simple and inefficacious, but because it is from God alone; nor consequent because it is efficacious; but because it is after our works foreseen, and takes occasion from us.[1798]

No less efficacious reasons can be produced from the doctrine delivered in Disput. 82, cap. 5, namely, that in the decree and foreknowledge of God the reason of what is prior and posterior - according to our way of understanding - can be assigned only in one of two ways. One is by analogy and likeness to the human mind, which consults about matters and proceeds by order; the other is from the side of the objects about which He is said to decree and determine. For although we must posit in the divine determination, according to our mode of conceiving, a certain order - which, however, in God is most perfect - yet we must also assign to God an order of acting; but no order is to be attributed at will without foundation in the objects about which He operates. Whence, as we showed there, God is not said to ordain one thing to another by His mere will, except inasmuch as the very objects are ordered and referred among themselves. Now such an order is constituted in the things themselves, that if something is a means to an end as a physical cause of attaining the end (as medicine is for health), in intention the order is inverted, so that health is first willed; for although it is an effect of medicine under the genus of efficient cause, it is nevertheless the end of it; but the end, as related to the will, is prior, and the will of it is prior, than the will of the means. If, however, the means to some end are moral - such as merits: whether condign, or congruous, or impetratory - although he who wishes to attain from another such an end through merits may first

1798. Vázquez, Disputatio 83, cap. 3.

think about the end and by an efficacious will wish to have the merits as means; nevertheless, he who promises to another the attainment of the end through merits as through means never decrees to give that end until he sees or foresees the merits, as we noted in cap. 6 of that Disputation.[1799]

The reason indeed is that a moral mean, which is merit, is not a physical mean which by its own action really effects and attains the end, as medicine does health; but it is a mean after the mode of impetration, related to the will of him who confers the end in view of it. But merit can never in time be a divine mean, unless He who in act confers the end bestows it on account of merits; whence it is that He must first see before He decrees to give the end which He has proposed. Now this order, which the will keeps in time - namely, that merits be first, before the end is given - God also keeps in foreknowledge; because both foreknowledge and merit in time itself are compared as a moral mean with the will of Him who confers the end; and thus in His mind, in order to impetrate, it must precede.

For this reason, when the Massilians (the men of Marseilles) tenaciously defended that the first prevenient grace is given to us in time in view of our labor and solicitude, and so conceded some merit at least congruous and impetratory of grace, they consequently said that we were elected to grace by God's election on account of the merits of our first labor: whether from faith, or from the will of rising from sins, which they supposed to be from us; or from some other work of ours, as is clear from the letters of Hilary and Prosper, often alleged. Nor anywhere does St. Augustine, disputing against them, impugn their position from this, that the end ought first to be determined before the means, and thus that grace - which in the opinion of the Massilians is the end of labor - ought to be prior to the labor itself; but he always presses them with this reason: that, just as grace is not given in time in view of any work or merit, so neither could it have been prepared from eternity out of the foreknowledge of works or merits; for he thinks the same account holds in both cases, namely, of the very donation of grace in time, and of the predefinition or election to it in foreknowledge.[1800]

Add that since St. Augustine himself, when he was a presbyter, had been in the same opinion with the Massilians, thinking that grace is given on account of the merits of faith from one's own powers, by the same token he said that in the eternal election to grace God had had regard to our faith, and that we were elected from the foreknowledge of it, or that our very faith had been elected. Thus he taught in the book of Expositions of certain propositions of the Epistle to the Romans, cap. 60, which afterwards he retracted in book 1 of the Retractations, cap. 24, and first, in book 1 De praedestinatione Sanctorum, cap. 3. Therefore he afterwards held that election to grace was not from the foreknowledge of faith, because he understood that faith itself is the gift of God, and thus is not prior to grace. His words are: "I had not yet diligently inquired, nor had I yet discovered, what the election of grace is, of which the Apostle says, 'the remnant were saved according to the election of grace'; which truly is not grace if any merits precede it to obtain that it be given, rather than that it be given not according to grace, but according to debt rendered to merits. But if truly

1799. Vázquez, Disputatio 82, cap. 5.
1800. The letters of Hilary and Prosper, often cited in this matter.

grace in time were given from merits, Augustine would not shrink from conceding - indeed would be compelled to say - that election to grace was made from merits; nor would any absurdity follow therefrom."[180118021803]

In the same way, in Tractate 86 on John, after the middle, explaining that, "You have not chosen me" (John 15), he says: "Here surely is vacated the vain reasoning of those who defend the prescience of God against the grace of God; and therefore they say that we have been elected before the foundation of the world, because God foreknew us as going to be good, not that He Himself would make us good. He does not say this who says, 'You have not chosen me.' For if for this reason He had chosen us, because He had foreseen that we were going to be good, He would at the same time have foreseen this, that we were going to choose Him first." Augustine therefore infers that election to grace was not made from the foreknowledge of merits, because otherwise in time we should first be good and should choose, or merit, God, before He moved us. But if in time it would be thus future, we should not deny that even in the eternal election we were foreknown as good, and therefore elected by God. Since therefore in time we, truly aided by the grace of God, do choose and do merit the kingdom of heaven, it follows that in the eternal foreknowledge from these merits we were elected to it. In precisely the same way, if something in time was the meritorious cause of our first grace and of the entire effect of predestination, it was also in foreknowledge the cause of it; just as the prayers of Stephen, on account of which God called Saul, and the merits of Christ, which were the cause of all grace and of the glory to be conferred on us, were in God's foreknowledge the cause of the predefinition and election by which He chose Saul, or us, to grace, as we shall say in Disput. 94. Finally, whatever in time is given in view of merits is in the eternal election decreed for the sake of those merits.[18041805]

Wherefore their opinion is not approved by me, because they assert that God chose us to glory - which He proposed without us - before He foresaw the merits of Christ; and that the Blessed Virgin was first chosen to be the Mother of God before her merits were foreseen: provided that they once concede that she obtained this dignity by merits, as all confess. Nor does that manner of speaking stand in the way: "Christ was predestined that we might be sanctified and glorified; and the Blessed Virgin was sanctified that she might be the Mother of God"; where the particle "that" denotes the final cause, which is prior in intention: because when the end is to be attained in the thing itself through merits, and the gift in time depends upon them, the end alone is willed prior in the order of intention by a will of simple affection and inefficacious; inasmuch as he who desires such an end for another proposes it only under the condition, if it be merited: and as in fact He will give it only through merits, so also in His decree He never efficaciously defines to give except through merits. And indeed it is absurd to assert that anyone was efficaciously elected to eternal life among men before He who was the cause of salvation for all was foreseen: for thus someone would not be elected in Christ, which is manifestly false, as we shall prove in that Disput. 94.

1801. St. Augustine, Exposition of certain propositions of the Epistle to the Romans, cap. 60.
1802. St. Augustine, Retractationes, lib. 1, cap. 24.
1803. St. Augustine, De praedestinatione sanctorum, lib. 1, cap. 3.
1804. St. Augustine, Tractate 86 on the Gospel of John.
1805. Vázquez, Disputatio 94.

From this also it follows - which we shall show more copiously at III, q. 2, a. 1 - that the merits of the holy Fathers could not in time have been the cause of the Incarnation of Christ according to substance, if indeed it was preordained from eternity that it should be in time, and if in time it was bestowed upon them in view of the merits of Christ Himself; for if from eternity their merits had been the cause, it would not in time have been granted in view of Christ's merits.[1806]

For this reason St. Augustine, in the book On the Predestination of God, chapters 2 and 3, seems to have taught that there is a twofold predestination: one of "binding," namely of natural things into their ends; the other truly of condition, namely of men to punishment or to eternal life. Whence at the end of chapter 3 he says thus: "From the foreknowledge therefore of offenses, as a just judge He predestined punishment; just as from the foreknowledge of virtue, predestination is wont to be made of remuneration." Thus does he explain that passage to the Romans (8): "Those whom He foreknew." Where, first, note that predestination is called by Augustine not the preparation of grace, according to his common phrase in book 1 De praedestinatione Sanctorum, cap. 10 and elsewhere, but the will of giving glory. Yet he did not say absolutely "predestination," but "predestination of remuneration"; and he admits this to be from foreknowledge, because it is a predestination under condition, namely, if one shall merit well and persevere; which is to propose eternal life as a prize.[1807]

Moreover observe that although this book is counted by Erasmus among the spurious works which are ascribed to Augustine, nevertheless the reasons by which he is induced to believe this are frivolous. One is because the work is brief; yet there are many others in the ninth tome much briefer which undoubtedly are Augustine's. Another is that it contains doctrine contrary to Augustine himself; but Erasmus is mistaken: for where he teaches that predestination is made without merits, he speaks of that predestination which is the preparation of grace and is called absolute predestination; but here he speaks of the predestination of the reward and of remuneration, which we commonly call election to glory. But now let us come to the third reason.[1808]

The third reason, no less efficacious for our position, is taken from the order of objects among themselves. For according to the doctrine handed down to us in Disput. 82, cap. 5, we must assign in the divine decree the same order which objects have among themselves in the thing itself, according to the different genus of cause under which they are compared among themselves; for otherwise we could not constitute order and predefinitions among the decrees of God according to reason; and since God has a most perfect mode of disposition, we ought to assign the very order which He observes in things. We will, however, handle in the last chapter whether God can, by a peculiar desire, will for someone eternal life before He foresees his merits, then only, when He decides to confer upon him greater means of grace.

1806. III, q. 2, a. 1.

1807. St. Augustine, De praedestinatione Dei, cc. 2 - 3.

1808. Erasmus judged that book to be among the spurious works attributed to St. Augustine; his reasons are refuted in the text.

...than if God were to bestow glory on one who had no merits. For then, just as in time He would not give it on account of merits, since there were none, so neither would He from eternity have decreed to give it from those merits.

The same, which up to now we have said of adults, think it said also of little ones; namely, that they were not efficaciously elected to eternal life before others except from the foreknowledge of justification. Indeed, in time glory is bestowed upon little ones only if they are justified, and the justification of these demands it condignly, if not as a reward, at least as a paternal inheritance, to which by that very justification they are adopted; and the very same ratio altogether ought to be held for it, as if it were bestowed as a reward.

The same position is shown from freedom of the will.

Caput X - A posteriori reasons: against the absurd consequence from the opposing view; on liberty

No less effective are the a posteriori reasons by which it can be proved that election to life was defined by God from the foreknowledge of the merits of grace. The first reason tries to draw the opposing view to this absurdity, that in the elect true freedom (*libertas*) of attaining and of losing beatitude (*beatitudo*) does not remain. For if God, from Himself alone, having no regard to merits (*meritum*), efficaciously decreed to make some blessed, it would follow that it would not remain in their free power not to attain glory and to be damned; since no one can resist the decree of God or make it void: which is plainly absurd and contrary to Scripture. But that this reasoning may be made firmer for me, two things must be proved: one is, that what we infer from this reasoning is false; the other is, that from the opposing view that very thing is clearly gathered.

As to the first, then, that what we infer is false is clear from Scripture, which often repeats that each one of us will receive on the day of judgment according to his works, whether good or evil, which would be said in vain unless it lay in our power. It is confirmed, first: we would also in vain say, "Thy kingdom come," if to attain or to lose it were not placed in our freedom, nor in any way depended on our prayer. Thus the men of Marseilles inferred against St. Augustine, when the discussion was about election to grace. But the ratio of that matter is far different, as we shall explain in our disputation on grace, chapter 17.[1809] In the present difficulty, however, it follows most rightly that it would be in vain to ask beatitude from God, if it in no way depended on our prayer and freedom.

It is confirmed, second: No one, who once has been elected to glory as a vessel unto honor, could make himself a vessel of dishonor and of damnation by his own iniquity. For whether he will have been good or evil, he will always be a vessel elected unto honor and glory, since to make that election, once made, void is not in his power. But Paul in 2 Timothy 2 does not think that anyone,

1809. Vázquez, Disputatio de gratia, cap. 17.

by cleansing himself from sins, can become a vessel unto honor from a vessel of dishonor any more than, on the contrary, from a vessel unto honor one can become a vessel of dishonor if he fall away from justification.[1810]

It is confirmed, third: That saying would be said to the elect in vain, Apocalypse 3: "Hold fast what thou hast, that no one may take thy crown." For if no one had it in his own hand in such wise as to be able to lose it, he would rightly answer that it is laid up in the hand of God, from which neither could any other snatch it, nor could the elect himself lose it. For if God has the key, and so shuts that no one can open, and opens that no one can shut, surely for the elect the gate of hell will thus be shut, and that of the kingdom of heaven open, so that it would not be in their power to shut for themselves what is open and to open what is shut. Wherefore it will not be free to them to enter into hell with the doors shut; on the contrary, with the door of the kingdom of heaven open, no one will hinder them, if they will to enter, however they may have conducted themselves in this life.[1811]

Some reply, following the opinion of St. Augustine, chapter 13 of On Correction and Grace, that Scripture so speaks, not because the crown of the elect can be lost, but that man may stand in fear. But neither is this the opinion of St. Augustine, nor could anyone fear for himself that which he knows to be impossible and in no way placed within his capacity. St. Augustine therefore in that place only teaches that the number of the predestined is certain, even if this also be said to them, "Hold fast what thou hast," etc.; indeed from this very passage he proves that the number of the predestined is certain in the aggregate, namely a thousand or some other, nor will it ascend beyond that: because unless one should lose his crown, another need not be substituted. He adds these words: "But that even to the saints who will persevere these things are said, as if it were held as certain that they will persevere, should not be heard otherwise by those to whom it will be expedient not to be wise above measure, but to fear. For who, from the multitude of the faithful as long as he lives in this mortality, would presume that he is in the number of the predestined? for that must be kept hidden in this place, where pride must so be guarded against that, lest he be lifted up, the Apostle was even buffeted by the angel of Satan."[1812]

The number of the predestined is certain only in foreknowledge; for certainty does not belong to the things themselves, but to their cognition and to knowledge, as was noted in Disputation 68, cap. 5.[1813] But foreknowledge supposes the very outcome of things as future from our liberty. Therefore that certainty proceeds both from our liberty and from the infinite divine intellect. And because he whom God certainly knows will persevere still has in his power not to persevere, since that pre-fixed certainty does not precede but rather supposes his liberty, therefore it is rightly said to him: "Hold what thou hast," because he can fall from it; and each predestined person, to whom also it is expedient not to be wise beyond measure, ought gladly to hear that voice: "Hold what thou hast." On this account Paul, certain indeed of his predestination, when he still saw his salvation placed in his own liberty, said, 1 Corinthians 9: "I chastise my body and bring it into servitude, lest

1810. 2 Timothy 2 (on vessels for honor and dishonor).
1811. Apocalypse 3:11.
1812. St. Augustine, De correptione et gratia, cap. 13.
1813. Vázquez, Disputatio 68, cap. 5.

perhaps, when I have preached to others, I myself should become reprobate."[1814] The word "perhaps" indicates the liberty by which he could fall and become reprobate. Therefore, lest that which he could bring about should follow, he chastised his body. For the certainty of his salvation was not pre-fixed before his consent, but after it; and so it remained in his power. Also for this reason, lest, though he could, he should be wise beyond measure, he was buffeted by Satan, as St. Augustine notes. He also observed that the name "reprobate" in that place either signifies one excluded from the kingdom of God - in which sense the Scholastics use this word - or denotes what we call "improper" and "vicious," which in the same way serves our reasoning. For if Paul had been elected to the kingdom of heaven before merits, and could not by his own sin lose it, then by his own will and life even to the end he could not become improper. But if the crown is pre-fixed without our liberty, and altogether prior to it from God alone, there is nothing for anyone to fear that he might lose it, since it is not free for any other to snatch it from the hand of God, nor for the predestined man himself to lose it; and up to this point concerning the first point which we proposed to prove.

Next, it must be shown that from that decree such a necessity is imposed from without upon our liberty that those who are elect are not at all left free not to obtain the crown; and hence their liberty is injured and impeded. I do not undertake to prove that from that supposition of a decree there follows a necessity of each and every work; for however necessary it would be for someone to persevere in grace, he could exercise himself in various good works with liberty; just as Christ, to whom it was not free to sin, could, according to his will, do these or those works. But I contend that at least it is necessary for the elect to obtain glory and not be damned, in such wise that no liberty at all remains to them toward the opposite. Wherefore it is also necessary for this, that someone at some time persevere in grace unto beatitude, and that he die without mortal sin, because it has been so ordained by God; it will not be free for the elect not to persevere; or, even if he should die in sins, they could obtain beatitude: both of which are absurd.

In the first place, the doctrine of Waldensis must be supposed, which I brought forward above in Disputation 68, cap. 1, namely, that it is a manifest error to concede in us an absolute necessity that we be saved or that we act, and also to concede a necessity which he calls "relative," that is, arising from a supposition that takes away liberty; from such an election prior to works there arises a necessity which is clearly shown in us, not only absolute necessity, but also necessity from a supposition which removes our liberty, as is proved there.[1815][1816]

For, with such a decree posited, either a man can fail to persevere in grace and be damned, or he cannot. If he cannot, it follows that in him there does not remain indifference toward either part, and hence neither liberty; for liberty is nothing else than an indifference toward either alternative, and it cannot remain along with an impossibility and an implication of contradiction toward the other part; thus the free faculty is not apt for either, but is by a necessary determination fastened to one part. But if still he can fail to persevere and be damned, then it is possible in reality. For if that

1814. 1 Corinthians 9:27.
1815. Waldensis, as cited above in Disputatio 68, cap. 1.
1816. Vázquez, Disputatio 68, cap. 1.

which is possible can be, no impossibility follows, as Aristotle says in the Prior Analytics, book I, chapter 12;[1817] but if from the positing of something an impossibility follows, that thing is not possible. Let us then suppose that some elect person should not obtain glory; it follows that an efficacious decree of God becomes void; but this is impossible: therefore so also is the antecedent.

Various adversaries try to reply to this argument, but in no way can they shake its force. First, some reply that, the decree posited, man indeed is saved of himself, but not free toward either alternative. But this doctrine cannot be defended by any reason. For heretics, with Calvin, say that from the foreknowledge and will of God a necessity is imposed on our free choice, so that although liberty and indifference toward either be taken away, nevertheless spontaneity remains - something which even in brute animals, according to the Philosopher in Ethics III, chapter 1, is found - namely, because the operation is from an intrinsic principle of cognition.[1818] But, as to single works, it is not enough to concede spontaneity; one must also assert liberty: so also in perseverance and the obtaining of beatitude, it does not suffice, but one must assert liberty; otherwise by the predefinition our liberty will be injured, although spontaneity should remain intact, and in this respect we should not differ from brute animals.

Second, others reply that, with the supposition made of the decree of God and of divine election, a necessity is imposed upon our will so that now it cannot go to the opposite part, yet of itself and by its own power it is free, and in the manner of acting nothing is changed in it from within; because the impediment is from without, nor does it physically flow into our will: for they think that, with a merely extrinsic impediment posited - as was, in Christ, the precept of dying - liberty is in no way taken away, but only by an impediment physically influencing and determining our will. But this solution is frivolous. For although our will, of itself and according to its manner of acting, would otherwise be free, nevertheless, with the decree of God posited, however extrinsically it be added, and even if it do not physically influence, it cannot act indifferently, or incline to either part; in no way here and now does it remain indifferent: therefore neither does liberty remain; and consequently the decree of God injures and will impede our liberty, which is absurd. For what, indeed, is liberty other than indifference toward either part? If therefore now indifference does not remain, liberty will not remain; whether the mode of acting be changed intrinsically, or only something be added extrinsically, upon the positing of which indifference does not remain. In what way, however, in Christ, with the precept of dying, liberty remained in the observance of that precept and the ratio of merit, we shall say in III, q. 18.[1819]

Third, some reply that no other kind of necessity is imposed on our will from the decree of God than from his knowledge. For just as, the supposition being made that God knows Peter will sin, he cannot not sin, yet simply his liberty to not sin is not taken away - wherefore simply thus he will sin, in such wise that he can not sin - so, with the supposition of God's election, man cannot be damned and not obtain glory, and yet simply thus he will freely obtain it, in such wise that he can lose it, because necessity from a supposition does not simply take away liberty nor diminish it. But

1817. Aristotle, Prior Analytics I, c. 12.
1818. Aristotle, Nicomachean Ethics III, c. 1.
1819. St. Thomas, Summa theologiae III, q. 18.

this solution is manifestly refuted by the doctrine of Anselm, which we adduced in Disputation 68, cap. 4 and 5.[1820] For as he himself teaches in the work De concordia liberi arbitrii et praedestinationis, cap. 1, there is a twofold necessity: one antecedent, the other consequent. The antecedent is that which precedes our liberty, that is, which arises from something that so precedes our liberty that its positing or its non-positing does not depend on us, as for example that the sun will rise tomorrow, or something similar. The consequent, however, is that which follows our liberty, that is, which, the supposition being made of that which will be future from our liberty, is necessarily inferred. By the former, he says, our liberty is taken away: for if something imposes on us a necessity of willing one part so that we cannot will the opposite, and that thing precedes our consent and liberty, nor is supposed to be from our liberty, it follows together with that necessity - because it is prior - that our liberty does not stand. For how can it be that something befalls me without my consent, and I am by necessity inclined to one part, and nevertheless my liberty be unharmed? The consequent necessity, however, according to the opinion of Anselm, does not take away or diminish liberty, because every supposition upon which such a necessity follows is posterior to liberty and even depends upon it. Such is the necessity which follows from the knowledge of God; for, this being posited, we also posit the thing to be future; but the thing is future from our liberty. Therefore the supposition is subject to our liberty, and hence the necessity which arises from it, being posterior, will preserve it unharmed, as we showed in that place.[1821]

But now, in the proposed difficulty, the supposition of the election of God prior to merits is prior to all our liberty, and in no way depending on it. Wherefore, if from such a supposition there arises a necessity - as stands proved - our liberty is altogether impeded. And this is clearly deduced not only from the doctrine of Anselm, but also from the reasoning made immediately above. But we must defend liberty against every kind of necessity, so that we truly remain free both to persevere and not to persevere, to obtain beatitude and to lose it. Nor is it enough to assert that otherwise we would freely persevere, if that supposition were not made; for there are heretics who, with Melanchthon, concede to the will liberty of itself, yet assert that from the knowledge or decree of God it by no means remains free, as we recalled in that place; and against these also, whatever supposition be made, true liberty in us must be defended.

But the adversaries go further and, that they may wholly escape the force of the argument, admit Anselm's doctrine to be true, namely that an antecedent necessity impedes our liberty, not a consequent; however, from that supposition of the election to glory there is not inferred to our will an antecedent necessity, but a consequent one, such as follows upon the supposition of God's knowledge. For although there did not precede an absolute knowledge of merits, yet there did precede a conditional knowledge, by which God saw under a condition that, if he should prevent this man by such and such a vocation, he would freely persevere to the end of life. Therefore, when with this liberty known he determined absolutely to give this man beatitude, he does not take away the indifference of will which he had known under the condition, but supposes it; whence the

1820. Vázquez, Disputatio 68, caps. 4 - 5; cf. Anselm, De concordia liberi arbitrii et praedestinationis, c. 1.
1821. Anselm, De concordia liberi arbitrii et praedestinationis, c. 1.

necessity which is subject to the decree is posterior to the liberty of that will. Nothing therefore prevents God, after this decree, from preparing various vocations by which the man may freely persevere to the end of life and freely obtain glory.

This conditional knowledge, which God has, some theologians abuse for explaining many difficulties; but if it be rightly weighed, in the present difficulty it has no force, but rather utterly fails for the safeguarding of our liberty, as if God had known nothing under a condition. First, for God to have known earlier under a condition that very perseverance - under this and that vocation - unto the end of life as free, and then, after this liberty was known, to have determined absolutely to give this man beatitude: does this not, by the very fact that the absolute election precedes our consent and is not in any way dependent upon it, put the event outside my power, according to what we have said in Disputation 68, caps. 6 and 7?[1822] Therefore, if it was not in my power, and from that there arose for me a necessity, there does not remain in me liberty. For even if God had earlier known under a condition liberty in me for persevering, yet with the absolute remaining, perseverance will be necessary. For that supposition of an absolute election was not constituted from the fact that earlier, under a condition, there was my liberty - as all must concede; otherwise even the reprobate could be said to be elected, since of some of them under a condition it is known that they would persevere, if they were prevented by such a vocation. Besides, as we showed in Disputation 67, cap. 4, from St. Augustine and Prosper, merits under a prior condition, which in truth were not absolutely future, could not be for God the cause either of damning someone or of denying grace, or likewise of conferring grace or glory; and on this point those Fathers call such merits fictitious and feigned. Therefore in that prior decree, in which God determines to give glory, it is not to be said that he has regard to merits under a condition or to the foresight of them, but that he absolutely wills to give as gratuitous and to render as retributive for merits absolutely future; but merits under a condition are not absolutely future. Therefore the decree to give in view of merits cannot be constituted upon those that are only under a condition; and so, in the case proposed, liberty cannot in any way remain in me, with my consent defined from without.

Next, in order that in the absolute order the same liberty be preserved which was in that order under a condition, it would be necessary that the same series of all motions be constituted. But the adversaries, in the present solution, constitute one order under a condition and another order when absolute; therefore it is no wonder if in that which is under a condition liberty is found, but in the absolute it cannot be. In such conditional suppositions they posit: Peter will be called thus; under that vocation, through successive occasions, if he shall freely persevere in life, he will obtain the consequent good, that is, he will freely obtain beatitude. Yet indeed in the absolute order, liberty under a condition does not give rise to liberty under an absolute, because it does not posit the same series of motions; and consequently, if one adds to the decree of election and of glory the presupposed liberty under a condition by a pact, that God should foresee before all under a condition, and then foresee likewise, and also will the calling as following in the end - certainly one must say that then the human free choice would remain, as far as that conditional supposition goes; but one unique decree of election would then be constituted, as if even the decree itself were

1822. Vázquez, Disputatio 68, caps. 6 - 7.

conditional in itself, or as if, taken in the absolute order, it were not absolute, but absolute only upon a condition. But if our case is that in the absolute future order, and in that very order the decree of election be absolute, then, even if under a condition it is added that liberty shall be preserved, it does not follow that, in the absolute, if such a decree be posited, liberty will be preserved.

They assert that it is true - namely, that our liberty is hindered by a necessity that is prior, not one that is subsequent; moreover, from that supposition of election unto glory there is not inferred for our will a necessity antecedent, but a subsequent one, such as is that which follows upon God's knowledge. For although the knowledge of merits under an absolute mode did not precede, yet a conditional knowledge did precede, by which God saw under a condition that, if I should forestall this man by such-and-such a calling, he would freely persevere unto the end of life. Therefore, when with this liberty thus known He absolutely resolved to give this man beatitude, He does not take away from him the indifference of will which He had known under the condition, but He presupposes it - because the necessity of this decree is posterior to the liberty of that will. Nothing, therefore, hinders that, after this decree, God should prepare various callings by which man would freely persevere to the end of life and freely obtain glory. Some theologians abuse this conditional science, which God has, to explain a thousand difficulties; if it be rightly weighed, however, it has no weight at all in the present difficulty, but is just as ineffectual for saving our liberty as if God had known nothing under a condition.

Refellitur primo. - First refutation.

First, that God earlier knew under a condition my perseverance by this and that calling does not prevent that that absolute election unto glory should precede my absolute consent, nor that it should in any way have been in my liberty under a condition; in this manner liberty under a condition is rightly defended by the sole predefinition of prevenient and concomitant grace, according to what we have said elsewhere.[1823] If, therefore, it was not in my power - and such is the knowledge of God, according to those things which we have said - then, if from it necessity arises for me, it will not leave liberty in me. For although God beforehand knew under a condition in me a liberty for persevering, nevertheless the perseverance under an absolute mode will be necessary.

For that supposition of absolute election was not made from this - that my liberty was foreseen under a condition - as all must concede; otherwise even the reprobate would be chosen: for each of them is known under a condition to be one who otherwise would persevere, if he were forestalled by such-and-such a calling. Then also, because, as we have seen elsewhere, merits foreseen under a condition, which in truth were not going to be absolute in the future, could not have been to God a cause either of damning someone, or of denying him grace, or likewise of conferring grace or glory upon him; and therefore those Fathers call such merits confected (i.e., fabricated) merits.[1824] Since, therefore, in that prior (order), in which God decreed to give glory according to the former opinion, He did not foresee merits as absolutely future, but only under a condition, one cannot say that God

1823. Vázquez, Disputatio 68, caps. 6 - 7.
1824. Vázquez, Disputatio 67, cap. 4, citing St. Augustine and Prosper.

foreordained glory on account of those merits that were to be future under a condition: because by this reasoning the merits are fashioned such that something should be given out of regard for them; whereas, after the decree of giving glory, nevertheless they can absolutely not be going to be, and in that prior (order) they are not absolutely future; yet the decree of beatifying is absolute and regards beatitude as to be conferred absolutely, not as to be conferred in time only in view of merits. Add, moreover, that when it is decreed that something be given on account of merits or in view of merits, such a will is one of gratitude and retribution; but who, even a fool, would determine to recompense out of gratitude because of merits not yet absolutely future, but under a condition? About which more below in chapter 11. Therefore the election in no way was in my liberty, but was determined without my consent.

Next, in order that in the absolute order the same liberty be preserved which existed in that order under a condition, it was necessary that the same series in all things be constituted; but the adversaries in the aforesaid solution constitute one order under a condition, and another absolutely: hence it is not a wonder if in that which is under a condition liberty is found, but in the absolute it cannot be. In the conditional they thus suppose: if Peter were called by this and that calling at each opportunity unto the end of life, he would freely persevere and would freely obtain beatitude. And indeed, if another decree under a condition be not added, liberty under a condition in this way is rightly defended by the sole predefinition of prevenient and concomitant grace. But if they would add a decree of election unto glory before liberty foreseen under a condition, thus: if God had decreed before all things to beatify man, and then to forestall him by this and that calling even unto the end, certainly no one would say that this man would remain free; for then there would be presupposed a decree of election before every knowledge - even conditional - of merits and works. Either, therefore, in the absolute order they should not suppose a decree of giving glory before works absolutely future, so that in it the will may remain free, and thus the order under a condition and the absolute order be entirely the same; or, if in the absolute they add that decree before works absolutely future, let them add it also in the conditional before works future under a condition: for if it would be added in the conditional, then in it liberty of persevering would be taken away under a condition, just as in the absolute, if such a decree be posited, absolute liberty is impeded.

Caput XI - Another a posteriori argument against the former opinion

Another a posteriori reason against the former opinion strives to infer this: that in the elect merits do nothing at all toward obtaining glory. For if God, not having regard to the reason of merits, not out of gratitude, but out of His sole gratuitous liberality and mercy, decreed from eternity to beatify Peter at such a time, then even if afterward he should have merits, God will not, in time, repay glory in view of them, but will give it gratuitously and out of mercy, just as He decreed. Indeed, although He should not find merits, nevertheless He will grant glory.

Exemplo res illustratur. - The matter is illustrated by an example.

Just as if some king should once and for all resolve to choose Peter as counselor, not looking to these endowments of mind, nor out of gratitude or mercy, but should establish that he chooses him solely by his gratuitous will, even if afterward he should ascertain that he is learned and prudent and has had merits, nevertheless by force of the prior decree he would choose him, not on account of his merits, but because it so pleases him. And again, although he should find him to be ignorant and foolish, still by force of the prior decree, when he chooses, he must either change his will or in his prior determination he will have regarded no merit by reason of which he would, when he wished, choose him. For when a man does not look to some merit when he determines to give something, by the reason of which he grants it, but is moved by his sole liberal and merciful will to benefit someone, assuredly by his gratuitous will he determines to give that; and therefore afterwards he will give it gratuitously in every respect and not out of gratitude, unless he should change his resolve. If, therefore, God had first with Himself resolved to give glory not in view and by reason of merits, it follows that it is by His sole kindness that He does good and not out of gratitude, because He so decreed: and since the decree of God once posited cannot be changed, it follows that by force of that decree He confers beatitude upon the elect in time altogether gratuitously, not out of gratitude nor in view of merits, although they may have many merits; indeed, even if they should have committed many sins; since the decree of God was entirely out of liberality and gratuitousness, as has been proved: therefore merits have nothing at all to do with obtaining beatitude - which is supremely absurd against the testimonies of Scripture, so manifest and accessible that it would be superfluous to bring them forward here. And accordingly it will truly be what Faustus, cited by us, said: that already we are not born to be judged, but judged, since our merits contribute nothing at all to beatitude, nor do sins impede it; although that author in another sense and without reason speaks thus against St. Augustine, as we shall see elsewhere.[1825]

This argument, too, the adversaries twist badly to their own advantage; and while they attempt in various ways to extricate themselves, they entangle themselves in more difficulties.

Prima adversariorum responsio. - First reply of the adversaries.

They reply first that that prior decree was not gratuitous nor out of merits, whence it does not follow that beatitude, once predestined by God, is given gratuitously. But there is no one who is ignorant that the will of giving something and of doing a kindness is either out of merits - if not equal, at least lesser ones; in which case the gift is said to be given on account of a cause, or in return, and as a remuneration - out of gratitude: or (it is) a will of giving not in view and by reason of some merit either had or received, but from sole benignity, liberal, or merciful; if therefore God had decreed to beatify men out of the special regard of some gratitude, the will would have been one of liberal kindness and gratuity; and whether it be named in this way or that, if from eternity it had been not by reason of merits absolutely future, in that same way in time the effect would have been borne, since the will of God does not change: for even if there were no merits in time, there would always remain the same motive by which God from eternity had decreed to beatify men, which would be mercy alone and liberality. But when the motive of some affection remains, the

1825. Vázquez, Disputatio 91, cap. 17.

affection itself remains, with all others excluded which do not pertain to the motive; then the motive of mercy would remain, which is the misery of the recipients, and the motive of liberality, which is munificence toward those being given gifts.

Secunda adversariorum responsio. - Second reply of the adversaries.

They reply secondly that indeed the will of God, in the order of intention in eternity, can be absolute from merits, that is, not by reason of merits; but that beatitude is to be consigned in execution through merits; and by this reasoning they also defend that Christ the Lord was from eternity predestined not by merits foreseen of the Fathers; yet in time His Incarnation was consigned to execution by the merits of those (Fathers). And this indeed happens in human affairs: for in the order of intention we first determine to obtain an end; then we consult about the means: but execution is through means, and the means themselves truly conduce to the obtaining. Although, therefore, God earlier in intention should have decreed to give Peter glory, and later to give merits so that he might obtain it; nevertheless those very merits could in execution contribute to the obtaining of beatitude.

Efficax argumentum contra illa responsa. - An effective argument against those replies.

But a manifest reason stands against this solution: for if God from eternity decreed to give something altogether gratuitously, not out of gratitude, but out of His sole liberal and merciful will, He certainly decreed that such a donation should in time be consigned to execution from that same liberal and not remunerative will: just as things which are freely given are so given in time as they were determined from eternity. For it is not fitting that He who decreed purely from liberality and from mercy to give something should later execute it in time out of gratitude, unless He should change His will. Moreover, there is a manifest difference between means which work physically toward the attainment of an end - like medicine toward health - and merits, which are moral means, as we have noted in part elsewhere and in this (discussion).[1826]

According to a real and physical operation, and not as a motive referred to the will. Wherefore, if God should decree efficaciously first to send Christ before He foresaw the merits of the saints - since He had preordained that He would in fact come, and, in execution, to His coming in act the merits of the saints would contribute nothing - because, if in the intention they had not had the ratio of a motive, in execution they would not have it either, unless there were a new will; for the efficacy of these means is nothing else than to move the will toward something. Add also that, according to the opposing opinion which concedes that there is a certain efficacious will of granting eternal life before foreseen merits out of liberality, we are necessarily compelled to admit another efficacious will of granting eternal life out of gratitude, namely on account of foreseen merits, as a reward; or we must say that the prior will, which was out of liberality, is changed into another, out of gratitude, which is absurd. For since we cannot deny that God wills to give eternal life to the just out of gratitude on account of merits, therefore either this is a new will distinct from the prior, or the prior was changed: and both seem false. The former indeed is superfluous, because in God that double will is posited in vain; the latter is absurd, because the will of God cannot be changed.

1826. Vázquez, Disputatio 81, cap. (cited generally).

Moreover, it is in vain to posit that prior efficacious will of liberality and mercy, if it is never to have its effect from itself and from its own motive alone: therefore it will suffice to ascribe to God an inefficacious will touching the end, which precedes the foreknowledge of merits.

Third reply from the doctrine of Cajetan. Others reply thirdly that, in the first sign of reason in which He decreed to give eternal life, He established that not in the explicit foreknowledge of merits, but not without them. They gather this doctrine from Cajetan on III, q. 1, a. 3, where he teaches that Christ was predestined before the forevision of sin and its remedy, but not without it; that is, prior causally, not prior by the consequence of being together in conversion. From which Cajetan himself infers that otherwise Christ would not have come, if sin had not been, even if He were prior causally to be preordained.[1827] In the explanation of which he notes that something can be prior to another causally and not by the consequence of being together; then it will be at once consequent together with it and yet prior causally: just as the luminous is prior causally to the very illumination, but at the same time it is the consequence together with it, because from the one the other is rightly inferred, and conversely. For it is rightly inferred, "It is luminous: therefore it illuminates," and, "It illuminates: therefore it is luminous." The prior of consequence is that from which a conversion does not hold: thus "animal" is prior to "man"; because it is rightly inferred, "He is a man, therefore he is an animal," but it is not reciprocated. Both kinds of the prior and the posterior are assigned by Aristotle in the Categories, in the chapter on the modes of the prior.[1828] And so recent theologians say that glory, being preordained prior causally as the end, is at the same time together by conversion with merits: because from the one the other is rightly inferred, and conversely.

But for the reason by which Cajetan's doctrine does not obtain in the predestination of Christ, it can in the present case obtain in no way. For that doctrine is true only when the cause that is preordained and its effect, or the means, are connected by mutual necessity. Then indeed, although the cause be preordained as prior causally, yet it is together by conversion with the effect, and thus never without it. But whenever the effect or the means does not have a necessary connection with the cause or the end, but the cause or the end can be without it, then, with a priority of causality, there is also already a priority without conversion; nor is the effect, or the means, converted with the end. For instance, if the end can be had through many means and in many ways, none of those means is determinately at once consequent together with the end, and each is posterior causally. If, however, there were a single means, Cajetan's doctrine would altogether fit. Therefore, since beatitude, which, as the adversaries contend, is preordained prior causally, could be given not only through merits, but also by another way - namely by the mere will of God - it follows that merits are not necessarily connected with it, and thus are not at once with it either in causality or by conversion, unless we say that God decreed to give out of them or through them, which is the same, so that with respect to the will of giving glory they would have some ratio after the manner of a cause and of a motive: then, however, their prescience would be prior to the will of giving glory. Finally, by the reasoning made above it is very well shown that, with that absolute will of giving

1827. Cajetan, on St. Thomas, Summa theologiae, III, q. 1, a. 3.
1828. Aristotle, Categories, on the modes of the prior.

something which was not in view and in the ratio of merits, merits have no connection at all - neither necessary nor voluntary: wherefore without them it would have its effect in the same way, as was shown above.[1829]

But if someone should again say that God could from eternity with Himself have established, before the foreseen cooperation of the will, to make Peter blessed through merits - not determining these or those, but then to apply to him congruous graces on various occasions, by which he would freely have merits - there follows from this way of speaking that it is indeed in man's freedom to have these or those merits; but that it is not in his freedom not to have merits and not to obtain glory, which also is absurd; because from such a decree there arises an antecedent necessity which takes away our liberty, as was shown in the preceding chapter.

From what has been said there is inferred a no less infirm answer of others, who teach that, although by the nature of the thing beatitude is not necessarily connected with merits, nevertheless God could have bound His will of giving glory to this means rather than to another. As when someone wills to go to Toledo, even if he can go by carriage, or on horseback, or in a litter, nevertheless he can bind his will to this means, so as to will to go only in a litter. This answer of theirs is no less easily refuted.

First, because when someone wills not to go to Toledo except in such a way, he never first decreed absolutely to go. For if he had decreed it, by the force of that decree he would go in this or another way; nor would he bind his will to this rather than to another means, unless he changed his resolution on account of some difficulty or inconvenience which he had not previously considered. Wherefore, when he himself would afterward bind an absolute decree of the end to one means, in some way he would be changing it. But since from the beginning he considered everything well, and in this and in that means he saw some inconvenience which deterred his will from the attainment of the end, before he found a convenient means, he never decreed determinately and efficaciously to go to Toledo, until such a means occurred; but before there was in him only a simple affection by which he would will to go, unless there were difficulties and inconveniences. Then indeed, when an apt means is now found, he efficaciously decrees to go to Toledo; surely that single means is related to the end willed in such a way, namely without inconvenience and difficulty. Wherefore it is not surprising if that will of the end is bound to one means, and with it there is at once conversion and consequence, so that the end will never be without it. But thus it could certainly not happen to God, who from eternity considered all things well, and therefore an absolute will of giving glory - which He could in various ways also give without merits - He could not afterward bind to merits. But because, as our opinion holds, He did not first decree absolutely to give glory, but always willed to propose it as a reward, and in this way the single means was merits, even if all should desire it with a simple affection; He never determinately willed to give it except to one having merits, nor such great glory except to one having so many or such great merits. And so merits, in the consideration of God by which He willed to give glory, were the single means, and therefore He preordained it only with them foreseen. For the convenience of a single

1829. Vázquez, Disputatio 89, cap. 9.

means redounds into the very ratio of the end, when that end is not willed absolutely by the ratio of its own goodness, but in such a manner and with such a convenience. Which rule obtains even when the means are physical, as has been explained, how much more when they are moral, such as merits, which by another reasoning explained above are referred to the will as a moving reason.

Next, that God cannot bind His will to one means when there are many means to the end which He Himself has constituted, is proved by a special reason drawn from what we said in Disputation 83, chapter 6: for no one will deny that God can leave His will free and indifferent to this or that means, if there are several. Let us grant, then, that it is now so, that, several means standing, God remains free and indifferent to any of them; then, if He were to bind His will to one means, there must be some variation either in God Himself or in things. For, as we noted in that same chapter 6, if things hold themselves in the same way and God in Himself likewise perseveres in the same way, we cannot say that God wills and orders things now in one way and now in another. But in God there cannot be any variation; rather, He is now in Himself in the same way from eternity in which He would be if He had willed otherwise: therefore there must be a variation in the things themselves. But in these there is none, if the same end remains and the same several means; or let them show what variation there would be in the things. It remains, therefore, that God should always will in the same way, and be able to will the end in no other way than in that same way: namely indifferently to several, if there are several, and He decreed the end first; or determinately through one, when there is only one.

Lastly, someone could say, from the proposed argument, that the same thing can be given under two titles - both gratuitously and onerously - and thus that eternal life is given to us by a gratuitous will, by which God...

Rejection: - But this too does not satisfy our argument, because even if the same thing could be given under two onerous titles, as certain people say the exaltation of Christ's body was granted under that twofold title, nevertheless a gratuitous and an onerous title are altogether mutually repugnant. For that title is gratuitous which presupposes no merit in him to whom the thing is given; but it cannot happen that the same man both buys the same thing and obtains it by merits, and without merits: therefore the same thing cannot at once be given to the same person under a gratuitous and an onerous title; and in human affairs nothing of the sort is experienced.

Explication of the words of the Council of Trent: - But what is adduced from the Council of Trent is to be understood far otherwise, as we explained above in chapter 8: namely, for this reason glory is called grace, because the merits leading to it are conferred gratis; on account of which it is said that grace is given for grace, or grace in the root; not because it is given as such for free without any regard, since it is never conferred except from merits; and he would be manifestly in error who would say that in the very execution glory is given at once under a wholly gratuitous and an onerous title, since in truth it is given only because of merits, as Scripture everywhere proclaims. And yet, as Fulgentius noted, not only is eternal life called grace, because it is given for another grace - namely for merits wrought from the grace of Christ - but also because the retribution overflows; but that is not to be understood as though glory were given without merits, or had been pre-appointed without them; rather because, either, as some more recent writers

think, something is given to the blessed beyond the condignity of their merits, which was never pre-appointed without merits; or because, although glory does not exceed the condignity of merit according to power and potency, nevertheless it exceeds in that which is formally in merits: to this sense, because for a small and momentary labor there is rendered eternal rest and great delight and repose. Which Fulgentius seems to indicate when adducing that in 2 Corinthians 4: "What is momentary and light," etc.[1830] - Now for us it will suffice to have said that, even if something of glory be given beyond condignity, that was not pre-appointed without something else which was to be conferred without merits, as is manifest. - Add that the same reward cannot be owed equally to two in such a way that it be repaid to each as to one and the same equal debtor. This is manifest in debts of justice: one payment cannot make full satisfaction in solidum for two. By the same proportion it seems one must speak in the matter of merits and retribution: that which in very truth is given by reason of merit, equally and condignly, is not to be given as a gift, because otherwise it would be condignly owed for another reason; and thus the exaltation of Christ's body would have been granted by reason of his labor, which nevertheless seemed to be condignly demanded by the union, so that otherwise God would not have given it, unless he suffered: I speak, however, in virtue of the decree according to which in passible flesh he was predestined as a remedy for sin; for we are not speaking of another way in which he could have come and been predestined. - Therefore Christ himself in Luke 24 said to the two disciples: "Was it not necessary for the Christ to suffer thus, and so to enter into his glory?" But if otherwise he were going to obtain glory, it would not have been necessary that he enter thus, for he would have entered in another way. - In this manner Cyril speaks in the fifth Dialogue on the Trinity, about the middle of it, where, replying to the interlocutor Hermias, he says: "I will say it without concern, even if now it seem less decorous, since it was necessary, on account of the lapses of men and our sins, that the Only-begotten should suffer. Let him himself have the highest thanks; yet let him know that the crimes of humanity were the occasion for his divine glory. For if we had not sinned, he would not have been made like to us, nor would he have endured the cross; and if he had not died, he would not have obtained that he should be venerated by the Saints - he understands, even by the angels - of whom he had spoken before."[1831] - Therefore Cyril holds that otherwise Christ would not have been to be adored, nor would knee have been bent to him by the heavenly, earthly, and infernal - namely, which was the exaltation of the body - unless he had suffered for us. For that the Incarnation condignly demanded this exaltation of the flesh and glory is not sufficient for us to say that God would have granted it to Christ even if he had not suffered, since in fact he so disposed that he should lack it until he suffered for us, and, after the merit of the Passion, should grant it to him.

Lastly, that efficacious decree of making men blessed, before, according to our way of understanding, their merits were by God foreseen as absolutely future, could not have had its origin from merits foreseen under a condition, as was shown above in chapter 10 of this disputation. Add that, although we say the merits were always foreseen under a condition, God

1830. St. Fulgentius, Ad Monimum, book 1, ch. 10, adducing 2 Corinthians 4.
1831. St. Cyril, Fifth Dialogue on the Trinity.

could not, out of gratitude in view of them, determine to bless men. For gratitude, as we also said there, cannot be exercised, as about its matter, around merits that are future under a condition: since not even a foolish man could do this. For who would determine to repay for those merits which would be under a condition, until he sees that they are absolutely going to be? And hence it follows that that decree was one of mercy and liberality, and thus, as we said above, the effect of habits from the sole motive of mercy and liberality, even if the motive of gratitude is lacking.

Caput XII - Responses to the testimonies which prove that the election to glory was made before merits

Thus far, of the two parts of the latter opinion which we proposed in chapter 2 of this disputation, only the former has been confirmed; the latter I will show in the following chapter, as much as shall be necessary, chiefly in solving the argument. But first it is fitting that we respond briefly in this chapter to all the testimonies; for they are very easy, if those things which we said in chapter 4 are rightly kept in memory.

How the testimonies of Scripture, before we reply to the aforesaid testimonies, are to be understood, it will be worth the effort to explain the mind of St. Thomas, who is usually cited for the prior opinion. If therefore we consider the words of this Article 4, there is nothing by which he signifies that the Doctor speaks of the election to a blessed life as having been before the predestination of merits: for he has only these words: "Whence the predestination of some unto eternal salvation presupposes, in a second notion, that God wills their salvation," to which pertains election and love. By the name of eternal salvation, however, there is no need that we understand the beatitude of the other life; but we can understand justification and perseverance in grace, to which God has chosen some rather than others, and to this end he has prepared by predestination each and every aid. For St. Thomas himself, in this Article 4, reply to the first, concedes an election of grace and of glory; yet he does not say that the election of glory was made before the foreseen merits and before the predestination of grace. But when we say that God chose men before the foreseen merits unto eternal salvation - that is, unto justification and perseverance - this is not to be taken as though he pre-appointed it without our foreseen consent: because from that it would follow that our liberty is taken away, as above we were inferring against an election unto glory before merits; but because God, before merits and the foreseen cooperation, so loved certain ones above others that, in general, he decreed to give them all the congruous prevenient helps by which they might obtain the salvation of the soul, which is eternal salvation, by cooperating with such helps, just as God knew they would. Then, by predestination, he decreed in detail all such helps even unto perseverance, that they might obtain the end which he generally set before himself. From which there does not follow any antecedent necessity that removes our liberty; but only a consequent one, which does not oppose liberty, as will be clear from what we shall say in disputation 99.

Now then, to all the testimonies of Scripture adduced in chapter 1, I answer first, that they are explained by all the expositors of Scripture about the election of grace, and no one, especially among the Fathers, understands them about the election unto glory. I except the recent Scholastics who, to defend their opinion, interpret out of their own head about election unto glory. But besides the consensus of the Fathers and of all the interpreters, the very passages of Scripture clearly expound themselves. For what else does Paul strive to commend in all the places cited, than grace - in that it is not given to us from the works of free choice? What then would he be speaking of the election unto glory, which is not grace, but grace for grace? For if he wished to commend this, he would not say that it is given gratis without any works, but that it is conceded to no one unless he has lawfully contended by the grace of God, and is proposed to all as a prize.

As to Paul's mind, moreover, and how, when he excludes works from justification, which James admits, he nevertheless agrees with him, this is sufficiently...

Caput XIII - Refutation of two reasons for the opposing opinion

It remains to satisfy the reasons adduced in the first chapter for the opposing position. To the first reason I answer from the doctrine of Ockham, I, dist. 41, q. 1, at the end, that the efficacious will of the end is always prior to the efficacious will of applying the means to that end. For the end can be considered in a twofold way: either it is referred to the power and will of him who must attain it, and for this he applies the means; or it is referred to the will of him who does not propose it for himself but for another, and leaves to that other's liberty the attaining of it.[1832]

In the former way, no one can be moved to apply the means so as to obtain the end, except from an efficacious will of the end; wherefore that will must be prior to every will concerning the means. And thus whoever, from the will of attaining glory, wills to be justified and to have merits, first wills glory; and from the efficacious desire thereof he wills the means, namely justification and merits.

In the latter way, the efficacious will of the end is not prior to that of giving the means. For example, one desires his son to become learned in theology, and from this desire he provides him with all the necessary means: he indeed has an efficacious will concerning the means, since he gives them; but he does not have an efficacious will concerning the end, only a simple desire, because such an end is not subject to his power. The same can happen even if the end be in the power of the proposer, if nevertheless he decides to leave it to the labor and industry of another; and especially when he intends to give it under no other title than as a reward and prize of merits, as domestic examples sufficiently prove, as was shown above, cap. 9.

The reason for the difference is this: the end which is proposed to another to be obtained, is not so much the end of the proposer as of him to whom it is proposed. For he who proposes it does not himself attain the end, but leaves it to another to merit or to obtain; wherefore it is enough if he himself, with a simple affection, desires the end for another, and with an efficacious will provides

1832. William of Ockham, Ordinatio (Sentences), I, dist. 41, q. 1, at the end, on the priority of the efficacious will of the end over that of the means.

the means. But the end which one apprehends as to be obtained by himself pertains to himself; and therefore he must first efficaciously will to obtain it before applying the means, because both the end and the means are subject to his own power and will, and are committed to him to carry out. Thus, then, it is not surprising if God, proposing to others eternal life as a prize, does not decree of himself to give merits, but, with a simple affection desiring it for men, with an efficacious will wills to give the means of grace, that they may merit it and obtain it.

Which he also observes with respect to the reprobate, to whom he so gives certain means of grace that, from the desire with which he wills eternal life to them, he grants them. But that he wills to give to some only sufficiently efficacious means, and to others even efficacious ones unto the end of life, does not argue in God an efficacious will of giving to some eternal life before merits; rather, from the same simple affection he can give to one efficacious means, and to another only sufficient ones. Just as among men it also happens: if someone proposes a prize for legitimate contending in a contest, and among many who come to that contest he gives to one better arms which he knows will prove efficacious, and to another not so good ones, however much he who received the better arms desires the palm more, he never by an efficacious will decrees to give him the prize unless the victory is foreseen. Therefore, from a simple affection concerning the end an efficacious will of giving the means can proceed, both of sufficiency and of efficacy.

But someone will say: just as among men no one gives better arms for that end unless he desires for him to whom they are given the victory and the prize, so too in God let us concede a greater efficacy of giving glory to those for whom by his own predestination he has, from a greater abundance, prepared the means of grace than for others; otherwise, by a special will God would determine the end for someone, nor would the peculiarity consist in the beginning in that instant in which he prepared greater means of grace for one than for another, and in this would be placed the election of grace, about which Augustine disputes much and wisely against the Pelagians and the Semipelagians.

And indeed, first, as to Augustine's mind, this opinion is easily proved from the fact that in chapter 4 we showed more than sufficiently that there never was any contention between Augustine and his disciples on the one part and the Semipelagians on the other concerning whether consequent glory is given from merits; rather, that contention was with Pelagius, who said it is given from the merits of free choice. Therefore, whenever the Semipelagians dispute about eternal election and contend that it was made without merits, we are speaking not of glory but of grace; whereas whenever the Pelagians speak of glory as given for works, Augustine nowhere says that God, by a special affection, willed to give it to someone before the merits of grace. Moreover, we would not on that account be forced to say with the Scholastics alleged in the first chapter that before all works God decreed with an efficacious will to choose someone unto glory, in which sense they plainly speak. But neither according to Augustine's doctrine, nor according to reason, are we compelled to philosophize in this way. Rather, according to the aforesaid opinion it must be said that, before God decreed to prevent the elect by his grace, as regards glory there was equal in him the will of giving glory to the predestined and to the reprobate; the discrimination, however, only

began from that instant in which he prepared greater means of grace for one than for another, and in this is placed the election of grace, about which Augustine disputes much and wisely against the Pelagians and the Semipelagians.

Ad Ephes. 1. As to that place, "He chose us in him, that we should be holy," it is said that Augustine understood it of election unto glory in the book To Simplicianus, book 1, question 1; yet elsewhere he clearly interprets it of election unto grace, as the context itself shows. Thus he himself expounds it of election unto grace in the book On the Predestination of the Saints, chapter 19; and St. Jerome agrees on that place. But adversaries gather from it that this election was made without merits, because the Apostle said, "that we should be holy," not, "because we would be holy." And certainly, if he were speaking of election unto glory, in the sentence stated above - which, as Augustine taught, would rightly be said - "because we were going to be holy by his grace," since election is said to be made from merits. But also the common mode of speaking shows this: for we do not say, "therefore God justifies us or calls us because he is going to give glory," but, "that he may give glory." If, however, he had first decreed to give glory, we would rightly say, "he chose us unto glory, that he might call and justify," not, "because we were going to be just." On the contrary, it would not be said, "he calls and justifies that he may bestow glory," but, "because he is going to give glory." For the particle "because" signifies that the election was first made absolutely; but the particle "that" only denotes that glory is the end of calling and of justification, which it suffices to set forth as a prize, and first to will by a simple will, according to the doctrine set forth above. But because Paul openly speaks of election unto grace, he rightly said, "that we should be holy," and not, "because we would be holy." For grace is not given from the merits of free choice, even future ones, but that we may have merits

As to that, Romans 9, "That the purpose of God according to election might stand," Augustine most excellently explained it, question that to Simplicianus, of an election before any examination of works, which, according to the Apostle's meaning, did not intervene, in order that grace might be conferred upon Jacob.[1836] He thus expounds it in this sense: when as yet neither Jacob nor Esau had done anything good or evil, so that, after a premised examination of works, God would will to justify the one and reject the other - since, I say, they had done nothing of the sort - it was said from the caller, "the elder shall serve the younger." Which exposition is indeed very subtle. It could also be explained thus of a promise of election unto grace without any examination. Since those two brothers had not yet done anything good or evil, and if among many one had merited nothing more than another, so that, according to the spontaneous bounty of grace, the purpose of justifying which he had proposed might be followed, from the grace of calling the lesser is preferred to the greater. For vocation is ordered unto justification and is conferred for that end; not that God first decrees by an efficacious decree to justify than to call - for to justify he does not determine without us, that is, without our consent, whereas to call he absolutely determines without us - but because by a simple will he first willed to justify, for that is the end of calling willed by a simple will alone, and this will is called the purpose of God. Therefore, to the end that justification may not fail and may have its effect, as God desires of itself, so he calls from himself and prevents us by his

1836. St. Augustine, To Simplicianus, on Romans 9, "That the purpose of God according to election might stand."

congruent grace. Yet from this nothing follows against our opinion; nor is there any of the Fathers who so interprets this place as to assert either that election unto glory was efficaciously predetermined before the foreknowledge of merits, or that the purpose of justifying was efficacious before our consent. Therefore, in vain do the recent writers, interpreting Scripture according to their own sense, accommodate it to their position, forcing the strength only upon words which can have another most excellent sense.

I have said these things according to the opinion which affirms that there Paul is treating of the predestination of Jacob and the reprobation of Esau. But if we follow the interpretation of others, who say that Paul there speaks only of the temporal kingdom in which Jacob was preferred to his brother Esau, there will be another sense; but nothing will harm our present opinion, about which we shall discourse below, disputation 95, chapter 8.

As to the testimony Romans 11, "The remnant according to the election of grace are saved," I have already noted, chapter 6, that it can be explained of an election of grace without merits; nay, that to be the genuine sense of that place, although Augustine seems in some place to have understood it of election unto glory from the works of grace, as we reported there; but in neither way can it harm our opinion.

Finally, as to John 15, "You have not chosen me," who doubts that it is to be understood of an election unto the apostleship? And if we wish to extend it to all others, as Augustine extends it, Tractate 86 on John, and in the first book On the Predestination of the Saints, chapters 17 and 19, and elsewhere frequently, it must be expounded not of election unto glory, but unto grace, as Augustine understands it in those places. For if we speak of election unto glory, since he himself says in Matthew 25, "Come, ye blessed of my Father, possess the kingdom prepared for you from the foundation of the world; for I was hungry, and you gave me to eat," who would doubt that they, aided by the grace of God, prepared glory for themselves, and therefore chose God for themselves? And certainly, if the Apostles had first received Christ into hospitality and had conducted themselves well toward him, so as to merit and obtain the apostleship, just as we merit eternal life, by no means would Christ have said, "You have not chosen me as master, but I have chosen you as disciples and apostles."

They adduce also that testimony, Romans 8, "Whom he foreknew, he also predestined," and so on, to prove that election unto glory was prior to the predestination of grace, since the Apostle first says, "Whom he foreknew," that is, chose unto glory, "those he predestined." But there is no one who interprets that place in this way. We shall set forth the true explanation in disputation 91, chapter 18.[1837] And thus far about the testimonies of Scripture first adduced.

Then, as to the testimonies of the Fathers, there has already been sufficient reply in chapter 4 of this disputation, where we showed more fully that Augustine, Prosper, and Hilary never contended with the Greeks, the Massilians, and the Gauls about election unto eternal life, but about election unto grace; nor did the Massilians, Faustus of Riez, and the other bishops of Gaul understand Augustine otherwise; nor, on the other hand, did Augustine wish to prove that election unto glory

1837. Gabriel Vázquez, Disputatio 91, chapter 18, for the explanation of Romans 8:29 - 30.

was made from the merits of grace, but only that grace is given to us from merits, or from some beginning of good of free choice; from which we also plainly demonstrated, chapters 8 and 9, that nothing against election unto glory made from the merits of grace was taught. Furthermore, what Augustine's true opinion is, how absurd is that of the Greeks, Massilians, and Gauls as regards the election of grace, and how modestly Augustine answers the authority of the Greek Fathers in this very sense, will appear in disputation 91, chapter 11. Therefore those later theologians cited by us in chapter 1 of this disputation, not having well considered both the matter and the history, thought that Augustine, Prosper, and Hilary contended against the Greeks, the Massilians, and the Gauls about election unto glory, whereas they can show not the least indication of such a contention.

But to posit in God some peculiar will of giving glory to the elect before foreseen merits contributes nothing at all to the commendation of grace, since glory itself is not the grace which St. Augustine and Paul commend, but is grace for grace. Why then, when Augustine was striving to prove that grace is given without merits, would he have had recourse to that peculiar will of giving glory? Why moreover men are said to be elect by that election of grace unto life and to reign with Christ, I explained in chapter 8 of this disputation.

Further, the same point is proved by reason from the doctrine of St. Thomas above, question 20, article 3. When it was asked whether God loves all things equally, after premising a distinction he rightly replied that, since to love is to will some good to another (as we showed from Aristotle in that place), we can understand that one is loved more than another in a twofold way. In one way, on the part of the very act of love, because it is more intense toward one than toward another; and thus it happens among men that, when someone wills to two persons some equal good, he sometimes wills it more intensely to one than to the other. But in this way God cannot love one more than another, but loves all things equally; because, on the part of the act of love by which God loves creatures, it is his own essence, which in itself is altogether the same, greater and lesser being impossible in it. This is judged so true by theologians that they assert that by the very same act of love by which the Father and the Son eternally love the Holy Spirit, they also love creatures, although not equally in respect to the Holy Spirit and to creatures; which diversity is not taken on the part of the act, but on the part of the creatures themselves, because they have being less necessarily than the Holy Spirit, as we said in disputation 145, chapter 5.

In the other way one is loved more than another, not because the love is more intense, but because we desire for him a greater good; and in this way God can love one more than another, inasmuch as he desires greater goods for one than for another. Add also that, since in the same act by which we will some good to a person there is a twofold regard of love, namely of friendship toward the person, which is called complacency, and of concupiscence toward the thing which we desire for him, as has been explained by us in that place, we could consider in God a greater complacency toward rational creatures than toward irrational, because they are more perfect - if love toward irrationals could be borne under the notion of complacency and friendship. But because in irrationals it is not borne in this manner, as we have noted there, this comparison of the love of friendship cannot be made in God. Whether indeed toward a single rational creature he is borne with a greater love of friendship and complacency, we shall see a little below.

From this doctrine there is excellently inferred what we were saying, namely that God does not have, before foreseen merits, a peculiar or greater affection and simple desire of eternal life toward the predestinate than toward the reprobate. For this inequality cannot be taken on the part of God - I do not say only that it cannot be known by us, but that in reality it is plainly not so: for the acts of God in themselves (which is his essence) cannot be greater and lesser. On the part of the thing willed such an inequality cannot be attended to, because before foreseen merits he desired the same glory for all, nor a greater for one than for another, but for each one, as far as it is in itself, without measure, unless man by his own merits set a limit. For just as God does not efficaciously decree to give eternal life before merits because he is going to give it on account of merits, so neither does he more desire for one than for another so great or such glory, unless from such and so many merits. Indeed, if we consider prevenient grace and the present justice of certain reprobates, such as was in the Apostle Judas, and in other most holy men who at length fell from grace, he desired for them a greater glory than for others who by one or another less merit attained it. Who will deny that holy men desired for themselves all that glory to which their merits referred? Yet that, compared in this way, was much greater than the beatitude of many predestinate. How then did he more love the predestinate? Certainly not because by an antecedent will he ordained them to a greater glory, but because by an efficacious will after merits he willed glory for them, while for others most holy, who fell from grace, in this manner he did not will it. Then also because he willed for the predestinate a greater grace, efficacious namely all the way to the end of life, which is a greater gift, but for others he did not.

1. Moreover, if God by a greater will desired eternal life for the predestinate than for the reprobate, the inequality would not have to be taken on the part of the thing willed, as has been proved, but on the part of the persons, because toward one he would be more affected with the love of friendship and complacency than toward others - not indeed on the part of the act, but because one person in himself would be nobler and more perfect in nature. But neither in this way does he will beatitude before merits more for the predestinate than for the reprobate: for there are many reprobate who, according to their nature, please God more, to whom nevertheless he has attributed lesser gifts of his grace and has desired for them a lesser glory. Then also, when God wills beatitude for someone, or his own grace, as it is that person's good, even if the person pleases according to nature, nevertheless from this in God the measure of willing that good is not taken; for he bestows as it pleases himself, not according to the dignity of the nature to which he bestows; and thus by bestowing grace on a man he constitutes him pleasing and a friend to himself, to whom previously he had only an affect, not that love which is friendship, although it was love of benevolence; for friendship is with mutual communication, and a likeness of nature, which does not befit man before he is justified - and when he has been justified, he is accordingly joined.

Furthermore, God wills any created thing, which he wills, only as means, not as an end, as we proved in disputation 82, chapter 2.[1838] Therefore, just as adversaries ought to admit that God, from the same love by which he loves himself as end, wills more eternal life for one than for another, so also from the same will by which he wills eternal life for all he can desire grace more for one than for another, because he wills to give to one a greater grace than to another. Therefore the supreme reason with God is his will and good pleasure, because it has so pleased him. "For who resists his will?" as Paul says to the Romans (Rom 9). He speaks not so much about resistance which could be done by power, as about reason, as we explained in disputation 91, chapter 4, and by the context of the place is shown.[1839]

Objection: However, someone will argue from that axiom of Aristotle: Posterior Analytics, book 1, chapter 2, "For the sake of which each thing is such, that is more such."[1840] Since God wills grace for the sake of glory, it follows that he wills glory more by the same efficacious will; therefore earlier also he efficaciously wills grace for the sake of that glory.

I answer: First, in God this argument has no force; for he does not will things for the sake of another, but he thus wills one thing on account of another, as was explained in disputation 82, chapter 2.[1838] Hence it is not that, if he more "determines" eternal life for men before works because of grace itself - rather, what is more principal and primary is that he wills glory than grace; and thus it is: he also desires, as what is greater, that men be blessed and imbued with beatitude itself, than that in this life they live justly.

Second: granted that among men it happens that he who proposes a prize to be obtained by merits first wills that that prize itself be obtained before he wills to give the means - because, namely, the means are for the sake of obtaining it - and that therefore in this case, with respect to the end, he truly is said to will the means on account of the end, and not only to will one thing on account of another; I say that from that axiom it does not follow that he who wills the end for another, and on account of that end wills to supply the means, wills efficaciously equally both; for if he efficaciously wills to give the means, as they are means, he must will also effectively the order: that if the man refuse, he himself withdraw the gift; and in this same way he ought not to be said to will the consequence, but to propose it to another according to rule, not to posit it; nor to will efficaciously before all to give that man the end. Therefore it is enough if he will the end more intensely than the means - either as something principal - and that grace stand as means. For likewise, if the intention of the will be toward the end as the principal thing, and grace be for it, the thing is secured.

Disputatio XC - Whether at least some exceptionally loved by God were elected to glory before foreseen merits

Among men this indeed happens; but God, for the reason stated, cannot desire that [end] more intensely. Therefore it is enough that he desire it as something principal; and let these things suffice concerning the first reason.

Ad secundam rationem cap. 3 ab adversariis adductam respondeo: the distinction of the predestined from the reprobate, even if it does not begin from an efficacious will of giving eternal life, nevertheless does begin before the consent of those persons as absolutely foreseen, and thus that they were distinguished by God alone, not by themselves, from the mass of perdition - namely, by preventing grace (*gratia praeveniens*), which God decreed to give without them, and to prepare their wills, through each occasion, even to the end of life. This is that grace of congruous calling (*gratia congruae vocationis*), about which much was said in Disputation 88, last chapter, which, although it is peculiar in the predestined - inasmuch as it is given in that proportion and measure in which God certainly knows it will have its effect - is rightly said, by it, to discern the predestined from the reprobate; and because it is given to us without our consent, it is rightly also said that God is not chosen by us, but that we are altogether chosen by God by grace. How, in respect of the knowledge whereby God knows that it will have its effect, it is called a peculiar grace, will be explained in Disputation 98, chapter 6. To this therefore men are chosen before merits, yet not by an efficacious will of giving them eternal life. Accordingly, St. Augustine in De correptione et gratia, ch. 7, said that among those called some are for this reason elect, because according to purpose - that is, they were called by a congruous vocation - they were called

Hence this instance, and the order of reason in God's predestination, we can now assign: that God, by his antecedent will (*voluntas antecedens*), willed eternal life equally to all - not in a determinate degree, but such that each should obtain it by his own merits. Then, seeing what the free choice of each one would do, with this or that calling, if it were given through each several occasion even unto death, to some he willed to give a congruous [calling] for a fixed period of life by which they would die in grace, but to others not. Finally, seeing the end of each one, to the one having merits and dying in his grace he decreed efficaciously to give eternal life, but he excluded the other from the kingdom. Wherefore election unto glory - which does not occur unless a prior examination has been made, as we have proved above from Augustine - is altogether posterior in this order; but election unto grace is prior, which precedes the merits also. Nor is election unto glory simultaneous with merits, as Bartholomaeus Camerarius and others thought, but [it is] from the merits of grace as from a cause.

Fulgentius not obscurely indicated this order, in the book On the Incarnation and the Grace of Jesus Christ, in the epilogue of that work, with these words: "God, indeed, who created man, by his very predestination prepared the gift of enlightenment for believing, and the gift of perseverance for advancing and for remaining (behold the various helps of grace on several occasions), and the gift of glorification for reigning, for those to whom he willed to give [these]."[1844] Wherein, in the

order of predestination, he places glorification itself in the last place, just as also in the thing itself it is. And that it was disposed by God in the same order - namely, from merits - as it is given in time, he explains with the following words: "And he does not bring to completion in work otherwise than he has disposed in his own eternal and unchangeable will." Behold, he does not assign one order in the mind of God but another in the very execution, but says that the same [order] exists, according to those things which in chs. 7 and 9 above have been noted by us.[1845]

But before these, note also what pertains to God's love: by giving grace to a man, he establishes him as pleasing to himself and as a friend, toward whom previously there was only an affection, not a love which is friendship, although his love was borne toward him after the manner of benevolent love. For friendship is with mutual communication and likeness of nature, which does not befit a man before he is justified, about which we will discuss more at length in I-II, q. 113, a. 2.[1846] Moreover, when God wills to someone a natural good from complacency in the person, according as the nature is such, he loves the better [one] more and bestows greater gifts of nature upon him - those which were, as it were, owed to that very nature.

From what has been said, therefore, it is clear that before foreseen merits God does not desire eternal life for one more than for another, but [desires it] equally for all; and the whole inequality of love toward the predestined and the reprobate, referred to glory as to the good willed, lies not in [God's] desiring greater glory for one, but in this: that he wills greater grace to one than to another. Therefore the will of God, referred to glory as to the willed good, is common and equal before merits; but referred to grace, it is greater toward the predestined and elect than toward others; and for this reason they are called elect, because they are destined by God to greater grace before merits, not because to greater glory, as is shown by St. Augustine in chs. 4 and 8.[1847]

It is objected: But someone will argue from that axiom of Aristotle in Posterior Analytics 1, ch. 2: "For the sake of which each thing is such, that is more such."[1848] If, therefore, God wills grace for the sake of glory, it follows that he wills glory more; but he wills grace by an efficacious will; therefore earlier, too, he efficaciously wills glory.

It is answered, first, that in God this argument has no force. For he does not will one thing on account of another, but he wills that one thing be for the sake of another, as was explained in Disputation 82, ch. 2.[1849] Whence it does not follow that he should desire eternal life more for men before works than [he desires] grace itself; but [it follows] that he should will glory rather than grace to be the more principal and primary thing - and so it is: for he esteems as something greater that men be blessed and by beatitude just, than that they live justly in this life.

- Moreover, because among men it happens that the one who proposes to another a reward to be obtained through merits may first will that that person attain the reward rather than that

1844. Fulgentius, De Incarnatione et gratia Iesu Christi, epilogue.

1845. See above, chs. 7 and 9, where this same order is noted between the divine decree and its execution.

1847. St. Augustine, chs. 4 and 8 (as cited by the author) on why the elect are so called on account of grace rather than greater glory.

1848. Aristotle, Posterior Analytics 1, ch. 2: "For the sake of which each thing is such, that is more such."

he give the means by which he should attain it, and he who proposes the end in this case is truly said to will one thing on account of another, and not only to will that one thing be for the sake of another; for this reason it is declared that from that axiom it does not follow that one who wills the end for another and, for the sake of that [end], wills to provide the means, must efficaciously will the end, if he efficaciously wills to give the means. For since he himself ought to give the means and ought not to leave it to his care [i.e., to the other's], he ought to will those [means] efficaciously; but since he himself ought not to attain the end for himself, but proposes [it] to another to be acquired, he need not efficaciously will, before all things, to give that [end]. Therefore it is enough if he will this sort of end more intensely than the means, either as something principal, and that grace be for it; and so also it happens among men. God, however, cannot, for the reason stated, desire that [end] more intensely; therefore it is enough that he desire it as something principal; and let these things suffice concerning the first reason.

Caput I - On the opinion of Ockham, Gabriel, and Catharinus

If the things said in the preceding disputation were rightly set forth, no difficulty would remain for us. For the reasons there alleged prove the same, not only about certain persons, but also about all the predestined universally. But because some more recent [authors], with Catharinus, have thought that with respect to the angels - indeed even about certain men exceptionally loved - there was some peculiar basis, therefore in this disputation I have judged it necessary to argue somewhat against them. There are, then, among more recent theologians some who think that there were three orders of angels in the divine predestination, in the same arrangement as Catharinus establishes them among men; yet among the writers whom I have up to now read, there is no one who has posited such a peculiar ordering concerning the angels.

The first order of the predestined according to Catherinus. Speaking about men and their predestination, Catherinus, book 1 De praedestinatione Dei, last chapter, and book 3, chapters 1 and 2, sets up three orders of men: the first, of the predestined, whom he calls the preeminently predestined, and he asserts that these were predestined to glory by God alone and absolutely before the forevision of merits; that is, that God thus of himself willed to give them glory, with no foreseen perseverance in their merits, so that it would not be left to them to fail to persevere in merits. For this author holds (as also the others whom in the preceding disputation, chapter 8, we enumerated) that predestination is the will alone of giving glory, not the preparation of the gifts of grace. But he says that that passage, Rom 8: "Those whom he predestined, he also called," is to be understood not as if first there were predestining, that is, a willing to give glory by an efficacious decree, and then willing to call; and that passage Ps 34[33]: "The Lord does not know the ways of the stained," and Ps 1: "The Lord knows the way of the just." He thinks that these preeminently predestined are the Blessed Virgin, the Apostles, and other men of singular holiness, who in this

1849. Gabriel Vázquez, Disputatio 82, cap. 2, on God's willing not one thing on account of another, but willing one to be for the sake of another.

life are said therefore to have been confirmed in grace, because they could not fall from it. For that God can impose on the will of a merely human being in this life a necessity, so that liberty is not left for sinning, is taught also by Marsilius in 2, q. 16, art. 5, dub. 1, and by Gabriel in d. 25, q. 1, a. 2, 3, dub. 1; indeed, in reality with respect to these preeminently predestined God actually did this, as the same Gabriel and Ockham teach, as we shall presently report.[1850]

The second order of the saved. He says that the remaining men are left by God under common providence; yet he divides them still into two other parts. Therefore the second order is of those whom he calls the "to-be-saved," about whom he asserts that they were not predestined to glory before merits, but that by a common will antecedent to them glory was proposed by God, and then the common helps of grace, as for those who are damned, were provided; in which distribution of helps he thinks that no one received a special grace, nor that any one of them was prevented by a special grace, but that the common grace was left to them, that they might use it well by their own free choice; and that after foreseen merits God decreed to save them. About these he does not wish to say that they are predestined to glory from merits, although he says that God from eternity decreed to give them beatitude from foreseen merits, because he calls "destined to glory" only those whom he calls "preeminently destined to glory," since the particle "prae-" in that compound signifies priority of placement and excellence, as from his opinion I noted in disputation 87, last chapter. But he calls them "to-be-saved," because by merits wrought from the grace of God they will obtain the salvation of beatitude.

The third order of the reprobate. Finally, he says that the third order is of the reprobate or of the to-be-damned, whom he claims are never excluded from the kingdom and rejected by God except on account of the forevision of sins unto death; and concerning both these two orders he teaches that their number was not certain before perseverance in good or in evil: because it was free for each to be saved or to be damned. But he thinks that the number of the preeminently predestined was certain before merits and perseverance, from predestination alone. He delivered this opinion in the same way on that passage Rom 8: "We know that to those who love God," as Sixtus of Siena testifies, that he taught and defended it for a long time, but afterwards utterly abandoned it, as he saw that it was disapproved by all learned men.[1851] Ockham in 1, d. 41, q. 1, and Gabriel in q. 1, a. 2, a. 2, had taught the same first; except that these two doctors do not hesitate to call predestined both those who are in the second order and those in the first; they do not use the particle "prae-" in that signification, but in the common one, so that it signifies a precedence of duration, as we explained in that disputation 87. Yet they say that those who are of the first order were predestined before all works, but those of the second order after merits of grace: in which in fact they agree with Catherinus.[1852]

Both men and all the angels were all elected to beatitude after the merits of grace, as is asserted against Catherinus.

Caput II - That all, even the preeminently predestined and the angels, were elected to glory after foreseen merits

I for my part judge the reasons to be common, by which in the preceding disputation, chapters 10 and 11, I in general proved that men were elected to glory from the foreseen merits of grace. Wherefore it follows without exception that no one was elected before all merits, indeed that he could not be otherwise elected by God, if truly in time merits worthy of it precede, and glory is conferred from merits in the very execution.

And certainly, if, as we showed in chapter 9, the best mode of choosing men to glory is from the merits of grace, this suffices for us to say that all were chosen in this way, even the preeminently predestined. Moreover, since there it was also proved thus, that it is possible for God to choose someone to glory before the forevision of merits, only if even in time and in execution he were to bestow glory gratis and without merits; it is much better inferred that all, not only men but even angels of the highest virtue and holiness, were elected to beatitude from the foreseen merits of grace; since to them God in time bestowed glory from merits. Therefore by that a priori reason it is excellently proved that no one was preeminently elected to glory before any and all foreseen merits, but that all equally were after merits.

The same is not obscurely shown by the a posteriori reason which we made in chapter 11, because such an election in the preeminently predestined would derogate from the virtue of merits, nor would they in any sense be said to obtain glory in time from merits; a reason which it is not necessary to repeat here. But by another a posteriori reason, which we adduced in chapter 10, John of Bologna very much presses Catherinus in part 2, on the third opinion about predestination, where he testifies that he frequently conferred with Catherinus on this matter, nor ever in their familiar and already held colloquies acquiesced to his opinion. Therefore he attacks the opinion of Catherinus, because it would follow from it that there is imposed on the preeminently predestined a necessity of persevering in grace and in merits, so that they could not freely fall from them, as about all we proved in that entire chapter.

Refutation of Catherinus's evasive reply. But, convicted by this argument, Catherinus openly confessed that such a necessity is imposed on the preeminently predestined, and that they do not remain free so that they could die in sin - something which he himself did not judge to be absurd. John of Bologna rightly disapproved this; and it can be attacked, as we refuted it in general in that whole chapter. For of the preeminently predestined that saying of Rev 3 cannot be said: "Hold what you have, lest another receive it," etc. For if it is impossible to lose the crown, it could by no means be said to the preeminently predestined, "lest another receive it." Then also Paul, who in the opinion of Catherinus was among the preeminently predestined, would say in vain 1 Cor 9: "Lest perhaps, when I have preached to others, I myself should become reprobate." For if it was impossible for Paul to be made reprobate, why did he say "lest perhaps"? For that particle pertains to future contingents, which cannot be accommodated to Christ, who had no liberty to sin, lest perhaps he should become reprobate, etc. Finally, in no preeminently predestined would that

saying fit: "Who could transgress and did not transgress" (Ecclus 31), which could be attributed to Christ alone: for from the union he was determined by such a necessity antecedent to the good that he did not have liberty to sin; as in the Third Part, in its place, we shall say.

A doubt. But someone will ask: what then was granted to the preeminently predestined, or to those who are said to be confirmed in grace, as to the Blessed Virgin and the Apostles, which other predestined did not have? For all the predestined are at length, during some period of life, called by a congruous vocation and tempered to that vocation, so that they never commit mortal sin; nor, given the knowledge of God, with which such a vocation is given to them, can they sin; which is only a consequent impossibility of not sinning, or a consequent necessity of persevering in grace, with which it stands well that they freely assent to the vocation, and that they can resist it: as the Council of Trent in general hands on about all, session 6, chapter 5.[1853]

I answer that no predestined person ever had an antecedent necessity (that is, one which was not in his power) of persevering in grace; but the whole necessity was consequent upon the knowledge of God, with which full liberty remains: as we said at length in that chapter. Christ alone had this antecedent necessity from the union, which was not in his power, not indeed for individual works, but for persevering in grace, and that he should transgress no precept. The others, even the Blessed Virgin, did not contract such a necessity, but over and above the other predestined they had this alone, that by a revelation of their perseverance they had, with most certain faith, believed that they would never lose grace; with which certainty it seemed that Paul was saying in Rom 8: "Who will separate us from the charity of God?" and yet, if some expound that passage not of our charity toward God but of God's toward us, so that the sense is: what tribulation, or thing soever adverse may seem to us, can prevent that God love us in Christ Jesus? - even also with adverse things he proves and exercises us, he loves us from his heart.

But the Blessed Virgin had also this peculiar privilege, that for each and every act she was prevented by congruous grace, by which she did not sin even venially; although, if one simply prescinds from the supposition of the knowledge of God, she remained free to sin.

Various modes by which God could take away liberty, and what follows. Add that it cannot be done even by God that liberty be taken away from someone, apart from madness, or inconsideration and perturbation, for persevering in grace and for falling from it, and for sinning and not sinning, for obtaining glory by merits, and not obtaining it, which is in time to be given for merits, if God be willing to concur with him according to that one's will and inclination, just as he now does, unless in one of two modes: either by the hypostatic union, which is not in the power of the assumed nature, and once posited it cannot sin; or by the clear vision of God, which is followed by the same antecedent necessity. For if he were to impose a necessity in another mode, either it would be because he would be about to give eternal life before the forevision of merits, and in this way there would indeed be imposed an antecedent necessity, which would take away the liberty of losing it, as we showed in that whole tenth chapter; but then not only would glory not be given in time from merits, but even without them it would nevertheless be given: which if God were in this

1853. Council of Trent, session 6, chapter 5.

way willing to give, it would not be within man's power to obtain it. But if in time future merits with perseverance are to be and glory is given, election to glory cannot be made from eternity before foreseen merits, as above said. Or finally, God would impose a necessity through individual works, as Scotus thinks can be done, in 4, dist. 49, q. 6 and 8. I say, therefore, by determining beforehand, and preparing our works on the way, and determining before our concurrence and the accompanying consent: yet not even in this mode could our liberty be impeded or taken away, as will be proved at length in disputation 99, chapter 8.[1854]

It remains, therefore, that for such a necessity against liberty to be able to be imposed on us, it would have to be by a subtraction of concurrence, so that if, when someone is prevented by a thought (good or evil) which inclines his free choice to one part, God should be unwilling to concur with him; if in this mode God should deal with the preeminently predestined, namely that, given an inclination by a thought to sin, he should be unwilling to concur with them, he would certainly take away or hinder from them liberty to sin. But this mode appears useless and less becoming: for since God, that which he desires, can better bring about by a congruous thought, whereby at each occasion the predestined are with effect kept back from evil and tend to good, he would choose this violent mode in vain.

And therefore from that in Rom 8, "Those whom he predestined, these also he called," Catherinus does not prove that it was prior to predestine, that is, to choose to glory, than to decree to call the predestined; but by predestination itself he decreed that they should be called, disposed for obtaining glory by merits, and not for obtaining it - for it is in time to be given on account of merits - if God be willing to concur with it according to that one's will and inclination, as he now does, unless in one of two modes. This will be easily clear from disputation 91, chapter 18, where we shall explain this passage expressly.[1855]

The remaining points which Catherinus teaches in his opinion are incidentally impugned.

Caput III - On criticisms leveled against Catherinus, and what in his teaching is false

Catherinus is attacked by critics: Dominicus Soto, on chapter 9 to the Romans, in the digression of Camerarius on predestination; and Antonius de Corduba, book 1, q. 16; and Bartholomeus Camerarius in the Catholic Dialogue, for asserting an opinion contrary to Scripture, and one they judge worthy of the note of error and of censure.[1856] Yet what he taught about a necessity of obtaining glory from predestination does not impair what is consequent, but something of lesser moment; and something in that sense which he himself did not understand. Wherefore it is necessary briefly and clearly to explain what in his opinion is false.

First, he was plainly deceived in this, that he thought that in St. Augustine predestination to glory is the will of giving it, not the preparation of the gifts of grace; and therefore, according to the doctrine of that author, all who are saved are predestined, that is, elected to glory by a will of giving

1854. Scotus, In IV Sententiarum, dist. 49, q. 6 and q. 8.
1855. See below, Disputatio 91, cap. 18, where this passage of Rom 8 is explained expressly.

it, with no foreseen merits of theirs, even from grace; a sense which many have injected into Augustine, indeed even Camerarius, who in many things opposes the opinion of Catherinus, as in the preceding disputation, chapter 8, I noted. There, however, I showed clearly that in Augustine predestination is not the will of giving eternal life, but is the preparation of the gifts of grace, by which some obtain eternal life.[1857]

Second, Catherinus speaks somewhat disrespectfully against Augustine, and is carried headlong with abuses against that very opinion of his just now explained, asserting that on that account it ought to be rejected by all, because the Bishops of Gaul and of the Massi -

But then not only would glory in time not be given from merits, but even without them it would nonetheless be given; which, if in this way God were willing to give it, would not be subject to man's power to obtain it. But if in time there are to be merits with perseverance, in order that glory be given, the choice unto glory cannot be made from eternity before merits foreseen, as was said above; or finally, God would impose necessity through each individual work, as Scotus thinks can be done, In IV Sentences, dist. 49, q. 6 and q. 9. I say, therefore, with respect to the verse in hand, that it sets before us our works as inclined to one side, and determines before our concurrence and the accompanying consent; but in neither way can our liberty be impeded or taken away. This will be proved more fully in disputation 99, cap. 8.

It therefore remains that only this necessity, which is contrary to liberty, can be imposed on us by the subtraction of concurrence - namely, if a man is anticipated with an evil or a good thought, with which his free choice inclined to one side, and God were unwilling to concur with it. But if in this way God were to deal with those predestined in an eminent way, so that, when their thought inclined to sin, He were unwilling to concur with them, certainly He would take away from them, or impede, the liberty to sin. Yet this mode seems useless and less fitting. For since God can better accomplish what He desires by a fitting thought, by which on each occasion the predestined are effectively held back from evil and tend to the good, He would choose this violent mode to no purpose. And as to what Catherinus does not prove from that [text] of Romans 8, "Whom he predestined, those also he called," namely, that one was first predestined, that is, chosen unto glory, before the decree to call the predestined, but that by predestination itself He decreed this - this will be easily made clear in disputation 91, cap. 18, where we shall expressly explain this passage. The rest that Catherinus teaches in his opinion are touched upon only in passing.

How Sotus, Corduba, and Camerarius inveigh against Catherinus

Against Catherinus, Dominicus Sotus, on Romans, cap. 9, in the digression of Camerarius De praedestinatione, and Antonius de Corduba in book 1, q. 16, and Bartholomaeus Camerarius in the Dialogus Catholicus, wax very indignant, as one whose opinion is rash, contrary to Scripture, and worthy of a note of error, they judge. Yet that which he taught about the necessity of attaining glory

1856. Dominicus Soto, on Romans, ch. 9, in the digression of Camerarius De praedestinatione; Antonius de Corduba, lib. 1, q. 16; Bartholomaeus Camerarius, Dialogus Catholicus.

1857. On Augustine's sense, see above, disputation 87, cap. 8.

among those predestined in an eminent way, they do not impugn, but matters of lesser moment, and some point in that sense which he himself did not understand. Wherefore it is necessary briefly and clearly to explain what in his position is false

First, he was plainly deceived in this, that he thought in St. Augustine predestination unto glory to be the will of giving it, not the preparation of the gifts of grace; and therefore, according to his doctrine, all who are saved are predestined, that is, chosen unto glory, by a will of giving it without any merits foreseen on their part, even out of grace - a sense in which many others understood Augustine, indeed even Camerarius, who in many things opposes the opinion of Catherinus, as we noted above, disputation 87, cap. 8. Yet there I showed clearly that in Augustine predestination is not the will of giving eternal life, but is the preparation of the gifts of grace, by which some attain unto eternal life.

Second, Catherinus speaks somewhat immodestly against St. Augustine, and, with abusive words, he aggressively attacks his teaching as he has explained it in his own way, asserting that for that reason it ought to be rejected by all, because the Bishops of Gaul and of Marseilles, indeed even many through Africa, long ago strongly disliked it, as Hilary of Arles and Prosper of Aquitaine testify in their letters to Augustine, which recount the book on the predestination of the saints. But in this Catherinus certainly slipped most disgracefully: both because, not understanding Augustine's mind, he brazenly attacks and reproves him; and because Augustine himself is honorably defended against the Massilians and others by Pope Celestine, in his first letter to the Bishops of Gaul. For Prosper of Aquitaine had fled to him, as Celestine testifies in the same letter, because he was unable to endure the obstinacy of the Massilian's opinion; whom Celestine kindly received and defended against the Massilians. Indeed, among other things in chapter 2 of the same letter he says thus about Augustine: "We have held Augustine, a man of holy memory, in our communion by his life and his merits, nor did the rumor of any sinister suspicion ever besprinkle him, whom we remember to have been once so great in knowledge that among the best masters he was counted even before our predecessors; therefore all thought the same about him in common, that he could be everywhere in sequence both to love and to honor. Wherefore we resist such persons" (he clearly means the Massilians and the Gauls who were adverse to his teaching), "whom we see growing badly." Therefore, if the controversy had been about that matter which Catherinus supposed, namely about election to glory, there would have been between Augustine and the Massilians and others a dissent; this testimony of Celestine would have sufficed to shut Catherinus's mouth. To this is added that very many other men, both of the East and of the West, consented with Augustine, as we shall see in disputation 91, cap. 11; therefore Catherinus should have kept his tongue in check. Moreover, from what we noted in the preceding disputation, cap. 4 and 5, and from the place cited we shall say below, it is plainly gathered that Catherinus did not understand Augustine's meaning and his controversy with the Gauls and Massilians.

Third, those three orders of men which Catherinus assigns are impugned by the aforesaid Doctors from that passage of Matthew 25, where two orders are constituted, one on the right, the other on the left. But this refutation is frivolous. For although there are two [orders], one of those for whom the kingdom of heaven is prepared, the other of the damned, which Catherinus does not

deny, what, I ask, would be opposed by this text of Matthew to his saying that among those who obtain glory there are some predestined in an eminent way, in the manner in which Catherinus thought, if only he meant that this does not oppose true doctrine?

Furthermore, that he is unwilling to call all who obtain glory "predestined," but only those chosen in an eminent way - this is worthy of reproof; since by this name "predestination" and "the predestined," the Fathers and Councils are wont to denote not only all who will be saved and obtain eternal life, who are predestined unto glory and obtain it, because for them the efficacious helps of grace for obtaining eternal life have been prepared from eternity; but also to signify the reprobate, who are said to be destined to punishment, or the second death, as we noted in disputation 87, cap. 4. Thus the Council of Valence under the Emperor Lothair, cap. 3, says: "And we confidently confess the predestination of the elect unto life, and the predestination of the impious unto death." There the prefix "prae-" in the composition of the word "praedestinatio" signifies not excellence but a priority in time, so that "praedestinatio" and "praefinitio" are altogether the same. Augustine too uses the name "predestination" in this sense in book 15 of the City of God, cap. 1, and very often elsewhere; and Fulgentius likewise in the book to Monimus, cap. 14 and 30. Therefore all the Fathers thought thus in common about it, as I noted in that place, who commonly call predestined simply, or predestined unto life or to the kingdom of heaven, all, as many as are saved; but all the testimonies of the Fathers are of little moment for Catherinus, who did not hesitate to introduce a peculiar mode of speaking into the schools.

Finally, the aforesaid Doctors also impugn what Catherinus said last: namely, that the number of the saved and the reprobate is not certain before perseverance, because it is in the free power both of the saved to be damned and of the damned to be saved; but after perseverance, indeed, it is already certain. They impugn this by the following reasoning: because it would follow from his opinion that God learned something in time, since those two orders were uncertain even for God up to perseverance, and so could be increased and diminished even in God's knowledge.

But this objection is trifling and empty. For those Doctors impugn what Catherinus taught only in the sense in which he understood it. He did not say that in God's eternal knowledge the number of the saved and of the reprobate is uncertain up to the time of perseverance, so that, when perseverance is seen in time, God's knowledge should begin to be certain - for who, however ignorant and unskilled, would say this? - but he asserted the number of the predestined, whether of the saved in general or of those predestined in an eminent way, to be already certain in God's eternal knowledge, in that first "moment" of reason, before merits are seen, since, once they have been chosen before merits, God's choice cannot be rendered void, nor is it left in their power to be able to be damned; hence in God's knowledge the number of those is already certain. But since in that first "moment" He did not choose others unto beatitude before merits, and still left them indifferent whether they would be saved or not saved, the number of those is not yet certain, even in God's knowledge. Nor will it be certain in the second "moment," in which He distributes the helps of prevenient grace; because, according to the opinion of Catherinus, God does not distribute such helps with conditional knowledge. For he thinks that nothing is seen by God as certain and determinate unless as absolutely future, which is already in reality present in eternity; and,

according to this opinion, which many Thomists, who also impugn Catherinus, follow today, one must say that the certain number of the predestined is not known in the distribution of the aids of prevenient grace, but in the following "moment," in which consent with perseverance is seen. This is Catherinus's opinion, sincerely explained according to his meaning; for which the Thomists ought not so readily to accuse him of error, since they too are compelled to say the same thing, unless they grant election unto glory before merits, which Camerarius is unwilling to assert. But although neither do we say that this election unto glory was made before merits, and thus that the number of the elect is not certain in that antecedent will of giving glory, since then no one is chosen before another; nevertheless, in the distribution of the helps of grace, in which we proved above, according to the mind of Augustine, that an election was made, we think that the number of the elect is already certain, with liberty, however, so that each one may be able to be damned, as we shall show in disputation 101. Likewise we grant that a peculiar prevenient grace was given to the predestined, which was not given to the reprobate, as we shall again say in disputation 97, and that the opposite is far from the true doctrine of Augustine. Wherefore the opinion of Catherinus could, in this part which many theologians even of our age also follow in this way, be refuted, as will be seen there. Here, however, let what has been said suffice.

Articulus V - Whether the foreknowledge of merits is the cause of predestination

It is asked:

It is objected 1. It seems that the foreknowledge of merits is the cause of predestination (*praedestinatio*). For the Apostle says to the Romans 8: "Whom he foreknew, those also he predestined." And the gloss of St. Ambrose upon Romans 9: "I will have mercy on whom I will have mercy," says: "I will give mercy to him whom I foreknow will return to me with his whole heart." Therefore it seems that the foreknowledge of merits is the cause of predestination. And likewise Ephesians 1 and many other places.

It is objected 2. Furthermore, divine predestination includes the divine will, which cannot be without reason, since predestination is the purpose of having mercy, as St. Augustine says. But no other reason of predestination can be assigned except the foreknowledge of merits; therefore the foreknowledge of merits is the cause or reason of predestination.

It is objected 3. Furthermore, "There is no iniquity with God," as is said Romans 9. Yet there seems to be iniquity if unequal things are given to equals. But all men are equal both according to nature and according to original sin. But inequality is found in them according to merit or demerit of what is proper to each. Therefore God does not prepare unequal things for men by predestining and reprobating, unless on account of the foreknowledge of differing merits.

But on the contrary is what the Apostle says to Titus 3: "Not by the works of justice which we have done, but according to his mercy he saved us." But as he saved us, so also he predestined us to be saved. Therefore the foreknowledge of merits is not the cause or reason of predestination.

I answer: Since predestination includes will (*voluntas*), as was said above, so the account of the divine will is to be inquired into. Now it was said above that no cause of the divine will can be assigned on the part of the act of willing; but a reason can be assigned on the part of the things willed, inasmuch as, namely, God wills something on account of something else. Therefore he was no fool of a mind who would say that merits are the cause of divine predestination on the part of the things predestined. But the question here turns upon whether on the part of the effect predestination has any cause. For this is to ask whether God predetermined that some effect of predestination be given to someone on account of merits. There were therefore some who said that the effect of predestination is predetermined to someone on account of merit preceding it in this present life. And this was the position of Origen, who posited that human souls were created in the beginning, and according to the diversity of their deeds they were assigned their diverse states and were united in this world to bodies. But this opinion is exploded by the Apostle to the Romans 9, saying that there had not yet been born, nor had they done anything good or evil, not from works but from the one who calls, that the greater might serve the lesser. There were others also who said that merits preceding in this life are the reason and cause of the effects of predestination. The Pelagians, indeed, set the beginning of conferring benefits to be from us, the confirmation, however, to be from God. And thus also it would happen that some effect of predestination would be given to another and not to another, because one began and prepared himself, and another did not. But this is against what the Apostle says, 2 Corinthians 3: "Not that we are sufficient to think anything of ourselves as of ourselves." Nothing, therefore, can be found in us before the first principle except thought. Hence he cannot say that there is in us some beginning of the effect of predestination, since thought itself is an effect of predestination. Therefore those who said that merits follow the effect of predestination are mistaken, since the first ratio of predestination is understood in this, that God gives grace to someone and predetermines to give to him the given thing, because He foresaw him to use grace well; just as a king gives to some soldier a horse, whom he knows will use it well. But they seem to have distinguished between that which is from grace and that which is from free will, as if one and the same could not be from both. Yet it is manifest that that which is from grace is an effect of predestination, and this cannot be posited as the reason of predestination, since this is included under predestination. But if something else on our part is set down as the reason of predestination, this is outside the effect of predestination. Nor is it a distinction to say "that which is from free will" and "that which is from predestination," just as it is not a distinction to say "that which is from a second cause" and "that which is from the first cause." For the divine providence produces effects through the operations of second causes, as was said above. Whence also that which is through free will is from predestination. It must therefore be said that we can consider the effect of predestination in two ways: In one way, in particular; and thus nothing prevents some effect of predestination from being the cause and the reason of another, the prior indeed being prior according to the reason of a final cause, the posterior, however, according to the reason of a meritorious cause; which is reduced to the disposition of the matter. As if we should say that God predestined that glory be given to someone on account of merits, and that He predestined that grace be given, by which he may merit glory. In another way, the effect of

predestination can be considered in common. And it is impossible that all the effects of predestination considered in common should have some cause on our part. For whatever is ordered in man unto salvation is contained under the effect of predestination, indeed even the very preparation for grace. Nor can this be unless by divine help, according to that of Lamentations: "Convert us, O Lord, to you, and we shall be converted." Thus in this way predestination has on the part of the effect, by reason of the divine will, that to which...

Thus in this way predestination has, on the side of the effect, as its reason the divine will, to which the whole effect of predestination is ordered as to an end, and from which it proceeds as from the first moving principle.

Reply to the first: The foreknown use of grace is not a reason for the bestowal of grace, except according to the notion of a final cause, as has been said.

Reply to the second: Predestination, considered on the side of the effect in common, has for its reason the divine goodness itself. But in particular, one effect is the reason of another, as has been said.

Reply to the third: From the divine goodness itself a reason can be taken for the predestination of some and the reprobation of others. For God is said to have made all things for his goodness, so that in things the divine goodness may be represented. Now it is necessary that the divine goodness (which in itself is one and simple) be represented in things in multiple ways, for the reason that created things cannot attain to the simplicity of the divine. And hence it is that, for the completion of the universe, diverse grades of things are required, of which some hold a higher and some a lower place in the universe. And so that the manifoldness of grades be preserved in things, God permits certain evils to be done, lest many goods be prevented, as was said above.[1858] Thus therefore let us consider the whole human race as the whole universe of things. God therefore willed, in men - so far as concerns some whom he predestines - to represent his goodness by way of mercy in sparing; and, so far as concerns some whom he reprobates, by way of justice in punishing. And this is the reason why God chooses some and reprobates others. And the Apostle assigns this cause in Romans 9, saying: "God, willing to show his wrath," that is, the vindication of justice, "and to make his power known, endured with much patience the vessels of wrath, fitted for destruction, that he might show the riches of his glory upon the vessels of mercy, which he prepared unto glory." And 2 Timothy 2 says: "In a great house there are not only vessels of gold and of silver, but also of wood and of earthenware. And some indeed unto honor, some unto dishonor." But why he chose these to glory and reprobated those has no reason except the divine will. Whence St. Augustine says upon John: "Why he draws this one and does not draw that one, do not will to judge, if you do not wish to err."[1859] So too, even in natural things, a reason can be assigned, since prime matter in itself is uniform, why one part of it is under the form of fire and another under the form of earth as established by God in the beginning, so that thus there be diversity of species in natural things. But why this part of matter is under this form and that part under another depends

1858. Q. 2. art.
1859. St. Augustine, Tractate 26 on John, tom. 9.

on the simple divine will, just as on the simple will of the artisan it depends that this stone be in this part of the wall and that in another, although the plan of the art contains that some be in this place and some in that. Nor, however, for this reason is there iniquity with God if he prepares unequal things for unequal persons. For this would be against the notion of justice if the effect of predestination were rendered as a debt and not given by grace. For in those things that are given by grace, a man can at his good pleasure give to whom he wills, more or less, provided he subtract not what is due to anyone, without prejudice to justice. And this is what the householder says in Matthew 20: "Take what is yours and go: or am I not allowed to do what I will?"[1860]

Explicatio Articuli.

Conclusion: There is absolutely no cause on our part of the whole effect of predestination. Of set purpose St. Thomas said "on our part," in order to exclude merits, and any occasion solely on the side of him who is predestined, lest in the very one who is predestined some cause be assigned why he rather than another is predestined. For that the merits of one are the cause of another's predestination is not doubtful, as we shall see in Disputation 94; where also we shall have to say whether the merits of one are the effect of another's predestination. The other things, however, which St. Thomas teaches here, and the whole doctrine of the article, must be examined by us in the following disputation.

Disputatio XCI - Whether there is some cause of divine predestination on the part of the predestined

- Explicatur status controversiae. cap. 1.
- Vari errores haereticorum. cap. 2.
- That some were taught to be predestined out of the condign merits of grace by Ockham and Gabriel; but other Doctors think all are thus predestined to glory. cap. 3.
- That predestination gives a final cause on the part of the predestined, but not a meritorious or disposing [cause], was the position of Durandus. cap. 4.
- That there is given to predestination a congruous merit from the help of grace was the opinion of St. Bonaventure and Cajetan. cap. 5.
- That the first grace of predestination has for its cause the good future use of the grace itself was the view of Alexander. cap. 6.
- Henry [of Ghent], and others, grant in us only a cause or condition without which not of our predestination. cap. 7.
- The Massilians with Cassian, and the Greek Fathers, said that the beginning of first grace and of predestination is from our free will. cap. 8.
- Our theologians variously defend these Fathers from this opinion. cap. 9.

1860. Cf. the clustered references: St. Augustine, ad Simplicianum, q. 2; De praedestinatione et gratia, c. 3; De haeresibus (De haeresibus ad Quodvultdeum)/De praedestinatione sanctorum, lib. 1 c. 2; lib. 2 c. 8.

- Certain scholastics also consent to the Massilians in reality, although by words they indicate something else about predestination. cap. 10.
- It is proved by authority against the Massilians that there is in us no cause or beginning of the grace of predestination. cap. 11.
- In the same manner as the Massilians, so those who grant from us morally good works to be the beginning of grace are refuted by authority also. cap. 12.
- The same truth is confirmed by testimonies of Scripture. cap. 13.
- The same Catholic sentence is demonstrated by an a priori reason. cap. 14.
- The rationale of the same sentence by an a posteriori argument. cap. 15.
- A certain objection of the adversaries. cap. 16.
- The arguments of the Massilians against St. Augustine. cap. 17.
- Certain testimonies brought against our sentence are explained. cap. 18.

Caput I - The state of the controversy is explained

It is customary at the beginning of any question to premise the definition of that about which the disputation is taken up; lest, if what is being asked be unknown, the controversy be rendered more difficult. Wherefore in the present case a definition of predestination ought to be premised, were it not that even among the Doctors, who have held various opinions in this matter, the term predestination is employed in many ways; according to which variety, although their positions seem contrary, yet some of them in reality do not oppose one another, but differ only in word. Now therefore let it suffice, first and in general, to suppose that predestination is a predefinition, or ordination, of someone unto eternal life. What, however, is to be thought concerning it in itself, and in what manner one should speak, we shall see in the course of the disputation.

Second, it must be observed that, when it is asked whether there is given a cause of divine predestination, the question is not about the act of the divine will, inasmuch as it is the divine essence itself and an uncreated thing. Thus all the scholastics to be cited in this disputation note along with St. Thomas in this article, when they speak in 3, dist. 7, together with the same St. Thomas, 3a, q. 24, a. 4, disputing how the predestination of Christ was a cause of our predestination. The same thing was observed by Driedo in the little work On the Harmony of Free Will and Predestination, book 1, part, chapter 4, to the fourth.[1861] For it is clear that the divine predestination is not in this way a cause. The controversy, then, is about predestination taken for its effects; and it comes to the same thing to ask the cause of God's predestination on our part, as to ask for some cause of the whole effect of predestination in us, which is not to be numbered among those effects. For if something be posited as an effect of predestination, by no account could that be a cause of the whole effect.

Third note. In the acts of the divine will, foreknowledge, and predestination, which are free in God, there are two things: namely the very essence of God, and a respect of reason toward creatures known and willed, as I have expressly treated elsewhere;[1862] whence it is that, although

the divine act, inasmuch as it is the essence of God, has no cause nor meritorious [cause] that it be, neither indeed can anyone merit that the divine essence be - for although one can merit to see it or to possess it - nevertheless the respect of that act and the relation can have a cause. For this relation is born from the objects toward which the divine act would proceed. Therefore, he who is the cause of the effect and of the object is said to be the cause of that relation and respect of reason. And consequently it is the same thing to merit that some effect of predestination exist, as to merit that the divine effect be referred to one by that relation of reason by which it is completed so as to be called predestination. By the same rationale we have said elsewhere[1863] that the knowledge of God, so far as it is about future things, is in our power, and that the relation of that [knowledge], not the knowledge of God, depends upon our freedom. In this way the predestination of Christ can be the cause of our predestination, and Christ can merit that [for] us, as we shall show.[1864]

Fourth, it must also be resolved that, as we have said, in God the will has not only no final cause, nor is moved after the manner of an object, but also has no created object which could be for God a reason for willing anything, except his own goodness; yet the same created thing can be the reason and cause of another; and thus, although God does not will one created thing because of another created object, nevertheless he wills one created thing to be for the sake of another, because one is the cause of the other. When therefore we speak of the cause of the divine will among created objects, we are not seeking whether anything be a motive reason to God after the mode of a final cause, why he should will to predestine us - besides his own goodness, for nothing else can be - but whether there be a reason on account of which he wills that effect of our predestination.

Fifth note of St. Thomas. In this article the controversy is not about individual effects, whether there be given some cause or occasion on the part of the predestined; for any effect whatsoever, if compared to another, has some cause on the part of the predestined, whether that cause be final, efficient, or meritorious. For the final cause on account of which the help of grace is given is future merits; and the glory, on account of which grace is given so that one may merit glory, is the end; in order that we may obtain eternal life. Moreover, glory itself is a cause - efficient, or as it were efficient - just as grace is. Therefore of singular effects there is some cause in the very one predestined. The question, then, says the holy Doctor, is about all the effects together, whether of all of them there is given some cause; but of all of them none can be, unless there be some cause of the first effect.

Further, although this doctrine is most true, yet because this question is the same as that very celebrated among St. Augustine and the other Fathers of the Church, and is the same as that concerning the first grace that calls, which we noted in part earlier,[1865] and shall say below likewise; now that question was whether the first grace, and the grace of calling, presupposes in us something, however minimal, meritorious at least by way of impetration, or some beginning whereby God, an occasion being offered, should call us and go before us with his grace. Therefore

1861. In 3, dist. 7; with St. Thomas, Summa theologiae III, q. 24; Driedo, Opusculum de concordia liberi arbitrii et praedestinationis, l. 1, p., c. 4, ad 4.

1863. Disputatio 68, c. 7.

1864. Disputatio 94.

1865. Disputatio 89, cap. 4.

this present question ought to be understood concerning the first effect, whether there be given some cause from the side of the very one predestined - not indeed a final [cause], for about this there is no doubt - but a meritorious or impetratory cause, or one by some mode disposing him; and here ought to be the hinge on which chiefly this whole disputation turns.

Finally, moreover, in the explanation of the article set down and in the rationale of the present controversy, it is treated of whether in another there is given some meritorious or impetratory cause of our predestination, but whether in ourselves there can be any [cause] of our predestination. How, however, these things are to be determined, we shall treat elsewhere.[1864] Therefore, with the controversy thus explained, let us next recount the state of the opinions of the heretics and of the diverse views of Catholics; and from among Catholics let us note first those which depart from the common and customary acceptance of predestination, lest they at some time oppose the truth not so much in reality as in word. Finally, let us enumerate those opinions which, speaking according to the common definition of Augustine and the Fathers, still feel otherwise than they ought about predestination, so that at length we may establish the truth both in reality and in the manner of speaking more in accord with the holy Fathers and with Scripture.

Caput II - Various errors of the heretics

So that in this controversy the various errors, not only of heretics but even of certain men who are counted by the Catholic name - though not so manifest - may be understood: therefore, first in this chapter I shall recount those errors about which there is no controversy and which are more openly condemned; then, in the order which the present disputation requires, I shall set forth the rest, I shall also mention the sentences of certain Catholics, and I shall show what of error or of danger they contain.

First error was that of the Manichaean, who, since he denied in us free choice, rejected the whole cause of our predestination (*praedestinatio*) and of eternal salvation into the diversity of the body's temperament and of condition arising from various constellations. St. Augustine, Jerome, and Prosper very elegantly refute this error; and in the Priscillianists the same error is condemned by Leo I, and by St. Gregory in a homily on the Gospels. It is, moreover, against Scripture: Jeremiah 10, "Be not afraid of the signs of heaven, which the nations fear"; and it is manifestly refuted by that passage of Paul to the Romans 9: "From the same conception of our father Isaac," etc.[1866]

Second error was that of Origen, who said that the cause of reprobation and predestination in this life is the works which we did in another previous life. For he thought that souls were created together with the Angels before the visible world. Jerome reports the same error and mentions it again elsewhere; more recent theologians rightly ascribe it to Origen; and among the ancients Epiphanius relates that Origen said that the souls of men, after sins committed in another life, were

1864. Disputatio 94.

1866. St. Augustine, Ad Simplicianum, q. 2; St. Jerome, Epist. 8 ad Demetriadem, near the end; Prosper, De vocatione gentium, l. 1, c. 14 (alias 5), before the middle; Leo I, Epistola ad Turibium, c. 11; St. Gregory, Hom. 10 in Evangelia; Jer 10:2; Rom 9:10 - 13; 11:33.

sent into bodies as it were into prisons, so that they might pay the penalties of their ancient sins, and therefore were called in Greek "souls" from psýchō, that is, "I cool" or "I refrigerate," because, having been sent down from heaven to lower things, they lost their former warmth; and that the body was called sōma, which we can interpret as sêma, that is, a sepulcher or monument. Origen himself not obscurely indicated this in the work On First Principles, with these words near the end of book 1, chapter 1: "Since, therefore, the nature of all rational creatures is one, from it God, according to preceding causes of merits, as from one lump, created and formed some indeed unto honor, others, however, unto dishonor." More clearly in the same work, chapters 8 and 9 of book 2, where he adduces the etymology of the name psychē, that is, "soul," and says the same things.[1867]

Third error was that of Pelagius and Celestius and their followers, who are called Pelagians, who spoke in the same way about predestination and about grace; for of old the question about grace and about predestination between Pelagius and the Catholics was the same, as we noted in Disputation 89, chapter 4. Pelagius, then, said that man is predestined by God to eternal life from merits and the justification of his own free choice, just as he also thought that in time, for adults, beatitude is conferred from their merits; and thus he held that there is no predestination of grace and of the gifts by which a man would obtain eternal life; for he wholly denied the necessity of grace for justification and merits. In this sense he constituted predestination to glory only in a decree of giving it, and said that it is done from the merits of free choice. But since he also admitted that we are at some time justified and merit eternal life by the grace of God, which he judged to be given not simply, but more easily for accomplishing these things, so he also conceded that there is sometimes a predestination of grace to eternal life, that is, an eternal preparation of the gifts of grace by which a man would be justified and would obtain eternal life; yet he said that this is done from condign merits of free choice, just as he also affirmed that grace in time is given from the same merits. All which things are sufficiently clear from those which we said in chapter 4 of that disputation; for he preserved the same order in time and in the eternal predestination of God, namely, that what is given from merits is predestined from merits, both by the nature of the matter and from the mind of St. Augustine, as I proved; and that of old the question was entirely the same, whether something is given from merits and is predestined from them.

But concerning little children, just as Pelagius said that they are not born in original sin and yet that they need baptism so that they may obtain eternal life, he also asserted that they are predestined to glory through baptism, by which they were to be justified and to be constituted sons of God. That he actually said this of the baptism of little children is gathered from the Council of Milevis and the Second of Orange, which we shall cite below, and St. Augustine reports it in book 1 On the Merits and Remission of Sins, chapters 18 and 26. Nor is it an obstacle that the same Augustine, letter 106, after the middle, affirms that, according to the opinion even of Pelagius, little

1867. St. Jerome, Epist. ad Hedibiam, quaest. 10, from Plato, Timaeus; idem, Epist. 8 and the larger commentaries on Gal 4:4 ("Cum placuit ei"); Driedo, Opusculum de concordia liberi arbitrii et praedestinationis, p. 1, c. 3; Epiphanius, Epist. ad Ioannem episcopum Hierosolymitanum (appended at the end of his works, among St. Jerome's letters as no. 60); Origen, De principiis (Peri archon) 1.1 (ad finem), 2.8 - 9.

children will have eternal life even if they die without baptism. For he understood by "eternal life" not the life of the vision of God, but another inferior life, as the same Augustine testifies in the place cited.

This error of Pelagius, which he had stated about adults, is condemned in the Council of Milevis, moreover in canons 3, 4, and 5, and in Augustine's letter 90, which is of the Council of Carthage to Innocent, and elsewhere in the places which we shall shortly allege; but that about little children is condemned in the Council of Milevis, canon 3, and in the Second of Orange, canon 2, as we shall bring forward; and Augustine relates the same, book 1 On the Merits and Remission of Sins, chapters 18 and 26. Yet in what he also asserted - that little children are by the grace of baptism destined to glory - this opinion, although repressed, can be disapproved.

But the Massilians, when they contended that to adults the first grace had been granted in view of some good works or of good will, so as to vindicate God from acception of persons, and thus that from this good beginning of free choice men had by the grace of God been predestined unto glory and separated from the mass of perdition; and, as is alleged in the places of Prosper, they used also the Augustinian example of little children, of whom some without merits are predestined, others reprobated; for this argument they said that these also, from the works of free choice which, if they had lived, they would have performed, were predestined and reprobated; and that from these works the separation from the mass of perdition was made; because on account of those works there was granted to them, and predestined, or altogether denied, the grace of baptism.

This opinion St. Augustine and Prosper judge to be manifest error; the testimonies of Augustine and of the Catholics are clear from that passage Romans 9: "When they were not yet born, nor had done any good or evil," that the purpose of God according to election might stand, "not of works, but of him that calls" (Rom 9:11 - 12), and below: "It is not of him that wills nor of him that runs, but of God who has mercy" (Rom 9:16); and from Wisdom 4: "He was snatched away lest malice change his understanding" (Wis 4:11). From which Augustine most rightly said that such assertions are abhorrent to Christian sense, namely, that things which are not going to be committed should nevertheless be punished by God, since no tyrant would be able to have such a manner of judging as to punish someone for crimes which he had not committed. These are enough about the errors which even by the judgment of the Scholastics appear most manifest and certain. For what the Massilians taught about adults, not without error, we shall set forth; and we shall show which Scholastics agreed with them and how they ought not to have done so.

Caput III - With the errors of the heretics now set aside and made manifest, it is necessary to review the sentences of the Scholastics.

But the Massilians, while contending that to adults the first grace was granted in view of certain good works or of a good will, so as to vindicate God from respect of persons, further held that from this good beginning of free choice they were by the grace of God predestined to glory and separated from the mass of perdition; and when, as Prosper attests in the places cited, Augustinians pressed them with the example of infants, of whom some without merits are predestined and others

reprobated, in order to parry this argument they said that these too, namely those infants, were predestined and reprobated according to the works of free choice which, had they lived, they would otherwise have performed; and that by these works the discrimination within the mass of perdition was made, because on account of those works there was granted and predestined to them the grace of baptism, or else denied absolutely.

Augustine and Prosper judge this opinion to be a manifest error in the places cited; and they refute it by that text of Romans 14 and 2 Corinthians 5: "We shall all stand before the judgment-seat of Christ, so that each one may receive according to what he has done in the body, whether good or evil." For Augustine notes that the Apostle did not say "what he was going to do," but "what he has done," to show that no account is to be had of the things someone was going to do. He also brings against the same persons that saying of Luke 10, "If in Tyre and Sidon ..."; and that of Wisdom 4, "He was snatched away lest wickedness should change his understanding." Whence, and with the best right, Augustine said that it is abhorrent to Christian sentiments that such crimes, which truly are not to be committed, should be punished so severely by God, when there is no tyrant who could take account of such crimes in order to punish them. But let what has been said about errors which even our own Scholastics count as manifest suffice. For what the Massilians taught concerning adults not without error, we shall report in chapter 8; and we shall show which of the Scholastics agree with them.

With the errors of the heretics now set aside and made manifest, it is necessary to review the sentences of the Scholastics.

It is necessary, and first of all those which less in reality oppose Augustine, and perhaps differ from his opinion only in manner of speaking.

The first opinion is that of Ockham, in I, dist. 41, q. 1, and of Gabriel, q. 1.2.2 and 2.3, dub. r. For as they taught concerning election to glory, so also concerning predestination they asserted something, namely, that certain pre-eminent saints were predestined to eternal life with no merits as yet foreseen, even of grace; but that all the rest were predestined from merits of grace foreseen. [1868] Although at first glance they seem to agree with the Pelagians and Semipelagians and to be opposed to Augustine and to the Catholic sentence, in reality they teach nothing contrary: for they employ predestination in a different sense than Augustine commonly does in the books On the Predestination of the Saints and On the Gift of Perseverance, and often elsewhere, where he disputes against the Pelagians and Semipelagians about grace and predestination. For Gabriel and Ockham by the name predestination understand the decree of God and his efficacious will of giving beatitude, which we, in Disputations 89 and 90, following the mind of St. Thomas and Augustine, have called election: for both of them, and the Scholastics commonly, say that predestination is the preparation of the gifts of grace by which a man is led to eternal life.

However, since Catharinus in reality agrees with Gabriel and Ockham, as we saw in that Disputation 90, he nevertheless differs in the mode of speaking: because he is unwilling to call predestination any will whatsoever of giving glory before foreseen merits; and thus, while in general he maintains that predestination, that is, a certain exceptional election, was made without merits, yet that the rest are saved by merits of grace and that eternal life was pre-fixed for them - he teaches nothing in reality against Gabriel and Ockham.[1869]

Moreover, some recent authors, using predestination in the same way for the bare will of giving eternal life, say that all, no one excepted, were predestined to glory from merits of grace foreseen. Thus teaches Osorius, book 9 De iustitia, whom we also cited in Disputation 89, chapter 2; and many professors of theology of our time, throughout Gaul and Germany, because, as against Calvin, this way of speaking seems to them more suited for defending our liberty. And in the same sense Major seems to be understood in I, dist. 40, q. 2; and William de Rubione both speaks expressly thus and so thinks in I, dist. 41, q. 1, art. 1, and art. 2, concl. 3.[1870] This opinion of theirs they can defend by the testimonies and reasons by which in that Disputation we proved that election to glory was made from merits of grace foreseen. For the same seems to be said concerning predestination, if indeed predestination to glory is nothing other than the pre-fixing of giving glory to someone, as they take it.

Osorius, however, and the more recent authors who follow him, think that they are in reality opposing Augustine, because he said that predestination, taken in this way, was made before foreseen merits: and they judge this sentence of Augustine to be severe and very difficult; and they think themselves to agree with the sentence of the Greek Fathers, of the Gauls, and of the Massilians, who assert that predestination is made from merits. There are also many, whom I cited in that Disputation 89, chapter 2 and 7, who understood Augustine thus - although in this very sense they defend his sentence and judge it necessary to embrace it, so that we may defend the grace of God against the Massilians and Pelagians.

But we proved that all these, who so interpret Augustine, have not attained his mind, in Disputation 89, chapters 4 and 8, where we showed that Augustine never contended against the Pelagians and Semipelagians about the will of giving glory, but about the will of giving grace; and that nothing of his interest, in order to assert grace without merits, required proving that glory was pre-fixed before foreseen merits. Then in chapter 8, from Augustine we demonstrated that predestination to eternal life is not the mere will of giving glory, but the preparation or pre-definition of the means of grace and of the benefactions of God by which a man must be led to eternal life. So he taught expressly in book 1 On the Predestination of the Saints, chapter 10, and in book 2 On the Gift of Perseverance, chapter 14, whose words we there recited; and finally he concludes with these words: "Wherefore predestination of God, which is in good, is grace - as I said, a preparation - while grace is the effect of predestination itself." Augustine commonly calls

1868. William of Ockham, In I Sent., dist. 41, q. 1; Gabriel (Biel), q. 1.2.2 and 2.3, dub. r.

1869. St. Ambrose Catharinus; see above, Disputation 90.

1870. Jerónimo Osório, De iustitia, l. 9; John Major, In I Sent., d. 40, q. 2; William de Rubione, In I Sent., d. 41, q. 1, art. 1, and art. 2, concl. 3.

this predestination not "to grace," but "of grace to eternal life": indeed, as often as he names predestination absolutely, he understands it in this way, especially when he commends grace without merits against the Pelagians and Semipelagians. Therefore, in his sentence grace is the effect of predestination; and to inquire whether there be, on our part, a meritorious, dispositive, or impetratory cause of predestination itself is the same as to inquire whether there be such a cause of grace on our part.[1871]

Besides Augustine in the places cited and in many others, Fulgentius expressly set forth this sentence, book to Monimus, chapter 9: "Just as therefore by predestination the will from the Lord is prepared, by which we should will the good; so also God has prepared the good works themselves, that we should walk in them" (Eph 2:10). Therefore he rightly says that both calling at a suitable time, and that we will, indeed even the good will itself, and thus the good deed itself, are the effect of predestination; and in chapter 11 he says: "Now all these things, that is, calling, our beginnings, increase in justification, and the rewards of glorification, always have the predestination of God." He gives the reason: because in calling, in justification, and in glorification, there is not only grace, but also the very preparation of what is to come, of predestination itself.[1872]

Finally, the Council of Valence, under the Emperor Lothair, chapter 3, says that God by his predestination has established only those things which, either by gratuitous mercy or by just judgment, he had done. Therefore even glory itself is commonly reckoned among the effects of predestination; and predestination is not the will of giving glory alone, but also of preparing grace - and together with grace - glory itself. Therefore the aforesaid Doctors erred in their understanding of predestination, although the error is one of word, not of thing. For what they assert, that glory by an efficacious decree was pre-fixed to no one before foreseen merits of grace, is not false, but has been proved by us with the best reasons in that Disputation 89, chapter 9 and the following; nor is it contrary to Augustine, indeed we have deduced not obscurely that it is manifestly confirmed out of him in chapters 7 and 8. And should the Doctors be thought opposed to Augustine and consenting with the Greeks and the Massilians, I would not therefore say that they are in error, as I noted in Disputation 90, chapter 1, against Catharinus. For Augustine's sentence has been defended by great prelates and pontiffs of the Church; whereas, on the other hand, the opinion of the Massilians has been branded with error, as we saw in chapter 11.[1873]

There are, however, some professors of theology of our time, whose opinion, it seems, Turrianus reported in his little work On Election: he distinguishes two predestinations in God - one to grace, another to glory; he says that there are, as it were, two wills, one of giving grace and one of giving glory. Of the former, he thinks, Augustine spoke when, against the Pelagians and Semipelagians, he contended that predestination was before foreseen merits: because, just as grace on our part is given without any merits, so also, from no merits, is it pre-fixed and predestined. The other they assert to be the will of giving glory; and this, they say, was made out of works and merits of grace foreseen, just as in time glory itself is conferred.

1871. St. Augustine, De praedestinatione sanctorum 1.10; De dono perseverantiae 2.14.
1872. Fulgentius of Ruspe, Ad Monimum, c. 9 and c. 11; cf. Eph 2:10.
1873. Council of Valence (Concilium Valentinum) under the Emperor Lothair, c. 3.

This sentence has nothing absurd in the matter, but is indeed probable with respect to the will of giving glory, as we have sufficiently confirmed; but concerning the will of giving grace, it is most certain, as will be clear in chapter 11. Nay more, even in their manner of speaking - wherein they seem to depart from the common School - there is some foundation in Augustine. For he himself not only calls predestination "of grace" wherever he deals with the Pelagians and Semipelagians, which at the same time he also says can be called predestination "to eternal life" or "to the kingdom of heaven," as is noted in Disputation 89, chapter 8; but even in the Enchiridion, chapter 100, he calls predestination "to grace," in that God destines men to the grace by which they are blessed. Thus too Paul, to the Ephesians, used this same way of speaking when he said, "He predestined us unto adoption of sons": that is, he destined us to have adoption and justification. Moreover, Augustine sometimes calls predestination the mere efficacious will of giving glory. In this manner he seems to speak in the book On the Predestination of God, chapter 3, if indeed that book be undoubtedly Augustine's; nor does the author simply call this predestination, nor "predestination to glory," but "the predestination of glory" or of remuneration - and indeed it is conveniently called thus. For "predestination to glory" is often said to be the very eternal preparation of grace, because, as we noted at chapter 10, times are ordained for this end, that we may obtain the glory which beforehand God willed for us by his antecedent and simple goodwill. Wherefore, these two predestinations are not at odds: one is called predestination to grace; the other predestination of remuneration, or of glory.

Furthermore, Augustine frequently speaks in yet another way: for he calls predestination to glory, predestination simply, and predestination of grace, the will and foreknowledge of those things to be prepared by God in grace unto the kingdom of heaven. And in this manner of speaking we can more safely, and more easily, defend ourselves against Calvin and uphold our liberty than can these more recent authors with their not-so-common distinction of predestination.

Besides St. Augustine indeed, not only in the places cited but in many others, Fulgentius expressed this same opinion: in book 1 Ad Monimum, chapter 9, he says: "Therefore, just as the will by which we should will the good has been prepared by predestination from the Lord (that is, just as He predestined and pre-appointed in time the fitting vocation whereby we should will - for by this He makes that we should will, as was explained in Disputation 88, chapter 11), so too God prepared good works, that we might walk in them." [1874] Accordingly he says that both are an effect of predestination: the vocation whereby we should will, and so the good will itself; and that we should do, and thus the good work itself. And in the same place, chapter 11, he says: "But all these things, that is, the beginnings of our vocation, and the increase of justification, the rewards of glorification, God has always had in predestination." He gives the reason: because both in the vocation and in the justification and in the glorification of the saints, by His grace He foreknew the works to come.

Finally the Council of Valence under the Emperor Lothair, chapter 3, says that God determined by His predestination only those things which He was going to do either by gratuitous mercy, or by just judgment. [1875] Therefore, glory alone is not to be numbered among the things of predestination;

and predestination must be not the mere will of granting glory, but also of preparing grace, and glory together. Therefore the aforesaid Doctors erred in their acceptation of predestination, although the error is of the word, not of the thing. For what they assert - that glory by an efficacious decree was pre-appointed to no one before the merits of grace foreseen - is not false, but has been proved by us with very strong reasons in that Disputation 89, chapter 9 and the following; nor is it contrary to St. Augustine; rather we have not obscurely deduced that it is clearly confirmed from him himself in chapters 6, 7, and 8. But if these doctors were to oppose Augustine and agree with the Greeks and the Massilians, they would be worthy of no light censure, as I observed in Disputation 90, chapter 3 against Catharinus. For Augustine's opinion has been defended by great men of the Church and by Pontiffs; whereas the opinion of the Massilians has been branded as erroneous, as we saw in chapter 11.

There are, however, some professors of theology of our time, whose opinion our Turrianus seems to have handed down in a little work On Election, who distinguish two predestinations in God, one to grace, the other to glory. They claim that one is the eternal will of giving grace, the other of giving glory; and they think Augustine spoke of the former whenever, against the Pelagians and Semipelagians, he contends that predestination was prior to merits foreseen: because just as grace is given from no merits, so also it is from no merits either pre-appointed or predestined. The other, they claim, is the will of giving glory, and this they say has been made on account of works and merits of grace foreseen, just as in time glory itself is conferred.

Their sentence has nothing absurd in the matter, but is probable: for concerning the will of giving glory, what we have confirmed remains solid; but concerning the will of giving grace, it is most certain, as will be evident in chapter 11. Nay more, even in the very manner of speaking, in which they seem to diverge from the common School, there is some foundation in Augustine. For he not only calls predestination to grace, whenever he deals with the Pelagians and the Semipelagians (which also can at the same time be said, and is at times by him called predestination to eternal life, or to the kingdom of heaven, as I noted in Disputation 89, chapter 8), but also in the Enchiridion, chapter 100, he called it predestination to grace, because men are destined to have grace; just as Paul also said to the Ephesians in this same manner of speaking: "Who predestined us unto the adoption of sons of God," that is, He destined us to have adoption and justification. [1876] Then too Augustine himself sometimes calls predestination the mere efficacious will of giving glory. He uses this way of speaking in the book On the Predestination of God, chapter 3, although neither is that book indubitably Augustine's, nor does its author simply call it predestination, nor predestination to glory, but predestination of glory, or of remuneration - and indeed it is more fitting to be called in this way. For predestination to glory can also be called the very eternal preparation of grace, because, as I noted in that chapter 8, grace is still ordered to an end, that we may obtain glory, which God first willed for us by His merely antecedent will and simple affection. Wherefore, lest these two predestinations be confounded, the one ought to be called predestination to grace, and the other predestination of remuneration, or of glory.

1874. Fulgentius of Ruspe, Ad Monimum, l. 1, c. 9 and c. 11.
1876. St. Augustine, Enchiridion c. 100; cf. Eph 1:5.

Moreover, Augustine frequently speaks in another mode; for he calls predestination to glory, predestination simply, and predestination to grace, the will and eternal foreknowledge of God of preparing the gifts of grace to the kingdom of heaven. And because in accordance with this manner of speaking we can with very great ease, against Calvin, defend our liberty, more than these more recent writers with their not-so-common distinction of predestination defend, there is no reason why we should shrink from the common and customary signification of predestination, but with Augustine openly profess that it is done without merits, as will be proved in chapter 11. Now very much will conduce to the present disputation that distinction of a twofold election: one to glory with examination pre-mitted, the other to grace without examination - which is most probable in reality, and not alien from Augustine's phrase, nay even quite familiar to him, as we demonstrated in that Disputation 89. But all the arguments which the aforesaid authors can allege prove only that which we too asserted there, namely, that election to glory has been made from merits of grace; but that it is predestination according to the customary manner of speaking of Augustine and the Fathers, certainly they will not prove. However, how with regard to all who are elected to glory the same ratio is maintained, we showed there against Ockham and Gabriel. [1877]

Caput IV - That a final cause of predestination is given on the part of the predestined, but not a meritorious or disposing cause (Durandus)

Durandus. Durandus in I Sentences, distinction 41, question 2, number 11, together with the other Scholastics, agrees in this: that when inquiry is made about the cause of predestination, the question is understood solely on the part of the effect; and with St. Thomas and the rest he notes that it is about the whole effect, namely, that there is given some cause on the part of the predestined of the whole effect of predestination. [1878] But in the question thus understood, he fights on the contrary with Ockham and Gabriel: for he holds that among the effects of divine predestination the attainment of the predestined end is not to be numbered, which is the attainment of beatitude, but only the other means by which man is led unto beatitude. From which doctrine he gathers, first, that for the whole effect of predestination there is not given a meritorious cause, nor in any way a disposing cause on the part of the predestined: because whatever conduces and disposes, or merits some effect of predestination, falls under that same predestination as an effect thereof; among which one can be the cause of another, either meritorious, or disposing, or in some way impetratory. Then Durandus infers that for the whole effect of predestination on the part of the predestined there is given a final cause; because all the means which God by His predestination prepares unto glory look to that very glory as an end, in respect of which the grace of those means is said to be. If therefore glory is not an effect of predestination, as is supposed, it follows that on the part of the predestined there is constituted some end for the whole effect of predestination. But he proves the supposition by this reasoning: predestination, or providence in God, answers to prudence in us, therefore concerning it one must philosophize as concerning our prudence: but prudence in us is not conversant about the end, but about the means; for Aristotle

1877. William of Ockham, In I Sent., dist. 41, q. 1; Gabriel (Biel), ibid.
1878. Durandus of St.-Pourçain, In I Sent., d. 41, q. 2, n. 11.

says in Ethics 6, chapters 9 and 12, that the right determination about the end of virtue is made by virtue without the consultation of prudence, which, he says, is conversant only about the means that are referred to the end: therefore providence, or predestination, in God ought not to be conversant about glory, which is the end, but about the means which lead to it. [1879]

In this opinion of Durandus there are two points: one, in which, although he speaks very well, he errs not a little in the thing itself; the other, which does not so well accord with the common mode of speaking of the Scholastics and the Fathers, yet is not alien from their sense. That which in the former place he teaches - namely, that there is no meritorious, or disposing, or impetratory cause from our side of the whole effect of our predestination - has indeed been rightly said, but was wrongly understood by Durandus and by some Theologians. For Durandus estimates in II Sentences, distinction 28, question 5, number 7, that those predestined can dispose themselves to grace without a special and internal motion which is effected by the Holy Spirit, although at times not without a special providence; and this disposition he numbers among the effects of predestination in I Sentences, that same distinction 41, question 3; yet he defends that there is not given a meritorious cause or disposition of the whole effect of predestination, since he does not refuse to concede it with respect to grace: in which, how gravely he and other Theologians err, we shall see in chapter 11 and following. But what Durandus teaches in the latter place is true in the thing itself: namely, that glory is a cause, after the manner of an end, of the remaining means which are prepared unto it - not as things willed by God because of it; for, with respect to the divine will, no created thing is that for whose sake and as the reason for willing something else, but rather that on account of which He willed other things, according to the doctrine handed down by us in Disputation 82, chapter 2. Whether, however, the attainment of glory should be numbered among the effects of predestination is rather a question of word than of thing. Nevertheless the sentence of Durandus is not to be embraced even from this side: because it runs counter to the common mode of speaking of the Scholastics and of the Fathers. First, all the other Scholastics call the very attainment of glory an effect of predestination. From the Fathers, too, Augustine everywhere assigns among those things which God has prepared and predestined for the elect the prize of glory and of beatitude itself; and Fulgentius, in book 1 Ad Monimum, chapter 11, in the verses cited there, and chapter 8, says: "These things indeed God has always had in predestination"; he enumerates, moreover, among those all beatitude. [1874] Fulgentius gathers this from that of Paul to the Romans 8: "For whom He predestined, He also called, and justified, and glorified"; and immediately the Apostle enumerates what God by predestination and presence has made in the elect; he says: "Whom He predestined, these He also called; and whom He called, these He also glorified." Whereupon straightway Fulgentius subjoins: "We most truly hear that we have been at once justified and glorified; let us not therefore assign as the work of the present time at once justification and glorification." He says this because some refer that "He glorified" to consummation and to the increase of sanctity in this life, reading not "He glorified" for the same cause, but "He magnified." [18741880]

1879. Aristotle, Nicomachean Ethics VI, c. 9, 12.
1874. Fulgentius of Ruspe, Ad Monimum, l. 1, c. 9 and c. 11.

It is therefore clear that for the whole effect of predestination there is no cause after the manner of an end other than on the part of the predestined, since glory - which could be the end - is numbered among the effects. It is, however, most certain that Durandus in no way favors either the Pelagians or the Massilians, with whom he is always in agreement with Augustine about predestination by grace. For there was never any controversy among them, whether a final cause of predestination is given on the part of the predestined, in the sense here explained; but - as I noted in chapter 1 - whether they would grant a meritorious or impetratory cause, on the occasion and with respect of which God would predestine and in time give first grace, or not: nor about the whole effect at once, but about the first. Which pertains nothing to the present question that Durandus handles; nor does it concern their disputations. I have said this because some, not sufficiently understanding this doctrine and intention of the Fathers, whenever they hear that in predestination, either in this sense or in another, this or that cause is given, straightway cast it into Pelagianism - which does not befit theologians, who ought to have the mind of the Fathers, and the errors of heretics, well understood.

Moreover, the love and the intention of virtue are not proposed by prudence, nor are they the object of counsel; for this is conversant about particular circumstances and the matter in which the ratio of virtue and of the honest end is found, and these in particular prudence determines. Nay, in the mind of Aristotle choice is conversant about the end in this way, as we note at I - II, question 13, article 2. Wherefore, in the difficulty of the proposition, there is no reason for us to say that glory, insofar as it is the reward to be rendered for merits, does not pertain to the prudence of God or to providence and to predestination. For the prudent man not only disposes and appoints the means by which we may obtain beatitude, but also, for each according to dignity, weighs the price of labor, and renders the reward to merit. Therefore the very retribution of beatitude for these or those merits pertains to providence. Add that Aristotle's doctrine holds only about an end which someone proposes to himself to be acquired, of what sort it is - namely, the honesty of virtue - and not about an end which someone else proposes, in order that one might labor for obtaining it and attain it by merits. Wherefore Durandus's reasoning in no way proves what he contends.

St. Bonaventure in I Sentences, distinction 41, article 3, question 1, ad 2, employing predestination in that way of "moving" which the Scholastics above have mentioned, and Augustine and the Fathers, as is manifest in many places - and philosophizing in a way different also from them - since he thinks there are only two effects of predestination, namely justification (to which perseverance is annexed) and the attainment of beatitude, says that, because the remission of sins is obtained by the merits of congruity with the help of grace, it follows that predestination to grace has a meritorious cause de congruo, not de condigno, namely all the works which precede justification and dispose unto it, not however those done by free will alone, but by the help of exciting and assisting grace. [1881]

1874. Fulgentius of Ruspe, Ad Monimum, l. 1, c. 9 and c. 11.
1880. Rom 8:29 - 30; Fulgentius of Ruspe, Ad Monimum, l. 1, c. 11 and c. 8.
1881. St. Bonaventure, In I Sent., d. 41, a. 3, q. 1, ad 2.

But on the part of the Fathers, St. Augustine, here and there, among the other things for which God prepared and predestined the elect, assigns to them the very reward of glory and beatitude; and Fulgentius proves this clearly in the places just cited, and in book 1 to Monimus, chapter 11, and chapter 8, where he says: "Now this God, as He has always had it in predestination, so He brings it about through grace, just as He had predestined it." He had, however, enumerated among all those things beatitude itself. He gathers this in that chapter 11 from that passage of Paul in Romans 8: "For whom He foreknew, He also predestined," etc. And straightaway the Apostle, enumerating the things that God brings about in the elect by His predestination and foreknowledge, says: "But whom He predestined, them He also called; and whom He called, them He also glorified." Where Fulgentius immediately subjoins: "Yet when we hear that they have been justified and glorified together, let us not assign together the work of justification and glorification to the present time." He says this because some refer that "He glorified" to the consummation and increase of sanctity in this life; for which cause they do not read "He glorified," but "He magnified."[1882]

Therefore it is common that the whole effect of predestination is not a cause after the manner of an end on the part of the predestined, since glory - which could be an end - is numbered among the effects. Yet this is most certain: that Durandus in no way favors either the Pelagians or the Massilians, with whom Augustine always had contention about the predestination of grace. For never was there any controversy between them, whether a final cause were given of predestination on the side even of the predestined, in the sense just now explained; but, as I noted in chapter 1, whether there were given a meritorious or impetratory cause on account of which, and in respect of which, God should predestine and in time give first grace, or not. Nor did they dispute about the entire effect at once, but about the first; therefore, that which Durandus taught pertains to none of their debate. I said this because some, not sufficiently understanding the doctrine and intention of the Fathers, whenever they hear that, whether in this sense or in another, this or that cause is given of predestination, immediately cast it back into Pelagianism. Which does not befit theologians, who ought to have a good grasp of the mind of the Fathers and of the errors of the heretics.

Moreover, the reasoning of Durandus does not prove that supposition which we have said; for what Aristotle says is to be understood in another way, although the proposed end be abstracted from matter and circumstances and considered according to itself, insofar as it is honorable, which the love and purpose of virtue pursue, it is not to be set forth by prudence, nor is it the object of deliberation - for this treats of particular things, circumstances, and the matter in which the rationale of virtue and of the honest end is found - and these particulars practical prudence determines. Nay, in the sense of Aristotle, choice deals with the end in this way, as we showed in Ethics 1.2, 9.13, 2.1.[1883] Wherefore, in the difficulty proposed, there is no reason why we should say

1882. Fulgentius of Ruspe, Ad Monimum, l. 1, c. 11 and c. 8; cf. Rom 8:29 - 30. that glory, insofar as it is to be rendered according to these merits, does not pertain to the prudence of God or to providence and predestination; for it is the part not only of the prudent man to foresee all the means, that they may obtain the prize, but also, after an examination of the dignity of the labors and of merit has been made, to render to each the reward. Therefore, the very retribution of beatitude according to these or those merits will pertain to providence. Add that the doctrine of Aristotle has place only in the end which one proposes to himself to acquire, such as the honesty of virtue, not however in an end which one proposes to another, that he might labor for obtaining it, and by merits attain it. Wherefore the reasoning of Durandus in no way proves what he contends.

A congruous merit of predestination is given from the help of grace, as Bonaventure and Iavellus held.

On the same

Bonaventure, in I Sentences, distinction 41, in some manner employing predestination differently than the Scholastics above mentioned and St. Augustine, philosophizes in a mode different from theirs. For since he thinks there are only two effects of predestination - namely, justification with perseverance, and the obtaining of beatitude - and since the grace of the remission of sins is given from the merits of congruity, he infers from this that there is given to predestination to grace a meritorious cause de congruo, not de condigno, namely all the works which precede justification and dispose to it, not however those done by free will alone, but by the help of exciting and assisting grace. And he noted this expressly in IV Sentences, dist. 15, in the first part, dist. 2, art. 1, q. 5; for in that distinction 41 he said nothing expressly. But since he says the same thing about predestination as about justification, and asserts in that distinction 15 that justification is given from merits de congruo proceeding from grace and not from free will alone, he understood entirely the same of predestination in that distinction 41.[1884] The same opinion was followed by St. John Chrysostom Iavellus in his commentaries on this article, recently printed.[1885] And certain men of our time in Spain abuse his opinion to prove that God does not foreknow or predefine our free acts, since he makes no mention of that matter, but only wanted to say that predestination had not been made before the forevision of the good of free will from the grace of God. Others, however, in that same Spain have more severely censured this opinion of Bonaventure, judging it to be Pelagian, and to be contrary to Augustine. But although Bonaventure and Iavellus do not preserve Augustine's mode of speaking of predestination, because they take predestination otherwise than he, nevertheless they certainly do not contradict him; nor do they in any way consent to the Pelagian or Massilian and Semipelagian. For Bonaventure and Iavellus never said that the grace of first vocation is given by merits of free choice or is predestined; but that the grace of remission of sins and justification itself is effected in time, and is predestined in the prescience of God from congruous merits foreseen, not indeed of free choice itself, but of the help of grace - something which they themselves expressly noted - and thus they allow a meritorious

cause of predestination on our part with the aid of grace. For they take predestination only for the preparation of justification, which will persevere unto the end, not for the preparation of all things which dispose to justification; but to assert that certain congruous or impetratory merits precede justification and the remission of sins, and impetrate them, is not to consent to the Pelagians or the Semipelagians, nor to contradict Augustine.

Indeed, this is the express doctrine of Augustine, differing from the Pelagian; for in Epistle 101 he contends with the one who, after the retraction which he had made in the Palestinian Council - when he had publicly asserted that grace is given without merits, understanding by grace the gift of creation and of free choice - should rightly explain about that grace which is through Christ for living rightly and overcoming temptations, and is given without any merits, which Paul commends in the Epistle to the Romans, and is entirely different from the gift of creation, so that in this way it might be received with joy by all into the fellowship of the Church. Then he objected to himself in these words: "They can indeed say," namely, the Pelagians, "that the remission of sins is grace, which is given without any preceding merits; for what good merits can sinners have?" as if he should say: Pelagius could grant that there is another grace besides the gift of creation, namely, the remission of sins. But Augustine replied immediately in these words: "But neither is the remission of sins itself without some merit, if faith impetrates this; nor indeed is there no merit of faith, by which faith that man said: God, be merciful to me a sinner; and he went down justified by the merit of faithful humility"; that is, it does not suffice that he concede this grace; for we, with the Apostle, seek another grace which is given from no merits, and is the beginning of every merit. And in Epistle 106 he concedes that we also by the grace of God merit the grace of doing well, which he himself calls charity. Therefore Augustine thus admits that there is some merit of the remission of sins and justification, namely, impetratory or congruous - which is the same - because the faith, which he says there is the gift of God and from which all justice takes its beginning, impetrates it. Whence Augustine gathered that it would not suffice if Pelagius conceded grace of the remission of sins; because since this is from merits, it is not that grace commended by the Apostle in the Epistle to the Romans, which precedes all merits; but it is necessary to admit such a grace, from which all justice takes its beginning, which he says is faith; and he calls it "the grace in which we are justified," or "the grace of justification," according to the phrase of the Council of Milevis, can. 3, and of the African Council under Pope Boniface I, can. 78, as we shall show at length in I-II, q. 109, a. 2 and 5, and in I-II, q. 114, a. 2 and 5; and in the same way it is called by the African Fathers in epistles 90 and 95, where they insist upon the grace which they strove to make Pelagius concede; and that in this way the grace of justification is used by the Fathers was noted by Andreas de Vega, book 8, on the Council, chapter 13. I have said this in passing (for we must dispute expressly in I-II, q. 114, a. 2 and 5), in order to show that the opinion of Bonaventure and Iavellus in no way in itself favors Pelagius, nor consents to the Pelagians or Semipelagians, nor contradicts Augustine who disputed against Pelagius; for he expressly taught the same. For it is entirely the same to assert that justification is effected from impetratory merits of faith, and that predestination is made on account of these merits, as has often been noted. Thus, then, Bonaventure and Iavellus, asserting

that predestination begins from justification, do not consent to Pelagius, nor are they contrary to Augustine, when they have been accustomed to assert that predestination is made on account of merits done with the help of grace, which are not condign, but congruous or impetratory.

In this way of taking predestination, this opinion in fact must be admitted by all who assert that the remission of sins and justification are effected from congruous merits done with the help of the grace of God, as the most learned Catholic men teach: Marsilius, in II, q. 18, a. 2, q. 3, conclusions 2 and 3; and St. Thomas, in II Sentences, dist. 27, q. 2, a. 4, ad 4; nor does he shrink from this opinion in I-II, q. 114, a. 5, as we shall explain there: for he only denies a congruous merit of the first grace, which is the principle of all merit, which is most true. The same was taught by Alexander, III, p., q. 69, mem. 5, 2, 2, 6, 1; and Laurentius Justinianus, in the book On Contempt of the World, chapter 9; Ferrariensis, book 3, Contra Regem, chapter 149, at the end; Roffensis, book against Luther; nor is the third likeness.[1886]

Again, Andreas de Vega, in the opusculum De iustificatione, q. 7, and on the Council, book 8, chapter 8 and the following; Jodocus Tiletanus, in the Apology for the Council of Trent on session 6, chapter 8; but that calumny - where he calls this merit "impetratory" - Franciscus a Daventria, in the Exegesis against the Augsburg Confession, fol. 46, n. 9. And again they will say: which opinion, in my judgment, is most true, as we shall show more fully in I-II, q. 114, a. 2.

They reply, however, that Augustine retracted that opinion, just as he retracted that which he, when a presbyter, had held - namely, that faith is not the gift of God, and that men merit the first grace from God. But this is a manifest deception: for these two are far different, that faith is not the gift of God, or that faith proceeding from one's own powers may merit first grace; and that by good works done from grace, or by faith itself, which is the gift of God, we merit another grace, or the remission of sins, or justification. Although, therefore, Augustine corrected the former, he did not by that very fact retract the latter: indeed when in his epistles he says that faith is the gift of God, and that grace is given without any merits of free choice, nevertheless he concedes some merit of the remission of sins; and truly, in the doctrine of that epistle which was written after the retraction of Pelagius, there is nothing which Augustine ought to have retracted.

But let us dismiss these trifling evasions. They object further the Council of Trent, session 6, chapter 8, where it says that "faith does not merit the grace of justification." I answer that some understand that of condign merit, as Vega in the cited place; I, however, of congruous merit, but in such a way that the Council understands by "the grace of justification" the whole set of graces from first vocation; for this is the grace in which we are justified, or "grace of justification," as I noted above, in disp. 88, c. 1. Therefore I join the mind of the Council, but not wholly, so that it might be shown that justification arises from faith itself, and that that is not from one's own powers, but is reckoned among the gifts of God; but about this more at large in its own place.[1887]

Nor in any way do Bonaventure and Iavellus favor the Semipelagians or the Massilians: first, because they would then favor the very Semipelagians whom Augustine clearly refutes against Pelagius and against the Massilians; for in opposition to Pelagius he asserts the grace of vocation,

which is given without merits of free choice, in such a way that he also excludes against the Semipelagians any beginning of a good work or of will on our part on account of which grace is given. Then the Massilians so conceded a cause of predestination to grace, that they said first grace of vocation is repaid for merits, or for some beginning of good of free choice. But this in no way is asserted by Bonaventure and Iavellus; rather, from works done with the help of grace, they say, justification is effected - which works are called dispositions and congruous, not condign, merits. Therefore, in fact these two Doctors teach nothing against Augustine, but differ from him in manner of speaking when they assert that predestination is only the preparation and eternal predefinition of justification and perseverance; whereas in truth Augustine and his disciples have called predestination the preparation of all the gifts of grace from first vocation unto the end: for often, when he argued against Pelagius or the Massilians, he spoke of predestination being without merits foreseen, not of the grace by which sins are formally remitted, but by which we are called unto justice and begin, as is evident from the cited epistle, and from the book On the Predestination of the Saints, chapter 10, and book 2, On the Gift of Perseverance, chapter 14, where he asserts that predestination is "the preparation of grace" or "of the benefits of God, by which whoever is saved is most certainly saved," as we reported in disp. 89, c. 8 of this disputation. And thus already against the Pelagians, Fulgentius, in the places cited by me, chapters 3 and the rest, in disputing about the effects of predestination, numbers among them the beginnings of our vocation; since this is the common acceptation and definition of predestination, and has no more difficulty than the opinion of Bonaventure; therefore there is no reason why, leaving the common acceptation, we should follow this peculiar one of Bonaventure and Iavellus. But how, even if many helps are given before justification, which seem common to the reprobate and the predestinate, nevertheless in predestination they are not effects of common providence, but of predestination, we shall say in disp. 93, cap. 1.

Caput VI - That the cause of the first grace of predestination is the very future good in those themselves from grace itself, with Alexander excluded

Thus far we have reviewed the various opinions of later Scholastics, with their grounds, such as either seemed to be contrary to Augustine, or, having recovered their senses, were repudiated by those who held them once they saw the difficulty, and from the very question of this disputation; but we assert the conclusion which we set out, with its supports. Now indeed there were also others, which were listed above, of this controversy, which Augustine had against the Pelagians and the Massilians most expressly

Therefore, the fourth in order is the opinion of Alexander, in 1 p., q. 28, memb. 3, a. 2 et 3, in the body and to ad 2 and 3, who asserts that on the part of the effects of predestination there is given some cause, but in a different way: for glory - good works done by grace - are a meritorious

1886. Alexander of Hales, Summa, III, p., q. 69, mem. 5, 2, 2, 6, 1; Laurentius Justinianus, De contemptu mundi, c. 9; Ferrariensis, Contra Regem, l. 3, c. 149 (in fine); Roffensis (John Fisher), Against Luther; "Nec tertia similitudo."

1887. Council of Trent, sess. 6, c. 8 ("fides non mereri gratiam iustificationis"); cf. Vazquez, disp. 88, c. 1.

cause; but for the first grace the cause is a certain congruity, namely the good future use of that very grace; on account of which cause, we can say not without reason that God predestined these rather than those.

Albert seems to have handed down this opinion in 1, d. 41, a. 2 et 3, who, after he had said in a. 2 of the same distinction that no meritorious cause is given on the part of the predestined, or of his predestination, or of its proper effect which they call grace - because no merit can be prior to grace - nevertheless asserts in a. 3 that some reason is given on the part of the effect, lest God's predestination and will be without reason. This, however, in my judgment, as far as I could gather from him, in order not to teach things contrary to himself, he thinks to be the use of grace itself and the merits that will arise from grace itself: for he denied in that a. 2 that there is any merit that precedes grace, and he did not understand only condign merit, but also congruous and the least that could be; because the same author, in 2, d. 28, a. 1, ad 6, when he says that without gratis-given grace a man cannot do moral good, yet well enough without superadded grace, that is, without the gift of habitual or supernatural grace, plainly excludes every merit, even congruous, of first grace.

But this opinion can be proved, because it is not of the ratio of a meritorious cause that it should precede in time the very retribution, since to the holy Fathers of the Old Testament grace was given on account of the future merits of Christ: therefore, nothing hinders God from giving grace on account of the good future use of it; nor does it stand in the way that the good use will be future from grace itself, since a king can give to some soldier arms and a horse on account of the good use of them which he expects from the soldier; and a man can sell his vineyard to another on account of the profit which he is going to receive from its fruits. Besides Alexander I have not read anyone who followed this opinion or favored it in some way, unless the Master in 2, d. 5, c. ult., and the Antissiodorensis, lib. 3, tract. 1, c. 7, at the beginning and before the middle in the solution of a certain argument, who teaches that the Angels were created in beatitude and by subsequent works merited it. That this opinion was Prepositivus's is attested by Marsilius, in 2, q. 4, a. 2, q. 2; and Albert in 3, d. 18, a. 4, thinks it probable. But perhaps these Doctors, although they conceded about beatitude that it was given on account of subsequent works, would not have said this about grace, nor did they anywhere expressly teach it. Nay, the same Alexander, 3 p., q. 69, memb. 5, a. 2 et 3, in express words denied that grace is given on account of the good future use of it: wherefore the opinion which he had set forth in 1 p. about the predestination of grace, he openly recalled.

Of more recent authors, truly, there is none who would dare to affirm that the beginning of first grace is given from the good future use of it; some, however, had been accustomed to say that it can be so: therefore, de facto they do not teach it, lest they seem to think with Pelagius; but de possibili they thus assert it because of the reason adduced, and because concerning the possible there was no dispute in the Church of God with Pelagius.

But indeed, although I judge altogether false the opinion of Alexander from the cited 1 p., not only in word but in reality alien from the common doctrine of the Scholastics and from sanction, nevertheless it does not favor Pelagius and the Semipelagians; nor does St. Augustine differ

anywhere against it. Of the Scholastics, however, St. Thomas in this article and in I - II, q. 114, a. 2, f., ad tertium; and St. Bonaventure, in 2, d. 27, q. 2, a. 1; Gabriel, in 2, d. 1, q. 1, a. 2, § 1; Scotus, q. 1, § 5 - speaking on whether grace is given to us from the good future use of it - impugn it.

But before I demonstrate each point, I will first suppose against those more recent Theologians, in that article "That grace is not given from merits or from works," that St. Augustine and the Fathers against Pelagius and the Massilians were speaking not only about the fact, but also about the possible: for against their error they always inferred that grace would not be grace if it were given from works; because it would not be given gratis, but would be repaid to merits, according to the doctrine of Paul in Romans 3, 4, 8, and 11, and Galatians 2 and 3. If therefore the opinion of those who think it probable that grace can be given from the good future use of it were to assert of the possible what Pelagius and the Semipelagians asserted of the fact, in the same way those would be convicted from Paul by Augustine and the other Fathers, namely, that grace would now not be grace; wherefore just as this is impossible, so too their opinion is false. Then I suppose: if grace could be given from the good future use of it, then also de facto it would be given so; I gather this, like many other things which I said above from the doctrine handed down in Disputation 82, c. 6, on the efficacy of free will in ... [sc. the order of grace]: namely, that God cannot will one thing on account of another and not for that reason order the other according to his good pleasure, without some congruous change made in the things themselves. Wherefore, if God were said to give grace on account of the good use of it, which now he does not grant on account of it, the things themselves would have to stand otherwise, or there would be some variation among them which now is not. For if, with things now standing thus as they are, God does not will grace on account of the good future use, it follows - with no change made in God, which cannot be made, and no change made in things, as we now suppose - that in the same way grace is not conferred on account of the good future use of it; but what change could be made in grace, or in the good use of it, such that then grace would be given on account of the good use which now is not given, does not appear. Therefore in the same way it must always be said, not only that it is not given on account of the good use of it, but also that it cannot be given.

Now indeed let us prove in detail the things we have said against Alexander's opinion. First, that it does not favor Pelagius nor the Semipelagians is clear: because when they said that grace is given from merits or from some good work and will which would be the beginning of grace; or that it is predestined by God on account of works which he foreknew; they did not assert this about the good use of grace itself, but about some works of free will alone, from which at least some beginning might be taken and an occasion of conferring grace. And thus St. Augustine and the other Fathers rightly inferred against them that grace bestowed on account of those works is not grace; wherefore it could not have been foredefined from those works in the eternal prescience of God.

Then Augustine contends everywhere in this same sense, especially in On the Predestination of the Saints, book 1, from c. 13 to 19, that grace is not predestined from future merits, the opposite of which the Semipelagians said. But when he says that it is not foredefined from future works, he does not understand "future" as from grace itself (for the adversaries never said this), but future from free will alone, which not as future after grace, or from grace, but as future in time God

foreknew from eternity: and thus he infers against them that if grace were predestined from those works, it would not be grace; which would not follow if God had decreed to give it from the works of grace itself and from the good use of it. For that grace be attributed to the works of grace does not prevent it from being grace; nor is Paul speaking of these works when he says in Romans 11 and elsewhere: "Otherwise grace is no more grace." (Rom 11)

It is clear, therefore, that Alexander's opinion is not on this point that of Pelagius or of the Semipelagians; and hence neither is it opposed to Augustine. But now it must be refuted by other reasons.

Gratia is not given on account of the good future use of free choice. First argument. Although God knows that all to whom he has predestined the helps of his grace will use that grace well, nevertheless that use of free choice cannot be in any way a reason which moves God, after the manner of merit or of impetration and of fittingness, to bestow his grace; rather, it is the end for which God from eternity prepared his grace: whence it follows that we must thus speak. God predestines the grace of his calling for us, that through it we may be holy; from which it follows that he did not give it because we were going to be holy through it. In this form of arguing St. Jerome uses that passage to the Ephesians 1: "He chose us in him before the foundation of the world, that we should be holy"; St. Augustine, On the Predestination of the Saints, book 1, c. 17; and the Council of Orange II, canon 25: for if (they say) he chose us by his vocation, that we should be holy and that we should believe, therefore not because we were going to be holy. For these two causes, "because" and "that," cannot both convene in respect of the same cause with respect to the same thing; wherefore, if vocation is given that we may be holy, it is not given because we are going to be holy. And the reason is manifest: because, in respect of the same will, the same thing cannot be both end and meritorious, that is, impetratory, cause; for an end does not impetrate the means by which rather it is going to be achieved; but merits impetrate the end. Hence also that axiom, quite familiar to theologians and most true, had its rise: The principle of merit does not fall under merit. Hence it is also proved that the merits of the holy Fathers were not the cause of Christ's Incarnation as to its substance, because they are effects of it: for thus we must speak: the saints had merits because Christ was going to come; therefore they did not have them in order that he might come. But if those merits had been the cause of the Incarnation, they would also have been the cause that Christ would come; and hence they would not be said to have had merits because Christ was going to come; which is absurd. We can use the same form of arguing thus: Christ came to seek and to save and to redeem all the holy Fathers, according to that of Luke 19: "He came to seek and to save that which was lost," and that of Paul to the Galatians 4: "Made under the law, that he might redeem those who were under the law"; which also suits the ancient Fathers, whom he is truly said to have sought and redeemed: therefore he did not come because they were going to be holy and to have good merits. But on this matter more at length in 3 p., q. 2, a. 11, and above we have said something in Disputation 88, c. 8.

Second argument. If the good future use of grace had been in some way the reason of predestining those whom he predestined, he ought not to have predestined these rather than others; since he most perfectly knew that Tyre and Sidon would do penance if he had granted them

the signs which he did in Bethsaida and Chorazin; and since there would not be lacking to God a mode of calling Esau by that vocation by which he would be saved, as Augustine noted, book 1 ad Simplicianum, q. 2, after the middle; it follows that the good future use of grace was not the cause why this one rather than that one was predestined. Moreover, the argument which we made for Alexander's opinion has little strength: we concede, therefore, that a merit can indeed be future much ...

Nor do St. Bonaventure and Javellus favor the Semipelagians or Massilians in any way. First, because if they favored the Semipelagians, then St. Augustine too would favor them in Epistle 105, and while he fought against Pelagius, he would incline into Semipelagianism - which is plainly false. For there he contends that the beginning of every justice, and even of the least merit, is faith; and yet at that time he was already sufficiently instructed against those Massilians: therefore also against the Pelagian he inquires into the grace of vocation, which is given without merits of free choice, that also against the Semipelagians he may exclude every beginning of a good work or of a will from ourselves on account of which grace is given. Yet some reply that Augustine later retracted that opinion, just as he retracted that other opinion which he had as a presbyter, namely, that faith is not the gift of God, and the opinion that some merit from God their first grace. But this is a manifest deception: for the two are far different - to say "faith is not the gift of God," that is, faith proceeding from our own forces; "to merit the first grace"; and "by good works done from grace, or by faith itself which is the gift of God, that we merit another grace, or act rightly, or the remission of sins." Although therefore Augustine corrected the former, he did not thereby retract the latter; nay, since in those epistles he says that faith is the gift of God, and that grace is given without any merits of free choice, nevertheless he grants some merit of the remission of sins; and assuredly in the doctrine of that epistle which was written after the retraction of Pelagius, there is nothing that Augustine ought to have retracted.

But let us dismiss these useless evasions. They object further the Council of Trent, session 6, c. 8, where it says that faith does not merit the grace of justification. I answer as above: some understand it of condign merit, as Vega in the cited place; I, however, of congruous merit; yet in such a way that the Council understands by "grace of justification" the whole sequence of grace from the first vocation - this indeed is wont to be called "the grace of justification," and "the grace in which we are justified" - as I noted elsewhere.[1888]

And so it says: "faith does not merit that justification arise as it were from faith itself, and that it be not from our own forces, but be numbered among the gifts of God": but of this more at its own place.

From this it follows that He did not give it because we were going to be holy through it; which manner of arguing St. Jerome uses on that passage of Ephesians 1: "He chose us in him before the foundation of the world that we should be holy"; St. Augustine, On the Predestination of the Saints,

book 1, chapter 17; and the Second Council of Orange, canon 25. For if (they say) He chose us by His calling, that we should be holy and that we should believe, therefore not because we were going to be holy: for these two causes, namely that it be given so that we should be holy, and that it be given because we were going to be holy, cannot both belong, in respect of the same thing, to the same cause; wherefore, if calling is given that we may be holy, it is not given because we are going to be holy; and the reason is manifest: because, in respect of the same will, the same thing cannot be both the end and the meritorious or impetratory cause. For the end does not impetrate the means, by which rather one will arrive at it; but merits impetrate the end.[1889]

Hence that theological axiom, quite familiar and most true, had its rise: The principle of merit does not fall under merit. Hence also it is proved that the merits of the holy Fathers were not the cause of the Incarnation of Christ as to its substance, because they are effects of it. For thus one must speak: The saints had merits because Christ was going to come; therefore they did not have them in order that He might come. But if those merits had been the cause of the Incarnation, they would also have been the cause that Christ should come; and so they would not be called saints who had merits because Christ was going to come - which is absurd.

We can use the same form of arguing in this way: Christ came to seek and to save and to redeem all the holy Fathers, according to Luke 19, "He came to seek and to save that which was lost," and that of Paul to the Galatians 4, "Made under the law, that he might redeem them who were under the law"; which also befits the ancient Fathers, whom He is truly said to have sought and redeemed: therefore He did not come because they were going to be holy and to have good merits. But about this matter more at large in III, q. 2, a. 11; and above in disputation 88, c. 8, something was said.

A later reason: if the future good use of grace had been to God in any way a reason for predestining those whom He predestined, He ought rather to have predestined these than others; since in truth He knew perfectly well that Tyre and Sidon would do penance if He had granted to them the signs which He did in Bethsaida and Chorazin; and since there was not lacking to God a mode of calling Esau with that calling by which he would be saved, as Augustine notes, book 1 to Simplicianus, q. 2, after the middle; let it be that the future good use of grace was not: it could not be the reason why this one rather than that one should be predestined.[1890]

Moreover, the argument we framed on behalf of Alexander's opinion has little strength: we concede indeed that merit can be future long after the reward and wage, as is clear in the merit of Christ. For this reason nothing could have stood in the way, on account of which the grace of calling should not be given because of that future good use of it; but because the principle of merit

1888. Council of Trent, session 6, c. 8 ("fides non mereri gratiam iustificationis"). On its interpretation see Andreas de Vega, De iustificatione, q. 7; and Super Concilio, l. 8, c. 13; Jodocus Tiletanus, Apologia pro Concilio Tridentino on sess. 6, c. 8; Franciscus a Daventria, Exegesis contra Confessionem Augustanam, fol. 46, n. 9; Marsilius, II, q. 18, a. 2, q. 3, concl. 2 - 3; St. Thomas, In II Sent., d. 27, q. 2, a. 4, ad 4; and I - II, q. 114, a. 5. See also the patristic usage of "gratia iustificationis" noted by Fulgentius of Ruspe, Ad Monimum, l. 1, c. 11 and c. 8; and the African Councils (Milevis, can. 3; African under Boniface I, can. 78). Augustine, Ep. 101; Ep. 106; De praedestinatione sanctorum, c. 10; De dono perseverantiae, l. 2, c. 14.

1889. St. Jerome, on Ephesians 1:4; St. Augustine, De praedestinatione sanctorum 1.17; Second Council of Orange (Arausio II), can. 25.

cannot fall under the very merit of which it is the principle, and the good use of grace is from grace itself as from a principle: therefore the good use cannot be the cause, or the reason on account of which God is said to confer grace, or to predestine it, which is the same. But the examples adduced, which seem to prove the opposite, are weak.

To that example of the fruits of the vineyard I answer that indeed in matters of justice and contracts it can so happen that payment and price are received from the fruits of the thing sold, even if no industry of the buyer is mingled with them; but the price is assimilated to merits, and the thing sold to the reward: for by merits, as it were with money, we procure a reward for ourselves. Yet from this it does not follow that the good use of grace can be the merit of receiving grace itself, which is the principle of that use. For there is a far different ratio of contracts in the matter of justice and of the retribution of reward for merits, if they be considered according to the proper ratio of merits and of reward. In exchanges one does not attend to the dignity of the work according to its goodness, but to the value of utility, according to which a thing is appraised; and by the nature of the thing in exchanges the thing given would not have more the ratio of a price than the thing received, unless by the consent of men money were established as the rule of all things. But since in every exchange there is repercussion, because each one suffers so much loss, or gives a thing for a thing, or money for a thing, or a thing for money, as he receives profit, by the nature of the thing this has no more the ratio of merit or of a wage than that; indeed, if in exchanges anything has the ratio of a wage, by the good pleasure and statute of men, it is also sometimes the very price: as when one labors in a vineyard, or lets a house, or a vineyard for such-and-such money. Finally, in exchanges each gives to the other some thing in order to have from him another as if in reward or price; but in the retribution of reward for merits there is always one who merits, and another who, for the merits, renders reward; nor does merit belong to both, nor retribution: therefore the ratio of exchange is far different from that of the merit of a good work and of reward. Wherefore it is not repugnant, from a thing which someone sells to another, to hope for its price when the ownership of the thing has been transferred to another, with its risk; but it is repugnant that the fruit of grace be the merit of grace itself, and that grace be repaid, as it were, as a wage for its future good use.

To the other example about the soldier Durandus replies, in II Sent., d. 5, q. 3, a. 8, that in that case the horse is not given to the soldier simply, but under a condition; and for this reason it can fall under the merit of good use, or under the hope of it; but grace is given simply, and glory in the same way; and thus neither can fall under the merit of the way following. But since a horse is also given simply, and not only under a condition (for the dominion of the horse that is given does not depend upon future use, even if it induce an obligation of such use), a different reply must be given. Therefore it is answered, from the doctrine of St. Thomas, I - II, q. 114, a. 5, ad 3, that this is the difference between a horse, or a human gift, which is wont to be given in hope of merit and of studies of future action, not only as for a price, but truly as for a merit; and between grace, that it cannot be given on account of the future good use of it as on account of merit. For the good use of a horse, or of any human gift, is attributed to the rider's dexterity and his industry, not to the gift; and the dexterity of him who receives the gift, or the horse, is of itself such as to be worthy of the

horse or gift, with which he may serve the king: but the good use of grace is not attributed to the virtue of free choice, but principally to grace, nor is grace given because the will is of itself worthy of such a gift; but rather that it may be made able and receive a virtue to act well; and thus the good use of grace cannot be the merit on account of which grace is given, but rather it is the end for which grace is bestowed.[1891]

Henricus and others concede in us only a cause, or a condition without which not, of our predestination (praedestinatio).

Caput VII - Henry and others grant in us only a cause or condition without which not, of our predestination

At last Henry and other theologians, fearing flatly to concede a meritorious or impetratory cause of predestination, or even the least disposition - for this has always seemed suspect to Catholics - said that our free choice is a cause without which not, because the whole effect of predestination in us does not take place without our cooperation and efficacy; just as in truth no adult will be saved without merits or his own consent. Thus teaches Henry in Quodlibet 4, q. 19, and in Quodlibet 8, quaest.; and that John of Bologna, in the little work On Predestination, part 1, when he asserts his opinion, and in part 1, after the sixth opinion, when he repeats it; and Bartholomew Camerarius in the Catholic Dialogue, c. 4, § 1 and following. There are also other recent writers who, having the term cause as suspect, are unwilling to concede this cause without which not, but call it instead a condition without which not; lest, to wit, they concede something that would antecede as a cause, even as a cause without which not and per accidens. For a condition without which not is said by them to be also an effect of some operation, without which such an operation would not be, as heating without produced heat. And indeed among the Doctors cited that John of Bologna never calls free choice and its cooperation a cause without which not, but says that predestination cannot exist without our free choice; which seems sufficiently manifest.[1892]

Others, for their part, are unwilling to concede a cause without which the first gratuitous effect of predestination, that is, the first calling of grace (gratia), would not be given to us; but [they concede only a condition] without which that calling which is given to us would not be an effect of predestination, but of common providence. For that it is efficacious depends upon our consent; but if it were not efficacious, it would pertain to common providence, not to predestination. Yet that this calling rather is given to us by God than another in no way depends on us.

Still others call the reason of our predestination, not indeed that on account of which one rather than another is predestined, but why those were predestined who were going to make good use of the grace of God.

Yet all these Doctors do not touch that in which, for Augustine and the Fathers, was the chief controversy about this matter. For the Fathers never doubted that the whole predestination of grace could not be perfected without our consent, nor were they ignorant that a congruous and

1891. Durandus, In II Sent., d. 5, q. 3, a. 8; St. Thomas Aquinas, Summa theologiae I - II, q. 114, a. 5, ad 3.

efficacious calling is not without us; for who ever doubted this? But that whole dispute was whether that first calling which God knew would be efficacious and congruous in us is predestined to us, that is, is fore-appointed to be given to us without any cause, reason, or condition of our consent. And Augustine contends that that first effect, that is, first grace, was fore-appointed for us without any occasion of our free choice; just as also in time, without any such occasion or cause, reason, or condition without which not, it was given to us. For the same difficulty has always existed about the giving in time and the fore-appointment, or predestination, in prescience, as has often been noted. Since, therefore, in time it is given to us without any cause, reason, or condition without which not, so also it is predestined. Nor must one only deny a reason why one is predestined and others are not, as some used to say, but also why anyone is predestined, with no comparison having been made; since indeed no reason could exist on account of which God gave the first grace, save in the mode of an end, as was shown in the preceding chapter.

Further, if we speak of this first calling, not as it is in us or is given to us, which is the first effect of predestination, but as it is congruous and efficacious in us; not only is free choice a condition without which not, which in no way is a cause, as the more recent authors alleged above think; nor is it only a cause without which not, and per accidens; nor only a ratio; but it is also a true cause per se, and efficient, cooperating with the first calling and grace. For in the same way it is a cause of the efficacy of grace as is consent: for on this account is grace said to be efficacious, that it effects consent in us; but free choice is the per se cause of consent while it cooperates with grace. Therefore, if the Doctors aforesaid speak of the completion of the first effect of predestination, or of that which is that a calling be congruous and efficacious, they speak less correctly. For free choice is not a cause per accidens or a condition without which not, which properly is said only to apply an agent to acting or to remove that which hinders action, but [it is] a proper and per se cause, which concurs per se to the effect, as has been shown.

But if they say that predestination begins in us not from the calling itself, as it is in us before consent, but from it as it has efficacy; assuredly we ourselves would be the cause of our predestination, or a concurring cause cooperating per se; which Augustine by no means held, nor can rightly be said, unless we abuse the name predestination of grace. For the giving of the calling, which is done without us and before our consent, is an effect of predestination; and that it be fore-appointed for us and prepared to be given in time is to predestine. Add that it is a new sort of philosophizing in those who call a condition without which not even that which is later than the operation, without which the operation cannot be - such as is, in their opinion, the terminus of the operation. For a condition without which not philosophers commonly call a cause without which not, or a cause per accidens, which in a certain order precedes the effect and the operation, as being required for the operation.

1892. Henry of Ghent, Quodlibet IV, q. 19; Quodlibet VIII, quaest.; John of Bologna, Opusculum de praedestinatione, part 1 (and again, part 1 after the sixth opinion); Bartholomaeus Camerarius, Dialogus Catholicus, c. 4, § 1 ff.

But about this way of speaking we ought not to be overly solicitous. Now let what has been said suffice about opinions about which Augustine and the ancient Fathers did not dispute, nor was there in the Church of God any controversy with the Pelagians and Semi-Pelagians. Yet about this sentence and way of speaking we shall say more in the disputation of the following chapter.

Massilians, with Cassian and the Greeks, said that the beginning of first grace and of predestination is from our free will (liberum arbitrium).

Caput VIII - The Massilians with Cassian and the Greeks said that the beginning of first grace and predestination is from our free will

We have come to the sentence of the Massilians, who, taking the opposite side, together with many others fought in open field against Augustine and his disciples and against the truth - not indeed disagreeing about words and manner of speaking, but, as to the thing itself, feeling far otherwise than they ought. Of these we already made mention in disputation 89, c. 4; and now again we will briefly set forth their sentence, and we shall note several others, both ancient Fathers and Scholastic Doctors, who assent to this sentence, although they confess the contrary in words.

The sentence of these men was that grace in time must be adjoined to human labor, or to the human will, or to human prayer; that is, that it is given to us on account of something of these which proceeds from our free will. By the name grace they understood not habitual grace, but the helps of grace by which we are promoted to justice; and some said more, some less; yet all agreed in this, that some beginning on our part precedes the grace of God in time and His predestination in prescience: for the ratio of giving in time and of predestining in prescience is altogether the same, as I noted to them in that same chapter and disputation. The leader of these Massilians was Cassian, whom almost all the bishops throughout Gaul followed as their author, among whom some judge Vincent of Lérins perhaps to have been one; and very many Gauls, of whom there exist with Prosper the books of objections against Augustine. Nor does it stand in the way that Vincent, in his little book On Heresies, c. 34, thus asserts against Pelagius: "For who ever, before that perverse Pelagius, presumed so great a power of free will as to think that, for persevering in good things of themselves, it was not necessary to have the grace of God?" By which words he would seem to concede that no good work from us, which could be the beginning of justification, is without grace. Yet by these words he only means that grace is necessary for each particular act to be aided and promoted, not to be aroused and begun. For in the style of writers it is not the same to aid our works and to begin them; and so he himself says that the grace of God is necessary for each particular act to aid - as if to say, to promote - whence the Massilians confessed that; but they did not confess that it is necessary for beginning, which Augustine maintained.

Others with good reason think that the Vincent whose "Vincentian objections" are found with Prosper was not that Lérinian monk who wrote against heresies, but another Vincent, a Gallic presbyter, of whom Gennadius makes mention in the book On Illustrious Men, c. 80; for in c. 64 he makes mention of Vincent of Lérins. This opinion of theirs is strongly confirmed by the fact that Vincent of Lérins, in that little book, often cites and greatly praises the epistles of Pope Celestine;

whereas against Cassian, as we shall see below in c. 17, he speaks almost the other way. Many also throughout Africa gave their consent to these Massilians; then Faustus of Riez; and certain give testimonies, and we read these very things in his book On Grace and Free Choice; and St. Peter Chrysologus; and John Maxentius; and Hormisdas the Pope, we likewise approve in the same place with others.

The sentence of the Massilians too is handed on by many Greek Fathers, as I observed in that chapter; among whom especially was St. John Chrysostom; and Cassian's teacher clearly held it. Their places ...

I already recited his passages there, but it pleases me here to set down one or another of them word for word. In Homily 17 on John, on those words, "But Jesus turning," he says: "Hence we can be admonished that God does not forestall our wills by his benefactions toward us; rather, the beginning must be from us; but when we, with a ready and prepared mind for receiving grace (grace: gratia), present ourselves, then he offers us many opportunities for salvation." And in Homily 12 on the Epistle to the Hebrews, in the moral exposition not far from the beginning, he says: "We ought indeed first to choose what is good, and then he introduces what is his; he does not go before our wills lest free choice (liberum arbitrium) be harmed; but when we have chosen, then he brings us much help."[1893]

Marcus the Hermit also agrees with Chrysostom. In the book On Paradise he says: "Let a man first know God; and when he has known, let him love, and draw forth the will; and that the mind may be exercised, let him endure toil; but that some work may be brought to completion, the grace of the Lord bestows it upon one who wills and believes; wherefore man's will is, as it were, a help inborn from nature, without which not even God works anything, although he does not lack the power to do so, which comes about by reason of the liberty of human free choice."[1894] These two Fathers, assuredly, not only concede that some beginning is from us - something to which, in a certain manner, grace is then repaid - but in a certain way they also assert that such an element must always precede on our part; not because God cannot begin in us, but because, if by his grace he were to forestall our wills, our liberty would be harmed; although Cassian and certain of the Massilians do not judge so severely, but plainly concede that sometimes the grace of God is prior and forestalls our wills, as we noted above.[1895]

Next, that same Marcus calls our nature and liberty a certain inborn help, by which he seems to allude to the opinion of those Massilians who, with Pelagius, used to take refuge in the grace of creation, so that they might attribute even the beginning that was from us to some grace; about whom we spoke in that same place.[1896] In this opinion, too, incline Clement of Alexandria, book 7 of the Stromata; Cyril, book 3 against Julian; and Damascene, On the Two Wills of Christ; and, not far from the middle, in the History of Barlaam, chapter 15. And since they all seem to concede that some beginnings on our part precede in time so that helps of grace be conferred, they must

acknowledge that in eternal foreknowledge (praescientia) God had the rationale of those things, so as to predestine (praedestinare) grace for us, as I noted in that chapter. But it is no wonder; for this controversy was not so well known to the Greeks as it was to the Latins after the times of St. Augustine.[1897]

Moreover, among the Greek Fathers Gregory of Nazianzus also seems to agree with the Massilians, in Oration 31, which is upon Matthew 19. For there at number 8, explaining that saying, "Not all receive the word," he says: "To whom it has been given - add, it has been given to those who are willing and to those who are of that disposition of soul." These words seem akin to those of Cassian, book 12 of the Institutes of the Coenobia, chapter 14, which we set down in that chapter 5, and they are recited in the Second Council of Orange, canon 6, where he is condemned who shall have said that grace is given first to those who are willing without the grace of God.[1898] Yet Gregory himself clearly explains himself; for there he teaches that our very willing is not from us, lest anyone be able to glory in himself, but is chiefly from God; and therefore he thinks that saying in Romans 9 - "It is not of him that wills, etc., but of God who has mercy" - was said for that reason. Although that exposition does not entirely persuade St. Augustine, as we saw, at least it indicates to us that his mind was that our willing is not of free choice alone, which suffices for our present purpose. How far, moreover, Nazianzen is from the Massilians' position is shown by the doctrine he delivers in that place; for he compares the natural aptitude for virtue, in which sometimes one is more able than another, to flint; which, in order to produce fire, needs to be struck with iron. But, he says, our aptitude and capacity for virtue is awakened by thought, like flint by iron; and in that very thinking and awakening St. Augustine recognizes grace, which God works in us without us. In the same sense Prosper, and, in all things, Augustine himself, in the book Contra Collatorem, chapter 12, uses another comparison in these words: "Nor does one by his own strength strive toward the principles of salvation; but hidden, powerful grace of God does this: by which, the jaws of earthly opinions and of dead works being removed, it stirs the heap of the heart like a torrent and inflames it with desire for the truth, so as to subdue man, not unwilling." There he compares our nature and good disposition to an ignited hearth, because it does not draw forth the flame of good desire, or of beginning, unless it be stirred by the Spirit of the grace of God.[1899]

Second, Hilary also seems to agree with the Massilians' position on Psalm 118, at the words, "Incline my heart," etc. There he says thus: "Therefore, when we pray, the beginning is ours, so that the gift may be from God: then, because after the beginning the gift is ours again, it is again from us that it be sought, and obtained, and remain." Where at least he seems to assert that the beginning from us is prayer; for in all other things he had assigned the prior part to grace in that same place. However, Hilary speaks manifestly about man not acting and praying from his own powers alone, but already anticipated by some grace for praying. For on those words of the same psalm, "Take not the word utterly out of my mouth," he says: "He wills that all things be begun by

his goodness," etc. And yet the beginning of prayer he attributes to us, because by prayer we obtain innumerable gifts of God, and thus we in a certain manner begin, by obtaining and impetrating them; although we are not moved to prayer itself without God's grace. "For we do not know what we should pray for as we ought; but the Spirit himself pleads for us with inexpressible groanings" (Rom. 8).[1900]

Third, the same seems to be asserted by Ambrose, book 2 On Abraham, chapter 10; for he says in a like sense that first grace and the mercy of God are obtained by us, and that we do not begin by ourselves with good pursuits and prompt faith as regards first grace; rather, he understands that, in order to obtain a richer grace and mercy, we ought, once stirred by prior helps, to begin with good pursuits and prompt faith. Incidentally it should be observed that that testimony of Isaiah 65 - "I have been made manifest to those seeking me" - is not to be taken affirmatively, but should be read with a negation, as Paul also alleges to the Romans 10 - "I was found by those who were not seeking me." The words agree with the Second Council of Orange as well: "I appeared to those who were not inquiring of me." From which place the Council of Orange secondly concluded against the Massilians the beginning not to be human invocation, but that by God's prior helps the grace of God is obtained, etc. It is also reported in Ambrose's Sermon 10 on Psalm 118; but those same words can be explained in the same sense. I pass over those things which in the Commentaries on Paul attributed to Ambrose are disputed; for those commentaries are judged by none to be Ambrose's.[1901]

Fourth, in that sense Jerome is also cited, book 3 Against the Pelagians at the beginning, where he says thus: "And yet this I know, that baptism forgives past sins, not future; nor is pardon thereafter superfluously granted for labors, and sweat, and alms, and for the rest of the virtues: mercy is of God; ours is to ask; his to bestow; ours to begin and to offer what we can; his to perfect and fulfill what we cannot." But we should be forced in vain to reckon Jerome among the remnants of the Pelagians, who in those three books inveighs so sharply against Pelagius, that in the first book he expressly asserts that the grace of God is necessary for each individual work, among which he numbers very small works of the moral virtues. Therefore, when in book 3 he says that it is ours to begin and to offer what we can, he is not understood to mean without the grace of God, but after we have already been stirred by grace; but he says it is God's to bring to completion and to fulfill what we cannot, because afterwards he offers us many things for the perfection of those works we have begun, which lie in the hand of God alone.[1902]

Fifth, Optatus of Milevis can be alleged on behalf of the Massilians' opinion, book 2 Against Parmenian, which is found in the Bibliotheca sacra; where, explaining that saying in 1 John 1:8, "If we shall say that we have no sin," etc., he says: "It is the mark of a Christian man to will the good; to will is his, and in God is that he bring to completion what he has willed well; but it is not given to man to perfect, so that, after himself there remain to God something which a man ought to fulfill,

1900. St. Hilary of Poitiers, In Psalmum 118, at "Inclina cor meum" and "Ne auferas de ore meo"; cf. Rom. 8:26.

1901. St. Ambrose, De Abraham II, c. 10; cf. Isa. 65:1; Rom. 10:20; Second Council of Orange (Arausio II), can. 6; Ambrose, Sermon on Ps. 118 (ascribed).

1902. St. Jerome, Contra Pelagianos, lib. 3 (init.); cf. idem, lib. 1, on the necessity of grace in each work.

where he has failed, that He may perfect what is lacking." By which words he in the same way concedes that it is given to man to will the good and to run, but he seems to deny that it is given to him to perfect; yet he wholly reserves perfection to God in that sense, not that it is not given to man to complete what has been begun, to will, to run; for of man speaking under the grace of God we say that to him it is granted also to perfect the work begun. But Optatus stands further from the Massilians' sense: for by the following words he explains that he is speaking of that perfection which admits no sin at all, not of the perfection of the work of justification and perseverance, about which the Massilians were speaking. Of that perfection, namely that which admits no sin, he says that in this life it has not been granted to man, even by the grace of God, except to will the good and to do it; therefore, he says, Christ did not give perfect holiness, but promised it as something to come and to be given in another age. When therefore he says that it is the mark of a Christian man to will the good and to do it, he is not speaking of bare free choice, but of the Christian man informed by the gifts of Christ. To him indeed it has been granted by the grace of God to will the good and to run, that is, to do it; but to attain that perfection which is from him most perfectly - this is a grace conceded in this life to holy men (except the Blessed Virgin).[1903]

Tertio, the same is asserted, it seems, by St. Ambrose, book 2 On Abraham, cap. 10; for he says: "Therefore present yourself with good endeavors and with ready faith, that God may take pity on you, may call you, just as he called the Church: 'I was made manifest to those who sought me; I appeared to those who did not ask for me'." But in truth all these things can be rightly explained: for Ambrose did not interpret those words as though, with respect to first grace and mercy, we begin of ourselves by good endeavors and prompt faith; he nowhere so understands. Rather, he understands that for obtaining more abundant grace and mercy we should, after being stirred by a prior grace, begin by good endeavors and prompt faith.

By the way, however, it must be observed that the testimony of Isaiah 65, "I was made manifest to those who sought me," is not to be read affirmatively, but with negation, just as the Apostle also alleges to the Romans 10: "I was found by those who did not seek me; I appeared to those who did not ask for me." The subsequent words are consonant: "I appeared to those who did not inquire for me." From which place the Second Council of Orange, can. 3, condemns the opinion of the Massilians, who were saying that by human invocation, that is, by one's own powers, the grace of God is obtained, etc.[1904] Ambrose is also cited, Sermon 10 on Psalm 118; but his words can be explained in the same sense.[1905] I pass over those things which I brought from the commentaries of Ambrose on Paul in disputation 89, cap. 3: for by those he doubtless gives support to the Massilians; but those commentaries are by many believed not to be Ambrose's.

Fourth, St. Jerome is reported for the same opinion, book 3 Against the Pelagians, at the beginning, where he has thus: "And yet know this, that baptism bestows forgiveness of past sins, not the keeping of future righteousness, which is kept by labor, and effort, and diligence, and always above all by the guardianship of God's clemency, so that it should be ours to ask, his to

1903. Optatus of Milevis, Contra Parmenianum, lib. 2; cf. 1 John 1:8.
1904. Second Council of Orange (Arausio II), can. 3.
1905. St. Ambrose, Sermon 10 on Psalm 118.

grant what is asked; ours to begin, his to perfect; ours to offer what we can, his to accomplish what we cannot."[1906] But we are attempting in vain to mention Jerome among the remains of the Pelagians, who in those three books so sharply attacks Pelagius that in the first he expressly asserts the grace of God to be necessary for each work, among which he numbers also certain works of the moral virtues. Therefore, when he says that it is ours to begin, he understands nothing except after we have already been stirred by grace; and when he says that it is God's to perfect and to accomplish what we cannot, he means that thereafter he offers to us what pertains to the perfection of what we have begun, which is in God's hand alone.

Fifth, Optatus of Milevis could be alleged for the Massilian opinion, book 2 Against Parmenianus, which is found in tome 2 of the Sacred Library.[1907] Where, explaining that text of the First Epistle of John 1, "If we say that we have no sin," he says: "It is the business of the Christian man to will what is good, and to run in God, as he has willed well; but it has not been given to man to perfect, so that, after the intervals which a man ought to fulfill, something remain to God, that he may succor one in need; because he alone is perfect." By these words, in the same way he concedes that it has been given to man to will the good and to run, while he also denies that to perfect has been given; but what is denied to man is only to perfect from his own powers: therefore in the same way it is conceded to begin, and to will, and to run. For if we speak of a man prevented by the grace of God, it has likewise been conceded to him to bring the work begun to perfection.

But Optatus was far distant from the sense of the Massilians: for by the subsequent words he clearly explains that he is speaking of that perfection which admits no sin, not of the perfection of the work of justification and of perseverance, about which the Massilians were speaking. Of that perfection which admits no sin he says that in this life it has not been granted to man, even by the grace of God, but only to will the good and to do it. Therefore he says that Christ did not give perfect holiness, but promised it as future, to be given in another age. When therefore he said that it is the business of the Christian man to will the good and to do it, he understood not the bare will, but the Christian already instructed in faith and in Christ's gifts. To this man it is given by the grace of God to will the good and to run, that is, to do it; but to attain that perfection which is without any sin has not been granted in this life even by the grace of God to holy men (the Blessed Virgin excepted).

Caput IX - Our theologians variously defend these Fathers from this opinion

Among our theologians of our time there have not been lacking those who openly attempted to defend the opinion of these Fathers, of whom we shall speak in the following chapter. Some also, speaking more cautiously, do not dare to uphold the opinion, but interpret the authors in a good sense: whose defenses, that the truth may shine forth the more, we shall briefly report in this chapter.

1906. St. Jerome, Contra Pelagianos, book 3 (at the beginning).
1907. Optatus of Milevis, Contra Parmenianum, book 2; cf. 1 John 1:8.

First, therefore, Driedo, treatise 2 On the Captivity and Redemption of the Human Race, cap. 2, p. 4, not far from the end, attempts to vindicate Faustus of Riez from this mark; although in cap. 1, p. 2, he plainly attributes this doctrine, which he himself deems absurd, to Cassian.[1908] Here, however, Driedo, an author otherwise very learned, is manifestly deceived. First, because the ancient and most learned Fathers of the Church openly lay at Faustus of Riez at least that doctrine which we have reported, as we shall relate below, cap. 11: Peter the Deacon, who lived at that time; Pope Hormisdas; John Maxentius; Isidore; and Ado of Vienne. Secondly, because his books On Grace and Free Will show this everywhere, especially in those places which we alleged in disputation 89, cap. 4. Nay rather, he speaks more severely in this matter than Cassian: for he judges it necessary that man should always begin, in order that the helps of God's grace be conferred upon him. But Cassian, as we noted in that cap. 4, concedes that God sometimes begins, and with his grace prevents us. If God were to begin sometimes, Faustus would not hesitate to assert that which in book 2, cap. 6, against St. Augustine he said, and which we recounted above in disputation 89, cap. 1: namely, that God then makes use rather of the right of a ruler than of the order of a governor. For this reason Peter the Deacon said, as we shall report in cap. 11, that among those who favor things similar to Pelagius (namely, the Semipelagians) he especially anathematizes the books of this Faustus.[1909] Why then does Driedo defend Faustus rather than Cassian?

Moreover, Driedo thus interprets the mind of Faustus, that he only, against the presbyter Lucidus, establishes and maintains our liberty, but does not derogate from the dignity of grace. For it is clear from the preface of those books of Faustus On Grace and Free Will, that Lucidus, from certain places of Augustine ill-understood, was taking away our liberty by God's predestination. I for my part do not doubt that this was the author's intention, which he himself explained in that preface. But since the Massilians and the adversaries of Augustine, nay even St. John Chrysostom, were striving to prove that God does not prevent our wills by his grace, because, if he were to prevent, some force would be brought to bear upon human free choice, as we shall see in cap. 12, and as is clear from the words of Chrysostom cited in the preceding chapter; by the same way, and reasoning as well, Faustus also wished to defend our liberty against Lucidus, as the words of that author in cap. 6 indicate.[1910]

From all these things, and from those which we reported in disputation 89, cap. 1, one may gather that Trithemius, a man otherwise careful, was deceived, plainly thinking falsely when he asserts of this Faustus of Riez that he was first indeed a Pelagian, then recalled to the true faith by Fulgentius and therefore wrote, in his favor, two books On Grace and Free Will. For first, Faustus - otherwise pious and religious - from the monastery of Lérins was never plainly a Pelagian; for in that book 1, from cap. 1 to cap. 6, and cap. 14, he elegantly proves against Pelagius the necessity of grace; but he belonged to the remains of the Pelagians, like the Massilians and Cassian, who were called Semipelagians.[1911]

1908. John Driedo, De captivitate et redemptione generis humani, treatise 2, cap. 2, p. 4; cf. cap. 1, p. 2.

1909. Peter the Deacon, cap. 11 (as cited by Vázquez), anathematizing especially the books of Faustus among the Semipelagians.

1910. Faustus of Riez, De gratia et libero arbitrio, preface and book 2, cap. 6.

Furthermore, that Fulgentius did not write those books for the reason which Trithemius supposed is clear: for in many places already cited he grants some beginning as "from us," contrary to the manifest doctrine of Fulgentius in the book On the Incarnation and Grace, and in other places which we shall cite.[1912] Also, because when Peter the Deacon had professed at Rome his own faith and that of the Eastern Fathers against these Massilians, he wrote of it a book On the Incarnation and Grace to Fulgentius, in which, cap. 8, he condemns those aforesaid books of Faustus, because in them he subordinated grace to human labor. Fulgentius, moreover, in the book On the Incarnation and Grace, which he wrote back to Peter in his own name and in that of all Africa, approves Peter's doctrine; nowhere, however, does he defend Faustus from this mark: he would have vindicated him, if he had converted him from error, and Faustus had composed those books in favor of his [Fulgentius's] books; for then he would have followed Fulgentius's judgment in all things, who attributes every beginning to the grace of God, and condemns the opposite as an error.[1913]

Secondly, Henricus Cuikius, in his annotations on Cassian, annotation 2, excuses Cassian, at least in book 12 On the Institutes of the Coenobia, caps. 11, 12, 13, and 14, where he seemed to attribute some beginning to us, on the ground that from cap. 10 to cap. 19 he wonderfully commends grace against Pelagius, asserting that our efforts are ineffectual unless they be helped by grace. For Cuikius does not defend him in Conference 13 of Chaeremon, where Cassian openly hands on this doctrine; otherwise he would have condemned Prosper, who attacks that doctrine, as a false slanderer. It seemed therefore to Cuikius that Cassian spoke well of grace, and that in that place he did not grant beginnings "from us," which in that conference he attributes to our free choice, since he asserted that our efforts are ineffectual unless at every moment we be supported in good, and that he spoke so honorably of grace.

But certainly this is a most light argument. For Cassian, and the others of the remains of the Pelagians, always speak honorably of grace against Pelagius, to promote our efforts; but for arousing and beginning they teach that it is not necessary; rather, they affirm that we begin solely "from ourselves." And if at some time Cassian says that the efforts are ineffectual unless we be supported by God in good, and his grace prevent us, he himself conceded nothing of the very beginning of a good work to be from God, as we saw in disputation 89, cap. 5; nonetheless they believed this, that among the works whose beginning they referred to God, they did not number faith, nor good will, and these he attributed to our free choice, so that to the rest God might prevent with his grace.

Moreover, that we begin not only by desire, faith, and prayer, but even by certain works "from ourselves," the same Cassian teaches in that book 12, cap. 14. For after, in cap. 13, he enumerated many good works and our efforts - vigils, reading, solitude, fasts, and withdrawals - he subjoins: "But I most firmly define, according to the sentence of the elders, that perfection indeed cannot at

1911. On Faustus's anti-Pelagian arguments: De gratia et libero arbitrio, book 1, caps. 1 - 6 and cap. 14; on Hormisdas, John Maxentius, Isidore, and Ado of Vienne, see their testimonies as cited by Vázquez.

1912. St. Fulgentius, De Incarnatione et gratia.

1913. Peter the Deacon, De Incarnatione et gratia ad Fulgentium, cap. 8; Fulgentius, De Incarnatione et gratia (reply to Peter) in his own name and in the name of all Africa.

all be attained without these, but that by these, without the grace of God, it can even be consummated. For we say that human efforts cannot grasp that perfection by themselves without God's help, thus we pronounce that mercy and grace of God are granted only to those who labor and sweat, and, to speak with the words of the Apostle, are imparted to those who will and run. And a little after: For we say, according to the Savior's sentence, that it is indeed given to those who ask, opened to those who knock, and found by those who seek; but that our petition and inquiry and knocking are not condign, unless the mercy of God has given what we ask, or opened what we knock for, or made that which we seek to be found. For the occasion is at hand to himself, once only our good will has been offered, for bestowing all these things." In which place observe also that "knocking" is not the same as "praying": for, as the author of the Opus Imperfectum on Matthew says, attributed to Chrysostom, homily 18, he who not only prays, but exercises himself in good works, is as one who not only cries with his voice at someone's door, but also knocks with his hand, so as to be heard. This author, however, felt with the Massilians, as is clear from that homily 32.[1914] Cassian therefore in that book 12 openly expressed the doctrine which he afterwards taught in that conference, and which all the Massilians followed. For in almost the same words he handed it on in Conference 13, cap. 9, for which reason, using his very words, it is condemned in the Second Council of Orange, can. 6; nay rather, in that book 12 he speaks more severely: for he asserts that the grace of God is given only to those who seek, knock, and labor, whereas in that conference 13, caps. 12, 13, and 15, he concedes that the grace of God sometimes prevents us, and that sometimes we seek the grace of God, as I noted in disputation 89, cap. 5.[1915]

Thirdly, Sixtus of Siena, book 5 of the Bibliotheca Sancta, annotation 101, interprets Chrysostom benignly, so that he derogates nothing from prevenient grace, but that his words should be referred not to prevenient grace, but to subsequent grace, which the theologians call habitual, so that this be given to us who ask and labor, once readiness toward God and an occasion of our will has been offered; or certainly it be understood of the helps of subsequent grace, which are given for perfecting what we have begun, once we already will, etc., as we said in disputation 88, cap. 10.[1916] But assuredly the words of Chrysostom, which I set out in the preceding chapter, do not admit this interpretation: for he plainly confesses that God by his gifts does not prevent our wills, but that the beginning is to be made by us. And if Chrysostom had been of that mind, namely that he judged the grace of God to hold the first place in our operations, and that by it we are excited to every good beginning and to the work to be begun, and that no beginning is given "from us" to which grace would be given, Cassian would not have thought otherwise: for this man had Chrysostom as his chief master in the East, and would gladly have corrected his opinion by the doctrine of all the other Eastern Fathers.

Nor does it stand in the way that Chrysostom, homily 38…

Cuikius, in annotation 2, excuses Cassian because in book 12 of the Institutes of the Coenobites, caps. 11, 12, 13, and 14, where he seemed to ascribe some beginning to us, he from cap. 10 through 19 in a remarkable way commends grace against Pelagius, asserting that our endeavors are vain

1914. Opus Imperfectum in Matthaeum (ascribed to St. John Chrysostom), hom. 18 and hom. 32.
1915. Second Council of Orange (Arausio II), can. 6.

unless they be aided by the grace of God. For in Conference 13, of Chaeremon, where Cassian openly hands down this doctrine, Cuikius does not defend him; otherwise he would have condemned Prosper, who attacks that doctrine, as a false calumniator. It therefore seemed to Cuikius that Cassian spoke well about grace, and that in that very place he did not concede beginnings from us, which in that Conference he attributes to our free choice, because he asserted that our endeavors are vain unless at every moment we are supported in good, and that he spoke honorably of grace.[1917]

But certainly this argument is most slight. For Cassian and the others of the remnants of the Pelagians always speak honorably of grace against Pelagius, in order to promote our endeavors; but as to arousing and initiating them, they do not teach it to be necessary; rather indeed they affirm that the beginning is solely from us. And if at some point Cassian says that the endeavors are vain unless we be supported by God in good, and that his grace prevene us, that excuses him nothing. For the Semipelagians also conceded that even the beginning of a good work is from God, as we saw in disputation 89, cap. 5, and nevertheless they erred, because among the works whose beginning they referred to God they did not number faith nor good will, and these they attributed to our free choice, so that to the rest God might prevene by his grace.

Furthermore, that we begin not only by desire, faith, and prayer, but even by some works, the same Cassian also teaches in that book 12, cap. 14. For after he has enumerated many good works and our endeavors - of vigils, reading, solitude, fasts, and activity - he subjoins: "But plainly and most constantly I determine the sentence of the elders to be this, that perfection indeed cannot in any way be attained without these, yet that by these alone, without the grace of God, by no one can it be consummated. For we say that human endeavors grasp at and approach works, but that without the aid of God they cannot bring them to perfection; thus we pronounce that mercy and the grace of God are bestowed upon those only who labor and are spent out, and imparted, to use the Apostle's words, to those who are willing and who run. And a little after: For we say, according to the sentence of the Savior, that to those who ask it is given, and to those who knock it is opened, and those who seek find; but that petition and inquiry and knocking are not condign, unless he shall have given that which we ask, or shall have opened, or we shall have found that which we seek. For the occasion of good will at length being offered to itself is at hand for granting these things." There also observe that by "knocking" he understands not only prayer by voice, but also actual works; as is said in the Opus Imperfectum on Matthew, hom. 18 and also in 32: he who exercises himself not only with voice at the door, but also knocks with hand, that is, by deeds.[1918] In which words, too plainly, that doctrine is delivered in that Conference; which also the Massilians followed. And that doctrine of Cassian is condemned in the Second Council of Orange, can. 6; indeed, he asserts to those who seek and knock in that Conference that the grace of God helps, and that we meanwhile supply our part, and that all our knocking be not without fruit, since, as the

1918. Opus Imperfectum in Matthaeum, homilies 18 and 32 (ascribed to St. John Chrysostom).

author says in the oration ascribed to Chrysostom, it is given not to one who hears only the clamor of a voice, but of one who hears the clamor of some working. Here you see what Cassian thought. Therefore Cassian expressed what he taught, and all the Massilians followed him. And the same thing is more severely stated by him in that book 12, that the grace of God is given only to those who knock and labor; but in Conference 13, caps. 12, 13, and 15, he concedes that sometimes we prevene the grace of God, as was noted in disputation 89, cap. 5.[1919]

Third, Sixtus of Siena, annot. 101, kindly interprets Chrysostom, so that he may not derogate from prevenient grace; as though those statements ought not to be referred to prevenient grace, which the theologians call habitual, but to subsequent grace, so that this is given to us already offered by God's promptitude and an occasion of our will; or certainly he understands the grace that follows, which is given for perfecting what we have begun.[1920] But assuredly the words of Chrysostom do not bear this, since plainly he thought that the grace of God does not prevene wills, but is obtained by our own operations, so that he would think that God is not stirred to give by anticipating us to every good beginning, nor is any given to him to whom grace is granted without our own operations; and therefore Cassian - whose very dear teacher in the East was Chrysostom - embraced this doctrine of all the Orientals most willingly, which Chrysostom in hom. 38 to the people of Antioch, and in the 12th on the epistle to the Corinthians, seems to have taught: that all our merits, faith, and virtues we have from God and that they are his gifts; for this indeed all the Massilians were saying; but only they erred, that they ascribed to us some beginnings of these things, although some said even that faith is from ourselves - in this matter indeed they were various, as was said in that disputation 89, cap. 5. Moreover, merits of eternal life, and virtues consummated and perfected, the Semipelagians ascribed to God and to his grace; and for this cause Julian also - himself so far Pelagian, against whom Augustine wrote - seemed to assert that very thing. Whose sentence Augustine in book 4, cap. 3, impugns thus: "When therefore man is divinely aided, he is not aided only toward attaining perfection," which he had set down so that he might will to be understood, "that he begins without grace that which grace perfects." For indeed in the preceding chapter and in those chapters I noted that this was the common sentence and manner of speaking of the Semipelagians: Our endeavors are vain unless they be helped. Against whom Bernard, in the little book On Grace and Free Will, very well strikes at the root: "The endeavors of free will toward the good are vain if they be not helped by the grace of God, and none avail if they be not aroused." So that he concludes that grace is necessary both for beginning and for perfecting.[1921]

Objection. Someone will object that Augustine, in a certain place On the Grace of Christ, cap. 64, benignly interprets Chrysostom, whom the adversary of Augustine alleged for himself. I answer: There a different matter is being disputed, namely, whether a man can be without sin. Augustine explains Chrysostom to have seemed to say that this can be, so that he may understand that it is by the grace of God; as also he explained above the other Latin Fathers. And truly so it

1919. Second Council of Orange (Arausio II), can. 6.
1920. Sixtus of Siena, Bibliotheca Sancta, book 5, annot. 101.
1921. St. Bernard, De gratia et libero arbitrio.

must be believed of Chrysostom: for neither he nor the Semipelagians ever contended that we can by our own powers live without sin, but only that we furnish certain beginnings from ourselves, as was also noted.

Nor let it seem incredible to anyone that the Greek Fathers of so great authority and doctrine were in this sentiment, since the Massilians, and throughout Gaul so many illustrious men likewise, were in the same opinion. For the matter was exceedingly subtle and difficult to explain, until Augustine, by the felicity of his genius, as in many other things, explained it for us. And if the Greek Fathers, because they were alleged by the Massilians against the sentence of Augustine - among whom it is not doubtful that Chrysostom is included, since he was the teacher of Cassian in the East - were being brought forward in this matter against Augustine, he would have more easily himself thus answered those objecting, that those Fathers had in vain been thus thought to be against his sentence, who had never taught the contrary. But in fact he himself answers in another way, as from the following it will be plain. For Prosper, in an epistle to Augustine, which is before the books On the Predestination of the Saints, writes thus about the Massilians: "And when we bring forward against them writings of your Beatitude, furnished with most forceful and innumerable testimonies of the divine Scriptures, they defend their obstinacy by antiquity, so that the things which are brought from the Epistle of the Apostle Paul to the Romans, to manifest the prevenient grace of God with respect to the merits of the elect, they affirm never to have been so understood by any ecclesiastics as they are now taken." And Hilary, in an epistle to the same Augustine: "And this," he says, "they declare to be proved not only by the testimonies of other Catholics, but also by the earlier disputation of your sanctity"; namely, that the Massilians confirmed their sentence not only by the authority of other Fathers, but even by the writings of Augustine himself, which, when he was a presbyter, he composed.

To these things, however, Augustine does not say that those Fathers never taught the opposite of his doctrine, but plainly conceding that they were in a contrary sentence, in that book On the Predestination of the Saints, cap. 14, modestly responds in these words: "What need, then, is there that we should scrutinize the little works of those who, before this heresy (namely, the Pelagian) had arisen, had no necessity to be engaged in this difficult question to be solved?" He adds indeed at the end of the chapter: "Wherefore, let it not disturb, nor do our brethren" (he understands the Massilians) "who with us for the Catholic faith impugn the ruinous Pelagian error, build up, that such Pelagian opinions were theirs." But what Augustine himself had taught while a presbyter, cap. 4 of the same book, and in the first book of the Retractations, cap. 23, he retracts. Nay, after he became bishop, he always taught the contrary, as he there admonishes; and it is plain from the first book to Simplicianus, q. 2, which was the first he composed after his episcopate.[1922]

I pass over the exposition of others who strive to explain the Greek Fathers on election to glory, so that they assert that men have been elected from the merits of grace, but not about election to grace from the merits of free choice; for I noted in disputation 89, caps. 4 and 8, that this is not the

1922. St. Augustine, De praedestinatione sanctorum, cap. 14; cap. 4 of the same work; Retractationes, book 1, cap. 23; Ad Simplicianum, book 1, q. 2.

mind of the Greek Fathers. I also pass over the exposition of other more recent writers, which I shall report in the following disputation, cap. 2; for from the things said enough remains against them.

Lastly, someone could contend that the Greek Fathers never taught the sentence of the Massilians. For the Massilians did not admit that the grace of God is given for each and every work which prepares for our justification, since they conceded that there are from us certain good beginnings, because of which grace would be conferred upon us for justification. Then they said that grace is given interposed from certain merits, and in foreknowledge determined from the same. But the Greek Fathers could not have been ignorant that these are manifest errors; for Pelagius retracted each point before them in the Council of Palestine, as is clear from the epistles 90, 95, 105, 106, and 107 among Augustine's, and from the Acts of that Council, which are held in a very ancient codex of the monastery of Monte Cassino, from which I transcribed the retraction of all the errors which Pelagius made there.[1923]

I answer first that we do not assert that all the Greek Fathers were in the Massilian sentence, but Chrysostom and his disciples, and also Origen, and a few others whom we have mentioned; and that Chrysostom did not take part in the Council of Palestine is manifest. For although it was held under Innocent I, after the Council of Milevis, as is clear from epistle 106 of Augustine, and to it Chrysostom could have been present; yet since that Council was only of the province of Palestine, as Augustine writes in the cited epistle, and in epistles 105 and 107, but it was celebrated at Diospolis, as St. Jerome attests in epist. 79, with John, bishop of Jerusalem, presiding, as Paul Orosius narrates in the Apology for Free Will a little from the beginning, it is plainly gathered that Chrysostom and the other bishops of Bithynia did not take part in it. Others, therefore, of the Fathers who were present could have been well instructed against Pelagius, that he should retract his errors, either because of their own diligence, or especially because Paul Orosius, as he himself affirms, was present at the Council, who was strongly devoted to Augustine's doctrine against Pelagius; even if Chrysostom and the others with the Massilians had been in the aforesaid sentence.[1924]

Then I say that Pelagius's error was far different from the opinion of the Massilians. These, namely, conceded some very little kind of merit which impetrates and disposes, as I observed in disputation 89, cap. 4; but Pelagius thought that the merits of free choice were condign, so that grace might be granted to us for acting more easily; just as he also said that we can by our own powers condignly merit glory; although Augustine, in the book On the Predestination of the Saints, cap. 2, convicts the Massilians of Pelagius's error, which he retracted in the Council of Palestine - namely, that grace is given according to our merits - which they asserted when they said that the beginning of believing is from us, but the consummation from God. For he therefore convicts them because some merit would already be from us in that beginning of faith, which they granted to be from us. Which, although it rightly follows, I nevertheless think that Pelagius taught a greater

1923. St. Augustine, Epistulae 90, 95, 105, 106, 107; Acts of the Council of Diospolis (Palestine), preserved in an ancient codex of the monastery of Monte Cassino.

1924. St. Jerome, Epistula 79; Paul Orosius, Apologia pro libertate arbitrii.

reason of merit from ourselves, from which Cassian, who was the head of the sect of the Semipelagians, when he wished to decline, conceding some beginnings from us, in book 12 of the Institutes of the Coenobites, caps. 11 and 12, said that our merits are not condign so that they can compensate for the grace of God, but that grace by divine mercy is granted to us because of those our merits. Yet from the sentence of the Massilians and Cassian it very well follows that there is some merit from us, which truly takes away the notion of grace, although it is not condign, as we shall show more at length in cap. 15.[1925]

But as to what Pelagius said in the Council of Palestine, that grace is necessary for each work, about what works he was speaking - whether about any kind of beginning, or about merits already consummated and perfect works - is not confessed and clear to all. However, about gaining victories over each and every temptation Paul Orosius plainly understands him in the cited little work; as we shall see more fully in 1, 2, 9, 10, 21, 2, and 4.[1926] And indeed, if Pelagius were speaking of each and every work, even those which could be the beginnings of justification, the Fathers of Palestine could not have been ignorant that without the grace of God we cannot even begin anything by which we obtain the very grace of God for perfecting; but this, as I have said, does not prove that Chrysostom was not in the opinion of the Massilians, because it is clear that he was not present at that Council.

Add also that the Fathers of that Council were not well instructed against Pelagius, as is gathered from the epistles of Augustine cited. For when Pelagius had retracted those errors, and had affirmed that the grace of God is necessary through each and every point, he nevertheless persisted in his own error; for by the name of grace he understood the gift of creation and of free choice. But the Fathers, because they had not yet well marked what grace it was of which Pelagius was speaking underhandedly, thinking that he understood by it the grace which is commended in the Scriptures and is granted to us through Christ, admitted his retraction. They ought, however, to have asked Pelagius whether he understood by those statements the grace of internal inspiration and holy thought: for this is the grace through Christ; for the gift of creation and of free will is not that grace through Christ.

Nota. The gift of creation is not through Christ, nor is it that grace which is commended in the Scriptures and which Catholics strive to defend against Pelagius. What wonder, then, if the Greek Fathers, who had disputed little with Pelagius, did not think so exactly about grace as did St. Augustine, who for a long time most happily sustained the war with Pelagius himself and his followers?[1927]

Caput X - Certain Scholastics in fact agree with the Massilians, though they indicate otherwise in words about predestination

With Cassian and the Massilians not a few Scholastics agree in reality: these, namely, are they who affirm that some disposition and preparation (disposition and preparation: dispositio, praeparatio) to justification is from our free will. And first, Scotus in 4, dist. 14, q. 2, a. 1; and Gabriel in 2, dist. 27, q. 1, a. 2, conclusion 4, and a. 3, dub. 4; and in 3, dist. 27, q. 1, a. 3, dub. 2, proposition 2; and Cajetan in the first tome of the Opuscula, tract. 4, q. 1, assert that a man can be sorry for sins for God loved above all out of his own powers, and that this is the last disposition to habitual justifying grace, and a merit for it, not indeed condign, but congruous; and that this contrition, subsequently informed by habitual grace, is already meritorious de condigno of the kingdom of heaven. They differ, however, in that Scotus says justification does not take place immediately, but a little after, the contrition being continued for some brief time; but Gabriel and Cajetan assert that it takes place in the same instant of time, and think themselves far removed from error, since they do not grant condign merits for the grace of our justification, as Pelagius affirmed.[1928]

Next are to be numbered those who ascribe to our free will some disposition not so proximate, but remote, and, as Richard calls it, indirect, by which a man obtains from God helps of grace, by which he is advanced unto justice. Such are Gabriel in 2, dist. 27, q. 1, a. 2, concl. 4, and in 1, dist. 41, q. 1, a. 2; and Durandus in 2, dist. 28, q. 5, a. 7; Richard in the same distinction, a. 1, q. 2; Cajetan on 1 - 2, q. 109. Lastly, whoever judges that common proposition to be true, "To one who does what is in him, out of the powers of nature, God does not deny grace," whether they will or not, subscribes to this opinion. For Driedo, De concordia liberi arbitrii et praedestinationis, part 2, cap. ult., fol. 50 and the following; and De captivitate et redemptione generis humani, tract. 2, cap. 2; and Ruard Tapper, 2, 7, 9; and Doctors before the Scholastics, and some more recent, deem it probable: although in another sense these Doctors understand that proposition which Gabriel, in 2, dist. 27, q. 1, a. 2, concl. 4, and in 3, dist. 27, q. 1, a. 3, dub. 2, proposition 2, expounds at length. For there he grants indeed many works which, if man should do from his own powers, he would obtain from God not only the helps of grace by which he would by degrees be disposed for the remission of sins, but even habitual grace itself, by which he would actually be justified; and in this sense he understands that proposition: "To one who does what is in him out of the powers of nature, God does not deny grace." Nay more, he adds that an unbeliever then does what is in him by the powers of nature, to the end that he may be justified immediately by the grace of God, when he conforms his free will to natural reason and with all his heart asks to be enlightened for the knowing of truth and of justice; but that a believer does what is in him, if, according to the rule of faith, he detests sin, proposing in all things to obey God for His own sake - "all which," he says, "one can perform by the powers of nature without any help of interior grace." But Driedo and Ruard only teach that, for one who uses the powers of nature well, in the exercise of certain good

1928. Scotus, In IV Sent., dist. 14, q. 2, a. 1; Gabriel (Biel), In II Sent., dist. 27, q. 1, a. 2, concl. 4; a. 3, dub. 4; In III Sent., dist. 27, q. 1, a. 3, dub. 2, prop. 2; Cajetan, Opuscula, tom. 1, tract. 4, q. 1.

moral works, the mercy of God is at hand to bestow the helps of His grace, by which he is by degrees disposed to the remission of sins.[1929] I for my part think that these Doctors also side with the Semipelagians and deem that proposition probable - as I shall immediately prove.

Others, moreover - grave and ancient Scholastics - are referred to this opinion, as if they, too, in this manner conceded the said proposition. Alexander, 3, p., q. 69, mem. 1, a. 2; and Gerson, Alphabetum, letter 24, M; and the Antissiodorensis, in the Summa, book 3, tract. 2, cap. 1, quaest. 5 - although the common run of Scholastics never understood the proposition thus. For, first, Gerson plainly says that "to one who does what is in him," that is, to one who uses well the gifts of God already had, God does not fail, but grants further ones; and since he himself, in the tract on the spiritual life, lect. 1, which is found in the Alphabetum, no. 61, under the letter G, expressly says that a man cannot do any good work, even of moral virtue, without some help of the grace of God moving interiorly, certainly he could not have asserted that proposition, "To one who does what is in him, out of the powers of nature, God does not deny the helps of His grace." In like manner, although Alexander and the Antissiodorensis affirm this proposition absolutely, yet since Alexander, 3, p., q. 69, mem. 1, a. 2, teaches that free will cannot of itself decline from evil and do good without the help of grace, but can do evil, and the Antissiodorensis, in the Summa, tract. 11, cap. 1, q. 4, says that we cannot, without grace given gratis (for thus he calls the help of grace, to distinguish it from habitual grace, as other Theologians also do), perform any good, it follows that they did not understand that proposition of him who does what is in him out of the powers of nature, but of one who acts with the help of grace; to wit, that God does not deny further gifts of His grace necessary for salvation to one who thus disposes himself: and hence they are far removed from the doctrine of the Massilians.[1930]

In the same way the most weighty Scholastics, St. Thomas, 1 - 2, q. 109, a. 2, and q. 112, a. 2 and 3, understood this very proposition against the Massilians; where he not only teaches that no preparation for grace can exist in man out of his own powers that might anticipate the help of God, but also understands the aforesaid proposition of him who does what is in him by the help of grace, not out of his own powers; nor did he ever affirm the opposite, as Cajetan falsely thinks on that article 6; indeed, he had expressly taught this in 2, dist. 28, a. 4, which place Cajetan there alleges for the contrary opinion. For he says that a man can prepare himself for grace without the habitual gift of grace - which no one denies - but not without some gift peculiarly received from divine providence, where he admits the necessity of the help of grace moving. Nor does he deny this gift in solution 4 concerning the man reared in the forests without the faith of Christ, while he follows the light of natural reason. So too Bonaventure speaks openly about the same proposition in 2, dist. 28, a. 2, q. 1, ad 2; nay more, Dominicus Soto in 2, De natura et gratia, c. 3, ad secundum, although in that place this author otherwise grants some remote disposition to grace from free will.[1931]

1929. J. Driedo, De concordia liberi arbitrii et praedestinationis, pars 2, cap. ult., fol. 50 sqq.; idem, De captivitate et redemptione generis humani, tract. 2, cap. 2; Ruard Tapper, 2, 7, 9 (as cited); and others named in the context.

1930. Alexander of Hales, Summa, III, q. 69, mem. 1, a. 2; John Gerson, Alphabetum, lit. 24 (M), and De vita spirituali, lect. 1 (in Alphabetum, no. 61, lit. G); William of Auxerre (Antissiodorensis), Summa, lib. 3, tract. 2, cap. 1, q. 5.

1931. St. Thomas, Summa theologiae, I - II, q. 109, a. 2; q. 112, a. 2 - 3; In II Sent., dist. 28, a. 4. St. Bonaventure, In II Sent., dist. 28, a. 2, q. 1, ad 2; Dominicus Soto, De natura et gratia, lib. 2, cap. 3, ad 2.

All, therefore, whom I have a little before reviewed I said to side with the Massilians, in that they plainly concede some beginning from our free will to which grace is adjoined. For thus we shall begin, and God will await - if not always, at least sometimes - our will, and will put our free choice to the test, and its good use, that He may bestow on us the helps of grace. But if in time it be thus, according to the sentence of these Doctors, as the Massilians affirmed, it follows that this very beginning ought also to be conceded in the eternal predestination of God: for the same ratio obtains of the bestowal of grace in time and of eternal election or predestination; so that, if grace is given on account of some occasion, or disposition, or our beginning, by the same in foreknowledge it is also prepared - as we have often already admonished, especially in disputation 89, cap. 4; nor is there anyone who can doubt this. Wherefore Gabriel - who had previously said that there is given a condign meritorious cause of predestination, because he thought it to concern only beatitude - in the place cited subjoins: if predestination also concerned grace, a cause too would have to be given on our part, namely a remote disposition from free will and a merit only of congruity; which sentence Richard in 1, dist. 41, deems more probable.[1932]

But indeed you may see some Scholastics, very religious men, when they speak about predestination, who speak less cautiously about the grace (grace: gratia) of God; although among the ancient Fathers of the Church there was altogether the same controversy about the cause of grace and of predestination on our part, and therefore they denied every merit, cause, and occasion from us of our predestination, so as to show that grace in time is bestowed on us wholly gratis, without any of these. These Scholastics therefore most constantly deny any cause of predestination on the part of the predestined; yet they admit that even the first grace is, as to its donation, connected with free will in such wise that some of the predestined dispose themselves for grace without interior motion and help of grace, though not without a special providence, as Durandus teaches in 1, dist. 38, q. 5; where he says that certain of the predestined dispose themselves to grace without interior motion and help of grace, yet not without a peculiar providence, since namely they rise from sin unto grace, in which they persevere to the end of life. For those works by which the predestined are disposed unto grace do not arise from a special interior motion of grace, but from a special providence, namely predestination: because, even if they are not unto grace, they are nevertheless effects of predestination. Now he judges these to be good moral works, of which he also said in 3, dist. 9, q. 3, n. 8, that they are meritorious by congruity of first grace. With Durandus agrees Richard in 1, dist. 41, a. 3, q. 1, who defends as probable the opinion of those who assert that there is no cause of predestination on our part, although he nevertheless concedes some disposition from us unto grace, as we have seen above; and we have found Scotus, Dominicus Soto, and Driedo to be of like mind with them.[1933]

1932. Gabriel (Biel), In II Sent., dist. 27, q. 1, a. 2, concl. 4; In III Sent., dist. 27, q. 1, a. 3, dub. 2, prop. 2; Richard, In I Sent., dist. 41.

1933. Durandus, In I Sent., dist. 38, q. 5; In III Sent., dist. 9, q. 3, n. 8; Richard, In I Sent., dist. 41, a. 3, q. 1.

Nor indeed will you fail to find not a few more recent Theologians who have embraced this opinion; and on this sole account they deny a cause of predestination: because whatever efficaciously conduces to salvation by preordination, whether as cause, or as occasion, or in some other way, inasmuch as it is not apart from grace, is encompassed under the effect of predestination. For this reason Durandus and Richard taught the same opinion.

But, as I have already warned, we ought to be no less solicitous about predestination than about grace, lest we ascribe any cause to it. Therefore those who say that there is some cause, disposition, or occasion of the bestowal of grace which takes place in time ought also to concede the same of predestination. For this question is not, nor among the Fathers ever was, about predestination as it is a kind of providence (providence: providentia) comprehending all things that are in the predestined person, but as it comprises only those things which are gifts of grace; and therefore it is called the predestination of grace (predestination: praedestinatio). And when we ask whether a cause is given of predestination, we put the question about the predestination of grace. For as we proved in disputation 89, cap. 8, and cap. 3 of this disputation, predestination is the preparation of gifts and benefits, not of nature, but of grace, by which a man is saved. Thus defined St. Augustine and the others there cited. Nay more, in book 1 De praedestinatione sanctorum, cap. 10, Augustine says that grace and predestination differ only in this, that predestination is the preparation of grace, grace itself the donation.[1934]

Nor indeed did Pelagius and the Massilians ever say that predestination has as its cause that all-embracing providence by which God disposes whatever He has decreed about the predestined. For who does not understand that nothing can be given which could overthrow divine providence, and so nothing which could precede the providence of God? Hence, if by "predestination" we mean, in the common manner of speaking, that which turns about grace in regard to the predestined, then the Massilian could plausibly doubt in some show of probability whether there be something natural on our part which precedes the bestowal of grace and its predestination - inasmuch as, if the bestowal of grace is made in time, it is also prepared in foreknowledge - so that, on account of the good use of free will from the power which we received by creation, God should grant to us the grace of Christ and predestine us. And although it is most certain that nothing of that sort is in us, as we showed in cap. 5; nevertheless, because of the difficulty of the matter, one may easily be confounded, if one does not distinguish the senses of the words carefully; and even now not a few Theologians stumble. In what manner the sentence of those Scholastics does not differ from the Massilian error was set out in the preceding chapter. But we shall set forth and refute, in cap. 16 and 17, the foundations of the Massilians and of the Scholastics.

Finally, from what has been said in disputation 89, cap. 5, it is gathered that the opinion of these men wholly coincides with the Massilians, when they say, "To one who does what is in him out of his own powers God does not deny grace," and that God at no time is under any promissory obligation to bestow it; for grace is not of debt but of grace - precisely what we said there.

... as we said, but only if there were given some beginning from us.

1934. St. Augustine, De praedestinatione sanctorum, lib. 1, cap. 10.

There are nevertheless some Scholastics who grant that proposition, "To one who does what is in him, God does not deny grace," in such a way that they do not dare to call a beginning or occasion of good works a disposition to grace: for this seems to them Pelagian, since there would then already be on our side some supernatural work. For the disposition to some form is of the same order as the form itself: but grace is of a supernatural order; therefore the disposition to it would be of the same order. Yet, as I shall show in chapter twelve, the Massilians did not hold that they asserted something supernatural to be from our powers; but that they said some beginning or occasion on our part precedes, on account of which grace is given to us. And the things which, in the following chapter, and in chapters twelve, fourteen, and fifteen, we allege against them do not only prove that from us there does not precede any merit, even impetratory or congruous, or any disposition; but also that there does not precede any least beginning or occasion on account of which grace is given: and they manifestly show this to be Catholic doctrine. Furthermore, among the Fathers you will never find the Massilian opinion condemned because they conceded on our part a disposition which they would call of the same supernatural order with grace, but because they said that grace is given on account of something of free choice, as will soon be clear.

Caput XI - That no cause, or beginning, of the predestination of grace is from us, is proved by authority against the Massilians

The Catholic opinion, therefore, is that no cause, nor any beginning or occasion on the part of the predestined can be devised, on account of which God either in time granted him His grace, or in foreknowledge decreed to give it. And, first, this doctrine is to be understood not only of the beginning of faith, prayer, or the will to attain salvation, or of other works which are occupied in some way about God, such as those of religion; but indeed also of any work of moral virtue which is referred to the honest good as such: so that in no way can anything of this kind be an occasion or beginning of the gift, or of the predestination, of grace. Moreover, we exclude not only a beginning which would be merit condignly; but also merit congruously or impetratorily, or a disposition; finally, any cause and occasion on account of which God gave, or foredecided to give, grace to this person rather than to that: so that the whole reason of preparing grace for this person rather than for that was the good pleasure of the divine will; but nothing, or at most the very least, on the part of the predestined. But before all else this doctrine must be confirmed by us in general; thereafter, the several points we have stated are to be explained in detail.

Among the Scholastics there are many reported for this opinion who in truth do not teach it; truly, however, it is handed on by St. Thomas in this fifth article, by Marsilius in the first, question 41, article 2, and by Gregory in distinction 41, question 1. I willingly cite these authors for this opinion against the Massilians, because both in words and in reality they oppose the Massilians' view, and they altogether defend Catholic doctrine. For they feel the same about grace and about predestination; and they enumerate the effects of predestination in us beginning from the first operation of grace. For, first of all, St. Thomas in the Prima Secundae, question 109, article 6, and question 112, article 3, plainly teaches that a man by his own powers cannot in any way dispose himself to grace; and he explains that proposition, "To one who does what is in him, etc.,"

correctly, as we saw in the preceding chapter.[1935] Marsilius and Gregory, moreover, since they say that no good moral work can be good in every circumstance without the help of grace moving within, by denying any cause from us of predestination, deny also a cause of the very first grace; and thus they think that there is no other effect of predestination than the helps and works of grace. About good moral works Marsilius thus taught in the First Book, question 20, article 3, propositions 4 and 5; and Gregory in II, distinction 28, question 1, article 1.[1936] Others also teach that on the part of the predestined there is no cause at all of his predestination. These are the Ferrariensis in III Contra gentes, chapter 161; Sotus in the Epistle to the Romans, chapter nine, in the digression on predestination; Driedo in the little work On the concord of free will and predestination, part one, chapter 3; Cordub. in chapter three, and in book one, question 56; indeed even Scotus in I, distinction 41, question 1.[1937]

These, however, cannot be alleged for this opinion, as it has been explained by us against the Massilians. For since Scotus, Sotus, and Driedo plainly contend that there is some beginning of grace from us, as we demonstrated in the preceding chapter, they are bound to concede some cause or beginning from the very predestined person of his predestination; and thus they not only do not oppose the Massilians, but in reality they think the very same as they, although they differ in words, as we said about Durandus. About the Ferrariensis and Cordub. it is not sufficiently clear to me in what sense they speak; therefore for this sole reason, that they say there is no cause of predestination, I would not wish to list them for this opinion. Perhaps they felt with Durandus and others.

Now among the Fathers the first author of this opinion was St. Augustine, who, since he was of keen insight and very versed in divine letters, disputing with Pelagius about the necessity of grace which is granted to us without any merits through Christ, took his starting-point by recurring to the beginning of holy cogitation and right counsel, so that he thought from there the exordium of our justification must be taken; and he ascribed to God, from whom right counsels are, pious wills and holy desires, and there he acknowledged a special grace over and above the gift of creation. From this principle he proved the necessity of grace for believing in the first book On the Predestination of the Saints, chapter two, not because the object is of the supernatural order, but because, since we cannot think anything from ourselves as if from ourselves, neither can we believe, which is with the assent of what is thought; and he rightly inculcates this reason in almost all the places where he disputes against the Pelagians and the Semipelagians.[1938]

In the second book Against the Two Epistles of the Pelagians, chapter eight, about the middle of the chapter, against the Semipelagians who were saying that there is some beginning from us, he says thus: "But let them also hear the Apostle. For when the Lord says, 'Without me you can do nothing,' in this one word he has comprehended the beginning and the end. The Apostle, however,

1935. St. Thomas, Summa theologiae, I-II, q. 109, a. 6; q. 112, a. 3.

1936. Marsilius of Inghen, In I Sent., q. 20, a. 3, prop. 4 - 5; Gregory of Rimini, In II Sent., dist. 28, q. 1, a. 1.

1937. Ferrariensis, Contra gentes, III, c. 161; Dominicus Soto, In Epistolam ad Romanos, c. 9, digressio de praedestinatione; Driedo, De concordia liberi arbitrii et praedestinationis, pars I, c. 3; Cordub., cap. 3; Cordub., lib. I, q. 56; Scotus, In I Sent., dist. 41, q. 1.

1938. St. Augustine, De praedestinatione sanctorum, lib. 1, c. 2.

as the expositor of the Lord's sentence, more openly distinguishes the man, saying, 'He who has begun in you a good work will perfect it unto the day of Christ Jesus.' And in the divine Scriptures, with this same Apostle, in the very place of which we speak, we find yet more. For now we speak of the desire of the good; if you wish it to begin by the will, to be perfected by the Lord, let them see what they will answer to the Apostle saying, 'Not that we are sufficient to think anything of ourselves as of ourselves.'"[1939] And in book one To Simplicianus, question two, near the end, showing how our good works are chosen by God, and that nothing is derogated from grace, he says: "It remains that wills are chosen by God; but the will itself, unless something occur which may delight and invite the soul, can in no way be moved: but that this occur is in no way in man's power. For there is a holy thought which precedes all our consent."[1940]

He says the very same in the second book On the Merits and Remission of Sins, chapter seventeen. For asking why men are not without sin, he answers: "I could most easily and most truly answer: because men are unwilling. But if one asks of me why they are unwilling, it is a long matter. Nevertheless, if even this must be touched upon by the preliminary of a more diligent inquiry, I will briefly say: Men do not wish to do what is just, either because it is hidden whether it is just, or because it does not delight." And below: "But that what was hidden may become known, and what did not delight may become sweet - this is the grace of God." He uses "ignorance" in this place for an inefficacious cognition, because what is to be done is not considered more deeply, as we shall say below, disputation 98, chapter seven. He uses the same argument in the book On Grace and Free Will, chapter seven, and in the book On the Good of Perseverance, chapter eight, about which there is to be disputed more at length in the Prima Secundae, question 109, article two. And in the same On the Good of Perseverance, chapter nineteen, he adduces that saying of Cyprian: "In nothing is there to be glorying, since nothing is ours"; and that other: "It is not in our power - our heart and our thoughts." And Augustine adds: "Nor are deeds and words themselves passed over. For there is no word or deed of man which does not depend on the thought of the heart."[1941]

Moreover, since Augustine recalled the beginning of the grace of God against Pelagius to a holy cogitation which would not be in our power, nor would regard from us an occasion or even impetratory merit, so that thus God by His sole liberal will would distribute the gifts of grace to individuals, Cassian, the Massilians, and the rest throughout Gaul and Africa, of whom it was said in disputation 89, chapter four, bearing Augustine's sentence so severe with difficulty on account of reasons which we shall set forth in chapter fifteen, began to teach that there is on our part some beginning, not, however, deserving, for which...[1942]

But if anyone thinks that he is able to begin goodness more by his own will than by God's grace to perfect it, let him see what he answers to the Apostle saying, "Not that we are sufficient to think anything of ourselves, as of ourselves." And in the first book to Simplicianus, question two, toward

1939. St. Augustine, Contra duas epistolas Pelagianorum, lib. 2, c. 8; Phil. 1:6; John 15:5; 2 Cor. 3:5.

1940. St. Augustine, Ad Simplicianum, lib. 1, q. 2.

1941. St. Augustine, De peccatorum meritis et remissione, lib. 2, c. 17; De gratia et libero arbitrio, c. 7; De bono perseverantiae, c. 8, c. 19; St. Cyprian, De zelo et livore (or allied testimony), "In nullo gloriandum ... Non est in potestate nostra cor nostrum et nostrae cogitationes."

the end, showing how our good works are chosen by God, nor is anything detracted from grace, he says: "It remains that our wills be chosen by God; but the will itself, unless something occur which delights and invites the soul, cannot in any way be moved: now that this should occur is by no means in man's power. For there is a holy thought which precedes all our consent." The very same he has in the second book On the Merits and Forgiveness of Sins, chapter seventeen. For, asking why men are not without sin, he answers most easily and most truly: because they are unwilling. But if one asks of me why they are unwilling, I will not draw this out at length. Nevertheless, since this too pertains to the judgment of a more diligent investigation, I will briefly say this also: men are unwilling to do what is just, either because it is hidden whether it is just, or because it does not delight. And below: in order that what was hidden may come to be known, and that what did not delight may become sweet, it is the grace and mercy of God. In this place he uses "ignorance" for an ineffective cognition, because it does not penetrate efficiently to what must be done, as we shall say below in Disputation 98, chapter seven. By the same argument he uses in the book On Grace and Free Will, chapter seven, and in On the Good of Perseverance, chapter eight, about which more at length is to be discussed in the Prima Secundae, question 109, article two; and again in On the Good of Perseverance, chapter nineteen, he adds also that saying of St. Cyprian, "In nothing ought we to glory, since nothing is our own," and that, "It is not in our power, our heart and our thoughts." To this St. Augustine adds: "Nor do even deeds and words pass by; for there is no saying or deed of man which does not depend on the thought of the heart."[1943]

Moreover, when St. Augustine brought back the beginning of God's grace against Pelagius into a holy thought, which is not in our power, and did not regard any occasion from us, nor even an impetratory merit, so that thus God by His sole liberal will would distribute this grace singly; Cassian, the Massilians, and the rest throughout Gaul and Africa, of whom we spoke in Disputation 89, chapter four, not bearing so severe a sentence of Augustine on account of the reasons which we shall report in chapter fifteen, began to teach that there is from us some beginning of the bestowal of grace and of predestination to grace. Against whom Augustine composed his last work, at the request of Hilary of Arles and Prosper of Aquitaine, namely, On the Predestination of the Saints, and the other, On the Gift of Perseverance; although elsewhere also he had taught that election to grace, or predestination, which is the same, as we said in that Disputation 89, chapter eight, was made prior to any foreknowledge of merit or occasion or work on our part, as is manifest from the testimonies there alleged and from innumerable others.[1944]

This sentence of Augustine against Cassian and the rest of the Massilians the Fathers who were defenders and followers of his doctrine esteemed to be the true one, so that they reckoned it Catholic, while they branded the opposite as error. Thus Prosper, in a special book about this matter against the Collator throughout, especially in chapters eleven and twelve of the thirteenth Conference, and in the book To the Excerpts of the Genoese, doubt eight, and To the Vincentian

1942. On Cassian and the Massilians, see Disputation 89, c. 4.

1944. On Cassian and the Massilians see Disputation 89, c. 4.

Objections, to the fourth objection, does the same. Nor does it matter that Gennadius, in the book On Illustrious Men, says these words about Prosper: "I have read also the book against the work On the Collations, suppressing the name of Cassian, which the Church of God approves as saving, he defames as harmful." For both Gennadius is of no good repute among Catholics and the learned: since of Augustine too he says that he wrote many things, and therefore erred in many, because "in much speaking sin does not fail"; and many other things which can by no means befit such a man: to which calumny Augustine himself most excellently replies in the prologue of the Retractations. He also prefers Ruffinus to St. Jerome, a Doctor so well deserving of the Church of God: and yet Pope Gelasius, whom we shall cite presently, says thus of Ruffinus and Jerome: "Ruffinus, a religious man, interpreted many ecclesiastical works; but since the Blessed Jerome noted him in some things about the liberty of free choice, we hold what we perceive that that Blessed Jerome held about the aforesaid." This Ruffinus, therefore, is not well praised by Catholics; and Gennadius is not well heard.[1945]

Furthermore, many things confirm the authority of Prosper. First of all, Pope Gelasius, and that very Gelasian decree in the Roman Council of seventy-six bishops, and it is reported in the chapter Sancta Romana, 15, dist., sets Prosper among the Catholic writers, whom he calls "a most religious man," together with the books of his master Augustine, among those who contain sound doctrine; but he numbers Cassian among the apocrypha: not because they lack an author, but because they teach many things amiss. Then also, when Prosper at Marseilles defended Augustine's sentence against Cassian, and could not bear that man's doctrine, and of the Massilians who preached the contrary, on that account he fled to Rome to Pope Celestine, who received him kindly, and in a letter honorably defended his doctrine and Augustine's against Cassian, and ordered the bishops of Gaul to restrain the petulance of the Massilians, as is clear from the Life of Prosper and from that Letter of Celestine, chapter one and the following.

In addition, it is believed on most certain conjectures that the canons of the Second Council of Orange against Cassian and the Massilians and others who spoke less cautiously about grace were composed by Prosper himself, were approved by Leo the First, and were sent to the city of Orange in Gaul so that they might be received by the Fathers of that Council, as is very clear from the first chapter of that council. That they were composed by the hand of Prosper, certain conjectures persuade. The first is that he was at Rome secretary of Leo the First, who succeeded Celestine the First, as Trithemius attests. The second is that of the Louvain editors in the letter prefixed to the works of Prosper. For since Prosper had been present at the Councils of Vaison and Carpentras, and had subscribed to both and added books to them, he did not subscribe to the Second Council of Orange, which was held in the meanwhile: certainly for this reason, that then he was secretary of

1945. For Gelasius, the Roman Council, and the Gelasian Decree listing approved and apocryphal authors and books; Gennadius, De viris illustribus; St. Jerome and Ruffinus; and on Prosper's authorship and authority in this controversy, see also: Prosper, Contra Collatorem; Sententiae ex Augustino; Ad excerpta Genuensium, dubium 8; Ad objectiones Vincentianas, ad quartam objectionem; Trithemius on Prosper as secretary of Leo I; the Louvain editors' prefatory epistle to Prosper's works; the Councils of Vaison, Carpentras, and Orange (Arausicanum II), with their canons received in Gaul. On Faustus of Riez: Hormisdas, Epistola ad Possessorem; Ioannes Maxentius, Responsio ad eandem; Isidore, De viris illustribus; Ado of Vienne, Chronicon. On Fulgentius and Peter the Deacon: Fulgentius, Ad Monimum; De incarnatione et gratia Domini nostri Iesu Christi; De doctrina Petri et aliorum; Petrus Diaconus, De incarnatione et gratia ad Fulgentium.

Leo the First and was living at Rome. The third, and in my judgment the most certain conjecture, is drawn from the matter and style of the canons. For each one is a sentence of Augustine, as the Louvain editors have recently noted in the Council of Orange as published, and inserted into Prosper's works. For the sentences of Augustine had been extracted by Prosper in the book whose title is Sentences; in these the entire manner of speaking of the Massilians is condemned, as we shall presently see, and Augustine's sentence concerning grace and predestination is defended. Therefore the authority of Prosper in this matter ought to be of great moment for us.

Secondly, all the Fathers who accused Faustus of Riez, deacon and then bishop, of error in this part favored the sentence of Augustine, because he had openly said that some beginning of grace is from us. From this it is gathered that he held a view contrary to the sentence on predestination which Augustine and Paul taught, and that he stuck with the Massilians. I have recalled the places of this Faustus in Disputation 89, chapter five. For this cause Peter the Deacon anathematizes his little works On Grace and Free Will, and judges them to have been written against the doctrine of Augustine and Paul, in the book On the Incarnation and Grace to Fulgentius, chapter eight; and from chapter six to the end of the book he most excellently approves the sentence of Augustine. The words of Peter the Deacon in chapter eleven are these: "We anathematize Pelagius and Celestius and Julian of Eclanum, and those who think similar things; especially the books of Faustus, bishop of the Gauls, who, having been promoted from the monastery of Lérins: which he wrote against the sentence of predestination, it is not doubtful; in which, not only coming against the truth of all the holy Fathers, but even against the Apostle's assertion, he adds to human labor the help of grace." When he says "And those who think similar things," he indicates the Semipelagians, who did not altogether agree with Pelagius, but in a certain way taught similar dogmas. Among these, however, Faustus seemed the chief, as I noted in chapter nine. Why indeed Peter says of this Faustus that he wholly evacuates grace, since he said that it is necessary only as a rule for the remaining works, and that only the beginning of something is from us, we shall say below in chapter sixteen.

But Peter, as is gathered from the first chapter, together with other religious men who had been sent to Rome by the Eastern Church for the sake of professing their faith against the heretics, proposed this his doctrine to Fulgentius and to the other bishops of Africa: which they themselves and his fellows subscribed at the end of the work. Fulgentius indeed in a marvelous way approved it in the book which, On the Incarnation and Grace, in the name of many bishops of Africa he wrote back to this Peter: where, as we shall see below, he marvelously approves Augustine's sentence against these Massilians. And Pope Hormisdas condemns the same books of Faustus for the same cause in his Letter to the Possessor; and John Maxentius in the response to this Letter - although John affirms that that Letter is not of Hormisdas; it is, however, found in the tomes of the Library - condemns them as well. The same books are condemned by Isidore in the book On Illustrious Men, and by Ado of Vienne in his Chronicle, age six, under the year 491; although this author does not rightly note wherein Faustus erred: for he seems to ascribe to him more than the error of the

Massilians; whereas in truth he taught nothing else. He concedes indeed that this Faustus, while he tried to destroy the Pelagian heresy, fell into error. He adds finally that those who think his books in this part to be Catholic, like Gennadius, err gravely.

Thirdly, Fulgentius followed Augustine's sentence against those same Semipelagians in the first book To Monimus, chapters 8, 9, 11, and 14; but especially in the book On the Incarnation and Grace of Our Lord Jesus Christ, chapter 16 to the end of the work; and in the first chapter of that book On the Doctrine of Peter and of others, which they wrote to him, he says thus: "We have had the letters which you sent to us (namely that book On the Incarnation and Grace which we have alleged above); and when we had reviewed them, we recognized at once your joy and your faith and salvation; indeed the instruction of your faith made known to us your salvation." And at length, in the epilogue of the work, about this sentence of Augustine, which that Peter had professed in his writings and which Fulgentius himself had pursued, he says: "The truth of which predestination, whereby the Apostle bears witness that we were predestined in Christ before the constitution of the world - if anyone refuses to receive it with an interior faith of heart, or to profess it with the confession of the mouth; if before the day of the present life he has not cast away the stubbornness of his impiety, whereby he resists the living and true God, it is manifest that he does not belong to the number of those whom God in Christ before the constitution of the world gratuitously chose and predestined to the kingdom." For since that author in that chapter 16 endeavored to prove that the beginning of our salvation and grace is not from us; he held that the same thing must be said of the predestination of grace: namely, that it was predestined without any beginning or occasion from us. For in the same epilogue he had said of God in these words: "And He does not otherwise perfect in work than as He has it disposed in His eternal and unchangeable will." And about all the effects of grace which he had enumerated from the first beginning of a good will to the end of beatitude, he taught that very thing in the first book To Monimus, chapter eight: that all of them, just as they have been predestined in foreknowledge, so also are wrought by grace in time.

Fourthly, that this truth was defended by Pope Celestine in the first letter to the bishops of Gaul is no less manifest. For when Prosper and Hilary in Gaul were defending Augustine's sentence on predestination and grace, they were at length compelled, because of the authority of their adversaries who were attacking Augustine's writings, especially those which he had written On Correction and Grace, to flee to Pope Celestine, asking his judgment in this matter. The Pontiff, in the first chapter, thus begins: "Our sons, the present Prosper and Hilary, whose zealously praising of our God we approve, have been heard by us as if they were present themselves; who before us have professed that, as our see is wont to undertake inquiries, certain persons, pertinaciously opposing, teach and preach against the truth of the saints, and, impatient of your love, claim for themselves the authority of dispensing over you." By which words it is clear with what honor Prosper and Hilary were received by Pope Celestine against their audacity.

Then he blames the doctrine of the adversaries more severely in chapter two; and he gravely reproves them because they did not fear to assail Augustine's doctrine. It is also manifest to all that the dissension of Prosper and Hilary with Cassian and the Massilians, and what the matter was about, was this: namely, about grace and predestination. For the latter said that some beginning is

from us; but the former, with Augustine, said that every beginning of predestination and of our salvation is from God and from His grace, since He inspires in us what He begins, promotes, and perfects. Therefore, he at once begins from the letters of Prosper and of Hilary, which are about the beginning according to Augustine of the predestination of the saints, of which matter enough has been said by us in Disputation 89, chapters four and five.

From the same letters it is also evident that Cassian and the Massilians marked Augustine's doctrine on grace and predestination as strange, and as contrary to the common consent of the Fathers. Therefore, when Celestine defends Prosper, Hilary, and Augustine, he plainly condemns Cassian and the Massilians.

"Except from that which he has given it." Then in that same canon he asserts that all our good things are to be referred to their author, namely to God. He understands, as to the author, grace (*gratia*); and in canon 9: that thus God works in the hearts of men, and in free will (*liberum arbitrium*) itself, so that every holy thought, pious counsel, and every motion of good will is from God. For through him we can do something good, without whom we can do nothing; and, after a few words, What time then, says Pope Zozimus, intervenes in which we should not need his help? Therefore in all acts, causes, thoughts, and motions God is to be besought as helper and protector, etc.

With these passages, since Caelestine refers all good works, studies, and merits at any time, in any cause and affair, to God the author of grace, he manifestly refutes the error of the Massilians. For if he understood only those good works which are worthily meritorious of eternal life to be gifts of God's grace, he would define nothing on behalf of Hilary and Prosper against the Massilians - something very alien to his purpose. For the Massilians did not deny this, nor was the controversy with them about this matter. Therefore either he understood whatever good works and studies, even of moral virtue; and by defining in this way that all these are of the grace of God, he openly declares that there can be no beginning on our part, nor any merit - even impetratory - of grace itself; or finally, he cannot but define that all the works and studies, by which in some manner our justification (*iustificatio*) is initiated in us, are not from us; but that the whole beginning is from the grace of God, and that all these studies and all the motions of our will are to be ascribed to God, lest grace be given to us who, without grace, study and are willing, as the Massilians used to say; so that at least in this way he plainly refutes the error of the Massilians; otherwise he would have defined nothing against them.

Confirmatur ex Petro Diacono. In the book On the Incarnation, in that chapter 8, after he reported these testimonies of Caelestine and Innocent, Peter the Deacon said concerning the books of Faustus of Riez: "We anathematize the books of Faustus, Bishop in Gaul, which without doubt were written against the sentence of predestination (*praedestinatio*): in which, coming into contradiction not only with these Fathers but also with the Apostle himself, he subjoins to human labor the help of grace." Therefore Peter judges that Caelestine manifestly condemned this sentence of Faustus, which was the same as the sentence of the Massilians; for if Caelestine had not

condemned those asserting that grace is to be subjoined to human labor, as the Massilians used to say, the books of Faustus would not have been written against Caelestine's definition; for they contain nothing other than that doctrine of the Massilians.[1946]

Accordingly, since Caelestine defines that in time grace is liberally given to us without any regard to some beginning of good that is from us, by the same reasoning he decrees that from eternity, in God's foreknowledge, without any regard to a good beginning that is from us, grace is prepared; and hence that predestination, which we call of grace in God's foreknowledge, had from us no merit, no impetratory title, no cause, occasion, or beginning.

Obiectioni occurritur. Nor in truth does it matter that in the margin of Caelestine's epistle Surius noted that those chapters were added by someone: the ground of which perhaps was that the epistle seemed already closed. This, I say, matters nothing: both because Caelestine adduces all those canons from other Pontiffs, and also because such a censure without founded testimony is of little weight; since Peter the Deacon cites those testimonies as of Innocent and Caelestine, as is seen in the said chapter 8.[19461947]

Furthermore, since even after the Pontiff's epistle sent to the bishops of Gaul the remnants of the Pelagians did not rest, and many things were being said against Augustine's books On the Predestination of the Saints, On the Good of Perseverance, On Correction and Grace, to the effect that the Pontiff had not defended those books by name in his epistle, and they asserted that Augustine's doctrine had been praised, not indeed that which was in those, but that which he had written in other books, as Prosper is witness in the book Against the Collator, chapter 21, after the middle; it came about through the diligence of Prosper himself that by Leo the First, whose secretary he was, canons were issued in favor of Augustine's position against the Massilians, and were sent to the Second Council of Orange into Gaul, where they were approved by the whole Council.[1948]

Therefore in the third canon they condemn those who say that the grace of justification - that is, the helps of grace unto justification - is obtained by human prayer, that is, by our own powers; and in the fourth canon they condemn those who said that God awaits our will by which we would wish to be cleansed; and in the fifth canon it is decreed that the beginning of faith, which is the will to believe, as also the motive, is the gift of God; and in the sixth canon the same truth is defined, whose words it seemed good to subjoin, that it might more clearly appear that the sentence of Cassian, in whatever way it may have stood, is condemned.

"If anyone" (it says) "asserts that without the grace of God mercy is conferred on us who believe, are willing, desire, endeavor, labor, keep vigil, study, strive, seek, knock; but does not confess that it is divinely effected in us by the infusion and inspiration of the Holy Spirit, that we may believe,

will, or be able to do all these things as we ought; or subjoins the help of grace to human humility or obedience, and does not consent that the gift of grace itself is that we be obedient and humble, he resists the Apostle saying, What do you have that you have not received? By the grace of God I am what I am." By these canons, with the words of Cassian having been taken up, his very mode of speaking and his opinion are manifestly condemned.

For that God awaits our will, he teaches in Conference 13, chapter 13. That by human prayer we obtain the grace of God, he teaches in that book 12 On the Institutes of the Coenobia from chapter 45 to the end, where also he openly said that grace is given first to us who seek, knock, and keep vigil, etc.; which mode of speaking Augustine also condemns as that of the Massilians, in the book On the Good of Perseverance, chapter 23.[1949][1950][1951]

When, however, in that sixth canon it is said "as we ought," do not understand "as we ought" for the merit of eternal life, as some more recent men, not having the history sufficiently in view, interpret; nor, as others also more recent (I know not on what foundation) explain, that the act be supernatural: for on these two points the Massilians, whose opinion that council contends to condemn, taught nothing ever, as is clear from the histories; but understand "as we ought" for the obtaining of grace. For the Massilians used to say that we are able to begin something by some of those modes condemned there, so that it should be "as it ought" for obtaining first grace; and therefore the Council immediately subjoins, "or he subjoins the help of grace to human humility or obedience, he resists the Apostle," etc.; by which words it condemned every beginning from us, to which grace be conferred.

Hunc autem sensum aperte colligo ex the Council of Trent, session 6, canon 3; for after by the two prior canons it confuted the heresy of Pelagius, condemned in the Council of Milevis and of Africa, lest it should pass over the Semipelagians, in this canon, with the Council of Orange, second, canon 6, it says: "If anyone shall say that without the prevenient inspiration of the Holy Spirit a man can believe, hope, love, or repent, as he ought, so that the grace of justification be conferred, let him be anathema."[1952][1953][1954]

By the grace of justification he understands every help by which from the beginning we are moved to justice, as I noted above in chapter five. And this interpretation commends itself to me because the Council of Trent, before it treated against Luther concerning the grace of God, wished to preface the condemnation of the Pelagian error, which it did by the two prior canons; then, that it might condemn the remnants of the Pelagians, it added the third canon. Now that this third canon was not against Pelagius is plain; because he did not admit that the grace of the remission of sins is given to us, and that it is obtained by God by our good works; but he said that the remission of sins is effected by one's own virtue, and that help is granted only sometimes for this, that it might be done better: which are condemned by canons 1 and 2. But the Semipelagians granted the

grace of the remission of sins and the helps necessary thereto; but they added that that grace and those helps are impetrated from God by our works. A beginning from us, among other things, they said to be faith, and hence hope; then also sorrow and some repentance, and hence some love, as was noted in disputation 89, chapters 4 and 5.[1955]

Wherefore that the same error of the Semipelagians was condemned, the Council of Orange, canon 2, says: "This also we wholesomely profess and believe, that in every good work we do not begin and are afterwards helped by God's mercy; but he himself, with no preceding good merits, first inspires in us faith and his love, so that we may faithfully seek the sacraments of baptism; and after baptism, by his consequent help, cooperating with him, we may be able to fulfill the things that are pleasing to him." By love he understands some love of God by which we begin to love him as the fountain of justice before baptism; as the Council of Trent, session 6, chapter 6, said. For the Council of Trent there is speaking about the disposition which precedes baptism, which is not always an act of theological charity. Accordingly, that the Council of Orange and the Council of Trent may exclude every beginning from us against the remnants of the Pelagians, they define that point.

Someone could say that here the Council of Trent condemns the error of those who affirmed that a man can accomplish all those things "as he ought," so that habitual grace may be conferred - which is the grace by which formally we are justified. But by that same cut no heretic up to now has taught this, although some of the Scholastics have thought it about penance. The Council of Trent, however, only issued the canons...

It is replied: If he speaks also of habitual grace, he did not pass over ancient heretics, namely those who said that by faith, from one's own powers, the helps of grace are obtained from God - who indeed were none other than the Semipelagians. Therefore that phrase, "as is fitting" (sicut oportet), he understood of obtaining the helps of grace; about the other interpretation which the Scholiast of Cassian applies, we shall speak at the end of the chapter.

Confirmatur: Moreover, even if we were to explain that "as is fitting" as the more recent writers contend, namely, to this end, that the act be supernatural; nevertheless in that same canon 6 of Orange the error of Cassian would be condemned, since it is added: "Or if he subjoins to human humility and obedience the aid of grace." For thus the Council would condemn both the assertions, namely, to assert that we are able to perform all those things "as is fitting," that is, supernaturally (as the recent interpreters explain), and to assert that by human labor the grace of God is obtained.

Error excluditur: Lastly, in the Directorium inquisitorum, part "qui," question 9, among the errors of Raymond Lull is set down here the 64th: "That in doing good, we ought not to hope (that is, expect) that God will begin, because he has already begun when he created us, gave us the world for our preservation, that we might serve him." Therefore there is condemned what he said, that by the mere gift of creation, as the Massilians taught, we are able to begin; therefore in the same way those who said that some beginning of grace precedes from us ought to be condemned. I confess that Raymond taught this nowhere, as learned men prove in a certain little book, which below I

1955. Vázquez, disputatio 89, cap. 4 - 5 (on the Semipelagians' placing certain beginnings in us).

shall mention in disputation 134, chapter 4; yet for us it is enough that that article was deservedly condemned, that from it we may prove our opinion which we have pronounced on predestination. Therefore it is to be believed by Catholic faith, what in this chapter we have proposed.[1956]

From these things one may gather that the theologian, the Scholiast of Cassian, did not slip lightly, who, having suppressed his own name, defended the opinion of Cassian himself both in the book On the Institutes of the Coenobia and in Conference 13 from error, plainly conceding with him some beginning of grace from us. Thus he has it in proposition 3, where he concedes some detestation of sin and sorrow, which is the beginning of justification - an initiation which certain of the Massilians said was from us in our justification, as is clear from the letter of Hilary to Augustine after the middle, which we shall report below in the next chapter - and thus he concedes with the same Cassian in Conference 13, chapter 17, that God is "a supporter" of some, because, namely, he promotes their efforts toward justification; but "a savior" of others, because he altogether prevents them. Also in proposition five the Scholiast openly admits some beginning of grace, namely prayer, and some endeavor arising from the good of nature to be put forward, so that by it we may in some measure be rendered worthy of God's grace and obtain it, although we are remotely disposed to it from ourselves.[1957]

But the opinion of the Scholiast can be refuted: First, because he despises the judgment of Gelasius, who, as we saw above, for this very reason enumerated the books of Faustus among the apocrypha, that he had thought less rightly concerning the grace of God.[1958] Second, because he did not notice that the doctrine of Cassian was that of the Massilians: for he himself was their standard-bearer, as was noted above. Therefore his opinion and that of the Massilians was condemned by St. Augustine, Prosper, the Second Council of Orange, and Caelestine; or else it is necessary with the Massilians that the Scholiast dictate that Prosper, Hilary, Augustine, nay even the Council of Orange itself, and Caelestine exceeded the due measure and spoke too severely concerning the grace of God - which is absurd. Third, because since the causes of the opinion were Faustus of Riez and Cassian, in the same way Cassian's doctrine was condemned by the most grave men above mentioned, and likewise the doctrine of Faustus in this, that he asserts that some beginning of grace is from us: for thus to human labor Cassian subjoins grace, just as Faustus also does. Fourth, because it follows that to us praying without grace the grace of God is conferred, contrary to canons 3 and 6 of the Second Council of Orange.[1959]

The Scholiast replies that there is condemned there only him who says that we can pray "as is fitting" without the grace of God, that is, who grants a perfect zeal for prayer: for that is denoted by that phrase "as is fitting"; yet that some affection for praying, less efficacious, can be had without grace. But the Scholiast did not grasp the mind of the Council: for there there is not so much condemned him who said that without the grace of God we can pray to God for our justification, as him who asserted that the grace of God by prayer is obtained from God by one's own powers - even

out of his mercy; for about this was the controversy with the Massilians, since they conceded some beginning from us, whether of prayer, or of labor, or of any other work whatsoever, so that grace be conferred. Wherefore he errs no less who says that to some lesser beginning from us than to a more perfect one the grace of God is given. For each subjoins grace to human labor and industry, which is universally condemned in that canon 6; nor does it in any way temper the error if we say that the grace of God is given to those praying, not out of justice, but by the free will of God, to those praying from their own powers or laboring. For the Massilians never said that the grace of God is given so out of justice that it could not be denied, but out of mercy and free will, as I noted in disputation 89, chapter 5; nevertheless their opinion was condemned, as we saw above.[1960]

In the same way as the Massilians think those to think, who grant from us that moral good works are the beginning of grace, as is also shown by authority.

On works preceding grace and Semipelagian error

Caput XII - On certain recent theologians who concede some moral works to precede and remotely dispose

to the first help of grace

There are some recent theologians who, in order to defend that certain moral works proceed from us, by which we are remotely disposed to the first help of grace and obtain it from the benignity of God - just as some of the ancients taught, whom in chapter 10 we have recounted - assert that the sentence of those ancients differs much from the error of Cassian and the Massilians: because the Massilians not only conceded beginnings from us which are moral good works of acquired virtue, but works also of infused and supernatural virtue, such as prayer, by which someone petitions justification for himself (for this is something supernatural), or the will and desire of justification - and that this is rightly damned, because works of the supernatural order cannot be ascribed to bare free choice. But, they say, surely no one can deny that moral works of acquired virtue are from us before the grace of God begins to help us, and that by them God is moved to bestow upon us the helps of his grace.

However, those also seem to me no less to be mistaken who suppose that by these moral works we begin and obtain the grace of God, than the Massilians: and all of them in that proposition are condemned in the Second Council of Orange, canon 6, and by Peter the Deacon in the book On the Incarnation and Grace, chapter 8: "Grace is subjoined to human labor or obedience" - which is condemned in the same way.[1961]

It is proved: First, because among Prosper, Augustine, Caelestine, the Council of Orange, or the others who disputed against the Massilians, you will never find this distinction noted, nor the least beginning of grace from us conceded: therefore this is a figment brought forth from the very brain of these Doctors. Second, Cassian, book 12 On the Institutes of the Coenobia, chapters 13 and 14,

1960. Vázquez, disputatio 89, cap. 5.
1961. Concilium Arausicanum II (Orange II), can. 6; Petrus Diaconus, De incarnatione et gratia, cap. 8.

among the other beginnings which he says precede from us, numbers certain virtues that are altogether moral, such as vigils, withdrawal from company, and other things of this sort; whence in the Second Council of Orange, canon 6, he is condemned who says that to those laboring and keeping vigil without the grace of God grace itself is conferred.[1962] Third, Faustus of Riez, who was in the same error of the Massilians, book one On Grace and Free Will, chapter 17, says that the grace of God requires a man already keeping the precepts - namely of the Decalogue, and moral precepts - so that from there, as it were by a certain handle, God may lay hold of him: which Peter the Deacon, a little before cited, rebukes, because he subjoined grace to human labor. And in the same way there are condemned in the Second Council of Orange, in that canon 6, those who subjoin the help of grace to human humility or obedience: but the Council understands by "obedience" the observance of the precepts which occur daily to be observed, namely, moral precepts. Thus Prosper reports their opinion in that letter to Augustine, before the middle, with these words: "Now here they bring forward testimonies by which the exhortation of the divine Scriptures incites men's wills to obey, who from free will do the things that are commanded while they neglect them." And after a few words interposed: "Him who seeks good, the grace of God nourishes; him who pursues evil, his own damnation takes up" - which Faustus himself thereupon follows out. But who would say, or by what foundation is it permitted to affirm that the Massilians asserted only this about supernatural precepts, and not about the precepts of the Decalogue, the observance of which they said to be the beginning for which grace was given to us? In the same way Augustine understood the opinion of the Massilians in the book On the Good of Perseverance, chapter 17, where, when he had shown that charity itself is predestined by the Lord, he subjoins by his grace: "But what I have said about charity, this about faith, this about piety, about charity, about perseverance, and - lest I go through them singly - this about every obedience by which obedience is rendered to God, can be said most truly." Therefore he teaches against the Massilians that there does not precede from us any obedience by which most truly obedience is rendered to God...[1963]

No observance of the commandments of God precedes, on account of which grace (*gratia*) would be given; rather that very obedience (*obedientia*) is predestined (*praedestinari*) by God. By obedience he understands chastity and every other virtue whereby God is obeyed, namely by observing the precepts - even in the observance of the moral commandments.

Fourth, the Massilians, as we shall say in chapter 18, used to say that some beginning from us exists. First, lest any force be taken away from our free choice (*liberum arbitrium*), if grace were to forestall it: for if free choice began to use its liberty well, or to procure grace for itself, they said that grace depended on our liberty, and thus that we suffered no force from grace itself; next, that acceptance of persons would thereby be removed: for, once a beginning from us were conceded, there would be some reason why grace should be given rather to one than to another, and it would not be referred solely to the will of God; finally, that correction might have a place in us: for if God

1962. Cassianus, De institutis coenobiorum, lib. 12, cc. 13 - 14; Concilium Arausicanum II, can. 6.

1963. Prosper, epistola ad Augustinum (ante medium); Faustus Regiensis, De gratia et libero arbitrio, lib. 1, c. 17; St. Augustine, De bono perseverantiae, c. 17.

had first to begin, correction seemed to them to be in vain, since man does not begin of himself in any way: but for another reason they did not concede any beginning from us at all. Yet these three things they themselves could equally defend by conceding some beginning from us of acquired moral virtue (*virtus moralis*), and also of infused and supernatural [virtue]; and to this Hilary seems to allude in that letter to Augustine, after the middle, proposing the objection of the Massilians against the doctrine of Augustine in this way: "For if thus men are predestined to either part, so that from some to others no one can pass over, to what does belong so great an external urgency of correction by man, if, when not entire faith arises, at least compunction of infirmity, or the peril of manifest death, deters? For if no one can fear that by which he is deterred, except by the will which is assumed, he is not to be blamed on that account that he does not now will, but in that, and with him, who at some time so willed not, that he should deserve to incur with his posterity that damnation, so as never to will right things, but always evil things. But if there is any sort of sorrow which arises at the exhortation of the reprover, this very sorrow they say is the cause on account of which either one is rejected, or another is taken up." By which words he plainly teaches that it lies in the power of man's free choice to have some such sorrow of itself, if at least he cannot have faith; and that on account of that sorrow the grace of God is predestined for the man, and he himself is assumed by God, just as on account of the opposite another is rejected; and finally, that a man is able by his own powers to do some good, by reason of which he obtains the gift of grace.[1964]

For if he could do nothing but evil, then when the man did that [evil], it would not be imputed to him, but when, together with the first parent, he lost the faculty of a good work. But once it is conceded that a man is able by his own powers to do something good, even of acquired moral virtue, by reason of which grace is given to him, then the Massilians themselves would already assign a cause why one is assumed to grace and another rejected, even if no one were predestined by reason of faith; and thus they would remove acceptance of persons, and would show that no force is brought upon free choice, since free choice itself forestalls grace: they would also assign room for correction, so that a man corrected beforehand might do good by his own powers and obtain grace from God.

But the aforesaid reasoning proves not only that no moral work from us is the beginning of acquiring grace, but also that even a remote disposition (*dispositio*) on our part can be removed - and (as some more recent authors say) a disproportionate disposition, or per accidens removing only impediments - which is said to be a disposition to grace: for a disposition to grace ought in some way to dispose toward acquiring it, and to contribute something to its attainment; with which, indeed, many Massilians, in my judgment, would be content: for they only wanted to avoid those absurdities which seemed to follow if God forestalled all our solicitude; but these they removed by conceding even the least beginning from us. But if you say that that remote disposition to acquiring grace contributes nothing, you call it in vain a disposition to grace: for it is not called a disposition to some form which contributes nothing to the attainment of it.

1964. Hilary, Letter to Augustine (after the middle), proposing the Massilians' objection against Augustine; cf. Cassian, De institutis coenobiorum, lib. 12.

How, however, without error there can be conceded some disposition from the gift of creation, not to grace, but to this - that grace may work in us better and more easily - we shall say in our disputation 93. And this has not only nothing in common with the error of the Massilians, but also is the manifest doctrine of Augustine, as we shall show there. Therefore the Massilians do not concern themselves with supernatural works, but are content if something good from us precedes, in view of which God bestows his grace.

Wherefore, since Augustine in the work On the Predestination of the Saints gathers together all the objections of the Massilians, he shows that there is no beginning of grace from us; he denies not only faith, and the works of infused virtue, but even of acquired moral [virtue]. This he very skillfully attests in book 4 against Julian the Pelagian, chapter 3, with these words: "Since therefore man is divinely helped, not only to lay hold of perfection, but also as to the beginning of that whose end grace perfects; you surely wish it to be understood that he can begin without grace that which grace perfects; but rather [it is] as the Apostle says, that he who begins a good work in us, may perfect it unto the end. For in that wherein you wish man, as you say, to be stirred by incentives to something laudable of a generous heart, in this you wish him to glory, not in the Lord, but in free choice; and thus to give the prior [place], that it may be repaid to him; and in this way grace is no longer grace, because it is not gratuitous."[1965]

Behold, Augustine universally condemns any beginning of a generous spirit to which grace would be given. But there would without doubt be some such beginning from us, if, by doing some good moral work, we were to obtain for ourselves the grace of God: for such a work - that is, of moral virtue, as conjugal chastity - Julian contended to be from us the beginning of acquiring grace.

And in book 1 to Simplicianus, question 2, a little before the middle, he shows that there was no work on our part which God, looking upon, chose us for his grace, just as it had been said concerning Jacob and Esau: "When as yet they had done nothing good or evil, that the grace of God, the election of each, might in consequence be obtained"; but [that] God by his mercy makes it that man believes, and that he be merciful; and he concludes with these words: "Whence we are admonished neither in the works themselves of mercy to glory and be exalted, as if by them, as our own, he had merited God, since, that he might have that very mercy, He afforded [it] who will afford mercy to him to whom he shall be merciful. But if anyone thinks that by believing he has deserved it, let him know that He, who has mercy by inspiring faith, afforded to him that he might believe."[1966]

Here Augustine is not speaking of merit worthy of eternal life, but of impetratory merit (*meritum impetratorium*), by which someone supposed that by our own powers we merit grace and the mercy of God toward us; and this is what he says, that "we merit God for ourselves," that is, his grace; nor does he exclude these works from us from the ratio of merit because they are not condign, but because we have received them also from God through his mercy and grace; and since

1965. St. Augustine, Contra Iulianum Pelagianum, lib. 4, cap. 3.
1966. St. Augustine, Ad Simplicianum, lib. 1, q. 2 (ante medium).

he says that we must not glory in works of mercy, as if by these we had merited God, that is, his grace and his mercy for us, by the same reason he excludes every moral work from us which would be impetratory merit of grace.

And this is the reason why the Second Council of Orange, canon 6, excludes every beginning from us, when it says that those who "subjoin grace to human obedience" contradict the Apostle saying: "What do you have that you have not received? If then you have received it, why do you glory as if you had not received it?"[1967] For if someone by obedience and human labor obtains grace for himself, he could glory very much in something without Christ; and in like manner could he who by moral works in some manner should obtain grace. Therefore the Council defines the same of these works as of any others whatever. For it does not condemn the Semipelagians and Massilians because they say that the works which the Scholastics call supernatural, and which are of another order, are done by one's own powers, but because they assert that we begin, and that by our own works we obtain the grace of God: a thing which is as absurd to understand of moral works as of others: for in either way the Fathers would infer that grace is not given out of mercy, but is repaid out of gratitude, as we shall see in chapter 15.

Finally, the same Augustine, in that same question to Simplicianus, near the end, concerning election to grace, says: "For I have nothing which, looking upon first, I should regard on our part in the choosing of men to saving grace - unless to the examination of this election I am by some thought premitted - unless it be a greater talent, or fewer sins, or merits; let us add also, if you please, honesty and useful learning. Whoever then shall be less entangled in sins - for no one can be in none - and polished in talent and in the liberal arts, seems to be to be chosen to grace. But when I shall have set this down, he will so laugh at me who has chosen the weak things of the world that he may confound the strong, that, looking upon [this], corrected with shame, I myself shall laugh at many; and [I shall laugh] that those who were chaster than some sinners, and orators than some fishermen, have been left, while sinners and harlots, and rude fishermen, have been chosen." These are Augustine's words. Therefore he would deride them because, although they were chaster, they had been left, but sinners and harlots chosen; and although they were orators and endowed with eloquence, they had been left, but rude fishermen chosen. And when he says that nothing can precede except either a greater talent and better natural disposition, or fewer sins, or the respectable human disciplines, and that none of these can be chosen for grace, without doubt he excludes every beginning, however least, from our powers, even of moral works, and he refers this election to the will of God alone. And when he denies a beginning in foreknowledge, so that men are chosen from eternity, he denies it also in time, so that grace be given because of it. For he often inculcates that the reason is the same for the giving in time and the election in foreknowledge.[1967]

To this is added the Council of Valence under the Emperor Lothair, chapter 3, where it says: "We confess predestination of the elect to life and predestination of the reprobate to death; in the election, however, of those to be saved, the mercy of God precedes the merits of the good." In which

1967. St. Augustine, De praedestinatione sanctorum, cc. 4 - 5, 10; cf. 1 Cor 4:7. See also Second Council of Orange (Arausicanum II), can. 6.

place it considers the mercy of the grace of God prior to the foreknowledge of merits from us; and since it attributes predestination to the mercy of God, it plainly excludes every even least merit, as will be proved in chapter 15.[1968]

Lastly, you see that the aforesaid Fathers, against the Massilians, excluded not only condign merit (*meritum condigni*), but any least merit, even impetratory; moreover, that the Massilians did not err in saying that grace is promised, and that by reason of the promise it cannot be denied to those who labor and begin from themselves, is evident from those things which we said in disputation 89, chapter 5. For the Massilians never conceded condign merit, but a certain remote occasion, or impetration, which God by his mercy would promote, as Cassian said in book 12 of the Institutes of the Coenobia.[1969] And of election to grace, and that the gift of it depends upon no free choice, as we have manifestly shown there from Cassian. Wherefore, no approved author of the Massilians has thought that grace is given for reasons or causes which we shall adduce in chapters 14 and 15; but the sentence of the Fathers - that grace is given, not by liberality because of some work of free choice - is proved by their authorities and reasons. Furthermore, that any grace of God is promised to moral works we shall see below in chapter 16. And the Council of Valence says the same. For when that Council had been gathered so that the Fathers should define the case of the bishop of that city, it pleased them at once to add a few documents of faith, and first of all concerning foreknowledge and predestination, because, as is said in the first chapter, the scandal of the souls of certain brethren was increasing; for the remains of those Pelagian [errors] still remained, which had begun in the time of Cassian, and for a long time flourished in Gaul. And thus far the Catholic sentence, proved by the authority of the Fathers, remains in full vigor, which we shall set forth in chapter 14.

That Scripture also clearly shows there is no human beginning even of moral works for which God would grant grace

By testimonies of Scripture it also can altogether be shown that there is no beginning from free choice, even of a moral operation, on account of which God would bestow his grace upon us; and besides those things which we shall adduce, by which this is plainly proved, there is especially the place quite familiar to Augustine, 1 Corinthians 4: "O man, who is it that distinguishes you? And what do you have that you have not received? But if you have received it, why do you glory as if you had not received it?" which he most fully explains in the first book On the Predestination of the Saints, chapters 4 and 5; and from that he proves that neither by faith, nor by any good work from itself, is one person set apart from another, but by the mercy of God alone.[1967] He infers this in this way. Since among the Corinthians there had arisen questions because one said he was of Cephas, but another that he was of Apollos, and thus each one gloried in his human teacher, wishing to

1967. St. Augustine, De praedestinatione sanctorum, cc. 4 - 5, 10; cf. 1 Cor 4:7. See also Second Council of Orange (Arausicanum II), can. 6.

1968. Council of Valence (Concilium Valentinum) under Emperor Lothair, cap. 3.

1969. Cassian, De institutis coenobiorum, lib. 12, cc. 13 - 14.

1967. St. Augustine, De praedestinatione sanctorum, cc. 4 - 5, 10; cf. 1 Cor 4:7. See also Second Council of Orange (Arausicanum II), can. 6.

repress this schism of theirs, in chapter 3 he explains what Peter, or Paul, and Apollos were, to the Corinthians, that faith and justice might be infused in them and might grow in them. He says therefore that they were ministers, who planted and watered, but that God gave the increase. Then, in chapter 4, that no one might be puffed up for one against another, contending that he had a better teacher than another, he subjoins the cause: "For who is it that distinguishes you?" By which words, as Augustine says in chapter 10, he confounds the pride of men, lest anyone glory in man, and therefore neither in himself, but in the Lord.[1967] But if anyone should take it that he has received either faith, or a moral work by which he obtains grace from God, from himself and from a gift of creation alone, without the grace of Christ, he would have wherein to glory, at least falsely, not indeed without God, who as Creator is the author of all. He also adduces that of Romans 9: "O man, who are you that replies against God? Shall the thing formed say to him that formed it, Why have you made me thus? Or has not the potter power over the clay, of the same mass to make one vessel unto honor, and another unto dishonor?" But we shall give a fuller exposition of these places in disputation 95, chapter 8.

The same truth is confirmed by testimonies of Scripture.

Caput XIII - On explaining Romans 9 and confirming our position

But as to "unto dishonor," the context of those words must first be explained, so that thereafter we may confirm our position. Now the whole difficulty is made by that word, "You say" (Dicis), and the word, "It is asked" (Queritur), and that, "O man," etc. For if that, "You say," signifies an objection which someone could make to Paul, as most interpret; and the subject supposed by that word, "It is asked," be "God," as all the Greeks and commonly the Latins will have it; the sense is: If God has mercy on whom he wills, and whom he wills he hardens, why is there complaint against human beings, that they do not live justly and piously; since no one can resist his will? Again, when it is subjoined, "O man, who are you who answer back to God?" Paul seems to be replying, as both the Greeks and the Latins commonly understand, and to be rebuking the objection of the man. Yet the reason that follows, which Paul seems to adduce in confirmation of his rebuke, stands very much in the way: namely, "Does the thing formed say to him who formed it, Why have you made me thus?" For these were not the man's complaints, but rather the contrary - why, to wit, God complains of man, when he has mercy on whom he wills. For neither could the craftsman complain of the vessel itself that it had been made in this manner or that, since it was formed by the craftsman himself. Wherefore a man in turn could object to Paul that his reply is altogether lacking, in this way: I do not say why man complains of God, for, as you say, just as the vessel cannot complain of the craftsman, so neither can man of God; but I say, why does God complain of man, since a craftsman cannot complain of the vessel?

If, however, as some Latins will have it, the subject supposed by the word, "It is asked," be "Man," which is truer; still the context remains most fitting, if the word, "You say," signifies an objection: for the sense will be of this sort - "You will object to me thus: if it depends on God's free

will (*voluntas*), that he has mercy on one and hardens another, why is man further blamed that God does not have mercy on him? for no one can resist the will of God." But the reply of Paul is difficult: "O man, who are you who answer back to God?" For without cause would Paul rebuke, saying, "O man, who are you who contradict?" him who would be saying that no one can complain of God; he would most fittingly have taught that no reason of any sort can lie against God, even if it be within his liberty to act thus or otherwise.

Therefore, in order that the context may be clearer, I judge that that particle, "You therefore say" (Dicis itaque), is not of one objecting, but of one inferring a conclusion from the things said, in this way: "Therefore now you say and confess, convinced by the things we have said up to this point, that it is in vain for man to complain of God because he divides his grace (*gratia*) to whom he wills: for to his will, which is supreme equity and is in place of a law, no one can resist; I do not say by power (for the Apostle is not treating of this), but not even by reason, just as we resist kings by law and by reason when we in no way can by power. Then, when it is subjoined, 'O man, who are you who answer back to God?' these are not the words of Paul rebuking, but are to be continued with the preceding as part of the very inference, in this way: Nay rather, you say to any man whatsoever, 'O man, who are you who answer back to God and contradict?' For in the Greek there is the particle ἀλλ' οὖν γε, which is rendered in Latin, Quinimo, and it augments the inference itself. Then the rest well agrees."

From this passage, however it be understood, our position is excellently proved: for if man cannot complain of God because he chooses this one for congruent grace, but not that one, it follows that there is no beginning, reason, occasion, or even the least merit from free choice (*liberum arbitrium*) for our predestination (*praedestinatio*); just as in the same mass of clay there is not any - no, not the least - reason why out of one part a vessel is made unto honor, and out of another unto dishonor: otherwise, in some manner man could complain of God, accuse him of ingratitude, and in some way resist his will by reason; because, when he had begun of himself, as far as he could, God did not follow up his endeavor. And this testimony thus proves that there is no beginning from us of supernatural virtue, just as neither of acquired moral virtue. Add also that, since in that same place in Romans 9 and in Jeremiah 18 man is compared, in the business of his justification, to clay out of which a potter's vessel is made, although it is not only formed by the potter into a vessel, but is also prepared and made pliant by him; so also man is not only justified by God, but is also made pliant and disposed by preparatory good works: if man, by certain works of his own without the touch of God's grace, obtained the grace of God, he would in some fashion make himself pliant and prepare himself.

There are, moreover, other testimonies of Scripture which prove that grace is not found by the solicitude and prayer of him who attains it, which in the same way confirm this position: however, we shall report these below in this disputation, chapter 17. Now indeed the same position must be confirmed by reason.

1967. St. Augustine, De praedestinatione sanctorum, cc. 4 - 5, 10; cf. 1 Cor 4:7. See also Second Council of Orange (Arausicanum II), can. 6.

Caput XIV - The same Catholic position is shown by a priori reason

Although, for confirming the Catholic doctrine which in chapters 11, 12, and 13 I have established by authority, reasons are not lacking; yet, since this matter altogether surpasses what is natural and human philosophy, it cannot be demonstrated from principles known by the light of nature alone; rather one must in good part lean upon authority also. I will therefore set down two reasons, gathered from the authority of the Fathers and of Scripture, by which I shall explain the nature of the grace which through Christ has been restored to us and its predestination. But before the first reason, it must be briefly premised what in the disputation on grace, put. 88, cap. 7, I said, namely, that the grace of God in general is any gift whatsoever bestowed upon us liberally by God, even if you include the gift of creation; but that the grace of Christ is the daily help by which man is directed to do well and to conquer temptations, by which at length, through individual acts, he attains to justification. Therefore, when we treat of the predestination of the grace of God, we do not treat of the providence by which God decreed to create men, but of that by which through Christ He destined to lead them to justification and to a right life: whether of this there be given from our free choice any cause which is not an effect of the grace of God through Christ. For this reason we said that no good work on our part has furnished God with an occasion for giving or predestining to us the grace of Christ, because even the least thing by which man begins to enter upon the way of justification ought to be reckoned among the gifts of the grace of Christ, and thus to fall under grace itself as predestined. This is proved by the following reasoning.

Since man is of a rational nature, indifferent indeed to follow the good or the bad, nor is he by the nature of his creation determined to the good more than to the bad; but he is moved by a foregoing thought to this or that; and he does not have the first thought in his power by the gift of his creation; it follows that he obtains a new grace from God when he is moved by the thought of good, namely, that thought which proposes the object so that in reality, as God knows, the will should pursue and love it. I said the thought of good; for if the thought is of an evil object or of an indifferent one - even if it be useful for the present life - it is not grace, which the Fathers contend with the Pelagians is through Christ, and by which we are promoted to justice, although in some respect it can be called a gift on account of usefulness for this present life, as creation itself. Moreover, if such a thought proceeds from some series of external things, which God by His foreknowledge and providence has so disposed, nothing hinders that it be in itself a gift of God distinct from the gift of creation. For from the force of creation there did not follow this order of things, from which a congruous and efficacious thought would arise, rather than the opposite order. Since therefore God so disposed things that man should be moved congruously and efficaciously, He predestined to him a new gift distinct from creation.

Nor indeed is this gift only of some external protection, but also of an interior inspiration and thought, since the whole external series of things is ordered to this, that inwardly man be moved by a holy thought; which, because by the opposite order of things and by many other ways it could have been disturbed by God or altogether impeded - without any hurt at all to the gift of creation and of free choice - so that it should not have its effect, for very good reason must be called a new

grace, distinct from the very gift of creation itself, as will also be shown in disputation 95, cap. 6. And although this reason would not prove that every moral work, correct in every circumstance, is a gift of God from the grace of Christ distinct from the gift of creation (about which I do not dispute now), nevertheless it effectively proves that that work and that holy and congruous thought from which the occasion or beginning of our justification is taken, is a grace of God distinct from the gift of creation; and that, as in Adam we lost the occasion, so through Christ it was predestined for us from eternity and restored in time. For just as by the sin of the first Adam we lost justice and innocence, so also we lost justification itself and any grace that moves us to it, and likewise every occasion and beginning of it; all of which were predestined and restored to us in the second Adam, that is, in Christ.

In this way Fulgentius is to be understood in the book On the Incarnation and the grace of Christ, chapter 12, at the beginning, when he says: "Thus to the human race the divine goodness bestowed gratuitous grace, by which in men not only would every iniquity be blotted out - contracted by the obligation of propagation and with the addition of the vice of the proper will - but the faculty of holy thought, long ago lost in the first man, would be received again through the second man."[1970] And Prosper, to the Chapters of the Gauls, chapter 9: "And since with two hundred and fourteen priests, whose constitution against the enemies of the grace of God the whole world embraced (he means the African councils), by a truthful profession - as their very discourse has it - let us say that the grace of God through Jesus Christ our Lord helps us not only to know justice but also to do it by individual acts, so that without it we are able to have, to think, to say, to do nothing of true and holy piety. Nor do we think that these gifts are not from God, so that - because He is the author of our nature - He may be thought to have already conferred these things by ordination, since He indeed gave this faculty to man from the beginning; but we all lost it in him in whom all sinned. Whence we need to be renewed by another creation and another principle in Christ."[1971] Who, moreover, would deny that at least those moral works which furnished God the occasion and cause of our salvation are true and holy piety? Therefore Prosper thinks that these are not had from the gift of creation, but from regeneration through Christ, by whom what was earlier lost is restored to us.

Corollary against Durandus: It follows therefore from the foregoing reasoning, at least, that good moral works by which we impetrate from God the helps of grace are also from the help of grace admonishing within, and not only from peculiar providence and external protection; and thus truly are effects of the grace of God, just as they are also within predestination; indeed, for this very reason they fall under predestination, inasmuch as they pertain to grace, as we showed in chapter 10. And how Augustine put the beginning of the grace of Christ in holy thought, and in what way, we saw above in chapter 11. Moreover, from our Scholastics this kind of grace - by the determination of thought to the good side, since man is from himself indifferent - is taught by St. Thomas, 1.2, q. 109, and by Capreolus on II, dist. 29, q. 1, art. resp., conclusion 4.[1972]

1970. Fulgentius, De Incarnatione et gratia Christi, cap. 12 (init.).
1971. Prosper, Ad capitula Gallorum, cap. 9.
1972. St. Thomas, Summa theologiae, I-II, q. 109; John Capreolus, In II Sent., dist. 29, q. 1, art. resp., concl. 4.

Note, first, in passing, that the help of grace through Christ is not only called the help which by the Scholastics is said, according to its substance, to be of the supernatural order and, in their opinion, is conferred for the acts of infused virtues alone - whereby our will is compared as from itself an instrument - but also whatever good has been given to us through Christ, and, after the sin of the first parent, has been restored for living rightly, overcoming temptations, and attaining to justification - such as is that devout and holy thought of which we have thus far spoken - which indeed, according to its substance, is of the natural order, yet can in a certain way be called above nature, because it is had without our industry and solicitude; rather, it forestalls our solicitude and operation, and is conferred with a view to a supernatural end.

Moreover, many considerations persuade that the help of grace through Christ is not only for those acts of the supernatural order, but also for certain other things of the natural order.

- First, the authority of St. Thomas, 2.2, q. 136, article 3, to the second, where, treating of patience, he says that the act of political virtue is commensurate to human nature, and thus our nature can tend to it without the help of grace that makes pleasing to God. He understands, however, help according to a substance that is supernatural; yet not without the help of grace: therefore he concedes help of grace for acts of the natural order according to their substance, besides the supernatural help for acts that are, according to their substance, supernatural.[1973]
- Second, the same is proved by the authority of the Doctors, whom we a little before alleged, [1974] and of many others, who teach that all moral works are always done by the help of grace; and if their sentence, taken thus universally, does not please, at least their opinion cannot displease, because they affirm that, for acts more difficult of moral virtue and for more difficult temptations against moral precepts, the help of grace is necessary. Indeed, concerning all temptations, not a few affirm this very thing as probable; as we shall see in its place.[1975]
- Third, the same is gathered from the Council of Trent, session 6, chapter 16, where it is defined that the grace of God always precedes, accompanies, and follows the good works of the just; wherein he plainly includes even moral works by which we observe the precepts, as will be clear from the same place of the Council; and we shall show below, chapter 11, article 4, that by grace there is not understood habitual grace, but the help of probation, in question, article 3.[1976]

Fourth, unless we concede this, we could scarcely defend that the beginning of our justification is not from ourselves, or that there is not some occasion on our part by natural good works, as we were proving in this chapter.

1973. St. Thomas, Summa theologiae, II-II, q. 136, a. 3, ad 2.

1975. See above, cap. 11; and below at its place.
1976. Council of Trent, sess. 6, cap. 16; cf. cap. 10 - 11 on the same session, and art. 4 as noted.

Next we ought to observe that it is of no importance to us whether this holy thought be after faith and the supernatural knowledge of God, or whether even before faith it is found; for however it comes about, that from that thought there should arise some work by which we impetrate from God some help of grace - especially that by which there is gathered a series of operations all the way to justification and perseverance - must be said to be of grace through Christ; and, inasmuch as it forestalls consent and descends to works, it is rightly called prevenient and cooperating, according to the terms of the Schools. Nor do I doubt that, by certain moral works done by the grace of Christ before someone knows the supernatural mysteries of Christ, he may obtain from God the true knowledge of them; whereas by older authors that knowledge was often attained from the law. What Augustine at times seems to deny about grace before the knowledge of faith, he teaches because he judged that, for the most part, those who do not have true knowledge of God - even if they often act concerning the matter of virtue - always act from a bad end, or with a bad circumstance; of which we shall treat in 2.2, q. 109, article 10.[1977] But how faith is the gift of God and grace, we shall say in the first and second questions elsewhere.

Caput XV - A posteriori reason for the same position

The later reason, taken from the absurd, is of this sort. If the help by which we are promoted to justification were to be posited as arising for us on the occasion of some work of ours, then it would not be grace, and consequently our justification would not be called grace but from our works; since in them it would be repaid to us...

But on the contrary: Paul in Romans 3 and 4 and to the Galatians 2 and 3 excludes works of mere free choice from our justification, and openly pronounces that a man is not justified by the works of the law, but by faith; not, indeed, if one should say "by the help of grace" which is communicated to us through faith, for when he excludes works, he excludes not only ceremonial observances, but also moral works which are done from the bare knowledge of the law; so that he may show that the mere knowledge of the law, without the Spirit of grace moving within, does not suffice for justification and for the observance of the law. Now that Paul speaks not only of the ceremonial law but also of the moral is plain; because in Romans 2, showing that it matters little whether one have the law written outwardly in order to observe it, he adduces the example of the Gentiles, who by the natural knowledge alone of the law - indeed, not without the Spirit of grace moving within, but without the exterior letter - observe it and are justified; which is clearly to be understood of the moral law. And in chapter 7, showing the weakness of the law as serving only to give knowledge of sin, and that, if the Spirit of grace be lacking who moves within, sin follows, he brings forward the example of the moral law, when he says: "What then shall we say? Is the law sin? God forbid. But I knew not sin except through the law; for I had not known concupiscence, unless the law said: Thou shalt not covet" (Rom. 7:7). Which words are plainly to be taken not of the ceremonial but of the moral law. And to the Galatians, chapter 3, to show that the letter of the

1977. Cf. the discussion on those who act in the matter of virtue without true knowledge of God: Summa theologiae, II-II, q. 109, a. 10.

law sounding outwardly, without the Spirit of grace, works death rather than righteousness, thus he says: "For as many as are of the works of the law" - that is, who attempt to act by the bare knowledge of the letter of the law - "are under a curse"; that is, they incur a curse because they do not keep the law. "For it is written: Cursed is everyone that continueth not in all things which are written in the book of the law to do them" (Gal. 3:10). But this curse is attached also to the moral precepts. Therefore, when Paul in both epistles says that man is not justified by works, he plainly excludes moral works done by one's own powers: either because there are no such works as could justify by themselves, or because there are no such works as would obtain justification from God and in some way initiate it.

Fourth, unless we grant this, we could hardly defend that the beginning of our justification is not from ourselves, or that there is not some occasion afforded by moral good works - as we were noting in this chapter - whereby we should observe the precepts. Then we must observe that it makes no difference for our thesis whether this holy thought occurs after faith and the supernatural knowledge of God, or whether it also is found before faith: for however it happens, from that right thought there springs some work by which we ask and obtain from God some help of grace, especially that by which the series of operations is gathered up as far as justification and perseverance. This is truly to be called grace through Christ; and, in so far as it prevents (precedes) consent, it is to be called prevenient or operating grace; and in so far as it accompanies consent, it ought to be called cooperating grace. Yet I have no doubt that by some moral works done by the grace of Christ, before a man knows the supernatural mysteries, one may obtain from God true knowledge of them, and further, by means of that knowledge the man may attain justification. If, more reservedly, St. Augustine sometimes denies grace before the knowledge of faith, he does so because, as he thought, for the most part those who do not have the true knowledge of God, even if they frequently act about the matter of virtue, always act with a bad end or with a bad circumstance; about which we shall treat at length in I-II, q. 109, a. 2. But how faith is the gift of God, and prayer likewise, we shall say in that question, article 1 first, and then second.

Moreover, we must show from the Council's very text that the word "grace" does not mean the habitual [gift], but the help; we will prove this in that question, article 3. And we shall demonstrate in I-II, q. 114, a. 4 that the place clearly includes even moral works by which we observe the precepts, as is plain from the same passage of the Council.

A posterior argument: if the help toward justification were given on the occasion of our works, it would not be grace

The posterior argument, drawn from an absurdity, is of this sort: If the help by which we are advanced toward justification were given to us upon the occasion taken from some work of ours, that would not be grace; and so our justification would not be from grace, but from our works, since it would be repaid to them as a debt - which is absurd. This plainly includes even moral works, as we noted in this chapter. And we shall show in I-II, q. 114, a. 4 that by the name of grace there is not understood the habitual gift, but help; we will prove this in that question, article 3.

Lest someone contend too far that here Paul only excludes moral works in that, of themselves, they do not have the power of justifying, but that he does not deny that by these works the grace of God is obtained: from chapter 11 to the Romans I show more clearly that by moral works done without the Spirit of grace a man does not obtain from God the help of grace such that he comes to justification. For he says: "The remnant," that is, the few, "are saved according to the election of grace. And if by grace, now not by works; otherwise grace is no more grace" (Rom. 11:5 - 6). As if he were to say: Those few who are saved were chosen by God to His grace gratuitously, and by a gratuitous election they are saved. But if they were chosen gratuitously, they could not have been chosen because of their works, whether these had gone before or were foreseen. Thus St. Augustine understands this passage, in the first book to Simplicianus, question 2, not far from the end, and in the seventh sermon on the words of the Lord according to Matthew, and in the book On Patience, chapter twenty, and in the first book On the Predestination of the Saints, chapter three; and the reason is that election would then be owed, not gratuitous; whence grace would not be grace - that is, what otherwise would be grace then would not be grace. With this argument from the testimony of Paul against the Massilienses the Fathers use to prove that the bestowal of grace in time, and the election unto it in foreknowledge, is not from works, nor does it take from them its occasion. Thus argues Augustine against Julian the Pelagian in book 4, chapter 3, and in that book 1 On the Predestination of the Saints, chapter 3, and very often elsewhere; Fulgentius in the book On the Incarnation and Grace, chapter 18; Prosper, book 1 On the Vocation of the Gentiles, chapter 18 at the beginning, and again near the end, and everywhere in the book Against the Collator, and in the Excerpts of the Genoese to the fourth doubt; and Petrus Diaconus in the book On the Incarnation and the Grace of Our Lord Jesus Christ, chapter 8. After he had condemned the books of Faustus for teaching that the help of grace must be added to human labor, he added: "And so, utterly evacuating the grace of Christ, he impiously professes that the ancients were saved not by the same grace by which we also [are saved], according to what the blessed Apostle Peter teaches, but by the capacity of nature." It is manifest that this Faustus did not deny grace, as Pelagius denied it altogether, but he maintained only that the beginning is from ourselves; nevertheless he seems to have utterly evacuated grace, because, if we were to begin, grace would not be grace. From which it would also follow that we would be said to be saved by the possibility of nature, because by it we would obtain from God the other things necessary to salvation. The same Petrus also says there that the books of Faustus of Riez, in which he teaches that grace must be joined to human labor, were written against the doctrine of the Apostle, because Faustus grants that grace is given to us from our works.

Yet someone may oppose this reasoning, and interpret the mind of these Fathers thus, that they speak only of condign merits, from which, if the grace of God were given - as Pelagius supposed - truly it would not be grace; because then, as it were for an equal price, it would be conferred like the glory of beatitude. For that grace should be given for some other work not condign, but only congruous, does not seem to impede the notion of grace: just as if a great gift were given for a thing of little moment. By this argument some think that, against the Semipelagians, it is not sufficiently proved that grace is not given from merely congruous and impetratory merits. This opinion was

embraced by Andreas de Vega, book 8, on the Council, chapter 5, in order to defend the opinion which he taught in the same book 8 on the Council, chapter 10, namely, that the sinner merits habitual grace and the remission of sins de congruo by preceding works done with the help of grace.[1978]

However, this opinion in no way pleases me, because it would so easily overturn the reasoning of the Fathers against the Semipelagians. For the confirmation of which it must be noted that the nature of a wholly liberal donation consists precisely in this, that it is made from no onerous cause, nor on account of any benefit received, but from the sole intention of giving and of doing good; and this is called a wholly gratuitous donation. For that which is made for some cause, or on account of some benefit received, or with some burden, is called an antidoral donation - that is, remuneratory - even if the benefit received is not equal to the return; or it is called a donation on account of a cause. Either, therefore, God bestows His grace upon us wholly liberally, with a mind to do good and out of mercy - not by an antidoral, that is, remuneratory donation - and thus not even the least merit, nor the least cause on our part, could have preceded; otherwise grace would no longer be grace wholly liberal and gratis, or of mercy, but would be conferred upon us for the sake of gratitude; and without doubt there would have preceded from us some merit or cause, if certain works had gone before by which God were inclined to give us His grace. Or else the donation of God's grace must be called remuneratory and antidoral. In which case Christ also would have suffered for us with a mind grateful toward us, and not with a mind of pity and altogether liberal; and thus our redemption would be not a work of mercy but of gratitude, nor would it be to be called simply a donation: for a donation done with a mind to remunerate is not rightly called a donation - as is marked in the legal rule on donations - which is plainly absurd.

Further, that the donation of grace is not antidoral is plain from this: in the same chapter 11 to the Romans the Apostle, when he proposes the free will of God whereby He has mercy on certain ones, namely, those whom He chose, adds: "O the depth of the riches of the wisdom and of the knowledge of God!" and then, explaining wherein the riches of God shine forth, subjoins: "Or who hath first given to Him, and recompense shall be made him?" (Rom. 11:33, 35; cf. Job 41:11: "Who hath given to Me before, that I should repay him?"). By the name of "recompense" he understands any sort of remuneration and antidoral donation. And he adds: "For of Him, and by Him, and in Him are all things; to Him be glory forever, amen" (Rom. 11:36). And in the same place of Scripture: "All things that are under heaven are Mine" (Job 41:2 Vg.). Therefore no one first gave anything of his own to God. If, then, God Himself is the source of all, the first grace would not redound to us by an antidoral donation, as though man had something beforehand to give; rather, all that man has he has received freely from Him, and for all things he ought to give Him thanks. Therefore the grace which God has given to us He has conferred utterly liberally, without any return, and without any account of remuneration or of "gratitude" owed on our part. Wherefore, when in the same chapter a little above he said, "If by grace, now not by works; otherwise grace is

1978. Andreas de Vega, De iustificatione, lib. 8, super Concilio, cap. 5; and in the same book, cap. 10, where he holds that the sinner merits habitual grace and remission of sins de congruo by preceding works done with the help of grace.

no more grace" (Rom. 11:6), he plainly excluded any works of free choice which would have even the slightest notion of merit, cause, or occasion, on account of which God should bestow His grace by an antidoral donation and remunerate with a grateful mind.

Moreover, as we shall note below, and as Fulgentius teaches, the grace of God through Christ is a work of mercy; because it is given solely from a mind that is moved by our misery, not from a mind of gratitude. For what is given from a grateful mind does not come from the bestowal of mercy; for gratitude regards a benefit received, but mercy regards misery alone. Therefore the Fathers rightly prove not only against Pelagius that grace is not given from condign merits of free choice - because grace would not be grace, as if it were given for an equal price - but also against the Semipelagians they show that grace is not given from congruous merits of free choice, because then grace would not be grace wholly and of mercy, but a certain antidoral and remuneratory donation, even if it were given for works of less value.

Furthermore, the Fathers alleged above stand, as I judge, in this same sentence, namely, that it is evident grace would not be grace if it were repaid even to works of free choice that are not worthy but only congruous; because in some of those places they were disputing expressly against the Semipelagians, who did not say that grace was given for condign merits of free choice, but for works which had some account of merit or of a beginning - see Disputation 89, chapter 4, expressly noted there. And Augustine, in that book On the Predestination of the Saints, chapter 2, against those who said that the beginning of faith is from us but the consummation from God, writes to this effect: that we must not depart from the sentence that even to begin to believe is God's gift; otherwise, if anything should precede from us which could be said to merit, then what follows would be rendered not according to grace but according to debt; so that justification, which faith is said to merit because it asks and obtains it, would be understood indeed as of that sort which some call "impetratory" or which the Schools call "congruous"; nevertheless he judges that even this does not suffice, lest grace be grace, but is said to be given "according to merits."

If he had been disposed with a mind not of pitying, but of gratitude, and altogether not generously for us, then our redemption would not have been a work of mercy, but of gratitude, nor would it be to be called a simple donation; for a donation with a mind to remunerate is not called a donation, as is defined in the law by Regulus, ff. De donationibus: but these are plainly absurd.[1979]

Moreover, that the donation of grace is not a counter-gift (antidoral) is clear from that which in Romans 11 the Apostle said, where, showing the free will of God, by which he had mercy on some, but rejected others, he says: "O the depth of the riches of the wisdom and of the knowledge of God." And explaining wherein the riches of God shine forth, he subjoins: "Who hath first given to him, and recompense shall be made him?" (Job 41:3 [Vulg. 41:11]: "Who hath given before to me, that I should repay him?") - as if he said, No one. But by the name of "recompense" he understands any remuneration and counter-donation; for he added: "For of him, and by him, and in him are all things: to him be glory for ever. Amen." And in that same chapter of Job: "All things that are under heaven are mine." Therefore he distinctly says that no one has first from himself given anything to

1979. Regulus, Digest, De donationibus (Roman law maxim: a donation with an intent to remunerate is not a donation).

God, such that God would repay him his first grace by a counter-donation; because rather all the things that man has, he has gratefully received from him, and for all things he ought to give thanks to him: therefore the grace which God has bestowed upon us, he has conferred altogether liberally, without any return that would have the notion of any remuneration and gratitude. Wherefore, since in that same chapter, a little earlier, he said (Rom 11): "If by grace, now not by works; otherwise grace is no more grace," he manifestly excluded whatever works of bare free will which would have even the least notion of merit, cause, or occasion on account of which God would, by a counter-donation, lavish his grace and remunerate with a grateful mind.

Furthermore, as we shall note below from Fulgentius, the grace of God through Christ is pure mercy, because it is bestowed solely from a mind to alleviate our misery, not from a mind of gratitude: for what is given from a grateful mind is not conferred out of mercy, for gratitude regards a benefit received; mercy, however, regards misery alone. Rightly, therefore, the Fathers not only against Pelagius prove that grace is not given according to condign merits of free choice, because then grace would not be grace, as if it were given for an equal price, but also against the Semipelagians demonstrate that grace is not given according to congruous merits of free choice; for then grace would not at all be grace, and mercy would not be mercy, but rather some antidotal and remuneratory donation, even if something of lesser value were given in return for works.

Moreover, the Fathers alleged above in this very sense, as they judge, hold that grace would not be grace if it were repaid even to not-worthy but only congruous works of free choice; it is clear, because in some of those places they disputed only against the Semipelagians, who did not say that grace is given for condign merits of free choice, but for works that have some notion of merit or of a beginning (as I expressly noted in Disput. 89, cap. 4). St. Augustine indeed, in that book On the Predestination of the Saints, chapter two, against those who were saying that the beginning of faith is from us, the consummation from God, thus writes: "Therefore we do not depart from that sentence which Pelagius, as the same acts attest, was forced to condemn in the episcopal judgment in Palestine, namely, that the grace of God is given according to our merits." But he proves this a little below with these words: "But who will say that he who has already begun to believe, from him in whom he has believed, merits nothing, whence it may be that to one now meriting other things are said to be added by divine retribution, and through this the grace of God is given according to our merits?" By which Augustine only shows that according to the sense of the Massilians some merit, even if not condign, precedes from us: because he who has begun to believe merits something, just as he himself in that same chapter, a little earlier, said that if Epistle 105 already acknowledges that faith merits justification because it obtains it, he understands at least an impetratory merit, or what the Scholastics call congruous, and he judges that this suffices for grace not to be grace, but to be said to be given according to merits.[1980]

He affirms the same also in that same book, chapter two, namely that he who begins to believe merits an increase of faith; and thus, if the beginning of faith were from us, the increase of it would not be grace, because it would be paid as a debt. And in chapter three, somewhat before the end, he

1980. St. Augustine, De praedestinatione Sanctorum, lib. 1, cap. 2 - 3; Epist. 105.

adds: "Wherefore that is not grace, if any merits precede it"; he did not say "condign" but "any," so that he might exclude every notion of merit. And finally he subjoins: "Lest now that which is given, be rendered not according to grace, but according to debt, rather than be given to merits" (he says, however, that grace is debt if it is rendered to merits), and thus not to be grace, if it is rendered to merits.

Testimony of Fulgentius. In the same way Fulgentius, against Faustus and other Gauls who were saying that it is ours to will to believe, on account of which will God would bestow upon us the grace of faith, in the book On the Incarnation and Grace of Our Lord Jesus Christ, chapter 18, says: "But if, according to their opinion, it is ours to will to believe before the grace of God begins to help us, it is not called grace, because it is not given gratis to man, but a good thing is repaid to the will. For this, as they will, grace finds in us, which it itself did not give. Nay rather, if so it is, we give to God the will beforehand, and thus we receive grace not from the mercy of one who bestows, but from the equity of God repaying. But who hath first given to him, and recompense shall be made to him?" (Job 41). But those, against whom Fulgentius was contending, did not concede condign merits from our free choice, but some notion of merit, which we call congruous or impetratory. For neither were they outright Pelagians, but of the remnants of the Pelagians, as I showed in the place cited. He infers, moreover, that thus grace would not be grace, because we would first give something to God: wherefore grace would not be given out of mercy, but out of equity; for mercy does not regard a benefit received, even the least, but rather misery. Fulgentius understands by equity not condignity and justice, but gratitude; but gratitude differs altogether from mercy, because the latter supposes misery in him to whom the donation is made, the former a benefit received by him: but through Christ we have grace from mercy, not from any gratitude.[1981]

Wherefore in Romans 9 and Exodus 33 Scripture says: "I will have mercy on whom I will have mercy, and I will show mercy to whom I will show mercy"; therefore "it is not of him that wills, nor of him that runs, but of God that shows mercy"; and again: "He has mercy on whom he wills, and whom he wills he hardens." In which words Paul calls the largess of the grace of God, to which he chose us, "mercy": and therefore he asserts that this election is not of him that runs, nor of him that wills, but of God that shows mercy. But if our diligence were to run by some good work, and we were first to will by some desire of ours by which we might incline God to choose us and to bestow his grace upon the good, Paul would neither exclude our running and our desire, nor would he say that grace is of God alone showing mercy, but rather of one who, out of gratitude, repays. Therefore, too, in that same place Paul and Hosea in the second chapter call the elect of God "a people that has obtained mercy"; and Peter the Deacon, when he says that the books of Faustus were written against the doctrine of the Apostle and that the grace of Christ was evacuated by him, was speaking of congruous or impetratory merits, which alone Faustus conceded, for he was of the sect of the Massilians.[1982]

1981. Fulgentius, De Incarnatione et gratia Domini nostri Iesu Christi, cap. 18.

1982. Prosper, Excerpta Genuensium ad quartum dubium, on Rom 11; see also Psalm 55. Petrus Diaconus, De Incarnatione et gratia Domini nostri Iesu Christi, cap. 8, against Faustus of Riez.

Finally, Prosper, in the Excerpts of the Genoese, to the fourth doubt, expounding that same place, Romans 11, "If by grace, it is not now by works," speaks thus: "Nothing of theirs preceded, which they might first give, and it be repaid to them: for for nothing he saved them" (Psalm 55). Which words he took from Augustine, book On the Predestination of the Saints, chapter six at the end; and in the response to the third doubt, the same Prosper thus says: "And that faith, whence all merits begin, is the gift of God, lest grace be not grace, if something precedes it, on account of which it is bestowed." He did not say "condign," but "something on account of which it is bestowed." He asserts this, indeed, against those who were saying that faith is from free choice, and that on account of it grace is bestowed upon us: these, however, were not Pelagians, but the Massilians, who did not concede condign merit, as has been noted. Therefore Augustine and Prosper exclude every beginning from free choice in view of which grace is bestowed, because they think the donation of the grace of God through Christ to be such that it is conferred "for nothing," which would not be true if we first gave to God anything whatsoever.

But someone may object in this way: If some poor man earnestly begs for another's help and aid which he needs, a rich man can, moved by the serious entreaty of the man, succor him, and nonetheless exercise in him the work of mercy and of favor in such wise that it has no notion of gratitude and of retribution: therefore nothing hinders, but that God, moved by our prayers, may bestow grace and mercy without any return and gratitude, but by the sheer free will of showing mercy; and accordingly, even if we affirm that the grace of God is conferred upon human prayer, we do not derogate from the true notion of grace and of mercy.

I answer: The relation is far different between men, who have pity on the supplications of the poor, and God; for men are moved not to repay by any merit of work, but by the misery of the one petitioning, which by the very prayer and entreaties is made known. Wherefore, since they receive no service from the prayer, or do not attend to it, but by prayer alone simply know the misery, or better than before, even after the prayer of the poor they exercise toward them a work of pure mercy; nor in any way do they repay the merit of those petitioning: or if they repay, they do not do a work of true mercy. But God has our prayers for acceptable, although otherwise he has no need of them in order to know our misery. Wherefore by those very prayers he is said to receive some service; and hence as often as prayer obtains something from him, he is said to repay the prayer, not to give to our misery; nor would the mercy of God be moved by prayer, as in man: he is thus bent by prayer as by a certain service, to which, if he grants something, he is said to repay out of gratitude, not to give out of liberality. Therefore, if by human prayer, that is, out of our own powers, grace were obtained from God, now it would not be grace, as we have shown clearly by the testimonies of the Fathers and by reason.

These two arguments drawn from Scripture and the Fathers prove that no beginning, however least, even a remote one, of moral virtue, which would dispose toward obtaining grace, precedes from us, especially because even when we give something to God which would contribute to obtaining grace, it would be a retribution, not mercy. Nor do they only prove that men had nothing of themselves by which they might obtain grace from God, but not even angels: and hence it is rightly inferred that the predestination of both was not made from any beginning of theirs, but

from the sole will of God. What, moreover, the Fathers and the Scholastics say of the grace of the angels specifically, we shall see below in Disput. 128, cap. 3. But how the merit of congruity by which we merit the remission of sins, according to the doctrine of Augustine in Epistle 105, does not take away the notion of grace, we shall say more fully in 1 - 2, q. 114, a. 2, 5; namely for this reason, that such merit proceeds from the help of grace, not from pure nature, and thus the whole benefit of the remission of sins is referred back to the root of first grace. But the Fathers just cited only contend that the notion of the grace of Christ is evacuated if even the least merits, or some occasion from our strengths, precedes; as has been explained.

Thus far we have shown that there was no beginning of a good work from us, from which we were predestined; but that a good disposition of nature and even talent was not a cause, has been shown incidentally from Augustine, and will also be proved below, Disput. 94, cap. 4, by arguments which can confirm what has been so far set forth. For if grace were given on account of excellence of talent, it would be neither mercy, nor altogether liberal, but in a certain way a counter-gift. Whether indeed, although on the part of the one predestined no cause or occasion of his predestination is given, it can nevertheless be in another, so that one may merit for another predestination and every effect of it, we shall say in Disput. 94.

Finally, from what has been said it is clear that the Massilians did not err in this, that they asserted that in the sinner there is some merit of congruity, or of impetration: for this can be in a sinner; but they erred because they conceded that this merit, or beginning, was from our strengths without any help of grace. Nor did those err merely because they said that this beginning from us is a condign merit; nor because they said that God by promise is of necessity bound on account of it; but because, while they conceded from us some merit, even the least, it followed from their sentence that, in view of that merit, God repays his grace out of gratitude, not gives it out of liberality.

Some objection of the adversaries.

Caput XVI

The argument is of this kind. Man of himself, without any other grace than the gift of creation and of free choice, can do some morally good work; therefore something can be a beginning on our part, whereupon God would then bestow grace.

Certain people say that we render something to God, on account of which he in turn repays and gives his grace. Some concede that from our own powers, by certain moral works, a man is disposed so as to obtain grace from God; nevertheless, that these are not the cause of predestination, because under predestination all these works are comprehended. Thus thinks Durandus, cited by us above, cap. 10, and other more recent authors; but their position has already been sufficiently refuted by us in its proper place.[1983]

1983. Durandus, cited by Vazquez above cap. 10, and other recent authors.

Others, however, who admit that every effect of predestination is a gift of God's grace through Christ, answer that indeed we can perform some morally good work from our own powers, but that there is no work of acquired moral virtue that would obtain any grace from God. They call that virtue "acquired," which certain Theologians distinguish even from infused moral virtue. For of works - e.g., of mercy - they say that some are done with a certain supernatural regard, as when alms are given to one in need as to a son of God or a member of Christ; and then it is a work of infused moral virtue. But when alms are given merely to a needy man, because thus it appears honest, it is a work of acquired moral virtue. They therefore teach that by a work of infused virtue (though not by a work of acquired virtue) some help of grace is obtained from God; and because a work of infused virtue cannot be done without the help of moving grace, it follows, according to their opinion, that there is no beginning of grace from our free choice. Others also, whom we reported above in cap. 12, think that grace is not promised to moral works done from free choice, but that it is conferred on them out of the mercy of God.

Yet the former are plainly mistaken in this, that they affirm that by certain works of mercy and by other moral works of acquired virtues no help of grace is obtained from God. For since Scripture and the Fathers everywhere promise us the help of God's grace if we have mercy on the poor and forgive the injury done to us, they never use this distinction of the Scholastics; rather they commend to us those things which among men are commonly judged honest, such as are the works of mercy of acquired virtue. Concerning alms which obtains grace from God so that sins may be forgiven, you have very many manifest testimonies in Tobit 4 and 12, Ecclesiasticus 3, 7, and 29, Daniel 4, and Matthew 5 and 6, where it is said: "Blessed are the merciful, for they shall obtain mercy." And who would say that he is not merciful who, moved by the miseries of the poor, strives to relieve them? And Matthew 6: "For if you forgive men their offenses, your heavenly Father will also forgive you your offenses." The same sentence is found in Mark 11, Luke 6, and Ecclesiasticus 28, where it is said thus: "Leave (that is, forgive) your neighbor who has wronged you, and then, when you pray, your sins will be loosed." In which place pardon of sins is promised not so much to prayer as to the remission of the injury done, as though with such a companion our prayer were the more acceptable to God. And who that speaks reasonably would dare to say that he who, out of pity for him by whom he has been injured, lest he suffer any harm, even if at that moment he has no remembrance of God but looks only to his misery, forgives the injury so as to keep him unharmed - obtains nothing of grace with God?

Moreover, that by works of mercy done from the mere apprehension of the neighbor's misery God is moved to bestow the help of his grace upon the merciful, is proved by this reasoning. If these works, when done by a just man, are meritorious of eternal life; and if alms given to the poor, by this very fact that it is given to the poor, without this that we recall Christ, is said to be done to Christ himself; then it follows that alms done from that same single affect of compassion and of relieving misery, when done by a sinner, is also done to Christ himself, and therefore - although it is not meritorious of eternal life because it is not by a just man - still has the power of impetrating from Christ himself some help of grace. For if it is said to be done to Christ himself, what wonder if he obtain some grace from him? But that alms done in this way is also done to Christ himself is

clear from Matthew 25, where the Lord rewards the just with the recompense of beatitude in these words: "I was hungry, and you gave me to eat," etc. At which the just, astonished, will say: "Lord, when did we see you hungry, and feed you?" The Lord will answer: "As long as you did it to one of these my least brethren, you did it to me." Where, from the fact alone that alms is said to be done to one poor person, Christ himself accepts it. For if the just had done that alms to the poor man because they apprehended him as a poor man of Christ, they would not say on the day of judgment: "When did we see you hungry," etc.; just as he who should receive honorably the envoy of the King because he was his envoy, and on that account the king should grant him a reward, saying, "Receive the due remuneration for the honor that you did to me," would not answer, "Where, my lord?" For he would know that in honoring the envoy he had done honor to him.

But let us consider the same place of Matthew 25: Those who will be on the left, and will hear that sentence of their damnation, "Depart, you cursed, into everlasting fire, for I was hungry and you did not give me to eat," will say, "When did we see you hungry, and did not feed you?" And the Lord will answer: "As long as you did not do it to one of these least ones, you did not do it to me." It is manifest that those who are to be condemned because they did not occupy themselves with works of mercy, are not therefore to be condemned because they omitted alms under that peculiar respect which looks to Christ. For they were not bound by precept to give alms under this respect; but they are said not to have given to Christ because they did not give to the poor for this sole reason, that he is poor. Therefore, according to the phrase of Scripture, to give alms to Christ is the same as to give to the poor; just as not to give to Christ is the same as not to give to the poor; because that work, done solely out of mercy toward the poor, is also acceptable to Christ; likewise, not to give to the poor displeases Christ. From which things it is also gathered that those later Doctors rightly said that grace is not promised to moral works done from free choice alone; but they erred in this, that they added that grace is repaid to such works out of mercy and not out of promise, as we noted above in cap. 12. For in either way, whether out of promise or out of mercy, if grace were given to the worker without promise, it would not be grace. Wherefore, when we say that some grace is promised to moral works, we understand works done with the help of grace, not by free choice alone.

I answer, therefore, to the argument proposed at the beginning: although we should concede that some good moral work can be done without the grace of Christ - about which there is a grave controversy, which we determine in I - II, q. 109, a. 2 - two things nevertheless ought to be held beyond controversy. First, that works of mercy, and some other moral works as well, impetrate from God some grace through Christ, and dispose for it; as Driedo expressly admits in the Opuscule On the Harmony of Free Will and Predestination, part 2, last chapter, and in the Treatise On the Captivity and Redemption of the Human Race, cap. 2, part 2, and Ruard likewise in a. 7 and a. 9; and other Scholastic Doctors agree.[1984] For the opposite opinion greatly derogates from the observance of the precepts of the Decalogue, in which almost the whole justice of human life consists; for these are the things which frequently occur to be observed by us. Then it is most

1984. Driedo, Opuscule On the Harmony of Free Will and Predestination, part 2, last chapter; Treatise On the Captivity and Redemption of the Human Race, cap. 2, part 2; Ruardus Tapper, articles 7 and 9.

certain that those moral works which obtain some grace from God and dispose to it also proceed from the help of grace through Christ, and not from our free choice alone; as against the Massilians and certain Scholastics, among whom were Driedo and Ruardus, has been proven up to this point, namely, lest we attribute something prior to God out of the mere gift of creation, so that he might in turn repay and grant the help of his grace through Christ. And so in this way there will be, on our part, no beginning, cause, or occasion of the first grace which is given in time, nor of predestination, which is prepared beforehand in the eternal prescience.

Caput XVII - The arguments of the Massilians against St. Augustine

Objections of the Massilians and of those who thought with them against the sentence of Augustine were chiefly these.

Prima obiectio. If God does not wait for our free choice and some occasion, but, as it pleases him, with his peculiar grace anticipates this man or that, a manifest force seems to be brought against free choice: for thus grace will not depend on free choice, nor will it be in our power. But Cassian and others who said that sometimes the grace of God is prior and sometimes our will, by this reasoning could not maintain their cause; nevertheless St. John Chrysostom, Marcus the Hermit, and Faustus of Riez, alleged by us above in c. 8 of this disputation, touched upon it in part. [1985]

I answer that no force is brought against our liberty from this, that the grace of God anticipates the will. For liberty does not consist in this, that the will should first act of itself, and that the help of prevenient grace should depend on its own power on each occasion and in each work to which it is given; but in this, that it be free for the will - once stirred by the prevenient holy thought of God's grace - to consent or not to consent; and that it be in its power to cooperate with operating and prevenient grace, and to have it as companion through its consent. This liberty the Council of Trent briefly taught in session six, cap. 5, where, when it says that the beginning of justification starts from the calling of God, which without doubt precedes our consent, it holds that there is nothing from our free choice which gives the beginning to the grace of God. But when it adds that we freely assent to that same grace and calling, and can resist it, it clearly indicates that our liberty is in the consent by which we assent to the calling; from which it is sufficiently clear that our liberty in the acts of the will is safeguarded. By what reason, moreover, all are anticipated by that help and calling to which they can assent, and how it lies in everyone's power to make the calling efficacious, we shall say in disputation 98, chapters 6 and 8.

Secunda obiectio. If God distributes his grace without waiting for our will, it follows that God uses the right of a lord and, as it were, of a tyrant, who, as he pleases, divides grace; and not the order of one who governs, who distributes gifts according to each one's disposition. In this way Faustus of Riez attacks Augustine in book 2 On Grace and Free Choice, c. 6, whose words we

1985. St. John Chrysostom; Marcus the Hermit; Faustus of Riez.

recited above, disput. 89; and from this he also inferred that the future cause of judgment is altogether taken away, and thus that those condemned are not to be judged but rather to be judged without cause.

I answer that this objection is frivolous. First, no "acceptance of persons" and no tyranny can be imputed to God because he now calls one with that thought which is congruent and will be efficacious, and another only with that which suffices that he might respond or might contemn - and in fact will not respond. For since the bestowal of such thoughts is not due to man from creation, but is of new grace, and an act of liberality beyond the gift of free choice and of creation itself, as we proved above in cap. 4, therefore God does not "accept persons" when he freely chooses to grant to one sooner than to another a calling suited to him. For acceptance of persons is found only in a distribution which is owed according to justice. Wherefore in this distribution of graces that saying of Romans 9 is rightly applied: "It is not of him that wills, nor of him that runs, but of God that shows mercy"; and again: "O man, who are you who answer back to God?" Men are not born "to be judged," that is, so that, without any personal merit, they should undergo judgment; rather, they are born "for judgment," that is, so that from the works which they will do they should receive reward or punishment. For a man will not be judged by God because he happened to have this calling rather than that; but because he did not will to respond to the calling which he had, when he could. For all are aroused by sufficient help and calling.

Tertia obiectio. The Massilians further argued, as Hilary and Prosper report in their letters which are found prefixed to the books On the Predestination of the Saints, in this way: If the sentence of Augustine is true, which says that that peculiar grace of the predestined is given from the sole will of God, prayer is in vain; for by human prayer grace cannot be obtained; and so all hope of impetrating grace is taken away; men also are corrected in vain, or we exhort them in vain, if grace and predestination do not depend on their free choice.

I answer: First, one person does not pray and ask in vain for another to have first grace; for sometimes one can impetrate for another the first grace, as we shall say in disputation 94; and thus it happens by the merits of one that another receives the first grace which is given in time; and likewise from eternity, as the cause of predestination. Nevertheless, the prayer of him who obtains some grace for another does not arise from free choice alone, but from the help of grace.

Then, no one can by any prayer obtain for himself his own first grace; for even the prayer by which we ask for grace proceeds from the help of grace; wherefore no prayer can precede the first of all graces. Therefore, what is defined in the Second Council of Orange, can. 3 - that by human prayer the grace of God is not obtained - must be understood of first grace; for second grace, although not by human prayer as if from our own powers, is nevertheless obtained by prayer proceeding from the spirit of grace; and in can. 6 he is condemned who says that the grace of God, namely first grace, is given to those praying without the Spirit of grace. Thus the Massilians were

deceived.[1986] The Council proves this from those places: Isaiah 65:1 and Romans 10:20, "I was found by those who did not seek me; I appeared openly to those who did not ask after me"; and 1 Corinthians 4:7, "What have you that you did not receive?"

It is also excellently proved by Job 28, where, after he has shown that many things which are precious among men have been found by human difficulty and diligence - gold, silver, etc. - he adds, in the middle of the chapter: "But wisdom - where is it to be found? and what is the place of understanding? Man does not know its price," etc.; and, since he showed that these things have been found by no one, neither by effort nor ingenuity, he subjoins: "God understands the way of it, and he knows the place of it," etc.

"But God understands its way," etc., so as to show that it belongs to God alone. Wherefore many of the words of that chapter, which lack a subject, and which some wish to refer to God, are better accommodated to man, so that thus the argument of Job may have force - namely, that many difficult things have been done and discovered by human industry; wisdom, however, by no means, but is given by God alone.

Baruch also, chapter 3, expressly set forth the same in these words: "Who has gone up into heaven, and taken her (namely, wisdom)? There is no one who can know her ways, nor who can search out her paths; but he who knows all things has known her, and by his prudence has found her; he has given her to Jacob his servant," etc. He not only said, "There is no one who can know her ways," but he added, "nor who can search out her paths," so as to show that true wisdom is obtained not only not by industry or by human prayer, but neither can it be sought out or investigated.

But, as St. Augustine in the book On the Good of Perseverance, chapter 16, answering this objection - which Prosper follows in On the Vocation of the Gentiles, book 2, chapter 8 - explains from Augustine, our prayer is not fruitless; for since the Spirit of grace, who goes before us, prevents us, that we may pray, by that prayer we can obtain another help of grace from God, and we frequently do obtain it. For certain things God gives not to those first praying and asking, such as the first of all graces, which he calls the beginning of faith; certain things he grants not otherwise than to those praying (he means praying from the Spirit of grace); among which he assigns perseverance, in this respect alone, that one end life in grace - not for all the helps which are conferred throughout the whole life after justification.

To the same end tends the doctrine of Prosper, On the Vocation of the Gentiles, book 2, chapter 36, elsewhere chapter 8, who, responding to this objection of the Massilians, proves from the sentence of Augustine that our solicitude and prayer are not taken away; for by labor of works and by the insistence of supplication the increments of merits are brought about. And he adds that, although by our prayer we may not be able to obtain the first grace, yet in received grace we can grow by prayer and solicitude, and have new merits day by day, and obtain not a few gifts from God.

1986. Second Council of Orange (529), can. 3 and can. 6, and the loci cited there: Isa 65:1; Rom 10:20; 1 Cor 4:7. Council of Trent, session 6, cap. 5.

Christ proposed this doctrine to us in two parables, Matthew 13. The one is of the hidden treasure in a field, which when a man has found, he goes away and sells all that he has, that he may buy the field; by which is insinuated the first grace, which is truly hidden, just as a treasure which, though it is not sought, is wont to be found unexpectedly: for thus too the first grace is found by those not seeking, as in the Second Council of Orange by that canon 3 it is defined.[1987] But just as, when the treasure is found, a prudent man sells all his goods, that he may buy the field and gain the treasure, so also he who is stirred by the grace of God ought with all solicitude to give his consent, that he may be able to be justified. The other parable is of a man seeking fair pearls, who by labor and industry at length finds them and sells all, that he may buy one for himself. By this indeed the second grace is denoted for us, which is now given to those praying and seeking - but from another prior grace; and when this is found, likewise we must be solicitous, that it may be made richer day by day. Rightly therefore did Augustine say that certain gifts are prepared for those not praying, but others are given not unless to those praying.[1988]

As to exhortation, Augustine says, chapter 14, that it is not in vain, because although those who do not have ears prepared by the Lord to hear do not obey, many nevertheless hear who have their dispositions from the Lord so that they may hear and obey. Therefore exhortation is not in vain: for God most often by the very means of exhortation itself opens the ears of the heart within, that men may hear and obey. He thinks the same of correction; for the same reason applies.

He subjoins nonetheless in chapter 15 that not on this account - namely, that some fall into sloth and despair - should we cease from the preaching of true doctrine, when from our silence other errors arise: such as that grace is predestined by God according to our merits, and from some beginning of ours. Which thing he himself elegantly pursues, and teaches that almost the same inconveniences commonly happen when God's foreknowledge is treated - namely, that then we pray in vain, we correct in vain, if only that shall be future which God has foreknown; yet on that account we ought not to allow any error to be taught concerning foreknowledge. How indeed the people are to be taught this doctrine prudently, he most excellently declares in chapter 22. Finally, in chapter 17, against the Massilians he turns the argument: because just as they exhort to chastity, which they would say is from ourselves, nevertheless they cannot deny that it is foreknown by God, indeed even predestined (he understands according to common providence, not grace), so we Christians can exhort men to that which we teach to be predestined by divine grace.

Caput XVIII - Certain testimonies alleged against our position are explained

They press still further some testimonies of Scripture and of the Fathers to prove a cause on our part of predestination and grace. The first testimony is Matthew 25, from that parable of the man who, going on a journey, distributed various talents to his servants, not indeed absolutely, but (as Christ says) "to each according to his own ability" - which parable signifies the distribution which Christ makes of his grace, that we may live rightly and trade. For just as that man divided the

1987. Second Council of Orange (529), can. 3.
1988. St. Augustine, De dono perseverantiae, c. 16; Prosper of Aquitaine, De vocatione gentium, II, c. 8.

talents of money to his servants having regard to natural virtue and faculty, which each had of himself by nature, so also Christ divided the talents of grace according to the proportion of the natural virtue of each one; therefore according to the use of free will.

St. Thomas answers that by the name of "proper virtue" there is properly understood a man's own disposition proceeding from the aid of God's grace, according to which God divides to each the grace of remission of sins and habitual grace.[1989] And perhaps in this way St. Jerome understood that passage, although not of the grace of the remission of sins, but of other gifts of charisms, and of the evangelical preaching, as he seems to have understood it. His words are: "Having called the Apostles he delivered the doctrine of the Gospel, not giving to one more and to another less by largess and parcimony, but according to the capacities of the recipients." He understands by capacities not only natural powers, but also those furnished with the gifts of grace: thus indeed he gave a greater ministry to one, namely to Peter, than to others.

Otherwise we may more easily reply, that according to the common doctrine not all the things narrated in this parable are to be applied spiritually. For in parables the individual minutiæ are not always to be understood spiritually; but one ought carefully to attend to the end of the parable, and to explain spiritually all the things which look thereto; but other things cannot always have a spiritual sense without some absurdity, as is clear from this same parable. For he who had received one talent, and had profited nothing, said: "I knew that you are a hard man, reaping where you have not sown, and gathering where you have not scattered; behold, you have what is yours." Therefore that servant, although detained in body and mouth, returned the talent whole to his lord, although he had profited nothing; which in the spiritual talent of grace does not occur: for he who does not trade, when he ought, even loses the very talent of grace. Therefore the parable regards this alone, that the Lord is going to exact an account of the talent of Christ's grace, and of creation, which he has bestowed on us liberally, just as that master exacted it of his servants. But as to the mode of dividing the talents Christ did not care, but, telling the parable, he introduced that division only so as to show that an account would be demanded.

Lastly, the Gauls noted against Augustine that he said that some are predestined by God to evil, and that not all can be saved, which is impious and is condemned in the Council of Valence under Emperor Lothair, cap. 3, and in the Second Council of Orange, cap. 25.[1990] But this the Massilians manifestly imposed upon Augustine, as he himself bears witness in the book On the Articles Falsely Imposed upon Himself, article 1; or rather Prosper, who is believed to be the author of that book, [1991] and Fulgentius, book 1, To Monimus, cap. 30; from which calumny against the Gauls Prosper himself defends Augustine in the book To the Chapters of the Gauls, to the first, fifth, and sixth doubts.[1992] And indeed in Augustine it is most certain that no one is predestined by God to sin, just as many are predestined to believe and to live justly. But what in the book On Correction and Grace, cap. 7, he says - that Judas was chosen for the work that was congruent to him, namely to

1989. St. Thomas, I-II, q. 114, a. 1, ad 1. St. Jerome, as cited.

1991. Prosper of Aquitaine, De praedestinatione sanctorum (traditionally ascribed), or the work On the Articles Falsely Imposed upon St. Augustine, art. 1.

1992. Prosper of Aquitaine, Ad capitula Gallorum, to doubts 1, 5, and 6.

shed the blood of Christ - must be understood in that manner, that is, permissively. Secondly, nowhere did Augustine teach that men are destined to punishment and penalty from eternity, unless from their fault foreseen, as we shall show in disputation 95. Thirdly, whether he said that some, because of certain sins at some period of their life, are so left destitute that then they lack sufficient help by which they may be able to avoid sins, is indeed hard among Augustine's texts, and is to be examined by us in disputation 97. It is certainly clear, however, that Augustine never said that which the Massilians imputed to him - namely, that God leaves some without help and remedy without their own fault.

Secondly, Augustine never taught that men were destined by God from eternity to punishment and torment, except on account of their foreseen fault, as we shall show in disputation 95. Thirdly, whether he said that some, on account of enormous sins, are in some period of their life so forsaken that then they lack sufficient help by which they may be able to avoid sins, is indeed hard among Augustine's texts, and is to be examined by us in disputation 97. It is certainly clear, however, that Augustine never said that which the Massilians imputed to him - namely, that God left some without help and remedy without their own fault.

Certain testimonies of Scripture and the Fathers adduced against our opinion

Some still contend, adding testimonies of Scripture and the Fathers in favor of their opinion about our predestination and grace coming in some way from us.

The first testimony is Matthew 25, from that parable of the man who, going on a journey, distributed various talents to his servants, not indeed absolutely, but (as Christ says) "to each according to his proper ability"; which parable signifies the distribution that Christ makes of his grace so that we may live rightly and trade therewith, just as that householder distributed the talents of money, having regard to the strength and capacity of each. Thus the distribution is made by the Lord with regard not only to natural powers, but also to the gifts of grace; for in that way he entrusted his ministry, namely to Peter; otherwise, if we were speaking of grace by which each is saved by predestination, some grace would be given proportionally to the recipient, which, however, is not given to all, nor distributed, except solely from the good pleasure of God. But it is easier to answer that, according to the common doctrine, not all the things done in this parable are to be applied spiritually. Nor are all its details to be taken in a minute spiritual sense; rather those things are to be heeded which, when the parable is diligently attended to, pertain spiritually to our subject; the other things cannot be explained without some extension, though they always have a spiritual sense. For as is clear from this same parable, he who had received one talent, though he had not traded and had gained nothing, said: "I knew you to be a hard man, reaping where you did not sow and gathering where you did not scatter; and behold, you have what is yours"; and he returned the talent intact to his lord, although, being reproved, he had gained nothing. Therefore that talent does not signify the spiritual grace: for he who does not trade with it, when he ought, loses the very talent of grace. The parable therefore looks only to this, that God is going to require

an account of the talents of creation which he entrusted to us to use freely, just as that master from his servants; but as to the plan of dividing talents, Christ determined nothing, for he as a narrator of the parable only intended thereby to show that an account of those things would be demanded.

The second testimony is Romans 8: "Whom he foreknew, he also predestined to be made conformable to the image of his Son." There it is said that the predestination of grace, by which we are made conformable to the Son of God, had its origin from foreknowledge; for "whom he foreknew, them he also predestined." But no foreknowledge can precede the predestination of grace unless it be of the good use of free choice; therefore from this, as from a starting-point and some disposition, we are predestined. This sense is followed by the Greek Fathers, whom we alleged in chapter 8, and according to it the context is thus ordered: for those whom God foreknew as going to use their own free choice well, he predestined that by his grace he would justify them and make them conformable in holiness of life to his Son. But that sense has already been condemned by the Church, as we showed in chapter 10 and the following of this disputation.

Others, however, interpret Paul thus: "Whom he foreknew," that is, those to whom he decreed to give his glory beforehand according to the plan by which he would not foresee their merits - these he predestined, that by his grace he might make them conformable to his Son and to the beatitude for which they, being chosen gratuitously, might be made worthy. And this interpretation is supported by the fact that Paul seems to enumerate the things in a kind of series and order, first predestination, then calling, afterward justification, and finally glorification. Since all these things in reality have this order which they are recounted to have, it follows that predestination is prior; and since foreknowledge is placed before predestination, it follows that it was prior; and yet no other foreknowledge seems able to be prior than that of the glory to which all the predestined had first been elected; therefore from that place it is rightly proved that the election to glory was prior.

But none of the approved authors and interpreters of Paul has explained that sense more suitably; for no word of Paul even slightly insinuates it. For who will say that to "foreknow" in Paul is the same as "to determine before the works to confer glory"? As for the reason of their series I answer: when Paul enumerates predestination, then calling, then justification, he does not do so because predestination is prior or something distinct from the rest, but so that he may explain in detail the things that are contained under predestination. And whether foreknowledge is prior to predestination depends on the various interpretations which we shall bring forward below. But the argument drawn from the sequence has no force, whichever of those interpretations we embrace.

For the explanation therefore of this place it must be noted that foreknowledge is used in Sacred Scripture in two ways: first, for the knowledge of approval, which indeed is predestination itself, as Augustine observed in the book On the Gift of Perseverance, chapter 18, in accord with that in Romans 11: "God has not cast away his people whom he foreknew."[1] According to this meaning the text is: those whom God by his knowledge of approval approved, he also predestined; not that it is prior to foreknow than to predestine (for it is the same), but it is a repetition after the manner of Scripture. Then, to foreknow in Scripture signifies the speculative knowledge of God, by which he knows the good and the evil that are going to be; and in this way the sense of that place can be what Anselm and Cajetan embrace there, such that the particle "and" is taken for "also," as the

interpreter of St. Cyril of Alexandria takes it in book 5 on Isaiah, chapter 66; which particle indeed must be taken so in every exposition, otherwise the whole sense cannot be rendered integral. But the sense is this: those whom God knew as going to be conformed to the image of his Son, he also predestined to be conformed. In this way both verbs, "foreknew" and "predestined," are referred to the clause "to be conformed." Then there is not a repetition, but Paul signifies that the sons of God have been known by God as going to be, and also have been predestined to be, conformed; since otherwise God foreknows many things which he does not predestine, namely sins. Thus it is not necessary that foreknowledge be prior to predestination; but even if it be later, it is quite well said: those whom he foreknew, he also predestined.

But a much clearer sense can be deduced from what precedes by context. For he had said above that the sons of God are heirs of the heavenly kingdom, if indeed they suffer with Christ, that they may be glorified with him, which is to be made conformable to him. Then, so as to show the power and merit of labors, he said: "To them that love God all things work together unto good," meaning tribulations and hardships, as St. Jerome and St. Ambrose explain. He straightway renders the reason with the words cited: "For whom he foreknew" - as his friends and beloved by his grace - "he also predestined to this, that they should suffer and be made conformable to his Son," who endured so many labors and hardships. "But whom he predestined to this, them also he called," etc. By which words he lists all the means by which he led them to this end of suffering for Christ: for he called them, then justified them, and, after the labors and hardships, he made them glorious and great; so one reads: "He glorified," or "He magnified."

The third testimony is 1 Timothy 1, where Paul says of himself: "Who was before a blasphemer and a persecutor; but I obtained mercy, because I did it ignorantly in unbelief." Therefore Paul seems to assign some cause on his part on account of which he obtained the mercy of God's grace. Some answer that Paul expressed by these words not the cause for which he was predestined by God or called in an outstanding manner, but the condition without which he would not have been called: yet how much it matters between a cause and a sine qua non condition they do not at all explain. But if we were to assign on our part any condition which in some way would precede the bestowal of first grace, from which God might take the occasion of giving grace and of predestining - that occasion, I say - so as to be more merciful to this man rather than that, then to a degree the Massilians would agree with us. For among other things they require for this end some disposition or occasion on the part of the predestined, that they may remove the acceptance of persons and not assign the distribution of grace to the will of God alone; wherefore I would by no means concede even this minimal beginning to be from us, but from the grace of God.

Now in Paul this beginning was nothing else than that he did not sin out of malice, but sinned out of ignorance; from which it resulted that he lacked some impediment, in the presence of which he would not have obtained grace. The negation therefore of the greater sin, and not the lesser sin, was the occasion and a removing cause of the impediment, such that Paul obtained mercy from God and that God predestined him. And therefore, since it is a cause removing an impediment, it ought not be called as yet a per se impetrating cause, but a condition or a sine qua non cause, which, in my judgment, is less of a beginning than the Massilians contended for: for they admitted

some positive beginning from us which would obtain grace; whereas this here is only the negation of some impediment. And indeed, if such a thing had preceded on our part, we could not infer against the Massilians, as we argued in chapter 14 of this disputation, that the grace given to us is not grace. For this beginning from us would not be sufficient for grace to be rendered in any way by way of retribution and so lose the notion and name of grace simply, and become a quasi anti-dotal gift. For to give to someone, who has sinned less, a grace which otherwise would not be given if he had a greater sin, is not properly a retribution of gratitude. Nevertheless, if such a beginning were from us, with the Apostle in Romans 9 we could not say that God made of the same lump one of us a vessel unto honor and another a vessel unto dishonor; which is absurd. For he who sinned more, namely out of malice, was a certain lump much less fit than he who sinned out of ignorance. Therefore, in order that we may refer all this difference not to the lump, that is, to us, but to the artificer alone, that is, to God, there is need to deny such a beginning to be from us; or rather, we ought to ascribe to the grace of God whatever sins we have not committed, as many more readily grant - namely, that we have no victory over sin or temptation to be attributed to us (as we shall say in I-II, question 109, article 2), and that every morally good work in us is from grace (which whether it be so, we shall discuss there); or at least that beginning, even if it be only a per accidens cause of some grace, must in everyone's judgment be attributed to the divine grace and protection through Christ, so that from us there be an equal cause of our not sinning before any grace of predestination begins in us.

Someone could object to us what lower, disputation 93, chapter 4, we shall teach from the doctrine of Augustine - namely, that some, by the mere gift of creation, are more apt to consent more easily to the grace of God; hence it happens that the mass and mixture are not the same from which God chose one into a vessel of honor, another into a vessel of dishonor. I answer that when Paul says "of the same lump," and when we also assert that the same hardness of all men existing in the mass of perdition is before God by which grace through Christ works anything in them or prohibits certain evils in them, this is always to be understood of hardness not proceeding from the natural disposition only from creation (for this is not the cause that one is called and another is not, as we shall show in the place cited), but from the evil disposition common among men through supposed good works or through lesser sins, by reason of which it is said that the mass is not the same in all nor infected in the same way. For this different disposition would not only be a cause that grace should work more in one than in another, but also why rather to one than to another first grace should be given: and it would be either a disposition, or at least a sine qua non cause. Disposition indeed - when by good works one would be better disposed, and thus the mass would be softer so as to be taken into a vessel unto honor; whereas the cause is God himself, who works opportunities, and whose counsel is lofty and of deep ordering. Augustine therefore holds that from utterly hidden merits there proceeds what God bestows - not the first grace of mercy, but the mercy of the remission of sins and the further grace which he confers after penance - many of which come forth from hidden merits and from congruous merits; not, however, from the merits of free choice alone, but rather from a gift of grace of some sort.

...indeed, when by good works one man was better disposed, and thus softer from evil, so that he would be enlightened as a vessel of honor; but as a necessary condition without which not, when he would have fewer sins of himself: for thus he would have less hardness and impediment from himself. Therefore we say that before the grace of Christ the same evils are present with respect to one's own operation, or the stain and common sin; although with respect to creation they are not the same evil, that is, the same disposition of temperament...

The fourth testimony is of St. Augustine in the book of Eighty-Three Questions, question 68, after the middle, where he says: "Here perhaps disturbed, you return to that question: 'He has mercy on whom he will, and whom he will he hardens. Why then does he still find fault? For who resists his will?'" To which Augustine answers in these words: "But this will of God cannot be unjust. For it comes from most hidden merits," etc.[1993] Augustine therefore concedes merits, although hidden, on account of which God has mercy on the one and chooses him for his grace, but on the other does not have mercy. By this testimony Soto, in his commentary on the Epistle to the Romans, chapter 9, in the digression on predestination, and Antonio of Cordova, book 1, quaest. 56, after the thirtieth opinion, said that Augustine had indeed set down what he later retracted, namely, that a cause is given of the predestination of grace and of reprobation.[1994] But these authors did not attain to Augustine's mind: for although Augustine, in the book On the Predestination of the Saints, chapter 3, and in the Retractations, chapter 23, retracted what a presbyter had taught in the book of the Exposition of the Epistle to the Romans, namely, that the merits of free choice are the cause of the predestination of grace, yet he nowhere retracted what he taught in that question 68; rather, in the Retractations, chapter 26, he explained it in the best sense.[1995] For when in that question he had said: "It is little to will, unless God has mercy; but God does not have mercy - he who calls to peace - unless the will has preceded: 'peace on earth to men of good will'"; by which words he seemed to concede with the Massilians some beginning from us of a good will, and most hidden merits, so that God might have mercy on us and confer grace; he explained that in this way: "This was said after penance: for there is the mercy of God even preceding the very will, which, if it were not, the will would not be prepared by the Lord; and to that mercy there pertains the very calling, which also precedes faith. About which a little later when I was treating, I said (namely, in that question 68) that this calling, whether in individual men or in peoples, and even in the whole human race, is in time dispensed."[1996]

The last testimony is from St. Bernard in the sermon On that which is read in Job: "In six tribulations," etc., where he writes thus: "For what is less in us, he himself supplies; yet that small part, whatever is ours, he does not suffer to be withheld." By which words he seems to indicate that

1993. St. Augustine, De diversis quaestionibus octoginta tribus, q. 68 (post medium): "Sed haec voluntas Dei iniusta esse non potest. Venit enim de occultissimis meritis..."

1994. Didacus de Soto, In epistolam ad Romanos, cap. 9, in digression on predestination; and Antonius Cordubensis, lib. 1, quaest. 56, post 30 opinionem.

1995. St. Augustine, De praedestinatione sanctorum, cap. 3; Retractationes, cap. 23; and see Retractationes, cap. 26, where he explains the sense.

1996. St. Augustine, Retractationes, cap. 26, expounding his words from q. 68 of the book of Eighty-Three Questions about God's mercy preceding the will and about calling which precedes faith, and about that calling being dispensed in time in individuals, peoples, and the whole human race.

we first begin with a certain small beginning, and then God by his grace supplies it, promoting it to the better. I answer that Bernard by no means wished to signify this, but assigned only the difference between the cleansing from original guilt in children and from actual guilt in adults: that original guilt in children is remitted without personal tribulation and sorrow, but actual [guilt] in adults is not blotted out without personal tribulation; in which, he says, there is something small that is ours, and the rest is supplied by God - not indeed because the grace of God is appended to our labor and free choice, as the Massilians said, but because, while it anticipates us and is conjoined to us, it makes our tribulations condign, which by ourselves alone would not be worthy. This, therefore, is that small part of our cooperation which God requires, and which he does not suffer to be withheld, that is, which he does not allow not to be offered by us. And that the aforesaid sense of the Massilians was not Bernard's is plain from that little work of his On Grace and Free Choice, where expressly against the Massilians he taught, as we reported above, chapter 9.[1997] So much thus far about the most celebrated controversy of this matter.

Disputatio XCII - Whether the predestination of the grace of God is in the power of the predestined

- Opinion of certain recent authors, Caput I.
- Predestination is not in our power, the truer opinion, Caput II.
- The arguments of the former opinion are solved, Caput ...

Caput I - Opinion of certain recent authors

To those who teach that no cause of our predestination is given by us, yet that there is some condition without which predestination would not be, whose opinion I recalled in the preceding disputation, chapter 7, some recent authors affirm that our predestination is in our power. Others indeed, who say that there is in us a condition without which that grace which is given to us would not be an effect of predestination, assert that it is in our power that that calling belong to predestination, yet not that it be conferred on us or be predestined. The former prove that predestination is in our power: first, from that of 2 Peter 1: "Wherefore, brethren, make the more effort, that by good works you make your calling and election sure; for doing these things you shall not sin ever." From which place they argue thus: unless by good works our calling were made sure, we would not be predestined; but it is in our power by good works to make our calling sure: therefore it is in our power to be predestined. Second, the first calling is not an effect of predestination except insofar as it has its effect; but that it have its effect is in our power; and therefore the whole predestination. Third, if that which is reciprocal with predestination is in our power, predestination itself will be; but perseverance in the grace of God, which is convertible with predestination, is in our power: therefore predestination itself also.

1997. St. Bernard, Sermo de eo quod legitur in Iob: "In sex tribulationibus, etc."; and his Opusculum De gratia et libero arbitrio, against the Massilians (as cited above, cap. 9).

By the same reasons later Doctors can prove that it is in our power that some calling not be an effect of common providence, but belong to predestination: because it is in our power that it be a congruous calling and efficacious, in which way it pertains to predestination. But if it were not congruous or efficacious, it would pertain only to common providence: therefore it will be in our power that that calling be an effect of predestination, although it is not in our choice that it be given to us.

Finally they add that God could have had regard to the use of free choice, which he foreknew would be, and to other circumstances of predestination, and that it was fitting that he should in such or such a mode determine to help man: nay, they think that in this way there can be reconciled the ancient Fathers who seem to have taught contrary things about predestination - the Greeks, namely Origen, St. John Chrysostom, and others - with Augustine and the Latins: so that, when the Greeks assert that we are predestined from the good use of free choice and from the merits of that use, they understand only that there is from us a condition and reason on account of which the calling of grace pertains to predestination, as has been explained; but when Augustine and others deny that predestination was from merits, or from the foreseen good use of free choice, they understand that there was from us no beginning, so that grace should be predestined and given to us, namely the calling which was going to be efficacious: which two things, in the opinion of these Scholastics, very well stand together.

Caput II - Predestination is not in our power, the truer opinion

It is no less certain that the predestination of grace and the very first grace (which is the same thing) is not in our power, than that predestination and grace itself have no cause or occasion that precedes from us. This doctrine we establish only against those former doctors; for about the manner of speaking of the others we shall say a few things afterwards. This opinion is proved, first, because of that which truly is in our power we are the cause, as Augustine in the first book of the Retractations, chapter 22, when he says that this is in our power which, when we will, we do: but of that which we do when we will we are the cause: therefore of that also which is in our power we are the cause; and hence, if predestination and its effect are in our power, it follows that we are the cause of our predestination and of its whole effect - an absurdity.

Then, when we ask whether a cause of predestination is given, or whether it is in our power, it is the same as if we were to ask whether from us there is some cause of the whole effect of predestination, or whether the whole is in our power, as was noted in the preceding disputation, chapter 1. Therefore, when they say that predestination is in our power, they either understand the whole effect of predestination, or only the complement of it: if they speak of the complement alone, that is, of perseverance and of the consent which we give to the calling of grace, we are not only a condition or a cause without which not - which seems to be only a non-resisting cause, per accidens, removing impediments - but we are also a per se cause, not total but partial: because together with God himself, the grace accompanying, we work the consent. But if from the fact that

the complement of predestination is in our power they were to say that it is also in our liberty, we could likewise affirm that we are the cause of predestination, or a co-cause, because we are truly the cause even of the complement of predestination.

But that this does not suffice for us to say any of those things, no one denies. For all admit that there is no cause of predestination unless it be a cause of the whole effect; and the same must be said of condition; and to say that it is in our power must be asserted. For if from us no cause is given, nor is it in our power that the effect of predestination begin in us, by no means will it be in our power that we be predestined.

Or the preceding opinion contends that the whole effect of predestination from the first to the last is in our power, and thus predestination itself; and this is manifestly false. For the first effect is not the consent itself and the accompanying or cooperating grace, but the first calling and the operating grace, which, without us, that is, without our consent, God works in us, as I explained in disputation 88; but this is not in our power. For this reason St. Jerome explains that saying of Jeremiah 10: "I know, O Lord, that the way of man is not in his power," against Pelagius, of any just man, in whose hand it is not to direct his steps - not because, when stirred by the grace of God, he cannot walk rightly and still give the effect of consent to it, but because it is not in his power to be called by such a grace by which he may direct his steps aright. I well see that the sense of that place of Jeremiah is otherwise; but for us now the authority of Jerome is sufficient.

In the same way Augustine, because he had said in the book against Adimantus that it is in our power to change the will for the better, later in the first book of the Retractations, chapter 22, interprets that saying thus: "This is not against the grace of God which we preach: for it is in man's power to change the will for the better; but that power is nothing unless it be given by God; and concerning it it is said: 'He gave them power to become sons of God.'" The same teaching he has in the second book of the Retractations, chapter 1, and in the book On Perseverance, chapter 8, where he most clearly teaches that this power is communicated to us by the very holy thought which is operating and preventing grace: therefore he says, "Not therefore in the power of men, but in the power of God it is, that men should have the power to become sons of God." He gives the reason: "For they receive it from him who gives to the human heart pious thoughts." Which he confirms from St. Ambrose in the book On Flight from the World, chapter 1.[1998] Therefore, since men do not have in their own power to become sons of God unless grace prevent them, and this was prepared for us by eternal predestination without us, just as also faith is given to us in us in time; it follows that these things pertain to the effect of predestination, as from the Fathers has been sufficiently proved in the preceding disputation, chapter 3; and no one can deny it. Whether indeed it be in our power to be reprobated, or not to be predestined, we shall say in disputation 95, chapter 8. Thus far remains impugned what those former doctors, in chapter 1, taught.

But regarding that which the later writers said, we cannot deny first of all that it depends upon our free choice that some calling be congruous and efficacious in us, that is, that it have its effect in us - yet not that it be given to us, nor that it be predestined in the foreknowledge of predestination,

because what is in us is without our consent, whereas for it to be congruous to us and to have effect in us cannot be without us: for the congruity and efficacy of a calling consist in this, that our will be so tempered to it and our will so agree with it that it elicit a free consent from us. Therefore, since consent is not without us, neither can the calling itself be congruous or efficacious without us: although that calling which is going to be efficacious is given and predestined to us without us, nor is there need to contend further in this matter.

I add, however, first, that not only is it to be conceded, what the later doctors concede, namely, that there is a condition or a reason on the part of our will, so that that calling be efficacious and pertain to predestination...

But not to common providence; rather, it is also a true cause on the part of free will (*liberum arbitrium*), so that that calling in us may be efficacious and congruent: for in order that it have its effect, we are not only a condition without which not; for this is only a cause per accidens, as a remover of impediments or as applying the principal cause to act; but we are also a cause per se, which they call a partial cause, as has been explained. Wherefore it lies in our power not as in a condition, but as in a cause, that some calling be congruent and efficacious. From this, however, in no way does it follow that we are the cause of our predestination, as regards all the effects, but as regards some: which cannot be denied, as is manifest from what has been said, and will be made clearer in the solution of the arguments.

Secondly, it must not be said that it was fitting and consonant to reason that God should give first grace, or predestine it, with regard to the use of free will. For either we speak of the use of free will proceeding from grace, and here there could not be a cause, condition, or any ratio of fitness on account of which God would give grace, as we shall show in chapter 6 of the preceding disputation against Alexander: therefore one cannot say that, with respect or in view of that, God predestined grace, which is the same as if we were to say that He did not have regard to that use in order to predestine grace. Or we speak of the use of bare free will, and there can be no such reason of fitness that God should give and predestine first grace; otherwise some beginning would already be on our part, which is the error of the Massilians, which is not at all moderated by him who asserts that that beginning is only of a certain fitness and congruity, and that God was not bound so that He could not do otherwise. For neither did the Massilians wish to impose upon God any obligation or necessity to bestow His grace on account of some beginning of ours, indeed some of them even affirmed that it is sometimes given without that; they only contended that at least sometimes some beginning on our part precedes, as we have shown in the preceding disputations and in 89.

Thirdly, one can rightly say that, in the predestining of thy grace and the bestowal of the same, God had knowledge of our future consent from grace. However, this was not only fitting and consonant to reason, but even necessary: because the infinite knowledge of God could not but foreknow all those future things even under condition, as was said in disputation 67; and since His

1998. St. Augustine, Retractationes, lib. 1, cap. 22; lib. 2, cap. 1; De dono perseverantiae, cap. 8; citing St. Ambrose, De fuga saeculi, cap. 1.

predestination is the preparation of grace congruent and efficacious, God, in predestining it, could not but know the effect which it was going to have in us. But on account of such a power He established or preordained nothing at all; rather, in order that we might have such a power, He Himself prepared first grace in the foreknowledge, and in time He bestowed it: for He did not call us because we were going to be holy, but that we might be so; as in that chapter 6 we noted from St. Jerome and St. Augustine.[1999]

Fourthly, it must not be said that God ordinarily predestined only those adults whom He foreknew from eternity were going to cooperate with divine grace with perseverance, as though He had predestined certain persons outside the common order whom He did not foreknow would use His grace well. For He foreknew all the predestined, as we said, with no one excepted, as going to cooperate well with His grace, although this cooperation was posterior and in no way the cause nor a condition of predestination: for God could not but foreknow what was going to be. Moreover, what the same Doctors add - that this foreknowledge of our cooperation is together, in the order of reason, in predestination, not only with the whole effect of predestination, all the way to perseverance, but even with the first effect, namely with calling - this is proved to me by no reason at all. For, as I noted above in disputation 82, chapter five, the order of reason in eternity between the acts of the divine intellect and will must be taken from the order of cause and effect among the objects: but who will deny that, in the order of cause, someone is called before he responds? therefore the predefinition of calling will be prior to that of cooperation; and hence, prior also to the foreknowledge of cooperation. I speak, however, of absolute foreknowledge, not under condition: for foreknowledge under condition precedes every absolute predefinition, as is manifest; and of absolute foreknowledge the cited Doctors speak. They contend, moreover, to confirm their opinion by many testimonies of St. Augustine, Prosper, and Fulgentius, which, in my judgment, rightly prove that the whole predestination and its complement include our cooperation - something which no one up to now has denied: but that this cooperation was at the same time foreseen with the predefinition of calling, they by no means prove: and because those things are of little moment, I deliberately pass them over.

Lastly, the way in which they strive to reconcile the Greek and Latin Fathers so that they do not oppose each other is a vain labor, as from what has been said in the preceding disputation is sufficiently clear: since in truth, as we said, St. Augustine always thought that his opinion and that of the Greeks are altogether contrary.

But whether to be reprobated, or not to be predestined, and not to be reprobated, is in our power; and whether it follows thence also that to be predestined is in our liberty, we shall say below in disputation 95, chapter 9.

Caput III - The arguments for the first opinion are solved

As to the arguments for the first opinion, to respond will not be difficult. Reply to the first: From that testimony of Peter we say, in order that the testimony have some weight, that the word "certain" must there signify firm and stable: but in this way it not only proves that predestination is in our power as in a condition without which not, but also as in a partial cause per se. For as the calling by which someone is called becomes certain, he is not only the condition, but also the cause: and thus there the discourse will not be about the whole effect of predestination, but about some complement of it, namely about consent and the efficacy of grace, which without doubt depends on our free will as on a partial cause: yet on that account neither is predestination in our power, since its first effect is not, nor is there in us any condition of it. Moreover, this exposition fits the context better: for Peter had first said: "For whoever has not these things," namely the good works which he had set forth, "is blind, groping with the hand." He then subjoins: "Wherefore, brethren, strive the more, that by good works you make certain your calling and election: for in doing these things, you will not sin at any time." But the Greek word which the interpreter here renders, "You will not sin," he renders to the Romans "They stumbled, that they might fall." Then, the sense of this place of Peter is as follows: If you have these good works at hand, you will walk with firm steps on the way of salvation, nor as blind men will you be groping with the hand, nor will you stumble, that you should fall.

There is also a twofold other sense of the same place, if that word "certain" signifies "well-known" and "noted," according to which sense the testimony cited has less difficulty in the present controversy. Another is that which St. Thomas follows, namely that by our good works we become more certain of our salvation, as far as human conjecture allows. Another, so far as concerns OEcumenius and Bede, is that by our good works we make others who look upon us to be certain of our holy calling and election. And the Greek name bebaioos signifies each: namely firm or stable, and "well-known."[2000]

Reply to the second has more fallacy than difficulty: for when it is said that first calling is not an effect of predestination except in so far as it is efficacious, a distinction must be made. Either it is said that it is an effect of predestination only for this reason, that it produces consent in us, and this is false; for even in so far as it anticipates our consent, it pertains to predestination, since as yet it does not have its effect in our will. Or it is said that only that calling falls under predestination which is so tempered for us that at length it elicits consent; and this is true; but not for this reason alone, that it cooperates in eliciting consent in us, ought it to be said to be an effect of predestination. For in calling itself, which is congruent to the will, there are two things: both that it is given to us and that it prevents us; and this effect is the first of predestination: and that it elicits consent from us; and this is already the second. Therefore, since that first one wholly anticipates

1999. See above, disputation 92, cap. 6, where he cites St. Jerome and St. Augustine.

2000. St. Thomas, on this sense; OEcumenius and Bede on the sense that by our good works we make others certain of our calling and election.

our consent and is not in our power, it will be no more in our power to be predestined than to be called. For if predestination were in our power, then all its effects would also be, from the first to the last.

Reply to the third: When there is something in our power which is in mutual correlation with something else, that thing is simply in our power, if the first was without any supposition made; but if something be supposed which does not lie under our liberty, then, even if the complement with which that thing is in mutual correlation be in our power, the other thing with which it is conjoined will not be. In this way, if someone were able to infuse a rational soul into prime matter, he would not have in his power simply to make a human being according to the whole, unless he could also make matter and the soul: so too, although it is in our power, supposing calling - which we now suppose from predestination itself - to consent, and consent is mutually conjoined with predestination, nevertheless predestination according to the whole is not simply in our power; that is, the whole effect of predestination is not in our power, because by no means does congruent calling, by which predestination begins in us, lie under our liberty. We have therefore from what has been said in this and the preceding disputation that on our part there is no cause, nor the least beginning of the predestination of grace, no occasion, and no condition without which not: nor is it in our power: wherefore we can rightly say with the Apostle in Romans 9: "It is not of him that wills, nor of him that runs, but of God that has mercy."

Disputatio XCIII

Which are the effects of predestination are enumerated.

Neither sin, nor the permission of it, is an effect of predestination. Cap. 2.

Justification and merits, which are impeded by mortal sin, are in a certain way effects of predestination, and in a certain way are not. Cap. 3.

Which natural goods are effects of predestination. Cap. 4.

Although above it has been proved that our predestination begins from calling, which precedes free consent, and various effects of it have hitherto been enumerated by us, nevertheless, for greater clarity we have thought it worthwhile here to gather all together into one, and also to note some that are falsely accustomed to be reckoned among them.

First indeed, Durandus in 1, dist. 41, quest. 2, num. 10 affirms that glorification, that is, beatitude, is not an effect of predestination, but the end of it: whose opinion in this matter is not to be approved. For already above, in disputation 91, chapter 4, from the doctrine of the Fathers, we have shown against him that beatitude must be counted among the effects of predestination. That which not a few try to derive from that [place] to the Romans 8, "Whom he predestined, them also he called; whom he called, them he justified; whom moreover he justified, them also he glorified."[2001]

2001. Romans 8:30.

But little can be proved from this. For St. Jerome, St. Gregory, and St. Ambrose, St. John Chrysostom, Theophylact, Theodoret, and Theodulus, bishop of Coele-Syria, who is found in tome 6 of the Sacred Library, in that place understand by "glorification" not the glory of the life of beatitude, but the glory of the present life, which God has prepared for His just ones, making them sons of God. There also agrees another reading of the same Vulgate in the amended codex which has "He will magnify"; and the Greek word edoxase denotes this rather than "to make blessed"; for doxazo signifies "I celebrate, magnify, glorify," that is, "I proclaim as great and glorious": but here it is put by the Apostle to signify that God has glorified and celebrated His friends not so much with words as that in reality He has made them glorious and celebrated: which I take to mean that He did this not only by the adoption of the sons of God - for this He expressed when He said, "He justified" - but also by the sufferings and hardships endured, by which He has made His sons, now justified, more illustrious; as I noted in disputation 91, chapter 18. But with respect to the glory of beatitude, Origen and St. Augustine in book 1 On the Predestination of the Saints, chapter 17, and in Sermon 17 On the Words of the Apostle, and Fulgentius, book 1 To Monimus, chapter 17, understood this place. Therefore, in order that we may prove that the glory of the other life is an effect of predestination, let those things suffice for us which we said in disputation 91, chapter 4.[2002]

Secondly, as to calling, St. Bonaventure taught that it is not an effect of predestination, but that justification begins from predestination; and therefore he concedes some cause and congruous merit of predestination, yet not from us, but from the grace of God's calling. Again, Gabriel thought - [2003]

Although it was above proved that our predestination (*praedestinatio*) begins from vocation (*vocatio*), which precedes free consent, and we have thus far enumerated its various effects; nevertheless, for the sake of greater clarity, to collect them all here into one, and also to note those which are falsely wont to be reckoned among its effects, is worth the effort.

First indeed, Durandus, In I, dist. 41, q. 2, n. 10, asserted that glorification, that is, beatitude, is not an effect of predestination, but its end. In this matter his sentence is not to be approved; for above, disputation 91, cap. 4, bringing against him the Fathers, we showed that glorification of life is to be numbered among the effects of predestination. Those who try to prove this from the Apostle's words, "And whom he predestined, them also he called; and whom he called, them also he justified; and whom he justified, them also he glorified" (Rom 8:30), prove little. For St. Jerome, St. Gregory, and St. Ambrose, St. John Chrysostom, Theophylact, Theodoret, and Theodulus, bishop of Coele-Syria, who is found in tome 6 of the Sacred Library, by "glorified" understand not the beatitude of the other life, but the glory of the present, which God bestows upon his just, making them sons of God.[2004] And since another reading of the same Vulgate codex

2002. Origen; St. Augustine, De praedestinatione sanctorum, lib. 1, cap. 17; Sermon 17 De verbis Apostoli; and Fulgentius, Ad Monimum, lib. 1, cap. 17.

2003. Durandus, In I Sent., dist. 41, q. 2, n. 10. The list of Fathers on Romans 8:30: St. Jerome, St. Gregory, St. Ambrose, St. John Chrysostom, Theophylact, Theodoret, and Theodulus, bishop of Coele-Syria (tome 6 of the Sacred Library).

2004. St. Jerome, St. Gregory, St. Ambrose, St. John Chrysostom, Theophylact, Theodoret, and Theodulus, bishop of Coele-Syria (in tome 6 of the Sacred Library).

has "he will magnify," and the Greek edoxasen rather signifies "to beatify"; for doxazo means "I glorify, magnify, honor, celebrate, make renowned": here the Apostle made his friends not so much glorious in words as made them glorious in very deed. And this he did not solely by the adoption of the sons of God - for this he expressed when he said, "he justified" - but also by the sufferings they endured, by which he made his sons most illustrious, as is noted on Romans 8 and cap. 18: "But concerning the glory of the life to come, Origen, and St. Augustine in De praedestinatione sanctorum, book 1, cap. 17, and in Sermon 17 De verbis Apostoli, and Fulgentius, Ad Monimum, book 1, cap. 17, understood this passage."[2005] Therefore let us prove that the glory of life is an effect of predestination, and let those things confirm for us what we have said before.

Various effects of predestination are enumerated. Neque peccatum, neque permissionem illius esse effectum praedestinationis, cap. 2. Iustification and merits, which are impeded by mortal sin, are in a certain manner effects of predestination, in a certain manner not, cap. 3. Which natural goods are effects of predestination, cap. 4.

Nevertheless, it is most certain that predestination begins from the first vocation, which God effects in us without us, and therefore from operative, prevenient, or exciting grace (*gratia*), as, against Gabriel and St. Bonaventure, in disputation 91, cap. 3 and 5, from the doctrine of the Fathers we have abundantly proved. Nor does it at all hinder that justification is common to reprobates and to predestinates; for that which is never lost by sin is peculiar to the predestinates: therefore this at least, as St. Bonaventure taught, will be a peculiar effect of predestination; and hence Gabriel vainly thought that beatitude alone is its effect. But if justification, which is perfected by perseverance (*perseverantia*), is assigned to predestination as its peculiar effect, it follows, also against St. Bonaventure, that some vocation which is wrought in us without our consent, and without any beginning on our part preceding, likewise pertains to predestination; namely, that by which a man begins to be moved and disposed to that ultimate justification which is never to be interrupted by sin.

Moreover, that some vocation be a peculiar effect of providence and of predestination, two things are necessary. The first is, that it go along with that knowledge and cognition by which it is known as going to have its effect in us. For if God, before he decreed to confer this or that vocation, did not know what effect it would be going to produce, he should not be thought to be preventing our will by this vocation with a special grace of God rather than by another. For if God had not yet known what that vocation would be going to do in me if it were given to me, until he absolutely decreed to bestow it upon me, it follows that the will to call me by that vocation was prior to the knowledge by which he knew my consent and the effect which it was going to have in me; and thus he did not bestow a greater grace upon me by preventing me with that vocation, than upon another whom he prevented with one equally intense, or perchance more intense, in whom nevertheless it was not going to have effect: nay rather, he would have bestowed a greater grace upon him, if he had called him by a more intense one. For the greater and lesser grace of vocation would then not be taken from a greater or lesser congruity with the free choice for eliciting consent (for this,

2005. Origen; St. Augustine, De praedestinatione sanctorum, book 1, chap. 17; Sermon 17 De verbis Apostoli; and Fulgentius, Ad Monimum, book 1, chap. 17.

without the knowledge of conditional truth, cannot have the nature of grace), but from the greater or lesser intensity of the vocation. And so he who is ignorant what effect the vocation is going to have in me, and does not know the congruity of it with my free choice, does me no grace from the fact that he calls with that vocation which is going to have effect. For that which is given in ignorance cannot have the nature of a gift or of grace. Wherefore Catherinus and others who deny this knowledge of conditional truth, or who say that future things are known only inasmuch as they are together present in eternity according to the thing, cannot defend a special prevenient and operative grace in one person rather than in another; but with the same intensity of vocation preserved, they ought to assert that all are equal up to consent: which, how alien it is from the doctrine of St. Augustine and from the truth, we shall show in disputation 98. But knowledge of future things under a condition has been sufficiently proved by us, disputation 67.

The second is this: that a vocation be an effect of predestination, it is required that it be so connected with the other effects unto the end of life that it have effect into glorification (*glorificatio*) itself. Whether in truth it should be so continued with the others that it be not interrupted by any sin, we shall defer to the following chapter. Wherefore, that some vocation, or the consent from it, be an effect of predestination, it need not be understood that, in the same instant according to reason, it is thus in the predestinate, or is prepared by God, that then it effect anything into beatitude (*beatitudo*), but it is enough if thereafter it be so continued with the others in reality that all the helps together work unto beatitude.

And the order of priority according to reason between cause and effect, and according to the order of things among themselves, must be assigned also in predestination itself, so that first there be understood by God the vocation prepared unto faith, then the consent and faith itself. Finally, in each several work, inasmuch as they precede justification itself in the order of causality, the same order must be observed; yet these priorities must never be assigned according to the diversity and succession of times. And we could in general reduce all the effects to two. For there are two things which grace works in us: one without us, such as are the vocations, which are graces that prevent and operate; the other with us, such as are the consents which we offer to those vocations in our several works, and this pertains to the grace that cooperates and accompanies; between which two, two instants of reason must be set because of the order of cause and effect. Then by four other principal effects these two must be divided, namely by faith, justification (*iustificatio*), perseverance, and glorification: wherefore in each of these, through various works, those same two principal ones - namely vocation and consent - must still be multiplied. Yet the instants of reason must be constituted only from the order of cause and effect between the things themselves, as was shown in disputation 81, cap. 3.

From which it is gathered what we said at the beginning, namely, that for some effect to be ascribed to predestination it is not necessary that, in the same instant in which it is predestined, it immediately have its effect upon beatitude, but it is enough if, with a series of other things, it somehow operate toward the attainment of it. Otherwise, if in that same instant it must have an immediate effect around it, we could assign a cause of predestination. For the first effect of it in us would be to persevere in grace, that is, to finish life by some last good work in grace. Now a cause of

this can be given, though not of the whole perseverance, which must be taken from the first help after justification. For by prayer made with the help of grace we can obtain from God justification, then run the course of life in the grace of justification. It must, however, be noted that the Fathers were no less solicitous about the grace that is given to the reprobate than about that which is given to the predestinate and at length works into glory itself: they were, I say, no less solicitous, so that for no grace should a cause be given on our part; for of either there is the same reason, because grace would not be grace. They only differ in this, that the grace and mercy which are given to the reprobate for some time and work before death are granted to the predestinate for some period of life up to death. Therefore God has mercy upon the predestinate until they depart from this life, but upon the reprobate only for some part of life, or in some work before death.

Caput II - Neither sin, nor its permission, is an effect of predestination

There is no Catholic who is ignorant that sin is not an effect of predestination, even if the predestinate often take occasion from it for their salvation. For since God cannot be the cause of sin, as is defined against Luther in the Council of Trent, session six, canon seven, and as we shall more at length show in the Prima Secundae, question 79, article one, it follows that God can in no way predestine sin.[2006] Not only, moreover, can sin itself, insofar as it has the notion of moral malice, not be an effect of predestination; but neither can the act itself of sin according to its natural being. For although in this way it is an effect of the divine will, which it produces in time, nevertheless among the effects of predestination it must not be numbered: for only the works of grace through Christ, as we shall say below, are to be ascribed to predestination; but that act is not a work of grace. Then, by the same reason by which permission is not an effect of predestination, as we shall presently see, the substance also of the act of sin cannot be. Furthermore, sins also according to the ratio of moral malice are objects, or matter, around which divine predestination is engaged in that way in which penance is engaged. For once sin has been committed, God prepares in his foreknowledge a vocation by which he touches the heart of man so as to convert him to penance and make him detest the sin itself.

But concerning the permission of sin not a few think that it is an effect of predestination, and they prove this in the following way. God wills and by his eternal providence decrees to permit sin, although he does not decree to do it: therefore he can will that permission in the predestinate for this end, that it may conduce to eternal life, as in fact it sometimes is wont to conduce; but whatever God wills for this end and in fact conduces to it, is an effect of predestination: therefore the permission even of sin will be an effect of it.

Moreover, that the permission of sin cannot proceed from such an intention, thus I show. For God to will the permission on account of beatitude, and that by this means he confer beatitude upon the predestinate, he ought first, in the series of things, to will the other means by which permission could conduce to eternal life. For no one wills a means which remotely brings one to will some end unless he will first that which proximately confers upon the same end; for every

2006. Council of Trent, session 6, canon 7.

means is chosen by the reason that it is useful for the end, and therefore by another it confers, and by that also it is chosen; and since the order of intention is contrary to the order of execution - namely, that is first in intention which is last in execution - and, as was noted in disputation 89, cap. 7, it comes about that the means which proximately confers upon the end, and in the execution itself stands last after the rest, is chosen earlier than the remote means. But if the permission of sin be useful for eternal life only remotely, and not except by the proximate things it conduce - nor indeed is any nearer cause of beatitude involved here than permission - then, if God wished to permit sin in predestination by a will of leading that person to eternal life, he ought first according to reason to will to give him eternal life at least by a simple act of affection, and then, by the order of intention, to predefine and will the proximate agents and causes to be employed for attaining it; and thereafter, consequent upon those two, to will to permit, in the sinner's lapse...

It is objected: Just as sometimes in reality it is wont to conduce, so too whatever God wills on account of this end, and in very deed conduces to it, is an effect of predestination; therefore even the permission of sin will be an effect of that. Moreover, that it conduces to that end is gathered from that to the Romans 8: "To those loving God all things work together unto good," according to the exposition of St. Thomas and Anselm, who say that to those loving God even sins cooperate unto good. Although therefore sin itself is not an effect of predestination, nevertheless its permission will be, which to those loving God will cooperate unto good.

It is rejected: But the opinion of these men is by no means to be approved. First, because according to St. Augustine, book 1 On the Predestination of the Saints, chapter 10, predestination, of which we have disputed until now, is the preparation of the gifts of grace, and thus nothing falls under the effect of predestination which is not a gift of the grace of God through Christ, as we pursued in disputation 91, chapter 3 and 10; but the permission of sin is not a gift of the grace of God, rather indeed it is a negation of it; for God is then said to permit sin, when he withholds the help of congruous grace which would impede sin. Who, moreover, would say that this withholding of grace is a gift of God proceeding from the merits of Christ and his passion, even if God by his mercy should draw good out of the sin which he permitted? Therefore permission is not an effect of predestination.

Second, it is refuted: Next, even if the permission of sin were an effect of the grace of God, it could not be counted among the effects of predestination: for, in order that something be an effect of predestination, it must not only in reality conduce to beatitude, but also proceed from the will of that predefinition; yet God did not decree to permit sin with this end, namely that by its permission he might lead a man to eternal life; therefore permission is not an effect of predestination. But that an effect of predestination must be defined by such an end is manifest: because predestination is the preparation of the means of grace unto eternal life; and although the efficacious will of this end ought not to precede, as is clear from disputation 89, nevertheless it is necessary that a simple will with respect to eternal life - according to our mode of understanding - be prior, and that from it all the means which are the effects of predestination be prepared.

Furthermore I show thus that the permission of sin cannot proceed from such an intention. In order that God should will the permission on account of beatitude, and in order that by this means he should confer beatitude on the predestined, he ought also first to will other means by which permission could conduce unto eternal life. For no one wills a means which is remotely useful to some end unless he first wills that which proximally contributes to the same end: for every means is chosen under the ratio according to which it is useful to the end; therefore, if it contributes by another thing, it is also chosen by that other. And since the order of intention is contrary to the order of execution, that is, that is prior in intention which is posterior in execution, as was noted in disputation 89, chapter 7, it happens that the means which most nearly confers utility to the end, and in the execution itself is later than the rest, is chosen before the remote means. But if the permission of sin is useful unto eternal life only remotely, and conduces not except through penance - since this is occupied more closely about beatitude than permission - then, if God willed to permit sin in the predestined from a will of leading him to eternal life, he ought first according to reason to will to give him eternal life at least by a simple act of affection, and then, by the order of intention, to predefine that he should do penance and rise more cautiously from sin; and finally, in order that the predestined should obtain these two, God ought to will to permit him to fall into sin. But God did not have this order in his intention; therefore neither did he permit sin from an intention of leading someone to eternal life. But that God did not previously have in his intention the penance of the predestined rather than the permission of sin is clear, because if penance had been prior in the intention of God, God would have willed of himself and by an antecedent will - namely, not yet with any occasion offered by us, but before all our works - to call someone to penance, if indeed he had willed penance before permission and before sin itself. But by an antecedent will God did not will penance, indeed neither could he will it, but only later by a consequent will, which is after our works; therefore before he willed to permit sin, he willed the penance of no one, nor to call anyone to it.

It is confirmed by the testimony of St. John Damascene: Moreover that the calling to penance, or correction, is not of the primary intention of God and antecedent will, but of the succeeding will, St. John Damascene has clearly handed down, On the Orthodox Faith II, chapter 29, where he speaks thus: "And first, that antecedent will, or good pleasure, is said to flow from himself; but the second, the consequent will, and permission, takes its origin from our fault; and of this permission, too, there is a twofold kind: one dispensatory and having the force of instruction, which looks to our salvation; the other proceeding from despair, which tends, as we said, to the extreme and most certain penalty." By which words he said that instruction, or correction, is of the consequent will (which he also calls permission) because it already supposes our vice; he adds that to the same will pertains the penalty of sin. Therefore penance, since it is correction and instruction, cannot be of the primary intention of God, but of the secondary and consequent, which already supposes sin, and hence also supposes the permission of it. Wherefore God does not will to permit sin in order to heal, nor from an intention of penance and correction; for these would have to be primary.

It is clear, then, that it was not of the primary intention of God to heal, to redeem, and to prepare medicine; because these are not goods simply, but goods (as they say) "in the case," namely, supposing sickness and captivity; and thus they are not of the primary intention, but of the secondary.

It is confirmed by St. Cyril: The same seems to have been taught by St. Cyril, book 2 to the Empress, chapter "On that that Christ was sanctified," a little from the beginning, where with these words he said: "God founded all things, that they might be, that the things which the world brings forth might be salutary; there would not be in them a drug of death, nor the kingdom of hell upon earth. Therefore the penalty of hell, and no drug did God will to be, from himself and by his primary intention." Which about the drug of spiritual death, too, St. Cyril seems to intend; for he adds: "But by the envy of the devil death entered into the world." Therefore the remedies of sin and of spiritual death God willed by a secondary intention, after he saw that by the envy of the devil death, and sin, had entered into the world. So also only with this secondary intention did he will the drug of bodily sickness to exist, etc.[2007]

It is proved by reason: Next, the same is proved by reason. First, because if God by a primary will, and of himself, willed the penance of man, he would necessarily will sin, without which penance cannot be understood. For whoever wills something also necessarily wills those things which are essentially required for it. Thus stands sin with respect to penance, not only according to the material being and the positive entity of the act, but also according to the malice and formal aspect of sin; because insofar as it is such, we detest it. But God could not will sin; therefore neither could he predestine penance by a primary will from himself, but by a secondary will, fault already on our part being presupposed, and hence with a preceding permission of falling into it. Therefore he first willed to permit, than that by penance sin should be destroyed; wherefore neither could he permit sin for this, that he might give penance and eternal life. Nay rather, by an antecedent will from himself God would not will there to be penance and other goods which necessarily presuppose sin, because he cannot will sin itself.

Then by another reason I thus show the same. If God by an antecedent will from himself had efficaciously decreed the penance of someone, or to bring a remedy to sin, sin could not fail to follow: because, that will of bringing a remedy being supposed, it would not remain in his power "not to sin"; and since this is an antecedent necessity, it would entirely take away liberty, as we shall show in disputation 99, chapter 3. Wherefore false is their opinion who say that God first efficaciously decreed to communicate himself to creatures in the best way, that is, by the Incarnation and as a remedy for sin, and then permitted the sin of Adam with this intention, that he might bring a remedy. For it does not belong to a prudent and pious judge or physician to permit seditions and diseases with the intention of bringing remedies; for the cure of diseases ought to be of a secondary and consequent intention.

2007. St. Cyril, book 2 to the Empress, chapter "De eo quod Christus sanctificatus est" (On that that Christ was sanctified).

But against the aforesaid someone will object St. Augustine, in the book On Nature and Grace, chapter 28, where he says: "God deserts somewhat, whence the proud may learn that it is not their own but his, lest the proud should be proud." Bringing however in confirmation a testimony from the First to Timothy, he subjoins: "Some are handed over to Satan, that they may learn not to blaspheme" (1 Tim 1), that is, they are permitted to fall into sin, that they may rise more cautious. More clearly, in the book On Grace and Free Will, chapter 20, after he adduces that of David, 2 Kings 16: "Let him alone, namely Semei, that he may curse, because the Lord has said to him," he subjoined: the reason is not kept back, since the Lord had in this way said to him to curse David, "that the Lord may see," he says, "my humility, and repay me good for evils." And St. Gregory, homily 21 on the Gospels, says that Peter's fall was permitted by God, that in his own person he might learn to have mercy on others; because he was to be the shepherd of others. Therefore these Fathers think that God permitted the sins of the predestined out of the intention of some correction or patience.

I answer: I say that the Fathers spoke in the usual manner, as Scripture also is wont, when it expresses the good of events which is to be an occasion of sin as if it were an end, and speaks of it as of a final cause, whereas the true good which God draws out of sin is not of his primary will, as has been proved; and rather God, sin already foregone, draws out good, than that, in order to draw out good, he should permit sin. As St. Augustine most excellently expressed it, book 1 On Genesis according to the Letter, chapter 17, where, when he asks why God created him whom he certainly foresaw would be evil, he answers thus in words: not because he willed the evil itself, but because, since he knew he would go to this by his own proper will, he arranged the good so that from him good might be of profit to the good; as if to say, he did not with that intention create him and permit him to fall into sin, that he might profit the good, but since he knew that he would be an adversary against the good, he decreed that his temptations should be to the profit of the good - which belongs to a secondary intention.[2008]

Moreover, they object secondly in this way: that God wills to permit sin in order to show the riches of his grace to the predestined; he does not display those out of the sins of the reprobates, nor are those the matter about which the showing-forth of the riches of God is concerned; but God shows his riches and liberality toward the predestined by the fact that, although he could deny to them congruous helps, which he denied to the reprobates, and thus he could...

But on the contrary, when the Lord had in this way said to him to curse David, "Let the Lord see," says he, "my lowliness, and repay me good for evil." And St. Gregory, Homily 21 on the Gospels, says that Peter's fall was permitted by God, in order that in his own person he might learn to have mercy on others, because he was to be the shepherd of others. Therefore, these Fathers think that God permitted from the intention of some correction or of patience.[2009]

The sins of the predestined are explained. According to the phrase of Scripture, I answer that these Fathers spoke in the common manner, as Scripture too is wont to do, which expresses the good event that is going to be the occasion of sin as if it were an end, and speaks of it as of a final

cause; whereas in truth the good which God draws from sin is not of the primary order of the will, as has been proved, and rather God, with the sin already foreseen, draws out the good, than that, in order to draw out the good, he permits the sin: as St. Augustine most aptly expressed it, De Genesi ad litteram, chapter 22, where he asks why the Devil was created by God, when he knew that by his own will he would be going to be evil, and he replies in these words: "Not that he made the evil itself, but because, though he would by his own will be going to be evil, and would harm the good, nevertheless he created him for this, that from him he might benefit the good"; as if he should say that he did not create him and permit him to fall into sin with that intention, that he might benefit the good by tempting them; but since he knew that he would be an adversary against the good, he decreed that his temptations should be to the profit of the good - which belongs to a secondary intention.[2010]

Moreover, someone objects secondly against the same point in this way. Just as God wills to permit sin for this end, that he may show forth the riches of his grace to the predestined, as we will say in Disputation, chapter 9; nor for that reason does he necessarily have to will the sin which follows upon the permission; so too God could will to permit sin with this intention, that someone might thereafter rise more cautiously and obtain everlasting life, without his willing the sin.

It is answered: the reason is different. For penance, or correction, necessarily supposes sin as the necessary matter about which it is concerned; and therefore one who wills the correction, before he sees that sin will be, must necessarily will that the sin be going to be. Wherefore, lest we assert that God wills sin, it is necessary that we say that he first saw the sin, so that thereafter he might resolve to will the penance and the correction of it. But when God permits sin in order to show the riches of his goodness, not the sin but the non-repentance, or the correction of sin - which is concerned with the sin itself as with a necessary matter - is that which is supposed; therefore, by the negation of help he shows immediately to them his riches and liberality toward them; and thus this showing-forth can be of the primary intention, without God's willing the sin, but not the penance or the correction of sin, which deals with the sin itself as with a necessary matter.

But someone may object in this way: God cannot show his riches of mercy to the vessels of mercy from the fact that he did not grant them to the reprobate, unless he first shows to the predestined the sin of the reprobate; for from that, and from no other source, will the predestined be able to gather that the congruous grace, which God granted to himself, was denied to the reprobate. But knowledge, and thanksgiving which depends upon the knowledge of sin, cannot be of the primary intention of God, just as neither can sorrow: because it necessarily supposes sin.

I answer: although the predestined in this life can only from the event of sin come to know the liberality of God toward themselves, namely that he granted to them that special grace which he denied to the reprobate, nevertheless this is per accidens by reason of the state; and thus the knowledge in this manner, and the thanksgiving arising therefrom in this life, was not of the

2009. St. Gregory, Homily 21 on the Gospels.

2010. St. Augustine, De Genesi ad litteram, c. 22.

primary intention, as the argument proves. But indeed, since in the other life God shows to the blessed this special grace, not from the event of sin, but from the nature itself of grace, and from its congruity with free choice - which the intuitive knowledge will reveal to the blessed - this knowledge and the thanksgiving arising therefrom could fall under the primary intention of God: since it does not of itself and by its own nature suppose sin in any way as matter or as occasion.

From this same doctrine one may gather that the infamy which arises from sin, or bodily labor, and other penal evils, are not of the primary intention of God; and thus, when we say that a later sin is the punishment of a prior one by reason of the effect proceeding therefrom, we must not assert that it is a punishment preordained by God, even after the foreknowledge of the prior sin. For since the prior sin, God cannot will to permit the later sin with this intention, that infamy or some other labor arise from it. For these things, since they necessarily suppose the very sin, and since sin is not predetermined by God, he cannot will the infamy proceeding from it before he sees, after the permission, the later sin; which, once seen, that infamy which follows upon the sin itself pleases him, and he approves it as a punishment of the prior sin; and this is enough for it to have the nature of a punishment of the prior sin.

Caput III - How justifications and merits impeded by mortal sin are in some way effects of predestination, and in some way not

The proper sense is explained. Although the merits of eternal life and the justifications which are interrupted by mortal sin are effects of grace, nevertheless they cannot be effects of predestination, insofar as they are first decreed by God to be brought about; but insofar as, after the sin has been committed, God determines to restore all those things by some subsequent justification which is now no longer to be interrupted by sin. And the reason is manifest: because not only are all these things common to the reprobate and to the predestined, since they are granted by God to both alike; but also because the very permission of sin, by which both in the reprobate and in the predestined merits are impeded so that they do not work unto beatitude, does not take place from the intention of restoring those things again by penance. Wherefore, thus interrupted by sin, and not further continued from the intention of God together with penance, they remain without effect and outside the way, unless by another new intention God again after the sin begin to lead the sinner back to the way of salvation, and to restore to him all the goods which he lost. Then therefore God predestines this man by a special providence to his kingdom, when he restores those things which had been impeded so that they did not work unto beatitude, and quickens them again. Wherefore, up to that restoration, God made use of a certain common providence with the predestined, just as also with the reprobate.

Yet there is another reason with respect to the helps which precede justification and advance unto it, and are never interrupted: for these, although they do not work immediately unto beatitude, nevertheless, because God by his special providence always willed them to be effected and to be continued together with the others all the way to beatitude, and did not permit any impediment to be opposed to them, always pertain to that same series of special providence. But

indeed, since justification when impeded so remains outside the way of beatitude that it needs a new ordination and intention of God, by which, being restored, it may be brought back to the way; therefore, when it occurs, it does not pertain to predestination, since it has not yet been brought back into the order and special series, but it does so when it is repaired by penance.

This reason not only proves something in the opinion of those who grant only a will of simple affection with respect to the beatitude common to the reprobate and the predestined before perseverance is foreseen, but also in the opinion of those who say that some were chosen unto glory by an efficacious will before God decreed to call them, and that from that will he called them by a special providence. For although this were so, nevertheless the helps, merits, and justifications impeded by sin could not pertain to special providence, even if they proceeded from that efficacious election unto glory: because, while they are impeded by sin, the will of God cannot be continued with the other means which will afterwards be granted to the predestined after new penance. For when God permits someone to fall, he does not permit it with the intention of calling him to penance, as has been proved, but for another end, namely of showing the riches of his goodness: therefore that justification which was impeded by sin did not remain continued by the will of God with other means which will bring the predestined all the way to beatitude; but by a new intention after the permission and the sin, he is called back to the same way of beatitude. Moreover, the aforesaid reason proves much better in that opinion which grants no special will to give glory to the predestined before perseverance. For thus an interrupted justification does not proceed from a special will concerning the end, and so neither will it on that account pertain to special providence.

Next, even if we grant, as the true opinion holds, that Christ would not have come if Adam had not sinned, and thus that the grace and merits of Adam which he had in the state of innocence were not from the merit of Christ; nonetheless it is rightly defended that the whole predestination of Adam was through Christ, because his predestination, as has been proved, did not begin from the justification and merits which were given to him in that state, but from the revivification which was after the sin: wherefore those merits pertain to predestination not as given in that state, but insofar as they were restored by the merits of Christ through penance.

Caput IV - On the distinction of natural and supernatural goods, and on whether acquired moral works are effects of predestination

Among the Scholastic Doctors, especially the more recent, that distinction of things natural and supernatural is the most received. In the supernatural order they place habitual grace, the infused virtues, and their operations; but in the natural order they place the very substance of man, and also the operations of acquired moral virtue; which, insofar as they are only from the light of nature, aim at an end known by that light. Upon granting this distinction, they vary in opinion about the effects of predestination: some think that the works of acquired moral virtue, whatever they be, are not effects of predestination; thus thinks Sotus, book 1 De natura et gratia, chapter 20.

... although Adam in the state of innocence did not have [grace] from the merit of Christ, nonetheless it is rightly defended that Adam's whole predestination was through Christ, because, as has been proved, his predestination did not begin from the justification and merits which were given to him in that state, but from the vivification which was after sin. Wherefore those merits pertain to predestination not insofar as they were done in that state, but insofar as, by the merits of Christ, he was restored through penance. Indeed, in the opinion of those who say that Christ would have come otherwise even if Adam had not sinned, and that He was predestined before Adam's sin was foreseen, concerning the effects of Adam's predestination, one must think in this way: since Adam's whole predestination is to be attributed in fact to the merits of Christ, such that, from the merit of the Passion of Christ, we say it to be what it is - for it was a predestination of redemption - yet that merit was not foreseen before the sin, but afterwards; because on the occasion of that sin Christ came, at least as mortal and to suffer death, who otherwise would not have so come, nor suffered. Wherefore, from the merit of the Passion of Christ, Adam had grace and merits in the state of innocence, as St. Augustine clearly confesses in the book On Correction and Grace, chapter 11, in these words: "He (namely Adam), in those goods (namely the state of innocence), did not stand by the death of Christ." Therefore, since from the Passion of Christ he had every effect of predestination and of election unto life eternal, it follows that those merits of the state of innocence did not fall under his predestination, but under common providence.[2012]

Objicitur Some object in this way: All the effects of God's providence in men are either of predestination or of reprobation; but since those justifications and merits do not pertain to reprobation, therefore they ought to belong to predestination.

Solvitur. I answer that neither in the predestined nor in the reprobate is every effect of God's providence an effect either of predestination or of reprobation; but some effect is of common providence, even if it pertains to the grace of Christ. For since it is not in that continuous series of means to life eternal, we say it is not an effect of predestination, which is the special providence toward the predestined, although it be an effect of grace; which is manifest in the reprobate.

On whether acquired moral works and certain natural circumstances are effects of predestination

Among the Scholastic Doctors, especially the more recent, the most received is that distinction of things natural and supernatural. In the supernatural order they place habitual grace, the infused virtues, and their operations; but in the natural order of things they place the very substance (*substantia*) of man, his nature (*natura*), and the works of acquired moral virtue, which are done solely for the honest end of virtue, known by the light of natural understanding. With this distinction premised, they vary about the effects of predestination: some think that the works of acquired moral virtue, whatever they may be, are not effects of predestination; thus thinks Sotus, book 1 On Nature and Grace, chapter 20.[2013] Others on the contrary say that not only these works

2011. Sotus, De natura et gratia, lib. 1, c. 20.
2012. St. Augustine, De correptione et gratia, c. 11.

are effects of predestination, but also other natural things which efficaciously conduce to eternal life: for instance, to be born in such a place, to be endowed with such a temperament of body, to have sprung from Christian parents and to have been brought up in an excellent place, and finally to have died at such a time and on such an occasion. To this they also say that various external occasions pertain, by which a man begins to be moved to penance: for example, that a funeral should occur in the street, and that someone should see before his eyes another meet with an unhappy death, and other things of that sort.

Their sentence is proved, because that is seen to be an effect of predestination which has efficacy unto beatitude itself, and in some way contributes to its attainment; but all these things conduce to beatitude; therefore they are effects of predestination.

I, however, think a distinction must be made: for some of the things enumerated can be effects of predestination and of the grace of Christ in the manner which will be explained below; others by no means. But, that these things may be better explained, first the common doctrine of St. Augustine against Pelagius, and those who were of the remnants of the Pelagians, must be presupposed, which we set forth in Disputation 89, chapters 3 and 10: namely, that the predestination of which the Fathers dispute is not any providence of God and predefinition of things, but a preparation of the gifts of grace, not of any grace whatsoever, but of the grace through Christ, which is the grace of redemption, and, as Augustine says in epistle 95, it is conferred on adults unto living rightly, and in infants it is the grace of Baptism, by which original sin is remitted. [2014] Whatever therefore is not grace through Christ in the manner we have said cannot fall under the predestination of grace. For since predestination, as Augustine says in the book On the Predestination of the Saints, chapter 10, differs from grace in this, that predestination is the eternal preparation of grace, but grace is itself the donation, whatever is not grace, about which he there disputes against the Pelagians and the Semipelagians, will not pertain to predestination; but there he disputes about the grace of Christ, which is given to adults for living rightly, or granted to infants for the remission of original sin.[2015]

Next it must be observed that, among the graces which God grants us for living rightly, some are external, for overcoming temptations and persevering unto the end; others are internal, namely holy and pious thoughts, by which a pious and devout affection is begotten in us. Those external graces were conceded not only by the Semipelagians, but even by Pelagius himself, and by Celestine, as we noted in Disputation 89, chapter 4, and as is gathered from epistles 90 and 95 among the letters of Augustine. They used to say that external grace is law and preaching, by which there is given to us a knowledge of what is to be done, and they judged this to suffice without the inward ministration of the Spirit moving within. Whose error is condemned by Augustine, and by the African Fathers, and by the Council of Milevis, canon 4. Wherefore, just as Pelagius conceded the external grace of preaching, so he did not deny the grace of signs, by which a man is admonished to do well. Nor indeed did Augustine and the African Fathers, disputing against

2013. Sotus, De natura et gratia, lib. 1, c. 20.
2014. St. Augustine, Epist. 95.
2015. St. Augustine, De praedestinatione sanctorum, c. 10, 14.

Pelagius, ever say that external signs and preaching are not grace, but only said that this does not suffice without the Spirit moving within, and that it is not that grace which the Apostle commends to the Romans when he says that it is given without our merits, which Christians ought to confess.

With these foundations laid, I reply to the difficulty proposed. First, that all moral works which have an effect upon life eternal - either because they are a disposition to justification, albeit remote, or an occasion, or finally because they are done by a just man - are truly effects of predestination; because they are done from the grace of Christ and his Spirit moving within, as has been sufficiently proved by us in Disputation 91, chapters 14 and 15. And that many things of this sort exist I do not doubt. First, all the things that are done by a just man, since they are truly meritorious of life eternal, as is defined in the Council of Trent, session 6, chapter 16, and as we shall show more fully in I-II, question 114, article 4, without doubt have an effect regarding beatitude and therefore are effects of predestination.[2016] Moreover, there are many other things by which a man obtains from God new helps of grace, as we showed likewise in Disputation 91, chapter 16. These therefore ought to be counted among the gifts of the grace of Christ, and therefore among the effects of predestination.

Second, to the grace of Christ and to predestination pertain all the external signs which God confers in order to inspire in us the spirit of holy thought; for God prepares these for those to whom it has pleased Him to give the internal inspiration: but for those to whom He did not will to give a congruent thought for living rightly and for avoiding sins, He denied even those external signs by which they would be congruently stirred up; as Augustine clearly testifies in the book On the Good of Perseverance, chapter 14, in these words: From which it appears that some have in their very natural disposition a divine limit of understanding by which they are moved to faith, if things congruent to their minds should occur, whether they hear words or see signs; and yet, if by a higher judgment of God they are not grains separated from the mass of perdition by predestination, there are not applied to them either the words or the deeds by which they would be able to believe, if they heard such things or saw them. When he says, "they would be able to believe," he understands power together with the effect, as if he said, "they would believe." For he had said earlier, "by which they are moved to faith," not, "by which they might be able to be moved." Therefore these external signs must be said to pertain to the grace of Christ and to His predestination, in such a way that we assert that they alone do not suffice, but that internal thought and inspiration are also necessary, which the Apostle commends and which the Fathers prove against Pelagius. Wherefore, together with those signs by which the help of the grace of Christ is inwardly given to us, there is not only cooperating grace, as some falsely think, but also operating and prevenient grace, as was manifestly proved in Disputation 88, chapter 8.

In this same way regarding a premature death, which happens at such a time as to deliver a just man from a sin that was to threaten him shortly thereafter, so that he finishes his life in the grace of God, it must be said that, just as by this death the perseverance of the just man is fulfilled, so also his predestination is perfected. It is therefore a gift of God through Christ, and ought to be

2016. Council of Trent, sess. 6, c. 16; cf. Summa theologiae I-II, q. 114, a. 4.

counted among the effects of predestination. For, as I noted in Disputation 91, chapter 13, among the graces of Christ are counted not only the helps which the Scholastics say are of the supernatural order unto the works of infused virtues, but also those which, although they are of the natural order, nonetheless conserve piety and conduce to living rightly and to persevering in grace. Nor did the Fathers distinguish between those which are of the supernatural order and those which are of the natural, but they called all these the grace of Christ, inasmuch as, as we have said, it helps us and stirs us to live rightly and to observe even the precepts of the Decalogue. The same must be said purely about the occasion and time in which someone is born, when that occasion was of such a kind: as, for instance, that an infant who dies immediately after birth is born where he can be baptized, or among those who at once baptize him; likewise about some good occasion which befalls someone that is apt to conduce to justification and to perseverance: for all these things are gifts of grace and through Christ, though external, yet not without internal inspirations and holy thoughts.

Further, among the things pertinent to predestination is not that by which we were made, but that by which, already created and brought forth, we are called and justified: about which we can say, not indeed "before we are," but "after our creation," "If God is for us, who is against us?" The same point holds in Augustine, epistle 105; for there he also unmasks the fraud whereby Pelagius, retracting his error, when he said that grace is given to us without our merits, meant the grace of creation.[2017]

Secondly, when Augustine and the other Fathers, against Pelagius and the remnants of the Pelagians, contend in this same way that grace is given without our merits and by predestination thereto, they speak of the predestination of that same grace which they prove to be given in time and without our merits. For Augustine, in the book On the Predestination of the Saints, chapter 10, establishes in these words the difference between predestination and grace: between grace and predestination this alone is the difference, that predestination is the preparation of grace, but grace is itself the donation; and in the same book, chapter 14, he says likewise, that the predestination of God is, as it were, prior within us - that is, the preparation; but grace is the gift itself prepared.[2015]

Thirdly, I show that those things which pertain to the natural constitution and temperament of man by no means ought to be referred either among the effects of predestination or among the effects of the grace of Christ which the Fathers defend against Pelagius; but rather they must be referred to the gift of creation; for, as the African Fathers handed down together with Augustine, first Pelagius fraudulently retracted his error in the Council of Palestine, when he said that the grace of Christ is given without merits, he was covertly understanding that by "grace" was meant creation itself, which is common to all, or the other gifts of nature. Wherefore the African Fathers, in their letters and councils, reproved this, and declared that the grace of Christ, which is given without merits, is that by which we are justified, helped, and stirred unto good works beyond the condition of nature - grace through Christ the Redeemer, and not the gifts of creation.

2017. St. Augustine, Epist. 105.
2015. St. Augustine, De praedestinatione sanctorum, c. 10, 14.

But if someone should be set free a little later, with death imminent for him, so that he finish his life in the grace of God, it must be said that by this death, just as perseverance in righteousness is completed, so also his predestination is perfected. Therefore it is a gift of God through Christ and must be counted among the effects of predestination. For, as I noted in disputation 91, chapter 13, among the graces of Christ there are computed not only the helps which the Schoolmen say are of the supernatural order for the works of infused virtues, but also those which, although they are of the natural order, nevertheless contribute to piety, to living rightly, and to persevering in grace. Nor in truth did the Fathers distinguish between those things which are of the supernatural order and those which are natural, but they called everything "the grace of Christ" which, as we said, helps us and stirs us up to live rightly and to keep even the precepts of the Decalogue. The same, I think, must be said of the occasion and the time in which someone is born, when it was an occasion of salvation: as that an infant who is going to die immediately after birth is born near a font where he can be baptized, or among those who will at once baptize him. The same must be said of someone's good upbringing, which effectively conduces to justification and perseverance: for all these are gifts of grace, and through Christ, though external, not in the way that inspirations and holy thoughts are.

Thirdly and finally, those things which pertain to the natural constitution and temperament must by no means be referred either among the effects of predestination, or among the effects of the grace of Christ which the Fathers defended against Pelagius: although they do pertain to the gift of creation, for which also we ought to give thanks to God. The African Fathers taught this to us expressly, first of all, with St. Augustine, Epistle 95, before the middle: for when Pelagius, fraudulently retracting his opinion in the Council of Palestine, had asserted that the grace of Christ is given without merits, understanding by "grace" the grace of creation, which precedes all merits, the African Fathers in that epistle and in Epistle 90 showed that it is not enough if he admitted this grace, but that another altogether distinct one must of necessity be conceded. They say therefore: "And although in a certain not-to-be-disapproved way of speaking, that by which we are created is called the grace of God, because it is bestowed not by the merits of any preceding works but by the gratuitous bounty of God; nevertheless there is another, by which, being predestined, we are called, justified, glorified, so that we can say, If God is for us, who is against us?" Therefore, in the mind of the Fathers, the grace of predestination is not that by which we were constituted, but that by which, being already created and produced, we are called and justified; of which we can say, not indeed "before we are," but after creation, "If God is for us, who is against us?" The same is had in St. Augustine, Epistle 105; for there he also uncovers the fraud whereby Pelagius, retracting his error, said that grace is given to us without our merits, understanding the grace of creation.[2018]

It is proved, second, that when St. Augustine and the other Fathers against Pelagius and the remnants of the Pelagians in the same way contend that grace is given without our merits and is predestined without them, they speak of the predestination of that same grace which they prove in time to be given even without our merits. For St. Augustine, in the book On the Predestination of the Saints, chapter 10, establishes the difference between predestination and grace in these words:

2018. St. Augustine, Epistula 95; Epistula 90; Epistula 105.

"Between grace and predestination this alone is the difference, that predestination is the preparation of grace, but grace itself is now the donation." And in the same book, chapter 14, he says: "Wherefore the predestination of God, which is unto good, is grace, I have said, preparation; but grace is the effect of that very predestination." He is speaking, however, about the grace which, against Pelagius, he was proving to be given without merits. But if our predestination began from the gift of creation - whether that be the common creation, or the peculiar one by which someone is endowed by God with an excellent natural disposition - then Pelagius and the remnants of the Pelagians would easily agree with the Fathers, conceding that there is no merit at all on our part of the whole of grace and predestination; because everything would begin from the gift of creation, before which there was no merit in us. Thus indeed some of the Pelagian remnants, because they fled to this grace of creation in order to concede grace without merits, used to maintain, as we noted in disputation 89, chapter f. Why therefore did the African Fathers in the cited epistles and St. Augustine in Epistle 105 not admit that retractation of Pelagius concerning grace without merits granted in the Council of Palestine? Since therefore those Fathers desire that a new and other grace above the gift of creation be conceded by Pelagius, and say that this is predestined by God without merits, by no means do they comprehend the gift of creation under this predestination.[2019]

Third, if the gift of creation were an effect of predestination, it ought to be the first and the foundation of the others: wherefore, those who would say that for this there is given neither cause nor merit on our part, even if they asserted that there is given a cause of the first gratuitous vocation to justification, would not on that account be compelled to concede that there is given a cause of predestination. For in order that on our part there be a cause of predestination, there must also be a cause of the first effect; but if the first effect is not a cause, even if there be granted a cause of another, we cannot be said to be the cause of our predestination. For on every opinion we are in some way the cause of the plurality of effects, as of the increase of grace, of perseverance, of consent, and of any second grace which we obtain from some prior one; nevertheless, we are not therefore said to be the cause that we are predestined, because we are not the cause of the first effect. Thus then Pelagius and the Semipelagians would not be compelled to concede a cause of predestination: rather, taking refuge in the grace of creation, they used to deny a cause in any meritorious way on our part. But since St. Augustine was speaking against them about the predestination of grace through Christ, which is distinct from the gift of creation, for that reason, outside the effects of that, the constitution and natural production of the predestined must be referred. For this reason also Peter the Deacon, in the book On the Incarnation, chapter 8, anathematizes the books of Faustus and pronounces them to have been written against the sentence of Sts. Augustine and Celestine on predestination. Because he subjected grace to human labor, as we noted in disputation 91, chapter n., namely, supposing the question to have been with St. Augustine about the predestination of grace, whether it were given in time from some beginning on our part and predestined in eternity: but if predestination began from creation, in no way would Faustus have said that grace is joined to human labor and that predestination proceeds from that.[2020]

2019. St. Augustine, De praedestinatione sanctorum, c. 10, 14; cf. Disputatio 89, cap. f.

Fourth, if natural disposition were an effect of predestination, it was necessary that it itself be the cause, or occasion, of the other gifts which are conferred on us from the merits of Christ. For if it is in no way a cause, it will not be connected with the other effects of predestination, nor will it establish any order with them; but it will be only the subject of predestination, to which the whole series of graces, and consequently the whole predestination, will come from the free will of God without any other occasion. Moreover, that a good disposition is in no way a cause, or a consideration, in regard to which looking God predestines the gifts of his grace, no Catholic denies, nor did the Massilians dare to deny it. For God does not therefore call someone by his grace because he sees him endowed with a good wit, since he leaves many of this sort, while he predestines others of a very bad disposition to be called in a fitting way; which St. Augustine declares in the first book to Simplicianus, near the end, in these words expressed: "For I have nothing which I can look to in those chosen unto saving grace, if I press my thoughts to the examination of this choice, except either greater talent, or fewer sins, or virtues - let us add also, if you please, uprightness and useful learning." And a little after: "But when I shall have set this down, he will laugh me to scorn, who chose the weak things of the world that he might confound the strong, and the foolish things of the world that he might confound the wise; so that, looking back in shame, corrected, I may laugh at many, and that some are chaster than certain sinners (behold a good disposition toward virtue), and that some are orators above certain sinners (behold good natural talent). Yet God had no consideration of either," as St. Augustine attests there.[2021]

We cannot indeed deny what he learnedly teaches in the book On the Good of Perseverance, chapter 14: namely, that some, by a certain acuteness of wit from the gift of creation itself, would have the power that, if they should see miracles or should hear words which others, seeing and hearing, do not believe nor are converted, they would without doubt believe and be converted. Nevertheless, to those to whom it is granted to see the miracles or to hear words of this sort, and in whose presence God inwardly touches their hearts, this is granted not because they are endowed with the best disposition, but by the sole mercy of God. Wherefore, although a good natural talent is more easily moved by the grace of God, nevertheless it is never the cause why someone is called by a congruent thought. And consequently the predestination of grace does not take its beginning from the gift of creation, but from the very gratuitous vocation. And to many who are strong in such a talent those miracles are not granted; because, as St. Augustine says, they are not separated, for the predestination of grace, from the mass of perdition, that is, because the interior and congruent calling, which otherwise would be born from those miracles, has not been predestined for them by God. And universally there is no one of so dull a wit and so depraved a nature who is in possession of reason who cannot see such miracles and hear words by which he might be congruently moved. For neither was there lacking to God a means by which, if he wished, he might have converted Esau; but he knew many means, of which he willed to apply none, as St. Augustine notes in the book to Simplicianus, question 3, after the middle. Finally, every predestined person

2020. Petrus Diaconus, De incarnatione, c. 8; cf. Disputatio 91, cap. n.; Faustus of Riez.

2021. St. Augustine, Ad Simplicianum, lib. 1 (near the end); De bono perseverantiae, c. 14; Ad Simplicianum, q. 3 (post medium).

was fittingly called by that which God knew to be fit for him, that he might be moved, as in that question St. Augustine says; yet for that reason we do not say that the quality of wit and of creation pertains to predestination.

From what has been said it is gathered that it is not an error of the Semipelagians to concede a natural disposition from ourselves, or from a good natural endowment, not indeed for obtaining grace, but that grace, bestowed out of mercy, might work more easily in us: for thus neither the beginning nor even a remote occasion, or per accidens, is conceded to grace. But those who say that there is given from us a disposition for grace - whether they call it remote, or per accidens, and only removing impediments - I do not know in what way they can defend it. For a disposition for grace is so called because it precedes the obtaining of grace: but if such were given from us, there would already be some beginning of grace from us; we should therefore fall into the absurdities which in disputation 91 we were inferring. Therefore there is given from our creation some disposition such that grace, which was bestowed upon us gratuitously and without any occasion on our part, might work more easily in us, because it is more fitted to our free choice; not, however, such that grace is given to us.

What order, moreover, is to be assigned between the will of creating man and of justifying and glorifying him, is plain from those things which I said in disputation 82, according to which the prior should be the will of producing man, and then of calling him, although at the same time God had the intention of glorifying him by a simple affect of complacency. Whence it follows that predestination, which begins from calling, is later than the very will of creating man.

Lastly, St. Augustine, Epistle 105, uncovering also the fraud of Pelagius, who in the Council of Palestine had said that grace is given to us without our merits, understanding the grace of creation, says in these words: "Let this deceit be cast away from the hearts of Christians. For assuredly it is not that grace which the Apostle commends, by which we were created so that we might be men; but that by which we were justified, so that we might be just men. For this is indeed 'by Jesus Christ our Lord.' For Christ did not die for none, that men might be created, but for the ungodly, that they might be justified." He understands indeed the grace of justification to be faith, as he immediately explains, because by that we are moved unto justification. This, therefore, he says is the grace which Christ merited for us by his passion, not the grace of creation; and yet Christ by his passion is the cause of our whole predestination from the first effect; otherwise he would not be the cause of the whole. Therefore the gift of creation does not pertain to the grace of predestination. And although we cannot deny that some men by the merit of Christ were not only begotten, but also endowed with a good wit and disposition - those, namely, who were given by God in answer to the prayers of the faithful, as Francis of Paola and other Saints - so that in these the gift of creation pertains to the grace of Christ; nevertheless that it is not an effect of predestination can be proved by that last reason. Wherefore, besides beatitude itself, the gift of predestination is solely the Spirit, who is supplied to us for living rightly through holy thoughts and inspirations, and all the other external helps which contribute to the same effect, as has already been explained.[2022]

2022. St. Augustine, Epistula 105; cf. Disputationes 82; 91.

Articulus VIII - Whether predestination can be helped by the prayers of the saints

It proceeds thus. It seems that predestination cannot be helped by the prayers of the saints. For nothing eternal is impeded by something temporal. And consequently a temporal thing cannot help to the end that something eternal be. But predestination is eternal. Therefore, since the prayers of the saints are temporal, they cannot help to the end that someone be predestined. Therefore predestination is not helped by the prayers of the saints.

Further. Just as nothing needs counsel except because of a defect of knowledge, so nothing needs aid except because of a defect of power. But neither of these befits God predestining. Whence it is said in Romans 11: "Who has helped the Spirit of the Lord? or who has been his counselor?" Therefore predestination is not helped by the prayers of the saints.

Further. It belongs to the same thing to be helped and to be impeded. But predestination cannot be impeded. Therefore it cannot be helped by anything.

But on the contrary is what is said in Genesis 25, that Isaac prayed to God for his wife Rebecca, and God gave conception to Rebecca. From that conception Jacob was born,

But on the contrary: what is said in Genesis 25, that Isaac prayed to God for his wife Rebecca, and God gave conception to Rebecca. From that conception Jacob was born, who was predestined. But predestination would not have been fulfilled, if he had not been born. Therefore predestination is helped by the prayers of the saints.

I answer that concerning this question there have been diverse errors. For some, attending to the certainty of the divine predestination, said that prayers are superfluous, or whatever else is done to obtain eternal salvation: because, whether these things be done or not done, the predestined obtain it, the reprobate do not obtain it. But against this are all the admonitions of Sacred Scripture exhorting to prayer and to other good works. Others, indeed, said that by prayers the divine predestination is changed. And this is said to have been the opinion of the Egyptians, who posited the divine ordination, which they called fate, to be able to be impeded by certain sacrifices and prayers. But against this too is the authority of Sacred Scripture. For it is said in 1 Kings 15: "Moreover the triumpher of Israel will not spare, nor be bent by repentance." And in Romans 11 it is said that "the gifts and the calling of God are without repentance." Therefore one must speak otherwise, that in predestination two things are to be considered, namely the very divine preordination, and its effect. As to the first, in no way is predestination helped by the prayers of the saints. For it is not by the prayers of the saints that someone is predestined by God. But as to the second, predestination is said to be helped by the prayers of the saints and by other good works: because providence (of which predestination is a part) does not draw away secondary causes, but so provides effects that the order also of secondary causes is subject to providence. Thus, as natural effects are so provided for that natural causes also are ordained to those natural effects, without which those effects would not come about; so too the salvation of someone is predestined by God in such wise that whatever promotes a man to salvation, whether his own prayers or those of others, or other good things, or anything of this sort, without which a man would not obtain salvation, falls under the order of predestination. Whence the predestined should

strive to act well and to pray: because by such things the effect of predestination is fulfilled with certainty. Wherefore it is said in 2 Peter 1: "Strive that by good works you may make sure your calling and election."

Reply to the first: That reasoning shows that predestination is not helped by the prayers of the saints as regards the very preordination.

Reply to the second: Someone is said to be helped by another in two ways. In one way, insofar as he receives power from him; and thus to be helped is a mark of weakness; whence this does not befit God, and so that saying is to be understood, "Who has helped the Spirit of the Lord?" In another way someone is said to be helped by another, by whom he carries out his own operation, just as a master by a minister. And in this way God is helped by us, insofar as we carry out his ordination, according to 1 Corinthians 3: "For we are God's helpers." Nor is this on account of a defect of divine power, but because he uses intermediate causes that the beauty of order may be preserved in things, and that he may also communicate to creatures the dignity of causality.

Reply to the third: Secondary causes cannot go out of the order of the first universal cause, as was said above, but they carry it out. And therefore predestination can be helped through creatures, but not impeded.

Explication of the article. After the fifth article it seemed worthwhile to us to interpret the eighth, that first we might treat all the things that are proper to predestination, then the things that pertain to reprobation, finally the things that are in some way common to both, according to the order assigned by us at the beginning of this question.

Conclusion. Therefore the conclusion of this article is: As far as concerns the divine preordination, predestination cannot be helped by the prayers and works of the saints; yet it can, as far as concerns its effects. With the two errors exploded which St. Thomas reports in the text, he distinguishes the things which are in predestination, just as he had distinguished in article 5: for one is the eternal act of God, which is the same as his essence, and the other things are the effects of predestination. He says, therefore, that what is eternal is not helped by the prayers either of the predestined himself or of another; just as also he had said in article 5 that no cause of it is given. But the effects of predestination can be helped. He proves it, because God's providence has willed many effects of predestination to be by means of secondary causes: for by the prayer of the predestined himself he willed that certain gifts be conferred, and his merits increased. Therefore predestination is helped by the prayers of the predestined, insofar as the whole effect of predestination is completed by the prayer of the predestined. But as to the beginning, he says, it is in no way helped by the prayers of the predestined himself: for it is certain that the prayers of the predestined contribute nothing to the inception of the effect of predestination in himself, as from those things which we said in Disputation 91, chapter 17, is clear. But about the prayers of someone else, by which the predestination of another is helped, St. Thomas teaches that they fall under the order of that predestination, just like all the other things that promote the salvation of the predestined. And since the same reason holds of the prayers of Christ, if they are referred to our

predestination, about both at once there will immediately be the same controversy. For, as regards the prayers of the predestined himself, how they confer upon his predestination, we have said enough in the place cited by us.

Disputatio XCIV - Whether the merit and the prayers of Christ, or of some Saint, have merited our predestination and election

Caput I - Various opinions of the Scholastics

There are some Scholastics not of mean name, who so extol the liberality of divine predestination that they think there is no meritorious cause, nor impetratory cause, of it, not only on the part of the predestined, but even on the part of another; but they assert that such a benefit is to be referred to the will of God alone. The various ways of speaking of these we shall report in this chapter.

First, therefore, Adam, in the Commentaries on the Epistle to the Ephesians, on that of chapter 1, "As he chose us in him," holds that our predestination and election were not made from the merits of Christ, but that these two benefits are to be referred to the liberality of God alone. He adduces no reason for this opinion; but perhaps it is this, that this author thinks that faith and the other dispositions for justification are granted to us not from the merits of Christ, but from the will of God alone. Thus he teaches on Philippians, chapter 1, toward the end, and on that of 2 Peter, chapter 1, "In the justice of God"; which opinion Capreolus had previously handed down, in 3, distinction 18, the only question, numbers 2 - 3, to the arguments of Scotus against the fourth conclusion; Ferrariense, the fourth against the Gentiles; Driedo, On the Captivity and Redemption of the Human Race, tractate 2, chapter 2, part 3, section 2, article 4, to the first objection; and in tractate 4, chapter 2, page 8, member 3; which Ruard also indicated.[2023]

Again, he objects, when he asserts that Christ sufficiently merited for us the remission of sins, but that an equal application of his merits is not made to us, this in part proceeds from our free will, in part truly from divine election; and into this opinion he cites Capreolus and Driedo. Therefore he seems to hold that, in order that the merits of Christ be applied to us, there is needed in us some prior disposition, which is not from the merits of Christ, because of which they are applied to us: and if he thinks that this is from free will alone, he thinks with the Massilians; but if from the help of grace, he must grant that that grace was not from the merits of Christ. From which doctrine the opinion of Adam, alleged above, is rightly gathered; and with it the other authors cited ought to consent: since, if for us faith and other dispositions which precede justification are not from the merits of Christ, and these pertain to predestination, as in Disputation 91, chapter ... against St. Bonaventure was sufficiently proved, it follows that predestination began in us before

2023. John Capreolus, In III Sent., d. 18, q. unica, nn. 2 - 3, ad argumenta contra Scotum, concl. 4; Franciscus de Ferrara, Contra gentiles, IV, contra gent.; Johannes Driedo, De captivitate et redemptione generis humani, tract. 2, c. 2, p. 3, sect. 2, a. 4, ad 1 ob.; idem, tract. 4, c. 2, p. 8, memb. 3; Ruard Tapper, loci indicati.

the merits of Christ were applied to us. But if the merits of Christ were not the cause of the first effect of our predestination, they cannot be said to be the cause of predestination itself, since in predestination there was no place for any merit of Christ, or of another saint.

The second opinion is of certain moderns, who, although they grant that the merit of Christ was the cause of predestination and of the love with which God predestined and loved us, nevertheless affirm that it was not the cause of our election. For between love and election they establish this difference, with St. Thomas in this question, article 4: that what belongs to love is only that God wills some good to someone without comparison and without a setting of him before another; but to election, since it is a choice among two or more, there pertains a reference also to others. Hence they say that the merit of Christ was the cause of the love with which God loved us; yet it was not the cause that he should love this one rather than that one. For this, they say, necessarily had its cause in this, that some were drawn out of the shipwreck of perdition, while others remained in the same; but Christ was not the cause that some should be drawn out and others remain; therefore neither was he the cause of that election which draws some out.

With Adam and Driedo agrees Francis Sonnius, book 4 of the Demonstration of the Gospel, tractate 3, who, treating of the passion of Christ, chapter 9, proves this very thing by another reason which he also thinks Adam insinuates: namely, that if Christ merited for us our predestination, it would be necessary that he merited every effect of it; but he could not merit every effect of it, since among the effects of our predestination are counted the incarnation, passion, and merits of Christ; therefore Christ could not have merited our predestination. To this argument some also are led; and on that account they also affirm, with Cajetan in 1, question 23, article 4, reply to the fourth, although they interpret the first opinion otherwise, that Christ could not merit for someone his predestination; since the order and merit, so far as they are effects of inferior predestination, if anything of this sort can be made plausible, follow secondarily: for whatever comes about in anyone is brought about by virtue of an interior gift of the Spirit of grace; but exterior helps are effects placed under predestination: therefore from the prayer either of himself or of another, by the power of that Spirit, the predestined obtains the effects of his predestination to be conferred; and for this also a peculiar kindness is to be ascribed to God. Moreover, Christ cannot merit our predestination; it is proved thirdly thus: that which is temporal and created cannot be the cause of what is eternal and uncreated; but the merits of Christ are temporal and created; our predestination, however, is eternal and uncreated; therefore the merits of Christ cannot be the cause of it. Fourthly it is proved: God in his providence uses no medium, but by himself immediately produces causes, although for the execution he uses secondary causes; therefore predestination is not caused through the merits of Christ, but by God himself proximate as cause.

They confirm this by the words of Scripture: John 17: "Father, I have manifested your name to the men whom you have given me out of the world; they were yours, and you have given them to me," which place Abulensis explains; and the Bishop of Hispalis also takes it in the sense that those are they whom God by his eternal election gave to the Son.[2024] In this same sense Paul uses that of

Hebrews 2: "Behold I and the children whom God has given me"; and in Ephesians he says: "He chose us in him before the foundation of the world," and "according to the purpose of his will"; by which he wished to show that the blessing depends on God alone, not on the merits of Christ, and that our election does not hang on the merits of Christ, but rests in the sole good pleasure of God. [2025]

To this there seems also to pertain that saying of Matthew 20: "To sit at my right or at my left is not mine to give to you, but for whom it has been prepared by my Father"; and that of Ephesians 1: "In whom also (that is, in Christ) we have been called by lot." For he says that we have been called "by lot" so as to show that from no merits was this election made. These reasons and testimonies, if they have any weight, prove not only that the election unto glory was not made from the merits of Christ, but neither the election unto grace.

The third opinion is that of Scotus in III, dist. 19, q. 1, n. in fine: who disposes in this order the steps of reason in God's foreknowledge and providence. First, he says, God understood himself; second, he understood all creatures; third, he preordained some to glory and grace, about others he bore himself negatively; fourth, he saw them to fall in the first parent; fifth, he provided them a remedy through the passion of Christ. From which series and order it follows that no one was predestined from the merits of Christ. For although Scotus teaches that Christ was the first of all the predestined, before the foresight of Adam's sin; nevertheless he asserts that the merits of Christ with respect to men were ordered after the foresight of the sin of the first parent, and thus after their predestination; and therefore, although in the execution the merit of Christ was the cause of every effect of predestination, yet it was not a cause in the intention, that men should be chosen and predestined. This opinion Almainus seems to embrace in the same Distinction 19, q. 1, after the fourth conclusion; and Maior the Master in q. 1, in the third argument: and some confirmation can be gathered for it from the reasons set out above. These were the various opinions which in this controversy seem less probable, which it is not necessary to refute one by one in this chapter: for in what follows, when we confirm the truer opinion of the theologians, we shall show the falsity of them all.

Caput II - That the merit of Christ was the cause of our predestination and election is proved by authority

The ancient opinion of theologians, which I judge to be Catholic, is this: that Christ not only merited for us that we should be loved by God and predestined by grace unto his glory, but also that we should be chosen out of the mass of perdition by the election of grace; about the election indeed unto glory we shall say something in the following chapter. This opinion about the election of grace and predestination must be proved for us in this chapter by authority alone: for in the following it will be confirmed by reason.

2024. John 17:6; see Alonso Tostado (Abulensis), ad loc.; and Isidore of Seville (or the Archbishop of Seville) as cited.
2025. Hebrews 2:13; Ephesians 1:4 - 5.

First, indeed, among the Scholastics many and the more notable have expressly taught it, when they affirm that the predestination of Christ is the cause of our predestination. Thus teaches St. Thomas in III, q. 4; Cajetan, and the more recent Thomists on that article; Alexander of Hales III, q. 4, mem. 5; St. Bonaventure in III, dist. 1, pars 1, a. 1, q. 3; Albert the Great, dist. 10, a. ult.; Richard, dist. 4, q. ult.; Durandus, q. 3; Paludanus, dist. 1, q. 2, concl. 2 and 3.[2026] They preface, however, a certain distinction in this way. Either predestination is taken for the act itself in the mind of God, or for its effect. If for the act in the mind of God, they say the predestination of Christ was not the cause of our predestination, because in God there was one and the same act of both predestinations; but if it be taken for the effect, they assert that the predestination of Christ was the cause of ours, because Christ himself was the cause of all the graces which God predestined for us, which they think sufficient for the predestination of Christ to be called our cause. For, as we noted in Disputation 91, chapter 1, when we seek the cause of predestination, we do not seek the cause of the divine act itself, but the cause of the graces which God predestined. The same opinion Gabriel follows, without any distinction premised, in III, dist. 19, q. 2, after the fourth conclusion, where he expressly refutes the opinion of Scotus.[2026]

As to the election of grace from the mass of perdition, the aforesaid Doctors assert nothing expressly; nevertheless, in my judgment I think it has the same reason as predestination. Moreover, the same opinion not only as to our predestination, but also as to election, is followed by Vega, book 4, on the Council of Trent, chapter 5, at the end; Viguerius in his Institutions of Theology, chapter 20, section 8, verse 3, near the end; Catherinus, book 1 On the remarkable predestination of Christ toward the end, and book 2 at the beginning; and Gaspar Caffalius, book 1 On fourfold justice, chapter 4, topic 1: although this author not only thinks that Christ was the meritorious cause of our election and predestination on the part of the effect, but even of the uncreated act in the mind of God, which some more recent authors follow; by what reason this is false we will show below.[2027]

But let us confirm this opinion by testimonies of Scripture first of all. The first testimony is Ephesians 1, where it is said: "He chose us in him (that is, in Christ) before the foundation of the world, that we should be holy." Where Paul uses the name "election," which is the separation from that mass of perdition in which many are left, there is no reason why we should deny that our election was from the merits of Christ, not only insofar as love and predestination are spoken of, but also insofar as it is called election. For indeed we are said by Paul not only to be loved and predestined in Christ, but also to be elected.

2026. St. Thomas Aquinas, Summa theologiae, III, q. 4; Thomas de Vio (Cajetan), in eundem art.; Alexander of Hales, III, q. 4, mem. 5; St. Bonaventure, In III Sent., dist. 1, pars 1, a. 1, q. 3; Albert the Great, In III Sent., dist. 10, a. ult.; Richard of St. Victor, dist. 4, q. ult.; Durandus of St.-Pourçain, In III Sent., q. 3; Peter of Palude (Paludanus), In III Sent., dist. 1, q. 2, concl. 2 - 3; and Gabriel Biel, In III Sent., dist. 19, q. 2, post 4 concl., expressly refuting Scotus.

2026. St. Thomas Aquinas, Summa theologiae, III, q. 4; Thomas de Vio (Cajetan), in eundem art.; Alexander of Hales, III, q. 4, mem. 5; St. Bonaventure, In III Sent., dist. 1, pars 1, a. 1, q. 3; Albert the Great, In III Sent., dist. 10, a. ult.; Richard of St. Victor, dist. 4, q. ult.; Durandus of St.-Pourçain, In III Sent., q. 3; Peter of Palude (Paludanus), In III Sent., dist. 1, q. 2, concl. 2 - 3; and Gabriel Biel, In III Sent., dist. 19, q. 2, post 4 concl., expressly refuting Scotus.

2027. Didacus de Vega, Lib. 4 in Concilium Tridentinum, c. 5, in fine; Viguerius, Institutiones Theologicae, c. 20, § 8, vers. 3, circa finem; St. Ambrose Catharinus, De eximia praedestinatione Christi, lib. 1 ad finem, et lib. 2 in principio; Gaspar Caffalius, De quadripartita iustitia, lib. 1, c. 4, t. 1.

However, Adamus, who defends the opposite opinion, judges that the particle "in" does not in that place signify a meritorious cause, but he applies a double other sense. One is that we may be said to be elected in him, just as also we are said to be in him founded or created: then indeed the particle "in" signifies a true efficient cause, but is referred to the divinity of Christ. Another sense is: he chose us to have faith in Christ.

This author is mistaken, however; and he attempts to defend by false interpretations, contrary to the sense of the ancient Fathers, an opinion less probable, indeed rash. For all the Greeks, with St. John Chrysostom, plainly teach that the particle "in" (in Greek en) signifies in that place a cause, and is put for the particle dia, that is, "through." The same sense is followed among the Latins by St. Ambrose and St. Thomas. Wherefore Adamus vainly interprets that we were elected so that we might believe in Christ.

Moreover, it is frequent in Scripture, and in the selfsame chapter quite continuously, that the particle "in" signifies "through," as when we say "in Christ," it is the same as "through Christ." Thus all understand that statement of the same chapter: "He graced us in his beloved Son," and again: "In whom we have redemption," and below: "In whom also we have been called by lot." Also in Ephesians 2 we are said to be "created in good works in Christ"; and in 2 Timothy 1: "But according to the grace which was given to us in Christ Jesus"; and the Council of Trent, Session 6, chapter 16, calls works "done in Christ," which were done by his grace.[2028]

Nor indeed do the aforesaid Greek Fathers interpret that "He chose us in him" in this way, namely by the cause of faith which was to be had in him. For, when a little before they explain that, "With every blessing in Christ," they openly said that Christ was the mediator through whom God blessed us with every blessing; and, therefore, when Paul says "He chose us in him," it is just as if he were to say: through the same one through whom he blessed us, through that same one he chose us. Photius expressed this most clearly, as cited by Oecumenius, explaining that "With every blessing," in these words: "He blessed through the Son, he chose through the Son, he made us beloved through the Son."[2029] But if the particle "in" denotes a cause and is put for "through," it is necessary that that cause be referred to Christ according to his humanity, not according to his divinity; and hence it follows that, in Paul's mind, the merit of Christ was the cause of our election. Thus the cited Fathers refer this to the humanity, when they say that Christ is the mediator of our blessing and election; for he is not mediator according to divinity. Therefore the same Photius thus says: "How through the Son? He answers: O wondrous thing: through his blood."

And the reason is manifest: for when Paul begins to speak about the business of our justification, and whenever he attributes any part of it to Christ, he refers it to him as mediator; otherwise, if it were permitted to interpret those places separately about Christ according to divinity, we could always understand them thus. Wherefore, when we are said to be "created in good works in him," since it is a discourse about the grace of doing good and of living rightly, which is the grace of Christ, as St. Augustine says in Epistle 105, and along with him the African Fathers

2028. Council of Trent, Session 6, chapter 16.
2029. Photius, as cited by Oecumenius, on Ephesians 1: "With every blessing."

in Epistles 90 and 95, this must be ascribed to his humanity, by which he merited that grace for us.[2030] But when we are said in Colossians 1 to be "created in Christ," which must be understood about the creation and production of nature, it is attributed to Christ according to his divinity, according to which he is the cause of all things; for "in him" all things are said to have been made and created (John 1). Yet not according to his humanity, because that neither is an efficient cause of our nature, as a father is, nor a meritorious one, according to that same Augustine in the said Epistle 105, where he says that Christ did not die in order that men might be created, but that they might be justified; whence he gathers that the grace of creation is not from the merit of Christ. Therefore, when Paul with full voice says that we have been elected in Christ, who would dare to deny that our election was from the merits of Christ?

However, some, in order to protect that secure opinion, understand this election not according to that aspect by which election is election, that is, as it carries a relation to others, but insofar as it is love or predestination. I do not know, nevertheless, by what reason it is permitted thus to abuse the word: since the Greek Fathers, especially Photius cited by us, say that we have been not only predestined through Christ, made dear, or loved, but also elected. From what has been said one may gather that the interpretation which Anselm embraces is not according to the mind of Paul, who understands that "in Christ" in this way: through the right, or merit, of Christ himself; and he explains that "with every blessing" concerns blessings which are gratuitous and are had in Christ, an exposition which cannot square with the text of Paul.

The first testimony is at Ephesians 1, where it is said: "He chose us in him" (that is, in Christ) "before the foundation of the world, that we should be holy." Where Paul uses the name of election - which is that separation from the mass of perdition in which many have been left - there is no reason why we should deny that our election was from the merits of Christ, not only in so far as it is called love and predestination, but also in so far as it is called election. For by Paul we are said not only to be loved and predestined "in Christ," but also to be elected "in Christ." Photius thus says: "He blessed through the Son, he elected through the Son, he predestined through the Son."[2031]

However, Adam, who defends the opposite opinion, thinks that the particle "in" does not there signify a meritorious cause, but he applies to it a twofold other sense. One is that we are said to have been chosen in him, as we are also said to have been in him created or made: then indeed the particle "in" signifies a true efficient cause, but he refers it to the divinity of Christ. The other sense is, that he chose us to have faith in Christ.

But this author is mistaken, and, with a view to defending his opinion, he advances interpretations that are not only unreasonable but also rash and false, against the sense of the ancient Greek Fathers. For all the Greeks, with St. John Chrysostom, plainly teach that the particle "in" (Greek en) in that place signifies cause, and is put for the particle "through" (dia); that is, "by." The same sense is followed among the Latins by St. Ambrose and St. Thomas; therefore Adam in vain interprets "that we were chosen to believe in Christ." It is, moreover, frequent in Scripture,

2030. St. Augustine, Ep. 105; African Fathers with Augustine, Ep. 90 and 95.

2031. Photius, as cited by Oecumenius, on Ephesians 1, explaining "with every blessing": "He blessed through the Son, he elected through the Son, he predestined through the Son."

and very plain in this same chapter, that the particle "in" signifies "through"; as when we say, "In Christ," it is the same as "through Christ." Thus all understand that passage of the same chapter: "He hath graced us in his beloved Son"; and again: "In whom we have redemption"; and lower: "In whom also we were perhaps called." Also at Ephesians 2 we are said to be "created in good works in Christ"; and at 2 Timothy 1: "according to the grace given to us in Christ Jesus"; and the Council of Trent, session 6, chapter 16, calls works "done in Christ," which are works done by his grace.[2032]

Nor, indeed, do the Greek Fathers interpret that clause, "He chose us in him," in this way, namely, through the faith which was to be had in him, as if they were to say that we were not only predestined and made dear, but also elected. For before they expound that, "with every blessing in Christ," they openly said that Christ was the mediator through whom God blessed us with every blessing; and in the same way, when Paul says, "he chose us in him," it is as if he were to say: through whom he blessed us, through the same he chose us. Photius most clearly expressed this among the passages of Oecumenius, when he explains, "with every blessing," by these words: "He blessed through the Son, he elected through the Son, he predestined through the Son."[2031] But if the particle "in" is put for "through," it must be referred to Christ according to his humanity, not according to his divinity: otherwise we could always speak that way according to the divinity in every case. Wherefore, since we are said to be justified and to live rightly through him, since he is the one who acts and operates, as St. Augustine says, and the African bishops with him in letters 90 and 95, this must be ascribed to the grace of Christ. But when we are said to have been created in Christ, or to have our natural production in Christ, that is attributed to Christ according to his divinity, which is the efficient cause of all things which are said to have been made in him, as at John 1; not according to his humanity, because that neither is an efficient cause of nature, as the Father is, nor of creation, as the Spirit is. Therefore when Paul says that we were chosen in Christ, our election was from the merits of Christ; for otherwise Christ would not be our mediator of blessing and election: for he is our mediator in Christ according to the humanity, not according to the divinity. Therefore in the same way that we are said to be washed in the blood of Christ, through which we are redeemed, we are said to be chosen by him: and the reason is the same that Paul uses in setting forth our justification and calling to the Romans, when he attributes them to Christ, to whom we were ordained; otherwise, if it were permitted, we could always interpret such expressions according to his divinity. Wherefore, since we are said to be created in good works "in him," since that concerns acting and living rightly, it is rightly to be understood of the merits of Christ, as Augustine says in letter 105 and with him the African Fathers in letters 90 and 95.

From what has been said it can be gathered what St. Anselm adopted according to the mind of Paul when he understood "in Christ" in this way: namely, as "through him"; and that, "with every blessing," and the like, which continuously occur in that chapter, which language cannot be made to fit, unless in this way it be understood.

2032. Council of Trent, session 6, chapter 16; see also 2 Timothy 1:9 - 10; Ephesians 1:3 - 14; 2:10.

2031. Photius, as cited by Oecumenius, on Ephesians 1, explaining "with every blessing": "He blessed through the Son, he elected through the Son, he predestined through the Son."

What we have so far proved is understood of election to grace, by which indeed God decreed to draw certain persons from the mass of perdition by his gratuitous and congruous calling, others being left therein. For it is in this sense that this place of Paul to the Ephesians 1 ought to be understood, as I showed in disputation 89, chapter 12. Wherefore from that same place it is no less proved that the efficacious will of God, by which he willed to give to certain persons his congruous grace, was from the merits of Christ, in so far as it is a certain kind of love. For just as "he chose us in him," so also "in him he loved us"; for the election of the elect was also their love. But if the discourse be of election to glory, from this place it cannot be demonstrated that it was from the merits of Christ, since the Apostle does not speak here of that; yet most fitly by reason, as the next chapter will deduce of the same.

Secondly, from the same chapter 1 to the Ephesians it is proved that Christ meritoriously was the cause of our predestination. For Paul says: "Who" - namely God - "predestined us unto the adoption of sons of God through Jesus Christ unto himself," than which nothing could be said more clearly, unless that contentious man Adam were to try to twist the particle "through Christ," which manifestly indicates a cause from the merits of Christ, to some other meaning. For he refers it not to the verb "he predestined," but to "unto the adoption of sons of God," so that the sense should be: "he predestined us unto the adoption, which we were going to obtain through Christ." And he seems to be favored by none of the Fathers. For Jerome, in his large commentaries on that place, where he says that it was the good pleasure of God to choose us that we might be holy and have the adoption of the sons of God, assigns no other cause of our election; not so as to exclude the merits of Christ, but to exclude ours.[2033] Next, Oecumenius on that place says: "It is great to be adopted; but greater is this, to have obtained that through the Son as mediator." By which words he refers that "through Christ" to the adoption, not to predestination.[2034] Finally, St. John Chrysostom concurs when he asserts: "It belonged to God to predestine; but to Christ to reconcile"; where he does not attribute predestination to Christ, but reconciliation, which is the very adoption of the sons of God.[2034]

But that evasion of Adam is frivolous, as we shall easily perceive, if we rightly understand the distinction between grace and predestination, which we have often recalled from St. Augustine, in the first book On the Predestination of the Saints, chapter 10: namely, that predestination is the preparation or predefinition of grace in foreknowledge; but grace is the very donation in time. So likewise predestination unto adoption is the predefinition, or preparation, of adoption in foreknowledge; but adoption is the very justification, which is given in time. Hence it comes about that, if adoption is given to us through Christ in time, as all Catholics must confess, then also adoption through Christ - that is, from his merits - was predefined. For, as we admonished in disputation 89, chapter 9, that which God in time grants on the basis of certain merits, from those same merits also he predestined; because he predestined in the same manner in which he was going to bestow in time.

2033. St. Jerome, Commentaries on Ephesians 1.
2034. Oecumenius and St. John Chrysostom, on Ephesians 1; Theophylact and Oecumenius on 2 Timothy 1.
2034. Oecumenius and St. John Chrysostom, on Ephesians 1; Theophylact and Oecumenius on 2 Timothy 1.

Moreover, when the Doctors inquire into the cause of predestination, on account of which someone is said to be predestined, they seek only the cause of the first effect which comes about in us from predestination; and if they find any meritorious cause, or occasion, of that effect of predestination, they also concede that as the cause of predestination. Nor did Augustine ever in this matter dissent from Pelagius or the Semipelagians; but all conceded a cause of predestination, namely that they said it was the cause in time of the first effect of predestination. Therefore Photius, in Oecumenius on chapter 1 to the Ephesians, speaking of spiritual blessing "through Christ," says: "In what way?" and he answers: "Since he chose us before the foundation of the world: election and blessing are joined together for us. What is it for the ancient blessing to be 'through Christ' just as election is, unless because both were in foreknowledge, and he said both to be 'through Christ,' because, just as they were going to be in time, so they were disposed in foreknowledge."[2031]

To this also pertains that of 2 Timothy 1: "He called us with a holy calling, not according to our works, but according to his purpose and grace, which was given to us in Christ Jesus before secular times," that is, before these times which are revolved by spaces - which is as much as to say, from eternity. In which place Adam did not remember, as he ought to have done, that grace was given to us by God before secular times through Christ; because just as the Father from eternity predestined to save us, so also he foreordained the mode of our salvation, namely through Christ. This sense is followed by Theophylact and Oecumenius.[2034]

I cannot, however, but marvel how from this place Chrysostom and Theodoret gather the eternity of the Son, when the discourse there is of Christ according to his humanity, as I noted above; yet Theodoret embraces both senses. Therefore I think it just as false to assert that God in his prescience did not have respect to the merits of Christ in order to predestine grace for us, as it is to affirm that in time grace was not conferred on us in view of those merits.

Nor are Jerome, Oecumenius, and Chrysostom, who were alleged above, opposed to this doctrine. For Jerome refers our predestination to the will of God, and he assigns no other cause; not to exclude the merits of Christ, but to exclude ours. Oecumenius indeed, when he asserts that we obtained the adoption of the sons of God through Christ, refers that "through Christ" to the adoption, so as not to exclude it from predestination, as from the foregoing is manifest. Finally, when Chrysostom says that "it was of God to predestine," he denotes the efficient cause, which was God alone: for only he is said to predestine, even if he predestines on account of another's merits; for he who merits predestination is not said to predestine. But when he subjoins that "it was of Christ to reconcile," he plainly indicates the meritorious cause of our justification in time, and therefore the cause of the same in eternal foreknowledge, as has been noted.

Thirdly, from that same chapter and the testimony to the Ephesians 1, by which the adversaries confirmed the opposite opinion, our opinion is not obscurely deduced. For the Apostle says: "In whom," namely in Christ, "also we were called by lot" (sorte vocati sumus). When he says "by lot,"

2031. Photius, as cited by Oecumenius, on Ephesians 1, explaining "with every blessing": "He blessed through the Son, he elected through the Son, he predestined through the Son."

2034. Oecumenius and St. John Chrysostom, on Ephesians 1; Theophylact and Oecumenius on 2 Timothy 1.

he indicates not only that no merits on our part preceded, so that we should be called; but also that our calling was from an election, by which, others being left in the mass of perdition, he by lot called us. For lot does not befall all, but some out of many; and in a lot some are preferred to others. By the name therefore of "lot" he most aptly denoted that the benefit of our vocation was not common to all, but peculiar to us; and since it is said to have been bestowed upon us in time "by way of lot" "in Christ," that is, through Christ, it follows that we were elected in time unto the grace of vocation through Christ, which if in time we were elected through his merit, from eternity also in the same manner we were: just as indeed God calls in time through the merits of Christ, so he decreed in foreknowledge to call on account of those same merits; and likewise, if he chose in time through Christ, he decreed to choose through the same.

Moreover, that the particle "in" in that place signifies cause and is put for "through" is clear from the context; for a little above Paul had said of Christ: "In whom we have redemption"; and "to re-establish all things in Christ"; and presently he subjoins: "In whom also we were called by lot": in which places the particle "in," that is, "through," as the adversaries also grant.

To these things add that when Augustine, against the Pelagians and Semipelagians, contends that the predestination of grace in us was not made out of any of our merits, as in the book On the Predestination of the Saints and elsewhere often: he is speaking of the same grace, which he wished Pelagius to concede; but this he calls "the grace of Christ" in epistles 105 and 93, because through the merit of Christ we have it; and therefore we can say with the Apostle: "If God is for us, who is against us? He who spared not even his own Son, but delivered him up for us all." By which he denotes that this grace, which God predestines to us without our merits, is from the merits of Christ; and since it was predestined to us from eternity, it will also have been predefined from his merits. Finally, about the love by which God has loved us, the same follows if we speak of that love by which God efficaciously decreed to give us this grace - namely, that it too was from the merits of Christ, just as election itself and predestination; for in these the ratio of love also is contained. But indeed, if we speak of that love by which, with an antecedent will and simple will, God desired remedy for all men, the sin of Adam having been foreseen, that was not from the merits of Christ; rather, from that love he predestined Christ, that he might bring a remedy to us: yet from that love alone there was not bestowed upon us in time any grace at all.

From these things it is proved:

Election differs from love: for love looks only to the beloved truly and of itself, to whom we absolutely will some good, and it has no respect whatsoever to others, who are not loved. But election is the love of one before another; and therefore it is of its nature exercised about the one elected, desiring good for him, yet also regarding others, from whom the beloved is preferred. Therefore it is the same to be chosen unto a dignity or a good that separates and sets one apart from others, to whom the same good is not granted.

From this definition - which no one can deny - we shall easily show that our election from the mass of perdition was made from the merits of Christ in time, and pre-defined in foreknowledge. For since we were all together, in the first parent, condemned in the same way; and the same

sentence weighed upon all; nevertheless, certain from that same common mass of the sons of Adam, by congruous and efficacious grace up to the end, being turned away from evil, are separated from others, whence we are chosen before others; the very grace by which we are separated and not condemned with the rest was through Christ. Therefore through Christ we were chosen out of the common mass; and if this was done in time, let no one doubt that in foreknowledge it was predefined in the same mode.

Nor, however, is it as though someone should think that the cause of choosing some out of that crowd of the condemned, namely the work of Christ, is also the cause of leaving others: for Christ is the cause of liberating someone; but he is not the cause that anyone be left in damnation; rather, those are left because of their sins. And if at times in the event some seem to be more diligently attended to and to have a special interest shown to them - if they sin - than others who are not liberated, this is not to be referred to a defect on the part of Christ.

Moreover, that something be the cause for which one rather than many is chosen, there need not be a cause determining that this one rather than that one be liberated, such that it should specially intercede for this person in particular; it is enough that there be a cause, on account of which, if it so please, he can intercede for one rather than another, and by it incline some rather than others, while leaving the others not liberated. Then indeed the cause will be determinate, special, and particular with respect to the one for whom it intercedes, not, however, on the side of the cause itself, which is common and can be applied now to one, now to another, as it shall please. Thus we have Christ, who, when he suffered for all, by the merit of his death and by his prayers liberated as many as by that application were to be freed; to whom, in the elect, salvation actually came about; if Christ did not commonly apply for all the effect of his death, Scripture expressly teaches. The first sermon on the passion, attributed to St. Leo, and St. Augustine's sermon 8 on the words of the Apostle; Fulgentius, in the book On the Incarnation and Grace; Photius in his Epitome, and at the beginning of volume 3 before the Seventh Synod; and from them we learn that Christ, although he merited the grace of salvation for all, and sufficiently, and efficiently, yet he willed in the event and in application that this grace should be effectuated for some and not for others; and why? on account of the eternal disposition of God. Hence we cannot deny that Christ, by a peculiar application of his merit and of his prayer, obtained perseverance for the Apostles. For it was said to Peter: "I have prayed for you, that your faith fail not"; but to others it was not said. Nor did he say: "I do not pray for the world, but for those whom you have given me," but then at the hour of his passion he also said: "I guarded those whom you gave me; and none of them perished except the son of perdition"; with regard to whose ruin the perdition of the persecutors was permitted by God. Who then would dare to deny that Christ merited for the Apostles the grace of perseverance, both congruously and efficiently, which they later obtained? And who would deny that, in the same way, in the election and calling of certain ones it was brought about through his prayer and his merit that they should be retained? And why was this retained for some rather than for others? The certain cause must be, not on the part of men, but on the part of God, who applied this grace more to some than to others, since others obtained the same preparation.

But that Judas did not have that, was because he was not among the number of the Apostles elect unto final perseverance; it was less; nor, if Christ at that time excluded him who was already damned, did he exclude the remainder whom the Father had given him: "Those whom you have given me I have guarded; and none of them has perished, except the son of perdition." And: "Those whom you have given me are mine"; and again: "Of them whom you have given me I have lost none, except the son of perdition."

Wherefore in that prayer Christ was not heard for all, so that perseverance should be granted to all to whom unity in faith was given. Why then shall we not grant that Christ did for all the predestined what at that time he did for the Apostles, namely, that in a peculiar manner he applied his merits to them and obtained perseverance for them? For if many Saints, praying for others, have obtained their conversion and perseverance, why shall we say that Christ did not pray for all the predestined, and by his peculiar prayer obtain for them so great a glory and grace - he who rightly knew all and had them present to himself?

Finally, when by a singular calling he called Matthew and the other Apostles, Mary Magdalene, Zacchaeus, and the rest, no one can deny that he applied to them his merits by preference over others. Whence it follows that not only was Christ the cause of the election of the predestined, but even certain Saints - who by their prayers have obtained for others first grace and perseverance - have been the cause of their election, and that from the foreknowledge of their prayer the election of others was made from eternity.

As to the just and predestined of the Old Testament, one must not judge in the same way: for Christ could not, by some peculiar reason, apply his merits to these rather than to others. Since prayer is not made for things past, it does not seem by what reason Christ's merits could be applied to these rather than to others; for that a peculiar application could not be made by thanksgiving, we shall show below. Therefore Christ, by the merit of his Passion, most perfectly paid whatever was due for the grace bestowed on the ancient Fathers; yet he could not be the cause why this man rather than that should be chosen: nevertheless he was the cause of the election of those who, in hope of him, were separated from the mass of perdition, as is gathered from what has been said.

But certain persons object in this way: how, when there existed no other cause, God should have willed to send his Son in the likeness of sinful flesh, and should have moved his human will to this, namely, that he should pray rather for these than for those; and, being moved by his prayer, should have decreed to help these rather than others. Nor could this merit of Christ, even if it were condign, stand in the way so as to prevent the grace which he obtained for us from being grace: for although, if it be referred to Christ, it is not to be called simply grace, yet for us, who offered nothing of our own, it is to be called simply grace, a gift, and mercy.

An objection of certain persons is met.

They will moreover argue thus: just as thanksgiving, which Christ offered to God, was to be exhibited, so, when God bestowed grace on the Fathers of the Old Testament, a peculiar thanksgiving could not be a cause that to these rather than to others a peculiar grace should be granted; and thus, universally, if we should suppose that Christ's merits were to be peculiarly

applied to some, it would suffice to assign only the absolute cause of election, not a reason why this one rather than another should be chosen. For if someone should do good to another on account of a thanksgiving which he expects from someone else for a benefit conferred, in which case thanksgiving would move as a kind of future merit, he could, on this very ground, do good to one rather than to another.

I answer: whenever thanksgiving is not the effect of the benefit itself, it can well incline one to bestow a good, just as a merit is apt to do; but when thanksgiving is the effect of the benefit, it cannot be the cause of that same benefit, because the good use of grace is not the cause of that grace, as we showed in disputation 91, chapter 6. Therefore, as to that thanksgiving which Christ offered, although, as regards future things, it could, by reason of hope, be a title on account of which grace would be given to the ancient Fathers, nevertheless it could in no way be a peculiar cause why a benefit should be granted to these rather than to others. Besides, as regards Christ in relation to God, he could not be to receive rather for one than for another any benefit; for for the least grace and benefit, infinite thanks were to be returned by Christ, since the least merit of his was of infinite value; nor could God hope for a thanksgiving from Christ rather for one predestined person than for another, for for any and every predestined person equally infinite gratitude was due from Christ.

What we have said thus far proves only our election unto grace, whereby God from eternity decreed to free some from the mass of perdition, and which was effected from the merits of Christ, on account of which also in time he gave that grace by which those who are drawn from that same mass are endowed, others being left in it; and we noted above that Scripture in the preceding chapter speaks only of this. Furthermore, that the election unto glory was made on account of the merits of Christ foreseen can easily be shown. First, from Paul speaking to the Ephesians, as some adversaries themselves admit; for from that passage we deduced that the election of which Paul speaks was made in Christ and in foreknowledge. Then also we shall argue against them by the same arguments with which, in disputation 89, chapters 9 and 11, we proved that this election was not defined by God before our merits were foreseen; by parity of reason it is manifest that neither was it defined before the merits of Christ were foreseen, since by his merit also, in due time, we were to receive life and grace, and the same reason of merits holds in time and in eternity. Moreover, it seems plainly absurd to assert that God decreed to restore to anyone the gate of the heavenly kingdom - shut to the whole human race by the sin of the first parent - before he foresaw that his Son would in the future, by the shedding of his blood and by the excellence of his satisfaction, expiate that sin and break the dominion of the enemy.

And that he would will his Son in the likeness of sinful flesh, and would move his human will to this, that he might pray rather for these than for those; and that, moved by his prayer, he decreed to help these rather than others. Nor could this merit of Christ, even if it were condign, stand in the

way so that the grace which was bestowed on us in view of him should not truly be grace. For although, if it be referred to Christ, it is not to be called simply grace, yet for us, who offered nothing of our own, it must be called simply grace, a gift and a mercy.

Then someone will argue: just as the thanksgiving which Christ was going to render to God was a meritorious cause that God should confer grace upon the Fathers of the Old Testament; so also a peculiar thanksgiving could have been a cause that these rather than others should be given a peculiar grace; and thus, taken universally, we should assert that the merit of Christ was peculiar to certain persons, and that he himself was the cause not only of election absolutely, but also that they should be chosen rather than others in the Old Testament. For just as a man is able to do good to one person because of the thanksgiving which he expects from another for a benefit conferred, which thanksgiving moves as a kind of merit of the future; so also he could, for this specific person, do good rather than to another on account of a peculiar thanksgiving which he expects for such a hoped-for benefit.

I answer: whenever thanksgiving is not the effect of the very benefit, it can well move in hope by way of a merit, as if it were past; but when it is the effect of the benefit, as is the good use of grace, it cannot, as I showed in Disputation 91, chapter 6; and therefore the thanksgiving which Christ was going to offer could be a merit in hope, in virtue of which grace would be given to the ancients. Thanksgiving, moreover, can be a cause that this benefit rather than another be conferred on someone: similarly, that it be conferred on this person rather than on that. For if someone knew that greater thanks would be rendered for this benefit than for that, and on that account, in order that greater thanks be rendered to him, he would bestow a greater gift, certainly the greater thanksgiving would enter into the cause that a greater benefit be conferred. In like manner, if someone should know that greater thanks would be rendered to him if he should favor this person rather than that, on this hope he can do good to this one rather than to the other. But God could hope for nothing of this sort from Christ rather for one than for another benefit; for for the least grace and benefit, infinite thanks were owed by Christ, since the least merit of his was of infinite worth; nor could he hope from Christ a thanksgiving rather for one predestined person than for another, for if any were chosen, the very same Christ would completely fulfill it. Therefore his future Passion and merits could not be the cause why this one rather than another, before his advent, was chosen unto grace.

The things which we have said thus far only prove that our election unto grace, namely that God from eternity decreed to free some from the mass of perdition, was made from the merits of Christ, on account of which in time that grace was given to the elect by which they were drawn out of the common mass and a peculiar grace was granted to them, others being left in that mass; and we noted that Scripture speaks only of this in the preceding chapter. Moreover, that the election unto glory was not made before the merits of Christ were foreseen can easily be shown.

First, if Paul in Ephesians 1 speaks of heaven, as certain adversaries admit, we would easily from that place convict them: for from there we deduced that the election of which Paul speaks was made through Christ in foreknowledge.

Then also we can argue contrariwise by the same arguments by which, in Disputation 89, chapters 9 and 11, we demonstrated that this election was not defined by God before our merits were foreseen; by those same arguments it is plainly proved that neither was it before the merits of Christ, by whose power we also were going to have merits unto eternal life: otherwise, just as our merits would effect nothing towards the attainment of glory if the election had been made before the foreknowledge of them, as we showed there; so now neither would the merits of Christ, which is absurd. But if our election unto eternal life is made from our merits, because from them in time we were going to obtain it, it follows that it was made from the merits also of Christ: for our merits proceed in time from the merits of Christ.

Furthermore, it certainly seems absurd to assert that God decreed to reopen to anyone the gate of the kingdom of heaven, shut to the whole human race by the sin of the first parent, before he foresaw that his Son would say, with sin and the dominion of death overcome: "Be lifted up, O everlasting doors, and the King of glory shall enter in" (Ps 23). For he who was to be the firstborn of all creation, and who by his own blood was to break the beasts of hell, and by his own merit to enter heaven, and to bring also other sons into the same glory, as first of all ought to have been foreknown by God as destined and elected in glory before the rest, of whom he was going to be the Redeemer and head.

What do the reasons made convince? These reasons indeed at least prove that God did not first predetermine by an efficacious will and decree to beatify someone, before he saw the Word united to flesh, suffering, and glorious; but that by this efficacious will each of us who is to be glorified was loved because of those merits, and hence that the love towards us, efficacious unto glory, arose from the foreknowledge of the merits of Christ. Moreover, that this love, insofar as it is election, also arose from the merits of Christ, is proved by the same reason by which we demonstrated that the election also unto grace was made from his merits. But as to the application of the merits of Christ, whether it ought to be made before our works and merits, or when these have already been done, so that glory may be rendered to them, this is not the place; rather we shall treat of this more fully in the Prima Secundae, questions 113 and 114. For now it is enough for us to have proved that the efficacious will of beatifying someone had its origin from the foreknowledge of the application of the merits of Christ.

Nor do the testimonies of Scripture, which have been adduced in favor of the contrary opinion, at all withstand our doctrine. That the justified are said to be given to Christ by God does not hinder Christ from having obtained them by the merit of his Passion; indeed, that he obtained these rather than others: for just as they are said to be given by God as justified, even if they were sanctified by the merit of Christ, so also they are said to be given by God, even if Christ by his merits obtained them from God. Yet we cannot deny that Christ, by right of redemption and by condign merit, so acquired them for himself that their justification was for him not grace but a wage duly rendered, not a freely given gift out of mercy - although to the justified themselves and the redeemed it was grace and, to be sure, mercy, because from themselves nothing but misery preceded. Nor is there any interpreter who understands those testimonies of Scripture in the sense which the adversaries suggest, and far less those two in Ephesians 1. For that we are said to be

elected by Christ "according to the purpose of the will of God," no one so explains as if the election proceeded from God alone; but they call "the purpose of will" that which God had of justifying the elect, which is frequently so called, as St. Augustine notes, in the last chapter of Disputation 88; and therefore Augustine often says that the election of the elect is said to be "according to purpose," because it is fitting that God should carry out the purpose of justifying.

Then when we are said in Ephesians 1, "called by lot," we are not therefore said to have been called by the mere will of God, not in view of the merits of Christ; but because we are called without any of our merits, as all the Latins explain, indeed, as we not obscurely proved above from that same place, that our election was from the merits of Christ.

Next, that passage of Matthew 20, who has ever thus understood it as the adversaries do? For Christ did not say that it is not his to give the kingdom of heaven to the elect and predestined, he who said in Luke 22: "And I dispose to you, as my Father disposed to me, that you may eat and drink upon my table in my kingdom"; where he was speaking in his humanity, as those words indicate, "as my Father disposed to me." But he said: "It is not mine to give to you who seek by right of kinship the right and the left"; yet for that reason he did not deny that it is his to give to those for whom it was prepared by the eternal Father; indeed he plainly affirmed it, when he subjoined: "But to those for whom it has been prepared by my Father"; especially if the Greek particle be set for "nisi" (unless), as the same Vulgate translates in Mark 9 in those words, "They saw no one, unless Jesus alone"; nay, even the particle "sed" (but), in Latin, has this force, that it affirms that which had previously been denied: as if a judge should be asked for a crown which the petitioner has not deserved, and the judge should answer: "It is not mine to give to you, but to those who shall have been more meritorious." In which sense the Greeks continue in that passage, from which our view is gathered rather than the opposite.

Finally, that which is adduced from St. Thomas only proves that God in his eternal election took to himself no counselor, but by himself foresaw by his providence the things to be done; yet it does not deny that God, in his election, looked to something, so as to determine something; for this is not to use some medium in his counsel and providence.

That the merits of Christ were the cause of our predestination is shown by reason

Caput IV - By reason it is shown that the merits of Christ were the cause of our predestination

But truly, from the foregoing it follows that the merits of Christ were the cause of our predestination in the same sense in which we have shown that on our part there is no meritorious cause or disposing cause for those effects. For just as on our part there was no such cause of the first effect of our predestination, and therefore we were not the cause of our predestination; so also, since the merit and prayer of Christ was the cause of the grace which was granted to us and prepared by predestination, it follows that it was the cause of our predestination: for this is nothing else than the preparation of the gifts of grace. The same must be said of the prayers of the Saints,

on account of which some have been called and have obtained perseverance. For he who is the meritorious or impetratory cause of the first calling is said to be the cause of the whole effect, if from that first calling the effects of predestination begin. Whence also our predestination begins, not as the adversaries contend, from the very prayers and merits of Christ or of another Saint, as I shall show more fully in the following chapter. Now, however, with the opinion of those supposed who teach that the effects of predestination begin from that grace which is granted to us, it has been duly proved that there is given a meritorious cause of our predestination, not on our part, but on the part of Christ or of another Saint; and thus that their prayers and merits aid our predestination otherwise than ours do. For these indeed aid our predestination only by consummating our own merits and perseverance; but the prayers of Christ or of another Saint aid even by initiating the very effect of predestination.

Moreover, in confirmation of this view it remained that, against Capreolus, Ferrara, and others who defend the first opinion, we should prove that Christ merited for us faith and every good movement of the soul by which in some way we are disposed unto justification; this, however, I now suppose as known, and accordingly I judge it to be true, so that the opposite, against our faith, I deem an error - although it is proved expressly elsewhere, namely 1 - 2, q. 113, a. 2 and 3; and 3, p., q. 19: where it will be more fully explained against the heretics of our age, when and how, and to what effects, the merits of Christ are imputed or applied to us. Now, however, let what has been said suffice: for now no one is left who would dare to deny that Christ was the meritorious cause of our predestination in the manner in which Driedo and Adam denied it; namely, that the merit of his was not the cause of faith, and of other dispositions unto justification: but if some deny this, they are brought for another reason into that opinion, against whom we have thus far disputed, and in solution of arguments we shall say something.

However, Gaspar Casalius, in the book On Quadripartite Justice, chapter 4, not only grants that Christ was the cause of our predestination as to the inward effects, but even asserts that he merited the very eternal and uncreated act by which God predestined us; which opinion also pleased some more recent men to such a degree that, on that account, they also asserted that not only created grace, namely the effects of predestination, but even uncreated grace fell under the merit of Christ. But they prove this thus: whatever is a reason that God do something is also a reason moving his will to do it; and therefore a meritorious reason of the very uncreated act by which God willed to do it.

But this opinion, insofar as it casts even the very act of God, not only eternal but also uncreated, under the merit of Christ, is opposed to the common sentiment of the Scholastics, and to reason. First, indeed, all the Scholastics named above by us in chapter 2, when they affirm that the merit of Christ, or his predestination, was the cause of our predestination, or election, note expressly that it was not the cause of the very uncreated and eternal act: because of this no cause can be. He therefore denies that Christ merited the uncreated act of our predestination who says that whoever merits something is truly the cause of it.

Moreover, all the Scholastics alleged by us already in Disputation 21, chapter 1, when they inquire into the meritorious or disposing cause of predestination, conspire in this one point, that no meritorious cause of the uncreated act of predestination be investigated, because such cannot be, but only of that act's effects. But if Christ could thus merit the uncreated act, so too as to the effects of it a cause of the act itself could be given, just as there is given a cause of its effects; nor was there need of that observation of the Doctors.

Furthermore, the preceding opinion is refuted by reason. For that which falls under our merit falls in one of two ways: first, as an object to be possessed; and in this way we merit the uncreated Trinity itself, not indeed that it should be, but that we may see and enjoy it: and in this way the uncreated, taken in itself, does not fall under merit as effect or as an act caused by us, but only as the object to be enjoyed by us; the causality of merit regards on our side our created acts and habits by which we are ordered to that enjoyment, not any uncreated act.

But the adversaries, when they say that Christ merited the uncreated act of our predestination, do not assert that he merited it as the object of our fruition and possession (for in that way he also merited for us the relations of the Trinity and whatever is in God); rather, in the same sense they say that he merited for us the uncreated act of God, in the very way that he also merited the grace which God gave to us. They affirm, therefore, that Christ merited that the uncreated act be in God, and that he obtained it by that merit, just as he obtained grace. But this is absurd. For that which is uncreated does not in any way depend upon the prayer and petitions of anyone in order to be, but from itself it is so necessary that it cannot not be. Therefore Christ could not merit that which is uncreated.

It is confirmed: This is further confirmed by the opinion which we followed in disputation 80, chapter 2, namely, that in God there is no act intrinsic to him which could be in him and not be, but every act of the will of God is, from the nature of the thing, the very divine essence itself.[2035] Finally, to call the uncreated act of God "uncreated grace" is contrary to the mode of speaking of St. Augustine so often alleged by us: for in the book On the Predestination of the Saints, chapter 10, he says that this is the difference between predestination and grace, that predestination is the preparation of grace, but grace is the very donation; where he did not call predestination "grace," but the preparation of grace.[2036] And if in Christ the very person of the Son is called uncreated grace, this is both because by the Incarnation she is said to have been given to us, and also because by the very Godhead, and the person of the Son as a kind of form, the humanity was so deified and enkindled that, without any other gift, it was pleasing and just before God.

Nevertheless, in accordance with the things which in that disputation and in disputation 91, chapter 1, I noted, it must be said that the act of the divine predestination falls under the merit of Christ and in some way depends upon it, not insofar as it is an uncreated act and, by its very nature, the same as the divine essence, but according to that relation of reason (*relatio rationis*) by which from eternity it is said freely to be referred to created objects, to which it could from eternity

2035. Disputatio 80, cap. 2.
2036. St. Augustine, De praedestinatione Sanctorum, cap. 10.

not be referred. For since this respect is taken from future things, as I showed in that disputation 80, and the future things - namely, the effects of our predestination - are from the merits of Christ, it follows that that very respect proceeds from them; and since the divine essence according to itself cannot be called from eternity our predestination or election without that respect of reason to things and future effects, just as neither could it be called foreknowledge, it plainly follows that thus Christ merited the divine act, insofar as it assumes the notion of predestination and election, as also the effects thereof. And therefore it is gathered that, just as Christ merited that we be called and justified by God, nay even predestined and elected, that is, that we be the object of the divine predestination and election, so too he merited that God himself should choose and predestine us. And let the same judgment be made concerning the efficacious love which God freely had.

Nor indeed does the common doctrine of the Scholastics put any obstacle in the way of our position, namely, those who on the part of the act deny a meritorious cause of predestination and concede it on the part of the effects; for they expressly understood this of the divine act insofar as it is uncreated, not insofar as it is referred by the relation (*relatio*) of predestination and election to creatures, which relation is indeed one of reason. Nor does it stand in the way that that relation is eternal and the merit of Christ and the effects of predestination are temporal; for the temporal, insofar as it is future, can be the cause of an eternal respect of reason, as we showed above in disputation 68, chapter 7.[2037] Therefore, although the adversaries can say that the act of predestination according to that eternal respect fell under the merit of Christ, and thus that Christ merited for us something that is eternal, nevertheless in no way may one say that the uncreated act itself fell under the merit of Christ. For in the act of predestination we distinguished these two: one, eternal and uncreated, which in no way could Christ merit; the other, eternal but not uncreated, which is only a respect of reason, and this Christ could merit. In what way, moreover, Christ was the exemplary and final cause (*causa exemplaris, causa finalis*) of our predestination we shall say in the Third Part, question 24, article 3, replies to 3 and 4.[2038]

Obiectio: But someone will object in this way: no cause is given of the divine will on the part of the act, but only on the part of the objects; therefore the divine will could not fall under merit.

Respondetur: I answer, as we said in disputation 82, that there is given neither a final cause nor even a sine qua non reason of the divine will among created objects; nevertheless, among the objects of the divine will one is the cause of another, and thus, because God willed one thing to be for the sake of another, we say that God willed to predestine and to justify someone from the foreseen merits of Christ. And when we concede that among the effects the one is a meritorious cause so that another be, consequently we assert that among the objects there is some cause so that there be an act of the divine will according to that respect which we have explained. Diluuntur adversariorum oppositiones.

2037. Disputatio 68, cap. 7.
2038. Summa theologiae, III, q. 24, a. 3, ad 3 - 4.

Caput V - Of the ten arguments by which in the first chapter we confirmed the positions of others, there remain only four which were brought forward for the first opinion.

For concerning the reason of the second, enough was said by us above, chapter 3; for the third opinion we adduced no reason.

To the first reason for the first opinion I reply: if it were true that faith and the other dispositions to justification were not granted to us from the merits of Christ, it would rightly follow that Christ did not merit our predestination; but that this is absurd and cannot be defended without the mark of error must be proved in the place alleged above. Wherefore it rather follows that Christ was the cause of our predestination, if he was the cause of all its effects.

To the second reason I answer that the controversy whether the prayer and merits of Christ, or of another holy man, who obtained grace for some predestined person, ought to be called effects of that predestination, is a question not of things but of words. This, however, must be asserted without doubt, so that with St. Augustine against the Pelagians and Semipelagians we agree in the thing itself, namely, that the first grace which is given to us had no merit of ours preceding it or occasion, nor our predestination, if the effects of it are said to begin from the first calling which is conferred upon us; but that of grace and predestination thus used there is merit in another - namely, in Christ, and sometimes also in some just man - as is manifest from what has been said. But if someone should wish to call "effect of predestination" the Incarnation of Christ, his merits, or also those of another saint, and should wish to call these "our grace," it must be asserted not only that there is no merit which is a cause or occasion of predestination on the part of the predestined, but also not on the part of Christ or of another saint: for neither did Christ merit his own Incarnation, nor that thought by which he was stirred to pray and to merit for us, nor did any saint. Thus, then, the beginning of our predestination would be from God alone, so that it would have had neither in us, nor in another saint, nor in Christ himself, a cause or occasion. But this way of speaking, or any other like it, derogates nothing from the very dignity of grace, which St. Augustine commends against the Semipelagians, nor from the dignity of Christ, since St. Augustine himself teaches that Christ did not merit his own predestination, in book 1 On the Predestination of the Saints, chapter 15.[2039]

Nevertheless I, for my part, think that, according to the idiom of Scripture and of the Fathers, the Incarnation of Christ, his merits, and prayers are in no way to be called effects of our predestination. I say the same of the prayers and merits of some just man who obtains salvation for another predestined person. I am persuaded of this especially from the fact that whenever Augustine disputes with the Massilians concerning first grace, which he holds to be given without merits, he says precisely the same thing about grace and about the predestination of it, as is explained in disputation 89, chapter 4, and disputation 91, chapter 3. Against the Massilians, however, Augustine concludes only - as I sufficiently proved in that chapter 4 - that the first grace which is granted to us at the first calling is not from merits or from our cause, and thus neither

2039. St. Augustine, De praedestinatione Sanctorum, lib. 1, cap. 15.

from the predestination by which this grace is prepared for us by God. If Augustine had said that the first grace is the Incarnation and the merits of Christ or of some saint, he would never have contended with the Massilians about our grace or predestination. For no one - of this grace and predestination, not even Pelagius himself - said that there was any cause from us.

Wherefore Augustine, in the book On the Predestination of the Saints, chapter 17, treating of our election to grace (which is altogether the same as the predestination of grace, of which he treats in that whole work) ...

But against the Massilians, he says: Let us understand, therefore, the calling by which men are made elect, not that they are chosen because they have believed, but that they are chosen in order that they may believe; and, with some matters interposed: They were elected, then, before the constitution of the world by that predestination in which God foreknew His own future works. They were elected, moreover, out of the world by that calling by which God fulfilled what He had predestined. Here at the outset Augustine judges election and predestination to be the same, when he says: They were elected by that predestination; for God, by predestining, chooses, and by choosing, predestines: I speak of election to grace, about which he always used to dispute: for predestination differs from election only in this, that election is called the separation of one from others; whereas predestination does not denote this respect to others. But when he says that they were elected by that calling by which God fulfilled what He had predestined, he clearly indicates that by that very fact they were elect and called, and that their election began from the calling. Now this was not a common calling, but according to purpose, which is proper to the predestinate, of which we spoke in Disputation 88, last chapter.[2040]

Reply to the first. And the African Fathers with Augustine, Epistle 95 a little before the middle, showing what grace Pelagius ought to confess to be without merits, say: "There is, however, another (to wit, grace) by which the predestined are called, justified, glorified," etc., by which words he seems to have comprehended all the effects of predestination. The same grace, inquiring against the same Pelagius, Augustine in Epistle 105, a little from the beginning, says to be that by which we are justified, that is, we are moved to justification, whose beginning he says to be faith. Therefore, when Augustine commends our predestination as done without our merits, because the beginning of our grace was bestowed gratuitously and without any merits, from that he judges predestination to begin whence also our grace takes its commencement.[2041]

Another. Fulgentius also adds, who, enumerating whatever our predestination effects, in book 1 to Monimus, chapter 1, thus says: "But all these things, that is, both the beginnings of calling, and the increases of justification, and the rewards of glorification, God always had in predestination, because both in calling, and in justification, and in the glorification of the Saints He foreknew the future works of His grace." He is speaking of grace, which is the effect of predestination: for he was treating of the predestination of this grace.[2042]

2040. Disputatio 88, cap. ult.
2041. St. Augustine, Epist. 95; Epist. 105.
2042. St. Fulgentius, Ad Monimum, lib. 1, cap. 1.

It is confirmed. Finally, it would have been altogether useless to the holy Fathers, against the Pelagians or Semipelagians, to dispute about another predestination than that of grace, which in us begins from the first calling. For that even the merits of Christ and of the just, by which one obtains grace for others, fall under the providence of God - indeed that these are effects of some grace - was not a matter of controversy among them: why then must we now speak otherwise about predestination? Moreover, according to the mode of speaking of Scripture, that the very Incarnation, or the merits of Christ, are not to be referred among the effects of our predestination, is clear: because otherwise it could not be said that Christ was the cause of our predestination, since He was not the cause of His Incarnation, nor of the thought whereby He was first stirred up to merit for us: for the merits of Him God also initiated in Him. But Scripture openly testifies that He was the cause of our predestination, as we saw in chapter 4; therefore not for any other reason, except that our predestination begins from our calling.

Some theologians answer that, in order that Christ be called the cause of our predestination, it is not necessary that He be the cause of all the effects, but it is enough if He be the cause of many of those which are contained under predestination itself. For to be the cause of predestination, that is, of the whole effect, belongs to God alone. Yet from this doctrine it follows that we also could be said to be the cause of our predestination, as Christ is said to be, because we are the cause of many effects by which our predestination is necessarily completed: but this is absurd: for, as we noted in Disputation 91, chapter 1, it is the same thing to be the cause of our predestination as to be the cause of the whole effect; indeed, in order that someone be said to be the cause of predestination, he must be the cause of the first effect. If, therefore, Christ was not the cause of His first calling, by which He began to merit for us - and this is the first effect of our predestination - it follows that He was not the cause of our predestination.[2043]

About the prayer and merits of the just, by which they obtain grace for others, the same must be said: namely, that they do not pertain to the effect of the predestination of him for whom they obtain grace: which point remains proved by the same reasons. But among the other arguments, this especially has force, that if the prayers of the just pertained to the effect of the predestination of another, then in the same way the merits of Christ would have to be counted among the effects of our predestination. Some, however, reply that the case is different, in that the merits of Christ were common both to the reprobate and to the predestinate; whereas the merits and prayers of the just, by which they obtained grace for others, were not so. But against this is an evident reason: because, as was said in chapter 3, the merits of Christ were not only common, but were also by a certain peculiar intercession applied to the elect after Him. If, therefore, those ought to be referred among the effects of predestination, and yet Christ Himself did not merit them, it follows that He did not merit every effect of our predestination. Moreover, that Christ did not apply His merits to the predestinate because He knew that they were already elected by God - indeed that they were elected by God because God foreknew the merits of Christ as to be applied to them - we proved in

2043. Disputatio 91, cap. 1.

chapter 3 of this Disputation. Wherefore it is more suitable to reckon the effects of our predestination from the grace of the first calling, which is according to purpose, and to set aside the merits which, on the part of others, preceded, not to number them among the effects of that.[2044]

It is objected. But someone will object: Since not only calling and justification are said to fall under our predestination, but also outward signs, preachings, and removals of impediments, by which our calling was made ready, why also should not the prayers and merits of Christ and of the just, by which we obtained the first calling, pertain to our predestination?

It is answered. I answer that the ratio is different: because the removal of an impediment, an outward sign, preaching, and the like are referred to the grace of the predestinate himself, and fall under his predestination: because for the predestinate they are a principle of acting, at least per accidens; but the prayer of another, or a merit that obtains grace for the predestinate and a good occasion for acting, is not a principle of acting for him, but on account of those things there is bestowed upon him the facility and the principle of good will and of acting.

Reply to the third argument. To the third reason, from what was said in chapter 4, I answer that a created merit is not the cause of anything uncreated, because it is not the cause of the act of divine predestination, inasmuch as it is the divine essence itself; but to be the cause of an effect of predestination, namely grace, is enough in order that it be called a cause of predestination. I add, too, that a created and temporal merit is in a certain way the cause of a respect of reason which we connote by the name of predestination and election: that respect, however, is not uncreated, although it is eternal in the way in which relations of reason are said to befit God from eternity, as I explained above in Disputation 68, chapter 7. But the merit which begins in time is said to be the cause, or the foundation, of that respect inasmuch as from eternity it is future: and thus it does not follow that the temporal is a cause of the eternal.[2045]

To the fourth from St. Thomas. To the fourth reason I say that St. Thomas only taught that God in His providence employed no counselor for Himself, as we explained in that place: but he did not deny that God in His providence looked to a meritorious cause, or another that on the part of the effects was to be considered.

From all the things that we have said thus far about predestination, one may gather the order which God in His foreknowledge kept concerning our predestination. Now, first of all, it is to be presupposed, according to the truer opinion, that Christ was predestined after the foreseen sin of Adam - this being presupposed, the instants of the divine plan, according to reason, are to be marked out in this series. In the first instant God willed to communicate Himself to creatures, from a will of simple complacency, whereby He desired for them His glory. Second, from this will of bounty He decreed to grant the gifts of grace in the state of innocence, permitting also that man should fall into sin: and He permitted it not from an intention of causing harm, as is gathered from the things we said in Disputation 93, chapter 2, but on account of another end, for the sake of which He permits sins, as we said there.[2046] Then, third, willing to prepare a remedy for fallen man,

2044. Disputatio huius, cap. 3.
2045. Disputatio 68, cap. 7.
2046. Disputatio 93, cap. 2.

He predestined Christ, and merits to Him. Fourth, out of the foreseen merits of Christ He predestined certain ones, and He chose to give His grace on each several occasion even unto perseverance, there being no cause or occasion from them. Fifth and finally, from the grace of God, for those persevering He efficaciously decreed to give glory, which before the merits of grace were foreseen He had never efficaciously foreordained, as was proved in Disputation 89. But let these things suffice concerning all the articles of this question, in which the Angelic Doctor treats of predestination. Now indeed let us treat, around the third article, of all the things that are worth knowing about reprobation.[2047]

Pars II - On reprobation

Articulus III - Whether God reprobates any man

The third point is proceeded to as follows. It seems that God reprobates no man.

1. No one, indeed, reprobates him whom he loves; but God loves every man, according to Wisdom 11: "You love all things that are, and you hate nothing of the things which you have made." Therefore God reprobates no man.
2. Further, if God reprobates any man, reprobation must be related to the reprobated as predestination is to the predestined. But predestination is the cause of the salvation of the predestined. Therefore reprobation will be the cause of the perdition of the reprobate. But this is false. For it is said in Hosea 13: "Your destruction is from yourself, O Israel; only in me is your help." Therefore God reprobates no one.
3. Further, nothing ought to be imputed to a man which he cannot avoid. But if God reprobates someone, he cannot avoid sinning. For it is said in Ecclesiastes 7: "Consider the works of God, for no one can correct him whom He has despised." Therefore it is not to be imputed to men that they sin. But this is false. Therefore God reprobates no one.

But on the contrary: it is said in Malachi 1: "Jacob have I loved, but Esau I have hated."

I answer that God reprobates some. For it was said above that predestination is a part of providence. But to providence it pertains to permit some defect in the things that are subject to providence, as was said above. Wherefore, since by divine providence men are ordered to eternal life, it also pertains to divine providence to permit some to fall short of this end. And this is called to reprobate. Thus therefore, as predestination is a part of providence with respect to those who are divinely ordered to eternal salvation, so reprobation is a part of providence with respect to those who fall short of this end. Whence reprobation does not name foreknowledge only, but adds something according to reason, just as providence does. For as predestination includes the will of conferring grace and glory, so reprobation includes the will of permitting someone to fall into fault, and of inflicting the penalty of damnation for the fault.

2047. Disputatio 89.

Reply to the first: It must be said that God loves all men, and even all creatures, inasmuch as He wills some good to all; yet He does not will every good to all. Inasmuch therefore as to some He does not will this good, which is eternal life, He is said to hate them, or to reprobate them.

Reply to the second: It must be said that reprobation is otherwise disposed in causing than predestination. For predestination is the cause both of that which is expected in the future life by the predestined, namely glory, and of that which is received in the present, namely grace. But reprobation is not the cause of that which is in the present, namely fault; but it is the cause of dereliction by God. Yet it is the cause of that which is rendered in the future, namely eternal punishment. But fault arises from the free choice of him who is reprobated and is deserted by grace. And according to this the saying of the Prophet is verified: "Your destruction, O Israel, is from yourself."

Reply to the third: It must be said that the reprobation of God does not take away anything from the power of the reprobated. Whence, when it is said that the reprobated cannot obtain grace, this is not to be understood according to an absolute impossibility, but according to a conditional impossibility, just as it was said above that the predestined must be saved with a conditional necessity, which does not take away the freedom of the will. Whence, although one who is reprobated by God cannot obtain grace, nevertheless what in this he sins, or that he falls into that, happens from his free will. And therefore the guilt is deservedly imputed to him for the fault.

1. No one reprobates what he loves; but God loves every man, according to Wisdom 11: "Thou lovest all things that are, and hatest none of the things Thou hast made." Therefore God reprobates no man.
2. Further, if God reprobates some man, reprobation must be related to the reprobated as predestination to the predestined. But predestination is the cause of the salvation of the predestined. Therefore reprobation will be the cause of the perdition of the reprobate. But this is false. For it is said in Hosea 13: "Thy perdition, O Israel, is from thee; only in me is thy help." Therefore God does not reprobate any man.
3. Further, no one ought to have imputed to him what he cannot avoid. But if God reprobates some man, he cannot avoid perishing; for it is said in Ecclesiastes 7: "Consider the works of God that no man can correct whom He has despised." Therefore it ought not to be imputed to men that they perish. But this is false. Therefore God does not reprobate any man.

But on the contrary: It is said in Malachi 1: "Jacob I have loved, but Esau I have hated."

I answer: It must be said that God reprobates some. For it was said above that predestination is a part of providence. But to providence it belongs to permit some defect in the things subject to providence. Therefore, since by divine providence men are ordered to eternal life, it also belongs to divine providence to permit some to fail of that end. And this is called to reprobate. Thus, just as predestination is a part of providence with respect to those who are divinely ordered to eternal salvation, so reprobation is a part of providence with respect to those who fall away from that end.

Hence reprobation does not name foreknowledge only, but adds something, just as providence includes not only foreknowledge but also the ordaining to an end. For just as predestination includes the will to confer grace and glory, so reprobation includes the will to permit someone to fall into fault, and to inflict the punishment of damnation for the fault.

Reply to the first: God loves all men and all creatures, inasmuch as He wills them some good; yet He does not will every good to all. Insofar, therefore, as He does not will to some this good which is eternal life, He is said to hate or to reprobate them.

Reply to the second: Reprobation is not related to the reprobated as predestination to the predestined. For predestination is the cause both of what is expected in the future life by the predestined, namely glory, and of what is received in the present, namely grace. But reprobation is not the cause of what is in the present, namely fault; it is, however, the cause of what is assigned in the future, namely eternal punishment. But fault comes from the free will of the one who is reprobated and deserted by grace; and according to this, damnation is from the justice of God.

Reply to the third: The reprobation of God does not take away anything from the power of the reprobated. Whence, when it is said that the reprobated cannot obtain grace, this is not to be understood according to an absolute impossibility, but according to a conditional impossibility, just as it was said above that the predestined must be saved with a conditional necessity, which does not take away the freedom of free choice. Whence, although one reprobated by God cannot obtain grace, nevertheless what in this he sins, or that he falls into that, happens from his free choice. And therefore the guilt is deservedly imputed to him for the fault.

The conclusion is affirmative and of faith: for it is clear from Scripture that many are reprobated by God. St. Thomas proves it by this reasoning: predestination is a part of providence; but it belongs to providence to permit certain defects from the end; therefore it will also belong to reprobation to permit that certain men do not attain glory. When he says, "it belongs to providence to permit certain defects from the end," he is not speaking of a particular providence, but of the universal one, of which he had spoken in Question 22, article 2, ad 2, and of Him who has general care and providence of all things, whom he there calls the universal provider.[2048] Now, as Cajetan observed, in this article St. Thomas does not argue in this reasoning from the universal to the special - that is, from predestination in general to reprobation, which is a species and a certain part of it; for this would be a useless form of arguing - but from a likeness, in this way: just as it pertains to the common providence of other things to permit some of them to fail from their ends, so also it will pertain to the providence by which God directs men to eternal life to permit also that some fail from that end. Moreover, it is to be noted that by this reasoning there is only proved that reprobation and the permission of failing from the end, whatever it be, pertain to the providence of God; just as also the very ordination to the end pertains to the providence of God: yet it does not prove in the same way that now the providence of God permits certain men to fail from their end, just as it also leads certain others to their end: for the providence of God could have so led all things to their ends that it would permit none to fail from it.

2048. St. Thomas, Summa theologiae I, q. 22, a. 2, ad 2; cf. Cajetan, Commentary on ST I, q. 23, a. 3.

This is followed by Durandus in I, dist. 41, q. 2, especially no. 14; Gregory in q. 1, art. 2, conclusions 4 and 5; Marsilius on I, q. 41, art. 2, conclusion 4 and the following; Driedo, book 1, part on the harmony of free will and predestination, chapter 3, conclusions 1 and 3; Ferrariense, book 3 Contra Gentiles, chapter 161; to whom we can add St. Thomas in this question 23, article 5, ad 3.[2049] Yet among these Doctors St. Thomas, Driedo, and Durandus do not say absolutely that no cause of reprobation is given on the part of the reprobate, but that there is no cause on account of which this man rather than another is reprobated; or, which is the same, why this man is predestined and separated from the mass of perdition, while that other is left in it and reprobated. The opinion of these some more recent writers chiefly defend, conceding indeed that there is a cause common to all men, namely original sin, or that of the first parent, on account of which each one could sufficiently be reprobated, and some were in fact reprobated; but that no particular cause is given, besides the good pleasure of God, on account of which this man rather than that other was left in that mass. The rest, however, teach absolutely that no cause of reprobation is given on the part of the reprobate; yet they seem only to speak of the actual sin of the reprobate himself, such that no such sin was the cause of his reprobation; but concerning original sin, Marsilius teaches altogether the same; the others say nothing expressly.

There are then also some Thomists who so severely follow this opinion that they affirm God to have observed the same order in reprobation as He held in predestination; namely, that before the foreseen sins He decreed by His will alone to exclude certain persons from the kingdom of heaven, although He did not destine them to the punishment of sense; just as, conversely, in their view He willed effectively to bestow the kingdom of heaven upon the predestined before foreseen merits. Then those whom He willed to exclude, He permitted to fall into sin with this intention, that He might exclude them from the kingdom, as He had decreed; just as also, on the other side, after the election of certain persons to glory, He effectively called them. Yet the Doctors alleged at the beginning of the chapter in favor of this opinion do not teach that before foreseen sins God willed to make anyone an exile from the kingdom of heaven, nor do they deny it; but they confirm that no cause of reprobation is given, because no cause is given of the first permission into sin.

But concerning little children, although they do not speak expressly, they ought altogether to say the same thing, counting the effects of reprobation from the permission by which God permitted them to fall into original sin. I except Durandus, who in I, dist. 40, q. 2, art. 6, expressly concedes, in the same plan in which God, before works, decreed to choose some effectively unto the kingdom of heaven, that He also rejected others, namely the reprobate, from it; and he considers this to be reprobation, or at least that reprobation begins from there. And he assigns to it only two effects, namely to exclude from the kingdom and to destine to the punishment of sense: the former

2049. Durandus, In I Sent., dist. 41, q. 2 (esp. no. 14); Gregory (of Rimini), q. 1, a. 2, concl. 4 - 5; Marsilius, In I Sent., q. 41, a. 2, concl. 4 and following; Driedo, De concordia liberi arbitrii et praedestinationis, l. 1, c. 3, concl. 1, 3; Ferrariense, Contra Gentiles, l. 3, c. 161; add St. Thomas, ST I, q. 23, a. 5, ad 3.

moreover he thinks is not equally and directly opposed to predestination, but to a certain antecedent to predestination, namely to the election unto eternal life, which he judges to have been made before merits. I also except Ferrariense, who in that chapter 5, under the title "Pro solutione," near the end plainly indicates that God willed to damn no one or to reject anyone from His kingdom - he himself calls it "to dismiss" - unless a fault were foreseen.

First, this opinion is proved by the authority of Scripture, namely Wisdom 12: "Neither king nor tyrant shall in thy sight inquire concerning those whom thou hast destroyed; since therefore thou art just, thou disposest all things justly, and thou thyself also, as thou hast judged those worthy of punishment, condemning them, hast exterminated them from thy kingdom." Therefore, before anyone is foreknown as worthy of some punishment by his own iniquity, God has exterminated him from His kingdom and has destined him to eternal punishment. It is confirmed.

Then in Romans 9 this same view is insinuated often. First, in those words: "But if God, willing to show his wrath and to make known his power, endured with much patience vessels of wrath fitted for destruction, that he might show the riches of his glory on the vessels of mercy [supplement]" - "Why then does man still complain?" or, which is the same, as St. Augustine supplies: "But who are you, O man, who answer back to God?" - for the speech is elliptical, and from the preceding that part must be supplied.[2050] Or we can explain the participle "willing" so that it has the force of a verb, and the sense be: "but if he was willing" - that is, if he willed - to show wrath, to this end assuredly he endured vessels fitted for destruction, that he might show the riches of his glory, etc. From either sense, however, it is plainly gathered that God first willed to show wrath, that is, to destine men to punishment, and for this He permitted them to fall into sin, and for a long time endured them, that they might be found worthy of the severity of His judgment: therefore God awaited no guilt from them, nor foresaw it, in order to reprobate them - that is, to exclude them from the kingdom of heaven and to permit them to fall into sin - by which two things each one's reprobation consists.

Second, the same thing the Apostle expressed there in Pharaoh, who a little earlier says: "For the Scripture says to Pharaoh: For this very purpose I have raised thee up, that I might show in thee my power," that is, might; as if he had said: therefore I have endured thee for a long time, and permitted thee to fall into sins, that I might inflict the punishment which I had predestined for thee. From which it seems to be gathered that before every will of permitting sin God decreed to punish some and to expel them from the kingdom of heaven; which, in order to accomplish, He endured them in much patience, permitting them to fall into many sins.

Third and finally, in the same chapter the Apostle says of those two brothers, Jacob and Esau, that "before they had done anything either good or evil," Jacob had been loved by God, and Esau hated.

2050. St. Augustine, Ad Simplicianum, l. 1, q. 2 - 3 (on Rom 9), middle.

From the Fathers indeed, St. Augustine in book 1 to Simplicianus, question 2, and book 11 (or 1) on Genesis ad litteram, chapters 16 and 18, and frequently in the books On Predestination and On Perseverance; and Prosper, book 1 On the Calling of the Gentiles, chapter 21 (elsewhere 7), seem to have taught the same view.[2051] From all of which...

Ratione probatur. Lastly it is confirmed by reason, because predestination and reprobation are parts of the divine providence, as it were looking upon the same thing in an even balance: therefore in two men, of whom one is predestined, the other reprobated, they begin equally; but predestination in the predestined begins from the first congruous calling, which is connected with perseverance: therefore reprobation will begin from the denial of congruous calling; but of this no cause is given: therefore neither of reprobation. For if there were any cause of it, it would be a preceding sin; but there can be no sin which does not precede permission: therefore in the end we must come to the first permission, of which there is no cause. This reason proves only the opinion of those Scholastics who say that no cause is therefore given of reprobation, because none is given of the first permission; it does not, however, prove that, before foreseen sins, God decreed to exclude some from the kingdom of heaven.

Confirmatur. Next, if a cause of reprobation were given on the side of adults, it would follow that it was in their power to be reprobated and not to be reprobated. But if it lies within them not to be reprobated, then it would also be free to them to be predestined, for there is no mean; and whoever is not reprobate ought to be predestined: but no one has it in his power to be predestined: therefore neither has he that he be not reprobated.

That we may refute this opinion, two things must be established: one is that God did not decree, before foreseen sins, to expel anyone from beatitude; the other is that reprobation, or rejection from glory, in the reprobate does not begin from the first permission, although some reprobation does begin thence. We shall show both in chapter 4 and chapter 5, confirming our opinion.

Caput II - The opinion of Scotus and of others

Scotus, however, differs from this opinion. For in the first book, distinction 41, question 1, 9, "Potest aliter," he asserts that there is in God a twofold reprobation, one he calls punitive, the other truly permissive.[2052]

In this opinion of Scotus I judge that certain things are altogether true and to be embraced; others, if explained in a good sense, can be true; finally, some are false, of which I have not resolved to refute all in this chapter. First, it is most true, and to me more than probable, that before foreseen sins God willed to punish no one with the pain of sense; that also before the foreknowledge of their sins no one was expelled by the eternal counsel of God from beatitude - which will be proved in chapter 4. Secondly, I judge it true that before foreseen sins there was some reprobation and repulse appointed by God. But whether this is to be called permissive reprobation,

2051. St. Augustine, Ad Simplicianum, l. 1, q. 2; De Genesi ad litteram, l. 11 (or 1), cc. 16, 18; De praedestinatione sanctorum; De bono perseverantiae; Prosper of Aquitaine, De vocatione gentium, l. 1, c. 21 (alias 7).

2052. Scotus, In I Sent., d. 41, q. 1, 9 "Potest aliter," positing a twofold reprobation, punitive and permissive.

or even that reprobation which Scotus calls punitive - indeed, that reprobation from eternal life was from the same foreknowledge of sins - we shall prove in the same place. Thirdly, finally, that God behaved negatively toward the reprobate in those two instants, I judge false; which I will now briefly set forth point by point.

But the doctrine handed on by us in disputation 79, chapter 3, is to be presupposed, namely that the will (voluntas) of God cannot comport itself altogether negatively with respect to those things which are not going to be in time; rather, as was proved there, for the things which will not be, God expressly willed that they not be. Wherefore concerning the reprobate, across those various instants, I judge the divine will to have comported itself thus. In the first instant indeed, positively he desired beatitude for them, but with the affect of simple complacency, which he had toward all universally, as was noted in disputation 89, chapter 9. But that they be excluded from the kingdom, displeased God with the same simple affect; for just as of himself God desires beatitude for all, so also that they be deprived thereof supremely displeases him, unless there be a cause, namely sin. But as regards the efficacious act (actus efficax) of the will in that instant, God comported himself negatively toward the reprobate; first, because then he did not will to exclude them from the kingdom - for if we should say that then he willed to exclude them, many absurdities follow, as we shall say in chapter 4; and also because he did not will not to exclude them: for if he had efficaciously willed not to exclude them, they would truly attain beatitude.

Nor is that contrary to this which we said in the place cited above, namely that from eternity God did not comport himself negatively concerning those things which are not going to be in time, but expressly willed that they not be. For this is not to be understood of every sign and instant of reason whatsoever, but of one or another, so that there may be nothing that is not going to be in time which God did not expressly will not to be: and thus that the reprobate not attain glory, God expressly willed from eternity - but not in the first instant, in which he did not yet consider the sins on account of which alone he willed to exclude them from the kingdom of heaven. After therefore in the third instant he foreknew sins, from then on, in the fourth, he expressly willed to deny glory to them. Which, generally speaking, is to be asserted of those things which God willed not to be, and that for some cause or occasion; for he is not understood to have willed them not to be before he foreknew the cause.

Wherefore what Scotus affirms about the second instant - namely, that in it God comported himself negatively concerning the permission of sin and the denial of grace - is false. For although concerning sin, precisely as it is sin, God may have comported himself negatively by an efficacious act, since he neither willed it to be nor willed it not to be; nevertheless concerning permission, which is the denial of efficacious grace, he could not comport himself negatively, as we have already proved in the place cited above. Moreover, in that second instant God positively and expressly willed to deny congruous grace - for since from eternity he was going to have this express will from himself, it is clear: because he was going to deny grace from himself, not on account of any cause, just as also in time he is going to give it from himself to whom he will: therefore in that instant he expressly willed to deny it to those to whom he in fact denied it, just as he willed to give it to those to whom he was going to give it; nor is there need to wait for another sign of reason in

which God would have this will. Concerning glory, however, it must be said in the same proportion - namely, in the same instant, to wit after foreseen works, that he willed to give it to some, but to deny it to others; because each decree concerning glory depends upon the foreknowledge of works. And thus in the first instant, namely in which we consider that God from himself alone willed, so far as concerns the efficacious act, he comported himself negatively concerning glory either to be conferred in time or to be denied; and for another following sign of reason we remit the decree of each, because each depends upon foreseen works, as has been noted, but works in that first sign of reason do not yet appear.

Caput III - That original sin is the cause of reprobation, as some more recent authors think

Thirdly, others hold - as Catherinus and John of Bologna report - that some cause of reprobation is given, and that it is original sin contracted in each one; and that among the effects of reprobation permission to fall into actual sins is to be counted; and of this a sufficient cause is original sin, in whose punishment all helps of grace are denied, whatever are not granted. They report in this opinion Valdes,[2053] where he disputes not about the cause of reprobation, but about the immutability of the divine knowledge. But St. Thomas expressly handed on this opinion, in De veritate q. 6, a. 24, ad 9, and in chapter 8 on the Epistle to the Romans, lecture 3, etc.[2054] Nor is that an obstacle which he said in this question, article 4, ad 3, and which we alleged for the first opinion: for both can be true, both that no cause is given which could be proper to reprobation, or, to speak more precisely, that no peculiar cause of this division is given, as he taught in article 4; and yet that there is a sufficient and common cause on account of which, whoever is reprobated is reprobated - namely original sin - as he taught elsewhere. Concerning infants it can be asserted for certain that the cause of their reprobation is this very sin; and so, as effects of this reprobation, they only reckon the punishment and penalty; yet the series of instants in the divine mind is thus constituted. In the first instant God saw the first man with all his posterity fallen into sin. In the second he decreed to apply the remedy through the incarnation of Christ. In the third, out of men lost in the same mass, he willed efficaciously to give eternal life to some, but to exclude others from the kingdom, leaving them in the mass of perdition in which they were. Hence too he permits adults to slide down into actual sins, and to persist in them. The other instants can easily thereafter be assigned. In this way these Doctors most excellently defend that reprobation is an act of justice, which by its nature requires sin and merits punishment. What they think, however, about the reprobation of the angels, we shall say a little later.

2053. Valdes, tomo 1, pars 1, lib. 1, cap. 17, where he treats not of the cause of reprobation but of the immutability of divine knowledge.

2054. St. Thomas, De veritate q. 6, a. 24, ad 9; Commentary on Romans, c. 8, lect. 3, etc.

Confirmatur auctoritate. They prove this first from St. Augustine in many places, especially Epistle 105, in the Enchiridion c. 57, and in On the Predestination of the Saints c. 14, where he affirms that in his mercy God has by predestination freed certain ones from the mass of perdition, but in his just judgment has left certain others in it: moreover Augustine presupposes that all were in the same mass of perdition before any distinction was made by their merits.[2055]

A third opinion of others. Some judge, as Catherinus and Ioannes a Bononia report, that for adults there is given a cause of reprobation, and that it is original sin contracted in each one; moreover they reckon among the effects of reprobation the permission to fall into actual sin; but the sufficient cause of this is original sin, in whose penalty all helps of grace are denied, whatever are not granted. They report in this opinion Valdés, tom. 1, part 1, book 1, ch. 27, where indeed he does not dispute about the cause of reprobation, but about the immutability of divine knowledge. [2056] But St. Thomas expressly handed on this opinion in De veritate q. 6, a. 24, ad 9, and on Romans c. 8, lect. 3 and 4.[2057] Nor does what he said in this question, a. 3, ad 3, and which we alleged for the first opinion, stand in the way; for both can be true: both that no cause is given why this one rather is reproved while that one is predestined - for there is no peculiar cause of this division, as he taught in article 5 - and that there is given a sufficient and common cause on account of which whoever is reproved is reproved justly, namely original sin, as he taught elsewhere in other places. As to infants, they assert that the same sin is the cause of their reprobation, and to such a degree that as the only effect of this reprobation they list punishment and penalty.

According to the sequence of this opinion they set up the instants in the mind of God thus. First, God saw the first man with his whole posterity fallen into sin. Second, he decreed to apply a remedy through the incarnation of Christ. Third, out of men lost in the same mass he willed to give eternal life efficaciously to some, but to exclude others from the kingdom, leaving them in the mass of perdition in which they were. Hence too he permitted adults to slip into actual sins and to persevere in them to the end. The other instants can afterwards be easily assigned. In this way these Doctors excellently defend that reprobation is an act of justice, which by its nature requires sin and the merit of punishment. What, however, they think about the reprobation of the angels, we shall say a little below.

They prove it first from St. Augustine in many places, especially Epistle 105 around the end, in the Enchiridion c. 57, and in On the Predestination of the Saints c. 14, where he affirms that in his mercy God has by predestination freed certain ones from the mass of perdition, but in his just judgment has left certain others in it: therefore Augustine presupposes that all together were in the same mass of perdition before either they were predestined or were reproved by God.[2058] Then they confirm it by a consideration which has great force in the school of the Angelic Doctor: since Christ was predestined on the occasion of the sin of the first parent, therefore before his predestination all were under a common debt and the death of sin; but Christ's predestination preceded ours, and

2055. St. Augustine, Epistula 105; Enchiridion c. 57; De praedestinatione sanctorum c. 14.
2056. Valdés, tom. 1, pars 1, lib. 1, cap. 27.
2057. St. Thomas, De veritate q. 6, a. 24, ad 9; Commentary on Romans, c. 8, lect. 3 - 4.
2058. St. Augustine, Epistula 105; Enchiridion c. 57; De praedestinatione sanctorum c. 14.

therefore also the reprobation of the damned: therefore original sin could have been the common cause of reprobation. Wherefore he did not speak in the same way about the reprobation of demons and of men: for the demons could not have had any cause of their reprobation of this sort. Therefore about them they assert with the Doctors of the first opinion that before any sin was foreseen they were reproved and excluded from the kingdom of heaven and permitted to fall into sin.

This opinion, to the extent that it agrees with the first, is impugned by us below in the same way. But whether in this point, in which it asserts that the cause of the reprobation of men was original sin, it is true, will be explained there in the same place. However, that which it supposes in the argument, namely that original sin contracted in each one was foreseen before our predestination and Christ's, is manifestly false. For from that it would follow that the Blessed Virgin not only contracted original sin and was foreseen with it, but also could not have been preserved from it by Christ. For if before Christ's predestination all had been foreseen as about to be born with original sin, Christ's merit could have profited them nothing so as to preserve anyone from it, if indeed the preservation, if it were conceded to anyone, would have been prior to the merit of Christ. Therefore only the grace of God, without any merit of Christ foreseen, could have prevented the Virgin so that she did not contract original sin, which is absurd: since all confess that whatever grace was bestowed on the posterity of Adam and on the Blessed Virgin was the grace of redemption from the merits of Christ, as we observed against Durandus in the preceding disputation, c. 4.

The adversaries answer: that the Blessed Virgin in the order of intention was foreseen with original sin, but was freed in the order of execution. But the distinction of the order of intention and of execution, which is wont to be assigned by the Doctors, can in no way be accommodated to the present difficulty. For it is this, that what in execution will truly be posterior is prior in intention; that is, the man first consults and deliberates about it and by his will decrees, as we explained in disputation 89, c. 7. But things which in no way were going to be future in reality could not have been prior or posterior in intention and execution. Wherefore, since the Blessed Virgin was in no way going to be born in original sin, it follows that neither earlier in intention nor later was she foreseen in it.

How the position set down is refuted by others. Then Catherinus and Ioannes a Bononia attack the same opinion in the opuscules On Predestination in this way: original sin contracted in each one was not in reality the cause why many damned did not obtain beatitude; for many were justified from original sin: therefore it could work nothing toward their damnation, not only so that on account of it glory would be denied them, but not even grace; for once original sin is remitted, it could not leave a fitting subject to be deprived of grace or of glory. More suitably, then, one would assert as the cause of reprobation the sin of the first parent in himself alone, and not yet derived into his descendants, inasmuch as of itself it was apt and sufficient to infect the whole posterity. For although in the first parent by penance it was blotted out as to the guilt, the stain, and the penalty due to himself, nevertheless there remained a debt of being without grace in the whole posterity, which Christ by his merit, as to sufficiency, condignly compensated, although many in

fact on account of it lacked the grace of a congruent calling and were permitted to fall into sin and were damned. But in what way, and in what sense, this sin of Adam could have been a cause of reprobation will be said below.

Caput IV - Certain notes for an explication of the truer opinion

Note the first. Now in order that we may explain a more probable opinion both about the manner of speaking and about the thing itself, four points must be premised, of which three regard the thing itself, but the fourth regards the words. The first is that on the part of him who falls into the first actual sin after he has been justified from original sin there is no cause of that first permission; this I judge to be as certain as what was said about the first calling from the mind of St. Augustine and others in disputation 91. Therefore just as for the first calling no cause is given, so neither for the permission, in him who is permitted after he has been justified from original sin. But among the Massilians and the Greek Fathers, with whom St. Augustine strongly contended about the first calling, this is not all that certain. For yet they could in no way assert that before the first permission there had preceded some sin on account of which someone would be allowed to fall into the first sin; nonetheless they asserted this: that for little ones who are damned the grace of baptism was denied to them because of sins which they would have committed if they had lived, as we reported in disputation 91, c. 2. Moreover, since they thought that adults dispose themselves from free choice in such wise that grace is conferred on them, and on the part of him whom grace prevents they did not grant a peculiar congruent grace, as we shall say in disputation 98, c. 4, they would not so easily concede that the permission of sin is a subtraction of some preventing grace which otherwise would impede the sin; but perhaps they would say that up to the consent into sin all are called with equal grace. But for those who respond and who persevere, a peculiar grace, and for those who do not persevere, to be given by God, will be proved in that disputation fully and beyond enough. From which it follows that there is no sin which is not preceded by some permission, that is, a negation of a congruent calling, by which God knows that the sin would otherwise be prevented if it were granted.

Note the second. Secondly it is certain, nor can any Semipelagian even deny, that every permission of sin must rightly be attributed to the merit of the sin of the first parent, although it cannot be ascribed to original sin which has already been blotted out by baptism or the love of God. For thus Fulgentius in the book On the Incarnation and Grace, ch. 12 and 13 at the beginning, taught that the human race lost in Adam every holy and pious disposition, and recovered none except by the merit of the second Adam.[2059] Nor does it stand in the way that Adam's sin in himself was utterly blotted out by penance: for there remained that obligation of punishment, indeed even the obligation of original guilt, which he merited for the whole posterity; but original sin contracted in anyone after it has been remitted by baptism or by the love of God is in no way a cause either of

2059. Fulgentius, De incarnatione et gratia, c. 12 - 13.

the permission of sin or of eternal damnation. And therefore in the preceding chapter I noted that it can be better assigned as a sufficient cause of reprobation, the sin of the first parent, than original sin contracted in each one.

Note the third. Thirdly I for my part judge it to be most true, against many recent writers whom I have mentioned for the first and third opinions, that no one was by God excluded from the kingdom or destined to punishment before foreseen works. To this opinion indeed Scotus subscribes, and those who follow his view (except Antonio de Corduba), and all whom in the following chapter we shall adduce for our opinion; and besides the testimonies of the Fathers which we there then cited, it can also now be proved to others and confirmed with efficacious reasons.

It is proved, first from Scripture, and is confirmed by efficacious reasons. The first testimony is Deuteronomy 32: "God did not make death, nor does he take pleasure in the destruction of the dying"; as if to say, of himself he would not have death, nor absolutely does he take pleasure in it, except on account of, and by the merit of, our sin. For since God has appointed punishment and death for sin, it is not the case that he is pleased with it according to itself, but so that he may preserve justice and equity.[2060]

The second testimony is St. John Damascene, book two On the Orthodox Faith, ch. 29, where he teaches that by the primary and antecedent will, which he says is from God himself, with no occasion as yet offered by us, God desires and wills not the salvation of only some, but of all; and it is impossible that God of himself should at once will that some man be saved and perish, admit him to the kingdom and exclude him: therefore before foreseen works he denied beatitude to no one.[2061] For that he should will of himself that someone be made blessed, but by the fault foreseen he should will with regard to the same to damn, are not contrary wills. For the same human judge of himself most ardently desires life to someone whom nevertheless on account of guilt he decrees to be afflicted with the punishment of death. This consideration not only proves that no one was by God damned and expelled from beatitude before the foreseen sin of the first parent, but also not after the sin; for although that sin was foreseen, the will of salvation and beatitude still remained in God, because he provided sufficient remedies for this after Adam's fall: from which it follows that he simply willed their end, namely beatitude.

But someone may object that nothing prevents there being at once in the same God a simple will of salvation for someone and an efficacious will of punishing and damning the same; therefore in God these two wills could at once have been, a simple will of blessing men with beatitude, and an efficacious will of expelling them from the kingdom of heaven. I answer: these two wills are not contrary when they arise from different causes, as, if someone of himself should will salvation to another, but on account of that man's guilt should will punishment; but to will from himself that someone be blessed, and from himself to will to damn the same, is altogether contrary and repugnant.

2060. Deuteronomy 32; cf. Sapientia 1:13: "Deus mortem non fecit, nec laetatur in perditione vivorum."
2061. St. John Damascene, De fide orthodoxa II, c. 29.

The same line of reasoning can be shown by which in disputation 89, c. 9, 10, and 11, we made use to prove that no one was elected to the kingdom of heaven before the merits of grace were foreseen. The first is that the order in the mind of God ought to be assigned from the order of the objects among themselves; wherefore whenever God does something in time from merits, it must be said that he did not decree otherwise than from merits: therefore since in time God excludes from the kingdom of heaven and destines to punishment and the penalty of fire from merits, it follows that from eternity he decreed that thing only from the foreknowledge of those same merits; this reason is had in that chapter 9. The second reason is: if of himself God had efficaciously predetermined to exclude someone from the kingdom before foreseen works, a necessity of his damnation would be imposed on him, and it would be altogether impossible that he be saved, and all liberty would be taken away by which a man could be saved: which is absurd; just as on the contrary in c. 10 we proved the same about the consequence of glory if God had decreed to bless someone before works. The third reason is that from the opposite opinion the efficacy of sins is taken away with regard to punishment itself, or expulsion from glory. For if this was defined by God before foreseen works, then sins in time contribute nothing at all to the inflicting of this punishment; just as in c. 10 I proved the same about good merits with respect to glory, if this had been predetermined before those. Which reasons indeed must be drawn in the same way, and confirmed, as those which in those chapters we pursued.

Note the fourth. Fourth it must be observed that the words Reprobation, to reprobate, and reprobate (reprobus) are rarely found in Scripture and in the Fathers, especially in the signification about which the dispute is for us; and in some places where they would seem to be so used, it is not certain that they have that signification. The passages of Scripture are Ecclesiasticus 9: "The beauty of a strange woman has many in admiration; they have become reprobates," and 1 Corinthians 9: "I chastise my body and bring it into servitude, lest perhaps when I have preached to others I myself should become a reprobate," and 2 Timothy 3: "And these resist the truth, men corrupted in mind, reprobate concerning the faith," and Titus.[2062] But in these places "reprobate" does not mean one who is cut off and repulsed from the kingdom of heaven and from the grace of God, but the same as "wicked, depraved." For the Greek is adokimos, which also signifies wicked. Nay rather the word reprobus among the Latins is more often used in this signification. It is set also in 2 Corinthians 13; but in this signification rather, I judge, it is to be understood. Now if in these places we should understand "reprobate" in that signification about which we are now disputing, then from those places it would not follow that the cause of reprobation preceded; nor does the sequel -

We shall say what the word "reprobo" signifies. Now the Latin word "reprobo," being set over against the word "probo," denotes to disapprove or to reject something; in which signification it is more frequently employed in Scripture: Mark 8; Luke 9 and 17; and 1 Corinthians 1; and in this latter place, if anywhere, it is set in this signification.[2063] But whether from that place we can gather any cause of reprobation, in the same, the following chapter must be said.

2062. Ecclesiasticus 9; 1 Corinthians 9:27; 2 Timothy 3:8; Titus 1:16; 2 Corinthians 13:5 - 7.
2063. Mark 8; Luke 9; Luke 17; 1 Corinthians 1.

Finally, St. Augustine and the other Fathers do not use the name "Reprobation," or the verb "I reprobate": once I found the word "Reprobate" in Augustine; but in what sense, and whether he assigns its cause, is afterward to be explained. Rather, Augustine and other Fathers oppose to predestination to eternal life, predestination to the second death; and to election unto grace, dereliction in the mass of perdition. Those, however, who are left in the mass, and are not separated from it by the mercy of God, Augustine says are deserted by God, and that God does not have mercy on them.

Caput V - On the cause of reprobation in adults; the truer opinion

Since a good part of this controversy is about a word, it will be easy, in accordance with the things that have been noted, after a certain distinction has been premised, to pronounce the truer opinion, and one more conformable to the testimonies of Scripture and the Fathers. But since reprobation (*reprobatio*) is both of little ones and of adults, and the case of each is not the same, for greater clarity it has seemed good to treat only of adults in this chapter, but in the following to discuss little ones.

Therefore, since to reprobate is the same as to disapprove someone and to reject, if "reprobation" is used for the act by which someone is rejected by God, a distinction is needed. Either we speak of the act by which someone is rejected from the grace (*gratia*) of God; or of that by which he is rejected from the kingdom of heaven. If the discourse is of the former, it must be asserted that there is no cause on the part of him who is rejected except the sin of the first parent. And it must be understood that the negation is of the first negation of grace and of congruous calling (*vocatio congrua*), by which man is rejected from the grace of the predestined, yet in such wise that God rejects no one from his grace with this intention, namely, that he also exclude him from the kingdom of heaven. For from such an intention it would follow that God from eternity, before the negation of congruous grace and before foreseen sins, had pre-appointed someone an exile from beatitude (*beatitudo*), which is absurd, as was shown in the preceding chapter. Wherefore this mode of reprobation is not opposed to predestination to glory on the part of the end to which it is directed, but only on the part of the means of grace which are granted to the predestined, but are denied to the reprobate, yet not with a contrary intention, namely of excluding them from the kingdom. In this mode of reprobation that saying in Romans 11 can be understood: "God has not cast off his people whom he foreknew," that is, he has not cast off from his grace that small part of the Israelite people which he chose for himself, as he cast off the remaining multitude of that same people, until the fullness of the Gentiles enter into the Church; for "the remnant," that is, the few, "have been saved by the election of grace." On the contrary, many of them were repulsed and cast out from the grace of God.[2064]

But the other places of Scripture, if they are understood of reprobation, are to be taken, in the signification of the Scholastics, not of reprobation from first grace, but of reprobation from glory, or from some further grace, as we shall say presently. Of this reprobation, therefore, I see no other

2064. Romans 11:2, 5.

common cause besides the sin of the first parent. For since original sin is blotted out by the grace of God in many even of the reprobate, that cannot be the cause of reprobation from grace; yet the common sin of the first parent can be such a cause (as I observed in chapter 3).

In this view agree with us the doctors of the second opinion, except Corduba, in so far as they assert that no one before foreseen works has been excluded from beatitude. But for reprobation from grace, which they call permissive, they do not posit a cause on the part of the reprobate himself. Nor do they deny that Adam's sin is a sufficient cause of that. Only this in their opinion does not please me, that they assert, concerning the negation of congruous grace and the permission of sin, that God bore himself negatively; which was impugned in chapter 3. The doctors also of the first opinion we can interpret in this sense. For no one said that before foreseen sin God decreed to cast out someone from beatitude. Wherefore perhaps they speak of reprobation from first grace; and for that reason they said that the effect of reprobation begins from the first permission.

In this mode to reprobate is the same as not to have mercy; and not to have mercy, as Augustine noted in Ad Simplicianum, book 1, question 2, is the same as to harden, with the Apostle when in Romans 9 he says: "Whom he will, he has mercy on; and whom he will, he hardens."[2065]

But of this hardening there is, on our part, no cause other than the sin of the first parent, if hardening is taken from the first permission; for if we speak of other permissions, by which, after many sins committed, someone is forsaken by God, on the part of the one abandoned the prior sins are the cause of the later hardening. St. Augustine in that place sets down this distinction between mercy, by which God lavishes a congruous calling (*vocatio congrua*), and hardening, which arises from the negation of grace (*gratia*); which, although by reason of the prevenient calling the Apostle says, "It is not of him that wills, nor of him that runs, but of God that has mercy," namely a work proceeding from grace, because it was God's alone thus to call that the will should be moved and should do; yet it cannot be said, "It is not of him that is unwilling and that despises, but of God that hardens," because God does not prevent us so that we sin and are worse, but he does prevent us so that we be better and consent to the calling; only this is not dispensed by God (says Augustine), namely something by which we may be better, when, to wit, a congruous calling is denied, by which we would act rightly and would not consent to sin. Yet of this reprobation (*reprobatio*) in the demons there was no other cause than the will of God: for at the first permission no sin preceded in them, or in others, which could be its cause.

Second, if we speak of reprobation in so far as it is opposed to predestination (*praedestinatio*) on the part of the end, by which namely a man or an angel in the eternal foreknowledge is excluded from the kingdom, it has a cause in the reprobate himself, namely the sins in which he ends his life. Wherefore this reprobation does not begin from the first permission and the negation of grace, but from the very destination by which someone, from sins foreseen, is excluded from the kingdom and consigned to eternal torments. Of this the Fathers speak more frequently, when they treat of the contrary of predestination. This Fulgentius and the Council of Valence under the Emperor Lothar

2065. St. Augustine, Ad Simplicianum, lib. 1, q. 2; Romans 9:18.

call predestination to death, namely the second; the cause of this, however, is the sins in which a man perseveres unto death, against the more recent authors whom we have mentioned above; this can easily be proved.

And first of all, if in the passages of Scripture above cited the word "reprobate" or "I reprobate" is used in the signification customary among the Scholastics when they dispute concerning reprobation, without doubt from them it would be gathered that there is some cause of reprobation. For that passage Ecclesiasticus 9 indicates a cause of reprobation, when it says: "Many have admired the beauty of a woman"; and 1 Corinthians 9, when Paul says that he chastises his body, "lest perhaps I become a reprobate," he understands that the sins which otherwise he would commit, unless he restrained his body, would be the cause of his reprobation. But in 2 Timothy 3, where it is said that some are "reprobate concerning the faith," the cause is there set down manifestly, when it says, "corrupted in mind." In these places, however, and in others, I noted in the preceding chapter that these words are not used in that signification, but that "reprobate" is the same as "wicked" and "vicious." In 1 Corinthians 1 the verb "I reprobate" is set down and denotes to disapprove or to condemn, when it is said: "I will destroy the wisdom of the wise, and the prudence of the prudent I will reprobate." But there it does not signify the reprobation about which we are now disputing. And if Paul were speaking about that, he would have indicated a manifest cause of it; for the wisdom which God reproves is that of the wise of this world, who, inflated with the sense of their flesh, have judged the wisdom of God to be foolish. This therefore God will "reprobate," that is, he will condemn it, convicting them of folly, since through the preaching of the Gospel, which seemed to them folly, he will save believers.

Omitting therefore the testimonies of Scripture, this our sentence is proved from the Fathers; first, from the Council of Valence under the Emperor Lothar, chapter 3, where it is thus said: "We confidently confess the predestination of the elect to life, and the predestination of the impious to death; yet in the election of those to be saved the mercy of God precedes the good merit; in the damnation, however, of those who are to perish, the evil merit precedes the just judgment of God"; where he opposed two predestinations to each other on the part of the end. Of that one, which is of the impious to death, he said that the cause is merit and proper sin. Nor does he speak only of destination to the pain of sense, which all confess to be from the forevision of sin, but also of the second death, which is damnation, and principally consists in the privation of beatitude. Then the Council adds that by predestination God determined only those things which he himself was going to do by gratuitous mercy or by just judgment. This sentence it took from Augustine in the book To the Articles Falsely Imputed to Him, article n., or rather from Prosper, who is rightly believed to be the author of that book; and it is found in Fulgentius, book 1 To Monimus, chapter 13.[2066] He holds therefore that God did nothing in the predestination of the wicked which he was not going to do by just judgment: since therefore from eternity God expelled some from beatitude by just judgment, and hence on account of their own fault he so predestined; for just judgment demands this cause.

2066. Council of Valence (Concilium Valentinum) under Emperor Lothar, c. 3; Augustine, Ad articulos sibi falso impositos; Prosper as probable author; Fulgentius, Ad Monimum, lib. 1, cap. 13.

Second, it is proved from Augustine, book 6 of the Hypognosticon, a little after the beginning, where he writes thus: "But since God is just and merciful, and foreknowing of things to come, from this damnable mass, not by the acceptance of persons, but by the judgment of his equity, those whom he foreknows to be prepared by gratuitous mercy, that is, he predestines to eternal life: but he punishes the rest with penalties; whom he therefore punishes, because he foresaw what they would be; yet he himself did not make them to be punished, nor predestined them." And a little after the middle, concerning little ones and adults, he says: "It must be held as a fixed rule in this shaken dispute, which has shone forth by divine testimonies, that sinners were foreknown in their own evils before they were in the world, as not predestined (he understands, to sin), but that punishment was predestined to them according as they were foreknown. He also predestines unbaptized little ones to be liable to punishment, who were foreknown, not by their own wills, but only in Adam's sin, which they drew contracting it by being born, and, remaining in this, they paid out the time of the present life." When Augustine says that punishment was predestined by God from the foreknowledge of sin, he understands this not only of the pain of sense, but also of the greatest of all, which is the privation of beatitude; for he says that it was predestined to little ones from the foreknowledge of the sin which they contracted and in which they ended their life. But when he affirms that God does not make men to be punished, nor predestines them, he understands this as "from himself without a foreseen cause": for if from himself, before the foreknowledge of sin, he were to decree to exclude a man from eternal life, he would make him to be punished, and would destine him to the sum of punishment and to the second death. Then, in book 1 to Simplicianus, question 2, after the middle, he has these words: "Esau therefore would not, and did not run; but if he had willed, and had run, he would have attained by the help of God, so that, if the calling had been despised, he would be made a reprobate." He holds therefore that the cause on account of which he would have been made reprobate, if he had not run, would be that he had despised the calling; and hence the cause of that man's reprobation would have been sin.[2067]

Third, the same sentence is gathered from Prosper, first from the book Ad capitula Gallorum, chapter 3, where he says: "Those therefore who, having fallen thus, ended in this evil without the correction of repentance, did not have a necessity of perishing, because they were not predestined; but they were therefore not predestined, because they were foreknown to be going to be such from voluntary prevarication." The same he says in the book Ad capitula Gallorum, to objection 7, and about the end in sentence 7, which I shall report below in chapter 9. He calls "not predestined" the reprobate, or those destined to the second death; and he says the cause is proper prevarication. For this author cannot be understood by "non-predestination" to mean the negation of every congruous grace from the first help unto the last; for of this no cause is given, just as neither of predestination itself, in the doctrine of that doctor whom, for the sentence of Augustine, we alleged in disputation 91, chapter 12: or at least the cause of this non-predestination in his opinion is not the proper prevarication, but the common fault of the first parent, as was explained above; and to the Vincentian objections, response 11, he says that God did not predestine sin, but the judgment

2067. Pseudo-Augustine, Hypognosticon, lib. 6; Augustine, Ad Simplicianum, lib. 1, q. 2.

by which he was going to render to each one according to his works; where he concedes the cause of predestination to punishment and of just judgment, when he says that God will render to each one according to his works.[2068]

Fourth, in the same sentence Fulgentius can be alleged, book 1 To Monimus, chapters 13, 14, 19, 24, and 27, where he opposes to the predestination of a man to life the predestination of a man to death, not to the first, which is sin, but to the second, which is punishment, such as is the perpetual privation of beatitude.[2069]

Finally, by reason the same opinion is proved; I confirm thus. If of reprobation, in so far as it is truly predestination to the second death and to the privation of beatitude, there were not a cause on our part, this would be because it would begin in us from the first permission of sin, that is, from the first negation of a congruous and efficacious calling, for which on our part no cause can be assigned, except the common one, which was the sin of the first parent: but that first permission does not pertain to this reprobation, since it is not from the intention of excluding someone from the kingdom of heaven, as we showed in the preceding chapter; it follows that he was not predestined by God to this end. Wherefore, when God permits someone to fall into sin, or denies him his efficacious grace, he does not "reprobate" someone, so to speak, from beatitude, nor reject him from it, but only from his grace. For although from such permission a man will sin, and on account of sin be excluded from the kingdom of heaven; nevertheless, precisely in the instant in which God permits or denies congruous grace, he does not intend, nor determine, to expel him from beatitude by such a means. What other end he has, we shall say in the solution of the arguments. The very same judgment must absolutely be made concerning the reprobation of the demons in this second signification: for the reason which we have just given proves the same about the demons as about men. He prepares sufficient means, by which he himself may make use, or another on his behalf, unto that end.

Caput VI - On the cause of the reprobation of little ones, what is to be held

With the foundations laid in chapter 4, it is easy to gather what is to be said about the reprobation of little ones, with the same proportion kept as that with which I have spoken about adults. Therefore, if we speak of that reprobation by which someone is rejected from grace, in the case of little ones themselves who have contracted original sin, by no means was there any cause at all of their reprobation in themselves: for nothing could have been prior in them than that God should deny them His grace; from which it came to pass that they contracted original sin. But the true cause of this reprobation was the common sin of the first parent, by whose merit sin entered into all, except Christ the Lord and the Blessed Virgin; apart from this cause there was no other, unless the will of God - a thing which no one can deny.

2068. Prosper of Aquitaine, Ad capitula Gallorum, c. 3; Ad capitula Gallorum, ad objectionem 7, and sententia 7; see also Vazquez, disput. 91, c. 12; Responses to the Vincentian objections, resp. 11.

2069. Fulgentius, Ad Monimum, lib. 1, cc. 13, 14, 19, 24, 27.

If, however, we speak of that reprobation by which one is expelled from beatitude, some think that one ought not to philosophize in the same way about all little ones. For there are some who not only contracted original sin, but for whom no remedy could be applied by human diligence, divine providence so disposing,[2070] as we shall dispute in 97. These therefore they purify in God's foreknowledge as excluded from the kingdom of heaven, not after original sin was contracted by them, but straightway after the sin of the first parent was foreseen, so that after it God no longer had the antecedent will to lead them to life eternal or to free them from sin, which He had towards all before the sin of the first parent. For if, once that was foreseen, God determined to deny to certain persons the helps of salvation in such wise that no human diligence could be applied to them, He Himself did not will with antecedent will to save them; for from this we infer that there is in God at least the will of simple complacency to lead a man to some end, because He prepares sufficient means by which he himself, or another on his behalf, may be able to be applied unto that end. But if He Himself preclude access, so that by human industry and diligence the means cannot be applied to that end, how shall we believe that God willed to lead such a man to that end? Therefore, although God of Himself, before every sin, willed beatitude for all by that primary and antecedent will; nevertheless, with that sin of the first parent foreseen, by a consequent will He no longer willed glory for those to whom by no manner of concession could the means be applied, but by a consequent will, because of the sin of the first parent, He willed wholly to exclude them from the kingdom. I, however, judge that the reprobation of these was brought about in the second signification straightway after the sin of the first parent: and that the permission also to contract original sin in themselves was an effect of this reprobation - yet in this order, namely, that straightway after the foreseen sin of Adam God did not by an efficacious decree determine to exclude them from the kingdom of heaven, but it simply pleased God with a non-efficacious affection to deprive them of beatitude because of the sin of the first parent, and by a consequent will the sin of the first parent made it displeasing to bestow glory on those to whom, of Himself, before the sin was foreseen, by an antecedent will He desired glory. From this simple complacency about the end, to wit, of punishing them by the privation of beatitude, in the following instant He permitted them, without remedy, to fall into original sin; and in the third instant He efficaciously decreed to exclude them from the kingdom of beatitude. From this it follows that the permission to contract original sin, and to die in it, is an effect of the reprobation of these, taken in this manner; whereas the permission into actual sin in adults is not an effect of reprobation thus taken.

The reason for the difference is that, in order that the permission of falling into sin be an effect of reprobation, it must arise from some intention of excluding the very reprobate from beatitude; but this intention did not exist with respect to adults before the permission of sin, and therefore the permission is not an effect of reprobation; it did exist, however, with respect to little ones, as we have said, and thus, if from that intention God permitted them to fall into sin, such permission, as from God, is an effect of their reprobation.

Therefore we do not grant that God had an efficacious will to exclude little ones from the kingdom before the sin of Adam was foreseen, because certain inconveniences follow which we brought forward in opposition to those who assert that God decreed to beatify someone before foreseen merits of grace.[2071] The first inconvenience in the reprobation of little ones would be that that efficacious will to exclude them from the kingdom, straightway after Adam's sin was foreseen, should still have been going to remain even if that child were afterwards baptized and God efficaciously applied to him remedies against original sin: which must be proved in the same way that in chapter 10 of that disputation we showed that he who was efficaciously elected to the kingdom of heaven is in the same way nevertheless to be glorified even if he were to die in sins, as if he were to depart with the merits of grace.

Then it would follow that original sin contracted in time would in no way be the cause of excluding these little ones from beatitude, nor would they be excluded because they would not have grace, but because their first parent sinned; whose sin alone would be the entire cause of losing the kingdom of heaven: just as also we proved in chapter 11 that merits would do nothing at all toward glory if glory had been efficaciously preordained by God before works. Therefore, since in time the proximate cause on account of which the little one does not attain beatitude is the privation of grace, because he lacks the grace which he ought to have; it follows that from that privation he is deprived of the kingdom of heaven, and hence that in the eternal foreknowledge by the prevision of that privation he was efficaciously expelled from beatitude: just as also I proved in that disputation, chapter 9, that merits were foreseen in eternity, so that from them election should be made unto glory, because in time they were to be rewarded; and therefore man is to be glorified because he was to have merits.

Someone will object in this way: if God by an intention even of simple complacency to exclude a little one from the kingdom wills the permission of sin, He must also will the very original sin which proximately brings it about that someone is deprived of glory. For we said in disputation 92, chapter 1, that therefore God did not will of Himself penitence and the correction of men by a primary will, because He would have to will also sin, as sin, which under that formal aspect penitence and correction necessarily regard. If therefore of Himself He willed by a simple affection to deny glory to the little one, He also ought to have been pleased with that one's original sin, by which He had to execute what by a simple affection He desired, namely, to exclude little ones from the kingdom of heaven.

I answer that the difference is manifest. For he who desires penitence for someone, before he sees that person's sin already committed, by that very fact desires for him the necessary object of this act, which is sin as sin; and thus, if for that end he permits sin, he also must will that he himself sin. But from the fact that, the sin of the first parent being foreseen, by whose merit the grace promised to posterity was lost, it pleases God to deny glory to certain ones, there is no need that their original sin, as guilt and as sin, please Him also; but that it please Him also to deprive

2070. Vazquez refers ahead to his own Disputation 97.

2071. Vazquez alludes to arguments set out above, Disputation 89, and to the structured proofs in the same disputation, chs. 10 - 11.

them of the promised grace, which is the seed of glory, if indeed it pleases Him to deprive them of glory. Therefore God considers the privation of grace, not as, by relation to the voluntariness of the first parent, it has the ratio of guilt - for so it cannot please Him - but as it is the privation of a certain gift without that relation and with a moral being; and under this aspect God directly wills it, and by the will whereby it pleases Him to deny the fruit, namely glory, it also pleases Him to deny the seed, namely grace itself.

Then I judge that all the other little ones, for whom God left remedies which human diligence could apply, but which, through negligence or even through the sins of their parents, were not applied to them, were not reprobated by God except after the end of their life in original sin was foreseen. And first I do not doubt that God did not decree efficaciously to exclude these from the kingdom straightway after the sin of the first parent, but after the negligence of the parents was foreseen; otherwise it would follow that by no diligence could they have been saved, or that, even if they were baptized, nonetheless they would have had to be excluded from the kingdom of heaven, as we proved above about the other little ones.

Next, not only did God not decree efficaciously to expel them from His kingdom, but He did not even with a simple affection desire this for them. For when after the fall of the first parent He granted them means and left these in the power of their parents, He had not yet been displeased to beatify them, until He saw that through the negligence of their parents the remedies had not been applied to them, and therefore that they had died in original sin. For as long as God saw that the remedies could have been applied to them, He still desired beatitude for them: for if the beatitude of little ones had already displeased God, He would not have placed in the power of others the remedies by which little ones could be saved. Therefore in these little ones reprobation began with the destination to the punishment of the privation of glory after their end in original sin was foreseen; whereas the reprobation of the other little ones began with the very permission of contracting original sin. The reason for the difference arises from the diverse manner in which God bore Himself concerning their beatitude straightway after the sin of the first parent was foreseen. For the reprobation of those whose beatitude straightway displeased God began from the permission, because the permission was born from the will of the end of reprobation; but the reprobation of those to whom God always of Himself willed to give beatitude, until He foresaw their end, could not begin from the permission of falling into original sin: because that permission did not arise from any will of excluding them from the kingdom of heaven, which is the end of reprobation.

From this doctrine, both concerning adults and concerning reprobate little ones, we may assign, in the mind of God according to our manner of consideration, this series: first, that God foresaw all in the mass of perdition, subject to sin, because of Adam's transgression. Second, that, this notwithstanding, He willed by a primary will of Himself that certain little ones and all adults should attain beatitude, and for this granted sufficient means, though He denied efficacious and congruous means, not with the intention of excluding them from the kingdom, but of pouring forth His riches upon vessels of mercy. Third, that He foresaw who would die in sin, whether actual or original. And on account of this, in a fourth instant He efficaciously decreed to expel them from

beatitude, and besides destined adults to the pain of fire; from which fourth instant their reprobation from glory begins. But with respect to the other little ones, to whom He did not grant that remedies could be applied, He had already constituted the order in the divine foreknowledge, and we have shown that their reprobation began from the denial of grace.

Further, it follows that reprobation from beatitude is a part of providence concerning men, opposed indeed to the predestination of grace; yet it does not begin in all from the same instant from which predestination begins. The difference, however, arises from the diversity of intention with which God permits sin and denies congruous grace to the reprobate; whereas for the predestined He prepares efficacious means of grace, as is clear from what has been said above. Nor, indeed, does it commend itself to me, what Durandus said, in the First Book, distinction 40, question 3, number 6,[2072] that reprobation is proved

Caput VII - The testimonies alleged for the first opinion are explained according to our own sentence

After the various opinions which we have set forth, there remains only that we solve the reasons of the first, which were brought forward also in chapter 1; and first those which are taken from the testimonies of Scripture. The first was Wisdom 12: "Neither king nor tyrant," etc. This place St. Gregory the Great explains in book 3 of the Morals, chapter n., about Christ, who, though He had no sin for which He should be punished by God, was offered to death, and therefore is said to be condemned by God and cast out from His power, according to that in 2 Corinthians 5: "Him who knew no sin" (namely, Christ) "God made sin for us," that is, a victim for sin.[2073] The ordinary Gloss took the same exposition from St. Gregory.[2074] Others interpret it thus: that he who in the judgment of men would seem not worthy of punishment, Thou, O Judge most high, who knowest all things, condemnest. And certainly, if we were to follow the letter of that text in the way we cited it in chapter 1, as it is had in some Latin codices, we should be compelled to admit some one of these interpretations, lest we say that God punishes someone without merit - which is absurd and by no means to be asserted of the goodness of God. But the letter of the text is faulty; indeed, the place seems to have been corrupted; for in the emended Vulgate codex of Sixtus V it has been corrected, according to which the text is plain and without any difficulty. For thus it is read, in conformity with the Greek, and the earlier reading could have been corrupted by a copyist with a few letters changed and by the addition of the particle "and" [et]. Thereafter, as to those places from chapter 9 to the Romans

Among little children the reprobation of some began from the destination to the penalty of the privation of glory, after their end was foreseen in original sin; but the reprobation of other little ones began from the very permission of contracting original sin. The reason for the difference arises from the diverse way in which God bore Himself toward their beatitude immediately after

2072. Durandus of St.-Pourçain, In I Sent., d. 40, q. 3, n. 6.
2073. St. Gregory the Great, Moralia in Iob, lib. 3, cap. n., interpreting Wisdom 12 in reference to Christ.
2074. Glossa ordinaria on Wisdom 12, from St. Gregory's exposition.

the foreseen sin of the first parent. For the reprobation of those whose beatitude at once displeased God began from permission, because the permission was born from the will of the end of reprobation; but the reprobation of those to whom God of Himself always willed to give beatitude, until He foresaw their end, could not begin from the permission of falling into original sin, because that permission was not from any will of excluding them from the kingdom of heaven, which is the end of reprobation.

From this doctrine, both concerning adults and concerning reprobate little ones, it will be permitted, according to our small measure, to assign in the mind of God this series. First, God foresaw all in the mass of perdition, liable to sin, on account of the transgression of Adam. Second, this notwithstanding, by a primary will from Himself He willed certain little ones and all adults to attain to beatitude, and He granted for this sufficient means, although He denied efficacy and what is congruent, not with the intention of excluding them from the kingdom, but of showing His riches in vessels of mercy. Third, when He saw them fall into sin, either actual or original. And for that reason in a fourth instant He efficaciously decreed to expel them from beatitude, and besides to destine adults to the pain of fire; from which fourth instant their reprobation from glory begins. But with regard to other little ones, to whom He did not grant that the remedies could be applied, we have already established the order in the divine foreknowledge, and that their reprobation began from the denial of grace.

Moreover, reprobation from beatitude is a part of providence concerning men, indeed opposed to predestination of grace; yet it does not begin in all from the same instant from which predestination begins. The difference arises from the diversity of the intention with which God permits sin and denies to the reprobate congruent grace; whereas for the predestined He prepares the means of efficacious grace, as from the foregoing is clear enough. Nor, in truth, does it approve itself to me, what Durandus said in I Sentences, dist. 40, q. 2, n. 6, that reprobation is directly opposed to election to glory before works are foreseen; for if that were to follow, reprobation would be prior to foreseen merits, which is absurd, as we have shown.[2075]

First testimonies of Scripture are explained. Wisdom 12: "Neither is there any God beside Thee ... and him who ought not to be punished Thou condemnest, dost Thou think him to be outside Thy power?" That place St. Gregory explains of Him "who had not known sin," that He should not be punished by God, when as a victim He is offered to God; and therefore He is said to be condemned by God and to be outside His power, according to that of the Apostle, 2 Cor. 5: "Him who knew no sin (to wit, Christ) He made sin (supply: God), that is, a victim for sin, for us." The same exposition the ordinary Gloss took from St. Gregory.[2076] Lyranus, however, explains it of the just, who, although they do not deserve punishments, are nevertheless afflicted by God, so that by men they may be judged as outside the divine favor: just as Job, smitten by God, seemed to all his friends alien to His grace. Others thus interpret: "And him who by human judgment seems not worthy of punishment, Thou, most exact judge, who knowest all things well, condemnest." And certainly, if

2076. St. Gregory the Great, Moralia in Iob, book 3, cap. n., interpreting Wisdom 12 in reference to Christ; Glossa ordinaria on Wisdom 12 from St. Gregory's exposition.

we were to follow the letter of that text in the way we recited it in chapter 1, which is had in some Latin codices, we should be compelled to admit some of these interpretations, lest we say that God punishes someone without merit, which is absurd, and is in no way to be affirmed of the goodness of God. But the letter of the text seems faulty; and it has been better corrected in the emended codex of the Vulgate by Sixtus V, according to which the sense is plain and without any difficulty. For thus it is read: "And him, who ought not to be punished, to condemn - do you think him to be outside Thy power?" This reading agrees with the Greek, and the earlier reading could have been corrupted by a copyist with a few letters changed, by writing "Thou condemnest" in place of "to condemn," and by the addition of the particle "and." Thereafter as to those places from chapter 9 to the Romans ...

I answer to those two first [texts], "But if God, willing to show His wrath, etc.," and "For this very purpose I have raised thee up, etc.," that Paul by no means meant to signify what the adversaries contend, namely, that by a primary intention, which would precede (according to the ratio of foreknowledge) the foresight of merits, God decreed to show wrath in some, and to make them vessels of dishonor by the mere expulsion from beatitude. For all the damned made themselves vessels of wrath by their own iniquity, which God, looking upon, willed to show power in His justice; yet not in such a way that He should show it as the end of His will, He willed to exclude them from the kingdom and to permit them to fall into sin. Thus explains St. John Chrysostom, Homily 16 on the Epistle to the Romans, and Theophylact on that earlier place; and it is plainly gathered from that of the same Apostle to the Romans 2: "Or dost thou despise the riches of His goodness and patience and longanimity? Dost thou not know that the kindness of God leadeth thee to repentance? But according to thy hardness and impenitent heart thou treasurest up to thyself wrath in the day of wrath." There Paul is speaking with all whom God long bears with in this life and at length by their own fault condemns. Since therefore he says that by the longanimity of God they are tolerated, that they may be led to repentance, he indicates openly that even after sin has been committed, the primary will of God is to correct them; and therefore He sustains them in great patience. That God should will to show His wrath and for this to endure them, is clear, by no means because His benignity should not be bringing them to repentance and inviting them, especially if before whatsoever of their sins were foreseen He would will to manifest wrath upon them. From intention therefore rather of mercy than of justice He sustained them, and in longanimity expected [them]. And for this reason Paul said: "But according to thy hardness thou treasurest up to thyself wrath in the day of wrath": that is, the wrath which God did not have from Himself, when rather He invited thee to repentance; the hardness of thy heart thou didst conciliate to thyself, and thou didst make it to be in God, which otherwise would not be in Him.

Accordingly the particle "that" (ut), which Paul set down in those two places to the Romans 9, and which seems to indicate the final cause and the intention of God, does not signify the cause, but the event proceeding from that which God "endured with much patience." This is frequent in Scripture, Luke 8: "That seeing they may not see," which is brought from Isaiah 6 and elsewhere frequently. We think, therefore, that the particle "that" is to be interpreted thus: first, whenever the thing to which it is joined is against the intention and will of God, such as sin. Second, whenever it

is not from the primary and antecedent will, such as is any punishment, or manifestation of wrath or vengeance, which God did not will before sin was foreseen; for at foreseen sin He is not angry of Himself, nor does He inflict evil. And although by a just judgment God could have this intention of excluding men from beatitude immediately after the sin of the first parent; because, however, this was not in God, as is proved in chapter 4 above, therefore we say that God sustained no adult from such an intention. Third and finally, the particle "that" signifies event as often as there is said that sin is permitted "for correction"; because this too pertains to the secondary and consequent will, as in Disputation 92, chapter 1, was shown. For as often as the particle "that" signifies cause, it is referred to the antecedent will; because then it denotes an end, on account of whose preceding design God does something. But when the event is according to the will of God, and pleased Him first before the means, then the particle "that" denotes the intention of God: as John 10, "I came that they may have life, and that they may have it more abundantly." Wherefore when in John 9 it is said: "For judgment I came into this world, that they who see not may see, and they who see may become blind," in the former part is signified the true intention of God, with which He came into the world; but in the latter only the event is denoted.

Therefore, in that very chapter 9 to the Romans, when Paul says: "Therefore He hath mercy on whom He will; and whom He will He hardeneth": and again, "Or hath not the potter power over the clay, of the same lump to make one vessel unto honor, and another unto dishonor?" he does not therefore speak thus, as though God should do these things with the intention of showing His wrath; but he says first that God hardens someone, because He denies him His grace, as will be explained in the following chapter. Then he says that God makes vessels unto dishonor, not indeed with the intention of bringing in dishonor, but because He permits man by his own fault to become worthy of dishonor; and this in no other way than by denying to him a congruent vocation. But with what intention He denies this, He does not deny it "so as to show wrath," as will be made clear in chapter 9. But we understand this, if Paul is speaking of the same mass which is stained by the sin of Adam alone: from this indeed God does not intend first to bring in dishonor and punishment, nor does He positively make man worthy of dishonor; but He permits him, by his own merit, to become such.

If, however, Paul understands by "mass" one stained by actual sin of its own, then God makes from that mass vessels of dishonor, by at once destining him to punishment, although from that same mass He makes another vessel unto honor, purifying it by His grace.

Of this mass it seemed that Paul was speaking, in order to show in what way God rejected the Jews, and destined them to dishonor on account of their own sins, while He admitted the Gentile people, and by His grace cleansed it unto honor. In this way St. Augustine seems to understand the Apostle, as a little below we shall see; and Fulgentius, in the book to Monimus, chapter 26, where thus he says: "What we confess in the sacrament of Christ, we ought to understand in this place of Paul" (to wit: that "we by the death of Christ were loved; we, who were not of God's flock, unless by the visible iniquity of our sins He had foreknown that we should be precisely such"). And so, on account of actual sins, men become vessels of wrath, i.e. unto dishonor.[2077]

Explanations of the places from Romans 9 concerning Jacob and Esau.

Caput VIII - On Jacob and Esau

This locus from Romans 9 the Doctors of the first opinion use most frequently; and they say two brothers are treated, Jacob and Esau: of whom the one is called loved by God, the other indeed hated, before they had done anything good or evil; so that in this way Paul might show that on the part of the persons themselves there was no cause why Esau should be hated and Jacob loved. But that place, if it be asked and considered, has no force at all: for if we admit with St. Augustine, book 3 to Simplicianus, q. 2, and with the Greek Fathers on that same place, that Paul is speaking of the spiritual predestination of Jacob and the reprobation of Esau; or the discourse is of reprobation and election to grace, or to glory: of the former, it is not said that God first hated Esau, and that He willed to deny to him the first grace congruent to the edifice of faith; but that He less loved him: He is said to have less loved him who, if anything is given to him over and above, does not agree, as the greater is graced and the lesser is granted less. By what reason he understood that, Luke 14: "If anyone comes to Me and does not hate his father and mother," that is, who loves father and mother more than Me. Whence this position is followed by John of Bononia, in the little work On Predestination: the first...[2078]

If by "mass" the Apostle Paul understands a mass steeped in its own actual sin, God makes out of that mass vessels of dishonor, by at once destining it to punishment; yet from that same mass He makes another vessel unto honor, purifying it by His grace (*gratia*).

Of this mass Paul seemed to speak, in order to show how God repelled the Jews and, on account of their sins, destined them unto dishonor; but He admitted the Gentile people and by His grace cleansed it unto honor. In this way St. Augustine seems to understand the Apostle, as we shall see a little below; and so does Fulgentius in book 1 To Monimus, chapter 26, where he says thus: "I beg you, most dear Monimus, that you diligently attend to this place of Paul (namely that cited by us above). For it is known that the wrath of God cannot be said to be, unless it be believed that man's iniquity has preceded." Therefore, on account of their own actual sins, Fulgentius thinks that men are made vessels of wrath and of dishonor.[2079]

But let us return to him who, although he thinks that Paul in that place is not treating of the spiritual election (*electio*) and reprobation (*reprobatio*) of Esau and Jacob - as we shall say below - yet explains that phrase, "I have hated," as being the same as "I have loved less."

If, however, it be set about reprobation from beatitude, the second exposition, in which St. Augustine and the other Fathers plainly understand that phrase, "I have hated," is to be taken properly. For when God decreed to exclude Esau from beatitude, He hated him; but on account of sin. Thus, moreover, Esau himself was already a vessel of dishonor, but made so by his own iniquity, as Augustine and all the Greeks understand in this place, where, after many things which

2077. Fulgentius, Ad Monimum, cap. 26.
2078. St. Augustine, Ad Simplicianum, lib. 1 (commonly cited as lib. 3), q. 2; various Greek Fathers ad loc.; Luke 14:26.
2079. Fulgentius of Ruspe, Ad Monimum, cap. 26.

Augustine there teaches against this place of Malachi 1, he adduces that of Wisdom 11, "You hate nothing of the things which You have made," and at length concludes: Therefore God does not hate Esau the man, but God hates Esau the sinner - which he himself pursues more at large. But what he afterwards subjoins concerning the reprobate, that "He makes them (namely, God makes them) vessels of perdition," He makes them for the use of the correction of others: let him not understand this of the perdition of sin - for this God does not make - but of the perdition of punishment, which God inflicted on them on account of sin. For a little above he had said: "And that out of the number of the impious, whom He does not justify, He makes vessels unto dishonor, He does not hate in them that which He makes; for, insofar as they are impious, they are execrable; but insofar as they become vessels, they are made unto some use, so that by their ordered punishments the vessels which are made unto honor may profit." Where Augustine thinks that nothing else is meant by "to be made vessels of dishonor" than "to be destined to punishment on account of their own sins"; and, he says, this destination God does not hate, because He Himself makes it.

Nor indeed can it be gathered from the context of Paul that Esau was held in hatred by God before Esau had done anything evil; for he says in this way: "For when they were not yet born, or had done nothing good or evil, that, according to election, the purpose of God should stand, not of works, but of Him who calls, it was said: The elder shall serve the younger; as it is written, Malachi 1: Jacob I loved, but Esau I have hated." In which place that "I have hated" ought not to be conjoined with "before they had done anything good or evil." But that testimony is adduced to prove what Paul had said about the two brothers, namely, that the younger was preferred to the elder in grace and in the kingdom of God, not of works, but of the sole will of Him who calls. He proves this difference most fittingly from the effect, for if Esau was held in hatred and Jacob was loved, it is rightly said that Jacob was preferred to his brother Esau; whence it happened that Esau, by his own iniquity, drew upon himself the hatred of God.

Another passage on Romans 9 concerning Jacob and Esau

Another passage in Romans 9, quite familiar to the Doctors of the first opinion, is about the two brothers Jacob and Esau, of whom one is said to have been loved by God and the other held in hatred, before they had done anything good or evil, so that Paul might thus show that in no respect was there a cause on their part why Esau should be hated and Jacob loved. But if that place be more closely considered, it has absolutely no force.

For if we admit the first exposition of the place with St. Augustine in book 1 To Simplicianus, question 2, and with the Greek Fathers on that place, that Paul is there speaking of the spiritual predestination (*praedestinatio*) of Jacob and the reprobation of Esau - either the discourse is of reprobation and ejection from grace (*gratia*), or from glory. If of the former, it is not said that God properly hated Esau because He willed to deny the first congruent grace; but "to hate" is the same as "to love less": for it has the manner of one who hates, who does not grant some gift to another,

or who denies the greater and grants only the lesser. In this way some understand that of Luke 14, "and does not hate father and mother," that is, who loves father and mother more than Me. This exposition is followed by John of Bononia in the little work on predestination, the first part.[2080]

But let us return to him who, although he thinks that Paul in that place is not treating of the spiritual reprobation of Esau and election of Jacob - as we shall say below - yet explains that "I have hated" as being the same as "I have loved less."

If, however, the discourse is of reprobation from beatitude (*beatitudo*), the second exposition, in which Augustine and the other Fathers plainly understand that "I have hated," is to be taken properly. For when God decreed to exclude Esau from beatitude, He hated him; but on account of sin. Thus, however, Esau himself was already a vessel of dishonor, but made so by his own iniquity, as Augustine and all the Greeks understand in this place, where, after many things which Augustine there teaches against this place of Malachi 1, he adduces that of Wisdom 11, "You hate nothing of the things which You have made," and at length concludes: Therefore God does not hate Esau the man, but God hates Esau the sinner - which he himself pursues more at large. But what he afterwards subjoins concerning the reprobate, that "He makes them (namely, God makes them) vessels of perdition," He makes them for the use of the correction of others: let him not understand this of the perdition of sin - for this God does not make - but of the perdition of punishment, which God inflicted on them on account of sin. For he had said a little above: "And that out of the number of the impious, whom He does not justify, He makes vessels unto dishonor, He does not hate in them that which He makes; for, insofar as they are impious, they are execrable; but insofar as they become vessels, they are made unto some use, so that by their ordered punishments the vessels which are made unto honor may profit." Where Augustine thinks that nothing else is meant by "to be made vessels of dishonor" than "to be destined to punishment on account of their own sins"; and, he says, this destination God does not hate, because He Himself makes it.[2081]

But both the context and the intent of Paul in that chapter, if we consider them more deeply, we shall perhaps find that he is not treating of the spiritual reprobation of Esau and predestination of Jacob, but of the temporal kingdom and primogeniture, to which Jacob was elected, his brother Esau being rejected: not of their works, but of the sole will of God who calls and says in Genesis 25: "The elder shall serve the younger." Thus Bartholomaeus Camerarius in the Catholic Dialogue, cap. 6, book 1, and John of Bononia in the place a little above alleged think that Paul is to be understood; which can be confirmed by these reasons.[2082]

- It is proved first: Because in Genesis 25 the discourse seems to be of primogeniture, when the Lord said to Rebecca: "Two nations are in your womb, and two peoples shall be divided out of your womb, and a people shall overcome a people, and the elder shall serve the younger." Which is narrated to have been fulfilled in chapter 27, when Isaac blessed Jacob and made him the ruler of his brother.

2080. John of Bononia, Opusculum de praedestinatione, prima pars.
2081. Cf. St. Augustine and various Greek Fathers on Malachi 1; Wisdom 11:24.
2082. Bartholomaeus Camerarius, Dialogus Catholicus, lib. 1, cap. 6.

- It is confirmed second: In Malachi 1, which the Apostle cites, the prophet manifestly speaks of the temporal kingdom and inheritance, in which Jacob was chosen and preferred to his brother. For thus the prophet begins: "I have loved you," namely the Israelites, says the Lord, and you have said, "In what have you loved us?" "Was not Esau brother to Jacob?" says the Lord, "and I have loved Jacob, but Esau I have hated; and I have made his mountains a wilderness, and his inheritance into dragons of the desert." By which words God plainly shows that from this He hated - or rather had Himself as one who hates - that He gave to Esau for inheritance and possession unfruitful mountains and an uninhabitable solitude; which is not properly "to hate," but "to love less." Wherefore St. Jerome confesses on this place that this testimony of Malachi and that of Genesis 25, which plainly speak of temporal inheritance and rule, were adduced by Paul in Romans 9 in a mystical sense.[2083]
- It is confirmed third from the text of Paul: For to the very same scope wholly looks the example of the two brothers Jacob and Esau and of the other two, Isaac and Ishmael, between whom also God chose Isaac, as the text plainly indicates. For, after he has adduced the example of Isaac and Ishmael, Paul subjoins: "Not only she," namely Sara, "but also Rebecca, having from one intercourse our father Isaac," provided us with an example of this matter which we have said, "for when they were not yet born," etc. Who, moreover, would dare to assert that Paul was treating so immediately of the election and predestination of the grace of Isaac, that he thought Ishmael was reprobated from grace and from the kingdom of God, as Esau was - since nowhere is there evidence of that man's damnation? That Paul, however, made use of the example of Isaac and Ishmael, although he did not expressly make mention of Ishmael, will straightway appear.

Therefore, that by this way we may unfold the text of Paul, three things must be premised. First, that the two testimonies of the Old Testament were adduced by Paul in the historical and literal sense; second, that they are to be understood historically of the temporal inheritance and primogeniture; third, that nevertheless in that chapter Paul is treating of spiritual election, not indeed of Isaac and Jacob, but of the Gentile people, and of spiritual reprobation, not of Ishmael and Esau, but of the Jewish people, until the fullness of the Gentiles may enter.

But the text of Paul is to be ordered thus: when at the beginning of the chapter he had shown that he was anguished with great sorrow because he saw the Jewish people rejected by the Lord and reprobated, and had said that with them were the promises made by God, he subjoins, "But not as though the word of God has failed," as if he said, it does not follow that the promises made to that people have been void: he then renders the reason in these words, "For not all who are of Israel, these are Israel, nor are all who are the seed of Abraham children," namely of Abraham; "but in Isaac shall your seed be called." That is, therefore, that the promises made to the people of Israel have not proved void, although the greatest part of those who according to the flesh derive

2083. St. Jerome, on Malachi 1; cf. Genesis 25.

their origin from him be rejected; because not all who spring from our father Israel in this way are true Israelites according to the sense of the Scriptures, to whom God promised so many and so great things.

He proves it, moreover, by example in this way: just as not all who are of the seed of Abraham according to the flesh are counted as the sons of Abraham according to the sense of the Scriptures and of the divine promise, which promises temporal inheritance and primogeniture; whence in Genesis the posterity of Ishmael is not said by the Lord to be the posterity of Abraham, but of Isaac alone - because Isaac alone was to be the heir of his father Abraham by divine promise. But after he has adduced the example of Isaac and Ishmael, in order to show that not all who descend from Israel are true Israelites according to the promise of the divine Scriptures, he straightway adds: "that is, not the children of the flesh are the children of God, but the children of the promise are reckoned for the seed."

... "the children of the flesh, these are not the children of God, but the children of the promise are reckoned for the seed." With these words he explains the allegory which he had brought forward of the two brothers: as if he were saying, thus it is cited (for thus the particle "that is" is to be interpreted): they are not the children of God to whom the Spirit of adoption has been promised - whoever are born from Israel according to the flesh - but only those to whom pertains the promise and the spiritual inheritance of Abraham and of Israel; these, I say, are the children of God and are counted in the true spiritual seed of Israel. He adds presently: "For this is the word of promise: According to this time I will come, and there shall be a son to Sara" (Genesis 18); as if he were saying: just as Isaac was born by a supernatural power from the promise of God, when in Genesis 18 God said, "According to this time I will come," and so in him he says that the seed of Abraham is computed according to the sense of the Scriptures and of the promise; so too the true spiritual Israelites and sons of Abraham are those whom grace and the power of the spiritual promise have regenerated through faith. Therefore, since in these persons the promises have been fulfilled, even if Israelites born according to the flesh are rejected and are not partakers of those promises, they ought not for that reason to be judged vain.

He then adds another example in the verses just above cited: "Not only she," namely Sara, "but Rebecca also having one conception by our father Isaac. For when the children were not yet born," etc. That is, not only does the case of Sara, conceiving a son by promise, from whom the inheritance of the father was to be had with another son rejected, show us that not all who descend from the same seed are computed in the seed and are heirs in the house of the father; but much more the case of Rebecca, who from the same father's seed had two sons in the same womb, and by the sole will of God calling and saying, "The elder shall serve the younger," the younger was the heir of the father and was computed in the seed, while the elder was rejected from the inheritance. This example demonstrates the matter much more expressly, because Isaac and Ishmael, even if born of the same father, were not born of the same mother; whereas Jacob and Esau were not only from the same father and mother, but even from the same seed and act of conception: yet in their case the word of God established this difference, that the younger should be heir, according to the promise, the elder being rejected - and that not from works, but from the mere will of God calling

and foretelling. Thus therefore the lesser people, namely the Gentile, was heir of the spiritual promise of Israel; and the Israelite people, who according to temporal generation was born from him, was not a partaker of the promise. From which things those three points which we proposed at the beginning are made clear, and the whole difficulty about reprobation remains solved.

But if there are any testimonies of St. Augustine and of other Fathers which seem to indicate that a cause of reprobation is not given, they are to be understood of reprobation from grace; nor do they use the name "reprobation" in those places. Indeed Augustine everywhere says that the cause of this reprobation is the mass of perdition infected by the sin of the first parent.

Now two other arguments must be refuted. To the first, therefore, I answer that the first permission of falling into sin is an effect of reprobation from grace, but in no way of reprobation from the kingdom of heaven. The first point is well known; the second is gathered from what was said in chapters 4 and 5; for the effect of that latter reprobation ought to be from an intention of expelling one from beatitude to whom grace is denied. But God does not deny congruous grace, nor does he permit sin with the intention of damning and excluding from the kingdom of heaven, as was shown there; therefore that permission is not an effect of that reprobation.

Yet someone will ask, if God does not permit for that end, for what other end does he permit? I say first that it suffices for us what has been sufficiently proved in those places, namely, that no sin is permitted by God with the intention of damning or of excluding from beatitude, even if another end, which God in his secret judgment has regarded, is not made known to us. I add furthermore that Paul has expressed another end for us in Romans 9 (as Augustine seems to indicate in book 2 On Marriage and Concupiscence, chapter 16, and very clearly noted in the book On the Good of Perseverance, chapter 12) with these words: "But if God, willing to show wrath and to make known his power, endured with much patience vessels of wrath, fitted for destruction, that he might show the riches of his glory upon the vessels of mercy, which he prepared for glory" (Romans 9). Therefore the end is to show the riches of his grace and the liberality which he has used toward the predestined; for by denying congruous vocations to the reprobate, he shows to the predestined those same vocations, by which they were prepared for glory, to have been bestowed upon them wholly gratuitously; since to them, in the same way as to the reprobate, they could have been denied. The same end was expressed by Augustine, book 4 Against Julian, chapter 8, a little before the middle, with these words: "Showing in those whom he condemns what is owed to all, that from this they may learn, those whom he frees, that the due punishment is remitted, and what is an undeserved grace is granted." He was speaking of little children whom God does not will to free, but condemns on account of the common sin; which Augustine repeats in the same chapter.[2084] Indeed, as he rightly observed in book 2 On the Merits and Remission of Sins, chapter 19, sometimes God denies even to the elect those helps of operating grace which he calls "certain knowledge" and "victorious delight," so as to show them that those are his gifts, which he distributes as it pleases him; about this end enough has been said by us in disputation 95, chapter 2.[2085] Augustine indicates another end, book 1 To Simplicianus, question 2, after the middle:

2084. St. Augustine, Contra Julianum, lib. 4, c. 8; cf. De peccatorum meritis et remissione, lib. 2, c. 19.
2085. St. Augustine, De bono perseverantiae, c. 12; cf. Ad Simplicianum, lib. 1, q. 2.

namely, that from the perdition of the reprobate the elect may be cleansed by fear; in which sense he explains that saying of Psalm 57: "He shall wash his hands in the blood of sinners." But since that fear was not the primary intention of God, just as neither is repentance, as is evident from what was said in that disputation 93, chapter 3, it must be said that God never permitted the sins of the reprobate for that end, but, once they were done, ordered them to this, that by the fear of them he might cleanse the predestined.

To the second argument I answer that it is in the power of each one to be reprobated and not to be reprobated, if the discourse is about reprobation from the kingdom of heaven. And although it follows rightly, "he is not reprobate; therefore he is predestined," nevertheless it is not inferred, "it is in my power to be predestined"; just as we said in disputation 92, chapter 3, it is not rightly concluded, "it is in my power to persevere in grace; therefore it is in my power to be predestined," even if perseverance is correlative with predestination. For which point it must be noted that reprobation, in this sense in which we now take it, begins from the destination to punishment, and its cause is perseverance in sin. Therefore it is directly opposed to the attainment of glory, which is sought from perseverance in grace. From this, therefore, that it be free to anyone to be reprobated and not to be reprobated in this way, it follows only that it is in his liberty to attain glory - which is directly and adequately opposed to reprobation - and to persevere in grace. But to be predestined is not only this, but also that the first congruous vocation be prepared for someone, and that this be given in time, or be prepared in foreknowledge - this is not in the liberty of anyone; therefore neither is predestination itself in the power of anyone. However, the vocation being supposed, from then on it is free for each one to persevere in grace and to attain glory, or to lose it; and thus it lies within him to be reprobated or not to be reprobated. Therefore, because predestination is not opposed adequately to reprobation, but begins much earlier, even if "not to be reprobated" and "to be predestined" are correlative, both are not in our power in the same way. And when we say, "if it is in the power of someone to lack one of two contraries, it will also be in his power to have the other," when from the privation of the one the presence of the other follows, it is to be understood between contraries which are adequately and directly opposed, as is manifestly clear. Wherefore, since in our power there is one thing which is correlative with another, that other sometimes is not, as in the present case we showed in that third chapter cited above.

Moreover, there is no lack of some more recent theologians who think it is placed in the power of each one "not to be predestined," just as also "to be reprobated" or "not to be reprobated"; yet even if it is in no one's power "to be predestined"; so that on the part of each reprobate there was some cause on account of which he was not predestined. In favor of this opinion they report Henry of Ghent, St. Bonaventure, and Alexander of Hales in the places alleged in disputation 91.[2086] They confirm it by authority and by reason. First indeed by the authority of Scripture: Ezekiel 18, "I will not the death of the sinner. Be converted and live ... In the iniquity which he has wrought, the impious shall die"; Hosea 13, "Your perdition is from yourself, O Israel; only in me is your help"; and 2 Peter 3, "God deals patiently for your sakes, not willing that any should perish, but that all should return to penance." In all these places, and in others of this kind, Scripture shows that God

2086. Henry of Ghent; St. Bonaventure; Alexander of Hales; see the loci reported above in Disputation 91.

of himself willed our salvation, whereas from ourselves our damnation has arisen. If God had of himself - no occasion being taken from us - excluded some from the benefit of predestination, he himself would have been the cause of their perdition; since it is certain that those who are not predestined are going to perish.

Then they prove it by the authority of the Fathers. For Augustine, in the book On the Good of Perseverance, chapter 8, says: "Let him who is freed love grace; let him who is not freed acknowledge the debt." And in the book On the Predestination of the Saints, chapter 14: "The grace of God is given freely to whom it is given; but by a just judgment it is not given when it is not given." Which sentence Augustine often repeats.

St. Augustine, and from him Prosper in the book To the Chapters of the Gauls, to objection 7, takes up the point that he is speaking about that grace which is proper and peculiar to the predestined. Therefore, since he says that it is denied by the just judgment of God to whomever it is denied, and that in the same matter each one ought to acknowledge his own debt, it follows that the denial is imputed to anyone to whom it is denied by his own fault, and hence that it is in his power not to be predestined, that is, not to be anticipated by such grace. And in book 2 On the Merits and Forgiveness of Sins, chapter 17, concerning the grace of God, he says: "Insofar as the wills of men are aided, insofar as they are not aided, the cause is in themselves, not in God." Prosper likewise, book 2 On the Calling of the Gentiles, chapter 19 (elsewhere numbered chapter 7), after saying that God wills all men to be saved, adds: "And let those who are bereft of grace be reproved for their own iniquity, and those who have attained to its threshold let them glory not in their own merit, but in the Lord." And chapter 12: "Let us most certainly know that no one of the faithful who does not depart from God is abandoned by God, nor is anyone's ruin disposed by a divine constitution." And near the end, in the seventh sentence, To the Chapters of the Gauls, he writes thus about those who were going to sin: "And because He foresaw that they would do this - that is, sin - by a voluntary defection, therefore He did not have them in the election of predestination." He speaks in nearly the same way to the third and seventh objection, where, instead of the particle "Therefore," he uses the particle "Because."[2087]

Finally, by reason the same position is proved: first, because if it arises from God Himself that men are not predestined, it would follow that salvation is impossible for them, since no one can be saved without predestination. Therefore, if God by His antecedent decree does not predestine someone, not looking to his sins, it follows that salvation - which without predestination can happen to no one - was not in his power. Moreover, it is in the power of any man not to consent to the calling, which is denied to no one: therefore it is in the power of anyone to render the calling inefficacious, and thus to prevent there being the effect of predestination and that he himself be not predestined; for without the grace of predestination no one can be predestined.

Yet I cannot but marvel at the opinion of these Doctors, who, when they affirm that it is not in anyone's power to be predestined, because it is not in anyone's power to be anticipated by peculiar grace, nonetheless say that it is in our power not to be predestined, that is, not to be anticipated by

that peculiar grace; whereas the reason is entirely the same for both. For although, antecedently and in the order of power, it is free to each of us to resist any calling, even a congruous one, as we shall show below in Disputation 98, chapter 8; and thus it is in our power that the calling bestowed on us pertain to predestination or to non-predestination, as was proved in Disputation 92, chapter 2; nevertheless, as I said there, it is not in our power to be anticipated, or not to be anticipated, by that grace which God knows will have its effect in us. Wherefore, since to be predestined is that that grace which God knows will have its effect in us be prepared for us, and not to be predestined is that that grace not be prepared for us, and neither is in our power, it follows that to be predestined or not to be predestined is not in our power. Moreover, that it is not in our power to be anticipated, or not to be anticipated, by this grace by which God knows the effect will be had in us - who can doubt it? Therefore for this reason we said in the preceding chapter that it is not in our power to be reprobated, if reprobation be taken for the negation of grace and for permission.

But by this authority our opinion can be confirmed no less than by the foregoing reason. First, the Apostle to the Romans 9, after he had said that it is free to God to have mercy, and that this is not of him that wills nor of him that runs, gathers from all: "Therefore He has mercy on whom He will, and whom He will He hardens." Where he would not refer hardening to the sole will of God, if some cause from us had preceded, or if it had been in our power. Now he takes hardening as the negation of congruous grace, the first help; for he opposes it to mercy, which begins in preventing grace. And then in the same chapter: "Shall the thing formed say to him that formed it: Why hast thou made me thus?" and he adds other things by which he removes every cause of complaint against God - not because something proceeded from us on account of which we are not predestined, but because no one can in any way resist His will, as we explained in Disputation 91, chapter 13. And when Paul says that from the same lump one is chosen unto grace, another is rejected from the same grace, he clearly indicates that nothing more preceded in one than in the other; and hence that it was in no one's power to be predestined or not predestined, to be anticipated by the peculiar grace of God or not anticipated; otherwise something would already have preceded in one which had not been in the other.

Moreover, Augustine in the book On the Predestination of the Saints, chapter 9, says: "All whom He teaches, mercy teaches; but those whom He does not teach, judgment does not teach." And in the book On the Good of Perseverance, chapter 11, at the end, about mercy and the peculiar grace from which the series of the effects of predestination begins, he says: "But why it is given rather to these than to those, who has known the mind of the Lord?" And again in the same book, chapter 12: "But why He rather frees these than those, again and again we say: O man, who art thou that repliest against God?" Clearly Augustine understood that there is no reason or cause in the power of him who is not predestined, on account of which he rather than another is not predestined. To the same point tends what he says in tractate 26 on John: "Why He draws this man, and does not draw that one, do not wish to judge, if you do not wish to err." He says the same in epistle 105 at the end.[2088]

2087. Prosper of Aquitaine, Ad capitula Gallorum, ad obj. 7; De vocatione gentium, lib. 2, c. 19 (alias c. 7), c. 12; cf. Ad capitula Gallorum, sent. 7.

Those, however, who defend the opposite opinion reply that Paul and Augustine denied not the cause on account of which someone is not predestined absolutely, but conjunctively; namely, the cause on account of which this one rather is not predestined, is not drawn, rather than another; they say, moreover, that this does not hinder in the least that it be in the power and liberty of each not to be predestined. But this is a fairly useless evasion. For if it is in the free power of each not to be predestined, and it depends on himself that he not be predestined, in the same way as that he not be saved, as the adversaries contend; it follows plainly that he who is not predestined, and he who is not drawn, has given the cause on account of which he rather than another is not predestined; just as also he who is damned to the eternal punishment of fire has given the cause on account of which he rather than another is damned - since he, being hardened in sin, ended his life, whereas another in grace. But if the choice or the desertion of one rather than another has its origin from God alone, it is not to be said that it was in anyone's power not to be predestined.

Now from the doctrine set forth above it will not be hard for us to overturn the foundations of the former opinion; to those testimonies of Scripture and the like I answer in a word: if they are to be counted of any moment, they prove only this - that God of Himself excluded no one from the kingdom of heaven and from salvation; since to all He granted of Himself sufficient helps that they might not be damned, if they willed, as we shall more fully show in Disputation 97. But that by peculiar and efficacious grace, or by congruous calling, which is proper to the predestined, He excluded all the reprobate by His own antecedent will, with no occasion at all taken from them. For the negation of this grace, which is permission, altogether precedes our liberty. Nor indeed is it permitted us on that account to conclude that God was the cause of the perdition and damnation of the reprobate: for, in granting to them the necessary and sufficient means that they might not be damned, if they would, He persevered in the antecedent will of their salvation; and from their malice it arose that they did not correspond to such helps, and hence they are damned by their own proper sin.

And by those two testimonies Augustine only denotes that in the negation of that peculiar and congruous grace which is proper to the predestined there is to be acknowledged the just judgment of God and debt - not of the actual and proper sin of each (for that is not even likely, since the first permission of falling precedes every sin, even in the doctrine of Augustine), but the debt of the common sin of the whole human race, namely of Adam, by which all of us were in evil perdition. Hence he rightly says that those who from this corrupted mass are freed by the grace of God are freed by pure mercy; but those who are left in that mass, that congruous, peculiar, and proper grace of the predestined being denied them by which they would be freed, are not freed by a just judgment on account of that common sin. For who would say that because of someone's own sins the first peculiar grace was denied him, seeing that the permission of sin, which is prior to the sin itself, is the negation of this grace?

2088. St. Augustine, De praedestinatione sanctorum, c. 9; De bono perseverantiae, c. 11 - 12; Tractatus in Ioannem 26; Epistula 105.

Reply to the third testimony of Augustine: we answer that he is speaking of helping and accompanying grace; and of it he rightly said that the cause is in us that it does not help and accompany us, because we can respond to the sufficient help by which all are anticipated; but of the first stirring grace, peculiar and proper to the predestined, he does not say that by our fault it is denied us - in the very denial of which consists not to be predestined.

Reply to the first testimony of Prosper: I reply that he rightly said that those who are bereft of the grace of God - namely, of the peculiar and congruous - are to be reproved for their own iniquity, and to be punished for it: because they do not respond to sufficient grace; yet from that it does not follow that, on account of their iniquity, they were not predestined, that is, that the congruous grace was denied them.

To the second testimony of the same I say that when Prosper says that no one is abandoned by God unless God is first abandoned by himself, he does not speak of the first permission and negation of first grace, but of a later one; for the first precedes every sin, and thus it does not follow that because of one's own injustice someone was not predestined. Whether, however, he speaks of the negation of sufficient help or of efficacious help, we shall say in Disputation 97, chapter 6.

To the third testimony of the same I answer that either by the name "non-predestination" he understands reprobation strictly so called, as we explained above in this disputation, chapter 6 - of this there is a cause from us, as we explained there also, because it is in our power; or certainly the particles "Because" and "Therefore," which denote a cause, do not with Prosper signify the cause of the thing, but of knowing. For in that reply to the seventh objection of the Gauls he says, in effect: since those virtues are proper and are brought forth by a person's own will, to this point no one would attribute his own perdition to predestination. For since the choice in Christ foreordained them to have these [virtues], and since perseverance in good to the end is not a debt but a gift of God, it is manifest from this very thing - that they did not persevere - that they did not have it. He did not say: because they did not persevere, therefore they did not have the gift of perseverance; but from the fact that they did not persevere he certainly infers that they did not have this gift. In the same way the rest are to be understood.[2089]

A retort: From our prior argument one might retort: since without predestination no one can be saved, therefore God does not of Himself predestine anyone; for then the help of salvation would lie in Himself alone. But this similar argument turns back upon them. For as it is impossible for someone to be saved without predestination, so with predestination someone cannot be damned. Therefore, if God of Himself, without any occasion from us, or without anything that is in our power, confers predestination upon someone, it would follow that he cannot be damned - which is surely absurd. Yet the same conclusion is easily resolved by the doctrine to be treated more at length in Disputation 101, chapter 3: namely, that this necessity by which we say "one who is predestined cannot be damned," or "one who is not predestined cannot be saved," is a consequent necessity, which follows only upon the divine knowledge; and in no way does it harm our liberty, as we shall explain there. And thus, this not hindering, we say that anyone can be saved or damned.

2089. Prosper, Responsiones ad capitula Gallorum, ad septimam objectionem.

A later reason, from the doctrine of Disputation 92, can very easily be dissolved. For just as, with respect to the effects that depend on us, that we make the calling bestowed on us to be efficacious in us is not the effect of predestination - since the first effect of predestination is not the effect of the calling, but the bestowal of that calling which God knows by conditional knowledge will have its effect in us - so too, although it be in our power that the calling whereby we are anticipated not have its effect in us, nevertheless it is not in our power to be deprived of that calling which God knows by conditional knowledge will have its effect in us; now this privation is the beginning of not being predestined.

Finally, not without reason St. Bonaventure, Alexander, and Henry confess that it is in our power not to be predestined, when they themselves, according to the various modes of speaking that we set down in Disputation 91, affirm that from us there is a cause or condition that we be predestined. I am amazed, however, at those more recent authors whom I mentioned above, who, while they confess that there is in us no cause, occasion, or condition of predestination, and that in no way is predestination in our power, nonetheless affirm that it is in our power not to be predestined.

Ad primum Prosperi: I answer that he spoke rightly, that those who are bereft of the grace of God, namely of the special and congruous sort, are to be reproved for their own wickedness and punished on account of it, because they do not respond to sufficient grace; yet it does not follow from this that, on account of their wickedness, they were not predestined - namely, that congruous grace was denied to them

Ad secundum eiusdem testimonium: I say that when Prosper says that no one is left by God unless he first be left by him himself, it is to be understood that he is not speaking of the first permission and the first denial of grace, but of a later one; for the first precedes every sin, and thus it does not follow that, because of his own iniquity, someone was not predestined. Whether, however, he speaks of the denial of sufficient help or of efficacious help, we shall say in Disputation 97, chapter 6

Ad tertium eiusdem testimonium: I answer that either by the name "non - predestination" he understood reprobation from glory, as I explained above in this Disputation, chapter 6; and of this, as I there also explained, there is given from us a cause, and therefore it is in our power; or certainly the particles "because" and "therefore," which denote a cause, do not in Prosper signify the cause of the thing, but the cause of the cognition. For in that response to the seventh objection of the Gauls, he says thus: "Because he foreknew that they would fall by their own will, for this reason he did not distinguish them from the sons of perdition by any predestination. For how could the election, preordained in Christ, have them, since it is not doubtful that perseverance in good unto the end is the gift of God, which these, from the fact that they did not persevere, manifestly did not have." He did not say that from the fact that they did not persevere they did not have the gift of perseverance - for rather from the fact that they did not have various efficacious prevenient graces they did not persevere, as is manifest - but he certainly gathers that they did not have this gift from the fact that they did not persevere: the rest are to be understood in the same way

Ex rationibus vero: the first indeed is frivolous. For although God of himself willed not to predestine some, that is, not to prepare for them efficacious grace, it does not follow that they are necessarily damned; for he did not altogether desert them, but he forestalled them with sufficient help by which they could be saved, as we shall say in Disputation 97. But the adversaries press in this way:

Obiectio. Without predestination no one can be saved: therefore, if God by himself predestines someone, he thereby takes from him the power over his own salvation.

Retorsio. But a like argument can be turned back upon them in this way. As it is impossible for someone to be saved without predestination, so, with predestination, no one can be damned: therefore, if God of himself, without any occasion on our part, or without anything that is in our power, predestines someone, it follows that he cannot be damned; which indeed is as absurd as that someone cannot be saved. But of both there is the same easy and common solution, of which we shall say more in Disputation 101, chapter 3 - namely, that this necessity, whereby we say that the predestined cannot be damned or that the non-predestined cannot be saved, is a consequent necessity, which follows only upon the knowledge of God, and in no way harms our freedom, as we shall explain there; and therefore, that not withstanding it, we say that anyone can be saved or damned.

Posterior vero ratio, from the doctrine of Disputation 92, can be very easily dissolved. For just as we there conceded that it is in our power that the calling bestowed upon us be efficacious, or have its effect in us - without which there would not be the effect of predestination - nonetheless the first effect of predestination is not in our power, because the first effect is not the effect of calling, but the bestowal of that calling which God knows by conditional knowledge will have its effect in us. In like manner, although it be in our power that the calling with which we are beforehand fortified not have its effect in us, nevertheless the privation of that calling, which God knows by conditional knowledge is not going to have its effect in us, is not in our power; and from this privation there begins the being-not-predestined.

Finally, I am not surprised if St. Bonaventure, Alexander, and Henry admit that it is in our power not to be predestined, when they themselves, according to the various modes of speaking which we reported in Disputation 91, affirm that from us there is a cause or condition that we be predestined. I am amazed, however, at those more recent authors whom I mentioned above, who, while they confess that there is in us no cause, occasion, or condition of predestination, and that in no way is predestination in our power, nonetheless affirm that it is in our power, and depends upon our power, not to be predestined; whereas the same ratio applies to both, as I said above; and thus the reasons of the first opinion remain solved.

Obiectio. But someone will object: since reprobation is a part of providence, and this is concerned more with means than with the end, why do we assign to reprobation only an effect around the end?

Responsio - I answer that, with respect to God, nothing created has the ratio of an end, as we said in Disputation 82, chapter 2, but all things are arrayed as means; nonetheless, reprobation is not only engaged about expulsion from glory after foreseen perseverance in sin, but it is also further ordered by God, to show his power and his justice, which exacts vengeance upon unjust and depraved men. St. Augustine too is defended by Prosper against his slanderers in the book To the Chapters of the Gauls, chapter 6, and in the book To Vincent's Objections, to the fifth and eleventh objections, which book is believed to be the same as that On the Articles Falsely Imputed, and whose author is thought not to be Augustine, but Prosper of Aquitaine; and Fulgentius is cited in the above - mentioned Disputation 91, chapter 18. How, moreover, God is not the cause of sin must be treated expressly in 1 - 2, question 79, article 1.

Caput X - In what way God is the cause of hardening

God not only withdraws his grace from the reprobate once or again, but also through various occasions and through various spans of time; whence it comes about that their heart is hardened in sin. And since this hardening is more often ascribed to God in Scripture, it must be considered what it is, and how God is said to be its cause.

A twofold acceptation of hardening. Hardening (which in Scripture is also called blinding, aggravation, and a reprobate mind) is customarily taken by the Scholastics in a twofold way. First, for the very sin by which one resists whatever calling of God, or for the sin by which we oppose God speaking and much calling. Then, for permission and the subtraction of grace, either whereby someone is permitted to slip into a first sin, or whereby he is allowed to persevere in the same sin for a long time. The Scholastics, to be adduced a little below, thus divide hardening. Concerning hardening in the former mode, the heretics of our times have dared to affirm that God is the proper and per se cause of it, just as he is of grace and of good works. But this error is condemned in the Council of Trent, session 6, canon 6, and in the Second Council of Orange, canon 25, and at Valence under the Emperor Lothair, chapter 5.[2092] Moreover, articles 5 and 11 were falsely imputed to Augustine by Vincent and others throughout Gaul, as is clear from Augustine's own book On the Articles Falsely Imputed, in which place he excuses himself. Augustine too is defended against his slanderers by Prosper in the book To the Chapters of the Gauls, chapter 6, and in the book To Vincent's Objections, to the fifth and eleventh objections, which book is believed to be the same as that On the Articles Falsely Imputed, and whose author is thought not to be Augustine, but Prosper of Aquitaine, and Fulgentius is cited in the above-mentioned Disputation 91, chapter 18.[2090]

But that God is the cause of hardening in the latter mode, Alexander,[2093] St. Thomas,[2094] St. Bonaventure,[2095] Soto,[2096] Canus,[2097] Roffensis,[2098] and Driedo[2099] confess; and in this sense they concede that the hearts of the reprobate are hardened by God. Yet although hardening and

2092. Council of Trent, sess. 6, can. 6; Second Council of Orange, can. 25; Council of Valence under Emperor Lothair, cap. 5.

2093. Alexander of Hales, Summa, I, q. 29, memb. 4 - 5.

reprobate sense - things which seem to pertain to the will - are not taken for permission, but for the sin of the will, nevertheless the Doctors explain in various ways why God is said to harden or to hand over into a reprobate mind.

The first is Origen's, in the third book Peri archon, chapter 1 before the middle; St. Augustine in Epistle 105, and in the book On Predestination and Grace, chapter 4; and in the book On the Essence of God, which is ascribed to Hugh of St. Victor; St. Jerome on that passage to the Romans 1, "God delivered them over to a reprobate mind"; St. John Chrysostom, Theophylact, and St. Anselm on the same place, and on that in Romans 9, "Whom he wills he hardens." They think that hardening and a reprobate mind are ascribed to God from this alone, that he is the cause of permission, subtracting and denying the help of his grace, whence only, and per accidens, the hardening of the will and the reprobate mind proceed; just as the Lord is accustomed to say, says Origen, to his servant: "I ruined you, in that I permitted certain evils with impunity."[2100]

But Canus, in the place cited, judges that something else also is to be added to permission, by reason of which God is said to harden and to hand over into a reprobate mind. "Therefore," he says, "in three ways God is the cause of hardening and of a reprobate mind. First, because God removes the sweetness of grace"; and this mode is the same as the former. "Second, because God uses his minister Satan as an instrument, and thus is said to effect it; for what his minister, strengthened by his authority, does, he himself is said to do." But for this mode to be true, it too must be understood through mere permission; for in no other way does God instruct Satan than by allowing him; wherefore this mode also collapses into the same.

"Third," Canus adds, "just as the same Sun hardens the clay and melts the wax on account of the diverse disposition of the matter, so also the same light of grace is said to enlighten and soften some, but to blind and harden others, because of the diverse disposition of hearts." This third mode seems to add something to permission, but Canus does not sufficiently explain it. This mode of hardening is taken from St. Jerome in the Epistle to Hedibia, which is the 150th; from Origen and Theophylact in the place cited; and from the imperfect work on Matthew, at St. John Chrysostom, homily 46, column 2. And although it has mixed with it permission and the denial of that grace of calling which would soften the heart itself, nevertheless it has something positive, which I shall say is an occasion of hardening and of sin.

From this doctrine we can interpret that good saying in St. Augustine, book 1 against Julian, chapter 3; On Sin and Grace, and On Free Will, book 3, chapter 1, where he asserts that God not only delivers into a reprobate mind by deserting, but also by inclining the will, according to "The heart of the king is in the hand of the Lord; wherever he will, he will incline it" (Proverbs 21). For

indeed, while it is established by many passages of his, that God in no way predestined sin nor can be its cause - as we note elsewhere - so too, in the Questions on Exodus, question 18, he himself explains that Pharaoh was hardened by God, because God set before that heart signs which he knew would - by reason of prior malice - become for him an occasion of obduration and of sin. In these places he speaks of hardening and of a reprobate mind, which indeed seem to be referred to the will and to be used for the sin itself and for the resistance of the will. But by a certain acceptation they more properly pertain to the intellect; for sometimes Scripture takes the effect for the cause. For blinding is what is opposed to vision; and aggravation, which is the same as obduration, seems to pertain to the intellect, inasmuch as it is opposed to hearing; and thus both blinding and aggravation are frequently taken in Scripture as acts of the intellect. Of this blinding and of this aggravation on the part of the intellect, God is the cause, by denying the suitable particular light (lumen) which he knew to be congruent with the will, so as efficaciously to incline it; and the Church prays for this light in the first week of Lent on Wednesday at Vespers, when it says: "Direct our minds, O Lord," so that all may be enlightened by the Lord.

Further, it is said that He effects it in this way: because what His minister, being strengthened by His authority, does, is said to be effected by Him. But this mode, if it is to be true, must also be understood through mere permission; for in no other way does God instruct Satan than by allowing him; wherefore this mode too falls back into the same kind.

Third, Canus adds: just as the same sun hardens the clay and melts the wax, on account of the differing disposition of the matter; so too the same light of grace is said to enlighten and soften some, but to blind and harden others, on account of the differing disposition of those persons. This third mode seems to add something to permission, but Canus does not explain it sufficiently.

Driedo sets it out better when he expounds that last chapter, and in his work On the Captivity and Redemption of the Human Race, tract. f., c. 4: namely, that God is therefore said to harden not only because He permits, but because, outwardly or even inwardly, as it were, He offers occasions by which He certainly knows a man will be provoked to evil, even if those occasions pertain to the grace of God - such as signs and scourges, indeed even the very preaching of the truth.[21012102] Nor, however, does God offer them with the mind that he should fall; for God is the tempter of no one to evils, James 1; rather with this sole intention, that He may bring him to repentance. Therefore, since from the work of God man takes occasion for sinning and for greater resistance, God is said to harden him, because there was the occasion of hardening.

Now these occasions are not said to be permitted by God, but to be willed (yet not with the intention of the sin and the hardening); because everything that is not sin takes place in the world by the will of God. And although it is not always free to men to offer similar occasions to their brothers without their own fault, even if otherwise they be good, according to the rules that St.

2101. St. Jerome, Epistula ad Hedibiam (ep. 150); Origen and Theophylact at the place cited; and likewise thoroughly Theophylact on Matthew, under St. John Chrysostom, homily 46, col. 2.

2102. John Driedo, De captivitate et redemptione generis humani, tract. f., c. 4; and also in the last chapter.

Thomas elegantly assigns in II - II, q. 43, aa. 2, 7, and 8; nevertheless to God, who is the supreme Prince and Governor of all, who does injury to no one and is opposed to no law, since He lets things operate freely, it is always permitted to send similar occasions and thoughts.[2103]

And hence is gathered a great difference between God and us, when we in a similar manner are the occasion of another's sin, and therefore it is imputed to us: for to God our sin is never attributed, nor is it voluntary for Him, nor is it imputed to Him as to a moral cause, because He was not obliged not to offer that occasion; but it is imputed to us and is called voluntary, because we ought not to have offered the occasion. For just as, for an outcome of this sort, following upon the will of John, to be voluntary in Peter, it was necessary that Peter owed it to that person to stand firm and to hinder him (as we shall say in I - II, q. 6, a. 3).

This mode of hardening is taken from St. Jerome in his Epistle to Hedibia, which is the 150th; from Origen and Theophylact at the place cited; and likewise most thoroughly from Theophylact on Matthew, under St. John Chrysostom, homily 46, column 2. And although it has mixed in it permission and the denial of that grace of a calling which would soften the heart itself, nevertheless it has something positive, which for the reprobate becomes an occasion of hardening and of sin.[2101]

From this doctrine we can interpret in a good sense St. Augustine, Contra Iulianum, book 2, c. 3, before the middle, and De gratia et libero arbitrio, c. 21, when he asserts that God not only hands over into a reprobate mind by deserting, but also by inclining the will, according to that saying: "The heart of the king is in the hand of the Lord; whithersoever He will He shall incline it" (Proverbs 21). For from many places of his it is clear that God by no account predestined sin nor can be its cause, as we noted above; and in the same way, in the Questions on Exodus, q. 18, he himself explains that Pharaoh was hardened by God, because in his presence God did signs, by which He knew that by his malice he would become worse day by day.[2104]

Thus far we have spoken of hardening and of a reprobate mind, which indeed seem to be referred to the will (*voluntas*), and are used for the very sin and repugnance of the will. But blinding pertains rather to the intellect (*intellectus*): for it is the same as not to see the things that must be done, although sometimes it is referred back to the will, taking the effect for the cause. Nay more, aggravation, which is the same as stopping of ears, seems to regard the intellect. For just as blinding, because it is opposed to sight, first befits the intellect, to which vision is also attributed; so too, since aggravation is opposed to hearing (for in Scripture there is "the heaviness of ears," Isaiah 6 and Zechariah 7), and this too pertains to the intellect, aggravation itself seems rather to belong to the intellect.

Both, however, are found in him who sins; because neither does he so see nor so hear the things that must be done, that he pursues them; but he is affected just as if he did not see or hear, and he suffers some defect in his intellect, as we shall treat more fully in disp. 98, c. 7, and in I - II, q. 77, and II - II. Of this blinding and aggravation on the part of the intellect, God is the cause by denying

2103. St. Thomas, Summa theologiae II - II, q. 43, aa. 2, 7, 8.

2101. St. Jerome, Epistula ad Hedibiam (ep. 150); Origen and Theophylact at the place cited; and likewise thoroughly Theophylact on Matthew, under St. John Chrysostom, homily 46, col. 2.

2104. St. Augustine, Quaestiones in Heptateuchum, In Exodum, q. 18.

that special calling which He knew was so congruent to the will that it would efficaciously incline it; and the Church asks for that calling in the first week of Lent on Wednesday at Vespers, when it says: "O Lord, illumine our minds with the light of Thy brightness, that we may be able to see the things that must be done, and to do the things that are right." And on the Sunday within the Octave of the Epiphany: "Pursue, we beseech Thee, O Lord, with heavenly pity the vows of Thy suppliant people, that they may see the things that must be done, and may be strengthened to fulfill the things they see."

And in this way St. Augustine is to be understood, De peccatorum meritis et remissione, book 2, c. 19, when he teaches that sin happens from ignorance, that is, from a defect of consideration: for which cause he there calls the calling which moves to acting and inclines the affection a certain knowledge. But in the book De praedestinatione sanctorum, c. 8, concerning those who, when the preacher sounds from without, do not believe, he says that they do not believe because within they do not hear from the Father. For God is said to open the ear of the intellect, by sending that thought which inclines the intellect to faith. For this reason the Lord in Luke 8 and in Apocalypse 2 says: "He that hath ears to hear, let him hear," that is, ears not stopped up, but fit to hear.[21052106]

Finally, of this blinding and aggravation, insofar as it is only in the intellect, God is thus the cause through various thoughts which He sends, that He may will and dispose it: for whatever precedes sin, as I said above, is set in order not only by God permitting, but also by God willing, yet without the intention of sin. Nor on that account does he suffer violence whose intellect is exercised: for that thought is always offered to him, by which he could resist if he wished, as we shall say in disp. 98, c. 7 and 8. Nor can anyone complain against God because to another man a thought is denied, as was noted in disp. 91, c. 8.

Finally observe that hardening of the will (*voluntas*) happens in two ways: first, in any sin whatsoever, when we resist God calling; then, after many sins, when we withstand God calling long and much. Of the former Augustine speaks in book 2 Ad Simplicianum, in what way it is the same that someone be hardened by God as that God not have mercy on him, as he himself there explains. But of this permission and not-showing-mercy, which precedes the first sin, there is no cause given on our part, as is clear from the above. Of the latter the same Augustine speaks in book 83 of Questions, q. 68, and teaches that it comes from most hidden merits.[21072108]

Disputatio XCVI - On whether God has provided all infants with sufficient remedies for salvation

Caput I - What is agreed upon in this matter

There are truths in this matter which among right-thinking persons are altogether indubitable and ought not to be called back into controversy. First, that for infants to be saved under the law of the Gospel, it does not suffice for the faith of the parents to be applied to them without baptism, or by the sign of the cross alone, or by the invocation of the Trinity alone, or in any other way; whose opposite, against all the Doctors, Cajetan had taught on III, q. 68, aa. 2 and 11. Yet in the Roman impression renewed by order of Pius V, Supreme Pontiff, the passages of the said commentary were expunged.[2109] Therefore it is certain that those dying in the mother's womb and those born into the light who die without baptism are damned; in whose stead martyrdom, by a special privilege, can be supplied in infants, as many affirm. Nor indeed do we approve what Gabriel says on the Fourth Book, dist. 4, q. 2, a. 2, dub. 2, namely, that by His power, which is not bound to the Sacraments, God perhaps saves some infants without baptism: for although God could do this, yet since in His Scripture He has established baptism as the sole remedy for infants, it is not to be granted that now some attain salvation without it.[2110]

Next, it is certain that the merit of Christ and all the remedies which He instituted both for infants and for adults are in themselves sufficient for salvation and effect it, if in fact they are applied. The controversy therefore is not whether Christ instituted remedies in themselves sufficient for all infants, but whether He so provided and disposed them that He left the application of them in the free power of someone. For if these remedies, which in themselves are sufficient, remain so disposed that by no human diligence can they be applied to any infant, we shall not say that a sufficient remedy was provided for him: because only to him is a sufficient remedy said to be provided to whom it can be applied and can profit. The difficulty therefore proposed is whether God has so provided these remedies for infants that by some human diligence they can be applied to them.

This matter is indeed outside controversy, unless it has seemed to certain more recent men to maintain that God has in such wise provided sufficient remedies for all infants, even if by accident they were impeded; and this they assert even of infants who die in the mother's womb. They prove it first, because although to many infants such remedies have not been applied, it only follows from this that efficacious remedies were not provided for them; it does not follow that sufficient remedies were denied: for to many adults as well the remedies which Christ left were not applied; yet on that account no one dares to assert that sufficient means were not provided for all adults, although efficacious ones were not granted. Then too Christ died for all infants and adults, since He willed - just as God of Himself and by a will of primacy - to save all men even after Adam's fall; therefore by His Passion He merited at least sufficient remedies for all, and granted them to them; otherwise it could not be said that He took death upon Himself for all, and willed to save all. For he who does not grant to someone the means necessary for some end, in order that he may use them if

2109. Cajetan (Tommaso de Vio), Commentary on Summa theologiae III, q. 68, aa. 2, 11; later Roman edition corrected by order of Pius V, with the said passages expunged.

he wills, or another for him, so that solely through someone's fault he is deprived of them - how could he, by an antecedent will, be said to desire that end for him? These are what certain professors of theology of our times have taught, to whom the judgment of learned men - who assert that to some infants sufficient remedies were denied by God - seemed too severe.

Caput II - The common and truer opinion

Among the Scholastic Doctors who have sent their writings to press there is no dissension in this matter, but all think in the same way: first, that for certain infants - namely those brought forth into the light, and those who die in the mother's womb through the negligence of their parents - sufficient remedies were provided which could be applied to them, although through the negligence of adults they were not applied; then, that for certain infants God in no way granted that sufficient remedies could be applied to them by human diligence, whether they were brought forth into the light when water is not available, or die in the womb by the sole force of nature. Thus teach Gregory on the First Book, distinction 46, question 1, after the middle; Richard of St. Victor on the Seventh Book; Gabriel on IV Sentences, distinction 4, question 2, articles 2 - 3, doubt 2; St. Thomas on IV Sentences, distinction 6, question 1, article 2, and question 1, article 9, reply to the first; Driedo, On the Captivity and Redemption of the Human Race, tractate 1, chapter 5; and Dominicus Soto indicates the same at the end of De natura et gratia.[2111]

The first part of this opinion is proved from Prosper, On the Vocation of the Gentiles, book 2, chapter 20 (elsewhere numbered 8), where he says of infants: "Those of a few days belong to that part of grace which has always been bestowed upon all nations, by which indeed, if their parents should have lived well, they themselves would be saved through the same."[2112] Here Prosper is not speaking of all infants universally. For, first, when he says "those of a few days," he understands only those brought forth into the light: for those who die in the womb cannot be called men of a few days. Then, when he adds "by which indeed, if their parents should have lived well," etc., he not obscurely intimates that he is speaking only of those to whom the diligence of parents could bring aid. Therefore, according to Prosper's view, there are some infants to whom sufficient remedies were thus granted that by the diligence of adults - namely of their parents or of others - they could be applied. And the same reason seems to hold for those who die in the womb not by force of nature but through the carelessness of their parents or of others: for these are deprived of sufficient remedies not by God but by men in whose power it lay to apply them.

The latter part is no less expressly stated by St. Augustine in many places. In the book On the Gift of Perseverance, chapter 12 at the end, after he has admitted that some infants die without baptism through the negligence of their parents, he adds that nevertheless there is room for God's secret judgment, who entrusted the infant's salvation to negligent parents; and he subjoins: "What

2111. 2112. Prosper of Aquitaine, De vocatione Gentium, l. 2, c. 20 (alias 8).

shall I say, that sometimes the infant is snatched away before one can by the ministry of the baptizer succor him?" And in On Grace and Free Choice, chapter 22 at the beginning, about the grace of baptism which he contends is given without merits, by God's sole benignity, he says thus: "And sometimes this grace is afforded to the children of unbelievers, when by God's hidden providence they in any manner come into the hands of those prior; sometimes the children of believers do not obtain it, some impediment being present whereby aid cannot be brought to those in peril." More plainly, in the book On Nature and Grace, chapter 8: "But I say, an infant born in that place where by Christ's baptism help could not be given him, being forestalled by death, was therefore such, that is, went forth without the laver of regeneration, because it could not be otherwise." This same opinion, with changed words, Paulus Orosius took from Augustine in the Apology for Free Will somewhat after the middle; in which places Augustine clearly shows that for some infants remedies could not be applied.[2113]

Moreover, on account of the sins of parents, or on account of their negligence, that infants were not deprived of that remedy is clearly indicated in epistle 105 after the middle, in these words: "What am I to say of unexpected and innumerable sudden deaths, by which even children of devout Christians are often forestalled, and baptism snatches infants away; whereas, on the contrary, sacrilegious enemies of Christ, coming somehow into the hands of Christians, depart from this life not without the sacrament of regeneration, and with few moments interposed? What, then, were the merits that preceded? If you consider those same infants, there are none proper to them: for the same common mass belongs to both. If you look to the parents, those are good whose sons are destroyed by sudden deaths without Christ's baptism. But if they perished through some negligence and fault of their parents, then the Pelagians win their invincible point, that there is some sin of the parents on account of which the grace of regeneration was not granted to the infants." Since therefore Augustine thinks there was no evil merit, it follows, in his opinion, that infants perished necessarily not by the negligence of the parents but because God so willed. Therefore, what he immediately subjoins about an infant who, suffocated through the drowsiness of the mother or nurse, died, he does not so understand as though he perished through their fault. For that a mother or nurse, overcome by sleep, should smother a child, happens without any fault of theirs. But most clearly he teaches the same in epistle 107 after the middle, where he proves that grace is not given according to merits: "Since to many children grace is not given, and without it very many die who have not a contrary will; and sometimes though the parents desire and make haste, and the ministers also are willing and prepared, nevertheless, since God does not will it, it is not given, because suddenly, before it is given, the infant expires, for whom one was running that he might receive it." With Augustine Prosper entirely agrees, in the book De ingratis, chapters 20 and 21.[2114]

But it is proved by reason: for it is certain that, without any negligence and fault of parents, some infants, by the sole force of nature, die either in the womb or outside it so quickly that no human diligence can bring them aid. Where then did God provide for them sufficient remedies

2113. St. Augustine, De dono perseverantiae, c. 12; De gratia et libero arbitrio, c. 22; De natura et gratia, c. 8. Paulus Orosius, Apologia pro libertate arbitrii, post medium.

which by the care of others could be applied to them? The adversaries say: in natural causes, which of themselves were sufficient that infants be brought forth into the light and receive baptism; but because God permitted other contrary causes to impede them, therefore the remedies could not profit the infants - not because God of Himself expressly willed to impede the application of the remedy.

Refutatur primo: But this evasion is useless. First, because even if God had only permitted the birth of infants to be impeded by natural causes, this would suffice for us to say that He had not granted to the infants sufficient remedies which could be applied by human diligence, although He had not expressly forbidden it. Secundo: Then, who would dare to say that that order of causes which impedes the birth of the infant, or in such a time and place cuts him off when born, was not specifically and minutely preestablished and ordained by God? For if "of two sparrows which fly, one of them shall not fall upon the earth without your Father" (Matthew 10), who will assert that some infants, either in the mother's womb or outside, perish without God's providence so ordaining? Since God is the author, by His will and providence, of all things and events apart from sin, it cannot be denied that the death of an infant in the womb or outside, at such a place and time, was predetermined by Him, not only permitting and allowing the causes to act, but also ordaining and willing. Wherefore I do not doubt that those are manifestly in error who ascribe this series of causes to divine permission and not to will and ordination.

But whether in God the will to deny remedies was prior, and to this end He disposed the order of causes, or the other way around, I do not much care, provided the adversaries concede that God expressly willed to deny to certain infants remedies which could be applied to them and profit them by human diligence. Nevertheless I judge that the prior will was to deny remedies, and that to this end He disposed natural causes. For that effect is compared to an end, whose will ought to be prior. Yet, lest any inconveniences should follow, it is better to assert that this will of denying remedies was only a simple affection before He disposed causes - just as we said in Disputation 95, chapter 6 about the will of rejecting these infants from eternal life.

Respondent alii: Others reply that to some infants, without any fault of their parents or of others, remedies could not be applied; nonetheless one must say that God provided them with sufficient remedies which could be applied: because non-application always depends on some voluntary act of the parents or of others, even if without any fault of theirs: as when a woman goes out of the house, or does something similar voluntarily; which, if she had not done, the remedies could have been applied to the child. Finally, whenever remedies cannot be applied, they always reduce this impotency to something done voluntarily by the parents or by others.

Improbas: But since God is said to have provided sufficient remedies for infants which could be applied, and this in the care of others by whom they ought to be applied, surely in no other way would He be said thus to have provided sufficient remedies for infants such that they could be applied, unless He had entrusted those remedies to the cares and solicitous oversight of the parents. Who, however, will say that such remedies were entrusted to their care, if by no human

2114. St. Augustine, Epist. 105, post medium; Epist. 107, post medium. Prosper of Aquitaine, De ingratis, cc. 20 - 21.

providence can they forestall the infant's premature death which happens without any fault of theirs, as in the cases set forth by Augustine? It makes little difference, therefore, whether a pregnant woman freely goes out of the house, or freely lays the child in his bed: if afterwards by some casualty which she could not foresee the infant dies prematurely without baptism, we cannot on that account say that the care either of her or of another about the remedy of baptism, which could have been applied, was committed to them.

Ad secundum respondetur ex Prospero: Concerning the other argument, Prosper, in the work Against the Objections of the Vincentians, chapter 1, and in the Chapters against the Gauls, chapter 9, asserts that Christ died for all as regards the greatness and power of the price, and as regards that one cause which pertains to the human race; not because He willed, even for all infants, to effect and decree those remedies which could be applied to them. And in truth the two testimonies of Scripture, from which we gather that God, by a prior and antecedent will, wills and desires the salvation of all, are to be understood of adults only. One is 2 Kings 14: "God does not will the soul to perish." The other is 1 Timothy 2: "God wills all men to be saved, and to come to the knowledge of the truth." In the former indeed the sacred text proposes the sentiment of a wise woman to induce David's mind to mercy toward his son Absalom; in the latter Paul immediately subjoins, "and to come to the knowledge of the truth," which shows that he is speaking of adults. He also exhorts Timothy "that supplications be made for all," namely for kings, etc., that, established in all dignity, they may accept from God that they be saved, and may come to a true knowledge of God

Ceterum we can, for three reasons, say that Christ died for all infants - who yet is by no means said to have died for the demons. First, because the cause on account of which He came was common to infants and to all men, for whom He also prayed; whereas demons are altogether outside that cause. Second, because He did not, either justly or piously, expressly deny to those infants the merit of His own [work], or exclude them with the Father from the fruit of His Passion, as the demons are rejected. Third, because we may no less piously affirm that Christ by a will of simple affection desired salvation for all infants without exception - even though, after the sin of the first parent, He did not will it efficaciously - just as He Himself desired life for Himself, and so prayed for all that they might obtain salvation, as He prayed for Himself that He might be spared from death, yet with that condition which He added to His prayer: "Nevertheless, not my will, but thine be done" (Matthew 26). On which St. Jerome seems to intimate that, when He said "Let this chalice pass from me" (Matthew 26), He prayed in a certain manner for all, and asked salvation and grace for all creatures. This, however, must be understood of all infants who were born after Christ; for for all those who died before, He could neither pray nor obtain grace for them.

Caput III - The refutation of the arguments of the prior opinion

Ad primum argumentum: The arguments of the prior view are easy. To the first I answer that from this fact - that remedies were not applied to infants on account of the impediments of natural causes, which no human industry could correct - it follows not only that efficacious remedies were denied to infants, but also sufficient ones. For when we say that sufficient means which could be

applied were not granted to them, we do not deny that in the Church there are remedies which are in themselves sufficient and, if they are applied, have their effect; but [we assert] that no such remedies could be applied to infants by human diligence. To many adults indeed counsels and congruous sufficient helps are afforded while efficacious ones are at the same time denied; because to them there is in reality granted only the sufficiency of vocation, not its efficacy. But if it happened that they were neither called with sufficient vocation, nor was there granted to them the Sacrament which by their own industry they could have applied to themselves, we would plainly say that no sufficient remedy was set and offered to them - even though in the Church sufficient Sacraments had been instituted and remained

But how the will of God stood toward those infants to whom no remedies could be applied has been said in Disputation 95, cap. 6. For although grace was bestowed on all, not all obtained the fruit of the Passion, indeed in the case of many it could in no way be applied. For these, therefore, he will be said to have died only, as Prosper says, with respect to the commonality of the cause and the greatness and power of the price; nor can the adversaries assign any other particular mode by which Christ may be said to have died for them, or to have offered his death and merits to the Father for them.

Moreover, for three reasons we can say why Christ is said to have died for all, even for infants, yet not for demons. First, because the cause was common to infants and to all men, on account of which he came and for which he prayed, outside of which demons were altogether excluded. Second, because we justly and piously believe that Christ did not expressly deny his merit and the fruit of his Passion to any infants before the Father, nor excluded them, as he rejected the demons. Third, because we can no less piously affirm that Christ by the will of simple affection desired salvation for all infants, without exception, even after the sin of the first parent, just as he desired life for himself; and thus that he prayed for all, that they might obtain salvation, as he prayed for himself that he might be delivered from death, but with that condition which he added to the prayer made for himself: "Nevertheless, not my will, but thine be done." Although St. Jerome and other grave authors think that by that prayer, "Let this cup pass from me," he prayed for the sin of the Jews who were going to slay him, and asked salvation and grace for them. Yet this should be understood of all infants who were going to be born after Christ. For for all those who had already died before, he could not pray nor give thanks for the grace bestowed on them, since not all obtained the fruit of the Passion, indeed in the case of many it could in no way be applied. For these, therefore, he will be said to have died only, as Prosper says, with respect to the commonality of the cause and the greatness and power of the price; nor can the adversaries assign another special mode by which Christ may be said to have died for them, or to have offered his death and merits to the Father for them.

Disputatio XCVII - Whether God has provided sufficient helps for salvation to all adults

- Error of Armacanus. Cap. 1.
- That sufficient help is sometimes denied to adults on account of prior sins: held by Henricus and others. Cap. 2.
- That sufficient help is lacking to no one in this life is the truer opinion. Cap. 3.
- That for the observance of a present precept and for conquering an imminent temptation sufficient help is lacking to no one. Cap. 4.
- That for repentance and for faith God bestows sufficient help not at all moments, but at certain times. Cap. 5.
- The arguments of the former opinion are dissolved. Cap. 6.

Caput I - The error of Armacanus

Although "sufficient help" is said in two ways, as we noted in Disputation 88, the last chapter, nevertheless in this present disputation we call "sufficient help of grace" (auxilium sufficiens), without which a man cannot be saved, and with which he can be, even if it is not efficacious. For about the efficacious [help] it is undoubted that it is not granted to all; about the sufficient, but inefficacious, there can be some controversy. But before we recount the opinions of the Scholastics, a certain error of Armacanus must be refuted. Therefore this author, in book 9 of the Questions of the Armenians, question 27, asserts that there are some sins of men in this life which, according to the law enacted by God, cannot be remitted, such as the sins of the demons. St. Thomas rightly judges this opinion to be an error in the faith; and Dominicus Soto refutes it; and most copiously Andreas de Vega.[2115]

But for us it will be enough, first, [to consider] that passage Matthew 11: "Come to me all you who labor and are heavy laden, and I will refresh you." There Christ invites all, and rejects no one from himself; therefore he denies to no one reconciliation with himself and justification from sins. Second, that passage of 1 Timothy 2: "Who [that is, God] wills all men to be saved and to come to the knowledge of the truth," which we proved in Disputation 83, cap. 2, to be understood of all and each. But if he were unwilling that the sins of some be remitted, and had so established by his law, it would follow that he does not will salvation for all.

Third, Catholic truth will be sufficiently established by us, if we show that the testimonies in which the grant of pardon seems to be denied to certain sins signify no such thing.

The first is 1 John 5: "There is a sin unto death; I do not say that anyone should pray for that." Now John would not prohibit praying for a sin unto death, if he knew that every sin can be remitted; for what else can hinder us from praying for someone than that, according to the law, his sin lacks pardon, as the sin of the demons? The Fathers interpret this passage in various ways. But

2115. St. Thomas Aquinas, Summa theologiae, III, q. 86, a. 1; Dominicus Soto, De natura et gratia, cap. 18; Andreas de Vega, On the Council of Trent, bk. 13, cap. 1 and the following.

whatever exposition we follow, it in no way favors the opinion of Armacanus. St. Augustine in book 1 On the Lord's Sermon on the Mount, at the end, understands it of the sin of envy and against fraternal charity, for which he thinks one should not pray. Bede embraces this exposition on that passage of John. Yet afterwards Augustine retracted this in book 1 of the Retractations, cap. 19, and adds that of no one in this life should despair be entertained: by which the opinion of Armacanus is clearly overthrown. He interprets John's testimony of the sin of final impenitence, for which he says one should not pray. This interpretation Bede also follows, though he himself approves the former more. Andreas de Vega embraces the same in book 13 on the Council, cap. 11. But John seems to speak of the sin of those who dwell in this life.[2116]

Origen, tract. 35 on Matthew, on those words "and going out outside," thinks that the sin unto death called so by John is the denial of the faith after grace has been received, for which reason the Novatians used to call the sin unto death the denying of Christ in torments. And although they denied the sacrament of reconciliation to one sinning in this way, nonetheless they encouraged him to contrition, and therefore did not think that in this life it could not be remitted, nor did they forbid praying for it. But in what sense John says, "I do not say that anyone should pray for that," Origen does not explain.

Ambrose, however, book 1 On Penance, chs. 8 - 9, calls "sin unto death" the gravest sin in any kind; for which, he says, one should not pray, that is, anyone at all from the people, but [only] a man of eminent and singular virtue. Others [understand it] of the sin to which excommunication is annexed, for which it is not lawful to pray publicly; but John certainly understands it of any prayer, even private.

The exposition is most approved by me which a few indicate - St. Jerome in Dialogue 2 against Jovinian, and Cajetan on that passage - and which from the very context is easily gathered. John had said: "And this is the confidence which we have toward God, that whatever we ask according to his will he hears us. And we know that he hears us in whatever we ask; we know that we have the petitions which we ask of him. If anyone knows his brother to be sinning a sin not unto death, let him ask, and life will be given to him, [to him] who sins not unto death." By which words he exhorts that we already ask God with confidence for our brother, certainly hoping that we shall obtain pardon for him, if the sin be not unto death. He immediately adds: "There is a sin unto death; I do not say that anyone should pray for that," as if he said: Of a sin which is unto death I do not promise so certainly the pardon, if someone should pray for another sinning unto death; and therefore I do not say that one should pray for him with so great a confidence and certitude of obtaining pardon; nevertheless he does not absolutely forbid to pray. But Cajetan understands "sin unto death" to be every special sin against the Holy Spirit, to which also pertains sin committed with certain knowledge. I, however, think that "sin unto death" is called a grave sin in any kind, especially when it is committed with a will hardened in evil, from which no rising again is hoped for.

2116. St. Augustine, De sermone Domini in monte, at the end; Retractationes, bk. 1, c. 19; Bede, on 1 John; Andreas de Vega, On the Council [of Trent], bk. 13, cap. 11.

The second passage of Scripture is Matthew 12: "Who shall speak a word against the Holy Spirit, it shall not be forgiven him, neither in this world, nor in the future." Yet Armacanus from this passage proves nothing, as will be evident from the expositions of it. St. Augustine, in the Inchoate Commentaries on the Epistle to the Romans near the end, and in Epistle 50 also near the end, and in book 4 Against Cresconius, cap. 8, teaches that this sin is that of final impenitence. Nevertheless Christ the Lord seems to speak of some particular sin in this life: for he opposes the blasphemy against the Son of Man, which he said is forgiven in this age, to the blasphemy against the Holy Spirit, which he asserts is not forgiven in this age nor in the future.

Andreas de Vega, book 13 on the Council, cap. 9, thinks that the sin against the Holy Spirit can, according to the law of God, be forgiven, but never is forgiven; and that Christ in Matthew 12 willed to signify this; but that the sin against the Holy Spirit, he says, is blasphemy against the divinity. But certainly this author is too bold here: for who would believe that no blasphemer against the Deity is justified in this life? Athanasius in Oration 2 against the Arians, and Basil in the Briefer Rules, response 253, St. John Chrysostom in Homily 42 on Matthew, and Anastasius in the Questions on Scripture, q. 68, which are found in tome 6 of the Sacred Library, affirm that the sin against the Holy Spirit is some word uttered against the divinity. Which indeed the Lord seems to have understood, when he opposes it to the word spoken against the Son of Man, that is, against Christ himself. But the other Fathers, besides Chrysostom and Anastasius, do not explain that [clause], "It shall not be forgiven," etc. Chrysostom indeed first thinks it is said for this reason, not that it is impossible, but that it is difficult. He adds another interpretation, which Anastasius also follows: "It shall not be forgiven him, neither in this age nor in the future," that is, if it be not blotted out by penance, he will be punished in this age and in the future; for other sins, even against the Son of Man, if they be blotted out by penance, by the common and ordinary law are not punished in both ages.

The third passage is Hebrews 6: "For it is impossible for those who were once enlightened, have also tasted the heavenly gift, and were made partakers of the Holy Spirit, and have nonetheless tasted the good word of God and the powers of the world to come, and have fallen away, to be renewed again unto repentance, crucifying again to themselves the Son of God and making a show of him." Which, in my judgment, is more difficult than the rest; but if it bears witness to our opinion, it not only proves that there are certain sins, as Armacanus contends, which according to the law of God in this age are not remitted, but even that any sin committed after justification is such. Yet nothing can be proved from this testimony, as will be evident from the interpretations to be set forth below.

St. John had said: "And this is the confidence which we have toward God, that whatsoever we ask according to his will, he hears us. And we know that he hears us in whatever we ask: we know that we have the petitions which we request from him. If anyone knows his brother to be sinning a sin not unto death, let him ask, and life shall be given to him who sins not unto death. There is a sin unto death: I do not say that one should ask concerning that." With these words he exhorts us that, with confidence and trust, we should even now ask God on behalf of our brother, confidently hoping that we shall obtain pardon for him, if the sin is not unto death. He adds immediately:

"There is a sin unto death; I do not say that one should ask concerning that," as if he were to say: with respect to the sin which is unto death, I do not promise so certain a pardon if someone should pray for another sinning unto death; and therefore I do not say that one should pray for that with such confidence and certitude of obtaining pardon. Nevertheless he by no means forbids prayer.

Cajetan, however, understands by "sin unto death" every special sin against the Holy Spirit, to which pertains also sin committed with certain knowledge. I for my part think that "sin unto death" is called a grave sin of any kind, especially when it is committed with a will hardened in evil, from which no resurrection is hoped.

The second testimony of Scripture is Matthew 12: "Whoever shall speak a word against the Holy Spirit, it will not be forgiven him, neither in this age nor in the future." Yet Armachanus proves nothing from this place, as will be clear from the interpretations set forth below. St. Augustine, in the inchoate commentaries on the Epistle to the Romans near the end, and in Epistle 50, also near the end, and in book 4 against Cresconius, chapter 8, teaches that the sin against the Holy Spirit is not said to be unable to be remitted as though absolutely impossible or as though it could not be remitted in this life; rather, when Christ asserts that blasphemy against the Holy Spirit is not remitted "neither in this age nor in the future," he signified that blasphemy against the Holy Spirit would never be remitted to those who persist in it to the end; and he spoke thus to deter excessive audacity at that point, not to deny that any blasphemy whatsoever can be remitted in this life by penance. Others of the Fathers assert that "neither in this age nor in the future" means that it will not be forgiven in this age, nor will it be forgiven in the future by way of any purgation; Chrysostom, however, thinks the phrase was said not because forgiveness is impossible, but because it is exceedingly difficult; he also adduces another interpretation, from which it follows likewise that it is not forgiven in this age, and in the future it will be punished. For other sins, if by penance they are not remitted in this age, they are remitted in the future (according to some); but blasphemy against the Holy Spirit will not be remitted even in the future. Many Fathers besides Chrysostom explain that saying: Athanasius, St. Basil, St. John Chrysostom, and Anastasius.[2117]

The third place is Hebrews 6: "It is impossible for those who were once enlightened, have tasted the heavenly gift, were made partakers of the Holy Spirit, have tasted the good word of God and the powers of the world to come, and yet have fallen away, to be renewed again unto repentance, crucifying again to themselves the Son of God and holding him up to contempt." This is more difficult; but it treats not only of sins (as some contend), but also of the return after justification. There is, meanwhile, nothing to be proved from this testimony for Armachanus, as will be evident from the interpretations.

Ambrose, Jerome, Chrysostom, Theophylact, and Theodoret on that place, and Augustine, book 1, On True and False Penance, chapter 3, explain it of the renewal through baptism, which they say is impossible to those who have already once tasted the gift of heavenly grace; to wit, to those to whom Paul was speaking, and who, after receiving baptism, had cast away the faith, thinking

2117. Athanasius, Oration 2 against the Arians; St. Basil, Briefer Rules, response 253; St. John Chrysostom, Homily 42 on Matthew; Anastasius, Questions on Scripture, q. 68, in tome 6 of the Bibliotheca sacra.

according to the Jewish custom that they could be baptized again; and on this point some note that Paul did not say, "It is impossible to repent," but "It is impossible to be renewed again unto repentance." He understood by "repentance" baptism. And when he says, "crucifying again to themselves the Son of God and holding him up to contempt," he indicates the same thing; for baptism, in which we are buried, is a figure of the death of Christ (Romans 6). Therefore he wishes it to be understood that he "crucifies Christ again" and exposes him to mockery, who again wishes to be baptized. In the same manner they interpret that other text, Hebrews 10: "For if we sin willfully after receiving the knowledge of the truth, there no longer remains a sacrifice for sins," as Chrysostom, Theophylact, and Anselm understand it: that baptism is a figure of the death of Christ, and therefore is called a "sacrifice for sin"; thus "there remains no sacrifice" is interpreted to mean no second baptism.

This doctrine indeed contains what is true and is most consonant with Scripture; but it does not square well with Paul's context, neither with what precedes nor with what follows, as will soon appear.

Accordingly, the exposition of Anselm pleases me, who takes "impossible" in that place to be the same as "difficult." For in morals, that which happens rarely and with difficulty is wont to be called "impossible." For this reason John 5 says that Christ said to the Jews: "How can you believe, who receive glory from one another, and do not seek the glory that is from the only God?" They could not believe, and so forth. This sense the context itself declares. For when in the preceding part he had spoken many and noble things about the priesthood of Christ according to the order of Melchizedek, he immediately subjoins: "Concerning which we have much to say and hard to explain." He gives, moreover, the reason why he said that the discourse was hard to explain, with these words: "Because you have become sluggish"; for they had fallen into sins. Wherefore he says that they, through their sloth, had rendered themselves such that they needed milk rather than solid food of higher instruction, and thus had need that to them the first rudiments of the faith be again delivered.

Paul begins chapter 6 in this manner: "Therefore, leaving aside the word of the beginning concerning Christ, let us be borne on unto perfection," with the following words he exhorts them to leave the first rudiments of faith, which in baptism itself are proposed to catechumens, and to be carried to the instruction of higher doctrine. He immediately subjoins: "And this we shall do, if indeed God permits"; which words must be referred to that "let us be borne on to perfection," lest the Jews think that they of themselves would diligently perform that, but only "if the Lord permits." Now he said "if indeed the Lord permits" for no other reason than that they themselves were too dull to understand, because they had gone backward from the grace received.

Then follows: "For it is impossible for those who were once enlightened, have tasted also the heavenly gift, were made partakers of the Holy Spirit, have tasted the good word of God and the powers of the world to come, and yet have fallen away, to be renewed again unto repentance, crucifying again to themselves the Son of God and holding him up to contempt." The particle "for" gives the reason for what he had said, "if indeed the Lord permits": as if he were to say, for this reason I added "if indeed the Lord permits," because I deem it difficult that those who have once

been enlightened and have received copious gifts of the Holy Spirit, if they fall into sins by which they seem again to crucify the Lord and to hold him up to mockery, as you, after so many charisms, have fallen, should return again into God's grace by penance; and insofar as you return, you are too dull to be fit for the higher instruction of doctrine beyond the first rudiments for catechumens.

He said "crucifying again to themselves the Son of God," because by the new sin they added a new cause of the cross and death of Christ. He explains this difficulty by a common example when he subjoins: "For the earth which often drinks upon itself the rain coming frequently, and brings forth useful herb for those by whom it is tilled, receives blessing from God; but that which brings forth thorns and thistles is reprobate and near to a curse, whose end is unto burning." In like manner those who, after the copious shower of gifts and graces, by which their soul was irrigated and enriched, do not bring forth the fruit of good works, but the thorns of sin, are near to a curse and to reprobation, unless repentance renew them. Immediately, however, he consoles them, saying: "But we are persuaded concerning you, beloved, better things and nearer to salvation, although we thus speak. For God is not unjust to forget your work and the love which you have shown in his name, you who have ministered to the saints and do minister." He consoles them, therefore, with a most apt reason, and shows that they are nearer to salvation than to a curse and reprobation; because although they had fallen into sin, yet by works of mercy which they had rendered to the ministers of the Gospel, and were still rendering, they would obtain the mercy of God. For God is not unjust and unfaithful that he should forget the promise of mercy which he has made to the merciful.

By the way, it must be observed that the Apostle in this place is not speaking about the retribution of eternal life, which he has promised to the good works of the just, but about that whereby he has promised mercy and the remission of sins to the merciful. When, however, the Council of Trent, at session 6, chapter 16, says that the words of the Apostle are to be proposed to just men, from 1 Corinthians 15, "Always abounding in every good work," and from Hebrews 6, "For God is not unjust," it rightly admonishes that these and similar passages are to be proposed to the just; because eternal life is not less, but more, promised to the good works of the just than remission of sins is promised to the works of sinners. Therefore, since God is not unjust, so as to forget what he has promised to the impious and sinners, much less will he be unjust by not fulfilling what he promises to the works of the just.[2118]

Moreover, the Fathers alleged above, in treating of baptism, interpret also that passage at Hebrews 10: "For if we sin willfully after receiving the knowledge of the truth, there remains no more sacrifice for sins: but a certain fearful expectation of judgment and the zeal of fire that will consume the adversaries"; as if Paul were to say that for such there is not left a second baptism; which interpretation does not please me either. For Paul, in that chapter, a few words earlier, when he was proclaiming the excellence of Christ's priesthood, had set him in opposition to the priests of the Old Testament, because they repeated the same sacrifices each day; but Christ with one oblation has consummated and purged all things. Then, after some intervening words, he inserts:

2118. Council of Trent, session 6, cap. 16, citing 1 Cor 15 and Heb 6.

for those who sin willfully there is not left for them a new sacrifice and oblation (for this is what the word "is not left" signifies), but the ancient one, by which our Christ the priest once offered, is sufficient to expiate all.

Caput II - Sufficient help (auxilium) is sometimes, on account of prior sins, denied for a time to adults: this was the view of Henry [of Ghent], and others.

There is none among the Scholastics, besides Armachanus, who says that sin by its very genus, by ordinary law of God, cannot be remitted; yet there are not a few, and not of the least name among theologians, who judge that sometimes, because of prior sins, men are so destitute during some determinate period of life that neither sufficient nor necessary help is granted to them by which they might be able to observe the commandments of believing, of penance, and other such, and to avoid sins. This is the opinion of Henry in Quodlibet 8, question 9, although he somewhat doubts about it; but more clearly do teach it Abulensis on Matthew 6:11; Gregory, on the First [Book of the Sentences], distinction 46, the single question, concerning the third solution when he impugns the second solution; Cajetan on chapter 12 of John, on those words, "They could not believe"; Roffensis in article 26 against Luther; Ruard Tapper in article 7, page 254, who, although he asserts that the opposite opinion is more pious, nevertheless thinks this one is much more conformable to the doctrine of the Fathers.[2119]

They prove it, first, from Scripture: Ecclesiastes 7, "Consider the works of God, that no one can correct him whom he has despised." Second, 2 Maccabees 9, about Antiochus, it is said: "The wicked man was praying to the Lord, from whom he was not going to obtain mercy." Of Pharaoh too, Scripture everywhere reports in Exodus that his heart was hardened, that he might not be moved by signs and wonders. John 12: "Therefore they could not believe," namely the Jews, "because again Isaiah said: He has blinded their eyes and hardened their heart." Isaiah 6. In these places, and in many others which Driedo relates for this opinion, Scripture signifies that it is impossible for some to be converted to God, or to believe, or to consent to good works.[2120]

Second, it is proved from the Fathers. Isidore, in the book On the Supreme Good, chapter 15: "Some are so despised by God that they cannot bewail their evils." St. Augustine and his disciples have taught this most clearly of all. I set aside the many testimonies of Augustine, wherein he teaches that those who are reprobate or hardened, or on whom God has no mercy because he does not call them with a congruous vocation, cannot respond to God: such is that passage, book 1 to Simplicianus, question 2: "To others the call indeed comes, but because it was of such a sort as could not move them, they could indeed be called, but not chosen." Something similar is found in On the Predestination of the Saints, chapters 6 and 8; in On the Gift of Perseverance, chapters 8 and 14; in On Predestination and Grace, chapter 15; in On Nature and Grace, chapter 18; and in the Enchiridion, chapter 103. For from these one could easily reply that Augustine there affirmed an

2119. Henry of Ghent, Quodlibet 8, q. 9; Alonso Tostado (Abulensis) on Matthew 6:11; Gregory [of Rimini], on the First Book, dist. 46, the unique question, about solution 3; Cajetan on John 12: "Non poterant credere"; John Fisher (Roffensis), art. 26, against Luther; Ruard Tapper, art. 7, p. 254.

2120. Eccl 7:13; 2 Macc 9; Exodus on Pharaoh's hardening; John 12:39 - 40 citing Isaiah 6; see Driedo, passim.

impossibility following upon the foreknowledge of the vocation, which in no way takes away liberty and the faculty of doing the opposite; yet, foreknowledge being supposed (with which it is conferred, because the effect that is not going to be is also supposed), it is impossible to operate rightly with it. About that consequent impossibility, and the opposite necessity, enough and more than enough has been said by us in disputation 68, chapter 4.

I will therefore refer the manifest testimonies of this Father, reduced to two classes, by which he seems to have expressed this view. The first is of those in which he says that no one is forsaken by God unless God is first forsaken by the man: therefore, in the book on the Articles falsely imputed to him, article 2, to wit: God, unless he is first forsaken, forsakes no one; and no one is forsaken unless he himself is the deserter and commits [the desertion]. What the sense of that proposition of Augustine is - "God, unless he is first forsaken, forsakes no one" - is this: God forsakes him by whom God himself is forsaken, and he forsakes no other. For logicians expound that proposition, "No one except Peter disputes," thus: Peter disputes, and no one else disputes. It follows, therefore, that God denies sufficient help to the sinner - which is to forsake him - and he denies it to no other.

To this also pertains the statement of Augustine in the same book On the Articles falsely imputed to him, whence Prosper took what he has in the book in response to the Vincentian objections, response 15: "To no one, he says, does God deny the way of correction; nor does he deprive anyone of the possibility of good..."[2121]

He was not able to obey, but because he had so comported himself that his heart should be hardened. But if at the time when he did not obey he had had sufficient help whereby he could obey, then not to obey would have been imputed to him. And although afterward he retracted many things in that book, this he never corrected.

Next, in the book On Rebuke and Grace, where already as bishop he spoke most exactly about the grace of God, thus he writes a little after the middle, about the help necessary for man and angel: "But if this help had been lacking either to the angel or to man when first they were made, since their nature was not made such that it could remain without divine help if it willed, assuredly they would not have fallen by their own fault; for help would have been lacking without which they could not remain: now, however, that this sort of help is lacking to some, is itself the penalty of sin." For these words are to be understood not of congruous and efficacious help, but of sufficient. For whoever sins lacks congruous and efficacious help; to whom nevertheless guilt is imputed: but the help of which St. Augustine speaks is such that, if it were lacking, fault would not be imputed to those acting; now this can be nothing other than sufficient and necessary. Therefore, since Augustine says of it, "Now, however, that this sort of help is lacking to some is itself the penalty of sin," he plainly holds that now it is denied to some men; yet because it is denied on account of their fault, therefore sin is nonetheless imputed to them: which, however, would not be imputed to the first man or to the angel, if without any fault of theirs such help were withdrawn from them.

2121. Prosper of Aquitaine, Against the Objections of the Vincentians, response 15; Augustine, De articulis sibi falso impositis.

Third, the foregoing opinion is proved by this argument. Without congruous and efficacious grace no one can consent or act: therefore this grace is necessary for acting. But this is denied to all who do not act as they ought: therefore the help of grace that is necessary is not granted to all. But this argument confirms the foregoing opinion less than it introduces a new difficulty: for this grace is denied to all who sin, even in the first sin; yet the aforesaid opinion does not assert that to all who sin, but only to some on account of very great sins, sufficient help is denied. Moreover, the foregoing opinion distinguishes efficacious and sufficient help: but this argument seems to prove them altogether the same; for efficacious help is necessary, if this argument proves anything; but necessary and sufficient are the same. Accordingly we adduced this argument not so much to confirm the aforesaid opinion as to satisfy the difficulty which it has.

That sufficient help is lacking to no one in this life is the truer opinion.

Caput III - Proofs for the common opinion

The proposed opinion has long since been so approved by the common vote of all the Scholastics that very many do not hesitate to brand the former with the mark of error. It therefore asserts that in this life no man, however hardened and rebellious, lacks sufficient help, but that it is offered to all. Thus teach Adrian in IV, q. 1 de Penance; Dominicus Soto, I, On Nature and Grace, c. 18; Driedo, On the Redemption and Captivity of the Human Race, c. 5 and 3; Andreas de Vega, book 3 on the Council of Trent, c. 13, col.; and it is gathered moreover from St. Thomas, III, q. 86, a. 1, where he charges with error those who say that some sin cannot be blotted out by penance, either because they seem to take away man's freedom, or because they detract much from the power of grace, or finally because man's malice would outweigh God's mercy: all of which, or some of which, follow against those who affirm that man in some period of life is deprived by God of sufficient help.[2122] This opinion we shall prove universally and without any distinction in this chapter; in the following ones, in order to explain it better, after a prefixed distinction we shall show the way in which God offers sufficient help to all.

It is proved first from that of Matthew 11: "Come to me all you who labor and are burdened, and I will refresh you." Since Christ there invites all to repentance, it follows that he also offers sufficient help to all; for he would invite them thus in vain without such help.

Second, it is proved from 1 Timothy 2: "Who wills all men to be saved." For if to some he denied at least sufficient helps, it would follow that in no way did he desire their salvation.

Third, some prove it from Augustine, in the book Exposition of Certain Propositions in the Epistle to the Romans, c. 62: "Just as that mercy is attributed as a merit to the preceding faith, so this hardening to the preceding impiety: although man's free will is not taken away either for believing God or for impiety, so that judgment may follow us." And in the book On Predestination and Grace, c. 15, where of Pharaoh and Nebuchadnezzar he says: "Here, feeling the hand of the

2122. Adrian of Utrecht, In IV Sent., q. 1 de Poenitentia; Dominicus Soto, De natura et gratia, c. 18; John Driedo, De redemptione et captivitate generis humani, c. 5 and 3; Andreas de Vega, Lib. 3 in Concilium Tridentinum, c. 13; St. Thomas Aquinas, Summa theologiae, III, q. 86, a. 1.

Lord, the one groaned in the remembrance of his own iniquity; the other, by his free will, fought against the most merciful truth of God." And c. 14, he writes about Pharaoh: "The patience of God ought to have availed him unto salvation, whereby, delaying his punishment and deserved chastisement, he repeatedly multiplied the scourges of miracles: could he not, just as by scourges he expelled the people when beaten, so by the miracles, believing, recognize God of so great power?" Where, while Augustine commends the patience of God, he speaks plainly of that whole time during which Pharaoh's hardening persisted. He judges therefore that during that whole time he could, by believing the miracles, dismiss the people, and obey the word of God. If therefore Pharaoh, the distinguished example of hardening, had this faculty of obeying, it follows that he never lacked God's sufficient help. Yet since in that same c. 62 and in the other places cited he so openly denies sufficient help of God to the hardened, I would not wish to confirm our opinion by his authority. Also, it is not sufficiently certain whether he speaks of that whole time during which Pharaoh, stirred by miracles and scourges, refused to obey, or only of that part in which, not yet destitute of sufficient help of God, he could obey; for in that c. 62 he assigns some time in which he could no longer obey, nor would it then be imputed to him as a fault, but in the beginning, when he so presented himself as to deserve from God to be hardened.[2123]

Further authorities for sufficient help

The same seems also to be proved, first from Prosper, book two On the Vocation of the Gentiles, c. 25, otherwise 8, where, after he has shown that there are certain general gifts of grace (for from God's common benefits and effects men can recognize their author), he subjoins these words: "But it pleased God to grant this to many, and to remove that from no one." Fulgentius agrees, Epistle 7, with these words: "As for a physician there is no incurable wound, so at no time can the heavenly medicine fail." Passing over, however, the testimonies of these Fathers - which perhaps held the same opinion as Augustine, as we shall say below - there is present to us Paulus Orosius, himself too a contemporary of Augustine and a most keen defender of his doctrine, who writes in the Apology for the Freedom of the Will, rather before the middle, as follows: "This has always been my faithful and undoubted sentence: that God supplies his help not only in his body, which is the Church, to which, on account of the faith of believers, he lavishly bestows his special gifts of grace, but also to all the nations in this world he, in long-suffering, ministers his eternal clemency: not, as you assert with your disciple Celestius - whose secret nature of impious dogmas was indeed crushed at the African Synod - that one grace is bestowed generally upon all in mere natural good and in free will; but that, in a special manner, daily, through times, through days, through moments, through atoms, atoms, to all and to each he ministers." In which place he acknowledges that helps of grace, distinct from the gift of creation, are offered to individual men on individual occasions. Moreover, he also teaches there that this help is conferred for conquering temptations and for knowing the true God, as we shall report in c. 4. Finally, Origen, book 3, Peri archon, c. 1, affirms that a man can come to such a pass of evils as to be equal to the malice of demons: yet he

2123. St. Augustine, Expositio quarundam propositionum epistolae ad Romanos, c. 62; De praedestinatione et gratia, c. 14 - 15.

adds that all sinners, as long as they are in this life, can be restored. Note: nonetheless in that same place certain of his words must be guarded against, in which he assigns various remedies by which a fallen man can be healed.[2124][2125][2126][2127]

I confess indeed that the testimonies of Prosper and Fulgentius are somewhat suspect to me, because they are most diligent and most exact disciples of Augustine, and seem to follow the opposite opinion, as is clear from the testimonies cited in the preceding chapter in the first class. Therefore, in the places now alleged by us, perhaps they granted the grace of outward signs and the medicines of benefits - even outward ones - of sin; but in other places they denied the help of inward inspiration, which is now the matter in controversy.

But in very truth, since we ought by right to presume many and great things about God's mercy, and Scripture proclaims such excellent and splendid things, and since it depends solely on God's will that such help be denied to anyone, unless it were manifest to us concerning this will, we ought in no way to affirm it. Now that will can become known to us from nowhere else than from Scripture, or revelation, or tradition. Since therefore by none of these means is God's purpose known to us, we shall rashly affirm that that help is denied to some. And from Augustine and others who taught that, we can ask whence they were more certain of this will of God. For passages of Scripture - if there are any - that seem to favor the prior opinion, we shall easily explain in c. 6; some also have been set out by us in c. 1 of this disputation.

That for the observance of a present precept and for conquering an imminent temptation sufficient help is lacking to no one.

Caput IV - That in various ways we need the necessary and sufficient help of God

But beforehand I note those things which seem to favor the prior opinion, we shall easily explain in c. 6; some also have been set out by us in c. 1 of this disputation. St. Augustine, too, in the place on Pharaoh writes thus: The patience of God ought to have availed him unto salvation, whereby, delaying punishment and the requital of merit, he redoubled the frequent blows of miracles: could he not, just as, smitten with scourges, he expelled the people, so by believing the miracles he might acknowledge God of such power? Where, while Augustine commends the patience of God, he speaks plainly of that whole time during which Pharaoh's obduracy persevered. He judges, therefore, that during that whole time he could, by believing the miracles, dismiss the people and obey the word of God. If then Pharaoh, a remarkable example of obduracy, had this ability to obey, it follows that he never lacked God's sufficient help. However, since in that same chapter 62 and in the other places cited he so openly denies sufficient help of God to the obdurate, I would not wish to confirm our opinion by his authority. I grant indeed that it is also not sufficiently clear whether he is speaking of the whole time during which Pharaoh, stirred by miracles and scourges, was unwilling to obey, or only of that part in which, not yet deprived of

sufficient help of God, he was able to obey: for in that chapter 62 he assigns some time in which he could no longer obey, nor would that then be imputed to him for fault, but at the beginning, when he showed himself such that he deserved to be hardened by God.[2128]

The same seems also to be proved, first, from Prosper, in the second book On the Vocation of the Gentiles, chapter 25, alias 8, where, after he has shown that there are certain general gifts of grace (for from God's common benefits and effects men are able to know their author), he subjoins these words: But it has pleased God to grant this to many, and to remove that from none.[2129] Fulgentius agrees, in Epistle 7, with these words: As for a physician no wound is incurable, so at no time can the heavenly medicine fail.[2130] Passing over, however, the testimonies of these Fathers, who perhaps were of the same opinion as Augustine, as we shall say below, we have Paul Orosius, a compatriot of Augustine and a most ardent defender of his doctrine, in the Apology for the Freedom of the Will somewhat before the middle, where he writes thus: This has always been my faithful and undoubted opinion, that God supplies his help not only in his own body, which is the Church, to which, on account of the faith of believers, he lavishly bestows his gifts of grace, but also to all the nations in this world, by his long-suffering and everlasting clemency, day by day and moment by moment, administering to all and to each distinct helps of grace.[2131] Likewise Origen, in On First Principles, book 3, chapter 1, affirms that a man can come by which he be made equal in regard to the assistance of God; and yet in the same place he adds that all in this life are set in such alternations and agitations that they can be healed by the remedies which God's mercy furnishes; and there he designates certain helps of his, namely remedies, by which the sinner, while he still lives, can be recalled to the true God.[2132]

Note. The testimonies of Origen, Prosper, and Fulgentius seem to me suspect, since, as most diligent disciples of Augustine, they appear to follow his opinion. Therefore, in the passages now alleged by us, perhaps they conceded the grace of exterior aids and remedies; in other places, however, concerning interior inspiration - about which the present controversy turns - they denied it.

But truly, because of the great and excellent mercy of God, we ought not to presume, nor rashly affirm, on the mere ground of the divine will, that help is denied to anyone. For that will can be made known manifestly to us by no other means than by Scripture or by revelation; since therefore in no such way is it known to us, we shall not affirm as certain that such help is denied to some. And if there are any places of Scripture which seem to favor the prior opinion, we shall easily explain them in c. 6; some, too, have been set out by us in c. 1 of this disputation. That for the observance of a present precept and for conquering an imminent temptation sufficient help is lacking to no one.

2132. Origen, De principiis (Peri archon), lib. 3, c. 1.

We need, then, the necessary and sufficient help of God, first, for the observance of a precept when it occurs, and for conquering a temptation; further, for works of virtue outside the time of a precept, as for penance when one is in sin, but the opportunity of this precept has not yet occurred. In the present chapter we must treat of the former; of the latter in the following: from which it will be clear whether God ever denies such help.

As to the first, it must be observed that there are certain precepts which the Schoolmen call supernatural, such as those of faith, hope, and charity; and certain others which are natural, such as those of the moral virtues which they call acquired. Note, furthermore, that those precepts which are supernatural require, for their observance as their principle, a cogitation of the supernatural order, nor in any way does a merely natural cogitation suffice.

These things being posited, I pronounce that the obligation of a precept or a temptation never occurs to us without sufficient cogitation by which we can both conquer the temptation and observe the precept. I speak of an affirmative precept, for which not only does the time exist in which it is wont to bind, but also the obligation of which comes to memory: for if no thought of it were to come up into the mind, no obligation of it would press upon us, as is manifest, and we shall show this in 1 - 2, q. 76, a. 2 and 3.[2133]

Further, that upon an occurring precept or an urgent temptation sufficient help is given to all is proved for a twofold reason. The first is that otherwise it would follow that sometimes the wayfarer knowingly transgresses a precept or yields to temptation and yet no fault is imputed to him. Wherefore, neither of that man whom God for a long time bears with and yet he is hardened in evil and is deprived of such help, could that be said which is in Romans 2: "According to your hardness and impenitent heart you treasure up for yourself wrath in the day of wrath and of the revelation of the just judgment of God." For if transgression is no longer imputed to him for fault because he is deprived of sufficient help, it follows that he does not merit a new punishment, and hence that he daily treasures up nothing of God's wrath for himself, which is absurd.

It will be said, on the doctrine of Augustine which we related in the cited place, that then indeed, when the hardened man in act transgresses a precept or consents to temptation, fault is not imputed to him, but rather to that time when he showed himself such that he deserved to be forsaken by God. But on the contrary: this is a manifest reason, because, in order that the event of obduracy be imputed, it ought to have been in some way foreseen or thought upon. But when someone sins and thinks nothing of such an event, neither has any reason for doubting, nor does any suspicion occur, or because - according to the more probable opinion - he thinks that such help is never denied by God, such an event can be imputed neither in itself nor in its cause; and therefore he in no way merits the greater punishment and the wrath of God.

It is proved, second: Although it be true that a supernatural precept cannot be fulfilled if supernatural cogitation is lacking, nevertheless, because whenever the obligation of a supernatural precept occurs to the mind it offers itself not without supernatural knowledge, therefore freedom in the will never fails for its observance on account of a defect of cognition. And since nothing

2133. St. Thomas, Summa theologiae, I - II, q. 76, a. 2 - 3.

contrary can occur which necessarily draws the will to itself as long as a man is in possession of himself, it comes about that in the will there always remains freedom to fulfill a supernatural precept whenever cogitation of it occurs. Further, when some temptation offers itself, it does not necessarily move and draw the will to itself as long as reason is not disturbed and advertes to the opposite; therefore no one is so hardened that he cannot fulfill an occurring precept and overcome or avoid an urgent temptation by not consenting.

Moreover, that the will is not necessarily drawn either by something occurring against a precept or by a temptation which offers itself is manifest; because, according to the common opinion of the Doctors, the will is not necessarily moved as to exercise unless by an object in which every ratio of good appears and under which no ratio of evil can be apprehended. Wherefore St. Thomas, 1 - 2, q. 10, a. 2, plainly affirms that in this life our will is necessarily moved by no object; indeed there are theologians who think that it is not drawn necessarily even by the highest good clearly seen. But a temptation, and that which occurs against a precept, cannot be apprehended under every ratio of good, as is evident; therefore neither can it necessarily move the will to itself. Hence it is that not only does God leave no one destitute of sufficient and necessary help, with which the integrity of the will's freedom stands fast, but neither can he take that freedom away whenever reason is not disturbed and sufficiently advertes; for if either of these should occur, then the man does not remain morally free, nor is fault imputed to him.

Caput V - That for penance and for faith God confers sufficient help not at all moments, but at certain times

It now remains that we say something of the other point which we proposed in the preceding chapter, namely of the sufficient and necessary help which God confers for believing on those who have heard nothing of the mysteries of our faith, and of the help for penance when one is not yet bound by the precept of faith or of penance. And first this must be presupposed: God does not stand at the door and knock at all moments. For since God is said to do this in us in no other way than by holy cogitation, whenever a man is thinking of other things and considers nothing of penance and his sins, nothing of the mysteries of faith, he is not to be said to stand at the door and knock. But this happens often, as experience has taught; therefore God does not continually confer help, even sufficient help, for these works. But if someone should say that at every moment of time God knocks and offers his help, let him explain, I beg, what this sufficient help is in us, with which he is said to knock. To say what some have asserted, that this help is the preparation of the will of God, whereby it is of itself at hand unless an impediment from us occur, is said without foundation. For here we are not treating of the preparation of the will of God; for the adversaries also concede that this is of itself prompt in God unless the impediments of sins on our part stand in the way; but the controversy now is about the help which is wont to be in us as the effect of the will of God - whether it is always given to all, or is sometimes denied on account of sins. Since therefore God does not continually, nor at every moment of time, arouse our cogitation to penance, it must be said that only at certain intervals of time he touches our heart; and although he always stands at

the door, yet he does not continually and always knock, but behaves as one who knocks with his hand at a friend's door, and after a single knock waits to see whether there is a reply from within, then adds a second, and so on in succession.

From this it follows that there are various excitations by which we are called to penance; for there is not one only, but many excitations, as many as are the limits of life, since they are not infinite. Hence it follows also that there is a last visitation, which God best knows, after which the heart of man will no longer be aroused: which we have learned from experience. For it happens that men, seized with fear, scarcely before think seriously of penance, and yet are not moved to it; and little by little they cease from such consideration and attend to other things; and, with the distraction of mind continuing, either they perish or die suddenly. In this case that last excitation and sufficient help for penance was that final thought before death; and the same must be said of all who die of disease after a long illness. For although more frequently they are touched by that thought, nevertheless at length the same agitation is ended in a last time, after which they think nothing further of penance. If anyone, therefore, at that time when danger of death is imminent, is not stirred to penance but suddenly perishes, thinking only of escaping the danger, and dies in sin, on account of other sins he will be justly condemned, nor can he complain of God for not having aroused him to penance.

As to how sufficient help for believing is given, one must think otherwise: when the preacher is present who proposes the things to be believed, and when the obligation of the precept lies upon one and the preaching has its place, that very preaching is an excitation sufficient for believing. Yet if, after he has heard the preaching, the unbeliever withdraws and the preacher departs from him, he is not forthwith and continually touched and excited to believe, any more than the sinner is to penance; but at set times and at certain intervals, so that it tends toward a last excitation - which we shall prove in the same way.

As for the Gentiles, who have heard absolutely nothing supernatural, it must be said that countless persons were never proximally excited by some sufficient cogitation to believe, and yet were not altogether destitute of sufficient help for salvation and for believing. For on many occasions by their works they were excited to act well and not to consent in sin, their cogitations mutually accusing and defending one another, as the Apostle says to the Romans; to whom there was supplied some grace of God not only of creation but also of governance, which is through Christ, for living uprightly; which if they used well, God would grant further and greater [helps] for believing - those things which are supernatural having been granted - and thus there was for them some measure of grace, because this whole universe and the celestial machine, which proclaims the maker of all things whom we ought to invoke, is set before all. Hence Wisdom 13 says: "Vain are all men in whom there is not the knowledge of God," and concerning those who from the goods of the world "could not understand him who is" nor, by attending to works, "acknowledge the workman, but either fire, or wind, or the swift air, or the circle of the stars, or the great water, or the sun and moon, they thought to be the gods that rule the world." It then goes on to show how they cannot be excused who from this fabric of the universe have not come to know the true God and the author of all things.

The same particular helps of grace for all the Gentiles are granted by Prosper in the book On the Vocation of the Gentiles, book 2, chapter 25 (alias 8), and also in the first book, chapter 13 (alias 5) and chapter 9 (alias 7), whose words it has pleased me to report: that God, by benefits and by that very providence of his which is inseparably extended to all creatures, admonishes all; and that then, when the Word was made flesh and sent into the world, through the very preaching of the truth by which men are helped to seek the true God, the effusion of this grace was poured more broadly.[2129]

The same is attested by Psalm 18: "The heavens declare the glory of God, and the firmament announces the work of his hands," which place Paul cites in Romans 10 to show that without preaching no one hears and believes in him whom he ought to invoke.[2134] The Fathers commonly hold that that place is adduced by Paul in a mystical sense and is understood of the Apostles - since the Psalm literally speaks of the heavens of this visible universe - whereas the Apostle applies it to the Apostles, of whose preaching he says: "Their sound has gone forth into all the earth."[2134]

- With his hand he knocks at the friend's door, and afterwards waits, whether they will answer within; then he adds a second, and so on.
- Hence it follows that there are various excitations, by which we are called to repentance; for the call is not one continuous thing, and they are finite, because they are not infinite. Wherefore it also follows that there is a last one, which God knows best, after which man will no more be stirred to repentance; a fact we have learned by experience. For it happens that a man, seized with fear, thinks seriously about repentance for his past life, yet is not moved to it at all, and little by little ceases from such consideration and turns to other things; and with that distraction of mind persisting, he either is killed, or suddenly dies. In this case indeed that last thought about his past life was the final excitation and sufficient help for repentance; and the same must be said of all who die of sickness. For although they are more frequently touched by that thought, nevertheless at length they come to some last one, after which they no longer think of repentance. But if someone, at the time when danger of death impends, is not stirred to repentance, but, suddenly terrified, thinks only of escaping the danger, and on that account dies in sin, he will be justly damned on account of other sins, nor can complaint be made against God that he did not stir him to repentance. In what manner he stirred him.
- Next, of sufficient help for believing, one must think otherwise: for when a preacher is present who sets forth the things to be believed, then the obligation of the precept comes to bear, and the preaching itself brings with it sufficient excitation for believing; although the infidel who once heard the preacher and afterwards departed from him is not forthwith

2129. Prosper of Aquitaine, De vocatione gentium, lib. 2, c. 25 (alias c. 8); cf. lib. 1, c. 13 (alias c. 5), c. 9 (alias c. 7).

2134. Psalm 18(19):2; Romans 10:18.

touched and excited to believe, just as neither is the sinner to repentance; but at fixed times and at certain intervals, so that one may come to a last excitation, which is to be proved in the same way.

- But concerning the Gentiles, who have heard nothing at all that is supernatural, it must be said that they were indeed never proximately stirred by some sufficient thought to believing; nevertheless they were by no means destitute of sufficient help for salvation and for believing. For through many occasions of works they were variously stirred to act well and not to consent to sin, with thoughts accusing and defending one another, as the Apostle says to the Romans; and to them there was imparted something of God's grace not only of creation, but also of governance, which is through Christ for living rightly, which if they were to use well, God would grant further and greater helps for believing, which are supernatural. A certain measure of grace was also granted to them, because this whole universe, and the celestial fabric, proclaims God the author of all, whom we ought to invoke. Therefore in Wisdom 13 it is said: "But vain are all men, in whom there is not the knowledge of God: and of the good things that are seen, they could not understand him that is" (Wis. 13); nor, attending to the works, did they recognize who was the craftsman, but either fire, or spirit, or the swift air. Then it continues to show how those cannot be excused who from this fabric of the universe did not know the true God and author of all.
- The same portion of grace Prosper grants to all the nations, in book 1 of On the Calling of the Gentiles, chapter 21 (alias 7), and again in book 1, chapters 13 (alias 5), 19 (alias 7), and 25 (alias 8), whose words I thought good to report here: "Whether, then, they contemplate the latest ages, or the first or the middle, it is notably and piously believed that God wills all men to be saved, and has always willed it. And this is shown from nowhere else than from his own benefits and that providence of God which is imparted commonly and indifferently to all generations. For there have been, and are, gifts of such a sort so general, that by their testimonies men might be helped to seek the True God; to which gifts, bearing witness to their author through all ages, a largess of special grace has been superadded. Therefore he holds that to those who use well that prior and general grace another special grace is poured out."[1]
- The same is attested by Psalm 18(19): "The heavens declare the glory of God, and the firmament announces the work of his hands." The Apostle cites this passage in Romans 10 to show that without preaching no one can hear and believe in him whom he ought to invoke. The Fathers commonly hold that that place is adduced by Paul in a mystical sense and is understood of the Apostles, since the psalm literally speaks of the heavens of this visible universe. They accordingly say that it is understood by Paul of the Apostles, of whose preaching he says: "And indeed, into all the earth their sound has gone out." Either because, in prophetic fashion, he uses the past for the future; or because by that time preaching had already been accomplished throughout all Palestine, which, after the manner of Scripture, is called "all" or "the whole earth."

- Yet with this exposition of the Fathers not standing in the way, Jansen thinks with some probability that that place is cited by Paul in the literal sense and understood of the corporeal heavens. For they themselves proclaim their author God, as the psalm itself signifies, and as Wisdom 13 states; and their preaching reaches all. From which Paul proves that all, both Jews and Greeks, or barbarians, can know God and invoke him; and this sense is clearly proved from the very context. For Paul had said: "For there is no distinction between Jew and Greek (namely, with God). For the same Lord is rich unto all who call upon him. For everyone who shall call upon the name of the Lord shall be saved." By which words, under the name "Greek," he understands the rest of the nations universally besides the Jews, so as thus to show that God's grace is equal toward all nations. But Paul objects to himself: "How shall they call upon him in whom they have not believed? Or how shall they believe without a preacher?" as if to say: there is a distinction between Jew and Greek with God, nor does he himself lavishly bestow the gifts of grace equally upon all, since not all can call upon him, because without some preacher they cannot have knowledge of him, and he has not sent preachers thus far to all nations. He answers these words, however: "And indeed into all the earth their sound has gone forth, and unto the ends of the world their words." He understands beyond doubt not only into Palestine, but into Greece as well, and into all barbarian nations. He speaks, moreover, not of what was going to be by the preaching of the Apostles, but of what had happened up to that time. Because, namely, at every time God excludes no one from his grace, whereby he might not be able to invoke him; and therefore by this machine and beauty of the heavenly bodies he has always manifested himself to all.
- If, therefore, the Gentiles were to use this grace of God well, a more abundant and more explicit knowledge of the mysteries of faith would be given to them. But because they had that beginning, it is rightly gathered that they were not destitute of sufficient help for believing and for salvation: not because help was granted to them which would proximately excite them to the faith of all the mysteries, but because something was given, whereby they could in some manner worship and invoke God; by the good use of which they would have greater things day by day. Thus about these common helps think Alexander, St. Bonaventure, Durandus, Gabriel, Adrian, Soto, St. Thomas, and Paulus Orosius.[2]
- But in this matter one must beware lest in any way we say that to a man acting well from free will the helps of grace are conferred: for this is absurd, as we have sufficiently shown in Disputation 91.
- And from this doctrine is easily understood that which the Scholastics commonly assert concerning the man brought up in the woods. Of this man we must not think otherwise than of a man among the Indians, or in the midst of paganism, where he has not even heard a single word of the mysteries of our faith. Of these therefore it must be said that they have many common helps, by which, if they were to act rightly, God also without a miracle would from eternity have so arranged matters that there would not be lacking to them someone to teach the rest of the things necessary for salvation. For he could easily, even without a miracle, ordain that some Christian, or surely several, should penetrate into those far

regions, as already they have penetrated, enticed by the craving for gold and silver. But that as yet no one has landed in these or those provinces has come about by the just judgment of God, because from eternity he saw that they would use ill the many common helps.

- But someone will ask whether these common helps are only from the grace of creation, or from the grace of Christ, which is necessary for living rightly. I answer: if someone uses well some prior help, and on account of that good use of it God gives some other grace, without doubt that prior help was not a gift of creation alone, but through Christ for living rightly: because to one acting from the gift of creation alone, grace is not given, as was sufficiently demonstrated in that Disputation 91.
- I add also, besides the common helps which seem necessarily to follow from the gift of creation, by which a man will never act rightly so that the grace of Christ be conferred upon him, that there are also other powerful helps of that grace of Christ, which is given for living rightly, while inwardly a thought moves a man to the knowledge of the true God, to the right life, and to overcoming temptations, to which helps the Gentiles sometimes, or almost always, resist.
- Yet it is undoubted that whenever the true knowledge of the mysteries is denied them, they have committed more sins, and they have misused the other more common helps of grace, and therefore greater helps are not granted to them.

Wherefore it will be necessary to admit that Augustine held that opinion; others, however, can more easily be explained in a good sense: therefore now let us speak to each in its order.

- To the testimonies of Scripture I answer: in Ecclesiasticus 7 and John 12, "cannot" - which is the same as "impossible" - cannot be taken for "difficult": so that it be said that no one can be corrected whom God has despised, and that the Jews cannot believe, for this reason, that it is difficult to correct such a one, as it was difficult for the Jews to believe; or certainly it is more fittingly understood of an impossibility consequent, which is brought along with the foreknowledge of God. For of necessity it is gathered in this way: He is corrected, therefore he is not despised by God; and he believes the preaching, nor is the glory of this world an impediment by which he believes less; therefore he does not seek that glory. For thus he who is corrected and he who believes is prevented by grace, so that he be called congruously against all adversities. But he who is not so congruously called cannot answer by an impossibility consequent, because thus called, he is foreknown not to be going to answer.
- The testimony of Antiochus proves only that he was not going to obtain from God mercy and repentance, although he asked with tears, because he did not ask rightly; not because he was destitute of help by which he could ask rightly.

- To the testimonies of the Fathers, first I say that those of Isidore, and if there be any others who speak in that way, can be explained, just as the testimonies of Augustine (which I purposely passed over), of an impossibility consequent, not antecedent: for he who is not called with a congruous calling is supposed from the foreknowledge of God already not to be going to answer; and with this supposed, he cannot answer. And these indeed are easier.
- Other things, however, which we brought from Augustine, distributed into two classes, in my judgment cannot be rightly explained. Wherefore I would not hesitate to say that Augustine, and his disciples Prosper and Fulgentius, held that opinion; which seems to me very probable, since I see that never by Prosper and Fulgentius is Augustine in this part excused, although they defend him from many other charges and interpret his sayings in a good sense. And although those things which we related in the first class we might somehow interpret in a good sense, as we shall expound the words of the Council of Trent which we there recited; yet since those which were adduced in the latter class admit of no benign interpretation, therefore I would not doubt that in both he had the same opinion.
- As for the words of the Council in that chapter 11, I think they are to be understood in one of two ways. First, so that the particle "nisi" not be exceptive, but have the force of a condition, and the sense be: God does not desert those justified by his grace, unless, that is, if not, they are first deserted by them. And let it say this most certain thing: that the justified are not left destitute by God of his sufficient help, if they do not first desert God; but what about, if they themselves desert God, the Council does not decree, and perhaps it wished to define nothing against Augustine's opinion. Or then we could explain that the Council is not speaking of prevenient help, but of accompanying help. Of this, however, it is true that it is denied by God to no one unless he first deserts God: because accompanying help is lacking to no one except because he does not cooperate and because he resists the prevenient help. And of this it manifestly speaks in the cited chapter 13, when it asserts: "For God, unless they fail his grace, as he begins a good work, so will he perfect to will and to accomplish." Men, however, are said to fail grace, because to God who excites and calls by a vocation they do not consent and cooperate. And therefore St. Anselm says in the book On the Fall of the Devil, chapter 3, that the bad angels did not receive perseverance because they were unwilling to receive it, as he himself strives to prove by many arguments; which must be understood not of prevenient help, but of accompanying help: for the prevenient help of perseverance does not depend on their consent.
- In the same way Hugh of St. Victor, in the Summa Sententiarum, tractate 2, chapter 3, and in book 1 On the Sacraments, part 6, chapter 24, says: "But those who were converted were therefore moved well because they had cooperating grace; but the one who turned away did not have it," - that is, he was not so moved because he did not have cooperating grace.[3]

Disputatio XCVIII - On peculiar grace in those who consent to the calling

I can also interpret Augustine and his disciples thus, when they pronounce: "God deserts no one unless he is first deserted," so that they be understood to speak of cooperating help. For it is prior that a man resist prevenient grace and do not cooperate with it, than that God deny his concurrence. And what they subjoin, "And he converts many deserters of himself," I could explain in this way: he later converts many who failed to answer his calling grace by a more abundant and congruent calling to himself, and he makes them do what they ought to do. But since from the testimonies of the later class it is so manifest to us what Augustine's mind was, it does not seem sufficient to explain those earlier sayings in this way.

There remains that we answer the argument which was brought forward last. I say, therefore, that the grace necessary for acting, without which no one can act, is twofold: one is antecedent, the other concomitant. And in this disputation the discussion is about the antecedent - whether that, without which a man cannot act, is denied to anyone. For as to the concomitant, no one doubts that it is not granted to many, because they fail and resist the calling and prevenient grace. And when, by the argument alleged above, adversaries infer: "Therefore God does not give to all the things necessary for acting," a distinction must be made. For there are some things necessary for acting with a necessity that is antecedent - that is, on the part of the cause - which are prior to consent itself; and these are the callings, excitations, and operating graces, which are denied to no one, as has been explained above. But other things are necessary with a necessity that is concomitant with our consent, which are required together with it; and these are in our power, as will be evident in the following disputation, and they are denied by God to those who by their liberty are unwilling to be helped by them; and such are the cooperating or concomitant graces. From this, God does nothing to harm our liberty, since these things are placed in our power, and by our liberty they are lacking to us. For that without them we cannot act is the same as that we cannot act without our liberty: just as, therefore, a consequent or concomitant necessity does not take away our liberty, as was shown in disputation 68, chapter 4, so also that the things necessary for acting, which are necessary only with a concomitant necessity, be lacking to someone, is no prejudice in the meantime, and looking humbly to the definition of the same Apostolic See, I shall sincerely state what seems to me more probable and more consonant with the doctrine of the Fathers.

An omnes, qui vocationi consentiunt, peculiari gratia excitentur.

Out of two who are equally stirred by grace, sometimes one consents and the other resists - the more recent hold this. cap. 1.

- The foregoing opinion, understood in three ways, is rejected. cap. 2.
- The one who answers the calling was stirred by a greater prevenient grace than the one who resists: as a more probable opinion it is proved by the testimonies of Scripture. cap. 3.
- The testimonies of the Fathers for the same opinion. cap. 4.
- A threefold explanation of the preceding opinion is refuted. cap. 5.

- A more probable exposition of the same opinion is confirmed. cap. 6.
- An answer to the testimonies of the prior opinion. cap. 7.
- A solution of the reasons of the same opinion. cap. 8.

Certain theologians hold that, out of two equally stirred by grace, it sometimes happens that one consents, the other resists the calling; and thus they think the whole difference between him who consents and him who resists is on the part of the concomitant and cooperating grace, which each one, once stirred by prevenient and operating grace, has in his own power. This opinion is favored by Catherinus, and by those who deny to God the knowledge of future contingents under a condition, as we shall note in chapter 6. Accordingly he affirms that it sometimes happens that he who was called by a greater grace resists, while he who was called by a lesser grace consents. They add, next, that not a few men are saved with sufficient and common grace, which is deduced from the foregoing foundation.

They prove this opinion, first, from St. Augustine, De civitate Dei 12, chapter 6, where he writes thus: "If two men are equally disposed in soul and body, and if, upon seeing the beauty of a body, one of them is moved to illicit enjoyment, while the other remains steadfast in chaste will, what do you think is the cause?" And though many causes which one might assign Augustine himself had admitted, and among them had numbered the inspiration of the Lord, rejecting the rest, he expressed the proper cause in these words: "What else appears, except that the one willed, the other was unwilling, to despise chastity?" Therefore he refers the diversity of the event to the liberty of each one, not to some peculiar prevenient grace.

Secondly, they confirm it from the same Augustine, De praedestinatione et gratia, chapter 15, where he says about Nabuchodonosor and Pharaoh: "As to nature, both were men; as to condition, both were kings; as to the cause, both were possessors of God's captive people; as to punishment, both were kindly admonished by scourges: what, then, made the ends of the two different, except that the one, feeling the hand of God, groaned in the remembrance of his own iniquity, while the other, by free will, strove against the most merciful truth?" He, therefore, assigns no other cause of the diverse effect than the freedom of the will.

Thirdly, from St. Jerome, epistle 150 to Hedibia, where, explaining that to the Corinthians, "To some we are the odor of life unto life," etc., he says: "Therefore our odor, which is of itself good, by the virtue of those who receive it, or do not receive it, passes into life or into death," etc. If, however, from some peculiar grace it befell that Paul's preaching was to some the odor of life, and, from the defect of it, to others the odor of death unto death, he would attribute that diversity not to the virtue and vice of men, but to a peculiar grace, or to the negation of it.

Finally, they prove it by reason. For, that God may begin in us, and that we may ascribe to him the prior parts of a good work, nothing else is required than a calling: that granted, nothing else seems to remain than our consent, by which we follow the one calling; but this is placed in our liberty, as also is to dissent: therefore it is not repugnant that, the same grace of calling standing, the one consent and follow the one calling, the other resist. From which they also infer that which we set down at the beginning of the chapter, namely, that with sufficient and common help some

are saved, indeed even with less than is conferred on others who are damned. Further, that with common and sufficient grace alone some are saved, they prove; because, if that be sufficient, it will bestow the faculty of acting, whereas faculty and potency which never come into act, at least in some singular instance, are vain: therefore someone will be saved with that alone. This opinion seem to be indicated by Domingo de Soto, De natura et gratia, book 1, chapter 16, and by Andrés de Vega, book 6 on the Council, chapter 9: for he teaches that not all whom God more favors by his stirring and prevenient grace are converted; contrariwise, that not a few whom he prevents with a lesser grace are saved. They adduce the example of Tyre and Sidon, to whom, if the signs that were exhibited to Bethsaida had been granted, they would have done penance, as Christ testifies in Matthew 11. They add, however, that all those whom God more favors by his aiding and accompanying grace always work better. Add also John of Bologna in the little work On Free Choice, section 9. From his very words, where in the question, "Why, out of two hearing the same word, is the one converted, the other not?" he says, one ought not to flee to that solution, "because one was drawn by the Father, the other not"; nor to that, "because God willed one to be converted, the other not"; but because "it seemed good to the one to be converted, to the other it did not seem good."[213521362137]

Caput II - The preceding opinion, understood in three ways, is rejected

In this chapter I shall indicate in brief three particular ways in which it is wont to be defended by its advocates, and what in them does not persuade us. For in that in which all agree, namely this - that the one who responds to the calling is not always stirred by a greater prevenient grace - we have resolved in the following chapters, with reasons added, to refute the position.

Some, then, understand the aforesaid opinion thus: that to respond to God who calls is not only from free will, but also from grace; yet that the first origin and cause of the determination to consent is the created will, to which God accommodates his grace as a cooperator. But this manifestly does not stand, as will be clear in the following disputation, chapter 5.

Others, in a second way, understand that not only is the created will the first cause and the origin of the free determination, but that even the free consent depends solely on it. These Doctors, though they give the first place to the grace of God, nevertheless think that grace adds nothing to our consent beyond moving us beforehand and exciting the will to desire the good; but that the consent itself proceeds from our will alone. Yet this mode can be refuted by the express testimonies of the Fathers. First indeed, in the Second Council of Orange, chapter 9, it is said: "Whenever we work, God works in us and with us"; therefore the grace of God not only works in us by preventing, but also works with us by accompanying.[2138] Secondly, the same thing is proved from Augustine, whom we alleged above from the treatise On Rebuke and Grace, chapter 11, where he distinguishes for us the grace that prevents and works from the grace that cooperates and helps; and he explains

it openly. So too Prosper, in the Capitula of the Gallicans, chapters 6 and 7. Fourthly, Fulgentius, book 1 To Monimus, chapter 14, and St. Bernard, in the little work On Grace and Free Choice, chapter 8, bring the same testimonies. For he affirms that it is ours only to dissent from grace; but that to consent is ours and also of the heavenly help. Fulgentius proves it from that text of Philippians 2: "For it is God who works in you both to will and to accomplish, for his good pleasure"; and from Ezekiel 36: "And I will make you to walk in my justifications."[2139][2140][2141][2142]

Finally, the reason is confirmed. For he who consents to the prevenient calling is moved to it both by the calling itself and by the origin of the act from the faculty that receives it: therefore by the virtue of that prevenient grace he consents and acts. Wherefore, in those affections and works in which prevenient grace and the consent of the will are both necessary, the consent to the prevenient calling is to be attributed at once to the calling and to the will, since the motion proceeds from both. And therefore, as I noted in disputation, chapter 6, one and the same calling is altogether prevenient and concomitant grace, operating and cooperating: for, as often as it precedes consent, it is operating and prevenient; inasmuch as it flows into our consent, it is cooperating and concomitant.

Nor does reason only prove this - that the consent of the will is from the will itself and from grace together in men after the Fall - but also in the state of integral nature and in the Angels. For, to speak generally, in all whom he has stirred and prevented to any work, consent is not elicited except in the virtue of the calling and preventing thought; which Augustine expressly hands down to us in the book On Rebuke and Grace, chapter 11, where, speaking of the first man, he says: "He did not have that grace whereby he should never be able to will evil; yet he certainly had that whereby, if he willed to persevere, he would never be evil." And he himself assigns the difference between the grace of that state and that which we have received through Christ: for they received a grace by which they were able to persevere, and without which they could not persevere; yet not the grace with which they would persevere; but through Christ we receive a grace with which we do persevere. Augustine, therefore, judges that even in the state of integral nature there is a peculiar grace, with which one can persevere; and thus that to consent, to will, and to work is to be attributed not only to the will, but also to grace. He teaches the same of Angels. Indeed, there was no sect among the Pelagians, or of the rest of the Pelagians, which, while conceding prevenient and operating grace, denied cooperating and helping grace to that work and consent to which operating and prevenient grace is given. For it would be to assert, contrary to the reason we have just set down, that grace is given to operate and to prevent with respect to some work, but that no helping and accompanying grace be given if consent follows.

Moreover, certain more recent authors, who think that to consent itself in Angels and in man in the state of integral nature is not from grace, but from free will alone, object to us Augustine, On Rebuke and Grace, chapter 11, where, speaking of the first man, he says: "Why does he who can will

the good not give thanks to God?" Whence they gather that, when one consents to the calling grace, he does not need the help of that same grace. For, they say, it is the same thing to receive the good and to consent to a good calling. But what Augustine subjoins straightway removes this objection from the midst: for he renders the reason in these words, namely, because even that very willing of the good is from the grace of God; "for what do you have that you did not receive?" so that both to will and to accomplish be from him who works in us.

As I noted in the disputation, chapter 6, the very same calling is at once prevenient grace and accompanying grace, namely operating and cooperating: for insofar as it precedes consent it is operating and prevenient; but insofar as it elicits consent from us, it is cooperating and accompanying.

Nor does this line of reasoning only prove that the consent of the will is at once from the will itself and from grace in men after the fall; it proves the same even in the state of integrity and in the angels. Indeed, in all these cases, whenever grace anticipates some work, consent is not elicited except by virtue of the preceding calling and consideration; which St. Augustine expressly hands on to us in the book On Correction and Grace, chapter 11, where he speaks thus of the first man: "The first man did not have that grace by which he would never will to be evil; but he certainly had that grace, in which, if he were willing to remain, he would never be evil." And there he assigns the difference between the grace of that state and the grace which we receive through Christ: because they received a grace with which they could persevere, and without which they could not persevere, but not a grace with which they would in fact persevere; whereas now through Christ we receive grace with which we persevere.[2143] Augustine therefore judges that in the state of integrity too there is a peculiar grace with which one perseveres; and thus that to consent, to will, and to act ought to be ascribed not to the will alone, but also to grace. He teaches the same about the angels. And assuredly, no one up to now, whether a Pelagian or one of the remnants of the Pelagians, conceding prevenient and operating grace, has denied cooperating and helping grace toward the same work and the consent for which operating and prevenient grace is given. For it is against the manifest reason we have just set out, to assert that for some work operating and prevenient grace is given, but not helping and accompanying grace, if consent follows.

Moreover, this is also confirmed by reason. For the one who consents to the prevenient calling is enticed and drawn by that very calling and by the object known; therefore by virtue of that calling he consents to it and acts. Accordingly, in those affections and works in which prevenient grace is necessary, the consent of the will is to be attributed at once to the prevenient calling itself and to the will, since an affection proceeds from each; and hence in those matters the cooperation of grace itself unto consent is not excluded.

But some more recent writers, who think that to consent in the angels and in man in the state of integrity is not from grace but from free will alone, object against us with Augustine, On Correction and Grace, chapter 11, where he thus speaks of the first man: "For, to receive the good, he did not need grace." From which they infer that for consenting to the calling of grace he did not need the

2143. St. Augustine, De correptione et gratia, c. 11.

help of that same grace; for, they say, to receive a good and to consent to a good calling seem to be the same. But what Augustine immediately subjoins removes this objection out of the way: he gives the reason in these words, namely, because he had already received the good in the justification in which he had been created by God; he was therefore said not to have needed a new grace in order to receive the good, since the good which he had received in justification he still possessed and had not yet lost. Yet, in order that he might abide in that good, he needed a new grace and help; and he received only that whereby he could persevere, not that whereby he would in act persevere. He thinks therefore that from the very help proceeds not only the ability to persevere, but also the act of persevering; but this does not come to be without consent: therefore the consent itself in that state would be from grace itself. That the same is Augustine's mind - that not to have and not to receive from God are the same - is clear from chapter 10 of the same book: speaking of that first man he says, "He did not therefore have perseverance in that good; and if he did not have it, he assuredly did not receive it." And in chapter 12 he plainly teaches that aid of perseverance was given to the first man, by which he could persevere, not by which he would persevere. Anselm says the same in the book On the Fall of the Devil, from the first chapter up to the third; and in that first chapter he understood that text, 1 Cor. 4: "What do you have that you did not receive?" not only of men but also of angels.[2144] It is therefore quite wrongly that some assert that to consent to the calling of grace in angels is not from grace itself, but from free will alone.

They object again with those words of Augustine in that same chapter 11: "He had given (namely, to the first man) help, without which he could not remain in that justice if he willed; but, that he should will, he left in his own free choice." But by these words he signifies only this, that it was free to the first parent, even when helped by grace, to resist the grace that was calling - just as also the Council of Trent, session 6, teaches that it is free to anyone who consents to the calling of grace to resist the same; which is to be understood of a congruous calling: how much more then of a non-congruous and merely sufficient calling, which was granted to the first man in that state.[2145] From the fact, however, that it was free to man to consent to the calling of grace, it does not follow that the cooperation of grace itself unto consent is excluded; otherwise the same thing would have to be said of man after the fall, which our adversaries do not concede.

Third, they allege the same Augustine, chapter 10 of the same book, where he says: "Thus (God) ordered the life of angels and of men, that first he might show what their free will could do, and then what his grace's benefit and the judgment of his justice could do." But if these words favor their opinion in some way, they prove too much - namely, that in their justification the first places ought to be ascribed to free will. Therefore I answer that Augustine only wished to signify that God permitted the first man and many angels to fall into sin, that in this way he might show to them what their free choice could do - namely, to sin. Then in man he showed the benefit of his grace, but in the angel the judgment of his justice; and this suffices for the second mode of explaining the former opinion.

2144. St. Anselm, De casu diaboli, c. 1 - 3; cf. 1 Cor 4:7.
2145. Council of Trent, Session 6 (De iustificatione).

A third mode is that of certain theologians of our time, who, in order to defend the aforesaid opinion, affirm that the consent of the will is at once from free will and from grace, not only in time, but also causally; yet, on the side of exciting and prevenient grace, sometimes a reprobate is equal to a predestined man and does not receive a peculiar benefit of grace. In this mode there remains only this for us to attack, that in which all who follow this opinion conspire, namely, that from two who are called by equal grace, sometimes one consents, the other resists. For what pertains to the cooperation of consent, those who understand the aforesaid opinion in this third way teach rightly. But that in which all agree we shall refute in the following chapters, while confirming the truer opinion.

Caput III - That one who responds to the calling is excited by greater prevenient grace than one who resists is proved, as the more probable view, by testimonies of Scripture

They, taking their stand in Augustine and defending it with all their might, pronounce that all who respond to the calling have been stirred by a greater benefit of antecedent grace than those who resist. Accordingly, in those who consent, and in all the predestined, the operating, prevenient, and exciting grace is greater than in others; and from two to whom an equal grace comes beforehand, they think it never happens that one consents with the other resisting. Therefore they judge that between him who responds and him who resists there is a difference not only on the side of cooperating and accompanying grace, as the Doctors of the former opinion assert, but also on the side of operating, prevenient, and exciting grace. For this opinion there are not obscure testimonies of Scripture and the Fathers; a cogent argument too commends it. Yet, for greater clarity, in this chapter we will bring forward testimonies of Scripture alone.

First testimony is John 6: "No one can come to me unless the Father who sent me draws him": where to God as the disposer in a peculiar manner is attributed that someone is drawn to the Son. Augustine so understands this passage in the book Against Two Letters of the Pelagians, chapter 3, where he notes that this is the same as what is said in that same chapter 6 of John: "Unless it has been given him by my Father." He gives the reason in these words: "He indeed is drawn to Christ to whom it is given to believe in Christ; now this is only that one who responds to the one calling: therefore to this man something is given by God which is not granted to that other who does not respond." Moreover, that something peculiar of prevenient grace is granted to him who is drawn, Augustine indicates while explaining the same passage in chapter 19 of that book, when he says: "He is drawn in wondrous ways in order that he may will by him who knows how to work within in the very hearts of men: not, that men should believe while unwilling (which cannot occur), but that from unwilling they should be made willing." For if in accordance with his foreknowledge God works within wondrously in the hearts of those who acquiesce in the calling, it follows that God does not work equally with his prevenient grace within the hearts of those who resist and of those who respond to the calling; since in the hearts of those who resist he does not work preveniently in those wondrous ways.[2146]

2146. St. Augustine, Contra duas epistolas Pelagianorum, c. 3 and c. 19; John 6:44.

In the same sense he explains that saying of the same chapter 6 of John, "Everyone who has heard from the Father and has learned comes to me," in the book On the Predestination of the Saints, chapter 8; from which we shall cite some things further on.[2147] And to the same point looks the testimony of Prosper, which we shall report below.[2148]

Second, it is proved from Rom. 11:33, "O the depth of the riches of the wisdom and of the knowledge of God," and Matt. 11:25, "I confess to you, Father, Lord of heaven and earth, because you have hidden these things from the wise and prudent, and have revealed them to little ones. Yes, Father, for so it was well-pleasing before you." For it would be said in vain in this manner, if he who responds were not excited by a greater operating grace than he who resists. For on the part of God working, the grace would be equal in both; and so every cause of wonder would cease, nor should it be thrown back upon the sole will of God.

Third, unless God prevened him who responds with greater grace, one would not say that he has mercy on one rather than another, and that he hardens one rather than another: for in Rom. 9 the Apostle says, "Whom he wills, he has mercy on; whom he wills, he hardens." Therefore, because by a peculiar mercy he excites one which he does not grant to another, he is said to have mercy on this man and not on that. Treating this passage Augustine, book 1 to Simplician, question 2, about the middle, speaking of those who were called by God but were not elect and did not obtain mercy, thus says: "If he willed also to have mercy on them, he could so call them in the way that would be suited to them, that they too would be moved, understand, and follow"; and a little after: "But of him on whom he has mercy, thus does he call him, in the way he knows to be congruent to him, that he may not spurn the One calling." Therefore since Augustine says that God has mercy on those whom he excites by a congruent calling, and on others he does not have mercy - indeed, according to the Apostle, he hardens them - it follows that this is said for no other reason, except that to those who respond a peculiar and greater operating grace - which, because it is greater, is called mercy - is conferred. For if God were to prevene all equally, and then one, by his liberty, were to act from that grace while the other resisted, he would not have mercy on one more than on another. For that cooperation with divine grace is in the power of anyone: once excited by God, he can have it as he wills. But the mercy by which God is said to have mercy on one rather than another is not referred to cooperating grace, but to prevenient grace, as the testimonies cited plainly demonstrate. It is also proved because when Paul says, "Not of him who wills, nor of him who runs," he excludes our cooperation; he adds, "but of God showing mercy": and he says that it is of God showing mercy alone. Wherefore Augustine rightly refutes there the explanation of St. Gregory Nazianzen, Oration 31.[2149]

1. The place in which St. John Chrysostom and the Greek Fathers agree, that therefore it was said, "Not of him who wills, nor of him who runs," because our will alone does not suffice, is also refuted by St. Augustine in the Enchiridion, chapter 32, as I noted in disputation 88,

2147. St. Augustine, De praedestinatione sanctorum, c. 8; John 6:45.

2148. Prosper of Aquitaine, Ad Simplicianum? Sc. the testimonium is adduced infra (cf. Ad capitula Gallorum).

2149. Rom 11:33; Matt 11:25; Rom 9:18; St. Augustine, Ad Simplicianum, lib. 1, quaest. 2; St. Gregory Nazianzen, Oratio 31.

chapter 8.[2150] He subjoins, moreover, these words in that question to Simplician: "Therefore it is not to be thought that it was said: Not of him who wills, nor of him who runs, but of God showing mercy (Rom 9:16), because without His help we cannot attain what we will: but rather for this reason, that without His calling we do not will." He therefore refers the mercy of God, which is denied to the reprobate, to the calling itself, not to cooperation; and below: "Likewise it is true, 'Not of him who wills, nor of him who runs, but of God showing mercy,' because even if He calls many, yet He has mercy on those whom He so calls as it is fitting for them to be called, that they may follow." Finally, the same Augustine in that question 2, book 1, to Simplician, a little before the middle, says: "Let him know that He granted him to believe, who has mercy by inspiring faith; on whom He had mercy so as to bring the call even to him while still an unbeliever." Augustine therefore establishes the mercy of God in the calling itself and the inspiration, which pertains to prevenient grace (*gratia praeveniens*). But how the mercy of God, in Augustine's mind, is given only to those who respond, we shall say in the following chapter.[2151]

Further, Augustine used both Pauline testimonies in Epistle 105, a little before the middle, to show what is the cause why one man responds, another resists. "But why" (he says) "this one believes, that one does not believe, though both hear the same thing, a miracle is done in the sight of both, both see the same, 'the depth of the riches of the wisdom and of the knowledge of God' (Rom 11:33) - 'whose judgments are unsearchable' - while 'He has mercy on whom He wills and He hardens whom He wills' (Rom 9:18)." He has the very same in the book On the Good of Perseverance, chapter 8.[2152] But if the adversaries' opinion were true, a manifest cause of this difference could be assigned, namely, that one, aided by grace, consents by his freedom, while the other resists the same grace. Augustine, however, refers the cause of this to the hidden judgments of God; for it proceeds only thence, that one is so called as to respond, and on that very account God is said to have mercy on him; but another is so called as not to respond, and therefore God is said not to have mercy on him.

Lastly, that which Baruch, chapter 3, said about the giants, whom God did not choose, can most aptly be accommodated to all the reprobate: "These the Lord did not choose, neither did they find the way of discipline; therefore they perished; and because they had not wisdom, they perished through their folly" (Bar 3). For although not everyone who sins sins from ignorance, nevertheless everyone suffers such a defect of consideration that, although freedom is not thereby impeded, yet he is rightly said to lack wisdom. For wisdom is that consideration which so apprehends and considers the matter as to move the affection to act rightly. This defect is found in all who sin; of this there is no doubt, as St. Thomas testifies, I-II, question 77, article 2, where we shall treat this more fully; therefore Scripture calls him blind who acts evilly; indeed, Aristotle likewise says in Ethics III, chapter 1: "Therefore every vicious man is ignorant of what he ought to do" - that is, he

2150. St. Augustine, Enchiridion, c. 32; cf. Gabriel Vázquez, Disputatio 88, c. 8.

2152. St. Augustine, Epist. 105; De bono perseverantiae, c. 8.

does not attentively consider what things are to be done. Therefore there is inequality on the part of the consideration which God disposes according to His will, as we shall show in chapter 7 of this disputation.[2153]

Caput IV - Patristic testimonies for the same position

If we carefully go through the writings of Augustine, we shall discover not only that the aforesaid opinion was always on his lips and ever in his heart, but also that he vehemently championed it against the Massilians; so that from this likewise we may understand of what weight it ought to be with us, when Augustine's cause against the Massilians was highly approved by the most grave Fathers of the Church and the Roman Pontiffs, as we showed in disputation 91, chapter 5.[2154] There are, therefore, splendid testimonies of Augustine, by which he seems not obscurely to have delivered our view.

Let the first testimony be from book 2 On the Merits and Remission of Sins, chapter 19, where he writes thus: "But as much as it has been granted, let us be wise and understand, if we can, that the Lord God, being good, for this reason also sometimes does not grant to His saints the righteousness of some work, either certain knowledge or a conquering delight, that they may know that not from themselves but from Him they have the light by which their darkness is illuminated, and the health by which their earth yields its fruit." By "certain knowledge" he means the congruent cogitation and consideration of that which ought to be done, as we said in disputation 88, the last chapter; by "conquering delight" he means the affection which proceeds suddenly from this knowledge, and by which the will is enticed that it may freely consent to the call; and we showed in the same disputation, chapter 4, that these two pertain to operating, exciting, and prevenient grace.[2155]

Therefore Augustine says that this operating grace is sometimes denied by God to His elect, namely, when He permits them to fall into sin, that they may learn it is a gift of God; and thus he judges that, when a man sins - even if he be among the elect - there is lacking to him that certain knowledge and conquering delight. Therefore there is not equal excitation on the part of the intellect and the first movement of the will in him who responds and in him who resists. For Augustine had said in that book, chapter 17, that every sin comes from a defect of certain knowledge and conquering delight, in these words: "Therefore each of us now knows, now does not know, to undertake, to do, to fulfill a good work; now is delighted, now is not delighted, that he may know that it is not of his own capacity but of the divine gift, either that he knows or that he is delighted." Certainly he is not speaking of that delight which is already with consent, as is clear from the foregoing, but of that whereby, together with a congruent cogitation, God so disposes our affection that He elicits consent from it; from the defect of which sin proceeds, as he himself testifies.[2156]

2153. Baruch 3; St. Thomas, Summa theologiae I-II, q. 77, a. 2; Aristotle, Ethics III, c. 1.
2154. Gabriel Vázquez, Disputatio 91, c. 5.
2155. St. Augustine, De peccatorum meritis et remissione, lib. 2, c. 19; cf. Gabriel Vázquez, Disputatio 88, c. 4 et cap. ult.
2156. St. Augustine, De peccatorum meritis et remissione, lib. 2, c. 17.

Secondly, it is proved from the same Augustine, in the book On the Predestination of the Saints, chapter 6, where he says: "Many hear the word of truth, but some believe, others contradict; these therefore will, but those will not: who is ignorant of this? But since for some the will is prepared, for others it is not prepared, it must be distinguished what comes from mercy, what from judgment." Therefore he assigns the difference on the part of the divine predefinition, because God prepared and preordained the will of the one by a congruent calling as the means, but did not prepare the will of the other; and in the former he acknowledges mercy, in the latter judgment. And as Augustine himself expressly noted in Epistle 107, after the middle: the will is prepared by a hidden inspiration; but inspiration is operating and prevenient grace, as we said above in disputation 88, chapter 9. And again in the same epistle he says that the will is prepared by the antecedent grace of God; therefore Augustine acknowledges inequality not only in the cooperation with grace but also in the antecedent grace itself; so that it may be greater in him who responds, but by judgment be denied to him who does not respond, and so be lesser in him. Now mercy, in Augustine, is not that by which any grace whatsoever is granted, but that by which efficacious grace (*gratia efficax*) is granted. For in book 1 to Simplician, question 2, as we saw in the preceding chapter, he says that God has mercy on those whom He calls with a congruent calling, which is efficacious; as is manifest from that whole question. Moreover, Prosper, in the book to the Excerpts of the Genoese, resolving the third doubt and explaining this Augustinian passage, which had seemed difficult to the Genoese, establishes this difference in time and in the very donation of grace, in these words: "Is it at all doubtful that, when the word of Truth is preached, some believe by their will, others by their will do not believe? But when God has opened the heart of some and has not opened the heart of others, it must be distinguished what comes from mercy, what from judgment."[2157]

In the same way the same Augustine, in the same book, chapter 8, after the middle, shows this difference in the very division of grace which occurs in time, in this manner: "When, therefore, the Gospel is preached, some believe, some do not believe. But those who believe the preacher without, who sounds without, inwardly hear from the Father and learn; but those who do not believe hear without, yet do not hear inwardly nor learn." And explaining what it is to hear inwardly, he subjoins: "This is, that to them it is given to believe; to those it is not given: because no one" (he says) "comes to me, unless the Father who sent me draw him" (Jn 6:44). What, I ask, is it "to be given to someone to believe" and "not to be given to another," if not that the sound of the internal inspiration be so fitted to the one's intellect that he hears and believes, but not be fitted to the other's, from which it comes about that he neither believes nor hears? Now this diversity of calling is from God alone, who knows how to call in one way and in another. But who will say that he who has not received to believe has received equal grace and prevenient mercy from God with him to whom it has been granted to believe? And a little above, showing that some are taught by God and others are not taught, he says: "For if He had willed to teach those to whom the word of the cross is foolishness, that they should come to Christ, surely they too would have come." He then objects to

2157. St. Augustine, De praedestinatione sanctorum, c. 6 et c. 8; Epist. 107; Prosper of Aquitaine, Ad Excerpta Genuensium, ad tertium dubium.

himself: "Why," they say, "does He not teach all?" He himself answers: "If we should say that those whom He does not teach are unwilling to learn, it will be replied to us, 'And where is that which is said to Him, Lord, Thou shalt turn and quicken us?' (Ps 84). Or if God does not make willing out of unwilling persons, why does the Church, according to the Lord's precept, pray for its persecutors?" But according to the adversaries' view God teaches equally at some time both him who hears and learns and him who neither learns nor hears; and therefore He does not teach all because not all are willing to learn. Augustine, however, impugns this from that Psalm 84: "O God, Thou turning shalt quicken us," showing that our quickening and discipline proceed from God in a peculiar manner, and that we ask as something peculiar on behalf of persecutors that which all have who learn: for thus is one taught, that he may also learn - that is, that this kind of teaching be granted as a peculiar benefit to some by God's mere liberality. And therefore neither is the grace of God, and His prevenient mercy, equal and disposed in the same way in both, nor has the excitation of their will existed equally; for that, from which it comes about that one responds, is prior to our consent, and thus pertains to prevenient grace.

The same thing is clearly taught by St. Gregory in Homily 30 on the Gospels, in these words: "For indeed the same Spirit opens within the heart of the hearer and gives utterance to the tongue of the teacher. Therefore let no one ascribe to a human teacher what he understands from the teacher's mouth; because unless He who teaches within act, the teacher's tongue that sounds from without labors in vain. Behold, all alike hear the voice of the speaker; yet they do not all alike perceive the sense of the voice they hear. Why is this, unless because understanding is not in the hearts of many hearers, unless the very Father grant it? He is the Master who, with regard to the understanding of the voice, teaches something in a special way." In which he assigns a special doctrine of the Spirit moving within, peculiar to those who respond; and in that special inward operation a special grace is required, namely, a congruent calling.[2158]

reply to the Massilians' charge of desperation

It is taught that they might learn that the cheeks of doctrine, as it were a peculiar benefit, are conferred upon certain persons for us out of God's mere liberality. Gregory has handed down the same very plainly: Homily 30 on the Gospels, in these words: "Because unless the same Spirit be within the heart of the hearer, the tongue of the teacher labors outwardly in vain. Let no one, therefore, attribute to the man who teaches what he understands from the mouth of the teacher; for unless there be a spirit within that teaches, the tongue of the teacher labors to no purpose. Behold, you all equally hear one voice of the speaker, yet you do not equally perceive the sense of the voice you hear. Why, if the voice is not different, is the intelligence of the voice different in your hearts, unless because, besides this, that the voice of the speaker admonishes in common, there is a master who in particular teaches certain persons concerning the intelligence of the voice?"[2159] Behold, Gregory attributes a special teaching of the Spirit moving within to those who respond; and in that inward operation we must recognize a special grace that works.

2158. St. Gregory the Great, Homiliae in Evangelia, hom. 30.
2159. St. Gregory the Great, Homiliae in Evangelia, hom. 30.

Thirdly, it is confirmed from the same book of St. Augustine, chapter 16, where he plainly shows that there is a peculiar calling in him who responds. "God," he says, "calls the predestined many sons, that he may make them members of his only-begotten; not by that calling by which those were called who did not wish to come to the wedding, but by the calling by which he calls the predestined," which the Apostle distinguished when he said, 1 Cor 1: "To those who are called, Jews and Greeks, we preach Christ"; and a little below: "Knowing that there is a certain sure calling of those who are called according to purpose." Of this same calling, after a few lines, he adds: "But by what calling is he a believer?"[2160] Therefore Augustine shows that among all the predestined there is not a common, but a singular calling, which the Apostle distinguished. Since that calling is a grace that works (*gratia operans*), it follows that there was granted to all the predestined a peculiar grace that works and arouses, by reason of which same thing Augustine teaches in the book On the Predestination of the Saints, chapter 6, that the will is prepared for the predestined, whereas for others it is not prepared. "Many," he says, "hear the word of truth, but some believe, others contradict. Therefore these will to believe, but those do not will. Who is ignorant of this? But since for some the will is prepared and for others it is not prepared, we must discern what comes from mercy and what from judgment. What, therefore, comes from mercy if not that very believing itself? And what from judgment if not that very contradicting?"[2161] Therefore Augustine thinks that for those who believe the will was prepared out of mercy, but for others, out of judgment, it was not prepared; and consequently neither did there exist in each an equal prevenient grace of God and mercy, nor a will disposed and aroused in the same way; for that - namely, the very believing, whence it proceeds - comes first according to our sense, and so pertains to prevenient grace.

The last testimony shall be taken from Hilary of Arles, in the letter to St. Augustine which is placed before the book On the Predestination of the Saints, where, against Augustine's doctrine, he reports the murmuring of the Massilians in these words: "Then they take it ill that grace is thus divided, which either was then first given to the first man, or is now given to all: that he received perseverance not so that he might not be able to persevere without free choice, but so that he might persevere if he would by free choice; but now to the holy ones predestined by grace to the kingdom, no such aid of perseverance is given; rather, such that perseverance itself is granted to them - not only that without this gift they could not be persevering, but even that by this gift they cannot fail to be persevering. By these words of your holiness they are so moved as to say that a certain despair is set before men. For if," they say, "Adam was so helped that he could stand in justice and could decline from justice; now the saints are so helped that they cannot decline, if indeed they have received that perseverance, so that they cannot will otherwise; or they are carried along in such a way that either they do not come at all, or if they have come and have received [it], they say the profit of exhortation or of commination pertains to that will which had the free power of persisting and of failing: not to that will to which the not willing justice is joined with an invincible necessity." And a little later: "Whence also in this alone will they say that the first man differs from all, namely, that him in integrity of the powers of the will grace helped as willing, without which he could not

2161. St. Augustine, De praedestinatione sanctorum, c. 6.

persevere; but these, with powers lost and ruined, as only believers, not only does it raise up prostrate, but also supports while they walk." But whatever may have been granted to the predestined, they contend to admit and hold it by their own will.[2162]

From which it is gathered that the Massilians never thought that the free will of man or angel could persevere without the grace of God, as Sander calumniously ascribes to them, book 7 De visibili monarchia, heresy 99; for by the cited words they plainly confess that man in integral nature could not persevere without the help of the grace of God. Faustus of Riez also, who was a most ardent defender of that Massilian sect, as I noted in Disputation 89, cap. 4, expressly taught this; for in the book On Grace and Free Will, cap. 1, against the Pelagian he speaks thus: "I judge that the liberty of free choice by itself alone could not suffice (namely, unto salvation) without the safeguard of grace, even before the transgression violated the privilege of that [state]."[2163]

Therefore the Massilians only murmured against Augustine, and were offended at his words, because he distinguished two prevenient graces, one special in those who persevere, by which they are made persevering, which was not granted to the first parent in the state of innocence; another, with which men can persevere, but do not persevere, which was given only to the first parents and to the bad angels.

These two graces Augustine had distinguished in the book On Correction and Grace, cap. 11; where, concerning the grace which through Christ was given after the fall of nature, he thus writes: "And by so much the more is help (*adiutorium*) given through Christ our Lord to those to whom it has pleased God to give it, that it may not only be present, without which we cannot remain even if we will, but also be such and so great that we will." The same two graces he most clearly distinguishes also in the same book, cap. 12, where are contained the words which Hilary recited in that letter and by which the Massilians were offended. Moreover, in that same chapter 11 he adds that the grace which we receive through the second Adam is indeed more powerful than that which was granted in the state of innocence to the first parents, although that former was more joyous; for in that state it existed without any strife and perturbation of passions; nevertheless it did not have the effect of perseverance; now, however, with great struggle of passions it makes the predestined to persevere.[2164] Therefore the Massilians felt that prevenient grace is common, by which all are aroused on each single occasion so that they may persevere; nor is there a special grace in those who in fact persevere; because otherwise, if those alone who persevere had that special grace, it would follow that no one could persevere without it, and no one with it could fail to persevere. Whence they inferred that all way to correction and commination is closed off, and a certain desperation is induced.

But indeed Augustine induced neither desperation nor necessity; for he did not say that without a peculiar grace no one is able to persevere, but rather that no one in fact perseveres without it. He distinguished, however, another common grace sufficient, and another efficacious; nor, when he

said "man is able to persevere," did he deny that without that special grace no one in fact perseveres. If he had said that without that special grace no one is able to persevere, he would have to be understood not of an antecedent impossibility, which is on the part of the cause, but of a consequent impossibility, which is joined with the foreknowledge of the future event (about which we have often spoken). This impossibility, just as the consequent necessity, neither takes away nor harms our liberty, but rather supposes it.

In this sense Augustine speaks openly in the book On the Good of Perseverance, cap. 6, where, replying to that objection of the Massilians which Hilary had written to him, he says: "But those brothers (as you write) are unwilling that perseverance be so preached that it cannot either be merited by suppliant prayer or lost by contumacious pride: but they do not attend carefully enough to what they say. For we are speaking of that perseverance by which one perseveres unto the end; that is given because it has been persevered unto the end; but if it has not been persevered unto the end, it has not been given. And a little below: True perseverance unto the end, since no one has it unless he has persevered unto the end, many can have, no one can lose. And again after a few lines: since when each one has persevered unto the end, neither can this gift be lost, nor can there be added other gifts which could be before the end." Therefore Augustine teaches that it is impossible that the grace of perseverance be lost, in that sense in which we say that a thing, when it is, cannot not be; which impossibility or necessity is only a concomitant or consequent of the thing, by no means contrary to liberty, as has often been said.[2165]

And of that consequent necessity Celestine too seems to have spoken in that epistle 1 to the bishops of Gaul, canon 7, where he says that not even a baptized man is fit to overcome the snares of the devil and to conquer the concupiscences of the flesh, unless by daily help he has received perseverance in good conduct. But, as Augustine bears witness in the book On the Good of Perseverance, cap. 1 and 6, perseverance - which the name itself indicates - no one has who, de facto, does not persevere, even if he has that from which he could persevere. Therefore when Celestine says that no one is fit to overcome temptations unless he has the gift of perseverance, it must be understood not of antecedent impossibility, but of the consequent. For if it were a matter of antecedent [impossibility], then with sufficient help, which is not called perseverance, or the gift of perseverance, each one can persevere and overcome all temptations.

In the same way Innocent is to be understood, as he is reported in epistle 91 among the letters of Augustine, whom Celestine also cites in that same canon 7, when he says: "If we do not firmly rely upon what is conferred on us (namely, the daily helps), by no means shall we be able to cut off human errors. For it is necessary that by Him by whose help we conquer we be again conquered if He does not help." These words are to be understood of efficacious and congruous help. For when he says "if God does not help," he signifies "if God permits." But God is said to permit not because he denies sufficient help, but because he denies congruous [help]. Therefore he says that it is necessary that we be conquered if we are left without congruous help and without that special gift

2165. St. Augustine, De bono perseverantiae, cc. 6, 15, 22.

of perseverance - with a necessity only consequent, not antecedent. For of antecedent [power] the Council of Trent teaches clearly, session 6, chapter 5, that we are able to respond to the grace that calls us, so that we are able also to resist it.[2166]

Finally, although the predestined are able, by antecedent possibility, to persevere and to resist the calling, nevertheless they cannot but have that peculiar grace with which God prevents them; the opposite of which the Massilians seemed to insinuate. We have, therefore, by the judgment of Augustine, Celestine, and Innocent, that in him who perseveres the special gift of perseverance is found, and hence that one is always stirred up by a greater grace than he who does not respond to the one calling; and that the opposite opinion, which some Scholastics follow, once pleased the Massilians.

But what those Massilians urged against Augustine, namely, that correction and commination are of no use, has no force, as we have shown in Disputation 91, cap. 18. Moreover, Augustine pursues the Massilians in that book On the Good of Perseverance, cap. 15 and 22, showing in what way those who persevere received a peculiar help of grace, which was not granted to others; which he calls the help of pitying grace. Prosper also comes in, himself thoroughly Augustinian, in book 2 On the Vocation of the Gentiles, cap. 23 (alias 8), who, showing that there is election among adults and among infants - so that to some the grace of election is given, to others it is not given by the sole will of God - says: "Just as, with respect to the greater [i.e., adults], besides that general grace which, more sparingly and more hiddenly, knocks at the hearts of all men, by a more excellent work, by a more liberal gift, by a mightier power, a special calling is exercised; so also with respect to innumerable little ones the same election is manifested." Therefore he thinks that to adult elect there is granted a more excellent work, a greater gift, a more powerful virtue, and a special calling. And in the book Ad capitula Gallorum, cap. 5, where the Gauls raise this proposition against Augustine as absurd, which they gathered from his writings, namely, "that those who are called are not called equally, but some so that they might believe, others so that they might not believe," Prosper replies in these words: "If calling in the Gospel be understood only as preaching, it is not truly said that to some and to others it is preached otherwise and otherwise, since there is one God, one faith, one regeneration, one promise. But if one looks to the effect of planting and of watering, something else has been done with those whose outward ears have been struck by a bodily voice; something else in those whose inward sense God has opened, and in whose heart he has laid the foundations of faith," etc.[2167]

To all these we can add the splendid testimony of St. Thomas, I-II, q. 112, a. 4, where, when he asked whether grace is greater in one than in another, he replies that indeed it is greater; and he is speaking of habitual grace, to which, when he had assigned the diversity of disposition, by which we are prepared for grace, as the cause of this inequality, he subjoined these words: "But on this side the first reason for this diversity cannot be taken, because preparation for grace is not of man, except in so far as his free will is prepared by God. Whence the first cause of this diversity is to be

2166. Council of Trent, sess. 6, cap. 5.

2167. Prosper of Aquitaine, De vocatione gentium, lib. 2, cap. 23 (alias 8); idem, Ad capitula Gallorum, cap. 5; cf. also cap. 7 of this Disputation.

taken on the part of God himself, who in diverse ways dispenses the gifts of his grace." Therefore, since the holy Doctor wishes to grant inequality not only in the actual disposition itself wherein there already is cooperating grace, but also in the very largesse of the gifts by which the will is prevented, he plainly indicates that, in prevenient grace, those who obtain unequal habitual grace had been unequal.

A triple explanation of the preceding opinion is refuted.

Caput V - A triple explanation of the foregoing opinion is refuted

Before I confirm the same opinion by no obscure reason, I have judged it worthwhile...

I have judged it worthwhile to set forth its sense. For some, not grasping the mind of St. Augustine, from whom that sentence was taken, have so interpreted it that to very many and learned men it has seemed overly severe and alien to the truth. We can explain it, then, in four ways; but the last sense of it is to be embraced and demonstrated by reason. Therefore it will be necessary in this chapter to refute the other three.

First, then, some understand the aforesaid sentence in such a way as to assert, first, that with that aid alone which is called sufficient, no one can answer unless efficacious aid is granted to him; then they add that, when that efficacious aid is granted, the will is so moved to consent that it cannot dissent from it. Which interpretation, if it be understood of the aid of prevenient and exciting grace, and of antecedent impossibility which is on the part of the cause, as the more recent authors understand it, has always seemed to me very difficult. For from the first part of it the following seems to result: that it is in vain called sufficient aid, if with it the will of itself cannot will and act; moreover, with that alone granted, it is not placed in the liberty of the will to consent or to dissent; since without another aid, efficacious and congruous, the will cannot be moved by an impossibility on the part of the cause.

But some answer that, if a man were to use that aid of sufficient grace well, God would grant to him that peculiar aid which is called efficacious. Yet this reply can easily be refuted. For if a man were to use that sufficient aid well, he would already be consenting to it and answering the vocation - either by pursuing with affection what the vocation proposes to be pursued, or by fleeing what it admonishes should be fled; and in either way nothing would remain to be done for that work which the vocation and sufficient aid proposed, nor would efficacious aid any further be necessary for it. For if to him who uses well the first aid there is granted another, a second, certainly that is granted for another work, not for the same. But when we inquire whether to him who answers there is given a peculiar grace which is not bestowed on another who does not answer, or not, we understand this of the aid of grace for each single work for which grace is necessary. In each single instance, therefore, that is peculiar and efficacious to which the will consents, and it is called a congruous vocation; but that is only sufficient, to which one can answer and yet does not answer.

Nor is what the latter part of the interpretation of this sentence teaches any less easily refuted. For if the discussion be about the exciting and prevenient aid, which is not in our power, the aforesaid sentence can first be confuted from the Council of Sens, celebrated in the year 1528,

chapter 15, where it is written thus: Nor yet does so great a necessity of grace prejudice free choice, since it is always at hand, nor does even a moment pass in which God does not stand at the door and knock: to whom, if anyone opens the door, He will enter to him and will dine with him: nor finally is such the aid of this sort of drawing God, to which one cannot resist. There the council clearly speaks of prevenient efficacious aid, to which we consent: both because it speaks of one who draws, and drawing is of efficacious aid; and also because it speaks of a man who opens his heart to God by consent. But explaining the nature of this drawing, it immediately says: God indeed draws, but we run to His odor; we are not forced, we are not snatched by a hook. And yet that application which the aforesaid sentence is trying to establish seems to be nothing other than a certain hook which so seizes our will that, once seized, it cannot run or stand still.

Then the same sentence can be refuted from the Council of Trent, session 6, chapter 5; for concerning the manner in which our will assents to and cooperates with divine inspiration, it says thus: Nor does man himself do nothing at all when he receives that inspiration, since he can reject it. Now the Council speaks of that special inspiration by which those who answer are excited; and it says that this is received by them, when they consent to it, in such a way that they can reject it and resist it by not consenting. But if that be understood of the aid of accompanying and cooperating grace, it is altogether outside the matter and controversy proposed. For no one doubts that he who answers has some grace or effect of grace which another who does not answer does not have - namely, a cooperation with divine grace. But the difficulty proposed is about prevenient grace - whether it is peculiar and greater in him who answers, so that he may consent, than in another who resists. To assert, therefore, that a man so consents to this grace and prevenient inspiration that he cannot resist it seems to be against the definition of the Council of Trent cited above, which Prosper expressed when he said in book 2 On the Vocation of the Gentiles, chapter 28, alias 9: He (namely God) grants so to will obedience to Himself, that even from those who will persevere He does not take away that mutability which can not will.[216821692170]

The opposite to this doctrine of Prosper was said by Calvin, book 2 of the Institutes, chapter 3, where he writes thus: God moves free choice, not as it was believed for many ages - that thereafter our election might be to obey or to resist the motion of God.[2171]

Then it seems to follow from this opinion that our liberty is injured and impeded by prevenient grace, if indeed, that posited, it is not in our election to consent and to resist. For it is not enough to say that that necessity is from supposition. For whenever a supposition is of such a kind that it precedes our liberty and, that being posited, liberty does not remain - which is indeed called antecedent necessity - election is altogether taken away and our liberty impeded, even if the necessity which follows from the supposition of a future event, from our liberty, since it is posterior, can in no way harm it: which distinction we have set forth at length in disputation 68,

2168. Council of Sens (Concilio Senonensi), held in 1528, cap. 15.
2169. Council of Trent, session 6, cap. 5 (De iustificatione).
2170. Prosper of Aquitaine, De vocatione gentium, lib. 2, cap. 28 (alias 9).
2171. John Calvin, Institutio Christianae Religionis, lib. 2, cap. 3.

chapter 4. From which it is also inferred that those are likewise refuted who affirm that, some ultimate judgment having been posited on the part of the intellect, the will cannot but consent; for these, while in the same mode they concede antecedent necessity, seem to take away liberty.

But they answer that the intellect is applied to that judgment by the will itself, and therefore the consent innate from such a judgment is free by reason of the preceding application. Yet this reply can easily be confuted. First, because in this life no object can be proposed which necessarily moves it, as was noted in the preceding disputation, chapter 4. Moreover, although the will freely applies the intellect to judge about this matter, nevertheless it does not apply it freely so that it judges for this or that side: rather it leaves that to the intellect; therefore the will has not yet decreed to follow this or that side. Wherefore, if later, when a peculiar judgment about one side has been posited, the will could no longer resist, it would follow that it had never of itself been determined to that side, but was moved by the judgment of reason against its liberty: which is absurd. Indeed, in the doctrine of St. Thomas there is a certain act of the intellect which is called command, as we will say in I-II, question 17, article 1, upon the positing of which the work cannot but follow, unless an external impediment be present; but this act is posterior to the free election of the will, and arises from its impetus, so as to direct to the work, as we will say there; and therefore by it our liberty is in no way impeded. But a judgment preceding election cannot be of such a sort that, when posited, the consent of the will and election necessarily follow.[2172]

Wherefore I do not see how the sentence of those can be true who say that in this life some are so called by God that they respond only spontaneously, not freely. For, as I will show below in disputation 99, chapter 8, the will in this life cannot suffer any necessity in giving consent, as long as it does not see God - neither from the vocation on the part of the intellect, nor from divine praedefinition. What necessity the human will contracts from vision and the hypostatic union, we will say there.

In a second way the preceding opinion can be explained, namely, that a peculiar grace always prevents him who responds - not only a peculiar vocation on the part of the intellect and the first indeliberate motion on the part of the will, but indeed also a certain efficacious application, which is prior to our consent and cooperation, and upon the positing of which the will cannot dissent from the vocation. But we have taken care to show that this application is impossible in disputation 88, chapter 5; and in the following disputation, chapter 3, it will be proved more fully. Moreover, all the arguments which we adduced against the preceding mode seem to fight against this one also. For from it seems to follow, first, that free choice cannot resist exciting grace - which we answer, as Calvin said, is against the manifest definition of the Council of Trent. Then, by this antecedent necessity our liberty is taken away, as was proved above.

But when they are pressed with the testimony of the Council of Trent that we have adduced, the adversaries reply in various ways. First, that free choice, once excited and applied, consents freely: because, with the full judgment of reason judging that that good is not necessary, it is moved - otherwise than by God clearly seen in beatitude. I nevertheless ask them whether the will is so

2172. St. Thomas, Summa theologiae I-II, q. 17, a. 1.

moved by a full judgment that it can fail to be moved and resist. If it can resist, then it will be able to reject the inspiration and the application, which the adversaries will not concede; because an actual application cannot exist without consent. If it cannot but consent, how then does it consent freely? It will indeed be able to do so spontaneously, but not freely - which ought to be with indifference.

Then they answer that free choice can resist, not the efficacious prevenient grace, but the inefficacious; and that the Council spoke of the aid of grace in general, so that "to be able to consent" is understood with respect to one, but "to be able to resist" with respect to another. Yet this solution seems to evade the words of the Council. For the Council speaks of that prevenient grace which man receives by consent, and says that man so receives it that he is able to cast aside the same, namely by resisting. Finally they answer that man can resist in the "divided sense" (as they call it), that is, if he is not prevented by that efficacious grace; but in the "composed sense," that is, as he is prevented by efficacious grace, he cannot resist. However, by this solution, first, it seems to follow that our liberty is taken away, as we will immediately say. Then it seems to be contrary to the sense of the Council. For when the Council says that our will can cast aside the inspiration, it understands that inspiration to which the will in fact consents; and therefore it speaks in the composed sense.

Furthermore it must be added that these theologians torture themselves to no purpose in assigning that actual motion and application of the will to consent, beyond the vocation on the part of the intellect and the first indeliberate motion on the part of the will, as though to oppose the Massilians, who, against St. Augustine, thought that all are equally called, both those who respond and those who resist. For St. Augustine refutes the Massilians, in the places cited, merely by assigning a special grace to the predestined on the part of the vocation and the first indeliberate motion of the will, by reason of which God is said to do in us that we may do, while by that congruous vocation and the motion of the will He so excites us that He knows we will freely consent. Nor was there anywhere any dissension between Augustine and the Massilians concerning that application which the theologians commonly posit. For in order to commend God's predestination and the peculiar gift of prevenient grace which God bestows on the predestined, it was enough for Augustine to assign unequal grace of vocation and excitation to the predestined and to those who respond, as we will explain in the next chapter. Then, too, it is not necessary to concede this prior application on the part of the divine mover in order to assign the prior share to divine grace and to defend against the Massilians that the initiation of our salvation is not from us; for the controversy with them was far different. For they asserted that we begin from ourselves by certain good works before grace begins in us, as we have sufficiently shown in disputation 91. But as for that application - whether it were prior or not - you will find no word in the Councils and ancient Fathers. For the testimonies which signify that God's grace begins in us are clearly understood of prevenient grace, as we showed in disputation 88, chapter 8. Therefore they fall into those straits to no purpose, while the adversaries contrive that application unto consent.

Third, one could explain the peculiar prevenient grace in him who responds in this way and defend the preceding sentence: that, on the part of the vocation in the intellect and the first indeliberate motion of the will, it is equal; then that no application precedes in him who responds, as the preceding opinion said; but that the inequality be solely on the part of the will and of God's decree antecedent to our consent, by which He decreed to cooperate with us. Yet this way also does not commend itself to me. First, because the question with the Massilians was about the inequality of prevenient grace; but the will of God is not called grace; rather grace is the effect of it. And the controversy of St. Augustine with Pelagius and the Massilians was always about the effect of the divine will. For, as he himself says in the first book On the Predestination of the Saints, chapter 10, between grace and predestination this alone differs: that predestination is gratuitous preparation, namely in the eternal prescience of God, but grace is the donation itself. Concerning this donation, therefore, Augustine strove to prove to the Massilians that it is not equal in him who responds and in him who does not respond.[2173] Second, our liberty seems to be no less impaired by the decree of the divine will preceding our consent than by prevenient grace, or that prior application upon the positing of which a man cannot dissent. For in both cases there is antecedent necessity, which is contrary to liberty, as we shall say in the following disputation, chapter 3. Third, that decree preceding our determination is posited to no purpose, unless in the thing itself and in the donation something precede, as will be explained there.

More probable exposition of the same opinion, and confirmation.

Caput VI - Sincere exposition of the later opinion judged truer

With those three explanations of the later opinion, which I said was truer, chosen, I shall subjoin its sincere exposition briefly. First, I judge that the vocation in the intellect and the first indeliberate motion of the will, in which operating grace, exciting, and prevenient consists, has something in him who responds, by reason of which - although in itself it may be more remiss - it is called peculiar and a greater grace, a greater gift and benefit, greater mercy, a greater help, indeed it can even be called a greater vocation; and consequently, he who responds is always visited with a greater grace than he who resists. Second, by such a vocation the will always consents, although it can freely resist it. Third, that peculiar grace which we mention is in a certain way necessary, in order that we may respond: all of which must be proved by us point by point.

The first part is handed down by Driedo in the work On the Captivity and Redemption of the Human Race, treatise 4, chapter 5, at the last confirmation of the second argument, and by Ruardus, article 7 after proposition 5.10. They call that peculiar feature which precedes on the part of the vocation in him who consents something intentional, namely the removal of impediments which, within and without, would stand in the way and impede the consent of the will. For fuller explanation of which, the doctrine handed down by us in disputation 88, chapter 11, must be observed - namely, that one vocation is congruous, another not congruous. Congruous, according to St. Augustine in book 1 to Simplicianus, question 2, is so called because it so suits and is

2173. St. Augustine, De praedestinatione sanctorum, c. 10.

tempered to free choice (*arbitrium*) that it responds; by contrast, that to which free choice does not consent is called not congruous. And this congruity of free choice with the vocation is known to God by His infinite wisdom and under a condition. Wherefore God not only knows, by the knowledge of vision, what a man will do after He has decreed to call him, but also what he would do if he were called, before, according to our way of understanding, He decrees to forestall him by that vocation. Therefore, when in His predestination God decrees to distribute vocations over individual occasions, He decrees to distribute them out of that foreknowledge, not awaiting in uncertainty our consent as absolutely future, but looking upon all things most rightly under a condition. That the knowledge of events as future under a condition befits God we showed above in disputation 67. We have often spoken of this congruous vocation, especially out of the mind of St. Augustine in those disputations 88 and 89. And since this congruity of free choice with the vocation is known by God from its circumstances, among which is numbered the removal of impediments which would hinder it within and without, those learned authors cited rightly said that what is peculiar in the vocation of those who respond is something intentional, which is not taken only from the intrinsic variety of the operation itself, but from that operation joined with all the circumstances with which it is conjoined.

This foundation laid, the first part of our opinion is proved by this reason. Although the operation of our intellect, inasmuch as it is a certain operation, or intellection in itself, can be said to be greater or lesser from its intensity or remissness, from greater or lesser clarity and representation - in which there is, as it were, a certain spiritual extension to many things - nevertheless, inasmuch as it is called grace, mercy, gift, and benefit, it must be considered under another respect, from which also its magnitude must be weighed. Since all these are referred relative to the subject to whom they are given, that grace and mercy, that benefit and gift, must be called greater which is more useful to him to whom it is conferred. For the same thing, because on account of diverse circumstances it is more suitable or less useful, must be called a greater or lesser grace and mercy, a greater or lesser gift and benefit. Indeed, for the same reason a thing of lesser value, on account of a diverse circumstance, is a greater grace and mercy, a greater gift and benefit, than a thing of greater price: for to give bread to the hungry when he is in need, and to drive away that hunger, is a greater grace and mercy, a greater gift and benefit, than then to offer a heap of gold. But a congruous vocation is more suitable and useful than a not congruous one, if indeed the latter does not work good consent in us, while the former has this effect: therefore, although considered in itself it is a more remiss operation, inasmuch as it is an intellection, nevertheless it ought to be called a greater grace and mercy, a greater benefit and gift. Therefore, since he who responds always has a congruous vocation offered in that time and mode in which God knew it would have its effect in him, it follows that he who responds had been prevened with a greater grace and mercy, a greater benefit and gift, than another who does not consent, or even than himself when he does not respond.

Wherefore it is true, as we were saying in disputation 91, chapter 14, namely, that a holy thought, which is congruous by the removal of external impediments out of which a contrary thought would arise and prevent the effect, pertains to internal grace. For that thought, as free

from impediments, has regard to a new congruity with free choice, by reason of which not only is it grace, but it must also be called a peculiar grace. For we said that the ratio of grace is constituted and also grows by the order by which it respects him to whom it is given, although the substance of the operation and of the thought is not diverse in itself.

It must also be observed that the ratio of mercy, with respect to him to whom it is given, of gift and benefit, does not only look to him to whom it is given, but also to the mind of the giver; for grace is not said to be grace, nor a gift what someone bestows unwillingly or in ignorance. For the mind of a gratuitous and beneficent giver ought to be free and liberal; and the mind of one who affords mercy ought to be intent on relieving misery. But he who is ignorant is not free; and he who is overcome by some force or fear has something involuntary, and hence is not liberal. Likewise, he who would give a precious thing while ignorant of its worth and usefulness would not be said to have given much. Similarly, he who is ignorant of the congruity of that which he gives for relieving misery either does not have mercy or does not have much mercy, from the fact that that gift in reality relieves misery, if he, at the time when he decreed to give it, was ignorant of it. Hence it follows that the conditional knowledge of truths is necessary for God, so that He may know how great grace, greater benefit, and a gift to be conferred will be with respect to the one who consents. In like manner, the same knowledge is necessary for it to be said that God has mercy on one whom He congruously calls, but hardens another (as St. Augustine says), to whom He denies a congruous vocation; finally, it is necessary for us to assert that some grace operating, prevenient, and exciting is a peculiar effect of predestination, as we noted in disputation 93, chapter 1.

Wherefore Catherinus and others, who say that absolute futures alone are foreknown, because presences are really eternity, and that futures under a condition are by no means known for certain by God, can by no reason defend the donation of prevenient grace as a peculiar grace, benefit, or mercy God has bestowed on us, unless by reason of greater intensity, which cannot be the rule, as is manifest from what has been said in this and in that. Therefore they must assert that all the saved are equal up to consent and perseverance, unless they wish to distinguish them from the damned by that will and efficacious choice of giving glory: which was judged rather difficult to defend in disputation 89. It follows, therefore, according to St. Augustine's opinion, that the predestined is best distinguished from the reprobate not only by consent itself and cooperation, but also by the donation of grace that excites, prevenes, and operates. For from that point the peculiar grace, mercy, and care of God toward them begins. Wherefore the reason of that saying is rightly able to be the one in 1 Corinthians 4: "Who is it that discerns thee?" As if he should say: not thou discernest, but God alone, who has prepared for thee rather than for another the congruous vocation - which reason plainly proves the same about men as about Angels.

The same reason likewise shows that a congruous vocation, by the very fact that it is congruous, even if the operation is more remiss, is not only a greater gift and benefit and greater grace, but also a greater help and must be called a greater vocation. It is proved concerning help, because since help is said not absolutely but relatively to him to whom it is given, that will be called greater which suits him more, is more useful, and more helps so that it works; such is a congruous vocation; not, however, that which in itself is something greater. Hence it is often said of vocation:

for this, since it is said with respect to the one who hears, who because of impediments sometimes does not hear, will be greater the more often it is offered to someone without impediments, so as to move him when He rouses him up, than when he is so called that, being hindered by something else, he does not hear. But Dominicus Soto and Andreas de Vega, whom we reported in chapter 1, seem to have been deceived, when they asserted that those to whom God is more favorable by His grace sometimes do not respond, for example in the case of the Tyrians and Sidonians: which indeed is not to the point. For that only proves that he who is prevened by fewer and less lavish external signs sometimes consents, with another resisting to whom greater signs are exhibited; but it does not prove that someone responds to a lesser interior grace, with another, or the same one, resisting with greater help: about which the controversy now before us is.

Finally, it is gathered that it is not enough, if we concede that on the part of a congruous vocation there is something which is not on the part of a not congruous vocation, unless we also absolutely assert that by reason of that there is a greater and special grace: as the reason adduced above and the testimonies of St. Augustine confirm. I have noted this because of some more recent authors who, although they concede that to those who respond the vocation is given with a certain conditional knowledge of future consent, by reason of which we absolutely call it congruous, greater, and special grace, nevertheless absolutely pronounce that with equal grace the same man sometimes responds and sometimes does not, and that out of two, one complies and the other resists: whose mode of speaking seems to be opposed to St. Augustine. Whether there is something peculiar on the part of the intellect in him who responds will be said in the following chapter. In this way I explained the mode of peculiar prevenient grace in him who responds, at Rome in the year of our Lord 1587, and publicly in our college here; which, when afterwards it had been approved and confirmed by the most learned men of our Society, supported by their authority, I established much more; and as most apt for composing the long-standing controversies of the more recent writers in this matter of controversy, I always chose and publicly defended it; and already long before, from the year 1580, I had often taught and defended it. And so much for the first part of this opinion.

The second part is manifest from the Council of Trent, session 6, chapter 5, and sufficiently established by us in the preceding chapter, which is this: given such a congruous and peculiar vocation, a man so freely consents that he is able to resist.

The third part, which asserts that this peculiar grace of which we have spoken is in a certain way necessary in order that a man may respond, is plainly proved from those things which in chapter 4 we noted against the Massilians. For there is a twofold necessity, or impossibility, as I said there: one antecedent, which is on the part of the cause; the other consequent, which follows upon or accompanies the position of the effect. Therefore, when we say that a peculiar grace operating and prevenient is necessary in order that one de facto may respond - beyond the sufficient and common grace, as Innocent and Celestine said in chapter illo 4, cited above, and chapter 9 - we prove a consequent necessity or impossibility, namely that which is brought along by God's knowledge, with which the helps of prevenient grace are prepared: for this supposes that the consent will be future. Wherefore, rightly is it gathered in this way: If someone consents to the one calling, it

necessarily follows that he has been prevened by God with a congruous vocation, and therefore it cannot happen that someone consents and yet has not been stirred by that congruous vocation. Just as it is impossible that someone consents and is not foreknown by God - which necessity, or impossibility, since it supposes the thing to be future, does not prevent its being future freely, as we have treated more fully in disputation 68, chapter 4. Respondetur testimoniis prioris sententiae.

Caput VII - On dislodging the foundations of the prior opinion

It remains to dislodge the foundations of the prior opinion. To the first testimony of St. Augustine I answer, first, that in that place he is not disputing about the necessity of grace, as in the others alleged for our opinion. Second, I say that those works On the Predestination of the Saints, On the Good of Perseverance, On Rebuke and Grace, On the Merits and Remission of Sins, among others are remarkable works of St. Augustine, especially in what pertains to the treatment of the necessity of grace; but in the books On the City of God Augustine disputed little or nothing about it. Wherefore, since in that On the City of God he seemed to have reduced the difference between him who sins and him who does not sin to the sole will of the persons themselves, in book 2 On the Merits and Remission of Sins, chapter 17, and On the Predestination of the Saints, chapters 6 and 8, he did not remain content with this reasoning, but reduced this difference to the entire preparation of the will, as we saw in chapter 4, and we shall see in this also. Therefore those testimonies cited for our opinion are to be preferred to that one from the City of God.

Third, I add that in that chapter of the City of God Augustine, by that example of the two men, does not prove an equality of operating and exciting grace in him who responds and in him who resists, nor does he insinuate it in that way; but he shows only that the will is the cause from the oblique side, that there is nothing besides it as a cause of malice from the man himself - something which is to create out of nothing - about which we shall say more below in disputation 231. By his manner of arguing he proves that there is no cause of evil which is some nature higher or lower, nor the Devil by suggestion without one's own consent; and he concludes that the very faculty of the will is the cause.

But he concludes that the very faculty of the will, not insofar as it is nature and good, but insofar as it is from nothing, is the cause of the evil effect; and in the following chapter he proves that there is not given an efficient cause of the evil affection, but a deficient one.

And if it could so happen that out of two who are equally affected, and in every way alike in their willing, and in all other respects alike, one should consent to the calling, the other should resist; nevertheless he would by no means deny, nor according to the doctrine he handed on elsewhere could he have denied, that to him who was going to respond a peculiar grace had been granted. For since God was rousing him by such a vocation, He rightly knew that the vocation was so congruous to him that he would be going to respond. But, on the contrary, that to him who would not be going to respond the vocation was not congruous and not efficacious. And since the diversity of grace sufficiently arises from the diversity of the science of God, as has been shown above, therefore even in that case a greater grace would have been granted to him who would be going to respond.

Therefore that book of the City of God teaches nothing against the diversity of grace which we have thus far assigned from a diverse congruity with the free choice. For there he only contends that, with an equal temptation, one can consent and the other dissent, even if they are affected in the same way and other things are equal; which in no respect is opposed to the aforesaid doctrine of the diversity of grace.

But in that case whether both would respond or resist, St. Augustine would think otherwise, according to the doctrine which he handed on in the books cited for our opinion, where, whenever out of two hearing the same words, or seeing the same signs, one consents and the other resists, he constitutes the cause of the diversity in this, that inwardly they hear in a different way from the Father; and he refers that diversity to the secret judgments of God inwardly calling and rousing in a different way. But if on the part of God inwardly preventing there were no inequality, he would by no means refer the diversity to the inscrutable judgments of God. Moreover, since in that book 2, On the Merits and Remission of Sins, c. 17, he teaches that every sin proceeds from a defect of certain knowledge and of conquering delight, which nevertheless, he says in c. 19, is given to the predestined, it follows that that which adversaries contend for in that book of the City of God about two equally affected, never happens.

If therefore St. Augustine seemed to teach against us that it sometimes happens that out of two equally affected, and seeing the same object in the same way and thinking in the same way, virtue and sin are proposed equally to each of them, so that one of them pursues evil with a varied thought, but the other good - this I judge cannot happen. For he who consents to sin, since he is not moved from it by a thought of virtue, without doubt considers more efficaciously that which delights in sin than that which delights in virtue. Wherefore although it can happen that someone embraces virtue by a lesser thought excited to good than he who sins; nevertheless this always happens, that in him who follows virtue the thoughts alluring to sin are lesser than those inviting to virtue. Otherwise that would not be true which St. Thomas says in I-II, q. 77, a. 2, from the doctrine of Aristotle - namely, that he who sins has a defect in his intellect, which we explained in its place, that he more lightly considers those things by which the soul ought to be called away from sin; which the same St. Augustine very clearly handed down, On the Merits and Remission of Sins, book 2, c. 17, where, when he had asked why men are not without sin, and had said one could briefly answer, "because they are unwilling," he subjoins: "But if I am asked why they are unwilling, the discussion would be long." And a little after: "Men are unwilling either because it is hidden from them whether it is just, or because it does not delight them; for we desire nothing more vehemently than that which we more certainly know to be good, and we are inflamed the more ardently, the more it delights us." Therefore he who sins is less delighted by the good and considers it less than he who does not sin but resists the temptation according to virtue. And when he says "because it is hidden," he does not understand a pure ignorance of what must be done; for thus there would be no sin except from ignorance; but he understands a certain defect of consideration, to which in c. 19 of the same book he opposes a "certain and efficacious" knowledge. For everyone who sins suffers some defect of consideration in his intellect. If there were not such a defect in the

intellect and of involuntary delight in him who sins, St. Augustine would not give another cause why men are not without sin except "because they are unwilling." Nor would he have gone further, but would have necessarily stopped there.

Therefore, although out of two equally excited by thought to evil and equally prevented by thought of good against the temptation one can not consent to sin, not from an affection contrary to virtue, but from a mere negation of consent to sin and by turning away his thought from evil; nevertheless one of them cannot resist the temptation by an affection of virtue, with the other consenting to sin, unless he has been prevented by a more distinct and more explicit thought of good. For it is impossible, when two objects are equally proposed, that someone be carried to that which is less explicitly proposed; and therefore it is necessary that in him who sins a defect of the thought of good precede, as I professedly say in I-II, q. 77, a. 2. But this diversity on the part of cognition in him who resists temptation according to virtue is not a greater intensity of thought; for it can happen that a more intense thought is less congruent; but it is a peculiar mode of representation, which is congruent to a will affected in this or that way. For out of two opposing thoughts, that one does not always draw the will to consent which is more intense; but that which in a peculiar way more expressly represents the object so that it be congruent to the will, as we shall again say in disputation 209, cap. 3.

Objicitur thus. If it is necessary that that more efficacious thought of good should precede, that someone may resist the temptation out of an affection of virtue, and man does not have it in his power, but receives it solely from the preventing mercy of God: it follows that it is not in the power of man to have victory over temptations according to virtue. I answer: To turn away the mind without a new dictate from the more efficacious to the less efficacious thought, and to apply the intellect so as to consider the more efficaciously opposed (object), is in the power of the will; and therefore, if he consent to the more efficacious thought, he consents freely. Yet it is repugnant that he consent to that which he thinks less and which delights less, in comparison with that which delights more and is considered more efficaciously; just as concerning the choice of a lesser good which is a means to an end I speak according to the sentence of St. Thomas, I-II, q. 13, a. 6. For it is necessary that in any sin there precede in the intellect some defect of consideration, as we shall say at I-II, q. 77 in order.

The other testimonies which we adduced for the prior opinion are of no moment. Therefore to the second testimony from the same St. Augustine I answer: Those two Kings were altogether equal in signs and other external circumstances, and in these only did St. Augustine make them equal; but certainly he did not judge them to be equal in the inward calling and in the affect, the first motion of delight, about which the present controversy is. I give the same reply to the third testimony, which was from St. Jerome, namely, that the same external preaching of the Apostles was to some "the odor of life unto life," to others "the odor of death unto death"; for of this alone was Jerome speaking there, just as Paul also was. Of the inward grace that moves and excites Jerome did not deny what we have said thus far, nor did he teach anything contrary.

In the very same way must St. Athanasius be understood, in the sermon a little from the beginning, where he says something like this: That rain which falls is the same, yet it produces a manifold seed; for it makes barley, millet, and corn. He speaks not of the inward, but of the outward grace of preaching. For he immediately subjoins: One, therefore, is that which descends, but many are the things which from it grow, and the sameness of the rain passes into a manifold fruitfulness; to make it clear that the fruit is not from the skill of the sower (nor even of the waterer), but from the power of God. Therefore St. Athanasius judges that the various fruits of preaching do not come from a diversity of the preaching itself, which is compared to rain, but from the grace of God inwardly moving, which gives the increase. He takes this doctrine from Paul, 1 Cor. 3: "Neither he who plants is anything, nor he who waters; but God who gives the increase." Just as planting and watering are done from without, but the increase is communicated by an inward operation: so preaching and signs are applied from without, but the grace of God moves inwardly and excites to the work, by which one is nourished and grows in virtue. And in the best way the Professor distinguished this in the place alleged by us, cap. 4 of this disputation, when he says that in the very external preaching there is no difference, because it is the same; but in the effect of planting, which is the increase, something else is done by God in him who responds than in him who does not respond.[2174]

Finally, concerning the aforesaid testimonies it must be observed that by them it has not yet been rightly proved that external preaching and signs - although in themselves they are equal, indeed the same - are equal grace to all who see and hear. For to those to whom they are congruent so as to work a greater benefit and grace, they ought to be reckoned greater than to others, as is not obscurely gathered from what was said in cap. 6. Therefore by those testimonies it is only proved that the signs and things which are exhibited from without are indeed equal in themselves. Wherefore the same signs done in Bethsaida, if they had been done in Tyre and Sidon, would indeed have been greater gifts and benefits of grace for the Tyrians and Sidonians, because to them they would have been congruent, than to the Jews, to whom they were not congruent.

In order that we may refute the reasons made for the same opinion, the twofold necessity must be recalled to mind, the antecedent, namely, and the consequent, about which we spoke in this disputation. We say, then, that to any vocation whatsoever, whether it be congruent or not, anyone can respond by a possibility on the part of the cause; for there is no vocation which of itself prevents consent, nor does it take away that the will remain free on either side, as we said there; but by a consequent impossibility, which God's science brings with it, to which science, when some vocation is given, no one can respond except to a congruent vocation; that is, God's science being supposed, which also supposes that another will not consent, no one can respond to that one.

2174. 1 Cor. 3:7; cf. St. Thomas, I-II, q. 77, a. 2 (from Aristotle); I-II, q. 13, a. 6. See also St. Augustine, De peccatorum meritis et remissione, lib. 2, c. 17; De praedestinatione sanctorum, c. 19. On the distinction between equal external preaching and unequal inward increase, see the Professor, cap. 4 of this disputation. On Jerome, cf. his exposition where he treats the Apostle's "odor of life" and "odor of death." On St. Athanasius, see the cited sermon with the analogy of one rain producing diverse fruits.

Which necessity is the same as that by which that which we say - "the future, as future, cannot but be future" - does not derogate from our liberty, but leaves it intact, at least that suppositive liberty, as we showed in disputation 88, cap. 8.

Therefore, when in the arguments it is said that, besides the common vocation, no other peculiar grace operating and preventing is necessary in order that a man may respond: if we speak of the antecedent necessity on the part of the cause, it is true; but if of the consequent necessity, then indeed a congruent vocation is required; whence it is that whenever a man consents, there was never lacking to him a peculiar grace of vocation and a peculiar preventing mercy.

Objicitur: It is in our power to respond to any common, non-congruent vocation; therefore it will be in our choice to make any vocation congruent for us. On the contrary, it also follows that, since it is in our power to resist a congruent vocation, it is in our power to make a congruent vocation not congruent. I answer: If we set aside the science of God that foreknows any vocation with its event, and speak of any vocation before the prescience is posited, it is in our power to consent to it and to resist it; and accordingly to make it congruent and not congruent. For whether a vocation be congruent or not congruent depends upon free choice, as to whether we receive it or do not receive it; as, for example, to be or not to be free from a bond depends on free choice by paying the price; but whether that vocation be conceded to us, which will be congruent in us, does not depend on us. As I noted in disputation 92, cap. 2. But if the discussion be of a congruent vocation on the supposition of God's science, with which it is conferred, which science supposes that that vocation will have its effect: in this way it is not in our power to make a congruent vocation not congruent, or the contrary. For it would be the same as to make that a future thing, inasmuch as it is supposed to be future, not be future; just as we said in disputation 66, cap. 7, that it is in our power that God should know something from eternity or not know it, no supposition of God's science being made; but once the supposition that God knows is made, then it is not in our power that He not know it.

From this it is gathered that, from sufficient non-congruent help, anyone can be saved as to a possibility on the part of the cause and antecedent; but not as to being saved in fact; because a non-congruent help is that which God knows will not have its effect. Nor therefore will that presence be frustrated which is never reduced to act. For if the peculiar effect were some nature; or if there were a determination of helps which are said to be sufficient for all in their kind; we would rightly conclude that they would be frustrated, unless in some individual they were reduced to act. But the sufficient helps of which we speak are to be referred to true and actual sufficient helps for single occasions in the same man as they occur, and not to some common nature of sufficient help. And of such helps the adversary must concede many that have no effect which they could have; but it is enough if, through the whole latitude of helps of grace for single occasions, there is some help that is sufficient, not efficacious, and another that is efficacious; thus the potency will be reduced to act. But when we say that it is free for the will to respond to a non-congruent vocation, it must be understood thus: because a man can stir himself up, so that that which is proposed as an object by a non-congruent thought he may consider better, and thus there be made a congruent thought by which the affection is moved. And this the will can do by that very fact that it turns itself away from

the end, and does not consent to the thought by which the object is proposed more efficaciously, and it turns itself away to external things; nor does it need for this a new thought that something must be considered anew.

Now, that we may dissolve the reasonings advanced for the same position, that twofold necessity must be recalled to mind, namely the antecedent and the consequent, of which we spoke in this disputation, cap. 5. Therefore we say that to any calling whatever, whether it be congruent or not, anyone can respond by a possibility on the part of the cause; for there is no calling which, insofar as it prevents consent, does not leave the will free on either side, as we said there; but there is an impossibility consequent, which no one affirms to be together with the foreknowledge of God, when a calling is given, that one can respond except to a congruent calling, that is, presupposing God's knowledge, which also presupposes this one or that one not to consent, no one of those can respond. And this necessity is just like that by which we say that the future, as future, cannot not be future, which derogates nothing from our liberty, but presupposes it entire and unharmed, as we showed in Disputation 68, cap. 8.[2175] When, then, it is said in the argument that, besides the common calling, there is no other peculiar grace operative and prevenient necessary in order that man may respond, if we speak of necessity antecedent on the part of the cause, it is true; but if of consequent necessity, a congruent calling is required; whence it is that as often as man consents, a peculiar grace of calling and a peculiar prevenient mercy is never lacking to him.

But someone may object: If it is in our power to respond to any common and not congruent calling, then the making of it congruent will also be in our power. Likewise, since it is free for us to resist a congruent calling, as was set forth in caps. 4, 5, and 6, it follows that it is in our power to make a congruent calling not congruent.

It is answered: If we set aside the knowledge of God which measures the calling along with the event, and consider any calling before prescience, it is free to each to consent and to resist, and consequently to make it congruent or not congruent. For a calling is congruent or not congruent as it depends upon free choice; just as it depends on free choice that this or that be or not be, although it does not depend on it that a calling be conferred on us which is going to be congruent in us, as in Disputation 92, cap. 2. But if the discussion be about any calling, the supposition of the knowledge of God having been made, together with which it is conferred, which supposes this calling to be going to have its effect, then it is not in our power to make a calling congruent or not congruent, or the contrary: for then it would be just to make that which is future, insofar as it is supposed future, not be future; as we said in Disputation 66, cap. 7, it is not in our power that God know something from eternity and not know it, no supposition of the knowledge of God having been made; but once it is supposed that God knows it, then it is no longer in our power that He not know it.[2176]

From this it is gathered that, with sufficient help not congruent, anyone can be saved, by a possibility on the part of the cause and antecedent; but that in fact no one is saved, because that help is not congruent which is known by God as not going to have its effect. Nor indeed is that

2175. See Disputation 68, cap. 8, where the author treats the necessity "that the future, as future, cannot not be future," as compatible with liberty.

potency vain which is never reduced to act: for if there were some specific nature, or a measured help determined, which of itself would be said to be sufficient for all, we would rightly conclude it to be in vain unless it were reduced to act in some individual. But since sufficient help, for the several occasions even in the same man, is diverse, we say of each one of them severally, not of some common nature of help, that it is sufficient, with which man can act, but he will not act. And this potency, which is found in the singular individual, even if it is never reduced to act, is not vain; and the adversary ought to concede many callings of this sort which do not have the effect which they could have. But it is enough if, in the totality of the helps of grace, through the several occasions, there be some help sufficient and not efficacious, and another efficacious: thus at length is potency reduced to act. And when we say it is free for the will to respond to a not-congruent calling, this is to be understood thus: because a man can rouse himself that that which was proposed by the not-congruent consideration be considered better; and a congruent thought be made by which the affection is moved. And the will can effect this by the very fact that it halts itself and does not consent to the consideration which proposed the object in a more efficacious mode, and it turns itself away from it to other things; nor does it need for this a new consideration that something must be considered anew.

From what has been said in this whole disputation it is inferred, first, that the very act of responding to the calling is from grace and free choice (*liberum arbitrium*) together as from two causes per se necessary; but not to respond is from free choice alone as from a cause per se, yet not from God except as from a remover preventing, which by the philosophers is called a cause per accidens. For from this, that God denies efficacious help congruent, it follows in a certain manner that man does not respond, namely by a cause per accidens. In what manner, however, prevenient grace which is not congruent does not work in the man whom God calls, because the man himself resists and is unwilling to consent, was explained above, in the preceding disputation, cap. 6, from the mind of Anselm, Hugh, and the Council of Trent.[2177]

Then it is further inferred that certain recent theologians assert in vain that efficacious help, without which no one is converted to God, is habitual grace; whereas, when one treats of efficacious help, one is not dealing only with that which is required for the supernatural love of God, but with any works of grace which also are done by sinners without habitual grace.

Pars III - On predestination and reprobation together

The third part of this q. 23 and of the whole treatise on predestination is common to predestination and reprobation. In it, however, it is treated of the certitude of predestination and its necessity; and the same is to be understood of reprobation in a certain proportion. Moreover, from this q. 23 only two articles are to be explained severally.

2176. See Disputation 66, cap. 7, on the distinction between what is in our power before the supposition of divine knowledge and what is not after it has been supposed.

2177. See above, the preceding disputation, cap. 6 (citing Anselm, Hugh of St. Victor), and the Council of Trent, sess. 6, canons on justification.

Articulus VI - Whether predestination is certain

To the sixth, one proceeds thus. It seems that predestination is not certain. For upon that of Apocalypse 3, "Hold what thou hast, lest another receive thy crown," St. Augustine says that another is not going to receive it unless this one should have lost it. Therefore the crown, which is the effect of predestination, can both be acquired and lost. Therefore predestination is not certain. [2178]

1. Furthermore, once a possible is posited, nothing impossible follows. But it is possible that someone predestined, as Peter, sin, and then be killed. But this posited, it follows that the effect of predestination is frustrated. Therefore this is not impossible. Therefore predestination is not certain.
2. Furthermore, whatever God could, He can. But He could not predestine one whom He did predestine. Therefore now He can not predestine. Therefore predestination is not certain.

But on the contrary: Upon that of Romans 8, "Whom he foreknew, he also predestined, etc.," the Gloss says: "Predestination is the foreknowledge and preparation of the benefits of God, by which whosoever is to be set free is most certainly set free."[2179]

I answer that predestination most certainly and infallibly attains to its effect; yet it does not impose necessity, namely that its effect should proceed from necessity. For it was said above that predestination is a part of providence. But not all things which are subject to providence are necessary; but certain things happen contingently, according to the condition of proximate causes, to which effects the divine providence has ordered them. And yet the order of providence is infallible, as was shown above. Thus therefore the order of predestination is certain, and yet liberty of the will (*voluntas*) is not removed, from which the effect of predestination comes contingently. To this also are to be considered the things said above about divine knowledge and divine will, which do not take away contingents from things, although they are most certain and infallible.[2180]

Reply to the first: A crown is said to be "of someone" in two ways. In one way, from divine predestination; and thus no one loses his crown. In another way, from the merit of grace. For what we merit is in a certain way our own. And thus someone can lose his own crown by mortal sin. Another, however, receives that lost crown, insofar as he is more quickly substituted in his place. For God does not permit some to fall without raising up others, according to that of Job 34: "He shall crush many and innumerable, and he shall make others to stand in their stead." Thus indeed, in the place of the fallen angels men have been substituted, and in place of the Jews, the gentiles. And the one substituted into the state of grace also, as far as this goes, receives the crown of the one falling, in that in eternal life he will rejoice in the good which another did, in which life each one will rejoice in goods as much those done by himself as by others.

2178. St. Augustine, on Apocalypse 3:11; cf. also his De dono perseverantiae, c. 14.

2179. Gloss on Romans 8:29: "Predestinatio est praescientia et praeparatio beneficiorum Dei, qua certissime liberatur quicunque liberatur."

2180. Cf. St. Thomas, I, q. 23, a. 1 - 4; and on providence in general I, q. 22; on divine knowledge I, q. 14; on the divine will I, q. 19.

Reply to the second: Although it is possible that he who is predestined die in mortal sin, considered in itself, nevertheless this is impossible, insofar as it is posited together with his being predestined. Whence it does not follow that predestination can fail.

Reply to the third: Since predestination includes the divine will, as was said above, that God should will something created is necessary ex suppositione by reason of the immutability of the divine will; yet absolutely it is not thus to be said here about predestination. Whence one ought not to say that God can "not predestine" one whom He has predestined, in the composite sense of the expression; although absolutely considered, God can predestine or not predestine. But from this the certitude of predestination is not taken away.[2181]

Explanation of the article. The conclusion is that predestination is most certain and infallible, yet it does not impose necessity upon our will; and the same is to be asserted of reprobation. The confirmation of this conclusion St. Thomas remits to q. ad q., art. 4, where it remains proved that providence over the whole is certain; yet from that the liberty of free choice is not harmed. Wherefore, since predestination and reprobation are parts of providence, the same account will wholly apply to them. In the reply to the third, the Doctor shows in what way the predestination of God cannot be changed; but of this we will have no further disputation; for already concerning knowledge of God, q. 14, art. 15, and concerning will, q. 19, art. 7, we have said enough.[2182]

Disputatio XCIX

Caput I - Preliminary observations

Before we come to the proposed disputation, certain things, both certain and indubitable, must be premised in this chapter. First, the same difficulty obtains about predestination, and about providence, and about the will (*voluntas*) of God, which in this place we have reserved; although it is not of the class of speculative knowledge and will: for the knowledge of God can be reconciled with our liberty much more easily than the divine will. Concerning knowledge, moreover, we have already said enough in Disputation 68. But about will, providence, and predestination the difficulty is plainly greater: because, although some think that providence and predestination, which is a subjective part of it, are acts of the intellect, yet they are acts of practical intellect by way of command, which depend upon the motion of the will. When, therefore, they suppose the will of the same thing, there will be altogether the same difficulty about will, providence, and predestination.

Second, whether there be in the will and mind of God one sole act of providence, or whether it be twofold - one of providence, the other of government, as St. Thomas seems to intimate above, q. 22, art. 3 - about which has there been said enough, the controversy will be altogether the same.

2181. On the distinction between necessity ex suppositione from the immutability of the divine will and absolute necessity, cf. St. Thomas, I, q. 19, a. 3; I, q. 23, a. 4 ad 3.

2182. St. Thomas, I, q. 23, a. 4; I, q. 14, a. 15; I, q. 19, a. 7.

For each of those acts, whether it be of the will, or whether, if it be of the intellect, it presupposes the operation of the will: therefore it will be equally difficult to reconcile our liberty with the one and with the other.

Third, it must be observed, over and above the errors enumerated by us above in Disputation 68, cap. 1, that there were some heretics who were taking away our liberty; others, however, conceded the will to be free in itself, but to be hindered by the prescience or the will of God and to contract a certain necessity contrary to its liberty - which also is absurd. For, as we were saying in that disputation, cap. 1, there were certain heretics who conceded that the will is free in itself, but is impeded by the prescience or the will of God, and contracts a certain necessity contrary to its liberty; which is absurd. For indeed Catholics all assert our liberty in the same way, yet they vary in assigning the reason and the way by which it can stand together with the will of God. We shall examine their various opinions before we explain our own. But the reason of the difficulty in which the question among Catholics, as it were, sticks is this: How can it stand with the will of God that which is the cause of our operation, and is in itself immutable; with which our liberty is to stand, which can resist any power whatever; our will is free by its nature and, as experience itself teaches, often strives against what God seems to will? Hence the opposition, to which God's design, as they say, is opposed.[2183]

Some, moreover, imposed this error upon the Predestinati, as Sigebert relates in his Chronicle under the year of the Lord 415, and Sander in his book on the visible monarchy, who asserted that works do not profit even to those living piously, if at death they were predestined; nor, on the contrary, that the impious are harmed because they live wickedly, if they were predestined to life. From which error Prosper, in the book To the Chapters of the Gauls, cap. 8, and in epistle 2 to St. Augustine, which is had before that book on predestination, argues against the Gauls; Prosper, moreover, reports that from this there followed that the necessity of perseverance stands, and from it follows the necessity of damnation; but we do not approve that glossing of our opponents, since it very greatly impairs our liberty. Yet the same error the Waldenses laid upon Coelestius first, and Sander under Leo. But it does not seem to have thrived in the time of Leo; nor is it doubtful that in the time of Coelestine there was that opinion; and to the same the Pontiffs consent, that the Gauls, with St. Augustine, were defending doctrine with Pontifical authority. Afterwards this error flourished in Holland and Friesland, some, in the year of the Lord 1548, damned the interior errors of Wiclif and John Hus in the Council of Constance, in the sixth session; and in the Council of Trent, session 6, canon 17. Further, another error of the Jovinians is referred by Augustine, De haeresibus, cap. 82; and St. Jerome numbers the Jovinians among those who, after baptism, thought it possible no more to sin. They are also damned in the Council of Trent, session 6, canon 23; where universally anathema is declared against one who should say, or sense, that one justified can no longer sin.[2184]

2183. See Disputation 68, cap. 1, for the catalogue of errors concerning liberty and divine foreknowledge or will.

2184. Prosper of Aquitaine, Ad capitula Gallorum, cap. 8, and Ep. 2 ad Augustinum; Sigebert, Chronicon, sub anno Domini 415; Nicholas Sander, De visibili Monarchia; Council of Constance, sess. 6; Council of Trent, sess. 6, canons 17 and 23; Augustine, De haeresibus, c. 82; St. Jerome (as cited).

Therefore, among Catholics it is a thing doubted by none, that the will of God, and providence, and predestination in no way harm our will of the creature created not only as free, but by nature apt to resist any power whatever, save by no decree, and by predestination of God to be impeded. But when we speak about liberty, we understand the more legitimate, as we said in Disputation 68, namely the liberty of contradiction, by which one can will and not will, and the liberty of contrariety, by which one can will and not will, or this and its contrary. We must strive, then, as much as is in our power, so to defend our innate liberty that it be in no way harmed by any extrinsic decree and will of God.

Opinions of Durandus; Cajetan; and John Medina.

Caput II - First assertion.

Another peculiar error was that of those who were called the Predestined, as Sigebert reports in his Chronicle under the year of the Lord 415, and Sander in his book On the Visible Monarchy: they asserted that works do not benefit the pious if they are predestined at death, nor, on the contrary, do they harm the impious if they are predestined to life; which the Gauls imputed to St. Augustine, as is gathered from Prosper in his work To the Chapters of the Gauls, chapter 6, and in the Letter to Augustine which is placed before the book On the Predestination of the Saints.[2185] Therefore these heretics inferred from God's predefinition a necessity of salvation or damnation, and thought that no liberty remained in us as to the choice (*adoptionem*). Valdens reports this error under Celestine I, and Sander under Leo. But although it flourished in the time of Leo, it is not doubtful that it arose in the time of Celestine; for to him Prosper fled, as is clear from the first Letter of Celestine, so that, against the Gauls, he might defend his and Augustine's doctrine by Pontifical authority. Certain persons in Holland and Frisia followed this error in the year of the Lord 1548, and it is condemned among the errors of Wyclif and John Hus in the Council of Constance, session 15, and in the Council of Trent, session 6, canon 17.[2186]

There was another error of Jovinian, as St. Augustine reports in De haeresibus, chapter 82, and St. Jerome, book 1 Against Jovinian, after number 7, who asserted that one baptized could no longer sin. He is condemned also in the Council of Trent, the sixth session, canon 23, where a universal anathema is pronounced against him who shall teach or think that one once justified can no longer sin.[2187]

Wherefore among Catholics it is undoubted that the will (*voluntas*) of God, His providence (*providentia*), and predestination (*praedestinatio*) do not at all harm our will; but that the created will is not only of itself and by its native power free, but also is impeded by no decree or

2185. Sigebert, Chronicon, sub anno Domini 415; Sander, De visibili monarchia; Prosper of Aquitaine, Ad capitula Gallorum, cap. 6, and the Epistle to Augustine placed before Augustine's De praedestinatione sanctorum.

2186. Council of Constance, session 15; Council of Trent, session 6, canon 17.

2187. Augustine, De haeresibus, c. 82; St. Jerome, Adversus Iovinianum, l. 1, post num. 7; Council of Trent, session 6, canon 23.

predefinition of God. And when we speak of liberty (*libertas*), we understand - as in Disputation 68, chapter 1 - the liberty of contradiction, which is the power to will and not to will, or to do this and its contrary.

The opinions of Durandus, Cajetan, and John Medina

The first opinion would have been true, that of Durandus in the First Book, distinction 1, question 5, asserting that God in time does not concur or cooperate with any cause, but that second causes, conserved proximately by God, operate of themselves. On that view, the predestination of God would easily agree with our liberty: if, consequently, we were to say that in God there was no other will except the will of conserving our free choice for its own operations. For if in time free choice operates, and God does not concur with it, He does not will from eternity to concur with it to operate. Therefore He will have no efficacious decree about our works individually and specifically. But if there were any will in God concerning the positing of those things, it would only be a will of simple affection (*voluntas simplicis affectus*), which free choice can very well resist, as is shown in Disputation 83, chapter 4. But because that opinion of Durandus about the concurrence (*concursus*) of God to individual effects does not please learned men, indeed is branded by all with the note of error - as we shall show at length in the First Part of the Second [Part], question 79, article 1 - therefore it will not be permitted to philosophize about the will of God in that manner.

The second opinion is that of John Medina, a learned man of Complutum, as Anthony of Corduba reports in the place to be cited below: he said that God does not operate by a mediating intellection and will, but immediately by His essence, by which He is in Himself indifferent for operating and concurring with all singular causes, just as a universal and common created cause operates by its own substance and essence. From this indifference truly no necessity at all can be imposed upon our free choice, nor can the proper mode of operating be changed, which free choice has from itself; as is quite clear.

Yet although it is true, as we explained in Disputation 90, chapter 6, that God does not will anything or understand by an elicited act (*actus elicitus*) added to His essence, but by His own essence, to which only a respect is added according to reason on our mode of conceiving; nevertheless, because the very essence (*essentia*) of God itself, insofar as it has the notion of will and intellect, is the principle of all things - as we also showed there, which the phrase of Scripture demonstrates - the difficulty always remains in what way our liberty can stand with the essence of God, insofar as it has the notion of will and decree, by which it is the cause of our operations; for to such a will and decree our liberty in no way can resist. I confess indeed that our liberty is more easily reconciled with the will of God according to the opinion of those who say that the act of willing and understanding is not an immanent elicited operation, or freely added to the essence itself, than if we were to say that it is a certain free elicited act; yet in either way we must strive to safeguard our liberty together with the will of God.

The third opinion is that of Cajetan, above on question 22, article 4, who, speaking about providence - which we have said has the same ratio as will and predestination - promises in a few words to satisfy the difficulty proposed. For from the decree of providence there does not follow the avoidability or the inevitability of our operation, but something in the middle, which, he says, is ineffable. But Cajetan seems to play with words, that he may elude us, and rather by marvelous taciturnity slip past the difficulty proposed than resolve it. For what else is it to call ineffable that which, by the will and providence of God, follows in our operations, than to suppress the matter in silence? But by reason we shall prove that there cannot be any middle between those two, as Cajetan imagines. For the avoidable and the inevitable are mutually opposed, just as the possible and the impossible; and the inevitable is the same as the not-avoidable, and the impossible the same as the not-possible. And since there is no middle between the possible and the impossible, therefore neither can there be a middle between the avoidable and the unavoidable. Let us then put the question to Cajetan in this way. The decree of God standing, either we are able to avoid the work, or we are not able; then, either we are able to act, or we are not able: for no middle can exist between these, since contradictories are opposed. If we are able, therefore our operation is avoidable by us; if we are not able, therefore it is unavoidable. Therefore, the divine decree standing, one or the other must be affirmed about our operation; and so that ineffable middle Cajetan has devised is vain.

Caput III - A fourth opinion of the older Scholastics

The older Scholastics attempt to dissolve this difficulty in another way. They say that the will (*voluntas*) and providence of God are of such power and efficacy that, although no created potency and liberty can resist, nevertheless He sweetly moves all causes, and, according to the nature of each, impels them to operate either necessarily or freely. For He not only brings about what He wills, but also holds in the cooperation the very mode which He wills, and by various causes He also produces various effects. In this way St. Thomas answers the proposed difficulty above in question 19, article 8, and in question 22, article 4; Durandus in 1, distinction 46, question 1, number 7; Dionysius the Carthusian on distinction 39, question 2; Capreolus on distinction 45, first question, conclusion 5; the Ferrariense against the Gentiles, chapter 83; Driedo, the work On the Harmony of Free Will and Predestination, part 2, chapter 3, to the first.[2188] And indeed the teaching of these men very greatly pleases some theologians, and from it, together with those places of St. Thomas cited, they infer that the contingency and liberty of our operations are not to be reduced to free choice alone, but also to God as to the first and principal cause of contingency, on account of His extraordinary power and excellence - lest we should say that free and contingent effects happen apart from the sentence of God.

This doctrine is indeed true as regards its former part; yet what it teaches in the latter place is difficult, as we shall see in the following disputation. For it is certain that the will of God - being of infinite power, and joined with highest wisdom - can in the best way direct any second cause to its

proper operation, according as the nature of that cause requires, and move it in that mode which He knows to be congruent to it; nor are knowledge or power for this wanting to Him. But to assert this is not enough to remove the difficulty set forth, and to stop the mouths of barking heretics. For that the will of God is of infinite power and is directed by infinite wisdom does not seem sufficient, that it could or would know how to move our will freely, if that is not possible; since neither His power nor His wisdom can attain what is impossible. Moreover, that it is impossible, the decree of God being posited, for our will to be moved freely, seems to be proved by this reasoning: If God's predefinition (*praefinitio*) precedes our will, and once posited cannot be changed, nor by any of our power be hindered from its effect, it follows that our liberty cannot resist it, nor operate against it. Therefore, in what way, the predefinition of God supposed, will our will be moved freely with a liberty of contradiction and of contrariety, to ...?

Nor indeed is it enough if we refer all contingency and the liberty of our operations to the liberty of God, who from the beginning freely defined what would be. For heretics will not deny this (I except John Wyclif, who, as we related in Disputation 68, chapter 1, even denied to God the liberty of contradiction and of contrariety); for with this they can affirm that no liberty remains in us in operating, which is absurd. And much more does the difficulty proposed at the beginning grow according to the opinion of more recent men - who think that the doctrine of St. Thomas and of the older theologians is to be understood thus - that God has from eternity pre-established each of our operations; and that His predefinition was prior in the order of cause to our determination and cooperation: because, without any regard had to it, God, of Himself, decreed each of our works. And this they judge to be true not only in works of grace, but in other works also, even of sin, if the discussion is not about the malice, but about the substance of the act. Hence the difficulty increases: for from this opinion, understood in this way, there follows in our works a necessity ex suppositione which is altogether contrary to our liberty; although absolute necessity, and from the nature of the thing, does not follow. But we noted above that a necessity which harms liberty is not to be conceded. For it is of faith not only that free choice is free of itself and by its nature, but also that it always remain so free that by no extrinsic cause is it harmed. Wherefore, when we concede some necessity in its operation, such a necessity must be of the sort that leaves its liberty entirely unharmed.

From the aforesaid opinion it will not be difficult to prove that there follows for our liberty an impediment which utterly takes it away. However, we must recall to mind that doctrine of Anselm in the opuscule On the Harmony of Free Will and Predestination, chapter 1, which we adduced in Disputation 68, chapter 4, and have often inculcated: namely, that in one of two ways some effect is necessarily going to be. Either by antecedent necessity, or by consequent necessity. Antecedent necessity is that which comes from a cause, or from something which precedes the effect, which, once posited, the effect cannot fail to follow. Consequent necessity, however, is that which follows the effect itself. In this way, of an effect already posited, we say that it is necessary when it is; or

2188. St. Thomas, I, q. 19, a. 8; I, q. 22, a. 4; Durandus, In I Sent., dist. 46, q. 1, n. 7; Dionysius Carthusianus, In I Sent., dist. 39, q. 2; Capreolus, In I Sent., dist. 45, q. 1, concl. 5; Ferrariense (on Contra gentiles) c. 83; Driedo, Opus de concordia liberi arbitrii et praedestinationis, pars 2, c. 3, ad 1.

that it will be, insofar as it is going to be. But about the former necessity Anselm plainly teaches that it is of a nature to harm the liberty of free choice: because with it liberty cannot stand; which also on this account has been proved, in Disputation 89, chapter 10. For if something precedes our consent, from which it follows necessarily that we will consent, and our will cannot in any way, that antecedent being posited, will the opposite; and that which precedes was in no way in our power; it comes about that nothing of liberty, nothing of indifference, can remain in us; as we have shown there more at large. The latter necessity, however, does not take away liberty: because that from which the necessity follows is presupposed from our liberty; and thus, since consequent necessity is of this sort, it cannot harm it. But those who concede that the decree of God so precedes as to predefine our works individually with no regard had to our consent and determination of our will, are compelled to concede that the oper...

Our work would come to be by a certain antecedent necessity: because once the decree is posited, which in the order of cause precedes, our will cannot will the opposite; therefore no liberty at all remains in it.

Confirmatur ex Thoma Valdense. By this line of reasoning Thomas Waldensis, tom. 1, lib. 1, c. 25, against several grave Theologians of his time, who plainly conceded that our works are done by a preceding necessity, says these words: "Antecedent necessity therefore is not compatible with the liberty of free choice, and therefore it does not befit human affections. Therefore perilously (as it seems to me) some great Men posit this antecedent necessity in human works; and even that it flows from the will of God, especially since, when they attempt it, they can find nothing consonant with the ancient Fathers of the Church; and that text which they adduce, 'The heart of the king is in the hand of the Lord, and to whatsoever he will he inclines it,' the very text explains itself as being understood of a necessity of traction or inclination, not however of that necessity which precedes according to Anselm."[2189]

Moreover, once that antecedent supposition has been made, that liberty does not remain together with that necessity we have amply proved above in disputation 89, c. 10. For once that supposition is made, an indifferent and free will does not remain, so as to be able to will one or the other, but is tied to one side, since it is in no way able to resist the decree of God.

Prima adversariorum Responsio. Yet to this argument many attempt various replies: however, since in that chapter we have expressly impugned their solutions, here we shall only touch them in passing. First they answer, that even with the decree of God posited our will remains free. And when we press them thus: If our will could tend to the opposite, it would already resist the will of God, which is absurd; but, once possibles are posited in being, nothing impossible follows (as Aristotle says, Prior Analytics 1, c. 12); they say: Yes indeed, then, if the will were to do the opposite of that which God has decreed will be, the supposition of God's decree would be taken away; just as, if we were to do other than what God knows will be, the supposition of God's knowledge would be taken away.[2190]

2189. Thomas Walden (Thomas of Walden), Doctrinale antiquitatum fidei, tom. 1, lib. 1, c. 25.
2190. Aristotle, Prior Analytics I, c. 12.

Refutatur. But we have shown there that this solution is weak: because, according to their own opinion, the supposition of God's decree is prior to our liberty; and therefore, if it remains, as is supposed, the will cannot will the opposite, it follows that it does not remain free; but if it can and does, the supposition ought not to be taken away, which is absurd.

Secunda Responsio. Secondly they answer, that once the supposition is made, the will does not remain free, yet in itself it is free. But in this way we would seem to fall into the error of Melanchthon and others, who, although they do not concede an absolute necessity in our works, as Wyclif taught, yet affirm that by an extrinsic decree or foreknowledge of God our liberty is harmed and impeded, as we recounted in disputation 68, c. 1. And if someone should concede that, once the supposition of God's decree is made, there remains a root of spontaneity; but without the liberty of contradiction; this avails nothing at all. For since spontaneity is also found in brutes, it is not enough to concede that for human operations; rather it is necessary to ascribe to the will the liberty of contradiction and contrariety. For spontaneity without liberty even the heretics of our time concede, together with Calvin, Institutes, book 2, chapter 5, §§14 - 15.[2191]

Tertia Responsio. Thirdly others answer, that by the decree of God there is not imposed upon our will an antecedent necessity, but a consequent one, such as comes from knowledge; and hence by the decree of God our will is not impeded. They prove the assumption: because the decree of God precedes conditional knowledge, whereby God most perfectly knows under a condition what each one would do if he were to be forestalled by such a vocation; therefore, that, this being foreknown, God should decree that it be done, and should by such a vocation stir the will to it, does not impose antecedent necessity: because that which he knows under a condition he decrees absolutely.

Refellitur. We have expressly impugned this solution in the same disputation 89, c. 10, when the question was treated of a decree of giving glory before the merits of grace were foreseen; and now it can be refuted in the same way. First, because from the fact that God knows under a condition that I will freely consent to such a vocation, it does not follow that in my liberty there had been an absolute decree of his, whereby he predetermined that I would do such a work: therefore it could have been that, before he absolutely decreed to call me, and before he foresaw my determination as absolutely future by such a vocation, he, of himself, decreed that I would absolutely do such a work; it follows that an absolute determination was altogether prior to my liberty and absolute determination; and hence an antecedent necessity would be imposed on my will.

Secundo. Next, these doctors do not keep the same order under condition and absolutely: whereas, if there were to be the same ratio on both sides, the same series would have to be constituted. For they say that God thus foresaw: If I forestall Peter with such a vocation, he will freely consent: but they do not add a predetermination under a condition, namely, what if I were to predefine his work before the vocation and foreseen determination? For if this were posited, just as

2191. John Calvin, Institutio Christianae Religionis, lib. 2, c. 5, §§14 - 15.

in the absolute order, there would be equal difficulty on both sides. Wherefore I judge this knowledge under a condition, thus understood, to profit nothing for reconciling the decree of God with our liberty, as was also noted there.

Postremo. Finally, if the decree of God, whereby he predefines sin as to the substance of the act, precedes our cooperation and does not depend on it in any way; by that very fact, if God were to reveal to someone his sin, as to the Apostle Peter, he could not strive to the opposite, lest he should attempt to frustrate the decree of God. Wherefore either by denying he would not sin, lest he make void the decree of God, which he well knows; indeed, he would do well by denying, lest he go against the definition of God; or he would be perplexed. But since in fact He leaves his decree in our power, because He accompanies it and does not precede it, a man both can rightly and indeed ought to strive to the opposite; because there still lies upon him the precept of God, of which in I - II, question 19, article 10.

Quarta responsio eorum probatur. Fourthly, others answer that by the decree of God concerning individual works, even if it should precede, according to the notion of foreknowledge of our cooperation, our liberty is not taken away, although necessity is imposed on it: because the decree does not change the intrinsic mode of operating, nor does it physically (as they say) predetermine the will; but the decree is altogether extrinsic. We have sufficiently impugned this solution of theirs in disputation 89, c. 10, where we have shown that by an extrinsic impediment our liberty is taken away in exactly the same way as by an intrinsic and physically influencing one, when from the supposition there follows an antecedent necessity.

These are the things that seem to follow against the aforesaid opinion, as it is understood by more recent Theologians, who plainly concede a decree antecedent to our consent, from which they are compelled to admit antecedent necessity in our works. For as to the more ancient Theologians commemorated in this chapter, we cannot affirm that they conceded such a preceding decree, and therefore an antecedent necessity, in our works. And indeed, of St. Thomas, Waldensis in the same book, c. 28, says that he never taught this necessity. For in that time, as even now, there were not lacking Theologians who would interpret the holy Doctor in that sense; from which opinion Waldensis strives to vindicate him, as from a less probable interpretation.[2192] Only against the aforesaid Scholastics we have noted above that their doctrine is less sufficient for the solution of the present difficulty, although it be true; and therefore another must be sought which will satisfy altogether.

Caput IV - The fifth and sixth opinions of more recent authors

Theologians of our time, in order to temper the severity of this position, teach with Gregory of Rimini, in 2, dist. 28, q. 1, art. 3, to ad 8 and 12th argument, that in the order of cause the motion of God is prior to our cooperation and determination in good works; but in works of sin, even as to the substance of the act with the malice set aside, our determination is prior; and that in eternity these are to be compared with one another in the same order. For they think with the same Gregory

2192. On St. Thomas, see Thomas Waldensis, tom. 1, c. 28.

that in time God, of himself, first applies our will and impels it to act, whereby it cooperates in good works; but in evil works, on the contrary, the will is first determined of itself before God cooperates with it. From which they infer that God has predefined good works before our determination was in any way foreseen, but evil works, as to the substance, by no means, unless the determination of our will was foreknown. As to good works this is proved, because in them the first part must be assigned to God: therefore both the decree and the predefinition of God ought to be prior. As to evils, they confirm this by many testimonies of the Fathers, who deny that sin is predefined by God. Thus it is said in the Council of Valence under the emperor Lothar, c. 5. With this there agree Augustine "on the articles falsely imputed to him," articles 11 and 13, or rather Prosper, "To the objections of Vincentius," who is believed to be the author of that book of responses; and Bede, tom. 8, in the book of Questions, q. 13; and Fulgentius, book 2, To Monimus, from chapter 13 through many chapters. Next, because God would seem to be the author of sin, and to him rather than to the sinner should that sin be imputed, if he, of himself, predefined in foreknowledge the sinful work without regard to our determination, and in time moves us and applies us before we are determined by ourselves; for then the sin should rather be ascribed to him than to us, since he impels us to that act which malice necessarily follows.[2193]

Others finally philosophize in almost the same way, except that they further distinguish among good works. For they think that certain works are of grace, and others works of nature. As to works of nature they say what the preceding doctors taught as to evil works, namely that in them the determination of the creature is prior in relation to God; and they affirm the same of the order of prescience and of eternal predefinition, that God, not in any way before our determination was foreseen, predefined the good works which are of grace, but the others after our consent was foreseen. They distinguish thus, so that at least in works of grace we may assign the prior part to God, since he is said to work and to do all things in us, that we may do them. And since Gregory judged that all moral good works are from the grace of God, in all good works he conceded that we are first moved and applied by God to act, before we act, as we noted in disputation 88, c. 1.

But these distinctions are applied in vain, since rather one ought to think the same way about all. And first of all, if the Doctors of this opinion judge that, even with the predefinition of God supposed and with that prior application to act in good works, nonetheless our will freely determines itself to those works, they ought to say the same in evil works. For what greater reason can there be, by which on account of that predefinition and prior application to act liberty is taken away in evils and not in goods? But if, the predefinition and application supposed, the will still remains free to sin, there is no reason why malice should be imputed to God or ascribed to him, since by his predefinition he leaves our will in the hand of its counsel, and decrees only the act of sin as to the substance, just as he also in time does and produces it. For that he in some manner wills it either before the consent, or together with it, or after it, no one can doubt, since the things which he produces in time he produces by his will; but his will is eternal. From the fact, however,

2193. Council of Valence (Valentinum) under Emperor Lothar, c. 5; Augustine, Ad articulos sibi falso impositos, arts. 11 and 13; Prosper of Aquitaine, Ad objectiones Vincentiani; Bede, In libro Quaestionum, q. 13 (tom. 8); Fulgentius, Ad Monimum, lib. 2, c. 13 ff.

that God concurs with us to the act of sin, as the faculty of free choice requires - whether before, or after, or together - it does not follow that malice is to be ascribed to God, since that follows only from the mode of operating of the created cause, as we shall say in I - II, q. 79, a. 1.[2194]

As to the Fathers commemorated, they either merely contend that sins, under the notion of sin and malice, were not predefined by God, that is, destined and determined from eternity to be done. The particle "prae" does not denote an antecedence of cause with respect to our determination, but a priority of time. For only St. John Damascene, as we shall note below, seems to have used the particle "prae" in that signification, so that it should signify an antecedence of cause. Or certainly, if the Fathers are speaking of the very act of sin as to its substance, they not only deny that God predefined it before our determination was foreseen, but also that he determined it in any way. For, as we shall say in I - II, q. 79, a. 1, Augustine in the book On Free Choice 2, c. 10, and indeed St. Jerome in the second Dialogue Against the Pelagians, seem not obscurely to teach that the very act and operation of sin are not from God. Wherefore, since the other Fathers alleged were most devoted to the doctrine of Augustine, it is not to be wondered if in that sense too they denied that sins were predestined by God. The Master also relates in III, dist. 37, that certain men in his time followed that opinion, lest sin should be cast back upon God as the author of malice, if he were presented as the author of the act of sin as to its substance; and in this opinion was the Auxerre master, book 2 of the Summa, tract. 27, c. 3, although he judges the contrary to be probable; the Master, however, dares to define nothing.[2195]

From among the Fathers, I have read only Anselm, in the little work On the Harmony of Free Choice and Predestination, chapter 2, who says that the act of sin as to its substance is from God. But as to what Augustine says in the book On the Manners of the Manichees, c. 2, that God is the cause ...

St. Anselm says that God is the cause of all natures and substances; from which he would seem to concede that God is the author of the act of sin according to its substance, because it is a certain nature. He does not, however, in that place prove or hold the sentence that the act of sin according to its own entity is from God; for by "nature" he himself understands substance, not operation. Therefore, against the Manichees he there contends that there is no substance evil by nature, which he signifies by the name "nature." He so understands it in the same book, chapters 2 and 8, and in book 1 Hypognosticon in the last words almost, book 4 at the beginning, and book 2 De libero arbitrio, chapter 20. In the same way John Maxentius speaks in the confession of his faith at the end, which is found in the Sacred Library, and St. John Damascene, book 2, chapter 19 of the History.[2196] Therefore the Fathers did not at all care whether the predestination of the act of sin was from God before the foreseen determination of our will.

2194. St. Thomas, Summa theologiae, I - II, q. 79, a. 1.

2195. The Master (Peter Lombard), Sentences, III, dist. 37; the Auxerre master (Antissiodorensis), Summa, lib. 2, tract. 27, c. 3; St. Anselm, De concordia liberi arbitrii et praedestinationis, c. 2; St. Augustine, De libero arbitrio, lib. 2, c. 10; St. Jerome, Dialogi contra Pelagianos, dialogus 2.

2196. John Maxentius, Confession of Faith (at the end), in the Sacred Library; St. John Damascene, Historia, book 2, chapter 19.

But if God had predetermined in his eternity the act of sin according to its substance, not with our determination foreseen, he would impose a necessity upon our will that would impede its liberty; and so it would follow not only that sin ought to be thrown back upon God, if there were any such thing (for he would compel us to do it), but also that no sin could be imputed to human choice. Further, if such a necessity in evil works arose from that predetermination, the same would assuredly hold for good works, and therefore no merit could be imputed to us - which too is absurd. Therefore the same account must be given. And by the same mode one should judge of predestination both in good works and in evil works according to their substance.

Wherefore the opinion does not please me of those who teach that our will, after vocation, is not only applied by God - of which we have often spoken - before our consent to a good work, but also to consent to the work of sin according to its substance. For from their sentence many things seem to follow which by no reason can be conceded.

First: that we are moved by God, driven, indeed even compelled, to the works of sin, even if God is not the author of the malice of sin. For if God applies our will, with thought and temptation set beforehand, so as to elicit the work of consent, then he impels and urges to such a work; and since, once that application is posited, free choice cannot fail to operate and does not in any way depend upon itself, but that application of God precedes its liberty, it follows also that we are not only impelled but also compelled; for antecedent necessity, as has often been said, is contrary to our liberty. In this mode Beza speaks, answering Sebastian Castellio in his second refutation of the calumnies, explaining Calvin's sentence in aphorism 220, where he says that free choice is not only ended in the work of sin, but is also impelled, excited, moved, and ruled toward it. Nor truly does he say that God is the author of sin insofar as it is evil and deformed; for in that respect he ascribes sins to the created will alone, in aphorism 31; but he says that to the very work of sin our will is impelled, excited, moved, and ruled by God.[2197]

Second: it seems to follow from this sentence that God, by an antecedent will and from himself, willed and decreed the works of sin, and thus in his primary intention destined some to such works. For according to Damascene, book 2 De fide, chapter 29, the primacy of will in God has its origin from himself alone, taking no occasion from us; and in this reason it is said to be antecedent with respect to us; but the secondary will, which is called consequent, has its origin from us, such as is the will to punish. To say, however, that by his primary will God predestined the works of sin according to their substance is not permitted; for by this primary will, as Damascene witnesses, God wills all men to be saved, to lead a tranquil life, to do nothing that will be in the future against reason; for this is a good and acceptable thing before the Lord, who wills all men to be saved and to come to the knowledge of truth, as the Apostle writes to Timothy, 1 Timothy 2. It is impossible, however, that God by his own self, by his primary or antecedent will, both will this, and at the same time by that same primary will predestine the work of sin according to its substance, to which deformity is conjoined.[2198]

2197. Theodore Beza, Responsio ad Sebast. Castellionem in refutatione secunda calumniarum; and Aphorismi, aphorism 220 and aphorism 31.

2198. St. John Damascene, De fide orthodoxa, book 2, chapter 29; 1 Timothy 2:4.

Third: it seems to follow that by this same primary intention, that men may give consent to the works of sin, God not only sends the thoughts from which he knew sin would be in the future, but even by the same will impels consent into such thoughts; which cannot be said. For although God is the author of the thought and of the occasion, from which he knew the work of sin would be in the future, because he would of himself will that it not be committed, it can by no account be said that by that intention, so that men consent to the work of sin, God sends the thoughts or offers the occasions.

Fourth: from this same sentence it is gathered that one must simply say that certain men are destined by God alone to the work of sin, just as others also to the work of virtue. For if God, the determination of man not being foreseen, from himself decreed that this man commit the work of theft, but that man the work of adultery, and that he should accomplish it in time, since we say he was applied and moved by God, it must be said simply that to these works of sin some men were destined by the will of God alone: which is against the doctrine of the Council of Valence under Emperor Lothar, chapter 3; and of St. Augustine, in the Articles falsely imputed to him, article 11; or of Prosper, in his Responses to the Objections of Vincent, responses 11 and 13, of which book he is thought to be the author; and of Fulgentius, book 1 To Monimus, chapter 13, in many chapters; and of Bede, tome 8, in the book of Questions, question 13. They deny that sin is foreordained by God, and that men have been destined by God to sin; nor do they only deny that malice was foreordained by God, but also that anyone was created and predestined by God to this, that God might impel him to the work of sin.[2199]

This inference is shown to be false from this, that God by his own self, by his primary will, wills that the work of sin, even according to its substance, not be done; because, according to Damascene, book 2 of that work De fide, chapter 29, God by his own self wills the salvation of all, and that all works be done according to reason; with which will another will cannot be consistent, by which he would will the work of sin to be done according to its substance, unless by some occasion taken from our determination and cooperation.

Fifth: it seems to be inferred from this motion and application of our will to the work of sin that the liberty of that will is taken away, as has often been said, and therefore that there is no sin at all, because every sin ought to be free and voluntary: or at least, if yet moral sin remains, one must say that God is the author of it.

Those, however, who follow the opposite sentence answer that God indeed is the author of the work of sin according to its substance; yet that the malice and the moral deformity is referred to free created choice alone: so that that work, insofar as it is from God, is not sin; but insofar as it is from free created choice. Moreover, one must observe that not all the heretics of our time have taught that God is the author of sin, insofar as it is sin. There are some who plainly say that sin, as sin, is not to be referred to God as to a cause, but only that God is the cause of the work of sin in that mode we have explained above according to their mind. So teaches Beza in Aphorism 31;

2199. Council of Valence under Emperor Lothar, chapter 3; St. Augustine, Ad articulos sibi falso impositos, article 11; Prosper of Aquitaine, Ad objectiones Vincentiani, responses 11 and 13; Fulgentius, Ad Monimum, book 1, chapter 13, through many chapters; Bede, In libro Quaestionum, question 13 (tom. 8).

Calvin, Institutes, book 3, chapter 23, §§6, 9; Zwingli, in the Sermon on Providence, chapter 6. Although this solution of the adversaries may have a place in their sentence who say that the work of sin according to its substance is done by God cooperating with us, with our determination taken into account; yet for those who assert, not only that God decreed to cooperate with us and to concur in time, but also, with no regard had to our determination, to apply us to the work of sin, to excite, rule, and impel us - this distinction and solution can avail nothing. For thus, as we were saying above, either there is no sin at all, or it rather belongs to him who from himself contrived and ordained that such a work be done.

There are, however, some Theologians who expressly do not say that our will is applied to the act of sin before it itself consents, although that plainly follows from their principles; since they assert that by nature a second cause is first applied to its operation by the first cause before the second cause itself operates. Yet those Doctors expressly teach that, if the human will is not applied to the good, it will infallibly sin. The sentence of such men seems to be rejected, just like the former, if that "infallibly" they take for a necessity antecedent and on the part of the cause, as they themselves seem to signify; for if it be referred to the knowledge and intellect of God: God infallibly knows that man will sin, not indeed if he be not applied to the good by that application which we impugned above, but unless he be prevented by a congruous and special vocation according to the purpose of God; as is clearly evident.

But some say that, at least in the works of grace, it is necessary to concede a predetermination before the determination of our will: because in time also a certain application precedes our determination, besides vocation and the first motion of the will, so that in this way they may satisfy the mode of speaking of St. Augustine and of the other Fathers. But that application and predetermination, understood in this way, is not only not according to the mind of Augustine and of the Fathers, but neither is it possible in this manner; and from it there furthermore seems to follow something against our liberty. That it is not according to the mind of Augustine and the other Fathers, nor possible, I dispute in Disputation 88, chapter 5, where it is proved. That moreover it does not impede our liberty, from what was said in the preceding chapter. For with such a predetermination posited, the will cannot be free in either part; for true predetermination is supposed without our consent and is prior to it: from it therefore is born an antecedent necessity which impedes liberty, as we proved above: the same must be said of that application in time. For it is of such a nature - as the adversaries themselves confess - that, once posited, operation and consent of the will cannot but follow. Therefore Ruarus Tapper rightly taught, article 7, §4, in the Tenth Proposition, that one must think the same way of the works of grace and of nature universally: namely, that operations are not foreordained in another way, nor in another way are causes applied to operate, as far as pertains to priority, posteriority, or concomitance; as below in chapter 7 will be said more fully. Scotus holds entirely the same in 4, distinction 49, question 6: "I say then, to the point proposed: when it is asserted that our will is not first applied by God to operate, than it itself consents - for by that in some way its liberty would be taken away - this same reason properly proves concerning the works of sin and of nature as concerning the works of grace."[2200]

Finally, other recent men philosophize in another manner. They say that God from eternity, our free decision in no mode foreseen, even under a condition, has predestined our works severally; but that in time our will is moved by God in such a way that, in the same instant of time and of nature (as they themselves speak), the action proceeds both from God and from us; nonetheless God is prior by the priority which they call "from which," not by the priority "in which," and so he forestalls our cooperation: thus only, they say, does there follow that necessity which we are wont to say, "Whatever is, when it is, is necessary to be." They add besides that our will is not always moved by God in this way, but sometimes in this way, sometimes otherwise, without this priority on the part of God.

Yet this opinion can be impugned by us less easily than the others. First indeed, as far as it regards the predetermination of God not with our determination foreseen, even under a condition, it has already been sufficiently set forth; for from it there seems to follow a necessity not only consequent, but coexistent and antecedent: by which our liberty is altogether harmed, as has been shown more than enough. Next, as to the point that the application and motion by which God moves us precedes, this sentence seems to play only with words; for first, if in the same instant of time and of nature God and our free choice operate, how will God move free choice by a priority

2200. John Duns Scotus, Sentences, IV, dist. 49, q. 6.

"from which"? For if it is necessary to assign some natural instant prior, then first God moves; which does not suit our free choice; and thus the concurrence of both will not be simultaneous in time and nature.

Then too, these Theologians abuse the vocabularies of the arts. For Aristotle, in the Categories, in the chapter on the modes of priority, among the modes of "prior" assigns one which we are wont to call "prior from which," but such a kind of priority cannot be exercised altogether indiscriminately; for it is not thus called "prior," from which the other does not subsist or follow equally in every respect, but in a particular respect and in a certain respect of the things that pertain to man; which pertains to the controversy at hand.

Lastly, what they assert, that sometimes God operates in us by this kind of priority, sometimes not, is said without foundation. For in order that we assign to God diverse modes of operating, it is necessary that in him there be something on account of which he should assign diverse modes of operating; but in our actions we cannot assign any diversity, as is evident; therefore we cannot assign to God diverse modes of operating. Add that there is no utility to that priority which the aforesaid opinion attributes to God: since sometimes without it God may cooperate with us, and nevertheless nothing is derogated from divine grace - to which we ought to attribute the first place - nor from the certitude of providence: since it is always certain, and sometimes even these Doctors concede this without this kind of priority. And elsewhere in Disputation 88, chapter 7, we showed that, without this priority of divine operation conceded, nothing derogates from the certitude of that; but rather these Doctors themselves add that sometimes this is the case, and sometimes the other, in such a way that nothing derogates.

Whether the application of our will to consent unto the good precedes its determination and free choice

...so that in this way they may satisfy the mode of speaking of St. Augustine and of other Fathers. But that application and predetermination, understood in this way, is not only not according to the mind of Augustine and of the Fathers, but neither is it possible in this manner; and from it, furthermore, there seems to follow something against our liberty. That it is not according to the mind of Augustine and of the other Fathers, nor possible, I dispute in Disputation 88, chapter 5, where it is proved. That it does not impede our liberty, from what was said in the preceding chapter. For with such a predetermination posited, the will cannot be free in either part; for true predetermination is supposed without our consent and is prior to it; from it therefore is born an antecedent necessity which impedes liberty, as we proved above: the same must be said of that application in time. For it is of such a nature - as the adversaries themselves confess - that, once posited, operation and consent of the will cannot but follow. Therefore Ruarus Tapper rightly taught, article 7, §4, in the Tenth Proposition, that one must think the same way of the works of grace and of nature universally: namely, that operations are not foreordained in another way, nor in another way are causes applied to operate, as far as pertains to priority, posteriority, or concomitance; as below in chapter 7 will be said more fully. Scotus holds entirely the same in 4,

distinction 49, question 6. "I say then, to the point proposed: when it is asserted that our will is not first applied by God to operate, than it itself consents - for by that in some way its liberty would be taken away - this same reason properly proves concerning the works of sin and of nature as concerning the works of grace."[2200]

At length, other recent men philosophize in another manner. They say that God from eternity, our free decision in no mode foreseen, even under a condition, has predestined our works severally; but that in time our will is moved by God in such a way that, in the same instant of time and of nature (as they themselves speak), the action of our free choice proceeds both from God and from us; nonetheless God is prior by the priority which they call "from which," not by the priority "in which," and so he forestalls our cooperation: thus only, they say, does there follow that necessity which we are wont to say, "Whatever is, when it is, is necessary to be." They add besides that our will is not always moved by God in this way, but sometimes in this way, sometimes otherwise, without this priority on the part of God.

Yet this opinion can be impugned by us less easily than the others. First indeed, as far as it regards the predetermination of God not with our determination foreseen, even under a condition, it has already been sufficiently set forth; for from it there seems to follow a necessity not only consequent but also concomitant and antecedent: by which our liberty is altogether harmed, as has been shown more than enough. Next, as to the point that the application and motion by which God moves us precedes, this sentence seems to play only with words; and first indeed, if in the same instant of time and of nature God and our free choice operate, how will God move free choice by a priority "from which"? For if it is necessary to assign some natural instant prior, then first God moves; which does not suit our free choice; and thus the concurrence of both will not be simultaneous in time and nature.

Then too, these Theologians abuse the vocabularies of the arts. For Aristotle, in the Categories, in the chapter on the modes of priority, among the modes of "prior," assigns one which we are wont to call "prior from which": but such a kind of priority cannot be exercised altogether indiscriminately; for it is not in this way called "prior," from which the other does not subsist or follow equally in every respect, but in a particular respect and in a certain respect of the things that pertain to man; which pertains to the controversy here at hand.

Lastly, what they assert - that sometimes God operates in us by this kind of priority, sometimes not - is said without foundation. For in order that we assign to God diverse modes of operating, it is necessary that in him there be something on account of which we should assign diverse modes of operating; but in our actions we cannot assign any diversity, as is evident: therefore we cannot assign to God diverse modes of operating. Add that there is no utility to that priority which the aforesaid opinion attributes to God: since sometimes without it God may cooperate with us, and nevertheless nothing is derogated from divine grace - to which we ought to attribute the first place - nor from the certitude of providence: since it is always certain, and sometimes even these Doctors concede this without this kind of priority. And elsewhere, in Disputation 88, chapter 7, we showed

2200. John Duns Scotus, Sentences, IV, dist. 49, q. 6.

that, without this priority of divine operation conceded, nothing derogates from the certitude of that; rather, as the same Doctors concede, sometimes this is the case, sometimes the other, so that nothing is derogated.

This opinion, however, is less easily impugned than others. First, because in order to produce the actions of the will (*voluntas*) and of the intellect (*intellectus*), God at least needs in some way our free choice as a co-operating cause; for without it He could not produce such effects in us as free, at least. Next, this "priority," such as it is, is only a priority of perfection; inasmuch as, according to Aristotle in the Predicaments, chapter on the modes of the prior, that which is more noble is said to be prior: but in this way not sometimes but always the efficacy of God is prior, not only in works of grace (*gratia*), but also in all other works, even natural ones, and in the very substance (*substantia*) of a sinful act: which is of no relevance for defending that God predefines (*praefinire*) our free works and predetermines the will (as they say) without regard to our concurrence; and much less for assigning to the grace of God the first and chief parts, as is clear from the foregoing. For that the first and more powerful parts are to be assigned to the grace of God, in another way, according to the mind of St. Augustine and the Fathers, is clear from Disputation 88. And thus far we have fought against the fifth opinion, variously expounded: now let us move on to the sixth degree.

Caput V - Two other opinions of the Theologians

Some Theologians on the contrary have said, first indeed, that God did not predefine our acts, whether good or evil as to their substance, before the foreseen determination of our free choice; then, that the determination to one side rather than to the other, whether in good or in evil acts as to their substance, is indeed from us and from God, but that the first root and cause of it is free will. From this they infer that our determination is understood as prior to God's predestination and predefinition, just as things among themselves are compared in eternity in the same way as in time. They also assign the same order in the works of grace, as regards consent and cooperation: they concede, however, that before our cooperation and God's there precedes operating and exciting grace, namely calling.

This opinion was handed down by Catherinus in the little work On the Foreknowledge and Providence of God, last chapter; Antonius de Corduba, book 1, question 55, doubt 10; Julius Sirenus, book 8 On Fate from chapter 11 to 14; Osórius, book 9 On Justice; the same order in evil works was posited by Marsilius, in 1, question 45, article 2, in a certain doubt after the fourth conclusion.[2201]

From this doctrine Antonius de Corduba gathers a distinction between secondary causes that are natural, and free. For although both in their own ways dispose and determine the divine concurrence, yet not in the same way: for natural causes determine God only to a mode of

2201. Catherinus, Opusculum de praescientia et providentia Dei, cap. ult.; Antonius de Corduba, lib. 1, q. 55, dub. 10; Julius Sirenus, lib. 8 De fato, cap. 11 - 14; Osórius, lib. 9 De iustitia; Marsilius, in I, q. 45, art. 2, in quodam dubio post 4 conclusionem.

operating naturally, not to the production of this or that in species or in the individual; because of Himself God is determined to bring about this rather than that, even if a natural and particular cause modifies the universal created cause, namely the heavens, so that it may produce this rather than something else, not only in species but also in the individual. But free agents determine God's efficacy and concurrence not only to a mode of operating freely, but also to producing this rather than that in the individual: so that of Himself God is indifferent, that by His will He co-operate with our will to that side to which He sees it determine itself. Therefore the aforesaid Doctors concede three instants: first, in which our will is prevened by grace; second, in which it determines itself to consent to the calling, or to resist it; third, in which God co-operates with it: and they establish the same order in the eternal prescience, proportion being kept. Nay more, among the more recent who embrace this opinion, some affirm that one should speak thus: not "because God willed me to speak, I speak," but "because I speak, God willed me to speak." In favor of all these Ruardus Tapper, article 7, 9, Decima propositio.[2202] He who judges it to be free asserts to maintain that the determination of our will, or of the divine [will], is prior in the consent and free operation, both in works of grace and of nature; although he inclines more to the opinion we have reported up to now. But those who follow this opinion philosophize thus, so as in this way to explain and defend the harmony of our liberty with divine predefinition. For since it seems necessary to assign some order between the determination of our will and of the divine [will], if by any account God's predefinition were prior, no liberty would seem to remain in us, as has been proved: therefore the decree of God must be posterior to our liberty and determination, just as also divine prescience is, so that from it there arise in our actions no antecedent necessity, but only consequent, which does not take away, but rather presupposes entire, our liberty. Then also, because if our will were not determined from itself, but by another, it would seem rather to be acted upon than to act, and to move itself: which most greatly repugns liberty.

Some Theologians of our time mark this opinion more harshly than was fitting. For it seems to them Pelagian, in that it says our determination is by nature prior to the cooperation of grace, and thus consents to the Pelagians, who used to say that the beginning of good works is from us. However, although the opinion is in no way approved by me, yet it is not worthy of that censure, for it is far removed from the error of the Semipelagians with which it is charged. For they, as we saw in Disputation 89, chapter 4, granted the beginning of good works and of justification to be from us in such a way that certain good works preceded in time (not by nature) from free choice alone without any prevenient grace, in view of which God would bestow prevenient and operating grace: which the aforesaid Doctors in the opinion mentioned by no means concede: because they teach only that free will, prevened by exciting and co-operating grace, is of itself by nature prior determined to consent, than that grace and the will of God co-operate with it. They affirm, indeed, that the same consent proceeds simultaneously in time from our free will and from grace and the will of God co-operating. Therefore the Second Council of Orange taught nothing against these men, nor did St. Augustine, when they dispute against the Semipelagians and prove that God makes it to be in us that we consent: for they did not think this to be done by any application

2202. Ruardus Tapper, art. 7, 9, Decima propositio.

(*applicatio*) of our will which would be from God alone, before it determined itself, but by calling alone, which excites and prepares our will: as we have warned in the preceding chapter and in Disputation 88, chapter 8. Nor do they violate the Second Council of Orange, nor St. Augustine to be examined, since the point under examination was whether the prior determination of our will is from an application of our will by God alone, or from divine cooperation.

Yet the aforesaid opinion is by no means approved by me. First, because it is impossible that in any moment prior by nature our will should operate first, or be determined - which is the same - than that God should operate with it: for neither can its determination be understood in eternity without a decree of God to concur with it. Then also, because this opinion seems somewhat to derogate from co-operating grace: for since our will needs not only excitation in order to act, but also the cooperation of grace, that it may consent, it will need also cooperation that it may determine itself to consent: how then is it understood to be determined in some prior [instant] without the cooperation of grace? Wherefore that mode of speaking, "Because I speak, God wills me to speak, not the other way around; and because I believe, God wills me to believe, not the other way around," I indeed could by no means grant; since the very act of believing and of speaking would be attributed to free choice without the cooperation of grace.

Finally, some, pressed by this difficulty, say that God from eternity did not will and decree our operations individually, but that in general only and universally He determined to be ready to cooperate with any one whatsoever according to his determination. And they embrace this opinion so as to defend that from God's predefinition no necessity is imposed upon our will contrary to its liberty. Then also, because if it were necessary that God predefine and will from eternity even the works of grace individually, it would follow that for those who do not act, nor consent to the calling, something necessary to acting would be lacking - namely that decree - and hence it would not be a wonder if they did not act, since without that they cannot act at all.

However, this opinion too is not approved by me, and I impugned it in Disputation 87, chapter 1. For since it is necessary to acknowledge not only in some, but also in all works a distinct and singular providence of God, it is also necessary that the will of God be engaged about each of our works individually. Thus it is necessary to concede that there was from eternity a singular will of God about each work: just as it is necessary that in time the will of God be engaged distinctly about each. But God in time works each of our works by His distinct and singular will: therefore from eternity He foreordained them with us individually. This the Fathers expressly hold; St. Gregory the Great, Moralia, book 7, chapter 4, where he says: "God, foreseeing all things, decreed before the ages how He would dispense through the ages." The same is taught by the Cretan [Commentator] on St. Gregory Nazianzen, Oration 1, on those words: "But that all voices..." and by the Council of Valence.[2203]

Caput VI - The true sentence, and the rationale for the concord of our free will with the predefinition of God

Finally, some, hard pressed by this difficulty, say that God from eternity did not will and decree our works individually, but only in general, and in the universal, He determined that He would be ready to work with whatever person according to that person's own determination. They embrace this opinion in order to defend that by God's predefinition no necessity at all is imposed upon our will contrary to its liberty. Then too, because, if it were necessary that God should predefine and will from eternity even the works of grace individually, it would follow that to those who do not act, nor consent to the calling, something necessary for acting would be lacking, namely that decree - and so it would not be surprising if they did not act, since without that they could not act.

However, the opinion of these men does not please me, and I have impugned it in Disputatio 87, cap. 1. For since it is necessary to acknowledge not only in some things, but even in all works, a distinct and singular providence of God, it is necessary also that the will of God be occupied concerning each of our works individually. For it is necessary to concede a singular will of God concerning each thing from eternity, just as it is necessary that in time the will of God be occupied distinctly concerning each thing. But God in time works each of our works by His own distinct and singular will; therefore also from eternity He foreordained them with us individually. This the Fathers expressly hold; St. Gregory the Great, Moralia, book 12, cap. c., where he says: "God, foreseeing all things, decreed before the ages how He would dispense through the ages." The same was taught by Elias of Crete on St. Gregory Nazianzen, Oration 1, on those words: "But that all voices..." and by the Council of Valence under Emperor Lothair; Fulgentius, book 1, To Monimus, cap. 14; and St. Augustine in many places, when they assert that God from eternity predestined what in time He was going to do by His will.[2204] But what St. John Damascene denies - that there is an eternal predefinition in God of our works - has another sense, about which we shall speak in the following chapter.

Moreover, that God does not fail in what is necessary for acting, even if from eternity He did not decree to concur with these or those, is plainly deduced from what we said in Disputatio 93, cap. 6. The same must be said of the eternal decree by which He determined to concur in time, and of the concurrence and cooperation itself; for the decree of God to act is not necessary otherwise than as the very cooperation of God is necessary. Now that cooperation is denied of all those who are unwilling to respond to grace when it excites; yet it is granted to others who do respond. But since this cooperation of God is, for each one, within his power, and it is lacking only to those who are unwilling to consent, therefore one must say that nothing is lacking to anyone which is necessary for acting by antecedent necessity; there is, however, something necessary by consequent necessity. And thus such a defect does not conflict with the liberty of free choice, as we explained in the place cited. Exactly the same must be thought about the external decree of God to concur with us:

2204. Gregory the Great, Moralia, lib. 12, cap. c. ("Cuncta Deus praevidens..."); Elias of Crete on Gregory Nazianzen, Oratio 1 ("Sed ne omnium voces..."); Council of Valence under Emperor Lothair, cap. 3; Fulgentius, Ad Monimum, lib. 1, cap. 14; St. Augustine, passim.

because it is not necessary in any other way than the cooperation in time itself is necessary. Therefore by this reasoning that course of action which has been up to now indubitable to all, and is supremely fitting for the supreme perspicacity and provident care of divine providence, ought not to be denied, namely that God from eternity has foredefined distinctly and individually each work of ours which He does with us in time.

If the things which were delivered by us in Disputatio 68, cap. 4, and Disputatio 88 are considered more attentively, it will be no less easy to reconcile our liberty with predestination and the decree of God than with foreknowledge. The rationale of this concord is as follows. From the predefinition (*praefinitio*) of God there is gathered for our works only a consequent, or accompanying necessity - which is altogether the same; and therefore our liberty can in no way be harmed or impeded, but rather remains of itself determined and entire.

To prove what is proposed - namely, that the predefinition of God is not prior, in the order of cause, to our determination, but is together with it according to what that determination itself demands - first, in this chapter, we shall confirm it by authority; then, in the next, by reason.

First, therefore, what I said is gathered from St. John Damascene, book 2, On the Faith, in the last chapter, where he says thus: "It is important to know this, that God indeed foreknows all things, but He does not predefine all things. For He foreknows even those things which are in our power and free choice, but He does not thus predefine them." He subjoins the reason: "For He neither wills that vice be admitted, nor again does He put compulsion upon virtue." And in the book Against the Manichees, not far from the end, he expressed the same thing more openly in these words: "Since these things are so, God foreknowing those things which will be voluntary on our part, that is, those which are in our power - namely virtue and vice - He predefines only those which in no way consist in our free choice." He concedes, therefore, in both places, that the work of virtue and of sin is by God only foreknown, yet not predefined, when he says: "He predefines only those things (namely, God) which in no way consist in our free choice"; otherwise, since sin and virtue are in our choice and free decision, if God predefined virtue, He would predefine some things which are in our free choice. Nor indeed does Damascene deny the predefinition of these works as certain more recent authors, commemorated in the previous chapter, deny it - that is, the decree of works, distinctly and individually, so that the particle "prae" signify only priority of time or duration; for that would be false, and contrary to the doctrine of the Fathers whom I alleged there. Rather, he speaks so that it signifies a priority and order of that which is prior with respect to our determination: as if he were to say that God does not predefine what we are going to do, without any regard for our consent and our determination, but, together with that and as it requires, He decrees. And in the same sense he had said in cap. 18 of the same book, at the beginning, and in that last chapter cited, that God predefined those things which are not in our liberty - that is, that from Himself He decreed them before our consent and determination, without any regard to them. The reason also which Damascene subjoined confirms this sense, as will immediately be evident.

Indeed, when St. Thomas set this testimony of Damascene before himself as an objection in this Question 23, article 1, argument 1, to prove that men are not predestined by God, he replies that Damascene denied the predefinition of our works - that is (says he), the imposition of necessity. So he judges that Damascene means: God did not predefine our works, that is, He did not impose necessity upon our works. The Holy Doctor gathers this interpretation from those words which Damascene added: "For He neither wills that vice be admitted, nor again does He put compulsion upon virtue."

However, in my judgment Damascene's mind is another. For no reason appears why he should rather use "predefine" than "foreknow" for that which is "to impose necessity." For if "foreknow" were taken in that sense, by the same token he would deny that all things are foreknown by God, as also that they are predefined. Moreover, by those words he did not explain what he meant by the name "predefinition," but he gave the reason why God does not predefine our works. He proves this as follows. Our works are either sins or virtues. Now God does not predefine sins, because He in no way wills them to be done; likewise He does not predefine virtues, because He would compel our will and impose necessity upon it - which cannot be understood in any other way than if, with no regard to our determination, He predefined the works themselves beforehand, as we proved in cap. 3. Therefore He predefines none of the works of our will. He thus concludes in that last chapter with these words: "Wherefore the predefinition conjoined with the just foreknowledge of God effects it." He speaks not only of those things which are not in our power, but also of those which are in it. Therefore he says that those things are predefined by God (which nevertheless he had previously denied), but by a predefinition conjoined with foreknowledge. For God, foreseeing the determination of our will in the manner which will be explained in the following chapter, predefines the consent of that will and its works, imposing upon it no necessity. From which it is also clear that Damascene spoke of the predefinition of human actions in another way than the Fathers cited in the previous chapter, and that he used the particle "prae" in another sense. For among those other Fathers it signifies the priority of time or duration; but in Damascene it denotes only the priority of cause.

Then the same thing is proved from St. Anselm in the little work On the Harmony of Foreknowledge and Predestination with Free Will, cap. 2, where, treating that question by what mode the things which God has predestined come about freely - since from the predestination of God there follows a necessity - after he said that even the act of sin, according to substance and entity, is predefined by God, he answers the question in this way. "Therefore it ought not to be doubted that His predestination and His foreknowledge do not disagree, but are most exact: what is foreknown is what is predestined." And after adding a few matters he shows in what predestination and foreknowledge agree: "He has foreseen, therefore, by some necessity that those things which are foreseen are to be, and those which are predestined; yet certain foreseen and predestined things do not come about by that necessity which precedes the thing, but by that which follows the thing." But in cap. 1 he teaches that antecedent necessity destroys the liberty of free choice. Therefore, when he says that certain things predestined do not come about by antecedent necessity, he understands those things which are established in our liberty. Consequently, he holds

that the decree of God does not precede our liberty: for if it were prior to our liberty, it would induce antecedent necessity upon us - which nevertheless he himself denies. This we must needs prove by reason.

Foundational point presupposed, as it was explained more fully above. In this disputation, and in the preceding one, we have often inculcated - and we treated it expressly in Disputatio 68, cap. 4 - that the necessity by which something is said to be necessarily going to be is twofold: one antecedent, the other consequent. The antecedent is that which comes from a cause from which the effect is going to be, or from something prior which, if posited, such an effect cannot fail to be; and the positing of that thing is not in our power. I said "prior in the order of cause"; for that which is prior in duration does not hinder our liberty, as is shown there. By this necessity it is necessary that tomorrow the sun rise, and that fire heat. Consequent necessity, however, is that which follows upon the positing of the future effect: for from the fact that a thing is said and supposed to be future, it is also said to be necessarily future. This necessity too can be called accompanying, because it is simultaneous with the thing that will be.

This foundation having been laid, the concord above asserted is explained by this reasoning. The decree of God by which He predefines our works individually does not, in the order of cause, precede the determination of our will, but accompanies it; therefore the necessity which follows upon the positing of the decree of God is an accompanying, or consequent necessity to our liberty and determination. For by the very fact that we suppose an absolute decree of God, we also suppose the determination of our consent and our liberty, which the divine will accompanies. Therefore the necessity which we infer from stating the decree of God also follows upon our determination, or accompanies it; and therefore, since it does not precede that determination, it cannot impede it nor in any way wound it, but rather supposes our liberty as of itself determined and entire. For just as the necessity which is inferred from God's knowledge does not impede our liberty - because it follows upon our determination - so in the same way the necessity from God's decree will not take away our liberty, because it supposes it as of itself determined, and is posterior to it. But in order that this reasoning may show what we contend, the assumption in the proving must be established, namely, that the predefinition of God is not, in the order of cause, prior to our determination, but is together with it according to what that demands.

It is fitting that by reason we confirm what, in the preceding chapter, we assumed in order to prove the concord of liberty with divine predestination: namely, that the decree of the divine will concerning each of our works, even of grace, is not prior to our determination. Three things, however, must first be presupposed.

First, that the same order obtains, as regards the relations in God's eternal foreknowledge, between God's decreed effects either considered as referred to His will or as referred to our will and its determination, as obtains in time between those things which God does alone and those which God and we do together, as we explained in Disputatio 82, cap. 6.

Second, note that God brings about in us only two kinds of works. One is before our liberty - of which sort are thoughts and sudden movements of the will, which pertain to grace - and they are called exciting, prevenient, and preventing; God works these in us without us, that is, without our liberty. The other is of those things which God does with us, that is, with our consent; and if these be of grace, they pertain to accompanying, cooperating, and helping grace. In truth, God by His efficacy accompanies our consent in such wise that He does nothing prior, by sole causality, without us; but He concurs together, not by parts separately, but mixedly and not severally, simultaneously and not by turns, with us. Nor, indeed, is there anything prior from God alone, touching accompanying grace, even in the very application unto consent; save only the calling on the part of the intellect, and the first sudden motion on the part of the will; as we have proved in Disputatio 88, especially cap. 5. Third, from Disputatio 69 it is to be presupposed that God most certainly knows what our free choice will do with this or that calling, if it be aroused.

Hence it is proved that the decree of the will of God, which determines our works not by an order of cause prior to our determination, has not been before our determination. For it is not fitting for God in those acts which He works with our consent to operate anything prior by Himself alone, whether as to the consent itself or as to that which pertains to the application and tending unto it, except only what is before on the side of God as to the vocation on the part of the intellect, and the first sudden motion on the part of the will; as has been set forth by us in Disputatio 88. Therefore, as Tertius or Disputatio 69 laid down, God most certainly knows what our free choice, with this or with that vocation being made, will do, if it be aroused.

From this, therefore, it is proved that the decree of the will of God, which determined our works not in an order of cause prior to our determination, was not before our determination. For it is not fitting that God in those works which He does with our consent should operate anything prior by Himself alone, whether as to the consent itself or as to its application and tending; except only what is before on the part of the intellect as vocation, and the first sudden motion on the part of the will; as we have proved above in Disputatio 88, especially cap. 5. And thirdly, from Disputatio 69 it is to be presupposed that God most certainly knows what our free choice, with such or such a vocation, will do, if it be aroused.

Therefore it is proved that the decree of the will of God, which determines our works not by an order of cause prior to our determination, was not before our determination: for in those works which He does with our consent - namely, with our consent if they be of grace, they pertain to accompanying grace - God's concurrence is not by sole causality without us; but in truth God by His efficacy accompanies our consent in such wise that He does nothing prior by Himself without us; but mixedly, not severally, simultaneously, not by turns, He concurs with us. Nor indeed is there anything prior from God alone as to accompanying grace, either in the very application unto consent or as to the consent itself, except only the vocation on the part of the intellect, and the first sudden motion on the part of the will; as has been proved by us in Disputatio 88, especially in cap. 5. Third, from Disputatio 69 it is to be presupposed that God most certainly knows what our free choice, with this or that vocation being made, will do, if it be aroused.

...to have predestined, except for the vocation on the part of the intellect, and the first not-deliberated motion in the will.

By reason it is shown that the predefinition of God in foreknowledge could not agree together with our determination, nor could it agree with it, unless there preceded a knowledge on God's part, not indeed of that which is absolutely future - for this the predefinition of God presupposes - but of that which is known under a condition, whose foreknowledge precedes every predestination. For God most excellently knows what would be future under a condition in this way: If Peter were aroused by such a vocation of mine, and my concurrence did not fail him, which the vocation proportioned to such a free choice postulates, and which cannot without force and miracle be denied, without doubt he would consent; but if he were called by such a mere thought, then he himself would fail me, and therefore I ought not to cooperate with him. Since, therefore, God foreknows these various and innumerable combinations of vocations with the free choice of each, and what the free choice would do with any one of them; in the first sign he decrees absolutely to prevent someone with such a vocation, to which he knew he would respond under a condition; but in the second he decreed to cooperate absolutely with the determination of the will, which under a condition he had known, and therefore he does not precede our determination by his decree, but accompanies it; and the necessity which follows upon such accompaniment can in no way harm the liberty of our free choice, which is posited together with the predefinition, as is clear from what has been said above.

But if there did not precede a knowledge under a condition, it does not seem by what reason God's absolute decree concerning our works would not either altogether precede our determination, or follow it - of which both are false. For from the former there would follow antecedent necessity in our operations, as was said above; from the latter there would follow that our operation is prior to God's concurrence: for in no other way can God by his decree accompany our consent and determination than by first knowing to which part the free choice tends. It is therefore the same to say, "What is predestined by God is necessarily going to be," and to say, "What is foreknown by God is necessarily going to be." For just as, by the very fact that something is said to be foreknown, it is supposed to be future, and thus "to be foreknown to be future" is the same as "for the future to be future," as Anselm says in the aforesaid little work, chapter 1, so also, when some free operation of ours is said to be predestined by God, it is also said to be future by our free choice and by its free determination. And therefore the necessity by which it is said that "what is predestined by God is future" is consequent upon our liberty and agrees well with it; which Anselm expressly noted in the little work, chapter 2, whose words we cited in the preceding chapter. By this same knowledge under a condition - which paves the way for divine providence so that, our liberty remaining unharmed, it may decree our works - the divine will also is guided, so that in time it may concur with our will with the same gentleness, and in no way harm it.

Wherefore Almain rightly defines in tractate 1 of the Moralia, chapter 2, at the beginning and in the middle, a free cause in this way: That which, all the things required beforehand for operation being posited, can will and not will. He adds that he said "things required beforehand," not "things accompanying," because although, positing God's concurrence, or a decree concurring with our will

(which is the same), our will could not fail to operate, nevertheless this does not take away its liberty. For God's concurrence and the will to concur with our will are not of the things required beforehand and necessary for operating, but of the necessary things accompanying. He himself gives no further reason for this. But it is very easy, the one which we have assigned thus far, namely, that the necessity which follows from the things required beforehand for operating is a necessity preceding our liberty and therefore takes it away; but that which follows from our determination and from the things accompanying it, such as is God's concurrence, is a necessity consequent upon our liberty, and is posterior to liberty itself, and so can in no way harm it. However, some more recent writers reprove Almain because he said that God's concurrence is not of the things required beforehand for operating, since without it the will can do nothing. But this reasoning only proves that God's concurrence is necessary to us for operating, which Almain does not deny; it does not, however, prove that it is something required beforehand, since in reality it is not, but accompanies our operation - which is what Almain contends.

Moreover, the things we have said are easier to understand if we consider that the decree of God's will is not an elicited act over and above the essence, but is the naked essence itself, with an added respect of reason to a future effect. For thus we more easily understand that the will of God is always accommodated to the things to which it has an order, since in itself it has nothing more when it wills these things to be than when it wills them not to be; and perhaps to this John Medina, whom we cited in chapter 1, had regard. Nevertheless, by the reasoning which we have explained above, we could no less easily defend our liberty together with God's decree, even if it were an elicited act and added to the essence; as is evident from what has been said, although I judge that opinion to be false, as I noted above in Disputatio 80, cap. 2.

It is confirmed by authority. This mode of the concord of the divine will with ours seems to be indicated by Alexander [of Hales] and St. Bonaventure, when they assert that, notwithstanding God's providence, which disposes things to be, our acts are voluntary and free, because the divine will is not the whole cause, but [works] with free choice, which, since it is the proximate cause, modifies the concurrence of the first cause. Which would not be true if God's efficacy were prior to our determination; but in fact, because it is simultaneous and proportioned to that which our will, aroused by such a vocation, demands, the concurrence of God is tempered to it, and preserves it unharmed, as has been explained. The opinion of these doctors, I do not know for what reason, is reproved by St. Thomas, q. 19, a. 8. For that it follows from this, he says, that a free effect would be beyond God's intention, if the ratio of the free were to be taken from a particular cause modifying the first, whence it would be rightly inferred, I do not see. For the fact that an effect turns out free because it is produced by a proximate free cause does not hinder its happening from the will of God, since He Himself decreed to concur with a free cause according to that which it demands; and this is enough that the effect not be beyond God's intention.

But this is most certain, namely, that the ratio of being free and human belongs to our act, not by respect to the first operating cause, nor therefore is it free and human because God alone decreed and made it to be done, but rather by respect to the mode of operating of the created cause; with which varied, although the act remains the same according to its substance, and the

concurrence of God in the same way, the act does not remain free. For liberty is only a relation of reason to the mode of operating with the indifference of created free choice; which indifference indeed fails by this alone, that there is not present consideration on the part of the intellect, as we shall say at 1 - 2, q. 71, a. 6. Nor indeed do I think that our opinion is contrary to St. Thomas and other Scholastics whom we mentioned in chapter 3: for they do not teach that God's predefinition is prior to our determination; they only assert that our works have been defined by God singly, which we do not deny. But to the difficulty proposed concerning the concord of our will with the divine, we noted in chapter 3 that they do not fully satisfy. Moreover, that St. Thomas did not grant antecedent necessity in human works was very well noted by Waldensis, cap. that 3 cited. But he would have to grant it, if he judged that God, of Himself, before our determination was foreseen, had determined our works.

Nevertheless, some more recent theologians think that our will is determined by the first cause in such a way that our will does not modify the efficacy of the first cause; and they think this to be defined in the second Council of Orange, canon 4, where he is condemned who has said that our will is waited for by God and not rather prevented. For, if our will modifies the efficacy of the divine [will], and God accommodates Himself to it, because He sees under the condition to which the will would incline when prevented by such grace, it follows that God is waiting for our will. But the aforesaid doctors did not have a sufficiently clear view of the heresy of the Semipelagians, against whom that canon was promulgated; for, as we noted in chapter 5, there he alone is condemned who has said that some good work precedes on our part, on account of which grace is given to us: but about the modification and determination of the first cause by the second the Semipelagians said not even a word; nor did the Council have, nor did its scope allow, to define anything about this matter: for it was dealing solely against the Semipelagians. Furthermore, we warned in chapter 5 that the concurrence and determination of our will are not without grace. That God also accommodates Himself to secondary causes and, according to that which they demand, operates with them, no Philosopher can deny.

Caput VIII - Corollaries of the foregoing doctrine

For a greater clarity of the things we have said, it is necessary to add a few points. The first is that the opinion of those is true who say that God pre-defined our works without us, that is, before our free determination...

For a greater clarity of the things we have said, it is necessary to add a few points. The first is that the opinion of those is true who say that God pre-defined our works without us, that is, before our free determination, not indeed explicitly and one by one in themselves, but in the congruous calling, which, together with the foreknowledge of what He would be going to do, He predestined for us. For just as He bestows on us in time the congruous calling before our free determination, so too He pre-defines it, since He keeps the same order in predestining from eternity and in operating in time: therefore in that calling, as in a cause whose congruity He knows most excellently, He pre-

defines our free consent and operation. But this pre-definition does not impede liberty, just as neither does congruous calling: because it is in the power of anyone freely either to resist a congruous calling or to obey it, as we said in disputation 98, chapter 5.[2205]

It must, however, be observed that there is a difference between a congruous thought for acting rightly and a temptation, from which God knows that there will be a future sin: for although in each, as it were in a cause, there lies our consent either to a work of virtue or to a work of sin, nonetheless God is not said in any way to pre-define the sin, even if He predestines the thought from which He knew it would be future; He is said, however, in a certain way to predestine the work of virtue in the very calling. The reason for the difference is that, since of Himself, before He pre-defines the calling, He desires with an antecedent will that man consent to good thoughts and works, and from this will He predestines a congruous calling, He is rightly said in that calling to predestine the consent, whose will He pre-defines by the calling itself. But because God does not will of Himself that sin be done, not only with deformity, but not even according to its substance, therefore while He pre-defines the thought without our consent, from which He knows that we will freely sin, He is not said in it to pre-define, as in a cause before our consent, the work of sin even according to its substance. But in the following instant He does pre-define the work of sin according to its substance, because He decrees to concur with the will, just as it itself demands; yet this will in God is not antecedent, but accompanying our own, and hence, there being as yet no antecedent will in God, the work of sin according to its substance has not been predestined as yet in a cause. Moreover, that God does not will with an antecedent will the work of sin even according to its substance is manifest. For just as of Himself He commands that it not be done, so also of Himself He desires that it not be, as is evident from the things said in disputation 83, chapter c.[2206]

Second, it must be observed that the same order which we posit between the concurrence of God and our determination in operating is to be kept between God's eternal definition and the determination of causes in His foreknowledge, in the case of natural things, between God and the other natural causes - namely fire, water, etc. Therefore just as God does not first concur for heating before the fire cooperates, so He does not first pre-define that He will concur with fire before He sees the fire's determination. But He sees this both from the fact that He knows its nature and its determination to heating, according to which it demands a concurrence that could not be denied without force and a miracle against its internal inclination; and also from the application to matter by which it burns. In time, moreover, the fire is not first applied by God for burning, nor does God first operate that the fire burn, but He operates together with it; this is clear in the same way in which we proved it about the works of free choice, namely because the effect of the fire is in such a way wholly from God and wholly from the fire that, in thought, one cannot discern what is from the one and what from the other. Much less, therefore, can there be in reality and in the real order of cause something prior to something else within the fire's very effect. And since pre-definition has the same order with the concurrence of a secondary cause in foreknowledge that it has in time, it follows that God from eternity decreed the effect of natural

2205. Vazquez, disputation 98, chapter 5.
2206. Vazquez, disputation 83, chapter c.

causes together with their cooperation. But when St. John Damascene says that God has pre-defined the things that are not in our power, that particle "pre-" does not denote a precedence with respect to the natural cause, but with respect to our will freely consenting: as if he were to say that the things that do not depend on our will He pre-defines before it, although not before the concurrence of the natural cause; but the things that will be from our will He does not decree before it, but together with it.[2207]

Third, from the things said in this whole disputation and in disputation 82, chapter the last, it is gathered that not only did God not pre-define our free works before the determination of our will, but He also could not have pre-defined them beforehand. The reason is manifest, because since the order of prior and posterior among the decrees of the divine will ought to be assigned, not from God's mere good pleasure, but from the diverse order of the things that are predestined by God, it follows that there must be variation among the things themselves, so that we may assign diversity in God's decree; otherwise, as we noted there, with things standing in exactly the same manner, we would say in vain that God decrees in one way and in another: for He is not said to define this or that variously from various acts elicited by His essence, but the very same essence, unchanged in itself, by various aspects of reason toward the objects; wherefore, if the objects are in the same condition, there will always be in God the same mode of predestining and pre-defining. But God, concurring with our will, not only does not act first, nor first apply it to operate before it cooperates, but He also cannot: for the argument made in disputation 88, chapter 5, also manifestly proves this; therefore, by His pre-definition God cannot precede the determination of our will, and hence He cannot impede its liberty by a pre-definition of its operations. Wherefore He can only take away liberty by predestining something that precedes our cooperation and free consent. But this He must do in one of three ways: either by disturbing the thought so that there is not in us a full power of deliberating; or by a hypostatic union; or by the beatific vision; of which the latter two ways impede liberty only with respect to sinning, but leave the will free with respect to other good works - although the vision also necessarily moves to the love of the Deity - whereas that first way wholly removes liberty. But in any other way our liberty of will cannot be removed or impeded: because, as St. Thomas rightly teaches, our will can be necessarily moved by no created object, so long as the use of reason remains without disturbance.[2208]

Fourth, note that various ways of speaking by causal propositions can be allowed concerning God's decree, or His concurrence, and the cooperation of our will - not because by them we signify that God operates first, or that He wills to operate with us without regard to our cooperation, or conversely (for neither can happen, as has been proved), but so that we may denote the different mode (as the saying goes) of dependence or connexion of one cause in operating upon the cooperation of another. For example, it can be said: because God wills me to consent, and to cooperate with me unto consent, I consent: in which way of speaking it is indicated only that our operation depends upon the help and concurrence of the divine will, not that it operates consent in us first, but that without it, as the first cause to which it is essentially subordinated, we can in no

2207. St. John Damascene; the particle "prae" denotes priority with respect to our free will, not to the natural cause.
2208. St. Thomas, Summa theologiae I-II, q.10, a.2; see also Vazquez, disputation 88, chapter 5.

way operate. Similarly, we can say: because I will and consent, God wills me to consent, and to will: by which is indicated only that our cooperation, as a secondary and proximate cause modifying and determining His efficacy, is required by God's will and concurrence. We also add that, in the consent of the will, the first cause and the second are so mutually connected that the second is essentially subordinated to, and depends upon, the first, as superior, for the whole effect and every account of it; and perhaps for this reason some have said that the first cause operates prior to the second in the same work: because the second is subordinated to the first, as in all things essentially dependent upon it. Indeed, this kind of priority ought to be reduced to a priority of dignity and excellence, as I said in chapter 5.

Finally, from what has been said it is inferred that for no reason ought it to be said that from God's pre-definition any necessity is imposed upon our will. For although we have granted that from pre-definition there follows upon our will some necessity, yet, because that necessity is posterior to our liberty and consequent upon it, it cannot be said that such a necessity is imposed upon our will. By this manner of speaking is denoted an antecedent necessity, which alone can be imposed; for that which is posterior is not imposed, rather it is subordinated afterward.

Disputatio C - An, if the first cause should operate necessarily, our will could still be moved freely

Opinio Scoti, cap. 1.[2209] Quid was thought by Gabriel and Corduba, cap. 2.[2210] The truer opinion of Cajetan and Camerarius, cap. 3.[2211] Even if no cause were free, some effects would be in a certain manner contingent, cap. 4.

On whether, if the first cause were to operate necessarily, our will could be moved freely

Caput I - The opinion of Scotus

In this question, thus understood, the first opinion is that of Scotus in the Second Book, distinction 1, question 2, and likewise in distinction 29, question 1. He there sets forth, against the first conclusion at the first instant, a third position that affirms the following.[2212]

First proposition of Scotus. The first reason of the one who affirms that our will, on account of an extrinsic impediment of the first cause, would then not operate freely, is necessary. He proves the first point thus: a cause that moves necessarily, in that wherein it moves, necessarily moves; but our will moves itself, inasmuch as it is moved by the first cause: therefore, because then it would necessarily be moved by the first cause, it would also necessarily move itself. He explains the

2209. Scotus's opinion to be treated in chapter 1.
2210. Gabriel and Anthony of Corduba's views to be treated in chapter 2.
2211. Cajetan and Camerarius's truer opinion to be treated in chapter 3.
2212. Scotus, In Sententias II, d.1, q.2; and d.29, q.1. Corduba: Book I, q.55, dub.4. Durandus is also referenced.

major proposition by Scotus's example of a staff, which then necessarily moves a stone when it itself is necessarily moved, but now moves it freely when it itself is also moved freely. But that the will moves itself inasmuch as it is moved by the first cause is clear, because it essentially depends on that cause in operating; whereas the first cause does not depend in its operation on the second. Then he proves thus: the first cause more deeply reaches the effect than the second cause, and hence by a prior nature; wherefore, if the first cause were to operate necessarily, in that prior [order] the effect produced by the first cause would be left unfree, and hence would be so necessary that it could not be freely impeded by a second cause.

But besides the fact that Scotus's reasons are weak, they do not sufficiently agree with his own doctrine - as we shall see in chapter 3 - his opinion does not please me. Cajetan impugns it in the Prima Secundae, question 19, article 8, and question 1, distinction 4, article 13. Passing over, however, his other arguments, we can refute the same on our own.

First indeed: from God's mode of operating our liberty would be impeded; since a created will cannot but be subject to God's mode of operating, it would be impossible for the will ever to operate freely. Therefore liberty from an intrinsic principle would be impossible: for where the act is impossible, the potency is also impossible; and so what Scotus was presupposing is destroyed, namely, that the will would remain free in itself if the first cause were to operate necessarily.

Second: from Scotus's position it follows that the whole liberty of our operations would be reduced not into our will, but into the first cause; and thus our acts would now be free, not because they are elicited from our free will, but because they proceed freely from God; and so they would not be in our liberty, but in God's - which is absurd. For if our will even then moves itself freely, insofar as it is moved freely by God, as a staff [is moved], it follows that it has no liberty of its own and no dominion of its operations.

Third: if by a prior nature an act of the will is produced by God rather than by our will, by reason of God's being the first cause, it follows that now also, with God operating freely, there would be no operation free on the part of our will. For if it is first produced by God because He is the first cause, our will will not be able to impede it; and in consequence there would follow - contrary to what we shall prove later in this disputation, chapter 7 - the opinion of Alexander and of St. Bonaventure and the older view, who reduce the liberty of our operations into our will as into its proper cause.

Caput II - What Gabriel and Corduba thought

The second opinion is that of Gabriel in the First Book, distinction 28, which in the second article he proposes; and Anthony of Corduba follows it in Book I, question 55, doubt 4, and he judges it to be Scotus's opinion. He asserts three things. First: if Durandus's opinion were true, which in the first question of the second distinction affirms that God does not concur with secondary causes, but that they operate without Him, then even if the first cause were to operate necessarily, our will would remain free - which is sufficiently clear. Second, with Gabriel he asserts that, if the first cause necessarily concurred with the second, because the second cause acts

mediately and by itself, our will would remain free. Third, as both affirm, if God proceeded wholly outside in such a way that by Himself alone He could bring about whatever a secondary cause brings about, then, the first cause operating necessarily, liberty would not remain in our will. From this part Corduba thinks that he and Gabriel agree with Scotus, and he confirms it by Scotus's latter reason.

However, this opinion differs from Scotus's. For Scotus holds that our will even then would not be free when it would operate together with the first as a partial cause; but this opinion asserts that then our will would operate freely, even if the first cause operated necessarily, when our will were a partial cause - only then would it be deprived of liberty when God alone by Himself would effect the whole. Nevertheless, this opinion does not commend itself to me: first, because it supposes that vital operations, especially those of the will, can be produced by God alone, which is absurd, as we shall show more fully in I-II, question 3, article 2.[2213] Moreover, because here we are treating of the liberty of the will in acts elicited by it - namely, whether, God operating necessarily, the will itself would elicit them necessarily or freely; for concerning acts produced by God alone, no one can doubt that they do not depend upon the liberty of our will, since they do not proceed from its efficacy. And although God could by Himself alone produce these acts in our will, nevertheless because the will could also operate by itself, there would still remain to it liberty for acting.

Caput III - The truer opinion of Cajetan and Camerarius

I embrace the opinion of Cajetan in the places cited, which Bartholomeus Camerarius adopts in the Catholic Dialogue, part 2, chapter 3; they absolutely teach that, even if the first cause operated necessarily, our will would operate freely, if it is of itself and intrinsically free. From this opinion it is rightly gathered that the proper cause of liberty is our will, and that by God's decree or mode of operating the mode in which it operates freely is not varied. And this opinion is proved and explained by the following easy reasoning.

If, while God operates necessarily, our will could not freely consent, this would occur in one of three ways. First: either because God would be necessarily determined to prevent it by His call; and this would not suffice to cause the will necessarily to will, unless there were such a consideration on the part of the intellect that by it our will would be moved necessarily. But no other such consideration can be had than the clear vision of God, which presents the supreme good under every aspect of good; for other things would not propose the object under every aspect of good, and thus would not necessarily move, as I noted in disputation 97, chapter 4.[2214] But for the will to be moved necessarily by this vision of God, there is no need that God operate necessarily; it is enough that He grant such a vision voluntarily and freely.

2213. Below, in the Commentary on the Prima Secundae, question 3, article 2, where it is shown at greater length that vital operations, especially of the will, cannot be produced by God alone.

2214. See disputation 97, chapter 4, on the necessity arising from the clear vision of God proposing the supreme good under every aspect of good.

Or second: our will would be moved necessarily, because God would be bound necessarily to cooperate with it as it demands; and in this way He would not take away its liberty, since He would cooperate in accordance with what the will demanded, nor earlier than it operated, but together with it, as is sufficiently clear from the preceding disputation, chapter 7, and disputation 88, chapter 3.[2215]

Or finally, third: God would then impede our liberty by predetermining our works and consent before our free determination, in such a way that we could not do this; but in no way, even when He operates freely, can He predestine our free acts so that they would be such, as was said in the preceding disputation, the last chapter; therefore by no route would our will suffer a necessity that would take away its liberty. It remains, therefore, that God's liberty, with which He freely cooperates with us, contributes nothing at all so that our operation be free, but that the whole reason of the "free," which lies in an extrinsic denomination, depends on our will alone. For whether God operated freely or necessarily, our action would be free in the same way. Therefore the first and sole cause of the liberty of our act is the created will.

Scotus's arguments can in fact be easily dissolved. To the first, Cajetan answers very well that the proposition, "Things which move inasmuch as they are moved [move] necessarily if they are themselves moved necessarily," is true when the cause demands to be moved by another as a previous form, or disposition, by which it itself moves, as appears in the example of the stick; but certainly our will does not require God's motion in this manner, in order that it operate and move itself, but it requires only God's motion as a helper and cooperator, because by itself alone it cannot operate. But in this way the first cause is tempered to the second, and elicits the operation according to the latter's mode: so far is it from being the case that, if it operated necessarily, it would take away the liberty of the second cause.

To the second, Cajetan also replies well, that the first cause, even though it is principal and most powerful and for this reason prior, does not touch the effect in any priority before the created will cooperates, as is established from disputation 88, chapter 3.[2215] Yet you will object: the first cause does not depend on the second in operating; therefore it touches the effect before it. I answer: the first cause does not depend on the second in this sense, that it receives from it the power for operating; but it does depend on it in that, without it, it cannot effect an operation - especially a free one - in it, and therefore they ought to cooperate with it. And indeed Scotus ought to have remembered this: for he taught the opposite in II Sentences, distinction 37, question 1, 5; to the solution; and in IV, distinction 49, question 6, § Dico ergo, which we reported in disputation 88, chapter 5.[2216] Therefore, as we said in chapter 1: if the first cause, operating necessarily, would, because it is prior, touch the effect first, then even now when it operates freely, because it is prior,

2215. See disputation 88, chapter 3, and also the preceding disputation, chapter 7, on the simultaneity of the first cause's concurrence with the created will.

2215. See disputation 88, chapter 3, and also the preceding disputation, chapter 7, on the simultaneity of the first cause's concurrence with the created will.

2216. Cf. Scotus, In II Sententiarum, distinction 37, q. 1, 5; and In IV Sententiarum, distinction 49, q. 6, § Dico ergo; reported in our disputation 88, chapter 5.

in the same manner it would touch (the effect) first, and so would leave no liberty to our will. But if now, when it operates freely, it does not touch (the effect) first, and so does not hinder liberty, it follows that not even then, even if it operated necessarily, would it produce the effect first.

Caput IV - Even if no cause were free, still some effects would be, in a certain respect, contingent

Quorundam opinio. There are some who say absolutely that, if there were no cause free and indifferent for operating, there could be in no way a contingent effect. Thus teach Gabriel and Corduba in the places cited. They prove this, because if there were no free cause, all things would be determined to one side by a force and necessity of nature; therefore there would be no contingency. For thus Aristotle in Perihermeneias, chapter 8, defines the contingent: "What is not determined to one side."

However, the opinion of Henry pleases me - Quodlibet 8, question 4 - who teaches that the "contingent" is twofold, or that a thing can be called "contingent" in two ways (for the controversy seems to be about the word rather than the thing). First, something is said to be contingent on the side of the effect, when it is of such a nature that it does not repel being or not being, but from its intrinsic principles either can befall it. Such are all corruptible things compared to created causes too, by which they can be produced and corrupted, or impeded. Thus a man can be and not be, rain likewise, and so on. Then something is called contingent on the side of a free cause and with the indifference of the agent.

Henry therefore gathers that "contingent" in that first way can exist even if no free cause exists, because created things, especially corruptible ones, are of such a nature that they can be and not be; and on that account they are said to be "not necessary"; but "not necessary" is entirely the same as "contingent," which can be and not be. Whether therefore these things are impeded or corrupted by a necessary agent or by a free agent, nevertheless they can of themselves be and not be, and therefore they are called contingent. Further, he says that in that case no effect is contingent as referred to its cause, because since causes operate naturally and necessarily, whatever they effect - whether by producing, or corrupting, or impeding - they effect not contingently but necessarily. For only the free cause is that which, from an apprehended form, acts with indifference toward either alternative; the rest are determined to one side. Of contingency in this latter way Aristotle speaks in the place cited; wherefore Henry's opinion in no way stands opposed to him.[2217]

2217. Aristotle, Perihermenias (De Interpretatione), chapter 8; Henry of Ghent, Quodlibet VIII, question 4.

Articulus VII - Whether the number of the predestined is certain

Ad septimum sic proceditur. It seems that the number of the predestined is not certain. For a number to which addition can be made is not certain; but to the number of the predestined addition can be made, as it seems: for it is said in Deuteronomy, chapter 1: "May the Lord our God add to this number many thousands more"; and the Gloss there says that it is not defined with God, who knows who are His. Therefore the number of the predestined is not certain

Further, no reason can be assigned why God should preordain men to salvation in this number rather than in another; but nothing is disposed by God without a reason. Therefore a fixed number of the saved preordained by God is not certain.

Further, God's operation is more perfect than the operation of nature. But in the works of nature, the good is found as in the majority, but defect and evil as in the fewer. Therefore, if the number of the saved were established by God, there would be more to be saved than to be damned. The contrary of which is shown in Matthew, where it is said: "Wide and spacious is the way that leads to destruction, and many there are who enter by it."[2219]

I answer: The number of the predestined is certain. But some have said that it is certain formally, but not materially; as if we were to say that it is certain that a hundred, or a thousand, will be saved, but not that these, or those, in particular. But this destroys the certitude of predestination, of which we have spoken above. And therefore it must be said that the number of the predestined is certain to God not only formally, but also materially. Yet it must be considered that the number of the predestined is said to be certain to God not only by reason of knowledge, because, to wit, He knows how many are to be saved (for thus also the number of the drops of rain and the sands of the sea is certain to God), but by reason of a certain choice and definition.

For the understanding of which it must be known that every agent intends to make something finite, as appears from what has been said above about the infinite, in question 7, articles 2 and 3. Whoever, moreover, intends some determinate measure in his effect, devises some number in the essential parts of it which are of themselves required for the perfection of the whole. For he does not of himself choose some number in those things which are not principally required, but only on account of something else; but he takes so many of such things in number as are necessary for something else. Thus the builder devises the determinate measure of the house, and also the determinate number of rooms he wishes to make in the house, and the determinate number of measures of the wall or of the roof; but he does not choose a determinate number of stones, but takes as many as suffice to fill out the set measure of the wall.

Thus, therefore, it must be considered in God with respect to the whole universe, which is His effect. For He preordained in what measure the whole universe ought to be, and what number would be suitable for the essential parts of the universe, which namely have some order to perpetuity: how many, to wit, spheres, how many stars, how many elements, how many species of things. But individual corruptibles are not ordered to the good of the universe as principally, but as

2219. Matthew 7:13.

secondarily, inasmuch as in them the good of the species is preserved. Whence, although God knows the number of all individuals of ox or of gnat, nevertheless the number of suchlike is not of itself preordained by God. But of suchlike the divine providence has produced so many as suffice for the conservation of the species.

Among all creatures, however, rational creatures are more principally ordered to the good of the universe; for inasmuch as they are such they are incorruptible, and most especially those who attain beatitude, who most immediately attain the ultimate end. Whence the number of the predestined is certain to God not only by way of knowledge, but also by way of a certain principal predefinition. It is not thus altogether with the number of the reprobate, who seem to be preordained by God into the good of the elect, "to whom all things work together unto good."

But as to the number of all predestined men, what it may be, some say that out of men as many will be saved as angels fell; others, that as many will be saved as angels remained; others, that out of men as many will be saved as angels fell, and in addition as many as were the angels created. But it is better said that the number of the elect to be placed in supernal felicity is known to God alone.

to the first: It must be said that that word of Deuteronomy is to be understood of those who are pre-noted by God with respect to present justice. For of these the number both increases and decreases, and is not the number of the predestined.

Reply to the second: It must be said that the measure of the quantity of any part is to be taken from the proportion of that part to the whole. For thus with God there is the reason why He made so many stars, or so many species of things, and why He predestined so many, from the proportion of the principal parts to the good of the universe.

Reply to the third: It must be said that the good proportioned to the common state of nature happens as in the many, and fails from this good as in the few. But the good which exceeds the common state of nature is found as in the few, and it fails from this good as in the many. As is clear, that there are more men who have sufficient knowledge for the governance of their life, but fewer who lack this knowledge, who are called simpletons or fools: yet very few, in comparison with others, attain to having a profound knowledge of intelligible things. Therefore since eternal beatitude, consisting in the vision of God, exceeds the common state of nature, and especially according as nature is bereft of grace through the corruption of original sin, fewer are saved. And herein also the mercy of God especially appears, that He raises some to that salvation, from which very many fall away, according to the common course and inclination of nature.

The earlier conclusion is this. The number of the predestined is not only certain formally, but also materially: that is, it is not only certain how many are predestined, but also who they are. The later conclusion: The number is certain not only by foreknowledge (*praescientia*), but also by a certain principal predefinition (*praefinitio*). But the number of the reprobate, and of other things which are not ordered principally to the good of the universe, but only secondarily, is not so.

By what mode the number of the predestined is certain. Disputation 101.

- Two scholastic opinions. Caput I.

- The final opinion. Caput II.
- How it is truly said: A reprobate cannot be saved; a predestined one, or one to be saved, cannot be damned. Caput III.
- That there are more reprobates than predestined. Caput IV.

Disputatio CI - On the certainty of the number of the predestined and of the reprobates

Caput I - Two scholastic opinions

Before we bring forward our own and others' opinion, it is necessary to explain briefly the state of the question. And first of all it must be observed that what the Scholastics call "certain" or "infallible" is something other than "necessary" or "inevitable": for the former two refer to the intellect, whereas the latter two are said of the things themselves, considered in themselves. In like manner "uncertain" and "fallible" pertain to cognition, while "contingent" and "free" belong to the things themselves, considered in themselves.

Concerning the contingency, freedom, and necessity of predestination (*praedestinatio*) and reprobation, we have already said enough; now, however, we must dispute about certainty, insofar as it pertains to the intellect. And although no Catholic doubts that the number of the predestined and of the reprobates is most certain in the science of God not only formally but also materially, as was said in the earlier conclusion of the article, nevertheless the question is, whence this certainty of the predestined begins, account being taken of the "instants" which, according to our mode of understanding, are posited in the divine decree.[2220]

In this controversy, the first opinion is that of Catherinus in book 1 De praedestinatione, in the last chapter, where he affirms that the number of the predestined is certain in a different way than the number of those to be saved.[2221] For he himself, as we saw above in Disputation 90, distinguishes the predestined from those-to-be-saved. Accordingly he first asserts that the number of the predestined is certain in the predefinition, by which God decreed efficaciously to beatify them before any merits, even of grace, were foreseen. In like manner, he says, the number is certain in the predefinition of the means of grace by which they are to be led to eternal life. For he thinks these means are such that, given them, it is not within their own power not to persevere. And if these two predefinitions were thus in God, it would plainly follow that in both ways it would not only be certain in foreknowledge after the one or the other predefinition, but that it would also be necessary that it be thus future, and in no way contingent and free.

2220. Above, Disputation 90; on the logical "instants" in the divine decree see the same disputation.
2221. Catherinus, De praedestinatione, book 1, last chapter.

Next he teaches that the number of those to be saved is not certain in the election to glory before all works, even of grace, because he thinks that they were not elected in this way, but were ordered to glory by a common kind of will of simple affect, which they could quite well resist; and therefore the number of them could not have been certain by any knowledge from an election prior to works.

Finally he asserts that the number of those to be saved is not certain in the predefinition and providence of the means of operating grace (*gratia operans*), because they were only prevented by common grace, which they too could resist. For he does not deny - as some falsely impute to him - that the number of those to be saved is certain in the predefinition by which God decreed to cooperate with individuals; nor does Catherinus anywhere deny such a decree. And thus, when he says that the number of those to be saved can be increased and diminished, he understands the number not as it is in the foreknowledge of God with the cooperation of each one foreseen, but absolutely and in itself, prior to this foreknowledge, from the sole predefinition of operating and preventing grace. For he thinks that our future works are not otherwise known by God than from their real presence in the eternity of God; and hence, in the sole predefinition of operating and preventing grace, before the decree of concurring and cooperating is added, nothing is known by God with certainty. This opinion seems to have been followed by the Massilians: for Hilary, in the letter to St. Augustine which is before the book De praedestinatione Sanctorum, writes thus of them in the middle of the letter: hence it is that "they likewise do not accept that there is a defined number of those to be chosen and those to be rejected." They were thinking against St. Augustine, as we saw in Disputation 96, chapter 4, that to the predestined there had not been granted by God a peculiar operating grace for persevering, by which God would certainly know that they would persevere; but that He had provided for all a common grace by which they could persevere and could fail to persevere. And therefore, in the predefinition of the helps of operating grace, they thought the number of the predestined to be uncertain and indefinite to God. For they would by no means have said that the number of those to be saved is altogether uncertain, who knew very well that all future things are at length certainly known by God from eternity.

The second opinion is that of Cajetan in this article, to which the more recent authors accede, and which all ought to follow who assert that the predestined were chosen to glory by an efficacious will before any merits were foreseen - whom we cited in Disputation 89, chapter 1.[2222] They therefore teach that in this election the number of the predestined is certain and determined, both formally and materially, as was set forth in the first conclusion; and that St. Thomas signified this when he said that to God the number of the predestined is certain, not only in foreknowledge (he understands: after works), but also by reason of a certain election and definition (he understands: the election to glory before works). But they think that the number of drops of water, of worms, and of other things, indeed even of reprobates, is not in this way certain: because they hold that all these were not defined through themselves before the foreseeing of a cause, in such a way that God would first will there to be so many worms before He willed anything else, and then would determine the causes to this number; but rather that He willed there to be as many as would be expedient for the good of the universe, and that to this end He applied the causes. Therefore, in the

2222. Cajetan, on this article; see also the recent authors cited by us in Disputation 89, chapter 1.

first predefinition, they say, He did not determine the number of worms, nor of the reprobates; because of Himself He did not will before all things to reprobate men, but as would be expedient for the number and end of the predestined: whereas the predestined, through themselves and before all things, He efficaciously chose in a certain number to beatitude. They confirm this by the example of an architect, who first determines the measure of the house and the number of dwellings, because this is his intention; then he does not decree a determinate number of stones considered in themselves, but so many as he judges necessary for the end he has set before himself.

Caput II - The final opinion

From the things set forth by us above in Disputation 89, chapter 2, and Disputation 95, chapters 4 and 5, we shall easily gather what ought to be thought in this controversy.[2223] First, I judge it highly probable from what we said in Disputation 89, that the number of the predestined is not certain from an election to beatitude before merits. For I showed there that it is sufficiently probable that no one was elected to glory before merits of grace were foreseen. But that the number of the reprobates is not certain from a will reiecting them from glory before sins were foreseen, is more than probable: because, as was shown in the aforesaid disputation, and in Disputation 95, chapters 4 and 5, God rejected no reprobate from the kingdom of heaven before sins were foreseen. And if predestination in that way were an election, and the reprobates a rejection from the kingdom, then not only would the number of them be certain in the foreknowledge of God from that sole predefinition, but it would also be necessary therein, nor in any way would it be placed under a free will, as was proved in the same place.

Some, however, try to prove that the number of the elect is certain from the election to glory by that saying of 2 Timothy: "For the firm foundation of God stands, having this seal: The Lord knows who are His." But I do not know from which word of Paul they draw that, since he only says that the number is certain in foreknowledge. For he says that this is a firm foundation: "The Lord knows who are His." And he calls it a firm foundation, in whatever way the subverting doctrine of certain persons might overthrow it, as Hymenaeus and Philetus had been deceived; for those heresies would stamp upon souls, and as it were imprint, this testimony - that they are sons of God and well known to God Himself, and remain immovable. Rightly so: "For the Spirit Himself gives testimony to our spirit that we are sons of God" (Romans 8).

Secondly, it must be said that the number of the predestined and of the reprobates is certain as to the foreknowledge of God from the providence of the means in a twofold way. First, from the preordination of the means of operating grace, or of prevenient guidance; and, further, from the condition of cooperation of free will: both of which are consistent. For God has a distinct and peculiar providence, by which He determines each in particular, as was proved in the preceding disputation, chapter 5.[2224] Indeed, Catherinus seems to acknowledge God's providence only in the predefinition of operating and prevenient grace, not in the decree of cooperating with free choice.

2223. Disputation 89, chapter 2; and Disputation 95, chapters 4 - 5.
2224. The preceding disputation, chapter 5.

This twofold providence therefore being posited, the number is not only certain in foreknowledge - that is, not only certain and infallible to the divine science concerning it - but the very number is consequent-necessary: by that necessity of the consequent which we have said above; which we call the necessity that something future, as future, is necessary to be future, and with which our liberty altogether agrees; yet not by an antecedent necessity, which would wholly take away or hinder our freedom, as was explained in an earlier disputation.[2225]

Thirdly, even from the sole predefinition of the means of operating and prevenient grace the number is certain in foreknowledge, yet still under a condition, until the decree of cooperating and concurring with free choice is added; for under that condition God knows what free choice would do with this or that calling, if He Himself should not decide according to His own will; and the will, foreseeing with such a consideration, sets forth the plan: therefore, under this condition, the number of the predestined is known as certain from the sole preparation of prevenient grace. Nevertheless, since together with the counsels of prevenient grace God can deny concurrence - which being denied, the vocation does not obtain the response of free choice - until the decree of cooperating with free choice is added, the number is not absolutely certain in foreknowledge; but when that is added, it is certain - by a consequent necessity, yet not necessary for us, nor including a removal of liberty, but free, contingent, and mutable. For the certainty of knowledge together with that consequent necessity does not take away from us liberty, mutability, and contingency, since it presupposes liberty itself entire in us. The same must be said, mutatis mutandis, concerning the reprobates.

Nor, moreover, does St. Thomas in this article oppose the opinion we have set forth: when he says that the number of the predestined is certain not only by reason of knowledge, but also by reason of a certain election and definition. For by "election" he did not understand an efficacious election to beatitude before merits were foreseen; but he understood "election" as we ourselves have explained his mind in Disputation 89, chapter 1, namely, as a decree by which God from eternity seals that He will cooperate, with all the predestined, with a cooperation reaching to perseverance, and finally confer eternal beatitude; and from these ways it is certain that then the number of the predestined is determined. Nor does there arise from this any necessity by which our liberty is impeded, as we related in Disputation 95.[2226]

But as to natural effects, which proceed from a necessary and natural cause, even not only in the present but also in heaven, their number is known certainly and necessarily. Whether, however, God first from ...

2225. On the distinction between the necessity of the consequent and of the consequence, see the prior discussion referenced in the same context.

2226. Disputation 95.

Caput III - How it is truly said, "The reprobate cannot be saved; and the predestined, or the one to be saved, cannot be damned"

Whether God first determined the number of these things in themselves, or with a view to a higher end, is manifest. For he did not predestine the number of these things according to themselves, but on account of another higher end, as it pleased him. But the number of the reprobate, with respect to the denial of efficacious and congruous help, was thus and thus great from the mere will of God: for although he decreed to deny them those helps, in order to show the riches of his mercy upon the vessels of mercy, nevertheless for this end such-and-such a number of the reprobate was not necessary.

But he understands these propositions, inasmuch as they are about a future contingent and inasmuch as that event is referred only to its proper causes; for inasmuch as it is in eternity, or is subject to the knowledge of God, he does not doubt that these propositions are determinately true or determinately false; and that of some predestined one it is true that he will be saved; but of another, that he will be damned, taking "non-predestined" as he himself distinguishes it from those especially predestined and elect, as we saw in that Disputation 90. Otherwise, how would he call these "to be saved" or "to be damned," if neither in reality nor in the prescience of God would it be true that they are to be saved or to be damned?

However, besides the fact that this doctrine rests on a false foundation, since it distinguishes between those "to be saved" and the predestined, as we showed there, there is another reason why it is not true. For although it is antecedently free, on the side of the cause, for the predestined to be damned and for the one to be damned to be saved; both because no one is chosen before all works unto eternal life, as was shown in Disputations 89 and 90; and also because no one is so stirred up by grace that he cannot resist it, as we said in Disputation 90 and Disputation 98; nevertheless every proposition about a future contingent and free event, in that formal aspect in which it is referred to its proper cause, is determinately true, as we more fully showed in Disputation 66, chapter 1. Therefore those two propositions, if they are enunciated of any individual whatsoever, are determinately true or determinately false. For if they are taken universally, each is false; if vaguely, each is true. For not every non-predestined will be saved, nor will every condemned be condemned, if "non-predestined" is taken in the sense of Catherinus: for he calls predestined both the one to be saved and the one to be damned, as was said; but some one will be saved, and someone else will be damned.

Therefore from the above things it was clear; but because Catherinus, relying on his own principles, has philosophized in a peculiar way in this matter, it was necessary to note a few things in passing against him. In his third book, on predestination, chapter last, he says first that this proposition is true: The predestined will necessarily be saved; but he understands "necessity" as antecedent, which is not in the power of the predestined, such that by the force of predestination a man is not left free to be saved or to be damned. For he thinks both that the elect were efficaciously chosen unto glory before foreseen merits, and also that they were so prevented by operating grace that it is not free for them not to obtain glory, nor not to persevere in grace. Yet we have shown this

to be false in Disputation 89, from our reply against Catherinus in Disputation 90, where we show that no one was so efficaciously chosen that it was not free for him to attain beatitude and to lose it; nor that anyone was so prevented by grace for Christ as that he could not fall away from it by his own liberty.

Then he teaches that these propositions, A non-predestined one will be saved; and, a non-predestined one will be damned, are neither true nor false, but contingent and possible either way. Moreover, by "non-predestined" he calls all those who before merits were not efficaciously elected, nor confirmed in grace; under which he comprehends as well those who are to be damned as those who are to be saved. He understands these propositions, inasmuch as they are about a future contingent, and inasmuch as that event is referred only to its proper causes; for inasmuch as it is in eternity or is subject to the divine knowledge, he does not doubt that these propositions are determinately true or determinately false; and that of some predestined person it is true that he will be saved; but of another, that he will be damned, taking "non-predestined" as he himself distinguishes it from those especially predestined and elect, as we saw in that Disputation 90. Otherwise, how would he call these ones "to be saved" or "to be damned," if neither in reality nor in the prescience of God would it be true that they are to be saved or to be damned?

Finally, Catherinus asserts this proposition, The reprobate will necessarily be damned, to be true. He gives the reason, because the reprobate, as reprobate, is supposed to be going to be in guilt unto the end of life; but once this supposition is made, it is not open to him not to be damned. He adds also that this proposition is true, If the foreknown is saved, he will be saved; but not this one, The foreknown, being saved, will necessarily be saved. But these two claims which Catherinus makes do not sufficiently cohere with each other. For by the same necessity, and by no other, it must be that the reprobate be damned, and the one to be saved be saved. And this is the following necessity, by which it is said that what is future is necessarily future, with which liberty rightly stands, so that the one of whom we say, "he will be saved," or "he will be condemned," may freely be saved or be condemned. Therefore in the opinion of all this must be conceded: The predestined will necessarily be saved, and the reprobate or foreknown will be condemned. So conceded Alexander, 1 part, question 28, members 4, 2, 3; Gabriel in 1, distinction 40, article 2, question 1; Gregory, questions 1, 2, 3; the Major Doctor, unique question; Marsilius in 1, question 41, article 1, corollary 1; and the following, when they affirm, in the composite sense, that this is true: The predestined, or the one to be saved, cannot be damned, but will necessarily be saved; and similarly this: The reprobate, or the foreknown, will necessarily be damned, and cannot be saved.[2227] However, in order that the sentence of these be true, they ought not to concede any antecedent necessity, whether from the supposition or in the composite sense, but only a following one, as from what has been said before in Disputation 68 is sufficiently clear.

Accedes also St. Augustine, book 3 against Cresconius, chapter 66, and book 4, chapter 51, where he compares the whole congregation of the faithful to a threshing-floor, in which chaff and grain are together; but the multitude of the chaff is greater. And "chaff" signifies those who are

2227. Alexander of Hales, Summa, 1 p., q. 28, membra 4, 2, 3; Gabriel Biel, In Sentences, 1 d. 40, a. 2, q. 1; Gregory of Rimini, q. 1, 2, 3; John Major, In Sentences, unique question; Marsilius of Inghen, In Sentences, 1 q. 41, a. 1, coroll. 1.

destined to be burned with fire, according to Matthew 3 and Luke 3: "His winnowing fan (namely, of Christ) is in his hand; he will thoroughly cleanse his threshing-floor, and gather his wheat into the granary, but the chaff he will burn with unquenchable fire." The same is indicated in that parable of the sower, Luke 8, in which the field was divided into four parts; only one bore fruit. But that parable signified the preaching of the Gospel by Christ, and what would befall at the preaching of his disciples; and it is clear that all four parts were received in some part of the ground, which denotes the faith received from the preaching by the hearers. But since only one gave fruit, it seems to indicate that fewer of the faithful are to be saved. This opinion is supported by Lyranus and the Interlinear Gloss on those passages of Matthew.[2228] I, however, judge rather that all these things should be left to the judgment of God than that anything should be rashly defined: as also that other question, whether the number of human beings predestined is greater than that of the Angels, or not; especially because controversies of this sort do not much pertain to the edification of the faithful. And thus far it is enough to have spoken of this whole question of predestination.

Caput IV - That there are more reprobate than predestined

That the number absolutely of the reprobate, and of those who are damned, is greater than of the predestined and of those who are saved, is clearly established from Scripture: Matthew 7, "Strait is the way which leads to life, and few there are that find it"; and elsewhere often by number. But concerning the faithful there is a doubt, whether the greater part of them is damned. There are, indeed, those who piously think that more of the faithful are saved, because more depart from this life having received the sacraments of the Church, of whom we probably believe that the greater part is saved. And this is confirmed by that parable in Matthew 22, in which, of those found for the wedding, by whom the faithful are signified, only one was found not having the wedding garment. But others think that the greater part indeed of the faithful is damned, to whom St. Gregory favors, Homily 19 on the Gospels, on those words of Matthew 22: "Few indeed are elect," where he says that many receive the faith, but few are saved.[2229]

Quaestio XXIV - On the book of life

Articulus I - Whether the book of life is the same as predestination

To the first we proceed thus. It seems that the book of life is not the same as predestination. For it is said in Ecclesiasticus 6:24, "These things are all the book of life"; the Gloss says, that is, the New and Old Testament. But this is not predestination.

Then we must consider the book of life. And concerning this three things are asked.

2228. St. Augustine, Contra Cresconium, l. 3, c. 66; l. 4, c. 51. On Matthew 3 and Luke 3; the parable of the sower in Luke 8; Nicholas of Lyra and the Interlinear Gloss ad loc.

2229. St. Gregory the Great, Homilies on the Gospels, hom. 19, on Matthew 22: "Pauci vere electi," where he says that many receive the faith, but few are saved.

Whether the book of life is the same as predestination

Objicitur 1. It seems that the book of life is not the same as predestination. For it is said in Ecclesiasticus 24, "These things are all the book of life"; the Gloss says, that is, the New and Old Testament. But this is not predestination.[4]

Objicitur 2. Further, Augustine in book 20 of the City of God says that the book of life is a certain divine power, by which it is brought about that each one's deeds, good or evil, are brought back into memory. But a divine power does not seem to pertain to predestination, but rather to an attribute of power. Therefore the book of life is not the same as predestination.[5]

Objicitur 3. Further, reprobation is opposed to predestination. If, therefore, the book of life were predestination, there would be found a book of death, just as there is a book of life.

But on the contrary: It is said in the Gloss on that Psalm 68, "Let them be blotted out of the book of the living": "This book is the knowledge of God, by which he predestined to life those whom he foreknew."[6]

Respondeo dicendum: The book of life in God is said metaphorically according to a likeness taken from human affairs. For it is customary among men that those who are chosen for something are enrolled in a book: for example, soldiers or counselors, who of old were called "Fathers enrolled." But it is clear from the foregoing that all the predestined are chosen by God for the having of eternal life. Therefore the very enrollment of the predestined is called the book of life. For metaphorically something is said to be written in the intellect of someone which he holds firmly in his memory, according to that of Proverbs 3: "Forget not my law, and let your heart keep my commandments"; and a little after it follows: "Write them in the tables of your heart." And also in material books something is written to aid memory. Hence God's very knowledge, by which he firmly retains that he has predestined some to eternal life, is called the book of life. For as the writing of a book is a sign of the things that are to be done, so God's knowledge is a certain sign with him of those who are to be brought to eternal life, according to that of 2 Timothy 2: "The firm foundation of God stands, having this seal: the Lord knows who are his."

Ad primum ergo dicendum: The book of life can be spoken of in two ways. In one way, as the enrollment of those who are elected to life; and thus we now speak of the book of life. In another way, the book of life can be said to be the enrollment of things that lead into life. And this in two ways: either as of things to be done, and thus the New and Old Testament is called the book of life; or as of things already done, and thus that divine power by which it is brought about that each one's deeds are recalled to memory is called the book of life. Just as also "book of soldiery" may be said either of that in which those elected to the soldiery are written, or of that in which the art of warfare is handed on, or of that in which the deeds of soldiers are recited. Whence the reply to the second is clear

Ad tertium dicendum: It is not customary to enroll those who are rejected, but those who are chosen. Hence to reprobation there does not correspond a "book of death," as to predestination the book of life

Reply to the fourth: According to its notion, the book of life differs from predestination. For it imports the knowledge of predestination, as also appears from the Gloss adduced.

Explicatio Articuli.

Conclusion: The knowledge by which God firmly retains that he has predestined some to eternal life is the book of life. From which it is clear that St. Thomas did not answer the question directly. For in the whole article he defines nothing else; from which, however, it is not obscurely gathered that the book of life is not predestination itself, even in the school of St. Thomas; who thinks that predestination is an act of the intellect. For he himself, and those who follow his opinion, hold that predestination is an act of the practical intellect after the manner of command, which precedes future things, and not of the speculative intellect which looks upon them. But the book of life, in the mind of the Holy Doctor, as is clear from the conclusion of the article, is an act of the speculative intellect, insofar as it is referred to memory; and reason proves the same: for by translation a thing is said to be written in someone's intellect, not insofar as the intellect by its command is the principle of that thing, but insofar as it is held in memory; but memory is not a practical act, as, in the opinion of St. Thomas, predestination and command are, but a speculative one.

Articulus II - Whether the book of life regards only the glory of the predestined

Objicitur 1. It seems that the book of life is not only with respect to the glory of the predestined. For the book of life is a knowledge of life. But God by his own life knows other life. Therefore the book of life is said chiefly with respect to the divine life, and not only with respect to the life of the predestined.

Objicitur 2. Further, as the life of glory is God's, so is the life of nature. If therefore the knowledge of the life of glory is called the book of life, so also the knowledge of the life of nature will be called the book of life.

Objicitur 3. Further, some are elected to grace who are not elected to the life of glory, as is clear from that which is said in John 6: "Have not I chosen you twelve, and one of you is a devil?" But the book of life is the enrollment of the divine election, as was said. Therefore it also is with respect to the life of grace.

But on the contrary: The book of life is a knowledge of predestination, as was said; but predestination does not regard the life of grace except insofar as it is ordered to glory. For they are not predestined who have grace and fall away from glory. Therefore the book of life is said only with respect to glory.

Respondeo dicendum: The book of life, as was said, imports a certain enrollment or knowledge of the elect to life. But one is chosen to that which does not befit him according to his nature; and again, what one is chosen to has the ratio of an end. For a soldier is not chosen or enrolled for this,

that he be armed, but for this, that he fight; for this is the proper office to which soldiery is ordered. But the end existing above nature is the life of glory, as was said above. Hence properly the book of life regards the life of glory.

Ad primum ergo dicendum: The divine life, even as it is a glorious life, is natural to God. Hence with respect to it there is no election, and consequently neither a book of life. For we do not say that a man is chosen to have sense, or any of those things which follow upon nature. Whence by this the solution to the second is also clear. For with respect to the life of nature there is neither election nor a book of life

Ad tertium dicendum: The life of grace does not have the ratio of an end, but the ratio of that which is to the end. Hence one is not said to be chosen to the life of grace, unless insofar as the life of grace is ordered to glory. And on this account those who have grace and fall away from glory are not said to be simply elect, but in a qualified sense. And similarly they are not said to be simply written in the book of life, but in a qualified sense: inasmuch, namely, as in the divine ordination and knowledge it stands concerning them that they are to have some order to eternal life according to participation in grace

Explicatio Articuli.

Conclusion (of St. Thomas): The book of life is said more with respect to the life of glory than of grace. For the explanation of this, it must be observed that here the life of glory is not being compared with the eternal death of hell, when it is asked whether there is a book of the life of glory, but with the life of grace, which is the means to the life of glory. St. Thomas answers that the book is said rather of the life of glory than of grace, taking the analogy from the "book of soldiery," in which soldiers are not said to be written, or chosen, in order that they be armed, but that they fight; for this is the end of soldiery. Thus also the predestined are not said to be written in the book of life in order that they be justified - for justification is the means - but in order that they be glorified; for glory is the end for which they are chosen and enrolled. But in the preceding article, in the reply to the second, St. Thomas had said that God's foreknowledge is not wont to be called the "book of death" and "of the reprobate," but only "of life" and "of the predestined," taking the metaphor likewise from human affairs. For those who are rejected from the soldiery are not written in any book; therefore the reprobates are not said to be in God's foreknowledge as in a book of death and of damnation.

Still, Basil, on Isaiah chapter 4, on those words, "And it shall be, that he that is left," says that there are two books: one of the living, that is, of the predestined, in which are written the disciples of Christ to whom he himself said in Luke 10, "Rejoice, because your names are written in heaven"; the other of those who are damned, according to that of Jeremiah 17, "They that depart from thee shall be written in the earth."[7] The same is the sense of St. Gregory Nazianzen, in Oration 9, the Discourse to the Jewish Tax-collector, no. 41, where he says to him: "Unless perhaps you have never heard anything of a certain book of the living and of the perishing; there we shall all be written, or, to speak more exactly, there we have been written." Where, although he does not distinguish two books, yet he says there is one in which both those who are saved and those who

are damned are written. And indeed although soldiers who are cast out of the militia are not written - because those are accustomed to be written who are to be condemned by death - another book of the reprobate also can not inaptly be posited in God.[8]

Articulus III - Whether anyone is blotted out of the book of life

Objicitur 1. It seems that no one is blotted out of the book of life. Augustine says in book 20 of the City of God that the prescience of God, which cannot fail, is the book of life; but from the prescience of God nothing can be subtracted, nor likewise from predestination. Therefore from the book of life no one can be blotted out.[9]

Objicitur 2. Further, whatever is in something is in it according to the mode of that in which it is; but the book of life is something eternal and immutable. Therefore whatever is in it, is there not temporally, but immovably and indelibly.

Objicitur 3. Further, deletion is opposed to writing. But one cannot be newly written in the book of life. Therefore neither can one be blotted out from it.

But on the contrary: It is said in Psalm 68, "Let them be blotted out of the book of the living."

Respondeo dicendum: Some say that from the book of life no one can be blotted out according to the truth of the thing; yet someone can be blotted out according to the opinion of men. For it is customary in the Scriptures that something is said to be done when it is made known; and according to this some are said to be written in the book of life, insofar as men think them to be written there on account of the present justice which appears in them. But when it appears, either in this age or in the future, that they have fallen away from this justice, they are said to be blotted out from it. And thus also the Gloss expounds such deletion on that Psalm 68, "Let them be blotted out of the book of the living." But because "not to be blotted out of the book of life" is set among the rewards of the just, according to that Apocalypse 3: "He who shall overcome shall thus be clothed in white garments, and I will not blot out his name from the book of life" (and what is promised to the saints is not only in the opinion of men), it can be said that to be blotted out or not to be blotted out of the book of life is referred not only to the opinion of men while it lasts, but also with respect to the reality. For the book of life is the enrollment of ordinations unto eternal life. And to this someone is ordained in two ways: namely, by gratuitous predestination - and this ordination never fails - and by grace. For whoever has grace is by that very fact worthy of eternal life. And this ordination sometimes fails; and therefore some are ordained, by grace had, to have eternal life, from which nonetheless they fall away.

[8]: St. Gregory Nazianzen, Oration 9, To the Jewish Tax-collector, no. 41.

[9]: St. Augustine, De Civitate Dei, l. 20 (on the book of life as prescience).

In the preceding article, in the solution to the second, St. Thomas had said that the prescience of God is not wont to be called the book of death and of the reprobate, but only of life and of the predestined, the metaphor being taken also from human practice. For those who are rejected from the army are not written in any book; therefore neither are the reprobate said to be in the prescience of God as in a book of death and damnation. Basil, however, on Isaiah 4, on the words, "And it shall be that which is left" (erit quod relictum fuerit), says that there are two books: one of the living, that is, of the predestined, in which are written the disciples of Christ, to whom He Himself said in Luke 10: "Rejoice, because your names are written in heaven"; the other of those who are damned, according to Jeremiah 17: "Let them be written in the earth." From which Nazianzen also in Oration 9, To the Jewish Tax-collector, no. 41, gathers as much, where he says to him: "Unless perhaps you have never heard anything of a book of the living and of the perishing; there all of us shall be written, or, to speak more rightly, we are inscribed there." Although he does not distinguish two books, he nevertheless says that there is one in which both those who are saved and those who are damned are written. And indeed, although soldiers who are ejected from the army are not written in some book, yet those who are to be condemned to death are wont to be written; hence another book of the reprobate can without ineptitude be posited in God.[2230]

Ad tertium sic proceditur. It seems that no one is blotted out of the book of life

1. For Augustine says in De Civitate Dei, book 20, that the prescience of God, which cannot be deceived, is the book of life; but from the prescience of God nothing can be subtracted, and likewise neither from predestination. Therefore from the book of life nothing can be blotted out.[2231]
2. Furthermore, whatever is in something is in it according to the mode of that in which it is; but the book of life is something eternal and immutable. Therefore whatever is in it is there not temporally but immutably; and hence deletion, which is something temporal, cannot be opposed to it, so that something there could be anew.
3. Furthermore, deletion presupposes that someone is first written; but someone is not written in the book of life. Therefore neither can he be blotted out from it.

But on the contrary: "Let them be blotted out of the book of the living, and let them not be written with the just" (Psalm 68[69]:29 Vg.).[2232]

I answer that it must be said: By "book of life" is meant the inscription of those who are ordained to eternal life. Now to that ordination one proceeds in a twofold way, namely, from divine predestination - which ordination never fails - and from grace. For whoever has grace is by that very fact worthy of eternal life. And yet this latter ordination sometimes fails, because some are

2230. St. Basil, Homily on Isaiah 4, on "Et erit quod relictum fuerit"; Luke 10:20; Jeremiah 17:13; St. Gregory Nazianzen, Oration 9, To the Jewish Tax-collector, no. 41.

2231. St. Augustine, De Civitate Dei, book 20, c. 14, "a medio."

2232. Ordinary Gloss on Psalm 68: "Deleantur de libro viventium"; see also Cassiodorus.

ordained from grace received to have eternal life, from which, however, they fall away through mortal sin. Those, therefore, who are ordained to have eternal life by divine predestination are simply written in the book of life, because they are there written as going to have eternal life in itself; and these are never blotted out of the book of life. But those who are ordained to have eternal life, not from divine predestination, but only from grace, are said to be written in the book of life, not simply, but in a qualified sense, because they are there written as going to have eternal life not in itself, but in its cause. And such persons can be blotted out of the book of life, in such wise that the deletion is not referred to the knowledge of God, as if God first knew something and afterwards did not know it, but to the thing known: because, to wit, God knows that someone was first ordained to eternal life, and afterwards not ordained, when he falls from grace.

To the first, therefore, it must be said that deletion (as has been said) is not referred to the book of life on the side of prescience, as if there were some mutability in God, but on the side of the things foreknown, which are mutable.

To the second it must be said that although things are in God immutably, nevertheless in themselves they are mutable. And to this the deletion of the book of life pertains.

To the third it must be said that in the way in which someone is said to be blotted out of the book of life, it can be said that he is written there anew, either according to the opinion of men, or according as he anew begins to have an ordination to eternal life through grace. Which is also comprehended under divine knowledge, although not anew.

Observations concerning the article. The conclusion of the article is this: Some are blotted out of the book of life not according to the knowledge of God, but according to some effect of grace. Cajetan very well explains these things in his Commentary, namely, that to be blotted out of the book of life according to knowledge is nothing else than that what previously had been foreknown by God should not be foreknown; since the knowledge of God cannot vary, as in q. 14. Thus, to be said to be blotted out of the book of life is not only referred to the opinion of men, but also to the reality. For the book of life is the inscription of those ordained to eternal life. Now someone is ordained to it from two sources, namely, from divine predestination (and this ordination never fails) and from grace. For whoever has grace is by that very thing worthy of eternal life. And yet this latter ordination sometimes fails, because some are ordained from grace received to have eternal life, from which, however, they fall away through mortal sin.

Accordingly, those who are ordained to have eternal life by divine predestination are simply written in the book of life, because they are written there as going to have eternal life in itself, and such are never blotted out of the book of life. But those who are ordained to have eternal life, not by divine predestination but only by grace, are said to be written in the book of life, not simply but in a qualified sense: because they are written there as going to have eternal life not in itself, but in its cause. And such can be blotted out of the book of life, so that deletion be not referred to the knowledge of God, as if God first knew something and afterwards did not know it, but to the thing known: namely, that God knows someone to be first ordained to eternal life, and afterwards not ordained, when he falls from grace. Hence, from what was said at 2.15, it follows that no one is

blotted out of the book of life according to knowledge. But to be blotted out of the book of life according to some effect of grace is the same as to lose grace, by which a man pertained to the state of glory. Wherefore he who loses charity is said in a certain sense to be blotted out of the book of life, who according to present justice pertained to glory, afterwards through sin becomes guilty of damnation.

But against the conclusion there are three difficult passages of Scripture.

The first is Exodus 32, where Moses thus prayed to the Lord: "Either remit the sin of this people, or blot me out of the book which you have written." But since Doctors variously expound this passage, from it no way can it be proved that someone is blotted out of the book of the knowledge of God. The first exposition is of some who said that Moses, moved by a disturbance of mind, uttered that - yet Lyranus rightly reproves this; for of Moses, a most holy man and very gentle, such disturbance of mind is not to be presumed. The second interpretation is of Burgensis in the addition on that passage, who interprets "book of life" not as the knowledge of God, but as the book in which the deeds of illustrious men of the people of Israel used to be written, which he calls the book of the just; and Hilary favors this interpretation on Psalm 68 in those words: "Let them be blotted out of the book of the living." Yet Turingus, replying against the addition of Burgensis, sharply reproves it, proving from the context that Moses had spoken of the book of predestination; for immediately the Lord answered these words: "No; but he that has sinned against me, him will I blot out of my book" - as if to say, "Him alone will I blot out of the book of predestination." In my judgment, however, this does not prevent the sense of Burgensis from being able to square with the letter. For although Moses may have asked to be blotted out of the book of illustrious men of Israel, nevertheless the Lord would have answered well that no one is to be blotted out of that book except he who by his sins had merited it. A third exposition of the same passage is given by Lyranus and Dionysius the Carthusian, such that Moses asked this according to the inferior part, which was showing his affection toward his people; or in such a way that from excessive affection Moses desired, if it could be done, to be blotted out of the book of life and to be deprived of glory without his own fault, so that God might pardon the sin of His people. Finally, Augustine in Question 247 on Exodus thinks that Moses asked of the Lord either that he be blotted out of the book of life, or that the sin of the people be remitted: because just as he did not fear that he would be blotted out, so also without hesitation he trusted that the sin of his people would be remitted by the Lord.[2233]

From among these interpretations, that which is of Burgensis, adduced in second place, is most approved by me.

The second passage is Romans 9, where of himself Paul says: "I wished (optabam) to be anathema from Christ for my brethren." Doctors also variously explain this. First, Origen, St. John Chrysostom, Theophylact, and St. Thomas in his commentaries on that Epistle say that the imperfect "I wished" (optabam) is used for the perfect of resolve, "I could wish" (optaverim), by which Paul expresses the disposition which he then had, to be anathema from Christ for his

2233. St. Augustine, Quaestiones in Heptateuchum, on Exodus, q. 247.

brethren; that is, if it could be done without sin, to be deprived of the fruition of Christ. Accordingly, Origen notes that Paul said these words from devotion of mind, not from prevarication, so as to show the affection with which he pursued his own people. Secondly, Anselm expounds that "anathema" is the same as "death"; as if Paul were to say that he desired to die for his brethren: which interpretation he took from St. Jerome, in the Epistle to Algasius, which is 151, q. 9. Nevertheless it stands against this that Paul added "from Christ"; for anathema "from Christ" signifies not bodily death but spiritual. But preferable to these seems the exposition of Jerome, Anselm, and Cajetan on that passage; whom Bartholomew Camerarius follows in the Catholic Dialogue, ch. 6, namely, that Paul speaks of the time in which he was in Judaism and with such zeal and love pursued the people of Israel and the ceremonies of the ancient law against the Gospel of Christ, that he then desired to be anathema and wholly separated from Christ for his brethren; that is, that he might defend the laws of his own brethren the Jews. Now this sense coheres correctly with the preceding and the following: for in the preceding chapter Paul seemed to have said many things with injury to the Jews, which in truth he had not said out of ill will; and in this chapter, since again he was going to speak of their reprobation, in order to show the sincerity of his own mind he under oath affirmed that he is tormented with great sorrow because he sees the Jews cast out from the grace of God; and for its confirmation he adduced the natural affection with which he pursued his own nation and the ceremonies, when he was in Judaism, by these words of Paul: "I speak the truth in Christ Jesus, I do not lie, my conscience bearing me witness in the Holy Spirit: because sorrow is great to me and continuous pain in my heart" (Rom 9:1 - 2). By which, under oath, he asserted that he was afflicted with great grief that he saw his brothers expelled from the grace of the Gospel. Then he confirms it from the affection with which he had always pursued them, saying: "For I myself wished to be anathema from Christ for my brethren, who are my kinsmen according to the flesh" (Rom 9:3).

The third passage is Psalm 68, which St. Thomas alleges in the argument "on the contrary": "Let them be blotted out of the book of the living, and with the just let them not be written." Of this a twofold exposition is had: one is of Augustine, Ruffinus, Cassiodorus, and the Ordinary Gloss on that place, that "let them be blotted out" be taken not absolutely, but according to the hope and opinion of those men, and the sense be: let it become known to them that they are not written in the book of the life of God, who thought themselves to be signed in it; because according to the phrase of Scripture it is sometimes said that a thing is then done when it becomes known. The other interpretation is of Hilary and Jerome, that the verb "Let them be blotted out" signify the same as "that they may not be written" or "are not written." And this interpretation very well squares with the words that follow; for it is subjoined: "and with the just let them not be written." St. Thomas does not reply to the argument "on the contrary," but from the doctrine of the article what must be said is gathered. For since according to some effect of grace one is said to be blotted out of the book of life, David rightly asks: "Let them be blotted out of the book of the living," while he imprecates evil upon them on account of their sins.[2234]

2234. On the book of life as prescience, see St. Augustine, De Civitate Dei, book 20.

Quaestio XXV - On the power of God

According to the division handed down, after the treatment of knowledge and will, let us treat of power, by which God outside Himself produces all things except sin, with most fitting right. In this our disputation St. Thomas differs; for this, as will be proved in the following disputation, is referred also to the intellect and to the will, just as predestination.

Articulus I - Whether there is power in God

To the first it is proceeded thus. It seems that in God there is no power. For just as prime matter stands to potency...

Objicitur primo: It seems that in God there is no power. For as prime matter stands to form, so does power to act. But prime matter, considered in itself, is without any act. Therefore the first agent, which is God, is without power.[2235]

Objicitur secundo: Further, according to the Philosopher in Metaphysics IX, every power is surpassed by its act. For form is better than matter, and action than active power, since action is its end. But nothing is better than what is in God, because whatever is in God is God, as was shown above. Therefore there is no power in God.[2236]

Objicitur tertio: Further, power is a principle of operation. But the divine operation is His essence, since in God there is no accident. Now the divine essence has no principle. Therefore there is no power in God.

Objicitur quarto: Further, it was shown above that the knowledge of God and His will are the cause of things; but cause and principle are the same. Therefore one ought not to posit power in God, but only knowledge and will.[2237]

Sed contra is what is said in Psalm 88: "Powerful art Thou, O Lord, and Thy truth is round about Thee."

Respondeo dicendum: There is a twofold power, namely passive, which in no way is in God, and active, which one must supremely posit in God. For it is manifest that each thing, insofar as it is in act and is perfect, so far is it an active principle of something. But a thing suffers insofar as it is deficient and imperfect. Now it was shown above that God is pure act and absolutely and universally perfect; nor has any imperfection place in Him. Whence it chiefly befits Him to be an active principle and in no way to suffer. But the ratio of an active principle belongs to active power: for active power is a principle of acting upon another, whereas passive power is a principle of being acted upon by another.

2235. "Philosophus dicit 5. Meta. Relinquitur ergo ..." and "Lib. 9. Metaph. cap. tex. 19, 10 m. 03." (Aristotle, Metaphysics, as cited in the margin of the text).

2236. "Secundum Philosophum in 9. Metaphysicae ..." (as in the printed marginal citation).

2237. "Q. 3, art. 3; q. 4, art. 4; q. 19, art. 4." (Summa Theologiae I, as cited in the margin).

Ad primum ergo dicendum: Active power is not divided against act, but is founded upon it. For each thing acts according as it is in act; whereas passive power is divided against act, for each thing suffers according as it is in potency. Hence this power (namely, passive) is excluded from God, not, however, active

Ad secundum dicendum: Wherever act is something other than power, it must be that the act is nobler than the power. But the action of God is not other than His power, but each is the divine essence, since neither is His existence other than His essence. Hence it is not necessary that anything be nobler than the power of God

Ad tertium dicendum: Power in created things is not only a principle of action, but also of effect. Thus in God the ratio of power is saved as to this, that it is a principle of the effect, but not as to this, that it is a principle of action, which is the divine essence, unless perhaps according to our mode of understanding, inasmuch as the divine essence (which in itself simply contains beforehand whatever perfection is in created things) can be understood both under the aspect of action and under the aspect of power, just as it is also understood both under the aspect of a supposit having a nature and under the aspect of nature. Thus therefore in God the ratio of power is preserved as to this, that it is a principle of the effect

Ad quartum dicendum: Power is not posited in God as something differing from knowledge and will according to the thing, but only according to reason, inasmuch, namely, as power imports the notion of a principle executing that which the will commands, and to which knowledge directs. And these three in God agree according to the same. Or it should be said that the divine knowledge or will itself, insofar as it is an effective principle, has the notion of power. Hence the consideration of knowledge and will precedes in God the consideration of power, as a cause precedes operation and effect

Notatio circa articulum.

Conclusio est: In God there is active power.

Besides many things worthy of observation were present around the text of St. Thomas; only one seemed good to note here, the rest must of necessity be explained in the following disputation - namely, his mind in this question, in which he treats only of power by which God produces effects outside Himself, although he also hands down not a little in this article about power to immanent operations, as we shall report in the following disputation. But of the power of begetting the Son and breathing the Holy Spirit he treats in q. 41.

Disputatio CII - Whether the power of God is in any way distinct from His knowledge and will

- Status controversiae. Caput 1.
- What Durandus thought. Caput 2.
- That the truer opinion holds that power in God is formally the knowledge and the will. Caput 3.

- Reply to Durandus's arguments. Caput 5.
- The doctrine of St. Thomas in the solutions of the arguments is explained. Caput 6.

Caput I - Status of the controversy

When we inquire about the power of God, what it is, we mean not passive power, but active. For it is certain, as St. Thomas teaches in this article, that passive power is not in God, as is clearly gathered from q. 3, on the simplicity of God, and q. 9, on immutability. Concerning the power of God as agent, two points lie outside controversy. One is that there is not a true active power in God in comparison to the immanent actions which are common to the Trinity, as intellection and volition. For although between St. Thomas and his school on the one side, and Scotus and his disciples on the other, there is the question whether in God the intellect is distinguished from intellection, and the will from volition, by nature of the thing and not merely by our intellect (since in general they do not think in the same way about the distinction of the attributes among themselves and from the essence, as we shall see in disputation 116), nevertheless there is no one who teaches that these immanent actions in God are true productions proceeding from the intellect and will by nature of the thing. For thus it would also be necessary to admit in God essential processions common to the three persons; whence it would also follow that there were more persons than three, indeed multiplied to infinity. Since therefore, in order that we concede some producing power by nature of the thing, it is also necessary to attribute to it a production which is a production not only according to our mode of understanding, but also by its own nature; and since none of the Scholastics has hitherto said that those productions through intellect and will, which we call essential operations, are common to God; it follows that no one teaches that in God there is by nature of the thing an active power of the intellect for understanding, and of the will for willing, common to the three persons - although some Scholastics do admit an active power in the Father by nature of the thing for begetting, and in the Father and the Son a producing power in the same way for spirating, of which we must speak in disputation 164. Therefore, with respect to the immanent operations that are common and essential, we ought only to concede active powers according to our mode of understanding, that is, powers which are conceived by us after the manner of an agent and efficient cause, although in reality they produce nothing. And this must be understood whether powers are distinguished from acts by nature of the thing, as Scotus thinks, or by reason alone, as St. Thomas holds: because a power which by nature of the thing is truly a power, and is not only conceived and named after the likeness of a power, produces some operation in reality; but such a power is not common in God with respect to understanding and willing. This is openly the mind of St. Thomas in this article, reply to the third objection, and in Contra Gentiles II, chapter 10, and of Ferrarensis in the same place.[2238]

2238. "St. Thomas. in hoc art. 1 ad 3; 2 Contra Gentiles, cap. 10; Ferrarien[sis] ibidem." (as in the printed marginal citations).

Another point without controversy is that in God there is an active power in comparison to creatures; for there is in God a principle by which truly and ...

But on the contrary is what is said in Psalm 88: "Thou art mighty, O Lord, and thy truth is round about thee."

I answer that it must be said that there is a twofold power (*potentia*), namely passive, which in no way is in God, and active, which must in the highest degree be posited in God. For it is manifest that each thing, insofar as it is in act (*actus*) and perfect, is in this respect an active principle of something; but a thing suffers insofar as it is deficient and imperfect. But it has been shown above that God is pure act and absolutely and universally perfect, nor does any imperfection have place in Him. Whence it befits Him in the highest degree to be an active principle and in no way to suffer. Now the notion of an active principle belongs to active power. For active power is a principle of acting upon another; passive power, however, is a principle of being acted upon by another, as in the 5th book of the Metaphysics.[2239] It remains, therefore, that in God there is in the highest degree active power.

Reply to the first: Active power is not divided against act, but is founded upon it. For a thing acts insofar as it is in act; but passive power is divided against act. For a thing suffers insofar as it is in potency (*potentia*). Whence passive power is excluded from God, not active power.

Reply to the second: Although every act is other than power, and an act is nobler than power, nevertheless the action of God is not other than His power, but both are the divine essence (*essentia*); but still necessarily His action is other than His essence - no, rather: His action is not other than His essence. Whence it is not necessary that there be in Him anything other than the power of God.

Reply to the third: Power in created things is not only a principle of action, but also of effect. Thus, in God the notion of power is saved insofar as it is a principle of an effect, but not insofar as it is a principle of an action which is the divine essence - unless perhaps according to our mode of understanding, inasmuch as the divine essence in itself simply contains beforehand whatever of perfection is in created things, and so it can be understood both under the notion of action and under the notion of power; just as also in our way of understanding the same thing has the notion of supposit (*suppositum*) and of nature (*natura*). Thus in God the notion of power is saved only insofar as it is a principle of an effect.

Reply to the fourth: Power is not posited in God as something different from knowledge (*scientia*) and will (*voluntas*) according to thing, but only according to notion; inasmuch, namely, as power imports the notion of a principle executing that which the will commands and to which knowledge directs. These three come together in God according to the same [reality]. Or it may be said that the very knowledge or will of God, insofar as it is a principle that is effective, has the notion of power. Whence the consideration of knowledge and will precedes in God the consideration of power, just as cause precedes operation and effect.

2239. Aristotle, Metaphysics 5; also 9, text 19 (as in the margin).

Note on the article.

The conclusion is: In God there is active power.

Besides the many things worthy of observation around the text of St. Thomas, it pleased us to note only one, the rest of which it will be necessary to explain in the following disputation. This is, namely, that his mind in this question is to dispute only about the power by which God produces effects outside Himself, although he also treats somewhat in this article of the power with respect to immanent operations, as we shall report in the following disputation. But he discusses the power of generating the Son and of spirating the Holy Spirit in q. 41.

Whether in some way the power of God differs from His knowledge and will

Status controversiae - Caput I

When we inquire about the power of God, what it may be, we do not choose to speak of passive power, but of active. For it is certain, as St. Thomas holds in this article, and is clearly gathered from q. 3 on the simplicity of God and q. 9 on immutability, that there is not in God passive power. But about the active power of God two points stand outside controversy. One is that there is not a true active power in God in comparison to immanent actions, which are common to the Trinity, as in intellection and volition. For although between St. Thomas and his school on the one hand, and Scotus and his disciples on the other, there is another question, namely whether in God the intellect is distinguished from intellection and the will from volition by nature of the thing and not only by our intellect (since, as we shall see in Disputation 116, they do not hold the same view about the distinction of the attributes among themselves and from the essence), yet there is no one who teaches that these immanent actions in God are true productions proceeding from the intellect and will by nature of the thing; for thus it would also be necessary to admit in God essential processions common to the three persons, whence it would follow that there are more persons than three, indeed multiplied to infinity. Since, therefore, if we concede some power productive by nature of the thing, it is also necessary to attribute to it production which not only according to our way of understanding, but also by its own nature is production; and none of the Scholastics has hitherto said that there are in God those productions through the intellect and will which we call essential operations common to God; it follows that no one teaches that there is in God by nature of the thing an active power of the intellect to understand and of the will to will common to the three persons; although some Scholastics do admit an active power in the Father by nature of the thing to beget in the Father, and in the Father and the Son a productive power in the same way to spirate, of which we must speak in Disputation 164. Therefore, with respect to immanent operations that are common and essential, we ought to concede only active powers according to our way of understanding, that is, powers which are conceived by us after the manner of an agent and efficient, although in reality they produce nothing. But this is to be understood whether powers are distinguished from acts by nature of the thing, as Scotus holds, or only by reason, as St. Thomas thinks; and this, because a power which by nature of the thing is truly a power and is not only conceived and named after the manner of a power, produces some operation in reality; such,

however, a power is not common in God for understanding and willing. This is openly the mind of St. Thomas in this article, reply to the third objection, and in Contra Gentiles II, chapter 10, and of Ferrarensis in the same place.[2240]

Another point without controversy is that in God there is an active power in comparison to creatures; for there is in God a principle by which truly and really He produces creatures, and an active power is nothing other than a principle of production and of action; wherefore there is in God not only according to our mode of understanding, but also in reality an active power.

Moreover, when we say that this active power of God truly is in God with respect to creatures and not only according to our way of understanding, we do not believe that it is distinguished by nature of the thing from the essence, although Scotus feels so; but for this reason we say that there truly is in God an active power and not only by the consideration of our intellect, because something proceeds according to the thing from the cause, whether the power be the same as the essence, or be distinguished from it by nature of the thing. For in the question it is posited whether even in creatures the active power is distinguished by nature of the thing from the essence to which it belongs: nevertheless all assert that in creatures there truly is active power and not only according to the consideration of our intellect, but also in reality.

From this, however, that we concede in God a power in reality with respect to creatures, we do not therefore assert that there is in this power a relation more than of reason to creatures; nor did St. Thomas wish to teach this when in Contra Gentiles II, chapter 10 he said: "It is manifest that 'power' is said of God by respect to things made according to the reality, not by respect to the action, as some falsely suppose; otherwise there would also be in the power of God a respect more than of reason to things made, which would accrue in time, which is absurd: but that 'according to the reality' ought to be referred, not to the respect, so as to denote a real respect inherent, but to the power, so as to denote that there truly and really is in God a power producing those things which are made; but that the power of immanent actions is only according to our consideration." Later we shall show in Disputation 104, chapter 6, that in God there is no respect to creatures more than of reason. These things being supposed, the present controversy is what in God the active power is with respect to creatures, whether it be the intellect and the will, or something else; and since in God by His very nature all things are one except what are relatively opposed, the question now is whether, according to our mode of understanding, active power differs from the intellect and the will.

What Durandus thought.

This opinion is marvellously approved by some more recent writers; and by the same proportion they distinguish in the angels the motive faculty, by which they move themselves and bodies, from the will and intellect - some indeed with Scotus by nature of the thing, others with St. Thomas by our intellect. Wherefore they thus think that the executive power differs in God and in the angels from the will and intellect, so that it includes neither the intellect, nor knowledge, nor the will in its

2240. St. Thomas, Summa Theologiae I, q. 25, a. 1 ad 3; Contra Gentiles II, c. 10; Ferrarensis, ibidem.

formal notion. St. Thomas also in this article, in the first solution to the fourth objection, seems to favor this opinion, where he seems to distinguish according to reason the executive power in God from the intellect and will.

But Durandus confirms this first: because the will and the intellect are not the proximate principle of things; but power is the proximate principle; therefore power is not the intellect and will. That the intellect and will are not the proximate principle, he proves because a power which, according to its proper notion, equally regards a created and an uncreated object is not the proximate principle of producing something outside; for the principle of producing does not regard that which cannot be created. But the intellect and will, according to their proper notions, regard both the created and the uncreated, since they deal with creatures as with God, who cannot be created, as also with impossibles, which likewise cannot be created; therefore they cannot be the principle of producing creatures; wherefore the power of God which is constituted as the principle of these things must be distinguished from them. Then it is confirmed: because, since in God all the attributes are in reality something one most simple and are distinguished only by our reason, after the manner of those things which we see in created things; and in created things, as in animals, which are moved by cognition and appetite, besides these two powers there is another executive of motion; by the same proportion in God besides the intellect and the will another power must be posited which is the proximate principle of producing creatures by executing that which the intellect has judged and the will has decreed. This opinion seems to Cajetan probable in this article, although he judges the opposite more probable and more conformable to the mind of the holy Doctor.[2241]

Caput III - The truer opinion holds that power in God is formally knowledge and will

The truer opinion is that of others, who teach that no other executive power is to be constituted in God besides the intellect and will, or if it be distinguished only by our reason. Of God thus St. Thomas expressly thought in this article, and Scotus in the first book, distinction 37, question "Utrum proximum principium operandi in Deo sit potentia vel voluntas," agrees that God understands and works, but not according to a distinct subsistence, as if there were in Him something immense, since one and the same is His essence and the divine operations. The same doctrine is held by Bañez in q. 8, article 1; by Ferrarensis in the eighth distinction, question 1, ad 2 and to the first; by Cajetan in this article; and St. Thomas in the solution to the fourth objection also favors it, and elsewhere in responding to the argument he says that nothing else besides the power of God is the proximate principle by which He produces effects, but the very will, insofar as it acts, and the intellect, insofar as it knows, and the will, insofar as it chooses. And in my judgment this opinion is the more probable.

2241. Cajetan, In Iam q. 25, a. 1, ad 4 (as cited in the margin).

We must confirm and explain this opinion; two things must be shown to us. One is that it is in vain to posit in God an executive power besides the intellect and will, which will be proved in this chapter. The other is, whether power in God is the intellect and will themselves, or the operation of each, namely knowledge and volition, which must be explained in the following chapter.

The former, therefore, is proved in a twofold way, both in general about God and the angels, and also by a particular reason about God. In general, indeed, and quite well, as Cajetan teaches below on q. 54, article 5, the power moving according to place in the soul and in intelligences is the intellect; and it is only diversified on the part of the body, for since the body is subject to the soul, it needs another force and faculty by which it may obey it: therefore, and much more, in God there is not to be attributed a moving and executive power distinct from the intellect and will. Moreover, in separated substances it is in vain to posit such a faculty absent that which is the principle of things; and in this sense we can interpret St. Thomas whom in the preceding chapter we have alleged according to the truer sentence. But the opinion of Durandus, which distinguishes power from knowledge and will so that it in no way includes them, or any one of them, we shall confirm and explain by showing two things. One is that it is pointless to constitute in God an executive power besides intellect and will; this will be proved in this chapter. The other is whether power in God is the intellect and will themselves, or the operation of each, namely knowledge and volition; which must be explained in the following chapter.

The truer opinion is that of those who teach that in God no other executive power (*potentia exequiens*) is to be constituted, besides intellect (*intellectus*) and will (*voluntas*), or else only distinct by our reason. Of God Scotus speaks expressly in this way in the First Book, distinction 37, question 1, when he proves that God can be understood to act where He is not according to substance, otherwise He would not be immense, because His omnipotence is His will; the same is taught by Ballolis in the Second Book, distinction 8, question 1, § Quantum ad primum; Ferrarensis on Contra Gentiles II, chapter 10; and Cajetan in this article; St. Thomas also favors this in the fourth reply, when, answering the second argument, he says that the power of God is nothing other than knowledge or will, inasmuch as it is the principle of things; and Carnariensis judges this more probable in the Prima Pars of St. Thomas, question 27, article 1, disputation 4, part 2.[2242]

Accordingly, in this opinion, power in God includes knowledge (*scientia*) and will, or both together, but adds the respect and notion of a principle: that is, knowledge and will themselves, inasmuch as they are efficacious for producing things, are called in God power. And on that account, in our mode of understanding, power and will differ as including and included, because power includes will and knowledge; but knowledge and will in themselves can be considered apart, and be distinguished from it by us.

Deinde confirmatur: since in God all the attributes are really something one most simple, and, according to the truer sentence, are distinguished only by our reason in the likeness of those which we see in created things; and in created things, as in animals which are moved by cognition and

2242. Scotus, In I Sent. d. 37, q. 1; Ballolis (In II Sent.) d. 8, q. 1, § "Quantum ad primum"; Ferrarensis, In Contra Gentiles II, c. 10; Cajetan, In Iam, q. 25, a. 1; St. Thomas, Summa Theologiae I, q. 25, a. 1, ad 4; Carnariensis, In Iam, q. 27, a. 1, disp. 4, pars 2.

appetite, besides these two powers there is another that executes movement; by the same proportion, in God, besides intellect and will, another power ought to be constituted which is the proximate principle of producing creatures by executing that which the intellect has judged and the will has decreed. This opinion Caietan seems to judge probable in this article, although he deems the opposite to be more probable and more conformable to the mind of the holy Doctor.

Prius ergo, in general, let us speak briefly concerning God and Angels, and then we will confirm it in particular by reason.

In animals there is also constituted an executive power in the body itself; this is because the soul, since by its nature it is conjoined to the body, does not perform corporeal effects except by the body as by an instrument; and therefore, as we shall say below, chapter 3, of question 194, separated it cannot move the bodies which it moves when conjoined. Therefore, since neither God nor the Angel needs a body, it is pointless to ascribe to them, besides appetite, that is, will, another executive faculty; otherwise this would also befit souls when conjoined.

Confirmatur: furthermore, an executive faculty distinct from appetite is constituted in such a way that it is set under it and operates only at its nod. Such subjection we rightly understand in man, who consists of a twofold substance, one spiritual, the other corporeal; but in the most simple substance, which is God, and in the Angel, which lacks composition, it is not sufficiently intelligible how one faculty would obey another for executing, or what necessity there is for us to constitute such a distinct faculty.

Ceterum in God no other faculty can possibly exist besides will; this is proved by testimonies of Scripture and of the Fathers: as in Ephesians 1, "He works all things according to the counsel of His will"; in Psalm 134 (Vulg. 135), "All that He willed, the Lord has done"; in Psalm 148, "He said, and they were made; He commanded, and they were created." Likewise the authority of the Fathers confirms it; for Leo I, in his sermons on the Nativity, says: "God, whose nature is goodness, whose will is power," etc.; and Augustine, in the book of Meditations, chapter 29, on God: "Whose will is deed; whose willing is being able."[2243] Yet these, and many other testimonies, only prove that the production of all things depends upon the nod of God; but that there is not also another executive power which depends upon will, as in us, is certainly not gathered from them. For of any man whatever it is rightly said: "He walks when he wills; where he wills; and whither he wills," solely because, at the nod of his will, his power, moving itself according to place, operates. And with respect to those things which are subject to the nod of his will, it is said that "his being able is his willing"; by no other reason, except because that is wholly subjected to his will.

Hac tamen ratione efficaci id confirmari potest. For although in God we consider many perfections and attributes, distinct by our reason in the likeness of those which we see in us, and this does not conflict with His supreme simplicity, nevertheless we ought never to multiply in God attributes and faculties, even in our mode of understanding, if in any way detriment is thereby done to the perfection and infinite efficacy of His; but to constitute an executive power distinct

2243. Leo I, Sermons on the Nativity: "Deus, cuius natura bonitas, cuius voluntas potentia"; Augustine, Meditationes, c. 29, "De Deo": "Cuius voluntas opus, cuius velle posse est."

from intellect and will detracts from the perfection of the divine will: for from this it follows that will, according to itself, is conceived by us without perfect and infinite virtue, since another faculty is assigned to it for executing - just as in us, according to itself, it is not efficacious and complete for operating, since it needs another faculty as an instrument. Therefore another executive faculty is not to be constituted in God distinct, even according to reason, from will; for the will ought to be conceived so perfect in the notion of will, that, when it wills and desires to do something, it attains it by itself.

At dicunt aliqui: God is able to operate outside Himself inasmuch as He is infinite, not in the genus of one knowing and willing, but simply in the genus of being; for this infinity in the genus of being simply befits God, inasmuch as, by a certain eminent reason, He has in Himself every perfection which He can communicate to others. Therefore the notion of omnipotence befits God, not by reason of intellect and will, but proximally by reason of His essence, which is simply infinite in the genus of being. And this very thing would belong to the other forms as well, namely, that without an accident added to them they would operate, unless they were limited: but God, as His infinity according to existence (*esse*), not only by reason of His essence has in Himself to be, but also to be able to operate; and thus omnipotence befits God, not mediately through intellect and will, but proximally by reason of His essence.

Respondeo: first, that infinity according to existence, of which the holy Doctor treats in question 7, is an attribute different from omnipotence; which two the aforesaid Doctors confound without reason, when they say that infinity according to essence is nothing else than to contain in itself by an eminent reason, as cause, all other beings and their perfections. Then, as is established in disputation 25, infinity according to essence is not to contain every perfection, even a created one, by an eminent reason, but to depend on none. Wherefore that proposition which the adversaries assume - "God is powerful, insofar as He is infinite according to essence" - if the particle "insofar as" denotes that the formal reason of infinity and of power is the same, is false: for the sense is, "God is powerful by that by which He is infinite"; and therefore, since infinity and power are two distinct attributes, the proposition will be false in the formal sense, just as if I should say, "God is intelligent by that by which He is infinite." But if the particle "insofar as" be a note which they call "of per se-ness," the proposition will be true: because from this, that God is infinite according to essence, He has, in our mode of understanding, that He is intelligent, willing, and powerful. From this, however, it does not follow that power is distinct from intellect and will, but rather that it is the same in the way which will be explained in the following chapter.

How power in God is knowledge and will

Since it has now been proved that power in God is to be reduced to intellect and will, it remains that we see whether this power is the intellect and will themselves in first act (*actus primus*), or else in second act (*actus secundus*), namely knowledge and volition.

Ponitur autem knowledge besides will for the constituting of power, because will is not understood to be powerful by itself, but by the direction of intellect, by whose operation it is said to be constituted in first act.

Caput IV - In what way the power in God is knowledge and intellect

Since it has already been proved that power in God is to be reduced to intellect and will, it remains that we see whether this power is the intellect and will themselves in first act (actus primus), or else in second act (actus secundus), namely knowledge and volition.

Reason for doubting. On the one hand it seems that power ought to be assigned to the intellect and will in first act, because power is necessarily in God, whereas not every volition necessarily befits God. On the other hand, power seems to be knowledge itself and volition, because power ought to be the proximate principle of operation; but God accomplishes all things by knowledge and by volition as the proximate principle, whereas by intellect and by the faculty of willing as a remote principle.

I, however, judge that a middle course must be taken: namely, that power is to be attributed to God, first, so that it is in Him necessarily and from the nature of the thing, nor could it in any way not be; then, saving this condition, so that it be the nearer principle of operation that can be. And in order that these two be rightly observed, we shall assign power to nothing more fittingly than to the knowledge of God and to the will, which is the faculty of willing. By knowledge I understand not the vision which is of future things - for this is posterior to power, since God is understood as powerful before He knows any future; moreover, that knowledge of future things cannot be practical, as we noted in disputation 69, chapter 2 - but I understand the knowledge of possibles, insofar as it is practical, as is there explained.[2244]

Knowledge is posited besides will for the constituting of power, because will is not understood to be powerful by itself, but by the direction of intellect, whose operation is said to be constituted in first act. Yet more certainly we say that knowledge in act rather than the very faculty of the intellect pertains to power: because, so far as can be, power ought to be constituted as the nearer principle of work; but knowledge operates more proximately than the intellect. On the part of will, however, at whose nod all things are done, that ought to be constituted as power which is the very faculty of willing, not volition; although volition is nearer to effect than the faculty, nevertheless we must assert that power is the proximate principle of operation in such wise that, from the nature of the thing, it inheres in the agent, and not freely, and that God is not powerful because He wills, but because He is; as St. Thomas very well noted, ad primum. For even if God should will to produce nothing, nonetheless He would be powerful and would be said to have power, just as He now has it, to produce things that will never be: therefore His power is not the act of willing, but the very faculty of will.

But one could object that in God, according to our way of understanding, there are a twofold effect of will: one by which He necessarily loves possible things; another, free, by which He wills to produce the things that shall be, as we explained in disputation 80, chapter 2. We could therefore assert that power in God is the affection of will which necessarily inheres in Him with respect to possible creatures. I answer that this affection is not the principle of things as they exist, and so does not pertain to power. Moreover, that it is not the principle of them is proved: first, it is not a principle through itself, because it is only a certain love of simple complacency, as we there noted, and hence of itself inefficacious; by this love, indeed, God loves things which He will never bring about. Then, this love is not a principle through another efficacious effect, by which God should will to produce whatever He will produce in time; for in God an efficacious affection does not arise from an affection of simple complacency, as happens in us, in whom these two affections are distinct. Therefore that affection concerning possible things does not pertain to power: rightly then it has been said that the power of God is knowledge and the faculty of willing. For by these two He is by His nature powerful to do whatever He does.

To this power, moreover, we ought to assign besides the external operation which is to be in time, also another immanent operation of His will itself, by which He immediately operates all things, namely an efficacious affection and decree by which He foreordained all things from eternity.

From what has been said it follows that, even if we say that the action of the divine intellect pertains to the power of God, by no reason does there pertain to it that action of the intellect which is called a command: for this action of the intellect is an insinuation of the will, which is wont to be called an intimation after the mode of speech, as we shall show in 1 - 2, question 17, article 1.[2245] But such an insinuation of the will would have to be of the free will, by which God would decree to do something, as is evident: therefore, since it has been proved that the affection of free will in God is not His power, because it is free in God, it follows that the insinuation itself is not power, because that too would be free in God, if such an insinuation befitted God. Add that, as we said above in disputation 87, chapter 3, such an insinuation and command in God is not in order to provide for things, or to effect and govern them: therefore such insinuation is not the power of God.[2246]

In the same proportion, in angels the moving power according to place is not at all distinct from will and intellect, but includes them, insofar as they are a true principle as referred to the very motion. But because in an angel neither does knowledge nor volition inhere always, whereas power ought to, therefore we say that no knowledge, nor any volition, pertains to power, but the bare intellect and will; yet neither of these powers works proximately through itself, but through an elicited immanent act of knowledge and volition.

But some object in this way. Since power in God is a certain attribute of God, peculiar and distinct from others, we ought to assign it as simple according to our way of conceiving, and not as if pieced together from two others, namely from intellection and from will. I answer: since God acts

2244. Disputatio 69, cap. 2.
2245. 1 - 2, q. 17, a. 1.
2246. Disputatio 87, cap. 3.

outside Himself, not insofar as He is, but insofar as He wills, and will cannot act without cognition, it ought not to seem strange if from these two we constitute in God the power which is the principle of operating: for such an agent requires two principles, in order to be understood as powerful; yet in such a way that each is not the principle of the work in the same mode; for the intellect is a principle after the mode of a director, but the will after the mode of an impeller, as was said in disputation 81, chapter 2.[2247]

To the actions put forward for the opinion of Durandus we can easily reply.

Reply to the first argument of Durandus. To the first we say that the intellect and will are not the proximate principle of things, because they work by means of knowledge and volition; nevertheless the faculty of will, without the operation of willing, pertains immediately to power, although the intellect pertains only by reason of knowledge, as has been explained. For thus we must constitute power as the proximate principle of operation, yet so that it is not in the agent freely, but naturally and necessarily: therefore on the part of will we said there is no act that is itself power, but the bare faculty of willing. The reason by which Durandus proves that the intellect and will are not the proximate principle of operation is trifling: for that the intellect and will of God are conversant about the created and the uncreated, whether about God or about impossible things, does not prove that they are not in some way the power of God. I say "in some way," because intellect and will extend more widely than power; for power regards creatures only; but the intellect, as intellect, also regards the uncreated, as God, or even impossibles that cannot be created, as was said in disputation 61; the will, however, as will, is at least conversant about God Himself: for about impossibles it does not operate, unless perhaps by an act of hatred and displeasure. Therefore that reason of Durandus does not prove that intellect and will, under a peculiar mode, are not the power of God, namely by the operation whereby they are principles of things; from which only it would follow that power in God is not at all distinct from will and intellect, in such a way that it does not include them; it does, however, rightly follow that it differs from them, as the includent from the included, or as that which exceeds from that which is exceeded.

Reply to the second. I answer to the latter reason from what I said in chapter 3 at the end, namely that, according to our way of understanding from created things, there are to be distinguished in God various attributes, so that nothing be derogated from infinite perfection and virtue; but so that whatever imperfection there is in creatures we remove when we transfer their properties to God, and that which in us proceeds from imperfection - that power which executes being altogether distinct from will, because will is not of itself efficacious to operate by itself - we attribute to God after another mode than to us: for the will of God is most perfect; and thus we attribute to God an executing power otherwise than to ourselves.

Moreover, certain recent writers, in favor of the more proper opinion of Durandus, that power in God is not intellection and will, use this reasoning. God is not therefore omnipotent because He knows all things; rather, He therefore knows all things because He is omnipotent: for in Himself, as omnipotent, as in a cause, He knows all other things: likewise, He is not therefore omnipotent

2247. Disputatio 81, cap. 2.

because He wills, as St. Thomas very well said, ad primum; indeed, He is not omnipotent because He can will to produce: therefore neither intellect nor will pertain to the power of God. I answer first, that, according to our way of understanding, God does not therefore know all things because He is omnipotent, but rather He beholds them in Himself, not in their cause, because He is omnipotent, but in Himself, as in an expressed species; both points above I showed in disputation 60.[2248] Then as to will I say, God is not power because He should will to produce - that which already in the preceding chapter we expressly noted - and thus we said that the willing of God is not the power of God; but rather God is therefore powerful because He can will to produce: for unless He had a will by which He could will, He would produce nothing. Ill do therefore those Doctors assume that God is not therefore omnipotent because He can will.

What we have hitherto said is in accord with the doctrine of the Angelic Doctor in the replies to the arguments, if it be rightly understood; yet if Caietan, with his wonted subtlety interpreting his mind, did not fully attain it.

First, then, among other things which he treats in dissolving the second and third arguments, is this proposition: "Action, if transferred to God, is the same as the divine essence." Concerning this proposition he himself doubts how it can be that the notion of power, which in creatures is transitive, is so to be attributed to God that it is altogether the same by nature with the essence itself. He answers this two ways, according to the two opinions which St. Thomas seems to touch in the solution to the fourth: for if we say that the power of God is the same as intellect and will, then it is plain how the action of power, transferred to God, is the same as His essence; because the immanent action of intellect and will - by the means of which He operates outwardly - is as to the power of God the same as the essence, but not the transitive action which is produced in the creature. But if power in God be something wholly distinct from intellect and will, as Durandus thought, which opinion too St. Thomas seems to indicate in the solution to the fourth, then one must not have recourse to immanent action, but the action of power is to be said to be the same as the divine essence, because in every agent that works by a transitive operation, besides the relation of the agent there remains also something absolute, which is the foundation of that relation, distinct from the very power of acting. But in God, operating by power, that foundation is altogether the same as the essence, by reason of which that proposition set above is true, namely: the action of power, if transferred to God, is the same as the essence.

But besides the fact that the foregoing doctrine of Caietan is manifestly false and against Aristotle, it is also against the mind of the holy Doctor. First, assuredly, it is false and against Aristotle: for he, in Metaphysics V, chapter 15, does not think that the relation of the agent is founded upon some absolute thing which remains in the agent, but upon the very action; for he says that relatives, according to the genus, are only powers and the actions of powers.[2249] Second, if some absolute thing should arise in the agent while it acts, then the agent, insofar as it acts, would be moved; which Aristotle judges absurd in Physics III, chapter 3, and from there proves that action is not in the agent but in the patient.[2250] Third, it cannot be understood, much less explained,

2248. Disputatio 60.
2249. Aristotle, Metaphysics V, c. 15.

what that absolute thing in the agent should be in which the relation is founded besides power itself; therefore it is asserted in vain. Wherefore Ferrarensis more rightly teaches, against the Contra Gentiles, that from a transitive action nothing remains in the agent besides relation.[2251] Whether indeed this can be considered after the mode of act and of action, we shall speak below in disputation 175, chapter 1.

Moreover, that the mind of St. Thomas is otherwise is easy to see for one considering the solution of the second and third arguments.

Articulus II - Whether the power of God is infinite

It will easily be clear that St. Thomas nowhere insinuated that proposition which Cajetan draws out. Rather, in the second solution he speaks only of power compared with an immanent act, and shows that then only is the act nobler than the power when the act is distinguished from it, as in us intellection is distinguished from the intellect. But he does not speak of the transitive action of the power itself, just as in the third solution; nor does the argument contend that this action is nobler or more perfect than the abiding power.

Therefore St. Thomas answers to that argument, that in God there is not a power with respect to immanent acts, for which acts would not be nobler, because the act is the same as the essence, and the power itself by the nature of the thing; although in solution 3 he concedes for another reason that there is not a power by the nature of the thing with respect to immanent actions. Therefore, in solution 3 he asserts that in God there is no power with respect to operations, that is, actions, understood as immanent - except according to our manner of understanding: because, as we said in the first chapter, in order that there be power according to the thing, it is necessary that by its nature the power be distinguished from the operation. He nevertheless concedes that there is in God a power with respect to an effect, that is, with respect to a transitive operation - for so he calls it - and he distinguishes it from the immanent, which he calls action, on the ground that the effect produced outside God is by the nature of the thing distinguished from God himself and from his power. There can therefore be in God a real power to an effect, and not only according to our manner of understanding.[2252]

One must also observe that the immanent actions of the intellect and will, by which God produces creatures outside himself, are nowise transitive actions of the divine power itself - as some Thomists have wrongly thought - but besides the immanent actions of intellect and will, which rather are the principle and efficient cause of the operation and of the effect that transits outside God, there is also a transitive action and operation, which is the same as the effect itself. For every cause has an act that is middle between itself and the effect: just as form by a middle, namely information, as by its proper act gives existence, and matter by a middle, namely reception which is passion, has existence from form: so likewise an agent by a middle, namely action,

2250. Aristotle, Physics III, c. 3.
2251. Ferrarensis, in Contra Gentiles, cap. (as cited in the text).
2252. Compare above, disputation 60.

produces existence - not by a middle action which should be to it as a form for producing an effect, such as intellection is to the intellect and volition to the will for operating outside, but by that which is a way between the cause itself, as informed in first act, and the effect itself - such as creation is in the creature produced, and generatedness-created in the thing generated. This doctrine is gathered from St. Thomas, Contra Gentiles, book 2, chapter 1.[2253]

Secondly, concerning the doctrine of the second solution, note that then the act is more perfect than the power when it is immanent, as intellection is more perfect than the intellect; for that act is the perfection of the power abiding in it. But as often as the operation of a power is transitive - like building - it is not nobler than the power which is the principle of it. For such an action is not the perfection of the power itself, but the effect and the thing produced outside, as St. Thomas teaches in the same place; and thus the art's power is much more perfect than the work of the art itself and the production thereof. Nor does it stand in the way that the more perfect be ordered to the imperfect: for it is not ordered to it as to the ultimate end, but by means of it to a further end of man and of the universe.

Third, it must be noticed that, of the two solutions which St. Thomas employs to the fourth argument, the former is that power differs according to reason from knowledge and will so that it does not include them; but that solution does not entirely satisfy the holy Doctor, and therefore he added the latter solution, which teaches that power is knowledge itself and will, insofar as they are principles of things - a position Ferrarensis deems truer in the place alleged, book 3, chapter 1.[2254] Wherefore Ferrarensis was deceived in Contra Gentiles, book 2, chapter 1, ad 4, when he said that the former solution was of St. Thomas's mind, and that the latter is not found in the ancient codices; for if that were true, he himself, in the same book, chapter 10 - where he says that power in God is knowledge and will themselves - would have taught against the holy Doctor; or he would not have remembered himself, as he ought.

Objection 1. It seems that the power of God is not infinite. For every infinite thing is imperfect, according to the Philosopher in Physics 3. But the power of God is not imperfect. Therefore it is not infinite.[2255]

Objection 2. Further, every power is manifested through its effect, otherwise it would be in vain. If, therefore, the power of God were infinite, it could produce an infinite effect. But that is impossible.[2256]

Objection 3. Further, the Philosopher proves in Physics 8 that, if the power of some body were infinite, it would move in an instant. But God does not move in an instant; rather he moves a spiritual creature through time, and a bodily creature through place and time, according to St. Augustine in the Literal Meaning of Genesis, book 8, chapters 20, 22, and 23. Therefore his power is not infinite.[2257]

2253. St. Thomas, Contra Gentiles 2, c. 1.
2254. Ferrarensis, in Contra Gentiles, cap. (as cited in the text).
2255. Aristotle, Physics III; cf. the scholastic loci indicated in the margins.
2256. See the loci noted in the margin: c. 19; Opusc. 9, c. 4; and the references in Metaphysics.
2257. St. Augustine, De Genesi ad litteram, lib. 8, c. 20, 22, 23.

But on the contrary: Hilary says in De Trinitate, that God is of immense strength and power. But every immense thing is infinite. Therefore the divine power is infinite.[2258]

I answer that, as has already been said, active power is found in God according as he himself is in act. But his existence is infinite, inasmuch as it is not limited by any recipient, as is clear from what was said above when the infinitude of the divine essence was treated. Wherefore it is necessary that the active power of God be infinite. For in all agents this is found: the more perfectly an agent has the form by which it acts, the greater is its power in acting. Thus, the hotter a thing is, the greater power it has to heat. And it would indeed have an infinite power to heat, if its heat were infinite. Therefore, since the very divine essence through which God acts is infinite (as was shown above), it follows that his power is infinite.[2259]

Reply to the first: The Philosopher speaks of the infinite that is on the part of matter not terminated by form - the kind of infinite that befits quantity. But thus the divine essence is not infinite (as was shown above), and consequently neither is his power. Hence it does not follow that it is imperfect.

Reply to the second: The whole power of a univocal agent is manifested in its effect. For man's generative power can do nothing more than generate a man. But the whole power of a non-univocal agent is not manifested in the production of its effect: just as the power of the sun is not wholly manifested in the production of some animal generated from putrefaction. Now it is manifest that God is not a univocal agent. For nothing else can agree with him either in species or in genus, as was shown above.[2260] Hence it remains that his effect is always less than his power. Therefore it is not necessary that the infinite power of God be manifested in this, that he produce an infinite effect. And yet, even if he produced no effect, the power of God would not be in vain: for that is in vain which is ordered to an end which it does not attain. But the power of God is not ordered to an effect as to an end; rather it is itself the end of its effect.

Reply to the third: The Philosopher in Physics 8 proves that, if some body had infinite power, it would move in non-time; and yet he shows that the power of the mover of the heaven is infinite, because it can move through an infinite time. It remains therefore according to his intention that, if there were an infinite power of a body, it would move in non-time; not however the power of an incorporeal mover. The reason of this is that a body moving another body is a univocal agent. Hence the whole power of the agent must be manifested in the motion. Therefore, the greater the power of the moving body, the faster it moves; and thus if it were infinite, it would move disproportionately swiftly, that is, it would move in non-time. But an incorporeal mover is a non-univocal agent. Hence it is not necessary that its power be manifested in motion in such a way that it move in non-time - especially since it moves according to the disposition of its will.

Note concerning the article. The conclusion of the article is: The power of God is infinite. Its rationale is clear in the text, and will be more fully explained in the following disputation. For the present, only note, in regard to St. Thomas's text, that here he is not treating of the infinity of the

2258. St. Hilary, De Trinitate; see also the articles cited in the margin.
2259. See above, q. 7, art. 1.
2260. See above, q. 3, art. 3; and q. 9, art. 4, 21, 36.

essence - about which he disputed in question 7 - but of the infinity of the power, which differs in ratio from the infinity of the essence, just as power is distinguished from essence itself: and this difference will be made clear in the disputation.

How being and nothing are said to differ infinitely. Although between no power and any effect whatsoever there is no proportion, nevertheless the distance is not infinite: for nothing is exceeded by being except by reason of entity, which is finite. If, however, nothing and something are said to differ infinitely, as one species from another and a genus, this infinitude is not absolute, but a certain likeness: namely, because they are so distant between themselves that neither by increase nor by decrease can the one reach the other, which is proper to the comparison of the finite to the infinite. But such an infinitude does not seem sufficient to require an infinite power in the genus of power. For that some power should produce only one species, as happens in univocal agents, and another two species, as in equivocal agents, which produce many things diverse in species, does not prove an infinite power in that which produces an effect diverse in species. We shall examine and confirm this reasoning more fully below in disputation 277, chapter 1.

Disputatio CIII - What the infinity of the power of God is, and in what way it is distinguished

- Various opinions, chapter I.
- The scholastic explanation and demonstration of the infinity of the power of God, chapter II.
- An argument against the aforesaid position, chapter III.

Caput I - Various opinions

The first opinion: of those who assert the infinity of the power of God from the production of things from nothing. Certain authors - Henry and St. Thomas among them - prove the infinity of the power of God from creation: for, in the manner in which an agent, in order to elicit an effect from some potency of a subject, requires a special power, and for eliciting it from a lesser potency a greater power (because the difficulty increases on the side of the subject), so, to produce an effect from no potency at all - that is, from nothing - an infinite power is required, since there remains no proportion whatsoever between nothing and the power to create.

Scotus and Durandus impugn this reasoning; their objections will be set forth below.[2261]

...or received from another, which is so proper to God that it cannot belong to a creature even through an infinite time. But this kind of infinity belongs rather to the essence (*essentia*) than to the power (*potentia*), as power, about which we have more at length treated in disputation 25.[2262] For the essence of God is said to be infinite, as in the same place, cap. 5, we explained, because it has existence (*esse*) from itself and from no other; but at present the debate concerns the infinity

2261. Scotus and Durandus argue against this line; their arguments will be taken up in the sequel of this disputation.
2262. See disputation 25, cap. 5.

which is proper to power, and certainly these are matters not to be confused one with another, but to be distinguished, just as the infinities of duration, of presence, and of comprehension are also diverse in notion from the infinity of essence.

The third argument is Durandus's, in 1, distinction 43, question, number 13, which is taken from the effect, thus. That power is infinite which either produces an infinite effect at once, or at least can produce it successively. For what is found successively in the effect is, virtually, at once in the power itself. And since Durandus himself, in 1, distinction 44, question 2, affirms that diverse species of things cannot be produced to infinity, about which we shall speak in disputation 106, he infers the infinity of God from the sole infinity of individuals that can be produced.[226322642265]

Refutation. But this argument proves nothing: for if the heaven and the sun had existed from eternity and had successively generated, from putrefaction, infinite animals at least diverse in number, nevertheless for that reason the power of the sun or of the heaven would not be infinite in the notion of power, but only in the duration of a participated eternity, about which there is no present controversy. Therefore, in order to prove the infinity of God's power in the genus of power, one must use another line of reasoning. Indeed, this line would demonstrate what we contend, if the power of God could at least successively produce without end new species of things to infinity, as we shall see in the next chapter; but on Durandus's view it certainly proves nothing. I pass over many other arguments of authors, which seem of lesser moment, and I make my way to a manifest demonstration of this matter.

Caput II - In what way some understand the infinity of the power of God

Some think to explain that power is infinite, and that each attribute - also in our mode of understanding - in such wise that one is essentially included in another, as being is in all things; and since the divine perfections and attributes are infinite, therefore they teach that God's very essence, and each of his perfections, is infinite. But, besides the fact that in our mode of understanding the attributes are so distinguished from one another that one does not include another, as we shall show in disputation 119, cap. 2 (otherwise they would be confounded even in our cognition, which would greatly hinder the way of speaking which it is necessary to use among men), on this path neither can the infinity of power which we are inquiring into be explained or defended; also because in this way essence and power would have the same infinity according to reason, whereas they are distinguished by us. For every perfection, in our mode of conceiving, is attributed to God so that it is understood and named as infinite in its own genus. For we do not say only that God is perfect on account of this or that perfection, or that he is so adorned with infinite perfections that nothing is lacking to him; but also that he is so powerful that his power is infinite in the genus of power, and on that account he is said to be omnipotent, not indeed infinite because he can, for example, at once know, act prudently, and act justly, but because he can do all things, and has a virtue for some effect to infinity; just as the knowledge of God is not said to be infinite

2263. Durandus, In Sentences, book 1, dist. 43, q., n. 13.
2264. Durandus, In Sentences, book 1, dist. 44, q. 2.
2265. See disputation 106.

because it is at once justice, holiness, and other perfections, but because he knows infinitely; and his duration, or eternity, is not infinite because it contains in itself other perfections and attributes, but because it is without beginning and without end. Since, therefore, to each attribute its own infinity in its proper genus is fitting, power must be said to be infinite from its object, as also knowledge and will.

Now, therefore, the infinity of the power of God must be proved to us by reason.

The first argument is that which the Holy Doctor asserts in this article in this manner. The essence of God is infinite, as is clear from question 7, article 1; therefore also the power, which in our mode of understanding follows it as a passion, will be infinite in its own genus.[2266] This argument indeed proves that there is infinite power in its own genus, if on the part of the object there is no repugnance, that is, if one can conceive some power infinite in the genus of power in comparison with its object: for if any such can exist, that will be the one which follows an essence infinite in the notion of essence; for an infinite power is not to be ascribed to a finite essence. Yet it does not prove that there is some object to which there corresponds some virtue and infinite power; because, although God is infinite according to essence, if nevertheless there were no possible object which required an infinite power, we should not say that in God there is an infinity, in so far as it is understood by us as referred to an object and on this account as distinct from the other attributes; but we should say that there is the greatest power that can be.

The later argument proves that God's power is infinite in the genus of power, as referred to the object, thus. There are some things possible indeed to be done, which nevertheless cannot be done except by an infinite power: therefore it is necessary that there be an infinite power in the nature of things; and if this belongs to anyone, it must be ascribed to the first cause. St. Gregory uses this line of reasoning in 1, distinction 43, question 2, which clearly demonstrates the point, once what it assumes is made manifest.[2267] Now this can be proved by supposing that the possible species of things are infinite, as many think; for thus, although all could not be produced at once, yet once one is given, another could be made; and so it is rightly inferred that in the first cause there is infinite power: for if it were finite, at length it would arrive at some species beyond which it could not add another; otherwise it would thereby make the virtue of the power itself in itself, in so far as it can operate, to be infinite. But since some deny that the possible species of things are infinite, about which we shall dispute in the last article of this question, therefore that point must be proved from elsewhere; for it is more certain that the power of God is infinite in the genus of power than that the possible species are infinite, since even from infinite individuals alone one does not gather an infinity of virtue in power, but an infinity of duration, whereby infinite individuals can successively be produced by the virtue of a finite power, as I noted above in cap. 1.

Therefore St. Gregory proves it by many examples, of which one will suffice for us. Every body is so apt to be moved that it can be set in motion faster and faster without a term: therefore it is necessary that there be some power by which it can be moved faster and faster without a term; but

2266. St. Thomas, I, q. 7, a. 1.
2267. St. Gregory, In Sentences, book 1, dist. 43, q. 2.

if every power were finite, there would also be some determinate limit of velocity, beyond which it could not move faster. Since, therefore, velocity can increase to infinity, it is necessary that there be some power of infinite virtue; and although it cannot produce an infinite velocity in any motion, as is clear, nevertheless the virtue of the power itself will be infinite in itself, because actually it has that virtue by which it can move a body faster and faster to infinity; and hence it has a virtue without end and limit in the notion of power.

There is also an infinity of God's power in the genus of power because in the production of singulars it has no limit: for he can make more and more to infinity, not only in the course of time, but also at once; but if it were finite, it would have a limit beyond which it could not produce more things at once, as is gathered from the reasoning made. This argument, as to the former part, without controversy demonstrates the infinity of the power of God. In our view, moreover, we who taught in disputation 26, cap. 3, that an infinite could be produced by God at once, even as to the latter part could thereby prove the infinity of the power of God.[2268]

Finally, it must be observed that this infinity of power is so proper to God that it cannot be communicated to a creature in the same manner. For although God should communicate to a creature, as to an instrument, the virtue of moving a body faster without limit, nevertheless it would never have the virtue from itself, nor in itself, to move a body faster to infinity; both because it would have that virtue from another, by whom it would be assumed as an instrument; and because it would not have that virtue actually infinite; for it would never receive it except for a finite and limited effect. In that way, therefore, the infinity of the power of God is distinguished from the infinity of a created power, if such could be communicated to it, just as we said in disputation 25, cap. 5, that the infinity of the duration of a creature, if it were communicated to it, differs from the infinity of God's eternity: for the duration of a creature would not have from itself the infinity which God's eternity has from itself. And the same must be said if God were to communicate to a creature the virtue of creating infinitely.[22622269]

Caput III - An argument against the foregoing opinion

There is, however, an argument which, though it is not difficult, has nonetheless given some trouble to certain people...

There is, however, an argument which, though it is not difficult, has nonetheless given some trouble to certain people, to prove that an infinite power does not befit God, and it runs as follows.

Proponitur argumentum. If God had an infinite power, He would not only be able to move from place to place through a medium ever more and more swiftly to infinity, but also most swiftly, that is, in an instant - just as Aristotle, Physics VIII, chapter 10, proves that there cannot be found in a body an infinite power for moving, on the ground that it would effect motion most swiftly not in time, that is, in an instant. For a power that moves in time is finite, and there could be a greater

2268. See disputation 26, cap. 3.
2262. See disputation 25, cap. 5.
2269. See again disputation 25, cap. 5.

one, namely that which would move in a shorter time: therefore an infinite, and the greatest of all, would move in an instant. But it is impossible for motion to be made in an instant from place to place through a medium: therefore it is impossible that there be in God an infinite power and virtue; otherwise, by the same argument Aristotle would not rightly prove that such a power cannot befit a body.[2270]

Averroista solutio. Averroes replies in the twelfth book of the Metaphysics, commentary 41, that from the infinite power of God there does not follow motion in an instant, as the argument contends, because second causes, which are finite, limit and modify the efficacy of the first.[2271]

Reijcitur. St. Thomas and Aegidius impugn this solution in Physics VIII, chapter 10 (as Caietan reports in the commentary to be cited below), because it does not give the reason why the second cause should so modify the infinite power of the first as to impede motion's being in an instant, and yet not impede that every motion may be infinite in duration.[2272] Caietan for his part tries to assign a reason why the second cause does not take away the infinity of duration in motion, but does impede the infinity of speed. On which, in my judgment, one need not labor much; since it is clear that the infinity of duration does not arise from an infinity of power in the genus of power, but from the infinity of the duration of the cause - which may be communicated to any created agent.

Scotus also attacks Averroes's solution; for since, according to him and Aristotle, God acts necessarily, it follows that His infinite efficacy cannot be limited by a second cause; because a cause that acts necessarily will operate in the same manner together with another as it operates of itself. Thus argues Scotus in book 1, distinction 8, the last question.[2273]

Tuetur Caietanus. Yet Caietan most aptly replies on behalf of the Commentator as follows: although an agent may act necessarily, nevertheless when it concurs with a second cause for some effect, its power is terminated and determined by that cause, inasmuch as it accommodates itself to operate along with it - just as the sun operates in diverse ways with diverse inferior causes. However, although the reasoning of Caietan and the Commentator shows that then the first cause does not move something in an instant when it moves by means of a second cause, it does not, for all that, prove that God by Himself cannot move some body in an instant - especially if He acted necessarily, like a body. For if a body having an infinite power would move in an instant, by the same reasoning a spirit would move so too, if it operated necessarily. Therefore one must meet the foregoing argument in another way.

Caietanus accordingly, in tome 3 of the Opuscula, treatise 2, question 1 (which he mentions also in his commentary on this article), answers in three ways.

Prima solutio. First, he says it suffices for the power of God to be infinite if an effect infinite in duration corresponds to it. But from what was said in chapter 1 it is clear that from the infinite duration of an effect there is not gathered a proper infinity of power in the ratio of power. Add that

2270. Aristotle, Physics, book 8, chapter 10.
2271. Averroes, In Metaphysicorum, book 12, commentary 41.
2272. St. Thomas; Aegidius, on Physics 8, chapter 10, as reported by Caietan in the place cited below.
2273. Scotus, In Sentences, book 1, distinction 8, the last question.

this solution does not satisfy the proposed argument: nor does it explain sufficiently how from an infinite power that would be in a body Aristotle gathers that motion would be in an instant; and why the same should not follow from God's infinite power.[2274]

Secunda solutio eiusdem. The second response (which Caietan sets in the third place) is that from the infinite power of God there cannot be made motion in an instant, because that is impossible - not indeed on account of a defect in the power of God, but on the part of the movable, which is not capable of such an effect. This solution does not please me either; because if we cannot assign to the power of God an infinite object, or one that requires an infinite power, we shall not be able to attribute to God an infinite power in the genus of power as related to an object, in the way we distinguish it from the essence and from other attributes - although the divine essence is infinite in the genus of being. And by the same token Aristotle's argument would not prove that an infinite power is not in a body on the ground that a motion in an instant would follow therefrom: for one could answer that a motion in an instant does not follow because it is impossible, not on the part of the moving body, but on the part of the movable, which is not capable of such an effect.

Tertia solutio S. Tho. & Caiet. The true solution is that which St. Thomas insinuated briefly in this article, reply to the third, and which Caietan also sets in the second place among other answers (omitting another which the same Doctor also indicates there), and it is of this sort. If a body had an infinite power, then a motion in an instant would follow (we are always speaking of motion through a medium), because that agent would be natural, and by force of its nature determined to one effect in such a way that it would not be in its power now to move less, now more, but would always exert its whole force for moving. Wherefore, if it were to move in time, however swift the motion, it would not be supremely swift, and hence would not require an infinite efficacy in the mover. Therefore, in order that the mover's power be infinite, some motion would have to be made which is the swiftest of all: but such a motion cannot be, unless in an instant: therefore either there would have to be a motion in an instant, or, if that could not be, there would be in a body no infinite power to move.

But since God acts freely, the efficacy of His power is not determined to one effect, but He produces diverse effects as He pleases, and thus He can move a body with respect to place ever more and more swiftly. From this it is rightly inferred that the virtue of His power is infinite. For that He can in the effect produce more and more without a terminus - even if He does not produce actually an infinite - argues an infinite efficacy: for if it were finite, there would correspond to it some motion in time which is the swiftest, which He could produce. Therefore, to gather that there is in God an infinite power which operates freely, it is not necessary to assign to Him a motion that is the swiftest, either in time or in an instant: for in neither way can it be. Not in an instant, as we shall show elsewhere; not in time, because to any determinate motion one can assign a swifter one without end. Therefore the infinity of power is rightly inferred, not from some determinate motion, but from those which are in potency to infinity.

2274. See above, chapter 1 of this disputation.

Infinitas divinae potentiae confirmatur primo. Thus far it has been shown from the mere speed of motion that God's power is infinite; but I think it can also be proved in another way. First, because He can create and conserve an infinite multitude of spirits, or even of bodies, as I taught in disputation 26. Whether that be a multitude of individuals in finite species, or in infinite ones, the very same follows. For although from the fact that some agent can successively in infinitum produce individuals of the same species there is not gathered an infinite power of that agent (as I noted in chapter 1), but only an infinity of duration, yet from the fact that it produces at once, or conserves, an infinite multitude under the same species, an infinite virtue of that agent is rightly inferred. Then too, the infinity of God's power is deduced from this, that He can produce infinite species either at once, or also successively, as was said in chapter 1. Whether, however, there is a definite number of species that can be made, we shall examine in disputation 106, chapter 4. Besides these ways by which the infinity of God's power is proved from effects, Gregory also adduces others in the place cited, which it would be long to recount.[2275]

Articulus III - Whether God is omnipotent

To the third, the procedure is as follows.

Objicitur 1. It seems that God is not omnipotent. For to be moved and to suffer something belongs to all things: but this God cannot, for He is immobile, as was said above. Therefore He is not omnipotent.

Objicitur 2. Further, to sin is to do something. But God cannot sin, nor deny Himself, as is said in 2 Timothy 2. Therefore God is not omnipotent.

Objicitur 3. Further, it is said of God that He manifests His omnipotence most by sparing and having mercy. Therefore, the ultimate thing which the divine power can do is to spare and to have mercy. But there is something much greater than to spare and to have mercy, as to create another world, or something of that sort. Therefore God is not omnipotent.

Objicitur 4. Further, upon that passage 1 Corinthians 1, "God has made foolish the wisdom of this world," the Gloss says: He made foolish the wisdom of this world, by showing possible what that [wisdom] declared impossible. Whence it seems that not everything should be judged possible or impossible according to inferior causes, as the wisdom of this world judges, but according to the divine power. If therefore God is omnipotent, all things will be possible. Therefore nothing will be impossible. But with the impossible taken away, necessity is taken away. For what is necessary to be, it is impossible not to be. Therefore nothing will be necessary in things, if God is omnipotent; but this is impossible. Therefore God is not omnipotent.

Sed contra: what is said in Luke 1: "No word shall be impossible with God."

Respondeo: It is answered that all commonly agree that God is omnipotent. But to assign the reason of omnipotence seems difficult. For there can be doubt as to what is comprehended under this distributive, when it is said that God can do all things. But if one considers rightly (since power

2275. St. Gregory, In Sentences, book 1, dist. 43, q. 2; and see also disputation 106, cap. 4.

is said with respect to possibles), when God is said to be able to do all things, nothing is more correctly understood than that He can do all things possible; under this He is called omnipotent. Now "possible" is said in a twofold way according to the Philosopher in Metaphysics V: in one way with respect to some power. Thus what is subject to human power is said to be possible to man. It cannot, however, be said that God is called omnipotent because He can do all things that are possible to created nature; for the divine power extends to more. But if it be said that God is omnipotent because He can do all things that are possible to His own power, there will be a circularity in the manifestation of omnipotence. For this will be nothing else than to say that God is omnipotent because He can do all things that He can; it remains therefore that God is called omnipotent because He can do all things absolutely possible. Now something is called possible or impossible absolutely from the habitude of the terms: possible indeed, because the predication fits the subject, as for a man to sit; impossible indeed absolutely, because the predicate repugns the subject, as for a man to be an ass. Moreover, since each agent produces its like, to any active power there corresponds as proper object the possible according to the notion of that act on which the power is founded. Thus the heating power is referred to what is heatable as to its proper subject. But the divine being, upon which the ratio of the divine power is founded, is an infinite being not limited to some genus of being, but having beforehand in itself the perfection of all being: whence whatever can have the notion of being is contained under absolute possibles, with respect to which God is said to be omnipotent. Nothing, however, is opposed to the notion of being except non-being. Therefore that repugns the notion of the absolutely possible, which is subjected to the divine omnipotence: namely what implies being and not-being together. For this is not subjected to omnipotence, not because of a defect of the divine power, but because it cannot have the notion of a possible or of a makeable.

Reply to the first: It is answered that God is called omnipotent according to active power (*potentia*), not according to passive power, as has been said; hence that he cannot be moved and suffer does not oppose omnipotence.

Reply to the second: To sin is to fall short of a perfect notion. Hence to be able to sin is to be able to fail in acting, which is repugnant to omnipotence. And for this reason God cannot sin, who is omnipotent. Although the Philosopher says in Topics 4, chapter 2, that God and the studious man can do wicked things, this is to be understood either under a condition whose antecedent is impossible - as, for instance, if we say that God can do wicked things, if he should will; for nothing prevents a conditional from being true whose antecedent and consequent are impossible, just as if it be said: if a man is an ass, he has four feet - or so that it be understood that God can do certain things which now seem wicked, which, if he were to do them, would be good; or he speaks according to the common opinion of the pagans, who said that men were transferred into gods, as Jupiter or Mercury.[2276]

Reply to the third: The omnipotence of God is manifested most of all in sparing and having mercy; for by this it is shown that God has the highest power, that he freely remits sins. For it is not his who is bound to a superior law to remit sins freely. Or because by sparing men and having

mercy he leads them to a participation of the infinite good, which is the ultimate effect of the divine virtue. Or because (as was said above) the effect of divine mercy is the foundation of all the divine works. For nothing is owed to anyone, except on account of that which has been given to him by God not as a debt. And in this especially is the divine omnipotence manifested, that to him pertains the first establishment of all goods.

Reply to the fourth: The absolute possible is said neither according to higher causes nor according to lower causes, but according to itself. But that which is said possible according to some power is named possible according to the proximate cause. Whence those things which are immediately apt to be done by God alone, as to create, to justify, and the like, are said to be possible according to the higher cause; but those things which are apt to be done by lower causes are said to be possible according to lower causes. For according to the condition of the proximate cause the effect has contingency or necessity, as has been said above.[2277] And in this the wisdom of the world is judged foolish, because it judged those things which are impossible to nature to be impossible even to God. And thus it is clear that the omnipotence of God does not exclude impossibility and necessity from things.

Note concerning the Article.

The conclusion of the article is affirmative, and is of faith, as is clear from many testimonies of Scripture. The doctrine of the whole article is most true and subtle, yet so perspicuous that it does not need explanation; we shall, however, set it forth in the following disputation and confirm it by reasons. Only this is to be noted from Cajetan concerning the solution of the fourth, that when St. Thomas says that the wisdom of this world is foolish, which thinks that things impossible to nature are impossible to God, he is not speaking of philosophy according to itself (for that does not teach the false), but of the philosophy which philosophers abuse, and by rash judgment apply to divine things, which their natural philosophy does not attain.

Disputatio CIV - Why God is called omnipotent

Status controversiae. cap. 1. Quid senserit Gabriel, & Scotus. cap. 2. Opinio Scoti. cap. 3. Verior sententia. cap. 4. Quomodo omnipotentia versetur circa non ens. cap. 5. Neque relationem omnipotentiae, neque ullam aliam ad creaturas esse realem in Deo. cap. 6.

Caput I - Status of the controversy

Among all Catholics it is undoubted that God is omnipotent, for Scripture everywhere proclaims it. But what Abailard and John Wyclif thought about God's omnipotence, we shall say in disputation 106, chapter 3.

2276. Aristotle, Topics, book 4, chapter 2.
2277. St. Thomas, Summa theologiae I, q.14, a.13.

Caput II - What Gabriel and Scotus thought

Nevertheless some doubt whether by natural reason it can be demonstrated that God is omnipotent. For Scotus in the First Book, distinction 42, question 1, and Gabriel, the same distinction, question 1, articles 1 and 2, assert that only the power of the first cause can be demonstrated, by which it can produce all things either immediately by itself, or remotely by concurring with second causes; but that the power of the first cause, by which it can by itself do all the things which it can do by means of second causes and other things that do not imply a contradiction - in the manner in which the theologians speak about omnipotence - cannot be demonstrated by natural reason, but is to be believed by divine faith alone. For although by natural reason it is evident that there is a first cause of all things, which has in itself the power of all causes, nevertheless it is not so manifest that it does not need the concurrence of second causes for operating.

Yet from the infinity of power (*potentia*), which in the preceding disputation we demonstrated by natural reason, it is clearly gathered that by its own power and of itself it can reach, and produce in a subject or outside a subject, whatever can by its nature be in a subject or outside a subject. For if a power is infinite in the genus of power, no effect, nor mode of operating, will be able to elude it, if it is possible. Just as, because the science of God is infinite in the genus of science and cognition, no knowable can be hidden from it: the sole difference is this, that the knowable is necessarily referred to the science of God, for it is necessarily borne to everything that it can know; whereas not every thing is necessarily referred to the power of God so as to be produced by it, but so as to be able to be produced, because the power of God does not operate except according to the good pleasure of his free will. Yet provided it does not imply a contradiction for something to be of itself or to inhere in another, it must, because the power of God is infinite, fall under it as subject so as to be able to be produced.

If, however, a vital operation of cognition or of appetite cannot be produced by God alone, the reason is that it essentially depends on a second cause, and it continually asks to be conserved by it, so as to render it knowing or appetitive; and thus it implies a contradiction for intelligence or appetite to inhere in a subject unless it be conferred by that cause. But those things which depend on a second cause in such wise that they can remain without its conservation will be able, by the omnipotence (*omnipotentia*) of God in the concurrence of the second cause, to be produced and conserved. Finally, whatever does not imply a contradiction, without doubt an infinite power ought to embrace under itself. Therefore rightly from the infinity of the power of God the rationale of omnipotence is deduced.

But indeed, since power is said relatively to those things which it can, and therefore one will say omnipotence because it can all things, it must be seen what those "all things" are with respect to which omnipotence is said - whether they are the possibles which are possible according to themselves, or those which can be done by another power, or finally those which are possible to be done by the power of God itself.

What Gabriel and Scotus thought

Gabriel, on the First Book, distinction 43, question 2, teaches that the power of God is called omnipotence because it can all possibles. He calls them "possibles" not because of themselves, before they are referred to omnipotence itself, they are possible, but insofar as they are compared with it. For the possible is said to be that which can be done by a power. There must be at once a power and a possible, insofar as it is possible, because they are mutually referred to each other. He judges that there is nothing absurd if omnipotence be defined through the possible, and the possible through omnipotence, and that in their definitions a circle be made; for the circle is not useless, when one relative is defined through the other and conversely - just as a father is said to be one who has a son, and a son, one who has a father.

This way of defining and explaining omnipotence is refuted by St. Thomas in this article: because in this way there is committed in the definition of omnipotence the fault which he calls a circle. For it is the same thing to say, God is omnipotent because he can all possibles, as to say, because he can do all that he can do, or because he can do all that can be done by him, which the holy Doctor with very good right judges absurd.

Then it can be impugned from the doctrine of Aristotle in Metaphysics, chapter 15: for he shows in what way certain things are said to be referred to another, because other things are first referred to them, from which they receive their denomination; thus, he says, "measurable," "knowable," and "intelligible," because something else is said with reference to them; that is, for this reason all these are denominated from the prior reference of the other to them.[2278]

Gabriel, on the First Book, distinction 43, question 2, teaches that the power of God is called omnipotence because He can do all things possible. But he calls them possible not because of themselves, before they are referred to omnipotence, they are possible, but precisely insofar as they are compared with it. For what is said to be possible is what can be done by a power. It is necessary, indeed, that there be at once a power and a possible, insofar as it is possible, because they are mutually referred to one another. He judges, however, that there is nothing absurd if omnipotence is defined through the possible, and the possible through omnipotence, and that a circle is made in their definitions; for the circle is not useless when one relative is defined through the other and conversely, just as when a father is said to be one who has a son, and a son one who has a father.

But St. Thomas refutes this way of defining and explaining omnipotence in this very article: because in this way there is committed in the definition of omnipotence the fault which he calls a circle. For it is the same thing to say, God is omnipotent because He can all possibles, as to say, because He can do all that He can do, or because He can do all that can be done by Him, which the holy Doctor with very good right judges absurd.

2278. Aristotle, Metaphysics, chapter 15.

Then it can be impugned from the doctrine of Aristotle in Metaphysics, chapter 15: for he shows in what way certain things are said to be referred to another, because other things are first referred to them, from which they receive their denomination; thus, he says, "measurable," "knowable," and "intelligible," because something else is said with reference to them; that is, for this reason all these are denominated from the prior reference of the other to them.[2279]

He adds the reason for these matters as follows: "For 'intelligible' signifies that of which there is an intellect; but the intellect is not referred to that of which it is the intellect" - for, in truth, the same thing would be said twice; as if he were saying: therefore something is called "intelligible" because the intellect can be engaged about it; but the intellect is not referred to the intelligible as intelligible, because it would also be said to be referred to that of which it is the intellect, and thus the same thing would be said twice; that is, there would be a useless repetition, since the thing defined would be repeated in the definition itself.

Some explain it thus: the intellect is not referred to the subject of which it is the intellect, because the same thing would be said twice - namely, that it would be referred both to the object and to the subject. But this interpretation does not square with the context; for there Aristotle proves in what way the intelligible is said, from this very fact, to be referred to the intellect, namely, because the intellect is said to be referred to it first. He proves, moreover, that the intellect is first referred to the object before the object is intelligible: for if it were referred to the intelligible, when the intelligible is thus defined, "that of which there is an intellect," the intellect would be said to be referred to that of which it is the intellect, and thus a certain nugatory repetition would be made. Therefore that, of which there is an intellect, is not the subject, but the object under the denomination of intelligible.

He pursues the same point by another example in this way. Likewise sight: it is sight of something, not "of which sight is" (and although it is true to say this), but of color, or of something else of that sort; but in the former way the same thing would be said twice, namely that sight is that of which sight is. That is, sight is not said to be referred to that of which it is the sight, namely to the visible; for visible is thus defined, like intelligible. Wherefore by those words, "of which there is sight," Aristotle does not understand the subject of sight, as the Commentator and Alexander of Aphrodisias falsely interpret; for in discussing these relatives, would he say that it is not referred to object and subject because the same thing is said twice, that is, that it would be referred to two things? For this would not be absurd, nor would it seem to make to the point. Rather, Aristotle understands by those words the object under the denomination of visible, and so he says: sight is said to be to something, not to that "of which there is sight" (that is, not to the visible as visible - for thus the same thing would be said twice by a repetition of the same thing already defined in the definition, as was explained), but to color or something else. He adds, "or something else," so as also to include light, and thus to prove that "visible" and "intelligible" are said with reference to sight or to intellect, because sight and intellect are referred to the things which receive the denominations "visible" or "intelligible." He added, moreover, in a parenthesis (and although it is

2279. Aristotle, Metaphysics, chapter 15.

true to say this) because we truly say that sight is "to the visible," on the ground that it is to the visible color which is called visible. But it is not rightly defined through "visible," nor is it referred to that, as visible, for the reason assigned.

From this doctrine of Aristotle it is rightly concluded that the power of God is not referred to the "possible" under this denomination, but to something prior; first, because (as Aristotle says) the same thing would be said twice - which St. Thomas also noted in this article[2280]; for it would be the same to say, omnipotence is that which can all possibles, as to say, it can all things which can be done by omnipotence itself. For the "possible," under this relative denomination, is so called because it can be done by some power. But it is manifest that omnipotence is not to be defined through the "possible-to-be-done" by another created power; therefore through the "possible-to-be-done" by itself - and in that definition there would be committed that nugatory repetition which we mentioned.

Furthermore, the same is proved by Aristotle's reason. For if "possible," under this denomination, is so called because it belongs to a power, just as "visible" because it belongs to sight, and "intelligible" because it belongs to intellect: therefore power is first said with reference to its object before the object receives a denomination from power. Wherefore power is not said from a habitude to the "possible" under this denomination, just as neither is sight from its ordering to the visible, but from something prior. For, as we shall show below, disputation 159, chapter 6, this kind of relations, which are called "non-mutual," are referred to an absolute terminus before the terminus obtains a relative denomination, as "visible," "intelligible," and "possible." Whether indeed the same should be asserted of mutual relatives - namely, that they are never referred to a related terminus as related, but to an absolute [terminus], because otherwise there would be a negative repetition - we shall also say in the same place.[2281]

Caput III - The opinion of Scotus

Scotus, in the First Book, distinction 43, the single question, teaches that the power of God can be considered in a twofold way. First, as it is in itself absolutely, because in reality it is not referred to creatures, as we shall say in chapter 6; and in this mode it is not omnipotence by respect to possible creatures, however those may be called "possible." Then the power of God is conceived by us relatively to that which it can do; and in this way, he says, omnipotence is said with respect to possible creatures. But it does not fall into that circle impugned above; because he holds that the creatures to which omnipotence is said to be referred are possible not from the power of God itself, but from the intellect insofar as He knows them, and produces under a certain diminished being. He judges this knowledge in God to be prior to our mode of understanding, indeed prior by its own nature to power too, since among all the attributes he establishes a distinction according to the nature of the thing: for, according to his opinion, as we saw in disputation 103, chapter 3, the omnipotence of God is His will, which is preceded by knowledge. He could teach the same even if

2280. St. Thomas, in this article.
2281. Vazquez, infra, disputation 159, chapter 6.

he thought that the intellect also pertained to power, as does the will: because only practical knowledge together with the will would be power; but things, in his opinion, have to be "possible" from the speculative knowledge of God, which also is prior to the practical.[2282]

But for a clearer declaration of this opinion note that Scotus does not deny that the denomination "possible," which is attributed to the things themselves, proceeds from the divine power, insofar as it is said to be referred to the things themselves; but when he says that things are possible from the divine intellect knowing, not from power, he understands "possible" (as they say) materially and fundamentally, not formally: that is, that things have from the divine intellect that they are under the divine omnipotence and can be, and that from this they take the denomination "possible."

Nevertheless this opinion has seemed rash to many, namely that it grants all things, by the force of the divine intellect, to have that diminished being from eternity, that is, some existence. Yet in this sense, which Scotus never dreamed of, they attack him in vain, as I noted above, disputation 70, chapter 2; for he himself did not think that that diminished being is produced from eternity by some real production which would be terminated at some "existent" being; rather he called "diminished being" that objective being of things which they have in the intellect by the force of the intellection itself: for by this they are present to the intellect, not only the things which are absent, but also those which do not yet exist. No one, however, will deny that all possible things are objectively present to the divine intellect by the mere force of intellection, even if in reality they were produced; therefore neither will he deny that they have some diminished being through intellection. For in what way would Scotus call that "diminished" if it were true being of existence and really outside of causes?[2283]

Nonetheless, for another reason this opinion of Scotus, as far as the present controversy is concerned, does not please me: because just as things are not said to be going to be, or to be of such a nature, because they are known by God - nay rather, they are known to be going to be, or to be of such a nature, because they are going to be and are of such a nature - so likewise things are not possible because they are known, but they are known for this reason, that they are possible; that is, they are therefore known to be able to exist and to involve no contradiction, because truly they can exist. In the same way also, as we shall say in I - II, question 71, article 6, some sins are not evil because they are known to be evil, or because they are even forbidden by God; but rather conversely: for the speculative intellect does not make, but presupposes the being and the object which it knows. Wherefore, even if otherwise God existed, even if He did not know, still by what they call the intrinsic place, creatures would be possible, that is, from themselves they would not imply a contradiction, to be of such or such a nature, and could be produced in time, if in some other way than by cognition and will God were omnipotent. Therefore, prior - according to our way of understanding - is that a thing be possible, that is, from itself not imply a contradiction, than that it be understood by the divine intellect.[2284]

Caput IV - The truer opinion

The truer opinion, which St. Thomas set forth briefly in this article, is this: namely, that the things which are said to be the object of the divine omnipotence do not have it that they are possible and objects of it either from the intellect, or from omnipotence itself insofar as it is referred to them; but they are the object of omnipotence insofar as in themselves they do not imply a contradiction in terms. Wherefore the divine power is not called omnipotence because it can make all things "possible" to be; for that would be a useless repetition; nor because it can do all things which it knows, if we wish to assign the first ratio of the object - for before God understands, already, by omnipotence, He can make and produce whatever does not imply a contradiction of itself; so that in this way there is assigned the proper and proximate object of omnipotence, and every useless repetition is removed. Therefore prior is it that things of themselves do not imply a contradiction, than that God be actually referred to them as omnipotent; just as it is prior that the eye be referred to color, than that color be called visible.

In this opinion Henry of Ghent, in part, concurs, Quodlibet 6, question 6: whose doctrine must be noted exactly; for he not a little illustrates the sentence of the Angelic Doctor. He observes, then, that God's "being able" is to be considered in a twofold way: first in Himself, then in reference to another. That is, first the active power of God is to be considered in itself, as a perfection of the first being, which of its own nature presupposes nothing else, nor asks anything with it in order to be; and therefore is by its very nature absolute from every prior and concomitant. Then, in a second way, insofar as it is actually referred to its object. By the same proportion, the passive capacity of creatures can also be conceived in a twofold way: in one way, in itself and absolutely, without any respect - that is, that in this way a thing of itself does not imply a contradiction; in another way, insofar as it is actually referred to the power of God under the denomination "possible," insofar as it is said to be able to be produced by it. These, then, are four items which are compared among themselves (says Henry): first is the active perfection in God in Himself, as befits the perfection of the first being; next follows in order the logical "passive can-be" of the creature in itself - that God in Himself is a more perfect being than that man not imply a contradiction to be; and by the intrinsic place it rightly follows: if God were not, it would imply a contradiction that man exist; not, however, conversely, that if it implied a contradiction that man exist, it would imply that God exist. And thus far Henry rightly teaches.[2285]

He adds then, next, that from this absolute passive capacity of creatures - in itself, that is, from the fact that the creature in itself does not imply a contradiction - there arises proximately the act of terminating, on the creature's side, the relation of the divine power; that is, that we say "possible" and "producible" are denominated from the power of God; and finally from this passive "can-be" as related there arises in God, too, a relation to creatures: in which sense his opinion seems to be corrected in accordance with what he himself taught, Quodlibet 8, question 8. For just as color is called visible from sight, and a being intelligible from intellect, by the same reason the "possible" or "producible" is denominated from the power of producing. Therefore prior is the act

2285. Henry of Ghent, Quodlibet VI, q.6.

of terminating the power actually referred to the object, which is denominated "possible" or "producible," than that the object itself should receive such an appellation. Wherefore, although by the order of assignment adduced by Henry we should not fall into that useless repetition, nevertheless that order is not the one to be assigned, as will be proved; and although in another philosophical manner it is rightly said, yet even so that circle is tolerated.

We say, therefore, with the same Henry (Quodlibet 8, question 8), that as soon as there is considered the absolute passive capacity, in itself - that is, that things do not imply a contradiction - there are already of themselves sufficient absolute objects, so that there is at once constituted the terminus with respect to the divine omnipotence, according to the manner of Aristotle's dictum; the respect of sight is terminated at color. Wherefore thus we understand the "possible object" of God under a relation: namely that we first consider the divine omnipotence with respect to the effect as to things insofar as they do not imply a contradiction; and finally, from the fact that God's power is in this way referred to things and to their absolute passive "can-be," in those very things there arises the passive related relation, that is, that denominated relation "possible" or "producible": just as Aristotle said that from the fact that sight is terminated at color, color is denominated visible, and in the same way things are intelligible from the intellect.[2286]

Yet we must discern an obscurity: for color is called visible from this, that by its own nature it is referred to sight; but things are not called possible because God's power of itself, by its own nature, is referred to them. Rather, it is referred according to the order of the understanding, and by a denomination - just as in turn the things themselves are referred to the power. But between both denominations we preserve the same order.

In this opinion Henry in part agrees, in Quodlibet 6, question 2, whose doctrine must be accurately noted, for it will marvelously illustrate the opinion of the Angelic Doctor.[2287] He notices, therefore, that God can be considered powerful in Himself in a twofold way: first, in Himself, by Himself; then relatively to another. That is, the active potency of God Himself is first to be understood as He is in Himself, and has from Himself the power of operating; then as He is now actually referred as potent to an object. In the same proportion the passive potency of creatures can likewise be conceived in a twofold way: in one way, as it is in itself absolutely, without any respect, which is nothing other than that some thing does not of itself imply a contradiction so that it be, and it can be called logical potency; in another way, as it is actually referred to the power of God under the denomination "possible," inasmuch as it is said to be producible by it.

Accordingly, these four are compared among themselves (says Henry): the active potency of God in Himself is prior, because it is the perfection of the first being, which by its own nature supposes nothing else, nor does it require along with itself, in order that it be; and hence by its nature it is absolute from all that is prior and concomitant, as will be proved in chapter 6; otherwise, it would not be the highest and first being. After this there follows, in the order of logical reason, the passive potency of creatures in itself: for God in Himself is a perfect being prior to the

2286. Henry of Ghent, Quodlibet VIII, q.8.
2287. Henry of Ghent, Quodlibet 6, q.2.

fact that man does not imply a contradiction so as to be; and by an intrinsic locus it rightly follows that, if God were not, it would imply a contradiction that man be; not, however, conversely, that, if it implied a contradiction that man be, it would also imply that God be, as will be proved in the same chapter. And thus far Henry speaks rightly indeed.

He adds, however, next, that from that absolute and in-itself passive potency of creatures - that is, from the fact that the creature in itself does not imply a contradiction - there arises next the proximate passive potency of those same things as actually related to the power of God, that is, that they are said to be possible to be produced by the power of God; and finally from this related passive potency there can arise in God an act also actually related to creatures. In this point, indeed, his opinion seems to need correction according to what he himself taught in Quodlibet 8, question 3. For just as color is called visible from sight, and being intelligible from intellect, by the same reason a thing is denominated possible, or producible, from the productive power. Therefore it is prior that the active power be actually referred to the object which is denominated possible or producible, than that the object itself acquire such an appellation. Wherefore, although by the order assigned by Henry we would not fall into that useless repetition, nevertheless, because that order is not rightly assigned, as we have proved, it is necessary to philosophize in another way, yet so that that circle be removed.

Explanation. We say, then, with that same Henry, in that Quodlibet 8, question 3, that as soon as the passive potency of things is considered absolutely and in itself - that is, that things do not imply a contradiction so that they be - already there exists a sufficient absolute object to terminate actually the reference of the divine omnipotence, just as Aristotle said that the reference of sight is terminated at color. Wherefore at once we understand the active potency of God under relation; that is, we straightway consider the power of God, under the respect of potency, actually to be referred to things, inasmuch as in themselves they do not imply a contradiction. Lastly, from the fact that the power of God in this way is referred to things and to their absolute passive potency, there arises in those things a related passive potency, that is, a predicated denomination "possible" or "producible": thus, as Aristotle said, from the fact that sight is terminated at color, color is denominated visible; and in the same way things are intelligible from the intellect.

Note, however, a difference: for color is called visible from this, that sight by its own nature is referred to it; but things are not called possible because God's power is referred to them in reality and by its own nature: it is referred extrinsically only by a denomination, just as in turn the things themselves are referred to the power. But between both denominations we preserve the same order which we see in creatures between active power and the denomination of the object, as between sight and the visible.

From this doctrine it is gathered, first, that that nugatory repetition is removed which can be committed in the definition of omnipotence, if it be defined by "possible": and by this reckoning the proper object of it is established as St. Thomas in this article assigned. Accordingly, if you define omnipotence thus: It is the power by which one is able to produce whatever does not of itself imply a contradiction so that it be, in this way the relation of omnipotence is referred to the absolute passive potency of creatures.

Second, by the same doctrine Anselm is explained in the book On the Fall of the Devil, chapter 12, when he says that something is possible because it can be made by another. For if he speaks of the possible absolutely, he cannot deny that the possible is first in itself, not a physical, but a logical potency, as we have said thus far; and in Disputation 82, chapter 1, we shall explain what it is for something to be said able to be made by some power. But if he understands the related possible, it is most true that nothing is said possible except because it can be made by another.[2288]

Third, it must be observed that by the name of "that which does not imply a contradiction, and is the object of omnipotence," there is not understood or comprehended the essence of God, or any of His persons, but only that which, being outside God, does not imply a contradiction. For this reason, in Disputation 169 we shall show that the three divine persons are of equal omnipotence, because they are equally able to produce creatures, although it does not belong to them equally to produce a person.[2289]

How omnipotence is related to non-being.

Caput V - How omnipotence is related to non - being

But from St. Thomas in the article we have only this: that that is not the object of omnipotence which implies a contradiction in itself; that is, it implies in itself at once to be and not to be. Wherefore he never excludes non-being from the notion of the object of omnipotence except insofar as it implies a contradiction: for thus he philosophizes. Since God contains in Himself every perfection of being, whatever can have the notion of being falls under the absolute possible, which the divine omnipotence regards as its proper object: but nothing is opposed to the notion of being except non-being; therefore that is opposed to the object of omnipotence which implies in itself a contradiction, that is, implies in itself to be and not to be. From the reasoning of St. Thomas, however, it seems to follow that every non-being, however it be, is not the object of the divine omnipotence. For since from the fact that God has in Himself every perfection of being it follows that everything which has the notion of being falls under omnipotence, it also seems to be gathered that everything which is not is in no way the object of that [omnipotence]; and thus in the Second Contra Gentiles, chapter 22, by the second argument he said that the omnipotence of God is referred to all things which do not repel the notion of being; whence he infers that non-being is not the object of omnipotence, because it is opposed to the notion of being, which in this article also he had insinuated.[2290]

But in I, Distinction 42, question 5, article 2, and in De potentia, question 1, article 3, he asserts that everything which can have the notion of being or of non-being is the object of the divine omnipotence; and that only that is outside it which implies a contradiction, that is, at once to be and not to be. From which it is not sufficiently clear whether non-being is the object of the divine omnipotence or not.[2291]

2288. St. Anselm, De casu diaboli, c.12.
2289. Vazquez, disputation 169.
2290. St. Thomas, Summa contra Gentiles II, c.22 (secunda ratio).
2291. St. Thomas, In I Sententiarum, dist.42, q.5, a.2; Quaestiones disputatae De potentia, q.1, a.3.

Cajetan in this article teaches that the omnipotence of God is occupied about being and non-being, yet in a different way: about being, by producing it; about non-being, by not producing, or by ceasing from production. Although this is true, it does not sufficiently explain what St. Thomas said in this article and in Contra Gentiles II, namely, that non-being does not fall under the omnipotence of God.[2292]

Wherefore the doctrine of Ferrariensis is to be observed here...[2293]

St. Thomas in this article gives us only a briefer account, namely, that that is not the object of omnipotence which implies a contradiction in itself, to wit, to be and not to be at once; wherefore he never excludes non-being from the notion of the object of omnipotence except insofar as it implies a contradiction: thus in fact he philosophizes. Since God in himself contains every perfection of being, whatever can have the notion of being is counted under the absolutely possible, which the divine omnipotence receives as its proper object; but nothing is opposed to the notion of being except non-being: therefore that is opposed to the object of omnipotence which implies in itself a contradiction, that is, which implies in itself to be and not to be.

Yet from St. Thomas's reasoning it seems to follow that every non-being, however it be taken, is not the object of the divine omnipotence; for since from the fact that God has in himself every perfection of being it follows that whatever has the notion of being falls under omnipotence, it also seems to be gathered that what is not is in no way its object; and thus in the second book Contra Gentiles, chapter 22, in the second argument, he said that the omnipotence of God is referred to all things that do not oppose the notion of being; whence he infers that non-being is not the object of omnipotence, for it is opposed to the notion of being; which also in this article he had intimated.[2294] But elsewhere, in I Sentences, distinction 42, question 5, article 2, and in De potentia, question 1, article 3, he asserts that everything that can have the notion of being or non-being is the object of the divine omnipotence; and that outside it is that which implies a contradiction, that is, to be and not to be at once.[2295] From which it is not sufficiently clear whether non-being is an object of the divine omnipotence or not.

Cajetan in this article teaches that the omnipotence of God is occupied about being and non-being, yet in a different way: about being, by producing it; about non-being, by not producing, or by ceasing from production.[2296] Although this is true, it does not sufficiently explain what St. Thomas said in this article and in Contra Gentiles II, namely, that non-being does not fall under the omnipotence of God. Wherefore the doctrine of Ferrariensis is to be observed here, who very clearly illustrates the Teacher's mind in 2 Contra Gentiles, in that chapter.[2297]

Note therefore that "non-being" can be said in a twofold way. In one way, as it were essentially, for that which has no essence at all, but rather implies in itself a contradiction; and about this non-being omnipotence is in no way occupied, neither by production nor by destruction: of this sort is a

2292. Cajetan, commentary on this article.
2293. Ferrariensis (Francesco Silvestri of Ferrara), on this article.
2294. St. Thomas, Summa contra Gentiles II, c.22 (secunda ratio).
2295. St. Thomas, In I Sententiarum, d.42, q.5, a.2; Quaestiones disputatae De potentia, q.1, a.3.
2296. Cajetan, commentary on this article.

chimera, which God cannot produce, nor have as a term of destruction; and this kind of non-being is opposed to being, which is the object of the divine omnipotence, to wit, the absolutely possible. Of this St. Thomas spoke in this article and in the second book Contra Gentiles, chapter 22; wherefore concerning non-being taken in this mode we can say: God cannot make that; although St. Thomas in this article, for modesty's sake, affirmed it would be better to say, "non-being cannot be made by God." Henry notes in Quodlibet 8, question 3, that non-being, that is, what implies a contradiction, cannot be done by God, not on account of a defect of power in God, but rather on account of an abundance of power; so that it is true to say, "God, the more powerful, cannot make that which implies a contradiction."[2298]

In another way "non-being" is said, as it were denominatively, from the mere negation of existence, although otherwise it is said to have an essence, that is, it does not of itself imply a contradiction: in this way a rose, or a non-existent man, is called non-being; and this is the object of the divine omnipotence, not by production, but by the negation of act: because the omnipotence of God not only produces a man, but also destroys and corrupts him; although Ferrariensis called the annihilation of a thing "corruption," he seems to have spoken by an extended signification of the term. Of this kind of non-being St. Thomas is to be understood in the places cited in I and in De potentia, when he says that that does not fall under the omnipotence of God which cannot have the notion of being or of non-being: but this is what implies a contradiction, namely, what implies in itself to be and not to be. But that which can either be or not be, that is, exist or not exist, is the object of the divine omnipotence, so that it be, or not be, in the manner explained.

Further, two things must be noted.

- First, the omnipotence of God is in a certain manner occupied about being and non-being; just as sight is about the visible and the invisible; about light and darkness; and in a certain way it is not occupied. For if non-being be taken in the former way, omnipotence regards it as sight regards darkness, not by a positive act, nor by destruction and annihilation, as it is occupied about non-being in the latter way; but because sight is said to be "of" darkness, since in respect of them there is in sight the privation of vision, as in its proper subject, whereas there is not the privation of vision with respect to sound and silence; so also omnipotence is referred to non-being in the former way: because with respect to non-being there is a negation of act in the omnipotence of God, as in its proper subject, since non-being in the former way is directly opposed to the object of omnipotence. But if non-being be taken in the latter way, omnipotence is referred to it otherwise than sight is to darkness; the opposite of which Cajetan taught without cause in this article. For sight is not occupied about darkness as about its own object, but as about what is directly opposed to its object, in regard to which a negation of operation follows in it as in its proper subject. But omnipotence

2297. Ferrariensis (Francesco Silvestri of Ferrara), on this article; idem, on Summa contra Gentiles II, c.22.
2298. Henry of Ghent, Quodlibet 8, q.3.

regards non-being in the latter way as a proper object made by itself, because omnipotence thus makes a thing not to be by withdrawing the action of its conservation, and by destroying, just as it makes a thing to be by producing it.

- Then note from Henry, Quodlibet 6, question 3, that the absolutely impossible, and in itself, is prior to there being in God, absolutely and in itself, a negation of active power. For he thinks, and rightly, that from the fact a thing is absolutely not possible, that is, from the fact it implies a contradiction, it follows that the power of God is said not to be able to make it; and from that negation of power in God things themselves are again denominated relatively impossible: nor did Henry teach the opposite in Quodlibet 8, question 3, as Scotus imputes to him in I, distinction 43, the sole question; for there he only asserts that something is impossible because it cannot be done by God: he speaks, however, of the impossible as referred to active power; in which sense he most truly teaches. But in Quodlibet 6 he speaks of the absolutely impossible; about which he rightly said that it first in itself implies a contradiction, than that in God there be any active impossibility, that is, any negation of power; in which opinion Scotus seems to have agreed in I, distinction 43, the sole question.[22992300]

On eternal relations and whether they are real in God

Caput VI - Neither the relation of omnipotence, nor any other, to creatures is real in God

That no real relation comes to God in time was shown above in question 13, article 7, not only according to the opinion of St. Thomas, but also of all Theologians, even of the Nominalists and of Durandus, to whom the contrary opinion is unjustly attributed by some recent writers.[2301] But because God is in various ways referred to creatures from eternity, we must now speak of eternal relations. Among these relations some belong to God freely: such is the relation of the science of vision and of efficacious will. That these are not real relations must be proved by the same argument by which we showed in Disputation 78, chapter 2, that there is no act of willing in God that is free in such a way as to inhere in him so that it could fail to inhere: for the same absurdity follows in both cases, if we say that real relations, or some real act of will intrinsic to God, belongs to him freely. Why moreover these relations are so eternal that they cannot be changed nor begin in time, we said in question 14, article 15.

Other eternal relations to creatures are predicated of God necessarily: such is the relation of idea, of the science of simple intelligence, of omnipotence, and even of the Word itself: for besides the real relation by which it regards the Father, it is also referred to creatures, of which it is called the Word, not only to possibles, but also to futures, as we shall show within Disputations 143 and 144. Although it freely regards future things, nevertheless it is referred to possibles necessarily.

2299. Henry of Ghent, Quodlibet 6, q.3.

2300. Scotus, In I Sententiarum, d.43, q.unica.

2301. Above, Quaestio 13, a.7; and see Durandus of St.-Pourçain. Also Vázquez's own Disputation 78, c.2; and for what follows, Disputationes 143 - 144.

Concerning all these eternal and necessary relations it remains to see whether they are real, that is, intrinsically inhering in God himself, so that by their very nature God would not be absolute and referred to himself, but would be referred to creatures in very reality.

The matter is wholly beyond controversy among Scholastic writers, who, with no one dissenting, affirm that there is in God no relation intrinsically to creatures from the nature of the thing, but only of reason. But against certain more recent writers, because they seem to think the opposite, the point must be established by authority and reason. Some therefore assert that, besides the three personal relations by which the divine persons are mutually referred, there are also in God respects to creatures, not only by our reason, but inhering in reality and intrinsically: and they judge to be of this sort the eternal and necessary relations of omnipotence, of idea, of the science of simple intelligence, and of the Word.

They explain their opinion thus. In creatures there are certain relations which, although they are real, are not called relations according to being, but according to saying; nor are they in the predicament of relation, because they are of the essence of something absolute, as is the relation of cognition to the thing known: but they are called transcendentals, because they transcend all the predicaments, nor do they necessarily require a terminus actually existing; and these are not properly called real relations. Other relations, however, are relations according to being, which are properly called real relations and are placed in the predicament; nor are they essential to anything absolute, but come to their foundations and subjects accidentally; and they require a terminus actually existing, as paternity and likeness. In the same way in God a twofold kind of real relations can be distinguished: for some are of the essence of the divine nature itself and do not require a terminus actually existing, such as the relations that belong to the attributes; and therefore they are, as it were, relations according to saying, and could be called transcendentals, although they in very reality are in God and are God himself. Others, however, are similar to predicamental relations, such as the personal ones; because without them the divine essence would be understood to be essentially perfect. Thus do these Doctors expound their opinion.

But as to what other reason they allege for proving that those real relations, which they themselves call transcendental, inhere in God, I do not see, unless it be that omnipotence, as it is omnipotence, is necessarily referred to creatures, and we define it through an order to them; and the same must be said of knowledge and of the idea: and since no absurdity follows, there is no reason why we should deny such relations to God. There are also adduced in favor of this opinion both that, in order to defend that by the force of the vision of the divine essence some creatures are seen on account of the respect which it has toward them, and also that they may teach that the divine Word proceeds by a cognition of possible creatures as of those per se pertaining to its production, as that which proceeds by a cognition of omnipotence, as omnipotence is.

But, as I said above, they assert these things without foundation. First, because they have no Scholastic authority for themselves; next, because most of the more ancient and weighty authors plainly affirm the opposite; finally, because by reason they can manifestly be convicted. First indeed, there is absolutely no one who has taught thus. For what Gregory of Rimini said in the First Book, distinction 30, question 3, conclusion 3, that God is referred from eternity to a creature not

yet existing, because (as he himself says) he is causative and foreknowing, in no way favors the aforementioned opinion: for in conclusion 4 he asserted that God is really referred in time to a creature; and yet, as we noted above in question 13, article 7, neither he, nor the Nominalists who speak in the same way, understand by a real relation one that is intrinsic to God himself, but one which receives a denomination from something extrinsic and real.

Secondly, against the aforesaid opinion, the most weighty theologians teach that in God there is no real relation to creatures, not only not in time, but neither from eternity. Thus taught St. Thomas above, in question 13, article 7; and Cajetan in the same place; and the same holy Doctor in the Second Book contra Gentiles, chapter 12, and Ferrariensis there. Concerning this and the following [matters], Henry of Ghent in Quodlibet 9, question 1; Scotus in the First Book, distinction 30; Capreolus, in Question 1, article n., conclusion 3, and to the first of Gregory against the same conclusion; and in article 2, conclusion 3, to the third of Gregory against the same; and Deza of Seville, in article 1, conclusion 3 (if it be compared with the fifth), and in article 4 to the first argument of Gregory against the third conclusion.[2302]

But perhaps you will interpret these Doctors as speaking only of predicamental relations, or of those which correspond to predicamental relations, and not, however, of relations which are like the transcendentals, which some call "second intention," although they are within the nature of the thing. But this interpretation cannot have place: because all of them expressly affirm not only that in God there is no real relation to a creature, but also that every relation becoming to God toward a creature is a relation of reason; and they speak expressly of the relations of power and of knowledge, which necessarily belong to God.

Moreover, St. Thomas expressly says that God is referred to creatures only for this reason, because creatures are referred to him; just as the knowable is only referred to knowledge because knowledge is referred to it: which he understands of a relation of reason alone, and in no way from the nature of the thing. Furthermore, no one up to now has dared to concede in God a respect more than of reason to creatures, even possible ones, as we shall see below in Disputations 143 and 144. Nor does St. Thomas, in 2 contra Gentiles, chapter 10, concede in God a relation more than of reason to creatures, as I noted in Disputation 102, chapter 1.

Third, by manifest reason the opposite opinion is refuted. Omitting, indeed, what he teaches about relations secundum dici and secundum esse, of which we shall speak more at length below in Disputation 173, chapter 4, one single argument, which Scotus briefly indicated in the place cited, will suffice for us, which is of this sort. Every nature which in reality is referred to another is so connected with it, and with itself requires it in that mode by which it is referred to it, that to be without it implies a contradiction: wherefore both must be necessary; and by the topic from the intrinsically connected, with the one taken away, the other must also be taken away. But if relation is altogether the same as the thing itself and the nature in which it is, as happens in God, in whom every relation is God himself, then by its very nature that thing, according to which it is referred,

2302. Capreolus, Quaestio 1, art. n., concl. 3, and reply to Gregory against the same conclusion; and article 2, conclusion 3, to the third of Gregory against the same. Deza of Seville, article 1, conclusion 3 (if it be compared with the fifth), and article 4, to the first argument of Gregory against the third conclusion.

requires the term as a whole, and without it cannot be; just as neither can the relation itself. All of which consequences are certain. But God, in order to be, by his very nature requires no creature, not even a possible one, nor is there any of equal necessity with him, nor, with any [creature] taken away, is God removed by the topic from the intrinsically connected: therefore, to no thing in reality is he referred.

Moreover, that God does not require any possible creature in order that he himself be, is manifest: because, in order that God be, it is of no account that an ape be able to be of such a figure and property. Which is then made clearer. For it is more necessary that God be, since he is the first being (*ens*) and of himself infinite, than that a creature be able to be: for a possible creature supposes God, as we said in chapter 4, so that it is true: because God is, it does not imply a contradiction that there be a creature; yet not conversely. But that by which each thing is such, that is more such: therefore God, who is the first being, is more necessary than a possible creature is. Which is confirmed by the doctrine of Aristotle, Metaphysics IV, text 18, when he says that "more and less are present in the natures of things": whence it comes to be that among truths one is greater than another. Who, moreover, will deny that it is a greater truth to say "God is possible" than to say "man is possible"? St. Thomas, following also this doctrine of Aristotle, above, question 2, article 3, that he might show that God exists, in the fourth way proceeds thus: In things there is found something more and less good and true and noble: therefore there is something which is most true; and accordingly supremely being: for those things which are most true are most beings, as is handed on in Metaphysics II, text 4; but this we call God. Now, a greater truth cannot have a necessary connection with a lesser from the nature of the thing, otherwise they would be equal: therefore "that God is" is a truth absolute from creatures.

Lastly, this is declared more in this way: by the topic from the intrinsically connected it does not follow, "If an ape were not possible, God would not exist in rerum natura"; for if that inference is not rightly drawn, "An ape is not possible, therefore man is not possible," as is well known; much less will it follow, "Therefore God is not possible": since God is the highest and supreme being, supremely necessary, and the root of all necessity and possibility.

Some of the more recent [authors] reply that, with the supposition made that a man were not possible, it is rightly inferred by the topic from the intrinsically connected that God is not possible; because, if an ape were not possible, God would not be omnipotent, and hence would not be God: therefore neither man, nor any other creature, would be possible. However, manifest reasons stand in the way of this solution.

First, because for God to be omnipotent in himself does not require that this or that nature be able to be created, but he must have such a perfection in himself that, if some creature does not imply a contradiction, he can produce it. But not to be able to produce those things which imply a contradiction takes away nothing of perfection and of omnipotence from God. Wherefore, if some creature among those that can be made were to imply a contradiction, indeed even if none were possible, God in himself would be of such perfection and in such a mode as he is. I think this to be a natural demonstration by which the contrary opinion is clearly refuted.

Secondly, even with that supposition made, nevertheless, even if a man were not possible, God could do whatever does not imply a contradiction: therefore he would be omnipotent: for omnipotence, defined above, is nothing else than a power regarding those things which do not imply a contradiction. When indeed it is supposed that something implies a contradiction, nothing is supposed against the omnipotence of God: for against omnipotence it would be only if something not implying a contradiction did not fall under it: for that which implies a contradiction is by that very fact outside omnipotence. And it would be vain for someone to say that omnipotence depends upon those things which now do not imply a contradiction: for omnipotence from itself only regards that which does not imply a contradiction, whether this or that be so.

Thirdly, it is more false to say "God is not" than to say "a man is not possible": just as, conversely, it is more true to say "God is" than to say "a man is possible." For, as Aristotle said, Metaphysics IV, text 18, among falsehoods and those which imply contradiction, one is more false than another. For it is more false (he says) to say "two are a thousand" than to say "two are five"; although both are false and impossible. But if there were a necessary and mutual connection and relation between God and creatures, then it would be as false to say "God is not" as to say "creatures are not possible": which is absurd.

They reply: with the supposition that the most similar things are not possible, it is rightly inferred by the topic from the intrinsically connected that a man too, and God, are not possible, because God would not be omnipotent: and therefore God would be necessary; wherefore neither a man, nor any other creature, would be possible. To this solution, however, manifest reasons stand in the way. First, because, for God to be omnipotent in himself, he does not require that this or that nature be able to be created, but he ought to have such a power in himself, that, if some creature does not imply a contradiction, he can produce it. Not to be able to produce those things that imply a contradiction takes away nothing from God's perfection and omnipotence. Wherefore, if some creature among those that can be made were to imply a contradiction, indeed even if none were possible, God in himself would be of such perfection and in such a mode as he is. I think this to be the natural demonstration by which the contrary opinion is manifestly refuted.

Secondly, even with that supposition made, nevertheless, even if a man were not possible, God could do whatever does not imply a contradiction: therefore he would be omnipotent. For omnipotence, defined above, is nothing else than the power over those things that do not imply a contradiction. When indeed it is supposed that something implies a contradiction, nothing is supposed against the omnipotence of God: for against omnipotence it would be only if something not implying a contradiction did not fall under it. For that which implies a contradiction is, by that very fact, outside omnipotence. And it is in vain that someone should say that omnipotence depends upon those things which now do not imply a contradiction: for omnipotence from itself only regards that which does not imply a contradiction, whether this or that be the case.

Moreover, it is more false to say "God is not" than to say "a man is not possible": just as, conversely, it is more true to say "God is" than to say "a man is possible." For, as Aristotle said, Book 4 of the Metaphysics, text 18, among falsehoods and those which imply contradiction, one is more false than another. For it is more false (he says) to say "two are a thousand" than to say "two

are five"; although both are false and impossible. But if there were a necessary and mutual connection and relation between God and creatures, then it would be as false to say "God is not" as to say "creatures are not possible," which is absurd.

Articulus IV - Whether God can make that past things have not been

It seems that God can make that past things have not been.

1. For what is impossible in itself is more impossible than what is impossible by accident. But God can do that which is impossible in itself, as to enlighten the blind or to raise the dead. Therefore much more can God do that which is impossible by accident. But that the past have not been is impossible by accident. For it happens that for Socrates not to run is impossible from this, that it is past. Therefore God can make that past things have not been.
2. Moreover, whatever God could do, he can now, since his power is not diminished. But God could make, before Socrates ran, that he not run. Therefore, after he ran, God can make that he has not run.
3. Moreover, charity is a greater virtue than virginity. But God can restore lost charity. Therefore [he can restore] virginity also. Therefore he can make that that which was corrupted not be corrupted.

But on the contrary: St. Jerome says, "Although God can do all things, he cannot make a corrupted [woman] incorrupt." Therefore, by the same reason, he cannot make any other thing that is past not to have been.[2303]

I answer that, as was said above, nothing falls under the omnipotence of God that implies a contradiction; but that the past have not been implies a contradiction. For just as it implies a contradiction to say "Socrates sits" and "he does not sit," so [it implies a contradiction to say] that "he sat" and "he did not sit." But to say that "he sat" is to say that it is past; but to say that "he did not sit" is to say that it was not. Hence that the past have not been does not fall under divine power. And this is what St. Augustine says contra Faustum: "Whoever thus says, If God is omnipotent, let him make that the things which have been done were not done, does not see that he is saying this: If God is omnipotent, let him make that those things which are true by this very fact that they are true be false." And the Philosopher says in the sixth of the Ethics that God is deprived only of this: to make not-begun what has been done.

Reply to the first: It must be said that, although "the past not to have been" is impossible by accident if that which is past be considered, that is, the running of Socrates; nevertheless, if the past be considered under the aspect of the past, its "not to have been" is impossible, not only per se, but absolutely, as implying a contradiction. And thus it is more impossible than a dead man rising, which does not imply a contradiction. That which is said to be impossible according to some power, namely, the natural power - such things are subject to the divine power.

2303. St. Jerome, Ad Eustochium de custodia virginitatis, aliquantulum a principio.

Reply to the second: It must be said that, just as God, as regards the perfection of divine power, can do all things; but some things do not fall under his power, because they fall short of the notion of the possible: so, if the immutability of divine power be attended to, whatever God could, he can. Some things, however, once had the notion of the possible when they were to be done, which now fall short of the notion of the possible when they are done. And thus God is said not to be able now to make those things which cannot be made to be done.

Reply to the third: It must be said that God can take away all corruption of mind and of body from a corrupted woman: yet this cannot be removed from her, that she was not corrupted; just as neither can he take away from any sinner that he has not sinned, and that he has not lost charity.

The conclusion is: "That the past have not been" implies a contradiction, and therefore does not fall under omnipotence. Nothing in this article needs explanation, provided that we understand the mind of St. Thomas. But as for what he teaches,

Disputatio CV - Whether God can make that the past have not been

Caput I - Two opposed opinions

Antonius de Corduba reports various opinions on this matter, Book 1, Question 55, in the last doubt. I, however, think there are only two, which seem rather to conflict in words than in reality; for what Antonius attributes to Gabriel must be understood otherwise than he himself reports, as we shall note below. The first opinion is that of the Antissiodorensis, Book 1, Summa, chapter 11, question 6; and of Alexander, Part 1, question 21, member 5, article 4; of Gregory on the First Book of the Sentences, distinction 42, question 1, article 2; and even of Gilbert upon Boethius, Book 1, On the Trinity, chapter 9, which Corduba judges the more probable, namely, that there is now in God the potency toward the past, that it not have been; which Gregory at the place cited broadly proves. But since, explained in a good sense, it is true and does not differ in reality from the opinion of St. Thomas, I set aside a confirmation of it.

The latter view is that of St. Thomas, of Cajetan, and of other Thomists in this article, and of Ferrarienis there; of St. Bonaventure on the First Book, distinction 42, question 3; and of Capreolus in the same question, article 3, to Gregory's arguments against the seventh conclusion; who hold that there is not in God a potency such that He can make the past not to have been. This view is wont to be proved by the testimonies of the Fathers and by reasons, some of which we shall report below.[2304]

2304. Antissiodorensis, Summa, lib. 1, c. 11, q. 6; Alexander of Hales, Summa, pars 1, q. 21, memb. 5, art. 4; Gregory of Rimini, In I Sent., dist. 42, q. 1, art. 2; Gilbert of Poitiers on Boethius, De Trinitate, lib. 1, c. 9; St. Thomas, Summa theologiae I, q. 25, a. 4; Cajetan, In Iam, q. 25, a. 4; Ferrarienis (Ferrariensis), In Contra Gentiles II, c. 25; St. Bonaventure, In I Sent., dist. 42, q. 3; Capreolus, In I Sent., dist. 42, q. 1, a. 3, ad argumenta Gregorii contra conclusionem 7.

Caput II - In what way in God there is no potency toward the past

I certainly think that the aforesaid Doctors do not, in reality, teach contraries, though they seem to contend with one another in words. That we may reconcile their opinions, it must be observed that the omnipotence of God in itself is eternal and wholly permanent all at once, so that nothing of it passes away; yet, inasmuch as it is said relatively, potency looks to our time according to the differences of past, present, and future. Therefore we state concerning it that it can and that it cannot do something, inasmuch as it is referred to our time. The Doctors of the first view, therefore, did not hold that God could, by His omnipotence, strip a past thing, once it is past (as Cajetan puts it) of its pastness - that is, that God could make that, after a thing was past, afterwards it was not past; for who does not see that this is impossible, nor lies under divine power? Nay rather, the aforesaid Doctors expressly noted that God cannot make the past not to have been in the composite sense (as they call it); but they now say that there is in God a potency such that the thing which was past not be past, if the divine potency be referred to the thing itself, taken in itself, before it is posited to have been or not to have been. For once it is posited that the thing has been, no one said that God could make it not to have been. In this sense the Scholastics alleged above spoke, especially Alexander in the place cited, to the second argument, where he begins, "As to that of Augustine, read and it will plainly appear." For since the divine potency remains the same in itself, and compared with things before they were, God could make that they not be; therefore they said that there is in God a potency toward the past, which is shown by this figure:

- Potency of God related to the same time, whether past, present, or future, can respect any part of a contradiction, although it cannot change the other at another time, because the potency of God would then be referred to different times simultaneously. In this sense Gabriel said, on I, distinction 38, question 1, article 2, doubt 3, this proposition: "God is, Peter will not sin" is not necessary - that is, knowledge of future things does not necessarily befit God, because there is potency in God that He not have known. He did not say that there is potency that, after He has known, He can have not known; but that from the beginning He so knew, that it was possible that He not know; just as it was possible that a thing which is future not have been future. Antonius de Corduba misreports Gabriel's view, if what we have gathered from Gabriel himself be compared with what he alleges.

But St. Thomas, and those who follow the latter opinion, merely contend that the divine power, referred to the present time, cannot now make that what is already past not be past - which is to be understood in the composite sense. For since it is impossible that the past have not been past, after it is posited to be past, it is not subject to the divine omnipotence to make that, when the past is posited as past, it not be past; and by the same reason He cannot make that the present, when it is present, not be present; and that the future, when it is future, not be future, as is noted in Disputation 68, chapter 4. In this way is to be understood what Aristotle, Ethics 6, chapter 2, reports from Agathon, in these words: "This also God Himself is said to be without power to do, to make what has been done not to have been done." So too speaks St. Augustine, Contra Faustum,

Book 26, chapter 5, when he says that it is impossible for the past not to have been; with whom St. Anselm agrees in the Proslogion, chapter 7, in the beginning, and On the Concord of Free Will and Predestination, chapter 4. In the same way St. Jerome in the epistle to Eustochium, which is the 22nd, says: "I barely think it possible that a virgin, after ruin, be repaired by God" - that is, I do not think that the virginity lost can be restored; and Augustine, in the place alleged above, said likewise that it is as impossible that what is to be, not be future, as that what is past, not be past. Whence it follows that it does not fall under divine omnipotence that the future not be future, just as the past not be past.

From what we have said it is gathered that what Bonaventure teaches on the First Book, distinction 49, article 2, question 1, and Durandus on the First Book, distinction 44, question 4, on the third, is true: that God cannot now do all the things that He could do; because He could raise Christ, and now He cannot, unless Christ were again to die. For although the divine nature is not changed in itself, nevertheless, according to those things which it connotes, it can be variously related; that is, when it is referred to diverse times, it is said to be able in diverse ways. But the verb "can" connotes time. Whence Alexander also infers in Part 1, question 21, member 4, in this way: Although this proposition be true, "God has whatever power He had," nevertheless this is not true, "God now has every power of a thing which He had before"; nor this, "Whatever God could do, He can do now," if the potency be referred to time. Others, however, together with the Master on the First Book, distinction 44, say that God can whatever He could - so that potency not look to an effect at a different time; as if we were to say, "God can have raised Christ, and not have raised Him." Both, however, according to what we have noted, are very true.[2305]

Articulus V - Whether God can do what He does not do

To the fifth, we proceed thus. It seems that God cannot do except the things which He does. For God cannot do the things which He does not foreknow and preordain that He will do; but He does not foreknow nor preordain that He will do anything, except the things which He does. Therefore He cannot do except the things which He does.

Further, God cannot do except what is just and ought to be done; but God ought not to do the things which He does not do, since He does not will to do them. Therefore God cannot do except the things which He does.

Further, God cannot do except what is good and fitting to things made. But for things made by God, it is neither good nor fitting to be otherwise than as they are. Therefore God cannot do except the things which He does.

But on the contrary is what is said in Matthew 26: "Thinkest thou that I cannot ask my Father, and he will even now supply me with more than twelve legions of angels?" Yet He Himself did not ask, nor did the Father supply them to resist the Jews. Therefore God can do what He does not do.

2305. The Master of the Sentences, In I Sent., dist. 44; cf. Alexander of Hales, pars 1, q. 21, memb. 4; Aristotle, Ethics VI, c. 2, citing Agathon; Augustine, Contra Faustum, XXVI, c. 5; Anselm, Proslogion, c. 7; De concordia praescientiae et praedestinationis cum libero arbitrio, c. 4; Jerome, Ep. 22 ad Eustochium.

I answer that, concerning this, some have erred in two ways. Some indeed posited that God acts as if by necessity of nature, so that, just as from the action of natural things no other things can proceed except those which do proceed - e.g., from the seed of man a man, from the seed of olive an olive - so from the divine operation no other things can be, nor can there be another order of things, except as it now is. But we showed above that God does not act as if by necessity of nature, but that His will is the cause of all things; nor is the divine will naturally determined, as by a necessity, to these effects. Whence in no way does it follow that the course of things proceeds from God by such necessity that other things could not proceed.

Others indeed said that the divine power is determined to this course of things on account of the order of divine wisdom and justice, without which God does nothing. But since the power of God (which is His essence) is not other than the wisdom of God, it can fittingly be said that there is nothing in the divine power which is not in the order of divine wisdom; for the divine wisdom comprehends the whole "can" of the power. Yet the order impressed upon things by the divine wisdom, in which the ratio of justice consists, as was said, does not equal the divine wisdom so that the divine wisdom be limited to this order. For it is manifest that the whole ratio of the order which a wise man imposes upon things made by himself is taken from the end. When, therefore, the end is proportionate to the things made, the wisdom of the maker is limited to a determinate order. But the divine goodness is an end that surpasses created things disproportionately. Whence the divine wisdom is not determined to some one order of things, so that no other course of things could flow. Therefore it must simply be said that God can do other things than the things which He does, according to His justice and His wise intellect. Then, because the will is not determined by necessity to these or those things (save perhaps by a supposition, as was said above), nor is the divine wisdom and justice determined to this order (as was said above), nothing prevents there being something in the divine power which He does not will, and which is not contained under the order which He has established for things. And because power is understood as executing, but the will as commanding, and the intellect and wisdom as directing, that which is attributed to the divine power as it is considered in itself is said to be within God's absolute power; and of this sort is everything in which the notion of being can be preserved, as was said above. But that which is attributed to the divine power according as it carries out the command of a just will, this God is said to be able to do by ordained power. According to this, therefore, it is to be said that God can, by absolute power, do other things than those which He has foreknown and preordained that He would do; yet He cannot bring it about that He should do other things than those which He has foreknown and preordained that He would do, because the very doing lies under foreknowledge and preordination, but not the very being-able, which is natural. For God therefore does something because He wills; yet He is not therefore able because He wills, but because such is His nature.

Reply to the first: In us, in whom power and essence are one thing and will and intellect another, and again intellect is one thing and wisdom another, and will another and justice another, it can happen that something be in power which cannot be in just will or in wise intellect. But in God power and essence and will and intellect and wisdom and justice are the same. Whence nothing can be in the divine power which cannot be in the just will or in the wise intellect.

Reply to the second: God owes nothing to anyone except to Himself. Hence when it is said that God cannot do except what He ought, nothing else is meant but that God cannot do except what is fitting and just. But this "fitting and just" can be understood in two ways. In one way, so that it be joined first with this verb "is," and thus be restricted to stand for what is fitting and just as things now are, and so be referred to power; and thus what is said is false: for the sense is, "God cannot do anything except as it is now fitting and just." In another way, it can be understood to stand for what is fitting and just absolutely; and thus what is said is true. For God ought to do nothing except what befits His own goodness and justice; and in this sense also it is said that "He cannot deny Himself," because He cannot do anything that would impede or oppose His own goodness.

Reply to the third:

... that God does not act as it were from a necessity of nature, but that His will is the cause of all things; nor is the will itself determined naturally and of necessity to these things. Whence in no way does this course of things proceed from God by necessity, so that others could not proceed. Others, however, said that the divine power is determined to this course of things on account of the order of divine wisdom and justice, without which God does nothing. But since the power of God (which is His essence) is not other than the wisdom of God, it can fittingly indeed be said that there is nothing in the power of God that is not in the order of divine wisdom. For divine wisdom comprehends the whole ability of power. Yet the order imprinted upon things by divine wisdom, in which the notion of justice consists, as was said above,[2306] does not so equal the divine wisdom that the divine wisdom be limited to this order. Now it is manifest that the whole ratio of the order that a wise agent imposes upon the things made by himself is taken from the end. Therefore, when the end is proportioned to the things made for the sake of the end, the wisdom of the maker is limited to some determinate order. But the divine goodness is an end that surpasses created things disproportionality. Hence divine wisdom is not determined to any order of things in such a way that another course of things could not flow forth. Therefore it must be said simply that God can make other things than those which He makes.

Reply to the first: In us, in whom power and essence are other than will and intellect, and again the intellect is other than wisdom, and will other than justice, there can be something in power which cannot be in a just will or in a wise intellect. But in God power and essence and will and intellect and wisdom and justice are the same. Hence nothing can be in the divine power which cannot be in His will and wise intellect.

Then, since the will is not determined of necessity to these or those things, unless perhaps by supposition, as was said above, nor are the wisdom and justice of God determined to this order, as was said above, nothing prevents there being something in the divine power which He does not will, and which is not contained under the order He has established for things. And because power is understood as executing, will as commanding, and intellect and wisdom as directing, what is attributed to power considered in itself is said to be what God can do according to absolute power. And of this sort is everything in which the notion of being can be preserved, as was said above. But

2306. See above, q. 21, a. 3.

what is attributed to the divine power according as it executes the command of a just will, this is said to be what God can do by ordained power.[2307] According to this, therefore, it must be said that God can do other things by absolute power than those which He foresaw and preordained that He would do; yet it cannot be that He should do anything which He did not foresee and preordain that He would do, because the very doing is subject to foreknowledge and preordination, but not the very being-able, which is natural. For this reason God does something because He wills; yet He does not on that account have power because He wills, but because He is such in His own nature.

Reply to the second: God ought to do nothing to any other than to Himself. Hence when it is said that God cannot do except what He ought, nothing else is signified except that God cannot do except what is fitting and just for Him. But this that I call "fitting and just" can be understood in two ways. In one way thus, that that which I call fitting and just is first understood to be joined with this verb "is," so that it is restricted to stand for things present, and thus is referred to power. And thus what is said is false; for the sense is, "God cannot do except what in the present mode is fitting and just." But if it be first joined with this verb "can" (which has an amplifying force), and afterward with this verb "is," there will be signified something present and confused, and the expression will be true under this sense: "God cannot do except that which, if He were to do it, would be fitting and just."

Reply to the third: Although this course of things is determined by these things which now exist, nevertheless the divine wisdom and power are not limited to this course. Hence, although given these things which now come to be no other course would be good and fitting, nevertheless God could make other things, and impose upon them another order.

The conclusion is: God can do many other things which He does not do.

Articulus VI - Whether God can make better things than those which He makes

To the sixth we proceed thus. It seems that God cannot make better things than those which He makes. For whatever God does, He does most powerfully and most wisely; but something is the better, the more powerfully and more wisely it is done. Therefore God cannot make anything better than He makes.

1. Further, St. Augustine, Against Maximinus, argues thus: if God could and would not beget a Son equal to Himself, He was envious; by the same reasoning, if God could make things better than He has made and would not, He was envious. But envy is altogether removed from God; therefore God made each thing the best. Therefore God cannot make anything better than He has made.[2308]

2307. See above, this question, art. 3.
2308. St. Augustine, Contra Maximinum, lib. 1, cap. 7, ad fin. (tom. 6).

2. Further, that which is supremely and very good cannot be made better, because nothing is greater than what is maximal. But, as St. Augustine says in the Enchiridion, the individual things which God made are good, but all together are very good, because from all there consists the admirable beauty of the universe. Therefore the good of the universe cannot be made better by God.[2309]

3. Further, the man Christ is full of grace and truth, and has the Spirit not by measure. And thus He cannot be better. Created beatitude also is called the highest good, and thus cannot be better. Likewise the blessed Virgin Mary is exalted above all the choirs of Angels, and thus cannot be better. Therefore not all things which God has made can be made better.

But on the contrary: It is said in Ephesians 3 that God "is able to do all things more abundantly than we ask or understand."[2310]

I answer that the goodness of a thing is twofold. One indeed is that which is of the essence of the thing; as to be rational is of the essence of man; and with respect to this good, God cannot make any thing better than the thing itself is (although He can make some other thing better than it), just as He cannot make a greater quaternity. For if it were greater, it would no longer be a quaternity, but another number; for the addition of a substantial difference in definitions is related as the addition of unity is in numbers, as is said in the eighth book of the Metaphysics. The other goodness is that which is outside the essence of the thing; as the good of man is to be studious or wise, and according to such a good God can make the things made by Himself better. But simply speaking, with respect to any thing made by Himself, God can make another thing better.

Reply to the first: When it is said that God can make something better than He makes, if "better" is taken as a noun, it is true: for of any thing He can make another better. The same thing indeed He can make better in a certain respect and in a certain respect not, as has been said. But if "better" is taken as an adverb and imports a mode on the part of the agent, thus God cannot make better than He makes, because He cannot act from greater wisdom and goodness. If, however, it imports a mode on the part of the thing made, thus He can make better, because He can give to the things made by Himself a better mode of being with respect to accidentals, though not with respect to essentials.

Reply to the second: It belongs to the very notion of the Son that He be equal to the Father when He has come to perfection; but it does not belong to the notion of any creature that it be better than it was made by God. Hence the reason is not similar.

Reply to the third: The universe, given these things, cannot be better on account of the most fitting order attributed by God to these things, in which the good of the universe consists. If one of these were made better, the proportion of order would be corrupted; as if one string were tightened more than is due, the melody of the lyre would be spoiled. Yet God could make other things, or add others to these things already made; and thus that universe would be better.

2309. St. Augustine, Enchiridion, cap. 10 (tom. 3).
2310. Eph. 3:20.

Reply to the fourth: The humanity of Christ from the fact that it is united to God, and created beatitude from the fact that it is the enjoyment of God, and the blessed Virgin from the fact that she is the Mother of God, have a certain infinite dignity from the infinite good which is God; from this side nothing can be made better than they, just as nothing can be better than God.

Cajetan gathers the conclusions from this article. The first is: God cannot change, or make better, any thing as to essence. The second is: God can make the same thing better as to accidents. The third is: God can make a species better as to essence than any other produced, unto infinity. This is the sum of the doctrine of both articles, which is to be examined in the following disputation.

Disputatio CVI - On whether God can do more than He has done

- In what manner God operates from necessity of justice: cap. 1.
- What is called ordained power, and what absolute: cap. 2.
- That God can do more than He has done is certain by the Catholic faith: cap. 3.
- That not only infinitely many individuals, but also infinitely many species, can be made by God: cap. 4.

Caput I - In what manner God operates from necessity of justice

Before we enter upon the disputation itself, two things must be premised, by which the state of the present controversy will be more elucidated. One is, in what manner the power of God is bound to justice, so that He can do nothing which is not just, and consequently that God operates necessarily out of justice; which will be explained in the present chapter. The other is, what is called ordained power and what absolute; of which we shall speak in the following chapter.

The manner, however, in which the power of God is bound to His justice is rightly explained by St. Thomas in this article, ad 1, and by Alexander, part 1, q. 21, memb. 2, art. 5, ad t., and by Durandus in I, dist. 43, q. 1, and by Gabriel, q. 1, a. 1, a. 4.[2311] For they distinguish a twofold necessity of justice in acting: one which is wont to be called as to specification; the other, as to exercise. The former necessity is thus posited, that as to specification God can do nothing which is not just. If therefore we speak of this necessity, we can still speak of justice in a twofold way: first, as it includes debt (debitum), and in this way there does not always lie upon God a necessity, as to specification, of doing only what is just. For although He does some things out of debt, because He has promised by His word, nevertheless He does many things without any obligation. Then we speak of justice inasmuch as it is only what befits and is decent to the divine goodness; and that is just which, being done, befits and is consonant with the goodness of God Himself. And in this way God operates necessarily as to specification, because He can produce nothing that does not befit His goodness.

2311. St. Thomas, Summa theologiae I, q. 25, a. 6, ad 1; Alexander of Hales, Summa, pars 1, q. 21, memb. 2, art. 5, ad t.; Durandus, In I Sent., dist. 43, q. 1; Gabriel Biel, In I Sent., q. 1, a. 1, a. 4.

The other necessity of justice is as to exercise, whereby, namely, one so operates that he cannot not operate. Yet in no way does God operate by a necessity of justice in this manner, if justice be taken merely for becomingness, as was explained above; because God can omit many things which, if they were produced, would befit the divine goodness. But if justice be called a debt whereby God is bound to do something, sometimes He operates from justice by a necessity as to exercise, because He has promised something, and according to a just promise He ought to do it.

It must, however, be observed that the aforesaid Doctors do not admit in God a debt of this sort whereby He is said to owe anything to another, even if He has promised it, but only whereby He may be called a debtor in a certain sense. I, however, think that by His word God is bound not only to Himself, but also to another as debtor; and thus, although He promised of His own will, nevertheless, since He has promised, He would be unjust if He did not fulfill.[2312] And so, with respect to things now present, I say that, since He has promised to give what He has promised, if He were not to do what He promised, this would not be just.

What is called ordained power, and what absolute.

Meanwhile it is to be noted, for the explanation of the state of this question, what we ought to understand by the name of absolute power and of ordained. For when we ask whether God can do some things which He does not do, if we stand on the mode of ordained power, we must answer otherwise than if we stand on absolute power. The Schoolmen interpret these terms variously. St. Thomas, in this article ad 1, and in Contra Gentiles III, cap. 98, calls the power of God "ordained" inasmuch as it executes the command of the will and is determined by it; but he calls that "absolute" which is referred to the will considered in itself, and is not determined by the command of the will; and it is therefore called absolute because it is only from the determination of the will that it is such. By "ordained" power God is said to be able to do that which, the decree of His will being supposed, He has established to do; by "absolute," that which by His power considered in itself, not bound by a decree, He could do. Wherefore, if God had decreed to free someone dying in mortal sin from hell, and to transfer him into the kingdom of heaven, it would be said that He could do that not only by absolute power but also by ordained power, because He would do it according to power determined by the decree of His will.

Caput II - What is meant by ordained power and by absolute power

Note, as was explained above: God can fail to produce many things which, if they were produced, would befit the divine goodness. But if "justice" is said to be a debt, whereby God is bound to do something, sometimes He operates out of justice necessarily as to the exercise, because He has promised something, and according to the promise He owes to do it.

2312. The author here takes a stronger view of promissory debt in God than some Schoolmen, who deny that God can be said to "owe" anything to a creature even on the basis of promise.

Note, however, that the aforesaid Doctors do not admit in God a debt of this sort whereby He would be said to owe anything to another, even if He had promised it to him, but only such that He would be said to be a debtor to Himself alone. I, however, judge that by His word God makes Himself a debtor not only to Himself but even to another; as I shall show more at length in 1 - 2, question 114, article 3, where I shall also explain the mind of St. Thomas.

Moreover, those same Doctors, except for Durandus, add that this proposition is true: "God can do something which is not just," if the "just" be referred to the present time; for now many things are not actually just, because they have not been ordained by God, which nevertheless can be done by Him. But if "just" is not referred to the present time, it must be said that nothing can be done by God which is not just, that is, which, if He were to do it, would not be just.

When we ask what is called ordained power, and what absolute:

When we inquire whether God can do certain things which He does not do, if the discussion concerns ordained power, an answer must be given different from that which concerns absolute power. The Schoolmen, however, interpret these terms in various ways.

St. Thomas, in this article ad primum and in the third book of the Contra gentiles, chapter 98, calls the power of God "ordained" insofar as it is determined to the execution of a rightful command of the will, and by that is determined; but he calls "absolute" the power which befits Him according to itself and is not determined by the command of the will; and therefore it is called absolute because it is loosed from the determination of the will. Wherefore, by ordained power God is said to be able to do those things which, the decree of His will being supposed, He has established to do; by absolute, that which by His power considered in itself, not bound by a decree, He could do; as was explained above.

But Scotus, in I, dist. 44, q. 1, to whom Major consents in I, 43, q. 1, at the beginning, understands both powers otherwise: for he says that "ordained" and "absolute" are referred to a law enacted by God Himself, so that "ordained" is that which is determined and bound by that law; but "absolute," that which does not follow the law, but is loosed from it. Wherefore, if God had decreed now to free someone from hell, He would be said in Scotus's sentence to do that according to absolute power, not according to ordained; whereas in the opinion of the Angelic Doctor the contrary must be said: for according to him He would be said to do it by ordained power, that is, by power determined by the decree and command of His will.[2313]

For my part, I think one should speak with a distinction: namely, where a law has been promulgated by God, such as this - "He who dies in mortal sin is to be punished with perpetual pain" - there "ordained power" will be said to be that which is determined by that law and according to that law; but "absolute" will be that which is not bound to it, but works beside it or against it. Yet in those matters about which God has promulgated no law to men, "ordained power" will be that which is determined by the decree of the will of God; but "absolute," that which, considered in itself, is not bound nor directed by a definition and decree itself. Wherefore, if God

2313. St. Thomas, Summa theologiae I, q. 25, a. 5 ad 1; Contra Gentiles III, c. 98. Scotus, In I Sent., d. 44, q. 1; John Major, In I Sent., d. 43, q. 1, in princ.

were now to free Judas from the pains of hell because He had so decreed, He would be said to act by absolute power in the former mode - that is, absolute with respect to the law which He promulgated in general against the damned; in which manner, too, He is said to have preserved the Virgin from original sin, because He did that beside the law commonly enacted. But if He were now to create a new star, or to do something concerning the course of the heavens beside the common order which the heavens have hitherto observed, He would then be said to act by ordained power, not absolute; "ordained," I say, that is, determined by the command of His will. And thus in part each opinion can have a place.

Moreover, it must be observed that the power which we have called "ordained" is not to be called "ordinary," as the more recent authors commonly call it. First, because the ancient theologians called it "ordained" only; secondly, because, although it is said that God commonly does those things He does "ordinarily," nevertheless it is not said that He can do them "ordinarily," nor is His power styled "ordinary." These points being presupposed, the proposed question is to be understood of absolute power in both modes: namely, whether God can do certain things which He has not done, the law and decree of His will being set aside.

Caput III - That God can do more things than He does is a truth certain by Catholic faith

Peter Abelard erred in this, as Walden testifies, tom. 1, book 1, article 1, cap. 10: he held that God cannot do anything other than those things which He has done, or will do. Thus Walden says that Bernard reported this error in the text of Abelard's words, cap. 3. He also alleges Bernard's Epistle 190, where among the errors of Abelard Bernard reckons this - namely, that he assigned omnipotence to the Father, semi-potence to the Son, and nullipotence to the Holy Spirit. From which, to be sure, how this error is gathered I do not see. The same error, with the name suppressed, is mentioned by Hugh of St. Victor, book 2 De sacramentis, part 2, cap. ultimo, and by the Master in I, dist. 43, whom Walden confutes in that chapter and the following by many testimonies of the Fathers. Read St. Augustine, Epist. 3, and De spiritu et littera, cap. 1, and De Genesi ad litteram, book 9, cap. 26, and book 4, cap. 1. It is refuted also by that testimony of Matthew 26: "Do you not think that I cannot beseech my Father, and He will now furnish me with more than twelve legions of angels?" and of Mark 14: "Abba, Father, all things are possible to You; remove this chalice from me." Finally, this error, together with the rest of the same Abelard, was condemned in the Council of Sens, where Abelard recanted and, converted to a better disposition, lived a religious life among certain monks. By reason, too, it is manifest that God can do many other things which He does not do: for if any human can do many things which he does not do, much more can God. Moreover, this error of Wyclif arose from another error: since he said that God acts by absolute necessity and with no liberty, as we reported in disputation 68, cap. 1, he was driven also to assert that God can only do those things which He has done and will do; and the same about man he frequently had to think, since he denied liberty of acting to each.

But indeed it is not only certain that God can do many other things which He has not done and will not do, but also infinitely many, all of which He knows most excellently, as in disputation 65, cap. 7, against that same Wyclif, and certain philosophers, whose memory St. Augustine noted in City of God 12, cap. 18, we have shown. They used to say that God only knows and can do finite things, but that for infinite ages He has always operated - not indeed by producing new things, but by repeating the same; which error Augustine there at length refutes. Among the Schoolmen, however, there is controversy whether this infinity of things which God can produce is only of individuals, or also of species. About this we shall differ in the following chapter.

Caput IV - Not only infinitely many individuals, but even infinitely many species can be made by God

Concerning the multitude of species which God can produce, our Schoolmen have thought variously. Aureolus, as Capreolus reports in I, dist. 43, q. unica, art. 2, in the arguments against the conclusion, endeavors by various ways to persuade that an infinite multitude of species cannot be produced by God, not for defect of power, but because the possible species are not infinite. He understands not only that they cannot be produced all at once, but neither successively, in such wise that among the possible there be a last one, after which, once produced, another could not be created. In the same sentence is Durandus, in I, dist. 44, q. 2. Cajetan also, in this article, reports Scotus in III, dist. 13, q. 1, when he asserts that created grace in the soul cannot be increased and perfected to infinity. For the reason by which Scotus proves that, also persuades that a certain species of any perfection whatsoever cannot be given to infinity. It is of this sort: if for any given grace there could always be a greater, then the whole latitude of the increase of grace would be infinite, and consequently there would be some grace which was at an infinite distance from the lowest grace; therefore it would be infinite, because it would exceed another infinitely. But grace cannot be infinite; therefore neither can its increase proceed to infinity.[2314]

By the same reasoning it seems to be proved that, for any species assigned, another more perfect according to the same cannot be created: for if it could be produced, it would follow that the whole latitude of species would be infinite, and that some of them would stand at an infinite distance, according to the same ratio of perfection, from the lowest species, and consequently would be infinite, because it would exceed the lowest species infinitely; which is absurd: for the imitation of the divine perfection, which is infinite, cannot be infinite in creatures.

I, however, think the truer opinion is that of St. Thomas and Cajetan in this article: namely, that, whatever species you assign, there can be given another and yet another beyond it to infinity, more and more perfect. Yet this opinion ought not to be judged so certain that the opposite should straightway be held a notable error, as some more recent authors seem to think; for their reason for proving it was this: that if there were not infinite possible species, God would not be called omnipotent. But no consequence follows: for God is not called omnipotent because He can produce

2314. Aureolus, as reported by Capreolus, In I Sent., d. 43, q. unica, a. 2; Durandus, In I Sent., d. 44, q. 2; Cajetan, In I, q. 25, a. 6, reporting Scotus, In III Sent., d. 13, q. 1.

infinite species, but because He can do all things which do not involve a contradiction. Now, that is not effected except by possible species which are finite; for only finite species do not involve a contradiction; and all those, and only those, could be produced by God; and nonetheless He would truly be omnipotent.

Of all the other reasons which Durandus brings forward for this opinion and dissolves, this one is chiefly used to prove it: every creature is a certain imitation and participation of the divine perfection; but none can imitate God in the mode of perfection itself; therefore there can be given another and another which will always imitate God in a more perfect mode. For if there were given one which did not imitate the most perfect prototype in the most perfect mode, there could be given another which would in that same mode imitate more perfectly. But I answer: from this reasoning one could indeed prove that assimilation and imitation, according to the variety of form and nature, can go on increasing to infinity, because that which is proposed to be imitated is infinitely perfect. Whence it comes about that a picture which imitates its prototype in figure and colors can grow until it equals that one's perfection. Wherefore, if the species of created things imitated God thus, without doubt, for whatever one you suppose, there could be produced another which would more perfectly resemble God; because there would always remain something to be imitated. But in fact creatures are not assimilated to God according to a variety of forms and natures, but in a form of a far different order, which they participate from Him; therefore it does not follow that the imitation of creatures can be extended to infinity through infinite species.

A second reason: even if the possible species were not infinite, that would not prejudice the infinitude of God's power in the genus of power; for divine power is not called infinite because the number of producible species is infinite. And since, as we noted elsewhere, God's power can from other grounds be shown infinite in its genus, this reason does not sufficiently prove that the possible species are infinite.

A third reason of this sort: "It does not involve a contradiction that there be infinitely many possible species of things; therefore one must not deny that they can exist." Now that it does not involve a contradiction is clear by induction; for the arguments that are wont to be adduced for the opposite part are easily dissolved. For if any had force, that one would have which we set forth first in behalf of Durandus's sentence.

But to that I reply: even if the possible species are infinite toward the superior part, it by no means follows that there is some supreme which stands at an infinite distance from the lowest. For neither does it follow that there is some supreme grace which stands at an infinite distance from the lowest; rather, either there is always a higher grace, or, if in that case there would be a highest grace, there would not be a most perfect species - nor is that what must be avoided. For these two manifestly conflict with each other: either to proceed to infinity in species or in graces, or to posit some supreme which stands at an infinite distance from another. Therefore, whatever one you posit, there is given another superior. And this is true if we constitute the progression in species toward the superior part as going on to infinity; for, if toward the inferior part one could again

posit a lower and lower, less and less perfect, nothing absurd seems to follow - there will never be some determinate species which, although it does not stand at an infinite distance from another, nevertheless terminates the rest; yet the perfection of creatures will never be infinite.

Articulus VII - On the infinity of possible species and the increase of grace

If the increase of grace were to go on without end, it would follow that the whole latitude of the increase of grace would be infinite, and consequently that there would be some grace which stands at an infinite distance from the least grace; therefore that grace would be infinite, because it would exceed another infinitely. But grace cannot be infinite; therefore neither can its augmentation proceed to infinity.

By the same reasoning it seems to be proved that, with any species assigned, another more perfect according to essence cannot be created: for if it could be produced, it would follow that the whole latitude of species would be infinite, and that some of them stand at an infinite distance according to essence from the lowest species, and hence that one would be infinite, because it would exceed the lowest species infinitely - which is absurd; for infinity according to essence can befit God alone. To this point also seem to look the principal reasons of Aureolus, and what Durandus asserts; therefore it has seemed to me good to pass over all of them.

I for my part judge the opinion of St. Thomas and Cajetan in this article to be truer, who teach that, with any species assigned, there can be given another and another, to infinity, more and more perfect. Yet this opinion ought not to be held so certain that the opposite should be judged worthy of any noted infirmity, as some more recent men falsely think; for their reason by which they attempt to prove it is not firm, namely, that if infinite possible species did not exist, God would not be called omnipotent. This in no way follows: for God is not called omnipotent because He can produce infinite species, but because He can do all things that do not imply a contradiction. And if only finite species were possible, then only finite things would not imply a contradiction; and all those could be produced by God; and nonetheless He would truly be called omnipotent.

Passing over other reasons which Durandus brings forward for this opinion and solves, the following is chiefly wont to be urged to prove it. Every creature is a certain imitation and participation of the divine perfection; but no creature can imitate God in the most perfect way; therefore there can be given still another and another which always imitates God in a more perfect way. For if some picture is not assimilated to the prototype in the most perfect way, there can be given another which is assimilated to it in a more perfect way. But someone could reply that by this reasoning it is wont to be proved that assimilation and imitation, according to the unity of form and nature, can grow to infinity, if that which is proposed to be imitated is infinitely perfect. Whence it follows that the painted image which imitates the prototype in figure and colors could grow until it equal the latter's perfection. Therefore the species of created things would thus imitate God that, no matter what one you posit, without doubt another could be produced which would resemble God more perfectly; because there would always remain something to be imitated. But in

truth, because God is not assimilated univocally according to the unity of form, but in a mode of form far different in notion, which creatures receive from Him by participation, it does not follow that the imitation on the side of the creature can grow to infinity through infinite species.

Second reason: if there were not infinite possible species, the power of God would not be infinite in the genus of potency; but it is infinite, as was proved in article 2; therefore species too are infinite. But since the infinity of God's power in the genus of potency can be proved on other grounds (as we noted in Disputation 103, chapter ...), this reason does not sufficiently prove that there are infinite possible species.

Third, finally, the reason is of this sort: it does not imply a contradiction that possible species be infinite; therefore it is not to be denied that they can be. That this implies no contradiction is clear by induction: for the reasons that are wont to be adduced for the opposite side are easily dissolved. For if any had force, it would especially be that which we brought at the beginning for the opinion of Durandus. To that I reply that, even if the possible species are infinite toward the superior part, it by no means follows that there is a supreme one which stands at an infinite distance from the lowest. So too it does not follow that there is a supreme grace which stands at an infinite distance from the lowest, or from some inferior grace: because neither in that case would there be given a most perfect grace, nor a most perfect species, for the reason that there would not be a last. These two things manifestly are mutually repugnant, namely, that there be an infinite progression in species or in graces, and that there be a supreme, or some determinate one which stands at an infinite distance from the others: since, whatever one you assign, there is given another superior. And this is true if we constitute the progression toward the superior part in species as going on to infinity; for if toward the inferior part it could be made infinite in things less and less perfect, it scarcely seems absurd, namely, that there would be some determinate species which, although it did not stand at an infinite distance from another also determinate, would nevertheless be more perfect than infinitely many. But if it exceeded infinitely many in perfection, it would plainly be infinite according to essence.

The same inconvenience seems to be inferred if we grant that between one species and another there can be produced infinitely many: for it follows that the extreme species stand at an infinite distance, and thus that the highest would be infinitely perfect. It infers no absurdity. Nevertheless, not even in this way does it seem that an absurdity is concluded. For the extremes would stand at an infinite distance only when, between them, an infinite multitude could be produced by the participation of the same form: as if, between one quantity and another, there could be infinitely many unequal quantities, not communicating, nor according to any proportion; for if this could be, it would follow that the highest would be infinite. The same is to be said in qualities and in the increase of grace. But that there be infinitely many between one species and another, or that one exceed infinitely many in perfection, does not seem sufficient for that one to be infinite essentially. For it would not be said to exceed others either by the multitude of perfections, or by quantity, or by intensity, but by an essential grade. But infinity of essential grade, which belongs to God alone, is nothing else than to have no cause of one's existence, but to be from oneself, as we explained in Disputation 25, chapter 5. But that one species exceed infinitely many others in essential perfection

does not seem to argue this infinity according to essence, but a certain distinct grade, more perfect than infinitely many, to which others cannot attain. For the same reason we also concede that one species stands at an infinite distance from another, because one cannot arrive at the state of the other.

Disputatio CVII - Whether God can make better things than He has made

Caput I - That God can produce a universe more perfect in certain parts than He produced

When we ask about the universe whether it can be made better than it has been made, we speak of the universality itself of created things apart from God. For if you also join God Himself with the universe, says Durandus in I, distinction 44, it can still be made better if better creatures are added to the universe: not that God is better with creatures than without them, but because the universe would then include more goods formally than it does now. For although God is infinitely good, yet because He does not contain all created perfections formally, therefore, if together with Him the universe had more and better creatures, it would be more perfect extensively. In vain, however, does Durandus compare two universes with one another, including God Himself in each; since, with God, comparison is unfit, and the whole comparison must be made on the side of the creatures, which are said to constitute the created universe: for God is not something belonging to the universe, but is said to be its author. Nevertheless, if someone wishes to compare this universe with another, even with the author of the universe conjoined to both, it must be said that another universe could be made more perfect than this one, provided that "more perfect," which signifies a comparison, does not denote continuous quantity of bulk or of power, but a discrete quantity, in this sense: it can be more perfect, that is, containing within itself more other perfections or perfect natures. Whether "more perfect" can denote either kind of quantity, we shall consider below in art. 1.

But if the controversy is understood about the universality of creatures itself, there still remains the question whether a better universe can be made.

All the Scholastics whom I have read agree, and against Aristotle, De caelo I, chapter 9, affirm that God can make another universe, distinct only in number, with other heavens, elements, and mixed bodies. Thus teach St. Bonaventure in I, distinction 44, question 1; St. Thomas there, question 1, article 2; Durandus, question 3; Gabriel, the single question, article 2; Major, question 1; Capreolus, in I, distinction 43, single question, article 2 - their opinion greatly pleases me; for Aristotle's argument has little force, which is this. If there were two universes, the earth of one would be moved toward the center of the other; therefore it would be moved both upward and downward. For it would have to ascend in its own universe, so that, having pierced the heaven of each universe, it would descend to the center of the other - which is absurd.

But this argument is trifling. For who does not see that within any universe whatever there is a proper center and a natural place only of the elements of that universe? Therefore the elements of one would not tend to the center of the other, because to them it would not be natural: for the center, by the constitution of the very bodies of the universe, claims its own place. For just as, if God were to destroy this universe and make another, the elements of that other would remain naturally within it; so too, with another produced and this one remaining, the elements of each would tend only to their own proper center: for the center of the other, with which they would have no communication, would not be natural to them. Wherefore, since Aristotle knew nothing of God's absolute power, nor otherwise did the will of God become known to him, by that reason he could not prove that there is not now another universe. But we, even if we say that God can make another, can be most certain that there is not another, although it could be produced by God: because from Sacred Scripture it is known to us only that this universe has been created.

Now, whether another universe can be made better, that is, containing created perfections, is a matter of controversy. All admit, however, that it certainly can be made, at least with perfections of creatures distinct only in number. But whether it can be made with creatures whose perfections are distinct in species, Durandus doubts. For since he thinks that creatures distinct in species cannot be produced to infinity, but that all the possible ones are finite, he judges it uncertain whether all those which can be created by absolute power have been produced, or whether others remain. We, however, since we said that there can be produced more species to infinity by God, must also assert that the universe can be made more perfect with other natures distinct in species.

Caput II - Whether there can be another better universe consisting of all parts different in species from the parts of this our universe

Among the Scholastics also there is dissension whether God can produce another universe made up of all its parts different in species from the parts of this our universe. Of these, Durandus first doubts whether such a universe can be produced, because he does not take it as established whether there are more possible species of things than have been produced. Next, even if more were possible, he nonetheless teaches that another universe distinct in species cannot be produced. He proves this by the following reason: all the species which would be produced would have an order to those which now exist in this universe; therefore one could not call that a distinct universe - for a universe is not merely some one thing by aggregation. The minor, however, on which Durandus relies in this reasoning, seems to many not proved; or, if he asserts that a universe distinct in species cannot be produced, he at least grants one distinct in number, since in the same way he seems to prove of one as of the other.

But other Scholastics teach that another universe can be produced, all of whose parts are different in species from the parts of this universe. This is the opinion of St. Thomas, St. Bonaventure, Capreolus, Gabriel, and Major in the places cited; and, taken generally, their reason confirms it: since species can, by God, be multiplied to infinity, nothing seems to stand in the way by which an entirely distinct universe, in every part different in species, could be produced. For if

anything stood in the way, it would be especially Durandus's argument; but that is very weak. For although the species which are produced have an order of superior and inferior, this does not prevent their constituting another universe really distinct, if God so wills, any more than order prevents a multitude of beings from being gathered under one universe when God so disposes.

Nevertheless the true opinion seems to be this: although we say that species can be multiplied to infinity, it is not thereby certain whether simple elements, as such, and of other species than these, can be produced by God; therefore we cannot confidently affirm that another universe, distinct in species according to all its parts, can be produced. What is less, however, is easier to admit: namely, that God can produce another better universe with many parts different in species; but whether with all its parts different in species from those of this universe is uncertain.

Caput III - That this universe, its parts remaining, can be perfected

But truly, because even if we say that species can be multiplied to infinity, nevertheless it is not certain whether the simple elements, as such, and the rest of a different species, can be produced by God; therefore we cannot confidently affirm that another universe, distinct in species according to all its parts, can be produced. For of mixed bodies it can more easily be defended; although if that universe ought to have, as this has, a rational corporeal creature that could preside, as it were, over every corporeal creature, it cannot be produced diverse in species: because it is much more probable that another rational corporeal creature, diverse in species from man, cannot be created.

This universe, its parts remaining as they are, can be perfected.

Sententia - St. Thomas in article 6, to the third, affirms that this universe cannot be made better with the parts remaining that it has: because its goodness consists in the proportion and order of the parts among themselves; but if some part were made better, the proportion in which it was set by God would be dissolved; and that being dissolved, that due order, which is one, would be taken away. Then it is proved from St. Augustine, book 3 On Free Choice, chapter 5, where he says thus: "Whatever shall occur to you as better by true reason, know that God has done it, as the maker of all goods": which he himself pursues more fully.[2315]

Confirmatur - This opinion of Durandus in the question cited above does not lack probability, namely, that this universe can be made better, all the parts, or some of them, having been changed for the better. The reason is that this harmony and consonance of the parts among themselves to generations and all the rest is not singular, but has a latitude: therefore it could be made better, with the very parts themselves also made better. Moreover, if all things had persevered as in the state of innocence, and the elements had obeyed man himself, and had in no way been able to harm him, and man himself had persevered in that state, the universe would have been rendered much more beautiful. But it is clear that the parts of the universe cannot be perfected according to substance, but accidentally; and we speak of this perfection: and from what has been said the solution appears to the argument alleged for the prior opinion.

2315. St. Augustine, De libero arbitrio, III, c. 5.

Aug. testimonium explicatur - I answer to Augustine, that he does not deny that things can be better, or produced in a better state: for he says there in these words: "Wherefore, if a creature delights you which by most persevering will does not sin, there is no doubting that by right reason you set it before one that does sin; but as you set it before by your thought, so the creator God has set it before by his ordering." Therefore he judges both by our judgment and by God's that the creature which does not sin is better: if therefore this universe should serve man in the state of innocence without sin, it would be much more beautiful, for it would serve a much better creature. Wherefore Augustine admits that the creature of the universe could have been made better and ordered to a better state; nevertheless he adds that God left it in the hand of its own counsel and permitted it to fall into sin: in which he strives to prove by many arguments that God kept a better mode. Augustine does not say that man is now better than he would have been in the state of innocence, but that God on his part kept a better mode by leaving him and permitting him to slip into sin: and to this only he adduces the words alleged for the prior opinion. For thus piously must one speak of all the things which God does, that we judge it better that he do them now thus; and not rashly judging let us say that God would do better, if he did thus or so. But if God had done in another way, we should say that that too was better: for his will, which is above every law, is most rightly said to do when it effects or decrees something.

Lastly, it must be observed that this universe cannot be made better with respect to the order which it has to its end; that is, it cannot be ordered to a better end, as St. Thomas, Durandus, and Capreolus teach: for it is on account of God, than whom no end can be better; but with respect to rational creatures it could be perfected around the end, not that they would be referred to a better end, but that more of them, and more perfectly, would attain it. With respect to irrational creatures, likewise, it could be perfected relative to the end in the same way; because they would serve man more perfectly and would represent God's goodness more perfectly.[2316]

Quaestio XXVI - On divine beatitude

Lastly, after the consideration of those things which pertain to the unity of the divine essence, consideration must be given to divine beatitude.

And concerning this four things are asked.

Articulus I - Whether beatitude befits God

Objicitur 1. It seems that beatitude does not befit God. For "beatitude is the state made perfect by the aggregation of all goods." But the aggregation of goods has no place in God, just as neither has composition. Therefore beatitude does not befit God.[2317]

2316. St. Thomas; Durandus; Capreolus.
2317. Boethius, Consolation of Philosophy.

Objicitur 2. Moreover, beatitude, or happiness, is the reward of virtue according to the Philosopher in Ethics I. But reward does not befit God, just as neither does merit. Therefore neither does beatitude.

Sed contra: The Apostle says (1 Tim. 6): "Which in his own times he shall show, God, blessed and only Mighty, King of kings and Lord of lords."

Respondeo: I answer that beatitude most of all befits God. For under the name of beatitude nothing else is understood than the perfect good of an intellectual nature, whose it is to recognize its own sufficiency in the good which it has, and to which it belongs to join to itself something either well or ill, and to be mistress of its own operations. But both of these most excellently befit God, namely, to be perfectly good and intelligent. Whence beatitude most of all befits God.

Ad primum: Therefore it must be said to the first, that the aggregation of goods is in God not by way of composition, but by way of simplicity, because those things which in creatures are multiple, in God are found simply and in unity, as was said above

Ad secundum: To the second it must be said that although the reward of virtue befalls beatitude or happiness, inasmuch as someone acquires beatitude, just as to be the term of generation befalls a being inasmuch as it goes forth from potency into act; so therefore God has being, although he is not generated, so he has beatitude, although he is not merited

Articulus II - Whether God is called blessed according to the intellect

Objicitur 1. The second proceeds thus. It seems that God is not called blessed according to the intellect. For beatitude is the highest good; but good is said in God according to the essence; and good regards being according to essence, according to Boethius in the book On the Hebdomads. Therefore beatitude is said in God according to the essence, and not according to the intellect.[2318]

Objicitur 2. Moreover, beatitude has the ratio of end. But the end is the object of the will, just as is the good. Therefore beatitude is said in God according to the will, and not according to the intellect.

Sed contra: On the contrary is what St. Gregory says in the Moralia, book 3: He himself is glorious, such that, whatever is professed of him, he needs no acceding praise. But to be glorious signifies to be blessed. Moreover, God is enjoyed according to the intellect, because "vision is the whole reward," as St. Augustine says.[23192320]

Respondeo: I answer that beatitude (as has been said) signifies the perfect good of an intellectual nature. And from this it is that, just as each thing appetites its own perfection, so also an intellectual nature naturally appetites to be blessed. But that which is most perfect in any intellectual nature is the operation of its intellect, according to which it in a certain manner comprehends all things. Whence the beatitude of any created intellectual nature consists in

2318. Boethius, De hebdomadibus.
2319. St. Gregory the Great, Moralia in Iob, III.
2320. St. Augustine: "Visio est tota merces."

understanding. But in God there is not one thing which is being and another which is understanding according to reality, but only according to the ratio of intelligibility. Beatitude therefore is to be attributed to God according to the intellect, just as to the blessed, who by assimilation to his beatitude are called blessed.

Ad primum: To the first, therefore, it must be said that from that reasoning it is proved that God is blessed according to his essence, not however that beatitude befits him according to the ratio of essence; but rather according to the ratio of intellect

Reply to the second: It is answered that beatitude, since it is a good, is the object of the will; but the object is presupposed to the act of the potency. Hence, according to the mode of understanding, divine beatitude is prior to the act of the will resting in it. And this cannot be anything other than an act of the intellect. Hence beatitude is attended to in the act of the intellect.

Articulus III - Whether God is the beatitude of any blessed person.

It is proceeded thus to the third. It seems that God is the beatitude of any blessed person. For God is the highest good, as was shown above. But it is impossible that there be several highest goods, as also is evident from the foregoing. Since therefore it belongs to the notion of beatitude that it be the highest good, it seems that beatitude is nothing other than God.

1. Besides, beatitude is the ultimate end of a rational nature. But to be the ultimate end of a rational nature befits God alone. Therefore the beatitude of any blessed person is God alone.

But on the contrary: The beatitude of one is greater than the beatitude of another, according to that of 1 Corinthians 15: "Star differs from star in glory."[2321] But nothing is greater than God. Therefore beatitude is something other than God.

I answer: The beatitude of an intellectual nature consists in an act of the intellect. In which two things can be considered, namely, the object of the act, which is the intelligible; and the act itself, which is to understand. If therefore beatitude be considered on the part of the object itself, thus God alone is beatitude: because from this alone is one blessed, that he understands God, according to that of St. Augustine in book 5 of the Confessions: "Blessed is he who knows you, even if he is ignorant of other things."[2322] But on the part of the act of the understanding subject, beatitude is something created in the blessed creatures; whereas in God there is, even in this respect, something uncreated.

Reply to the first: Beatitude, as to the object, is the highest good simply; but as to the act in the blessed creatures, it is the highest good, not simply, but in the genus of goods that are participable by a creature.

2321. 1 Corinthians 15:41.
2322. St. Augustine, Confessions, V, "Beatus est qui te novit, etiam si alia ignoret."

Reply to the second: The end is twofold, namely, "of which" and "by which," as the Philosopher says, namely, the thing itself and the use of the thing. Just as for the miser the end is money and the acquisition of money. Therefore for the rational creature God indeed is the ultimate end as the thing itself; but created beatitude is the use, or rather the enjoyment, of the thing.

Articulus IV - Whether in God's beatitude every beatitude is included.

It is proceeded thus to the fourth. It seems that the divine beatitude does not embrace all beatitudes. For there are certain false beatitudes. But nothing false can be in God. Therefore the divine beatitude does not embrace every beatitude.

1. Besides, according to some, a certain beatitude consists in bodily things, such as pleasures, riches, and the like. But these cannot befit God, since he is incorporeal. Therefore his beatitude does not embrace every beatitude.

But on the contrary: Beatitude is a certain perfection; but the divine perfection embraces every perfection, as was shown above. Therefore the divine beatitude embraces every beatitude.

I answer: Whatever is desirable in any beatitude, whether true or false, wholly and more eminently pre-exists in the divine beatitude. For from contemplative happiness it has continuous and most certain contemplation of itself and of all other things; but from active, the governance of the whole universe.

As to earthly happiness, which consists in pleasure, riches, power, dignity, and fame, according to Boethius in book 3 of the Consolation, it has joy in itself and in all others by way of delight; for riches it has every sort of sufficiency which riches promise; for power, omnipotence; for dignity, the governance of all; but for fame, the admiration of the whole creation.[2323]

Reply to the first: A certain beatitude is false according as it falls short of the notion of true beatitude; and thus it is not in God. But whatever it has of likeness, however slight, to beatitude, wholly pre-exists in the divine beatitude.

Reply to the second: The goods which are in corporeal things corporeally, are in God spiritually according to his mode.

And let these things said be sufficient concerning those matters which pertain to the unity of the divine essence.

Note: In this whole question there is nothing worthy of disputation except those points which, concerning the beatitude of a rational creature, must be said in the Prima Secundae, question two; for in the same proportion must we philosophize about the beatitude of God. Nor indeed is there anything peculiar in his beatitude, except that God is understood by us to be blessed by his very own nature and substance, inasmuch as we apprehend it as an operation; whence it also follows that beatitude is not a reward for God, but is by his nature; whereas in us it is an accident and the reward of labors.

2323. Boethius, Consolation of Philosophy, III.

FINIS.

INDEX

INDEX OF SCRIPTURE

Genesis — *Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XVI, Quaestio I, Articulus X, Caput III, Disputatio XVII, Quaestio I, Articulus X, Caput III, Disputatio XVIII, Quaestio I, Articulus X, Caput I, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput VI, Disputatio XX, Quaestio III, Articulus II, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio XXII, Quaestio V, Articulus I, Disputatio LI, Quaestio XII, Caput II*

Elias of Crete — *Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio LVIII, Quaestio XIII, Articulus VIII, Caput III, Disputatio XCIX, Quaestio XXIII, Articulus VI, Caput VII*

Eusebius — *Disputatio XI, Quaestio I, Articulus VIII, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput VI, Disputatio XVIII, Quaestio II, Articulus I, Disputatio XX, Quaestio II, Articulus III, Caput III, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio LIX, Quaestio XIII, Articulus XII, Disputatio LXXI, Quaestio XV, Articulus I, Caput I, Disputatio LXXXVII, Quaestio XXII, Articulus I, Caput I*

Eusebius of Caesarea —
Disputatio XXII, Quaestio IV, Disputatio XXXII, Quaestio X, Articulus I, Caput II

F

Faustus of Riez — *Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput II, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput IV, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput V, Disputatio XCI, Quaestio XXIII, Articulus V, Caput IX, Disputatio XCI, Quaestio XXIII, Articulus V, Disputatio XCI, Quaestio XXIII, Articulus V, Caput XV, Disputatio XCI, Quaestio XXIII, Articulus V, Caput XVI, Disputatio XCI, Quaestio XXIII, Articulus V, Caput XVII, Disputatio XCIII, Quaestio XXIII, Articulus VIII, Disputatio XCVIII, Quaestio XXIII, Articulus III, Caput V*

Franciscus de Ferrara — *Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput I, Disputatio XCIV, Quaestio XXIII, Articulus VIII, Caput I*

Fulgentius of Ruspe — *Disputatio XXXVI, Quaestio X, Articulus VI, Caput II, Disputatio LXXXVIII, Quaestio XXIII, Caput X, Disputatio LXXXVIII, Quaestio XXIII, Pars I, Articulus I, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput VIII, Disputatio XCI, Quaestio XXIII, Articulus V, Caput III, Disputatio XCI, Quaestio XXIII, Articulus V, Caput V, Disputatio XCI, Quaestio XXIII, Articulus V, Caput VI, Disputatio XCI, Quaestio XXIII, Articulus V, Disputatio XCV, Quaestio XXIII, Articulus III, Caput VIII, Disputatio XCVII, Quaestio XXIII, Articulus III, Caput II*

G

Gabriel Biel — *Disputatio V, Quaestio I, Articulus II, Caput III, Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio VIII, Quaestio I, Articulus IV, Caput VI, Disputatio X, Quaestio I, Articulus VII, Caput V, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XXII, Quaestio III, Articulus V, Caput II, Disputatio XXVI, Quaestio VII, Articulus IV, Caput II, Disputatio XXVIII, Quaestio VIII, Articulus II, Disputatio XXXII, Quaestio X, Articulus I, Caput I, Disputatio XXXIII, Quaestio X, Articulus VI, Caput II*

Gilbert of Poitiers — *Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio XXII, Quaestio III, Articulus VIII, Disputatio XXII, Quaestio IV, Disputatio CV, Quaestio XXV, Articulus V*

Giles of Rome — *Disputatio IV, Quaestio I, Articulus II, Caput V, Disputatio VI, Quaestio I, Articulus II, Caput II, Disputatio VIII, Quaestio I, Articulus IV, Caput II, Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio LI, Quaestio XII, Caput II, Disputatio LXXI, Quaestio XV, Articulus I, Caput II, Disputatio LXXII, Quaestio XV, Articulus I, Caput I, Disputatio LXXIV, Quaestio XV, Articulus III, Caput I, Disputatio LXXIV, Quaestio XV, Articulus III, Caput III*

Gregory — *Disputatio X, Quaestio I, Articulus VII, Caput VII, Disputatio X, Quaestio I, Articulus VIII, Disputatio XII, Quaestio I, Articulus X, Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XV, Quaestio I, Articulus X, Caput III, Disputatio XVI, Quaestio I, Articulus X, Caput II, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio XXI, Quaestio III, Articulus IV, Disputatio XXVI, Quaestio VIII, Articulus I, Disputatio XXX, Quaestio VIII, Articulus III, Caput I*

Gregory of Rimini — *Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XXXVIII, Quaestio XII, Articulus II, Caput IV, Disputatio XXXIX, Quaestio XII, Articulus II, Caput I, Disputatio LX, Quaestio XIV, Articulus VI, Caput I, Disputatio LXXXI, Quaestio XIX, Articulus IV, Caput I, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput I, Disputatio LXXXVIII, Quaestio XXIII, Caput V, Disputatio LXXXVIII, Quaestio XXIII, Caput VII, Disputatio XCI, Quaestio XXIII, Articulus V, Caput XI*

H

Henricus of Ghent — *Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput III, Disputatio XLIX, Quaestio XII, Articulus VIII, Caput I, Disputatio LXXIV, Quaestio XV, Articulus III, Caput III*

Henry of Ghent — *Disputatio IV, Quaestio I, Articulus II, Caput III, Disputatio VII, Quaestio I, Articulus III, Caput III, Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio XXII, Quaestio III, Articulus V, Caput V, Disputatio XXXI, Quaestio X, Articulus I, Caput V, Disputatio XXXIII, Quaestio X, Articulus VI, Caput IV, Disputatio XXXIV, Quaestio X, Articulus VI, Caput II, Disputatio XXXVI, Quaestio X, Articulus VI, Caput II, Disputatio XXXVIII, Quaestio XII, Articulus II, Caput II, Disputatio XXXVIII, Quaestio XII, Articulus II, Caput IV*

I

Isidore of Seville — *Disputatio XXXII, Quaestio X, Articulus I, Caput II, Disputatio XXXIII, Quaestio X, Articulus VI, Caput II, Disputatio XXXVII, Quaestio XII, Articulus I, Caput V, Disputatio LI, Quaestio XII, Caput IV, Disputatio XCIV, Quaestio XXIII, Articulus VIII, Caput I*

J

Jerome — *Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio III, Quaestio I, Articulus I, Caput II, Disputatio IX, Quaestio I, Articulus V, Disputatio X, Quaestio I, Articulus VIII, Disputatio XI, Quaestio I, Articulus VIII, Caput II, Disputatio XII, Quaestio I, Articulus X, Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XIV, Quaestio I, Articulus X, Caput IV, Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XV, Quaestio I, Articulus X, Caput III*

John Damascene — *Disputatio X, Quaestio I, Articulus VII, Caput I, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XIX, Quaestio II, Articulus III, Disputatio XX, Quaestio III, Disputatio XX, Quaestio III, Articulus II, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio XXI, Quaestio III, Articulus IV, Disputatio XXII, Quaestio III, Articulus V, Caput V, Disputatio XXII, Quaestio III, Articulus V, Caput VI*

John of Bologna — *Disputatio XCI, Quaestio XXIII, Articulus V, Caput VIII, Disputatio XCVIII, Quaestio XXIII, Articulus III, Caput II*

M

Maior — *Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio V, Quaestio I, Articulus II, Caput III, Disputatio LXVIII, Quaestio XIV, Articulus XV, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput II*

Marsilius of Inghen — *Disputatio XCI, Quaestio XXIII, Articulus V, Caput XI, Disputatio CI, Quaestio XXIV, Articulus I*

Melchior Canus — *Disputatio III, Quaestio I, Articulus I, Caput VI, Disputatio V, Quaestio I, Articulus II, Caput III, Disputatio XCV, Quaestio XXIII, Articulus III, Caput X*

N

Nicholas of Lyra — *Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XV, Quaestio I, Articulus X, Caput I, Disputatio XVI, Quaestio I, Articulus X, Caput III, Disputatio LII, Quaestio XII, Caput III, Disputatio CI, Quaestio XXIV, Articulus I*

O

Optatus of Milevis — *Disputatio XCI, Quaestio XXIII, Articulus V, Caput VIII, Disputatio XCI, Quaestio XXIII, Articulus V, Caput IX*

P

Paludanus — *Disputatio XXXVIII, Quaestio XII, Articulus II, Caput II, Disputatio XL, Quaestio XII, Articulus III, Caput III, Disputatio L, Quaestio XII, Caput V, Disputatio LXXXVI, Quaestio XXI, Articulus I, Caput II*

Paul of Burgos — *Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XVI, Quaestio I, Articulus X, Caput III, Disputatio XVII, Quaestio I, Articulus X, Caput III*

Peter of Palude — *Disputatio LXXXV, Quaestio XXI, Articulus I, Caput III, Disputatio LXXXVI, Quaestio XXI, Articulus I, Caput II, Disputatio LXXXVI, Quaestio XXI, Articulus I, Caput III, Disputatio LXXXVI, Quaestio XXI, Articulus I, Caput IV, Disputatio LXXXVI, Quaestio XXII, Articulus I*

Prosper of Aquitaine — *Disputatio LXVII, Quaestio XIV, Articulus XIII, Caput I, Disputatio LXVII, Quaestio XIV, Articulus XIII, Caput III, Disputatio LXVII, Quaestio XIV, Articulus XIII, Caput IV, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput V, Disputatio LXXXIII, Quaestio XIX, Articulus VI, Caput III, Disputatio LXXXIII, Quaestio XIX, Articulus VI, Caput IV, Disputatio LXXXVIII, Quaestio XXIII, Caput VII, Disputatio LXXXVIII, Quaestio XXIII, Pars I, Articulus I, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput IV, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput V*

Pseudo-Dionysius — *Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio III, Quaestio I, Articulus I, Caput II, Disputatio XII, Quaestio I, Articulus IX, Disputatio XII, Quaestio I, Articulus X, Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XX, Quaestio III, Articulus II, Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXII, Quaestio III, Articulus VIII, Disputatio XXII, Quaestio IV*

R

Richard — *Disputatio X, Quaestio I, Articulus VII, Caput V, Disputatio XIV, Quaestio I, Articulus X, Caput IV, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XX, Quaestio II, Articulus III, Caput III, Disputatio XXVI, Quaestio VII, Articulus IV, Caput II, Disputatio XXXIII, Quaestio X, Articulus VI, Caput II, Disputatio XLII, Quaestio XII, Articulus V, Caput II, Disputatio XLVI, Quaestio XII, Articulus V, Caput II, Disputatio L, Quaestio XII, Articulus VIII, Caput III*

Richard of Mediavilla — *Disputatio XXVI, Quaestio VII, Articulus IV, Caput III*

Richard of Middleton — *Disputatio LXV, Quaestio XIV, Articulus XIII, Caput II, Disputatio LXVIII, Quaestio XIV, Articulus XIII, Caput IV*

Ruard Tapper — *Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput II, Disputatio XCI, Quaestio XXIII, Articulus V, Caput X, Disputatio XCIV, Quaestio XXIII, Articulus VIII, Caput I, Disputatio XCVII, Quaestio XXIII, Articulus III, Caput II, Disputatio XCVIII, Quaestio XXIII, Articulus III, Caput VII*

S

Scotus — *Disputatio I, Quaestio I, Articulus I, Caput II, Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio VIII, Quaestio I, Articulus IV, Caput II, Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio X, Quaestio I, Articulus VII, Caput V, Disputatio X, Quaestio I, Articulus VII, Caput VII, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XX, Quaestio II, Articulus III, Caput III*

Sixtus of Siena — *Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XVI, Quaestio I, Articulus X, Caput II, Disputatio XVI, Quaestio I, Articulus X, Caput III, Disputatio XXXVII, Quaestio XII, Articulus I, Caput III, Disputatio XC, Quaestio XXIII, Articulus IV, Caput III, Disputatio XCI, Quaestio XXIII, Articulus V, Caput IX*

St. Bernard of Clairvaux — *Disputatio XXII, Quaestio IV, Disputatio L, Quaestio XII, Caput IV, Disputatio LXXXVIII, Quaestio XXIII, Pars I, Articulus I*

St. Cyril of Alexandria — *Disputatio XXXVII, Quaestio XII, Articulus I, Caput V, Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput III, Disputatio XLIX, Quaestio XII, Articulus VIII, Caput I, Disputatio LII, Quaestio XII, Caput IV, Disputatio LV, Quaestio XII, Articulus XI, Caput III, Disputatio LVII, Quaestio XIII, Articulus III, Disputatio LVII, Quaestio XIII, Articulus V, Disputatio LIX, Quaestio XIII, Articulus XII, Disputatio LXVIII, Quaestio XIV, Articulus XIII, Caput VI, Disputatio LXXXIV, Quaestio XXI, Articulus I*

St. Cyril of Jerusalem — *Disputatio XXXVII, Quaestio XII, Articulus I, Caput V, Disputatio LII, Quaestio XII, Caput IV*

St. Gregory of Nazianzus — *Disputatio XIV, Quaestio I, Articulus X, Caput IV, Disputatio LVI, Quaestio XII, Articulus XII, Disputatio LXXXIV, Quaestio XXI, Articulus I, Disputatio LXXXV, Quaestio XXI, Articulus I, Caput I*

St. Gregory of Nyssa — *Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XXXVII, Quaestio XII, Articulus I, Caput V, Disputatio LV, Quaestio XII, Articulus XI, Caput III, Disputatio LVII, Quaestio XIII, Articulus I, Caput III, Disputatio LXXXIV, Quaestio XX, Articulus III, Disputatio LXXXVII, Quaestio XXII, Articulus I, Caput I, Disputatio LXXXVII, Quaestio XXII, Articulus I, Caput III, Disputatio LXXXVII, Quaestio XXII, Articulus III, Disputatio LXXXVII, Quaestio XXII, Articulus IV*

St. Hilary of Poitiers — *Disputatio XXI, Quaestio III, Articulus IV, Disputatio XXII, Quaestio III, Articulus VIII, Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput III, Disputatio XCI, Quaestio XXIII, Articulus V, Caput VIII*

St. Thomas — *Disputatio I, Quaestio I, Articulus I, Caput I, Disputatio I, Quaestio I, Articulus I, Caput II, Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio III, Quaestio I, Articulus I, Caput VI, Disputatio IV, Quaestio I, Articulus II, Caput III, Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio VI, Quaestio I, Articulus II, Caput II, Disputatio VI, Quaestio I, Articulus II, Caput III, Disputatio VII, Quaestio I, Articulus III, Caput III, Disputatio VII, Quaestio I, Articulus IV*

T

Tertullian — *Disputatio XVII, Quaestio I, Articulus X, Caput I, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio XXIX, Quaestio VIII, Articulus II, Caput II, Disputatio XXXI, Quaestio X, Articulus I, Caput III, Disputatio XXXVI, Quaestio XI, Articulus III, Disputatio XXXVI, Quaestio XI, Articulus IV, Disputatio XLVII, Quaestio XII, Articulus VI, Caput III, Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput III, Disputatio XLIX, Quaestio XII, Articulus VIII, Caput I*

Theodoret — *Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio III, Quaestio I, Articulus I, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XX, Quaestio II, Articulus III, Caput III, Disputatio XXI, Quaestio III, Articulus II, Caput II, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXXVI, Quaestio XI, Articulus III, Disputatio XXXVI, Quaestio XI, Articulus IV, Disputatio XXXVII, Quaestio XII, Articulus I, Caput III, Disputatio XXXVII, Quaestio XII, Articulus I, Caput V*

Theophilus of Antioch — *Disputatio XXVIII, Quaestio VIII, Articulus I, Caput III, Disputatio XXIX, Quaestio VIII, Articulus II, Caput II*

Theophylact — *Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio XII, Quaestio I, Articulus X, Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput VI, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXVIII, Quaestio VIII, Articulus I, Caput IV, Disputatio XXXVII, Quaestio XII, Articulus I, Caput III, Disputatio XXXVII, Quaestio XII, Articulus I, Caput V, Disputatio XLVII, Quaestio XII, Articulus VI, Caput II*

Thomas de Argentina — *Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XXXVIII, Quaestio XII, Articulus II, Caput II, Disputatio XLII, Quaestio XII, Articulus V, Caput II, Disputatio XLIII, Quaestio XII, Articulus V, Caput II, Disputatio XLIII, Quaestio XII, Articulus V, Caput VI, Disputatio LVII, Quaestio XIII, Articulus I, Caput II, Disputatio LX, Quaestio XIV, Articulus VI, Caput IV, Disputatio LXXIII, Quaestio XV, Articulus II, Caput III*

Thomas de Vio — *Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio XVIII, Quaestio I, Articulus X, Caput I, Disputatio XLVIII, Quaestio XII, Articulus VIII, Caput III, Disputatio XLIX, Quaestio XII, Articulus VIII, Caput I, Disputatio LIII, Quaestio XII, Caput II, Disputatio LXXXI, Quaestio XIX, Articulus IV, Caput I, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput I, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput V, Disputatio LXXXVII, Quaestio XXII, Articulus IV, Disputatio XCIV, Quaestio XXIII, Articulus VIII, Caput II*

W

William of Ockham — *Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio XXXIV, Quaestio X, Articulus VI, Caput II, Disputatio LXXIV, Quaestio XV, Articulus III, Caput I, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput V, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput II, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput XIII, Disputatio XCI, Quaestio XXIII, Articulus V, Caput III, Disputatio XCI, Quaestio XXIII, Articulus V, Caput V*

INDEX OF TOPICS

A

Absurdity — *Disputatio I, Quaestio I, Articulus I, Caput I, Disputatio XXXVI, Quaestio XI, Articulus IV, Disputatio XLI, Quaestio XII, Articulus V, Caput II, Disputatio XLII, Quaestio XII, Articulus V, Caput II, Disputatio XLIV, Quaestio XII, Articulus V, Caput I, Disputatio L, Quaestio XII, Articulus VIII, Caput I, Disputatio L, Quaestio XII, Caput IV, Disputatio L, Quaestio XII, Caput V, Disputatio L, Quaestio XII, Caput VI, Disputatio L, Quaestio XII, Caput VII*

Acceptance — *Disputatio XXXII, Quaestio X, Articulus VI, Disputatio LXXVIII, Quaestio XVIII, Articulus II, Disputatio LXXXVI, Quaestio XXI, Articulus I, Disputatio LXXXVI, Quaestio XXI, Articulus III, Disputatio XCI, Quaestio XXIII, Articulus V, Disputatio XCI, Quaestio XXIII, Articulus V, Caput XVII, Disputatio XCV, Quaestio XXIII, Articulus III, Caput VI*

Accidens — *Disputatio X, Quaestio I, Articulus VII, Caput VII, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXIII, Quaestio V, Articulus III, Disputatio XXV, Quaestio VII, Articulus IV, Disputatio XXVI, Quaestio VII, Articulus IV, Caput II, Disputatio XXVI, Quaestio VII, Articulus IV, Caput III, Disputatio XXVIII, Quaestio VIII, Articulus I, Disputatio XXVIII, Quaestio VIII, Articulus II, Disputatio XXIX, Quaestio VIII, Articulus II, Caput V, Disputatio XXX, Quaestio VIII, Articulus III, Caput I*

Accident — *Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXII, Quaestio III, Articulus VIII, Disputatio XXIV, Quaestio VI, Articulus IV, Disputatio XXV, Quaestio VII, Articulus II, Caput V, Disputatio XXVIII, Quaestio VIII, Articulus I, Disputatio XXIX, Quaestio VIII, Articulus II, Caput III, Disputatio XXX, Quaestio X, Articulus I, Disputatio XXXII, Quaestio X, Articulus VI, Disputatio XXXVI, Quaestio XII, Articulus I*

Accommodation — *Disputatio III, Quaestio I, Articulus I, Caput II, Disputatio XIII, Quaestio I, Articulus X, Caput II, Disputatio XIV, Quaestio I, Articulus X, Caput IV, Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XV, Quaestio I, Articulus X, Caput I, Disputatio XVI, Quaestio I, Articulus X, Caput III, Disputatio XVIII, Quaestio I, Articulus X, Caput VI*

Action — *Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio VIII, Quaestio I, Articulus IV, Caput VI, Disputatio IX, Quaestio I, Articulus IV, Caput III, Disputatio XII, Quaestio I, Articulus IX, Disputatio XXII, Quaestio III, Articulus V, Caput V, Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio XXII, Quaestio III, Articulus VI, Disputatio XXIII, Quaestio V, Articulus I, Caput IV, Disputatio XXIII, Quaestio V, Articulus V, Disputatio XXVIII, Quaestio VIII, Articulus I*

Addition —
Disputatio XIV, Quaestio I, Articulus X, Caput V, Disputatio XV, Quaestio I, Articulus X, Caput III, Disputatio XVII, Quaestio I, Articulus X, Caput I, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XXII, Quaestio III, Articulus V, Caput II, Disputatio XXII, Quaestio III, Articulus V, Caput V, Disputatio XXIV, Quaestio VI, Articulus III, Caput I, Disputatio XXV, Quaestio VII, Articulus IV, Disputatio XXVI, Quaestio VII, Articulus IV, Caput II

Affection — *Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio VIII, Quaestio I, Articulus IV, Caput VI, Disputatio XX, Quaestio III, Articulus II, Disputatio XXIII, Quaestio V, Articulus III, Disputatio XXVIII, Quaestio VIII, Articulus I, Caput V, Disputatio XXX, Quaestio VIII, Articulus IV, Disputatio XXXIX, Quaestio XII, Articulus II, Caput II, Disputatio LIV, Quaestio XII, Articulus X, Caput I, Disputatio LVII, Quaestio XIII, Articulus II, Disputatio LVII, Quaestio XIII, Articulus III*

Agreement — *Disputatio I, Quaestio I, Articulus I, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput I, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XXII, Quaestio III, Articulus V, Caput VI, Disputatio XXII, Quaestio V, Articulus I, Disputatio XXIV, Quaestio VI, Articulus IV, Disputatio XXVIII, Quaestio VIII, Articulus I, Disputatio XXXII, Quaestio X, Articulus V, Disputatio XXXIX, Quaestio XII, Articulus II, Caput I, Disputatio LIII, Quaestio XII, Caput II*

Angel —
Disputatio II, Quaestio I, Articulus I, Caput III, Disputatio IV, Quaestio I, Articulus II, Caput V, Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio V, Quaestio I, Articulus II, Caput III, Disputatio VII, Quaestio I, Articulus III, Caput III, Disputatio XVIII, Quaestio I, Articulus X, Caput II, Disputatio XVIII, Quaestio I, Articulus X, Caput VI, Disputatio XIX, Quaestio II, Articulus I, Caput III, Disputatio XIX, Quaestio II, Articulus III, Disputatio XX, Quaestio III

Appetite —
Disputatio VIII, Quaestio I, Articulus IV, Caput VI, Disputatio XXIII, Quaestio V, Articulus I, Caput II, Disputatio XXIII, Quaestio V, Articulus I, Caput IV, Disputatio XXIII, Quaestio V, Articulus V, Disputatio XXIII, Quaestio VI, Articulus I, Disputatio XXXVI, Quaestio XII, Articulus I, Disputatio XXXVII, Quaestio XII, Articulus I, Caput III, Disputatio XXXVII, Quaestio XII, Articulus I, Caput VI, Disputatio L, Quaestio XII, Caput IX, Disputatio LX, Quaestio XIV, Articulus VIII

Application — *Quaestio I, Articulus I, Disputatio XV, Quaestio I, Articulus X, Caput V, Disputatio XXX, Quaestio VIII, Articulus III, Caput I, Disputatio XXX, Quaestio X, Articulus I, Disputatio XLIV, Quaestio XII, Articulus V, Caput I, Disputatio XLVII, Quaestio XII, Articulus VI, Caput IV, Disputatio XLVII, Quaestio XII, Articulus VI, Caput VI, Disputatio LVIII, Quaestio XIII, Articulus VIII, Caput III, Disputatio LXIX, Quaestio XV, Articulus I, Disputatio LXXXVII, Quaestio XXII, Articulus I, Caput V*

Apprehension — *Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio XIX, Quaestio II, Articulus I, Caput II, Disputatio XXIII, Quaestio V, Articulus V, Disputatio XXIII, Quaestio VI, Articulus I, Disputatio XXXI, Quaestio X, Articulus I, Caput III, Disputatio XXXII, Quaestio X, Articulus III, Disputatio XXXVI, Quaestio XI, Articulus III, Disputatio XXXVIII, Quaestio XII, Articulus II, Caput III, Disputatio XLIII, Quaestio XII, Articulus V, Caput V, Disputatio XLVII, Quaestio XII, Articulus VII*

Aptitude — *Disputatio XII, Quaestio I, Articulus VIII, Caput III, Disputatio XXIX, Quaestio VIII, Articulus II, Caput IV, Disputatio XXX, Quaestio IX, Articulus II, Disputatio LV, Quaestio XII, Articulus XI, Caput I, Disputatio LXXV, Quaestio XVI, Articulus II, Caput II, Disputatio LXXVIII, Quaestio XVII, Articulus I, Disputatio LXXXIII, Quaestio XIX, Articulus X, Disputatio XCI, Quaestio XXIII, Articulus V, Caput VIII*

Argument — *Disputatio III, Quaestio I, Articulus I, Caput VI, Disputatio IV, Quaestio I, Articulus II, Caput V, Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio VI, Quaestio I, Articulus II, Caput II, Disputatio VI, Quaestio I, Articulus II, Caput III, Disputatio VII, Quaestio I, Articulus III, Caput III, Disputatio VII, Quaestio I, Articulus IV, Disputatio VIII, Quaestio I, Articulus IV, Caput VI, Disputatio X, Quaestio I, Articulus VII, Caput V, Disputatio X, Quaestio I, Articulus VII, Caput VII*

Attainment — *Disputatio I, Quaestio I, Articulus I, Caput II, Disputatio XXIV, Quaestio VI, Articulus IV, Disputatio XLV, Quaestio XII, Articulus V, Caput I, Disputatio LXXXII, Quaestio XIX, Articulus V, Caput V, Disputatio LXXXVII, Quaestio XXII, Articulus I, Caput V, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput IV, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Caput IX, Disputatio LXXXIX, Quaestio XXIII, Articulus IV, Disputatio XCI, Quaestio XXIII, Articulus V, Caput V, Disputatio XCI, Quaestio XXIII, Articulus V*

Authority — *Quaestio I, Articulus I, Disputatio III, Quaestio I, Articulus I, Caput VI, Disputatio IV, Quaestio I, Articulus II, Caput III, Disputatio IV, Quaestio I, Articulus II, Caput V, Disputatio IV, Quaestio I, Articulus II, Caput VIII, Disputatio V, Quaestio I, Articulus II, Caput III, Disputatio VI, Quaestio I, Articulus II, Caput II, Disputatio X, Quaestio I, Articulus VIII, Disputatio XII, Quaestio I, Articulus VIII, Caput III, Disputatio XII, Quaestio I, Articulus IX*

B

Baptism — *Disputatio XV, Quaestio I, Articulus X, Caput I, Disputatio XLVII, Quaestio XII, Articulus VI, Caput IV, Disputatio LXVII, Quaestio XIV, Articulus XIII, Caput III, Disputatio LXVII, Quaestio XIV, Articulus XIII, Caput IV, Disputatio XCI, Quaestio XXIII, Articulus V, Caput III, Disputatio XCI, Quaestio XXIII, Articulus V, Caput VIII, Disputatio XCI, Quaestio XXIII, Articulus V, Caput IX, Disputatio XCI, Quaestio XXIII, Articulus V, Disputatio XCV, Quaestio XXIII, Articulus III, Caput IV, Disputatio XCVI, Quaestio XXIII, Articulus III, Caput I*

Beatitude — *Disputatio I, Quaestio I, Articulus I, Caput II, Disputatio III, Quaestio I, Articulus I, Caput II, Disputatio VII, Quaestio I, Articulus IV, Disputatio VIII, Quaestio I, Articulus IV, Caput II, Disputatio VIII, Quaestio I, Articulus IV, Caput V, Disputatio IX, Quaestio I, Articulus V, Disputatio X, Quaestio I, Articulus VII, Caput II, Disputatio X, Quaestio I, Articulus VII, Caput III, Disputatio X, Quaestio I, Articulus VII, Caput V, Disputatio X, Quaestio I, Articulus VIII*
