COMMENTARIES AND DISPUTATIONS

on the First Part of St. Thomas - Volume One

Containing the first twenty-six Questions, by Father Gabriel Vazquez of Belmonte, Theologian of the Society of Jesus.

To the Most Illustrious and Most Reverend Lord Don Pedro Portocarrero, Bishop of Cuenca, and High Inquisitor of Heresies in the Kingdoms of Spain. With privilege.

*

Complutum (Alcala), from the press of the widow of Ioannes Gratianus. 1598.

Translated by Stiven Peter.
English edition dated April 24, 2026.

CONTENTS

Ad Lectorem - To the Reader

Prologus - Prologue

Praefatio ad primam Quaestionem - Preface to the First Question

Quaestio I- On sacred doctrine, what it is and to what it extends, divided into ten articles

- **Articulus I** - Whether, besides the philosophical disciplines, it is necessary to have another doctrine *(Quaestio I)*
- **Articulus II**- Whether sacred doctrine is a science *(Quaestio I)*
- **Articulus III**- Whether sacred doctrine is one science *(Quaestio I)*
- **Articulus IV**- Whether sacred doctrine is a practical science *(Quaestio I)*
- **Articulus V**- Whether sacred doctrine is more worthy than the other sciences *(Quaestio I)*
- **Articulus VI**- Whether sacred doctrine is wisdom *(Quaestio I)*
- **Articulus VII**- Whether God is the subject of this science *(Quaestio I)*
- **Articulus VIII**- Whether sacred doctrine is argumentative *(Quaestio I)*
- **Articulus IX**- Whether Sacred Scripture ought to use metaphors *(Quaestio I)*
- **Articulus X**- Whether sacred Scripture under one letter has many senses *(Quaestio I)*

Disputatio I- On the necessity and notion of sacred doctrine

- **Caput I**- On in what sense theology is necessary to each person and to the Church *(Disputatio I)*
- **Caput II**- The true view *(Disputatio I)*

Disputatio II- On the sense of Isaiah 64: "Eye has not seen"

- **Caput I**- Some interpret the place of the mystery of the Incarnation *(Disputatio II)*
- **Caput II** - That the same place of Isaiah is to be understood of the goods of the other life; the truer opinion *(Disputatio II)*
- **Caput III**- That the same place of Isaiah is alleged by Paul in the same sense *(Disputatio II)*
- **Caput IV**- Digression on Paul's words, "But the spiritual man judges all things" *(Disputatio II)*

Disputatio III- On the utility and method of scholastic theology

- **Caput I**- Heretics disparage scholastic theology *(Disputatio III)*
- **Caput II**- The utility of scholastic theology is defended against the heretics *(Disputatio III)*
- **Caput III**- First objection of the heretics *(Disputatio III)*
- **Caput IV**- Second objection *(Disputatio III)*
- **Caput V**- Third objection *(Disputatio III)*
- **Caput VI**- Fourth objection *(Disputatio III)*

Disputatio IV- Whether theology is truly and properly a science

- **Caput I**- Status of the controversy *(Disputatio IV)*
- **Caput II**- The opinion of Francis of Marchia *(Disputatio IV)*
- **Caput III**- What Henry held *(Disputatio IV)*
- **Caput IV**- The opinion of Cajetan *(Disputatio IV)*
- **Caput V**- The opinion of Albert and the Thomists *(Disputatio IV)*
- **Caput VI**- That the theology of wayfarers is not properly science is proved by authority *(Disputatio IV)*
- **Caput VII**- The reason by which others are accustomed to prove this opinion *(Disputatio IV)*
- **Caput VIII**- The best reason for the last opinion *(Disputatio IV)*

Disputatio V - On the quality of the assent to the theological conclusion, and of the habit concerning it

- **Caput I**- Aureolus's opinion: that the habit of theology is declarative, not adhesive *(Disputatio V)*
- **Caput II**- What Ockham and the Nominales think *(Disputatio V)*
- **Caput III**- The true opinion *(Disputatio V)*

Disputatio VI- On the subalternation of our Theology

- **Caput I**- The opinion of Cajetan and others *(Disputatio VI)*
- **Caput II**- The true opinion on the subalternation of Theology *(Disputatio VI)*

Disputatio VII- On the unity of this science

- **Caput I**- Durandus holds that our theology is not one science *(Disputatio VII)*
- **Caput II**- The truer and more common opinion *(Disputatio VII)*
- **Caput III**- Confirmation of the preceding opinion from Cajetan and St. Thomas *(Disputatio VII)*
- **Caput IV**- A truer explication and defense of the latter opinion *(Disputatio VII)*

Caput V- How theology uses natural principles, although it is one science *(Disputatio VII)*

Disputatio VIII- Whether our theology is practical or speculative

Caput I- The teaching of St. Thomas and the sentence of Scotus *(Disputatio VIII)*

Caput II- Two other opinions which Durandus reports *(Disputatio VIII)*

Caput III- What Henry held *(Disputatio VIII)*

Caput IV- The opinion of Durandus *(Disputatio VIII)*

Caput V- Notes for the explication of the truer opinion *(Disputatio VIII)*

Caput VI- Theology is simultaneously practical and speculative *(Disputatio VIII)*

Disputatio IX- On how the practical and the speculative belong to Theology

Caput I- On those who say the same science is both, but not the same habit; refutation *(Disputatio IX)*

Caput II - Cajetan's account: practical/speculative as essential only in finite sciences; evaluation *(Disputatio IX)*

Caput III - The truer opinion: the same habit of Theology is formally both practical and speculative *(Disputatio IX)*

Disputatio X- On the subject of theology

Caput I- State of the question *(Disputatio X)*

Caput II- The opinion of Durandus *(Disputatio X)*

Caput III- The opinion of Durandus is refuted *(Disputatio X)*

Caput IV- Two other opinions *(Disputatio X)*

Caput V- That God under the absolute notion of God is the subject of Theology *(Disputatio X)*

Caput VI- On the difficulty with Bassolis's opinion *(Disputatio X)*

Caput VII- Arguments that can be opposed *(Disputatio X)*

Against this last opinion there are arguments from which some third opinion seems able to be proved

Disputatio XI- Whether the Theologian can evidently dissolve the adversaries' arguments

Caput I- The opinion of Durandus *(Disputatio XI)*

Caput II- What Caietanus holds *(Disputatio XI)*

Caput III - The more probable view: that no argument directly against a mystery can be evidently positively solved by the theologian *(Disputatio XI)*

Disputatio XII- On the loci of Theology and on treating theological questions

- **Caput I**- What is a theological locus, and how many kinds there are *(Disputatio XII)*
- **Caput II**- On the use of the five prior loci *(Disputatio XII)*
- **Caput III** - On the authority of the Scholastics and the philosophers, and on philosophic reasoning *(Disputatio XII)*
- **Caput IV**- On human history *(Disputatio XII)*
- **Caput V**- The difference between human history and philosophical reason *(Disputatio XII)*

Disputatio XIII- That under the same letter there can be many senses

- **Caput I**- The error of the heretics *(Disputatio XIII)*
- **Caput II**- The Catholic truth *(Disputatio XIII)*

Disputatio XIV- On the use of accommodation in Scripture

- **Caput I** - Not only the Fathers, but ecclesiastical writers too have used Scripture by accommodation *(Disputatio XIV)*
- **Caput II** - Many things are recited by accommodation by the Evangelists, as Iansenius asserts *(Disputatio XIV)*
- **Caput III** - Others, however, affirm that all testimonies of the Old Testament are recited by the Evangelists in the literal sense *(Disputatio XIV)*
- **Caput IV**- A middle opinion: these are cited neither by mere accommodation nor in an equally proximate literal sense, but in a mystical sense *(Disputatio XIV)*
- **Caput V** - Certain by accommodation, which, however, approach much to the literal, are alleged by the Evangelists *(Disputatio XIV)*
- **Caput VI**- The various use of Scripture by accommodation *(Disputatio XIV)*
- **Caput VII**- How Scripture is useful for arguing by accommodation *(Disputatio XIV)*

Disputatio XV

- **Caput I**- The opinion of Lyranus *(Disputatio XV)*
- **Caput II**- Opinio Abulensis *(Disputatio XV)*
- **Caput III**- The truer opinion on the literal sense *(Disputatio XV)*
- **Caput IV**- On the literal sense of parables *(Disputatio XV)*
- **Caput V**- Corollaries of the preceding doctrine *(Disputatio XV)*
- **Caput VI**- Rule for eliciting the literal sense *(Disputatio XV)*

Disputatio XVI- On the mystical and spiritual sense

Caput III- The four senses of Scripture are illustrated by examples *(Disputatio XVI)*

Caput IV- Corollaries of the preceding doctrine *(Disputatio XVI)*

Caput V- How the mystical sense is useful for argument *(Disputatio XVI)*

Disputatio XVII- Whether under the same letter several literal senses are contained

Caput I - Under the same letter there are never several literal senses, taught Michael Medina *(Disputatio XVII)*

Caput II - The common opinion: that multiple literal senses are equally under the same letter *(Disputatio XVII)*

Caput III- With a certain moderation the latter opinion is approved *(Disputatio XVII)*

Disputatio XVIII- Various passages are to be examined

Caput I- Some notes *(Disputatio XVIII)*

Caput II- The place of Psalm 2: "The Lord said to me" *(Disputatio XVIII)*

Caput III- Locus Genesis 1: "In principio creavit Deus" *(Disputatio XVIII)*

Caput IV- Locus Danielis 9: "Et erit in templo abominatio" *(Disputatio XVIII)*

Caput V - Locus Isaiae 53: "Vere languores nostros ipse tulit, et dolores nostros ipse portavit" *(Disputatio XVIII)*

Caput VI- Locus Isaiae: "Generationem eius quis enarrabit?" *(Disputatio XVIII)*

Quaestio II- On God

Articulus I- Whether God exists is self - evident *(Quaestio II)*

Articulus II- Whether the existence of God is demonstrable *(Quaestio II)*

Articulus III- Whether God exists *(Quaestio II)*

Disputatio XIX- On the doctrine of this article

Caput III- The best reason by which the aforesaid opinion is proved *(Disputatio XIX)*

Caput IV- Refutation of the arguments of the first opinion *(Disputatio XIX)*

Disputatio XX- Whether God's existence can be proved by a true demonstration

Caput I- The error of the atheists *(Disputatio XX)*

Caput II- Alliacensis judges that the existence of God cannot be shown evidently *(Disputatio XX)*

Caput III - That God's existence can be demonstrated: the common opinion of the theologians *(Disputatio XX)*

Caput IV- That God exists is demonstrated by arguments *(Disputatio XX)*

Quaestio III- On the simplicity of God

Articulus I- Whether God is a body *(Quaestio III)*

Articulus II- Whether God is composed of matter and form *(Quaestio III)*

Articulus III- Whether God is the same as His essence or nature *(Quaestio III)*

Articulus IV- Whether in God essence and existence are the same *(Quaestio III)*

Articulus V- Whether God is in some genus *(Quaestio III)*

Articulus VI- Whether there are any accidents in God *(Quaestio III)*

Articulus VII- Whether God is absolutely simple *(Quaestio III)*

Articulus VIII- Whether God enters into the composition of other things *(Quaestio III)*

Disputatio XXI- Whether God is a body or composed of matter and form

Caput I- Various errors *(Disputatio XXI)*

Caput II- Catholic truth established by the authority of Scripture and the Fathers *(Disputatio XXI)*

Caput III- Reasons of the same opinion *(Disputatio XXI)*

Disputatio XXII- Whether God is in some genus with created things

Caput I- Status of the controversy *(Disputatio XXII)*

Caput II- The Nominalists held that God is placed in a predicament *(Disputatio XXII)*

Caput III - The truer position, proved by six reasons of others: that God cannot be placed in a predicament *(Disputatio XXII)*

Caput IV- The first efficacious reason for the foregoing position *(Disputatio XXII)*

Caput V- The latter reason *(Disputatio XXII)*

Caput VI- The foregoing reason is confirmed by the doctrine of the Fathers *(Disputatio XXII)*

Caput VII- On the ways of knowing and naming God *(Disputatio XXII)*

Quaestio IV- On the perfection of God

Articulus I- Whether God is perfect *(Quaestio IV)*

Articulus II- Whether the perfections of all things are in God *(Quaestio IV)*

Articulus III- Whether any creature can be like God *(Quaestio IV)*

Quaestio V- On the good in general

Articulus I- Whether the good differs in reality from being *(Quaestio V)*

Articulus II- Whether good, according to reason, is prior to being *(Quaestio V)*

Articulus III- Whether every being is good *(Quaestio V)*

Articulus IV- Whether the good has the nature of a final cause *(Quaestio V)*

Articulus V- Whether the notion of the good consists in mode, species, and order *(Quaestio V)*

Articulus VI - Whether the good is fittingly divided into the honorable, the useful, and the pleasurable *(Quaestio V)*

Disputatio XXIII- What is the universal formal ratio of the good, and in what way it befits God

Caput I- The teaching of Durandus *(Disputatio XXIII)*

Caput II- Refutation of the preceding opinion *(Disputatio XXIII)*

Caput III- Two other opinions on the same question *(Disputatio XXIII)*

Caput IV- The prior part of the truer opinion *(Disputatio XXIII)*

Caput V- On the good that is convertible with being, and on the opposite evil *(Disputatio XXIII)*

Caput VI- Certain objections against the foregoing doctrine *(Disputatio XXIII)*

Caput VII- On whether the notion of goodness is absolute or relative *(Disputatio XXIII)*

Quaestio VI- On the goodness of God

Articulus I- Whether to be good belongs to God *(Quaestio VI)*

Articulus II- Whether God is the highest good *(Quaestio VI)*

Articulus III- Whether to be good by essence is proper to God *(Quaestio VI)*

Articulus IV- Whether all things are good by the divine goodness *(Quaestio VI)*

Disputatio XXIV- Whether to be good by essence is proper to God

Caput I- The view of St. Thomas and of Cajetan *(Disputatio XXIV)*

Caput II- The difficulty is explained *(Disputatio XXIV)*

Caput III- To whom goodness by essence belongs *(Disputatio XXIV)*

Quaestio VII- On the infinity of God

Articulus I- Whether God is infinite *(Quaestio VII)*

Articulus II- Whether anything other than God can be infinite by essence *(Quaestio VII)*

Articulus III- Whether something can be actually infinite according to magnitude. *(Quaestio VII)*

Articulus IV- Whether there can be an infinite in things according to multitude. *(Quaestio VII)*

Disputatio XXV- In what way it is proper to God to be infinite by essence

- **Caput I**- Some explain the reason of God's infinity from infinite attributes *(Disputatio XXV)*
- **Caput II**- St. Thomas, Cajetan, and recent authors; Aegidius, and Richard *(Disputatio XXV)*
- **Caput III** - Some explain God's infinitude from this, that he is not placed under a genus *(Disputatio XXV)*
- **Caput IV**- Albert the Great expounds the infinity of God in two other ways *(Disputatio XXV)*
- **Caput V** - The true account of the infinite according to essence is, not to be from another *(Disputatio XXV)*

Disputatio XXVI- On the infinite in created things

- **Caput I**- Two extreme sentences on this matter *(Disputatio XXVI)*
- **Caput III**- On the infinite according to multitude *(Disputatio XXVI)*

Quaestio VIII- On the existence of God in things

- **Articulus I**- Whether God is in all things *(Quaestio VIII)*
- **Articulus II**- Whether God is everywhere. *(Quaestio VIII)*
- **Articulus III**- Whether God is everywhere by essence, presence, and power *(Quaestio VIII)*
- **Articulus IV**- Whether to be everywhere is proper to God *(Quaestio VIII)*

Disputatio XXVII- Whether it is certain that God is everywhere

- **Caput I**- Errors on this matter *(Disputatio XXVII)*
- **Caput II**- The Catholic truth *(Disputatio XXVII)*
- **Caput III**- In what modes the presence of God in place is described *(Disputatio XXVII)*

Disputatio XXVIII- From God's operation in things, his presence in them is gathered

- **Caput I**- The state of the question and Scotus's reasons *(Disputatio XXVIII)*
- **Caput II**- What St. Thomas and others think *(Disputatio XXVIII)*
- **Caput III**- Some observations for the explanation of this controversy *(Disputatio XXVIII)*
- **Caput IV** - The middle opinion is proved by answering the testimonies of the later position *(Disputatio XXVIII)*

Disputatio XXIX- Whether God could be outside heaven or in the vacuum within heaven, or whether before the creation of the world He was somewhere

- **Caput I**- The assertion of Maior and Cajetan *(Disputatio XXIX)*

Caput II - That God is not outside heaven; the common opinion of the Scholastics, and the Fathers affirm it *(Disputatio XXIX)*

Caput III- The same common opinion is proved by reason *(Disputatio XXIX)*

Caput V- The arguments of the same opinion are dissolved *(Disputatio XXIX)*

Explicatio articuli - Explanation of the article

Disputatio XXX- How the modes by which God is said to exist in things are to be explained

Caput I- Various opinions concerning the first three modes *(Disputatio XXX)*

Caput II- The common and truer opinion *(Disputatio XXX)*

Caput III- Two other modes of God's existence in things *(Disputatio XXX)*

Quaestio IX- On the immutability of God

Articulus I- Whether God is altogether immutable *(Quaestio IX)*

Articulus II- Whether to be immutable is proper to God *(Quaestio IX)*

Quaestio X- On the eternity of God

Articulus I - Whether eternity is fittingly defined as the interminable possession, all at once, of life *(Quaestio X)*

Articulus II- Whether God is eternal *(Quaestio X)*

Articulus III- Whether to be eternal is proper to God *(Quaestio X)*

Articulus IV- Whether eternity differs from time *(Quaestio X)*

Articulus V- Whether aevum differs from time *(Quaestio X)*

Articulus VI- Whether there is only one aevum *(Quaestio X)*

On the operations of the Angels, cap. 1. On the beatific vision and grace, cap. 2. On bodily things and those subject to corruption, cap. 3

Disputatio XXXI - How eternity and immutability are distinguished, and which of them presupposes the other

Caput I- In what way eternity and immutability are distinguished *(Disputatio XXXI)*

Caput II- The opinion of Cajetan on the proposed question *(Disputatio XXXI)*

Caput III- What the more recent authors think *(Disputatio XXXI)*

Caput IV - The third opinion: eternity as composed of real duration and of the ratio of measure *(Disputatio XXXI)*

Caput V- Notes in favor of the truer opinion *(Disputatio XXXI)*

Disputatio XXXII- Whether any succession belongs to eternity

- **Caput I**- The common doctrine on this matter *(Disputatio XXXII)*

Disputatio XXXIII- On the various significations of aevum and Bonaventure's opinion

- **Caput I**- Various acceptions *(Disputatio XXXIII)*
- **Caput II**- What Bonaventure holds *(Disputatio XXXIII)*
- **Caput III**- That in the aevum there is no succession, as the common opinion holds *(Disputatio XXXIII)*
- **Caput IV** - On reconciling the testimonies of the Fathers and distinguishing aevum from eternity *(Disputatio XXXIII)*

Disputatio XXXIV- On whether the aevum is the measure of permanent things

- **Caput I**- Various opinions *(Disputatio XXXIV)*
- **Caput II**- The easier opinion *(Disputatio XXXIV)*

Disputatio XXXV- Whether the aevum of the Angels can be defined by our time as by a measure

- **Caput I**- What St. Thomas and his disciples, and Durandus, held *(Disputatio XXXV)*
- **Caput II**- This too is a controversy of words, not of things *(Disputatio XXXV)*
- **Caput III**- What is the definition and nature of the aevum *(Disputatio XXXV)*

Disputatio XXXVI - What is the measure of the operations of Angels, of the beatific vision, and of bodily things subject to corruption

- **Caput I**- On the operations of the Angels *(Disputatio XXXVI)*
- **Caput II**- On the beatific vision and grace *(Disputatio XXXVI)*
- **Caput III**- On corporeal things and those liable to corruption *(Disputatio XXXVI)*

Quaestio XI- On the unity of God

- **Articulus I**- Whether "one" adds something over and above being *(Quaestio XI)*
- **Articulus II**- Whether one and many are opposed *(Quaestio XI)*

Quaestio XII- How God is known by us

- **Articulus I**- Whether some created intellect can see God through his essence *(Quaestio XII)*
- **Articulus II** - Whether the essence of God is seen by a created intellect through some likeness *(Quaestio XII)*
- **Articulus III**- Whether the essence of God can be seen with bodily eyes *(Quaestio XII)*
- **Articulus IV**- Whether some intellect by its natural powers can see the divine essence *(Quaestio XII)*

Articulus V - Whether a created intellect needs some created light in order to see the divine essence *(Quaestio XII)*

Articulus VI - Whether among those seeing the essence of God one sees more perfectly than another *(Quaestio XII)*

Articulus VII- Whether those who see God through His essence comprehend Him *(Quaestio XII)*

Articulus VIII- Whether those who see God through His essence see all things in God *(Quaestio XII)*

Articulus IX - Whether the things that are seen in God are seen through certain similitudes *(Quaestio XII)*

Articulus X- Whether those who see God through the essence at the same time see all the things which they see in him *(Quaestio XII)*

Articulus XI- Whether someone in this life can see God through his essence *(Quaestio XII)*

Articulus XII- Whether by natural reason we can know God in this life *(Quaestio XII)*

Articulus XIII - Whether through grace a higher knowledge of God is had than that which is had through natural reason *(Quaestio XII)*

Disputatio XXXVII - Whether the vision of God, as He is, can be communicated by God to a created intellect

Caput I- The error of the Armenians and of Abelard *(Disputatio XXXVII)*

Caput III- How some endeavor to excuse Chrysostom *(Disputatio XXXVII)*

Caput IV- Further Latin Fathers concurring *(Disputatio XXXVII)*

Caput V- The contrary opinion must be rejected as contrary to Catholic teaching *(Disputatio XXXVII)*

Caput VI- The arguments for the Armenian position are proposed and answered *(Disputatio XXXVII)*

Disputatio XXXVIII - Whether by God's absolute power an intelligible species of God can be given, by which He may be clearly seen

Caput I- Two opposed opinions *(Disputatio XXXVIII)*

Caput II- The opinion which affirms that a species of the divine essence can be given is proved by a likeness from the production of the Word *(Disputatio XXXVIII)*

Caput III - The differences that some establish between the impressed species and the word are impugned *(Disputatio XXXVIII)*

Caput IV - On solving the objections against an impressed species of the divine essence *(Disputatio XXXVIII)*

Disputatio XXXIX

Caput I- The true interpretation of St. Thomas's view *(Disputatio XXXIX)*

Disputatio XL- Whether the essence of God is seen by the eye of the body by the blessed

- **Caput I**- What St. Augustine thought on this matter *(Disputatio XL)*
- **Caput II**- That God cannot be seen by the bodily eye *(Disputatio XL)*

Disputatio XLI- Whether the created intellect can see God by its own power

- **Caput I**- Against the error of the Anomoeans the Catholic doctrine is established *(Disputatio XLI)*
- **Caput II**- By natural power the intellect cannot see God; against Durandus it is proved *(Disputatio XLI)*

Disputatio XLII- Whether the light of glory necessary for seeing God is a habit, or an operation

- **Caput I**- The common opinion of the Scholastics *(Disputatio XLII)*
- **Caput II**- What in this matter has been defined by the Church *(Disputatio XLII)*

Disputatio XLIII- On the effect of the light of glory in the minds of the blessed

- **Caput I**- The opinion of Richard and others *(Disputatio XLIII)*
- **Caput II**- What Capreolus and other Thomists thought *(Disputatio XLIII)*
- **Caput V**- Finally, the opinion of Capreolus is impugned *(Disputatio XLIII)*
- **Caput VI** - That the intellect together with the light of glory alone is the complete principle of the vision, is proved by authority *(Disputatio XLIII)*
- **Caput VII**- The same opinion is confirmed by reason and is further explained *(Disputatio XLIII)*
- **Caput VIII** - The arguments by which it is proved that the light of glory is superfluous are dissolved *(Disputatio XLIII)*

Disputatio XLIV- Whether the light of glory can be made natural to some creature

- **Caput I**- That this cannot at all be done *(Disputatio XLIV)*
- **Caput II** - Whether the very vision of God is connatural to the intellect endowed with the light of glory *(Disputatio XLIV)*

Disputatio XLV - Whether, besides the light of glory, the light of the agent intellect is necessary for seeing God

- **Caput I**- The two scholastic opinions *(Disputatio XLV)*
- **Caput II** - What the light of the agent intellect is, and whether it contributes anything to the clear vision of God *(Disputatio XLV)*

Disputatio XLVI - Whether our intellect can be moved to the vision of God without the habit of the light of glory

Caput I- The prior opinion of Capreolus and of others *(Disputatio XLVI)*

Caput II- The truer opinion *(Disputatio XLVI)*

Disputatio XLVII- Whether God is seen equally by the blessed

Caput I- The Catholic truth is established against the heretics *(Disputatio XLVII)*

Caput II - Three other places of Scripture are examined, by which this same truth is wont to be proved *(Disputatio XLVII)*

Caput III- What the Fathers hold about the parable of the laborers, Matt. 20 *(Disputatio XLVII)*

Caput IV - The parable is explained according to its own sense, and Jovinian's argument is answered *(Disputatio XLVII)*

On the occasion of this argument, however, it also pleases me to examine something further, and to see whence indeed the measure of vision is to be taken

Disputatio XLVIII - Whether one who sees God as He is necessarily sees the things that are in Him formally

Caput I- What Scotus and others with him hold *(Disputatio XLVIII)*

Caput II- On the common and truer opinion *(Disputatio XLVIII)*

Caput III- That one divine person cannot be seen without the others *(Disputatio XLVIII)*

Disputatio XLIX- Not all futures and not all possibles are seen by the blessed

Caput I- Not all future things are seen by the Blessed *(Disputatio XLIX)*

Caput II- Not all possibles are known by the blessed *(Disputatio XLIX)*

Disputatio L- Whether the blessed see anything in the Word

Caput I- The opinion of Durandus *(Disputatio L)*

Caput II- What Henry (of Ghent) holds *(Disputatio L)*

Caput III- The Thomists' position *(Disputatio L)*

Caput IV- Refutation of the Thomists' opinion; first argument *(Disputatio L)*

Caput VI - The truer opinion is that no creature is seen by the force of the vision of God, but is seen by a special revelation *(Disputatio L)*

Caput VII - That in the Word creatures are known by a cognition different from that by which God himself is seen *(Disputatio L)*

Caput VIII- Which species of things the blessed know in the Word *(Disputatio L)*

Caput IX- Which future things the blessed see in the Word *(Disputatio L)*

Disputatio LI

Caput I- The various opinions of the scholastics on interpreting Augustine's mind *(Disputatio LI)*

Caput II- The true interpretation of Augustine's view *(Disputatio LI)*

Caput III- The latter part of the aforesaid opinion is proved *(Disputatio LI)*

Caput IV- Oppositions against the latter part *(Disputatio LI)*

Disputatio LII - Whether it is a dogma of faith that God cannot be comprehended by any creature, even the blessed

Caput I- What is called "comprehension" in St. Augustine and the other Fathers *(Disputatio LII)*

Caput II- What Scripture teaches about the comprehension of God *(Disputatio LII)*

Caput III- What the Latin Fathers think on this matter *(Disputatio LII)*

Caput IV - What can be gathered concerning the comprehension of God from the Greek Fathers *(Disputatio LII)*

Disputatio LIII- Whether, as God is clearly seen, He can also be comprehended by a creature

Caput I- By what reasoning Francisco de Vitoria and other recent authors assert the incomprehensibility of God *(Disputatio LIII)*

Caput III- The opinion of Ockham and the Nominalists on the same matter *(Disputatio LIII)*

Caput IV- An easier explanation of incomprehensibility *(Disputatio LIII)*

Disputatio LIV - Whether some creatures according to their proper formal reasons are seen successively in the Word

Caput I- Two opposing Thomist opinions *(Disputatio LIV)*

Caput II- How, on the foregoing foundations, the blessed can receive new revelations, and also see in the Word, with a succession of time *(Disputatio LIV)*

Disputatio LV- Whether Moses in this mortal life clearly saw the divine essence

Caput I- The opinion of St. Augustine and St. Thomas *(Disputatio LV)*

Caput III- From the Scripture of Exodus 33 it not only does not follow that Moses clearly saw the essence (*essentia*) of God, but the opposite also is not obscurely gathered. *(Disputatio LV)*

Caput IV- What Moses asked in those words of Exodus 33, "Show me your glory." *(Disputatio LV)*

Disputatio LVI

Caput I- Two opposing opinions. *(Disputatio LVI)*

Caput II - On others to whom some think a clear vision of the divine essence was conceded. *(Disputatio LVI)*

Quaestio XIII- On the names of God

Articulus I- Whether any name befits God *(Quaestio XIII)*

Articulus II- Whether any name is said of God substantially *(Quaestio XIII)*

Articulus III- Whether any name is said of God properly *(Quaestio XIII)*

Articulus IV- Whether the names said of God are synonymous *(Quaestio XIII)*

Articulus V - Whether those things which are said of God and of creatures are said univocally of them *(Quaestio XIII)*

Articulus VI- Whether names are said primarily of creatures rather than of God *(Quaestio XIII)*

Articulus VII - Whether the names which import a relation to creatures are said of God from time *(Quaestio XIII)*

Articulus VIII- Whether this name, God, is a name of the nature *(Quaestio XIII)*

Articulus IX- Whether this name "God" is incommunicable *(Quaestio XIII)*

Articulus X- Whether this name "God," said of God by participation and by nature and by likeness, is equivocal *(Quaestio XIII)*

Articulus XI - Whether the name "Who is" is God's proper name, and more suited to the divine nature *(Quaestio XIII)*

Articulus XII- Whether affirmative propositions can be formed about God *(Quaestio XIII)*

Disputatio LVII - On whether a name can be imposed upon God that signifies His essence quiditatively

Caput I- The various opinions of the theologians *(Disputatio LVII)*

Caput II - The assertion that not only the blessed but also wayfarers can signify God essentially and quiditatively *(Disputatio LVII)*

Disputatio LVIII- Concerning the doctrine of the article

Caput I- What the Fathers thought about this name, God *(Disputatio LVIII)*

Caput II- The opinion of St. Thomas on the same matter *(Disputatio LVIII)*

Caput III- In what sense the name "God" can be said to be connotative *(Disputatio LVIII)*

Disputatio LIX- Whether "Who is" is the same as the Tetragrammaton

- **Caput I**- Two extreme opinions; the prior opinion of St. Thomas *(Disputatio LIX)*
- **Caput II**- The truer opinion *(Disputatio LIX)*
- **Caput III** - The latter part of the opinion, that the name WHO IS, and the tetragrammaton, are the same *(Disputatio LIX)*

Quaestio XIV- On the knowledge of God

- **Articulus I**- Whether in God there is knowledge *(Quaestio XIV)*
- **Articulus II**- Whether God understands himself *(Quaestio XIV)*
- **Articulus III**- Whether God comprehends himself *(Quaestio XIV)*
- **Articulus IV**- Whether God's understanding is his substance *(Quaestio XIV)*
- **Articulus V**- Whether God understands things other than himself *(Quaestio XIV)*
- **Articulus VI**- Whether God knows things other than himself by a proper cognition *(Quaestio XIV)*
- **Articulus VII**- Whether the knowledge of God is discursive *(Quaestio XIV)*
- **Articulus VIII**- Whether the knowledge of God is the cause of things *(Quaestio XIV)*
- **Articulus IX**- Whether the knowledge of God is of non - beings *(Quaestio XIV)*
- **Articulus X**- Whether God knows evils *(Quaestio XIV)*
- **Articulus XI**- Whether God knows singulars *(Quaestio XIV)*
- **Articulus XII**- Whether God knows infinite things *(Quaestio XIV)*
- **Articulus XIII**- Whether the knowledge of God is of future contingents *(Quaestio XIV)*
- **Articulus XIV**- Whether God knows enunciables *(Quaestio XIV)*
- **Articulus XV**- Whether the knowledge of God is variable *(Quaestio XIV)*
- **Articulus XVI**- Whether God has practical knowledge concerning things *(Quaestio XIV)*

Disputatio LX- Whether God knows all things in Himself

- **Caput I**- Two opposing opinions *(Disputatio LX)*
- **Caput II**- Secunda sententia *(Disputatio LX)*

Disputatio LXI- On whether the knowledge of God is of non - beings

- **Caput I**- The ground of doubting *(Disputatio LXI)*
- **Caput II**- How non - being is referred to the intellect of God *(Disputatio LXI)*

Disputatio LXII- Whether God knows the malice of sin through his goodness

- **Caput I**- Whether God can, by his own goodness, know the evil which is of fault *(Disputatio LXII)*

Caput II- The opposed sentence, more probable: that God does not by himself, but through the opposite virtue, understand every sin *(Disputatio LXII)*

Disputatio LXIII - Whether God knows actually infinite things, not only possibles but also futures

Caput I- What is certain among all *(Disputatio LXIII)*

Caput II- The opposite sentence more probable *(Disputatio LXIII)*

Caput III- Solutions to the arguments of the prior opinion *(Disputatio LXIII)*

Disputatio LXIV - Whether God knows future contingents certainly by their real presence in eternity

Caput I - According to the Catholic faith and philosophical reason, that God foreknows all future things *(Disputatio LXIV)*

Caput II- According to the opinion of Richard and of some Thomists, future contingents are present in eternity, and thus are known certainly by God *(Disputatio LXIV)*

Caput III- The truer opinion holds *(Disputatio LXIV)*

Caput IV- On testimonies of the Fathers; against naming God's knowledge of future things "foreknowledge"; and on the distinction between the science of vision and of simple intelligence *(Disputatio LXIV)*

Caput V- What St. Thomas thought about this presence *(Disputatio LXIV)*

Disputatio LXV - Whether any account of the certainty of the knowledge by which God knows future things can be assigned

Caput I- Various scholastic opinions *(Disputatio LXV)*

Caput II- From the decree of the divine will a sufficient, though remoter, cause of the certainty of knowledge can be assigned *(Disputatio LXV)*

Caput IV - From the truth of futures and the infinity of the divine intellect is best inferred the certainty of His knowledge *(Disputatio LXV)*

Disputatio LXVI- Whether a singular proposition about a future contingent is true

Caput I- What Aristotle and certain Scholastics thought *(Disputatio LXVI)*

Caput II- On the principal reasons for that interpretation *(Disputatio LXVI)*

Caput III- The same truth is proved by a philosophical reason *(Disputatio LXVI)*

Disputatio LXVII- Whether future conditionals are certainly known by God

Caput I- The opinion of certain theologians of our time *(Disputatio LXVII)*

Caput IV- The arguments of the opposing opinion are dissolved *(Disputatio LXVII)*

Disputatio LXVIII- Whether the prescience of God takes away our free will

Caput I- The Catholic doctrine is set forth against the heretics *(Disputatio LXVIII)*

Caput II - The first argument of Wyclif against our liberty, to which Catholics reply in various ways *(Disputatio LXVIII)*

Caput III- Two other solutions to the same argument *(Disputatio LXVIII)*

Caput IV- The true solution of Wyclif's argument *(Disputatio LXVIII)*

Caput V- The subsequent argument of Wycliffe against the same liberty *(Disputatio LXVIII)*

Caput VI- That the foundation already laid must be strengthened; against the newer opinion that a thing is or will be because known by God, not conversely *(Disputatio LXVIII)*

Caput VII- Corollaries of the whole Disputation *(Disputatio LXVIII)*

Disputatio LXIX- Circa doctrinam Articuli

Caput I- What Scotus held *(Disputatio LXIX)*

Caput II- The true opinion *(Disputatio LXIX)*

Quaestio XV- De Ideis

Articulus I- Whether ideas exist *(Quaestio XV)*

Articulus II- Whether there are many ideas *(Quaestio XV)*

Articulus III- Whether of all things God knows, there are ideas *(Quaestio XV)*

Disputatio LXX- In what way creatures are said to exist in God

Caput I- What John Wyclif held *(Disputatio LXX)*

Caput II- The Catholic truth against Wyclif is proved *(Disputatio LXX)*

Disputatio LXXI- On ideas

Caput I - Preliminaries concerning the name "idea" and its reception; that ideas of creatures are in God *(Disputatio LXXI)*

Responsio- I answer that this difference is nothing, such that a thing objected to the intellect should be called an idea.

Disputatio LXXII- By what reason the essence of God is the idea of creatures

Caput I- Various opinions of the Schoolmen *(Disputatio LXXII)*

Disputatio LXXIII- How in God there are many ideas

- **Caput I**- In God there are many ideas distinguished only by reason *(Disputatio LXXIII)*
- **Caput II**- Ideas in God are not distinguished by the divine intellect, nor by the human seeing God, but by the wayfarer only *(Disputatio LXXIII)*
- **Caput III** - In God there are not said to be many arts, or sciences, as there are said to be many ideas *(Disputatio LXXIII)*

Disputatio LXXIV- On divine ideas

- **Caput I** - Idea and exemplar pertain to practical science; but idea can also pertain to speculative *(Disputatio LXXIV)*
- **Caput II** - Not only of species and genera, but also of individuals there are singular ideas in God *(Disputatio LXXIV)*
- **Caput III** - Of matter and of accidents, which are really distinct from substance, peculiar ideas must be posited *(Disputatio LXXIV)*

Quaestio XVI- On truth

- **Articulus I**- Whether truth is only in the intellect *(Quaestio XVI)*
- **Articulus II**- Whether truth is in the intellect composing and dividing *(Quaestio XVI)*
- **Articulus III**- Whether the true and being are convertible *(Quaestio XVI)*
- **Articulus IV**- Whether the good is prior to the true *(Quaestio XVI)*
- **Articulus V**- Whether God is truth *(Quaestio XVI)*
- **Articulus VI**- Whether there is one only truth, according to which all things are true *(Quaestio XVI)*
- **Articulus VII**- Whether created truth is eternal *(Quaestio XVI)*
- **Articulus VIII**- Whether truth is immutable *(Quaestio XVI)*

Disputatio LXXV- Whether the truth of the intellect is only in composition and division

- **Caput I**- The opinion of Ferrarensis and of others *(Disputatio LXXV)*
- **Caput II**- The opposite position *(Disputatio LXXV)*
- **Caput III**- The posterior opinion is proved by arguments *(Disputatio LXXV)*

Disputatio LXXVI - Whether the truth of enunciation is the conformity of the formal concept, or of the objective, with the thing itself

- **Caput I** - The truth of the intellect is the conformity of the objective concept with the thing *(Disputatio LXXVI)*

Caput II - From the foregoing position Durandus and Hervaeus gather certain points worth noting. *(Disputatio LXXVI)*

Disputatio LXXVII- In what way truth is in things outside the intellect

Caput I- So that, for an exact explanation of these articles, it is necessary to understand how truth is in things *(Disputatio LXXVII)*

Caput II- The preceding opinion is refuted *(Disputatio LXXVII)*

Caput III- The opinion of Capreolus and Soncinus *(Disputatio LXXVII)*

Caput IV- The more probable opinion *(Disputatio LXXVII)*

Caput V - From the preceding the doctrine of articles 3 and 4 of this question is elucidated *(Disputatio LXXVII)*

Caput V- On the supreme truth of God in judging, and on the nature of divine truth *(Articulus V)*

Disputatio LXXVIII- On the doctrine of these articles

Caput I- The position of St. Thomas *(Disputatio LXXVIII)*

Caput II- The more probable opinion *(Disputatio LXXVIII)*

Quaestio XVII- On falsity

Articulus I- Whether falsity is in things *(Quaestio XVII)*

Articulus II- Whether there is falsehood in sense *(Quaestio XVII)*

Articulus III- Whether falsehood is in the intellect *(Quaestio XVII)*

Articulus IV- Whether true and false are contraries *(Quaestio XVII)*

Quaestio XVIII- On the life of God

Articulus I- Whether living belongs to all natural things *(Quaestio XVIII)*

Articulus II- Whether life is a certain operation *(Quaestio XVIII)*

Articulus III- Whether life belongs to God *(Quaestio XVIII)*

Articulus IV- Whether all things are life in God *(Quaestio XVIII)*

Quaestio XIX- On the will of God

Articulus I- Whether in God there is will *(Quaestio XIX)*

Articulus II- Whether God wills other things besides Himself *(Quaestio XIX)*

Articulus III- Whether whatever God wills, He wills from necessity. *(Quaestio XIX)*

Articulus IV- Whether the will of God is the cause of things *(Quaestio XIX)*

Articulus V- Whether it belongs to assign some cause of the divine will *(Quaestio XIX)*

Articulus VI- Whether the will of God is always fulfilled *(Quaestio XIX)*

Articulus VII- Whether the will of God is mutable *(Quaestio XIX)*

Articulus VIII- Whether the will of God imposes necessity upon the things willed *(Quaestio XIX)*

Articulus IX- Whether the will of God is of evils. *(Quaestio XIX)*

Articulus X- Whether God has free choice. *(Quaestio XIX)*

Articulus XI- Whether in God the will of sign ought to be distinguished *(Quaestio XIX)*

Articulus XII- Whether the five signs are fittingly posited concerning the divine will *(Quaestio XIX)*

Disputatio LXXIX- Whether God necessarily wills all the things which He wills

Caput I- Opinion of Alexander, St. Thomas, and St. Bonaventure *(Disputatio LXXIX)*

Caput II- The will of God is borne necessarily toward possible things, yet toward future things freely - this is more probable. *(Disputatio LXXIX)*

Caput III- Confirmation of the prior part; and on the necessity or liberty of God's will toward possibles and futures, with replies to difficulties *(Disputatio LXXIX)*

Disputatio LXXX- Whether the free willing of God is something in Him formally

Caput I- Various opinions of the Scholastics *(Disputatio LXXX)*

Caput II- How the divine will, by which God freely willed to create, befits Him *(Disputatio LXXX)*

Disputatio LXXXI - On God's operating ad extra by will, and on whether will is a more proximate cause than intellect

Caput I - That God operates ad extra by will, not by nature, is certain by Catholic faith *(Disputatio LXXXI)*

Caput XXIII - In the third argument he proves that a subject is necessary from which something be made, and therefore that matter is unbegotten; read Gregory of Rimini. *(Disputatio LXXXI)*

Caput II- Whether the divine will operates more proximately than the intellect *(Disputatio LXXXI)*

Disputatio LXXXII - Whether any cause, or at least a final reason, can be assigned for the divine will

Caput I- Two opinions of the theologians *(Disputatio LXXXII)*

Caput II - The truer opinion: that for God nothing other than his own goodness is the reason of willing *(Disputatio LXXXII)*

Caput III - That instances of the prior and the posterior must be assigned in God's decree *(Disputatio LXXXII)*

Caput IV - That authors differ in the way of distinguishing and ordering the instances of reason in the divine decree *(Disputatio LXXXII)*

Caput V - These instances are to be assigned according to the order of the objects among themselves *(Disputatio LXXXII)*

Caput VI - From the divine will alone, without a connection of things among themselves, instants ought not to be ordered. *(Disputatio LXXXII)*

Disputatio LXXXIII - Whether there is in God some will of good pleasure which is not always fulfilled

Caput II - The affirmative thesis: that God has a will of good pleasure regarding the salvation of all and a right life *(Disputatio LXXXIII)*

Caput III- Why this will is called antecedent *(Disputatio LXXXIII)*

Caput IV- In what way the will by which God has an antecedent will of the salvation of men is absolute, and nevertheless is not always fulfilled *(Disputatio LXXXIII)*

Caput V- The arguments of the prior opinion are dissolved *(Disputatio LXXXIII)*

Quaestio XX- On the love of God

Articulus I- Whether love is in God *(Quaestio XX)*

Articulus II- Whether God loves all things *(Quaestio XX)*

Articulus III- Whether God equally loves all things *(Quaestio XX)*

Articulus IV- Whether God always loves better things more *(Quaestio XX)*

Disputatio LXXXIV- On the affections of the will of God in general

Caput I- Which affections do not befit God *(Disputatio LXXXIV)*

Caput II- On the love of God *(Disputatio LXXXIV)*

Caput III- That the affection of hatred befits God *(Disputatio LXXXIV)*

Caput IV- On the wrath of God *(Disputatio LXXXIV)*

Dubium I *(Articulus IV)*

Quaestio XXI- On the justice and mercy of God

Articulus I- Whether there is justice in God *(Quaestio XXI)*

Articulus II- Whether the justice of God is truth *(Quaestio XXI)*

Articulus III- Whether mercy belongs to God *(Quaestio XXI)*

Articulus IV- Whether in all the works of God there are mercy and justice *(Quaestio XXI)*

Disputatio LXXXV- Whether in God there is commutative justice

Caput I- A recent opinion of certain theologians *(Disputatio LXXXV)*

Caput II- The truer opinion: that commutative justice, according to its proper notion, is not in God; and this is supported by the consent of all the theologians *(Disputatio LXXXV)*

Caput III- Certain preliminaries to shaping the reason for the preceding position *(Disputatio LXXXV)*

Caput IV- That in God there is not commutative justice according to its proper notion; it is proved from the ratio of giving and receiving *(Disputatio LXXXV)*

Caput V- The same is shown from the condition of God and the creature *(Disputatio LXXXV)*

Caput VI- That no obligation of proper justice arises in God from a promise *(Disputatio LXXXV)*

Caput VII- The arguments of the prior opinion are solved *(Disputatio LXXXV)*

Disputatio LXXXVI- On whether distributive justice is proper to God

Caput I- The opinion of certain Theologians *(Disputatio LXXXVI)*

Caput II- That distributive justice does not properly exist in God is proved by the authority of the Scholastics and of others *(Disputatio LXXXVI)*

Caput III- The foregoing opinion is proved by reason *(Disputatio LXXXVI)*

Caput IV- The adversaries' arguments are dissolved *(Disputatio LXXXVI)*

Quaestio XXII- On the providence of God

Articulus I- Whether providence befits God *(Quaestio XXII)*

Articulus II- Whether all things are subject to divine providence *(Quaestio XXII)*

Articulus III- Whether God immediately provides for all things *(Quaestio XXII)*

Disputatio LXXXVII- Whether the providence which God has of things is an operation of the intellect or of the will

Caput I- Errors about the providence of God *(Disputatio LXXXVII)*

Caput II- Providence (*providentia*), or predestination (*praedestinatio*), to be an operation of the intellect - such was the view of certain Scholastic doctors. *(Disputatio LXXXVII)*

Caput IV- Divine providence does not always achieve the end to which it ordains and for which it prepares means *(Disputatio LXXXVII)*

Caput V- Predestination is not a subjective but an objective part of providence *(Disputatio LXXXVII)*

Quaestio XXIII- On predestination

Pars I- On those things that pertain to predestination *(Quaestio XXIII)*

Articulus I- Whether men are predestined by God *(Pars I)*

Articulus II- Whether predestination posits anything in the predestined *(Pars I)*

Articulus IV- Whether the predestined are chosen by God *(Pars I)*

Articulus V- Whether the foreknowledge of merits is the cause of predestination *(Quaestio XXIII)*

Articulus VIII- Whether predestination can be helped by the prayers of the saints *(Quaestio XXIII)*

Pars II- On reprobation *(Quaestio XXIII)*

Articulus III- Whether God reprobates any man *(Pars II)*

Pars III- On predestination and reprobation together *(Quaestio XXIII)*

Articulus VI- Whether predestination is certain *(Pars III)*

Articulus VII- Whether the number of the predestined is certain *(Quaestio XXIII)*

Praefatio

Disputatio LXXXVIII- On the nature of grace and its various modes

Caput II- How manyfold is the help of grace through Christ *(Disputatio LXXXVIII)*

Caput IV - What Gregory of Rimini and other recent men thought about this matter *(Disputatio LXXXVIII)*

Caput V- The opinion of Gregory of Rimini is refuted *(Disputatio LXXXVIII)*

Caput VI- The true opinion of the Fathers about operating and cooperating grace *(Disputatio LXXXVIII)*

Caput VII- The same truth is confirmed by the testimonies of St. Augustine *(Disputatio LXXXVIII)*

Caput VIII - The testimonies of Augustine which Gregory of Rimini adduced are explained *(Disputatio LXXXVIII)*

Caput IX- On the various names of operating and cooperating grace *(Disputatio LXXXVIII)*

Caput XI- On the efficacious and the sufficient help of grace *(Disputatio LXXXVIII)*

On both conclusions, as far as was needful, we have spoken above, q. 22, article 3

Disputatio LXXXIX- Whether the election to beatitude preceded the predestination of merits

Caput I- Sententia quorundam Scholasticorum *(Disputatio LXXXIX)*

Caput II- That efficacious election to glory is made from foreseen merits of grace: proved by the authority of the Scholastics and by Scripture *(Disputatio LXXXIX)*

Caput III - By what testimonies of the Fathers the same opinion is approved by others *(Disputatio LXXXIX)*

Caput IV - What Augustine contends against the Pelagians and Semipelagians concerning our election *(Disputatio LXXXIX)*

Caput V- Some notes by which the opinion of the Semipelagians is made clearer *(Disputatio LXXXIX)*

Caput VI - Augustine holds that election to glory is made from foreseen merits of grace *(Disputatio LXXXIX)*

Caput VII - On recent attempts to overturn Augustine's testimonies, and their refutation *(Disputatio LXXXIX)*

Caput VIII - On testimonies of Augustine for predestination and the sense in which they are to be taken *(Disputatio LXXXIX)*

Caput IX- Election to glory after merits is proved a priori *(Disputatio LXXXIX)*

Caput X - A posteriori reasons: against the absurd consequence from the opposing view; on liberty *(Disputatio LXXXIX)*

Caput XI- Another a posteriori argument against the former opinion *(Disputatio LXXXIX)*

Caput XII - Responses to the testimonies which prove that the election to glory was made before merits *(Disputatio LXXXIX)*

Caput XIII- Refutation of two reasons for the opposing opinion *(Disputatio LXXXIX)*

Disputatio XC - Whether at least some exceptionally loved by God were elected to glory before foreseen merits

Caput I- On the opinion of Ockham, Gabriel, and Catharinus *(Disputatio XC)*

Caput II - That all, even the preeminently predestined and the angels, were elected to glory after foreseen merits *(Disputatio XC)*

Caput III- On criticisms leveled against Catherinus, and what in his teaching is false *(Disputatio XC)*

Disputatio XCI - Whether there is some cause of divine predestination on the part of the predestined

Caput I- The state of the controversy is explained *(Disputatio XCI)*

Caput II- Various errors of the heretics *(Disputatio XCI)*

Caput III - With the errors of the heretics now set aside and made manifest, it is necessary to review the sentences of the Scholastics. *(Disputatio XCI)*

Caput IV- That a final cause of predestination is given on the part of the predestined, but not a meritorious or disposing cause (Durandus) *(Disputatio XCI)*

Caput VI- That the cause of the first grace of predestination is the very future good in those themselves from grace itself, with Alexander excluded *(Disputatio XCI)*

Caput VII - Henry and others grant in us only a cause or condition without which not, of our predestination *(Disputatio XCI)*

Caput VIII - The Massilians with Cassian and the Greeks said that the beginning of first grace and predestination is from our free will *(Disputatio XCI)*

Caput IX- Our theologians variously defend these Fathers from this opinion *(Disputatio XCI)*

Caput X- Certain Scholastics in fact agree with the Massilians, though they indicate otherwise in words about predestination *(Disputatio XCI)*

Caput XI - That no cause, or beginning, of the predestination of grace is from us, is proved by authority against the Massilians *(Disputatio XCI)*

Caput XII - On certain recent theologians who concede some moral works to precede and remotely dispose *(Disputatio XCI)*

Caput XIII- On explaining Romans 9 and confirming our position *(Disputatio XCI)*

Caput XIV- The same Catholic position is shown by a priori reason *(Disputatio XCI)*

Caput XV- A posteriori reason for the same position *(Disputatio XCI)*

Caput XVI *(Disputatio XCI)*

Caput XVII- The arguments of the Massilians against St. Augustine *(Disputatio XCI)*

Caput XVIII- Certain testimonies alleged against our position are explained *(Disputatio XCI)*

Disputatio XCII - Whether the predestination of the grace of God is in the power of the predestined

Caput I- Opinion of certain recent authors *(Disputatio XCII)*

Caput II- Predestination is not in our power, the truer opinion *(Disputatio XCII)*

Caput III- The arguments for the first opinion are solved *(Disputatio XCII)*

Disputatio XCIII

Caput II- Neither sin, nor its permission, is an effect of predestination *(Disputatio XCIII)*

Caput III - How justifications and merits impeded by mortal sin are in some way effects of predestination, and in some way not *(Disputatio XCIII)*

Caput IV- On the distinction of natural and supernatural goods, and on whether acquired moral works are effects of predestination *(Disputatio XCIII)*

Disputatio XCIV - Whether the merit and the prayers of Christ, or of some Saint, have merited our predestination and election

Caput I- Various opinions of the Scholastics *(Disputatio XCIV)*

Caput II - That the merit of Christ was the cause of our predestination and election is proved by authority *(Disputatio XCIV)*

Caput IV - By reason it is shown that the merits of Christ were the cause of our predestination *(Disputatio XCIV)*

Caput V- Of the ten arguments by which in the first chapter we confirmed the positions of others, there remain only four which were brought forward for the first opinion. *(Disputatio XCIV)*

Disputatio XCV- Whether on the part of the reprobate any cause of reprobation is given

Caput II- The opinion of Scotus and of others *(Disputatio XCV)*

Caput III - That original sin is the cause of reprobation, as some more recent authors think *(Disputatio XCV)*

Caput IV- Certain notes for an explication of the truer opinion *(Disputatio XCV)*

Caput V- On the cause of reprobation in adults; the truer opinion *(Disputatio XCV)*

Caput VI- On the cause of the reprobation of little ones, what is to be held *(Disputatio XCV)*

Caput VII - The testimonies alleged for the first opinion are explained according to our own sentence *(Disputatio XCV)*

Caput VIII- On Jacob and Esau *(Disputatio XCV)*

Caput X- In what way God is the cause of hardening *(Disputatio XCV)*

Disputatio XCVI- On whether God has provided all infants with sufficient remedies for salvation

Caput I- What is agreed upon in this matter *(Disputatio XCVI)*

Caput II- The common and truer opinion *(Disputatio XCVI)*

Caput III- The refutation of the arguments of the prior opinion *(Disputatio XCVI)*

Disputatio XCVII- Whether God has provided sufficient helps for salvation to all adults

Caput I- The error of Armacanus *(Disputatio XCVII)*

Caput II- Sufficient help (auxilium) is sometimes, on account of prior sins, denied for a time to adults: this was the view of Henry [of Ghent], and others. *(Disputatio XCVII)*

Caput III- Proofs for the common opinion *(Disputatio XCVII)*

Caput IV- That in various ways we need the necessary and sufficient help of God *(Disputatio XCVII)*

Caput V - That for penance and for faith God confers sufficient help not at all moments, but at certain times *(Disputatio XCVII)*

Disputatio XCVIII- On peculiar grace in those who consent to the calling

Caput II- The preceding opinion, understood in three ways, is rejected *(Disputatio XCVIII)*

Caput III- That one who responds to the calling is excited by greater prevenient grace than one who resists is proved, as the more probable view, by testimonies of Scripture *(Disputatio XCVIII)*

Caput IV- Patristic testimonies for the same position *(Disputatio XCVIII)*

Caput V- A triple explanation of the foregoing opinion is refuted *(Disputatio XCVIII)*

Caput VI- Sincere exposition of the later opinion judged truer *(Disputatio XCVIII)*

Caput VII- On dislodging the foundations of the prior opinion *(Disputatio XCVIII)*

Disputatio XCIX

Caput I- Preliminary observations *(Disputatio XCIX)*

Caput II- First assertion. *(Disputatio XCIX)*

Caput III- A fourth opinion of the older Scholastics *(Disputatio XCIX)*

Caput IV- The fifth and sixth opinions of more recent authors *(Disputatio XCIX)*

Caput V- Two other opinions of the Theologians *(Disputatio XCIX)*

Caput VI - The true sentence, and the rationale for the concord of our free will with the predefinition of God *(Disputatio XCIX)*

Caput VIII- Corollaries of the foregoing doctrine *(Disputatio XCIX)*

Disputatio C- An, if the first cause should operate necessarily, our will could still be moved freely

Caput I- The opinion of Scotus *(Disputatio C)*

Caput II- What Gabriel and Corduba thought *(Disputatio C)*

Caput III- The truer opinion of Cajetan and Camerarius *(Disputatio C)*

Caput IV - Even if no cause were free, still some effects would be, in a certain respect, contingent *(Disputatio C)*

Disputatio CI- On the certainty of the number of the predestined and of the reprobates

Caput I- Two scholastic opinions *(Disputatio CI)*

Caput II- The final opinion *(Disputatio CI)*

Caput III - How it is truly said, "The reprobate cannot be saved; and the predestined, or the one to be saved, cannot be damned" *(Disputatio CI)*

Caput IV- That there are more reprobate than predestined *(Disputatio CI)*

Quaestio XXIV- On the book of life

Articulus I- Whether the book of life is the same as predestination *(Quaestio XXIV)*

Articulus II- Whether the book of life regards only the glory of the predestined *(Quaestio XXIV)*

Articulus III- Whether anyone is blotted out of the book of life *(Quaestio XXIV)*

Quaestio XXV- On the power of God

Articulus I- Whether there is power in God *(Quaestio XXV)*

Articulus II- Whether the power of God is infinite *(Quaestio XXV)*

Articulus III- Whether God is omnipotent *(Quaestio XXV)*

Articulus IV- Whether God can make that past things have not been *(Quaestio XXV)*

Articulus V- Whether God can do what He does not do *(Quaestio XXV)*

Articulus VI- Whether God can make better things than those which He makes *(Quaestio XXV)*

Articulus VII- On the infinity of possible species and the increase of grace *(Quaestio XXV)*

Disputatio CII- Whether the power of God is in any way distinct from His knowledge and will

Caput I- Status of the controversy *(Disputatio CII)*

Status controversiae - Caput I

Caput III- The truer opinion holds that power in God is formally knowledge and will *(Disputatio CII)*

Caput IV- In what way the power in God is knowledge and intellect *(Disputatio CII)*

Disputatio CIII- What the infinity of the power of God is, and in what way it is distinguished

Caput I- Various opinions *(Disputatio CIII)*

Caput II- In what way some understand the infinity of the power of God *(Disputatio CIII)*

Caput III- An argument against the foregoing opinion *(Disputatio CIII)*

Disputatio CIV- Why God is called omnipotent

Caput I- Status of the controversy *(Disputatio CIV)*

Caput II- What Gabriel and Scotus thought *(Disputatio CIV)*

Caput III- The opinion of Scotus *(Disputatio CIV)*

Caput IV- The truer opinion *(Disputatio CIV)*

Caput V- How omnipotence is related to non - being *(Disputatio CIV)*

Caput VI - Neither the relation of omnipotence, nor any other, to creatures is real in God *(Disputatio CIV)*

Disputatio CV- Whether God can make that the past have not been

Caput I- Two opposed opinions *(Disputatio CV)*

Caput II- In what way in God there is no potency toward the past *(Disputatio CV)*

Disputatio CVI- On whether God can do more than He has done

Caput I- In what manner God operates from necessity of justice *(Disputatio CVI)*

Caput II- What is meant by ordained power and by absolute power *(Disputatio CVI)*

Caput III - That God can do more things than He does is a truth certain by Catholic faith *(Disputatio CVI)*

Caput IV - Not only infinitely many individuals, but even infinitely many species can be made by God *(Disputatio CVI)*

Disputatio CVII- Whether God can make better things than He has made

Caput I - That God can produce a universe more perfect in certain parts than He produced *(Disputatio CVII)*

Caput II- Whether there can be another better universe consisting of all parts different in species from the parts of this our universe *(Disputatio CVII)*

Caput III- That this universe, its parts remaining, can be perfected *(Disputatio CVII)*

Quaestio XXVI- On divine beatitude

Articulus I- Whether beatitude befits God *(Quaestio XXVI)*

Articulus II- Whether God is called blessed according to the intellect *(Quaestio XXVI)*

Articulus III- Whether God is the beatitude of any blessed person. *(Quaestio XXVI)*

Articulus IV- Whether in God's beatitude every beatitude is included. *(Quaestio XXVI)*

Opera Theologica omnia (Vol. 1)

COMMENTARIES AND DISPUTATIONS on the First Part of St. Thomas. Volume One. Embracing the first twenty-six Questions, by Father Gabriel Vázquez of Belmonte, Theologian of the Society of Jesus. To the Most Illustrious and Most Reverend Lord Don Pedro Portocarrero, Bishop of Cuenca, and High Inquisitor of Heresies in the Kingdoms of Spain. With privilege. Complutum (Alcalá), from the press of the widow of Juan Gratian. 1598.

THE KING. Inasmuch as on your behalf, Gabriel Vázquez of the Society of Jesus in the College of Alcalá, there was presented to us a report that you had offered certain commentaries and disputations on the First Part of Saint Thomas, of which you made presentation, and you petitioned us to grant you license to print the same, and a privilege for such time as we might be pleased to grant, or as our favor should determine; which matter having been seen by those of our Council, and since, by their order, diligences were made according to what is provided by the pragmatic recently issued by us concerning the printing of books, it was agreed that we ought to order this our royal writ to be issued in the said matter, and we deemed it good so to do: by which we give you license and faculty that for the time of ten years next following, to be counted from the day of the date of this our writ, you, or the person holding your power, and no other, may print and sell the said commentaries, mentioned above, according to the original which was seen in our Council, which bears at the end the rubric and signature of Pedro Zapata del Mármol, our clerk of the chamber of those who reside in our Council; with the provision that, before it is sold, you bring it before them with its original, so that it may be seen whether the said impression conforms to it, or else bring proof in public form that the said impression was seen and corrected by the corrector named by us, according to the original; and we command the printer who thus shall print the said book that he shall not print the title and first quire, nor deliver more than a single copy with the original to the author or the person at whose cost it shall be printed, nor to any other person, for the purpose of the said correction and taxing, until first and beforehand the said commentaries shall be corrected and taxed by those of our Council; and when this has been done, and not otherwise, you may print the said title and first quire; and thereafter he shall insert this our writ, and the approbation that by our order was made of the said commentaries, and the tax and errata, under penalty of incurring the punishments contained in the laws and pragmatics of our realms which provide on this matter. And we command that during the term of the said ten years, no person without your license may print or sell the said commentaries, under penalty that whoever shall print and sell them shall have forfeited and shall forfeit all and whatsoever books, types, and implements that he may have of the said commentaries, and moreover shall incur a fine of fifty thousand maravedís, which said fine shall be one third for our treasury, and another third for the judge who shall sentence it, and the other third for the person who shall denounce it. And we command those of our Council, the president and auditors of our courts, the alcaldes and bailiffs of

our house, court, and chanceries, and all corregidores, assistants, governors, high and ordinary alcaldes, and other judges and justices whatsoever of all the cities, towns, and places of our realms and lordships, as well those who now are as those who in the future shall be, that they keep and fulfill this our writ, and that against its tenor and form they shall not go nor pass, nor allow it to be gone or passed against in any manner, under penalty of our displeasure and of ten thousand maravedís for our treasury. Given in Madrid on the thirteenth day of the month of July, fifteen hundred and ninety-five years. I THE KING. By order of the King our Lord, Don Luis de Salazar.

APPROBATION. The commentaries on the twenty-six questions of the First Part of Saint Thomas by the most excellent Father Gabriel Vázquez of the Society of Jesus, committed to me by order of the Royal Senate, I have read with the diligence I could. In them, not only does nothing appear that is opposed to the orthodox faith or to the instruction of the faithful, but all is full of piety and learning. For besides the fact that on obscure and involved matters the author's easy style and happy talent shed no small light, the constancy of doctrine, the untiring labor in inquiring after the truth, and (what in theological debates has been desired by many) the careful investigation of the sentences of the holy Fathers, not reported on another's unreliable credit (as happens with plagiarists) but weighed with fair examination and to the very line, make the work not unworthy of its author, and, in my opinion, one that, coming forth into the light, will be useful to students of sacred letters not in a common way but with great honor. If there is anything that could displease, it is only that it has lain hidden so long: for perhaps an answer would already have been given to those who, deceived by a vulgar estimation of writers, manifestly impose calumnies on Augustine, Chrysostom, Jerome, and the rest of the lights of the Church, from which things, when they are more closely examined and (as our Gabriel easily provides) compared one with another, anyone sees them to be far removed. In the Augustinian monastery of Burgos, on the Kalends of July. Fr. Gabriel Goldaraz.

APPROBATION. I, Francisco Porres, Provincial of the Society of Jesus of the Province of Toledo, by the power to that effect granted to me by the Most Reverend Father Claudio Aquaviva, our General, grant faculty that there be committed to the press the Commentaries and Disputations on the twenty-six questions of the First Part of St. Thomas, composed by Father Gabriel Vázquez, Theologian of the Society of Jesus, and approved by grave and learned men of our Society. In witness whereof we have given these letters subscribed with our hand and fortified with our seal, on 16 March of the year 1595. Francisco Porres.

PRICE FIXING (TASA). I, Pedro Zapata del Mármol, clerk of the chamber of the King our Lord, of those residing in his Council, attest that, a book written by Gabriel Vázquez of the Society of Jesus having been presented before the lords of the said Council, entitled Commentariorum in primam partem Sancti Thomæ, which, with the license of the said lords, he had printed, they taxed at three maravedís the sheet; and at this price, and at no more, they ordered it to be sold, and that this tax be set at the beginning of each copy of the books that shall be printed by virtue of the said license. And so that this may be known, at the petition of the said Gabriel Vázquez I issued the present, which is made in the town of Madrid, on the second day of the month of July, fifteen hundred and ninety-eight years. Pedro Zapata del Mármol.

INDEX OF ERRORS The first number indicates the page, the second the column, the third the line.

- 5.1.1. "pofsit": read "poffunt".
- 27.1.27. "de Angelis": read "& Angelis".
- 65.2.6. at the end, "obiectum": read "subiectum".
- 67.1.22. "neceffarium": read "neceffariarum"; and in col. 2, last line, "fide apud i": read "fidei apud".
- 73.1.3. at the end, "quinque": read "haec quatuor"; and col. 2, line 16, "eadem": read "eande".
- 91.1.34. "disp.25": read "l.15".
- 95.2.8. "ex nulla": read "ex nuda".
- 102.1.16. at the end, "mysticum": read "mysterium".
- 103.1.25. "vera est": read "vera esset".
- 104.2.19. "argumentu": read "Augustina".
- 117.1.21. at the end, "creaturarum": read "creatarum".
- 120.2.21. "propositione": read "propositionem per se notam"; and v.38, "positionem": read "propositionem".
- 130.1.14. "quae": read "quam".
- 137.1.8. at the end, "interpretarentur": read "interpretaretur".
- 182.1.13. "bonum": read "bonus".
- 193.1.13. "hoc loco": read "sine hoc loco".
- 204.2.16. "finite": read "infinitate"; and v.19, "secundum": read "quintum".
- 208.1.20. "Iob 2": read "Iob"; and col. 1, "coelo": read "coelo"; and v.2, c.39, "ve.": read "vero".
- 213.1.last. "esset deserere": read "esse deserere"; and col. 2, line 22, "prioris": read "posterioris".
- 2.6.1.16. at the end, "in libro": read "cum in codem libro"; and v.21, "Metaph. cap.2 circa finem": read "libro de mundo post medium".
- 250.1.40. "cap.4": read "cap.5".
- 267.1.7. at the end, "homine": read "nomine".
- 303.2.1. "id quod": read "id tamen".
- 304.2.4. at the end, "infinitatis": read "finitatis".
- 305.2.8. "spiritum": read "speciem".
- 306.1.24. "non non": read "non".
- 312.1.18. at the end, "ille": read "illa".
- 313.2.25. "scientia": read "essentia".
- 342.2.6. "obiectum": read "obiecti".
- 353.1.16. at the end, "ego": read "ergo"; and col. 2, last line, "voluit non significari": read "non significavit".
- 361.2.22. "perfecti": read "perfectius".
- 374.1.19. at the end, "nostra": read "natura"; and col. 2, v.8, "visioni": read "visionis".

- 375.1.10. "disp.29": read "disp.229".
- 379.1.10. "clara": read "clare"; and col. 2, line 2, "modo": read "quomodo".
- 394.2.16. at the end, "intuitiva": read "quidditativa".
- 396.1.33. "discerneretur": read "discerneret".
- 412.1.12. at the end, "& neque hoc pacto Deus": read "& hoc pacto Deus".
- 413.1.14. "viventem": read "videntem".
- 416.2.22. "ipsius Dei": read "ipsius, tametsi ea produceretur virtute visionis ipsius Dei".
- 431.1.3. "aut iuxta": read "aut auditur iuxta"; and penultimate line, "docerunt": read "docuerunt".
- 439.col.6. at the end, "nomini, vocum": read "nomini & vocum"; and v.4, "rerum & etiam": read "rerum etiam".
- 440.1.23. "cam": read "eum".
- 446.2.14. "subiectum praedicabile": read "quintum praedicabile".
- 447.2.2. "decendentia": read "decentia".
- 487.1.8. "cognitio": read "cognitionem".
- 500.2.last. "tota illa": read "totam illam".
- 526.1.31. "enunciatione": read "enunciationem".
- 535.1.6. at the end, "vidisset": read "vixisset".
- 539.1.31. "sed fato": read "fato, sed".
- 540.2.46. "praedestinationi": read "praedestinationi".
- 550.1.15. "non ideo": read "ideo".
- 554.2.1. "real": read "rei".
- 564.1. "trconclusio": read "Concilio".
- 567.2.7. at the end, "qua": read "quia".
- 570.1.20. "ipsam": read "ipsas"; and col. 2, line 3, at the end, "spiritus": read "species".
- 580.1.5. at the end, "quia": read "quae".
- 598.2.17. "intellecta": read "intellectu".
- 637.2.25. "comparetur": read "coparatur".
- 643.2.4. "liberi": read "liberum".
- 661.1.2. "in Deo": read "Deo".
- 665.2.2. "Prophetis": read "prophetijs".
- 675.1.16. "fuit": read "fiunt".
- 688.2.1. "ex timore": read "ex amore".
- 690.2.11. "defecit": read "deficit".
- 677.2.31. "decrevisset": read "non decrevisset".
- 692.1.15. "Stoici": read "Epicurei".
- 702.2.24. "negant": read "affirmant".
- 708.1.10. at the end, "non esse": read "esse".
- 715.2.2. "qua": read "qui".
- 734.2.32. "potentia": read "potentias".

- 742.1.2. "intelligunt": read "intelligit"; and v.5 at the end, "quae": read "qui".
- 745.2.3. "effectu": read "effectui".
- 758.2.16. "volumus": read "valemus".
- 763.1.22. at the end, "idemq;": read "idq; eodem".
- 782.1.8. at the end, "loquitur enim Aug. de": read "loquuntur enim de"; and col. 2, last line, "electione": read "de electione".
- 785.1.26. "canones": read "Canones".
- 790.2.last. "gratis": read "gratia".
- 797.1.7. "locandi": read "beandi".
- 798.1.3. "gratiam": read "gloriam".
- 799.1.18. "non": read "nos".
- 818.1.28. "effectum": read "affectum".
- 825.1.37. "occidentis": read "& occidentis".
- 836.1.2. "gratiae": read "gloriae".
- 838.1.28. "retractionem": read "retractatione"; and col. 2, line 18, at the end, "in praedestinatione": read "in praedestinatis".
- 846.2.31. "Fulgentium": read "Faustum".
- 848.1.5. at the end, "quia liqui": read (complete as appropriate).
- 852.1.14. "praedestinationem": read "praeparationem".
- 858.2.33. "defendisset": read "defendisser".
- 866.2.3. "nobis": read "bonis".
- 883.2.3. at the end, "illis": read "illius".
- 888.2.17. "cap.7": read "cap.6".
- 893.1.24. at the end, "Coelestin.": read "coelesti".
- 894.2.27. "gratia, de quam": read "de gratia, quam".
- 902.1.28. "Christum pro meritum": read "Christi meritum".
- 907.1.26. "praescientis": read "praescientia"; and l.11, "illud": read "illum".
- 910.2.15. "esset & ex": read "esset ex".
- 921.2.13. at the end, "cap.3": read "cap.2".
- 923.1.10. at the end, "reprobates": read "reprobationes".
- 924.3.16. at the end, "permissio in": read "permissio cadendi in".
- 925.1.11. at the end, "disp.92": read "93".
- 930.1.32. "ex quo": read "ex qua".
- 931.1.19. at the end, "esse reprobu": read "non esse reprobum".
- 934.1.1. "spectans": read "expectans".
- 935.1.7. "reprobationem": read "reprobationi".
- 942.2.15. "divinat": read "divinitatem".
- 957.1.29. "allegata": read "alligata".
- 971.1.24. "nostra": read "nostre".
- 1011.2.9. at the end, "effectu": read "affectu".

- 1028.1.7. "hoc ens": read "hoc non ens".
- 1041.1.7. at the end, "certum": read "incertum".
- 1042.2.last. "posset": read "esset".
- 1043.1.1. "creatrix": read "creaturae"; and v.20, at the end, "in statu": read "in eo statu".

Licentiate Christopher Orduña.

Dedicatory Epistle - To the Most Illustrious and Most Reverend Lord Don Pedro Portocarrero, Bishop of Cuenca, and High Inquisitor against Heresy in the Kingdoms of Spain, etc. Gabriel Vázquez sends greetings in the Lord.

Since nothing is dearer to me than to submit whatever I have taught by voice, or have committed to the press, and shall commit, wholly to the censure and judgment of Holy Mother Church, nothing can be more desirable to me than that I might understand my lucubrations to be approved by your judgment, most ample Prelate, and that of your Colleagues. In order the more easily and more surely to attain this, I wished that this first volume of those Commentaries which I now begin to publish upon the whole Summa of Theology of St. Thomas should be dedicated to you under many titles, yours especially in the first place: both because it is the first, and long and much expected, and thus due not only to your time-honored beneficence toward me, but also to your splendor, nobility, and eminence; and because, besides other matters which St. Thomas at the beginning of this First Part disputes weightily and acutely concerning God, it contains that noble controversy which about four years ago stirred so great a dissension and discord among most noble wits and most learned men, that to allay it there was plainly need of your authority and the nod of the Supreme Pontiff. I mean that controversy which gave birth to the twofold question treated both in the tract on the grace of God and in that on predestination: namely, whether, of two who are both prevened by equal grace, it happens that the one responds or resists the calling, and the other does not; and whether, on the part of prevenient grace, besides a congruous calling, there is necessary some further application of the will so that it may consent to the calling, or not.

On which matters, since after a four - year silence the power to dispute and to write without disparagement and censure of the contrary opinion has now been granted to us by the Supreme Pontiff, I judged I should do something worth the effort if I were to enroll you, most illustrious patron and defender, to this very volume, for the sake of the opinions on the same matters which I set forth toward the end of this volume; so that what of itself (unless I be mistaken) would please not a few, might, increased by the shadow of your name and patronage, come forth into the light somewhat more gladly and boldly. Nor indeed (to speak plainly what I think) has nothing been gained by our Schools from the aforesaid controversy arisen among most learned men, and soon after the silence imposed upon the same by the authority of the Supreme Pontiff and yours. For just as it happens to those to whom, being thirsty or hungry, drink or food is denied, that they are forthwith provoked to greater thirst or hunger, so those who were altogether untrained and ignorant in these questions, when they saw their opportunity of learning the same taken away, began with incredible and continual desire to wish to draw in understanding thereof; while those who already had obtained some knowledge of these matters burned the more ardently to

understand those same opinions more fully, and to know more eagerly wherein (as they say) the very knot of the controversy chiefly consisted, and by what weights of arguments the parties themselves were upheld. Wherefore, since of themselves the minds of students are sufficiently aroused to embrace and to labor over those books from which they hope to be able to draw knowledge of the controversies I have mentioned, it seemed to me that these my writings either need no commendation at all, or only a very brief one - especially with you, most illustrious Prelate, who have been wont to hold me and all my things not in the lowest esteem; although, if this work shall be approved by your judgment (as I hope), I am certain you will procure for it the highest commendation among all. Farewell

Ad Lectorem - To the Reader

Although the nature and method of human knowledge, acquired with the help of the senses, moves about, as it were, with timidity and trepidation, not without peril of error, in almost all matters (if you except a few things known of themselves, and some truths handed down by God), who does not see that he undertakes a task most full of toil and almost beyond human strength, who attempts not some ordinary discipline or art, but theology itself in its entirety, that is, the most hidden truths about God and other things which surpass the capacity of man, and that in so great a variety of sects and opinions, to comprehend and to explain them - as is fitting - with weighty and subtle discourse? Especially since that most wise investigator of all heavenly mysteries, Dionysius, calls every knowledge of divine things which proceeds from the feeble industry of men the foolishness of the wise and a mystical darkness, intimating to us that no mortal has ever been, nor will be, so lynx-eyed as to draw out things sunk so deep from hidden darkness, nor so clear-sighted as to survey all and each of the things which lurk in the broad and inexhaustible fields of Theology, nor finally so sharp in contemplation as to be able to grasp in mind all the difficulties which pertain to sacred doctrine. For indeed all divine things, as that Attic bee Xenophon excellently judges, like the most splendid rays of the sun, so bedazzle every eye of understanding with their light, that the more intently we fix our thoughts on contemplating these, the more vehemently, blinded by the everlasting light, we lament our own slenderness.

Accordingly, this labor which is undertaken by us in these studies seems to be nothing else (to use a familiar adage of Nazianzen) than "plous en te nykti," that is, a night voyage wrapped in darkness, which has much both of dread and of difficulty. All which would not only more than once, but not a little, have deterred me, and would likewise have wholly recalled me from bringing to completion and publishing my lucubrations on the whole of Theology, unless it had at some time occurred to me that these our forces, whatever they be - although perhaps less accurate and less ingenious - yet, as for the most part drawn from the monuments of the Fathers and the oracles of the holy Councils, would bring to the Church of God no less utility than the vain works of heretics, whose doctrines, resting on no authority at all either of God or of the holy Fathers, in matters most grave and most hidden, have been able to bring to the same nothing but ruin and deceit, both at every time and in this our age.

To this was added that common saying of the wise, that we are born not for ourselves alone, but for others also. I omit the common good-will of those who once used me as master and guide in the course of Theology in Italy and in our Spain, and the desire of others laboring in the studies of this same science, by which I was admonished not to shut up the slender springs of my industry: the love with which I have always pursued their studies urged me on - especially since I saw not a few both teaching in the Schools and also in books published to the light, boldly selling as their own things which up to now they had taken from me, and daily put up for sale. But even this, to confess the truth, could not have sufficed either to arouse or to impel me thoroughly, unless I were to follow St. Thomas - the most weighty and most acute Doctor given to us by God - going before and, as it were, making a road, in these so toilsome commentaries of ours; whose very distribution - if I say nothing greater - most excellent amid so manifold a variety of theological matters, and whose divine method, will effect that I treat or repeat nothing rashly, nothing out of order. And although so many and such causes existed which first moved me to undertake this work, and soon also to publish it, yet they in no way lightened the labor and the difficulty which I experienced in this same work. For to omit the vast size of this Summa, divided by St. Thomas into three, by later men into four volumes, which whole, in order that we might comment upon it more rightly and more easily solve the frequent difficulties occurring, had to be read and reread again and again; whatever St. Thomas has handed down anywhere in his other works (which are neither few in number nor small in bulk) we carefully read; then those mystical and very wide fields of the Scriptures, both of the recent and of the ancient Testament (which was necessary), we long and much traversed; afterwards the most august decrees of Holy Church and Councils, those most abundant and undoubted fountains of truth and faith, we turned over with all diligence and attention; finally, the monuments of the holy Fathers, as well Greek as Latin - by whose authority we were of necessity to confirm very many things in this work, and very often - we ran through with tireless labor and study. Thus neither the invincible force of the oracles of the Saints nor the most grave authority of Councils nor the most carefully sifted judgment of the most ancient Fathers - most powerful supports of our assertions - will be lacking in these our volumes.

For although in other disciplines perhaps more strength and weight is attributed to reasons and to arguments sought from the nature of things than to the authorities of men, even most learned (because the former are, as it were, nearer to freedom from the peril of error than the latter), yet in Theology the contrary happens: since it treats of matters that flee the grasp of the human mind and the experience of the senses, one must sometimes rely rather upon the most weighty testimonies of men divinely instructed than upon natural reasons - though these are not rejected - provided that they rest upon sound grounds. In the opinions of the ancient Scholastics, and in adducing their supports, I have followed this method: to bring forward only the more select judgments of approved authors, and their force and core, with the greatest brevity; leaving aside not only those by whose aid little or nothing can be confirmed, but also those whose refutation would not greatly illustrate the truth of our own position. I judged I should do this chiefly for two reasons: lest (which is no light vice of this age) I might seem to have crammed our garner with another man's harvest;

and also that, if anything perhaps less truly said or less accurately confirmed should occur in these our works, it might be compensated by the brevity of the style, so that, if I have profited nothing by teaching, at least I might not burden the thrifty reader with a prolixity of things and idle words.

It does not escape me that this first volume of our works has come forth somewhat later than either our promise or perhaps the desire of not a few demanded; yet I would not have this ascribed to sluggishness or forgetfulness - of which there was none at all in me. For when four years ago I had published three little books on the cult of Adoration as a specimen of my lucubrations, and then thought at once to step on to those Commentaries which I had begun upon the whole of Theology - as I remember I then indicated - I was immediately, by order of my Superiors, compelled to return to the public duty of teaching which had been for a while intermitted; whence it happened that, the thread of our efforts being suddenly cut, I was constrained of necessity to bestow no small part of the labor and vigilance which I was going to expend in bringing out our remaining works upon my auditors.

To this at last was added the silence imposed about four years ago by the Supreme Pontiff upon the Spanish Theologians concerning the matter of Grace, to allay certain contentions - about which we were of necessity to say not a little in this work, where the question of predestination is treated. But since now both the pontifical authority and the length of time have at length brought an end to these obstacles and impediments, what remains, friendly Reader, is that as we shall hereafter employ diligence in publishing our works, so you use the same in reading them. For now the second volume of our Commentaries upon this very First Part is under the press, which you will receive very soon. Farewell.

Pars I - With the Commentaries and Disputations of Father Gabriel Vázquez of the Society of Jesus

Prologus - Prologue

The teacher of Catholic truth ought not only to instruct the advanced, but also pertains to him to educate beginners likewise (according to that of the Apostle, 1 Corinthians 3: "As to little ones in Christ, I gave you milk to drink, not meat"). The purpose of our intention in this work is to hand down the things that pertain to the Christian religion in the way which is suited to the instruction of beginners.

For we have observed that novices of this doctrine are very much hindered by what has been written by various men: partly, indeed, because of the multiplication of useless questions, articles, and arguments; partly also because those things that are necessary for such as these to know are not handed down according to the order of the discipline, but according as the exposition of books required, or as there offered itself an occasion of disputing; partly, again, because the frequent repetition of the same generated weariness and confusion in the minds of the hearers. Therefore,

endeavoring to avoid these and other things of this sort savoring of curiosity, we shall attempt, with confidence in divine aid, to prosecute briefly and clearly the things that pertain to sacred doctrine (*doctrina sacra*), according as the matter will allow.

Praefatio ad primam Quaestionem - Preface to the First Question

Since the science (*scientia*) of Theology treats of God and the other things that pertain to Him as about its proper object, nevertheless in this question St. Thomas, and all the Scholastics in the prologue of the Book of Sentences, accomplish what the writers of all the other natural arts and sciences are wont to accomplish at the beginning of any science: namely, to preface certain prolegomena for explaining the necessity, nature, and method of proceeding of that science. Therefore theological treatment not only disputes about God and about other things that pertain to Him, but also, which is proper to any other science or faculty, it reflects above itself and considers about itself the things which we say. Of these, indeed, not a few would be most useful, were they not handled with boyish curiosity rather than with theological gravity. There are, however, many which seem to have something in common with logical and philosophical matters; from which, so far as can be done without detriment to the explanation of theological truths, I willingly abstain - especially from those which seem to contribute little to explaining theological truths. But because St. Thomas disputed about them, we too shall touch upon certain things, lest we seem at the very outset of the disputations to flee difficulties. In the progress of the work, however, we shall gladly omit many things which will seem purely logical or philosophical, from among those matters debated by more recent Theologians, interpreters of St. Thomas. But we shall examine expressly only those which can be of help for explaining theological difficulties. For, as we shall show elsewhere, this our scholastic Theology relies not only chiefly upon the testimonies of Scripture, Councils, Fathers, and the traditions of the Church, but is also not a little aided by philosophical reasons.[1]

Quaestio I - On sacred doctrine, what it is and to what it extends, divided into ten articles

T hat our intent may be grasped within certain fixed limits, it is necessary first to investigate sacred doctrine (*doctrina sacra*), what sort it is, and to what it extends.

1. Vázquez refers forward to his own discussions: "disp. 12, cap. 2 & 4."

Articulus I - Whether, besides the philosophical disciplines, it is necessary to have another doctrine

Objicitur primo: It seems that it is not necessary, besides the philosophical disciplines, to have another doctrine. For since man ought not to endeavor beyond reason, according to that of Ecclesiasticus 3: "Seek not the things that are too high for thee," but those things which are subject to reason can be sufficiently handed down in the philosophical disciplines; therefore it seems superfluous to have, besides the philosophical disciplines, another doctrine.

Objicitur secundo: Moreover, doctrine cannot be except about being; for nothing is known except the true, which is convertible with being. But about all beings there is treatment in the philosophical disciplines, and even about God: whence a certain part of philosophy is called theology or divine science, as is clear from the Philosopher in the sixth book of the Metaphysics.[2] Therefore it was not necessary to have, besides the philosophical disciplines, another doctrine.

Sed contra: It is said in 2 Timothy 3: "All Scripture inspired of God is profitable to teach, to reprove, to correct, to instruct in justice." But Scripture inspired of God does not pertain to the philosophical disciplines, which are investigated according to human reason. Therefore it is profitable, besides the philosophical disciplines, that there be another science divinely inspired.

Respondeo: I answer that it was necessary for human salvation that there be a certain doctrine according to divine revelation, besides the philosophical disciplines which are investigated by human reason. First indeed, because man is ordained to God as to a certain end which surpasses the comprehension of reason, according to that of Isaiah 64: "Eye hath not seen, O God, besides Thee, what Thou hast prepared for those that love Thee." But the end ought to be pre-known by men, who must order their intentions and actions to the end. Whence it was necessary for man unto salvation that certain things should be made known by divine revelation which exceed human reason.

Also concerning those things which can be investigated about God by human reason, it was necessary ...

Objicitur: It seems that it is not necessary, besides the philosophical disciplines, to have another doctrine. For to the things which are above reason man ought not to strive, according to Ecclesiasticus 3: "Seek not the things that are too high for thee." But the things that are subject to reason are sufficiently handed down in the philosophical disciplines; therefore it is superfluous to have another doctrine besides the philosophical disciplines.

Again, doctrine cannot be except concerning being: for nothing is known except the true, which is convertible with being. But in the philosophical disciplines there is treatment of all beings, and even of God; and a certain part of philosophy is called theology, or "divine science," as the Philosopher says in Metaphysics VI.[3] Therefore it was not necessary, besides the philosophical disciplines, to have another doctrine.

2. Aristotle, Metaphysics VI; cf. the customary designation of "theology" or "divine science" within philosophy.
3. Aristotle, Metaphysics VI.

But on the contrary: It is said in 2 Timothy 3: "All Scripture inspired of God is useful for teaching, for reproving, for correcting, for instructing in justice." But Scripture, being divinely inspired, does not pertain to the philosophical disciplines, which are investigated according to human reason. Therefore it is useful that, besides the philosophical disciplines, there be another divinely inspired science.

I answer: I say that it was necessary for human salvation that there be a certain doctrine according to divine revelation, besides the philosophical disciplines which are investigated by human reason. First indeed, because man is ordained to God, as to a certain end which surpasses the comprehension of reason, according to Isaiah 64: "Eye hath not seen, O God, besides Thee, what Thou hast prepared for those that love Thee." But the end ought to be pre-known by men, who must order their intentions and actions to the end. Whence it was necessary for man unto salvation that certain things should be made known by divine revelation which exceed human reason.

Also concerning those things which can be investigated about God by human reason, it was necessary that man be instructed by divine revelation: because the truth concerning God investigated by reason comes to men by few, and through a long time, and with the admixture of many errors; whereas upon the knowledge of this truth depends the whole salvation of man, which is in God. Therefore, that the salvation of men might be brought about more conveniently and more certainly, it was necessary that they be instructed concerning divine things by divine revelation. Therefore it was necessary to have sacred doctrine through revelation, besides the philosophical disciplines which are investigated by reason.

Reply to the first: Although the things which are higher than man's knowing are not to be inquired into by man through reason, yet the things revealed by God are to be received by faith. Whence in the same place it is added: "Many things beyond the sense of men have been shown to thee." And upon such things sacred doctrine consists.

Reply to the second: A different mode of knowability induces a diversity of sciences. For the same conclusion is demonstrated by the Astronomer and by the Natural Philosopher - e.g., that the earth is round - but the Astronomer through a mathematical medium, that is, abstracted from matter, while the Natural Philosopher through a medium considered about matter. Hence nothing prevents, concerning the same things about which the physical disciplines treat as knowable by the light of natural reason, there being another science which treats of them according as they are known by the light of divine revelation. Whence theology, which pertains to sacred doctrine, differs in genus from that theology which is set as a part of philosophy.[4]

Annotationes circa articulum.

From this article a single conclusion is elicited. It was necessary, besides the philosophical disciplines which are investigated by reason, to have sacred doctrine through revelations.

4. On the philosopher's "theology," see Aristotle, Metaphysics VI; St. Thomas often calls this part of philosophy "divine science."

Before we approach the individual disputations, it will be worthwhile to premise some things so that what St. Thomas hands down in this article may be better understood. First, regarding the etymology of the name: theology, in view of the name, is a discourse about God; and the science which treats about God is called theology. But since treatment about God is twofold - one which proceeds from natural principles, of which sort is metaphysics; another which uses revealed principles (such as the articles of faith) which no one can attain with reason alone as guide - the theology which we call scholastic, and which can be called sacred doctrine, about which we are presently speaking, disputes in the latter mode concerning God, and about other things that pertain to Him.

Second, it should be noted that "sacred doctrine" can be taken in two ways: either for the mere knowledge of the articles themselves, which have been handed down to us by revelation, with their full explication; or for the conclusions which are gathered from those same revealed articles. The former is called faith; to which also pertains prophecy and the gift of interpretation, by which sacred Scripture and the mysteries of our religion are explained; of which it is said in Ephesians 4: "He gave some indeed as apostles, and some as prophets." The latter is the science of theology, which is occupied in gathering conclusions from the articles, and in refuting errors - not only those which are directly opposed to the very articles of faith, but also those which, by good consequence, can be convicted from the same articles. By which reason also we call that part which pertains to this "positive and moral" - we shall speak in Disputation 7, chapter 5.

Third, finally, it should be observed from Cajetan that by "philosophical disciplines" St. Thomas does not understand only those which dispute about natural being composed of matter and form, which they call mobile, but also those which treat of God, like metaphysics, through entirely natural media and reasons.

Quaerit igitur Sanctus Thomas whether, beyond these, there was necessary some other doctrine which does not proceed by natural media; and he answers that, besides the natural and philosophical disciplines, it is necessary that there be some sacred doctrine supernaturally revealed. But it remains to be explained what St. Thomas wishes to mean in this conclusion; which will be done more conveniently by the following doubts.

Prior dubitatio circa textum. The first doubt, then, is what St. Thomas understands by the name "sacred doctrine": whether only faith, or also theology, which is deduced from the articles of faith as from principles. Cajetan proposed this doubt in this article, and he brought an excellent reason for doubting, which is of this sort. Either by "sacred doctrine" he understands faith, or theology. If faith, two inconveniences follow: one is that he would uselessly repeat in II-II q. 2, a. 3, where he asks whether it is necessary for salvation to believe something supernatural; the other is that he would use the name "doctrine" equivocally in this article and in those that follow; for in those it is not taken for faith, but for theology, whose necessity, nature, and mode of proceeding, not of faith, he endeavors to investigate, as we noted at the beginning. Since therefore in this very article he affirms that sacred doctrine is necessary for man, and in the following he also proves that it is a science - yet faith is not a science - it follows that in this article the discourse is not about faith, but

about theology. Or if by "sacred doctrine" he understands theology, it would follow that, besides the doctrine of faith, theology also is necessary for salvation, which is plainly absurd, since the simple can be saved with the knowledge of faith alone and direct their own actions to their end.

Cajetan replies that "sacred doctrine" is not taken for faith, insofar as it is distinguished from theology, nor for theology, as it is distinguished from faith, but for revealed and supernatural doctrine, abstracted from both faith and theology; which on God's part has the ratio of doctrine, but on our part the ratio of discipline. Taken in this way, sacred doctrine is necessary, since a certain species of it - namely, faith - is necessary. And thus those absurdities set down above do not follow: not the first, because the same Doctor does not repeat himself in II-II; for there he is treating of doctrine in general, but here of the doctrine of faith in particular, insofar as it supplies the principles of theology. Nor the second, because the name "doctrine" is not used equivocally by St. Thomas; here it is taken in the genus, abstractly; in the following, however, it is taken in the species for theology. Finally, that other absurdity does not follow on the other side, namely that faith alone does not suffice without theology to direct rightly actions to the end; because we do not there speak of theology, but of sacred doctrine universally, as has been explained above.

This doctrine of Cajetan is indeed true and seems able to be accommodated to the mind of St. Thomas, about which precisely there is the difficulty. Yet still it appears sufficiently difficult that St. Thomas is not speaking of sacred doctrine as it is taken for this science of theology, but only in general, as has been said. First, because St. Thomas in the following article, without any distinction made, asks about sacred doctrine whether it is a science, and answers that it is a science; which he clearly understands of the habit of theology, not of sacred doctrine in general. Second, because in the proemium he has thus: "We shall attempt, with confidence of divine aid, briefly and lucidly to set forth the things which pertain to sacred doctrine." Where by the name "sacred doctrine" he plainly understands this theology in particular, not sacred doctrine in general. Third, at the beginning of the question he says that it is necessary to treat of this doctrine - what sort it is and to what it extends - and first to inquire about the necessity of this doctrine, second whether it is a science, etc.; which clearly seem to be said of the same doctrine. Fourth, in this article, in the solution to the third, he openly speaks of theology, which is sacred doctrine and the science of God; and in particular he says that it therefore differs from the science of metaphysics, which also is about God, yet through different principles; because two sciences through different media can be about the same, not only as to the subject, but also as to the proposition itself.

Recentiores quidam explain St. Thomas in this way: that he speaks of sacred doctrine in particular, insofar as it is a certain science of theology deduced from the principles of faith, which we now have in hand; and that he says it is necessary for man to direct his operations to a supernatural end, although in a different mode than faith: for this is necessary to individuals for salvation; but theology is necessary to the whole Christian commonwealth for the same end. And therefore when he says in this article that it is necessary for man, they explain it not of each and every individual, but of "man" universally, that is, of the human race. This necessity indeed can easily be shown. For once the principles of faith are posited, from Scripture ill-understood, or from one's own brain, many false things can be falsely deduced, which are contrary to the principles of

faith; whence it can happen that someone gradually, with those same principles perturbed by heresies and errors, may overthrow and destroy them. Therefore it was necessary that there be the science of theology, which should most excellently discern what is contrary to the principles of faith, defend them from errors, and preserve them unharmed.

Theology of the Fathers and ours is the same. But when it is said that the science of theology is necessary, it is not to be understood as it is now, after the time of the Master, reduced to method, but in this or another arrangement, such as the Fathers always had from the time of the Apostles, and perhaps an earlier one; although not composed so methodically and in ordered fashion. They, on occasion of errors and heresies, from the principles of faith - especially those expressed in Scripture - against the rising errors, deduced many things most excellently; which in the Catholic Church never ceased. Therefore for this reason this doctrine is specially necessary, not to individuals, but to the universal Church. And such a necessity seems most aptly proved by St. Thomas from this, that for directing operations to a supernatural end, some supernatural knowledge acquired by revelation was necessary. For the science of theology proceeds from revealed principles, and by most acute reasoning preserves from every error, as has been explained.

Disputatio I - On the necessity and notion of sacred doctrine

Caput I - On in what sense theology is necessary to each person and to the Church

It is asked how theology is necessary to man. It is proved: Theology is not only the knowledge and doctrine of conclusions which are deduced from the articles of faith, but also the doctrine of the very articles, which alone have been made known to us by supernatural revelation. Therefore, when St. Thomas says that sacred doctrine is necessary for each one to direct his operations to the end, he understands this our theology, which, although according to its whole latitude it is not necessary, is nevertheless necessary in a certain part, namely insofar as it is of principles, without the knowledge of which a man could not be saved. For it is necessary for salvation to know something supernatural, as is clear from Secunda Secundae, question 2, article 3.

It is objected: But someone will say, how is theology not that science of which St. Thomas treats in the following articles, but faith, of which he treats in II-II, question 2, article 4? Thus we fall into that inconvenience which Cajetan inferred, namely that the same thing is treated twice by St. Thomas.

Solution: We reply that the habit regarding the first principles of theology, that is, of the articles of faith - which also is conversant about conclusions, and is the same as theology itself - is not the habit of infused faith, but an acquired faith; whence it does not follow that the habit of theology is the same as the habit of infused faith. Therefore it is not consequent, as we will say in article 3, that in a heretic, since infused faith does not remain, theology cannot remain; for some principles remain believed by human faith, from which, as before, he deduces.

He [the heretic] draws conclusions; therefore theology remains in him, not only as a habit, but even in act about many conclusions: for instance, if someone erred only in the matter of justification, he could excellently retain the whole science concerning God which does not presuppose what pertains to justification. From this, moreover, it is gathered that the same thing is not treated twice by St. Thomas: for in II-II he inquires only about infused faith, but here about sacred doctrine, which, although he says is from supernatural revelation, he does not, however, assert to be knowledge supernatural in its substance and nature, as infused faith is, of which the Second of the Second treats. For although many things which we believe about God we cannot investigate by natural reason and we hold them only by supernatural revelation, nevertheless we can believe them (supposing human and acquired faith, which in itself and by its nature is not supernatural in substance, except on the side of the cause, that is, of the revealer), as we will show in II-II, q. 1, a. 1, and as Scotus most excellently proves, whom we will also cite there.[5] Therefore, since here St. Thomas taught that a certain sacred doctrine is necessary, he understood the science of theology, not infused faith; and this theology, in so far as it is conversant about principles, he asserts to be supernatural on the part of the revealer, because no one could procure it for himself by investigation of natural reason. And for this reason he said in the conclusion that, besides the philosophical disciplines, which are investigated by reason, a sacred doctrine is necessary, which he called supernatural, not according to substance, but by revelation.

Objicitur. Someone will say, secondly, that the knowledge of acquired faith regarding the principles of our religion is not necessary for a man for salvation and for directing his operations to a supernatural end, but only infused faith.

Respondetur. We answer that the acquired is also necessary, because, as we will show in II-II, q. 1, a. 1, without it the infused is not had; for acquired faith is a necessary condition for that. But since about the thing itself there is sufficient agreement, let what has been said suffice concerning the interpretation of St. Thomas; and thus far about the prior mode in which the author says that sacred doctrine is necessary, namely, for directing operations to a supernatural end. There is, however, also another mode, about which we will speak in the first disputation.

Posterior difficulty concerning the text.

Before we proceed to the latter mode in which theology is necessary, there remains, concerning the reasoning of St. Thomas by which it is proved that sacred doctrine is necessary in that former way, a certain difficulty with Scotus. For he, in I, Prologue, question 9, "Ad quaestionem igitur," and in what follows, says that a doctrine drawn from supernatural revelation is not necessary for this reason, namely, that our end and beatitude is supernatural according to itself. He holds that there is no form and perfection by which we are joined to our end that is supernatural according to its substance, but that every such perfection is natural and perfects a created potency naturally; and that it is called supernatural only on the part of the efficient cause, because that perfection cannot be obtained except from a cause acting in a supernatural mode. Therefore he does not deny that a doctrine is necessary on the part of the efficient [cause], but only that it is supernatural

5. St. Thomas, II-II, q. 1, a. 1; Scotus, In I Sent., Prologus, q. 9, "Ad quaestionem igitur," and the following.

according to itself and its nature. Against this opinion Cajetan disputes in this article. But we, more at length in disputation 11, chapter 2, against Scotus will show that there is some form which is a supernatural perfection of ours, and such is the attainment of the ultimate end, grace, and other things which we will enumerate there.[6] Wherefore the reasoning of St. Thomas in this article ought to be judged most sound: or at least this is true which he supposes, namely, that our end and the attainment of it is a supernatural perfection of our nature. Now let us pass to another stage.

An sacred doctrine is necessary also for knowing even natural truths without error.

Whether sacred doctrine is necessary also for knowing even natural truths without error

The opinion of Cajetan

After we have set forth all the difficulties concerning the text and the mind of St. Thomas, it remains that we examine more deeply his doctrine itself, as we promised at the beginning. And first of all, whether sacred doctrine is necessary in the latter mode, that is, not only for [knowing] supernatural [truths], but also for [knowing] natural truths without error. In which controversy the prior opinion is that of Cajetan on this article, at the section "Before they are proved." He teaches briefly that for this end sacred doctrine is not simply necessary, but only useful; and that for this reason it is said by St. Thomas to be necessary even for this end, because it is necessary for the well-being (bene esse) thereof. For from Metaphysics V, chapter 5, it is clear that something is said to be necessary in a twofold way: first simply, then for a better or well-being.[7] Therefore, when St. Thomas says that revealed doctrine is necessary, Cajetan understands a necessity for knowing well even those truths which can be known naturally; which the same Doctor seems to have indicated. For after he said that sacred doctrine is necessary with respect to those things about God which can be known by natural reason, upon the cognition of which true [cognition] the salvation of man depends, straightway he subjoins these words: "Therefore, that salvation may come to men more suitably and more certainly, it was necessary that they be instructed about divine things by divine revelation." These words certainly cannot be referred to the knowledge of those things which cannot be investigated by natural reason, but to those which we are able to attain by natural understanding. For these, therefore, revelation is necessary, that they may be known more suitably and more certainly. Perhaps this opinion of Cajetan agrees with what he sets down in I-II, q. 109, a. 1, namely, that a man by the powers of nature, without the help of grace, can know every truth, both speculative and practical, which is contained under natural principles and can be deduced from them; which can be confirmed in this way. If some truth lies within the limits of natural truth, consequently it will be a natural object and of itself accommodated to the human intellect: therefore of itself and without revelation the intellect will be able to attain that truth sufficiently. Why then is the revelation of God himself necessary? And although to some it may seem necessary,

6. Cajetan against Scotus in this article; see also below, Disputatio XI, cap. 2, where it is shown that some form is a supernatural perfection of us, and such is the attainment of the ultimate end, grace, and other items there enumerated.

7. Aristotle, Metaphysics V, cap. 5.

either because of the shortness of life, or because of the trouble of illness, or for some other reason by which men are often hindered from speculation; nevertheless it does not for that reason seem necessary for all, even for philosophers of excellent genius. On which grounds Cajetan, II-II, q. 2, a. 4, teaches that faith, or divine revelation, is necessary not for individual men, but for the whole human community, in which there are many of slower talent, of shorter life, or otherwise impeded, so that they cannot understand every natural truth with certainty and without any error unless they are taught by others; and because not all can have skilled teachers, a common doctrine is necessary, revealed, which without reasonings and in a simple manner may be handed on to all.[8]

Caput II - The true view

Yet the truer opinion is that revealed doctrine, in this mode, is necessary not only for the community and universal multitude of men, but also for individual men of more expert talent. This is gathered expressly from St. Thomas in II-II, q. 2, a. 4, where he teaches that supernatural revelation, or faith, is necessary in three ways. First, that a man may more quickly arrive at the true knowledge of things, than he would attain by demonstration so quickly. Second, that the knowledge of God and of those things that befit God be more common, which he understands generally of the whole human race: because there are many who cannot investigate these things by natural reason, either on account of slowness of talent, or because of the shortness of life, or because of other impediments; and therefore for the community of men doctrine and the hearing of faith are necessary. Third, he adds that this same divine [revelation] is necessary for another reason, namely, for certitude, lest it happen to err: because men scarcely or never fully attain ...[9]

It is objected that man, by the powers of nature, without the help of grace, can know every truth, both speculative and practical, which is contained under natural principles and can be deduced from them; and this can be confirmed thus. If some truth lies within the limits of natural truth, then, consequently, without revelation one will be able to attain it.

I answer: Even if they be philosophers, men scarcely or never fully attain the things which in reality can be investigated by natural reason. For such is the corruption of human nature and the uncertainty of the senses, that individuals in many matters err. And therefore there has not yet been any philosopher, destitute of the revelation of faith, who has reasoned rightly and sincerely about God in those matters which can in some fashion be demonstrated by natural reason. For although someone may have known that God is one, he nevertheless has erred by denying to him knowledge of all future things; another, by denying providence and the governance of the least things. By contrast, Christian philosophers, having reasoned rightly and without error about God, have reached the demonstration of these truths, namely, aided by the light of faith, by divine revelation, and by a good upbringing from their parents. From which it is clear that the aforesaid opinion of Cajetan is false.[10]

8. Cajetan, in II-II, q. 2, a. 4, § Antequam probentur.
9. St. Thomas, II-II, q. 2, a. 4.
10. Cajetan, in II-II, q. 2, a. 4, against Scotus; cf. the false opinion refuted above.

Objection, and its solution. But if someone says that natural truths are proportioned to our intellect (*intellectus*), and therefore do not need divine revelation in order to be understood: I reply that our intellect, in fallen nature, and even in pure nature, cannot attain every natural truth because of the corruption of the senses; for the body, which is corrupted, weighs down the soul, and the earthly habitation depresses the sense with much thought (Wisdom 9). And in order that some truth be called natural, or naturally intelligible, it is enough if it can be known by Angels, or by a separated soul, or by an integral nature. There is also another impediment, lest even a man of remarkable talent attain all the natural truth about God; namely, the evil disposition of the affections and of the will (*voluntas*) from sin. Although, indeed, in demonstrations the assent of the will and its good disposition is not necessary so that, propositions being grasped, a man should at once give assent of himself to those things which are most well known and which in no way pertain to piety - such as are the mathematical [truths] - yet in those matters which pertain to piety, or are necessary, such as are [the truths] concerning the unity of God, his knowledge, and providence, even if the demonstrations keep within their proper measure, a pious affection is necessary. For since the things are most remote from sense, and consequently they entail certain things which do not please the senses and appetites of man, it happens to many, that on account of their depraved disposition, even if you propose demonstrations to them, they do not assent. In these matters a good affection contributes very much - not, indeed, so that, like the conformity of extremes once seen, the intellect should assent (for in a demonstration assent is already there), but so that it may apprehend the proposition inwardly in such a way and form it as to make the conformity of the extremes appear; which would not be required in mathematics, in the most evident sciences, and in other matters of that sort.

But it still remains to explain what St. Thomas means when he says in this article that sacred doctrine is necessary, so that salvation may come to men more certainly and more suitably; by which words he seems to indicate only usefulness, not the necessity of this sacred doctrine, or of revelation. I answer, therefore, that either St. Thomas was speaking in such a way not in a comparative sense, as if without this revelation and sacred doctrine there could also be some other sufficient science, but in a positive sense, as if he were saying: in order that salvation should come to man with certainty and suitably, this science was necessary; or, if he is speaking comparatively, the comparison is not referred to a less suitable and certain [science] which could be had without this sacred doctrine, but the sense is that without it salvation in no way could be had; because there would be lacking the certain knowledge of natural [truths], which also is required for salvation; and, therefore, he says that it is had more suitably through revelation. For sometimes a comparison is referred to an evil; and a comparison is sometimes made with something that does not participate in the same form.

And when he says that our salvation depends upon the knowledge of those natural truths, this is to be taken thus: not that that [knowledge] is sufficient for salvation, but because it is necessary. For since for salvation faith (*fides*) concerning supernatural truths is necessary, and this

necessarily presupposes also natural knowledge, such as that God exists, that he is one, that he has providence, it follows that the knowledge of natural truths is also necessary for salvation; and, consequently, justification and man's salvation depend upon it.

But if someone wishes to prove that this bare knowledge of natural truths suffices for salvation, because in Romans 1 Paul reproves the philosophers who, when they had known God, did not glorify him as God: I reply that from that [text] there is proved only this, that such knowledge was sufficient so that guilt be imputed to them for not having worshiped God, not that they could be justified thereby. On this more at length below in II-II, q. 2, a. 3 and 7.[11] And in what way, if the Gentile philosophers had made good use of that natural knowledge, God would further have revealed other mysteries so that they might be justified, we shall also say in that article and below in Disputation 97, cap. 5. But what Cajetan has noted in this article concerning the solution of the arguments are assuredly easy matters; and therefore I have judged it more useful to pass them over.[12]

Disputatio II - On the sense of Isaiah 64: "Eye has not seen"

Caput I - Some interpret the place of the mystery of the Incarnation

Not all writers understand in the same way the place of Isaiah which St. Thomas adduces in this article to prove that our end is supernatural, which cannot be investigated by natural reason. Some explain it of the mystery of the Incarnation; and first they prove this, because in this sense that seems to have been said by Isaiah in chapter 64, where, speaking expressly of the very mystery of the Incarnation, he begins with these words: "Oh that you would rend the heavens and come down." With which he continues what he had begun to treat in the preceding [chapter]. All which St. Jerome interprets of the advent of the Messiah. Since, therefore, shortly after he subjoins: "From of old they have not heard, nor perceived with the ears, the eye has not seen, O God, besides you, what you have prepared for those who wait for you," of the same mystery it is to be understood, namely, of that which neither eye ever saw, nor was perceived by the ears, at least by all, but by a few, to whom God deigned to reveal it by his Spirit.[13] In the same way it also seems that Paul recited this sentence of Isaiah, with only the words changed, 1 Corinthians 2. After he had spoken of the mystery of the cross and of the Incarnation (which he called the wisdom of God in a mystery, which God predestined before the ages for our glory, which none of the princes of this age knew; for if they had known, they would never have crucified the Lord of glory), he presently adds: "But as it is written, Eye has not seen, nor ear heard, nor has it entered into the heart of man, what God has prepared for those who love him." Therefore, of that hidden wisdom, which he said the princes of this age did not know, he seems to have said: "Eye has not seen," etc. - which, namely, Christ, if the princes had known, they would never have crucified the Lord of glory. On this point

11. St. Thomas, II-II, q. 2, a. 3 and a. 7.
12. Below, Disputatio 97, cap. 5; and cf. Cajetan's notes on this article.
13. Isaiah 64:1 - 4; St. Jerome, on the advent of the Messiah, ad loc.

Ambrose, on that place of Paul, as also Jerome, Theophylact, and Oecumenius in the same place, understand that sentence of Isaiah about Christ himself. Among later writers Adamus follows them on that chapter of Isaiah, and Leo de Castro there, although this latter admits at the same time another interpretation of that passage, following Marius Victorinus, book 1 Against Arius, namely, that it be understood both of the goods of eternal felicity and of the mystery of the Incarnation together, and thus that there be in it a double literal sense.[14]

Caput II - That the same place of Isaiah is to be understood of the goods of the other life; the truer opinion

But I for my part think, according to the common opinion of the Fathers and the only literal sense which Paul followed in 1 Corinthians 2, that it is to be understood only of the goods of beatitude (*beatitudo*), which God has prepared in the other life for those who love him. For what Isaiah said, "for those who wait for you," Paul interpreted as "for those who love him." In this sense Dionysius, in Contemplation chapter 12 of the Celestial Hierarchy, and Jerome, Haimo on that chapter of Isaiah, Chrysostom, Theodoret, Anselm on that passage of Paul, and there also Bede, who in two places gathers certain fragments of Augustine in this opinion, understand the testimony of Isaiah and of Paul (which is the same). Very many others also in various places: Tertullian, in the book On the Resurrection of the Flesh, chapter 26, no. 212; Cyprian, epistle 56 (elsewhere book 4, epistle 6), and in the preface to the book On the Cardinal Virtues of Christ; Marcus the Hermit, in the book On Paradise, and On the Law of God, contained in the third tome of the Sacred Library; St. Patianus, in the Parenesis to Penance, at the end, contained in the first tome of the Library; Theophilus of Antioch, book 1 (at the end), contained in the sixth tome; Arnold the Abbot, in the Treatise On the Praises of Mary, at the end, contained in the sixth tome; Jerome in epistle 148 to Marcel.; Ambrose, in the second prayer of preparation for Mass, at the end. The same is contained in the Mass of St. James, after the consecration of the chalice, which is in the fourth tome of the Library. The Author of the Meditations, cited by Augustine, book 2, chapter 18; and the Author of On the Triple Dwelling, cited by the same Augustine, chapter 1. And indeed this can easily be proved from the context of Isaiah.[15]

First of all, without any foundation is it said that Scripture there argues from the mystery of the Incarnation to the heavenly rewards. For neither the words of Isaiah himself nor of Paul indicate such a manner of arguing; but it is said simply: "Eye has not seen," etc. Therefore it must be understood either of the one mystery or of the other, even if those things which are said literally of the one could be said by accommodation of the other; about the manner of which there is no

15. Dionysius, De coelesti Hierarchia, cap. 12; St. Jerome; Haimo, on that chapter of Isaiah; St. John Chrysostom; Theodoret; Anselm, on that place of Paul; Bede; Tertullian, De resurrectione carnis, c. 26; St. Cyprian, ep. 56 (alias lib. 4, ep. 6), and in the preface to the book De virtutibus cardinalibus Christi; Marcus Eremita, De Paradiso, and De lege Dei (in Bibliotheca sacra, tom. 3); St. Patianus, Parenesis ad poenitentiam (in Bibliotheca, tom. 1); Theophilus Antiochenus, lib. 1 (in tom. 6); Arnoldus Abbas, Tractatus de laudibus Mariae (in tom. 6); St. Jerome, ep. 148 ad Marcel.; St. Ambrose, in the second prayer of preparation for Mass; the Mass of St. James after the consecration of the chalice (in Bibliotheca, tom. 4); the Author of the Meditations, apud Augustine, lib. 2, cap. 18; and the Author De triplici habitaculo, apud eundem, cap. 1.

controversy. Moreover, that that passage is not to be understood of the mystery of the Incarnation is clear from the words of Isaiah. For after he said, "what you have prepared for those who wait for you," which Paul interpreted, "for those who love him," the same Isaiah immediately explains the very same [thing] more: "You have met with him that rejoices and works righteousness," that is, with spiritual joy doing good works. But if the discourse were about Christ's Incarnation, he would not have said, "You have met with him that works righteousness." Rather, Isaiah said the opposite in chapter 9: "The people that walked in darkness have seen a great light; light has risen to those who sat in the region of the shadow of death." And in chapter 65, and Romans 10: "I was found by those who sought me not; I appeared openly to those who asked not for me." For although Christ deigned in the flesh to appear visibly to the just and to those expecting the redemption of Israel - Simeon, namely, Anna, and others - yet the fruit of the redemption, in which principally that mystery consists, did not befall except the unjust and those not expecting. For the first grace, whence this fruit begins, is not given to those laboring well, nor to those expecting, nor to those asking, as it is defined in the Second Council of Orange, canons 4, 5, and 6, where is adduced that [text of] Isaiah 65 and Romans 10: "but to those sitting in darkness and the shadow of death," not to those seeking, nor expecting. Therefore, when he says, "You have met with him that works righteousness," he now understands [this] of the reward of good works, about which reward he had already said, "Eye has not seen, nor ear heard," etc., and not about the mystery of the Incarnation - since the fruit of that [mystery] does not meet "the one doing righteousness," but, on the contrary, "those sitting in darkness." As to that dative, "to him that works righteousness," or "to those who love him," signifying a cause, it will be proved below in Disputation 89, chapter 2; and from the same testimony reported by Augustine, book 2, chapter 18, and by the Author of On the Triple Dwelling, cited by the same, we will confirm the opinion which says that election unto glory is spoken of as from merits.

Nor does it hinder [our reading] that Isaiah speaks in that chapter of the mystery of the Incarnation, and calls upon Christ, when he says, "Oh that you would rend the heavens and come down," etc. For after he subjoined, "At your presence the mountains would melt," and again, "That your name might be made known to your enemies," etc., he presently, in admiration, added the goods which he has prepared for his friends, in these words: "From of old they have not heard, nor perceived with the ears," etc. I pass over the exposition of Cyril and of some more recent [authors], who explain it this way: "From the constitution of the world we have neither heard, nor have we seen such a God besides you; and indeed only you lavish mercy upon those who wait for you." For these authors translate the Hebrew otherwise than the Vulgate and Paul: for they read, "Nor have our eyes seen God without you"; whereas the Vulgate and Paul put "God" in the vocative case, "O God, besides you."

Caput III - That the same place of Isaiah is alleged by Paul in the same sense

As to the sense in which Paul recited the testimony of Isaiah, it can be shown that he took it in that very meaning...

Christ deigned to appear bodily to those expecting the redemption, in which passage of the Prophet, which Paul cites, there is no mention of the expected one, but of the recompense. The first beginning of the fruit is not to those who sit, but to those who work; nor to those who look, but to those who seek; as is defined in the second canon of the African Council. Therefore it is not said, to sitters in darkness, but, to those sitting in the region of the shadow of death, a light has arisen. When therefore he says, "You met" ("occurristi"), he understands it of the reward of good works. For the prize of good works he had said, "Eye has not seen, nor ear heard, etc."; not, however, of the Incarnation, since the fruit "meets" those who do justice, not those still sitting in darkness. The Vulgate puts it in the dative case, "To him who does justice" ("facienti iustitiam"), which others also explain in the same sense.

The same sense is alleged in many places by Tertullian in the book On the Resurrection of the Flesh, c. 26, St. Cyprian in ep. 56 (alias lib. 4, ep. 6) and in the preface to the book On the Cardinal Virtues of Christ, Marcus the Hermit in the books On Paradise and On the Law of God, St. Patian in the Parenesis to Penance, Theophilus of Antioch, Arnold Abbot in the Treatise on the Praises of Mary, St. Jerome in ep. 148 to Marcella, St. Ambrose in the second prayer of preparation for Mass, the Mass of St. James after the consecration of the chalice, the Author of the Meditations, and the Author On the Triple Dwelling.[16] From the context of Isaiah this can easily be proved.

First of all, it is said without any foundation that Scripture there argues from the mystery of the Incarnation to the heavenly rewards. For neither the words of Isaiah himself nor of Paul indicate such a mode of arguing, but it is said simply, "Eye has not seen," etc. Therefore it must be understood either of the one or of the other mystery - even if the things that are said literally of the one can by accommodation be said of the other - about which "how" there is no controversy. But that the aforesaid place is not to be understood of the mystery of the Incarnation is evident from the words of Isaiah. For after he had said, "What you have prepared for those who wait for you," which Paul interpreted as "for those who love him" (1 Cor 2:9), Isaiah himself, further explaining the same thing, subjoins: "You met one who rejoices and does justice," that is, one who does good works with spiritual joy. But if the discourse were about the Incarnation of Christ, he would not have said, "You met one who does justice." Rather, Isaiah likewise said in c. 9: "The people who walked in darkness have seen a great light; upon those who dwelled in the region of the shadow of death a light has arisen" (Isa 9:2). And in c. 65, and in Rom 10: "I was found by those who did not seek me; I have appeared openly to those who asked not for me" (Isa 65:1; Rom 10:20). For although Christ was to be seen in the flesh by the just and by those expecting Israel - Simeon saw

16. Pseudo-Dionysius, De coelesti Hierarchia, c. 12; St. Jerome; Haimo on that chapter of Isaiah; St. John Chrysostom; Theodoret; St. Anselm on that place of Paul; Bede; Tertullian, De resurrectione carnis, c. 26; St. Cyprian, ep. 56 (alias lib. 4, ep. 6), and in the preface to the book De virtutibus cardinalibus Christi; Marcus the Hermit, De Paradiso and De lege Dei (in Bibliotheca sacra, tom. 3); St. Patian, Parenesis ad poenitentiam (in Bibliotheca, tom. 1); Theophilus of Antioch, lib. 1 (in tom. 6); Arnold Abbot, Tractatus de laudibus Mariae (in tom. 6); St. Jerome, ep. 148 ad Marcellam; St. Ambrose, in the second prayer of preparation for Mass; the Mass of St. James after the consecration of the chalice (in Bibliotheca, tom. 4); the Author of the Meditations, apud Augustine, lib. 2, c. 18; and the Author De triplici habitaculo, apud eundem, c. 1.

him - yet the fruit of redemption was chiefly not received by the just and those expecting, but by the unjust and those not expecting; for grace is a gift, whence it is not given to those who labor well as a debt, nor to those who expect.

Nor does it harm that Isaiah speaks in that chapter of the mystery of the Incarnation, and as if Christ himself were to say, "O that you would rend the heavens and come down" (Isa 64:1). For after he had subjoined, "At your presence the mountains would flow down," and again, "That your name might be known to your enemies" (Isa 64:1 - 2), a little later, admiring, he adds the words: "Eye has not seen, nor ear heard," etc., which he clearly understands of the goods of the future age, about the reward of good works: "You meet him who rejoices and does justice." The Vulgate and Paul put it thus: "To him who does justice," in the dative case. Some Hebrew editors read otherwise, "without you" ("absque te"): "We have not seen a God such," they say - others read, "our eyes have not seen God." But the Vulgate, and Paul, read, "O God, besides you." They who translate, "without you," understand: "Nor have we heard from ages, nor have some received in any way," etc. - which some more recent men explain otherwise; but we say, "we have not heard, except from you," namely, to whom you give, by what things you are bountiful. For they transfer that which the Vulgate and Paul put thus: "Nor has ear heard, O God, besides you," etc., indeed to this: "We have not seen such a God," not to this alone: "those expecting," but also "those not expecting mercy." Cyril's exposition confirms this testimony, which says that election is not from merits.

Someone could contend that that place ought to be understood of the mystery of the cross, or of the Incarnation, about which he was speaking in that chapter. For he says: "But we speak the wisdom of God in a mystery, which is hidden; which God predestined before the ages for our glory; which none of the princes of this world knew; for if they had known, they would never have crucified the Lord of glory; but as it is written: What eye has not seen, nor ear heard," etc. Therefore, of that wisdom which he says the princes of this world were ignorant, he seems to interpret the place of Isaiah, "Eye has not seen," etc., so that from there he may prove that it was hidden and unknown to princes.

The context of Paul is indeed difficult, especially if that "which none of the princes of this world," etc., be referred to the hidden wisdom of the cross which Paul preached, as St. John Chrysostom and the other Greeks relate, and St. Ambrose and Anselm on that place of Paul, and Athanasius in the book On the Incarnation of the Word near the end, who does not read "what" ("quam"), but "whom" ("quem"), otherwise than it is in the Greek and Latin text. For thus Paul seems to prove by the testimony of Isaiah nothing other than Christ, whom he calls hidden wisdom, was not known to the princes of this world, and therefore was crucified by them. This sense is especially confirmed by those words of Paul: "If they had known, they would never have crucified the Lord of glory" (1 Cor 2:8). As if he were to say: if they had known this wisdom, that is, Christ, they would never have crucified him, who is the Lord of glory. The difficulty is also increased in the context of Paul's words by the adversative particle "But" ("Sed"), which few expositors press, indeed almost all pass over; which added, if those words, "Eye has not seen," are to be understood of eternal beatitude, as many understand - whom we have already cited - scarcely can they cohere with the preceding; indeed, even if the particle be not added, the context remains

difficult. But it seems much easier if Paul understands Isaiah's words of Christ and his mystery; for thus, with the adversative particle, the context also can be easily arranged in this way: for if they had known him, they would never have crucified him; but, as it is written, "Eye has not seen," etc.; as if he were to say, but because they did not know, as it is written, they condemned him to death.

Yet, these things notwithstanding, it seems to me that Paul cited Isaiah's words in the same sense which, from the common interpretation of the Fathers, we have adduced; understanding, namely, those words, "Eye has not seen," etc., not of the mystery of the Incarnation and of the hidden wisdom of the cross, but of the glory of the other life and of eternal felicity; and also the context of Paul, even with the particle "But," can stand very well, provided that that "which none of the princes of this world," etc., be referred not to the wisdom hidden in a mystery, but to "our glory," to which - and according to the Latin and Greek reading - it can most fitly be referred. The letter and the sense ought thus to be ordered: "We speak wisdom," namely of the cross, "which God predestined before the ages for our glory" - which glory, namely eternal beatitude - "none of the princes of this world knew; for if" - supply "that glory" - "they had known in what manner it was prepared by God for us, never would they have crucified the Lord of that very glory, namely Christ, by whose merit it is prepared for us. But as it is written," namely of that glory, "What eye has not seen, nor ear heard," etc., they themselves did not know it. He subjoins immediately, "But to us God has revealed it through his Spirit." Gagneius tries to dispose the text otherwise, understanding Isaiah's testimony of Christ and of hidden wisdom, and referring that "which" not to "glory," but to "hidden wisdom." But the phrase is more difficult and harsher. For me, however, as I have said, the proposed sense pleases more, because it has been sufficiently proved from the Fathers' opinion that Isaiah said those words not of Christ, but of the glory of beatitude. Wherefore, consequently, Paul ought to have applied Isaiah's text in the same sense. Then, whereas Paul said, "They would never have crucified the Lord of glory," he indicates that particle "which" is to be referred not to wisdom but to glory, which, by amplifying, he very well inserts, when he says that, if they had known that glory, they would never have crucified the very Lord of glory.

Caput IV - Digression on Paul's words, "But the spiritual man judges all things"

But someone will doubt how, if the things cited, "But to us God revealed by his Spirit. For the Spirit searches all things, even the deep things of God" (1 Cor 2:10), are true - if it be true that "eye has not seen, nor ear heard, nor has it ascended into the heart of man," etc. - of the same mysteries, Paul says, "But to us God has revealed." Marcella proposed this question to St. Jerome, and he himself replies in epistle 148 to her: we ought not to seek what that is which "eye has not seen, nor ear heard," etc. "For if," he says, "it is unknown, how can it be known?" Whence in this sense the Apostle is to be believed to have said that with carnal eyes and with a carnal ear, with mortal thought, the spiritual things cannot be comprehended: and that, as he testifies that they were revealed to himself and to the saints through the Spirit, it does not straightway follow that he revealed them to others; otherwise, he heard in paradise ineffable words, which he could not narrate to others, or, if he narrated them, they are by no means ineffable. These are the words of St. Jerome. By which he teaches that those things which are in future beatitude were indeed revealed

to Paul and to other saints with some peculiar illumination, but such that they could not themselves explain them so that those mysteries might be perceived by corporeal senses, nor show them so that they might be seen by a corruptible eye.

Yet it seems more congruent to the text of the Apostle if we say that that revelation is not common indeed to all the faithful, but to the spiritual alone and to the adults, not to little ones in the faith of Christ, because only adults can perceive those things. These he signifies when he says, "But to us God has revealed by his Spirit." For immediately he subjoins, "For the Spirit searches all things, even the deep things of God." "But we have not received the spirit of this world, but the Spirit who is from God, that we might know the things that have been given to us by God. But the animal man does not perceive the things that are of the Spirit of God; for it is foolishness to him, and he cannot" (1 Cor 2:10 - 14). He judges these things the spiritual man, but not the animal. This indeed is how in c. 3 he begins: "And I, brethren, could not speak to you as to spiritual, but as to carnal, as to little ones in Christ; I gave you milk to drink, not solid food; for as yet you were not able; but neither indeed are you now able; for you are still carnal. For whereas there is among you zeal and contention, are you not carnal?" (1 Cor 3:1 - 3). Therefore Paul says that the things which the princes of this age were ignorant of were revealed to the spiritual, in such a way also that they themselves could speak of them - not to the carnal, but to the spiritual. Therefore, not as St. Jerome thought, were these things revealed to Paul in such a way that he could not reveal them to others; but that he could truly propose them so as to be understood, to those who, however, would truly be spiritual. But to the Corinthians he said that he had not yet explained them, because they were still carnal, that is, serving the passions of the flesh.

Therefore the interpretation of Chrysostom, of Marcus the Hermit, and of the Anselmian places cited, pleases us: by which the difficulty proposed can be most fittingly answered, namely, that when Paul says from Isaiah, "Eye has not seen, nor ear heard," etc., he is speaking of human nature considered from its own proper power. Hence in this sense the Apostle must be believed to speak. For if the Prophets and Apostles acquired not as men, but as Prophets and Apostles heard, this is, as men illustrated by the Spirit of God. Wherefore, what the princes of this world, by their own effort and by human power, did not know nor hear, indeed nor conceive, to the spiritual it has been revealed, namely to the Prophets, to the Apostles, and also to others. But when Paul and Isaiah say, "Eye has not seen, nor ear heard," they deny not only the proper and quidditative concept of those things which could be understood by those words, "Eye has not seen," but any other which could be understood, when he says, "Nor has ear heard." For men by their own power could not even have an affective grasp of the goods of that eternal felicity. But when he subjoins, "But to us God has revealed," he understands a concept which can fit viators under the veil of faith.

From all that we have said it can be gathered how rightly St. Thomas proves that sacred doctrine is necessary to have a true cognition of our end, which remains for us in the other life. For from the testimony of Isaiah and of Paul it is plain that our end, namely the goods which the Lord has prepared for us, cannot only not be seen by corporeal eyes nor be expressed by any human word, but also can be known only by divine illumination. From which, therefore, it is rightly proved that our end is supernatural (supernaturalis), not because its possession is supernatural according to its

substance and nature - this is the question disputed with Scotus, as I noted above, and is to be discussed in its place - but I say it is supernatural because its cognition can be had neither by human reason or study nor by angelic [reason], but only by God's revelation.

Therefore, with good reason, there is required some sacred discipline, acquired by God's revelation, for learning those things which eye has not seen nor ear heard. Which, although they cannot be so rightly perceived by the faithful who are still carnal as by the spiritual, to whom God so reveals them that, by the gift of understanding, they may penetrate them more clearly and understand more of the same mystery; yet to those carnal the same things, by the revelation of faith, though less perfectly, can be known.

Disputatio III - On the utility and method of scholastic theology

- Heretics disparage scholastic theology. Caput I.
- The utility of scholastic theology against heretics is defended. Caput II.
- The first objection of the heretics. Caput III.
- The second objection. Caput IV.
- The third objection. Caput V.
- The fourth objection. Caput VI.

Caput I - Heretics disparage scholastic theology

Now that we have sufficiently treated the necessity of this disputational doctrine, it remains that we say something of its utility, especially as, from the time of the Master of the Sentences, it has in an ordered scholastic way been handed down. The difficulty indeed is not that sacred doctrine, insofar as it gathers certain conclusions from the principles of faith, we should call scholastic, and that the ancient Fathers, and the sacred Councils, drew very great fruit from it; but that which, after the Master, is called by the single name of scholastic, as one discipline and the method of doctrine reduced to this, this the heretics of our time vehemently assail. Luther in the book against Jacob Latomus says that the scholastic way of arguing is nothing other than ignorance of the truth and empty fallacy, which the Apostles and the Colossians most of all warned against. The same enmity is harbored in the book on abolishing the private Mass. And Philip Melanchthon in the Apology against the Parisians says that Scholasticism was born in Paris, and that by it the Gospel was obscured and faith extinguished. From which error, as from a source, the others of these heretics have been thought to have flowed, as Cano supposed in book 8 De locis, c. 1. For the judgment of the schools having been despised, it was necessary to neglect Jerome, and the other Fathers, and by degrees the sacred Councils and the decrees of the Pontiffs. From which it came about that no firm foundation of our faith remained among them, but that the entire definition of faith and the doctrine was placed in their own judgment. But I would rather think that the origin of their errors was derived from their depraved morals. For Luther, kindled by a spirit of ambition

and pride, began to despise the Roman Pontiff, his power and decrees; and since there was no one except the scholastic doctors who at that time could resist his rashness, in order to hold fast to his errors obstinately, he was forced to despise and hiss the scholastic doctrine.

Caput II - The utility of scholastic theology is defended against the heretics

As to that very doctrine which is called scholastic, no one can deny that its greatest utility lies in the method and way of disputing, and of examining questions, which from the time of Peter Lombard we have in the schools. For even before him, as Damascene and Anselm - who nevertheless did not treat much in a scholastic order - handled certain things in this way; but Peter was the first who reduced the universal sacred doctrine to method, on account of which he most deservedly obtained the name of Master in the schools. Those who followed after him were Albert, St. Thomas, and the rest, who indeed perfected the method with greater diligence; and yet the scholastic discipline does not rest in the words, but in the sense, and in the reasoning and disputation, and in the weight of arguments; and the utility of this doctrine is gathered either from the sacred Scripture itself, or from the Councils, or from the ancient tradition of the Fathers, very frequently even from the very nature of the matters sought.

Of the things sought, truth is separated from falsehood; and what is not so certain but is probable on both sides is not handed down as a certain dogma of faith, but as probable. Secondly, the mysteries of our faith, and what can be deduced from them, being arranged by a certain order and method of discipline, are more easily learned and retained in memory. Lastly, how much the scholastic discipline itself and its Doctors have profited the Church for defending the Catholic faith can, in these times, be argued for us from the one Parisian school, mother of the rest; which, amid so many storms of heresies, kept that city and the greatest part of Gaul unharmed. And finally, in the year 1590, during the siege of that city against the Béarnese heretic besieging Paris, it so confirmed the city in the faith that all preferred to die by dreadful and unheard-of famine rather than to admit a heretic as King. And when by certain grandees the commons were urged to rather give themselves up, lest they perish by famine, they always replied that they could not do this with a safe conscience: a fact in which all were thus instructed by their theologians. Luther indeed seems to have caught the scent that the Parisian theologians would sharply assail his errors, when he dared to speak so impudently about them and about scholastic theology.

Caput III - First objection of the heretics

Moreover, there are certain things which at first sight might lead someone to hold scholastic theology in contempt, on account of which the heretics also explode it and hiss it off the stage. First, we cannot deny that there have been in the schools many theologians who have treated theological questions with frivolous reasons; in which testimonies of Scripture are very rare; and those which they employ are used not in the literal sense, but either allegorically or morally - modes which, for disputation, for the most part, profit little; and of Councils, scarcely any mention

is made - although these are the two chief foundations of this doctrine. They also sometimes mix in questions purely philosophically or metaphysically - childish indeed, and little suited to theological matters: all of which ought to be alien to the doctrine of theology.

Solutio objectionis. However, this vice is not of theology itself, but was brought in by the injury of the times, in which wits were not so cultivated and the arts not so polished, nor was there such a supply of books. But now, since the supply of books is greater and the exercise of wits is far greater, our scholastic theology is, more and more each day, enriched with testimonies of Scripture and definitions of Councils, and is treated according to its dignity. Furthermore, although these are its own proper principles and foundations, nevertheless where there is need of philosophical reasoning sought from the very nature of things, it is not to be despised. For this kind of thing is wont to be of very great efficacy for confirming theological truths: as, in the matter of the adoration of sacred things, although some arguments can be drawn from Scripture, nevertheless, if rightly weighed, very much can be proved from the nature of adoration itself. This, however, has especially its place in those matters which pertain to the piety of morals, about which the theologian also disputes; so much so that such a reason can be sufficient, that by it alone, without other testimony of Scripture or of Councils, the mystery yet being supposed, and an article of our faith, some truth can first be declared and defined by the Church. Likewise natural reason itself, deduced from philosophical principles, is of the greatest assistance in the mystery of the Incarnation and in others. Yet philosophical reasons and disputations are to be used with such modesty that they be assumed for this sole end which we have named.

Caput IV - Second objection

Secondly, against scholastic theology certain Catholics also inveigh in this way. Among Catholic Doctors there are very many who seem born for discord, contentious, and divided into sects, to whom it is less a care to investigate truth by disputations than to defend their school and their master, in whose words they seem to have sworn. From which matter a no small injury is inflicted upon theology itself and upon truth. For they who are, as it were, bound and consecrated to certain fixed and settled opinions of some doctor, and are thereby compelled of necessity that even those things which they are not wont to approve they are forced, for the sake of constancy, to defend, and those which they judge more probable, by the same reason to assail - these clearly profess that they are driven to learn or to dispute not so much by zeal for truth as by a spirit of contention.

Solutio. Nevertheless, we ought not on that account to despise scholastic theology itself. For this vice, if it is one, is not of scholastic theology, but of morals. Nor does theology suppose as a certain principle anything unless it is something established either by Scripture, or by the definition of the Church, or by the ancient tradition of the Fathers. Besides these, that which a better reason, deduced from these principles, has proved is embraced as the sounder and better doctrine. Yet this ought not to hinder us from deferring much, in opinions, to the most learned of the scholastics on account of their authority - namely, to St. Thomas and others; but certainly with moderation applied, as Francis Victoria, a disciple of the same St. Thomas and his most ardent defender, was

wont often to admonish, as Cano reports and follows in book 12 On Theological Places, chapter 1.[17] For he used to say that among us the authority of St. Thomas ought to be sufficient for us, if a better reason is not forthcoming; but that the words and reasons of so great a Doctor are not to be received without selection and examination. Nay rather, if it happens that he has said something less probable, we ought to imitate his modesty and industry, who neither withdrew faith from the more ancient Doctors, nor went over into their opinion if reason drove to the contrary. Wherefore he wishes that we ought not to be so attached to the doctrine of St. Thomas that we think it a crime to depart, even a hair's breadth, from some argument, foundation, opinion, or conclusion of his; nor to think all the things which he hands down - whether in the conclusion of an article, or in the reasons by which he confirms a conclusion, or in the solutions of arguments - so certain that we judge nothing to be more certain or more probable; since the school of theologians does not defer so much, in all their opinions, even to Augustine, or to Jerome, or to any of the foremost Fathers of the Church, that it never embraces the opposite, with other Fathers, as more probable.

We see indeed from the school of St. Thomas illustrious men, most zealous defenders of his doctrine, have marvelously illustrated his writings - I mean Cajetan, Francis Victoria, Domingo de Soto, Melchior Cano, Bartholomew Torres - who nonetheless did no injury to the holy Doctor when they sometimes, with mature counsel and due modesty, did not approve some opinion of his. Nor did they believe that the Angelic Doctor had concerning his own doctrine, as to its being embraced by others, any other judgment than Augustine had concerning his own; who in the book On the Good of Perseverance, chapter 21, writes thus: "I do not wish anyone so to embrace all my things as to follow me, unless in those in which he shall have perceived that I do not err. For this reason I now write books in which I have undertaken to revise my little works, so that I may show that I did not even follow myself in all things."[18] In the same sense the same Augustine said in epistle 19 shortly after the beginning that he gave this honor to the sacred writers alone, that he would believe that none of them had erred in writing; but that he read others so as not to think something true because they had written it, but because they persuaded it by canonical authors or by probable reason. He subjoins, speaking to Jerome, to whom he was writing: "Nor do I think, my brother, that you judge otherwise; assuredly I do not suppose that you wish your books to be read as those of the Prophets or the Apostles are read, concerning whose writings it is impious to doubt that they are free from all error."[19]

Yet indeed you may see some who deliberately try to refute the doctrine of St. Thomas, and then at last think they have done something glorious when they have pronounced something against his opinion - which theologians ought rightly to hold in suspicion. These indeed are worthy of no slight rebuke; and there is no doubt that they shut up the road of knowing the truth to themselves.

17. Melchior Cano, De locis theologicis, lib. 12, c. 1; reporting Francis Victoria's counsel regarding the authority of St. Thomas.

18. St. Augustine, De bono perseverantiae, c. 21: "Neminem velim, sic amplecti omnia mea, ut me sequatur; nisi in iis, in quibus me non errare perspexerit. Nam propterea nunc facio libros, in quibus opuscala mea retractanda suscepi, ut nec me ipsum in omnibus me secutum fuisse, demonstrem."

19. St. Augustine, Epistula 19 (ad Hieronymum), post initium: he reserves inerrancy to sacred Scripture; of other authors he accepts what canonical authorities or probable reason persuade. "Nec te, mi frater... quam Prophetarum vel Apostolorum: de quorum scriptis, quod omni errore careant, dubitare nefas est."

Therefore the Thomists aforesaid teach that doubtful and probable matters, which do not pertain to the dogmas of our faith, ought to be treated by the theologian with such purity of mind and right desire of truth that, although much must be deferred to the authority of Blessed Thomas, nevertheless reason, maturely thought out, if ever it happens to be found, should have first place. For in these matters not only the weight of authority in disputing, but also the considerations of reason, must be sought.

Indeed also, as Cicero says, the authority of those who profess to teach is sometimes wont to harm those who wish to argue; for they cease to apply their own judgment, and hold as valid only what they see has been judged by him whom they have as their master. Yet in such matters we are not bound; but we must proceed with mature counsel and after much time, and without rejecting the authority of the scholastics. Therefore, that many theologians do not conduct themselves rightly in treating questions is, as I said, the fault not of theology but of themselves. On that account, therefore, theology itself ought not to be despised.

Caput V - Third objection

Thirdly, what offends some in scholastic theology is the style and uncultivated manner of speaking - too low and popular, and stuffed with barbarisms and solecisms. Hence there are those devoted to Rhetoric and eloquence, who are more delighted by words than by things; who neglect to investigate the natures and properties of things and to explain difficulties: to whom the very name "scholastic" is odious. In which matter indeed they by no means follow the doctrine of Cicero, whom they venerate as an oracle in the art of speaking. For he, making mention of Epicurus in the book On the Ends of Good and Evil and passing judgment on him, says, "The speech of the philosopher himself does not offend: for he embraces in words what he wishes, and he clearly says what he understands; although you would not scorn a philosopher for this not to have eloquence, nor would you have him flee it greatly."[20] We have indeed seen in our own age distinguished men, unskilled even in the vulgar tongue, who nevertheless, by the highest learning in matters, have elicited admiration from the most learned. Therefore, in scholastic writers, it is not so much purity of language as doctrine that should be examined.

Moreover, there are certain words which the scholastics frequently use, which - although barbarous - yet because they express more easily what could scarcely be explained by circumlocution, deservedly ought to be retained by the theologians and used as proper to the art. For it has always been permitted (as Tully says), and already from the beginning the authors of disciplines have claimed for themselves this right: that, whereby they might more conveniently hand down their own matter, they should devise certain words proper and peculiar to themselves. Finally, this barbarism of the scholastics and unskilled logomachy ought rather to be ascribed to the vice and rash injury of men than to be imputed to sacred doctrine itself. For if this be treated in a purer speech, it will not therefore lose its force and learning. Moreover, the matters that are

20. Cicero, De finibus bonorum et malorum, in the judgment on Epicurus: the philosopher's speech should be clear and fitting to the matter, not an orator's florid style.

treated in it and the mode of disputation by which truth ought to be examined require no abundance of words, no excessive eloquence and orators' style; but few words, which are sufficient for explaining difficulties; a style humble, plain, and brief, which nevertheless is not obscure, but more suited to disputation. Therefore, since these things are so, even if some of the ancient and some of the more recent theologians have written barbarously and without polish, on that account theology itself ought not therefore to be judged useless, nor yet pernicious.

Caput VI - Fourth objection

Fourthly, the study of humane letters, they say, flees our theology, because in it curious questions are disputed which altogether neglect to consider the dispensation of our salvation. Such, they say, are questions like this: in what way the Father and the Son are distinguished from the Holy Spirit - namely, whether by the same thing by which they are constituted - which would seem to pertain nothing to piety.

Solutio. But although it may be true that many questions are treated by more recent and by ancient scholastics which are not of great moment either for expounding the dogmas of faith or for deducing theological conclusions from them, and many also which seem to have difficulties in common with the philosophers, only the matter being changed - for instance, whether something is prior on the part of the efficient cause in the influx of grace with the expulsion of sin, and what indeed is prior on the part of the patient - we shall see this elsewhere (q. 113, a. 5). Nevertheless, that inquiry by which the Father and the Son are distinguished from the Holy Spirit is most useful. For, as we shall note below, in Disputation 147, while it is diligently examined whether the Holy Spirit does not proceed from the Son, it will be distinguished from that - in which also the question

Tertia obiectio. The third thing on account of which scholastic theology offends some is the style, and an uncultivated manner of speaking, a low and vulgar speech full of barbarisms and solecisms. These are men devoted to rhetoric and eloquence, who delight more in words than in things, who neglect to investigate the natures and properties of things and to untie difficulties; to whom the very name "scholastic" is hateful. In this, to be sure, they do not at all follow the doctrine of their own Cicero, whom they venerate as an oracle in the art of speaking. For he, in the book On the Ends of Good and Evil, making mention of Epicurus, says: "The speech of this philosopher does not offend me: for he also embraces in words what he wills, he says plainly what I understand: and yet, from a philosopher, if he brings eloquence, I do not despise it; if he does not have it, I do not much demand it." We have indeed seen in our time distinguished men unskilled even in the vulgar tongue, who nevertheless, for the highest learning in matters, were an object of admiration to the most learned.[21]

Therefore, in theologians it is not so much purity of language as doctrine that must be sought. There are moreover certain words which the Scholastics frequently use, which, although they be barbarous, yet because they more easily express what by circumlocution could hardly be explained, ought deservedly to be employed by the theologians themselves, even those of polished speech, as

21. Cicero, De finibus bonorum et malorum, in the place mentioning Epicurus.

proper to the art. For it has always been permitted (as Tully says), and already from the beginning the authors of disciplines have claimed this right for themselves, that, in order to hand on their own matters more conveniently, they should devise for themselves certain proper and peculiar terms.[22] Finally, this barbarism of the Scholastics and clumsiness of speech is rather the fault and injury of the times than something to be imputed to sacred doctrine itself. For if this be treated in a purer style, it will not therefore lose its force and erudition.

Moreover, the things that are treated in it, and the mode of disputation by which truth ought to be examined, do not require a great abundance of words, excessive eloquence, and an oratorical style; but few words, which may suffice to untie the knot of the difficulty; a humble, plain, and brief style, which, however, should not be a cause of obscurity, but more accommodated to disputation. Since therefore these things are so, even if the ancient theologians and some of the more recent have written barbarously and without polish, for that reason theology itself ought not to be judged useless, much less pernicious. Quarta obiectio. Furthermore, students of the humanities mock our theology because in it very many curious questions are disputed which could altogether have been omitted without harm to our salvation. Such, they say, is this: by what the Father and the Son are distinguished from the Holy Spirit; whether, namely, by the same thing by which they are constituted; which seems to pertain nothing to piety.

Solutio. But although it is true that many questions treated by more recent Scholastics and by the ancients are not of great moment, either for explaining the dogmas of faith, or for deducing thence theological conclusions, and many also which seem to have a difficulty common with the philosophers, only the matter being changed - such as this: what is prior on the part of the efficient cause, the infusion of grace, or the expulsion of sin; and what on the part of the patient, as we shall see in I - II, q. 113, a. 8 - nevertheless that question about the relation (*relatio*) by which the Father and the Son are distinguished from the Holy Spirit is most useful. For, as we shall note below, disputation 147, while it is diligently examined whether, if the Holy Spirit did not proceed from the Son, He would be distinguished from Him; and in that same question, in what way the Father and the Son are in reality distinguished from the Holy Spirit, the best argument is taken against the Greeks, who, against the dogma of faith, affirm that the Holy Spirit does not proceed from the Son.

I confess that that question about the order of the infusion of grace and the expulsion of sin, and some others, are truly common with the physicists, only the matter being changed; some also pertain little to piety. But this is not sufficient for condemning scholastic theology as useless; just as neither is the multitude of articles and questions, which others unjustly censure. For if this be a fault, it could easily have crept in through the excessive curiosity of the Doctors; nevertheless many of these curious questions are useful for sharpening minds. Indeed, from that question about the infusion of grace some dogma of faith, in its own place, will not a little be elucidated; and when this happens, a question ought not to be judged curious or useless. Therefore, at least theology which purely and sincerely examines theological questions, and even philosophical ones which can

22. Tully (Cicero) on the right of founders of disciplines to coin proper technical terms.

conduce to theological truths, is not to be hissed down and derided. Let therefore these rhetoricians and those too much devoted to the humanities avail themselves elsewhere; but let us pursue our disputations in the order that we have indicated.

On sacred doctrine, what

Articulus II - Whether sacred doctrine is a science

Objicitur primo. It seems that sacred doctrine is not a science. For every science proceeds from principles known of themselves; but sacred doctrine proceeds from the articles of faith, which are not known of themselves, since they are not granted by all - for "not all have faith" (2 Thess. 3). Therefore sacred doctrine is not a science.[23]

Objicitur secundo. Further, science is not of singulars; but sacred doctrine treats of singulars, for instance, about the deeds of Abraham, Isaac, and Jacob, and the like. Therefore sacred doctrine is not a science.

Sed contra: St. Augustine says in book 14 On the Trinity, about the middle of chapter 1: "To this science is attributed that alone whereby saving faith is begotten, nourished, defended, strengthened." But this pertains to no science except to sacred doctrine. Therefore sacred doctrine is a science.[24]

Respondeo: I answer that sacred doctrine is a science. But it must be known that there is a twofold genus of sciences. For some there are which proceed from principles known by the light of the natural intellect, such as arithmetic, geometry, and the like. But others there are which proceed from principles known by the light of a higher science: thus perspective proceeds from principles made known by geometry, and music from principles made known by arithmetic. And in this way sacred doctrine is a science, because it proceeds from principles known by the light of a higher science, namely, the science of God and of the blessed. Whence, as the musician believes the principles delivered to him by the arithmetician, so sacred doctrine believes the principles revealed to it by God.

Ad primum: To the first, therefore, it is to be said that the principles of any science are either known through themselves, or are reduced to the knowledge of a higher science; and such are the principles of sacred doctrine, as has been said

Ad secundum: To the second it is to be said that singulars are delivered in sacred doctrine, not because they are treated principally, but they are introduced both as examples of life, as in moral sciences, and also to declare the authority of the men through whom divine revelation has come down to us, upon which sacred Scripture, or doctrine, is founded

23. The objection follows St. Thomas's format; see 2 Thess. 3:2, "for not all have faith."
24. St. Augustine, De Trinitate, lib. 14, cap. 1, about the middle.

Conclusio. Conclusion of the article: Our theology, or sacred doctrine, is a science. St. Thomas proves it, because that which proceeds from principles known by the light of a higher science can truly be called a science. But our theology proceeds from principles known by the light of the blessed, which is a higher science; therefore it can truly be called a science.[26]

Disputatio IV - Whether theology is truly and properly a science

Caput I - Status of the controversy

The difficulties which are wont to be treated in this article seem to pertain not so much to the theologian as to the logician: for it is properly the logician's office to hand down the instruments or mode of knowing and demonstrating; therefore he expressly treats of the nature and property of science and of demonstration, which is the proper instrument of knowing; indeed the whole doctrine of logic chiefly tends to this, namely, to hand down the mode of constructing demonstrations. The logician indeed does not designate nor determine this or that matter, but he describes the form which can be accommodated to any matter, and in it generates the assent of science; as an architect, who in some cheap material forms the idea of a house to be built, from which, in a more precious material, another is expressed. Therefore the question whether theology is a science properly belonged to the logician, who, once the nature and quality of the principles which the theologian assumes were known - namely, how they are known to him, and the perfect form of the syllogism by which he gathers conclusions from them - could easily define whether it be properly a science and whether it have the instruments of true science. But because something will also come up in these questions for dispute which pertains to the theologian - and lest we seem at once at the outset to flee difficulties - we have determined to examine those things which have been disputed by other theologians in this article.

The difficulty, therefore, is this: Whether theology be truly and properly a science. By the name "theology" we do not understand any sort of knowledge about God; for in that way faith also could be called theology. Nor is that understood (says Durandus) by which someone knows how to explain and defend the things handed down in sacred Scripture, as Augustine seems to have used the term in book 14 On the Trinity, chapter 1. But by the name "theology" we signify a science by which someone, from principles revealed in Scripture, or established and believed by the authority of councils or the Church's tradition, infers other truths and conclusions by evident consequence. In which sense theology is more commonly taken, as Durandus admits; but, he says, not so truly: a thing which I do not see how rightly it can be said. Indeed, this seems to be the same as that of which Augustine speaks in that place: for he who defends the principles of our faith against heretics ought by that very fact from the principles of faith best to draw conclusions; as against the Apollinarists, who deny in Christ a human will, he ought to gather in this way: In Christ there was true humanity, but humanity is endowed with will; therefore in Christ there was a human will.

26. Compare St. Thomas, Summa Theologiae, I, q. 1, a. 2.

Concerning theology, therefore, thus taken, not as it is busied in the explication of principles, but as it proceeds to elicit conclusions, the controversy is whether it be truly and properly a science or not.

Caput II - The opinion of Francis of Marchia

Thus, the question having been understood, the first opinion is that which Gregory reports in 1, q. Prologi, art. 4, and Ockham, q. 3, of a certain Francis of Marchia - whom some report to be Mairon, but in truth he is not; for Mairon taught the opposite, as we shall say below. He used to say, therefore, that theology is truly and properly a science, because it supposes the principles of that science - which are the articles of faith - to be of themselves and in themselves known, so that there may be had of them an understanding, just as also of the principles of natural science; for all that, however, he did not deny that divine faith is necessary for assent. I pass over the foundations of this opinion, which Gregory reports more at length; for they are frivolous and of no moment. This opinion is refuted by many - Ockham and Gregory in the place cited - in that part in which it says that all the principles of theology which are in Scripture, or in some other way have been handed down to us, are known of themselves and evidently. Yet they could be impugned even by this sole reason. For, besides that, as we have shown in disputation 135, in this life there cannot be had an evidence of the mysteries of our faith, nor can it be communicated by God unless it be intuitive and beatific - whoever has the mystery of the Trinity by an intuition that is, as they say, the vision which is natural to God alone and the mystery of the resurrection in its structure - those things which depend on the will of God are not evident to any wayfarer per se, nor evident by nature. Thence in the mysteries of faith the note of being evident is not to be found, nor can there be a necessary and fixed assent from such evidence. We grant that in some sciences certain evidence can be had about other species of things, if possible, with a notice taken from those things which are known; but those are not in our power in such a way that, by reason of them, the same evidence which mathematics has could be had. What is per se evident is no less certain than that from which any mathematical conclusion is elicited. Therefore in this there is not supposition of our opinion such that we should incur the note of error, as Paul says in 1 Cor. 13: to see now in a mirror, in an enigma; and 2 Cor. 5: to walk by faith, not by sight. It is therefore true, that since we suppose - as we also suppose without doubt - our theology to be true and properly a science, this is saved not by a headlong supposition. Therefore we shall join battle below with all the scholastic controversies, whether it be true and properly a science, insofar as it proceeds from principles only believed.

Caput III - What Henry held

The second opinion is that of Henry [of Ghent], in the Summa, art. 6, q. 1, and Quodlibet 12, q. 2.[27] He says that theology can be had by wayfarers in two ways: in one way, from principles believed by faith alone; in another, from the same principles known evidently - not, he says,

27. Henry of Ghent, Summa, art. 6, q. 1; Quodlibet XII, q. 2.

evidently of themselves, but made evident; which can be brought about by exercise and study of faith itself. For faith (he says) first proposes the mystery to be obscurely believed; then, by diligent effort we are able, through the study of faith, to come to an evident understanding of them. And this evidence, which they think is generated by discourse, he says is not the evidence of vision, which they call intuitive, but an inferior evidence, and one which can exist together with the obscure assent of faith. He seems therefore to suppose that this evidence is not quidditative and proximate, but through other species, just as we have, on the way, concerning God. He says, therefore, that if theology be had in the first way, it is not truly and properly a science; but if it be contained in the latter way, it will be truly and properly a science. The former part he proves by a reason common with the first opinion, which we shall adduce for our own position; for in that Henry agrees with us. But the latter is proved thus: because then the good consequence from those principles known evidently will be a true and proper demonstration, or a certain propter quid generating some evidence of the conclusions. Therefore theology, in that mode, will be properly a science; that is, one whose reasons produce general demonstration.

This opinion is impugned by Durandus in 1, n. 9, Prologi. First, because those mysteries of our religion which are believed alone cannot, in this life, become evident to us - a point of which we shall speak below, disputation 135, and 2, quaest. 1, art. 5. Nay rather, we assert that, even by absolute power, it cannot be that to us there be evidence except an intuitive knowledge alone, in which eternal beatitude consists. For now it is enough to suppose that by the exercise of faith there cannot fall to man an evidence of the mysteries; therefore, the theology of the wayfarers also - according to Henry's own opinion - will not be truly and properly a science.

Secondly, Durandus also proves that, even if the principles of faith were to become evidently known, theology would not be truly and properly a science, as Henry contends: for one more readily assents to some proposition on account of the authority of the speaker than on account of whatever evident reasoning; so that, once the authority ceases, either he would not assent, or at least he would not assent in the same way; therefore he is not said to have science by reason of an assent which is rather derived by some other route. But the one who, in the doctrine of faith, by the exercise of it, would arrive at evidence of the articles, would have it in this way: therefore, by force of such evidence, he could not truly have the science of theological conclusions. The third reason that Durandus brings tends only to prove that one cannot have an understanding of the articles of faith such as is had of the principles in some science, about which sort I do not dispute here; but it must be discussed in disputation 135.

However, Durandus's second reason does not prove what he proposed. For if the articles of faith were to become evident to someone, whether by themselves or by something else, the conclusion which would be gathered from them by an evident consequence would be truly and properly science, because assent to it would be evident through discourse. First indeed, if the articles were evidently known from what is posterior: for in subordinate science a conclusion of science is inferred only from inductive principles and from what is posterior and evidently known. Then, if the articles were evidently known from what is prior, whether by themselves or by other principles, science also from what is prior and the reason why would be gathered from them: therefore Henry

rightly inferred that theology would then be truly and properly science, when someone, from evidently known articles, would also infer evident conclusions. But what Durandus said, that it is necessary, chiefly on account of the demonstration, to assent to the conclusion in order to have science of it, is most true. Yet in that case, even if someone, on account of authority, would at the same time believe the articles by faith and would have evidence of them, being nevertheless prepared to believe on sole authority, still it would not be one and the same assent of faith and of evidence concerning the conclusion drawn from the articles; rather, that conclusion would be known by a twofold assent: one indeed from principles believed by faith, and the other from principles evidently known. But this latter assent would not be chiefly on account of authority, but on account of reason alone, as is clear. Then it would happen that there is a twofold assent to the conclusion, because by the same middle terms, known obscurely and clearly, the same assent to the conclusion cannot be gathered: if therefore, as Henry contends, the articles of faith, which are the principles, were evidently known and at the same time believed by faith, the same obscure and clear assent of the same conclusion would not be gathered. The clear assent, therefore, could be truly and properly science.

Caput IV - The opinion of Cajetan

The third opinion is that of those who say that theology can be considered in a twofold way: first according to itself, then in wayfarers. In the former way, they say, it is properly and perfectly a science; in the latter, it is not a perfect science. Thus Cajetan teaches in this article. As to the evidence of this: when he says that in wayfarers there is not perfect science, he understands that it is not truly and properly [science]. He subjoins the reason in these words: Because that is not truly science which cannot truly be resolved into principles of evidentness. He affirms, therefore, that in wayfarers there is imperfect science, that is, not truly and properly science on account of the state [of this life]: and therefore he thinks that St. Thomas did not answer that theology is absolutely a science, but that it is a subordinate science, so as to indicate that it is an imperfect and improper science.

This opinion of Cajetan, insofar as it asserts that the theology of wayfarers is not truly and properly science, will have to be examined below; for to this the whole difficulty of this controversy is reduced. Now, however, I will show briefly in what way that division of theology - "according to itself" and "in us" - laid down by Cajetan and by others, is to be understood. Cajetan, then, takes theology in a twofold way: one he says is that of God and of the blessed; the other of wayfarers. This latter, again, he divides into theology according to itself, and as it is in us. Therefore, when he says that theology according to itself is truly a science, he is not speaking of the theology of God, by which He has [knowledge] of Himself, about which there is no difficulty: for it is most perfect knowledge; but it is not univocal with created [science], especially with that which is through discourse, which Aristotle defines in Posterior Analytics, book 1, chapter 2,[28] and about which there is now controversy. As to what sort of science God's [knowledge] is, we shall teach below, question

28. Aristotle, Posterior Analytics I, c. 2.

14. Nor does Cajetan speak of the theology which the blessed have of God, which, though it be evident, is not science as it is defined by Aristotle in the cited place: for that requires to be through discourse; but the knowledge of the blessed is without discourse. All the mysteries of faith are to them per se known; just as to the angels are per se known all those things which they naturally know through their proper species, as we shall say below, disputation 221, chapter 2.

Wherefore Scotus is mistaken in question 3 of the Prologue, question 4, lateral, where he says that theology according to itself, that is, in the blessed, is science as it is defined by Aristotle. He thinks that in them it is produced through discourse; he is mistaken, since, just as it will be proved against him concerning the angels that they do not discourse, so the same is to be said concerning the blessed. For they understand the things that they see as they really are, and therefore they are to them per se known. There is also a lapse in Bassolis, in the place to be cited below, when he asserts that theology is truly a science even in God and in the angels, because it is not of the notion of science (so he says) to be generated through discourse. But he errs, since by this alone intellect differs from science, that science is through discourse, but intellect without discourse. In which he agrees with us against Scotus; and therefore he grants that the theology by which God has [knowledge] of Himself is not science as it is defined by the Logicians, but [knowledge] of a higher sort.

Therefore, when Cajetan asserts that theology according to itself is science as it is defined by Aristotle, he plainly understands the theology of wayfarers, not insofar as in them it is an obscure knowledge gathered from principles believed only by divine faith, but considered apart from the imperfection of obscurity: and on this score he says that it is science, because its argument would be a demonstration, if there were had evidence of its principles. There is indeed a certain [analogy with] mathematical science: there are many demonstrations according to themselves which nevertheless do not generate science for someone to whom the principles are not evidently known, but only believed by faith. And in this sense Cajetan's opinion is true. There is, however, a different case as between the mathematical demonstration and the theological: for the mathematical [demonstration] can in some person generate science, namely, in him who has evidence of the principles; but the theological demonstration certainly can in no one generate science through discourse: for the one to whom the principles of a theological demonstration were evidently known could not discourse, unlike him to whom the principles of mathematics are evident. For the theological principles can be evidently known to no one unless to him who clearly sees God; but such a one cannot discourse, as we were just saying. Wherefore the theological demonstration can be an instrument of knowing for no one; yet it is of such a nature that, if the principles were evident in such a way that discourse could at the same time be had, it would generate science - just as if in this life there could be communicated to someone the evidence of the mysteries through alien species. For the present, however, the controversy is only about theology insofar as it is actually found in wayfarers, with the obscurity of the principles, whether it be truly and properly a science.

Caput V - The opinion of Albert and the Thomists

The fourth opinion, which is rather common among the more recent [authors], is that theology of wayfarers, deduced from articles believed by divine faith alone, is truly and properly a science, not only according to itself, but also as it is in the very wayfarers - though imperfect in its own genus. The more recent [authors] think this to be the opinion of St. Thomas; but what he himself holds we shall see in the next chapter. They also relate in favor of this view, among the ancient theologians, the Antisiodorensis, St. Bonaventure, and Ægidius: of whom the Antisiodorensis, speaking of this matter in passing, teaches the opposite. But Ægidius, in the second part of the Prologue, article 4, disputing about the subalternation of theology, says that it can be called a science, and therefore its task requires that the articles of faith, which are its principles, be per se known in another science, namely, that of the blessed.[29] From this, however, it does not follow, according to the opinion of Ægidius, that theology is truly and properly a science as it is in us, but only according to itself, and, as it is in us, imperfect -

Caput VI - That the theology of wayfarers is not properly science is proved by authority

This last view, more common among the Scholastics, affirms that the theology of wayfarers, as it is in them, is not truly and properly science. This is taught first of all by the Antisiodorensis in book 2 of the Summa, tractate 29, chapter 1, question 1 in the middle, where he says that the cognition of precepts acquired by the natural light from principles per se known is properly science; but that the cognition of precepts which is had from the articles believed on faith is not science, but rather faith. The same was taught by St. Thomas, as will immediately be said. Scotus, under question 3 of the Prologue, in question 4 laterally, where he teaches that theology according to itself is science, that is, in God and in the blessed, even if it be without discourse, seems to deny that it is science in us, and that by inference from the articles of faith we properly know anything. So interprets and follows the sentence of Scotus Ockham in question 3 of the Prologue. The same is openly held by many other Scholastics in the Prologue of the Sentences: Durandus, question 1, number 49; Gregory, question 1, article 4, after the middle; Thomas of Argentina, question 2, article ...; Marsilius, question 2, article 3, conclusion 7; Gabriel, question 7, article 1, note 1; Major, question 4; Francis of Mair, who was alleged for the first opinion, question 14 of the Prologue; Bassolis, question 5, article 3 at the beginning, but especially truly on theology; finally Richard, who is reported for the fourth opinion in question 2 of the Prologue, seems rather to incline to this one; and Henry in the place alleged above - if we suppose what is really certain, namely that the principles of our theology are not evidently known to us.[30]

29. Ægidius [Giles of Rome], In II Sent., Prologus, pars II, art. 4; the Antisiodorensis [Hugh of St. Cher or the school of St. Victor] and St. Bonaventure are also cited by later authors for this view.

30. Antisiodorensis, Summa, l. 2, tract. 29, c. 1, q. 1; St. Thomas, De veritate q. 14; John Duns Scotus, Prol., q. 3; William of Ockham, Prol., q. 3; Durandus, In Prol., q. 1, n. 49; Gregory of Rimini, In Prol., q. 1, a. 4; Thomas de Argentina, q. 2; Marsilius of Inghen, q. 2, a. 3, concl. 7; Gabriel Biel, q. 7, a. 1, nota 1; John Major, In Prol., q. 4; Francis of Mair, In Prol., q. 14; Bassolis, q. 5, a. 3; Richard of Middleton, In Prol., q. 2; Henry of Ghent as cited.

Nor does St. Thomas seem any less openly to have been in this view. For in question 14 De veritate, article 9, he says: "Whatever things are properly known by certain science are known by resolution into first principles, which are per se evident to the intellect; and thus all science is perfected in the vision of the present thing; whence it is impossible that the same thing should be of faith and of science." Where he speaks not only of perfect science, but also of that which strictly and properly is science.

He says the same in 2-2, question 1, article 5, in the body. However, in reply to the second, he adds something else which seems to be contrary. For he asserts that from principles accepted by faith something is proved among the faithful just as from what are naturally known among all; and therefore that theology is science, as was said in the beginning of the work. This, however, must be explained so that the holy Doctor not be contrary to himself in so brief a space. He says, therefore, that in the same mode something is proved among the faithful from those principles as among all from principles per se known, only in this respect, because in theology such is the disposition of discourse and of syllogisms from proper principles, that if these were evidently known, without doubt they would generate science in us; just as was generated in all discourse from principles per se known. Now, however, because the principles of theology are received by faith, they generate assent and prove only among the faithful, as principles per se known do among all others. From this he gathers that theology itself is science: which Caietan understands in that article "according to itself," as was explained in the previous chapter; and in the second article of this question he also says that even if St. Thomas calls theology simply "science," yet because he adds that it proceeds from principles demonstrated in a higher science, but accepted by faith and authority alone, he seems (as Caietan says) to call it not simply science, but in some respect. Wherefore on 2-2, q. 1, a. 5, ad hoc dubium, the same Caietan teaches that theology in us wayfarers is "according to itself" truly subalternated science, but does not yet have the status of science until it be joined with the evidence of the principles.

Finally St. Thomas in 3, dist. 33, q. 1, art. 2, little question 4, says that if there were some science which could not be reduced to principles known naturally, it would not be of the same species with the other sciences, nor would it be univocally called "science." From which it is gathered that for the ratio of the assent of science it is necessary that to him who uses demonstration the principles be evidently known, and not believed by faith alone. In this sense, besides Caietan, Thomas Capreolus interprets St. Thomas's mind, in 1, q. Prologi, article concluded, 3, and article 3 ad 1 against the third conclusion; and Hervaeus in Quodlibet 11, q. 18.[31]

Caput VII - The reason by which others are accustomed to prove this opinion

This last view, which we judge more probable, is not proved in the same way by all who follow it. Some use this reason. Science properly so called is not of singulars, but of universals; for it ought to be of those things which cannot be otherwise; but singulars can be otherwise; but our theology is of

31. St. Thomas, De veritate q. 14, a. 9; Summa theologiae 2-2, q. 1, a. 5; In III Sent., d. 33, q. 1, a. 2, quaestiunc. 4; Thomas de Vio (Cajetan), ad 2-2, q. 1, a. 5; Thomas Capreolus, In Prol., q. 1; Hervaeus Natalis, Quodlibet XI, q. 18.

singulars, as of the mystery of the Incarnation, and of other contingent things, which come to be solely by the will of God, such as the resurrection of the dead, and justification in the sacraments: therefore it is not science. This argument is used by Aureolus, as found in Capreolus in question 1 of the Prologue, article 2, in the fourth argument of the second class against the second conclusion; Gregory in the third proof of the first conclusion; and Bassolis in that article 3 somewhat from the beginning. Indeed, they would be held by the same reason to assert that even if there were evidence of contingent things, there would not be of them properly science; as Bassolis expressly noted.[32]

But this reason has no weight. Wherefore others try to solve it. St. Thomas, in this article 2, ad 2, says that singulars are treated in sacred doctrine not because theology is principally about them, but because they are adduced by way of example. Yet this solution does not seem to satisfy: because the mysteries of the Incarnation, justification, and resurrection are not adduced as examples of doctrine; but of them our theology treats principally. I pass over Albert's solution, question 1, cited, ad 1; and that of Alexander in the same member 1, ad 1 and 2, which satisfies much less. I reply from the doctrine of Scotus, that in that question 4, it is possible to have no less perfect cognition of singulars than of universals, if that be evident, as indeed it can truly be; and so of them there can be science - only under the condition that this evidence be had from singular principles through some discourse. For if it were had without discourse, it would be understanding rather than science. Yet for that reason it is commonly said that science ought to be of universals, because these, for the most part, can be evidently known to us by the natural light, and thus certain, that is, of perpetual truth, so that they can never deceive us. But if there should be had an evident knowledge of some singulars, as indeed there can be had, why, supposing certain things, could not by discourse some evident conclusion be gathered? Why would not that be truly and properly science? Thus among astrologers the news comes: the motions of the wandering stars, and the vicissitude of their orbs, the encounters of the stars and the aspects, have evident demonstration. It is not, therefore, repugnant that there be truly and properly science of singulars, whose affections, even future, are evident and can be certainly known.

Wherefore, if God should communicate the evidence of singulars which we believe by faith alone, as of the Incarnation, of glorification, etc., then there could be deduced evident and necessary conclusions, as that Christ had two wills, that he was capable of laughter, and so forth. This doctrine, it seems, was handed down by Caietan: for to the first he says that of the Incarnation and of other things contingent according to themselves there can be science: because, insofar as they are subject to this science of theology, they are necessary - he understands this by reason of the revelation of faith, as he says, that contingent things, namely, can be known by God.

One thing, however, can stand in the way lest we have science of those singulars which are believed by divine faith. For if the evidence of them were communicated to us, it ought to be of the thing as it is through its proper species, which they call intuitive. But from this there can be no discourse, as we said in chapter 5, which is the proper instrument of knowing. And if we were to call this intuitive knowledge properly and strictly "science," we could also by the same name call

32. Petrus Aureolus, as cited in Thomas Capreolus, In Prol., q. 1, a. 2; Gregory of Rimini, prob. 3 of concl. 1; Bassolis, q. 5, a. 3.

the knowledge of singulars which we know by faith alone. But because science properly, as it is distinguished from the understanding of first principles, is not said to be a cognition of something per se known, but through discourse, therefore it must be said of the singular mysteries of faith that even if God were to communicate to us an evident knowledge of them, it could not be science - not because they are singulars, but because they would be per se known; and from these by a true discourse nothing could be evidently deduced, but all things would at once be known in the same intuition.

Moreover, the common axiom of the philosophers, namely that "there is no science of singulars," is to be understood of the singulars of corruptible things, and of science acquired by human industry and the natural light. For of these, especially as regards their future existence, we cannot have anything certain, because they do not have operations and effects remaining in the same mode, nor a determined existence. I do indeed see that Scotus, in the place cited, not only said but thought this: that there cannot be science of singulars, even if the evidence of them be had through discourse, because he thinks that of the ratio of science, as it is defined by Aristotle in the Posterior Analytics I, chapter 2, the universal object is required; and thus that "science," as defined in Ethics 6, chapter 4, is undoubtedly distinguished from opinion. But his view does not please me. For that condition of the universal object does not seem necessary for the ratio of science, even as it is defined in the Posterior Analytics, except in the mode which we explained above. Nay rather, in Ethics 6, chapter 4, the Philosopher says that science is an estimation of universals, of those things which are necessary. Wherefore the science of singulars is not yet that of which it is treated in Ethics 6, if that condition be necessary, as Scotus supposed.

From which it is plain that it is not because of singularity as such that we deny there is science of the singular mysteries of faith; but because, if God were to communicate to us an evident knowledge of them, it would be through intuition proper, not through the discourse by which science is effected.

Caput VIII - The best reason for the last opinion

To confirm the last opinion, which we said is the more probable, by the best reason, two points must be premised. One is that here the question is not about theology according to itself, that is, about the very disposition of arguing and proving which theology uses - namely, whether that disposition of demonstrations would be sufficient to generate science if its principles were evident, as we said above. The other is that we are inquiring whether our theology is truly and properly science, under the name "science" taken in that proper signification in which the philosophers have always employed it; just as when...

If of the singular mysteries of faith there cannot be science as it is, through its proper species, namely that science which they call intuitive, from this, however, no discourse can be made, as we said, which is the proper instrument of knowing. But if we were to call this intuitive knowledge properly and strictly science, we could also by the same name designate the knowledge of singulars which we know by faith alone. Yet because science properly, as it is distinguished from the intellect

of first principles, is not said to be a knowing of something per se known, but through discourse, it must be said that the singular mysteries of faith, even if God were to communicate to us a certain knowledge of them, cannot be science: not because they are singular, but because they would be per se known without discourse, and therefore would be intellect rather than science.

By that same reason it is commonly said that science ought to be about universals, because these, for the most part, can be evidently known to us by natural light, and thus with certainty, that is, with a permanence of truth such that they can never deceive us. Yet if of certain singulars there be had a certain knowledge - as in truth there can be had - and, certain things being posited, some evident conclusion is gathered by discourse, why would there not be of that a true and proper science? As happens to astrologers: for the motions of the heavens, and of each sphere, the conjunctions of the stars, and the aspects of any given one, have demonstration. Therefore it is not repugnant that there be true and proper science of singulars, whose affections, even future, can be known evidently and with certainty. Wherefore, if God were to communicate an evident knowledge of singulars which we believe by faith alone - such as of the Incarnation, glorification, etc. - from these there could be deduced evident and necessary conclusions, as that Christ had two wills, that He was capable of laughter, etc. This doctrine seems to have been handed down by Cajetan in the section "To the first." For he says that there can be science of the Incarnation and of other things which are contingent according to themselves; because, insofar as they are subject to this science of Theology, they are necessary - he understands this by reason of the revelation of faith - just as, he says, there can be science in God of things that are contingent.[33][34]

One thing indeed can stand in the way, lest we have science of those singulars which are believed by divine faith. For if an evident knowledge of them be lacking to us, there ought to be had from those a discourse, rather than any science; but from those a discourse could not with certainty be deduced, but all things together would be known in the same intuition.

But the vulgar axiom of the philosophers, namely, "There is no science of singulars," is understood of the singulars of corruptible things, and of science acquired by human industry and natural light. For of these, especially as regards their future existence and state, we cannot have anything certain, because their operations and effects, as well as their determinate existence, do not remain in the same way. I see well that Scotus in the place cited feels differently: for he asserts that there cannot be science of singulars, even if an evident knowledge of them be had through discourse, because he thinks that, by the account of science as it is defined in Posterior Analytics I, chapter 2, the object must be universal; yet he allows that there can be a higher sort of knowledge than the science defined in that place, or even science as it is defined in Ethics VI, chapter 4 and the following, insofar as it is only distinguished from opinion.[35][36] But his opinion does not please me. For that condition of a universal object does not seem necessary for the account of science, even as it is defined in Posterior Analytics I, unless in the manner which we explained above. Nay

33. Scotus, loc. cit.
34. Cajetan, ad primum.
35. Aristotle, Posterior Analytics I, c. 2.
36. Aristotle, Nicomachean Ethics VI, c. 4 sqq.

rather, in Ethics VI, in that very chapter, Aristotle openly says that science is an estimation about universals and about things that are necessary. Wherefore a science of singulars would still not be that which is treated in Ethics VI, if that condition were necessary, as Scotus thought.

The best reason for the last opinion

To confirm the last opinion, which we said is the more probable, by the best reason, two points must be premised. One is that here the question is not about theology according to itself, that is, about the very disposition of arguing and proving which theology uses - namely, whether that disposition of demonstrations would be sufficient to generate science if its principles were evident; for about this we have said enough in chapter 4. The other is that we are inquiring whether our theology is truly and properly science, under the name "science" taken in that proper signification in which the philosophers have always employed it; just as when there is inquiry about God, whether in God there is mercy, justice, or anger, the inquiry is about the proper propriety of that which is asked, with the common and universally received meaning of those names presupposed, and also with the definition by which the philosophers have been accustomed to define the proper significates of those names; otherwise theologians would be free to apply these names to strange significations.

We therefore take here "science" properly, and distinct from the intellect of those things which are per se known. For in a broader signification commonly also received, the intellect of principles is also called science. By this reason, the knowledge which God and the angels have about things has also been accustomed to be called science. We, then, speak only of science as it is distinguished from knowledge per se, which is called intellect, when we inquire whether our theology is properly science.

These points being laid down, if the definition of science which Aristotle and the other philosophers hand down does not suit our Theology, it follows, without doubt, that it is not to be said to be science; nor is the theological argument to be called demonstration; for this is the proper instrument of science. Now we speak of the theological argument as it is referred to the intellect of the wayfarer, to whom the principles of this [science] are obscure, not to the intellect of another to whom they would be evidently known. But now an argument of this sort is not a demonstration to the wayfarer; nor is the assent of its conclusion science. This is proved in this way. For although the principles of our Theology are most true and necessary, and the discourse constructed from them is necessary - indeed, in the nature of consequence it would be evident to us, so that an evident and certain knowledge of the conclusion would be inferred, unless the obscurity of the principles hindered - nevertheless from those there is not generated in us an evident knowledge of the conclusion; and hence neither science: for of its account, as it is defined by Aristotle and commonly by the philosophers, evidence is of the essence. Or else one must say that here "science" and "demonstration" are employed in another way than they have been defined anywhere by the philosophers.

Accordingly, some Thomists, that they might stubbornly defend a fourth opinion, say that for the account of demonstration it is not necessary to proceed from principles evident to him who has the demonstration, but that it suffices if he receive the principles from another who has the evidence of them. And in this way they think that a subalternate science has a true demonstration and science in him to whom the premises are not evident, but are received by faith from him who has the subalternating [science]. This seems to have been taught by St. Thomas in this article, and to be proved from Aristotle, Topics I, chapter 1, who, defining demonstration, says that it is that which proceeds from first principles, or from those things which, on account of the first, have received true credibility.[37][38]

However, this solution has nothing of probability. For he who in perspective assumes principles that are indeed true and necessary, but are to himself known only by human faith, cannot through a syllogism from them attain a greater and more certain knowledge of the conclusion than is the faith of the premises; but since that faith is human, the assent of the conclusion will be only human faith, or certainly opinion. But when St. Thomas says that a subalternate science is science, he says that it proceeds from principles known by the light of a superior science; he is not to be understood as though he thought that from mere human faith in the principles there could be generated an assent of science in a subalternate science; rather, he calls the subalternate faculty "science" (as Cajetan explains) according to itself - that is, he says that the disposition of argumentation which the subalternate faculty uses is truly a demonstration, if otherwise the evidence of the principles be not lacking, as indeed it can be had, not within the limits of a subalternate science, except a posteriori and by induction, but by the light of the subalternating [science]. In the same way he understands our Theology to be science, because it receives its principles from the light of a higher science, namely of the blessed. In this sense Cajetan interprets the mind of St. Thomas. But whether this happens in Theology in the same way as in perspective and other natural subalternate sciences was said in chapter 4.[38]

Finally, the testimony of Aristotle in Topics I, text 2, is frivolous; for he did not say that science is that which is derived from first principles per se evidently known to us, or from first principles received by faith alone - for thus Theology would be science, as the adversaries contend - but he said, [that it proceeds] either from those things which, by reason of first principles, have received credibility. By "faith," however, he understands in general assent, not that peculiar sort which we procure from testimony alone.

These, truly, are said to "receive credibility from first principles," whose assent is acquired not from testimony or from things accepted as probable, but from first principles evidently known. But the principles of Theology are neither per se evidently known to the theologian, nor does he have assent to them from first principles evidently known to himself; rather, they themselves are first principles known only by testimony, or as probable. Therefore it cannot be said of our Theology

37. Aristotle, Topics I, c. 1.
38. Cajetan, in this article; cf. ch. 4 above on subalternate sciences.
38. Cajetan, in this article; cf. ch. 4 above on subalternate sciences.

that it proceeds from those things which, by reason of first principles, have received true credibility, but from things believed by faith alone, which the theologian assents to on testimony, authority, or probable reason; and that is far different.

Others, however, although they admit that within the limits of a subalternate science an assent of science cannot be generated unless someone have evidence of the conclusions which are assumed as principles in the subalternated [science], as was proven in article 3, yet they think our Theology has a different account. For although it proceeds from principles believed by faith alone, yet because that faith is divine, and its assent is so much more certain than that of the things which are evidently certain to us as the testimony of first Truth is more certain than any created truth and reason, therefore they say that our Theology, which elicits conclusions from such principles, is truly science. But neither does the reasoning of these people prove anything. For that the principles be known by divine faith, and therefore that there be had of them an assent more certain than is the evident knowledge of other created things, does not suffice for generating the evidence of the conclusion, which is of the essence of science, as it is defined by Aristotle and by the philosophers commonly. To say, moreover, that that divine certainty without evidence suffices for the account of science, is to define science at one's pleasure, and to employ it otherwise than the philosophers have accepted.

In addition there is this, that a theological conclusion and its assent is not supernatural according to its substance, as commonly the assent of divine faith is said to be, once the infused and supernatural habit for believing has been posited; because the theological assent does not rest immediately upon the testimony of God by a supernatural illumination, as the assent of faith does, but upon a consequence drawn from the articles of faith, sometimes also with an added proposition known by natural light. Whence it follows that the assent to a theological conclusion is not infused in its nature, but acquired. Indeed, some have said probably that the assent of the theological conclusion, and the science thereof, does not depend upon the supernatural assent of the articles of faith, infused by a supernatural light, but upon the firm assent of them obtained from signs, or reason, or the human authority of the Church. Maior, In IV Sentences, q. 9, in the Prologue, grants that a heretic, who does not have infused faith, can be a theologian, and have the habit and act of Theology about many conclusions: therefore this is a sign that the assent of a conclusion is not generated from the supernatural assent to the articles. Otherwise, just as in a heretic who denies one article the assent from infused light does not remain around some other, as we shall say in II - II, q. 5, so neither would there remain a truly theological assent to any conclusion, the same as that which he had when he was faithful: because whenever the assent to principles, or of some principle, in any syllogism is changed, it is necessary that there be changed the assent to the conclusion which is generated from that principle; for the assent to the principles flows into the conclusions.[394041]

39. Below, art. 3.
40. Maior, In IV Sent., q. 9, Prol.
41. St. Thomas, Summa Theologiae II - II, q. 5; and II - II, q. 1, a. 1.

Wrongly, then, do certain Thomists concede that the theological assent in a heretic is of another kind than it was in him when he was faithful. For who can perceive that difference in the mode of assenting? Why, therefore, must we assert it without foundation? If we grant a different assent to the articles of faith as from a supernatural light, and as from signs, or from human authority, it is because, with the supernatural habit of faith posited, it is necessary to posit its proper assent, which rests upon the testimony of first Truth, distinct from the assent from miracles or from human authority, or from another mode deduced by reason, as we shall show in II - II, q. 1, a. 1. Finally, in whatever way we say that the assent to theological conclusions is generated, since it does not attain the evidence which the philosophers posit to be of the essence of science, it will not be able to be properly named science, but only in a broader signification, insofar as any knowledge whatsoever, however acquired, can be called science.

But they think that there is a different account of our theology. For although it proceeds from principles believed by faith alone, nevertheless that faith is divine, and the assent of it is so much the more certain than those things which are evidently certain to us, by how much the testimony of the first Truth is more certain than any created truth and reason; therefore they say that our theology, which from those principles so believed elicits conclusions, is truly science.

Refutation. Yet neither does their reason prove anything. For that the principles be known by divine faith, and therefore that a more certain assent be had about them than there is to the evident knowledge of other created things, does not suffice for generating the evidence of the conclusion, which is of the notion of science, as it is defined by Aristotle and by the philosophers commonly. But to say that that divine certitude without evidence suffices for the notion of science is to define science at pleasure, and to usurp it otherwise than the philosophers received it.

To this there is added that a theological conclusion, and its assent, is not supernatural according to substance, as the assent of divine faith is commonly said to be, supposing once for all an infused and supernatural habit for believing: because the theological assent does not rest immediately upon the testimony of God by supernatural illumination, as the assent of faith does, but upon a mediate consequence from the articles of faith; sometimes also by the mere position it is inferred by the natural light alone. Whence it is that the assent to a theological conclusion is not supernatural by nature, but acquired. Indeed certain men have said that the assent to the conclusion and the science are generated from the assent to the supernatural articles of faith by a supernatural light; or again that they are generated only from a firm assent to those articles, compared with either reason or the authority of the Church. Major concedes that even a heretic can have a habit about many conclusions of theology; therefore the assent to the conclusion is generated from the assent to the principles. Otherwise, just as we shall say below at 2-2, q. 1, so too the assent would not remain to any logical conclusion which he had when he was faithful; because as often as the assent is changed, whether of some principle or also of some middle, of necessity the assent of the conclusion which is deduced from that principle is changed. But some Thomists say that the theological assent is of a different kind than when he was faithful. For who will be able to perceive that difference in the mode of assenting? Why therefore ought we to assert it? That there is a different assent, one which is from a supernatural light, another which is from human

authority or from reason, we shall show at 2-2, q. 1, a. 1. Finally, in whatever way we say that the assent to theological conclusions is generated, since it does not attain the evidence which the philosophers posit to be of the essence of science, it will not be able to be properly named science, but only in a broader signification, insofar as any knowledge whatsoever, however acquired, can be called science, especially if it be of necessary matters and without any fear.

About the habit of theology there is to be said in the same proportion as the philosophers propose: for the nature of a habit ought to be discerned from acts.

Response is made to the arguments of the adversaries.

Disputatio V - On the quality of the assent to the theological conclusion, and of the habit concerning it

Caput I - Aureolus's opinion: that the habit of theology is declarative, not adhesive

It must therefore be seen what sort of assent this is of the theological conclusion, and what habit in theology is acquired; in which matter also the theologians vary. The first opinion is that of Aureolus, which Ockham reports: asserting that the habit of theology acquired through discourse is not (as he himself speaks) adhesive, but declarative; as if he said that by such a habit the intellect is not inclined to elicit an act of assenting and of adhering to one part of a contradiction, but only to the act of declaring better and of explaining the mysteries. The first is proved - that a habit is acquired (which in this his opinion Aureolus seems to suppose) - because by the repetition of those acts, eliciting conclusions from the articles of faith, a man becomes day by day more able around them: therefore he acquires some habit which affords him promptitude. From this he proves that through that habit the intellect is not inclined to assent, because if it were to generate assent, it would either be of science or of opinion: not of science, as was shown in the preceding disputation; nor of opinion, for he would fear about the truth of the theological conclusion who assented by opinion alone; but the theologian cannot fear, if he holds the faith of the principles and sees the conclusion to be deduced by evident consequence from them: therefore it remains that it be a declarative habit, because it cannot be any other.

To the first argument of the third opinion, which alone remains for us to be dissolved, response is easy. To the first we say that sacred doctrine is called by the Fathers and Scripture "science" by that general and common reason, not however as it is distinguished from the assent to principles. For neither do the Fathers and Scripture themselves call the very assent of faith, which is the assent to principles and corresponds to the assent which is called "intellect" in other sciences, "science," in that proper and peculiar signification which the philosophers employed to signify only an evident assent and deduced through discourse, but in a broader signification, although without a metaphor, according to which we also say that there is science in God and in the Angels, although the knowledge of God and of the Angels corresponds rather to the intellect of principles, which are evidently known through themselves, than to the knowledge of conclusions, of which alone science

is said to be had, as the adversaries admit, in that proper and peculiar signification which we said. To the reason we respond that what is asserted in it is not enough for there to be science among wayfarers in those things: for evidence is also required, as has been proved. But what sort that assent is to the theological conclusions will be clear in the following disputation.

Caput II - What Ockham and the Nominales think

The second opinion is Ockham's in the cited place, and Gabriel's, q. 7 of the Prologue, a. 1, note 2, and Gregory, q. 1, a. 4, conclusions 2, 3, and 4, and Maior, q. 4 after the middle. They teach first that there is in the theologian not only a habit which they call declarative, but also that through syllogisms drawn from the articles of faith an assent to the conclusions is generated, and that thence an adhesive habit is acquired. Then they assert that this assent, and the habit thence compared, is not of science, as was said above, nor of opinion, nor of infused faith, but of acquired faith, which is either intended through discourse, or is newly acquired when before it had not been acquired.

In the first part of this opinion there agree with the aforesaid authors Marsilius, q. 2 of the Prologue, a. 3, con. 4, and Bassolis, q. 5, a. 3, to the end of the article, who says briefly that there is in the theologian a habit of declaring the mysteries and of assenting to the conclusions; and that the theologian discharges the office of declaring sometimes when by one mystery he declares another, and by one place of Scripture he declares another; which the ecclesiastical writers themselves were accustomed to do. From this exercise the theologian therefore acquires a habit of declaring. Moreover, that habit also to be for assenting they rightly prove against Aureolus Ockham, Marsilius, and Gregory by this reason: As often as discourse from the assent of the premises so moves the intellect to the assent of the conclusion that, if no other cause were present, by that alone the intellect would assent to the conclusion, the discourse is the cause of assenting to the conclusion; but theological discourse is of this sort: for if once a man assents to the premises, whether both be of faith, or one naturally evident and the other of faith, since the discourse and the disposition of them is good and as such appears, of necessity the intellect will be moved to assent to the conclusion: therefore theological discourse is not only for declaring, but also for assenting; and consequently the habit acquired from it will not be merely declarative, but also adhesive.

The latter part of this opinion, namely that the theological assent is not of opinion but of acquired faith, they prove thus: It belongs to the notion of opinion to fear the opposite part; but the assent to a theological conclusion is not with fear, since the form of the inference is evident, and there is an assent to the premises without fear: for either both are of divine faith, or one naturally evident and the other of divine faith: therefore the assent to the theological conclusion is not of opinion, but of acquired faith; and the habit in like manner.

Refutation of the opinion of Ockham and the others. The position indeed of Aureolus, which we reported in the preceding chapter, is sufficiently refuted by Ockham's reasoning and of the others, who prove the first part of their opinion; but we can refute its latter part by this reason. Although the theological conclusion follows without fear, as the aforesaid Doctors of that sentence rightly

prove, nevertheless on that account it ought not to be denied to be an assent of opinion. For to the account of opining an expressed fear, by which someone thinks that thing could be otherwise, is not necessary, as I shall show more fully at 2-2, q. 1, a. 5. For this cause therefore the theological assent ought not to be excluded from the account of opinion. Add that fear seems to belong no less to the account of human and acquired faith than to the account of opinion, since both are from a principle to which of itself it is not repugnant that falsehood be subject. Why then do the aforesaid Doctors rather say that the theological assent is acquired faith than opinion? For acquired faith seems to be the assent most nearly deduced from human testimony, to which he is said to believe who has faith in it; but opinion is said to be had through some probable reason: commonly indeed we use "faith" and "opinion" for the same thing. Wherefore an assent, whether from human testimony alone, or from signs, or from reason deduced, is wont to be called acquired faith. Whether there be fear with it or without it, it matters little, whether it be called faith, or opinion.

Caput III - The true opinion

Therefore that sentence is true, that the assent of a theological conclusion without expressed fear can be called either acquired faith, or also opinion: if we suppose what we said in the previous disputation, namely that theological conclusions are collected from articles of faith not believed by divine faith, but by human and acquired. For thus a theological conclusion will be acquired in a broader signification, or it will be opinion: yet in such a way that the theologian believes it to be most certain. But if we say that a theological conclusion is deduced from articles believed by infused and divine faith, because of the testimony of the first Truth, then it would be called neither opinion nor acquired and human faith; but it would be a certain middle kind of assent between divine and human faith or opinion; and it would differ from divine faith not because the articles would be believed without discourse, but the theological conclusion through discourse, as some think, but because the articles are derived immediately from the testimony of God, the theological conclusion however is collected from the very articles of faith through discourse.

Furthermore, for the explication of this sentence there must be noted the difference between divine faith and the theological conclusion: in divine faith indeed assent is generated through discourse, such that the first principle upon which it rests is that complex "God says," which is the reason for assenting to any revealed and testified article. For he who believes something because God has said it, from the fact that God has said it infers that it is true: nay, he seems also to understand under it another proposition, namely that God is truthful, who can neither be deceived nor deceive. This discourse of faith is not theological, because it is deduced immediately from the testimony of God; but theological discourse is from the believed articles.

But some contend to prove that the assent of divine faith is not generated through discourse, because faith is borne toward one only proposition, namely "God says that he is three and one," to which without another, by the light of faith alone, we assent: but in one proposition there cannot be discourse: therefore the assent of divine faith is not compared through discourse. I answer nevertheless, even if in that one proposition, as it were modal, of "God says" the article be clearly

evident, nonetheless under it a discourse is contained; for it is necessary to assent to both parts, "God says," and also to this, "God is three and one," and to this: "Therefore I assent" - and hence often the intellect should be more expressly instructed, so that it may be more fully explained.

Then there is to be noted the doctrine of Cano, book 6 on the loci, the last chapter, at the tenth little verse, "Sed id postremo"; and of Andreas de Vega, book 9, on the Council of Trent, chapter 39, somewhat at the beginning. They assert that a proposition deduced by evident consequence from articles of faith, or from one de fide and another evident, is a proposition of divine faith, and that to its assent we are straightway inclined by the supernatural light of faith no less than to those things which have been determined by the definition of the Church. Which doctrine some think less true, and in this way they try to refute it. A conclusion always follows the weaker part, whether in the quality of the propositions or also in certitude: therefore when it is deduced from one de fide and another naturally evident, the conclusion will be less certain than if it were de fide; but when it follows from two de fide, at least its assent will be distinct from the assent of faith, because this rests upon the testimony of God as upon a proximate principle, but the assent to the conclusion is deduced proximately from the premises de fide through discourse. Wherefore Catholic faith, which rests proximately upon the testimony, will not incline to the assent of it.

But these Doctors do not seem to have understood the aforesaid sentence of Cano and Andreas de Vega. The reason adduced only proves that the assent to a theological conclusion, insofar as it is inferred from premises de fide, or from one de fide and another natural, is not the assent of infused faith, but either inferior to the assent of the premises, or of another kind. But indeed Cano and Vega, besides this assent which is through discourse and is called theological, contend that there is another produced proximately by the light of faith, which, as a preceding condition, demands the theological assent, even if this is less certain than the assent of faith: which is not wondrous. For as they themselves very well note, and as we shall show more broadly at 2-2, q. 1, a. 1, the assent of infused faith also requires, as a condition, the assent of human faith: for in order that some proposition which has been defined by the Church be believed by infused faith, it is necessary first to believe that the definition was made, either in a Council, or by the Pontiff, which however is known only by human faith. In the same way when a preacher proposes or sets forth the articles of faith, first we believe by human faith; and this being supposed, straightway the higher assent follows from the...

Then, next, the doctrine of Cano must be noted, book 6 On theological loci, last chapter, at the tenth little verse, "Sed id postremo," and of Andreas de Vega, on the Council of Trent, book 9, chapter 39. For Cano and Vega teach that, once an evident consequence from the articles of faith, or from one article of faith and another natural [premise], has been posited as a prior condition, the assent of infused faith follows; for theological demonstration stands to the theologian who demonstrates just as a Council, when it declares something de fide, stands to the whole Church. The only difference is that the Council proposes what it defines to all for belief, so that all are bound to believe; but the theological reasoning proposes [its conclusion] only to those for whom the consequence from the articles of faith is evident. And therefore a proposition contrary to a theological conclusion is commonly called erroneous, not heretical, because it is not proposed to all

as to be believed; but a proposition of Scripture, or a definition of the Church, contrary thereto is called heretical, because that is proposed to all as to be believed. Nonetheless, one who had an evident theological discourse from one premise of faith and another natural, or from both premises of faith, and would not believe the conclusion, would be a heretic, both because, the aforesaid supposition having been made, he was bound to believe it, and also because thereby he would not assent to some premise which is of faith.

Respondetur argumentis contrariis.

For the second agrees with this in what it asserts, namely, that to the assent of a theological conclusion there corresponds an adhering habit, and not merely a declarative [one]. It remains therefore that we explain briefly, concerning the second argument of the first opinion, whether the theological habit is an intellectual virtue (*virtus intellectualis*), as science (*scientia*) is said to be, or not.

I answer first, if we say that the theological conclusion is deduced from articles believed by infused faith, it is without doubt an intellectual virtue, just as we shall say of infused faith itself in 2.2, q. 4, a. 5; because, as infused faith, on the part of the formal object on which it leans, can never incline to the false, so too the habit of Theology cannot move to the false by a consequence drawn from articles believed by divine faith. But this habit is said by Aristotle, Ethics 6, chapters 2 and 3, to be an intellectual virtue that cannot incline to the false; therefore, according to his view, infused faith and Theology are intellectual virtues; and if Aristotle had known such habits, he would without controversy have numbered them among the intellectual virtues.[42]

Then I reply: if we say that the theological conclusion is deduced from articles believed by acquired faith, which some call human, it will perhaps seem to someone to be excluded from the notion of an intellectual virtue, just as opinion is excluded by the same Aristotle, because it sometimes happens that something false is said by opinion. The same line of reasoning seems to apply to acquired faith, and to an assent deduced from it.

Nonetheless it must be said that, even according to Aristotle's view, the theological habit in this way is an intellectual virtue; because acquired faith has been so confirmed through so many miracles and signs, by the holiness of life, and by the authority of the Church, that no intellect, according to the rules of right reason, can believe anything else; indeed, with Richard of St. Victor, De Trinitate 1, chapter 2, one can confidently say to God: "If there is error, by thyself we have been deceived. For we see that all these things are confirmed by so many signs and wonders, which cannot be done except by thee." Aristotle, moreover, for that very cause rejects opinion from the notion of a virtue, Ethics 6, chapter 3, because it can happen that by opinion something false is asserted. Wherefore, if such is the confirmation of the articles of our faith, that by no right reason can it be believed that they have been revealed by any other than God, we have no reason to reject from the notion of an intellectual virtue the acquired faith of the articles, and the theological assent deduced therefrom. Otherwise it must be said concerning human faith about other matters, which we easily believe can be false. Yet if there were so great an authority that it would naturally seem

42. Aristotle, Nicomachean Ethics, book 6, chapters 2 - 3.

that the contrary could not be true, then even human faith would be an intellectual virtue. Such is that by which we believe that Constantinople or Rome exists. For who does not see that it is naturally impossible that so many men, who bear witness to these things, should have conspired to deceive?

Disputatio VI - On the subalternation of our Theology

Sententia Caietani, et aliorum. cap. 1. - Vera opinio de subalternatione Theologiae. cap. 2. - Respondetur argumentis Caietani. cap. 3.

Caput I - The opinion of Cajetan and others

This question, according to our opinion which we set out in the fourth disputation - that Theology is not a science - could easily be disposed of: for if it is not a science, it cannot be subalternated. But because certain persons who agree with us contend that some genus of subalternation ought to be attributed to our Theology, there can be a controversy whether, besides the defect of evidence, something else is lacking to our Theology by reason of which it is not a subalternated science. The prior opinion is that of Cajetan in this article and in 2.2, q. 1, a. 5, who, although he thinks our Theology in us is truly and properly not a science, as we saw in the fourth disputation, nevertheless affirms that it is truly and properly subalternated. Which opinion was followed by Giles of Rome in the principal part of the Prologue, article 2; and Capreolus seems to have been of the same mind, q. 1, Prolog., a. 1, conclusions 2 and 3, whom he proves by many places of St. Thomas, which in my judgment support nothing of the sort.[43]

Cajetan therefore asserts two things in this article. One is that Theology, according to itself (*secundum se*), is truly and properly a science, and simply subalternated. He understands Theology according to itself, as we explained in disputation 4, chapter 4. The other is that our Theology in us is an imperfect science (I understand "improperly," as I noted there), yet simply subalternated. But, to explain this opinion - which certain recent authors report not quite correctly - he notes that Theology according to itself is not the same as our Theology according to itself. For Theology according to itself is the science which God has of himself; but our Theology is said [to be that] which is in men who are wayfarers and also in the blessed. Wherefore this [latter] too can in turn be divided into the Theology of those who clearly behold God and into the Theology of wayfarers. Finally, Cajetan considers the Theology of wayfarers in two ways: first, as there is in us a certain assent engendered from principles believed by faith alone; then, according to itself. And he understands "according to itself" (even if he does not explain it) not as Theology as it is in the blessed; for he distinguishes the Theology of wayfarers from the Theology of the blessed; and again he distinguishes that of the wayfarers in the two ways which I have said. Accordingly, he understands the Theology of wayfarers according to itself, as I explained from his mind in

43. Cajetan, In 2.2, q. 1, a. 5; Giles of Rome, principal part of the Prologue, art. 2; Capreolus, q. 1, Prologue, a. 1, conclusions 2 - 3; various loci of St. Thomas as cited by Capreolus.

disputation 4, chapter 4: namely, the theological line of argument itself, not as applied to such a subject as we mentioned, to be a true demonstration according to itself, unless the evidence of the principles is lacking.

These positions laid down, Cajetan goes on to prove that the Theology of wayfarers, both according to itself and as it is in wayfarers, is subalternated simply and perfectly to the science of God and of the blessed. He does not say that it is simply a science, but that it is simply subalternated: for as it is in us, he says, it is not simply a science, yet it is subalternated; but according to itself it is a science and subalternated. In both ways, therefore, he says that it is simply subalternated, but only in the latter way is it a science. He proves this by the following reasoning. If anything stood in the way for which reason it would not be subalternated to the Theology of God and of the blessed, it would be that the principles of a subalternated science ought to be conclusions deduced from higher principles from the subalternating science. But the principles of the Theology of wayfarers are the very truths that are first and per se known to God and the blessed, such as that God is triune and one, etc. Yet this does not impede the Theology of wayfarers from being subalternated. For when we transfer to God something that is found in creatures, it must be transferred without imperfection; and therefore we attribute science to him, together with evidence and certitude, but without discursus, which is an imperfection that it has from us. Accordingly, when we say that the Theology of wayfarers is subalternated to the science of God, it is not to be understood as if we attribute to the divine science, as to the subalternating, what created subalternating sciences have - namely, to prove by discourse their conclusions which are assumed as principles in the subalternated science. There is, therefore, no need that the principles of the Theology of wayfarers, which are the articles of faith, be conclusions of the Theology of God and of the blessed; but it is enough if those things which are evidently known to God and the blessed be assumed only as believed by wayfarers in their Theology. Just as, if a Geometer had without any thread of discourse the evidence of his conclusions which he now assumes by way of hypotheses as principles, he would nonetheless be subalternating; and that which is subalternated would be perspicuous, just as it now is.

Such is Cajetan's reasoning and opinion, which he hands down clearly enough, and he confirms it especially by this reason, that in many codices (even the Roman ones, as has been edited, though perilously corrupted by many falsehoods) the reading runs thus: "Et quod subalternare, non quod discursu demonstrationis probentur principia subalternatae, sed quod evidentiam illorum, etc." And those who should have corrected the Roman text ought rather to have expunged the mendacious parenthesis, and restored the words into this form: "Et quod subalternare, non quod discursu demonstrationis probentur principia subalternatae, sed quod evidentiam illorum, etc." And they rightly have this sense, which I have explained as containing Cajetan's opinion.

Caput II - The true opinion on the subalternation of Theology

The opposite opinion is more common and more comprehensive, namely, that our Theology, even if it were true and properly a science, nevertheless could neither be nor be called subalternated. Thus say many recent disciples of St. Thomas; among the more ancient Scholastics, Scotus in the Prologue to the Sentences, after q. 3; in q. 9, a. 8, and the side note ad 4; ad 8; ad quod. Henry of Ghent in the Summa, a. 7, q. 5; the Master of Strasbourg (Argentina), 2, Prologue, art. 3; Durandus, q. 7, Prologue. Likewise this opinion is reported for Aureolus in 1, Prologue, art. 2, in the arguments of the first order against the second conclusion. Hervaeus also agrees, Quodlibet 11, q. 18, who for the sole reason that the principles thereof do not have evidence denies it to be subalternated. Of the others, whom in disputation 4 I alleged on the one side and the other, none, as far as I have read, discusses this matter. Those indeed who said that the Theology of wayfarers is not a science for that reason do not treat of subalternation.

This is Cajetan's reasoning and opinion, which he sets forth rather obscurely, especially for this reason, that in many copies - even those printed at Rome - a certain sentence is very corrupt, in this fashion: "And that the subalternating is not as to the demonstrative discourse for proving the principles of the subalternated, but as to the evidence of them," etc. Yet the words can indeed be emended so as to yield a clear sense: "And that the subalternating is not as to the proving by demonstrative discourse the principles of the subalternated, but as to the evidence of them," etc.; and thus they have the best sense, which we have explained above. Thus far as to reporting Cajetan's opinion.

As to St. Thomas, whom Cajetan and Capreolus adduce in their favor, there is no reason for us to suspect that he held the same opinion as they. He is indeed cited by Capreolus in the work on Boethius's De Trinitate, q. 2, a. 2, ad 5 and ad 7, and in De veritate q. 14, a. 9, ad 3; one could also cite him in this article; but nowhere does he assert that the Theology of wayfarers is subalternated to the Theology of God and of the Blessed. Rather, in order to show that nothing hinders Theology from being a science although its principles are taken by us on faith alone, he uses the comparison of a subalternated science, when it takes its principles - believed by faith alone - from the subalternating science in which they are indeed known, which nevertheless is a science. Thus, then, he says: it suffices for the Theology of wayfarers to be a science that its principles be evidently known in the superior. He did not say "in the subalternating," but "in the superior." Therefore St. Thomas neither disputes nor cares about subalternation. Richard taught nothing else in q. 2, Prologue; therefore he ought not to be cited for the opposite opinion.[44]

For a fuller understanding and confirmation of this opinion, first it must be observed that it is not permitted us to philosophize about the subalternation of our Theology otherwise than Aristotle and the other philosophers have spoken about the subalternation of sciences in general; otherwise, as we said in disputation 4, chapter 8, we could attribute to God without metaphor wrath, repentance, and the like, which is false. Therefore, in order that we may know whether our

44. Capreolus, in the work on St. Thomas super Boethium De Trinitate, q. 2, a. 2, ad 5 and ad 7; and De veritate, q. 14, a. 9, ad 3. Also Richard, q. 2, Prologue.

Theology is truly and properly subalternated to the Theology of God or of the Blessed, or not, it is necessary to see whether the ratio of subalternation which the philosophers handed down fits it. For if none of the modes of subalternation which the philosophers assign fits it, it will be a fiction and futile to call it subalternated. Wherefore Giles, cited above, is in error: while he strives to defend the former opinion, he plainly admits that no kind of subalternation assigned by the philosophers suits it, but that it is subalternated in a certain new mode.

The true opinion concerning the subalternation of Theology

The opposite opinion is more common and to be embraced, which says that our Theology, even if it were truly and properly a science, could not be, nor be called, subalternated. Thus many recent authors, even true scholastics, disciples of St. Thomas: among the earlier, Scotus after q. 3 of the Prologue, in q. 4 and 5, lateral questions, to 2, 9, and "Sed quid"; Henry in the Summa, a. 7, q. 5; the Master of Strasbourg (Argentina), q. 2, Prologue, art. 3; Durandus, q. 7, Prologue. This opinion is also reported for Aureolus in 1, Prologue, art. 2, in the arguments of the first order against the second conclusion; Hervaeus also agrees in Quodlibet 11, q. 18, who, for the sole reason that its principles are not had with evidence, denies that it is subalternated. Of the others, whom in disputation 4 I alleged on the one side and the other, none, as far as I have read, discusses this matter. Those indeed who said that the Theology of wayfarers is not a science for that reason do not treat of subalternation.

With this posited, what remains is to see wherein the true ratio of subalternation consists. Among the Doctors alleged, Giles treats of this matter in part 2, Prologue, 2, 1; Durandus and Henry in the place cited; therefore it must be noted, second, that for subalternation it is necessary - as Henry and Durandus hold, and Scotus indicates - that the principles of the subalternated be conclusions proved in the subalternating. Wherefore Aristotle assigns in 1 Posterior Analytics, chapter 10, the difference between demonstration That (quia) and demonstration Because (propter quid): which the subalternating science employs; for it proves its conclusions from a cause. But the subalternated science employs That (quia). This is to be understood thus: not because the conclusions of the subalternating - which are principles in the subalternated - are demonstrated from later conclusions of that same subalternated; for that would be a useless circle: but because the subalternated does not have the evidence of the propositions which it assumes as principles from the demonstration of the subalternating and continuity with it, but evidently proves them by induction. For this is an argument that is necessary and produces evidence, if it be made as it ought; as most well known I presuppose from Aristotle's doctrine in Posterior Analytics 2, chapter 18.[45] For since induction consists by its nature in this, that some singulars happen in the same way, it is rightly inferred that in other cases they happen in the same way, because nature is determined to one. But from premises known by induction there is not inferred the Because (propter quid). For

45. Aristotle, Posterior Analytics, book 2, chapter 18.

although they are prior to the conclusion itself, nevertheless they are not known a priori, but by induction, which is an argument from what is posterior. Therefore a demonstration drawn from those propositions does not truly show the Because itself, but the That itself.

Third, it must be observed that it does not suffice for the ratio of a subalternated science if its principles are conclusions demonstrated in a superior; for thus the later parts of philosophy would be subalternated to the earlier, which they presuppose; nay rather, a later demonstration of Euclid would be subalternated to an earlier. Therefore, although in every subalternated science the principles are conclusions of the subalternating, nevertheless not every science, or part of a science, which has this, is subalternated to a prior. In two ways, then (says Giles), as is taught in Posterior Analytics 1, c. 10, a science happens to be properly and strictly subalternated; and in each way it is distinguished from the subalternating:

- In one way, when the object of the subalternated science adds an accidental difference to the object of another science whose principles it presupposes. Thus perspective (optics), which deals with the line in a visible thing and with reference to the diverse way a thing appears because of diverse distance, and presupposes as principles the conclusions of Geometry, which deals with the line absolutely, is for that reason subalternated to it. In the same way music, which treats of number as sounding, is subalternated to Arithmetic, which treats of number absolutely. Aristotle adduces the example of each in that chapter, from which we gather the foregoing doctrine.[46] To this mode of subalternation, four things are required according to the opinion of Giles, which there is no need to rehearse.
- The other mode of subalternation is when the subalternating science and the subalternated are about precisely the same object; but the subalternating treats it in a subtler mode, the subalternated in a rougher. In this way the science of machines (mechanics) - an example which Aristotle also adduces - stands to the science of solids; and the science of those things which appear in the heavens, which sailors use and which proceeds in a rougher mode, is subalternated to astronomy, which considers these in a subtler mode.

These two modes are not approved by Durandus; rather, he himself in q. 7, Prologue, says the same, that subalternation only occurs when the objects of two sciences are things altogether diverse, of which one is not included in the other, but is ordered to it as effect to cause, especially the final cause. For example, bridle-making is subalternated to horsemanship; for the bridle serves the movement of horses as a means. Aristotle adduced this example in Ethics 1, chapter 1. And bridle-making presupposes, as principles, the conclusions of horsemanship. However the matter stand, it is necessary for true subalternation that the sciences be altogether distinct; and the objects, and that the object of one not be contained under the object of the other as species is contained under genus. For thus they would rather be parts of the same science than different sciences.

46. Aristotle, Posterior Analytics, book 1, chapter 10; and Ethics, book 1, chapter 1.

From all this it is easy to gather the reason why our Theology is not subalternated to the science of God and of the Blessed: both because it does not have the conditions which we have mentioned - and it would be vain for someone to devise another mode of subalternation, as we have already noted - and also because, at the least, for subalternation some distinction seems necessary, both on the part of the objects, even if they be compared to one another as genus and species, and on the part of the propositions, that they not be about the same thing; so that the subalternated tends further than the subalternating, and by the ministry of the subalternating takes its conclusions as principles for inferring others further. But the Theology of wayfarers does not take conclusions and principles from the Theology of God and of the Blessed; rather, the principles of both are the same, and the Theology of the Blessed proceeds from first principles, which presuppose no others, even in a superior science: therefore it is not subalternated to any superior science.

This alone is the difference between the two Theologies, that in that which is of wayfarers the principles are not per se known, but are believed by faith alone, not because the Blessed believe, but because God revealed them to wayfarers; whereas in the science of the Blessed they are per se known. From this, however, there does not follow a subalternation between them, nor that one serve the other as minister. It is otherwise in the other examples of true subalternation: for there, in order that the inferior, subalternated science may proceed to demonstrate its own conclusions, it is necessary that the superior first also elicit its own, which it should hand down to the subalternated as principles; and if the subalternated were to take the same principles which the subalternating has, even if it were to take them under a different kind of cognition, it would not properly be subalternated to it. Thus, too, if someone, from these same principles of some science, which were not per se known to him, but only believed by faith - because perchance he did not have sufficient explanation of them - were to infer the same conclusions which another, who had those same principles per se known, would not be said to have a science subalternated to the science of him to whom the principles are per se known. Auriolus used this reasoning.

But Cajetan replies in this article, at the section Ad secundum dicitur, that our Theology and that of the Blessed are not simply about the same truths: for the Theology of the Blessed is about the articles of faith; ours, however, assumes the articles as principles. He also adds that the object of our Theology has a certain accidental ratio over and above the object of the Theology of the Blessed: for the object of our Theology is God as revealed; but of the Blessed, God according to himself. If this does not satisfy (says Cajetan), at length it must be denied that there is required for the ratio of the subalternated any accidental condition on the part of the object beyond the object of the subalternating.

Yet this doctrine of Cajetan has no foundation. First, because the Theology of the Blessed is not only about the articles of faith, which are expressly set before us to be believed, but also about all other truths which we deduce therefrom: therefore each Theology is about the same things, except that the Theology of the Blessed does not proceed by discourse from articles to conclusions, but all things are per se known to the Blessed; whereas ours does proceed by discourse and from the articles collects other truths. Finally, this is indeed true, that our Theology does not receive conclusions from the Theology of God and of the Blessed as the principles of its own conclusions,

but that the principles of both are the same. Next, what he says about the object of our Theology is frivolous - namely, that it adds an accidental difference, which is revelation, over the object of the science of the Blessed - for this is not some known ratio of the object of cognition such as ought to be the accidental ratio which is included in the object of a subalternated science, but it concurs only on the part of the principle for believing the articles of faith: for this reason they are believed, because we believe them to have been revealed by God. But in theologically deduced conclusions this ratio is certainly not known. And let this suffice for the Theologian concerning subalternation in general.

From these things the solution to Cajetan's argument is clear: for although those things which are attributed to God from creatures ought to befit him without imperfection, nevertheless those things which essentially include imperfection, or something repugnant to God, cannot be transferred to him properly. Therefore, since, for some science to be subalternated to another, it is necessary that the superior hand down to it its conclusions proved by discourse so that they be for it principles, or at least that the same propositions be in each, the Theology of God and of the Blessed cannot be subalternated ...

It is answered: The reply to Cajetan's argument is clear: for although those things which are attributed to God from creatures ought to befit him without imperfection, nevertheless those things which essentially include imperfection, or something repugnant to God, cannot be transferred to him properly. Therefore, since, for some science to be subalternated to another, it is necessary that the superior hand down to it its conclusions proved by discourse so that they be for it principles, or at least that the same propositions be in each, the Theology of God and of the Blessed cannot be subalternated to our theology. Moreover, at the very least, some distinction seems necessary for subalternation, both on the part of the objects - even if they are compared with one another as genus and species - and on the part of the propositions, lest they be about the same thing, so that the subalternated tends further than the subalternating, and by the ministry of the subalternating receives its conclusions as principles for inferring others further. But the theology of wayfarers does not receive from the theology of God and of the Blessed conclusions and principles; rather the same are the principles of each, and the theology of the Blessed proceeds from first things which suppose no others, even in any superior science: therefore it is not subalternated to any superior science.

Only this differs between the two theologies: that in the one which is of wayfarers the principles are not known per se, but are believed by faith alone - not because of the Blessed, but because God revealed them to wayfarers - whereas in the science of the Blessed they are per se known. From this, however, subalternation between them does not follow, nor that one should be subservient to the other. It is otherwise in other examples of true subalternation: there indeed, for the inferior subalternated science to proceed to demonstrate its conclusions, it is necessary that the superior also first elicit its own, which it ought to supply to the subalternated as principles. But if the subalternated received the same principles which the subalternating has, even if it received them with a different kind of knowledge, it would not properly be subalternated to it; just as if someone, from the same principles of some science which were not per se known to him, but only believed by

faith, because perhaps he did not have a sufficient explication of them, were to infer the same conclusions as another who had those same principles per se known, he would not be said to have a science subalternated to the science of him to whom the principles are per se known. In this way Aureolus used to argue.

Cajetan's solution: But Cajetan replies in this article. To the second he says that our theology and that of the Blessed are not simply about the same truths: for the theology of the Blessed is about the articles of faith, while ours assumes the articles as principles. He also adds that the object of our theology has a certain accidental account above the object of the theology of the Blessed: for the object of our theology is God as revealed; but of the Blessed, God according to himself. And if this does not satisfy (says Cajetan), he finally denies that any accidental condition is required for the notion of subalternation, either on the part of the object or on the part of the subalternating.

This, however, has no foundation. For the theology of the Blessed is not only about the articles of faith which are expressly proposed to us to be believed, but about all the truths which we also deduce from them; and about the same things are both theologies, except that the theology of God and of the Blessed does not reason discursively from the articles to conclusions, but all things are per se known to the Blessed; whereas our theology reasons discursively from the articles to other truths theologically deduced. Finally, this is indeed true, that it does not receive conclusions from the theology of God and of the Blessed as principles of its own conclusions, but that the same are the principles of each. Next, it is trifling to posit a difference of object for our theology over against that of the Blessed, to wit, that it is "revelation": for this is an accidental account of the object of cognition, and as such cannot constitute the object of a subalternated science. It concurs on the side of the articles of faith, indeed - for we believe them because we believe that they have been revealed by God - but in the conclusions this account certainly does not concur on the part of the object; rather, in general, the merely accidental note of "being revealed" is not sufficient for the theologian in conclusions.

And thus much about subalternation; this satisfies Cajetan's argument.

It is asked: Whether sacred doctrine be one science.

Articulus III - Whether sacred doctrine is one science

Objicitur: 1) It seems that sacred doctrine is not one science (*scientia*). For according to the Philosopher in the first of the Posterior Analytics, one science is that which is of one genus of subject.[47] But Creator and creature, of which sacred doctrine treats, are not contained under one genus of subject: therefore sacred doctrine is not one science.

2) Moreover, in sacred doctrine it is treated of angels, of corporeal creatures, and of the morals of men; but such things pertain to different philosophical sciences: therefore sacred doctrine is not one science.

47. Aristotle, Posterior Analytics, book 1.

But on the contrary: Sacred Scripture speaks of it as of one science: for it is said in Wisdom 10, "He gave her the knowledge of the saints."

I answer: Sacred doctrine is one science. For the unity of a power and habit is considered according to the object (*obiectum*), not indeed according to the material object, but according to the formal account of the object: for example, man, ass, and stone agree in one formal account of being colored, which is the object of sight. Since therefore sacred Scripture considers certain things according as they are divinely revealed (as was said in the preceding article), all things whatsoever that are divinely revealable communicate in one formal account of the object of this science, and therefore are comprehended under sacred doctrine as under one science.

Reply to the first: Sacred doctrine does not determine about God and about creatures from what they are, but about God principally and about creatures secondarily, inasmuch as they are referred to God as to a principle or an end: whence the unity of the science is not impeded.

Reply to the second: Nothing prevents inferior powers or habits from being diversified around those materials which commonly fall under one superior power or habit; because the superior power or habit regards the object under a more universal formal ratio: just as the object of the common sense is the sensible, which comprehends under itself the visible and the audible. Hence the common sense, since it is one power, extends to all the objects of the five senses. And similarly, the things which are treated in different philosophical sciences, sacred doctrine, being one, can consider under one ratio, namely, insofar as they are divinely revealable: and thus sacred doctrine is, as it were, a certain impression of the divine science, which is one and most simple of all.

The conclusion is affirmative. The reason which St. Thomas uses we shall examine in the following disputation.

Disputatio VII - On the unity of this science

Caput I - Durandus holds that our theology is not one science

The present controversy is not whether theology is one simple quality; for this is a question of any habit and science, that is, whether it have one specific ratio of knowing (*ratio sciendi*), so that, even if it be not a simple quality, nevertheless with order to one specific ratio of object it be called one science. For although many judge that philosophy or some other natural science is not one simple quality, yet no one denies that it is one science specifically in the ratio and mode of knowing. Then this controversy has place whether we say that theology is truly a science, which produces assent either only of faith or of opinion; for in either way the assent of conclusions is generated through discourse. The difficulty therefore is whether the mode of inferring conclusions is one specifically; for this is to inquire whether it be one science.

Concerning the question thus understood, the first opinion is that of Durandus: who, in question 4 of the Prologue, seems to teach that theology is not one habit, and even that it is not one science; for he asserts that there are many habits about distinct objects and through distinct media.

And, in number 5 of the same question, in order to explain about what he speaks when he says "theology," he adds that theology is taken in three ways, that is, that three habits can be called "theology." The first is of infused faith, which is conversant about principles; the second and third are conversant about theological conclusions: one is for defending, the other for deducing them from the articles of faith. He thinks, indeed, in number 7 of the Prologue, that theology is sometimes taken for faith alone; but in number 8 he says that more commonly, though less properly, it is used for the habit of conclusions: and thus he says that "theology," taken in the universal, is many sciences, not one. For he supposes, from that same question 4 of the Prologue, number 4, when it is asked whether theology is one science, that it is not the question of a science strictly so called, but as it is extended to faith, opinion, and any assent whatsoever. Thus understood, Durandus's opinion is true, in so far as he says that "theology" in the universal, including infused faith and the habit of conclusions, is not one science. But the present controversy is only about theology, in so far as it is posited as a peculiar faculty about conclusions: and in this way Durandus will plainly admit that it is one science of inferring conclusions from premises, unless perchance he asserts some other peculiar habit for defending the mysteries which are believed by infused faith, which he also calls a peculiar science.

Caput II - The truer and more common opinion

The latter sentence is that of all the Scholastics whom I have read: of whom, although some say that theology is not one simple quality, nevertheless all affirm that it is one science in the mode of inferring conclusions, whether it be called "science" properly or in a broader signification. In this opinion are St. Thomas, Cajetan, and the more recent Thomists in this article, Albert in the Summa, tract. 1, q. 3, memb. 2, and in 1, dist. 1, art. 3, Henry in the Summa, art. 6, q. 3, Aegidius, part 2, Prol., q. 2, Richard, q. 3; who also seem to suppose - or at least do not deny - that it is one simple quality. With these agree Marsilius, q. 2, Prol., art. 4, Ockham, q. 3, the principal question, the annexed little question which is in order the eighth, with the solutions of the arguments added, Gregory, q. 3, especially art. 3, who assert that it is not one simple quality, yet that it is one science. Gabriel, however, q. 8, Prol., only teaches that theology is several habits if we include infused faith and an acquired habit (he understands, moreover, about the articles of faith which are assumed as principles in this science) and the acquired habits both about propositions and about consequences. But whether it be one science like geometry or philosophy he does not define. Not all, moreover, of the doctors cited confirm this opinion in the same manner.[48]

Caput III - Confirmation of the preceding opinion from Cajetan and St. Thomas

St. Thomas's reason: St. Thomas proves that theology is one science because all things which are treated in Sacred Scripture and in sacred doctrine fall under the same formal account of divine revelation (*revelatio*). Now the unity of a science is derived not from the unity of the material

48. The author lists a series of scholastic references in this section, including St. Thomas, Cajetan, Albert, Henry, Aegidius, Richard, Marsilius, Ockham, Gregory, and Gabriel, with their loci indicated in the margin.

object but of the formal. Wherefore if some science considers several material objects under the same formal account, it will be one and the same. Thus also concerning the unity of a power St. Thomas teaches, adducing the example of sight: which, although it is conversant about various things, for instance about man and horse, is nevertheless one faculty of seeing, because all these agree in one formal account of the object of sight, namely of being colored.

This reason, if it be rightly unfolded, is excellent; yet Cajetan and the recent Thomists, in my judgment, have understood it otherwise than St. Thomas.

Cajetan's explanation of the foregoing: Cajetan therefore in this article notes that there is a twofold account of the object: one is, he says, the account "by which," namely the entity itself of the thing which is the cause of its passions and is assumed as the immediate middle in demonstration, just as entity in metaphysics, quantity in mathematics, and so forth. Another is the account "under which," namely abstraction, or the immateriality of the object: for example, abstraction from sensible and intelligible matter in metaphysics, from sensible matter alone in mathematics, and so forth. And this is called the formal account of the object, not as it is a thing, but as it is an object. By the former the object is constituted in the genus of thing; by the latter in the genus of knowables: just as the object of sight, namely color, is under two genera, and in the genus of passible quality - of which the species are odor, taste, color, and sound - and in the genus of sensible - of which the species are visible, audible, etc. And these differences are not real in the very objects, but only extrinsic denominations; whereas the differences of the former genus are real. Therefore (says Cajetan) the distinction of the senses among themselves and the unity of each is not attended according to the distinction or unity of the object in the genus of real being and passible quality, but in the genus of the sensible; and hence one faculty of sensing can be occupied about several objects in the genus of quality, as sight about white and black, etc., because they have the same account of the object under which, that is, in the genus of the sensible. So also the distinction of sciences and the unity of each ought not to be taken from the unity and plurality of objects in the genus of being, but in the genus of the knowable and speculable. With good reason therefore by St. Thomas theology is said to be one science, because all the things which it treats have one account - not indeed in the genus of being, but in the genus of the knowable - namely, divine illumination by revelation. This doctrine of Cajetan is much approved by the more recent authors; yet by Aristotle's testimony and reason it can easily be refuted.

For Aristotle, in book V of the Metaphysics, chapter 15, expressly teaches that science is not referred to the knowable as knowable, nor sight to the visible as visible; but that science is terminated to the thing itself which is known, and sight to color or something else, that is, to the thing; and that in this way they ought to be defined. He proves it thus: otherwise the same would be said twice, that is, there would be a certain useless repetition and a circle; for the thing defined would enter into the definition - as I shall show more fully elsewhere (Disputation 104, chapter 2). This can be confirmed also in another way. For it is prior that science be terminated to the known thing as object than that the thing be denominated "knowable." For something is called "knowable" from this, that a science of it can be had. Now "knowable" is a relative, of that sort of things which, as Aristotle in the same place testifies, are said to be "toward another" from the fact that other

things are "toward them," and therefore they are not the thing itself, but only by name are "toward another," as we shall also show in the place cited. Therefore science has, with respect to the thing itself, a relation to the thing, that is, to the object, prior to that by which the thing is called knowable. And the same is to be said of sight and the visible, and of any other similar case.

...as with any other faculty and its object, it must be learned: therefore a habit of science or a certain faculty does not have specific unity from its order to the thing under that ratio which is called the "under which" (sub qua), and is an extrinsic denomination; but from its relation to the thing itself, and to the object according to its quiddity and nature. Wherefore St. Thomas in this article, when he said that a power takes its species not from the material object, but from the formal, did not understand by "material" the color, and by "formal" the denomination "visible"; but by "material" he understood the very substances imbued with color, such as man and horse; by "formal," however, the ratio of color. Accordingly our theology will not therefore be one science or habit because all the things it considers put on one ratio of revelation, or of the knowable; for this denomination already presupposes unity in the habit itself and in the science from which it proceeds.

Objectio. Yet someone may say on behalf of Cajetan that that ratio of "revealable" in the object of theology is not a denomination from the habit of theology itself, but from the infused light of faith, or from divine revelation that is external. Thus every circle and repetition is removed: for it is prior that a thing be revealed by God than that the science of theology be occupied with it as revealed; and so it could have the character of a formal object conferring species.

Soluitur. However, Cajetan's doctrine cannot be defended in this way. First, because he generally teaches that the species of a science is to be taken from the object under a formal ratio and the denomination "knowable," and the species of sight from color under the ratio "visible," and so in other cases. Therefore he thinks the same of theology, namely, that its species is to be taken from the object under the denomination "knowable": but the argument made above conflicts with this. Next, even God's revelation, whether external or internal through infused faith, is occupied only with the articles of faith, which are assumed in theology as principles, and not with the conclusions as they are deduced by us through discourse. But theology has its unity from the conclusions as they are gathered from principles: therefore the ratio of revelation cannot confer unity on our theology. And although to theological conclusions once deduced through discourse, even divine faith within us may bestow assent, as we said: nevertheless it is prior that the conclusions be deduced than that they be assented to by infused faith: therefore prior to their being believed, there must be in them something from which the unity and species of theology be taken.

Vera explicatio, et defensio posterioris sententiae.

Caput IV - A truer explication and defense of the latter opinion

Two other reasons are brought forward by the other Doctors previously mentioned, which excellently confirm this opinion. The first is of Henry, Albert, Richard, and Marsilius, who say that our theology is one science because all the things that are treated in it have an order to one subject,

which they call a subject "of attribution," not "of predication," namely God: for although not all the things that theology treats can be predicated of God, nevertheless it considers all through a respect to him, as to the end and author. Thus, indeed, it disputes about God so as to show not only what he is in himself, but also how he is an end to be obtained by the rational creature, how he is the author of all things by creation, how he communicated himself by the hypostatic union, and the rest. For the same reason also the theologian treats the things that pertain to the matter of grace and of the sacraments, and to moral discipline, so as to show by what means and helps man can obtain his end, and by what he is hindered from obtaining it. Therefore, it cannot be, says Henry, that our theology, considering such various things under this ratio, is not one science.

The second reason is St. Thomas's, which Henry also indicates in this manner. All the things that theology treats, it considers under one formal ratio of the object; but the unity of a science is taken from the unity of the formal ratio in the object: therefore our theology is one science. Now this formal ratio of the object is not what Cajetan understood, as has been sufficiently proved; but just as the medium of demonstration in any science whatsoever is called the formal ratio of knowing other things, so in theology the medium and the principle which it assumes for inferring conclusions is the formal object of theology itself, and the rest are considered by theology under that respect. In this very way the same Doctor, in 2.2, q.1, a.1, said that the formal object of divine faith is the First Truth, that is (as we shall explain there), the testimony of the First Truth, upon which, as upon a medium and principle of believing, faith rests.[49] Since therefore our theology, in every theological discourse, assumes as principles those things which it believes to have been revealed by God, insofar as it believes them to be revealed, therefore the ratio of the formal object, or of the medium of theological demonstrations, is the same according to species. Wherefore theology is rightly said to be one science. And this is true whether we say that in a theological demonstration there are assumed principles believed by infused faith from the sole testimony of the First Truth, or only believed by human and acquired faith: for in either way we always believe them to be revealed by God; and in either way the theological conclusion deduced from them will be one according to species.

Caput V - How theology uses natural principles, although it is one science

Our theology sometimes assumes, in its demonstrations or in certain syllogisms, some natural principles, which it therefore believes to be God's doctrine because they are evidently known by natural reason: nevertheless it does not assume these alone, but together with another article known solely by revelation. For example, in order to prove that the sins of homicide and fornication must be explained distinctly in confession, we assume this revealed principle: All mortal sins must be explained distinctly in confession; then we subsume from moral philosophy: But killing is a sin distinct from fornication; and we gather the conclusion: Therefore it must be explained distinctly. Wherefore, if we are to defend that theology is one science, it must be said that to it there does not pertain a disputation about a matter that is wholly moral, which, from

49. St. Thomas Aquinas, Summa theologiae, II-II, q. 1, a. 1.

principles merely natural, elicits conclusions: for this kind of demonstration has diverse principles, and it gathers evident conclusions. Theology must always proceed from some revealed principle. Therefore, in order to defend that theology is one science, it must be said that to it there does not pertain a disputation about a matter that is wholly moral, which, from principles merely natural, elicits conclusions: for this kind of demonstration has diverse principles, and it gathers evident conclusions.

Someone will ask why, then, are those things which pertain to morals treated so diffusely in theology, from the principles only of natural and civil law (for those things that are proper to canon law seem theological). I answer, as to theology insofar as it is a science distinct from others, these moral matters do not pertain: hence, as regards that part, there will not only be a distinct habit, but even a different science. Nevertheless our theologians have with very good right treated of these matters, because a theologian ought also to be a moral philosopher, so that his theology may be able to profit others. From which it has also come about that moral philosophy, in that part of theology which pertains to morals, has been treated more exactly, and more illustrated, than by the philosophers; and indeed many of our theologians, aided by faith, have found things beyond Aristotle and other philosophers, so that nothing which pertains to morals could be lacking.

Finally it must be observed that when we say theology is one science, we must understand this insofar as it gathers its conclusions from certain principles and by certain consequences. For insofar as it deals in opinions, or argues either from merely probable principles or by merely probable consequences, not only is it not the same habit with that theology which we have said to be one science, but it is not even the same science as that: because it does not have the same genus either of principles or of arguments. Besides, we cannot deny that many things are disputed by the Scholastics which, as to theology insofar as it is one science, do not pertain.

It remained to explain how faculties and powers take their species from their object considered in the genus of thing, when it happens that there is not one univocal ratio of the object in the genus of thing. For by this reason Cajetan seems to have recourse to the ratio "under which," which at times is common to different things in the genus of thing, as was explained above: I say, then, briefly, that for the specification of some power a univocal ratio of the object in the genus of thing is not necessary, neither a generic nor a specific ratio; but that one power is distinguished in species from another only by this, that it is conversant about a distinct object adequate to it. I call "adequate" whatever that is which the power by its operation embraces completely: just as sight has light and color. Nor does it obstruct that something be called the adequate object of one power which also can be referred to by another: because "adequate" is that which the power comprehends as the whole, and nothing else; but that which is adequate to one, can be not adequate to another. Whether indeed anything else is required for the notion of "adequate," we shall say in the following disputation.

Articulus IV - Whether sacred doctrine is a practical science

To the fourth, we proceed thus. It seems that sacred doctrine is a practical science. For the end of a practical science is operation, according to the Philosopher in Metaphysics 2. But sacred doctrine is ordered to operation, according to that of James 1: "Be doers of the word, and not hearers only." Therefore sacred doctrine is a practical science.

Further, sacred doctrine is divided according to the Old Law and the New. Now law pertains to moral science, which is a practical science: therefore sacred doctrine is a practical science.

But on the contrary: every practical science deals with things that are operable by man, as moral science with the acts of men, and the science of building with buildings: but sacred doctrine is principally about God, of whom men are rather the work: therefore it is not a practical science, but more a speculative one.

I answer that it must be said that sacred doctrine (as has been said), being one, extends to the things which pertain to the various philosophical sciences, on account of the formal ratio which it attends to universally: namely, insofar as they are knowable by the divine light. Whence, although in the philosophical sciences one is speculative and another practical, sacred doctrine nevertheless comprehends under itself both; just as God by the same knowledge knows both himself and the things that he does. Yet it is more speculative than practical: because it treats principally of divine things rather than of human acts: of which it treats insofar as by them man is ordered to the perfect knowledge of God, in which eternal beatitude consists. And through this the reply to the objections is evident.

Conclusion, and the sum of the whole article is this: Just as God knows by the knowledge by which he knows himself, and by it also knows other things and what he does; so also is our theology; yet it is chiefly speculative; because it treats of God principally, rather than of other things.

quae the same thing sometimes agrees in different things in the generic order of thing, as was explained above: I say therefore briefly, that the necessity of specification for any power is not from the notion of an object univocally; in the generic order of thing neither generic nor specific; but only so far as one power is distinguished from another by the species from the object that is dealt with concerning a distinct object adequate to itself. Unity of powers is taken from an adequate object in this way: just as sight has both light and color. Nor does it stand in the way, for something to be called the adequate object of one power, that it can also be regarded by another: because that is called adequate which the power's operation can comprehend wholly and nothing else; but that which is adequate to one, can be not-adequate to another. Whether anything else is required for the notion of the adequate, we shall say in the following disputation. Objicitur: 1) It seems that sacred doctrine is a practical science. For the end of the practical is operation, as the Philosopher says in Metaphysics II, text 3; but sacred doctrine is ordered to operation, according to that of James 1: "Be doers of the word, and not hearers only"; therefore sacred doctrine is a practical science.[5051]

2) Besides, sacred doctrine is divided by the Old Law and the New. But law pertains to moral science, which is a practical science; therefore sacred doctrine is a practical science.

But on the contrary: Every practical science is about things operable by man, as moral science is about human acts, and the building art about buildings; but sacred doctrine is principally about God, of whom men are rather the works; therefore it is not a practical science, but more speculative.

I answer that: Sacred doctrine (as has been said), being one, extends itself to those things that pertain to the various philosophical sciences on account of the formal reason that it considers in diverse subjects, namely, insofar as they are knowable by the divine light; whence, although in the philosophical sciences one is speculative and another practical, nevertheless sacred doctrine comprehends under itself both; just as God by the same knowledge knows both himself and the things that he does. Yet it is more speculative than practical: because it treats principally of divine things rather than of human acts; of which it treats insofar as by them man is ordered to the perfect knowledge of God, in which eternal beatitude consists.

And through this the reply to the objections is evident. The conclusion and the sum of the whole article is this: Just as God's knowledge, by which he knows himself and by which he also knows other things, is at once practical and speculative; so too is our theology; yet it is chiefly speculative, because it treats more principally of God than of other things.

Disputatio VIII - Whether our theology is practical or speculative

Caput I - The teaching of St. Thomas and the sentence of Scotus

The teaching of St. Thomas in this article is not only true, but would also be very easy to understand, were it not that Cajetan and some more recent writers, by excessive subtlety, have rendered it more obscure. Nor would so great a debate have been needed in this matter, had not the other Scholastics, supposing the question to be of greater moment, taught so many and such varied opinions. All which disputation I would gladly have omitted, did it not seem more a flight than a care to avoid prolixity. It must therefore be examined whether our theology is practical or speculative. In which question we must also, in passing, treat of practice and speculation; for from these it is gathered what a practical and a speculative faculty is. But, as is our custom, let us first set forth the opinions of others.

The first sentence is that of Scotus, who in Prologue, question 4, and in the second article, teaches two things: one is, that theology, even in that part which is conversant about God and necessary truths, is in us indeed a practical science, but in God altogether speculative. The other is, that theology, in that part which deals with contingent truths - if they be our works - is in us indeed practical, but in God, concerning all contingent truths, is speculative.[52][53]

50. Aristotle, Metaphysics II, text 3.
51. James 1:22.

The chief foundation of either assertion is the definition of practice, which he himself hands down in that question. I say therefore first, in this way: practice (praxis) is an act of another power than the intellect, naturally posterior to intellection, apt to be elicited conformably to right reason, in order that it be a right act. Omitting the explication which Scotus himself employs at length; from this definition he gathers that practice universally is an act of the will elicited or commanded; for this alone is naturally posterior to the intellect, and, as a rule, regards reason itself.

From this principle he proves that theology in us, both that which is conversant about God and necessary truths, and that which is conversant about our operations, is practical: because that habit is practical whose act is truly practice; such is the act of theology concerning all these truths; therefore the habit also will be practical. He proves that the act of theology is practical thus: because that is practical cognition which is naturally prior and by its own nature conform to right reason; which Scotus said to be practice. Now such is theological cognition, even of God himself, considered in itself: for it moves the affect, whether about God himself, or about the other objects of the virtues which it treats; and that affect, without an exterior act commanded, is practice, by the definition posited. By this same reasoning Scotus ought to concede that the clear vision of God is practical, because a love conformable to right reason naturally follows it.

Then he proves that theology in God, which is his knowledge of himself and of creatures, is not practical: for although love follows it, nevertheless that love is not the rule of the will in God, inasmuch as the will of God has rectitude from itself, not from an order to the rule of reason; and hence will in God will not be practice, because it is not by its nature conform to right reason, but has rectitude from itself. With Scotus, in part, agrees Bassolis in question 8 of the Prologue, article 2; for he asserts that theology is not only the knowledge which God has of himself, but also that which the blessed have of God by his clear vision, not to be practical; yet for a different reason than that by which Scotus teaches this. Concerning the theology which God has of himself, he proves his sentence, because to the notion of practical cognition it is necessary that it move to practice by an affect which presides about the end; but the theology which God and the blessed have does not do that, because it is prior to every volition about the end; therefore it is not practical. From which, conversely, he infers that the theology of wayfarers is practical.[54]

However, although the question seems rather about words than about the thing, the sentence and mode of speaking of Scotus do not please. For neither is it permitted to anyone to impose names upon things at will, even if in the thing itself, being unfolded, nothing absurd be contained. Therefore practice and practical ought to be called by all what the Greek philosophers - especially Aristotle - who best understood the force of Greek words, wished to express. Since, therefore, it will be shown below from Aristotle that something else is called praxis, and something else practical, than Scotus has called them, it will also be clear, without foundation, that Scotus spoke thus.

52. Scotus, Prologue, q. 4.
53. "Secundus articulus."
54. Bassolis, q. 8 Prologi, art. 2.

Meanwhile, however, it must be added, as we shall note also below in question 14, article 16, that the reason is of no moment on account of which he himself taught that the science which God has of himself, or of things, is not practical.[55]

Caput II - Two other opinions which Durandus reports

For the will of God not to have, as a first rule, his own cognition, befits any created will as well, as I shall show in First - Second, question 19, article 3. For the first rule of goodness and malice by consonance or dissonance is not the dictate of reason, but the very nature itself of the rational being; whereas the dictate of reason is the proximate rule proposing and judging that which is consonant and dissonant to rational nature: nor does anything hinder our saying that in God also it is thus in the same way. Therefore, if in us that knowledge which moves the affect to right love is, in the sentence of Scotus, practical, so also must we judge concerning the knowledge which God has of himself and of other things. Another reason, by which he peculiarly proves that the knowledge which God has of creatures is not practical, we shall easily refute in that same article 16. For the present, these things against Scotus suffice.[56]

Bassolis also, without foundation, wished to call only that knowledge practical which, from a prior affect about the end, directs to another affect or to a work. For since the knowledge of synderesis in general, and the knowledge of prudence in the singular order - which suddenly dictates something to be done - in first morals, is truly practical, and does not proceed from a prior affect about some end, the condition aforesaid is assigned in vain. Nor does it stand against this that Aristotle, Ethics VI, chapter 1, says the speculative intellect is conversant about universals, but the practical about singulars: for he said this for the reason that the practical intellect is conversant in deliberation about singulars: while the speculative is in considering universals, for the most part, as is usually the case. Yet this by no means hinders that the practical intellect have its universal principles, for deducing singular conclusions by prudence: as Aristotle seems to have handed down in De Anima III, chapter 8, text 59, where he thus says: "But that reason which is attributed to science does not admonish, but abides." By which words he understands, as St. Thomas explains, speculative reason; and of the practical he subjoins: "But since of estimations and of reasons one is universal, another singular: the universal says that every good is to be honored; but this says, that I am good: this opinion moves, not that universal; nay rather both move." Therefore Aristotle concedes that practical reason is also conversant about universal principles. And consonant with this is St. Thomas in First Part, question 79, article 12, when he asserts that practical reason discourses about singular things and operations, and has universal principles for that end.[57][58]

The second sentence is that which Durandus reports in question 6 of the Prologue, number 7, of certain persons who used to say that our theology is simply speculative; not because it is not conversant about works, but because any science receives its denomination simply from its end:

55. Below, q. 14, a. 16.
56. St. Thomas, Summa theologiae, I-II, q. 19, a. 3.
57. Aristotle, De Anima III, c. 8, text 59.
58. St. Thomas, Summa theologiae, I, q. 79, a. 12.

but the end of theology is our beatitude, which is speculative knowledge; therefore theology will be a simply speculative science. Durandus more at length impugns this sentence; for us, the first reason which he himself alleges will suffice. Because a science is not to be called practical or speculative except from its proper act which it elicits; which if it be practical, the science itself will also be practical, even if it dispose to beatitude as to the end to be obtained; if, however, it be speculative, it will itself also be speculative. It must therefore be seen whether the act which theology has about the things it treats is practical or speculative, or of both conditions; that from this we may gather what the habit of theology itself is. Concerning which act the Scholastics are not sufficiently agreed.[59]

The third sentence, which the same Durandus reports in that same question 6, number 14, is of others who asserted that theology is neither practical nor speculative, but affective; that is, which is ordered to moving the affect. They prove this, because the principal end of it is to arouse the love of God, which theology especially considers: which if it is affective, it will be neither speculative nor practical; because the affective pertains to the will; but the practical and speculative to the intellect. This sentence, with its foundation, Durandus relates. And this he seems to have taught, Aegidius, Fourth Book, Prologue, question 1: for he affirms these three to belong to theology - affective, practical, and speculative: the first principally, the other two...

Caput III - What Henry held

The second opinion is that which Durandus reports, Prologue, q. 6, n. 7, of certain persons who were saying that our theology is simply speculative: not because it does not concern itself with deeds, but because any science whatsoever takes its denomination simply from its principal end; but the end of theology is our beatitude, which is speculative cognition; therefore theology will be a simply speculative science. This opinion Durandus attacks at greater length; for us the first reason which he himself alleges is sufficient. For a science is not to be called practical or speculative except from the proper act which it elicits; which, if it be practical, the science itself also will be practical, even if it dispose toward beatitude as toward an end to be obtained; but if it be speculative, it itself also will be speculative. Therefore it must be seen whether the act which theology has concerning the things which it treats is practical or speculative, or of both conditions, so that from that we may gather what the habit of theology itself is (habit, habitus). About which act indeed the Scholastics do not sufficiently agree.

The third opinion, then, is that which the same Durandus reports there, q. 6, n. 14, of others, who were asserting that theology is neither practical nor speculative, but affective; that is, which is ordered to moving the affect. They prove this because its principal end is to stir up love of God, which theology especially considers; which if it is affective, it will be neither speculative nor practical, because the affective belongs to the will (voluntas); but the practical and speculative to the intellect (intellectus): thus Durandus reports this opinion with its foundation. And this Giles seems to have taught, Fourth Book, Prologue, q. 1, for he affirms these three to belong to theology -

59. Durandus, Prologue, q. 6, n. 7.

affective, practical, and speculative: the first principally, the other two improperly. And the reason of this is that a science takes its denomination from the principal end; but the principal end of theology is to stir the affect to love.

I, however, do not see why our theology should not be practical and speculative, even if it be affective, that is, even if it move the affect to love: for the affective does not belong to the will but to the intellect; for that which moves the affect is either the intellect itself, or belongs to the intellect: therefore it is not repugnant that one and the same science be in the intellect equally practical and speculative, and at the same time affective. For consideration itself, whether practical or even speculative, sometimes moves the affect to love of the thing which it considers: therefore the affective is not distinguished from the practical or the speculative in cognition. Scotus impugns the same opinion, Prologue, q. 4, by the fourth path. For he judges that theology cannot be called an affective science, if the affective is posited as something distinct from the practical; but if it be said to be the same, he judges it to be vain. And he says this because he thinks praxis to be an act of the will, either elicited or commanded; but the practical act of the intellect is a cognition which moves the affect, as we reported above. But since praxis is not only an effect of the will, nor is a practical cognition always that which can move the affect; because a speculative cognition can also move it, as we will say; nothing stands in the way whereby one and the same science can at once be speculative and affective; just as also practical and affective. Albert is seen to have handed down Giles's opinion, on I, dist. 1, art. 4, where he teaches that theology is an affective science, but does not deny that it is speculative and practical: indeed in the Summa, Part 1, tract. 1, memb. 3, he says it is practical, because it is occupied about the work of virtue. He seems, however, to call it practical only because, even if it considered God, nevertheless it refers the consideration to love: and he takes praxis in the way Scotus does: explicitly, however, he does not deny that it is speculative. But we say that, even if theology is an affective science, nevertheless it must also be said to be practical and speculative, if the other conditions do not fail, about which we will speak afterward.[60616263]

A varied opinion of Henry is found in Henry, art. 8, q. 3, who asserts that theology is simply speculative: he does not deny that it is practical, nor does he expressly affirm that it is at once practical and speculative, but he calls it simply speculative; because although in part it directs to action, nevertheless since this is ordered to the contemplation and speculation of God, whom he thinks to be the principal end of theology, it must simply be called, he says, speculative, not practical: just as, on the contrary, moral philosophy, even if it speculates truths, nevertheless because it orders speculation to work, is said to be simply practical. He seems, moreover, to suppose that a practical cognition is not, as Scotus thought, that which moves the affect, but that which has operation for its object.

This opinion, in what it supposes, is true: for if it admitted that theology is at once practical and speculative, but simply speculative, that is, principally, it would not differ from the opinion of St. Thomas and of others, which I think to be truer: but if it says absolutely that it is speculative, or

60. Durandus, Prologue, q. 6, n. 7; q. 6, n. 14.
61. Aegidius (Giles of Rome), IV Book, Prologue, q. 1.
62. Scotus, Prologue, q. 4, by the fourth way.

that it has no act of practical cognition at all, it can easily be refuted from the things which we will say below. From which also it will be clear that a practical cognition, even if it be assumed as a means and disposition to contemplation, is not speculative, but remains within the limits of the practical: therefore if our theology has the act of practical cognition and of speculation, as will be proved, it ought not to be called simply, that is, altogether, speculative, but indeed simply, that is, principally speculative.[64]

Caput IV - The opinion of Durandus

The fifth opinion is Durandus's, in Prologue, q. 6, n. 20, who allows theology to be taken in three ways; as he had noted before in Prologue, q. 1, n. 6, and q. 5, n. 6. First, for the habit whereby we believe the things which are handed down in Sacred Scripture. Second, for the habit whereby the same things are declared and defended. Third, for the habit whereby from the articles of faith conclusions are deduced. He says therefore there, Prologue, q. 6, n. 20: First, that in the first mode theology is simply practical. He proves it because that science which has some work for its object is simply practical; but theology in the first mode has meritorious work for its object, for everywhere it exhorts to good works: therefore in this way it is simply practical. Now if sometimes in Scripture something is proposed which pertains altogether to speculation, it is not a wonder; because this rarely happens, and for the most part those things are handed down which pertain to morals. He teaches the same altogether there in q. 6, n. 25, about the habit of faith according to its whole latitude.

Second, he teaches that in the second mode, namely the habit of declaring and defending the principal articles of faith, theology is simply speculative. He proves it, both because the object of it is not some operation, but God himself under the notion of Savior, which pertains not to work but to speculation; and also because that is a simply speculative habit, whose operation is the cognition of truth, and there it rests: but the habit which is posited for defending the mysteries serves only to the end that the truth be known: therefore it is speculative.

About the third mode of theology he says nothing in the body of the question, because he thinks it falls back into the first mode and has the same reason with both. Wherefore, in Durandus's opinion, about that third mode it must be said that theology, which deduces conclusions from the articles, about which our principal controversy is, is simply practical: which doctrine he also hands down there, Prologue, q. 6, in solution 2, where he also assigns a special reason for this, which he had likewise said before, q. 5, n. 21. He says therefore that theology, which is the habit for deducing conclusions from the articles of faith, is so practical that even from articles which pertain to mere speculation it does not deduce a speculative conclusion, but an altogether practical one: for when something speculative is deduced from the articles of faith, it is not a new conclusion, but serves rather to declare the article itself alone; yet that which is inferred as a proper conclusion is simply practical.

63. Albertus (Albert the Great), In I Sent., dist. 1, art. 4; Summa, Part 1, tract. 1, memb. 3.
64. Henry (Henricus), in... lum., art. 8, q. 3.

He proves the first point, that no speculative conclusion is deduced from the articles, because such an inference either amounts to nothing, or only slightly perfects the intellect. Next he proves that many practical conclusions are collected. For from this, that Christ emptied himself, we do not gather this to declare it, but in order to collect a new conclusion, namely that we must live also in humility: in which way Peter argues in his First Epistle, chapter 2, when he says, "Christ suffered for us, leaving you an example," etc. (1 Pet. 2). And thus he judges about the others. But from Durandus's opinion we have that a practical cognition has for its object some operation, nor is it sufficient that it move to love, as Scotus taught.

This opinion approves itself to me much less than Henry's opinion. First, for he distinguishes in vain the habit of theology whereby the mysteries of religion which are contained in Scripture are known, from the habit whereby all those things are defended: for the same habit of faith which teaches the truths, also defends and declares them; or at least, if faith does not furnish this in any man whatsoever, theology furnishes it, which is engaged about the conclusions deduced from the articles. For often the same habit proves the truths which are gathered from the articles, and consequently satisfies the things which could be objected against them, by deducing to the absurd, or by arguing otherwise. Philosophy also greatly contributes, which is wont to be a help to theology, as is known. Finally, if the habits are to be distinguished, two seem to be sufficiently distinguished, namely one habit of faith about the articles, another of theology about the conclusions.

But come, let us concede to Durandus three habits of theology, as he contends; at least theology in that first mode cannot be said to be simply practical, if "simply" signifies that which is altogether, or in every part, as Durandus seems to understand it. For that is nothing other than the faith of the mysteries of our religion, which considers many mysteries altogether speculatively, as the mystery of the Trinity, of the Incarnation, of the Resurrection, etc.: therefore theology in the first mode is good on the side of the speculative. But what he says, that in Scripture more things are found which pertain to practical cognition than those which pertain to sole speculation, matters little: for it is enough that there be thus speculative, that there are certain mysteries which solely pertain to speculation: indeed, if these be rightly counted up, they are not a few.

Second, what he teaches, that theology in the second mode, for the habit namely of declaring and defending the mysteries, is only speculative, is false. For if Durandus once admits that theology in the first mode, that is, the faith of the mysteries, is simply practical, surely the habit itself of declaring and defending these mysteries, which is theology in the second mode, will also be practical. For when a definition and a declaration are ordered, through single propositions set down, to the inquiring and investigating of truth, in no way is that a practical operation; but it is truth which is declared, and it is defended, and that is practical. Third, as to what Durandus says, namely that theology in the third mode, about which there is now controversy, is altogether practical, besides that this seems false in its effect, reason also, which he assigns there, Prologue, q. 6, solution 2, and repeats, q. 5, n. 21, proves it little: at least, the articles themselves, which consist in speculation, cannot be inferred; neither can any practical thing be manifestly inferred: for if theology in the first mode, that is, the faith of the articles, sometimes is turned toward the object of mere speculation, it neither receives nor admits anything into itself that is inferior, by which

something pertaining only to speculation can be inserted as if a proper conclusion; nor can a practical thing be inferred from mere speculation. In the matter concerning the Incarnation and the assumption of the human nature, and all that follows from it likewise human, and not only divine, some things can indeed be inferred; thereafter the human works of Christ should not be adopted as the sole condition. For although more often Scripture speaks about things pertaining to morals, nevertheless all of them are reduced to a few heads, namely of precepts and counsels, which are more often repeated in Scripture; therefore theology in this way is not for the greater part, nor simply and altogether, practical. But if that "simply" signify the same as "principally," Durandus ought rather to say that it is simply, that is, principally speculative: as St. Thomas asserted about our theology, which deduces conclusions: for those things which it chiefly considers, as God, and the things which pertain to him, pertain to speculation, not to practical cognition.[65]

Third, it is false what he teaches, that theology in the second way, namely for the habit of declaring and defending the mysteries, is only speculative. For if Durandus once admits that theology in the first way, that is, the faith of the mysteries, is simply practical, certainly the habit itself of declaring and defending these mysteries, which is theology in the second way, will be practical too. For when a definition and declaration are ordered through single propositions according to the object which faith has, theology in the first way obtains the same reasons and conditions. For although the habits of defending and declaring and investigating truth are distinct, nevertheless nothing is more practical than that truth be declared and defended as practical.

About the third, as we said of Durandus, namely theology in the third way, which is now controversial, that it is altogether practical, besides that this seems false in effect, reason also seems weak which he brings, and we will treat it in its place: at least he himself supposes that articles which consist in speculation do not infer anything, not even the practical; but he also manifestly supposes this: if theology in the first way, that is, faith, sometimes is turned toward the object of mere speculation, he does not receive into it anything inferior, just as from articles of speculation something most human is inferred; and not only the divine but also human can be inferred: then the human works of Christ are not to be adopted as the sole condition; that he, as a servant, did not remain, that his works were suitable for the redemption of the human race, and many other things, which not only explain and declare the article itself revealed, but also contain some new truth which consists altogether in speculation: and although it conduces to fuller understanding of the article, nevertheless they should not therefore be rejected from the ratio of speculative science: for there is no demonstration which, by the truth of the conclusion which it demonstrates, does not also more explain the principles from which it is inferred.

Caput V - Notes for the explication of the truer opinion

Among all others the more probable opinion is that of not a few, who assert that theology, which is engaged about conclusions to be deduced from the articles, is at once practical and speculative. This St. Thomas hands down in this article; Cajetan likewise; and recent authors too; Ockham in

65. St. Thomas.

the principal question of the Prologue, article ...; Gabriel; Gregory, question the last, article 4; joined also with the doctrine of other articles, Capreolus, article 1, conclusion c.; Major, question 6, conclusion 2; and Canus, book 2 De locis, chapter 1. But because they do not sufficiently agree in its confirmation, I judged it necessary to premise certain things, by which it is explained and, by the aforesaid Doctors, is more probably received. Then I will briefly set down the points on which they themselves disagree among themselves.[66]

- First, since this controversy seems more to be of words than of things, and names are not to be used at one's pleasure, one must see what is called by the philosophers, and especially by Aristotle, the intellect itself, or mind, and the practical and the speculative, and how the division is made. ()

Although Scripture often speaks of matters pertaining to morals, nevertheless all things are reduced to a few heads, namely of precepts and of counsels, which are frequently repeated in Scripture; therefore theology in this mode is not for the greater part, much less simply and altogether, practical. But if that word "simply" signify the same as "principally," Durandus ought rather to have said that it is simply, that is, chiefly speculative; as St. Thomas asserts concerning our theology which deduces conclusions: for those things which it chiefly considers, such as God and the things that pertain to him, do not belong to practical cognition.[67]

Secondly, it is false what he teaches, that theology in the second mode - namely the habit of declaring and defending the mysteries - is solely speculative. For if Durandus once admits that theology in the first mode, that is, the faith of the mysteries, is simply practical, assuredly the very habit of declaring and defending these mysteries, which is theology in the second mode, will also be practical. For since the defense and declaration, proposition by proposition, have the same object which faith has, or theology in the first mode, it follows that both are of the same rationale and condition. For although the habit of defending and declaring is ordered to investigating truth, nevertheless it will be practical if the truth which is declared and defended is practical.

Third and finally, what Durandus teaches - namely that theology in the third mode, about which there is now controversy, is altogether practical - besides being false (as we shall easily show in chapters 5 and 6), is supported by a reason which manifestly supposes a falsehood: namely, because from articles of faith which consist in speculation nothing can be inferred unless it be practical. For if theology in the first mode, that is, the faith of the articles, sometimes turns upon an object of pure speculation - which cannot be denied - how can nothing be inferred therefrom that pertains to speculation alone? For in the matter of the Incarnation, from the fact that we believe the Word to have assumed humanity, we infer that he also had a human mind and not only a divine; further, that that humanity was not adopted; moreover, many other points are gathered which explicate and declare some new truth ordered to speculative understanding; and even

66. Cajetan; Ockham, principal question of the Prologue; Gabriel; Gregory; Capreolus, art. 1, concl. c.; Major, q. 6, concl. 2; Melchior Canus, De locis theologicis, l. 2, c. 1.

67. St. Thomas, passim on the character of sacred doctrine; cf. 1-2, q.57; 2-2, q.179; and his teaching that the conclusions deduced in theology chiefly consider God and what pertains to him, which do not belong to practical cognition.

though these contribute to a fuller apprehension, they nevertheless belong wholly to speculative science. For no demonstration of a conclusion is of greater moment than the exposition of the principles from which, according to the truer account, the explanation proceeds.

The more probable opinion: that the theology which deduces conclusions from the articles is at once practical and speculative

The more probable opinion - held by not a few - is that theology, which deduces conclusions from the articles, is at once practical and speculative. This is taught by St. Thomas, by Cajetan, and by more recent authors there; Ockham, Gabriel, Gregory, Capreolus, Major, and Canus agree on this point.[68] But because in the confirmation they do not sufficiently agree among themselves, I judged it necessary to premise certain points by which the matter is explained and, from the aforesaid doctors, is received as more probable. Then in a few words I shall report wherein they disagree among themselves.

First, since this controversy seems to be more about words than about things, and names are not to be used at one's pleasure, one must see what is called by the philosophers, and especially by Aristotle, the intellect itself, or mind; he indeed was the first of all to divide the intellect into the practical and the speculative. By the same rationale by which the intellect is called practical, the habit will also be so called. Therefore the mind is said by the philosophers to be of one kind, productive (which in Greek they call poiētikē), and of another kind, active (which the Greeks call praktikē), which we in Latin commonly render "practical." The productive is so called because it has production for its end; the practical, because it has action.

But if we trust St. Thomas (1-2, q.57, a.4), who holds that "action" is said only of what is immanent, but "production" of what is transient, it follows that the active intellect or mind is that which by its cognition directs to some immanent action and has it as object; while the productive is that which regards a transient [work] and is the principle thereof. This distinction between action and production seems to have been handed down by Aristotle, Metaphysics 9, c.9, where he calls transient actions "operations," because they are said to regard a work; but he calls immanent ones "actions," because from them no made work remains.

Yet in this matter Aristotle seems to have varied: for in Ethics 6, c.5 he says that the end of production is something other than the production itself, but not always the end of action - as if he thought that from action there sometimes remains something else besides the action itself; and in Metaphysics 6, c.1 he distinguishes these two in another way: for he teaches that the eligible and the doable are the same, around which, he says, the active or practical mind is conversant. Wherefore he holds that this [mind] is only about moral actions, but the productive pertains to art. Hence, according to him, only prudence will be practical or active; but art will be productive or operative. Finally, in Magna Moralia 1, c. ult., he uses these two in yet another way: for he says, "In

68. St. Thomas; Cajetan; Ockham, principal question of the Prologue, art. 3; Gabriel, q. 12 in the Ordinatio; Gregory, q. ult., art. 4, together with the doctrine of other articles; Capreolus, q. 2, art. 1, concl. 6; Major, q. 6, concl. 2; Melchior Canus, De locis theologicis, l. 2, c. 1.

those who make and in those who act the makeable and the doable are not the same; for of makeable things there remains, besides the making, another end." He gives the example of house-building; but in those things which fall under action there is no other end, besides, for instance, playing the cithara. By which he plainly teaches that action also can be called transient. This division is indeed followed by Alexander of Aphrodisias on Metaphysics 6, c.1. If this be retained, then not only prudence, but also some operation of art will pertain to the active mind. Nevertheless, the doctrine of that last chapter of the Magna Moralia can be easily reconciled with what Aristotle taught in Metaphysics 9, c.9, if we say that in that chapter he calls "operations" those acts which are transient, not always, but for the most part: because from most of them a made work remains. For since he himself says in Magna Moralia 1, c. ult. - and experience attests - that from some transient acts no work remains, as from playing the cithara and the like, it follows that some transient acts are not to be called "operations" according to that usage. Therefore, since in the present discussion we are confounding the practical and the productive mind in order to distinguish both from the speculative, by the same name "operation," or "praxis," we understand both production and action.

Secondly, it must be supposed that praxis, taken universally, is either an action, or also an operation of any power whatsoever, and not only of the will, as Scotus thought: although in the sense in which Aristotle, in the place cited, says that praxis is only action as it differs from operation; nevertheless, since we are now confounding the practical and the productive so as to distinguish both from the speculative, therefore by the same name "operation," or "praxis," we understand both production and action.[69]

Accordingly, we ought to use praxis as opposed to speculative, for the same use, both for action and for operation or production, as Gregory most aptly noted.[70] In this way Capreolus also used praxis, in the proofs of the fourth conclusion in that article, to such a point does he think it true as to maintain that the praxis, from which the intellect, or the habit, or the act is called "practical," is not only external action - as St. Thomas seems to indicate (1-2, q.57, a.1, ad 1; 2-2, q.179, a.2) - but also the internal act of the will, to whose service pertains the practical act of prudence, of which St. Thomas treats (2-2, q.47, a.5); and even the act of the intellect itself, insofar as it is voluntary and is directed by another through choice. He proves this from St. Thomas (2-2, q.47, a.2, ad 2), where he teaches that the object of prudence is also an act of speculative reason, insofar as it falls under choice. But what falls under choice and prudence is praxis; for prudence is practical, and therefore it has praxis for its object: therefore speculation itself is rightly called praxis. Nor is he inconsistent with himself when, in art. 3, ad 1, about the fourth conclusion, he denies that an act of the intellect is praxis: for he is speaking of the act of the intellect according to itself, not insofar as it is voluntary and falls under choice; as he himself explains in the solution to Gregory's argument against the same conclusion. He adds, however, that logic is not a practical but a speculative science, even if it direct to the work of reason, because it does not direct by means of choice, but immediately by its own speculation. In this, nevertheless, he errs: both because no operation of reason, such as the

69. Scotus had restricted praxis to the will; cf. his position ad loc. Aristotle, Metaphysics 9, c. 9; 6, c. 1; Ethics 6, c. 5.
70. Gregory, q. 5, Prol., art. 1.

construction of a syllogism is, is directed or effected by another operation of the intellect except through choice - for from choice a man applies his intellect to making this or that syllogism - and also because even if logic were to direct to the operation of reason without choice, still in this way it would have to be called practical, since by its operation it would direct to praxis, by that very fact that it directs to the operation of the intellect. How logic is at once practical and speculative will be shown below.

Therefore, since logic is commonly divided into teaching (docens) and using (utens), I would understand this division thus, that by "teaching logic" I would mean the very habit and act of logic by which a man considers and advances the works of reason according to the rules set forth in it; but "using logic" is called praxis and the work of this art, namely the very construction of a proposition and of a syllogism in this or that matter, which indeed is found in all the sciences; and for this reason logic is numbered among the arts, because it is occupied about a work. I pass over the various acceptions of praxis which Gabriel and Ockham adduce.[71] Of the four acceptions, they think that only the latter two pertain to the present question: the third, namely, whereby praxis is said to be any operation, both good and bad, which is in our power; and the fourth, which they say is the most proper, and is called a studious operation. In either way the operation of the intellect can be called praxis, as we noted above from the mind of Capreolus, and as Gabriel and Ockham expressly admit.

Third, it must be noted that it is not enough, in order that an act of the intellect be called practical, that praxis follow from it - even if by a kind of natural consequence. And on this account Scotus was deceived when he said that every act of the intellect which is followed by love or delight is practical: for these can arise from speculation itself, as we shall say below; but it is necessary that the act of the intellect be conversant about praxis as about its object, by thinking how such an action or operation ought, or can, be done: as when someone thinks how a statue is to be made or a building constructed; how it is good to love or to hate, or even to speculate. Thus have taught Ockham, Gabriel, Major, Gregory, Capreolus, and indeed also St. Thomas, who in the places cited teaches openly that there is no practical knowledge from the fact that it moves the affection to the love of the known thing, but only from this, that it regards the operation itself and praxis; and this is, he says, to direct knowledge proximately to praxis; remotely, however, speculation also is said to direct when love follows upon it. Wherefore simple and incomplex intellection, taken precisely and properly speaking, will not be practical, as Ockham, Gabriel, Major, and Gregory have noted.[72]

Practice is sometimes opposed to the speculative, and sometimes the same word "practice" (*praxis*) is used for action (*actio*) itself as well as for operation or production; as Gregory very well noted.[73] In this way Capreolus too employed "practice" in q. 2, art. 1, in the proofs of the fourth conclusion; and he thinks this so true that he maintains that practice, from which the intellect, or habit, or act is called "practical," is not only an exterior action, as St. Thomas seems to

71. Gabriel, q. 20, art. 1, notation 2; Ockham, q. 4, Prol., art. 1.

72. Ockham, q. 4, Prol., art. 2 (placed as q. 10 in the order); Gabriel, q. 11, art. ...; Major, q. 6, prop. 2; Gregory, q. 5, art. 2; Capreolus, q. 2, art. 5, concl. 5; St. Thomas, De veritate q. 14, a. 4; In III Sent., d. 23, q. 2, a. 3, q. 2.

73. Gregory, q. 5, Prol., art. 1.

indicate (1-2, q. 57, a. 1, ad 1; 2-2, q. 179, a. 2), nor only an interior action of the will, to which the practical act of prudence is subservient (2-2, q. 47, a. 5), but also an act of the intellect itself, insofar as it is voluntary (*voluntarius*) and, by another reflecting through choice (*electio*), is directed and determined.

It is proved from St. Thomas in the same question, q. 47, a. ..., ad 2, where he teaches that the object of prudence is also an act of speculative reason, insofar as it falls under choice. Now what falls under choice and prudence is practice; for prudence is practical, and therefore has practice for its object: therefore even speculation is rightly called practice. Nor is he at odds with himself when in a. 3, ad 1, around the fourth conclusion he denies that the act of the intellect is practice: for he is speaking of the act of the intellect according to itself, not as it is voluntary and falls under choice; as he himself explains in the solution of Gregory's argument against the same conclusion. Yet he adds that logic is not a practical science but speculative, even if it directs to the work of reason, because it does not direct by means of choice but immediately by its speculation. In this, however, he is mistaken: first, because no operation of reason - such as the construction of a syllogism - is directed or performed by another operation of the intellect except by means of choice; for by choice a man applies the intellect to make this syllogism or another; secondly, because even if logic, without choice, did direct to the operations of reason, nonetheless in that way it ought to be called "practical," since by its operation it would direct to practice precisely insofar as it directed to the operation of the intellect. In what way logic is at once practical and speculative will appear below.

Wherefore, since logic is commonly divided into "teaching" and "using," I would understand this division thus: I would call "teaching logic" the habit and act of logic itself, by which one considers and judges the reason's operation, according to the rules of the art; but "using logic" I would call the use of this art, namely the very composition and construction of proposition and syllogism in that matter which in fact occurs in all disciplines; and on account of this logic is counted among the practical arts, because it is engaged with practice, and with constructions in this, or in that, or in some operation, in which kinds of things the sciences are numbered among the arts which are about a work.

I pass over the various senses of "practice" that Gabriel adduces,[74] and Ockham likewise,[75] from which senses two will matter for the present question; the third, namely, by which any operation, whether good, which is in our power, or otherwise, they say to be "practical" and to be a "studied operation" - in which way indeed an operation can in some fashion be called practice, as we noted above according to the mind of Capreolus and expressly of Gabriel and Ockham.

Note that it is not enough, for an act of the intellect to be called practical, that practice should follow upon it, even by some consequence arising from it - here Scotus was deceived when he said that the act of the intellect which is an act of pleasure or delight is practical, and that delight itself springs from the very speculation. Rather, it is necessary that the act itself be engaged with practice as with its object, by thinking how such an operation should be done, or can be done: as when

74. Gabriel, q. 20, art. 1, not. 2.
75. Ockham, q. 4, Prol., art. 1.

someone considers how a statue, or a building, ought to be constructed; or that it is good to love, or to hate; even if he be just speculating. Thus Ockham teaches,[76] and Gabriel,[77] and Major,[78] and Gregory,[79] and St. Thomas: in De veritate q. 14, a. 4, and in III Sent., d. 23, q. 2, a. 3, q. 2 he expressly teaches that some knowledge is not practical from the fact that it moves the affection to love of the known thing, but from the fact that it regards the work itself and the practice; and this is what it is to "direct immediately to practice": indeed, it is said also to direct speculatively when love follows upon it: but a simple and incomplex speculation cannot properly and strictly be practical; as Ockham, Gabriel, Major, and Gregory have maintained.

But Gregory: for simple knowledge does not regard as its object action or operation.

Furthermore, that a practical act always is engaged with practice is plain from Aristotle, De anima 3, c. 10, text 50, where he thus speaks of the practical intellect: "and this, without appetite, differs from the speculative, as if to say it regards a different object." He shows this difference more clearly in Metaphysics 2, c. 2, when he says: "For speculative science the end is truth, but for practical, work (*opus*)." By "work" he understands that practice is the end or object of practical science, and consequently that cognition too is practical when it has practice for its object. And in Ethics 6, c. 1 he himself divides the intellect and reason into one part by which we contemplate those things that are necessary; and this is speculative: and into another by which we discern those things that can be otherwise; and this is practical: and to this, Aristotle says, belongs deliberation about contingent matters, namely about our actions, about which alone it can be; as we shall say at 1-2, qq. 13 and 14. Therefore, according to Aristotle's view, practical knowledge is not engaged with external things and with those that are not in our power: wherefore, if some consideration of eternal things should move the affection, nonetheless it will be speculative.

It is proved also by reason: for if it were enough for the nature of the practical to move the affection, then no cognition would be speculative; for both physical science and metaphysics, which by the judgment of all are called altogether speculative, could most justly be called practical too. For speculation about those things that are considered by them can give rise to delight and love of the known thing. For, as Aristotle says (Ethics 10, c. 7 and 8), from perfect speculation perfect delight can be born. It remains therefore that that knowledge alone be called practical which is engaged with practice and has it for end and object.

Certain recent authors teach, however, that in two ways some knowledge can be called practical from the end, just as "end" itself can be taken in two ways. First, from the end under the notion of end, which is compared only to the affection: and in this respect they say the practical depends on the will, indeed on right will alone; and on that account they think Aristotle assigned only these two habits to the practical intellect, prudence and art. Secondly, something is said to be practical from the end not under the formal notion of end but materially; that is, from the thing itself which is the end, although it is not regarded under the notion of end and good; and in this way they affirm

76. Ockham, q. 4, Prol., art. 2 (placed as q. 11 in the order).
77. Gabriel, q. 11, art. 1, not. 2.
78. Major, q. 6, prop. 2.
79. Gregory, q. 5, art. 2.

moral science to be practical, because it regards practice as object, which in reality is the end: although it does not regard it under the notion of good from a right affection concerning it, for one can have this knowledge even from a depraved affection.

This distinction of "end" as to the nature, or the distinction, of practical knowledge or habit seems to pertain nothing at all; nor does Aristotle teach it anywhere; nor in that place therefore does he assign those two habits to the practical intellect only because only those are practical. For there he does not enumerate in detail all the [habits] that belong to the practical mind. Therefore the above opinion is refuted by the preceding reason: because knowledge does not seem to be called practical or operative from the fact that it proceeds from the will; as above, against Bassolis, we noted that there can be practical knowledge which precedes every will, if nonetheless it proposes something to be done: simply therefore it is called "practical" from practice, which it has for its object. Aristotle, moreover, said that the speculative reason and the practical differ by end, not because the practical operates by the end through the affect; otherwise even the speculative would operate by the end, since it too is said to differ from the practical by an end; but because they differ by object; and he called the object "end."

Fourth, it must be observed that it is not enough for the nature of practical knowledge to be engaged with practice - although this is necessary, as is clear from the third notation; but it is also necessary to be engaged with it in a peculiar certain way, in which it directs to work, which people commonly express by saying "to be engaged with a workable thing, and in a workable mode." This St. Thomas has most excellently explained below in q. 14, a. 16, where he says thus: If a builder considers how some house can be made, not ordering it by the intention of end to operation, but to knowing, the consideration will, as to the end, be speculative: nonetheless it will be about a workable thing. As if he were to say: by its mode, and formally, it will be speculative; by its object, however, and materially, it will be practical, because it is about some work to be done. Hence he gathers that a science which is speculative even from its object, because it is not about any work, is simply speculative - that is, by object and by mode; but that which is about a work, although it has the mode of speculation, is speculative in a qualified sense - that is, in some respect; yet he does not deny that it is formally speculative.

That same thing seems to have been taught by Aristotle in Metaphysics 2, c. 2, text 3, in these words: "For speculative science the end is truth, but for practical, work. Therefore, if the manner in which things stand is considered, one does not consider a cause for its own sake, but for something else; and at that time they speculate practically." As if he were to say, as the Commentator explains, that reason is practical when, if it considers the cause of a thing, it does not contemplate it so as to know the truth - and this is not to consider the cause for its own sake or according to itself - but so as to do what it considers: therefore not only is it required for knowledge to be practical that it consider the nature of the work, but also that it think it for the sake of operating. And this is the consideration of the practical intellect, which is truly practical knowledge. Cajetan in that a. 16; Ferrarensis, 3 Contra Gentiles, c. 20; Iavellus, 6 Met., q. ...; Sozinianus, q. 4; Aureolus in q. 3, Prol., a. 2; whom Gregory reports, q. 5, art. 2.[80]

Nor, indeed, is it enough for knowledge to be practical that it be ordered to a work solely from the will of the agent: for thus the work itself would be the end of the science per accidens, from the scientist's will alone: but it must be ordered to a work as to an end per se, that is, as to its proper object. Yet it can be ordered to this end in a twofold way. First, from itself, without a preceding will to operate: so that it moves to a work, nor detains the knower in the mere contemplation of truth. Such are the dictates of synderesis, which precede every will. Further, it can move to a work from a preceding will of the work itself, such as is the knowledge of an art to perform its works: and in both ways knowledge is practical from the end of the agent, in such a way that also from its proper end and object it is practical. And in this way those Doctors alleged for this opinion are to be understood when they say that knowledge is practical from the end of the agent, not from the end of the science itself: because it is not enough that the end and object of the science be practice, but it must in the mode we have said direct to work. But when some contend, on the contrary, that knowledge ought not to be called practical from the end of the agent, but from the end of the science itself, they understand that from the end of the agent alone, which is extrinsically added to the science and is not its object, it cannot be called practical: for instance, if someone were to speculate some truth, even with the intention that afterwards he might help and dispose to operating, that knowledge would not be called practical, even if it had work for its object. And when someone learns the works of an art, or considers a work made by some distinguished craftsman, so that he may become more learned in the art, without the intention then of using those things, he will be said to speculate and to contemplate rather than to have practical knowledge. I do indeed notice that Ockham has taught the contrary, q. 4, Prol., a. 2 (which in the order is put as q. 11), and Gabriel, q. 11, art. 1, not. 2, and Gregory, q. 5, art. 2; who think that from this alone some knowledge is to be called practical, that it has work and practice for its object. Otherwise it would follow, says Gregory, that the same habit would successively be practical and speculative about the same conclusion. I, however, do not think that absurd: because it is not repugnant that someone consider a work in order to do it, or solely for the sake of looking upon and contemplating its truth and nature: and thus the same habit, about the same conclusion, can at once be practical and speculative; although the same knowledge cannot at the same time be both. The habit, however, is at once practical and speculative, because at least successively it can operate in each way.

Caput VI - Theology is simultaneously practical and speculative

We have now laid down the foundations by which the final opinion is to be confirmed and explained, namely that Theology is one science, simultaneously practical and speculative. Now it is proved thus. That science is to be called practical whose act is practical knowledge; but speculative, whose act is mere contemplation and speculation: if, then, some science can have acts of each kind, at once it will be practical and speculative; for the habit of a science takes its denomination from its proper act. But Theology can elicit both acts; therefore at once it is practical and speculative. For

80. Cajetan, on that art. 16; Ferrarensis, 3 Contra Gentiles, c. 20; Iavellus, 6 Met., q. ...; Sozinianus, q. 4; Aureolus, in q. 3, Prol., a. 2; reported by Gregory, q. 5, art. 2.

from the foundations already established it will be easy to see that both acts can be elicited by Theology: for practical knowledge is that which has practice for its object - as was said in the third notation - and is engaged with it in that mode by which it directs to a work - as we explained in the last notation. Speculation, however, is either about such an object as is not itself the practice of what is known, or, although it has the work itself for object, yet is engaged with it for the sake only of contemplating the truth, not of operating, as was noted in that same ultimate foundation. But Theology has acts of each kind: on one side it considers God, the mystery of the Incarnation, and other such things, which do not have the nature of practice; on the other side it considers many things placed in operation; and these in two ways also: either with the sole contemplation of truth, or for the sake of operation: for the Theologian can use Theology after the manner of prudence, so as to move himself to act rightly: therefore it has the act of each, namely the practical and the speculative, not only about diverse conclusions, but about the same as well, as has been explained.

They add, nevertheless - St. Thomas, Capreolus, and other Thomists - that Theology should chiefly be called speculative: which I too deem true, not because for the greater part it is speculative (for even this, if all be well computed, is true), but because its chief object, to which the other things that are treated in it are ordered, and on account of which they are said to pertain to it as true science, is God, who can be the object only of speculation. From all which it is sufficiently clear that this is the truer opinion: because it employs "practical" and "speculative" in the same manner in which Aristotle and the other philosophers received them. From these points too the several opinions that we set down at the beginning can be impugned; for their authors employed the denominations of practical and speculative without any foundation, as seemed good to them. But if there are any arguments for those views, from what has been said they are easily dissolved.

Disputatio IX - On how the practical and the speculative belong to Theology

- The Nominalists hold the same science of Theology, but not the same habit, to be practical and speculative. Cap. I.
- Cajetan teaches that the habit of Theology is practical and speculative eminently. Cap. II.[81]
- Truer opinion: that the same habit of Theology is not only eminently, but formally practical and speculative. Cap. III.

With the foundations laid, it is easy to see that Theology can elicit acts of both kinds: for practical knowledge is that which has practice for its object (*obiectum*), as was said in the third notation, and it is occupied with it in such a way as to direct to action, as we explained in the last notation. But speculation is either of such an object as is not the knower's own practice, or, though it should have the knower's work for its object, yet it is occupied about it for the sake only of contemplating the truth, not of acting, as was noted in that same last foundation. Now Theology has acts of both rationales: on the one hand it considers God, the mystery of the Incarnation, and other things of that sort which do not have the rationale of practice; on the other hand it considers

81. Cajetan, in his commentary on this article, in the body; cf. also the note cited earlier: Cajetan on that article.

many things placed in operation; and these also in two ways - either for the mere contemplation of the truth, or for the sake of operation: for the theologian can use Theology in the same way as prudence, to move himself to act rightly. Therefore it has acts of both sorts, namely the practical and the speculative, not only about diverse conclusions, but even about the same conclusion, as has been explained.

St. Thomas, Capreolus, and other Thomists add that Theology ought chiefly to be called speculative; which I also judge to be chiefly true, not because it is for the greater part speculative - though this too, if all things are rightly reckoned, is true - but because its principal object, in relation to which the other things treated in it are said to pertain to it as to one science, is God, who can be an object of speculation alone. From all which it is sufficiently clear that this is the truer opinion: because they admitted the practical and the speculative in the same way as Aristotle and other philosophers admitted them. From these points the several opinions also can be impugned which we recounted at the beginning; for their authors, without any foundation, used the denominations of practical and speculative as they pleased. And if there are any arguments for them, they are easily dissolved by what has been said.

How the practical and the speculative can belong to the same science. Disput. 9.

Caput I - On those who say the same science is both, but not the same habit; refutation

There remains a difficulty among the Doctors who followed the last opinion in the preceding disputation, namely, how it can be that the practical and the speculative - which seem not only to be essential differences and opposites of habits (*habitus*), but even of faculties, as Aristotle teaches - should belong to the same Theology, or to the same habit.[82] In this difficulty the first opinion is that of Ockham, Gabriel, Gregory, and Major: they affirm that the same science of Theology is at once practical and speculative, yet not in the same habit. For they think that Theology, and any science whatever, consists of many habits; indeed, that it consists of habits about single conclusions. Thus any science consists of many habits; and yet, though Theology consists of all of them in order, it is one - not, however, in the genus of quality. And because there are in it various conclusions, some wholly in speculation, such as those about God, some about practice; therefore they say that Theology is practical and speculative at once, not according to the same habit about the same conclusion, but practical by reason of one, speculative by reason of another. From the commentaries of certain authors Gregory does not wish to concede the same habit to be practical and speculative about the same conclusion, as we reported at the end of the preceding disputation.[83]

But the opinion and foundation of these men do not please me. First, because I hold that one science (*scientia*) is one simple quality, though I do not dispute that point expressly: I am persuaded of it for this reason. The habit of science ought to be a quality distinct from intelligible species; for science cannot be a coordination of species. It can scarcely be understood, much less

82. Aristotle, De Anima III, c. 10, text 53.
83. Gregory, at the end of the place cited above; cf. Gregory, q. 5, Prol., art. 1 - 2.

explained, what that order of species should be which some have said to be the habit, since it is not an order according to position, nor according to any substantial change of the species themselves. But that it is one simple quality distinct from the species, and not several around single conclusions, could be shown thus: for things which are really distinct can be separated from each other, if they are distinct as thing from thing; but the habit about the posterior conclusion cannot exist without the habit about the prior, just as the demonstration of the posterior cannot exist without the demonstration of the prior. It is therefore a sign that there are not several habits and qualities, but the same in a different mode.

I say "in a different mode," because just as the same quality is found less intense and more intense, and for that reason is said to have a latitude, so too the same quality about the first and second conclusion has a latitude which we call a latitude of extension. Nay more, by the same reasoning I would believe that the habit of conclusions and of the principles from which those are deduced is not two habits, but the same more extended one, which essentially supposes the other, so that the posterior - about conclusions - cannot exist without the prior, which is about principles. Therefore Aristotle in Ethics VI, ch. 3, said that wisdom is at once science and understanding of those things which are most honorable: he calls it science, insofar as it is of conclusions; and understanding, insofar as it is of principles, in the same faculty.[84] He therefore thinks it is the same habit about principles and about conclusions, but more extensive; for he there numbers wisdom as one habit.

Then, as we said in the last notation, about the same conclusion there can be practical and speculative knowledge; therefore the habit too can in the same way be practical and speculative. Wherefore, even if the object of Theology were operation alone, as is the object of moral philosophy, nevertheless Theology would at once be practical and speculative; just as moral philosophy and logic are, because it could consider things in either mode.

Caput II - Cajetan's account: practical/speculative as essential only in finite sciences; evaluation

A second opinion is that of others who assert Theology to be one habit and a simple quality; which, indeed, they affirm of any science whatsoever; and that it is at once practical and speculative, because it is partly occupied about operation, and partly about things that do not fall under operation. Of this opinion Cajetan seems to be.[81] But to explain the difficulty proposed - namely, how the practical and the speculative can belong to the same habit - he devised a way of philosophizing more subtle than true; which the recent writers in this part marvelously praise and embrace. He says then in his commentary on this article, in the body, that Theology is neither purely practical nor purely speculative, but in a higher rationale, which others call "eminently," it contains both in itself.

84. Aristotle, Nicomachean Ethics VI, c. 3.
81. Cajetan, in his commentary on this article, in the body; cf. also the note cited earlier: Cajetan on that article.

To explain this, he notes that the practical and the speculative are not per se essential differences first dividing science universally; just as neither do sight and hearing divide sense generically at the first step. Rather, as sense is first divided into common and particular, and then the particular into sight and hearing, so science in general, by an essential division, is first distributed into finite and infinite science, that is, of a finite and of an infinite object; and then finite science into speculative and practical. Wherefore, if the practical and the speculative are referred to science universally, they are not essential differences: because they are found together in the same science which has an infinite object, as Theology has. But referred to finite science, they are essential differences: because in one finite science - that is, of a finite object - both rationes are not found together. Thus ordination to the visible and to the audible and to other sensibles in particular are not differences of sense universally; because in a certain sense, namely the common interior sense, both regards are found; but in the particular senses they are essential differences, and are not found together in one.

The reason, moreover, why a science of an infinite object can be practical and speculative is this: because things dispersed in lower orders are united in higher ones; wherefore the practical and the speculative, which cannot at the same time belong to the same habit about the same finite object, are found in the habit of Theology, which is occupied about an infinite object. For an infinite thing is of such excellence that it can be the object of speculation and the rule of praxis. From this doctrine some recent writers infer that Theology is not formally practical, nor speculative, taking practical and speculative as they are differences of finite science; in which position they think Cajetan stands, indeed even St. Thomas, because they assert that Theology, if it is compared with other inferior sciences, stands to them as the interior sense stands to the exterior senses. But then (say the Thomists) no difference of the exterior sense belongs formally to the interior sense: therefore neither the practical nor the speculative - which are per se differences of finite science - can belong formally to Theology, which is a higher and common science. Yet again, I know not by what reason, these same Thomists grant it to be probable, in the sense just said, that Theology is formally speculative, taking speculative as it is a difference of a lower science; but not formally practical, taking practical in the same way; whereas the rationale of each seems altogether the same, if it is taken in the same way.

Caput III - The truer opinion: the same habit of Theology is formally both practical and speculative

I for my part judge that our Theology is not only eminently, but formally practical, just as other sciences of a finite object are practical. And in order to show how the practical and the speculative can formally belong to the same science, it must first be noted that some habit falls under the rationale of the practical or of the speculative from this alone, that it is a principle either of speculation or of practical knowledge (*notitia practica*): sometimes, however, only one rationale belongs to a habit, sometimes both together; for example, the rationale of the speculative belongs to Metaphysics, the rationale of the practical to prudence, but both to moral philosophy and to our

Theology. Nor does the otherwise specific and essential difference hinder a unified rationale of the practical and of the speculative - of a common denomination and not essential - from belonging to diverse habits and powers that are occupied about the same thing.

Next it must be noted that from the rationale of the practical and of the speculative, even if it is a common and, as it were, accidental denomination, there can sometimes be inferred an essential difference of habits - namely, whenever a habit is wholly practical or wholly speculative. For then the adequate object of these habits is an altogether different thing; and from the diversity of adequate object an essential difference of habits is most fitly inferred. For although different habits and powers can be occupied about the same thing, yet they never regard it adequately: just as the common sense and sight operate about color, yet not adequately. Therefore in habits which are either only practical, as prudence, or only speculative, as Metaphysics, though the rationale of the practical and of the speculative is the best indication of an essential difference - because then each seems to follow upon adequately diverse objects - yet in Theology, and in other sciences which are at once practical and speculative, the rationale of the practical or of the speculative cannot be a sufficient sign of a distinction according to species. For since they belong together to the same habit according to reality, they cannot be the cause of a different adequate object according to species. Thus it does not conflict that the practical and the speculative be found together in the same habit and in the same faculty. Then not only are they not essential differences of a habit or of a faculty, but from them such a difference cannot be inferred.

And if the practical and the speculative were to constitute an essential difference in the intellect, then in the same way the opinable and the demonstrable in the same intellect, and in sight the regard to white and the regard to black, and in the common sense the regard to color and to sound, would infer a distinction according to species - which is absurd. For this reason St. Thomas, below, I q. 79, a. 11, teaches that the practical and the speculative cannot distinguish the faculty of the intellect according to species: because each rationale regards only accidentally...

Articulus V - Whether sacred doctrine is more worthy than the other sciences

It is asked in the fifth way as follows. It seems that sacred doctrine is not more worthy than the other sciences. For certitude (*certitudo*) pertains to the dignity of a science. But other sciences, concerning whose principles it is not possible to doubt, seem to be more certain than sacred doctrine, whose principles - namely the articles of faith - admit doubt; therefore other sciences seem to be more worthy than this one.

1. Moreover, it belongs to an inferior science to receive from a superior, as Music receives from Arithmetic; but sacred doctrine receives something from the philosophical disciplines. For St. Jerome says in the Epistle to Magnus, the orator of the city of Rome, that the ancient doctors wove their books so much from the doctrines and opinions of the philosophers that you do not know in them what you ought first to admire, the learning of the age, or the science of the Scriptures. Therefore sacred doctrine is inferior to other sciences.

But on the contrary: Other sciences are called its handmaids: "She has sent forth her handmaids to call unto the citadel" (Prov 9).

I answer: Since this science is in a certain respect speculative, and in a certain respect practical, it surpasses all the others, both speculative and practical. For among speculative sciences, one is said to be more worthy than another, both on account of certitude and on account of the dignity of the matter. And as to each, this science exceeds the other speculative sciences. As to certitude indeed: because other sciences have certitude from the natural light of human reason, which can err; but this science has certitude from the light of the divine science, which cannot be deceived. As to the dignity of the matter, because this science is principally about those things which by their loftiness transcend reason; whereas the other sciences consider only those things which are subject to reason. Among practical sciences, that one is more worthy which is not ordered to a further end, as civil science is to military: for the good of an army is ordered to the good of a city. But the end of this doctrine, inasmuch as it is practical, is eternal beatitude (*beatitudo*), to which, as to the ultimate end, all other ends of the practical sciences are ordered. Whence it is manifest, in every way, that it is more worthy than the others.

Reply to the first: Nothing prevents that which is more certain by nature from being less certain for us, on account of the weakness of our intellect, which stands with respect to the most manifest things of nature as the eye of the owl to the light of the sun, as is said in Metaphysics II. Hence the doubt which occurs in some with respect to the articles of faith is not on account of the uncertainty of the thing, but on account of the weakness of the human intellect; and yet the least that can be had of knowledge of the loftiest things is more desirable than the most certain knowledge which is had of the least things, as is said in the eleventh book On Animals.

Reply to the second: This science can receive something from the philosophical disciplines, not because it necessarily needs them, but for the greater manifestation of those things which are handed down in this science. For it does not receive its principles from other sciences, but immediately from God by revelation. And therefore it does not receive from other sciences as from superiors, but uses them as inferiors and handmaids, just as architectonic arts use their subordinates, as the civil uses the military. And this very fact that it thus uses them is not on account of any defect or insufficiency of itself, but on account of the defect of our intellect: who, from those things which are known through natural reason (from which the other sciences proceed), is more easily led by the hand to those things which are above reason, which are handed down in this science.

Explanation of the doctrine of the article.

The conclusion of the article is: Our Theology, inasmuch as it is speculative and inasmuch as it is practical, is more noble than all other sciences. From this conclusion it is plainly evident what the Blessed Thomas intends in his last words when he says: "Hence it is manifest, in every way, that it, namely Theology, is more worthy than the others." For he says "in every way," not because it is more noble on account of the note of evidence and other properties, but because it excels the others both inasmuch as it is practical and inasmuch as it is speculative - this is what "in every

way" means. It remains, then, to explain why in both ways it is absolutely more worthy than the others. First, as to the notion of the practical, St. Thomas proves this very well, and Cajetan explains it in this article; wherefore we need not dwell on it here. But as regards the dignity of speculation, St. Thomas gives two reasons by which he proves that Theology excels the other sciences; of which the latter is the better, taken from the nobility of the object, by which also the dignity of a science ought to be weighed. And although Metaphysics treats of God as a principle among other things, as does our Theology, nevertheless each considers God under a different formal notion: for Metaphysics considers only those things which men can grasp by natural light; but Theology considers only those things which are deduced from revealed principles; for those things that are known by natural reason it supposes as foundations.

A doubt about the first reason of the article.

The first reason by which St. Thomas proves the same point is not free of difficulty: namely, that our Theology is more certain than all other sciences. And the difficulty is whether he speaks of Theology "according to itself," or as it exists in wayfarers. However, for the sake of what must be said, a certain division of certitude must first be set forth, which we shall explain more fully below, II-II, q. 4, a. 8. Certitude can be taken in three ways. First, for the determined assent to one side without doubt. Second, for the truth of cognition, which is taken from the conformity of the intellect with the thing. Third, for the reflex act by which one judges that in no way is one deceived about what one is thinking.

These things being supposed, Cajetan, in this article, interprets St. Thomas as speaking of Theology "according to itself," not as it is in us: for thus he judges that it is not more certain than the others. He gathers this from the answer to the first objection, where the Blessed Thomas teaches that what is more certain by its own nature can be less certain for us; and so concerning the articles of faith, which are by their nature most certain according to themselves, there can sometimes occur in men doubt or fear.

Yet, to me, the mind of St. Thomas, understood in this way, seems very difficult; nor do I have sufficiently clear whether he speaks only of the object itself, that is, of the things that are treated in Theology, or rather of the very science. And indeed, if he spoke of the object, he ought not to have said that it is more certain according to itself. For, as will be proved below, disp. 68, c. 5, and II-II, q. 4, a. 8, things are not said to be more or less certain, but more or less necessary; while certain or less certain, like fallible and infallible, are referred to cognition. But if St. Thomas speaks of the science and cognition according to itself in some intellect, namely either the divine, or of those seeing God, so that in this way Theology be abstracted from imperfection, then it does not seem rightly to compare Theology - which is of predicates supernatural - to all the other sciences of created things; since the science about God Himself, according to predicates naturally known of Himself, ought not to be compared: because in God, and in those seeing Him, there is the same certitude and in the same mode. And in the same way Theology about God, according to either set of predicates, is certain, in whatever way you take certitude. Compared, however, with other sciences, it is without doubt more certain, if certitude is taken in the second way: because the truth of the cognition which God has of Himself is greater than that of the cognition of other things. Yet,

with certitude thus taken for truth, Theology about God is as certain in us as in God Himself; therefore it is in vain to distinguish Theology "according to itself" and "as in us." But if certitude be taken in the first and third way, it will be futile to distinguish Theology according to itself and in us; nor, according to itself, is it not more certain than other sciences taken likewise according to themselves: for in the divine intellect any science whatsoever is as certain as Theology about Himself, in those two modes of certitude. In vain, then, would anyone compare Theology according to itself, that is, in the divine intellect, with other sciences as they are in us. It remains, therefore, that Theology, as it is in us, compared with other sciences of created things - even of God Himself as naturally known - be called more certain and more noble.

The second opinion is that of other Thomists, who teach that Theology in us is more certain than the other sciences by the same reason whereby infused faith is more certain - on the part, namely, of the formal object on which it rests. For just as infused faith, which even concerns created things, is more certain because it rests on the testimony of First Truth, as will be explained at II-II, q. 4, a. 8; so also our Theology will be more certain, because at least remotely it rests on the testimony of First Truth, and proximately on the articles of faith believed on the testimony of First Truth. And in this way certitude is taken by these Doctors, for truth and the conformity of the intellect to the thing. Nor does it stand in the way that theological discourse sometimes proceeds from only one premise of faith and from another naturally known, so that the conclusion be less certain, as if it were deduced only from both premises naturally known: for although the conclusion follows the weaker part - even in certitude - nevertheless the conclusion, which is constituted by terms of both premises, to the assent of which the premise of faith gives help, cannot but have greater certitude than if it were deduced from both premises naturally known. That proposition, "The conclusion follows the weaker part," is true only in this sense, that the conclusion, insofar as it is gathered by the syllogism, is not believed by infused faith, as the other of the premises is. Otherwise, for this opinion to be true, it is necessary to assert that the theological conclusion is gathered from articles believed by divine infused faith, and not only by acquired faith - which, however, is not certain. But if we say that it proceeds from articles believed by acquired faith, it cannot be asserted.

Supplement to the preceding discussion (from the close of the previous chapter).

It regards the adequate object (*obiectum adaequatum*) of the intellect. For when the object is taken universally, it is accidental to be something for practice, or something subject only to speculation - just as it is accidental to an animal to be a man or a horse. From mere reference to various objects, unless they are adequate, the difference of a habit or faculty according to species cannot be gathered; but things cannot be adequate which, in reality, belong to the same faculty or habit. However, supposing a real distinction of faculties or of habits, various objects are the cause of diversity according to species in habits or faculties, because the various objects are adequate: as color and sound, which could not distinguish, according to species, the faculty of the common sense, because the same faculty in reality embraced both; whereas in sight and in hearing they are the cause of distinction according to species, because, the real distinction of powers being supposed, they have the ratio of an adequate object.

Against this doctrine only Aristotle seems to stand, who in De Anima III, text 53, writes thus: "It is also plain that those who divide the parts of the soul, if indeed they divide the very powers and separate them, must grant that there are several principles, of nutrition, sensation, understanding, deliberation, and appetite." There he distinguishes the power of understanding, which we call speculative, from the power of deliberating, which we call practical. I answer first that it is manifest that these faculties of understanding and deliberating are not really distinct, nor in any way by nature: for the same power of the soul speculates and deliberates. This being supposed, neither can they be distinguished by our reason according to species, as is gathered from the reasoning of St. Thomas set out above; in which St. Thomas rightly taught that otherwise the faculty of opining and that of demonstrating would have to be distinguished - something no one grants. Then I say that Aristotle, when he there distinguishes powers, did not so much attend to their specific distinction as to the variety of operations, from which, by a certain common rationale, he wished to name the diverse parts of the soul, or powers. In the same way that place must be explained in Magna Moralia I, c. 35, when, speaking of the parts of the soul, he enumerates the practical and the speculative; and in Ethics VI, c. 1, where he says that the practical and the speculative differ in kind

Articulus VI - Whether sacred doctrine is wisdom

Third and true opinion. It remains, then, that we say that theology in us is more certain than the other sciences, if certitude be taken in the third way, which we said to be in the reflex act of the intellect, by which one judges that the cognition which one has of some thing cannot be false, or be otherwise than it is known to be. Thus without doubt our theology is more certain than any other science - that is, we are more certain that the cognition which we have through theology cannot be deceived than we are of any other science whatsoever. For we believe that it has its origin from God's testimony, to which falsity is more repugnant than to any created science.

Objicitur 1. It seems that this doctrine is not wisdom. For no doctrine that supposes its principles from elsewhere is worthy of the name wisdom, because it is the part of the wise to order, and not to be ordered, as is said in Metaphysics I; but this doctrine supposes its principles from elsewhere (as is clear from what has been said). Therefore this doctrine is not wisdom.[93]

Objicitur 2. Further, it belongs to wisdom to prove the principles of the other sciences; whence also it is called the head of the sciences, as is clear in Ethics VI. But this doctrine does not prove the principles of the other sciences. Therefore it is not wisdom.[94]

Objicitur 3. Further, this doctrine is acquired by study; but wisdom is had by infusion, whence it is numbered among the seven gifts of the Holy Spirit, as is clear in Isaiah 11. Therefore this doctrine is not wisdom.

But on the contrary: Deuteronomy 4, at the beginning: "This is your wisdom and understanding in the sight of the peoples."

93. Aristotle, Metaphysics I; cf. St. Thomas, Summa theologiae I, q. 1, a. 6.
94. Aristotle, Nicomachean Ethics VI, c. 7.

I answer that this doctrine is most of all wisdom among all human wisdoms, not indeed only in some particular genus, but simply. For since it belongs to the wise to order and to judge, and a judgment about higher causes is had concerning lower things, he is called wise in any given genus who considers the most exalted cause of that genus; as, in the genus of building, the craftsman who disposes the form of the house is called wise and an architect in relation to the lower craftsmen who fit the timbers or prepare the stones. Whence it is said in 1 Corinthians 3: "Like a wise architect I laid the foundation." And again, in the whole genus of human life, the prudent man is called wise, insofar as he orders human acts to their due end. Whence it is said in Proverbs 10: "Wisdom is prudence to a man." Therefore he who considers simply the most exalted cause of the whole universe, which is God, is called most wise. Whence also wisdom is said to be the knowledge of divine things, as is clear from St. Augustine, On the Trinity XII. But sacred doctrine most properly determines concerning God according as He is the most exalted cause: for it not only considers, as far as that which is knowable of Him through creatures (which the philosophers knew, as is said in Romans 1: "What is known of God is manifest to them"), but also as far as that which is known to Him alone of Himself, and is communicated to others by revelation. Whence sacred doctrine is most properly called wisdom.[95]

Reply to the first: Sacred doctrine does not suppose its principles from any human science, but from the divine science, from which, as from the highest wisdom, all our cognition is ordered.

Reply to the second: The principles of the other sciences are either self-evident and cannot be proved, or they can be proved by some natural reason in some science. But the proper cognition of this science is that which is through revelation, not that which is through natural reason. And therefore it does not pertain to it to prove the principles of the other sciences, but only to judge about them. For whatever in the other sciences is found to be repugnant to the truth of this science is condemned as wholly false. Whence it is said in 2 Corinthians 10: "Destroying counsels and every height that exalts itself against the knowledge of God."

Reply to the third: Since judgment pertains to the wise according to a twofold mode of judging, wisdom is taken in a twofold way. For it happens that someone judges in one way by way of inclination, as one who has the habit (*habitus*) of virtue judges rightly about those things that are to be done according to virtue, insofar as he is inclined to them. Whence also in Ethics X it is said that the virtuous man is the measure and rule of human acts. In another way, one judges by way of cognition, as someone instructed in moral science (*scientia*) can judge about the acts of virtue even if he does not have the virtue. The first mode of judging about divine things pertains to the gift (*donum*) of the Holy Spirit, according to 1 Corinthians 2: "The spiritual man judges all things"; and Pseudo-Dionysius says in the Celestial Hierarchy II that Hierotheus was taught not only by learning but also by suffering divine things. But the second mode of judging pertains to this doctrine according as it is had through study, although its principles are had from revelation.

Confirmation of the doctrine of the article. The conclusion is that our theology is the greatest wisdom among all wisdoms. The whole difficulty of this article, just as of almost all the preceding ones, seems to lie more in words than in the thing itself - namely, whether theology, of which so

much has been said above, can be called wisdom. There is no one who denies this; but by what rationale St. Thomas proves it can be gathered from the text. In the explanation of which Cajetan notes some things which, being easy, I willingly pass over. However, it can be proved from the doctrine of Aristotle, Metaphysics I, c. 2; Magna Moralia I, c. 35; and Ethics VI, c. 7, where he treats of wisdom and teaches that, by a certain general rationale, he calls wise the one who in his art or science is most exact, and who not only knows the things that can be deduced from principles, but also is thoroughly skilled in the principles, and at once has science (*scientia*) and understanding (*intellectus*); and that wisdom is the most exact science or art which comprehends both. Yet, most properly, he calls wisdom the most exact science of those things which are worthy of the highest honor, which he himself calls metaphysics. By how much more reason, then, ought we to call our theology wisdom, which treats principally of God Himself; and it not only considers those things which natural reason can investigate, but also very many others utterly unknown to the philosophers and wise men of this world, which have been handed down by divine revelation.[96]

Articulus VII - Whether God is the subject of this science

Objicitur 1. It seems that God is not the subject (*subiectum*) of this science. For in any science one must suppose concerning the subject what it is, according to the Philosopher in the beginning of the Posterior Analytics; but this science does not suppose concerning God what He is: for St. John Damascene says, "To say what God is is impossible." Therefore God is not the subject of this science.[97]

Objicitur 2. Further, all the things that are determined in some science are comprehended under the subject of that science; but in Sacred Scripture many other things are determined than about God, namely about creatures and about the morals of men. Therefore God is not the subject of this science.

But on the contrary, that is the subject of a science of which there is speech in the science; but in this science there is speech about God (for it is called "theology," as it were, "speech about God"); therefore God is the subject of this science.

I answer that God is the subject of this science. For the subject stands to a science as the object (*obiectum*) to a potency (*potentia*) or habit (*habitus*). Now, properly that is assigned as the object of some potency or habit under whose rationale (*ratio*) all things are referred to the potency or habit; thus man and stone are referred to sight insofar as they are colored; whence "the colored" is the proper object of sight. But all things are handled in sacred doctrine under the rationale of God, either because they are God Himself, or because they have an ordering to God as to principle and end. Whence it follows that God truly is the subject of this science. This also is made manifest from the principles of this science, which are the articles of faith (*fides*), which are about God. Now the subject of the principles and of the whole science is the same, since the whole science is virtually

95. St. Augustine, De Trinitate XII; Romans 1:19; 1 Corinthians 3:10; Proverbs 10:23.
96. Aristotle, Metaphysics I, c. 2; Magna Moralia I, c. 35; Nicomachean Ethics VI, c. 7.
97. Aristotle, Posterior Analytics I; St. John Damascene, De fide orthodoxa III, c. 24.

contained in the principles. Certain persons, however, attending to the things that are treated in this science, and not to the rationale according to which they are considered, have assigned otherwise the subject of this science - either "things and signs," or "the works of restoration," or "the whole Christ," that is, head and members. For of all these indeed there is treatment in this science, but according to their order to God.

Reply to the first: Although we cannot know what God is, nevertheless we use His effect in this doctrine - either of nature or of grace - in place of a definition, for those things which in this doctrine are considered about God; just as also in the other philosophical sciences something is demonstrated about a cause through its effect, taking the effect in place of a definition of the cause.

Reply to the second: All the other things which are determined in sacred doctrine are comprehended under God, not as parts, or species, or accidents, but as somehow ordered to Him.

Conclusion: God is the subject of this science. The rationale by which St. Thomas proves it, which seems difficult, will be examined in the following disputation together with the doctrine of the whole article.

Disputatio X - On the subject of theology

Status quaestionis

Caput I - State of the question

Although the present controversy is not of great moment, yet because it seems to be not entirely about the name, as many of the preceding are, but about the thing, it is not to be passed over in silence. For its sake two points must be supposed. One is that it has no place either in the view of those who think theology to be truly a simple quality (that is, one single habit), or in the opinion of others who teach that there are many, each concerning its own conclusion, out of which, in order, a certain one science is constituted. For when we inquire about the subject of theology, we do not inquire about the subject of any conclusion whatsoever, but about the subject of the whole science, to the extent that, as will appear below, we can reduce each conclusion to the common subject of the whole. The other point is what Durandus very well noted in the Prologue to the Sentences, question 1, no. 6.[98]

Caput II - The opinion of Durandus

Very many sentences are wont to be reported in this question, at first glance not a little diverse; some of which do not pertain to the question proposed, nor are they among themselves, nor to others that we shall report, truly contrary. The first is of the Glossa of Cassiodorus at the beginning of the Psalms, and of Hugo of St. Victor in the Prologue to book 1 of De sacramentis, c. 2, who say that the matter of the divine Scriptures is the works of human restoration, namely the Incarnation

98. Durandus of St. Pourçain, In Sententias, Prologue, q. 1, no. 6.

and its sacraments, whether those that preceded or those that later followed. The second is of Alexander, who in part 1, q. 1, memb. 3, asserts that the matter of Sacred Scripture can be assigned both according to essence, and thus he says it is God, and according to operation, and thus he says it is the work of restoration; and according to virtue, and thus he says it is Christ himself; and hence that the whole matter of Theology is the divine substance to be known through Christ in the work of restoration. Yet these sentences do not pertain to the present question, nor do they oppose either themselves or others that we shall report. For these Doctors seem to speak not about the subject, but about the object. But now the controversy is solely about the subject, in the manner explained above - about which, nevertheless, there are still various sentences of the Scholastics.

The first is that of Durandus, who in q. 5 of the Prologue, just as elsewhere, takes Theology in a threefold acceptation. First, for the habit by which we assent to the things handed down in Sacred Scripture; and in this way he thinks Theology and faith are the same. Second, for the habit by which our faith and the things handed down in Scripture are defended and explained. Third, for the habit that deduces theological conclusions from principles. About the subject accordingly he teaches three things. The first is that the subject of Theology taken in the first way is meritorious act; thus he teaches in q. 5, no. 9; he asserts the same in no. 21 about Theology taken in the third way, concerning which there is now a special controversy.

He proves this by two reasons. The first is of this sort. That is the subject in some discipline the knowledge of which is the proximate end of that discipline. For in any faculty the knowledge of the subject according to itself and according to the things attributed to it is sought as the proximate end; for, just as in a speculative science the proximate and simply ultimate end is the perfect knowledge of the subject, which is ordered to nothing else; so in a practical science the knowledge of the subject is not the ultimate end, because it tends to work, yet it is the proximate end. But the proximate end of Sacred Scripture, which is Theology in the first way, is the knowledge of meritorious act, or of that which has an order to beatitude; therefore that is the subject of Theology in the first way. Now that the proximate end of Sacred Scripture is the knowledge of meritorious act, Durandus proves from 2 Timothy 3: "Every Scripture divinely inspired is useful for teaching, for reproving, for correcting, for instructing in justice, that the man of God may be perfect, instructed to every good work." Therefore, that a man be instructed in justice and piety is the proximate end of this Scripture.[99]

A posterior reason. That is the subject of some faculty which is chiefly considered in it, and the other things regard it and are in a certain way attributed to it; as is gathered from the second note. Of this sort in Theology is meritorious act: for whatever are handed down from the beginning of Genesis to the end of Apocalypse regard meritorious act and in a certain way belong to it - things which are either precepts or counsels for living well, or examples ordered to this very thing, or, finally, the punishments and rewards which Scripture proposes to those who act well or ill; nay rather, even those things which are written about God in himself and about God incarnate, and are handed down as to be believed, have an order even to meritorious act itself; as it is said in John 20:

99. 2 Timothy 3:16 - 17; cf. John 20:31. Hugo of St. Victor, De sacramentis I, Prol., c. 2; Glossa of Cassiodorus at the beginning of the Psalms; Alexander, I, q. 1, memb. 3; Durandus, In Sent., Prol., q. 5.

"But these are written that you may believe that Jesus is the Son of God, and that believing you may have life in his name." Some things, too, are proposed as a rule of meritorious work. Finally, Durandus confirms the same by many testimonies of Scripture, in which Sacred Scripture is called the science of salvation; therefore the subject of Theology taken in the first way is meritorious act.

About Theology, however, taken in the third way, inasmuch as it deduces conclusions, he teaches the same; he proves it thus. Either from the articles of faith there is deduced something speculative, or something practical. If something speculative, the subject of the habit that deduces conclusions from the articles is the same as the subject of the habit of faith about the articles themselves, from which that is gathered. For the subject of a conclusion in a demonstration, or in a syllogism directly concluding, is the subject of the minor proposition; but the minor proposition of a theological demonstration is always an article of faith; therefore in the conclusion itself the subject will be the same as in the article of faith; and hence the subject of Theology taken in the first and in the third way will be the same. That the minor proposition in a theological demonstration is an article of faith, Durandus shows by the example of this demonstration: Where there is a unity of essence in three supposits really distinct, there cannot be a distinction by absolutes; but in God there is a unity of essence in three persons; therefore in God there is not a distinction by absolutes.

Second, Durandus teaches that the subject of Theology taken in the second way - which is for explaining and defending the mysteries of faith - is God. Thus he asserts in no. 13. He proves it, however, because Theology which declares and defends the mysteries of our religion is chiefly conversant about the articles concerning God according to himself and concerning God incarnate. For although Scripture and our faith hand down not only things that pertain to God according to himself or to God incarnate, but also things that regard our justification and meritorious works, yet those, however, chiefly hold the principal place.

The former reason he proves by two reasons. The former reason is of this sort: that is the subject in any discipline, the knowledge of which is the proximate end of that discipline; for knowledge of the subject according to itself, and according to the things attributed to it, is sought as the proximate end in any faculty whatsoever. For in any speculative science the proximate, and simply the ultimate, end is perfect knowledge of the subject, which is ordered to nothing else; but in a practical science, knowledge of the subject is not the ultimate end, because it tends to work, yet it is the proximate end. But the proximate end of Sacred Scripture, which is therefore the same as Theology in the first way, is knowledge of the meritorious act, or of that which has an order to beatitude: therefore that is the subject of Theology in the first way. That the proximate end of Sacred Scripture is knowledge of the meritorious act, Durandus proves from 2 Tim. 3: "Every Scripture inspired by God is useful for teaching, for arguing, for correcting, for instructing in justice, that the man of God may be perfect, furnished for every good work" (2 Tim 3:16 - 17). Therefore that a man be instructed in justice and piety is the proximate end of this Scripture.

The latter reason. That is the subject of any faculty which is especially considered in it, and the rest all look to it and are in a certain way attributed to it, as is gathered from the second notation. Such in Theology is the meritorious act: for whatever things are handed down from the beginning

of Genesis to the end of the Apocalypse look to the meritorious act and in a certain way are suited to it, because either they are precepts of living well, or examples that are arranged, or finally rewards which for good or evil ... Scripture proposes: indeed the things about God in himself and about God incarnate, and the things that are handed down to be believed, are already ordered to the meritorious act, as it is said in John 20: "These are written, that you may believe that Jesus is the Son of God, and that believing, you may have life in his name" (John 20:31). Certain things moreover are set forth which pertain to a meritorious work. Finally, the same Durandus gathers from many testimonies of Scripture, by which Sacred Scripture is called the way of salvation: therefore the subject of Theology taken in the first way is the meritorious act.

But of Theology in the third way, which derives conclusions, he teaches the same: namely, because either something speculative or something practical follows from the articles of faith. If something speculative, the same subject belongs to such a habit deducing the connection from the articles, and to the habit of faith about the articles from which that is gathered; for the subject of the conclusion in a demonstration, or in a syllogism directly connecting, is the subject of the minor proposition; but the minor proposition of a theological demonstration is always an article of faith: therefore in the conclusion itself the subject is the same as in the article of faith; and consequently the same is the subject of Theology taken in the third way. That the minor proposition in a theological demonstration is an article of faith, Durandus teaches by the example of this demonstration: "There is unity of essence in three really distinct [persons]; there cannot be a distinction by absolutes: but in God there is unity of essence in three persons: therefore there is not a distinction by absolutes."

The second part of Durandus's opinion about Theology in the second way is as follows. Thus he asserts in n. 13. Theology which declares and defends the mysteries of our religion is chiefly conversant about the articles concerning God according to himself and concerning God incarnate: although, indeed, Scripture and our faith hand down not only the things that regard God according to himself or God incarnate, but also the things that regard our justification and meritorious works; yet those, however, have the notion of a principle in sacred doctrine, and are more difficult; whereas these have the notion of a conclusion, nor do they present any peculiar difficulty, the articles about God as principles being supposed. For if we suppose that he who said in John 14, "He who loves me shall be loved by my Father," was the Son of God incarnate, we very well and very easily gather that love of God is meritorious before God, and so of the others. Therefore Scripture and our faith do not need defense or declaration with respect to the conclusions that it gathers, but with respect to the principles from which it deduces; and since the principles are the articles about God according to himself, or about God incarnate, but the conclusions concern our meritorious works, as was said; it follows that the subject of Theology which is engaged in the defense of faith is not the meritorious act, but God.

Third, finally, he asserts that the subject of Theology in this way is not God under the absolute aspect (*sub ratione*) under which God is, but under the determined and relative aspect of Savior: thus he hands down in that q. 5, n. 16 - 17. He confirms it by this reason. The subject of Theology taken in this way is the same as the subject of the habit of faith itself; for the same is the subject of

one habit from which a conclusion is deduced, and of the conclusion which that habit deduces: but the conclusion which the habit of Theology in this way deduces is the article of faith itself: therefore the subject of Theology and of the articles of faith is the same. But in the articles of faith God is the subject, not under the absolute aspect, but under a determined aspect. For as he had said in q. 1, n. 42: God is not the subject of faith under the aspect of the knowable, under which many things can be demonstrated of him; otherwise some article of faith could be evident to a wayfarer. But about God under the absolute aspect, under which God is, many things can be demonstrated, as that he is one, intelligent, omnipotent, etc. Wherefore God under the absolute aspect is not the subject of faith; therefore neither of Theology. Lastly, that God is the subject of Theology taken in the second way under the aspect of Savior, he proves in n. 17 of that q. 5. First, because this notion falls primarily under faith: for in every state there has been faith in God the Savior; then also, because under this aspect many other mysteries are contained. Moreover, under that aspect God is the subject of the articles of faith, under which especially he has an order to the meritorious work, for the reason that the articles ... as principles have of themselves a relation to the conclusions; but the articles of faith are principles with respect to those things which are concluded in Sacred Scripture about the meritorious work, as was said above: wherefore what is the subject of the articles of faith ought to have a relation to the meritorious work: but God, rather under the aspect of Savior than under another, has this order: therefore under that aspect he ought to be subject. He proves the latter minor by a certain reason of his own, which I purposely pass over.[100]

Confutatur sententia Durandi.

Caput III - The opinion of Durandus is refuted

To refute this opinion point by point from the very principles of Durandus himself will not be difficult. Therefore, that division of Theology being admitted, it appears false what he teaches first, namely that the subject of Theology in the first and third way is the meritorious act. For if we speak of Theology in the first way, that is, of the faith of mysteries which are handed down in Scripture or otherwise, the conditions of a subject, which Durandus himself assigned at the beginning, cannot befit the meritorious act: because it does not belong to the notion of a subject to be that which he said in the first reason, namely to be the proximate end of the science; but, as in the second reason he taught, and as we noted above, this is the condition of a subject, that all other things be attributed to it, and in a certain way look to it. Although therefore the meritorious act were the proximate end of Theology in the first way, yet if it is not that to which all other things are attributed, but this is rather God, the subject of Theology will not be the meritorious act, but God. But indeed all other things are not attributed to a meritorious act: for the mystery of the Trinity does not regard the meritorious act as subject - even if to believe this mystery is meritorious -

100. The citations "q. 1, n. 42" and "q. 5, n. 17" refer to Durandus's discussion in the Prologue, where he treats the subject of faith and Theology under diverse formal aspects.

rather the meritorious act is attributed to the Trinity, which is proposed to us to be believed, because it is the author of that act: therefore not the meritorious act, but God has that first condition of a subject.

Moreover, from the fact that the mystery of the incarnation is proposed as a rule of the meritorious act, the act itself ought not to be compared as subject with the mystery of the incarnation, but rather the contrary. Whence it also follows that Theology in the third way does not have the meritorious act for its subject, as Durandus also falsely thought: because whether from the articles of faith there follows something speculative or something practical, the same account of this subject ought to hold as of Theology taken in the first way, as he himself also admits. Since therefore it has now been proved that the subject of Theology in the first way is not the meritorious act but God, so also must it be said of Theology in the third way.

As to the second point which Durandus asserts - namely, that the subject of Theology in the second way is not the meritorious act but God - even if it be true, nevertheless it is not sufficiently consonant with the doctrine already set down by himself. For if the subject of Theology in the first way - namely, for the faith of the mysteries - is the meritorious act, not God, the same will hold of Theology in the second way, which defends the same mysteries. First, because defense and declaration are not only necessary, as he supposed, for the articles about God according to himself and about God incarnate, but also for the articles of justification, of merits, and of the sacraments; against which there have been no fewer errors than against others, and day by day there can arise more. Therefore, if faith has the meritorious act for its subject, the defense of that faith will have the same. Wherefore, even if we concede to Durandus that those mysteries which we have about justification and merits are conclusions of the articles which we believe concerning God according to himself and incarnate, nevertheless there will be difficulty not only in the articles themselves, but also in the conclusions about justification and merits drawn from them; which without controversy is not clear, in what manner the Lord in Scripture has handed down the things that pertain to the notion of merit and justification. For which cause certain persons, while admitting the articles about God and Scripture itself, taught many things wrongly understood about justification and merits. Next, it cannot be said that all the articles about God are principles of the articles about merits and justification: for these, and all the rest, only seem to suppose that God is, and that he handed down those articles to us. But the mystery of the Trinity and of the incarnation, as to all things, do not seem to be supposed as principles, as Durandus thought.

Third, finally, what he said seems to have not even a semblance of probability: for ...[101]

Caput IV - Two other opinions

Therefore, since they are predicated absolutely, God rather under the notion of God (*ratio Dei*) than under the notion of Savior is the universal subject. Moreover, it is not necessary, as Durandus contended, that God be the subject of Theology under that notion under which He is referred

101. John 14:21; 2 Timothy 3:16 - 17; John 20:31.

rather to a meritorious work, but under that which is incomplex, and thus universal, so that to it the rest may be attributed in the way we said; which without doubt He has under the absolute notion of God.

Thus far we have fought against Durandus from his own principles in such wise that at the same time all his arguments are left dissolved. Now let us report the opinions of others, who all, making no distinction in Theology, answer the question absolutely: for however it be taken, it has the same subject.

• Two other opinions.

The second opinion, then, is that of St. Bonaventure, q. 1, Prologue; Ockham, q. 3, a little before the end; and Gabriel, q. 9, art. c.; with whom Albertus seems to agree, 1 p. Summae, tract. 1, q. 9, c. 3, memb. r., and in 2, d. 1, ar. 2, of those who affirm that the subject of Theology can be taken in three ways; of which, in the third way, it ought rather to be called object (*obiectum*) than subject (*subiectum*).[102] According to this mode they say that the universal, or common, subject, under which are contained all the things treated in Theology, is signs or things. But, besides the fact that the subject taken in this way does not pertain to the present question, as I noted above in chap. 1, still in this way the common ratio (*ratio*) of the object of the whole of Theology is not rightly assigned. First, because this is not the adequate ratio of all the things which are treated in Theology, but much more universal: for under it are comprehended other things and signs about which Theology does not discourse; then also because by the same reason we could call things in general the object of philosophy or of metaphysics. Besides, it is not necessary to assign to habits or faculties one adequate and common ratio of object, as I said in the preceding chapter; especially this:

• The subject of Theology is endowed.

Therefore, with that third acceptation omitted, the aforesaid Doctors affirm that the subject of Theology is employed in two other ways. First, they say, there is a radical subject; so St. Bonaventure calls it: or that which is first in perfection; so Ockham and Gabriel call it; Albertus, however, calls it the principal; and in this way the first subject of Theology is God, because in dignity He is prior to all the others, and as it were the integral foundation of them. Then it is called the integral subject; so St. Bonaventure calls it: Gabriel, however, and Ockham call it the subject of containment; and in this way they say that Christ is the subject of Theology, because He integrally contains the human and the divine nature. St. Bonaventure adds that Christ in this way is not only the very person with two natures, but with all also the mystical members and the things that pertain to that person. In this way of speaking they seem only to assign a common subject containing all the things treated in the science: about which, as we have already said, there is not much need to be concerned. Indeed, if it were so, there would be no need to assign that third acceptation which we reported above; since Christ in this way is the universal object of Theology.

102. St. Bonaventure, In II Sent., Prol., q. 1; Ockham, In II Sent., Prol., q. 3; Gabriel, q. 9, art. c.; Albertus, I p. Summae, tract. 1, q. 9, c. 3, memb. r.; and in II, dist. 1, ar. 2.

Accordingly, the opinion of these writers is approved by us only in this, that they assert that God is the subject of Theology: for to Him those conditions of a subject belong, as will be clearer below. Wherefore Albertus also is mistaken, when he asserts that Christ, according to His person in two natures, is the subject, of which passions are demonstrated in Theology: for, just as God as glorifier or Savior cannot be the subject, as Ockham and Gabriel also admit, because the subject ought to be something incomplex; no predication is supposed to have been made of it; so neither now can God be man. With other arguments Scotus impugns this opinion under q. 3, of the Prologue, in the lateral question 2.5. From the foregoing it appears; which I pass over deliberately.[103]

The third opinion is that of others who assert that God indeed is the first subject of Theology, not under the notion of God absolutely, but under the notion of glorifier. Thus taught Gregory, q. 4, Prologue, ar. 2; and Marsilius, q. 2, ar. 3, proposition 1, 2, and 3. Albertus agrees in 2, d. 1, ar. 2, who, with the common notion of subject omitted, which in the second opinion we reported, wherein with St. Bonaventure and others he agrees, pronounces that the special subject of Theology is God, not absolutely, but in so far as He is alpha and omega, that is, principle and end. For all the things that Theology treats it considers in so far as they are from Him and for Him. Therefore Albertus agrees with the others, but adds another peculiar notion, under which also God is subject, namely the notion of principle. The same is asserted by Aegidius in Prol., r. p., q. 3, except that he refers the notion of principle only to the restoration of our salvation.[104] He proves this opinion first by Gregory from St. Augustine, book 14, De civitate, c. 1, where he says that the Theology which he in that entire chapter calls wisdom, treats of those things by which the most health-giving faith, which leads to true beatitude, is begotten, nourished, defended, and strengthened.[105] It is manifest, moreover, that he is not speaking of faith alone: for he subjoins, "By what science the faithful are not very powerful, although they are very powerful by faith itself": therefore he is speaking of the science of Theology, by which the mysteries are proved and defended, and on that account he said that by this science faith is begotten: for Doctors skilled in Theology, converting very many to the faith, beget faith in them, nourish and strengthen it, while day by day more and more they inform them by the doctrine of the mysteries. Wherefore, when Augustine says that this science is about those things that lead us to beatitude, he openly indicates that God is under the same notion the object of this science, under which He is also the object of beatitude, to which the very things that are treated in it lead. The same opinion could be urged by the reasons with which Gregory and others prove that God under the absolute notion of God is not the subject of Theology; these, however, because they directly clash with the truer opinion, we shall set forth below.

This opinion is impugned by Ockham and Gabriel in the cited place with this very good argument. The notion of Glorifier, Redeemer, and other such like, are not notions of subject, but of predicate: because, as we were saying above, in this complex "God glorifier," some enunciation is presupposed in which "glorifier" is the predicate and "God" the subject: but the subject of a science

103. Scotus, Prol., q. 3, lateral q. 2.5.
104. Aegidius, In Prol., r. p., q. 3.
105. St. Augustine, De civitate Dei 14.1.

ought to be incomplex, of which we enunciate something: therefore "God glorifier" is not the subject of Theology, but God absolutely. Secondly, Scotus, q. that second, lateral 9; and Bassolis, q. 4, Prologue, ar. 1: Secondly, I prove; they refute the same opinion for this reason. The subject of a real science cannot be a being of reason (*ens rationis*), nor can the formal notion of the subject be a being of reason: but the notion of Glorifier is a being of reason, just like whatever things in God have a respect to creatures: therefore under that notion He cannot be the subject. They also bring forward other reasons, which can be reduced to the first.[106]

Yet this reason, although it does not assume what is true - namely, that a real science cannot be about a subject which is only a being of reason - nevertheless in Theology it is most true: because although it considers many things in God by a respect to creatures (which, however, is of reason), nevertheless not all the things that it treats have a respect of reason, nor under the same subject which is a being of reason; but it considers them about God Himself. And if someone should reply that the notion of Glorifier is not taken for that respect to creatures, but for the very divine essence, by which we are beatified, this indeed is real: true, as Bassolis noted, if God under this notion were the subject of Theology, He would indeed be so under the notion of deity (*deitas*), under which He is the object of beatitude. Whence even a third reason is taken against Gregory: for if, as he himself admits, the subject of Theology is the same as the object of beatitude, then God under the notion of God will be the subject of Theology: for under this very notion we are also beatified; the notion of glorifier is a certain extrinsic denomination proceeding from the act of beatitude, just as the denomination "knowable" from the act of knowing; which are not of the ratio of object or of subject, in so far as the science is referred to it; as is clear from the doctrine delivered in disputation 7, chap. 3.[107]

Deum sub ratione absoluta Dei esse subiectum Theologiae, truer opinion.

Caput V - That God under the absolute notion of God is the subject of Theology

The last opinion is most approved by me, which affirms that God under the absolute notion of God is the subject of Theology: St. Thomas, Cajetan, and certain recent authors have handed this down in this matter; Henricus in the Summa, ar. 19, q. 1; Richard in the Prologue, q. 6; Scotus, q. 3 in 2, lateral question s.; as is evident from what has been said, § to the first question, and elsewhere. Now, however, we must see -

Bassolis, q. 4, a. 2; Capreolus, q. 4, a. 1, concl., adding also the doctrine which he delivers at the end of the article; Major, q. 7, near the end. Canus, book 12 De locis, c. 2. But what Henricus says in Quodlibet 12, q. 1, namely, that God under the notion of infinity is the subject of the science which God has of Himself, not, however, of the science which the Blessed or wayfarers have of Him, is not against the aforesaid opinion. For in that Quodlibet he asserts that God under the notion of infinity formally is the subject of the science which He Himself has of Himself; not only because God knowing Himself sees Himself to be infinite (for the creature too knows that God is infinite), but

106. Ockham, loc. cit.; Gabriel, loc. cit.; Scotus, q. 2, lateral q. 9; Bassolis, Prol., q. 4, ar. 1.
107. See above, disputation 7, chap. 3.

because God knows Himself to be infinite, and in an infinite mode, in such wise that the perfection of the cognition of the thing known adequately corresponds: and therefore he asserts that He has infinity on the part of the very subject which is known formally; whereas the cognition of the creature is of finite perfection, and thus, although it understands the infinity of God, it does not adequately correspond to it. And for this reason Henricus said that God is not under the notion of infinity formally the subject of created science, but has infinity only concomitantly. Therefore, when this last opinion asserts that God under the absolute notion of God is the subject of Theology, it understands God not by comprehending His infinity or any other attribute: for He demonstrates infinity and the other attributes as passions of God. Whether, however, the ratio of the infinite be compared formally with the subject of Theology, or concomitantly according to the sense of Henricus, is not of the present controversy.

Next it must be observed that God is the subject of Theology not only with respect to that part which deals with necessary truths, but also with respect to that which is about contingent things, as about justification, the Incarnation, etc., as Scotus admonishes; for the rest speak without distinction, except Bassolis, who in that article, § "De Theologia vero," holds that with respect to that part which deals with contingent things God is not the subject under the notion of Deity, but under another notion, as we shall say in the following chapter. In confirmation of this opinion St. Thomas and Henricus use this reason: the subject stands to science as the object (*objectum*) to a potency (*potentia*) or habit; but that is the object of a potency or habit under whose notion all other things are referred to the potency or habit: just as color is therefore the object of sight, because other things, as stone and man, are referred to sight since they have color: therefore that will be the subject of Theology under whose notion all things are referred to it; but all the things which Theology treats are considered in it either because they are God Himself, or because they have an order to Him as to their principle and end: therefore God is the proper subject of Theology.[108]

This is the first reason of St. Thomas, which proves excellently, if the proposition assumed in it be rightly understood. Therefore the comparison between the object of a habit and the subject must be understood thus: just as nothing is the object of a potency or habit which does not have that common notion of object, either essentially as "white," or accidentally as "wall," and in this way something is the object of sight, namely either per se or per accidens, as it partakes of the nature of color; so also all the things which a habit considers have some order or look in some way to the subject of that habit, not that subjection befits them in such wise that it belongs to them by predication, but that in some way those things are said of the subject itself directly or obliquely, and therefore have some order to it.

To this reason can be referred the reason of Scotus, who in q. 2, that lateral question 5, in defending this, assigns as the sole property of the subject that it contains in itself all the truths which are considered in the science; for it ought to be the cause and principle of all those, as induction shows. Wherefore, in the Contra, answering to the first reason which he brought against it, he says that the object is compared with a potency or habit in a different way than the subject:

108. St. Thomas; Henricus, Summa, ar. 19, q. 1; Richard, Prol., q. 6; Scotus, q. 3 in II, lateral q. s.; Bassolis, q. 4, a. 2; Capreolus, q. 4, a. 1, concl.; Major, q. 7, near the end; Canus, De locis theologicis, book 12, c. 2; Henricus, Quodlib. 12, q. 1.

the former is compared as that which moves only, that is, as that which is understood or known, which indeed fits whatever property or conclusion which some habit considers about a thing; but the subject is compared as the cause of all the other things about which that habit is occupied. From which remains proved what St. Thomas assumed in the major proposition; namely, that that is the subject of Theology, under whose notion -

But what Henricus says, namely, that God under the notion of infinity is the subject of the science which God has of himself, not, however, of the science which the blessed or wayfarers have of him, is not contrary to the foregoing opinion.[109] For in that Quodlibet he asserts that God, under the notion of infinity formally, is the subject of the science which he himself has of himself, not only because God, knowing himself, sees that he is infinite (for even a creature knows that God is infinite), but because God understands himself to be infinite, and in an infinite mode, such that the perfection of the cognition adequately corresponds to the thing known; and therefore he asserts that he has infinity on the part of the very subject which is known formally. But the cognition of a creature is certainly of finite perfection; and thus, although it understands the infinity of God, it does not adequately correspond to it. And for this reason Henricus said that God is not, under the notion of infinity formally, the subject of a created science, but that he has infinity only concomitantly. Therefore, when by this latter opinion he asserts that God, under the absolute notion of God, is the subject of Theology, he understands God not as comprehending his infinity or another attribute; for he demonstrates the infinite and the other attributes of God as passions of God. Whether, however, the notion of infinity is compared formally with the subject of Theology, or concomitantly according to the sense of Henricus, is not the present controversy.[110]

Note first: It must then be observed that God is not only the subject of Theology with respect to that part which is occupied with necessary truths, but also with respect to that which is about contingents, as about justification, the Incarnation, etc., as Scotus admonishes; for the rest speak without distinction, except for Bassolis, who in that article 2 judges that, with respect to that part which is occupied with contingents, God is not the subject under the notion of Deity, but under another notion, as we shall say in the following chapter.[111]

In confirmation of this opinion St. Thomas and Henricus use this reason: The subject stands to the science as the object to the potency or to the habit (habitus): but that is the object of the potency or habit, under whose notion all other things are referred to the potency or habit; as color is the object of sight, because all other things are referred to sight inasmuch as they have color: therefore that is the subject of Theology, under whose notion the rest are referred to it; but the rest, which Theology treats, either are God himself, or are considered by us by way of a property, or they have been made by him and are said of him as of a cause: therefore, God under the absolute notion of God is the subject of Theology.[112]

109. Henricus, Quodlibet 12, q. 1.

110. On whether the notion of infinity is compared formally or concomitantly with the subject of Theology, see Henricus as cited; the present dispute does not address it expressly.

111. Scotus, as cited above; Bassolis, In co. art. 2, f.; see also disputation 81, c. 1.

112. St. Thomas, and Henricus, as cited.

This is the first reason of St. Thomas, which is excellently explained, if it is rightly understood. The comparison between object and potency, or habit, must be understood thus: just as nothing is an object potentially which does not have the notion of an object, either essentially or accidentally, so too something is an object either per se or per accidens; and for this reason in the part of the Philosopher which considers color, he considers not only the parts of color, but whatever order or species of being is referred to the object of that potency, to which predication it belongs that in some mode those things are said of the subject either directly or obliquely, and hence they have some order.

To this reason the account of Scotus is recalled, who in question 2, laterally the second, assigns that alone as the subject in which, according to genus, all the things which we adduced at the beginning are contained and are, as it were, comprehended; but St. Thomas, according to Caetanus' exposition, does not think that the conclusions of some science must be contained in the subject as in a sufficient and adequate cause, but only as in a first cause, and sufficient in its order. He says "in its order," because, with something adjoined which participates in that common notion, they are sufficiently obtained from it. Wherefore some generic notion can be the subject in some one science according to species; as number, commonly taken, is the subject in Arithmetic: for, the common notion of number having been posited, and the notion of a particular number being added, there follow singular truths which are contained in number as in a first and sufficient cause, in its own order. The Doctor does not set forth this doctrine expressly in the article; yet Caetanus excellently gathers it from this, that, according to the doctrine of the holy Doctor and the common opinion of all, there can be one science according to species, about some one subject according to genus: such is Arithmetic about number, Philosophy about mobile being, etc. But as pertains to the present controversy, since the subject of Theology, namely God, is one according to species, indeed according to number, he will contain all the truths of this science as an adequate and sufficient cause of them.[113]

Another reason of St. Thomas in this article is of this sort: the same is the subject of the principles and of the whole science; for the whole science is virtually contained in the principles: but God is the subject of the articles of faith, which are the principles of Theology; for we believe about God all the things which are enunciated in the articles: therefore God is the subject of Theology.[114]

A distinction between St. Thomas and Scotus. Caetanus notes on this article that St. Thomas and Scotus do not sufficiently agree in the mode in which they assert the subject to contain virtually the conclusions which are demonstrated in the science. For Scotus holds that they are contained in the subject as in a sufficient and adequate cause, though not proximate: he says not proximate, because a second passion is not contained unless the first is the mean; he says, however, sufficient and adequate, because he thinks it is not possible that something common

113. Caetanus, on this article; cf. the common doctrine that a single science according to species can be about one subject according to genus, e.g., Arithmetic about number, Physics about mobile being.

114. St. Thomas, in this article: "the same is the subject of the principles and of the whole science"; the principles of Theology are the articles of faith.

according to genus be the subject of some peculiar science, but only according to the most special species, which he calls the sufficient and adequate cause of all the conclusions. Scotus seems to have indicated this opinion in that question 2, lateral, in the solution of the second argument "Against that." But Caetanus himself explains otherwise the doctrine of St. Thomas. For he holds that it is necessary that the conclusions of some science be contained in the subject, not as in a sufficient and adequate cause, but only as in a first cause, and sufficient in its order: he says in its order, because, with something adjoined which participates in that common notion, therefrom they sufficiently arise. Wherefore some generic notion can be the subject in some one science according to species, as number, commonly taken, is straightway in Arithmetic: for the common notion of number being posited, and the notion of a particular number being added, there follow the singular truths which were contained in number, as in a first and sufficient cause, in its own order. The Doctor does not hand down this doctrine expressly in the article; yet Caetanus excellently gathers it from the fact that, according to the doctrine of the holy Doctor, and the common opinion of all, there can be one science according to species about some one subject according to genus: such is Arithmetic about number; Physics about mobile being, etc. But as regards the present controversy, since the subject of Theology, namely God, is one according to species, indeed according to number, he will contain all the truths of this science as an adequate and sufficient cause of them.[115]

Non solum Deus est subiectum Theologiae respectu veritatum necessariarum, sed etiam contingentium.

Caput VI - On the difficulty with Bassolis's opinion

There still remains a difficulty with the opinion of Bassolis, whether by the same reason God is the subject of Theology with respect to necessary truths and to contingents. For he himself, as we have previously recounted, thinks that he is the subject with respect to contingent truths according to the notion, not of Deity and essence, but of will: forasmuch as God is not the cause of things inasmuch as he is, but inasmuch as he wills, as we shall show in disputation 81, chapter 1. But I, for my part, am very much pleased with the opinion of Scotus in that question 2, lateral, where he teaches that under the notion of Deity alone God is the subject with respect to both kinds of truths; but that he cannot be the subject under the notion of will is easily proved from the fundamental principle posited at the beginning and repeated in chapter 4. For the subject ought to be something incomplex, such that in the science there is no enunciation made about it supposed beforehand: for which reason we said in chapter 4 that God, under the notion of Glorifier, cannot be the first subject of Theology; because in him there is already some enunciation supposed, namely that God is a glorifier. But by the same reason God, insofar as he is conceived by us under the notion of willing, is not something incomplex; but an enunciation is already made about him, namely that he wills some thing to be done: therefore under this notion he cannot be the first subject of Theology.[116]

115. Scotus, q. 2, lateralis; Caetanus, in this article.

116. Scotus, q. 2, lateralis; see the fundamental principle posited in cap. 1 and repeated in cap. 4; on "Glorifier" as not the first subject, see cap. 4.

But what Bassolis was asserting for his opinion is of no weight. For although God is not the cause of things and of contingent truths inasmuch as he is, but inasmuch as he wills, nevertheless the first subject, of which all things are predicated, is God himself, inasmuch as he is. For the predications, however, of those truths include an act of will, by reason of which something is enunciated about God: therefore the notion of will is rather on the part of the predicate than of the subject; just as the notion of Glorifier is of the same sort, as Bassolis himself above taught.[117]

Scotus, however, notes in that question 2, lateral, to the first question and the following, that God, under the notion of Deity, is not in the same mode the first subject of Theology with respect to necessary and contingent truths. For he says that he is a necessary subject because he contains them virtually from the nature of the thing and necessarily; of which there still is not the same mode of subject in Theology taken according to itself and as it is in wayfarers. For in Theology according to itself, which has the evidence of these truths, God is thus the first subject, that the evidence of himself makes the evidence of all those truths: but in the Theology of wayfarers, by that reason alone, that he contains all those truths in himself and is by his own evidence apt to generate their evidence, if that evidence were had. But with respect to contingent truths, God indeed (he says) is the first subject, not because he contains all those virtually, but because he is the first to which there must inhere the first predicate of the first contingent truth, which is "to be the first subject of every predication." I, for my part, would not deny that God is thus the subject of Theology as related to both kinds of truths, that he contains them in himself, even if he be said not to contain them in the same way. For he contains contingents freely, as their efficient cause; but the necessary truths he contains necessarily from the nature of the thing, which Scotus called virtually; because in him they seem to be included virtually by the very fact that they belong to him from the nature of the thing.[118]

I also think, against Scotus, that God is not the subject of necessary truths in Theology according to itself: for this is either the Theology of God, or the vision of God himself as he is: but each is the most simple knowledge of him and of all necessary truths which, in our mode of understanding, are ascribed to him in predication; but in simple knowledge there is no subject and predicate: therefore only in us wayfarers, who enunciate composite truths about God, does God have the notion of a subject, about which our Theology enunciates and treats something: but with respect to contingent truths God is certainly the subject of Theology according to itself; for the blessed with a single simple intuition see the essence of God and creatures, as we shall show below, disputation 50, chapter 7. Therefore they can both enunciate composition about God, and deny division of those things which are outside of him. Yet there is another mode of Theology which God has about himself: for he by a single intuition knows himself and all things; wherefore, with respect to the cognition itself, we cannot assign in God either subject or predicate distinctly according to our mode of understanding, although in God we distinguish both.[119]

117. Bassolis, supra, in the same matter.
118. Scotus, loc. cit.
119. On the vision of the blessed and their mode of cognition, see below, disputation 50, c. 7.

Caput VII - Arguments that can be opposed

Against this last opinion there are arguments from which some third opinion seems able to be proved

First argument: No science proves about its own subject whether it is and what it is; but it supposes these two, as is said in Posterior Analytics I, chapter 1: but Theology not only proves what God is, but also whether he is: therefore God is not the subject of it.

Solution: I answer that in Theology, from its own principles, which are known only by revelation, these two are not properly proved, but are thus supposed: that God is and that he is the first being, the principle and cause of all things, as that he is Trinity and one, and the other principles which are called the articles of faith. But the Theologian, after another fashion than the Philosopher, proves by reasons from the posterior that God is and that he is one, since among the most base men there are not lacking those who either deny that there is one God, or, what is worse, deny that he is. For we said above that the Theologian is greatly helped by good philosophy. But although faith teaches that God is and that he is one, these two are not numbered among the articles of faith among all; but they are among the things necessarily required for the articles, as St. Thomas teaches.[120]

It is further supposed what God is, by a generic concept which wayfarers can have for this state by the species of other things, by adding and subtracting, as Aegidius notes in that question 3, ad 3, and Henricus in the article cited ad 3; of which kind of cognition we shall speak in disputation 22, chapter 4.[121]

Second argument of St. Gregory: St. Gregory argues secondly in that article 24, in confirmation of the second conclusion: If God under the notion of God were the subject of Theology, he could also be comprehended by Theology; for it pertains to the habit of some subject to consider the things which belong to it, and which can belong (that is, to be able to attain even those): but God cannot be comprehended by Theology: therefore he cannot be its subject.

Solution: I reply: it is not necessary for a habit to know of its subject or of its objects so perfectly as to comprehend them, and to reach them in such wise as to know all the things which can belong to them. And although there may be some habit posited in a creature which comprehends its created subject or object, nevertheless none can be so perfect that it can operate after this mode about God, even if it clearly intuited him. Therefore it is sufficient for the habit of a science about some subject to know many things about it and to deduce them from its principles.

Others also try to infer something absurd, as St. Gregory reports, if the last opinion be true: namely because it would follow that there is some Theology which would know infinite truths about God; since infinite things can be enunciated about him under the absolute notion. But that absurdity does not follow, if we should say that God is the subject of Theology, but in that peculiar

120. Aristotle, Posterior Analytics I, c. 1; St. Thomas, II - II, q. 1, a. 1, ad 3.
121. Aegidius, q. illa 3, ad 3; Henricus, in the article cited, ad 3; on this kind of cognition see disputation 22, c. 4.

way. Yet this too is trifling: for the perfections and predicates of God which are said to belong to him are not infinite in number. For either the discourse is about perfections according to themselves and about the things themselves; and in this mode they are not many, much less infinite: for in God there is most simple essence, without any other distinction than of the persons; infinite according to existence (*esse*), yet not according to number and multitude. But if we speak about the perfections of God as known by some intellect, even then they are not infinite; first indeed in the divine intellect and that of the blessed: for they do not distinguish in God the attributes and perfections among themselves and from the essence, as we shall say in 113, chapter 2.[122] Then neither are they infinite in the intellect of wayfarers: for no one thus far has conceived infinite things about God or discovered perfections. Finally, although the perfections of created things, which, when referred to God, can in some manner be predicated of him as an effect of a cause, are distinct, and infinite too if you include the possibles, nevertheless there is no need to posit in God a created knowledge which would know all of them: but it is enough if it considers some chief ones. St. Gregory, moreover, does not deem it absurd that there be some created knowledge which at once knows God and infinite creatures, as we shall show below, disputation 50, chapter 7. Therefore by this argument St. Gregory proves nothing.[123]

Third argument of Aegidius: Aegidius argues thirdly, if God under the absolute notion of God, not under some particular one, were the subject of Theology, this doctrine would not be distinguished from Metaphysics, which also is called Theology or divine science: for diverse faculties ought to have diverse subjects about which they dispute, and one science is of one kind of subject, according to Aristotle.

Solution: We reply that, first, the subject of that Theology which is Metaphysics is not God, but being universally; nor does Metaphysics refer all the things it considers to God as to its formal object: and besides this difference, which is had from the unity of the subject, not only must the unity of the subject be considered, but also the unity of the formal object, that is, of the principles from which it proceeds. And because Metaphysics proceeds from the principles of natural light, but our Theology from revealed principles, diverse sciences are constituted about the same subject. But this difference could not be known to Aristotle, who did not know such a kind of principles as our Theology has.[124]

Articulus VIII - Whether sacred doctrine is argumentative

To the eighth, one proceeds thus.

122. See 113, c. 2.

123. St. Gregory, in the place cited; see also disputation 50, c. 7.

124. Aegidius, in the argument; cf. Aristotle, on the unity of science by subject; on the distinction between Metaphysics and sacred Theology by their formal principles, see the discussion in this chapter.

It seems that this doctrine is not argumentative. For Ambrose says in the book On the Sacraments: "Remove arguments where faith is sought." But in this doctrine faith is sought chiefly; whence it is said in John 20: "These are written that you may believe." Therefore sacred doctrine is not argumentative.[125]

1. Further, if it be argumentative, either it argues from authority or from reason. If from authority, this does not seem congruent with its dignity (for, according to Boethius, the locus from authority is most infirm). If also from reason, this does not agree with its end: because, according to St. Gregory in a homily, "faith has no merit where human reason supplies experience." Therefore sacred doctrine is not argumentative.[126]

But on the contrary: it is said to Titus, concerning the bishop, that he should "embrace the faithful word according to doctrine, that he may be able to exhort in sound doctrine and to argue with those who contradict."[127]

I answer that, just as certain sciences do not argue in order to prove their own principles, but argue from principles in order to show other things within the sciences themselves, so this doctrine does not argue to prove its own principles, which are the articles of faith; but from them it proceeds to show something, as the Apostle in 1 Corinthians 15 argues from the resurrection of Christ to prove the common resurrection.

Nevertheless, it should be considered in philosophical sciences that the lower sciences neither prove their own principles nor dispute against one who denies the principles, but leave this to the higher science; while the highest among them, namely Metaphysics, disputes against one who denies its principles if the adversary concedes something; but if he concedes nothing, it cannot dispute with him; it can, however, solve his reasons. Thus sacred Scripture, since it has no superior, disputes with one who denies its principles, indeed arguing if the adversary concedes something of those things which are held by divine revelation - just as by the authorities of sacred Scripture we dispute against heretics, and by one article against one who denies another. But if the adversary believes nothing of the things that are divinely revealed, no further way remains for proving the articles of faith by reasons, but only for solving the reasons, if he brings any, against the faith. For since faith rests upon infallible truth, it is impossible that the contrary be demonstrated about the true; hence it is manifest that the proofs which are brought against the faith are not demonstrations, but arguments to be solved.

Reply to the first: Although arguments of human reason do not have a place for proving the things that pertain to faith, yet this doctrine argues from the articles of faith to other things, as has been said.

Reply to the second: To argue from authority is most proper to this doctrine, because the principles of this doctrine are had through revelation. And thus it is necessary that authority be believed of those to whom revelation has been made. Nor does this derogate from the dignity of

125. Ambrose, De Sacramentis; John 20.
126. Boethius, Topica; St. Gregory, Hom. 26 in Evangelia.

this doctrine; for although the locus from authority, which is founded upon human reason, is most infirm, nevertheless the locus from authority which is founded upon divine revelation is most efficacious. Sacred doctrine, however, also uses human reason: not indeed to prove the faith (for by this the merit of faith would be taken away), but to make manifest certain other things which are handed down in this doctrine. Since therefore grace does not take away nature, but perfects it, it is necessary that natural reason serve faith, just as the natural inclination of the will obeys charity. Whence also the Apostle says in 2 Corinthians 10: "Bringing into captivity every understanding unto the obedience of Christ." And from this it is that sacred doctrine also uses the authorities of the philosophers, where by natural reason they were able to know the truth: just as Paul in Acts 17 adduces the word of Aratus, saying, "As also some of your own poets have said, 'For we are his offspring'." Yet this doctrine uses authorities of this kind as extrinsic arguments and probable ones. But it uses the authorities of canonical Scripture properly and from necessity in arguing. The authorities, moreover, of other Doctors of the Church it uses as arguing not from their own, but probably. For our faith rests upon the revelation made to the Apostles and Prophets, who wrote the canonical books; not, however, upon the revelation, if any there was, made to other Doctors. Whence St. Augustine says in the epistle to St. Jerome: "To the books of Scripture alone, which are called canonical, have I learned to pay this honor, that I most firmly believe that none of their authors erred in writing anything. But other authors I so read, that however much they excel in sanctity and doctrine, I do not therefore think true, because they thus perceived or wrote."[128]

Summary and confirmation of the whole article.

From the body of the article three conclusions can be elicited.

- First: Our Theology does not use arguments to prove its own principles, but proceeds from the things supposed to prove other things.
- Second: Just as it pertains to Metaphysics to dispute against those who deny its principles, if they admit something as true from which one may argue - wherefore among the natural disciplines Metaphysics is more noble - so also it is the office of Theology to confirm the articles of faith, which are the principles of this science, against heretics from Scripture, which they themselves admit, or from another locus in which they agree with Catholics.
- Third: If someone denying the principles admits nothing from which the Theologian can argue against him, there only remains that he respond to his arguments made against the same articles. Finally, in the solution of the second [objection], St. Thomas enumerates the theological loci, from which Theology draws its arguments.[129]

From all which things is gathered the response to the question proposed in the title of the article; namely, that Theology is argumentative; that is, that it pertains to it to use arguments and reasons, as Paul testifies in 2 Timothy 3: "All Scripture, inspired by God, is useful for teaching, for arguing," and this is, for refuting and convincing false dogmas: in which sense all the Latin and

127. Ad Titus, on the qualification of a bishop.

128. St. Augustine, Epistle to St. Jerome: "Solis enim scripturarum libris, qui canonici appellantur..."

129. St. Thomas, in the solution to the second objection of this article, on the theological loci.

Greek Fathers interpret Paul. Now two kinds of false dogma can be refuted by Scripture: one of those which directly fight against the articles of faith, which are the principles of Theology, such as the error of those who deny the divinity of Christ; and against these Theology argues in the manner said in the second conclusion. The other kind of false dogma is that which is not directly and expressly against an article of faith, yet from it something against an article follows. And this kind of error is against the conclusions of Theology itself, and this the Theologian refutes from Scripture or other loci in the manner which we have said in the first conclusion: by which kind of arguing very many truths in the Church have been defined and contrary opinions condemned: such as that concerning the formal cause inhering in our justification, concerning the adoration of the Saints and of images, and other things of that kind. The Lord Christ also, employing this kind of arguing, in the Gospel convicts the Pharisees; and he convinces by example: in Luke 6 he adduces the example of David, who, under urgent necessity, ate the loaves of proposition (1 Kings 21). Then in Matthew 19 Christ proves that it is not lawful to dismiss a wife for any cause whatsoever, and elsewhere very often from Scripture. Sometimes too he argues by most excellent reason. Thus in Luke 11 he rebukes the malice of the Jews by reason, and proves that he casts out demons by the finger and by the power of God.

Both kinds of arguing against heretics are frequent among the holy Fathers; wherefore by no right do the heretics of our times defame our Theology, that it applies itself so diligently to the forming of "the best reasons" and arguments. For they say that by scholastic argumentations and diverse disputations the doctrine - which the Fathers in a wonderful manner commend - is so disturbed, that it seems to have been devised rather for deceiving or for contention than for teaching; indeed for stirring up new heresies, since by philosophical reasons the wit is sharpened beyond measure. For which cause St. Jerome, in the treatise to Ctesiphon against the Pelagians, seems to call the philosophers the patriarchs of the heretics; and in Epistle 127, on the forty-two mansions, he named the heresies themselves the firstborn of philosophy; and in the first act of the sixth General Synod he says that Arius drew his error from the books of the philosophers.

But these are the subtleties of the heretics, who do not lack slanders, that they may falsely reprove the Theologians. But if the heretics themselves, by perverse interpretations of Scripture and captious arguments, most miserably deceive the ignorant peoples, it will not be a fault against the truth if our Theology should apply itself to dissolving these reasons and use against the same heretics arguments more efficacious and truer. Moreover, if at some time the Church has used logical and even sophistical disputations - St. Augustine, when he was engaging the Manichees; likewise Tertullian publicly disputing against the same - it will not be useless, but necessary, that there be in the Church Theologians who may be skilled in the art of arguing, and may know how to dissolve the captious argumentations of heretics; nor is simplicity and the truth of doctrine thereby taken away, but rather explained and defended; and if any false opinions arise anew, they are more easily refuted. Heretics indeed are not born in the Church from philosophy rightly understood; nor are philosophers well instructed in sacred doctrine the masters of heretics, but rather they have been their most keen assailants. Deservedly therefore does our Theology use arguments and

reasons, and is sometimes helped by true and sound philosophy. We do not deny that many Theologians sometimes sin in their exercises, disputations, and questions, either disputing too contentiously or mixing in things useless; yet these vices are theirs, not Theology's.

Dubitatio circa textum.

About the first conclusion of this article more recent Thomists vary in explaining the mind of the holy Doctor: for there are some who think he taught only this, that it does not pertain to the Theologian to prove evidently and necessarily his own principles, which are the articles of faith and other things defined by the Church or handed down in Scripture; yet that they can be commended by a Theologian negatively by probable reason. For it does not belong to him only to explain his principles, but also to show them in some way by reason: wherefore in 2-2, q. 1, a. 5 many Theologians strive to show by probable reasons the credibility of the mysteries of our faith. They say therefore that our Theology differs from philosophy in this, that the latter can manifestly prove even posteriorly its own principles, whereas Theology can prove neither a priori nor a posteriori, nor show necessity, but only probable reasons, as was said.

Others assert that this commendation also - by which Theologians demonstrate the particular credibility - is not from the habit of Theology; because it does not proceed from revealed principles, but from human reasons and from effects by which the credibility of things can be humanly demonstrated. Wherefore it does not pertain to the Theologian, as Theologian, to prove his principles; nor is this kind of proof to be had from that source, but from another, namely that Theology, whatever it teaches, should have the faith of human faith. This indeed shows ...

Christ also, the Lord, in the Gospel convicted the Pharisees by the best kind of arguing, by reason and orderly sequence; and, in order to prove that it was lawful for the Apostles on the Sabbath to pluck ears of grain to refresh themselves, he adduced, Luke 6, the example of David, who, because of urgent necessity, ate the loaves of the proposition (1 Reg. 21). Then in Matthew 19 Christ proves that it is not lawful to dismiss a wife for just any cause; and elsewhere very often from Scripture; sometimes too he argues by most cogent reason. Thus in Luke 11 he refutes the malice of the Jews by argument, and proved that he had cast out demons by the finger and the power of God.

Both kinds of arguing, especially against heretics, are frequent among the holy Fathers. Wherefore, without cause do the heretics of our times reproach our Theology (Theology, Theologia), because it so diligently applies itself to the framing of most fitting reasons and arguments. For they say that by scholastic arguments and disputation-circles the simplicity of doctrine, which is marvellously commended by the Fathers, is so disturbed, that it seems invented rather to deceive, or to contend, than to teach; indeed useful for nothing else than to stir up new heresies, while minds are sharpened more than is expedient by philosophical reasons. For this cause St. Jerome, in the tract to Ctesiphon against the Pelagians, seems to have called philosophers the patriarchs of the heretics; and in Epistle 127 on the forty-two mansions he called the heresies themselves the first-born of philosophy; and the Sixth general Synod, act 1, says of Arius that he drew his error from the books of the philosophers.[130]

But these are the quibbles of heretics, who do not lack cavils, so that they may falsely reprehend our Theology. And if the heretics themselves, by perverse interpretations of Scripture and captious arguments, most miserably deceive unlearned peoples, it will not be a fault of our Theology if it endeavors to refute those arguments, and employs against those same heretics more efficacious and truer ones. Moreover, if at some time the Church complained of logic and sophisms - for when St. Augustine was a Manichee, he urged that God should be publicly prayed to for deliverance from them - it will not be useless, but necessary, that there be in the Church theologians who are well skilled in the art of arguing and know how to dissolve the captious arguments of heretics; nor on that account are the simplicity and truth of doctrine taken away, but they are explained and defended; and the false opinions which thereupon arise are the more easily refuted. Heresies, however, do not arise in the Church from philosophy well understood; nor have philosophers well instructed in sacred doctrine been the teachers of heretics, but rather their most ardent assailants. Rightly, then, does our Theology employ arguments and reasons, and is at times aided by true and sound philosophy. We do not deny that theologians do sometimes sin much in their disputation-circles, disputations, and the handling of questions, either by differing too contentiously, or by mixing in useless things: yet these vices are theirs, not Theology's.

Dubitation concerning the text.

Concerning the first conclusion, the principles (principles, principia) of this article the more recent Thomists vary in expounding the mind of the holy Doctor. There are theologians who think he taught only this, that it does not pertain to the Theologian to prove evidently and necessarily his own principles, which are the articles of faith and other things defined by the Church or delivered in Scripture; yet he did not deny that they can be commended by the Theologian with probable reason. For it does not belong to him only to explain his principles, but also to show them by some reason. Wherefore, in 2.2, q. 1, a. 5, very many theologians endeavor to show by probable reasons the credibility of the mysteries of our faith. They say, therefore, that our Theology differs from philosophy in this, that the latter can at least a posteriori evidently prove its own principles, whereas Theology neither a priori nor a posteriori evidently or necessarily demonstrates, but only by probable reason, as has been said. Others assert that even this proof, by which the Theologian demonstrates the credibility of our articles, is not from the habit of Theology; because it does not proceed from revealed principles, but from human reasons drawn from effects by which the credibility of things can in a human way be demonstrated. Wherefore it will not pertain to the Theologian, as Theologian, to prove his principles; and so this kind of proof will belong to another habit, which they say is the habit of human faith. For this shows by the best right that those things are to be believed which have been received with highest veneration by an innumerable multitude of men distant in places and times, distinguished by sanctity and letters, without any advantage of riches, pleasure, or honor, so lowly and contrary to human sense.[131] On which matter Eusebius says

130. St. Jerome, Ad Ctesiphontem contra Pelagianos; Ep. 127, De XLII mansionibus; Sixth Ecumenical Council (Constantinople III), act 1, on Arius.

131. That is, the common human signs of credibility taken from the universality, sanctity, learning, and disinterest of believers across times and places.

many things, book 1 of the Preparation for the Gospel; Justin, in the Exhortation to the Greeks; and St. Augustine, De civitate Dei 12, chapters 10 and 18; and book 13, On the Trinity, chapters 5 and 6. [132] Wherefore with good reason St. Thomas, in the second conclusion, compared Theology in this respect to Metaphysics, because it is nobler than the rest, and therefore is called wisdom.[133]

But if those admit no principle of this sort who deny the articles of faith, there remains no argument against them within the bounds of Theology; but it serves only to dissolve their reasons, as St. Thomas expressly noted in the third conclusion. Wherefore the later Thomists rightly used to say that those reasons by which the credibility of our faith is wont to be proved do not pertain to the Theologian as his proper ones; yet we can and ought to use them against those who deny the mysteries of our faith, if they admit no place at all to Scripture, tradition, or the definition of the Church. With such men one must proceed rather by human reason: first to show the error of their faith, then the probability of ours, especially from the kinship which it has with the true law. These reasons, therefore, are not proper to Theology: otherwise St. Thomas would not have said that, against those who deny all the principles of Theology, nothing else remains for the Theologian than to dissolve their arguments.

Vera explicatio St. Thomas. Easier to my judgment is the mind of St. Thomas, and that the truest; namely, that the principles of Theology are not proved by it absolutely, but are supposed as true - unless in the case of the second conclusion, that is, against those who deny them. For with those who are well instructed in the Catholic faith and ready to believe what the Roman Church proposes, Theology does not treat of proving the articles, but among them it supposes them as certain, and from them argues to infer new conclusions and truths. It does indeed prove those aforesaid articles, which it ought to have supposed, when they are denied by heretics. However, as St. Thomas says in the conclusion, in this way Theology can argue only when certain articles are denied and others admitted: for the principles of Theology are of such a sort, and so connected, that they can mutually aid one another and one be proved from another - namely, Scripture by the definition of the Church and by tradition, and conversely; but only among those who admit some of them. Likewise, the same universal principle, if granted, proves the particulars which are contained under it; and this too pertains to the Theologian. For example, if a heretic admits some book of Scripture, yet denies some truth contained in it from a perverse understanding and interpretation thereof; the Theologian, who ought to be versed in Scripture, can within the proper bounds of Theology convict him: likewise, if someone admits the authority of some Council, yet denies what is defined in the same, in like manner he is to be convicted by the Theologian. By this reason our Theology ought to be called wisdom, and the Theologian wise. For, according to Aristotle, Ethics 6, chapter 7, the wise man must not only know those things which are known from principles, but also pronounce concerning first things, by explaining and declaring them.[134]

132. Eusebius, De praeparatione evangelica, book 1; Justin Martyr, Oratio paraenetica ad Graecos; St. Augustine, De civitate Dei, book 12, chs. 10, 18; De Trinitate, book 13, chs. 5 - 6.

133. St. Thomas, in the second conclusion of the present question/article, comparing Theology to Metaphysics.

134. Aristotle, Nicomachean Ethics VI, ch. 7.

And if they admit no principle of this sort, who deny the articles of faith, there remains no argument within the bounds of Theology against them; but it serves only to dissolve their reasons, as St. Thomas expressly noted in the third conclusion. Wherefore the later Thomists rightly used to say that those reasons by which the credibility of our faith is wont to be proved do not pertain to the Theologian as his proper ones; yet we can and ought to use them against those who deny the mysteries of our faith, if they admit no place at all to Scripture, tradition, or the definition of the Church. With such men one must proceed rather by human reason: first to show the error of their faith, then the probability of ours, especially from the kinship it has with the true law. These reasons, therefore, are not proper to Theology: otherwise St. Thomas would not have said that, against those who deny all the principles of Theology (essence, essentia; existence, esse; relation, relatio; person, persona; supposit, suppositum), nothing else remains for the Theologian than to dissolve their arguments.

Disputatio XI - Whether the Theologian can evidently dissolve the adversaries' arguments

Caput I - The opinion of Durandus

Concerning the third conclusion of the article it remains to dispute whether our Theology dissolves the adversaries' arguments by showing evidently that they prove nothing. In this difficulty Durandus thought, in Quodlibet, Prologue, n. 42, that the Theologian cannot dissolve evidently, but only probably, the arguments that are made against our mysteries of faith. He proves this, because either the reason adduced against an article has a defect in form, or it assumes some false proposition: the former can be evidently known, and therefore, if in some way this argument be solved, it will be evident about its solution. But the latter cannot be evident: for just as there cannot be evident certainty about the truth of the mystery, so neither about the falsity of that which is assumed to prove the contrary; for of both there is the same reason. As, if someone argues against the mystery of the Trinity in this way: wherever there is distinction of persons, there is also distinction of nature; but in the divine there is distinction of persons: therefore also of nature. The argument indeed has no other defect than that it assumes the major proposition to be false, since in the Infinite, according to essence, it can at once be that there is a singular nature and a plurality of persons. But if by faith the falsity of that were evidently established, evidently too would appear the truth of the contradictory proposition, namely, that in some singular nature there can be more supposits (supposita). Thus the mystery of the Trinity would be evident.

Caput II - What Caietanus holds

But Caietanus, in this article, concerning the third, seems to have taught the contrary. For he asserts two things. One is, that all contrary reasons can be dissolved evidently within the limits of Theology itself, and thus that the Theologian can respond to them not only from propositions

believed, but also from those evidently known: not indeed positively, but negatively. For the explanation of which he notes that contrary reasons can be dissolved evidently in a twofold way. First, negatively; not because there is evidence of the opposite proposition, but because it is evident that what is assumed in the argument does not convince the intellect to its assent. As, in the example posited by Durandus, that major proposition can be denied, in every nature where there is distinction of persons, there is also of essence; since it does not appear how universally true is what is there said. Then, some argument can be dissolved evidently positively, because the truth of the contradictory of what is assumed evidently stands. As, if in the same example the truth of the major proposition should appear, namely, that in some singular nature there are several persons; and in this latter way all the arguments against the mysteries of our faith cannot be dissolved: because, as Durandus well proves, there would be had an evidence of the mysteries themselves. Therefore Caietanus wished to teach nothing else, when he said that the Theologian does not fulfil his office unless he evidently dissolves the arguments, than that the well-instructed Theologian evidently dissolves the arguments negatively, by this very fact that he is not forced to assent to the assumed proposition, nor by doubt is moved from the true doctrine.

From which Caietanus infers that they are deceived who think that the reasons brought against our faith can be dissolved not evidently, but obscurely. For there is a difference, says he, between the proof of some proposition and the solution of a contrary argument; namely, that, in order that the proof be evident, it must assume propositions of which it is not only not clear that they are false, but their truth is also evident, so that from them an evident positive assent to the conclusion may follow; but that the solution of a contrary argument be evident, it is enough if something is denied whose truth does not appear, which would convince the intellect to assent. For to one to whom there does not appear something from which he should assent, but rather he believes the contrary, even if he believes it obscurely, it is evident that that argument does not efficaciously prove. As if someone denies that the stars are even in number, and another wishes to prove it to him from a certain number he shall have assumed at pleasure; if the assumed proposition does not appear true to him, its negation will be an evident way of dissolving such an argument, that is, of showing it proves nothing. But in order that the even number be evidently proved, propositions must be assumed which engender an evident assent. Wherefore the opinion of Caietanus, rightly understood, does not oppose the position of Durandus: for the latter speaks only of positive evidence, which Caietanus does not grant in the solution of arguments; while here he speaks of negative evidence, as has been explained, which Durandus would not deny.

Posterior part. The other thing which Caietanus teaches is that nevertheless some arguments at least can be dissolved evidently positively, from the fact that the opposite of what is assumed in the argument is evidently known: as if someone should argue against the mystery of the Eucharist that accidents in it cannot be...[135]

135. Durandus: Quodlibeta, Prologue, n. 42; Caietanus: commentary on II - II, q. 1, a. 5, and allied places, as referred to in the text.

Durandus rightly proves that arguments against the mysteries cannot be dissolved evidently; therefore Cajetan wished to teach something different, when he said that the theologian has done his task if he resolves the arguments made against him, rather than that the theologian should evidently, by a negative, argue them down, by the very fact that he does not grant the assumption, the doubt about the proposed point being thereby removed.

Cajetan adds that they are mistaken who do not distinguish between an evident proof of a conclusion and the solution of an argument. For, there is, he says, a difference between the proof of some proposition and the solution of an argument against it. In order that a proof be evident, it must assume propositions of which it is not only not uncertain that they are false, but whose truth is evident, so that from them there may arise an evident assent to the conclusion. But for the solution of an argument it is enough, if something be shown from which the truth of the conclusion does not appear, which prevents the intellect from assenting. And if there does not appear something from which that conclusion follows, but rather the contrary is obscurely believed, it is evident that the argument does not efficaciously prove it. For if someone were to deny, for example, that the stars are equal, and wished to prove it from a certain number arbitrarily assumed; if that assumed proposition does not appear true to him, to deny such an argument is to dissolve it - that is, to show that it proves nothing. Therefore, in order to prove evidently a number or the like, it is necessary to assume propositions that generate an evident assent.

Properly understood in this way, the opinion of Cajetan does not contradict that of Durandus: for Durandus speaks of positive evidence; it is not a positive evidence of the solution of arguments that Cajetan intends; rather, Cajetan speaks of negative evidence, as has been explained, which Durandus would not deny.

However, what Cajetan teaches is, in its latter part, nevertheless true: that at least some arguments can be dissolved evidently and positively from the fact that the opposite of what is assumed in the argument is evidently known. Thus, if someone contended against the mystery of the Eucharist that accidents in it cannot be without a substance, because their being and nature is to be-in (inesse), this argument can be evidently and positively solved, because in good philosophy it is evidently known that the essence (*essentia*) of accidents is not an actual existence (*esse*) in a substance, but a total aptitude and ordination to inhere; and so the assumption can be denied with the evidence of the contrary proposition. This, however, will not be done in the case of other arguments to be solved. Cajetan also adds that this mode of responding evidently and positively pertains to the theologian, as he is a theologian, even if the solution of the argument be taken from principles of philosophy. For theology makes alien principles its own, when it uses the ministry of other faculties for the defense of its own doctrine; for which reason he himself calls these principles theological ministerially.

Nevertheless, Cajetan falsely asserted that it pertains to the theologian, as he is a theologian, to solve evidently and positively such an argument which indirectly fights against the mystery: for that the theologian does, insofar as he is a philosopher. Nor do the principles of philosophy become proper to the theologian, unless when, with articles of faith being granted, they are used to infer some conclusion; then indeed he receives them from philosophy, because theology is in a certain

manner subordinated under philosophy, as was said above in Disputation 7, cap. 5.[136] But when the theologian disputes from the principles of philosophy alone, as happens in the solution of the aforesaid arguments, he does not exercise the office of a theologian, but of a philosopher; whence it follows that the theologian, as he is a theologian, dissolves no argument evidently and positively.

Caput III - The more probable view: that no argument directly against a mystery can be evidently positively solved by the theologian

This opinion of Cajetan, except for its latter part, does not please me; and so I think, universally, that no argument which directly fights against a mystery, as it is an article of faith, can be dissolved evidently and positively, but only negatively. Enough has been said, in the explanation of Cajetan's opinion, about an evident negative solution; but as for an evident positive one, our opinion is now proved: because, if some argument which directly fought against a mystery were to be evidently and positively dissolved, there would thereby be an evidence of the mystery itself, as the reasoning of Durandus most rightly convinces. I said, an argument that directly fights against the mystery; because the arguments that fight by consequence, or directly against something natural which an article supposes, not only some, but all, can be evidently and positively solved; and in this sense Cajetan's opinion would be true. Such is that argument adduced against the mystery of the Eucharist; for it does not fight directly against the article, which consists solely in this, that after the words are properly pronounced the accidents now remain without a subject; the argument indeed does not directly prove that the accidents do not remain in that way, but deduces it by consequence, because so to be cannot happen; now, that this can be, is not known by the oracles of faith and by revelation alone, but is something that can be known by natural reason and is necessarily presupposed to the article. Similar would be the argument, if someone wished to prove against the article of the resurrection, and to this end assumed that the soul is mortal, and has no potency toward the past. For this argument could be evidently and positively solved, because it does not directly conflict with the article itself, which consists only in this, that there will be a future resurrection.

Finally, Cajetan falsely asserted that it pertains to the theologian, as he is a theologian, to solve evidently and positively such an argument which indirectly fights against the mystery: for he does that insofar as he is a philosopher. For the principles of philosophy do not become proper to the theologian, unless when, with articles of faith being granted, they are used to infer some conclusion; but then he receives them from philosophy, because theology is in a certain manner subordinated under philosophy, as was said above in Disputation 7, cap. 5.[136] But when the theologian disputes from the proper principles of philosophy alone, as in the solution of the aforesaid arguments happens, he does not exercise the office of a theologian, but of a philosopher; whence it follows that the theologian, as he is a theologian, dissolves no argument evidently and positively.

Disputatio XII - On the loci of Theology and on treating theological questions

- Caput I - What is a theological locus, and how many kinds there are.
- Caput II - On the use of the five prior loci.
- Caput III - On the authority of the Scholastics, of the philosophers, and on philosophic reason.
- Caput IV - On human history.
- Caput V - The difference between human history and philosophic reason.

Caput I - What is a theological locus, and how many kinds there are

The argument about the theological loci in our own time Melchior Canus has treated excellently through twelve books, in which he not only set before our eyes the number of the loci, but also, concerning each, handed down much, and recalled into discussion various matters fetched from here and there. But our present plan will be, with a simple narration, to review the loci which seem to pertain to the theologian, and briefly to set out the weight of each and the use.

We call theological loci, not the subjects about which theology treats, which are also called commonplaces, as concerning justification, merit, etc., but rather the seats and storehouses from which theological arguments are drawn. Just as Aristotle in the Topics shows various loci, either from definition, or from contraries, etc., from which in any proposed question one can fetch probable arguments; so it will now have to be set forth whence the theologian can produce his reasons and arguments. And although every argument, universally, is made either from authority or from reason, nevertheless ten theological loci are customarily enumerated. Whether indeed all of them pertain to the theologian as legitimate and proper, we shall say in this disputation.

The first locus, therefore, is the authority of Sacred Scripture. The second, the authority of the traditions of Christ and the Apostles. The third, the authority of the Catholic Church. The fourth, the authority of Councils. The fifth, the authority of the Roman Pontiff. The sixth, the authority of the Fathers. The seventh, the authority of the Scholastic theologians, together with which there is wont also to be reckoned the authority of the jurists, in that part in which the theologian treats of the doctrine of right. The eighth, reason, deduced by natural light. The ninth, the authority of the philosophers. The tenth, the authority of human history. Of these Canus judges the first seven to be proper to the theologian, in book 1 De locis, the last chapter; the three latter, however, to be adscititious and borrowed from elsewhere: in what way this is true I shall explain briefly; for it is not our purpose to teach what sacred Scripture is, in what manner it was written and revealed, what tradition is, and of what authority; nothing, moreover, that pertains to the firmness and strength of the decrees of Councils and Popes; but we presuppose that there are five most solid foundations of theology, from which its most principal arguments are derived, and contain one and the same truth of divine revelation, as will be shown more at length in 2 - 2, q. 1, a. 10, in the special treatise about all these.[137] For this reason St. Thomas embraces these four loci under one only, namely under the authority which is had from divine revelation; for the firmness and strength of truth is the same from divine testimony, although it be expressed in different modes.

This energy of truth, however, the other loci do not have from themselves. I except the common consent of the Fathers in the explication of some sense of Scripture which pertains to a dogma of faith, and also in eliciting traditions of faith; for in these the same authority is had as with the true sense of Scripture and with true Christian tradition, for no other reason than that the Catholic Church receives and holds Scripture thus explained, as the Council of Trent defines, session 4, in the decree on the edition and use of the sacred books, and embraces the traditions themselves preserved continuously by the common consent of the Fathers.[138] From itself, however, the authority of the Fathers is human, and from them alone does not have the weight of an incontestable truth. The other four loci ought to be placed in a lower grade of certainty; nevertheless, in what way they can contribute to theological conclusions and to eliciting articles of faith, and what the use of each ought to be, we shall say in due course.

Caput II - On the use of the five prior loci

From the use of these loci let us first establish this, that from the prior five the theologian can argue in a twofold way: first, as we noted in the explanation of the article, against those who deny the principles, or some particular contained under them, in the manner there explained. Wherefore against those who deny the definition of the Church or of the Pontiffs we can argue from Scripture; and against those who deny Scripture, from the definition of the Church, when adversaries admit something from these. Finally, against those who deny some particular on account of a perverse understanding of the Scripture which they receive, we ought to argue from Scripture itself rightly

137. St. Thomas, 2 - 2, q. 1, a. 10.
138. Council of Trent, session 4, Decree on the edition and use of the sacred books.

understood; for the proving of which it can and ought to be added the passage from the Fathers, according to whose interpretation in the dogmas of faith, as I have said, Scripture is to be understood.

Next, from all these loci, and with the authority of the Fathers accepted in the same way, we can argue and from them deduce our conclusions; and this yet in two ways, either by an evident inference, or by a probable one. In the former way, a theological conclusion is deduced, and such a consequence, if both propositions are assumed from the aforesaid loci, or if one of the premises is evident by natural reason, is sufficient to determine in a Council a conclusion of faith; in the latter way, however, a conclusion only probable is inferred, about which, without harm to the faith, there can be controversy among theologians, and a dissent of opinions. Nor ought this mode of arguing probably and opining be judged useless, provided excessive contentiousness be absent: in this way not only are talents exercised fruitfully, but many truths also are brought out of darkness by assiduous disputations. I myself saw, not many years ago, in the matter of grace and predestination, some questions among theologians so obscure on both sides, that the defenders of each side judged that nothing certain could be had in that matter, in which, however, an easy way has begun to appear. On the other hand, I saw some who, lightly and without foundation, clung so to their own opinions, that they thought the contrary opinion exposed to the danger of error: which, however, a prudent theologian ought to beware of, always judging maturely about matters, nor condemning anything rashly. By assiduous disputation it has been brought about that, with Scripture and the books of the Fathers diligently examined, the matter now appears easier, and where danger seemed to be, truth itself shines.

It remained that we should treat of the sense of Scripture, which can serve for theological disputations; for about its authority, and about the number of the canonical books, and about other rules of faith, I have already promised a special treatise. About the sense, however, accommodated to disputation we shall defer to the following disputations. Now, however, I wish to admonish this only, that the theologian - what I promise, so far as it can be done - I will observe, that in his disputations he always derive his arguments from some of those loci which seem to be proper to him; nevertheless, he should little care for the arguments which pertain solely to the subtlety of metaphysics, unless insofar as they can illustrate theology.

Caput III - On the authority of the Scholastics and the philosophers, and on philosophic reasoning

Then it must be said of the sixth locus, which is called the authority of the Scholastic theologians, and, by the way, also of the ninth, namely, of the authority of the philosophers, to which philosophic reason itself also pertains. The authority of both cannot, from itself, generate a greater certainty than that of opinion: the theologians indeed in a theological matter, the philosophers in a philosophical matter; which, since it can also serve the theologian for deducing his own conclusions, even the authority of philosophers can be of use in theological disputations for arguing probably; unless when the common sense of the Scholastics is such that, as to a dogma

of faith, and of the philosophers, as to a principle and definition of some philosophical thing, they agree. Then a greater certainty is generated not from their authority, as it is theirs, but from the very principle in which they agree. In what manner, moreover, regard ought to be had, in the choice of the opinions of the Scholastic Doctors, we shall say in 1 - 2, in the tractate on conscience. When it is rash to opine against the common sentence of all the Scholastics, we shall say in 2 - 2, q. 11, a. 2, where it will be necessary to treat of the qualities of propositions.

Finally, philosophic reason, or the principles taken from philosophy - which are called the eighth locus - are of very great service, so that we may have some conclusion, either natural or moral, elicited from its own principles, which the theologian then assumes, so that with another truth of faith he may infer a theological conclusion: for example, to prove that Christ's humanity was not adopted by God, we presuppose the true definition of adoption from the principles of moral philosophy; which, once established...

Caput IV - On human history

We apply the proposition of faith, namely, that in Christ the human nature was united substantially to the Word of God, and from this we gather that it was not adopted; as in the particular disputation on this matter we have already demonstrated. We observed the same in another disputation to prove that the humanity in Christ did not retain a servile condition, and in other such matters of this sort.

Therefore a reason altogether natural or moral is not the theologian's, as he is a theologian, but he presupposes it, as we have said; wherefore, although in this way it serves the theologian, yet, strictly speaking, it is foreign to his institute; however much it may serve the theologian to infer a theological conclusion, it is not the theologian's proper locus, but an adscriptitious one. And as philosophical reason can conduce to a theological demonstration, so also to probable argumentation, either by assuming propositions in philosophy that are probable together with other revealed ones, or that are evident in philosophy - yet from these still inferring only probably. From this there is also clear in what way the authority of the philosophers can be a theological locus.

But how the theologian acts by philosophical reason alone in moral matter, and whether that part pertains to the theologian, we said elsewhere.[139]

The sixth locus, namely human history, is so necessary to the theologian that I should not call it on loan from elsewhere, but proper. I mean not any history whatsoever, but that which narrates the acts of Councils and Pontiffs, the traditions of the Church, and the contrary heresies, against which action was taken in the Councils. From this indeed we have the undoubted authority of a Council, not because the definition of a Council relies on human history as a principle (*principium*) of truth, but because, unless from undoubted historical testimony it is established concerning the Council, and its authority by which it was convened and confirmed, from it we shall not be able to deduce a firm argument.

139. Above, Disputation 7, cap. [number not given in this chunk].

Then too, it is not enough to know those things, which we have said, about the Council; but one must have a clear view of the heresies of that time, and the opinions against which fighting took place therein. For if someone is ignorant of these, it will often happen that he by no means grasps the mind of the Council: which, in our own age, has happened to not a few concerning the definition of the Second Council of Orange, who, thinking that it had been convened against the Pelagians and not knowing to distinguish them from the Semipelagians, against whom especially its canons were issued, many of them have interpreted it wrongly, as will be clear below in Disputation 91, cap. 11, and likewise in the second part in the matter of grace.[140]

Another sort of history, even about ecclesiastical matters, for the most part can serve more for ornament than for the doctrine of theological questions; whence it is not so much the theologian's proper locus, nor frequently accommodated to his principal institute. Indeed, this history of the Church - and even of the Gentiles - is sometimes useful for a clearer understanding of Scripture, as St. Augustine testifies in On Christian Doctrine, book 2, cap. 28; but rarely as regards that part which serves the dogmas of faith, from which the theologian must argue and draw conclusions; and hence it does not so frequently pertain to the theologian, as the things that contain the acts of Councils, traditions of the Church, and the contrary heresies.

Caput V - The difference between human history and philosophical reason

Lastly, a difference must be observed between the locus of history, which we said properly regards the theologian, and the locus of philosophical reason, which sometimes can help the theologian; because that locus of reason is not included in the very principles which the theologian assumes, but is presupposed as prior: for from natural principles it deduces a conclusion, which must serve in the theological syllogism as a principle; but history is in a way a part of a theological principle: for it is assumed by the theologian together with the very definition of a Council for inferring conclusions, if indeed it pertains to the theologian to seek a firm foundation of the principles which he assumes from the definition of the Council, and to hold also its legitimate sense and the true interpretation of them: to these matters, as we have said, history contributes very much.

Wherefore, just as Aristotle said of the wise man, Ethics 6, c. 7, that it belongs to him not only from principles to collect conclusions, but also to say true things about the principles, so too it will pertain to the theologian - who is deservedly called wise - to set out the foundation of his principles, and to speak many true things about them: which he will suitably accomplish if he knows best the ecclesiastical history. Nor for that do we deny that the principles of theology are to rest on the authority of divine revelation; but we assert that history also concurs together as one of the conditions. For if we say that the theological principles are assumed as believed by infused faith as such divine, then human history will be a condition only that is required, without which the assent of infused faith is not had, as will be explained at 2-2, q. 1, a. 1.[141] But if we say that the

140. Below, Disputation 91, cap. 11; and in the second part, in the matter of grace.
141. St. Thomas, 2-2, q. 1, a. 1.

theological principles are assumed only as believed by acquired faith, then human history will not only be a condition on the part of the principles, but also a reason for assenting to them, yet in such a way that we believe these things to be true as delivered by God and confirmed by his authority.

Articulus IX - Whether Sacred Scripture ought to use metaphors

To the ninth we proceed thus.

Objection 1. It seems that Sacred Scripture ought not to use metaphors. For that which is proper to the lowest doctrine does not seem to befit this science, which, among the others, holds the supreme place, as has been said. But to proceed through various similitudes and representations is proper to poetry, which is the lowest among all doctrines. Therefore to use such similitudes is not befitting to this science.[142]

Objection 2. Moreover, this doctrine seems to be ordered to the manifestation of truth: whence a reward is promised to its manifesters, Ecclesiasticus 24: "They who elucidate me shall have everlasting life." But by such similitudes truth is concealed. Therefore it does not befit this divine doctrine to deliver under the similitude of corporeal things.

Objection 3. Moreover, the more certain creatures are sublime, the more they approach to a divine likeness. If therefore something is transferred from creatures to God, then such a transposition ought especially to be made from more sublime creatures, and not from the lowest. Yet in the Scriptures this is frequently found (to be otherwise).

But on the contrary is what is said in Hosea 12: "I have multiplied visions to them, and in the hands of the prophets I was assimilated." But to deliver something under a similitude is to speak metaphorically. Therefore it pertains to sacred doctrine to use metaphors.

I answer that, it is fitting to Sacred Scripture to deliver divine and spiritual things under the likeness of corporeal things. For God provides for all things according as their nature requires: but it is natural to man to come to intelligible things through sensible things, because all our knowledge takes its beginning from the senses. Whence it is fitting that in Sacred Scripture spiritual things are set forth to us under metaphors of corporeal things; and this is what Pseudo-Dionysius says in the first chapter of the Celestial Hierarchy: it is impossible for the divine ray to shine upon us otherwise, unless it be enveloped by the variety of sacred veils. It also befits Sacred Scripture, which is proposed in common to all (according to that Romans 1: "To the wise and to the unwise I am a debtor"), that spiritual things be proposed under corporeal similitudes, so that at least in this way the unlearned may grasp them, who are not apt to grasp intelligible things according to themselves.

Reply to the first: The poet uses metaphors for the sake of representation; for representation is naturally delightful to man. But sacred doctrine uses metaphors for necessity and usefulness, as has been said.

142. The marginal references appended to this objection in the source include: "1. Prol. art. 9. Et distinct. 34. 3. art. 2. Et 3. contra gent. c. 150. Et quodl. 4...." and similar scholia.

Reply to the second: The ray of divine revelation is not destroyed because of the sensible figures with which it is veiled, as Dionysius says, but it remains in its truth; and the wise man, to whom the revelation is made, does not allow it to remain in similitudes, but he raises it up to the cognition of intelligible things; and through these those, to whom the revelation was made, others also are instructed about these matters. Whence those things which in one place of Scripture are delivered under metaphors, in other places are more expressly expounded. And the very hiding of figures is useful for the exercise of students, and against the mockeries of unbelievers: of whom it is said in Matthew 7: "Do not give the holy to dogs."

Reply to the third: As Pseudo-Dionysius teaches in the second chapter of the Celestial Hierarchy, it is more fitting that divine things in Scripture be delivered under the figures of vile bodies than of noble bodies, and this for three reasons. First, because by this the human mind is more freed from error. For it is manifest that these things are not said of the divine according to their propriety, which could be doubtful if the divine were described under the figures of noble bodies - especially among those who know how to conceive of nothing else more noble than bodies. Secondly, because this mode is more fitting to the cognition which we have of God in this life. For more is manifested to us of a thing by what it is not than by what it is. And therefore the similitudes of those things which are more removed from God make for us a truer estimation that what we say of God is above, whether by adding something, or even by detracting: but the metaphors which Scripture uses are taken from corporeal things to explain spiritual things, as induction shows. Thirdly, because by this mode divine things are more hidden from the unworthy.

Explanation of the doctrine of the article.

The conclusion is: Sacred Scripture uses metaphors quite suitably, and (as is gathered from the reply to the first) for some reason this is even necessary.

So far St. Thomas has disputed concerning sacred doctrine, and the faculty of theology, and has expounded its nature, properties, the mode of proceeding, and the ways of drawing out reasons: but because among the principal loci from which he draws arguments one is Sacred Scripture, which among all the rest is not only commonly explained by the Doctors, but also is to such a degree fecund that it contains many senses under the same words, therefore with good reason in this and in the following article he disputes about finding the true sense of Scripture, according to which the theologian ought to argue in his disputations - which it is not necessary to note with respect to the other theological loci, namely ecclesiastical traditions, definitions of Councils and Pontiffs: for of these principles there is plainly one sense, which from the force of the very words, from history, and from the knowledge of heresies can easily be investigated.

In this article St. Thomas gives the reason why Scripture uses so many metaphors; which is this. It is natural for man to ascend from corporeal and sensible things to the cognition of spiritual and intelligible things, because our intellect, conjoined to the body, even receives from it the species of corporeal things, so that after the likeness of them it may understand incorporeal things, whether by adding something, or also by detracting. Therefore the metaphors which Scripture uses are taken from corporeal things to explain spiritual things, as is evident by induction; therefore quite

suitably does Scripture use metaphors. For this cause Scripture attributes to God members and human affections, by which it shows forth his various virtues. For this same reason St. John Chrysostom used parables in homilies 38 and 45 on Matthew, to show why Scripture uses parables. [143]

Moreover, St. Thomas teaches in the reply to the third that it is more suitable to take metaphors in Scripture from abject and lowest corporeal things than from the more noble: for thus it is made more manifest that such things do not befit God.

Moreover, St. Thomas teaches in the reply to the third that in this life it is more known to us what God is not than what he is; and therefore, when we affirm something of God, we must always add, as we shall show below in Disputation 22, cap. 4, that this is said according to a likeness taken more easily, says St. Thomas, from the likeness of lower things than of higher; therefore more suitably is the metaphor (*metaphora*) taken from those. I, for my part, judge the cause of this to be also that things lowest and common to our sense are very familiar to us, and hence are more apt, so that after the manner of them we may understand spiritual things and those remote from sense.

Observations concerning the doctrine of the article.

For the further explication of this doctrine, certain things are to be noted. First, that there are various figurative modes of speaking in Scripture, about which Sanctes Pagninus disputes very copiously, book 1 of the Isagoge to the Sacred Letters from cap. 12 up to 29; the knowledge of whose variety is very necessary in our theological disputations: let it suffice in general to have noted the reason on account of which metaphor is employed in Sacred Scripture.[144]

Second, it is to be noted that then it is necessary to understand a trope or metaphor in Sacred Scripture when, if the passage be explained without figure, it would contain something absurd; as when Christ is called a vine, the Apostles branches, John 15. Thus admonishes St. Augustine, book 3 De doctrina Christiana c. 5, 15, and 16; which is followed by Sanctes Pagninus in cap. 19 and 20. [145]

Third, it is to be noted that, if metaphor be taken properly, as Quintilian defines it, book 8, c. 6, namely the transference of a word from the thing which it properly signifies to signify another because of likeness, its use is not simply necessary, but only useful, in Sacred Scripture. But if metaphor be taken in the broader way for any kind of translatio, by which a word is extended from the signification of one thing to another, it is then necessary in Sacred Scripture, indeed in any disputation about spiritual things, so that without it we cannot say anything. For since all names first bear concepts, and these concepts are first had from corporeal things, names also were first imposed to signify these corporeal things; then either by negation or by extension analogically they are brought down to signify divine things; indeed even created spiritual things are signified by us by names first imposed to signify corporeal things. This extension of names is such that, according to propriety, even spiritual and divine things are signified; created things indeed univocally, divine

143. St. John Chrysostom, Hom. 38 and 45 on Matthew. Pseudo-Dionysius, Celestial Hierarchy, c. 1 - 2. Romans 1; Ecclesiasticus 24; Hosea 12; Matthew 7. Augustine, De doctrina Christiana 2, c. 28. Aristotle, Ethics 6, c. 7.

144. Sanctes Pagninus, Isagoge ad Sacras Literas, book 1, cap. 12 - 29.

145. St. Augustine, De doctrina Christiana, book 3, cc. 5, 15 - 16; Sanctes Pagninus, cap. 19 - 20.

things however only analogically, as will be more broadly explained below, Disputation 22, cap. 4. In this way we call God strong, not because he has bodily strength and vigor, for which the name seems first to have been imposed to signify, but because he has spiritual power and stability in good, and so of others.

But in that prior kind of metaphor, the word thus signifies a perfection in God, that first it denotes another thing of which it is the likeness that expresses what is in God, not by an extended signification of the name, but by the very thing signified by the name to show that which is in God. For which cause such names are said of God improperly, because the primary signified is not in God, but is a certain created thing manifesting to us what is in God. In this way, by a certain pact of understanding, we call the intellect of God an eye, because the name "eye" was never extended to signify spiritual intellect, but always remained in its primary signification of a corporeal instrument for seeing. But because the operation and cognition of this instrument is apt, so that by its likeness we may understand and explain spiritual intelligence, therefore the faculty of understanding is called metaphorically and improperly the eye of the mind.

From which it is gathered that metaphor, properly taken, is not simply necessary in Scripture, because by other names which properly, by extension, signify spiritual things, Scripture can express divine mysteries; indeed, by words accepted only by metaphor in the prior mode, the mysteries could not be suitably explained. But when St. Thomas in the reply teaches that it is necessary for Sacred Scripture to use metaphors, it ought neither to be understood simply, nor in every respect, but sometimes - not indeed because without metaphor a thing could not be explained, but because not so effectively without metaphor as with metaphor could it be expressed.

There are also other reasons not to be despised, on account of which Scripture uses metaphors, parables, and similitudes. The first is for the exercise of the wits of the faithful, which Augustine assigns, 11 De civitate Dei c. 19, and 2 De doctrina Christiana c. 6; Jerome in the epistle to Eustochium De virginitate; Gregory, homily 20 on Ezekiel; Theophylact on Luke c. 8; the second, that we more assiduously ask intelligence of Scripture from God. Thus Origen, hom. 7 on Ezekiel; Jerome on Isaiah c. 18; and Theophylact on Matthew c. 13. The third, that many spiritual senses be elicited for the edification of the faithful. This is Augustine, book Contra mendacium c. 10.[146]

Other causes also are often alleged, which I purposely pass over. Nevertheless I judge this no less true, that, although the ecclesiastical writers wrote with the Holy Spirit assisting and governing their mind and pen, they nevertheless retained a phraseology customary to their homeland. Thus Paul, writing in the Greek tongue, frequently uses a Hebrew phrase. Now to the Palestinians a figurative manner of speaking, with the use of parables and similitudes, was very familiar; and on that account Scripture is accustomed to speak thus so very often. By what reasoning an argument is to be drawn from a place where Scripture speaks metaphorically will be made clear from the things that must be said in the next article.

146. St. Augustine, Contra mendacium, c. 10; Jerome, Epistle to Eustochium De virginitate; St. Gregory, Hom. 20 in Ezechiel; Theophylact, on Luke c. 8; Origen, Hom. 7 in Ezechiel; Jerome, on Isaiah c. 18; Theophylact, on Matthew c. 13.

Articulus X - Whether sacred Scripture under one letter has many senses

The tenth proceeds thus. It seems that sacred Scripture under one letter does not have several senses - namely the historical or literal (*sensus literalis*), the allegorical, the tropological or moral, and the anagogical (*anagogicus*). For a multiplicity of senses in one Scripture gives rise to confusion and deception, and removes the firmness of arguing: whence from multiple propositions no argumentation proceeds; but rather on account of this certain fallacies are assigned. But sacred Scripture ought to be efficacious to show the truth without any fallacy. Therefore in the same letter multiple senses ought not to be handed down.

1. Besides, Augustine says in the book De utilitate credendi that Scripture, which is called the Old Testament, is handed down fourfold, namely according to history, according to etiologia, according to analogia, according to allegoria. But these four seem altogether alien to the four aforesaid. Therefore it does not seem fitting that the same letter of sacred Scripture be expounded according to the four senses aforesaid.[147]
2. Besides, beyond the aforesaid senses there is found a parabolic sense, which is not contained among those four senses.

But on the contrary: what St. Gregory says, Moralia, book 20: Sacred Scripture transcends all the sciences by the very manner of its speech, because with one and the same expression it narrates the deed and discloses the mystery.[148]

I answer that the author of sacred Scripture is God, in whose power it is to accommodate not only voices to signify (which man also can do), but even the things themselves. And therefore, whereas in all the sciences voices signify, this science has proper to itself that even the things signified by the voices also signify something. Therefore that first signification, by which the voices signify things, pertains to the first sense (*sensus*), which is the historical or literal sense; but that signification by which the things signified by the voices in turn signify other things is called the spiritual sense (*sensus spiritualis*), which is founded upon and presupposes the literal.

Now this spiritual sense is divided threefold. For as the Apostle says to the Hebrews 7, the old law is a figure of the new law; and the new law itself, as Pseudo-Dionysius says in the Ecclesiastical Hierarchy, is a figure of future glory. In the new law also, the things that were done in the Head are signs of the things that we ought to do. Therefore, according as the things of the old law signify the things of the new law, there is the allegorical sense; but according as the things done in Christ, or in those things that signify Christ, are signs of the things we ought to do, there is the moral sense; but according as they signify the things that are in eternal glory, there is the anagogical sense.[149]

147. St. Augustine, De utilitate credendi.
148. St. Gregory, Moralia, book 20.
149. Hebrews 7; Pseudo-Dionysius, Ecclesiastical Hierarchy, cap. 5.

But because the literal sense is that which the author intends - and the author of sacred Scripture is God, who comprehends all things at once with his intellect - it is not unfitting, as Augustine says, Confessions 12, c. 18, 19, 20, 24, that even according to the literal sense there be many senses in one letter of Scripture.[150]

Reply to the first: The multiplicity of these senses does not make an equivocation, nor another species of multiplicity; because, as has been said, these senses are not multiplied on account of this, that one voice signifies many things, but because the very things signified by the voices can be signs of other things. And thus no confusion follows in sacred Scripture, since all the senses are founded upon one, namely the literal, from which alone an argument can be drawn; not, however, from those things which are said according to allegory, as Augustine says in the letter against Vincent the Donatist. Nor does anything of sacred Scripture thereby perish, because nothing necessary to faith is contained under the spiritual sense which Scripture does not somewhere manifestly hand down by the literal sense.[151]

Reply to the second: Those - history, etiologia, analogia - belong to the one literal sense. For there is history, as Augustine himself expounds, when something is proposed simply; etiologia when the cause of the said is assigned, as when the Lord assigned the cause why Moses permitted the license of repudiating wives, namely because of the hardness of their heart (Matthew 19); analogia indeed is when the truth of one Scripture is shown not to be repugnant to the truth of another. But only allegory among those four is posited for the three spiritual senses, just as Hugh of St. Victor, under the allegorical sense, also includes the analogical, positing in the third book of his Sentences only three senses, namely the historical, the allegorical, and the tropological.[152]

Reply to the third: The parabolic sense is contained under the literal: for by the words something is signified properly and something figuratively; nor is the literal sense the figure itself, but that which is figured. For when Scripture names the arm of God, the literal sense is not that in God there is a member of this bodily kind, but that which is signified by this member, namely operative power; in which it is plain that the literal sense of sacred Scripture can never be false.

Summary of the article.

From the body of the article two conclusions are elicited. The first is: Under the same letter there can be several senses. The second is: Under the same letter there can be several senses not literal. The first is to be understood absolutely and universally of any sense; which the Doctor proves from this, that under the same letter sometimes one sense is historical or literal, another spiritual or mystical. In the latter conclusion, however, the discussion is only of the historical or literal sense. Yet the truth of this doctrine must be elucidated and examined more amply in some disputations.

Whether the same place of Scripture under the same letter has many senses. Disputation 13. - The error of the heretics, cap. 1. - The Catholic truth, cap. 2.

150. St. Augustine, Confessions, book 12, cc. 18 - 20, 24.

151. St. Augustine, Epistle against Vincent the Donatist.

152. Hugh of St. Victor, in the Prologue of De sacramentis and in the third book of the Sentences, where he enumerates three senses.

But on the contrary: Pseudo-Dionysius, in the Ecclesiastical Hierarchy, says that it is a figure of the glory to come; and in the New and Old Law the things that were done in the Head are signs of the things we ought to do. Therefore, insofar as the things of the Old Law signify the things of the New Law, there is the allegorical sense (sensus allegoricus); but insofar as the things that were done in Christ, or in those which signify Christ, are signs of the things that we ought to do, there is the moral sense (sensus moralis); and insofar as they signify the things that are in eternal glory, there is the anagogical sense (sensus anagogicus). And because the literal sense (sensus litteralis) is that which the author intends, while the author of Sacred Scripture is God, who comprehends all things at once by his intellect, it is not unfitting, as St. Augustine says (Confessions 12, cc. 18 - 20, 24), that even according to the literal sense one and the same letter of Scripture should have multiple senses.[153]

Reply to the first: The multiplicity of these senses does not produce equivocation, nor any other species of multiplicity of that kind; for, as has been said, these senses are not multiplied because one utterance signifies many things, but because the things signified by the words can themselves be signs of other things. And thus neither does any confusion follow in Sacred Scripture, since all the senses are founded upon one alone, namely the literal, from which alone an argument can be drawn, and not from those things which are said according to allegory, as St. Augustine says in the Epistle against Vincent the Donatist.[154] Nor does anything thereby perish from Sacred Scripture, because nothing necessary to faith is contained under the spiritual sense which Scripture does not elsewhere hand down manifestly through the literal sense.

Reply to the second: Those three, namely history (historia), aetiology (aetiologia), and analogy (analogia), belong to one literal sense; for, as St. Augustine himself explains in the Argument on Genesis, history is when something is simply set forth; aetiology is when the cause of what is said is assigned; but analogy is when the truth of one Scripture is shown not to be contrary to the truth of another.[155] Moreover, allegory is reckoned among four as if it were put in place of the three spiritual senses; so too Hugh of St. Victor, under the allegorical sense, also includes the anagogical, positing in the Prologue of De sacramentis of his Sentences only three senses, namely the historical, the allegorical, and the tropological.[156]

Reply to the third: The figurative sense (sensus tropicus) is contained under the literal; for by words something is signified either properly or figuratively; nor is the literal sense itself the figure, but that which is signified by the figure. For when Scripture says the arm of God, the literal sense is not that in God there is a member of this corporeal kind, but that which is signified by this member, namely operative power; in which it is clear that falsehood can never lie under the literal sense of Sacred Scripture.

153. Pseudo-Dionysius, Ecclesiastical Hierarchy, cap. 1; St. Augustine, Confessions, book 12, cc. 18 - 20, 24.

154. St. Augustine, Epistle against Vincent the Donatist.

155. St. Augustine, in the Argument on Genesis (cf. De Genesi ad litteram), on the threefold division of history, aetiology, and analogy.

156. Hugh of St. Victor, in the Prologue of De sacramentis and in the Sentences, where he enumerates three senses.

Sum of the article. From the body of the article two conclusions are elicited. The first is: Under the same letter there can be several senses. The second is: Under the same letter there can be contained several literal senses. The first is to be understood absolutely and universally of any sense whatever: the holy Doctor proves it from this, that under the same letter at times one sense is historical, that is, literal; another is spiritual, that is, mystical. In the latter conclusion, however, the discourse is of the historical, or literal sense alone. Yet the truth of these two must be further elucidated and examined in some disputations.

Disputatio XIII - That under the same letter there can be many senses

Caput I - The error of the heretics

The present controversy, which ought to be about the matter of the first conclusion concerning the senses (sensus) of Scripture taken as a whole, around which there have been not a few errors. I pass over certain fanatics and heretics of our own time who have reproved all study of the sacred books directed either to eliciting the literal or the mystical and spiritual sense. One was Otho Brunsfels, as Cochlæus attests, On the Authors of Scripture, chs. 3 and 4. Another was Gaspar Suencesfeld, as Palladius reports in his book on the heresies of our time; and Federicus in the book On the Concord of the Lutherans.[157] For the error of these men will be sufficiently refuted in II - II, q. 1, a. 10, in the disputations on Scripture, where we will the more fully establish its authority. But from Scripture itself we shall not be able to convince those who think that its interpretation altogether rests upon a merely cabalistic and human figment.

Now, with its authority posited, we must treat of the mode of interpreting it, so that from it we may know how to draw theological arguments. In this matter too many have erred.

First error, that of Porphyry. First indeed Porphyry, as Eusebius reports (Ecclesiastical History, book 3, ch. 17), impudently derided the multiple and various interpretations of Scripture, about which in book 3 Against the Christians he says: Christians (namely) cling to the inept Jewish Scriptures, in which, when there is no completion or explanation, they turn to certain incongruous tales which are not so much explanations as speeches which, where things are more obscure, bring applause to those disputing. For those things which Moses wrote in a rustic and simple style, they confirm by saying they are most holy and laden with figures and riddles, and, puffed up with enormous mysteries, they are disturbed in mind, and, subjecting them to the judgment of human reason, they think they are sacraments in which the unskilled and rustic writer was not able to explain himself. So Porphyry. And a few lines later he affirms that the author of this evil was Origen, whom he testifies that, when he was a little boy, he had known.

With this same spirit of blasphemy, Erasmus too was carried away, in his Epistle to the Emperor, which he prefixed to his Paraphrase, saying: The Doctors of the ancient Church in explaining allegories partly differ, partly act in such a way that they seem to me to be playing

games. Finally, Luther, the offspring of Erasmus, writes thus of Dionysius the Areopagite: He plays with allegories, which is the pursuit of idle men. To these there seems to lend favor Abulensis, q. 57 on Matthew 2, where he asserts that there is no mystical sense according to the mind of the Holy Spirit, but that all are the fictions of preachers. He teaches the same at q. 28 on ch. 13 of Matthew, and the marginal Postil on Abulensis himself at q. 74 on ch. 6 of Joshua.

Caput II - The Catholic truth

But then, how impudently Porphyry has lied is sufficiently shown by what Philo the Jew relates in the book On the Contemplative Life; for he writes that this kind of mystical interpretation among the Essenes, men distinguished for religion and holiness among the people of the Hebrews, was very frequent. For from dawn till evening they were accustomed to devote entire days to the reading of the sacred Scriptures, which they tried to apply to allegorical and mystical senses. Moreover, Christ himself and his Apostles, as will appear in Disputation 15, very often used this mode of interpretation. The same too Philo, as Eusebius reports in the second book of the History, ch. 17, praises the Christians of that time, in the aforesaid book On the Contemplative Life, in these words: The treatise of the sacred volumes has this character, that it delights more in allegorical opinions, because to those men all law seems similar to a living soul, which indeed has the letter as its body, and those things which are designated according to the letter; but it has, hidden in the letter, the spiritual and invisible sense, which they, as if scrutinizing it from their authors, behold as more sublime and nobler, as if looking into a mirror. Therefore the custom is older than Porphyry supposed; and this kind of interpretation ought to be held in great esteem and honor, because not only the ancient Fathers, the sacred writers, and the Apostles, but also Christ himself used it, as will be seen in Disputation 15; from which also the shamelessness of Erasmus and Luther will appear.

Assenting therefore are Catholics, whom we will soon afterwards adduce in place, that Sacred Scripture is to be explained not only historically, that is, literally, but also mystically, that is, spiritually; and first, that it can be so explained: which is confirmed most excellently by the testimony of Philo just alleged, and of Josephus in Antiquities, book 3, ch. 11. For he teaches that in the sacred vestments things were mystically signified, which, after he had explained them one by one, he subjoins at the end of the chapter: Let these things have been made clear, lest perhaps the virtue of the legislator should more often be able to be set forth opportunely.[158]

From the Fathers, however, this same doctrine has been handed down to us by Origen, book 10 on ch. 15 of the Epistle to the Romans, and book 4 of the Periarchon, ch. 2, and Homilies 2 and 7 on Genesis, and 11 on Numbers; by St. Jerome, in the great Commentaries on Galatians 4, on that which Paul adduces about the two sons of Abraham, and in the book On the Passover, and in the Epistle to Hedibia, which is 150, q. 12; by St. Augustine, in many places, in the Imperfect Work on Genesis, ch. 2, in the first book On Genesis to the Letter, ch. 1, in On True Religion, ch. 50, Epistle

157. Cochlæus, De scriptoribus auctoribus, chs. 3 - 4; Palladius, on the heresies of our time; Federicus, De concordia Lutheranorum.

158. Josephus, Antiquities, book 3, ch. 11.

49, to the last question 15, in City of God, book 17, ch. 3, in On the Usefulness of Believing, ch. 3, and book 3 of Christian Doctrine; by St. Gregory, in the Preface to the Moralia, chs. 3 and 4, and book 22, ch. 22; by St. Cyril, book 1 on Leviticus at the beginning, and book 5 about the middle; by St. Ambrose, Sermon 14, and on Psalm 108, on the first verse, and book 3 on Luke on that of chapter 3, Who was Pharez; and book 5 on Luke, on that of chapter 6, And Jesus answering; while he explains that which Achimelech did, and the deed of the Centurion, which is had in chapter 7, and on that, They beckoned to their partners, chapter 11, and book 6 on that of chapter 6, And Jesus answering; by Eucherius, in the book On Spiritual Forms at the beginning; by Bede at the beginning of Genesis; by Bernard, Sermon 61 On the Little Ones; by Hugh of St. Victor, book 6 of the Didascalicon, chs. 3 and 4.[159]

From the Scholastic theologians, very many have taught this very thing: St. Thomas and Cajetan in this article; Nicholas of Lyra in Prologue 2 and 3 of the Postil on the Bible; Paul of Burgos in the edition on both Prologues; Alphonsus de Castro, book 1 Against Heresies, ch. 3; Driedo, book 2 On Sacred Scripture, ch. 2; Catherinus in the Opuscule On the Keys of Scripture, chapter On Various Senses; Sixtus of Siena, book 3 of the Bibliotheca Sancta at the beginning; Pagninus in the Isagoge, chs. 18 and following; Adam in the Prologue on Isaiah; likewise Michael Medina, book 6 On Right Faith in God, ch. 25; where from Petrus Galatinus he reports that among the Hebrews the mystical sense was held in such esteem, that their tongue by the ancients called it dabar gadol, that is, the great word; but the literal sense it named dabar qaton, that is, the small word. It ought therefore to be indubitable that, in one and the same place of Scripture, not only the literal and primary, but also the mystical and secondary sense is sometimes contained. Moreover, that many testimonies in the New Testament were used by Christ and the Apostles in the mystical sense will be made plain from those things which we will say in the two following disputations.[160]

But when we say that under the same letter the mystical sense also lies hidden, we do not understand that sense which anyone at his own discretion can elicit, and by a certain resemblance, which differs little from accommodation, is not uselessly employed by preachers for the people: solely for which reason Abulensis, q. 18 on Matthew 13, unjustly thought that besides the literal a mystical sense can be under the same letter. Rather, we say that, besides the literal sense, a mystical sense also lies hidden under the same letter from the intention of the Holy Spirit, who is

the principal author of Scripture; and because such a sense is from the Holy Spirit, it can rightly be said of it that something has been fulfilled or prophesied, as will be evident in the following disputation.

This doctrine is not obscurely gathered from the Fathers and Doctors alleged, and will be illustrated by examples in the following two disputations: where we will also show that it is proper to Scripture to contain both senses, namely the literal and the mystical. But if the opinion of Abulensis were true, in that he said the mystical sense is not from the Holy Spirit, it would not be proper to Scripture to contain such a sense: it would rather be only a kind of accommodation which can fit any writing whatever. Therefore we have not adduced Abulensis for this opinion, even if he concedes a mystical sense: for he does not think this to be from the intention of the Holy Spirit, as we contend. And thus far we have fought against the first error of the heretics.

They err in the second place, who so follow the spiritual sense that they completely abandon the letter; among whom seems to be Sebastian Franck, in ...[161]

Disputatio XIV - On the use of accommodation in Scripture

Recte ergo reprehenditur is qui in praefatione sua De Paradoxis, dum affirmat "the letter is the sword of Antichrist, with which the Saints are to be slain." Yet those are not altogether unlike him who, in extracting allegories and the mystical sense, have bestowed excessive labor with the literal sense altogether omitted; of which sort St. Augustine testifies that, among the Jews, Philo was one - otherwise a most wise man - Contra Faustum, book 2, ch. 39, who, because he did not have Christ to whom he might refer what he was saying, found no doorway and, as Augustine says, fell into various errors.[162]

Thirdly, they also sin who readily admit both senses of Scripture; yet in the literal they neither retain the proper signification of words when there is no need of a trope - according to what we said in the preceding article - nor do they carefully consider the context of Scripture: or, abandoning the common and Vulgate edition, they have recourse to the Greek and Hebrew; or finally, being poorly instructed in the dogmas of faith, they twist Scripture to that sense which favors heretics - something that not rarely happens to those explaining St. Paul; or they endeavor to draw out the spiritual sense before the literal, or the spiritual sense even from all places of Scripture in which it is not found, as we shall say in disputation 16.

Accordingly, with good reason Gregory of Nazianzus, Oration 2 on Pascha, which is the 42nd, reproves those who admit no other sense than the literal; and also those who are excessive in extracting the spiritual, writing in this manner: "Let us, however, proceed by a certain middle way between those who are of wholly gross understanding and those who are led by an excessive zeal for contemplation and anagogy, so that we neither remain altogether inert and torpid, nor again be

161. The continuation treats of those who discard the literal sense altogether in favor of the spiritual, with Sebastian Franck named among them.

162. St. Augustine, Contra Faustum, book 2, ch. 39.

more curious than is fitting, and so fall away from our proposed argument and wander; for the one is, as it were, a certain Judaizing and maimed thing, the other inept and worthy of a dreamer of conjectures; and both alike deserve censure: in this way, let us discourse of these matters neither too absurdly, nor ridiculously." He then explains the mysteries which were contained in the eating of the Paschal lamb. The same is had by Nicetas, his commentator, on those words.[163]

Therefore he will walk the right road who will be careful to avoid all these rocks, and will first elicit the literal sense, and, where it can conveniently be done, the spiritual; yet with that moderation, that he not think any spiritual sense whatsoever to have been intended by the Holy Spirit, but only that which shall have been approved either by the sacred writer or by the common sentence of the Fathers.

Caput I - Not only the Fathers, but ecclesiastical writers too have used Scripture by accommodation

By "accommodation" of sacred Scripture nothing else is meant than this: to apply some of its words, by a certain extension, to a matter which neither the sacred writer understood, nor willed to signify by those words, not only primarily and historically, but not even secondarily and mystically - something which will be made more manifest in the following disputation from the definition of the literal sense. Now indeed this definition can be illustrated by examples.

The Church sings of any Bishop and Confessor: "He was found just, and in the time of wrath he was made reconciliation." Yet Ecclesiasticus said this of Noah (Ecclesiasticus 44), intending no one else by those same words. For in that chapter he praised the glorious men of a past age, among whom he numbered Noah. The Church, however, uses those words which were spoken of him, because the thing which Scripture signified about Noah by those words fits in some manner any Pontiff and Confessor: for he was found just by the holiness of his life, and, praying for the people, appeased God. The Church also often employs a like accommodation of Scripture in Masses of the Blessed Virgin or of the Saints.

Nor does the Church only in her chant and office do this; but the sacred writers too sometimes refer the words of another, earlier Sacred Scripture solely by accommodation. Thus in Apocalypse 11, about those two men who are to prophesy in the time of Antichrist for 1,260 days, John foretold, saying: "These are the two olive trees and the two candlesticks standing before the Lord of the earth." Many and grave Doctors have thought that Zechariah had previously said those words, with little change, of Jesus the priest, son of Josedec, and of Zorobabel, leader of Judah (Zacharias 4); and Ambrose, Gregory, Prosper, and Richard handed down that the two of whom John prophesied are Enoch and Elijah. And indeed, in whatever way we may wish to investigate the sense of Zechariah and of John, there is no doubt that the same words are used of diverse things; and therefore it is necessary that some accommodation be present there. The Church also accommodates the same words in a certain antiphon to the holy martyrs John and Paul. In the same way Tob. 2 receives the words of Amos 8, "Your feast days shall be turned into lamentation

163. St. Gregory of Nazianzus, Oration 42 (2 on Pascha); Nicetas, Commentator on the same oration.

and mourning," and the first book of the Maccabees, ch. 1, alludes to the same words when it says: "The feast days were turned into mourning." This method of treating Scripture is frequent among the holy Fathers in sermons and homilies to the people - most useful indeed: for the words of Scripture very often carry before themselves with the Fathers a certain wonderful weight and energy, so that they are most apt for persuading. And what we have said so far is without controversy.

Yet in our age there is no light difficulty among those skilled in Scripture, whether some places of Scripture are recited by accommodation by the Evangelists - of which we must speak in what follows.

Caput II - Many things are recited by accommodation by the Evangelists, as Iansenius asserts

Some very grave men there are, who even assert that many things which otherwise seemed prophetic are used in the Gospel by accommodation. Thus Cornelius Iansenius, in the Concordia Evangelica, ch. 11, judges that those words of Hosea 11, "Out of Egypt I called my son," recited by the Evangelist Matthew, ch. 2, were said literally of the Israelite people, whom the Lord through Hosea called his son, so that they are not to be understood of Christ in a mystical and secondary sense. He teaches the same of those words of Isaiah 29, which Matthew, ch. 15, reports: "This people honors me with their lips," etc.; and of those of Isaiah 6: "Hearing you shall hear, and shall not understand"; and of Psalm 77: "I will open my mouth in parables," which Matthew, ch. 13, cites - not, he says, for any other reason than that they very well fitted the things then being done. First, indeed, because the Jewish people then honored Christ only with their lips, but were far removed in heart, just as that same people in the time of Isaiah honored God only with their lips. Secondly, because those same Jews received the words of Christ with the ear of the body, but did not grasp them with the understanding of the mind so as to profit unto salvation - a thing which likewise in the time of Isaiah happened in the same way. Thirdly, because Christ the Lord was then truly speaking by similitudes and parables, just as Asaph, the author of that Psalm, did in his own time: finally, that saying of Jeremiah 31, "A voice was heard in Rama," which Matthew, ch. 2, reports, Iansenius thinks is to be taken in no other way.

Caput III - Others, however, affirm that all testimonies of the Old Testament are recited by the Evangelists in the literal sense

But, on the other hand, other men no less learned and pious vehemently reprove the opinion of Cornelius, to the point of branding it with the name of rashness - not because they think that by the sacred writers another sacred Scripture is never used by accommodation (for that cannot be said, as remains proved by manifest examples), but because Matthew reports the aforesaid places of Scripture in such a way that he seems to allege them as true prophecies in testimony of what he narrates. This they prove by two reasons.

The first is: Matthew wished to confirm his history by the testimonies of Scripture - a history which he knew would be read and impugned by many, especially Jews; but it would be frivolous to produce testimonies of Scripture by mere accommodation in confirmation, especially against the adversaries of the Gospel and of Christ. For besides the fact that a place by accommodation proves nothing, but only somehow illustrates the thing itself, in the same way he could also have accommodated to his design and narrative words from any profane author whatsoever.

The second reason: if the Evangelist had said that that saying of Isaiah, or of Jeremiah, or of the Psalm, fitted excellently the matter which he was treating, he would certainly have indicated that he was using those testimonies merely by accommodation. But since he says: "Well did Isaiah prophesy of you"; and again, "There is fulfilled in them that of Isaiah"; and again, "That it might be fulfilled which was spoken by Isaiah," etc.; and finally, "That it might be fulfilled which was spoken by the Lord through the Prophet, 'Out of Egypt I called my son,'" we are surely compelled to understand a prophetic sense in the aforesaid testimonies. For this phrase and mode of speaking do not well suit a locution accommodated. For if someone, wishing to signify the remarkable solicitude of a certain father for his sons, should use that Virgilian line, "All a father's care centers in Ascanius," he could say that that Virgilian fits him; but that "in him that saying of Virgil has been fulfilled" would be said not only ineptly, but even falsely; and far less could it be said that "Virgil rightly prophesied" of him. Therefore the modes of speaking of the Evangelist, which we have reported, indicate something more than accommodation and verbal allusion.

Wherefore the theologians already alleged, for the second opinion, think not only that the cited testimonies are not to be taken by accommodation, nor only in the mystical and spiritual sense - which also presupposes the literal and is secondary - but that there is also a prophetic sense in those places.

Because, however, they cannot deny that, according to the letter and historically, all those things also suit other matters, they affirm that in each of those places there is a twofold sense of the letter equally proximate. Accordingly, that saying of Hosea 11, "Out of Egypt I called my son," they think to have been said not by figure but prophetically both of the people of Israel - of whom without doubt the prophet was speaking - and of Christ himself, as Abulensis taught, question 57 on Matthew, ch. 2.[164] In the same way they interpret the two other testimonies of Isaiah of men of both ages - namely of Isaiah's time and of Christ's - laboring under the same vice. But that of the Psalm they interpret of the author of the Psalm and of Christ; and finally, the testimony of Jeremiah, "A voice in Rama," of the Babylonian captivity which Rachel - that is, the women of that region - were lamenting, and of the slaughter of the innocent children - historically to be understood. They assert the same of that saying 2 Reg. 7, which Paul cites, Hebrews 1, "I will be to him a father, and he shall be to me a son," that it is to be taken both of Solomon and of Christ. For this reason they are unwilling to admit a mystical sense, because it has no strength for confirming the truth of the Gospel; a point which especially has place in this last testimony, by which Paul strives to demonstrate Christ's divinity against the Hebrews.

164. Abulensis (Alonso Tostado), on Matthew, ch. 2, q. 57.

Caput IV - A middle opinion: these are cited neither by mere accommodation nor in an equally proximate literal sense, but in a mystical sense

Here indeed a middle opinion is to be approved, which moderates both the license of the former and the excessive severity of the latter: namely, that in the cited places the testimonies are recited by the Evangelists neither altogether by accommodation, nor in the literal sense equally proximate with the first, but in a mystical sense. I call it mystical because the fact which the Evangelist narrates was prefigured by those earlier realities. I except those two testimonies of Isaiah, of which we shall speak in the following chapter. Into this opinion the same Iansenius at length, as if compelled, consented, because that earlier opinion seemed to him not very well established. In the same way St. Jerome, on that chapter 3 of Hosea; St. John Chrysostom, homily 8 on Matthew; and the Glossa...[165]

They do not deny that elsewhere another sacred Scripture is sometimes employed by accommodation (for they showed by manifest examples that this cannot be gainsaid and stands firm); but they say this because Matthew reports those accommodated places in such a way that he seems to assert them to have been true prophecies in testimony of that which he narrates. They prove this by two reasons. The first is: Matthew wished to confirm his history by the testimony of Scripture, which he knew would be read and attacked by many, especially Jews; but it would be frivolous to bring forward testimonies of Scripture by mere accommodation for the sake of confirmation, most of all against the adversaries of the Gospel and of Christ among the Jews. For besides the fact that a passage by accommodation proves nothing, but only after a fashion illustrates the very thing, he could likewise have done the same out of any profane author he chose, and have accommodated words to his narration.

The second reason: if the Evangelist had said that that saying of Isaiah, or of Jeremiah, or of the psalm suited very well the matter he was treating, he would assuredly have indicated that he had employed those testimonies by mere accommodation; but since he says, "Well did Isaiah prophesy of you," and again, "There is fulfilled in them that saying of Isaiah," and again, "That what was spoken might be fulfilled, I will open my mouth in parables," and finally, "That what was spoken by the Lord through the prophet might be fulfilled, Out of Egypt I called my son," we are constrained to understand a prophetic sense in the said testimonies. For this phrase and mode of speaking do not fit well a speech accommodated by accommodation. For if someone, wishing to signify a father's marvelous solicitude for his sons, were to employ that Virgilian: "All a father's care is for Ascanius," he could say that that Virgilian line "All his care..." fits him. But to say that "that line of Virgil was fulfilled in him" would be said not only ineptly, but also falsely; and much less could it be rightly said that Virgil prophesied about him. Therefore the modes of speaking of the Evangelist, which we have related, indicate something more than accommodation and allusion of words.

Wherefore those Theologians already cited think - so as to carry through their opinion - that the testimonies cited are not to be taken only by accommodation, nor only in the mystical and spiritual sense (which also presupposes the literal, and is secondary), but also that they are to be understood

as prophecies in the literal sense. Because they cannot, according to the letter, all be referred to other things as well, they affirm that in each of those places there is equally the sense of the letter about Christ. And concerning that of Hosea 11, "Out of Egypt I called my son," and about the people, about which without doubt the prophet was speaking, they do not think it was spoken of Christ by figure, but prophetically; Abulensis, on Matthew, ch. 2, q. 57, teaches the same. Likewise they interpret two other testimonies of both Testaments about Isaiah and Christ with the same severity. But as for that testimony of Jeremiah, "A voice was heard in Rama," historically they understand it of the Babylonian captivity, when great slaughters were made in Rama, but nevertheless they say it can be taken of the slaughter of the Innocents in a spiritual sense. The same they affirm about 2 Kings 7, which Paul cites: "I will be to him a father, and he shall be to me a son," as said of Solomon and of Christ. For this reason they are unwilling to admit the mystical sense in these places, because it would bring nothing to the truth of the Gospel; which especially in this last testimony, where Paul strives to demonstrate to the Hebrews the divinity of Christ, they contend would have no place.

But that the Evangelists employed the testimonies not by accommodation but in the mystical sense, is the truer opinion.

The mean between the extremes: mystical, not merely accommodated nor strictly literal

Here, however, a middle opinion is approved, which moderates the excessive severity both of the former and of the latter: namely, that the testimonies cited by the Evangelists are neither altogether by accommodation, nor in the literal sense equally signifying the same thing as in the former [figures], but in a mystical sense. I call it mystical because the fact which the Evangelist relates was prefigured by those earlier realities. I except those two testimonies of Isaiah, of which we shall speak in the following chapter. Into this opinion the same Iansenius at length, as if compelled, consented, because that earlier opinion seemed to him not very well established. In the same way St. Jerome on that chapter 3 of Hosea; St. John Chrysostom, homily 8 on Matthew; and the Glossa ordinaria.[166]

And the Glossa ordinaria of that place, which Paul of Burgos in the first addition of that chapter highly praises, Theophylact, St. Thomas, Cajetan, and Titelman on Matthew, Driedo, book 2 On Sacred Scripture, ch. 2, and Adam in the preface to the Commentary on Isaiah, affirm that that testimony of Hosea 11, "Out of Egypt I called my son," is cited by Matthew in the mystical sense.[167] Wherefore also that of Jeremiah 31, which Jerome in that place understands historically of the time of the captivity of Israel, when great slaughters were made in Rama, can be taken of the slaughter of the Innocents in the spiritual sense. The same is taught by Jerome on Matthew 13 concerning

165. St. Jerome, on Hosea, ch. 3; St. John Chrysostom, Hom. 8 on Matthew; Glossa ordinaria. Ambrose, Gregory, Prosper, and Richard are cited above on the two witnesses (Enoch and Elijah).

166. St. Jerome on Hosea 3; St. John Chrysostom, Homily 8 on Matthew; Glossa ordinaria.

167. Paul of Burgos, Addition to Matthew 2; Theophylact; St. Thomas; Cajetan; Titelman; Driedo, De sacra Scriptura, II, ch. 2; Adam, Preface to the Commentary on Isaiah.

those words of Psalm 77, "I will open my mouth in parables," etc. For he says that in that Psalm the going forth of the children of Israel from Egypt is described, in which hidden mysteries were contained, and therefore that it must be understood parabolically of Christ. If this mode of interpreting those places is approved by Jerome and others, there is no reason why it should displease more recent Theologians.

Wherefore perhaps Osiander's audacity might be noted in his Annotations on book 1 of the Gospel Harmony, ch. 11, who, although he affirms that all the interpreters of the old Scripture understood that testimony of Hosea allegorically of Christ, himself thinks it must be taken in the historical sense; and while in this way he strives to defend the sacred writer honorably from the calumnies of adversaries, he exposes him far more to them.[168]

It is proved indeed that the aforesaid opinion is true, because no one can deny that Exodus 12, "You shall not break a bone of it," must be understood in the literal sense only of the paschal lamb, about which alone there was discourse there, not of Christ; and yet John says in ch. 19 that it was fulfilled in Christ: "These things were done," he says, "that the Scripture might be fulfilled, You shall not break a bone of it." Therefore the mystical and prefigurative sense suffices, so that it be said that in Christ Scripture was fulfilled, or that that prophet predicted it: for even a figure, just as also a prophecy itself, is well fulfilled in the reality and in the event. Wherefore the latter reason made against the former opinion can have no weight against ours. Nor does it at all stand in the way, what Theophylact says on Matthew 13, namely, that the Evangelist cites the prophet predicting the preaching of Christ in parables: for also that which is prefigured by a mystical type is rightly said to have been predicted by the Prophets, just as also to have been fulfilled.

Therefore Abulensis fell into error in ch. 13 on Matthew, q. 28, when he thought that the testimony cited from Exodus 12 is not referred by John in the mystical, but in the literal sense, because he thinks that no Scripture can be fulfilled in the mystical sense, but only in the literal. But that the place cited from Exodus 12 is recited by John in the mystical sense is taught by St. Augustine, tractate 120 on John; St. John Chrysostom, homily 84; Theophylact; and St. Thomas on that place; Driedo, book 2 On Sacred Scripture, ch. 2; and Michael Medina, to be cited below.[169] Since therefore that place is recited by the Evangelist in the mystical sense, and nonetheless Scripture is said to have been fulfilled in the figurative sense, the same seems to have to be said of the others about which there is controversy.

But by the latter reason the adversaries press us more: because an argument drawn from the mystical sense has little or no force; therefore it is not to be believed that the writers of the New Testament used it, especially against incredulous and insolent Jews, unless when the mystical sense is not only known to the writers, but also ought to be clear to others, as from the doctrine of the Fathers we shall note in Disputation 16, ch. 5; on which ground John rightly adduced the aforesaid testimony of Exodus 12 in the mystical sense, since it ought to have been manifest to the

168. Osiander, Annotations on the Gospel Harmony, bk. 1, ch. 11.

169. St. Augustine, Tractate 120 on John; St. John Chrysostom, Homily 84; Theophylact; St. Thomas on John 19; Driedo, De sacra Scriptura, II, ch. 2; Michael Medina, cited below.

Jews that the paschal lamb had been a figure of Christ, the true lamb, of whom Isaiah says ch. 53: "Like a lamb before his shearers he shall be silent," and again ch. 16: "Send forth, O Lord, the lamb, the ruler of the earth"; and Jeremiah 11: "I am as a mild lamb that is carried to sacrifice."

For my part, I confess that an argument taken from the mystical sense is weak and scarcely valid, unless that sense ought to be known to the hearers, either from other places of Scripture - as in the aforesaid testimony of Exodus 12 - or be proved by most apt reason, as in that of Deuteronomy 23, "You shall not muzzle the ox when he treads out the grain," of which we shall speak more at large in that Disputation 16, ch. 4. But, since the Evangelists report the aforesaid testimonies, about which there is controversy, not to persuade and to convince the Jews (as the context shows), but in a simple narration of the history, it was not necessary to recite them only in the literal sense, or at least in the mystical sense known to all; but it was enough, in the very history - which no one could call false, since those things had been done in the sight of all - to show also by a simple demonstration how in those things there appeared to be fulfilled those things which in the Old Testament were figured and obscurely foreshadowed; a point which not a little illustrates the truth of the history itself.

But if Paul did not adduce that of 2 Kings 7 and 1 Chronicles 17 and 22 in a simple narration of history, but to prove the divinity of Christ - of which it is quite clear that it was said of Solomon - nonetheless it is not necessary that it be recited in the literal sense, as the latter opinion contends; for since Paul had brought forward many other most firm testimonies in the literal sense, it is not surprising if he alleged this one only in the mystical sense; since it also ought to have been very well known to the Jews that Solomon and his kingdom had been a figure of the Christ to come. Nor is there need to understand all of that chapter 7 as said only of Christ, as St. Augustine wishes in City of God 17, ch. 8, although not a few things suit Christ alone. From which the Hebrews ought to have concluded that Solomon had been the figure of the true Messiah. Michael Medina taught that this testimony was referred by Paul in the mystical sense, book 6 On Right Faith in God, ch. 25; nor did Lyranus in the second Prologue, already cited, think the opposite; for although he says that this testimony must be taken of Christ in the literal sense, nonetheless he calls it mystical in a certain respect, inasmuch as in Solomon, as in a figure, Christ was contained; but he called that truly literal, because that had been intended by the Holy Spirit; which concession we likewise grant; but how the literal differs from that which commonly is called mystical we shall see in the following Disputation.[170]

I return to the testimony of Hosea 11, and I prove that it must be understood of Christ not to the letter, but mystically, from this, that the antecedents and consequents suit only the Israelitic people, as will be easily clear from a reading of that selection. But the adversaries respond that it is customary for the Prophets to mingle times and to conjoin things very far removed. Yet I do not see, in the example at hand, what can be brought forward, where things so diverse, without any occasion, and in so brief a space, be conjoined. But Osiander objects: it cannot be that an unchangeable people be the figure of one man; therefore in the allegorical sense that testimony

170. Michael Medina, De recta in Deum fide, VI, ch. 25; Lyranus, Prologue II.

cannot be employed. But this is frivolous: first, because the Fathers cited for our opinion plainly affirm that that people in that deed bore the figure of our Savior; then also, just as in one man one people was, as it were, contained in figure - Genesis 25, "Two nations are in thy womb," etc. - so in one people one Christ can be signified. Add that the things by which something is signified mystically are wont to be of a quite different ratio from the things signified; what marvel, then, if the people of Israel was a figure of the Savior? How, moreover, that people was a figure of Christ journeying in Egypt and returning thence, Rupert more fully explains on that place of Matthew.[171]

Caput V - Certain by accommodation, which, however, approach much to the literal, are alleged by the Evangelists

It remains that we say something about the two other testimonies of Isaiah, which, in my judgment, must be taken in an accommodated sense, yet so that they do not differ much from the literal, indeed are so deduced from it by a certain marvelous relation that they have not a little energy against the Jews, to whom Christ reproached hypocrisy and hardness of heart.

First, then, is that from ch. 29: "This people honors me with their lips." This can be more easily taken in this way: it must not be denied that in that passage the Prophet spoke with the people and men of his own age, and with those words rebuked their hypocrisy and hardness; this, however, is enough, that much later the Evangelist not only employed the same words with respect to their sons, but also said that he prophesied very well about those Isaiah - not because he understood it of those in the literal sense, or even in the mystical, but of their parents, whose hypocrisy and hardness the sons seemed to have received by a kind of hereditary succession. For it frequently happens that certain vices, which are, as it were, native to a people, derived from its natural temperament and inclination, are also transmitted to its posterity. And that the vice of hypocrisy and obduration was most familiar to that people is attested by the Scripture of the Prophets and of the Gospels.

In the same mode Paul, to Titus 1, admonishes him that he should sharply reprove the Cretans, because they were very evil men; he proves their life by the saying of Epimenides, whom he calls a prophet: "The Cretans are always liars, evil beasts, lazy bellies"; and he confirms it then with these words: "One of themselves, a prophet of their own, said: The Cretans are always liars, evil beasts, lazy bellies"; and shortly after: "This testimony is true; for which cause rebuke them sharply, that they may be sound in the faith." Where, first, note that this testimony of Epimenides is adduced by Paul to upbraid the life of the Cretans - not only of those who were in the time of Epimenides, but of those in the time of Paul; for these alone Titus had to reprove. Second, Paul concludes that that testimony is true, and understands it as referred even to the Cretans of the present time, of whom he then was speaking; otherwise he would in vain have alleged it and said it was true. Third, it is certain that Epimenides did not say that by a prophetic spirit of the future Cretans, but described in those words the native life of that nation, which through long experience he had come to know. And since, as is commonly said, this sort of vices, as if innate, for the most part are derived into

171. Rupert of Deutz, on Matthew.

posterity, the testimony of Epimenides, which he pronounced about the Cretans of his own age, is also true of those after; and in this way the prophecy of Isaiah is in some sense efficaciously verified in the words of the Gospels - namely, that this sort of vice in their parents should be noted. Therefore Christ used that testimony not by pure accommodation, but in a certain mode which, though small, does not fall back from the literal sense, but is the best and most natural according as it is deduced out of it, as I have said. Thus must St. John Chrysostom be understood on that place of Matthew, homily 2, when he says: "On account of the malice of the times he spoke in parables" - that is, because Christ was speaking to the Jews, as if that vice were naturally transfused into them, as from original sin, what we called the vice of hypocrisy - so that in those he seemed to say that the prophecy of Isaiah was fulfilled in this sense, in which we have explained the aforesaid testimony.

There is also another place of Isaiah, ch. 6, which Matthew 13 reports in this way: "Therefore I speak to them in parables, because seeing they do not see," etc.; "And the prophecy of Isaiah is fulfilled in them: With hearing you shall hear and not understand, and seeing you shall see and not perceive; For the heart of this people has been made gross," etc. This place must be recited by the Evangelist in the same mode. For it is evident that the vice of obduration was so very ancient in the people of Israel, that long before it had been reproved by the Lord in Exodus 32: "This people is stiff-necked"; and elsewhere with these words: "This is a people of stiff neck." Wherefore it is not marvelous if, while the same vice was seen in the Jews with whom Christ was speaking, as if it were naturally transfused, as the sin of hypocrisy, he seemed to say that in those the prophecy of Isaiah had been fulfilled, not because the Prophet had prophesied of the sons rather than of the parents, or because the events of the latter times had been specially intended by a particular memory and recording of future generations' animosity, but because he described the present people of the sons, in whose parents such a vice had been noted. Christ the Lord thus in common calls the hypocritical Jews his contemporaries by that head, and rebukes them under the pretext of a legacy, and wills that the obstacles put up by the fathers to salvation be recognized in the sons, in whom that vice was peculiarly noted.

Therefore Christ used that testimony not by accommodation only, but in a certain mode, and the best and most natural, as it is deduced out of the literal sense, as I have said. Thus also does St. John Chrysostom, in the place cited on Matthew, homily 2, understand: "He spoke in parables because of the malice of the times," that is, because he speaks to the Jews; in whom it seemed that this vice, common to the fathers and the sons, had passed down, as a kind of native thing; therefore, in those, as if in the very stock of that people, he says that the prophecy of Isaiah was fulfilled.

Of this hereditary transmission of vice in one people 4 Kings, ch. 17, beautifully gives a description: "And the Lord testified to Israel and to Judah by the hand of every prophet and seer," etc., and a little below: "A people of stiff neck." Which is not to be wondered at, if this vice, which Christ reproaches in the later, had been as it were native to the earlier, since the Prophets often speak in this way; and we said above in many places that the appellations of this or that nation are assigned on account of the reasons of these habits, which are not at all to be said now for the first time.

Sic therefore the Lord Christ, in Matthew 15, most fittingly applies to the Jews of his own age the words of Isaiah 29 and says: "Well did Isaiah prophesy of you, 'This people honors me with their lips, but their heart is far from me'." In which words he indicates that vice as found, not only of old, but as in a certain way native to them; and so he rightly reproaches them severely, that they may be sound in the faith. Here first observe that this testimony of Isaiah is brought forward by Christ to convict the vices of the Jews, not of those who were in the time of Isaiah, but in the very time of Christ himself: for these alone Christ had to reprove. Second, when he says "Well did Isaiah prophesy of you," he understands it as also related to the Jews of the present time, of whom he was then speaking; otherwise he would have adduced it in vain and said that it was fulfilled. Third, it is certain that Isaiah did not say that with a prophetic spirit or sense about the future Jews of the time of Christ, but he described, with those words, the native vice of that nation which he knew by long experience; and because, as we said a little above, these vices are, as it were, for the most part passed down into their posterity, that testimony of Isaiah, which he pronounced about the Jews of his own age, is also true when related to their descendants, and in a certain respect can be said to be prophetic; indeed Isaiah himself can be said to have prophesied well about them: for it is the same thing to have prophesied and to have foretold. He is said, however, to have prophesied, not because he was then thinking about future things, but because it is the same thing to describe the native vices of a nation and to predict the morals of posterity; and for this reason I think that Christ used the testimony through accommodation (*accommodatio*), yet in such a way that it departs little or nothing from the literal sense, and that what he was contending ought to be inferred with a best and natural reason from the same testimony. So St. John Chrysostom ought to be understood on this place, Matthew, homily 52, when he says: "I see that in earlier times, too, their wickedness was foretold," for what Christ was bringing as a charge was foretold by Isaiah much before.[172]

There is another place, Isaiah 6, which Matthew 13 cites in this manner: "Therefore I speak to them in parables, because seeing they do not see, and hearing they do not hear nor understand; and in them is fulfilled the prophecy of Isaiah, saying: 'By hearing you shall hear and shall not understand; and seeing you shall see and shall not perceive; for the heart of this people has been made gross'." I think that place is to be cited by the Evangelist in the same way. For it is well known that the vice of obduracy was common and native to the people of Israel, which long before the Lord had attested in Exodus 32 and 33 and elsewhere with these words: "This people is of a stiff neck." Wherefore it is no wonder if this same vice seemed as it were transfused naturally into those Jews to whom Christ was speaking, just as we said about the sin of hypocrisy, so that thus it might rightly be said that the prophecy of Isaiah was fulfilled in them in that sense in which we have explained the testimony above. For the Prophet was attributing this vice to the Jews of his time in such a way that he said it was common to the people and therefore as it were native: wherefore in some manner he also prophesied what would befall their descendants when Christ was preaching.

172. St. John Chrysostom, Homily 52 on Matthew.

A description of the as-it-were hereditary transmission of this vice in that same people is beautifully set down in 4 Kings 17: "And the Lord testified in Israel and in Judah by the hand of all the prophets and of all the seers, saying: Return from your most evil ways," etc., who did not hear, but "hardened their neck like the neck of their fathers, who would not obey the Lord." And Stephen in the Acts of the Apostles, chapter 7, says: "Stiff-necked and uncircumcised in heart and ears, you always resist the Holy Spirit, as your fathers did, so do you also." And the Lord in Luke 11: "Truly you bear witness that you consent to the deeds of your fathers, because they indeed killed them," namely the Prophets, "but you are willing to kill the Lord of the Prophets." Of whom Matthew, chapter 23, said: "Nevertheless, fill up the measure of your fathers," about which testimony we have more in book 3, disputation 3, chapter 3.[173]

Caput VI - The various use of Scripture by accommodation

It must be observed, however, that in this kind of treating Scripture by accommodation not only words and sentences can be used, but even examples and histories can be brought forward to persuade virtue and to detest vices. But how the accommodation of words is made is clear from what has been said; of histories, when they serve only as example, so that in those events, according to the intention of the Holy Spirit, there is not set any mystical signification - about which we shall speak in disputation 5 - and this is one difference between a history which contains a mystical sense and that which is brought forward as an example by accommodation: another is, that the mystical sense is always contained in a history of a different kind, whereas examples are wont sometimes to be adduced by accommodation from things of the same nature.

This kind of accommodation is understood in Romans 15: "For whatever was written was written for our instruction, that through the patience and the consolation of the Scriptures we might have hope." For when Paul was persuading the Romans that each one should please his neighbor unto good, he brought forward the example of Christ: "Who did not please himself," etc.; and immediately he subjoins the words which we have reported. Now the example of Christ serves only through accommodation for us: for, as Peter says in 1 Peter 2, "he left us an example that we should follow his steps"; and yet in Christ, as in a figure, there was not contained that which Paul was urging as a mystical sense. In the same way is that passage understood, 1 Corinthians 10: "All these things happened to them in figure," namely to the Jews: although in that same place the Apostle reports that the Jews "were baptized into Moses in the cloud and in the sea," and that "all ate the same spiritual food," and "all drank the same spiritual drink from the rock which was Christ," in which we cannot but understand the mystical sense of baptism and of the Eucharist; nevertheless that which he adds below, "All these things happened to them in figure," is not referred to those mystical senses, but to that which immediately preceded, namely: "But with most of them God was not well pleased. For they were overthrown in the desert": for he immediately subjoins, "Now these things were done in figure for us, that we should not be lustful of evil things, neither become idolaters, as some of them"; and he recounts many other punishments, and when

173. Vazquez, De Adoratione, book 3, disputation 3, chapter 3.

these have been enumerated he repeats those words, "Now all these things happened to them in figure; but they were written for our correction." Therefore Paul in that place does not understand by "figure" that which contains the mystical sense, but the example, which, by accommodation, avails very much for persuasion; therefore he said, "for our correction."

Caput VII - How Scripture is useful for arguing by accommodation

From what has been said one may gather what pertains to our undertaking, namely that this place by accommodation has no weight for proving the truths and dogmas of our faith: because under that letter there is not contained that sense primarily or secondarily according to the mind of the Holy Spirit. But I say this when words and sentences alone are accommodated; for the accommodations of histories, from which an argument is drawn that is called ab exemplo or a simili, besides the fact that they very much avail for persuading love of virtue and hatred of sin, are also effectively useful in morals for showing what is lawful or how far something is forbidden. Christ's manner of arguing is of this sort in Luke 6, where by the example of David, who, because of pressing necessity, ate the loaves of proposition, he excused the deed of his disciples and defended them from the malice of the Pharisees, deducing thence the true understanding of the precept concerning the observance of the Sabbath. In the same way, in book 2 On the Adoration of Images, disputation 6, chapter 2, we proved that the veneration and honor of inanimate things is holy, because by the precept of the Lord the ark of the covenant was always in veneration and honor. On the other hand, those things which heretics adduce from example to prove that the veneration and adoration of the Saints is not lawful, which at first sight seem to prove something, have been sufficiently explained by us in book 1, disputation 5, chapter 3; and so in all other matters this is how Scripture, by accommodation, is to be understood.[174]

Caput I - The opinion of Lyranus

That under the same letter of Sacred Scripture there lies hidden a sense which they call mystical or spiritual, and another sense which they call literal, the Fathers and Catholic writers, alleged in disputation 13, chapter 2, constantly affirm. But what the literal sense is, what in truth the mystical and spiritual and how manyfold, does not seem sufficiently to be agreed among them; nor is the disagreement, as some suppose, only about words, but also about things. Therefore we shall set forth the opinions of each distinctly and faithfully, from which afterwards it will not be difficult to choose the truer. In the first place, then, we must treat of the historical or literal sense, which is, as it were, the foundation and basis of the spiritual and mystical sense. I said "literal," or "historical"; for by these two names it is also called by the Fathers, who take letter and history for the same thing, confusing the common with the particular notion. For every history is a literal sense; not conversely.

On the literal sense, therefore, the first opinion is that of Lyranus, who in that third Prologue of the Postils on the Bible says that the proper literal sense is that which is signified by the very words; but the mystical, that which is expressed through the things signified by the words. Then he adds that some place of Sacred Scripture is without a literal sense and is contained only by a spiritual sense, whenever Scripture uses a metaphor or a parable: as when Christ said in Matthew 5, "If your hand scandalizes you, cut it off"; and Judges 9, "The trees went forth to anoint a king over them," etc. He proves this, because otherwise it would follow that the sense of Scripture is false or absurd: for if there were any literal sense, it would be that which is signified most closely by the words; but it would be absurd to say that the hand of the body must be cut off, and that the trees of the woods wished to choose a king for themselves. Therefore the sense of those places is only spiritual, signified not by the words themselves most closely, but by the things through the words signified: for by "hand" is signified the proximate occasion, from which we ought to be separated, if it is a scandal to us; and by "the trees of the woods" are signified the men of Shechem, who assembled to choose a king for themselves. Wherefore, according to the mind of this Doctor, in order that a sense be called literal, it does not seem enough that it be signified most closely by the words; but there is need that by the intention of the Holy Spirit the words so express as to signify that other thing, and not be transferred to signify another thing: and if some translatio (metaphor) occurs, this author judges that there is no literal sense simply and properly, but only a mystical one in such a place

This is the opinion of Lyranus, which more recent theologians have understood otherwise, not according to his own mind. It can, however, be confirmed first from Cassian, Collation 8, chapter 3, where, to show that various dishes are served for the human intellect in divine Scripture as in a splendid banquet, he says that some things so shine with the plain signification of the letter that they do not need a more refined interpretation, but simply...[176]

Therefore, concerning the literal sense the first opinion is that of Lyra, who in that third Prologue on the Bible says what the literal sense is, namely, that which is expressed by the very words signified. He adds that there is some place of sacred Scripture which lacks the literal sense and is contained only under the spiritual, as often as Scripture uses a metaphor or a parable: as when it said in Matthew 5, "If your hand scandalizes you, cut it off," and in Judges 9, "The trees went to anoint a king over themselves," etc. He proves this, because otherwise it would follow that the sense of Scripture is false or absurd: for if there be any literal sense, it would be that which is signified most proximately; it would be absurd to say that the hand of the body must be cut off, and that the trees of the forests chose a king for themselves. Therefore the sense of those places is only spiritual, the thing itself being signified proximately, not by the words: for by "hand" the proximate thing signified is that which we must separate, if it be our scandal; but by the "trees of the forests" are signified the men of Shechem, who came together to choose a king. Wherefore, according to the mind of this Doctor, for one to say that something is the literal sense, it is not enough that it be signified proximately; there is further need that, by the intention of the Holy Spirit, the words be extended and transferred to signify another thing: and if some transference occur, this author judges that there is simply and properly no literal sense of such a place, but only a mystical.

This is the opinion of Lyra, which more recent theologians have understood otherwise, not according to his own mind. It can, however, be confirmed first from Cassian, Collation 8, chapter 3, where, to show that various dishes are served for the human intellect in divine Scripture, as in a splendid banquet, he says that some things so shine with the plain signification of the letter that, with sobriety of interpretation, they do not need a more refined exposition, but are abundantly sufficient to the hearers by the simple sound of the letter; as is that: "Hear, Israel: the Lord your God is one Lord"; and that, "You shall love the Lord your God with your whole heart" (Deuteronomy 6). And immediately he subjoins: "But certain other things, unless they have been thinned down by an allegorical explanation and softened by the testing of spiritual fire, in no way pass over into saving nourishment for men without the stain of corruption." Such he says is that in Luke 12, "Let your loins be girded," and Matthew 10, "He who does not take up his cross," etc. And for that reason he charges monks with imprudence, who, understanding this passage simply, not according to knowledge, made for themselves wooden crosses, which brought, not edification, but laughter to the beholders. Therefore Cassian thinks that certain places of Scripture must be understood so spiritually that, if they be understood only according to the letter, they do not bring salvation to the soul, but death; and yet the sense of Scripture, even the literal, is never harmful, but always salutary. Therefore some place lacks the literal sense and is contained by the spiritual alone.[177]

Second, St. Gregory, Moral. 4, chapter 1, teaches that certain places of Scripture, such as that Job 3, "Let the day perish on which I was born," cannot rightly be understood according to the rind of the letter itself, but that the spirit must be sought there.[178]

176. John Cassian, Collationes, 8, chapter 3.
177. John Cassian, Collationes 8, c. 3.
178. St. Gregory the Great, Moralia in Iob 4, c. 1.

Third, St. John Chrysostom, homily 39 on John, on that, "If I bear witness of myself," says that we must not insist upon the bare words.[179]

Fourth, St. Jerome, on Isaiah 11, refers those words, "The wolf shall dwell with the lamb," to a spiritual understanding, and contends that they are not to be taken according to the letter. The same likewise on that, Isaiah 29, "Lebanon shall be turned into Carmel, and Carmel shall be accounted a forest."[180]

Fifth, most clearly of all Origen seems to teach this, On First Principles, book 4, chapter 1, in the beginning, where he affirms that the Jews were deceived because they expected that many things foretold concerning the time of the Messiah would come about according to history. Such, he says, is that in Isaiah 11, "The wolf shall dwell," etc. And in homily 2 on Genesis, near the end, he writes thus: "But because in the divine Scriptures the historical sequence cannot always stand fast, but sometimes fails - for example, when it is said, 'A thorn shall spring up in the hand of the drunkard,' etc. - for this reason, and things like these, the ark is woven not only as three-storied, but also as two-storied, that we may know that in the divine Scriptures there is not always a threefold sense, since the historical does not always remain."[181]

Caput II - Opinio Abulensis

The second opinion is that of Abulensis on Matthew, chapter 13, question 28, if the text of that passage be read emended: where he seems to teach that the literal sense of sacred Scripture is that which the author willed to signify, whether by the words themselves proximately, or remotely, and proximately by the things signified by the words. He himself calls "history" in a broader signification, not only that which the words primarily signify: then it is history in the proximate signification, when the words are taken in their proper signification; but the remote, when they are taken metaphorically, or are asserted according to a parable, as very often happens: for the proximate signification of those words which are used metaphorically or are brought into a parable is that which is properly denoted by the words themselves and is contained in the rind of the letter; and Abulensis thinks that this is not the literal sense of Scripture, because it is not from the intention of the Holy Spirit. The words of Abulensis in that question 28 are these: "The literal sense is that which the letter makes; and it also seems to be historical, because by it a bare history is signified, which Scripture reports, taking history broadly for everything which is signified immediately by the letter of Scripture; but not that which the author willed to signify: which is said on account of parables and metaphors; because that which is signified there in the rind of the letter is not the sense, as when it is said, 'The eyes of the Lord are upon the just,' because it is not the sense that the eyes of the Lord are upon the just, since the literal sense is always true, and it is false that God has eyes; but the literal sense here is that God always has care of the good."

179. St. John Chrysostom, Hom. 39 in Ioannem.
180. St. Jerome, In Isaiam, c. 11; c. 29.
181. Origen, Periarchon (De Principiis) 4, c. 1; Hom. 2 in Genesim.

These things Abulensis seems to teach; first, that history, in the broader signification by which it renders the literal sense, is that which is signified immediately by the letter itself, not that which the author wished to express: in which he seems to have followed the opinion of Lyra. Then he says that, where there is a metaphor or parable, the literal sense is not that which lies under the rind of the letter, as if one should say it is the proximate signified, but that to which the words are transferred, as in the testimony alleged it plainly appears, according to his own exposition. But, to be consistent with himself, he would have to say that, in that place where there is a metaphor, there is no literal sense, as Lyra said.

I, for my part, think that through the carelessness of scribes an error crept into Abulensis's writings, and that they should have cast that negation, enclosed by slashes, back onto the former part of the sentence, in this way: "Taking history broadly, not for everything that is signified immediately by the letter, but for that which the author willed to signify," etc. Thus indeed the opinion of Abulensis excellently holds together, and is that which we have related in this chapter; but because in this way it would not sometimes confound the literal and the mystical sense - for the mystical is always denoted by the words remotely, but by the things proximately, as will appear below according to the common opinion - therefore, in that question 28, and question 57 on Matthew 2, and in other places cited above, disputation 13, chapter 1, he teaches that there is never any mystical sense contained in the letter by way of repetitions of the words, but that it all depends on the preacher's judgment and will; which reason, although from his opinion the literal is sometimes hidden and signified secondarily, is not to be called mystical. St. Thomas could be referred for this opinion in this Article to the third reply, where he says thus: "The parabolic sense is contained under the literal: for by the words something is signified properly, something figuratively: nor is the literal sense the figure itself, but that which is figured: for when Scripture names the arm of God, the literal sense is not that in God there is a member of this corporeal kind, but that which is signified through this member." He therefore holds in that case that by the name "arm" the member is signified proximately, and by the member, the power of God; and thus that the power of God is denoted, not proximately, but remotely, by the very word.[182]

Caput III - The truer opinion on the literal sense

The other Doctors, in one and the same accord, seem to agree upon one opinion, which to me is more probable, although several other definitions are reported by some more recent theologians: namely, that the literal, or historical, sense is that which the author of Scripture, the Holy Spirit, willed first to signify, whether by words under their proper and usual, or under their metaphorical, signification. This definition, either in the same words or with a few changed, St. Thomas handed down in this Article in the body, with an added solution to the third, and the more recent theologians in this same Article. For St. Thomas teaches that the parabolic sense, which the words by translation signify first, is itself literal, not however that which those words, without translation, signify. Burgensis agrees, in the Addition to either Prologue of Lyra at the first doubt, and in the

182. St. Thomas Aquinas, Summa theologiae I, q. 1, a. 10, ad 3.

solution of the fourth principal argument of the question; Alphonsus de Castro, book 1 Against Heresies, chapter 3; Driedo, book 2 On Sacred Scripture, chapter 2; Sixtus of Siena, book 3 Bibliotheca Sancta, chapter 2; Adam in the preface to the Commentaries on Isaiah.[183] The definition set down must, however, be explained more fully. For which purpose it must be noted what the difference is between the mystical sense and the historical or literal in general: for by the comparison of each the distinction of the aforesaid definition will be illustrated.

Therefore all the Doctors just cited say - and from Driedo and Adam it is plain - that the mystical sense is never signified proximately by the words, but by the things; so that the words, by which it is had, first signify some thing, and then that thing is a sign of another, which it is said to denote mystically and spiritually: and therefore it is called mystical, or spiritual, because it is in the things, as though it were according to the mode of mysteries, and, as it were, like a spirit hidden in a body. But the literal is that which is signified first by the words themselves, whether properly or metaphorically.

This foundation being set, it remains that we expound the aforesaid parts of the definition; by the declaration of which the whole definition stands manifest. The first is the particle "first." Now this is set in opposition to that which is contrary; and it teaches that the literal sense is signified first by the words, not by the things: just as the mystical is proximately by the things, remotely by the words; and secondarily by the very words. Driedo and Adam have expressly posited this particle; but from the mind of all the rest the same doctrine is clearly gathered. In its explanation, however, it must be observed that words which have a proper and a metaphorical signification do indeed signify two things, yet not so that one be ordered through the other, as it happens in the mystical and literal sense of the same place, but so that both alike designate proximately: as equivocal terms signify by the same name; except that they denote one thing by the first imposition and properly, but another by a secondary and metaphorical imposition, which is called transference; which, since it is not a first signification and imposition, is transferred to another new imposition, and therefore does not remain in the first. Whence it happens that by the same word that thing is signified proximately also by the transference. For example, that of Abulensis, "The eyes of the Lord are upon the just," which we have set down to explain: for there Scripture, by the name "eye," does not denote first the corporeal instrument of seeing, and, under that aspect, an instrument is not understood, since it says "the eyes of the Lord," and in God there is no instrument of this bodily kind; it therefore signifies proximately the intellect of God, which by transference it calls by the name of "eye," because it is, as it were, like to bodily instruments which for us are coapted. Therefore, although in the same word there be a secondary imposition of the letter, which is translation, nevertheless there is never a remote signification of one thing through another.

Nor indeed is that doctrine contradicted by what Alphonsus de Castro says, namely, that the literal sense is had in many ways; sometimes from the bare signification of the words: he understands this when they are used properly; sometimes not from the words themselves, but from

the things signified by the words: he understands this of the metaphorical signification: for by these words he does not contend that that metaphorical sense, which is understood and is literal, is signified by the words remotely or proximately through things, but that that sense was taken from the likeness of things, on account of which the words themselves, having been transferred to a secondary signification, designate something metaphorically; in which mode he himself explained his own opinion a little. In the same way one ought to understand St. Thomas in that solution 3, which we set down above as the best test against the opinion of Abulensis clearly, when he said that the literal sense is that which the words signify, whether properly or metaphorically: the mystical, however, on the contrary is that which is designated by the things themselves, which the same words signify, as he says, as well as that which is signified remotely by the words.

The second part of the definition, which must be explained, is, "under the common and usual, or the metaphorical, signification": which are set forth to exclude the mystical sense: for this, since it is denoted by the words remotely, but proximately by the things, can sometimes not be signified by the words taken in their common and usual signification, nor in the metaphorical signification: as when Scripture says that Jonah was in the belly of the fish three days, by the usual signification of the words the history of Jonah is expressed: but Christ in the sepulcher is not denoted by the usual signification, nor by the metaphorical signification of the words, but proximately by the things themselves, namely, by that history of Jonah; and by the words remotely, insofar as by their usual signification they signify the history of Jonah. I said "sometimes," because sometimes even the mystical sense can be referred to the words in their common signification, when, namely, both of the history and of the mystery they can first be said in the usual signification. Such is that in Hosea 11: "Out of Egypt I have called my son," which can be said, in the common signification of the words, both of the people Israel and of Christ; for each is called "son" in the common use of the term.

The mystical sense is never signified proximately by the words, but by the things, in such a way that the words, under which it lies, first signify some thing, and then that thing is the sign of another, which is said to be denoted mystically and spiritually. Therefore it is called mystical, or spiritual, because there lies hidden within things, as it were, a recondite mystery and, as it were, a spirit in a body. But the literal is that which is first signified by the very words, either properly or metaphorically.

With this foundation laid, it remains to set forth the three principal parts of the definition, by the declaration of which the whole definition will become manifest. The first is the particle "First." We have inserted this on purpose, because the literal sense is first signified by the words, not by the things, just as the mystical is signified proximately by the things, but remotely and secondarily by the words. This particle was expressly posited by no one except Driedo and Adam, yet it is clearly gathered from the opinion of all. In the unfolding of this part it is to be observed that words which have both a proper and a metaphorical signification signify two things in such a way that they do

183. Paulus Burgensis, Additiones ad Prologos Lyrae; Alphonsus de Castro, Adversus haereses, lib. 1, c. 3; Johannes Driedo, De sacra Scriptura, lib. 2, c. 2; Sixtus Senensis, Bibliotheca sancta, lib. 3, c. 2; Adam (Adamus) in praefatione ad Commentaria in Isaiam.

not signify one through the other in ordered fashion, as happens in the mystical and the literal sense of the same passage, but they denote each alike as equivocal terms are signified by the same name - except that one they denote by first imposition and properly, the other secondarily and metaphorically, which is called a transfer, by which the name, from its first signification and imposition, is carried over to another new one, and hence does not remain in the first. Whence it is that by the transfer it also proximately signifies that second thing. We can explain this by Abulensis's example: "The eyes of the Lord are upon the just," etc. For there the Scripture, by the name "eyes," does not first denote a bodily instrument of seeing; and since in God there is not such an instrument, it denotes intellect, which it calls an "eye" by translation, because we conceive it as taking the place of a corporeal instrument.

Nor, indeed, is this doctrine met by what Alphonsus de Castro says, namely, that the literal sense is had in many ways: sometimes from no signification of the words - he means, when they are used properly; sometimes not from the words themselves, but from the things signified by the words. He means this of metaphorical signification. By these words he does not contend that the metaphorical sense, which is at times literal, is signified by the words remotely and proximately by the things themselves, but that that sense took its very rise from a similitude of things, on account of which the words themselves, by secondary signification transferred metaphorically, designate something else; in which manner he briefly explained his own position. In the same way St. Thomas is to be understood in that third reply which we reported in favor of Abulensis; for in the body he plainly taught that the literal sense is that which is signified by the words, and the mystical, on the contrary, that which is denoted by the things themselves - which is the same as to say, signified remotely by the words.

The second part of the definition which must be explained is: "Under the common and usual, or metaphorical, signification." This is set down to exclude the mystical sense; for this, since it is denoted remotely by the words themselves and proximately by the things, can sometimes not be signified by words taken in their common and usual signification, nor in their metaphorical signification; as when Scripture says, "Jonah was in the belly of the fish three days," the history of Jonah is expressed by the usual signification of the words; but Christ is not denoted by the usual signification concerning the sepulcher, nor by the metaphorical signification of the words, but proximately by the things themselves, namely, by that history of Jonah; and by the words remotely, insofar as by their usual signification they signify the history of Jonah. I said "sometimes," because sometimes even the mystical sense can be referred to the words in their common signification, when, namely, both of the history and of the mystery they can first be said in the usual signification. Such is that in Hosea 11: "Out of Egypt I have called my son," which can be said, in the common signification of the words, both of the people Israel and of Christ; for each is called "son" in the common use of the term. If, however, it be joined to what precedes and follows, it proximately signifies only the people Israel, to whom alone the words there refer; but Christ remotely, by means of the intervening thing, namely, the people Israel, as was explained above.

The last particle of the definition is: "What the author of Scripture willed to signify." This is necessary in order that there be some literal sense, although it does not suffice, as Abulensis falsely supposed. For, as we shall show in the next disputation, the mystical sense, which nevertheless ought to be called literal, is not contained together with the literal under the same passage by the intention of the Holy Spirit. Therefore it does not suffice, in order that there be some literal sense; still, it is required as necessary. For since it can happen that by the same word or speech various things can be signified proximately (as in those expressions which are wont to be used either properly or metaphorically), it must be said of necessity that the literal sense of the word or speech is that which the author willed to express, properly or metaphorically; and since the principal author of Sacred Scripture is the Holy Spirit, in order that a sense be literal, it is necessary that it be expressed from His intention. Whether, however, the human writer himself knew every literal sense, and whether it depends upon his intention, we shall say in disputation 17. Although, therefore, the aforementioned particle does not suffice, still with the others it most fittingly completes the definition.

Caput IV - On the literal sense of parables

As to the literal sense of parables, whether it is that which is brought in the similitude and as an example, or that to which the parable itself is applied, Alphonsus de Castro seems to leave it under doubt in the place cited; for he says: "As to the sense of parables, if one wishes to confine it within the literal, he will not do amiss; if, however, he is unwilling, I do not oppose." But since from the particle of the definition shortly before explained it is clear that the literal sense is that which is first signified by the very words, it is easy to gather that the sense of parables is that which is in the example adduced.

But first it must be observed that in parables there are two parts: one that brings in the thing by way of likeness, the other that applies it; the former is, as it were, a history; the latter is, as it were, an explanation of a mystical and hidden sense. The former, therefore, has that sensible and rough thing as the literal sense, which is, as it were, the history; the latter, however, has the mystery and spiritual thing, to which the parable is applied. For example, when it is said in Matthew 13: "The kingdom of heaven is like leaven, which a woman took," etc., in the literal sense there is truly signified the woman's act, who out of leaven and flour prepares a mass so that bread may be made; and this is the thing which is brought forward as an example in the former part of the parable; but in the latter part, in which the application of that parable is contained, the word of the Gospel and its efficacy is literally denoted. This sense can be called mystical if it be referred to the former part, in that it is hidden under the sensible thing; but referred to the latter part of the parable, it is truly literal.

Secondly, it is to be noted that sometimes in Scripture the application of parables is made; sometimes it is not expressly made: then, however, the latter part is understood, to which the parable ought to be applied; and that has its literal sense, as has just been explained. In this way Christ sometimes spoke to the crowds, and in general only applied the parable, as when in Luke 7

he said: "The kingdom of heaven is like a man who sowed good seed in his field," etc.; but the distinct application of the parable he set forth only to the disciples. There is also another rather long parable in Scripture which Solomon employed in the Song of Songs, where he introduces the Bridegroom and the Bride under the persons of shepherds, and the sweetest words of love between them, so that under that parable and sensible example he might display the sweetness of spiritual love between God and the soul, Christ and the Church. There, therefore, there is a twofold sense: one of the thing which is brought in a parable, and this is material, namely, the things as if done among shepherds - not that it really so happened, but because it is brought forward in a parable, so that under those persons that which is spiritual be signified; as when the Bride says to the Bridegroom (Cant. 1): "Tell me where you feed and where you rest at midday," and the Bridegroom answers: "If you do not know, O most beautiful among women, go out and follow after the tracks of the flocks," etc. In which the Bride asks about the shelter, where at midday the Bridegroom was covered from the burning of the sun; and he answers: "If you do not know," etc., that is, "If you are ignorant, go after your flocks and the kids; for they of their own accord graze in the pasture into which you lead them." But the latter part is to be understood, in which the parable was applied: the literal sense which the Holy Spirit willed properly to express will be that which is referred to spiritual love and charity, as the interpreters variously explain that place.

Thirdly, observe what Alphonsus de Castro also noted from St. Augustine: namely, that the history of a parable is not to be taken as that which really happened as it is narrated, but as that which at least could have happened. Such is that of Matthew 20: "The kingdom of heaven is like a householder, who went out early in the morning to hire laborers into his vineyard," etc. Since this is brought forward by way of similitude, it is not necessary that it be a thing that really happened; sometimes, however, what is brought in a parable truly happens, either in natural things - as that of Luke 13: "The kingdom of heaven is like a grain of mustard," or again among men, as is that parable of the leaven. These two modes of parables are more frequent in Scripture. Finally, sometimes there is brought forward in a parable some impossible and fabulous thing, as in Judges 9 it is said: "The trees went forth to anoint a king over them," etc. This, however, occurs more rarely. In whatever mode, nevertheless, a parable is set forth, the sense of it as regards the former part is always true, although the thing which is narrated did not happen in reality, nor even could have happened; because that which is proposed in a parable is not recounted as that which truly happened, but as that which could have happened, or at least is supposed as if it were possible, although in reality it is impossible: as in the likeness of that fact among even inanimate things something moral among men is better expressed. In this there is no falsehood, just as neither when one advances a fable so that from it a moral sense may be elicited.

Caput V - Corollaries of the preceding doctrine

From the preceding doctrine it may be gathered, first, that the opinion of Lyra is false, which he set down in the first chapter, when he asserts that the literal sense is properly that which the words express, and hence that Scripture sometimes lacks such a sense, which he asserts on account of metaphors. It is refuted, however, because wherever there is metaphor, the literal sense is that

which the words signify by a secondary, as it were, imposition, which is transfer; but this is signified proximately by the words, and therefore is not mystical, as Lyra supposed, nor is it denoted by the things themselves but by the words, as was proved in chapter 3.

More absurd still is it that Scripture sometimes lacks the literal sense, which, besides the reason just alleged, is shown thus. For Scripture always signifies something, either properly or metaphorically; that the proper sense is literal, no one doubts; and about the metaphorical it was proved by this reason. For the spiritual and mystical sense is so called either because a mystery lies hidden, or because, like a spirit in a body, it does not appear; but a metaphorical sense does not so lie hidden, but is very well known even commonly, and from the antecedents and consequents, according to the subject matter, is easily understood by all not unskilled in language. For metaphor is a certain transfer and, as it were, a subsequent imposition or extension of a name; but the mystical sense, since it is contained under things which of themselves do not signify unless as Scripture, at its own discretion, employs them, is not known to all as the metaphorical is, but, as it were, a mystery and a spirit lies hidden in things. Therefore, the metaphorical sense is not mystical, but literal, a sense which Scripture at least never lacks.

As to the testimonies of the Fathers alleged for Lyra's position, I answer that they sometimes call that sense "spiritual" which is contained under a metaphor, because in a certain way, like a spirit in a body, it is enclosed under the prior signification of the words; they also call it "allegorical," as we shall say in the next disputation, chapter 3. Then, indeed, when they speak of the "bark" of the letter, they mean the very words in their first signification, which are transferred; thus sometimes "history fails," as Origen used to say; yet, properly and strictly speaking, the metaphorical sense is literal, and that Scripture never lacks such a sense has been sufficiently proved.

Next, from what has been said it is no less gathered that Abulensis was in error.

Abulensis was deceived, when without reason he thought that the metaphorical sense is signified remotely by the words, and proximately by the things. For, as we showed a little above, a word taken metaphorically does not denote that thing which by its prior imposition it properly signified; rather, it is transferred to signify another thing in such a way that it expresses that alone: therefore it will signify that other thing proximately, not remotely. Thus, when I say, the meadow laughs, I do not signify a man's laughter, and through it the greenness of the meadow, but proximately the very greenness which I call "laughter."

But Abulensis erred worse, when he said that whatever mystical sense is contained in Scripture is from the mere will of the men who use it, and not from the intention of the Holy Spirit. This will be refuted more fully in the following disputation.

Finally, one must take diligent care to observe the context of any passage of Scripture, especially of the New Testament. For although it is familiar to the Prophets, once they have taken up an argument, to pass on to other mysteries, being rapt with the very prophetic Spirit, this does not happen in the New Testament, especially in the epistles of the Apostles. Since these deal with handing on moral precepts and doctrine, they commonly follow out the argument proposed in one

context, yet nevertheless drawing from it conclusions in their own order. Nothing, however, contributes more to understanding the whole sequence of the context than to determine the force of the particular particles which the writers use; and indeed, one thing above all must be observed, which is wont to introduce no small difficulty, namely, that a particle does not always refer to what immediately precedes, but to what had been said earlier. This, however, becomes evident at once whenever it does not square with what immediately precedes. As for other rules for explaining Scripture at length, to set them out is not the business of our present undertaking.

Caput VI - Rule for eliciting the literal sense

In order to investigate the true literal sense (*sensus litteralis*) of any passage, one must have before one's eyes first what the Council of Trent admonishes, session 4, in the decree on the use of sacred books, namely, how great is the authority of the common consent of the Fathers; for no one is permitted in matters of faith and morals pertaining to the edification of Christian doctrine to interpret sacred Scripture contrary to the unanimous consent of the Fathers.[184]

Second, knowledge of the languages is most helpful, which ought to serve with such moderation that it defends, to the extent of its powers, the Vulgate of our edition. The customary phraseology of Scripture itself, well understood, also opens a way to the understanding of Scripture itself. Thus, when a collation has been made and by assiduous reading of Scripture it comes about that it explains itself.

Third, Scholastic Theology, the definitions of the Councils, and even the history of heresies contribute very much to understanding at least that part of Scripture which deals with the dogmas of our faith. Therefore, if someone, instructed only in the skill of languages and trained in the assiduous reading of Scripture, should undertake to explain the epistles of Paul, especially that to the Romans and to the Galatians, he would find himself in very great danger.

Disputatio XVI - On the mystical and spiritual sense

Quid sit sensus mysticus. Cap. 1.

Quotuplex sit sensus mysticus. Cap. 2.

Quatuor sensus Scripturae exemplis illustrantur. Cap. 3.

Corollaria praecedentis doctrinae. Cap. 4.

Quomodo mysticus sensus utilis sit ad argumentum. Cap. 5.

That the mystical, or spiritual, sense is, is clear from the foregoing disputation: according to the common opinion of the Doctors whom I cited there, it is that sense which is signified neither properly nor metaphorically by words proximately, but which is enclosed under the things signified

184. Council of Trent, session 4, decree on the use of sacred books.

by the words, as under a shadow and figure - on account of which reason it is called "mystical," that is, hidden and secret. It is called "spiritual," because it lies hidden under the things, as a spirit under a body.

For greater clarity of this definition, as a foundation one must first establish that the internal concept of the mind is wont to be signified not only by words used properly or metaphorically, but also by other things, as is clear in the symbols and hieroglyphics of the Egyptians; in the bee they signified mercy, and in the king armed with a goad, justice, and other things of that sort. From such things Pythagoras and other distinguished philosophers used to hand down many salutary lessons for moral instruction, which are commonly called proverbs.

Nevertheless, although this is so, the statement remains true which says that it is the peculiar property of sacred Scripture under the same letter to contain both history and mystery. St. Gregory expressed this view, Moral. bk. 20, c. 1, when he asserts that sacred Scripture surpasses all other sciences in this, that with the same discourse, while it narrates the text, it also discloses the mystery.[185] St. Thomas taught the same in this article, and in Quodlibet 7, a. 8; for the mystical signification in the things themselves is found among the sacred Scriptures in a far different manner than it ever was among the pagan philosophers.[186]

To explain this difference more clearly, note secondly that there are three kinds of signs by which things can be signified. The first is that of words. The second is that of lower things which, at one's discretion, whether fictitious or even truly done, are adduced to signify greater things; and in both ways it is common to men to signify other things, as we said about the hieroglyphics of the Egyptians, who were wont by animals or also by other fictitious things to express marvelous matters. The third kind is that which God alone uses in Scripture, namely of things which truly happened among men, whose history He Himself willed to denote a mystery that would be many years later. Such was the calling back of the sons of Israel from Egypt, by which it was signified that Christ was to be called back from Egypt long afterward. Also the manna falling from heaven, by which He not only fed the people for forty years, but also willed to indicate the future sacrament of the Eucharist, and other things of that kind. To contain the mystical sense by this third kind of signs, and, as Gregory said, to narrate the history and express thereby the mystery, is the proper characteristic of sacred Scripture.[185]

And although men among themselves can also use things done, nevertheless this is done by them only after the fact, by bringing them in as a parable, example, or similitude. But it is proper to Scripture not only to present true events in a parable, but also to narrate simply those things which truly happened, in such a way that the Author of Scripture intends to denote loftier mysteries to come.

Third, it is to be observed that the mystical sense is not always in Scripture expressed by lower things; sometimes, too, lower things are signified by higher. For the passion of Christ outside the gate represents what is less, as Paul noted to the Hebrews 13, namely: "Let us go forth therefore to

185. St. Gregory the Great, Moralia in Iob, bk. 20, c. 1.
186. St. Thomas Aquinas, in this article; and Quodlibet 7, a. 8.
185. St. Gregory the Great, Moralia in Iob, bk. 20, c. 1.

him outside the camp, bearing his reproach" (Heb 13). Yet more frequently by lower things higher are denoted. Lastly, as the Doctors already mentioned in disputation 13 warn, the mystical sense is not to be sought everywhere in Scripture. For the evangelical precepts and counsels are to be understood to the letter, such that no spiritual sense is contained in that letter. Likewise in other places, any mystical sense explained according to each man's fancy ought not at once to be considered as signified according to the mind of the Holy Spirit, who is the principal author, although such a use of Scripture may be reckoned as suitably useful in sermons.

How manifold this mystical sense is does not seem sufficiently settled among the Doctors; who, although they say different things, nevertheless are not at odds with each other. Therefore, the sense of Scripture considered universally is twofold: one, the literal or historical; the other, the spiritual or mystical - their difference having been explained in general up to this point. Moreover, the spiritual or mystical is wont to be divided variously.

First, a certain distinction is asserted from St. Augustine, On the Usefulness of Believing, c. 3, which Sixtus of Siena, Bibliotheca sancta, bk. 3, c. 3, arranges in this way: Sacred Scripture has a twofold explanation - namely, historical and allegorical. Again, the historical is either analogical or aetiological. The allegorical, however, is threefold. The first accommodates the figures of past things to present things, and takes the name "allegorical." The second looks to morals, and is called "tropological." The third looks to the unchangeable condition, and is called "anagogical."[187]

Yet in that place Augustine assigns only four modes by which the Scripture of the Old Testament is handed down: according to history, according to aetiology, according to analogy, according to allegory - though he testifies that he preferred to use those names because he had received them so from others. And, as Driedo rightly observes, On Sacred Scripture, bk. 1, c. 2, after the middle, Augustine did not say that there is a fourfold sense of Sacred Scripture, but that it is handed down or taught in four modes. First, according to history, when what was done, or not done, is narrated. Second, according to aetiology, when it is shown what was done or said for what cause. Third, according to analogy, whereby the concord of the two Testaments is perceived. Fourth, according to allegory, when it is taught that the things written are not to be taken to the letter, but figuratively.

By these four modes the Lord Christ and the Apostles used to proceed, as Augustine there also attests. Christ used the first mode in Matthew 12, when He brought forward the history of David, 1 Kings 21, who ate the loaves of the proposition. He used the second mode in Matthew 19, when He showed the cause on account of which Moses allowed the Jewish people a bill of divorce. Of the third mode he brings forward no example. Finally, Scripture is brought forward in the fourth mode in Matthew 12, where it is said: "A sign shall not be given to it, except the sign of Jonah the Prophet." And although by these four modes the Scripture of the Old Testament is handed down, yet all of them are found in the New, in which the whole Old Scripture is adduced in various ways.

187. St. Augustine, De utilitate credendi, c. 3; Sixtus of Siena, Bibliotheca sancta, bk. 3, c. 3; J. Driedo, De sacra Scriptura, bk. 1, c. 2.

Therefore, Sixtus of Siena, in the mind of Augustine, has in vain numbered the senses of Scripture in that order, since Augustine neither treats of the senses of Scripture, nor distinguishes so many members.

St. Jerome, moreover, in epistle 120 to Eustochium, q. 12, affirms that only three can be understood in Sacred Scripture; he does not say "handed down" or "taught," but "understood." Whence it follows that a threefold sense of Scripture is handed down by us: namely, the first according to history; the second through tropology; the third into the spiritual understanding which they call "theoria." About the first there is no dispute. The second, he says, is when that which in the former people was carried out carnally is drawn into a moral interpretation of the passages, and we convert it to the profit of our soul. In the third, finally, as Jerome says in sum, the mind is raised to serenity and to the spirit concerning the beatitude of future things. This third mode Sixtus of Siena divides again into the allegorical and the anagogical.

There is, moreover, a widespread and commonly received division of the senses of Scripture, which Eucherius hands down in the preface to the Spiritual Formulae, and Cassian in Conference 14, c. 8, where they assert that there are four ways of illustrating Sacred Scripture; from which four the Theologians commonly, with St. Thomas in this article, derive the senses of Scripture. Thus Lyranus, Burgensis, Abulensis, Driedo, and others, whom I cited in disputation 13, say. The first is the historical, about which enough was said in the preceding disputation. The second is the tropological, or moral, which is referred to the correction of life. The third is the allegorical, when in a narration of deeds and in the history some mystery is said to be indicated. The fourth, finally, is the anagogical, which is referred to those things that are of eternal beatitude. These are contained in the two verses commonly cited: "The letter teaches deeds; what you should believe, allegory; what you should do, morality; where you should aim, anagogy."

These four senses seem to be indicated by Augustine, On Genesis ad litteram, bk. 1, c. 24, where he speaks thus: "In all the holy books there ought to be sought what from eternity is intimated; what deeds are narrated; what things future are foretold; what things to be done are commanded, or are advised." Of all which we will set forth examples from the New Testament in the following chapter.

From all these it becomes clear that under the first and literal sense there is not only contained the mystical and spiritual, but that this latter is also so various, as Eucherius said; and that these four senses reduce every sense to two modes only - namely, the literal and the spiritual. And although the ancients do not always distribute the mystical into those three enumerated parts, nor is the division one so much of things as of words; nevertheless it cannot be denied that the mystical sense is referred both to morals and to the mysteries of eternal beatitude.

Second, it is referred to morals, and is called the tropological. Third, it is referred to unchangeable eternity, and is called the anagogical.

But truly St. Augustine assigns only four modes by which the Scripture of the Old Testament is handed down: according to history, according to aetiology, according to analogy, according to allegory; and he bears witness that he preferred to use these Greek names, because he had received

them thus from others; and, as Driedo rightly observed in that place, book 2 On Sacred Scripture, chapter 2, after the middle, Augustine did not say that the sense of Sacred Scripture is fourfold, but that it is handed down or taught in four modes.[188] First indeed according to history, when what was done, or not done, is narrated. Second, according to aetiology, when it is shown what was done or said for what cause. Third, according to analogy, whereby the congruence of both Testaments is made plain. Fourth, according to allegory, when it is taught that certain things written are not to be taken according to the letter, but figuratively.

That Christ the Lord and the Apostles used these four modes, Augustine bears witness there. Christ used the first at Matthew 12, when he brings forward the history of David, 1 Kings 21, who ate the loaves of proposition. He used the second at Matthew 19, when he shows the reason for which Moses permitted to the Jewish people a bill of repudiation. He adduces no example of the third mode. Finally, the fourth mode of Scripture is adduced at Matthew 12, when it is said: "A sign shall not be given to it, except the sign of the prophet Jonah." And although by these four modes the Scripture of the Old Testament is delivered, yet they are all found in the New, wherein the Old Scripture is brought forward in such varied ways. Therefore, in vain did Sixtus of Siena, according to Augustine's mind, number so many senses of Scripture in that order, since Augustine treats neither of the senses of Scripture, nor distinguishes so many members.[189]

St. Jerome, however, in epistle 120 to Hedibia, question 12, affirms that Sacred Scripture can be understood in a threefold manner: he does not say "delivered" or "taught," but "understood." From which it follows that he taught us a threefold sense of Scripture. The first is according to history. The second is through tropology. The third is according to the spiritual understanding, which they call theoria. Of the first there is sufficient evidence. Of the second he says that it is when that which in the former people was done carnally, we interpret according to the literal place and convert to the profit of our soul. Finally, of the third: "To higher things," says Jerome, "we pass; we abandon earthly things; we discourse concerning the beatitude of future things." This third mode Sixtus of Siena again divides into the allegorical and the anagogical, so that the division of Jerome may agree from every side with the vulgate and common one; yet not according to Jerome's mind: for he, as we said, enumerated only three senses of Scripture.

But there is a widespread and commonly received division of the senses of Scripture, which Eucherius, in the preface of the book On Spiritual Forms, and Cassian, in Conference 14, chapter 8, hand down, where they assert that there are four kinds for illuminating Sacred Scripture, from which the four senses of Scripture the theologians commonly, with St. Thomas in this article, derive. Thus do Lyranus, Burgensis, Abulensis, Driedo, and others whom I report in disputation 13, teach.[190] The first is the historical, about which enough was said in the preceding disputation. The second is the tropological, or moral, which is referred to the correction of life. The third is the allegorical, when in the narration of deeds and in the history some mystery of our faith is

188. John Driedo, De sacra Scriptura, book 2, chapter 2 (post medium), commenting on St. Augustine's four modes.

189. Sixtus of Siena (Sixtus Senensis), in Bibliotheca sancta, attempts a numerical ordering of senses drawn from Augustine.

190. Eucherius of Lyons, Praefatio to the Spiritualium formarum; John Cassian, Collatio 14, c. 8; Nicholas of Lyra; Paul of Burgos (Burgensis); Alphonsus Tostatus (Abulensis); Driedo; cf. St. Thomas, in this article; and see our disputation 13.

contained. Finally, the fourth is the anagogical, which is referred to those things that belong to eternal beatitude; and these are contained in these two verses: "The letter teaches what has been done; allegory, what you should believe; the moral, what you should do; anagogy, whither you should tend."

These four senses seem to be indicated by St. Augustine, book 1 On Genesis according to the Letter, chapter 1, where he thus speaks: "In all the holy books one must look for what things therein may be intimately eternal, what things may be narrated as having been done, what things may be foretold as future, what things may be prescribed or admonished as to be done." Of all of which we shall bring forward examples from the New Testament in the following chapter.

From all these it becomes clear that under the first and literal sense there is contained not only the mystical and spiritual, but that this latter is also so various, as Eucherius said; and although it is free to divide and to include every sense into only two modes, namely, the literal and the mystical, and not to distribute the mystical further into those three enumerated parts (since here there is a small disagreement of words, not a great disagreement of things), nevertheless it cannot be denied that the mystical sense is referred both to morals and to the mysteries of faith and to the heavenly fatherland; whether you wish to call this by this, or by another, name. For not all the Fathers have enumerated so many members of the mystical sense under those names as Eucherius, Jerome, and Cassian. Concerning Jerome it is now clear that in the place alleged he reports only three, in the second of which he includes the sense that pertains to morals and to the mysteries of faith.

He himself too, in his commentaries on the Prophets, and St. Augustine, book 1 On Genesis according to the Letter, chapter 2, and Pseudo-Dionysius, On the Celestial Hierarchy, chapter 2, and in epistle 9 which is to Titus, Origen, and other Fathers, as I allege in disputation 13, enumerate only two senses, namely the literal and the mystical. Cyril, however, book 5 on Leviticus about the middle, Ambrose, book 3 on Luke, on that passage, chapter 3, "Who was Phares," and Bernard, sermon 61 of the lesser sermons, besides the historical, also enumerate the moral and the mystical; perhaps they do not distinguish the moral from the literal, but from the historical, taking history in the strict and proper sense for the narration of deeds; for although every literal sense is historical, not every historical is moral; for in Scripture not only deeds are narrated, but also moral precepts and matters of life are delivered.

For which reason Ambrose, book 5 on Luke, chapter "On the Centurion's Servant," in that which he did for the same, takes the literal and the moral sense, from which also he draws the mystical concerning the death of Christ; and book 5 on Luke, chapter "On that which was on the second-first Sabbath," concerning the deed of Ahimelech, 1 Kings 21, says: "But this in history is moral, in the mystery prophetic." With whom Bede seems to agree, in the preface to the Psalms, who teaches that Sacred Scripture pertains to three things: to history, to morals, and to mystery. But in that place he does not assign various senses of Scripture, but reduces to three heads the totality of what is contained in Scripture. Finally Hugo of St. Victor, besides the literal, treats of the other two: for

in book 6 of the Didascalicon of learning, chapter 3, he deals with the literal; chapter 4 with the allegorical, which he says pertains to the mysteries of faith, under which we can also include the anagogical; and chapter 5 with the tropological, which he calls the moral.[191]

Yet, notwithstanding these things, for the sake of clarity, the sense of Scripture is conveniently divided into those four members enumerated according to the opinion of Eucherius and Cassian, examples of which stand out in the New Testament, as we shall see in the following chapter. I pass over another, little-used kind of explaining Scripture, namely the elementary exposition, which is taken from the letters of the very words; and again it is assigned into the physical and the prophetic; about which Sixtus of Siena has very extensively written, book 3 of the Bibliotheca sancta, chapter 5 and the following.[192]

Caput III - The four senses of Scripture are illustrated by examples

The four senses which, from Eucherius and Cassian, we have enumerated, one city Jerusalem presents to us by way of example. For in Sacred Scripture "city" is, according to the letter, the earthly city; according to tropology, it is the soul; according to allegory, it is the Church; by anagogy, it is the heavenly fatherland. There are also many marked examples of these in the New Testament, which can be looked at together in one place, in the epistle to the Galatians, chapter 4. For it is said: "Abraham had two sons, one by the handmaid, and one by the free woman" (Gal 4). In which part the literal sense plainly appears. What follows, however, he subjoins: "Which things are said by allegory: for these are the two testaments," and what follows, pertains to the allegorical sense. It then follows: "But as then he who was born according to the flesh persecuted him who was according to the spirit, so also now," which is referred to the tropological or moral. Finally, when he adds: "But that Jerusalem which is above is free, which is our mother," he explains the anagogical sense.

Other also in the New Testament manifest examples of the three spiritual senses are found. To the moral pertains that, 1 Corinthians 9: "You shall not muzzle the ox that is treading out the grain." Which the Apostle cites from Deuteronomy 25, but refers in the moral sense to the ministers of the Gospel, whom he judges worthy of their wage, namely food and sustenance. For the Apostle did not understand that it had been said of the very oxen according to the letter in Deuteronomy 25, as some think; otherwise the Apostle's argument, drawn from the mystical sense, would be weak. For it is certain that the Jews, by the express precept of the law, did not muzzle the ox that was treading; but since that matter would seem most slight, as if God had care only of that, and had willed to signify nothing greater by it, the Apostle most rightly infers that by that fact God also indicated that the ministers of the word of God are by right to be nourished and sustained; for which reason he subjoined: "Does God care for oxen? or does he not speak entirely for our sake?" as if he were to say, In that law and precept God looks not only to oxen, which are a viler thing, but

191. Hugo of St. Victor, Didascalicon, book 6: c. 3 on the literal, c. 4 on the allegorical (pertaining to the mysteries of faith, under which the anagogical may be included), c. 5 on the tropological (the moral).

192. Sixtus of Siena, Bibliotheca sancta, book 3, chapter 5 and following, on the "elementary" exposition (from the letters themselves), and its assignment also into the physical and the prophetic.

also to what is more worthy, to the sustenance of ministers; nor does the Apostle deny that God also had care of oxen, since the law speaks of them according to the letter. Wherefore also the argument of the Apostle has no small strength, even if it be drawn symbolically and from the mystical sense. For the mystical sense is easily gathered from that letter.

That place also is commonly adduced as an example of this moral sense, 1 Corinthians 10: "Now these things were done in figure of us," etc. But in disputation 14, chapter 6, it was proved that that Scripture which the Apostle cites is used not in the mystical sense, but by accommodation.

Examples indeed of the allegorical sense are very many in the New Testament: John 3 adduces the brazen serpent, which was an express figure of his cross; and Matthew 12 and Luke 11 allege the sign of Jonah, by which his burial and resurrection were foreshadowed. To this also pertain those testimonies Hosea 11 and Jeremiah 31, which we have shown in disputation 14 to be accepted only in the mystical sense. And since it is referred to the mysteries of faith, the sense of those is called allegorical. But that of the brazen serpent so in all respects squares with the cross of Christ and with its marvelous effects that the mystical sense straightway appears in it. Wherefore it is not permitted to concede only accommodation in it. But in the sign of Jonah the mystical sense is more evident: for when the Pharisees demanded from Christ a sign by which he might be acknowledged by them as the true Messiah, he granted them only that sign, nor did he wish then to exhibit to them some express sign.

Finally, a most apt example of the anagogical sense is with Paul to the Hebrews, chapters 3 and 4, where he treats that place of Psalm 94: "Today, if you shall hear his voice," etc., and below, "To whom I swore in my wrath, if they shall enter into my rest," which, according to the letter, was said of the people of the Jews, who, because they had been unbelieving at the waters of contradiction, God swore should not enter the land of promise. Therefore when Paul, chapter 4, subjoins: "For to us it has been announced just as to them," he clearly judges that God also swore to the unbelievers that they should not enter the heavenly fatherland, of which that land of promise was a figure; and after a little: "Since then it remains for some to enter into it," namely into the rest of the Lord, "and those to whom it was first announced did not enter in because of unbelief, again he designates a certain day, 'Today,' saying in David after so long a time, as it is said above: 'Today, if you shall hear his voice;'" "for if Jesus [i.e., Joshua] had given them rest, he would not afterwards have spoken of another day; therefore there remains a sabbath-rest for the people of God" (Heb 4). As if he were to say, Therefore, long after, David said "Today," to indicate that there are still others remaining who are going to enter, not indeed the land of promise, but eternal happiness. For if Jesus Nave had afforded to the people of Israel the full rest, which in the Psalm is called "My rest," that is, the rest of the Lord, he would never have made mention of another by saying: "Today, if you shall hear his voice." But he said this because there yet remains for the people of God a sabbath-rest and the rest of eternal life. The same rest of the heavenly fatherland Paul says was figured, Genesis 2, when the Lord "rested from all his work." For thus, after the labors of this life, that eternal rest and happiness await us. Therefore here the anagogical sense is included in that which befell the people of Israel, which not only does Paul elicit from that history, but also affirms to have been expressed by the Prophet in that Psalm, so that David himself from the shadow of that earthly and temporal

rest, which God kept for the believing Israelites after forty years, understood mystically the rest of the heavenly fatherland, which still remains for us; and that this is the literal sense of the Psalm, which is the anagogical of that event in the people of Israel, Paul in my judgment thought.

There is also an anagogical sense explained by Paul at Hebrews 8, where, concerning the material temple of Solomon in which the Levitical priests ministered, he says that it is a shadow of future things. For of the priests he says: "Who serve a shadow of the things to come" (Heb 8:5): that is, of the temple of Solomon, by which the future tabernacle of heavenly glory, not made by hand, was foreshadowed; which also he prosecutes in the same chapter.

Caput IV - Corollaries of the preceding doctrine

- I add certain observations, worthy of note, for a greater clarity of the things we have said.
- First: Sometimes the Fathers call the literal sense, when it is hidden under metaphors and tropes, "allegorical," or even "spiritual." St. Augustine called it "allegorical" in Epistle 48, that is to say in the last notation, insofar as something is signified metaphorically; for a metaphor can be called a kind of allegory, or "spiritual," as the same Augustine testifies (On the Trinity 15, c. 9). Origen, St. Ambrose, St. Jerome, and Cassian - mentioned in the preceding disputation, c. 1 - called "spiritual" what is, as it were, contained somewhat obscurely under the very bark of the letter; yet properly it ought to be called "literal," as we there at length proved. On the other hand, the mystical sense is sometimes called "literal," when it is from the intention of the Holy Spirit, as we shall see in the following disputation.
- Second: Among all these senses of Scripture, the literal is the principal, if we consider the formal notion of sense, not the thing signified, or the intention of the Holy Spirit. For the signification of words is primary and proximate, and therefore the proximate signified, according to the nature of the signified, will be principal. Of this sort is the literal sense. The mystical is secondary and remote from the words: for it is denoted proximate by the things themselves. And in this way true is the sentence of Paul of Burgos, in the addition upon both prologues of Lyra, to the sixth doubt, question principalis, when he teaches that the literal sense is principal in Scripture according to the dignity of certitude, since it is more certain than the spiritual when referred to the speculation of the intellect; it would in truth be true if he said this only in this respect, namely, that as to our intellect the literal sense is signified most nearly by the words and is not hidden, as is the mystical. Otherwise, since the mystical also is signified from the intention of the Holy Spirit, it must be said to be equally certain and true absolutely. I pass over two other considerations, by which he teaches the literal sense to be more excellent, which seem of less moment. But if we attend to the very thing signified, the mystical, for the most part, is more noble; although the opposite sometimes happens, as we said in c. 1. Still more noble and principal it can be called if we consider the intention of the Holy Spirit; for Scripture was inspired for that mode of signifying as its principal end.

- The Apostle indicated this dignity of sense and the primary intention of the Holy Spirit, 1 Corinthians 9, around that Deuteronomy 25: "You shall not muzzle the ox that treads the grain." When he said, "Does God care for oxen? Or was it not altogether for our sakes that this was written? For it was written for our sakes, because he who ploughs ought to plough in hope." For since in the literal sense something less worthy is signified, and in the mystical something more worthy and more divine, the mystical sense will not therefore be more noble for this reason, nor, according to the intention of the Holy Spirit, primary. In this latter way Paul of Burgos plainly concedes it to be the sense of those who teach the mystical to be principal. Yet in vain is that of Paul, 2 Corinthians 3: "The letter kills, the spirit gives life," brought forward to prove this. For if there the Apostle were speaking about the literal and spiritual sense of Scripture, not only would the literal sense be less noble, but even harmful. For he did not say, "The letter is less noble," but "kills." But to grant that would be absurd. For the literal sense, truly literal, signified by the Holy Spirit, never kills. I confess indeed that the Fathers - alleged in the preceding disputation, c. 1 - said that the literal sense is sometimes harmful; yet they said that only, as I noted there, c. 2, whenever the place is metaphorical. For if then it were taken according to the primary signification, not translated, it would truly be harmful. But we shall show there that such a sense is not literal.
- Moreover, in that chapter Paul is not speaking of the literal sense, but of the letter of the law and of the Old Testament, of which Moses was the minister, and of the spirit of grace and faith which he himself preached; he speaks openly, as St. Thomas notes (1 - 2, q. 106, a. 2). Of the letter, then, of the law, if it be destitute of the spirit of grace and of faith, he truly says that it kills, as he admonishes in the Epistle to the Romans: for the law is rather a stumbling-block and an occasion of sin, if the aid of grace by which it may be fulfilled is lacking. Of the spirit, that is, of faith, he rightly asserts that it gives life, for it supplies strength to observe the precepts of the law, "which if a man shall do, he shall live in them" (Galatians 3): not only with a temporal life, by fleeing punishment, but also with a spiritual, by attaining true sanctity before God. I admit, however, that Ambrose also used this testimony of Paul, book 6 on Luke, c. de responsione Iesu Simonem arguentis, where at the effusion of ointment upon the head of Christ the holy Doctor understands spiritually: "The letter," he says, "kills." Yet Paul, as we have already shown, willed to signify another thing. Nor do I quite understand how the material pouring out of ointment, done in the spirit of charity and religion, can kill.
- Thirdly it must be observed that the opinion of certain persons is false, who affirm with the Jews that in every place of the Old Testament there is contained something first done in the prior people, which then is a figure of that which was to be in the Gospel. For there are certain testimonies of the Old Testament which, in the literal and primary sense, ought to be taken prophetically of things future under the New, as Tertullian hands down, On the Resurrection of the Flesh from chapter 26, and in Against the Jews c. 7 and the following, and Against Marcion book 3, c. 5; such as St. Jerome judges that one of Isaiah 7 to be: "Behold a Virgin shall conceive," etc.[193]

- Now this manner of interpreting Scripture, which in these times began to be taught by certain persons in our Spain - I know not by what spirit - was once condemned against Theodore of Mopsuestia, bishop, by Pope Vigilius in the Roman synod, at which twenty bishops were present: it is clear from the collection of the various letters of the Pontiffs, which Antonius St. Augustine, Archbishop of Tarragona, copied out of the Vatican Library. Our Francis Turrianus also mentions this condemnation, in c. 5 of the second book of the Apostolic Constitutions of Clement Romanus, where he reports certain places which Theodore was explaining in this sense, nor did he wish to apply them to those things which were to be in the New Testament.[194]
- Fourth, note that the mystical sense is found not only in the Old Testament, but also in the New; the contrary was thought by Abulensis on Matthew 13, q. 28; and not to mention what St. John Chrysostom says of Christ's entry into Jerusalem, Matthew 21 - namely that Christ so fulfilled the prophecies of the ancients that he himself gave occasion to another prophecy - , in which fact Jerome and Origen also understand a mystery; let the manifest testimony of Hebrews 13 suffice us: "Let us go forth therefore to him outside the camp," etc., where the Apostle interprets that Christ suffered outside the gate not without a mystery. I confess indeed that in the Old Testament, which is full of prophecies and figures, there are more testimonies under which the mystical sense is contained.
- Furthermore Abulensis adduces St. Augustine, who, in the book On the Usefulness of Believing, cap. 3, said that Scripture - not universally, but the Old Testament alone - is taught and is to be learned in those four modes enumerated above; he therefore understood that in the New Testament the mystical sense is not to be found. I answer: the first argument there is not dealing with the senses of Scripture, as was proved above in c. 1, but is handing down diverse ways of treating Scripture. Then I say that Augustine so affirms that of the Old Testament that he does not deny it of the New; but he rather did it of the Old because this variety of senses is more frequent in it.

Caput V - How the mystical sense is useful for argument

- Now indeed, as regards our present undertaking, it is certain among all that the literal sense (*sensus literalis*) is so manifest that from it are drawn most efficacious arguments to prove the dogmas of faith, as Alphonsus de Castro rightly admonishes (book 1 Against the Heresies, c. 3). But as to the mystical sense (*sensus mysticus*), that it does not so serve, this seems to have been taught by St. Jerome, book 2 on Matthew, treating that of c. 13, about the leaven which a woman hid, etc., where, after he had applied it to the Trinity, he subjoins: "A

193. Tertullian, De resurrectione carnis, from chapter 26; Contra Iudaeos, c. 7 and following; Contra Marcionem, book 3, c. 5; St. Jerome, on Isaiah 7:14 ("Ecce Virgo concipiet").

194. On Theodore of Mopsuestia's condemnation by Pope Vigilius in the Roman synod: see the collection of papal letters copied by Antonius St. Augustine, Archbishop of Tarragona, from the Vatican Library; also Francis Turrianus, Apostolicarum constitutionum Clementis Romani, book 2, c. 5, who reports places which Theodore explained in this sense and did not wish to apply to the things of the New Testament.

pious indeed sense, but never can the understanding of a parable and of riddles promote the authority of dogmas." In which sense Dionysius also seems to have said somewhere, in the Epistle to Polycarp: "Mystical Theology does not argue." Nay rather, adds Alphonsus, many have erred, willing to prove their doctrine from the mystical sense: yet the examples which he adduces are of heretics who, by perversely interpreting the letter, were dragging it into their own opinion, and where there was an improper or metaphorical expression, they were using the Scripture without that. In this way Luther, from 1 Peter 2 - "But you are a chosen race, a royal priesthood" - collected that all Christians without distinction are priests to offer to God not only prayers and good works, which in a broader signification are called sacrifices, but also the very proper and true sacrifice of the altar, which belongs only to the priests consecrated in the Church of God.

- Yet since the mystical sense too is from the intention of the Holy Spirit, when it is known to us - as in places where either Christ the Lord or the Evangelical writer brings it to light - without doubt it can be of use to us as efficaciously as the literal; which Alphonsus himself also expressly noted, and seemed to deduce from the words of Augustine, Epistle 48, where he says: "Who would not most shamelessly strive to put something in allegory to be interpreted for himself, when these things are obvious through the manifest testimonies of the saints, whose light shines forth?" Augustine is speaking in that place not about the mystical sense, but about the literal signified through a metaphor - what he himself calls "allegory": about this, therefore, when it is obscure and does not stand by manifest proofs, he says that heretics most shamelessly interpret it for themselves, following only the bark of the letter; as is apparent in the very example which he adduces. For the Donatists, who inhabited the parts of Africa, were contending that the true Church was with them, in confirmation of which they cited that, Canticles: "Where you feed, where you lie down at noon," which partly spiritually - namely of the Church - , and partly even to the letter - understood of the meridional region - they most shamelessly alleged for themselves.[195]
- Nevertheless the sentence of Alphonsus de Castro remains true, when he asserts that the mystical sense is useless for theological arguments, unless from another sacred writer it is established; add: or unless the common sentence of the Fathers interprets the place in the same sense; for thus it will be of great weight, as the literal also is. But because, for the most part, about that it is not so established as about the literal in all places, therefore it is deemed useless for arguing, because it is uncertain for us.
- Still, to the sacred writer himself, a testimony of the more ancient Scripture, which he uses in the mystical sense, could serve in a twofold way. First, for illustrating the history, as is clear from what was said in disputation 14, c. 4: in which way he alleges that of Hosea 11: "Out of Egypt I called my son," and others there enumerated. Then such a testimony could serve, when either beforehand it was established in the mystical sense - as we said of that Exodus 12, "You shall not break a bone of it" - or when by an easy reason such a sense could

195. Augustine, Epistle 48; the Donatists' abuse of Canticles 1:6 - 7 ("ubi pascis, ubi cubes in meridie") is adduced as an example.

be gathered: just as from that Deuteronomy 25: "You shall not muzzle the ox that treads out the grain," Paul deduced that the ministers of the Church ought to be supported, as we noted in c. 2; and in this way the mystical sense was useful to the sacred writer for arguing against all the unbelievers of his age: just as even an accommodated sense could be of use, being well confirmed by natural reason, as was said in that disputation 14, c. 5.

Disputatio XVII - Whether under the same letter several literal senses are contained

- Under the same letter there are never several literal senses, taught Michael Medina, cap. 1.[196]
- Under the same letter there are several literal senses - so the common opinion holds, cap. 2.
- With a certain moderation the latter opinion is proved, cap. 3.
- The solution of the arguments of each opinion, cap. 4.

Caput I - Under the same letter there are never several literal senses, taught Michael Medina

- Since, among the other senses of Scripture, the literal (*sensus literalis*) is principal for arguing, it were best, in order that we might proceed with examination of what we can, that we should handle first what is nearest: for several things are contained under the same letter which pertain only to the literal senses, as we shall say below, which it is more fitting to our disputation to elicit in the present case than those which are more remote. Therefore

Luther, interpreting perversely and dragging the sense to his own purpose, where there was a proper or metaphorical expression, used Scripture. Thus from that 1 Peter 2, "You... a royal priesthood," he collects indiscriminately that all Christians are priests, to offer to God not only prayers and good works, which, in a broader signification, are called sacrifices, but even the proper and true sacrifice of the altar, which belongs only to priests consecrated in the Church of God.

But since the mystical sense also proceeds from the intention of the Holy Spirit, where this is known for us, as in places where either the Lord Christ or the evangelical writer himself elicited it, without doubt it can serve us just as effectively as the literal. This even Alphonsus expressly noted, and he seemed to deduce it from the words of St. Augustine in Epistle 48. For he says: "Who would not most shamelessly endeavor to interpret in his favor something set in allegory, unless he have most manifest testimonies, by the light of which the obscure things are made manifest?" Yet Augustine in that place does not speak of the mystical sense, but of the literal as expressed by a metaphor, or, as he himself calls it, by an allegory-signification. Therefore, when this is obscure and not established by manifest indications, he says, heretics most shamelessly interpret it for themselves, following only the letter, the rind; as in the example which he himself adduces, it appears with the Donatists. For the Donatists, who inhabited parts of Africa, contended that the

196. Michael Medina, as cited in the disputation's plan.

true Church was with them, and for its confirmation they adduced that of Canticles 1, "Where you pasture, where you couch at midday," which, partly spiritually - that is, of the Church - partly also to the letter, understood of the southern region, they most shamelessly alleged for themselves.

Nonetheless true is the aforesaid sentence of Alphonsus de Castro when he asserts that the mystical sense is useless for theological arguments unless it is established concerning it by another sacred writer. Add: or unless the common opinion of the Fathers interprets the place in that sense; for thus it is of great moment, just as the literal. Because, however, for the most part it is not established concerning that as it is about the literal, in all places, therefore it will be judged useless for arguing, because it is uncertain for us.

Moreover, to the sacred writer himself the testimony of the more ancient Scripture, which he uses in a mystical sense, could serve in two ways. First, for illustrating the history, as is evident from what was said in disputation 14, chapter 4, in what manner all are brought together indiscriminately: for that Hosea 11, "Out of Egypt I called my son," and other things enumerated there are adduced. Then, that such a testimony could serve to establish the mystical sense was already established before, as we said of that Exodus 12, "You shall not break a bone of it"; or when by an easy reasoning such a sense could be gathered; as from that of Deuteronomy 25, "You shall not muzzle the ox that is treading out the grain," Paul concludes that the ministers of the Church must be supported, as we noted in chapter 2. And in this way the mystical sense was useful for the sacred writer for arguing against the unbelievers of his age; just as also the accommodative sense could be useful, being confirmed by most excellent natural reasoning, as was said in that disputation 14, chapter 5.

Whether under the same letter multiple literal senses are contained

That under the same letter there are never multiple literal senses, as taught by Michael Medina

Michael Medina in book 6 De recta in Deum fide, chapter 25, expressly defends that in sacred Scripture the same letter never designates multiple literal senses.[197] In favor of the same sentence Adam is reported in the preface on Isaiah, where he says that when the discourse is of divine or heavenly things, there is only one sense of Scripture, and that the literal.[198] But, in my judgment, Adam wanted to teach something quite different, namely, that when Scripture speaks of divine or heavenly things, there is not contained under the same letter a twofold sense of which he had spoken before, that is, the literal and the mystical, but of these one in kind, and that the literal. For this author thinks that under the history of created and lower things a mystical sense lies hidden. Whether under the same letter the literal sense, which is distinguished from the mystical, is sometimes multiple, he does not concern himself. However, to say this in passing against him, he is

197. Michael Medina, De recta in Deum fide, lib. 6, cap. 25.
198. Adam (Adamus), Praefatio super Isaiam.

mistaken in this, that he denies that, with respect to divine and higher things, a lower thing is sometimes denoted mystically; as is clear from what was said in the preceding disputation, chapter 1.

Medina proves his sentence first, that the opposite seems to proceed from a certain empty fear: for many, so that they might defend the testimonies of the Old Testament alleged in the New as being recited in the literal sense, lest the confirmation of the history be weak, said that multiple literal senses are expressed by the same letter. Yet this is not necessary: for sometimes the evangelical writer adduces testimonies in a spiritual sense, which, as we showed in disputation 14, chapter 4, in no way detracts from the force of the history and its doctrine. Second, it can be established by induction that there is no Scripture testimony which under the same letter yields multiple literal senses. Vainly therefore would that be conceded in any genus. Third, the sacred writer proceeds far otherwise than a scribe: for the latter, perceiving by the ear only the sound of the words, draws it with the pen, not understanding the sense of the things themselves; but the sacred writer wished to express in Scripture the concepts of his mind, and what the Holy Spirit wished to designate: therefore that is the literal sense of his Scripture which he himself understood and which the Holy Spirit wished to designate; nor is it to be believed that the sacred writer by the same word signified various things, since that is contrary to the custom of correct writers: therefore the literal sense of his Scripture was unique. Fourth, if under the same letter many literal senses were contained, we would have nothing certain from Scripture, nor could the dogmas of faith be proved by any firm testimony.

Caput II - The common opinion: that multiple literal senses are equally under the same letter

The common opinion is set down which affirms that multiple literal senses are equally under the same letter. Thus taught St. Thomas in this article, question 4 De potentia, article 1, and in 2, distinction 12, article 2, ad 7; Burgensis in the Additiones on each of Lyra's Prologues; Alphonsus de Castro, book 1 Contra haereses, chapter 3; Driedo, book 2 De sacra Scriptura, chapter 2; Abulensis on Matthew 13, question 28; and Catherinus in the book De Clavibus sacrae Scripturae. [199] Lyra is reported into this sentence in the second Prologue of the Bible, as a rule for interpreting Scripture, which, in my judgment, he did not teach: for although he asserts that sometimes multiple literal senses are designated by the same letter, nevertheless he brings forward in example that 2 Kings 7 and 1 Paralipomenon 17, "I will be to him a father," which he says is to be understood to the letter of Solomon, but of Christ in a mystical sense in a certain respect, and literally simply. He calls it mystical in a certain respect, because Solomon was a figure and symbol of Christ; literal simply, because by the intention of the Holy Spirit Christ was figured in the person of Solomon. In

199. St. Thomas, De potentia, q. 4, a. 1; In II Sent., d. 12, a. 2, ad 7; Paul of Burgos (Burgensis), Additiones super utrumque Prologum Lyrani; Alphonsus de Castro, Contra haereses, lib. 1, cap. 3; Jan Driedo, De sacra Scriptura et ecclesia, lib. 2, cap. 2; Abulensis (Tostatus), In Matthaeum, cap. 13, q. 28; Ambrogio Catherino (Catharinus), De Clavibus sacrae Scripturae. St. Augustine, Confessiones, XII, cc. 30 - 31; St. Jerome, Ep. 103 ad Paulinum; St. John Chrysostom, Hom. 21 in Genesim; St. Basil, De Spiritu Sancto, prooemium.

this way no Catholic denies that under the same letter multiple senses by the intention of the Holy Spirit sometimes lie hidden, yet so that one is signified by the words and is primary, but another by the things signified by the words and is secondary. But the authors alleged above say that there are multiple literal senses equally signified by the very words, and it is only concerning these that the controversy is proposed, as Alphonsus and Driedo expressly observed.

Nevertheless the aforesaid sentence was taken from St. Augustine, Confessions XII, chapters 30 and 31, where he hands it down in express words: indeed he judges that, when Moses was writing those words of Genesis 1, "In the beginning God created heaven and earth," there came into his mind not only whatever of truth human talents were going to find for the explication of those things, but also many other things, which were never going to be devised, yet could be devised, in no way at odds with piety and truth: which he also admits in the same way concerning the other sacred writers, who wrote in the same Spirit.

There are also testimonies of other Fathers, by which some attempt to confirm this very point. The first is of St. Jerome, who in Epistle 103, near the end, to Paulinus, writes thus about the Apocalypse: "John has as many sacraments as he has words; I have said little for the merit of the volume, all praise is inferior; in the single words multiple intelligences lie hidden." This seems to be taken of literal senses; for as to other senses, Scripture of the Old Testament abounds in them more. The second testimony is of St. John Chrysostom, homily 21 on Genesis: but since he is speaking there of Scripture and of the manifold senses of it in general, not regarding the literal sense in particular, his testimony favors little: for it can be explained out of the variety of senses, as was said in disputations 15 and 16. The third testimony is of St. Basil, who in the proem of the work On the Holy Spirit admonishes that in sacred Scripture syllables, letters, points, nay even the very words and orations are to be weighed; but this testimony proves little: for, where even a single literal sense of Scripture exists, that must be done, whether for a better understanding of it, or for eliciting mystical senses; not in all places of Scripture, but in many and those more difficult.

Caput III - With a certain moderation the latter opinion is approved

Indeed this latter opinion, on account of Augustine's authority, recently obtained first place among the Scholastics, especially among the more learned interpreters of Scripture; therefore I will try to defend it, with a certain moderation, lest, while we are eager to commend the fecundity of Scripture, we attribute excessive license of interpreting to the mind of the Holy Spirit. In whose exposition two things must be observed by us. One is that it has not hitherto been defined by the Church that multiple literal senses can sometimes suit the same letter; and although the Fathers, not without fruit of spiritual doctrine for the edification of the Church, variously interpret some places and each one in his manner tries to investigate the mind of the Holy Spirit - indeed the Doctor explains the same place in various ways - yet none of the Fathers, except Augustine thus far, has affirmed that all those senses are under the same letter from the intention of the Holy Spirit. For Jerome, whom we reported for the second sentence, does not speak of the literal but of the mystical sense, which is called a sacrament or mystery; and therefore he said that in that book of

the Apocalypse there are as many sacraments as words; nor indeed is there need that the Old Testament abound more in these senses; or, if he speaks of the literal, yet of the prophetic one, which is rightly called a sacrament, or mystery.

There are also reasons not lacking for this sentence. First is: if God, who is the chief author of Scripture, is so fecund in intelligence that with the single word of his mind he at once expresses infinite things, why can he not by the same written word also signify several things? The second reason: God could designate several things by the same realities, which no one denies; for the same manna, as Paul bears witness in 1 Corinthians 10, represents the Eucharist; but with the author of Wisdom, chapter 16, it represents the Word and the Eloquium of God: why therefore can he not by the same words also denote several things? since words are no less suitable for God for signifying than things are. The third reason is taken from places of Scripture, first indeed from the more obscure ones, which God on that account made difficult, that we might interpret them in various ways. For which cause it is said in Daniel 12: "Shut up the words and seal the book until the appointed time; many shall pass through, and knowledge shall be manifold"; on which place St. Jerome says: "He commands that he fold up the words and seal the book, that many may read and may seek the truth of the history, and, on account of the greatness of the obscurity, may opine different things." Then from other places, under which we are compelled to assign multiple literal senses, which, being examined singly below, I pass over for now.

By way of exaggeration he said that under single words there lie multiple understandings, to commend the fecundity of the revelations of one and the same book; therefore, when no manifest and certain legitimate sense and true meaning of some place appears, which the Fathers variously expound, we ought to look upon their various interpretations, which have nothing contrary to sound doctrine, yet not assert with certainty that this rather than that is according to the mind of the Holy Spirit, although it will be permitted to embrace one of them as more probable than another.

This Augustine plainly taught in On Christian Doctrine, book 2, chapter 27, in these words: When from the words of the same Scripture not some one thing, but two or even more, are understood, even if it is hidden what he who wrote it understood, there is no danger if each of them can be brought into agreement with the truth, as can be taught from other places of the sacred Scriptures: as if he were saying that this alone is permitted, when the mind of the writer is not certainly and determinately known.[200] Therefore, that some place is variously expounded by the Fathers must not for that reason be judged to contain various senses by the intention of the Holy Spirit, but only that various senses are probably assigned by the Fathers; on which account Jerome, just cited a little above, rightly said that the more difficult places in Scripture were left so that, on account of the greatness of the obscurity, the studious might opine different things; he did not say, so that they might assert with certainty various senses, but that they might opine different things. This difficulty of Scripture and this study excites to learning, and renders Scripture itself very commendable; from which it appears that what was alleged in the third reason for the second

200. St. Augustine, De doctrina Christiana, 2.27.

opinion has no weight; for no one denies that the same place can be fruitfully illustrated by various senses, but those who follow the first opinion only contend that but one literal sense is contained under the same letter by the intention of the Holy Spirit. Wherefore the second opinion can only efficaciously be proved, if the same testimony is referred to different things signified historically in Scripture, or if by a definition of the Church, or by the common sentiment of the Fathers, a twofold literal sense is said to be under the same letter.

Next it must be observed that there is no literal sense which not only the principal author of Scripture, who is God, but also the writer did not understand; not so, however, with the symbolic and the mystical. For Augustine seems to have been excessive in Confessions, book 12, chapters 30 and 31 (which, saving the reverence due so great a Doctor, I would say), when he concedes that all and each true thing that anyone can understand under one letter pertains to the literal sense. For it appears difficult to believe that God would have wished the sacred history, which He willed to be written for man, to be so much and so variously veiled, and that, so that he might signify these things at once, He would have impelled the writer to write.

Wherefore I for my part think that under the same letter several literal senses are sometimes contained, whenever it is probable that the sacred writer understood them all, and they fit the context of Scripture and cohere rightly with it. Such, therefore, must be the agreement of the things with one another and with the very words, that one and the other signification not be dissonant to the same letter and context. In this way I would judge that in that place of Isaiah 53, "His generation who shall declare?" two literal senses are contained - of eternal generation and of temporal; for each is so admirable and, to that extent, seems to fall under one and the same consideration, that the Prophet, in wonder, rightly said, "His generation who shall declare?" Both senses, moreover, fit the context very well, as we shall see in the following disputation, where we shall examine many other places of Scripture under which several literal senses seem to be contained; and with this moderation applied, I judge the later opinion to be truer.

But with the mystical there is not the same ratio, since things themselves, not words, are proximately signified. Wherefore the Holy Spirit could have understood some mystical sense which the sacred writer by no means attained. For the writer, who not only took down what was dictated, but also wished to express the conception of his own mind, did enough by using the words themselves for signifying, even if the things to the same effect did not concur; for it belonged to the supreme Author, who moved the writer, to mark out also by the very things narrated in the history something further for posterity. Wherefore it was necessary that both senses, namely, the literal and the mystical, be under the same letter by the intention of the Holy Spirit, even if the writer knew only the literal.

It is proved: for the sacred writer was not like a mere amanuensis, who would only take down dictation, not understanding the sense of the words, but he also wished to write down the conceptions of his own mind; and, in that way, he sometimes used the past tense, or even the future, to signify what would happen to posterity, or to furnish salutary lessons. But if the Holy Spirit had wished to express by the words something else than what the writer understood, either

in whole or in part, the writer would have been an amanuensis and a kind of irrational instrument of the divine Word, which is absurd; and this I judge must be conceded to the first opinion, which it assumed in its third reason.

Nor, indeed, did St. Thomas teach the opposite in 2-2, question 173, article 4, and Cajetan in the same place; for in that place they only dispute about the Prophets, whether they always knew that which they prophesied; and they very well teach that the Prophets sometimes did not know all the things which in their visions, deeds, or words the Holy Spirit intended; and that is because the mind of the Prophet is an instrument of the efficient cause.[201] From which doctrine nothing can be gathered against what we have said up to now; for this is true precisely because the Prophets did not know all things distinctly and in detail; from this, however, it does not follow that there is some literal sense besides the intention of the Prophet himself writing; for those things were noted by them confusedly and in general. The other things, however, which the blessed Thomas teaches there, are not to be understood about the sacred writer, but about those who, with their own word, prophesied some things, while in reality they understood one thing, but the canon (of Scripture) contained something far different; as was the case with Caiaphas, John 11: "It is expedient for you that one man should die for the people, and not that the whole nation perish."[202] I admit indeed that St. Thomas in that article therefore said that there can be several literal senses under the same letter, which he says must be from the intention of the author, because the author of Scripture is God; he did not say, because the writer could at the same time understand and intend them; he does not, however, deny that.

But because, the earlier opinion having been left, the later one has been embraced with a certain moderation, we must satisfy the reasons on both sides which seem to fight against us.

Reply to the first argument of Medina: I reply that not so much on account of that fear which this author suspects, as on account of the authority of Augustine the later opinion obtained credit among many and the chief interpreters; nor is it necessary that those things which in the New Testament are alleged - even if that expression is added, "that it might be fulfilled" - be cited in the literal sense; it is enough that they sometimes be understood in the mystical sense, as was said above in disputation 14.[203]

To the second reason I say that there are not as many places in Scripture as some commonly think, which contain more literal senses, as we shall see in the following disputation; there are, however, some, one of which we have already cited in the preceding chapter.

The third reason very well proves what was said above in the second notation, namely, that several literal senses are thus to be conceded under the same letter, that nevertheless they not be too diverse and little coherent; for this would seem rather a fault of the writer than a fecundity of doctrine. But the variety of senses in the mode stated above takes nothing of strength away from

201. St. Thomas Aquinas, Summa theologiae, 2-2, q. 173, a. 4; Thomas de Vio (Cajetan), ad loc.

202. John 11:50.

203. Refers to the author's own treatment above, Disputatio 14. Other loci cited in the chapter: Daniel 12:4; Isaiah 53:8; 1 Corinthians 10:1 - 4; Wisdom 16. Michael Medina, De recta in Deum fide, lib. 6, cap. 25.

Scripture for proving the dogmas of our faith. Yet it is very much to be noted that the places of Scripture on which the mysteries of our religion chiefly depend have nothing of obscurity from a multiple sense under the same letter, although some are difficult on account of various readings.

The solutions to the reasons for the second opinion can also easily be given, and the testimonies of the Fathers were explained above in chapter 3. To the first reason, I say that, although God is fecund in intelligence so as to be able to express many, and most diverse, things with one word, nevertheless He did not wish to do that, because Scripture was used only so that He might speak with us and signify deeds or mysteries to men. But signification ought to be weighed not from the fecundity of the speaker, but from the capacity of the hearers; otherwise, He who would not accommodate Himself to the hearers would be worthy of blame; and although, for the reasons said above, God has left many places obscure in Scripture, nevertheless He ought not, beyond the accustomed manner, to express under the same Scripture senses so diverse and so little coherent.

To the second reason I reply that the case is not the same for things and for words; for words of common usage and community among men are received according to vulgar and common signification, by which discourse is composed in the manner of ordinary speech; and the context of those things which are narrated is most aptly adapted to the way in which they are commonly wont to be told, while it is not of the same speech to signify things so various and little coherent. But things themselves, as each one wishes, can be able to denote another thing on account of other reasons; then, indeed, the signification ought to be evident to the hearers by itself; but the other signification, when it is recondite and understood as mystical, is called a spiritual sense. Hence it is said that things themselves especially diverse, and little coherent, denote other things, not so words, which ought to signify.

But to the former part of the third reason about the more obscure places, which in various ways are interpreted in chapter 3, section 5, I say this: after that there will be a place where we shall discuss in what places we recognize several senses to concur; we will speak of this in the following disputation.

Notandum - What it is for there to be several literal senses under one letter: I judge that under the same letter several literal senses are sometimes contained, whenever it is probable that the sacred writer understood them all, and they fit the context and the words such that one and the other signification is not dissonant to the same letter and context. - The mystical sense is not necessarily known to the sacred writer: the Holy Spirit could have intended a mystical sense which the writer did not attain; it suffices that the literal sense be known to him.

Disputatio XVIII - Various passages are to be examined

Various passages are examined.

- Some notes. Caput I.
- The place of Psalm 2: "The Lord said to me." Caput II.
- The place of Genesis 1: "In the beginning God created." Caput III.

- The place of Daniel 9: "And in the temple shall be the abomination." Caput IV.
- The place of Isaiah 53: "Our infirmities," etc. Caput V.
- The place of Isaiah 53: "His generation, who shall declare it?" Caput VI.

Caput I - Some notes

In addition, God used the sacred writer as an instrument endowed with reason and understanding, who signified in writing, after the manner of men, the things which he understood in his mind. Wherefore he ought not to express by the same Scripture such various and least congruent things as the second opinion contends.

To the second reason I answer that the rationale of things is not the same as that of a word with respect to signifying; for words are taken according to the popular and common signification among all, from which also a discourse ought to be composed in such a way that it best fits the context of the things narrated. But it is not customary that so various and least coherent things be signified by one and the same discourse; whereas things do not signify among all according to a usage commonly received, but, as each one will, he can by things denote this or that. Then too the signification by words ought to be manifest to the hearers; the other signification is hidden, and therefore is called the mystical and spiritual sense. From the fact, therefore, that by things many, and those most diverse and least coherent, are denoted, it does not follow that they must also be signified by words.

As to the first part of the third reason, concerning the more obscure places which various Fathers interpret, enough has been said in chapter 3; but as to the latter, concerning places in which we are compelled to concede more senses, we shall speak in the following disputation.

First it must be premised that some bring forward those places which, on account of a variant reading, also contain diverse literal senses: thus indeed many senses are not assigned to one and the same letter, but the same Hebrew text, translated in a different way, signifies various things. Now, however, we inquire about various literal senses under the one and the same letter and reading. The variety of a translation is wont to arise for many causes; and whatever reason has been introduced, even if it be found in the Vulgate edition itself, about it a sense-controversy is not to be understood.

Now there are four principal causes whence the variety of a reading takes its origin, of which the first two pertain to Hebrew codices, the other two to Latin or Greek. The first is the change and variety of the points or vowels: for since the Hebrew scribe, after his native manner, wrote the individual words with the consonants alone, under which the points or vowels were understood from usage, it came to pass that the Seventy Interpreters understood other vowels, and translated otherwise than Jerome and other Hebrews; and this variety is in fact found even in the Vulgate itself. For in Genesis 47 Jerome reads thus: "And Israel, when he swore, adored, turning to the head of the bed"; but Paul, to the Hebrews 11, following the version of the Seventy, renders it thus: "And he adored the top of his staff." And both readings are found in the Vulgate. In this way it is not surprising that under the same place several senses lie hidden. Whether, however, the Holy

Spirit so moved the Hebrew scribe that, writing out the words with those consonants, he willed diverse points to be understood under them, and used the same consonants to express diverse words, is not of this place. We shall speak of this matter later, where we treat of the authority of the Vulgate edition as regards all its parts and individual words.[204]

The second cause of a various reading is the ambiguity of a Hebrew word, whence various versions of the same place have proceeded. But if each version is not in the Vulgate edition itself, it does not pertain to the present question; for anyone can easily say that the Hebrew writer willed to signify only that thing which the Vulgate edition expressed in Latin, from which alone we argue for confirming the dogmas of our faith, because it alone has been proposed as the rule of faith; whereas the others, especially the Seventy, although not to be despised, have not been so approved by the Church as regards all their parts. But if this second kind of diverse reading is found in the Vulgate itself, as was the first, the same is to be said of it as of that.

The third cause of a various reading is the variety of Latin codices, which has arisen either by the error of scribes or in some other way. The fourth cause is the variety of points whereby periods and clauses are distinguished. Wherever, therefore, there shall be such variety of readings, or any other whatever, there cannot but be a variety of literal sense. Now, however, the question must be treated of the variety of this sense under the one and the same reading altogether.

Next it must be observed that there are not diverse senses of the same place, nor diverse readings, whenever they are referred to signify wholly the same thing, even if the things themselves seem various and diverse. Thus it happens in that verse of Psalm 2, "Apprehendite disciplinam," which we have thus from the translation of the Seventy; but others, with no change made in the points, render the Hebrew text literally thus: "Kiss purity"; others: "Kiss purely"; others: "Kiss the Son." Yet the sense comes to the same: for that verse exhorts that all receive with reverence the true Messiah and his law or discipline; and because a kiss is a sign of subjection and reverence, the same is to kiss the Son, that is, to receive himself and his doctrine purely and with reverence.

Now, therefore, with regard to the present question, it remains that we examine some places which under the one and the same letter or reading seem to contain various senses. Of the more recent theologians, who embrace the second opinion set forth in the preceding disputation, almost all admit that there are few such places; those, however, which are wont to be adduced, we shall here subjoin.[205]

204. The author promises to treat this question later: "we shall speak of this matter, 2.2, q. 1, art. ..., where we shall treat of the authority of the Vulgate edition as regards all its parts and individual words."

205. Above, Disputatio 14, on places such as Hosea 11:1 ("Out of Egypt I called my son").

Caput II - The place of Psalm 2: "The Lord said to me"

Setting aside certain Scripture places brought forward, such as that of Hosea 11: "Out of Egypt I called my son," etc., in which we have shown that there are not two literal senses, but one literal and another mystical or accommodated, the first place to be examined by us is Psalm 2: "The Lord said to me: Thou art my Son, this day have I begotten thee," in which a twofold literal sense has seemed to some to be signified.

First, the eternal generation of Christ is signified, because to prove this Paul recites it to the Hebrews 1, in this manner: "For to which of the angels did God ever say, Thou art my Son, this day have I begotten thee?" Thus do Rufinus and Augustine interpret Paul, as also on the Psalm itself Augustine in the Enchiridion c.49 and in the book or oration on the five heresies c.4, after the middle; Chrysostom, Theophylact, and Oecumenius on chapter 1 of the Epistle to the Hebrews; Tertullian, Against Praxeas c.7 and 11; and Athanasius seems to have understood it in the same way, in the oration against the Arians which is after the four sermons, and in the epistle of the decree against Arius in the Nicene synod.[206] And the word of the past tense "I have begotten," and the adverb of the present "today," beautifully describe the eternal generation: for it has something of the past, namely perfection and consummation; but of the present, perseverance without succession, whereby it embraces all times together. For, as Augustine most aptly noted, "This day neither begins yesterday, nor ends at the beginning of tomorrow; it is always today." Moreover, Paul marks the difference between the Son and the angels, that the Son is called begotten from the Father's substance, whereas the angels are not begotten, but made, according to that Psalm 103: "Who maketh his angels spirits."

Furthermore, in the same place the generation of Christ according to the flesh seems to be signified, which the particle "Today" indicates. Thus understand Gregory of Nyssa in homily 2 on Ecclesiastes, Oecumenius, and Theodoret on Hebrews 1, although Oecumenius asserts both expositions.[207]

Likewise Cyprian, book 2 Against the Jews, testimony 8, and Augustine in the book Questions on the Old and New Testament q.14; namely, because Augustine refers these words to a temporal generation, which he thinks to have been made in baptism, when that voice was heard: "This is my beloved Son," etc.[208] Finally, by the same testimony the resurrection of Christ seems to be signified: for Paul in Acts 13 says thus: "And we announce to you the promise which was made to our fathers: that God has fulfilled this to their children, raising up Jesus, as it is written in Psalm 2: Thou art my Son, this day have I begotten thee." In which sense Hilary interprets the same place, and

206. Rufinus; St. Augustine on the Psalm; St. Augustine, Enchiridion, c. 49; the book or oration De quinque haeresibus, c. 4; St. John Chrysostom; Theophylact; Oecumenius on Hebrews 1; Tertullian, Adversus Praxean, cc. 7, 11; St. Athanasius, Oration against the Arians (after the fourth sermon), and the epistle of the decree against Arius in the Nicene synod.

207. St. Gregory of Nyssa, Homily 2 on Ecclesiastes; Oecumenius; Theodoret on Hebrews 1.

208. St. Cyprian, Adversus Iudaeos, lib. 2, Testimonium 8; St. Augustine, Quaestiones in Vetere et Novo Testamento, q. 14.

Chrysostom on that Psalm; whom Ambrose seems to follow, book 3 On the Sacraments c.1.[209] Wherefore, not only from the Fathers, but also from Paul, who used the aforesaid testimony in a twofold way, it seems necessary to gather a double literal sense of that place.

I answer, however, first, that there is none of the Fathers who plainly admits two literal senses of that place; but some of them interpret it in one way, others in another: from which it is not permitted to conclude that there are more literal senses of it. For, as we noted in the preceding disputation, it is far different that the same place be variously explained by the Fathers, and that there be two literal senses of it. Moreover, not only does none of the Fathers say that there are two literal senses of that place, but even expressly Nyssen and Theodoret affirm that it must be understood only of the temporal, not of the eternal, generation. Add that Bede, Lyranus, Dionysius, and Cajetan, on Acts 13, assert that the testimony of that Psalm is cited by Paul not to prove the resurrection, but the divinity of Christ. From whose opinion - although their exposition is not approved by me, as I shall show below - it follows that there are not more literal senses of that place. Why then do certain more recent writers think it indubitable that more literal senses are contained in that place?

Wherefore I judge that there is only a single one, which, in my opinion, Paul in Acts 13 clearly expressed, namely the resurrection of Christ according to his humanity; of whose resurrection's day he understood that, "This day have I begotten thee"; that is, as Hilary expounds, "I have raised thee," which agrees with Ambrose in these words: "When thou didst redeem the people, when thou didst call to the kingdom of heaven, when thou didst fulfill my will, thou didst prove thyself to be my Son." Therefore that "Today" signifies the day on which, the cause of human redemption being accomplished, Christ declared himself to be begotten of the Father. Thus, however, not the eternal generation itself, but its manifestation in the glorious resurrection, is described in that Psalm; just as in Romans 1 it is said: "Who was predestined the Son of God in power by the resurrection of the dead," that is, declared on the day of the resurrection. That Paul willed by that testimony in Acts 13 to prove this, the context itself shows: for when he says, "As it is written," the particle "as" is referred to what preceded; either then to the promise made, or to the fulfillment of the promise: but to neither can it fit; it remains, therefore, that it be referred to that, "Raising up Jesus," etc.

But to the eternal generation or divinity of Christ, I do not see in what way it can be referred, as Bede and others wished. Both because thus there would be no connection of the text, and also because in that passage there is no mention of the divinity or the eternal generation. The circumstances of the Psalm clearly indicate that that part is to be understood of Christ's humanity: for what is said, that he is constituted king by him upon his holy mount Sion, is understood of Christ according to his humanity; as also that: "Ask of me, and I will give thee the nations," etc.; which was fulfilled in the very time of the resurrection, in which Christ, Matthew 28, said: "All power is given to me in heaven and on earth; go therefore, teach all nations," namely those which God had given to him for an inheritance and possession. The resurrection, too, in Scripture is called generation, Matthew 19: "In the regeneration, when the Son of Man shall sit"; and to the

209. St. Hilary and St. John Chrysostom on Psalm 2; St. Ambrose, De sacramentis, lib. 3, c. 1.

Colossians 1 Christ is called "the firstborn of the dead." Whether, however, that Psalm in the literal sense is to be understood of Christ, or only mystically under the figure of David, is not to be disputed in this place: therefore it is not permitted to understand the mind of those Fathers who think that by this testimony a temporal generation of Christ is signified, as referring to that which was made in the Virgin's womb; but rather, as I have explained, to the resurrection.

Moreover, that this same place of the Psalm is also cited to the Hebrews 1 to prove something else, is not to be denied; yet from this it is not permitted to infer that there are two literal senses of it as regards the same part; for neither...

Therefore that word, "Today," signifies the day on which, the cause of human redemption having been accomplished, Christ declared himself to be begotten of the Father. And this is not the eternal generation itself, but its manifestation in the glorious resurrection, as is described in the Psalm; just as it is said in Rom. 1: "who was predestined the Son of God in power by the resurrection from the dead," that is, declared on the day of the resurrection. That Paul wished to prove this in Acts 13 by the same testimony the very context shows: for when he says, "As it is written," the particle "As" ("Sicut") is referred to what preceded; either, then, to the promise that had been made, or to the fulfillment of the promise. But it can fit neither; therefore it remains that it be referred to this: "Raising up Jesus," etc.

But I do not see how it can be referred to the eternal generation or to the divinity of Christ, as Bede and others wished. Both because thus there would be no coherence of the text, and also because in that passage there is no mention made of the divinity or of the eternal generation. Moreover, the circumstances of the Psalm plainly indicate that that part is to be understood of the humanity of Christ: for that which is said, "I have been established king by him upon Sion, his holy mountain," is understood of Christ so far as his humanity is signified; and likewise that, "Ask of me, and I will give thee the nations," etc., which was impressed at the very time of the resurrection, when Christ said in Matt. ult.: "All power is given to me in heaven and on earth; go therefore, teach all nations," namely those which God had given him for inheritance and possession. Resurrection too in Scripture is called generation: Matt. 19, "In the regeneration, when the Son of Man shall sit," and in Col. 1 Christ is called "the firstborn of the dead." Whether indeed that Psalm in its literal sense is to be understood of Christ, or only mystically under the figure of David, is not to be disputed in this place; thus, therefore, I would understand the opinion of those Fathers who think that by this testimony a temporal generation of Christ is signified, such that it is referred not to that which took place in the Virgin's womb, but to the resurrection in the manner explained.

However, that this same place of the Psalm is cited in Heb. 1 to prove something else - about generation - must not be denied; from this nevertheless it cannot be gathered that there are two literal senses of that passage with respect to the same part. For it is not referred there to the confirmation of Christ's eternal generation, as the adversaries contend, but only to the manifestation of his eternal sonship. For this purpose the former clause is brought in, "Thou art my Son"; but the other, "Today I have begotten thee," is cited not to prove anything, but as a part of the same verse. For Paul there is not disputing about the eternal generation of Christ, but about his divinity, showing that he is so much more excellent than the angels, as he has inherited a more

excellent name, namely that of Son, which no angel ever obtained. Therefore he said: "For to which of the angels did God say, 'Thou art my Son'?" That is, whom did he ever call his Son? Although therefore Paul does not wish by that testimony to prove the same thing in both places, nevertheless it does not follow that, with respect to the same part, it has a double sense: for in Hebrews 1 Paul presses the particle "Son," but in Acts 13 the particle "I have begotten thee."

On scriptural testimonies alleged for multiple literal senses

Caput III - Locus Genesis 1: "In principio creavit Deus"

The second testimony is Gen. 1: "In the beginning God created heaven and earth." Passing over that variety of senses enumerated by St. Augustine in Confessions, book 12, ch. 20, which he thought to be signified in the same book, chs. 30, 31, both from the intention of the Holy Spirit and even of the very writer (for this is rather difficult), more recent authors still contend, by another more efficacious reason, to show several senses of that place; not because other Fathers interpret that place variously (for this is not enough, as we noted in the preceding disputation), but because from this place two Catholic truths have been defined by the Church. One, that the world began at the beginning of time; the other, that all things, spiritual and corporeal, were created together at the same moment of time. Therefore that, "In the beginning," will signify two things: one, "In the beginning of time"; the other, "before God made anything else." They say that both truths are defined from the same place of Genesis in the Lateran Council under Innocent III, and it is reported in the chapter Firmiter, De summa Trinitate et fide Catholica.[210]

Yet I think that by the aforesaid reasoning it is not rightly proved that there are two literal senses of that place. First, because those two truths are not both defined in the Lateran Council, as the adversaries contend, which will be shown more fully below in disputation 22, ch. 4. Next, because the Council does not adduce that testimony in confirmation of both truths, but of only one.

Caput IV - Locus Danielis 9: "Et erit in templo abominatio"

A third text is wont to be brought forward, Dan. 9: "And in the temple there shall be the abomination of desolation; and even to consummation, and to the end, desolation shall continue." We certainly cannot deny that Christ foretold this would be future, either in the devastation of Jerusalem (Matt. 24), or, as some prefer, in the coming of Antichrist. Also in 1 Macc. 1, under King Antiochus Epiphanes, who set up an idol to be adored in the temple, Scripture shows the outcome of this prophecy. Therefore there is a double prophetic sense of that place expressed in Scripture itself.

But there is no Father who said that in that place those two abominations of desolation were foretold by the prophet Daniel, both the one of which mention is made in the books of the Maccabees and the one which Christ announced would be future. Although interpreters variously understand what would be future after Christ, yet that does not force us to understand several

210. Fourth Lateran Council (1215), cap. Firmiter, De summa Trinitate et fide Catholica.

senses under that place, as was noted above. Moreover, in 1 Macc. 1 the prophecy of Daniel is not reported as if it were then fulfilled, indeed there is no mention of it; rather, the nefarious crime of Antiochus is described, who set up an idol to be adored in the temple and profaned all sacred things. And the author of that book calls the idol "the abomination of desolation," using Daniel's words only by accommodation, which very well suited that abominable idol at the time of that desolation of the sanctuary; just as in the same chapter he applies the words of Tob. 2 and Amos 8 to the feast days of the Jews under that same King Antiochus, saying: "Her feast days were turned into mourning, and her sabbaths into reproach." He does not say the prophecy was then fulfilled, but he narrates the mourning of the same kind, described in the same words. About the accommodation of these places we spoke in disputation 14, ch. 1.[211]

Caput V - Locus Isaiae 53: "Vere languores nostros ipse tulit, et dolores nostros ipse portavit"

A fourth place is Isa. 53: "Truly he himself bore our sicknesses, and our pains he carried," which Peter seems to have understood of our sins in 1 Pet. 2, when he says of Christ: "Who himself bore our sins on the tree," that is, he paid the penalties of them on the wood of the cross. Which sense the very context of Isaiah confirms. But Matthew, ch. 8, narrating bodily sicknesses cured by Christ, cites this testimony, and says: "That it might be fulfilled which was spoken by Isaiah the prophet, saying: He himself took our infirmities and bore our sicknesses." We have, therefore, two senses of that place expressed in the New Testament.

That Matthew did not cite this testimony only by verbal allusion and accommodation is clear from what was said in disputation 14, chs. 3 and 4; for the Evangelist said, "That it might be fulfilled," which way of speaking cannot agree with mere accommodation of words, as was shown there. Therefore it is necessary that, at least in a mystical sense, that testimony be alleged; but it does not appear, from the two aforesaid senses, which of them is mystical. Therefore each will be literal. However, it is clear that neither of them is mystical: for either the cure of bodily diseases is signified literally, and the cure of sins, which are spiritual sicknesses, mystically, as Anselm teaches on that place of Matthew; but this cannot be. For Isaiah seems to have spoken of spiritual sicknesses and sins, as hold St. Athanasius in Oration 4 against the Arians somewhat before the middle, Elias Cretensis in the first apologetic oration on St. Gregory Nazianzen explaining those words, "He fights against all," St. John Chrysostom, hom. 28, Theophylact on Matt., and Euthymius on Matt. 8, Nicetas in or. 39 on St. Gregory Nazianzen - which is "On the Holy Lights" - explaining the words, "He indeed became man," and St. Cyril, book 5 on Isaiah; the sense of the words and the context of Isaiah plainly show the same.[212] For he did not say, "Truly he removed our sicknesses," but "he bore them." That is, he took them upon himself by bearing them; and Peter said, "He bore on his body." Next he says: "And our pains he himself carried," that is, he willed to

211. Above, Disputatio 14, ch. 1, on accommodation.

212. St. Athanasius, Oration 4 against the Arians; Elias Cretensis, Oration 1, the Apologetic on St. Gregory Nazianzen; St. John Chrysostom, Homily 28; Theophylact on Matthew; Euthymius on Matthew 8; Nicetas, Oration 39 on St. Gregory Nazianzen ("On the Holy Lights"); St. Cyril, book 5 on Isaiah.

undergo for us the punishments due to our sins, which the Seventy plainly explained thus: "He bears our sins and for us suffers pain." Therefore Isaiah immediately subjoins: "And we thought him as it were a leper, and struck by God." He is speaking, then, of Christ's passion, who, bearing for us the punishments we had deserved, was thought by men a leper, and struck by God for his sins. Therefore "to bear sicknesses" and "to carry pains" with Isaiah is not to remove illnesses and heal infirmities, but to take upon himself our sins to be paid for by the due punishment. Therefore the literal sense ought to be about spiritual sicknesses.

But neither, conversely, can it be said that bodily diseases are mystically signified, and that in that sense the testimony is cited by the Evangelist to confirm Christ's miracle in the cure of diseases. For the healing of sinners ought not to be a figure of the cure of bodily sicknesses, but rather the contrary. Since, then, Matthew says that the above was fulfilled by Isaiah in the cure of bodily diseases, neither can it be understood in a mystical sense, as has been proved; nor is the testimony adduced by mere accommodation, as we were saying above; therefore we are plainly forced to admit a double literal sense of that place.

I, however, think it is not necessary to admit two literal senses of that place, even if by that testimony, understood literally, a double healing can be proved, namely of bodily and of spiritual sicknesses. This first I am brought to believe because none of the Fathers cited, who saw the difficulty proposed, said that there are two literal senses of that place. Secondly, because the letter of Isaiah itself does not exhibit both senses as diverse: for in order that by that testimony the healing of bodily sicknesses be expressly signified, the Prophet ought not to have said, "He himself bore our sicknesses," but, "he removed them"; and, "our pains he himself alleviated." But Christ took upon himself nothing of our bodily sicknesses; for he removed leprosy, but he himself for us was not a leper; he removed fever, but he never for us had a fever. He is said, however, to have borne our sins in himself, because he, who deserved that we pay the penalties, himself paid them, as has been explained; by which reason also he was thought a leper and struck by God. Therefore the words of Isaiah - if we attend to the express force of the words - do not literally signify the cure of bodily sicknesses.

Thirdly, because Anselm, seeing the difficulty proposed, said that the testimony of Isaiah is referred to bodily sicknesses only mystically; whose opinion, although in this I do not approve, is nevertheless true in this, that he does not concede a double and diverse literal sense.

To the difficulty, therefore, proposed I reply, that the testimony of Isaiah is to be understood literally of the satisfaction for sins, which the reasons set forth above sufficiently convince. From the testimony indeed of Blessed Peter this sense cannot be confirmed so openly, since he does not report the prophecy of Isaiah, but only seems to allude to his words; although I do not doubt that Peter, by appropriating the words, wished to explain the true sense of this prophecy. But that Matthew cites this testimony to prove the cure of bodily diseases is of no consequence. For St. Chrysostom, Euthymius, and Theophylact, in the places cited, answer that, even if Isaiah said that of sins, nevertheless it is alleged by the Evangelist for the cure of bodily diseases, because very often they arise from sins. Yet they do not sufficiently explain by what reason Matthew applied the testimony to this end. Euthymius and Theophylact, in the places cited, although they had said that

Isaiah spoke those words of sins, nevertheless say that the Evangelist alleged it for the cure of bodily sicknesses, because often they arise from sins. This is not enough explanation, since Matthew so applied it that he said not merely, "He bore sicknesses or sins," etc., but "he bore them" or "carried them." St. Chrysostom alone seems to answer rightly, namely that the Evangelist historically accepted the testimony of the Prophet and transferred it from the Prophet to the Evangelist: which, if it be understood in this way, that the literal sense the Prophet intended remains, it does not stand against us, as above we have said.

Better, therefore, Rupertus says, and Ticelinus, and other recent authors, that the testimony of Isaiah was referred by the Evangelist to the cure of bodies, not because the words of Isaiah expressly signify this cure, but because, as Rupertus says, He undertook a work which was to operate more gravely upon souls, so that the same might first visibly cure bodies, and then his remedies might come to the souls, and to the care of the sicknesses of souls. Wherefore, as Ticelinus reminds, the testimony of Isaiah is to be understood of bodily sicknesses less principally. For the cure of these was a sign and confirmation of the interior healing. Therefore, when Isaiah says, "Truly he himself bore our sicknesses," by the best reason is to be understood the healing of spiritual sicknesses, such as Christ was operating; that by the very cure of bodily sicknesses it might be signified and confirmed. Yet by those words he expressly denotes only the healing of spiritual sicknesses, but indicates only the cure of bodily ones. Therefore we must interpret the word "bore" otherwise than it was explained above, for that which is "to carry." For it does not refer to bodily and spiritual sicknesses at once, but only to spiritual. For the cure of bodily sicknesses Isaiah did not express by these words, but insinuated it.

Caput VI - Locus Isaiae: "Generationem eius quis enarrabit?"

The last place is Isa. 53: "His generation who shall declare?" which many understand of the eternal generation of Christ: Pope St. Clement in Epist. 1; Eusebius, Preparation for the Gospel, book 11, ch. 2; St. Cyril, On the Trinity, book 5; St. Basil, Against Eunomius; Justin in the Dialogue with Trypho; St. John Chrysostom, Homily on the Incomprehensible Nature of God; and Homily 21 on Matthew; St. Augustine, De symbolo ad Catechumenos, book 1, ch. 3, and book 2, ch. 67. Of the temporal generation it is interpreted by Iustinus, Quaest. 4 on the Gospels; Tertullian, Against the Jews, ch. 13; St. John Chrysostom, Homily on the birthday of John the Baptist.[213]

Dicitur, moreover, that he bore our sins in himself, because he himself fully paid the penalties which we deserved, as has been explained; and for this reason, too, he was thought to be a leper and stricken by God. Therefore the words of Isaiah, if we attend to their express force, do not literally signify the healing of bodily diseases. Third, because Anselm, seeing the difficulty

213. St. Clement I, Epistle 1; Eusebius, Preparation for the Gospel, book 11, ch. 2; St. Cyril, On the Trinity, book 5; St. Basil, Against Eunomius; Justin Martyr, Dialogue with Trypho; St. John Chrysostom, Homily on the Incomprehensible Nature of God; Homily 21 on Matthew; St. Augustine, De symbolo ad Catechumenos, book 1, ch. 3; book 2, ch. 67; Iustinus, Quaestiones on the Gospels, q. 4; Tertullian, Adversus Iudaeos, ch. 13; St. John Chrysostom, Homily on the Nativity of John the Baptist.

proposed, said that the testimony of Isaiah is referred to bodily ailments only mystically; whose opinion, although in this I am not persuaded, is nevertheless true in that he does not concede two different literal senses.

To the difficulty proposed I answer, therefore, that the testimony of Isaiah is to be understood literally of the healing of sins, and that the healing of bodily diseases was both to signify and to confirm that healing, as the reasons set forth above sufficiently prove. From the testimony indeed of blessed Peter this sense cannot be so openly confirmed, since he does not report Isaiah's prophecy, but only seems to allude to his words; although I do not doubt that Peter wished to explain, with the Prophet's words adopted, the true sense of this prophecy. But that Matthew recites this testimony to prove the healing of bodily diseases is no impediment. For Chrysostom, Euthymius, and Theophylact reply in those places that, although Isaiah was speaking of sins, nevertheless it could be alleged by the Evangelist for the healing of bodily diseases, because very many of them arise from sins. Yet they do not sufficiently explain by what reason Matthew applied the testimony to this end. Euthymius says that nothing hinders calling bodily diseases that arise from sin "sins" as well. But in this way I do not see how the testimony of Isaiah could serve Matthew's purpose, since of those diseases Isaiah does not say, "He himself bore our infirmities," that is, he endured or carried them.

Chrysostom answers in one word, namely, that the testimony of the Prophet was taken historically by the Evangelist. But if he understands it in that way because the literal sense is also called historical, it does not agree with the things said above.

Better therefore do Rupert, Titelman, and other more recent writers say that Isaiah's testimony is understood of the healing of sins; nevertheless, that it is referred by the Evangelist to the healing of bodies, not because the words of Isaiah expressly signify this healing, but because, as Rupert says, Christ, whose work is to heal the ailments of the soul, undertook to operate upon the sicknesses of bodies, so that, by first curing those visibly, the true physician might become known, and then at length he might come to cure the ailments of souls. Wherefore, as Titelman admonishes, Isaiah's testimony concerning bodily diseases is to be understood as less principal. For their cure was a sign and confirmation of the interior healing. When, therefore, Isaiah said, "Surely he has borne our infirmities," with the best reason he understood the healing of spiritual diseases, which Christ was going to work, to have been also signified and confirmed by the healing of bodily diseases; yet he expressed in those words only the healing of spiritual infirmities, and indicated that of bodily ones only tacitly. Therefore there is no need to interpret the word "bore" in some other way - as above it was explained for "to carry." For it is not referred to bodily and spiritual diseases together, but only to spiritual ones. For Isaiah did not express the healing of bodily diseases in these words, but insinuated it.

On Isaiah 53: "Generationem eius quis enarrabit?"

The place of Isaiah, "Generationem eius quis enarrabit?" - which some understand of the eternal generation of Christ, namely Clement the Pope in Epistle 1; Eusebius in the Preparation for the Gospel, book 11, chapter 2; St. Cyril, On the Trinity, book 5; St. Basil, Against Eunomius; Justin Martyr in the Dialogue with Trypho; St. John Chrysostom in the Homily on the Incomprehensible Nature of God and Homily 21 on Matthew; St. Augustine, De symbolo ad Catechumenos, book 1, chapter 3, and book 2, chapter 67. Of the temporal generation, however, interpret Justin in the Questions on the Gospels, question 67; Tertullian, Against the Jews, chapter 13; St. John Chrysostom, in the Homily on the Praises of John the Baptist.[214]

There are also three other interpretations of this place, which are approved the more by recent writers. For Isaiah's words are: "By oppression and judgment he was taken away; his generation who shall declare?"

- The first exposition is: "his offspring, who shall declare?" according to that of the same chapter, "If he shall lay down his life for sin, he shall see a long-lived seed."
- The second interpretation takes "generation" for Christ's sojourn in this mortal life.
- The third understands "generation" as the nation of that age: for the Prophet, marvelling at the nefarious crime of that people who stained their sacrilegious hands with the blood of Christ, exclaims, "Generationem eius, that is, that evil age, who shall be able to declare?" For the Hebrew word in other places signifies "age," that is, the men of some age and time: Ecclesiastes 1, "A generation passes, a generation comes"; and passim in the Psalms; and Matthew 12 called the wicked and unbelieving men "a wicked and adulterous generation."

But, as is gathered from the doctrine of the preceding disputation, we ought not so to concede multiple senses under the same letter that they do not in some way agree among themselves, but rather so that they may seem, as it were, to fall under one reason. Such, however, are not the generation of Christ, the offspring of the Christian people, the pilgrimage of Christ, and the depraved people of that age: therefore the Writer did not wish to express all those things together by the same letter. The two prior interpretations, indeed, which we brought from the Fathers, I would readily grant to agree equally with the very same letter; and thus to admit for this place two literal senses: for it does not seem to be beyond the order of the place that the Prophet, when he was speaking of Christ's death, should speak at once of the eternal and of the temporal generation of Christ. For when he foretold the shameful death of Christ, caught up into admiration, in order the more to exaggerate the same, he subjoins: "Generationem eius quis enarrabit?" And each generation of Christ, as being admirable and ineffable, contributes very much, for the same reason, to the extolling of Christ's death; wherefore with good reason the Prophet referred to either. But

214. St. Clement I, Epistle 1; Eusebius, Preparation for the Gospel, book 11, ch. 2; St. Cyril, On the Trinity, book 5; St. Basil, Against Eunomius; Justin Martyr, Dialogue with Trypho; St. John Chrysostom, Homily on the Incomprehensible Nature of God; Homily 21 on Matthew; St. Augustine, De symbolo ad Catechumenos, book 1, ch. 3; book 2, ch. 67; Justin, Questions on the Gospels, q. 67; Tertullian, Adversus Iudaeos, ch. 13; St. John Chrysostom, Homily on the Praises of John the Baptist.

the other interpretations which we have recounted are so diverse among themselves that neither the context nor the sense of the Prophet can stand, if he were to comprehend all those things. Wherefore the translation of Foreirus does not please me, who renders: "his age, who shall declare?" For thus no place is left for the expositions of the Fathers: he ought, therefore, to have rendered with the Vulgate, "Generationem." But if there are other testimonies which contain two literal senses, from the doctrine of the preceding disputation they can easily be discerned.

Distribution and order of the whole treatment. In the prolegomena to the whole theological treatment necessary to it, in Prima Pars, question prologue, St. Thomas approaches the matter set before him, which he divides universally into three parts. He says the first is about God; the second, about the movement of the rational creature into him; the third, about Christ, who is the way by which the rational creature tends to God. Again, he divides the disputation about God, which the first part comprises, into three members: in the first, he says there is treated of the things that pertain to the essence (*essentia*) of God from this question 2 up to 26; in the second, about the Trinity (*Trinitas*) of persons, from question 27 up to 43; in the third, about the production of creatures, which is the work of God, from question 44 to the end. Of all which 64 prior questions, which among others are held to be principal, we have now chosen to be explained and illustrated in these our commentaries and disputations. He begins, moreover, this first part with the disputation about God according to himself, because he is the subject of this theological discipline, so that he may show the scope of the whole treatment, to which all the other things look. He himself indicated this reason briefly in the preface of this question. Let this alone, with other things omitted, suffice for us.

Nor, indeed, does this order by which we serve, in knowing God, the natural mode of inquiry, in any way stand opposed. For although we come into the knowledge of God from the knowledge of created things, on account of which it seemed we ought to treat first about other things; yet, because this our Theology presupposes exact knowledge of created things from philosophy, it ought not at once in the beginning to dispute about those things, but to begin from God, whom it proposed to itself as its scope. Nay more, afterward it ought to treat of other things so soberly that it dispute of them only insofar as they have an ordered relation to God as to cause and end, and that chiefly from revealed principles.

Finally, when we say that the knowledge of God is obtained from the knowledge of created things, it is not to be taken in such wise that we think perfect speculation of other things to be necessary for it. For sufficient is the knowledge of those things which anyone, even unskilled, sees daily, if he would turn some small consideration to them. For by adding to, or taking from, things of that sort, one can know God, and grasp the doctrine of our faith, as far as is possible to a wayfarer. Therefore there was no need that our Theology begin from the consideration of other things. I acknowledge, nonetheless, that for perceiving it exactly, perfect knowledge of philosophy is necessary; yet rightly the whole disputation begins from God himself. But why St. Thomas disputes about the subject of Theology - Whether he is - when, after the manner of other sciences, he ought to have supposed it, has been said above in disputation 10, chapter 7.

Quaestio II - On God

Articulus I - Whether God exists is self - evident

Objicitur primo. It seems that God's existence is self-evident. For those things are said to be self-evident to us, the knowledge of which is naturally implanted in us, as the father says about first principles. But, as St. John Damascene says at the beginning of his book, the knowledge that God exists is naturally inserted in all: therefore that God is is self-evident.

Objicitur secundo. Further, those things are said to be self-evident which, the terms being known, are known at once, which the Philosopher attributed to the first principles of demonstration in the Posterior Analytics I. For, knowing what the whole is and what a part is, at once it is known that every whole is greater than its part. But, once one understands what this name "God" signifies, at once it is had that God is. For by this name is signified "that than which a greater cannot be signified"; but that is greater which is in reality and in the intellect than that which is in the intellect alone; whence, once this name "God" is understood, since he is at once in the intellect, it follows also that he is in reality. Therefore that God is is self-evident.

Objicitur tertio. Further, that truth is is self-evident: because he who denies that truth is, grants that truth is not: for if truth is not, it is true that truth is not; but if something is true, it is necessary that truth be. But God is Truth itself, John 14: "I am the way, the truth, and the life." Therefore that God is is self-evident.

Sed contra: No one can think the opposite of that which is self-evident, as is clear from the Philosopher in Metaphysics IV and Posterior Analytics I concerning the first principles of demonstration. But one can think the opposite of that which is God's being, according to that of Psalm 52: "The fool said in his heart: There is no God." Therefore that God is is not self-evident.

I answer -

I answer: It happens that something is self-evident (per se notum) in a twofold way, in one way in itself (secundum se), and in another way with respect to us (quoad nos). For some proposition is self-evident from this, that the predicate is included in the notion (ratio) of the subject, as when one says that man is an animal; for animal belongs to the notion of man. If, therefore, what the predicate is and what the subject is be known to all, that proposition will be self-evident to all: as is clear in the first principles of demonstrations, the terms of which are certain common notions which no one is ignorant of, such as being and non-being, whole and part, and the like. But if among some there be not known what the predicate is and what the subject is, the proposition, as far as it is in itself, will be self-evident, yet not to those who ignore the predicate and the subject of the proposition. And for that reason it happens, as Boethius says in the book On the Hebdomads, that certain are common conceptions of the soul and self-evident only to the wise, as that incorporeals are not in a place.[215]

215. Boethius, De hebdomadibus (On the Hebdomads), around the principles of that work.

I say therefore that this proposition, God is, as far as it is in itself, is self-evident: because the predicate is identical with the subject. For God is his existence (*esse*), as will be clear below. But because we do not know what God is, it is not self-evident to us, but needs to be demonstrated through things that are more known with respect to us and less known with respect to nature, namely through effects.

Reply to the first: To know that God is, in some common way and under a certain confusion, is naturally implanted in us, inasmuch as God is man's beatitude (*beatitudo*); for man naturally desires beatitude, and what is naturally desired by man is naturally known by the same. But this is not simply to know that God is - just as to know that one who is coming is coming is not to know that it is Peter, although it is Peter who is coming. For many consider the perfect good of man, which is beatitude, to be riches; others pleasures; others something else.

Reply to the second: It must be said that the one who hears this name "God" does not necessarily understand something to be signified "than which nothing greater can be thought," since some have believed God to be the world. Granted also that everyone understood that by this name "God" is signified that which is said, namely that than which a greater cannot be thought; nevertheless it does not follow on that account that he understands that what is signified by the name exists in the nature of things, but only in the apprehension of the intellect. Nor can one argue that therefore it is in reality, unless it be granted that there is in reality something than which a greater cannot be thought - which is not granted by those who posit that God is not.

Reply to the third: That truth is in general is self-evident; but that the first truth exists - this is not self-evident with respect to us.

By this single conclusion the whole doctrine of the article is contained: That God is, is a proposition self-evident in itself; to us, however, it is not, but needs to be demonstrated through other things.

Disputatio XIX - On the doctrine of this article

Deum esse, even to wayfarers, to be self-evident, was taught by Aegidius and others.[216]

The common and truer position asserts the opposite.[217]

It is proved in the best manner for the aforesaid position.[218]

The arguments of the former position are resolved.[219]

In this controversy the first opinion is that of Aegidius on I, dist. 3, q. 2, with the solutions to the arguments added by Thomas of Argentina, q. 1, art. 3; Albert, Summa, part 1, q. 17, part 2, q.; the author of the Summa of Auxerre, book 1, ch. 2 of the preface; Nicholas of Lyra on Exodus 5 "I do

216. Aegidius (Giles of Rome), In I Sent., dist. 3, q. 2; Thomas of Argentina, q. 1, art. 3; Albert the Great, Summa theologiae, part 1, q. 17; the Summa of Auxerre (Antissiodorensis), book 1, ch. 2 of the preface; Nicholas of Lyra on Exodus 5 ("Nescio Dominum, et Israel non dimittam"); Abulensis (Tostatus) on the same chapter, q. 2.

217. See below, Cap. II: the common position of St. Thomas and the Scholastics.

218. Below, Cap. III.

not know the Lord, and I will not let Israel go"; and Abulensis on the same chapter, q. 2, who affirm that that proposition is self-evident not only in itself, as St. Thomas and others wish, but also to wayfarers. This is what Epicurus seems especially to have taught, whose sentiment Cicero relates and marvelously commends in book 1 On the Nature of the Gods, near the beginning. After he has said that the opinions of the common people about God are found in the greatest inconstancy and ignorance, he adds: "From which one may consider how inconsiderately and rashly they speak who venerate Epicurus, to be counted in the number of those about whom this question is: he alone first saw that there are gods, because nature itself had impressed their notion in the minds of all. For what race of men, or what kind, does not have without teaching a certain anticipation of the gods, which Epicurus calls πρόληψιν, that is, a fore-conception in the mind, or a certain information, without which nothing can be understood or sought or discussed?" This is Cicero. Therefore, since in the judgment of Epicurus the notion of God is impressed by nature, it follows that it is not acquired by ratiocination. For a notion acquired by ratiocination adheres to the soul not by its own nature but by labor and study. He indicates this more clearly when he calls it an anticipation without teaching, because it is generated in the mind without a teacher, and precedes all ratiocination. For without it, he says, nothing can be understood or discussed; which is proper to those principles which are called self-evident.

Moreover, among the Fathers, first St. Gregory Nazianzen taught this, in Oration 24, which is on the coming of the Egyptians, where, speaking of God whom he calls Father, he says: "Now as to the Father there is something that must be said, which we put down as something certain, because this knowledge is naturally implanted in us: namely, that God exists, which also the very created things, and their preservation and government, proclaim with one consent of all." Elias of Crete elucidates these words in this way: "About the Father, therefore, one ought to say nothing as if it were to be proved, but to posit it as certain, because this knowledge - namely that God exists - is naturally implanted in us, which even the very things created, with one and the same consent, concede, as it were by the natural notions of God already imbued and inborn."[220]

Second, St. John Damascene, On the Orthodox Faith, ch. 1: "There is no mortal," he says, "to whom this is not naturally implanted by God, that he have a clear perception that God exists; indeed the things themselves that have been created, and their preservation and government, proclaim the majesty of the divine nature." In which place Damascene, besides the notion of God that we acquire from creatures, says that there is also one imparted to us by nature, as Nazianzen and Elias said: which certainly would not be naturally imparted, if that God exists were not self-evident to us.[221]

Third, St. Jerome on Job 36 "All men see him," speaks thus: "By the knowledge of the good of nature, the knowledge of the Creator is in the hearts of men; and although someone be so depraved and cold as to wish to be alien from his Creator, nevertheless there is no one who is utterly without his warmth." And in the commentary on the Epistle to the Galatians, which is contained in tome 6,

219. Below, Cap. IV.
220. St. Gregory Nazianzen, Oration 24; Elias Cretensis ad loc.
221. St. John Damascene, De fide orthodoxa, ch. 1.

on that place of ch. 1 "When it pleased," he says: "From which it is evident that knowledge of God is born in all by nature. But no knowledge is in us by nature unless of those things which are self-evident to us: therefore that God exists is self-evident to us."[222]

Anselm also adds, who in the book Against the Fool, about God who is that than which a greater cannot be thought, writes thus: "Finally, that it is such that, once thought, its indubitable existence is immediately and certainly perceived by the intellect - this must be proved to me by some indubitable argument." By these words he does not propose that he is going to prove that God exists from that, that than which a greater cannot be thought, but he says that at once, without any other, it appears to any intellect that that is in the nature of things than which a greater cannot be thought; and in the Proslogion, ch. 3, he explains how it can be thought that God is not; and in ch. 4 he shows that the fool said in his heart "There is no God," because he did not conceive in any way the very reality which is God, but had only the concept of the word. Whence he infers that there is no one who can think that God is not, if once he conceive what is signified by the name "God." Nor does he speak of a proper concept, which we call intuitive, but of any other concept of the thing distinct from the concept of the word, which we have of God, as Aegidius has most aptly noted: which truly would not be true unless that proposition, "God is," were self-evident.[223]

It is proved also by the reasoning of Aegidius and of Argentina. A self-evident proposition is recognized by three marks. First, if the predicate is of the notion of the subject: and this is found in the said proposition. Second, if it is such that it cannot be directly denied, as often as it is not directly asserted. I say "not directly," that is, when the signification of the words is not well understood: but this proposition, "God is," cannot be denied by anyone, if he understand the thing signified, as Anselm taught. Third, if the truth of the proposition is so manifest that anyone immediately judges it to be true, if he understands what it signifies: as Boethius taught in the Hebdomads in the book "Whether the being that is is good," around the principles of that work, whose condition falls under the second [mark], and therefore in the same way will fit the proposition "God is." Moreover Albert, Aegidius, and Thomas of Argentina add that that proposition is self-evident, not indeed to all, but to the wise and of sound mind, who perceive the signification of words: for, as Boethius teaches in that place, a common conception of the mind can be self-evident in a twofold way: first to all men, without any distinction; then to the wise alone.

In this article Cajetan and more recent theologians do not consent to the Doctors cited in confirming the same; for they vary in defining a self-evident proposition.[224] First, the authors do not deny St. Thomas's opinion, which lays down that a self-evident proposition is that in which the predicate is of the notion of the subject; they impugn another definition as less sufficient - Scotus, Gregory, and Aureolus - for, as he proposes, that in which a first part of the definition of the subject, and its accident, is predicated, is a proposition lacking a middle; and the first will likewise be self-evident: which Cajetan and Ferrariensis ingeniously take up in the places cited. They excuse

222. St. Jerome on Job 36; Commentary on Galatians, at ch. 1.

223. St. Anselm, Liber pro insipiente; Proslogion, chs. 3 - 4; Aegidius ad loc.

224. Cajetan, in this article, q. 1, art. 2; recent theologians cited in the same context; Scotus; Gregory of Rimini; Aureolus; Ferrariensis.

St. Thomas indeed, that in this place he did not hand down a definition of a self-evident proposition, but only said that then indeed a proposition is self-evident when the predicate is of the notion of the subject, in which he speaks truly, and gives a sufficient cause; yet he did not assign a cause so adequate, and a proper definition of a self-evident proposition. For every proposition in which the predicate is of the notion of the subject will be self-evident: not thus. Wherefore in that same place St. Thomas's proposition, defined in this same way, must be understood with the addition, as Cajetan and Ferrariensis warn, of the particle: "formally," or "virtually," or "proximately," or "remotely." They say this because of a proposition in which some part of the definition is predicated of the subject, which is of the notion of the subject at least virtually or remotely.

On this basis the Holy Doctor teaches this position: that "God is," according to itself is self-evident, because the predicate is of the essence of the subject; yet it is not self-evident to us because of the defect of our intellect, since we do not know what God is: and hence we need some reasoning to assent to it, whereas to someone understanding perfectly it would be self-evident. With St. Thomas agree Capreolus, Cajetan, Ferrariensis, and the more recent [authors]

But on the contrary Scotus, in that question "Since according to their art a proposition is self-evident," divides a self-evident proposition into that which is self-evident "in itself and to us": and he teaches that what is self-evident is that which by any intellect, the terms being perfectly known, is judged to be true of itself: and thus he teaches that this proposition, "God is," is absolutely self-evident ...

But as to whether it is absolutely and in itself self-evident, they vary somewhat as to the manner. This position is expressly handed down by St. Thomas in this very article and in the contrary argument; by Ferrariensis in the place cited; by Ricardus; by the Master of the Sentences; by Scotus in many places; by the Expositor on the Sentences; by Gregory; by Cajetan; by Bañez; by Capreolus; by others.[226]

This foundation St. Thomas teaches for this position: that "God is," according to itself, is self-evident because the predicate is of the essence of the subject; yet to us it is not self-evident properly and in the mode of a first self-evident proposition, since we do not know what God is: and therefore we need some reasoning to assent to it; which, to one perfectly understanding what God is, would be self-evident. And thus St. Thomas teaches; Capreolus, Cajetan, Ferrariensis, and the more recent [authors], follow.

On the contrary, however, Scotus holds in this question: he distinguishes a self-evident proposition in that which is self-evident in itself and to us; but self-evident is what is judged to be true of itself by any intellect, the terms being perfectly known: and thus, he says, this proposition, "God is," is self-evident absolutely

226. St. Thomas, here in Art. I; Ferrariensis, ibid.; Richard; the Master (Peter Lombard); Scotus in various places; Gregory; Cajetan; Bañez; Capreolus; and others.

The common and truer opinion, in which the other Scholastics agree, affirms that the proposition "God exists" is not self-evident (per se nota) to human beings on the way; I do not say that it is not self-evident absolutely, but only that it is not so to wayfarers: in this the rest of the Scholastics consent. Whether, however, it is absolutely self-evident, they differ among themselves.

This opinion thus explained has been handed down by St. Thomas in this article, and in Contra Gentiles, c. 10 and 11; likewise by Ferrariensis there, Richard in I, dist. 3; Ockham, q. 4, post medium; Durandus, dist. 9, q. 3; Gabriel, q. 4, a. 2, n. 2; Scotus in I, dist. 2, q. 2, n. 1; from these to the question; Gregory, q. 1, ar. 2; Bassolis, q. 2; Capreolus, q. 2, ar. 1, concl. 3; Henry in this article; Cajetan and more recent theologians in the same place.[227]

Yet in confirming it the Doctors do not agree: for they vary in defining a self-evident proposition.

First, St. Thomas, in confirming this view, prefaces that a self-evident proposition is that in which the predicate is "of the account" (de ratione) of the subject; a definition which, as less sufficient, is impugned by Scotus, Gregory, and Aureolus: just as the proposition in which a first property (prima passio) is predicated of the definition of the first and adequate subject is a proposition lacking a middle and is first, so also it will be self-evident. This is candidly admitted by Cajetan and Ferrariensis in the places cited.[228] They excuse St. Thomas on the ground that in this place he did not hand down the definition of a self-evident proposition, but only said that then indeed it is such a proposition when the predicate is of the account of the subject - by which he assigned a true and sufficient cause, but not an adequate and proper one, of a self-evident proposition. For every proposition in which the predicate is of the account of the subject is self-evident, though not conversely. And if elsewhere the Blessed Thomas has defined a self-evident proposition in the same way, that definition must be understood - as Cajetan and Ferrariensis warn - with the addition "formally," or "virtually," or "proximately," or "remotely." They say this because of propositions in which a first property is predicated of the definition of the subject, which is "of the account" of the subject at least virtually or remotely.

On this groundwork the Holy Doctor teaches that this position, "God exists," is self - evident in itself (secundum se), because the predicate is of the essence (essentia) of the subject; yet it is not self - evident to us, because of the defect of our intellect: for we do not know of God what he is (quid sit), and therefore we need some reason for assenting to it - which otherwise would be self - evident to one who understands perfectly. With St. Thomas agree Capreolus, Cajetan, Ferrariensis, and more recent authors

But on the contrary, Scotus in that question, § "Quoniam secundum," affirms that it is pointless to distinguish a self-evident proposition into that which is self-evident "in itself" and "to us"; rather, that is self-evident which is judged self-evident by any intellect that perfectly knows the terms; and thus he teaches that this proposition, "God exists," is absolutely self-evident; yet to us it

227. St. Thomas, in this article; Contra Gentiles, c. 10 - 11; Ferrariensis, there; Richard, I, dist. 3; Ockham, q. 4 post medium; Durandus, dist. 9, q. 3; Gabriel (Biel), q. 4, a. 2, n. 2; Scotus, I, dist. 2, q. 2, n. 1; Gregory (of Rimini), q. 1, ar. 2; Bassolis, q. 2; Capreolus, q. 2, ar. 1, concl. 3; Henry, in this article; Cajetan, and later authors.

228. Cajetan, in this article, q. 1, art. 2; Ferrariensis, loc. cit.

is not self-evident that God exists - in which, as I said, he agrees with the authors of the former view. However, he does not for that reason admit the distinction of a self-evident proposition which he had just before rejected; rather, he says that in us wayfarers, for whom it is not self-evident that God exists, there is one proposition in which "being," or existence, is predicated from the objective concept which we have of God; and another in the blessed, which is to them self-evident because the terms are perfectly and quidditatively apprehended.[230]

Finally, Gregory, in that question 1, ar. 1; Gabriel, in that question 4, ar. 1; Ockham, and Bassolis, in the places cited, say that a proposition is self-evident, to the assent of which the knowledge of its own terms suffices, whether intuitive or abstractive; nor do they divide into self-evident "in itself" and "to us," but they say it is self-evident for him to whom, apprehending the terms either intuitively or abstractively, it is known without anything further. Wherefore in their view a self-evident proposition is not said to be such absolutely, but relatively to the knower. They add furthermore that the signification of this proposition, "God exists," is self-evident to one seeing him, but not to us who know abstractively; and that there are two propositions, one in the mind of the one seeing God, the other in the mind of the wayfarer. Wherefore, although the same thing signified can be said to be self-evident by its nature, yet not to us likewise; nevertheless the same proposition is not to be distinguished in this way, since the concept is not the same in the predicate and in the subject with respect to the one seeing God, and with respect to the wayfarer. If they understand this of the very connection and of the concept, insofar as it includes the mode of conceiving, this opinion - wherein also Scotus agrees - seems to me well grounded.

Thus, with respect to things, it can rightly be said that some are self-evident by their own nature, but not to us; while others are also to us self-evident: just as Aristotle, Posterior Analytics I, c. 2, said that some things are more known by their own nature, others to us; he said "by their own nature," i.e., with respect to the intellect without imperfection; but "to us," i.e., to an intellect with imperfection from the communication of the senses. Wherefore this opinion also agrees with Henry, and does not differ in reality from the view of St. Thomas and others.

Set this dispute aside, then, it is certain that that is not self-evident which is not known from its own terms, but through another. Wherefore, if "that God exists" becomes known to us through another, it will not be self-evident to us.

But that it becomes known to us through another is proved by Gabriel: first, because one to whom a proposition is self-evident cannot doubt it; but we can doubt this proposition, "God exists"; therefore to us it is known not per se but through another. Next, theologians and philosophers labor greatly to prove that there is one God: therefore that is not self-evident to wayfarers; for the things that are self-evident are either proved easily, or do not need proof.[231]

Caput III - The best reason by which the aforesaid opinion is proved

I judge the aforesaid opinion to be truer, but hitherto not sufficiently proved.

230. Scotus, in the question "Quoniam secundum...," on I, dist. 2, q. 2, n. 1.
231. Gabriel (Biel), q. 4, a. 2, n. 2.

First, from the fact that we do not have a proper and quidditative concept of God, it does not follow that God is not self-evident to us. For that principle, "Whatever is, or is not," under which an angel, and God himself, are contained, is self-evident to us: therefore it is also self-evident that God either exists or does not exist, although we do not have a proper concept of God. Similar is this: every incorporeal thing is not commensurate with place; and yet we do not have a quidditative concept of an incorporeal thing.

Next, Gabriel's first reason proves only that to the foolish and ill-disposed it is not self-evident that God exists: for only they are the ones who can doubt. The opposing opinion, however, does not affirm [that it is self-evident] to all, but to the wise and well-disposed. Nor is anything an obstacle because some have doubted, or even have held that there are many gods: for now the controversy is not about unity, but about the existence of God. And if to the well-disposed and well-prepared some doubt should at times creep in about this matter, it does not prevent God from being self-evident to them: for this happens because the thing is remote from sense; if the mind adheres to it with slight consideration, yet when it considers it fully, every doubt vanishes.

Gabriel's latter reason also proves nothing: for it is not difficult to demonstrate that God exists, except to fools and to those who are foolish in evil.

There is therefore a single reason which best confirms this opinion. It must first be premised that God, absolutely considered in himself, is without any relation to creatures - as we will show in Disputation 104, c. 6 - yet by us he is not known except in relation to them: wherefore all the names of God denote some kind of relation, either of lordship, or of cause, or of another notion; or this is established by induction. Whence it follows that this truth, "God exists," could not be proposed to anyone so absolutely that the signification of the name "God" would not be conceived in relation to the whole universe, either under the mode of Lord, or of Prince, etc.; and thus he conceives not only God but also other created things, of which he acknowledges God to be the common Lord.

From this foundation the aforesaid opinion is shown: for if, upon hearing this proposition "God exists," God were not known by us absolutely and without any relation to creatures, then that God exists would not be self-evident to us - not only not evidently, but not even probably: as certain first opinions are wont to be self-evidently probable. This is quite manifest.

But since God is always apprehended in relation to creatures, then even if, by steady labor and by the constant exercise of discipline, some at once assent and judge that God exists, nevertheless for that reason he is not self-evident to us: for from the creatures themselves, in reference to which God is known, there arises some reasoning, by which we give assent to the aforesaid proposition.

Wherefore, just as it is impossible, in our present state, for God to be thought by us unless he be related to creatures, so also it cannot happen that he become known to us self-evidently and not through other things. Thus this whole machine of the universe, and this mass and amplitude of the heavens, leads us by a certain discourse into the knowledge of a universal Emperor and Governor of all; which knowledge the Epicureans call a certain anticipation without teaching, impressed by God upon the minds of men; but St. Jerome and St. John Damascene, and Elias, call it naturally

inborn; and St. Gregory Nazianzen finally says that by natural reason learned men and the well-instructed arrive at it - not that such knowledge needs no steady labor of discipline as do other truths, but that, from created things, reason collects that there is a Creator and Ruler.[232]

The later argument of Gabriel proves nothing else: for it is not difficult to demonstrate that God exists, except to the foolish and to those obstinately set in evil.

A true reason is brought forward. There is therefore a single reason that best confirms this position. It must first be premised that God in himself is absolute, without any relation to creatures, as we shall show in disputation 104, section 6; yet he is not known by us except in relation to them: wherefore all the names of God denote some kind of relation, either of dominion, or of cause, or of some other account, as is clear by induction. Whence it comes about that this truth, "God is," cannot be proposed to anyone so absolutely that he does not conceive the signified of the name "God" in relation to the universe - either under the mode of Lord, or of Prince, etc.; and thus he conceives not only God but also other created things, whose Lord and Master he acknowledges.[233]

From this foundation the aforesaid position is shown: for if, upon hearing the proposition "God is," absolutely and without any relation to creatures, God were known by us, then it would not be to us self-evident (*per se notum*) that God exists, not only not evidently, but not even probably; just as certain first opinions are wont to be probable of themselves. This is sufficiently manifest. But since God is always apprehended in relation to creatures, even if, without toil and the assiduous exercise of discipline, we at once assent and judge that God exists, nevertheless on that account he is not self-evident to us: for from the creatures themselves, in the order to which God is known, by a certain sudden ratiocination we yield assent to the aforesaid proposition. Therefore, just as it is impossible, in our present state, for God to be thought by us except in relation to creatures, so also it cannot happen that he be known by us of himself and not through other things.

Accordingly, this machine of the universe, this mass of the heavens and their vastness, by a sudden sort of discourse leads us to the cognition of some Ruler and Governor of all. This knowledge indeed Epicurus called an "anticipation," as it were, impressed by God upon the souls of men without teaching; St. Jerome, St. John Damascene, and Elias said it is naturally implanted; and St. Gregory Nazianzen finally said that men are taught and imbued by natural reason, such that this notion does not need the assiduous labor of discipline, as other truths do, but is taken in by the very light of nature from created things.[234]

But because St. John Damascene seems to assign a twofold notion of God - one naturally implanted in us, another deduced from the preservation and governance of the creatures - we, however, assert that the former also is gathered from creatures; it will be worthwhile to point out in how many ways the cognition of that proposition, "God is," is had, from which also the meaning of Damascene will become clear. God is naturally known to us in three ways. The first is through

232. St. Jerome on Job 36; Commentary on Galatians at ch. 1; St. John Damascene, De fide orthodoxa, ch. 1; Elias Cretensis ad loc.; St. Gregory Nazianzen, Oration 24.

233. Disp. 104.6.6.

234. Epicurus' term "anticipation"; St. Jerome; St. John Damascene; Elias Cretensis; St. Gregory Nazianzen.

human discipline, the belief which we learned in childhood from the teaching of our parents; this so clings to the mind that it seems to us to be known of itself that God exists, because from childhood, strengthened by the common judgment of men, that knowledge has taken growth with us; although in truth it is not self-evident to us, but believed on the authority of others.

Secondly, we know God not from the authority of others, but because, this universe of things having been seen, without any other toilsome ratiocination it immediately appears that God exists - if not evidently, at least with the highest probability: so that, just as among men we see that in a house, or a city, or a kingdom, there is some supreme governor, thus at once in this universe we believe that there is some Prince of all. This knowledge of God, however, is not without every ratiocination; but it is gathered by so easy a consequence that it seems as if implanted by nature.

Thirdly, finally, from the preservation and governance of creatures, by a more exact consideration and by a discourse from effects to cause, we prove, not only probably but also evidently, as far as is permitted to the natural philosopher, that God exists. St. John Damascene recounts the two latter ways, and he called the prior of these two - that is, the second in order - naturally implanted, the ratiocination being most readily assigned; but the later, which stands in the third place, he distinguished from the prior: because although each is had by ratiocination from creatures, nevertheless the prior is acquired with so easy a business that it seems to be without discourse. Therefore St. Gregory Nazianzen, in Oration 3, which is the second On Theology, somewhat at the beginning - as we shall report his words in the following disputation - asserts that by the law of nature we are all taught that God exists, while reason from the things subject to our sight and placed in right order gathers that there is an author of them.[235]

Caput IV - Refutation of the arguments of the first opinion

It remains that we refute the arguments of the first opinion. As to all the testimonies, except that of Anselm, enough was said in the preceding chapter. To Anselm, however, I first answer that, even if it were the case that God cannot be not thought by us, once we conceive the thing signified by the name, nevertheless that does not come from this, that the proposition "God is" is self-evident; but because from created things it immediately, either evidently or probably, appears that God exists, so that it is not in our power to deny it. I confess, nonetheless, that Anselm, as it were by a hyperbole, said that God cannot be denied by anyone except by him who perceives only the sound and not the signified of the name: which he said in the same sense in which we shall say that in one who sins there is always a defect of cognition, because he grasps the very thing itself so lightly that, like one drunken and tipsy who repeats doctrines, he seems to retain only the consonance of the words, although he still in some way understands the very thing itself. Therefore, because the fool does not penetrate sufficiently what is signified by the name "God," he says in his heart that he is not.[236]

235. St. Gregory Nazianzen, Oration 3 (the second On Theology).
236. St. Thomas, I-II, q. 77, a. 2.

The argument also of Aegidius and of the Argentinensis is not difficult to overturn. I answer, therefore, that neither all those three conditions, nor any one of them, suffices for something to be called self-evident. The first does not suffice - namely, that the predicate be of the essence (*essentia*) of the subject in the proposition: for in this, "An angel is corporeal," or in this, "An angel is incorporeal," the predicate is of the essence of the subject, yet neither is self-evident, but concerning each there was a variety of opinions. The second also, and the third - which come to the same - likewise do not make a proposition self-evident: for even a proposition evidently demonstrated is at once judged true by all, yet it is not self-evident. And even if both conditions concur in the same proposition, as can happen, they will not make it self-evident: for it can be that such a proposition is proved by an easy discourse.

It is objected: But someone may say that a proposition which is evidently demonstrated and is not self-evident is judged only true and not able to be denied whenever it is conjoined with the demonstration; but taken by itself and separately, it can easily be denied: wherefore that which, taken according to itself, is always judged true, is rightly called self-evident: such as that "God is" seems to be.

It is answered: I answer that this proposition is never separated from a proof: for since God cannot be conceived except in relation to creatures, the aforesaid proposition is always known to us through another; yet because that discourse is easy and sudden, the aforesaid proposition does not seem to be proved through another.

Articulus II - Whether the existence of God is demonstrable

Proceeding in the second way, it seems that the existence of God is not demonstrable.

1. For that God exists is an article of faith; but those things that belong to faith are not demonstrable: because demonstration causes knowing, but faith is of things not appearing (Heb. 11). Therefore the existence of God is not demonstrable.
2. Furthermore, the middle of a demonstration is "what a thing is" (quid est); but concerning God we cannot know what he is, but only what he is not, as St. John Damascene says; therefore we cannot demonstrate that God exists.[237]
3. Furthermore, if it were demonstrated that God exists, this would be only from his effects; but his effects are not proportioned to him, since he is infinite and the effects finite; but there is no proportion of the finite to the infinite. Since therefore a cause cannot be demonstrated through an effect not proportioned to it, it seems that the existence of God cannot be demonstrated.

237. St. John Damascene, De fide orthodoxa, c. 4.

But on the contrary: The Apostle says to the Romans (1): "The invisible things of God are understood and seen through the things that are made." But this would not be, unless through the things that are made it could be demonstrated that God exists: for the first thing that must be understood about anything is whether it is.

I answer that there is a twofold demonstration: one which is through the cause, and is called "propter quid" (on account of which); and this is through things prior simply. Another is through effects, and is called "quia" (that it is); and this is through things that are prior as regards us. For when some effect is more manifest to us than its cause, through the effect we proceed to the knowledge of the cause. And from any effect it can be demonstrated that its proper cause exists, if indeed its effects are more known as regards us. For since effects depend upon a cause, once the effect is posited, it is necessary that the cause pre-exist. Hence that God exists - insofar as it is not self-evident as regards us - is demonstrable through effects known to us.

Reply to the first: That God exists, and other things of this sort, which can be naturally known about God by reason, as is said in Romans 1, are not articles of faith, but preambles to the articles. For thus faith presupposes natural cognition, as grace presupposes nature, and as perfection presupposes the perfectible. Nevertheless, nothing prevents that which is in itself demonstrable and knowable from being accepted by someone as believable, who does not grasp a demonstration.

Reply to the second: When a cause is demonstrated through an effect, it is necessary to use the effect in place of a definition of the cause to prove that the cause exists; and this happens especially in the case of God. For, in order to prove that something exists, it is necessary to take as the middle what the name signifies, not what the thing is in its quiddity: because the question "what it is" follows upon the question "whether it is." But the names of God are imposed from effects, as will be shown later; whence, in demonstrating that God exists through an effect, we can take as the middle what this name "God" signifies.[238]

Reply to the third: Through effects not proportioned to the cause, a perfect knowledge of the cause cannot be had; yet from any effect whatsoever it can be manifestly demonstrated to us that the cause exists, as has been said. And thus from the effects of God it can be demonstrated that God exists, although through them we cannot perfectly know him according to his essence (*essentia*).

Conclusion: The existence of God cannot be demonstrated a priori - something that also befits a proposition self-evident; yet a posteriori, and through effects, it can be demonstrated.

Articulus III - Whether God exists

Proceeding in the third way, it seems that God does not exist.

1. For if one of contraries were infinite, the other would be totally destroyed. But this is understood and signified in this name "God," namely, that he is a certain infinite good. If, therefore, God existed, no evil would be found. Yet evil is found in the world; therefore God is not.

238. "As will be shown later": see q. 13, a. 1.

2. Furthermore, what can be accomplished by fewer principles is not effected by more. But it seems that all things which appear in the world can be accomplished by other principles, on the supposition that God is not: because those things which are natural are reduced to a principle which is nature; but those which are by intention are reduced to a principle which is human reason or will. Therefore there is no necessity to posit that God exists.

But on the contrary is what is said in Exodus 3...

But on the contrary: the Apostle says to the Romans (1): "The invisible things of God are clearly seen, being understood from those things which are made." But this would not be so, unless by those things which are made it could be demonstrated that God exists; therefore God's existence is demonstrable from effect.

I answer that: There is a twofold demonstration. One is through the cause, and is called demonstration propter quid; and this is through things which are prior simply. The other is through the effect, and is called demonstration quia; and this is through things which are prior relative to us. For when some effect is more manifest to us than its cause, we proceed from the effect to knowledge of the cause; and from any effect whatsoever it can be demonstrated that its proper cause exists, if, however, its effect is more known to us. Because since effects depend upon a cause, the effect being posited, it is necessary that the cause pre-exist. Whence God's existence - since it is not self-evident to us - is demonstrable through effects known to us.

Reply to the first: That God exists, and other such truths which can be known by natural reason, as is said in Romans 1, are not articles of faith, but preambles to the articles. For faith presupposes natural cognition, as grace presupposes nature, and as perfection presupposes the perfectible. Yet nothing prevents that which in itself is demonstrable and knowable from being taken by someone as credible, who is not capable of the demonstration.

Reply to the second: When a cause is demonstrated through its effect, it is necessary to use the effect in place of a definition of the cause in order to prove that the cause exists; and this happens especially in the case of God. For in order to prove that something exists, it is necessary to take for the middle term what the name signifies, not what the thing is; because the question "what it is" follows upon the question "whether it is."

Reply to the third: Of effects that are not proportionate to the cause, perfect knowledge of the cause cannot be had; yet nevertheless from effects it can be clearly demonstrated that the cause exists, as has been said; and from the effects of God it can be demonstrated that God exists, although through them we cannot know what he is according to his essence (*essentia*).

The conclusion is that God's existence cannot be demonstrated a priori, since it is not self-evident to us; but it can be demonstrated a posteriori from effects.

Whether God exists

It seems that God does not exist.

1. For if one of contraries were infinite, the other would be totally removed. But in this name "God" there is signified a certain infinite good; if therefore God existed, no evil would be found in the world. But evil is found in the world; therefore God does not exist.
2. Furthermore, what can be accomplished by fewer principles is not effected by more. But it seems that all things which appear in the world can be accomplished by other principles, on the supposition that God is not: because those things which are natural are reduced to a principle which is nature; but those which are by intention are reduced to a principle which is human reason or will. Therefore there is no necessity to posit that God exists.

But on the contrary: from the person of God, Exodus 3: "I am who am."

I answer that: The existence of God can be proved in five ways.

The first and most manifest way is that which is taken from motion. It is certain, and evident to sense, that in the world some things are moved. Now whatever is moved, is moved by another. Nothing is moved except insofar as it is in potency (*potentia*) to that toward which it is moved; but something moves insofar as it is in act (*actus*). For to move is nothing other than to bring something forth from potency into act. But nothing can be brought from potency into act except by something which is in act, as the actually hot - namely fire - makes wood, which is hot in potency, to be actually hot; and by this it moves and alters it. But it is not possible that the same thing be at once in act and in potency in the same respect, but only in different respects; for what is actually hot cannot simultaneously be hot in potency, but at the same time it can be in potency as to being cold. It is therefore impossible that, in the same respect and in the same way, something be both mover and moved, or that it move itself. Therefore whatever is moved must be moved by another. If that by which it is moved is itself moved, this also must be moved by another; and this by another. But it is not possible to proceed to infinity, because then there would be no first mover; and consequently no other mover: for subsequent movers do not move except insofar as they are moved by a first mover; as the staff does not move except insofar as it is moved by the hand. Therefore it is necessary to arrive at some first mover, which is moved by nothing; and this everyone understands to be God. [239]

The second way is from the notion of the efficient cause (*causa efficiens*). In the sensible things we find an order of efficient causes; and yet we do not find, nor is it possible, that something be the efficient cause of itself, for then it would be prior to itself, which is impossible. Neither is it possible to proceed to infinity in efficient causes: because in all ordered efficient causes, the first is the cause of the intermediate, and the intermediate is the cause of the last, whether there are many intermediates or only one; but if the cause be removed, the effect is removed. Therefore, if there is no first among efficient causes, neither will there be a last effect nor an intermediate efficient

239. Aristotle, Physics, VIII; cf. "Ex Met." in the margin.

cause. But if one were to proceed to infinity in efficient causes, there would be no first efficient cause; and thus neither would there be an ultimate effect nor intermediate efficient causes, which is plainly false. Therefore it is necessary to posit some first efficient cause; and this everyone names God. [240]

The third way is taken from the possible and the necessary, which runs thus. We find among things certain ones that are possible to be and not to be; for some are found to be generated and to be corrupted; and consequently they are possible to be and not to be. But it is impossible that all such things be, always; for what can not-be, at some time is not. If therefore everything were such that it is possible not to be, at some time nothing would have been in existence. But if this were true, even now nothing would be: because that which is does not begin to be, except through something which is. If therefore nothing was in existence, it would have been impossible for anything to begin to be, and thus nothing would now be - which is false. Therefore not all beings are merely possible; but it is necessary that there be something necessary among things. Every necessary being either has the cause of its necessity from another, or it does not. But it is not possible to proceed to infinity in necessary things which have the cause of their necessity from another, just as it is not possible in efficient causes. Therefore it is necessary to posit something which is necessary through itself, not having the cause of its necessity from another, but rather being the cause of necessity for others; and this all call God.

The fourth way is taken from the gradation which is found in things. For there are found in things more and less good, true, and noble, and so on with the others of this sort. "More" and "less" are said of diverse things according as they approach in diverse ways to something which is in the highest degree; as that is hotter which more nearly approaches that which is hottest. Therefore there is something which is most true, and best, and most noble; and consequently that which is most being (*ens*): for those things that are most true are most being, as is said in the second book of the Metaphysics. [241] Now what is said to be "most such" in any genus is the cause of all things which are of that genus; as fire, which is the hottest, is the cause of all hot things, as is said in the same book. Therefore there is something which is cause of being, and goodness, and every perfection for all beings; and this we call God.

The fifth way is taken from the governance of things. For we see that some things which are devoid of knowledge, namely natural bodies, act for an end; which is evident from this, that they always or for the most part act in the same way in order to achieve that which is best. Hence it is plain that they attain their end not by chance but by intention. But those things which lack knowledge do not tend to an end unless they be directed by some knowing and intelligent being; as an arrow is directed by the archer. Therefore there exists some intelligent being by whom all natural things are ordered to an end; and this we call God.

240. On efficient causes and their order: see the notes "Ex Metaphysica" in the margin.
241. Aristotle, Metaphysics II (or IV), commentary noted in the margin: "2. Metaph."

Reply to the first: As St. Augustine says in the Enchiridion, God, since he is supremely good, would in no way allow anything evil to exist in his works, unless he were so omnipotent and so good as to bring good even out of evil. Therefore this pertains to the infinite goodness of God: that he permits evils to exist, and from them draws forth goods. [242]

Reply to the second: Since nature, for the sake of a determinate end, operates under the direction of some higher agent, it is necessary to reduce the things which are done by nature to God also, as to a first cause. Likewise too the things that are done by intention must be reduced to some higher cause which is not human reason and will; because these are changeable and fallible. But all things that are mobile and able to fail must be reduced to some first principle which is immobile and necessary through itself, as has been shown above.

In this article the holy Doctor proves that God exists by five means; and since in the preceding article he said that this can be demonstrated, beyond doubt in this he aims to adduce demonstrations alone.

Disputatio XX - Whether God's existence can be proved by a true demonstration

- Error of the atheists.[243]
- That it cannot be evidently shown that God exists, is maintained by Alliacensis.[244]
- That God's existence can be demonstrated is the common opinion of the theologians.[245]
- That God's existence is demonstrated by arguments.[246]

Caput I - The error of the atheists

We supposed as most well known in this question, to us, that God exists; only it had to be called back into dispute what St. Thomas set forth in these articles. But since a great crowd of atheists in our age has rushed into the Church,

Since a great crowd of atheists in our age has rushed into the Church, I judged it necessary to recount in this chapter the authors of this error. The first atheists of all, if we believe Cicero,[247] Plutarch,[248] Lactantius,[249] Eusebius,[250] and Theodoret,[251] were Protagoras - who called into doubt that God exists - and Diagoras, Melius, Theodorus the Cyrenaic, and others who expressly denied it; and therefore they were called, as it were, without God. In this same opinion, in our age, many

heretics rest fully satisfied. For as Hedio testifies in a letter to Philip Melanchthon, and Lindanus in his Doubtantia, since the men of these times, through a most extreme inconstancy, from Catholics become Lutherans, from Lutherans Zwinglians, and from these Calvinists, and, as they try and profess the several sects, having fallen headlong into the depth of evils, they deny that God exists. These atheists are now called Politicians, because they undertake the management of no other affairs than those which pertain to the external government of the state; but about religious worship they are only so far solicitous as they judge it expedient, by human policy, for holding the peoples in civil discipline and obedience. And that false simulation of piety proceeds plainly from atheism itself.

On this matter Machiavelli, a citizen of Florence, not many years ago published a book which was immediately, and with very good right, forbidden by a public edict of the inquisitors. By his continual reading and the doctrine in which he had made no little progress, Henry III, King of the French, being moved, long tolerated most evil morals and heresies in his kingdom; and, if the pious and very many Catholics of that realm are to be believed, while on the one hand he pretended to be Catholic, and on the other hand followed the morals of the heretics with the mind that he might rule the realm with the highest peace and authority, he cruelly laid it entirely waste and divided it against itself, until he ended his life by a most unhappy death. From which civil sedition a very great part of war and hardships still remains: so that even from this the Politicians may persuade themselves how little profit - indeed how much harm - atheism brings to temporal peace and to the governance of a kingdom, which alone they deem sufficient for human happiness

That very many of this sect are in the church which they call the Italian, Lindanus gathers in the place cited: that when the Calvinists, consulting among themselves about the once-for-all abolishing of the Roman pontificate, purgatory, and other dogmas, one of their leading masters said: "Let us assert that the soul perishes together with the body; thus, with purgatory, together with the Mass, we shall abolish the Roman Pontiff at a stroke." And indeed, whoever once is brought into that error, so as to think that the soul of man is mortal, will easily decline into atheism.[252]

Caput II - Alliacensis judges that the existence of God cannot be shown evidently

I judged it superfluous to confute this error by the testimonies of Scripture, of the Fathers, of the pagan philosophers, and by the common consent of all nations: for atheists will despise all these things with ease; while for Catholics they are so well-worn that there is no need to set them out one by one in detail. It is therefore enough to recall to memory that hitherto there has been no nation so barbarous that it did not acknowledge some divinity, to which it rendered worship and invoked it; so that Epicurus rightly said, as cited in the preceding disputation, chapter 1, that there was no race of men which did not have, without teaching, a certain anticipation of the gods. In confirmation of this truth Eugubinus gathers innumerable testimonies of the heathen in books 1, 2, and 6 of the Perennial Philosophy.[253]

252. Lindanus, in the place cited; on the so-called "Italian" church and Calvinist deliberations.

Therefore we must deal only with reasons; nor must we discourse by probable and merely topical arguments, but evident demonstrations are to be brought forward. But since, among Catholics who confess that God exists, some have called into doubt whether the existence of God can be demonstrated, before the reasons are set forth, this difficulty must be examined.

There was, moreover, the opinion of certain men, which St. Thomas reports,[254] who affirmed that it cannot be demonstrated, but that only by revelation it is established that God exists. The recent writers attribute this to Rabbi Moses in book 3, chapter 6;[255] however the Ferrariense, in the place against the Gentiles, only says that that Rabbi mentions this opinion, which indeed, among the Scholastics, Alliacensis followed in question 3, article 2, letter x, with a certain moderation. For he asserts that the existence of God cannot be shown evidently, yet is naturally probable; wherefore he does not refer all knowledge of God to supernatural revelation; nor, indeed, does he deny that it is most probable and such that it appears at once to all, as was set forth in the preceding disputation; he only affirms that no knowledge of God can naturally arrive at evidence.

This opinion he chiefly supports by diluting the arguments which are wont to be advanced as, so to say, concluding. Then it can be confirmed by this argument which he, in the third place, adduces at the beginning of the question: It is not evidently known to us that God is one; therefore neither that God exists. For it comes to the same thing to demonstrate that God is, and that He is one: since by the name "God" we understand nothing other than a certain one, infinite above all beings.

Caput III - That God's existence can be demonstrated: the common opinion of the theologians

The latter opinion, which I judge the truer one, is the common one among the theologians, who teach that by natural reason it can be demonstrated that God exists. Thus St. Thomas teaches,[256] as do Cajetan and more recent authors in this article and in Contra Gentiles 1, chapters 12 and 13; likewise the Ferrariense there; Albert in 1, part, question 17, first part of the question; Richard, on 1, dist. 3, q. 1, a. 9, 3; Aegidius, q. 1, a. 3; Scotus, on 1, dist. 2, q. 2, q. Ad 1. quaest.; Marsilius, on 1, q. 5, a. 1; Henricus, in Summa a. 22, q. 4.[257] Among these, however, Aegidius does not defend it in the same manner as the others; for, since he thinks - as we saw in the preceding disputation - that that proposition "God exists" is self-evident (per se nota), he is unwilling to concede that it can be demonstrated absolutely; but he claims that all demonstrations are brought only to explain what the name "God" signifies; which being explained, it is at once self-evident that He exists. And certainly, if the reasons were to do only this, that proposition would not truly be demonstrated; for by the force of the reasons no assent would be elicited, but only by the explication of the terms.

253. Agostino Steuco (Eugubinus), De perenni philosophia, lib. 1, 2, 6.
254. St. Thomas, Summa contra Gentiles I, c. 12.
255. Rabbi Moses (Maimonides), Guide of the Perplexed, III, c. 6.
256. St. Thomas, Summa contra Gentiles I, cc. 12 - 13.
257. Albertus Magnus, In I partem, q. 17; Richard (of Middleton), In I Sent., dist. 3, q. 1, a. 9; Aegidius (of Rome), q. 1, a. 3; Scotus, In I Sent., dist. 2, q. 2, Ad 1 quaest.; Marsilius, In I, q. 5, a. 1; Henricus, Summa, a. 22, q. 4.

The reason, moreover, on account of which he thinks that proposition not to be demonstrable in the aforesaid way, is of this sort: if God's existence (*esse Dei*) is God Himself, then about Him His existence cannot be demonstrated: for the same thing would be that which is demonstrated and that about which it is demonstrated. Then too it can be proved in this way: If that proposition, once the terms are explained, generates assent to itself of itself, any demonstration subsequently arriving will do nothing toward assent.

But in both points Aegidius is in error. First, when he says that the aforesaid proposition is self-evident, as we have refuted above. Then, when he asserts that it cannot be demonstrated; which is disproved by these reasons. First, although God and His existence are the same in reality (secundum rem), yet by us they are conceived as diverse, and therefore we compose the proposition in which we predicate "exists" of "God": since here there is question of a demonstration in the intellect of the wayfarer, the unity and simplicity of God cannot hinder our demonstrating that God exists. This is the teaching of St. Thomas in Contra Gentiles 1, chapter 12. Nor ought it to move one that he says that the said demonstration does not take the middle term from God Himself, but proceeds from effects.

Second, the arguments which are advanced do not explain what is signified by the name "God," but confirm the intellect, against every doubt, in assent to that proposition: for, even after the explication of the name, someone can doubt whether God exists, against which doubt the demonstration determines the intellect.

Third, even if we were to concede that the aforesaid proposition is self-evident, the intellect, to one who does not see it, could nonetheless be aided by a posteriori demonstration - if, namely, that proposition were self-evident not with the intuitive evidence they speak of, nor so manifest as other things which are nearer to our sense. Wherefore Albert, who conceded that that proposition is self-evident, nevertheless affirms that it can be demonstrated a posteriori.

Scotus uses a certain distinction: for he says that if the discussion is about this proposition according to itself, it can be demonstrated even by a demonstration propter quid; to us, however, who are wayfarers (*viatores*), it is known only by a demonstration a posteriori. But as to what he asserts about a demonstration propter quid, it is in no way true. For this proposition, according to itself, that is, abstracted from the intellect of the wayfarer who knows it through alien species, and posited in the intellect of one who sees it itself, is without doubt without a middle; indeed, it is not a proposition composed of subject and predicate, but a certain simple cognition; wherefore neither discourse, much less any demonstration, can be about it; from which principle, in Disputation 22, chapter 2, we shall prove that angels know nothing by discourse from those things which are known to them by simple intuition. Therefore this latter opinion is true, according to the common sense of the other authors, who speak only of a demonstration a posteriori and of the intellect of wayfarers. So truly do more recent Thomists esteem this opinion, that they rightly judge the former rash, which St. Thomas in the Contra Gentiles called an error.[258]

258. St. Thomas, Summa contra Gentiles I, c. 12.

They prove, indeed, by the testimonies of Scripture and of the Fathers; for to the Romans 1 it is said: "For the invisible things of him, namely of God, from the creation of the world, by those things which are made, being understood, are seen" [Rom 1:20], where they press the word "are seen," by which they think something greater than an obscure assent is signified. Paul adds: "So that they are inexcusable" [Rom 1:20]. From which they argue thus: if the knowledge of God were only obscure and probable, they would be excusable who could rightly doubt. Similar is that in Wisdom 13: "For by the greatness of the beauty and of the creature, the creator of all could be seen in a knowable way" [Wis 13:5]. For which cause Wisdom calls the nations vain who have not attained the knowledge of God from the fabric of the universe. The Doctors also note the word "to be seen," which signifies evident assent. They also adduce that of Psalm 18: "The heavens declare the glory of God," and Psalm 88: "The heavens shall confess thy wonders," and Acts 14: "And indeed he left not himself without testimony, since, doing good from heaven, he gave rains," and so forth [Ps 18:2; Ps 88:6; Acts 14:16 - 17].

But all these things, in my judgment, do not prove the proposition. For in these places of Scripture, and the like, it only contends that there has always been a sufficient testimony of God from the world's fabric, beauty, and other effects, so that he might be known by all; whether, however, by evident knowledge, or only most probable, it does not care. And that it uses the word "are seen" and the word "to be seen," matters little: for these, in a certain common and more usual signification, signify any knowledge of the intellect with determined assent; and in this common signification Scripture everywhere treats these and similar things. Moreover, what Paul says, and Wisdom insinuates, that the Gentiles who did not know God cannot be excused, does not prove that all could have had a demonstration. For to this end, that they might not be able to be excused, it is enough if they could have had some most probable and prudent knowledge. For having this knowledge, they ought to have worshiped the true God. For if someone in like manner denied Christ, he would not on that account be incapable of excuse because he could have had an evident reason of him, but because by faith and prudent knowledge he could have believed. From this, therefore, the Gentiles cannot be excused, because they did not acquiesce in probable arguments among the prudent. As to St. Gregory Nazianzen, Oration 34, which is the second on Theology, a little from the beginning he says: "For that God is, and that he is a certain principal cause which produced all things and preserves them, both the very eyes and the natural law teach to that man, when, fixing their gaze upon the things that fall under sight, these, through the things subjected to the eyes and set in right order, gather by a certain conjecture their author." He did not say "by evident reasoning," but that by a certain conjecture from the things seen it is gathered that God is. For it is the best argument, even if it is not evident to all, to be deduced from created things, and that which almost immediately sticks in the minds of nearly all. In Greek Nazianzen uses the participle syllogizomenos from the verb syllogizomai, which does not signify "to gather evidently" or "to demonstrate," but simply "to reason." Therefore this view will be confirmed by us only in the following chapter by adducing reasons to prove that God exists, which we judge to be demonstrations. For the present, the arguments of Alliacensis must be satisfied.

The first argument will be of no moment; from the things which we shall say in the following chapter it will be clear.

To the second argument I reply that, even if it could not be demonstrated that God is one, it could nevertheless be demonstrated that God exists, that is, that there is some divinity above all visible and created things, as we shall see in the following chapter. I add, however, that it can in fact be demonstrated that God is one, as will be clear in Question 11, no less readily than that God exists in the order of nature. As to what we have already said and what remains to be said in the following chapter, it must be noted that in these demonstrations one must not demand the kind of force and evidence found in mathematics, but only what is appropriate to natural, metaphysical, or moral science; for all the arguments we are about to adduce fall under one of those three heads.

Caput IV - That God exists is demonstrated by arguments

We must strive to demonstrate God by reasons drawn only from natural principles; for by theological arguments we should dispute against Atheists in vain. Moreover, since very many are wont to be adduced, which St. Thomas gathers in Contra Gentiles I, c. 13, and in article 3 of this question, as also Henricus and Scotus in the places cited, omitting some, we shall use only those which are more efficacious and more becoming to a Theologian. This, however, I judged should be premised, which I have received from men of great authority, namely, that in Gaul and in England, where now Atheism flourishes most greatly, most wicked men are easily recalled from Atheism, when in magical arts, in other things, or in themselves, they experience marvelous effects which surpass all human and visible power; by which they are compelled to believe that, besides those things which fall under sight, there is something spiritual and of a more powerful virtue: this once admitted, they are more easily led into that opinion, that they acknowledge some numen. For they deny this because they think there is nothing else besides these corporeal and visible things; worse indeed than the Sadducees, who, although they denied a created spirit and the immortality of the soul, nevertheless acknowledged God by sacrifices. Wherefore most grave men testify that especially in Gaul and England men are held fast by Atheism, who the more eagerly study magical arts; which, unless among these heretics God had permitted, almost all would be involved in Atheism.

The first demonstration, therefore, is as follows. Whatever is in the universe either is from itself or from another; the former cannot be said. For we see very many things not only to be made by others, but also to be preserved, and to be arranged in many ways, that they may be defended from contraries; and thus all things can depend upon another. For thus it would happen that the order of causes would be infinite; which all philosophers with Aristotle, 2 Metaphysics, c. 2, rightly thought most absurd.[259] First, because an essential order of efficient causes, of which we now speak, could not through an infinite series transfer the virtue of the higher to the lower. Then also it does not seem possible that any thing at all should need an infinite number of causes for its being and preservation; for each has a determined nature, and therefore demands also a determined cause

259. Aristotle, Metaphysics II (alpha minor), c. 2.

which is of this or that nature; wherefore it cannot depend upon a confused and infinite multitude of causes. Moreover, since nothing first is assigned in that order of causes, and each depends upon another, we are compelled to acknowledge that this whole machine of things is disposed as it were by chance and without a cause, since there is nothing firm and stable to which the rest may be referred, from whose nature or will the other things have been produced and are preserved; for if there were no cause, there would be no reason why the universe of things should be disposed in that infinite series; both because there would not be a superior will, and because there would be no nature; for nature is in each thing determined; and therefore from itself it demands a determined multitude of causes. Nor, moreover, would there be one nature of all together which would demand such an infinite order, as is manifest: there would, therefore, be as it were a Chaos and utmost confusion, since with such contrariety as we see, this beauty of things and the congruity with due order could not stand.

Nor indeed do I now contend to exclude the plurality of gods; for of this in Question 11 there must be disputation: nor whether it is a body or a spirit; of which in the following Disputation we shall speak: I only wish in general to prove that in this universe there is a divine numen, which is easily gathered by the foregoing reason. For if there is some being which is not from another, it follows necessarily that it has always existed; nor indeed can it be determined by any cause that it begin in time and at some time cease. It follows, moreover, that that being is a cause. For if we must stand in effects and causes, at length we must arrive at a first which is of this sort. But these properties belong to God alone; therefore he who admits that there is in this manner a necessary being, concedes in reality that God exists, although he does not call him by the name "God."

This argument is taken from the principles of metaphysics and of philosophy, which Aristotle taught in 2 Metaphysics, c. 2.[260] St. Thomas also touched upon it, and the other Schoolmen mentioned, and St. John Damascene, 1 De fide, c. 3.[261]

The second demonstration, drawn from moral philosophy, is of this sort. He who removes God from the middle must also remove rewards of virtues and punishments of vices after this life. For who will be a judge in this cause? especially since he who denies God ought also to deny the immortality of the soul. These being taken away, virtue, which even the most wicked men venerate in others, would remain without its due reward. For it sometimes happens most miserably that the more modest and the more studious are forced to spend this life. If, therefore, after death no one will repay the reward of true praise which virtue by its nature demands, virtue will remain without reward; but that virtue merits a reward even scoundrels confess. Happier, too, would be the one nurtured among crimes, who would take care of his skin, when no punishments at all would remain. He, therefore, who once denies God, and hence the immortality of the soul, removes also worship of God, religion, oath, and finally removes all virtue from the midst; for the best thing would be the convenience of bodily life, if, besides itself, neither God nor any other immortal reality remained.

260. Aristotle, Metaphysics II, c. 2.
261. St. John Damascene, De fide orthodoxa I, c. 3.

The third demonstration, rather subtle, which Anselm pursues in the Proslogion, chapter 2, and in the book against the Fool, is this: God is that than which nothing better can be thought; but that than which nothing better can be thought cannot be only in thought; for thus it would not be the best: that is better which is in thought and in reality; therefore God exists in the nature of things. However, in reality the case stands otherwise.

Quaestio III - On the simplicity of God

Once it has been established of a thing that it is, it remains to ask in what way it is, so that one may know what it is. But because concerning God we cannot know what He is, only what He is not, we must consider not how He is, but rather how He is not.

- First, therefore, it must be considered how he is not.
- Second, how he is known by us.
- Third, how he is named.

Now it can be shown of God how he is not, by removing from him those things which do not belong to him, as, for instance, composition, motion, and other things of this sort.

- First, therefore, inquiry is made concerning his simplicity, by which composition is removed from God. And because simple things among bodily things are imperfect and parts,
- Second, inquiry is made concerning his perfection.
- Third, concerning his infinity.
- Fourth, concerning his immutability.
- Fifth, concerning his unity.

From this question St. Thomas begins to demonstrate the divine attributes and, as it were, the properties of God, who is the subject of the whole of theology. In the preceding question he proved what otherwise would have had to be presupposed, namely that God exists, unless it had been necessary to answer the error of certain foolish men.

From this question up to Question 43, where he treats the divine nature and attributes, St. Thomas follows the common way of considering divine things commended by Pseudo-Dionysius and St. John Damascene, namely the way of knowing God by negation. What belongs to God in Himself he considers in four ways. First, the perfections of God that are not operations, from this question up to Question 11. Second, in Questions 12 and 13, the same perfections insofar as they are referred to our intellect. Third, from Question 14 to Question 16, the divine perfections considered in operations that are not productions, namely intellect and will. Fourth, from Question 27 to Question 43, the operations that are productions within God Himself. Finally, he runs through the operations outside Himself and all their effects.[262]

262. Pseudo-Dionysius, De divinis nominibus; St. John Damascene, De fide orthodoxa.

Articulus I - Whether God is a body

Objicitur primo: It seems that God is a body. For a body is that which has three dimensions; but Sacred Scripture attributes to God three dimensions: for it is said in Job 11, "He is higher than heaven, and what wilt thou do? deeper than hell, and how shalt thou know? The measure of him is longer than the earth, and broader than the sea": therefore God is a body.

Objicitur secundo: Further, everything that is figured is a body, since figure is a quality about quantity. But God seems to be figured, since it is written in Genesis 1, "Let us make man to our image and likeness": for image is called figure, according to that in Hebrews 1, "Who being the brightness of glory and the figure of his substance," that is, image: therefore God is a body.

Objicitur tertio: Further, whatever has bodily parts is a body. But Scripture attributes bodily parts to God: for it is said in Job 41, "Hast thou an arm like God?"; and in the Psalm, "The eyes of the Lord are upon the just"; and, "The right hand of the Lord hath wrought strength": therefore God is a body.

Objicitur quarto: Further, situation does not befit anything except a body; but the things that pertain to situation are said of God in the Scriptures: for it is said in Isaiah 6, "I saw the Lord sitting"; and in Isaiah 3, "The Lord stands to judge the peoples": therefore God is a body.

Objicitur quinto: Further, nothing can be a local terminus from which, or to which, unless it be a body or something corporeal. But in Scripture God is said to be a local terminus, both as that to which one goes, according to the Psalmist, and as that from which one departs, according to Jeremiah 17, "They that depart from thee shall be written in the earth": therefore God is a body.

But on the contrary: It is said in John 4, "God is spirit."

I answer that it must be said absolutely that God is not a body; which can be shown in three ways.

First, because no body moves without being moved, as is clear by induction in each case. But it was shown above that God is the first unmoved mover; whence it is manifest that God is not a body.

Second, because it is necessary that that which is the first being be in act (*actus*), and in no way in potency (*potentia*). For although in one and the same thing which proceeds from potency into act, potency is prior to act in time, simply speaking act is prior to potency, because what is in potency is not reduced into act except by a being in act. But it was shown above that God is the first being. It is therefore impossible that there be anything of potency in God. But every body is in potency, because a continuum, with respect to such quantity, is divisible to infinity. It is therefore impossible that God be a body.

Third, because God is that which is most noble among beings, as is clear from what has been said. But it is impossible that any body be the most noble among beings: because a body is either living or non-living. Now a living body is manifestly more noble than a non-living body; but a living

body does not live insofar as it is a body, for thus every body would live; it is therefore necessary that it live through something else, as our body lives through the soul. But that by which the body lives is more noble than the body: it is therefore impossible that God be a body.

Reply to the first: As was said above, Sacred Scripture hands down to us spiritual and divine things under the likenesses of corporeal things. Hence, when it attributes three dimensions to God under the likeness of corporeal quantity, it signifies his virtual quantity: for example, by depth, the power to know hidden things; by height, the excellence of his power over all things; by length, the duration of his existence (*esse*); by breadth, the affection of love toward all. Or, as Pseudo-Dionysius says in the sixth chapter of On the Divine Names, by the depth of God is understood the incomprehensibility of his essence (*essentia*); by length, the advance of his power penetrating all things; but by breadth, his overextension to all things, inasmuch, namely, as all things are contained under his protection.[263]

Reply to the second: Man is said to be to the image of God not according to the body, but according to that whereby man excels other animals: whence it follows in Genesis 1, after it has been said, "Let us make man to our image and likeness," "and let him have dominion over the fishes of the sea," etc. But man excels all animals as to reason and intellect: whence according to intellect and reason, which are incorporeal, man is to the image of God.

Reply to the third: Bodily parts are attributed to God in the Scriptures by reason of their acts according to a certain likeness; as the act of the eye is to see: whence "eye" said of God signifies his power for seeing in an intelligible mode, not a sensible one; and the same is to be said of other parts.

Reply to the fourth: The things also that pertain to situation are not attributed to God except according to a certain likeness: thus he is called "sitting" on account of his immobility and authority; and "standing" on account of his strength for warring down whatever opposes.

Reply to the fifth: One does not approach to God by bodily steps, since he is everywhere; but by the affections of the mind: and in like manner one recedes from him. And thus "approach" and "withdrawal," under the likeness of local motion, designate a spiritual affection.

Note on the article.

The conclusion is: God is not a body, nor does he consist of body. Which St. Thomas confirms by three reasons, which you have in the text. Concerning those, however, and the propositions which they assume, many things which pertain to the philosopher are disputed by Cajetan and more recent Thomists, which are not much accommodated to our plan. But we, as we promised at the beginning of this work, will take only those things from philosophy which can conduce to confirming this truth; and we will set forth the errors and the degree of certitude which it has in Theology and in philosophy. Concerning the title of the article it must be observed, with Cajetan in the commentary on the following article, that here there is not a question whether God is a body composed of matter and form. For although in the doctrine of St. Thomas "body" and "composite

263. Pseudo-Dionysius, De divinis nominibus VI.

of matter and form" are the same - for his School acknowledges no simple body - yet because some have thought that some body exists without composition, he rightly inquires in general whether he is a body; but in the following article, whether he is composed of matter and form. In the third, nevertheless, for its own reason he also indicates something concerning composition.

Articulus II - Whether God is composed of matter and form

It seems that in God there is composition of matter and form.

1. For everything that has a soul is composed of matter and form, since the soul is the form of the body. But Scripture attributes a soul to God; for in Hebrews 10 God is introduced as saying, "The just man lives by faith; but if he draw back, my soul shall have no pleasure in him." Therefore God is composed of matter and form.
2. Further, anger, joy, and the like are passions of something composite, as is said in the first book of On the Soul. But such things are attributed to God in Scripture; for it is said in the Psalm, "The Lord was angry in fury against his people." Therefore God is composed of matter and form.
3. Further, matter is the principle of individuation. But God seems to be an individual, since he is not predicated of many. Therefore he is composed of matter and form.

But on the contrary: everything composed of matter and form is a body, for dimensive quantity first inheres in matter. But God is not a body, as was shown in the preceding article. Therefore God is not composed of matter and form.

I answer that it is impossible for there to be matter in God.

First, because matter is that which is in potency; but it was shown above that God is pure act, having nothing of potentiality. Hence it is impossible that God be composed of matter and form.

Second, because every composite of matter and form is perfect and good through its form, and therefore good by participation, insofar as matter participates in form. But that which is first and best, namely God, is not good by participation, because what is good by essence is prior to what is good by participation. Hence it is impossible that God be composed of matter and form.

Third, because every agent acts through its form; wherefore, as a thing is related to its form, so it is related to acting. Therefore whatever is first and per se agent must be first and per se form. But God is the first agent, since He is the first efficient cause, as was shown above. Therefore He is form through His essence, and not composed of matter and form.

The conclusion is: God is form, and not composed of matter and form.

Therefore, first it must be said that "soul" is attributed to God by a likeness of act; for that whereby we will something in us is the soul. Hence when it is said "the good pleasure of the soul of God," it is the good pleasure of his will.

Secondly, it must be said that anger and the like are attributed to God by a likeness of effect: because it is proper to one who is angry to punish; hence his act of punishing is metaphorically called his anger.

Thirdly, it must be said that forms, inasmuch as they are receivable in matter, are individuated by matter, which cannot be in another, since it is the first subject sustaining substance; but a form, inasmuch as it is of itself, unless something else impede, can be received by many. Yet that form which is not receivable in matter, but is per se subsistent, is individuated precisely by this, that it cannot be received in another; and such a form is God: whence it does not follow that he has matter.

Conclusion: There cannot be in God any such composition. It is proved by three reasons, one of which we will bring forward in the following disputation for the confirmation of Catholic doctrine. But since the subject matter of this article contains nothing especially proper to the theologian beyond what is common with the doctrine of the preceding article, we will embrace the matter of both under a single disputation.

Disputatio XXI - Whether God is a body or composed of matter and form

Various errors, cap. 1. Catholic truth established by the authority of Scripture and the Fathers, cap. 2. Reasons of the same position, cap. 3.

Caput I - Various errors

So weak is the frailty of the human mind, and so perverse the depravity of morals, that, if it be not prepared by the light of divine grace by the Lord, not only concerning those things which are known solely by supernatural revelation, but even concerning those things which are consentaneous to natural reason, it most shamefully slips. Wherefore above, disputation 1, cap. 2, I noted that sacred doctrine is necessary not only for supernatural mysteries, but also for natural truths to be understood without error. Accordingly, just as there have not failed those who, having fallen into the depth of evils, would deny God, which of all truths is the most well known, so it ought not to be a wonder that there were some so foolish heretics as to assert that God is corporeal.

Among the pagan philosophers, as St. John Damascene relates in the book on heresies, the Stoics were the first authors of this error. For they said that body is everything, and that God is this world which is perceived by sense. In this opinion Thales is said to have been, as Eusebius relates, book 4 of the Preparation for the Gospel, chapter 6.[264] But Epiphanius, in heresy 8, affirms that the Stoics taught that God is the soul of the world; and Damascene attributes this not to all of them, but to some. Nevertheless they could have taught that he is corporeal itself, as will be established from art. 8 of this question, as Democritus taught, whom we will report in that article.

264. St. John Damascene, De haeresibus; Eusebius, Praeparatio evangelica 4.6; Epiphanius, Haereses 8.

Among Christians, indeed, the master of this error was, as the Master, on the testimony of Epiphanius in heresy 70, states, in the time of Arius, Audius, or Audæus, a monk, a man formerly religious and grave, who, with Christian freedom and zeal of religion, rebuked sharply not only religious of his own order and presbyters, but also bishops, for misdeeds. Afterwards, however, on some occasion, which Epiphanius narrates, departing from the Church, he began to teach that that of Genesis 1, "Let us make man to our image and likeness," was fulfilled according to the body; in which he said that man is made like to God, and hence he attributed to God the body and members of man. This error Theodoret also ascribes to Audius, book 4, On the Fables of the Heretics, chapter 13, and book 4 of the History, chapter 19.[265] Yet he reports him under the emperors Valentinian and Valens; with which the Tripartite History, book 7, chapter 11, also agrees. Nicephorus, however, book 11, chapter 14, places him under Theodosius the Younger; but the more recent writers vary among themselves. Yet the opinion of Epiphanius in this matter has greater weight with me: following whom St. John Damascene, after the heresy of Arius, immediately puts the sect of the Audiani. The followers of this error were called Audiani, or Odiani, whom, with a corrupted word, St. Augustine calls Vadiani; and others Anthropomorphites, a Greek word composed from anthropos, that is, man, and morphê, that is, form; as it were, those who fashion God in the likeness of a man. Concerning these St. John Damascene in the book on heresies says: "The schism and division of the Audiani is not a heresy"; which St. Augustine also, book on Heresies, cap. 50, seems to gather for himself from Epiphanius. But since he understood that of Genesis 1, "Let us make man," etc., according to the body, from which it necessarily followed that God is corpulent, they are to be considered not only schismatics, but also heretics. Wherefore it is a wonder why St. John Damascene calls them only schismatics and not heretics, since he says that passage of Genesis 1 is explained most harshly by them. Epiphanius indeed, although he calls them schismatics, does not deny that they also were heretics: for they were divided from the bosom and obedience of the Church, and taught the aforesaid error.

This same error, too, Melito, bishop of Sardis, is indicated to have taught earlier, by true report of Theodoret, question 20 on Genesis, after the middle, which are to be discussed earlier, where that "to the image" is situated - in the body, or in the soul. First let me see by whom it was earlier asserted, of which number is Melito, who left writings in which he asserts that God is corporeal.

But, as Sixtus Senensis very well observes, book 5 of the Bibliotheca Sancta, annotation 18, it is hardly credible that such a man fell into so great an error. For elsewhere Eusebius, book 5 of the History, chapter 23, and likewise 24, makes a most notable mention of this man: for he reports Polycrates, who was president in a certain synod of Asia, where it was disputed on which day Easter ought to be celebrated, to have written to Pope Victor that he still wished to retain the ancient tradition of his own people, among whom, mentioning Melito, thus he says: "Why then should I recount the Blessed Papirius and Melito the Eunuch, who, inspired by the instinct of the Holy Spirit, spent all the time of their life piously and holily, and who is buried at Sardis?" Here the text of Eusebius in the ancient translation is rather corrupted: for the translator rendered not

265. Theodoret, Haereticarum fabularum compendium 4.13; Historia ecclesiastica 4.19; Historia tripartita 7.11; Nicephorus, Historia 11.14.

"Blessed Papirius," but "Papirius, Macharius, and Melito for the kingdom of God, Eunuch"; where the interpreter accepted these four names as if they were proper names; whereas in truth those two, Macharius and Eunuch, are epithets of the other two; for makarios is not a substantive, but an adjective which in Latin signifies "blessed," which, since it is sometimes a proper name and substantive, was the cause of the interpreter's error.

The same also Eusebius, book 4, chapter 25, and St. Jerome in the books On Ecclesiastical Writers, marvelously praises this Melito, and among his other works lists a book peri ensomiatou theou, that is, On God Incarnate; nevertheless he does not attribute such an error to him: indeed, St. Jerome adds the testimony of Tertullian, in the books Against the Church on behalf of Montanus, who said that this Melito was considered by many a prophet.[266]

Furthermore, Theodoret himself, in the place alleged when treating of the error of the Audiani, makes no mention of Melito; and, which is the chief point, as Sixtus has most well noted, the words of Theodoret in that question 30 on Genesis in Greek exemplars corrected have it far otherwise than those in the Latin codices translated, and a little before recited: for he writes, "of whom the writings which he left are, concerning that God is embodied; he indeed wrote a book on God corporeal, as we have just related from Eusebius and Jerome." Therefore Theodoret does not say that Melito taught that, but others, whose opinion he himself left written and impugned. Wherefore the interpreter of Theodoret erred when he translated "in which he asserts God to be corporeal"; for these words seem to be referred to Melito himself, and therefore the aforesaid error is falsely ascribed to him.

In the same error Tertullian is thought to have been, by the statement of St. Augustine, book 10 On Genesis to the Letter, chapter 25, although he excuses him in the book On Heresies, cap. 86, that, although he slipped into this error, he did not say that God is a body of the sort whose parts, some greater, some lesser, might avail, or ought to be thought such as all those things which we properly call bodies are; but, says St. Augustine, he could have called God a body because he is not nothing, he is not emptiness; in this way "body" could be used not for that which has extension, but for the reality which is opposed to shadow. In which sense Paul said to the Colossians 2, "in Christ dwells all the fullness of the Godhead corporally," that is, not figuratively, but really. But where Tertullian taught this St. Augustine does not report; rather in that same chapter 25 he only notes that Tertullian seemed to himself to have taught the contrary, if he thought God to be a body; for in the book On the Soul, chapter 8, at the end, he said that every corporeal thing is passible, and a little above he had said that God is body. But it is not credible, says St. Augustine, that Tertullian thought God to be passible.

I, however, could not find in that book where he says that God is corporeal, nor do St. Augustine or the more recent writers, who attribute this error here to Tertullian, allege any place. Yet this opinion in no way seems able to be excused: for, after he said that there are no members in God, although their names are said of him, he subjoins the reason in these words: "What diversity will there be of the divine body and the human, since, under the same names of members, there will be

266. Eusebius, Historia ecclesiastica 4.25; St. Jerome, De viris illustribus; Tertullian, Adversus Ecclesiam pro Montano.

such diversity and difference of the divine mind and the human, although under the same words the senses differ?" where, since he clearly asserted that God consists of body and soul, he only contends that the members of the human body are not to be repeated in God: because his body is altogether of another kind of proportion and nature.[267]

One might object to us the same Tertullian in the book On the Trinity, chapters 6 and 7, where he more at length shows that God is spiritual and everywhere, and that only metaphorically do members belong to him. But that book is not by Tertullian, but by Novatian, as Pamelius most well proves at the beginning; there, moreover, Novatian proves that in Scripture members are attributed to God because by these sensible things, in whatever way, we may conceive him, although we cannot express him exactly. Indeed he adds, if we say that God is Spirit, it is not enough; because every spirit is a creature, which Pamelius in annotation 33 thinks that Novatian held the Holy Spirit to be a creature. But Novatian certainly was not speaking of the third person of the Trinity, but of "spirit" for air or wind; therefore most aptly did he say, to express the subtlety of God, that it is not enough if we call him Spirit, using a name transferred from created things to divine: for no name taken from created things is able to express what God is.[268]

Caput II - Catholic truth established by the authority of Scripture and the Fathers

The Catholic doctrine, which affirms that God is altogether incorporeal and spiritual, has always been undoubted in the Church of God, approved by common sense and tradition of the faithful, so that it has no need of confirmation by some express definition of a council. Yet it is expressed in Scripture at Romans 1, where it is said: "The invisible things of God," etc.; and 1 Timothy 1: "To the King of ages, immortal, invisible," etc.; and John 4: "God is spirit." From which places some think that it is not sufficiently proved, unless the common opinion of the Fathers and the sense of the Church interpreting those places be adduced; for many of the Fathers hold that the angels are corporeal, yet they are said by them to be invisible and spiritual, because they have certain more subtle bodies which are likened to spirit, that is, wind, and do not fall under sight. Below, however, disputation 178, chapter 3, we will manifestly show that angels are incorporeal. Meanwhile, from those places it can very well be deduced that the divine nature is spiritual and invisible in a higher way than the angels; and by a much stronger reason one must judge that the same thing concerning God is to be gathered from the same Scripture.

Wherefore all the Fathers whom we have mentioned rightly held that the opinion of the Audiani was heretical. Against which, among more recent writers, Alphonsus de Castro disputes under the word "God," heresy 2; and from the immensity of God, which Scripture hands down, he proves that he is not a body: for either he would be an infinite body or a finite one. To assert an infinite body beyond this universe is without foundation and, as many think, impossible; but that he be finite is not possible either, for by his nature he would be enclosed in some place, against that which Scripture everywhere proclaims, that the majesty of God is contained neither by heaven nor by the

267. St. Augustine, De Genesi ad litteram 10.25; De haeresibus 86; Tertullian, De anima 8; Adversus Marcionem 2.16.
268. Novatian, De Trinitate 6 - 7; Pamelius, annotations ad Novatianum.

whole universe; it remains therefore that he be spirit, who is in the whole world, and in any part of it, in such a way that by his nature he is neither circumscribed nor bounded by the universe; because in other universes, if there were many, he could exist, as we shall see in disputation 29.[269]

If, however, any argument at all had weight for the Audiani, it would be that in Scripture man is said to have been made to the image and likeness of God, and that many members are attributed to God, as eyes, hands, etc. But this is ridiculous. For first, all the Fathers interpret the image and likeness of God in man according to the soul, which Epiphanius at the cited place and Theodoret in question 20 on Genesis set forth at length. Secondly, if it had any force, it would also prove that God is a lion and has wings; indeed, that he is a monster compacted from various animals, since Scripture attributes to God not only the members of a man but also of other animals. Therefore all those things are to be understood by metaphor, as Novatian in the book On the Trinity, chapters 6 and 7, very well teaches; and St. Augustine in the book On True and False Religion, cap. 50; and epistle 112, after the middle; and in the book On the Essence of the Divinity something from the beginning; St. Jerome; and St. Anselm in the little work on this matter; St. Gregory, book 14 of the Moralia, cap. 22, on that "Pray, my sons, for my womb"; St. John Damascene, book 1 On the Orthodox Faith, chapters 14 and 15; St. Isidore, book 6 of the Etymologies. There also exists in the ninth tome of St. Jerome an epistle in the order 15, which explains individually the things that are attributed to God in Scripture. The same argument was treated also by Pagninus.[270]

It may be objected to us that the same Tertullian, in the book On the Trinity, chapters 6 and 7, where he shows more at length that God is spiritual and everywhere, and that only metaphorically are members attributed to him, supports our view. But that book is not by Tertullian, but by Novatian, as Pamelius excellently proves at the beginning of Novatian. There, however, Novatian proves from Scripture that members are attributed to God, in order that by these sensible things we may conceive him in some manner, although we are not able to express him exactly. Nay more, he adds that if we call God Spirit, it is not enough, because every spirit is a creature - on which point Pamelius in annotation 33 thinks Novatian erred, as if he had thought the Holy Spirit were a creature. But Novatian certainly was not speaking of the third person of the Trinity, but of spirit as meaning air or wind; and thus he said very well, for expressing God's subtlety, that it is not enough if we call him Spirit with a name transferred from created things to the divine: for no name taken from created realities can express what God is.

The Catholic truth, confirmed by Scripture and the authority of the Fathers.

The Catholic doctrine, which affirms that God is altogether incorporeal and spiritual, has always been undoubted in the Church of God; proved by the common sense and tradition of the faithful; so much so that it does not now need the confirmation of some explicit definition of a Council. Yet it is expressed in Scripture at Romans 1, where it is said: "The invisible things of God," etc.; and 1 Timothy 1: "To the King of ages, immortal, invisible," etc.; and John 4: "God is spirit." From these

269. Alphonsus de Castro, De haeresibus, verbo Deus, haeresis 2.

270. St. Augustine, De vera et falsa religione 50; Epist. 112; De essentia divinitatis; St. Jerome, Epistolae; St. Anselm, Opusculum de hac re; St. Gregory the Great, Moralia 14.22; St. John Damascene, De fide orthodoxa 1.14 - 15; St. Isidore, Etymologiae 6; Pagninus, Epistola de nominibus Dei.

passages some think it is not sufficiently proved, unless those texts be interpreted according to the common opinion of the Fathers and the common sense of the Church. For many Fathers hold the Angels to be corporeal; yet they call them invisible and spiritual, because they have certain bodies more subtle, which are likened to spirit - that is, to wind - and do not fall under sight. Nevertheless, below at disputation 178, chapter 3, we shall clearly show that Angels are incorporeal; and this will be gathered most rightly from Scripture's way of speaking. By greater reason, therefore, the same must be judged to be collected about God from the same Scripture.

Wherefore all the Fathers, being moved, rightly thought the opinion of the Audians to be heresy; against which Alphonsus de Castro disputes among the recent writers, under the word "God," heresy 2. And from the immensity of God, which Scripture hands down, he proves that God is necessarily spiritual, or not a body. For either he would be an infinite body, or a finite one. That he is an infinite body above this universe is asserted without foundation, and is, as many more learned men think, impossible; but that he is finite is not possible: for then by his nature he would be contained in some place, against what Scripture commonly proclaims, that the majesty of God is contained neither by heaven nor by the whole universe. It remains, therefore, that he is a spirit, who is in the whole world, and in any part of it in such a way that by his nature he is neither circumscribed nor defined by the universe: because otherwise, if there were many spirits, he could be contained in others, as we shall see at disputation 29.

If, however, any argument would have any force on behalf of the Audians, it would be this: that in Scripture man is said to be made to the image and likeness of God, and many members are attributed to him, as eyes, hands, etc. Yet this is ridiculous. For first all the Fathers interpret the image and likeness of God in man as according to the soul; which is widely followed by Epiphanius in the place cited, and Theodoret in Question 20 on Genesis. But further, if it had any force, it would also prove that God is a lion, and has wings; nay, that he is a monster composed out of various animals, since the Scripture attributes various members not only of a man, but also of other animals, to him. Therefore all those things, as the Novatian in the book On the Trinity, chapters 6 and 7, St. Augustine in On True and False Religion, chapter 50, and in epistle 112 after the middle, and in the book On the Essence of the Divinity somewhat from the beginning, St. Jerome, and St. Anselm in a little opuscle on this question, St. Gregory in the Moralia, book 14, chapter 22 on "I will pray for the children of my womb," St. John Damascene, book 1, chapters 14 and 15 of On the Orthodox Faith, and Isidore, book 6 of the Etymologies, rightly teach, are to be understood metaphorically. There also exists in the ninth tome of St. Jerome an epistle, number 15 in order (in the edition of Pagninus), which explains the several things that are attributed to God in Scripture. The same argument is handled by Alphonsus de Castro under the word "God," heresy 2. [271][272]

IX) in ordine 15 (ed. Pagninus).

272. Alphonsus de Castro, under the word "Deus," heresy 2.

Caput III - Reasons of the same opinion

Although the common opinion of the philosophers has always been that the true God is immaterial and incorporeal, nevertheless I have decided to prove this philosophically, and at the same time to show that God is not composite - which St. Thomas strives to prove in article 2. Many other reasons being omitted, it can be recommended by this one alone. If God is corporeal, either he is composite, or he is altogether simple; in neither way can he be: therefore he must be spiritual and incorporeal.

First, if he were composite, he would necessarily consist at least of two parts, of which one would be potency (*potentia*), the other act (*actus*), otherwise he would not be one simply, which is repugnant to God. But it cannot be that in God one part is potency, the other act; for a part in potency would not be the most perfect thing that it could be, nor would it be God, as is manifest: therefore neither would it have existence (*esse*) from itself, nor union with act, but it would have perfection from another, which either would be God, or would be something under God, having existence and union with act. Therefore, besides that part which would be potency, there would be something which would be God, on which that part would depend; and consequently it could not belong to the essence (*essentia*) of God.

But someone may say that indeed it depends on another more perfect, namely on the whole composite of which it is a part; wherefore it does not follow that, besides that, there is God, on whom its constitution and composition depend. But this objection is easily rejected. For the parts composing the whole cannot, in their very existence or in the union by which they come together to composition, depend on the whole itself: for they are by nature prior to the composite itself; but the prior does not depend on the posterior. Wherefore, if that part depends on something that is God, it cannot belong to the composition of that [whole]. By this reason Antissiodorensis, book 1, Summa, chapter 1, part 2, concludes that, if God were composite, something would be prior to him.[273] St. Gregory Nazianzen too, in Oration 34 (which is the second theological oration), witnesses to this; and Sanctes Pagninus in the Isagoge to the Sacred Letters, chapter 48, near the beginning, proves that there is no composition in God by these words: "For composition is the beginning of conflict; beauty is the conflict of disagreement; disagreement is the solution"; and dissolution by no means falls into God and the first nature. Nay, from this Nazianzen gathers that God is not a body: for he seems to feel that every body is composite and capable of corruption; which, although it cannot be demonstrated, is to me nevertheless most probable; and, if we speak of every corruption, it seems most consonant with Scripture and the doctrine of the Fathers.[274][275]

Moreover, since there are some who think there is some body altogether simple, it must be shown by another reason that God is not a body in this manner. Either he would be wholly without sense and cognition, or cognizant. The first cannot be said; for then it would be a body far more ignoble than very many things, and therefore would not be God. The latter also does not suffice for

273. Antissiodorensis (Anselm of Laon?), Summa, lib. 1, c. 1, pars 2.
274. St. Gregory Nazianzen, Oration 34 (the second theological oration).
275. Sanctes Pagninus, Isagoge ad sacras litteras, cap. 48.

the perfection of God. For if cognition were in a body, it would not be whole in the whole and whole in any part; wherefore that body would not sense equally perfectly from every part; for it would need exterior sense, by which it would perceive sensible things, which could not be applied equally perfectly so as to be known. Hence it would fail in the governance and conservation of things. Then too, since cognition would be a power in a body, it could not fail to be fatigued, and at some time remit its operation; which is of such imperfection that it cannot befit God.

But if someone answers that such a body would be so perfect as to be without toil and weariness, this indeed, just as it is said gratuitously and without foundation, so also is to be rejected without anything further. For whatever be the kind of body, it is by no means capable of lassitude; such as the heavens are; yet a living and cognizant body of this sort cannot exist, unless, as I said, gratuitously and without foundation someone concoct some such body. Philosophical reason more rightly prescribes that fatigue belongs to a body as its own proper [passion], so that it cannot belong to another; and likewise that all that which thinks and discourses is free from matter and body.

As for the principle of individuation, about which in this article one is wont to treat regarding the solution of the third [argument], many opinions are omitted; below, at disputation 181, we shall say something touching this matter.

Articulus III - Whether God is the same as His essence or nature

To the third we proceed thus.

1. It seems that God is not the same as His essence (*essentia*) or nature (*natura*). For nothing is in itself; but the essence or nature of God, which is Deity, is said to be in God: therefore it seems that God is not the same as His essence or nature.
2. Further, the effect is likened to its cause: because every agent acts to its like. But in created things the supposit (*suppositum*) is not the same as its nature: for man is not the same as his humanity. Therefore neither is God the same as His Deity.

But on the contrary, of God it is said that He is life, and not only that He is living, as is clear in John 14: "I am the way, the truth, and the life." But as life stands to the living, so Deity stands to God: therefore God is Deity itself.

I answer that God is the same as His essence or nature. For the understanding of which it must be known that in things composed of matter and form it is necessary that the nature or essence and the supposit differ. For essence or nature comprises only those things which fall into the definition of the species: as humanity comprises in itself those things which fall into the definition of man; for by these man is man; and this is what humanity signifies, namely that by which man is man. But individual matter with all the accidents individuating it does not fall into the definition of the species: for in the definition of man these fleshes and these bones, or whiteness, or blackness, or something of this sort, do not fall. Whence these fleshes and these bones and the individuating accidents are not included in humanity; and yet in that which is man they are included. Wherefore

that which is man has in itself something which humanity does not have; and on this account man and humanity are not totally the same; but humanity is signified as the formal part of man: because the defining principles are formally in respect of the individuating matter.

In those, therefore, which are not composed of matter and form, in which individuation is not through individual matter, that is, through this matter, but the forms themselves are of themselves individuated, it is necessary that those very forms be supposits and subsistences (*subsistentia*): whence in them supposit and nature do not differ. And so, since God is not composed of matter and form, as has been shown, it is necessary that God be His Deity, His life, and whatever else is predicated thus of God.

Reply to the first: We cannot speak of simple things except after the mode of composites, from which we receive our cognition: and therefore when speaking of God we use concrete names, so as to signify His subsistence; because among us there subsist only composites: and we use abstract names so as to signify His simplicity. Therefore what is said, that Deity, or life, or something of this sort is in God, is to be referred to the diversity which is in the reception of our intellect, and not to any diversity of the thing.

Reply to the second: The effects of God imitate Him not perfectly, but according as they can: and this belongs to a defect of imitation, that that which is simple and one cannot be represented except by many; and thus there occurs in them composition, from which it follows that in them the supposit is not the same as the nature.

Explication of the article.

The conclusion is: God is the same as His essence or nature. For the explication and doctrine of the whole article it must be noted that by the concrete name "God" St. Thomas understands either the supposit of the divine, or something which includes it: and from this he infers that God is His essence, that is, Deity itself, because the supposit in divine things is not distinguished from it. He thinks exactly the same regarding created spiritual things; not so in composites out of matter and form. In which doctrine there were many things worthy of disputation, some of them indeed philosophical, such as that about the distinction of nature from supposit; yet they are so necessary to the theologian, and were so unknown even to the ancients, that it would not be right to pretermit them unless they were deferred to a more convenient place. But about the concrete "God," whether it directly signifies only the nature and connotes the supposit, or whether it directly also signifies the supposit itself, will be disputed below at disputation 115. And, insofar as the rules of logic may especially aid, the theologian who wishes to understand accurately can do so; and from there also it may be seen how the doctor of the Trinity speaks. Secondly, since the supposit in the divine relations, as we shall see at disputation 159, is, as it were, consummated by the utmost complement, it will be evident whether the supposit and the nature in the divine differ in any way from those [terms] as is said later in disputation 120. Thirdly, the distinction of the created supposit from nature, and of the essence itself, as well in composites from matter as in spirituals, we have above, I hope, explained very well, for the use of the theologian. From this many points of

the doctrine of the divine Incarnation, which are to be treated, depend; and for that reason they are conveniently to be treated where the matters of that question are handled, there at question 4, article 2.

Articulus IV - Whether in God essence and existence are the same

To the fourth we proceed thus.

It seems that in God essence and existence (*esse*) are not the same. For if this were so, then to the divine being nothing would be added: rather, existence, to which no addition is made, is common being, which is predicated of all things: therefore it follows that God is common being predicable of all things; but this is false, according to Wisdom 14: "They imposed the incommunicable name upon woods and stones"; therefore the being of God is not His essence.

Further, concerning God we can know that He is, as was said above, but we cannot know what He is; therefore the being of God is not the same as His whatness or quidditative nature.

But on the contrary, Hilary says in book 6 On the Trinity, at the beginning of the book: being is not an accident in God, but subsistent truth; therefore that which subsists in God is His being.[276]

I answer that God is not only His essence, as has been shown, but also His existence; which indeed can be shown in many ways.

First, because whatever is in something else besides the essence, is either caused by the essential principles of the species, and follows consequently upon the species, as the risible follows upon man and is caused by the essential principles of the species; or [it is caused] by some exterior principle, as heat in water is caused by fire. If therefore the very being in something else is other than its essence, it must be that either it is caused by its essence - if so, that being would be caused by something exterior; or [it is caused] by the essential principles of the same essence. But it is impossible that that which is only a cause by its essential principles have from those same principles its being in such a way that it would have a caused being. It is necessary that that which is the first efficient cause be: it is impossible, therefore, that there be in God one thing which is being and another which is His essence.

Secondly, because existence (esse) is the actuality (actus) of every form or nature: for neither goodness nor humanity is signified in act unless inasmuch as we signify it to exist. It is necessary therefore that existence itself be compared to the essence (essentia), which is other than it, as act to potency (potentia). Since therefore in God there is nothing potential, as was shown above, it follows that there is not in him one thing which is essence and another his existence: therefore his essence is his existence.

276. St. Hilary of Poitiers, De Trinitate, lib. 6, at the beginning.

Thirdly, just as that which has fire and is not fire is enflamed by participation, so that which has existence and is not existence is a being by participation. But God is his own essence, as has been shown: if therefore he were not his own existence, he would be a being by participation and not by essence; therefore he would not be the first being, which it is absurd to say. Therefore God is his existence, and not his essence alone.

Reply to the first: Something to which no addition is made can be understood in two ways. In one way, so that it belongs to its notion that no addition be made to it, as it belongs to the notion of an irrational animal to be without reason. In another way, something is understood to which no addition is made because it does not belong to its notion that any addition be made to it: thus the common notion of animal is without reason, because it does not belong to the notion of common animal to have reason, nor yet does it belong to its notion to lack reason. In the first way, to be without addition is the divine being; in the second way, to be without addition is the common being.

Reply to the second: "To be" (esse) is said in two ways: in one way it signifies the act of existing; in another way it signifies the composition of the proposition which the soul discovers when it joins the predicate to the subject. Therefore, taking "to be" in the first way, we cannot know God's existence, just as neither his essence, but only in the second way. For we know that this proposition which we form about God, when we say "God is," is true; and we know this from his effects, as was said above.

Conclusion: God is not only his essence (essence), but his existence (esse). Two things are wont in this article to be called into question, which, although they rest in part on the principles of philosophy, are most necessary to the theologian. One is, whether the existence of God is really distinct, or distinct by nature of the thing, from his essence and from the supposit (suppositum): about this, however - just as about the distinction in general of those things which are formally in God - we shall defer to Disputation 116 and the following. The other is, whether the existence of any created thing is distinct from its essence, about which in IIIa q. 17, a. 2, and below in this Ia, Disputation 182, we shall say something; but as to the matters now to be said about God, nothing at all can be helped by it.

Articulus V - Whether God is in some genus

For the fifth, thus one proceeds.

It seems that God is in some genus. For substance is a being subsisting through itself; but this above all befits God: therefore God is in the genus of substance.

Secondly, every single thing is measured by something of its own genus: as lengths by length, and numbers by number; but God is the measure of all substances, as is clear from the Commentator on Metaphysics 10; therefore God is in the genus of substance.[277]

277. The Commentator (Averroes), In Metaphysicorum, book 10.

But on the contrary: Genus is prior, according to the intellect, to that which is contained in the genus; but nothing is prior to God, neither according to thing nor according to intellect; therefore God is not in any genus.

I answer: Something is in a genus in two ways. In one way, simply and properly, as species which are contained under a genus. In another way, by reduction, as principles and privations: for example, point and unity are reduced to the genus of quantity as principles; and blindness and every privation are reduced to the genus of their habit. But in neither way is God in a genus.

That something cannot be a species of any genus can be shown in three ways.

First, because a species is constituted from genus and difference. Now, that from which the difference constituting the species is taken stands to that from which the genus is taken as act to potency. For "animal" is taken from the sensitive nature by way of concretion: for that is called "animal" which has a sensitive nature; but "rational" is taken from the intellective nature, because that is rational which has an intellective nature. Now the intellective is compared to the sensitive as act to potency; and likewise is it manifest in other cases. Hence, since in God potency is not adjoined to act, it is impossible that he be in a genus as a species.

Secondly, because since God's existence is his essence, as has been shown, if God were in some genus, his genus would have to be "being" (ens): for a genus signifies what a thing is. But the Philosopher shows in Metaphysics 3 that "being" cannot be the genus of anything: for every genus has differences which are outside the essence of the genus; but no difference can be found which is outside "being," since non-being cannot be a difference. Whence it is left that God is not in a genus.[278]

Thirdly, because all things which are in one genus communicate in the quiddity or essence of the genus, which is predicated of them in answer to "what is it?"; but they differ as to existence: for it is not the same to be a man and to be a horse, nor the same to be this man and that man. And thus it is necessary that whatever things are in a genus differ both in their existence and in their "what it is," that is, in their essence. But in God, existence and essence do not differ; whence it is manifest that God is not in a genus as a species.

From this it is clear that he has neither genus nor differences, nor is there a definition of him, nor a demonstration, except through effect: for a definition is from genus and difference; but the middle term of a demonstration is a definition.

That God is not in a genus by reduction, as a principle, is manifest from this: the principle which is reduced to some genus does not extend beyond that genus; thus the point is a principle only of continuous quantity, and unity of discrete quantity. But God is the principle of the whole of existence, as will be shown below; whence he is not contained in any genus as a principle.[279]

278. Aristotle, Metaphysics, book 3, text 10.
279. See below, q. 44.

Reply to the first: The name "substance" does not signify only "that which exists through itself"; for this, namely existence itself, cannot of itself be a genus, as has been shown; but it signifies the essence to which it belongs to exist thus, that is, to exist through itself; though that existence is not the very essence of it. And thus it is clear that God is not in the genus of substance.

Reply to the second: That objection proceeds about a proportionate measure; for such a measure must be homogeneous with what is measured. But God is not a proportionate measure of anything; nevertheless he is called the measure of all things from this, that each thing has so much of existence as it approaches to him.

Conclusion: God is neither directly in a predicament (praedicamentum), nor can he be reduced to a predicament.

The doctrine of this article, although it is wont to be disputed by logicians, should not seem alien to the theologian: for upon it depends no small knowledge of the divine perfections. Omitting, however, very many things which are wont to be delivered in this article about analogy, we shall briefly dispatch what concerns the theologian, drawing also upon some points from Logic.

Disputatio XXII - Whether God is in some genus with created things

- Status of the controversy. Caput I.
- The Nominalists held that God is placed in a predicament. Caput II.
- The truer opinion is proved by six reasons of others. Caput III.
- The first reason, effective, of the preceding opinion. Caput IV.
- The later reason. Caput V.
- The preceding reason is confirmed by the doctrine of the Fathers. Caput VI.
- Replies are made to the arguments of the earlier opinion. Caput VII.

Caput I - Status of the controversy

Since it is manifest that there is one only God, as in Question XI is to be proved expressly, the present controversy will not be whether God is placed in some genus common to himself and to other gods: for where a plurality cannot be, or even be imagined, the intellect cannot discover any generic notion, nor arrange a series of predicaments, as is plainly evident.

The question therefore is about a genus or predicament common to God and creatures - namely, whether God can be placed under some such thing.

It will, however, be more difficult to establish that God is outside every genus, if we suppose that which I judge to be most true, and which we shall set forth more openly below in Disputation 118, chapter 4: namely, that none of the predicaments are things, nor forms of notions distinct by nature of the thing, but an ordering of concepts taken from this - that in the things we see, by effects and other signs we conceive some ratio common to them, greater or lesser in extent, and again another more common, up to the supreme degree of genus and of likeness; which likeness

indeed is taken by the intellect from the very nature of things, not because in things there is something really common, or distinct by nature of the thing from singulars. This being supposed, it seems easier that God be contained under some genus. For what could hinder our reason from conceiving that God agrees in some respect with created things, and in some respect differs? And if he ought to be constituted in some predicament, he must be placed not reductively, as they say, but directly: for only those are reduced to a predicament which are not entities, or forms subsisting through themselves, but parts, or as it were principles and appendices, such as a point, the soul, and matter. The present difficulty therefore is, whether God is constituted directly under some genus, as a species.

Caput II - The Nominalists held that God is placed in a predicament

There have not been lacking among the Scholastics those who asserted that God is placed directly in a predicament. The authors of this opinion are Robert Holcot in 1, q. 6; Gregory, d. 8, q. 3, especially in art. 2; Marsilius in 1, q. 12, art. 2; and Gabriel in 1, d. 8, q. 1, who even judged it the more probable, although he himself embraces the opposite opinion, thinking that in the Oxford School it was the common one.[280] In the same way the aforesaid Doctors teach that some names are predicated univocally of God and creatures; which also Scotus thinks, in the same d. 8, and in 1, d. 3, q. 3, n. 9. As to the second point, however, we shall cite him for the following opinion.[281]

But to show that this does not conflict with the divine simplicity, they suppose that which we said above: that genus and difference are distinguished not by nature of the thing, but by our consideration alone; and hence that it does not conflict with God to be in a predicament and to be composed of genus and difference; for no other repugnance would seem to prevent God from being placed in a predicament.

Augustine seems to teach that certain predicaments are said of God only by translation, namely quality, quantity, position, habit, and time, while certain others are said properly, namely substance and relation. On this foundation a good part of the doctrine of the whole book seems to rest. And in that same chapter 8, after he said that many predicaments are predicated of God by translation, he adds these words: "But as to doing, perhaps of God alone is it most truly said: for God alone acts, and he himself is not acted upon, nor does he suffer"; by which he seems to teach that the predicament of action properly befits God.[282]

In addition there is St. John Damascene, who in book 1 On the Faith, chapter 9, so attributes to God the names of sonship and paternity that they were not transferred to God from creatures, but rather, on the contrary, were communicated to us from God. He proves it from that passage to the Ephesians 3: "From whom every paternity in heaven and on earth is named." He teaches this more expressly in the book of the First Institutions, chapter 7, where, after he has said that essence, which others call substance, is the highest genus, he subjoins: "Of this highest and first genus the

280. Robert Holcot, 1, q. 6; Gregory, d. 8, q. 3, especially art. 2; Marsilius, 1, q. 12, art. 2; Gabriel, 1, d. 8, q. 1.
281. Scotus, the same d. 8; and in 1, d. 3, q. 3, n. 9.
282. St. Augustine, De Trinitate 5.8: "Solus enim Deus facit, et ipse non fit, neque patitur."

species are, first, that which is without body, and inanimate body"; and, after a few things interposed, he completes thus: "Essence without body comprises God, the angel, the soul, the demon."[283]

Caput III - The truer position, proved by six reasons of others: that God cannot be placed in a predicament

The aforesaid position is much more probable, which more and greater authorities among the theologians follow; namely, that God cannot be placed in a predicament. Thus taught St. Thomas, Cajetan, and more recent authors in this article; Henry in the Summa, article 26, question 2. The Master also is reported in 1, distinction 8, who teaches that neither the predicaments of accidents, nor substance itself properly, befit God, by which he seems to exclude God from the predicament of substance. But most clearly do Albert in the same distinction, article 32; St. Bonaventure, article 1, question 4; Richard, article 4, question 2; Thomas of Argentina, question 1, article 1; Aegidius, article 1, question 3; Scotus, question 3; Basso lis, question 4; Capreolus, question 2, article 1, conclusions 5 and 6; Durandus, in 2, distinction 3, question 1, number 12; likewise St. Thomas and the Ferrarian in Contra gentiles 1, chapter 25; finally Ockham in that distinction 8, question 1 - although he judges it difficult to prove - embrace the aforesaid position.[284]

From this doctrine Gregory in the cited question, articles 1 and 2, resolves almost all the reasons that are wont to be brought forward for the contrary opinion, as will be clear by induction. Hence the second reason is dissolved, which is as follows: Genus is a part of that which is under a genus; but God does not have parts; therefore God is not under a genus. By this reason Aegidius and Henry in the places cited, and Avicenna in Metaphysics 8, used to argue; and yet nothing is proved thereby: for it does not seem to be contrary to the simplicity of God to consist of some parts according to our intellect. Just as it is not repugnant to be composite, or constituted by reason, as will be explained below in disputation 121, chapter 2, and again in disputation 159, so only composition from the nature of the thing is repugnant to God, as also plurality and distinction, except the distinction of the persons.

The third reason is: A thing of a predicament ought to be something distinct from its existence (*esse*), at least in intention and in definition, although in reality it is not distinguished. But Henry - whose this reason is - understands only a distinction of reason, as will be evident from his doctrine below, disputation 121, chapter 1. Since therefore God is not distinguished from his own existence, but in the definition of God himself that is included even according to our reason, it follows that God is not placed in a predicament.

283. St. John Damascene, De fide orthodoxa 1.9; and "From whom every paternity in heaven and on earth is named" (Eph. 3). Also: Damascene, Lib. primarum institutionum c. 7.

284. St. Thomas; Cajetan; Henry of Ghent, Summa, art. 26, q. 2; the Master (Peter Lombard), 1, dist. 8; Albert the Great, in the same distinction, art. 32; St. Bonaventure, ar. 1, q. 4; Richard of St. Victor, ar. 4, q. 2; Thomas of Argentina, q. 1, ar. 1; Aegidius (Giles of Rome), ar. 1, q. 3; Scotus, q. 3; Basso lis, q. 4; Capreolus, q. 2, ar. 1, concl. 5 - 6; Durandus, in 2, d. 3, q. 1, n. 12; St. Thomas again; the Ferrarian (Ferrariensis), Contra gentiles 1.25; Ockham, dist. 8, q. 1.

St. Thomas used almost this same reasoning in this article; and Capreolus in 1, distinction 8, question 2, article 1, conclusion 2. For he assumes it necessary that, in order for something to be placed in a predicament, the essence (*essentia*) of that thing differ from its existence not only by reason, as Henry was saying, but also from the nature of the thing. Yet this reasoning is easily solved from the same principle posited above. Both because what Henry supposes in his major proposition cannot be proved; and also because in God we can distinguish essence from existence by our concept in the manner of creatures. Moreover, we will show in 3, part, question 17, article 2, that existence and essence in created things are not distinguished from the nature of the thing. And since composition from genus (*genus*) and difference (*differentia*) is only by the intellect, such a distinction from the nature of the thing does not seem necessary.

The fourth reason of Scotus is in this way. Although a common and univocal concept can be given to God and creatures - for thus he thinks "being" is predicated of God and creatures - yet in God there is no reality which of itself is indifferent to the finite and the infinite, from which a genus might be taken: therefore God cannot be placed under a genus. But from the same principle it is clear that it is not necessary that there be something distinct from the nature of the thing, from which the genus is taken, and something from which the difference is taken, as we will show from the doctrine of St. Thomas, disputation 180, chapter 3. Wherefore this can place no obstacle to that which is most simple being able to consist of genus and difference.

The fifth reason, which St. Thomas asserts in that chapter 25, is of this sort. If God were in a predicament, he ought to be in the predicament of substance; but in that he cannot be, because "substance" is said of him abusively, according to St. Augustine, book 7 On the Trinity, chapter 5: therefore God is not in a predicament. Yet one can reply: although "substance," if we consider that from which the name was first imposed, is not properly said of God, but abusively - for it was said from "standing under" accidents - if, however, we attend to the thing itself signified, it is properly found in God, as in that same chapter Augustine indicates: for it signifies a nature, or essence, which does not need another in which it may inhere, but is through itself. Wherefore he teaches that essence properly befits God. And indeed, since "hypostasis" is properly said of God according to the phrase of the Greek Fathers and Councils, there is no reason why we should deny that "substance" too is properly predicated of God. For both hypostasis in Greek, and substance in Latin, are said from "standing under." But what St. Thomas objects on the contrary in that same chapter 25 - namely, that "per se" in substance is nothing, and signifies only a negation of existing in another, and therefore if in God there is not substance insofar as it "stands under" accidents, substance does not properly befit him - does not persuade me. For, as I will show in 3, part, question 4, article 2, against Scotus, that "per se" mode in substance is not a mere negation, but something positive explained by a negation, as also in the supposit and the person.

The sixth reason: whatever is in a predicament is enclosed and contained by it; but that which is infinite, like God, cannot be enclosed or contained by another: therefore neither is it in a predicament. This argument was used by St. Bonaventure, Thomas of Argentina, and Durandus, and was hinted at by Aegidius and Albert; yet it is of little weight. For to be contained under some genus of a predicament happens only according to our mode of understanding. And as we

understand the natures of things determined and finite essentially, so too we can consider something common and indifferent to the finite being and the infinite, unless that should be repugnant on other grounds. For to be contained and concluded under the most general predicament does not mean to be finite and limited in reality according to essence. For the common concept is abstracted from both, and thus can under itself embrace both finite and infinite according to essence. I pass over other reasons which, from the foregoing doctrine, I could easily show to be weak, and by two only, more efficacious, we will confirm the aforesaid position.

Caput IV - The first efficacious reason for the foregoing position

Two reasons are at my disposal which efficaciously prove the superior and more preferable position; of which I will set forth the former, since it seems less theological, more strictly in this chapter; the latter, which contains much doctrine of the Fathers, I will subjoin in the following chapter.

The first is of this sort. Whatever is under some genus is either an individual, or a species, either subalternate or lowest; but God in neither way can be in a predicament: therefore in no way is he placed in it. First, he is not a species; for he neither contains under himself other species as subalterns, nor individuals as the lowest species, as is manifest; for there are not many gods, differing only in number. Next, God in a predicament cannot be an individual: for every individual, in the notion of its species, essentially agrees with others; but God can in no way agree thus with anything in the world; otherwise he would be said to be of the same species with some creature and to differ from it only numerically; which is absurd, because he is more distant from any creature whatsoever than one creature is from another of a different species. Therefore God in no way is contained with any creature under a genus.

Next, it cannot be said that God is under any of the ten predicaments assigned by Aristotle; and by running through them it will easily be made clear. For if he were placed under any of those, he would be substance or relation; as Augustine seems to have taught in the places cited for the prior position: for of the other predicaments although something is properly said of God - namely, that he acts, as Augustine indicates - yet that is not something in God himself intrinsically and befitting. Now the controversy is whether God himself, according to something of himself, is placed in some predicament; not however whether something of a predicament is properly enunciated of him at least by an extrinsic denomination: as nearly all the items that are numbered in the predicament of action. Wherefore, although we should concede that the action of creation, or another by which God produces something external, is in the predicament of action, nevertheless what is said of God on that account does not make God himself to be in a predicament. It remains, then, that he must be in the predicament of substance or of relation, if he is to be placed in any. But that he cannot be constituted in these will also be easily proved.

First, indeed, concerning the predicament of relation (*relatio*), there is a particular argument to be set out next, besides the common reason that will be given a little later.

Caput V - The latter reason

The latter reason is this. Either God together with all other created things is under the univocal predicament (*praedicamentum*) of being, or he is under one of the ten predicaments assigned by Aristotle; but under none can he be: therefore he is not under any predicament. First, he cannot be under being: both because substance alone is being simply, while the rest are such only in a qualified sense; but what is predicated univocally of some things is wont to belong to them simply; and also because whenever some abstract concept univocally befits many, it ought to be common besides many things, that is, so abstracted from them that in them something remains by which they differ, different from that which is abstracted univocally from them: otherwise nothing common to them could be understood, as we will show in disputation 114, chapter 2. But "being" cannot be abstracted in this way; for in that which remains in the inferiors the very notion of being is intrinsically included; for which reason it is commonly said that being is intrinsically included in each, and hence is not a genus, nor univocal with respect to all individual beings; which reason Richard touched upon. Wherefore I do not see how those things could stand which Scotus teaches in the place cited: namely, that there is something univocally common to God and creatures, but that God is not placed under a predicament; to pursue this more extensively against him is not necessary. From what has been said one may also gather the commentary of certain more recent authors who try to recall all things into one predicament of being.

Next, it cannot be said that God is under one of the ten predicaments assigned by Aristotle; as will easily be made clear by running through some of them. For if He were placed under any of them, He would be under substance or relation, as Augustine seems to have taught in the places cited for the prior position; for from the other predicaments scarcely anything is properly said of God except "to act," as Augustine indicates; yet that is not something intrinsically and fittingly in God Himself. But the present controversy is whether God Himself, according to something in Him, is placed in some predicament; not, however, whether some predicament is properly enunciated of Him at least by an extrinsic denomination: as perhaps the predicament of action would be enunciated. Wherefore, although we should grant that the action of creation, or another by which God produces something externally, is in the predicament of action (which, however, is not yet certain), nevertheless for that reason God Himself would not be in that predicament. It remains therefore to see whether, if He is to be collocated in any, He must be in the predicament of substance or of relation. But that in these He cannot be constituted will also be easily proved.

First, indeed, concerning the predicament of relation, apart from the common reason which likewise proves the point concerning the predicament of substance - reason which we shall assert below - this can be shown in a special way. Although the series of each predicament is disposed by our intellect alone, indeed sometimes the predicaments are distinguished by our reason alone, as action and passion and relation (a point which will be made manifest below in Disputation 118, chapter 3), nevertheless the predicaments of accidents necessarily require this, that in no predicament of accident should anything be collocated unless it be a true and real accident. For just as the predicament of substance is true and real substance, so also the remaining nine are truly

accidental forms. This supposed, human reason can order the several predicaments of accident, and distinguish one from another; but the relation which is in God is not an accidental form, but true substance: therefore it cannot be placed in the predicament of relation, which is one of the nine. For the same reason we shall note in Disputation 173, chapter 2, that a relation which by the nature of the thing is the same as substance is not to be constituted in the predicament of relation.

But for what reason Boethius in book 1 of De Trinitate says that the predicament of quality and quantity in God signifies substance, that the last six predicaments are said of God after the manner of an extrinsic form, and that, finally, the predicament of relation is not predicated of God, will be explained in Disputation 114, chapter 1.[285]

Furthermore, that God is not in the predicament of substance is shown thus: no notion can be apprehended by our intellect univocally common to God and creatures - not only of wisdom, power, and the other attributes which in creatures are accidents but in God are substance, but not even of substance itself. For the substance in God is of such a nature that it ought rather to be called supersubstance than substance; because neither the name substance, nor the concept which we have of it, suits that which is in God; a point which common opinion of the Fathers bears out for the other names also which are said of God, as we shall see in the following chapter.

Caput VI - The foregoing reason is confirmed by the doctrine of the Fathers

Boethius. Boethius, about the middle of his book on the Trinity, speaking of the substance of God, writes thus: "For substance in Him, namely in God, is not truly substance, but beyond substance; and, a few words later: For when we say 'God is,' we seem indeed to signify substance, but that which is beyond substances."[285] He is elucidated by Gilbert. In his commentary on that book he says: "For what is called His substance is indeed in that of which it is predicated, but it is not there substance - that is, not with that truth of notion by which anything whatever is called substance, namely that which, subsisting, is something; it is substance in respect of that in which it is, but it is called substance by a certain proportion of reason." By which words Gilbert expressed Boethius's opinion, namely, that substance in God is not of the same notion with our own, but is called substance by a certain proportion.

However, what the author subjoins a little below does not please me: namely, that God is named essence by one notion, substance by another, so that in this way there be some agreement between God and the creature; whereas in truth the ratio of both names is the same, if it be compared with God and with creatures. For Boethius does not on that account deny substance of God because by its primary signification it signifies that which underlies accidents; but because God's substance and nature exceeds the grasp of our cognition, and therefore neither by the name substance, nor essence, nor by any other imposed by us can it be expressed, except by a certain proportion.

That this was the mind of Dionysius in book 7 of On the Divine Names, I hold myself persuaded.[286] For there, describing the mode by which we know God in this life, he says that we have knowledge of God not from His own nature (which, considered in itself, is unknown to us), but

285. Boethius, De Trinitate 1; see also Gilbert of Poitiers (Porretanus), Commentary on Boethius's De Trinitate, ad loc.

from the things created by Him, in which there are images and likenesses of the divine perfections. And explaining this mode more fully he adds: "But that which surpasses all things we approach, so far as lies in us, by the way and order of the removal of all things and by the excellence and ascendings of all." Whence: "In all things God is known, and apart from all; and God is known both by knowledge and by ignorance." These words St. Thomas, in lecture 4 on that chapter, explains by distinguishing three modes by which we know God, which Dionysius seems to have expressed in the words cited.[287]

The first and chief mode is by the negation of those things which we see: hence we deny of God substance, wisdom, and all the rest. We deny, I say, in that manner in which we see those things in creatures and for this present state conceive them: for thus they are by no means found in God. Wherefore the same Dionysius in the Mystical Theology, in the chapter on God, thus speaks: "We profess that He is neither soul, nor mind, nor has imagination, opinion, discourse, or mental apprehension; that He is neither reason nor understanding."[286] And, among many other things which he denies of Him, he numbers life, essence, and eternity - not for any other reason than because nothing of that sort, such as we conceive and see, is in God.

This mode of knowing God Damascene taught with these notable words: "But in God it is impossible to say what His essence and nature is; rather it is more fitting to speak by the removal and denial of all things: for none of the things that are is His."[288] And a little later he grants that He is "beyond essence"; finally he subjoins: "There are moreover certain things which, although they are said of God by affirmation, nevertheless have the force of negation: for example, when in speaking of God we take up the word 'darkness,' we do not propose to our mind obscurity, but that He is not light as we know it, rather that He is loftier than light." Therefore this mode of knowing God denies all the things which we have said of God - not because of any imperfection in God, but because He surpasses all those things by a certain superior way.

In the same way Boethius, in that same book De Trinitate, said that God is not substance, but supersubstance. Of both modes of knowing - by affirmation and by negation - Dionysius makes mention: in that same book the Mystical Theology, chapter 3, and in book 1 of On the Divine Names; and a little after the middle he seems to have indicated both when he said that God is all the things that are, and is nothing of the things that are.[286] Elias cites these words in his commentary on Oration 24 of Nazianzen, which is "On the Coming of the Egyptians"; he says: "God indeed is the cause of the things that are, but He Himself is not, as being none of those things that are, but above all."[289] For although God is called being (ens), according to that saying, "I am who am," nevertheless He is not being in the way that the things which are are being (for otherwise the

craftsman would be of the same mode as his work), nor is He being in any determinate way, but simply and in a peculiar mode, or as in an eminent and surpassing way, as He alone knows. And on the Apologetic Oration, on those words "The high heaven," he speaks thus: "He indeed (namely, God) is, according to St. Dionysius, as mind, and as wisdom, and as life, and as lovable, celebrated by all Scripture. And likewise He both has many names and is without every name." And a little below, after he had enumerated many things which are said of God, he subjoins: "Accordingly He is said to be all these things, and yet He is above all these things: for God is, and is mind above mind, and is life above life, and, finally, is above all."

On the other hand, others, in order to show the same difference between God and other created things, and that He is above all, said that God is, and that the rest are not. Thus Augustine reports that Plato called all things except God "non - beings"; whence Augustine persuaded himself that Plato had read that text of Exodus 3 in which the Lord answered Moses: "I am who am." The same Plato in the Sophist shows that that which can simply be called being is that which contains in itself the perfections of being, and to which nothing is lacking. In this sense Augustine, Confessions 7, chapter 11, says thus: "I inspected the rest beneath Thee, and I saw that they neither altogether are nor altogether are not: they are, indeed, because they are from Thee; but they are not, because they are not what Thou art; for that is truly which remains unchangeably."

The third mode of knowing God, says St. Thomas, is according to the relation of cause and effect, since all the things found in the order of nature are considered as effects of God Himself.[287]

Caput VII - On the ways of knowing and naming God

But this third mode, which is little suited to the present disputation, ought to be included under one of the two preceding modes. For when we refer other things to God, we understand Him either by negation or by excellence: from this doctrine of the Fathers it is clearly evident that nothing can be univocally common to God and creatures in our cognition; therefore the notion of the divine essence does not pertain to the predicament of other things. Nor is this only true if the discourse be about the intellect of wayfarers, but also about the intellect of those seeing God: first, because for the same reason nothing at all common can be found between God and creatures, since God is above every mode of essence and of substance; and also, because those who see the thing are assured that in it they cannot distinguish a generic from a specific concept, as we shall see in disputation 118, chapter 4.

For this cause also the names which otherwise, according to the common sentiment of the theologians, are said properly of God, the Fathers affirm neither to belong to Him truly nor properly, because in God they signify something quite other than in created things from which they are taken. Thus Boethius in that book On the Trinity said that substance in God is not truly substance; and St. Augustine, book 5 On the Trinity, chapter 10, at the end, after having asserted that certain predicaments are said of God not metaphorically but properly, subjoins: Yet if anything can be said properly of Him by the mouth of man: as if to intimate that in every

287. St. Thomas, In De divinis nominibus, cap. 7, lect. 4, on the three ways: by negation, by excellence, and by causality.

appellation by which we name God, however proper it may seem, there is always something of the mode of translation.[294][295] In which sense Pseudo-Dionysius, chapter 5 of the Mystical Theology, among the many things which he denies of God, says that in God there is neither the notion of son nor of father; and St. Basil, book 5 against Eunomius, chapter 13, says that neither son nor generation is proper to the Deity, but thinks it has been introduced from human likeness.[296][297]

For the explanation of this it must be noted that in all the names which are attributed to God there is some impropriety, because they do not signify God and His perfections as they are in themselves, but after the manner of created things whose likeness we know, by removal or by excellence, as has been explained. But when they are transferred to God so as to signify that which is in Him unmixed with imperfection, we therefore say that the formal signification of those things is found in God truly and properly. Thus we call Him wise, not because He discourses, nor because His cognition is an operation elicited by a faculty of the intellect, but because in Him all things are manifest in a certain superior manner.

On these names St. Thomas taught most well below, q. 13, a. 2 - 3: that they are said of God improperly, if we attend to that from which they are taken and to the mode of our cognition; but if we attend to the thing itself, they belong properly to God. Which we shall show there from St. Cyril and John Cyparisiotes. On the other hand, because there are some names whose proper signification cannot at all be separated from imperfection, transferred to God they cannot in any way belong to Him properly, but metaphorically; which nevertheless are attributed to God because of some likeness of an effect. Such as we sometimes attribute even to inanimate things: so to the disturbed sea, anger and indignation; and hearing and sense also, because of some likeness on the side of an effect. Therefore when the cited Fathers teach that nothing of the things which are understood by us belongs properly to God, and hence that all the names are predicated of Him improperly, they are to be understood as speaking in the former way

In this reasoning St. Thomas and Cajetan also have used in this article; Richard and the Argentina in the place cited: for, as Richard most aptly says, every creature in respect of God is said to be a being by imitation, no otherwise than accidents in respect of substance; and therefore the Doctors cited think that there is not anything univocally common to God and creatures. With whom Cajetan teaches this very thing in this article and in I, q. 13, a. 5, and in the little work On Being and Essence, c. 2, q. 3; Ferrar likewise with the same St. Thomas in Contra Gentiles c. 32; Basthol also on I, dist. 8, q. 1, a. 5. For these reasons we reply to the arguments for the prior view.[298][299]

294. Boethius, De Trinitate 1.

295. St. Augustine, De Trinitate 5.10.

296. Pseudo-Dionysius, De mystica theologia 5; De divinis nominibus 7.

297. St. Basil, Contra Eunomium 5.13.

298. St. Thomas, Summa theologiae I, q. 13, a. 2 - 3; on the three ways, see also In De divinis nominibus, cap. 7, lect. 4.

299. Cajetan on Summa theologiae I, q. 13, a. 5; Opusculum De ente et essentia c. 2, q. 3; Richard of St. Victor; the "Argentina" (Hugh of Strassburg); Ferrar; Basthol on I, dist. 8, q. 1, a. 5; and St. Thomas, Summa contra Gentiles 1.32.

Foundations of the prior opinion are not difficult to overthrow. To the first argument, which is unique, namely that the authors of that opinion think that no effective argument is found for ours, I answer: although many reasons which are customarily adduced for our opinion do not have much weight, nevertheless some not ineffectual are not lacking, as was shown above. And to the testimonies of the Fathers from what has been said one can also easily reply.

Reply to the authorities. To the first, which is of St. Augustine, we concede that those two predicaments of substance and relation, that is, the names of those predicaments, belong properly to God; but not univocally: for which reason we noted above whence Augustine, book 5 On the Trinity, chapter 10, said: Yet if anything can be said properly of Him, that is, of God, by the mouth of man. But we are not concerned at present with those predicaments which are enunciated of God only extrinsically, such as the predicament of action. For although the action of God should be set in a predicament, nevertheless not for that reason would God Himself be placed in a predicament.

To the second testimony, which is of Damascene, I reply that the vocables of sonship and procession, like all the others, are truly translated from creatures to the divine, as was shown above from Pseudo-Dionysius and other Fathers, who for that reason seem to concede a certain kind of translation in divine names, because all those things have been taken from created things. Wherefore I do not see how Damascene could have said the opposite. That, indeed, which he adduces on Ephesians 3, "from whom every fatherhood," does not prove that the very names and vocables "Son" and "Father" were derived from divine to human things; nor does any of the Fathers interpret the place in that sense. Nor indeed does "fatherhood" in that place signify the ratio and dignity of a Father, but family. For in Greek there is in the margin that "patria" denotes family or tribe. Thus Psalm 21 the Vulgate translates: "All the families shall adore in His sight," and Psalm 95, where he could have said in Latin, "Bring to the Lord the families of the nations," he left the Greek name "patriae," and said, "Patriae of the nations." In Hebrew it is mishpehoth, which the Seventy have translated as patriae in the cited places and in Numbers. Therefore also in Ephesians 3 is set the name "patria," which signifies family, not "patrotês," which in Latin can be said "paternitas"; which same term Damascene uses in the subtext when he says: It is fitting that the name of paternity, that is, of family, be derived.[300]

1. Solution. Further, it must be observed that the word "is named" in that place in Paul does not signify that which is called or is vocalized, but that which is. Thus also "name" is sometimes taken for the thing itself: Philippians 2: "At the name of Jesus every knee should bow," as has been often shown by us elsewhere. A similar thing is said in that same epistle, chapter 1: "Above every name that is named whether in this age or in that to come," that is, above everything that is celebrated.

Therefore the sense of Paul in Ephesians 3 is of this sort: Hence I bend the knee to the Father of our Lord Jesus Christ, from whom every "patria," and family of men as well as of angels, is derived; who is not only the Father of Christ, but also of all men and of angels; and therefore not only

300. Eph. 3; Phil. 2:10; Ps. 21(22); Ps. 95(96); see also St. John Chrysostom, Hom. 7 on Ephesians; Theophylact, Theodoret, and Oecumenius on Ephesians; St. Ambrose; St. Jerome, Commentarii in Ephesios (short and large versions).

eternal paternity, but temporal also in heavenly and earthly tribes and congregations, belongs to Him. This interpretation is followed by all the Greek Fathers - St. John Chrysostom, homily 7; Theophylact; Theodoret; and Oecumenius on that place: among the Latins, however, St. Ambrose does not press this particle of the text. St. Jerome in the short commentaries which are had in tome 8 simply explains it thus: From whom every "paternitas" has received its name, that is, from whom every thing that is father is named father: not that he thought that by translation from the divine to the human the name "Father" was derived, but that every thing which is father has from God the form, dignity, and hence also the very name, of father. But the same Jerome in the large commentaries, which are had in tome 6, excellently explains this place according to the mind of the Greek Fathers, demonstrating that the name patria signifies family, although he himself translates "paternitas": and certainly the Vulgate translator, because of a paronomasia, that is, a likeness of names, rendered "paternitas" in Latin what in Greek is patria. Yet the sense comes to the same both ways, if by the name "paternitas" we understand not only the notion which arises by generation, but also a principality in any family and congregation: otherwise, if paternity there were signified only from generation, it could by no reason be true that every paternity which is in heaven and on earth comes from the eternal Father or is named after Him; since in heaven there is no other besides the eternal paternity of God the Father: and this is not from Him, but rather is Himself the Father. Of the celestial spirits there is indeed a principality; or at least there is a paternity proceeding not by generation. Thus, therefore, Jerome in those commentaries explains this place so as to say that not only every family and assembly, both of angels and of men, is from God the Father, but indeed also every paternity; which he thinks to be a principality in a congregation: for he says, I think the angels and the other virtues have first rank in the heavens, whom they rejoice to call fathers. Therefore it is clear that Damascene did not employ that testimony according to the mind of the Apostle.

By reason also it is proved that the aforesaid names were not derived from the divine to the human: for before the mystery of the Trinity was manifested to the world, men, according to the idioms of their languages, were called fathers and sons; and the name of generation among men is by so much more ancient as human generation was known before the divine. Likewise the name "Spirit," as Basil noted, was taken from created things, namely from the breathed air, and was in a certain manner translated to the divine. In the same way Pseudo-Dionysius is to be understood, On the Divine Names in the cited place, where as it were by allusion and accommodation he reads that testimony of Paul thus: From whom, namely from the divine Trinity, the very "Trinity" is named in heaven and on earth.

To the other testimony of Damascene from the Elementary Chapters, chapter 7, I reply that it plainly favors the former opinion: unless we say that in that place he is not so much concerned to settle whether God is in a predicament, as to propose examples of species and genera: the truth of which examples is not always found.

Articulus VI - Whether there are any accidents in God

We proceed thus to the sixth. It seems that there are in God certain accidents. For a substance is no accident to another, as it is said in Physics I: but that which cannot be in another as accident, cannot be in another as substance. Thus it is proved that heat is not the substantial form of fire: because in other things it is an accident; but wisdom, virtue, and the like, which in us are accidents, are attributed to God; therefore also in God there are accidents.

1. Further: In every genus there is one first, but many are subsequent in rank: these are accidents; therefore if the first of those genera are not in God, there will be many firsts outside God, which is incongruous.

But on the contrary: Every accident is in a subject; but God cannot be a subject: because a simple form cannot be a subject, as Boethius says in the book On the Trinity; therefore in God there cannot be an accident.[301]

I answer that, from the foregoing it plainly appears that in God an accident cannot be. First indeed, because the subject is related to the accident as potency to act: for the subject, by reason of an accident, is in a certain way in act; but in no way is potency in God, as from the foregoing is evident. Second, because God is His own existence, as Boethius says in the book On the Hebdomads: and although that which is some thing can have something adjoined, nevertheless "to be" itself can have nothing adjoined: thus that which is hot can have something other than hot, as whiteness; but heat itself has nothing besides heat. Third, because everything which is per se is prior to that which is per accidens. Hence, since God is simply the first being, in Him there cannot be anything per accidens. Nor indeed can accidents be in Him per se, as "risible" is per se an accident of man: because such accidents are caused by the principles of the subject. But in God nothing can be subject to principles.

Reply to the first: Virtue and wisdom are not predicated univocally of God and of us, as will be made clear below. Hence it does not follow that there are accidents in God as in us.

Reply to the second: Since substance is prior to accidents, the principles of accidents are reduced to the principles of substance as to prior things: although God is not the first content within the genus of substance, but is first outside of every genus with respect to the whole of existence.

Explanation and confirmation of the article.

The conclusion is: In God there are no accidents. St. Thomas proves this by three reasons. Omitting these, because they are easier, and also those which Cajetan notes, I have resolved to confirm the entire doctrine of the article by the judgment of the Fathers. It is held as indubitable, both by philosophers and by theologians, that all those things which in creatures are accidents, when attributed to God, pass into His substance (*substantia*). Thus teach, among the Fathers, St. Augustine in De Trinitate 5, chapters 4 and 5; and Boethius in the book On the Trinity, when he

301. Boethius, De Trinitate; De hebdomadibus.

says that the predicaments of accidents, which are transferred to God, signify substance.[302] Athanasius agrees in the Epistle to the African Bishops; Basil in Epistle 141 to the Caesarienses; Marius Victorinus in book 1 against the Arians; and Nicetas, in Oration 40 of St. Gregory Nazianzen, on the words "I desire to be dissolved," teaches the same. The same truth was defined by Leo I in epistle 93 to Turibius, chapter 5, and in the Council of Rheims against Gilbert, the acts of which we will report below, disputation 120, chapter 2 - not that Gilbert thought that there are accidents in God, but that he said God is not His own wisdom. But when in the council it is defined that God, that is, the person, is His own wisdom and His own deity, it is plainly decreed that there is no accident in God.[303]

From the philosophers indeed, by the guidance of natural reason, Plato knew this very thing in the Symposium, where, speaking of the Beautiful, which he says is of God, he says: "It always is, nor is it affected by change; it is not beautiful as a part, nor as that in which beauty is, but He Himself is by Himself Beauty, whence the beauty of the others flows forth"; and Plutarch in the book On the Instruction of Princes, where he says: "Justice does not sit beside Jove, but He Himself is justice, and the most exact law."[304]

By philosophical reason also it can be shown. Moreover, all the reasoning of St. Augustine, which, from the immutability of God, rightly proves that there is not in Him any accident which can be separated, some employ in this argument: whether an accident can be separated from God or not, if once we concede that there is an accident in God, we are forced to say that He is composed of two; for the form of a true accident in respect of something cannot be, unless it be really distinguished from that by nature before the intellect. But to assert composition in God is absurd, as is evident from article 2. Therefore whatever is in Him is of His substance and essence (*essentia*).

However, since hitherto in the conclusion it has been proved that God is not essentially composed, and yet from the fact that someone should say that in Him there is some accidental composition it would not follow that there is in Him essential composition, it is necessary by another reason to prove that accidental composition is not found in God, which is of this sort: Since by His very nature God is the highest being most perfect, needing nothing, than whom nothing better can be conceived, it follows that in His essence and substance is contained every fullness of perfection; nor does He need another extraneous nature or form, such as is accidental. Wherefore not only essentially, but neither accidentally can He be composed.

Furthermore, since there are certain appellations which are attributed to God from time, as of Creator, Lord, etc., they are said to belong to God not from any change wrought in Him in time, but through extrinsic denomination and respect from the change of creatures. This St. Augustine noted very well in book 5 On the Trinity, chapter 16, and St. Jerome on that of Amos 9: "Behold I will command," where he says: "Therefore God is not changed, who is always immutable, but we change Him by our conversion"; as if he said, there is no change in Him, but because we are

302. St. Augustine, De Trinitate 5.4 - 5; Boethius, De Trinitate.

304. Plato, Symposium (on the Beautiful itself); Plutarch, De doctrina principum.

changed, He is said to look upon us in another way. Wherefore, to speak in the manner of logicians, although in God there is not any accident of the predicament, that is, any intrinsic form, yet there is an accidental predicable, that is, something can be predicated of Him by the predication of the fifth predicable. Nay more, if there be any predicament which, by extrinsic respect alone, is said of substance, something too can be enunciated of God by reason of mere simplicity, which does not repugn.

Articulus VII - Whether God is absolutely simple

To the seventh we proceed thus. It seems that God is not absolutely simple. For those things which are from God imitate Him: whence from the first being are all beings, and from the first good are all goods; but in the things which are from God, nothing is absolutely simple: therefore God is not absolutely simple.

1. Further, whatever is better is to be attributed to God: but among us composites are better than simples, as mixed bodies than the elements, and animals than plants: therefore it is not to be said that God is absolutely simple.

But on the contrary: St. Augustine says in book 6 On the Trinity that God is truly and supremely simple.[305]

I answer that God is absolutely simple can be made manifest in many ways.

First indeed by the things said above in this question. For since in God there is not composition, neither of quantitative parts - for He is not a body - nor composition of form and matter; nor in Him is one thing nature and another supposit (*suppositum*); nor one thing essence and existence (*esse*); nor in Him is the composition of genus and difference; nor of subject and accident; it is manifest that God is in no way composite, but is absolutely simple.

Second, because every composite is posterior to its components and dependent upon them; but God is the first being, as was shown above.

Third, because every composite has a cause: for things which are diverse according to themselves do not agree in something one unless by some cause uniting them; but God has no cause, as was shown above, since He is the first efficient cause.

Fourth, because in every composite there must be potency and act, which is not in God: for either one of the parts is act in respect of the other, or at least all the parts are as in potency in respect of the whole.

Fifth, because every composite is something which does not belong to any of its parts: and in wholes of dissimilar parts this is manifest: for none of the parts of a man is man; nor is any of the parts of a foot a foot. But in wholes of similar parts, although what is said of the whole is said of the part - for a part of air is air, and of water, water - yet something is said of the whole which does not belong to any part: for if the whole water be of two cubits, the part is not of two cubits. Thus

305. St. Augustine, De Trinitate 6, cap. 6 - 7.

therefore in every composite there is something which is not the thing itself. Now this, although it can be said of the one having a form, namely that it has something which is not itself - for example, in white there is something which does not pertain to the notion of white - yet in the very form there is nothing other. Whence, since God is the very form, or rather the very existence, in no way can He be composite. And this reason is touched by St. Hilary, 7 On the Trinity, saying: "God, who is power, is not contained from infirm things; nor He who is light is fitted together from dark things."[306]

Reply to the first: Those things which are from God imitate God as the caused imitates the first cause. Now this belongs to the notion of what is caused, that it be in another way composite: for at least its existence is other than what it is, as will be made clear below.

Reply to the second: Among us composites are better than simples, because the perfection of a creature's goodness is not found in one simple thing, but in many; but the perfection of the divine goodness is found in one simple thing, as will be shown below.

Confirmation of the doctrine of the article.

The conclusion is: God is absolutely simple; and this pertains not only to the dogma of faith, but is also evident by philosophical reason. It was first defined in the Council of Rheims, as we noted in the preceding article. For although Gilbert did not expressly say that God is composite, yet that followed from his opinion. And whether this can in truth be inferred from the opinion of those who say that the divine attributes differ outside the thing among themselves and from the essence, we shall see in disputation 116. He opposed, moreover, the error of him who attributed composition to God, as is ascribed to Peter Abaelard the Master, in his Elenchus of heretics; which error St. Bernard, however, in epistles 188, 190, and 192, among others, does not record as one of Abaelard's errors. Then the same truth was defined in the Lateran Council under Innocent III, and is reported in the chapter "Firmiter" on the supreme Trinity and the Catholic faith. And by natural reason also it is proved by us in disputation 21, chapter 3. Furthermore, concerning the simplicity of God St. Hilary elegantly disputes in book 8 On the Trinity; St. Augustine, book 11 On the City of God, chapter 10, and book 1, chapter 17; Hilduin, book 1 On the Supreme Good, chapter 1; Boethius, book On the Trinity, chapter 3; St. Bernard, book 5 On Consideration. Aristotle also, Metaphysics 12, chapter 7, pronounces that the first substance, that is, God, is simple and indivisible.[307]

306. St. Hilary of Poitiers, De Trinitate 7.

307. Fourth Lateran Council (Innocent III), cap. "Firmiter"; Hilduin, De summo bono 1.1; Boethius, De Trinitate 3; St. Bernard, De consideratione 5; Aristotle, Metaphysics 12.7.

Articulus VIII - Whether God enters into the composition of other things

To the eighth we proceed thus. It seems that God enters into the composition of other things. For Dionysius says, in the Celestial Hierarchy, that the being of all things is the Deity which is above being; but the being of all enters into the composition of each thing: therefore God enters into the composition of others.[308]

1. Further, God is a form; for St. Augustine says, in the book On the Words of the Lord, that the Word of God, which is God, is a certain unformed form; but a form is a part of a composite: therefore God is a part of some composite.[309]
2. Further, whatever things are, if they differ, differ by certain differences; and thus they must be composite: but God and prime matter are both utterly simple; therefore they in no way differ, and so are altogether the same. But prime matter enters into the composition of things; therefore so does God. The proof of the middle is this: whatever things differ, differ by certain differences, and thus it is necessary that they be composite: but God and matter are most simple; therefore they in no way differ.

But on the contrary: Dionysius says in the Divine Names that God is neither as a part in anything, nor is He composed of parts: therefore He does not enter into the composition of other things.[310]

I answer: Concerning this there have been three errors. Certain ones posited that God was the soul of the world, as is clear from St. Augustine, book 7 of the City of God; and to this is also reducible the position of some who said that God is the soul of the first heaven. Others, however, said that God is the formal principle of all things; and this is said to have been the opinion of the Amalricians. But a third error was that of David of Dinant, who very foolishly posited that God is prime matter. For all these are manifest falsehoods: and it is not possible that God should in any way enter into the composition of anything, neither as a formal principle, nor as a material principle.

First, because we have said above that God is the first efficient cause (*causa efficiens*). But an efficient cause does not coincide numerically with the form of the thing made, only in the same species: thus man generates man. Matter, however, neither coincides numerically nor specifically with the efficient cause, because this is in potency, but that in act.

Second, because since God is the first efficient cause, it belongs to Him to act first and per se; whereas what comes into the composition of something is not the per se agent, but rather the composite: for the hand does not act, but man through the hand; and fire heats through heat. Hence God cannot be a part of any composite.

308. Pseudo-Dionysius, De coelesti hierarchia; cf. also De divinis nominibus.
309. St. Augustine, Sermo de Verbis Domini (on the Word as "forma quaedam non formata").
310. Pseudo-Dionysius, De divinis nominibus.

Third, because no part of a composite can be first simply among beings; not even matter and form, which are the first parts of composites: for matter is in potency, and potency is posterior to act, simply speaking, as is evident from what has been said; and form, which is a part of the composite, is a participated form: and as the participant is posterior to that which is by essence (*per essentiam*), so too is the participated act posterior to that which is through essence; just as fire that is in an ignited thing is posterior to that which is through essence fire. But it has been shown that God is the first being simply.

Reply to the first: The Deity is said to be the being of all things effectively and by way of exemplar, not, however, by essence.

Reply to the second: The Word is an exemplary form, not the form which is a part of a composite.

Reply to the third: Simple things do not differ by some other differences, which is a feature of composites: for man and horse differ by the rational and irrational differences, and those differences themselves do not differ further among themselves by other differences: hence, if one insists on the word "differ," prime matter and God are not properly said to differ, but to be diverse. Hence, according to the Philosopher in Metaphysics 10, "diverse" is said absolutely, but every "different" differs by something: therefore, even if it be granted in speech that prime matter and God do not "differ," they are nevertheless diverse in themselves; whence it does not follow that they are the same.[311]

Confirmation of the article. The conclusion is: God cannot with another come together into the composition of anything. The conclusion of this article is no less certain in philosophy and theology than that of the preceding; yet there were not a few who dared to affirm the opposite. First among the philosophers, according to Eusebius, book 14 of the Preparation for the Gospel, chapter 6, Democritus taught that God is the soul of the world, and therefore to have the form of a spherical fire; though Cicero reports this man's error very differently in book 1 On the Nature of the Gods.[312] Into this opinion Epiphanius records the Stoics to have fallen, book 1 of the Panarion (Against Heresies); and John Damascene, in his book on heresies, ascribes it not to all, but to certain Stoics; and Ludovicus Vives judges it to have also been Pythagoras's view, on City of God, book 4, chapter 12.[313] Among Christians, the first of all seem to have been the Priscillianists in this error, since they asserted that the soul of man is a divine substance, or a part of it, as is clear from the First Council of Toledo in the confession of faith, and from Pope Leo I in epistle 93 to Turibius, chapter 5.[314] But Peter Abelard, as Bernard testifies in epistle 190, taught that the Holy Spirit is the soul of the world; which opinion Bernard relates him to have learned from Plato.[315] Finally, among the errors of a certain Amalric, who flourished under Innocent III, Turrecremata in book 4 of the Summa,

311. Aristotle, Metaphysics 10, on the distinction between "diverse" and "different."

312. Eusebius of Caesarea, Praeparatio evangelica 14.6; Cicero, De natura deorum 1.

313. Epiphanius, Panarion (Against Heresies), book 1; John Damascene, De haeresibus; Ludovicus Vives, commentary on Augustine's City of God 4.12, on Pythagoras.

314. First Council of Toledo, Profession of Faith; Pope Leo I, Ep. 93 to Turibius, c. 5.

315. St. Bernard of Clairvaux, Ep. 190, on Peter Abelard's teaching that the Holy Spirit is the soul of the world, learned from Plato.

chapter 35, numbers this error: for he used to say that all things are one and of the same nature, indeed that all things are God, and that God Himself is the essence of all things. This man Innocent condemns as heretical with the single word "We condemn," in the chapter Damnamus, On the Most High Trinity and the Catholic Faith.[316] From Scripture too it is clearly shown that God cannot be the soul of the whole world: for in Job 22 it is said, "He is higher than heaven," etc.; and in 2 Chronicles it is said, "Heaven, and the heaven of heavens cannot contain Thee."

Moreover, that God cannot enter into the composition of anything can be shown for this reason: everything out of which something is composed is more imperfect than the composite itself; but God is the most perfect of all things: therefore from Him no other thing can be composed. Those, however, who taught the opposite seem to have been deceived because they observed that the universe depends upon God the efficient and conserving cause in such a way that without Him it could no more be than an animal could live without a soul. On account of this, however, they ought not to have affirmed that God Himself, or the soul of the world, or the souls of other things, is a form.

As to the ancient philosophers, I do not have sufficiently clear information whether they said that God is truly the soul of the world, as the form and nature of it, or only the mover by way of an efficient and conserving cause - in the manner in which some think Aristotle called the intelligence that moves the heaven its assisting soul. As to the heretics, there is no doubt about the Priscillianists having taught that our soul, as informed, is a certain portion of God; and in this sense the Council of Toledo condemns their error, and Leo I likewise, and finally Leo concludes that there is no creature so pre-eminent that God Himself should be by nature its form - that is, "form" under the name of "nature," as Aristotle uses the name, Physics 2, chapter 1, and more clearly Metaphysics 5, chapter 4, where toward the end he says that that is first and properly called "nature" which is substance - that is, the form - of those things which in themselves, as such, have the principle of motion; matter is called "nature" metaphorically, as being the recipient of this.[317] As to Abelard and Amalric, there is no doubt that they spoke of an informing soul.

Quaestio IV - On the perfection of God

After the consideration of the divine simplicity, something must be said concerning the perfection (*perfectio*) of God. And because each thing, insofar as it is perfect, is said to be good, first we must treat of the divine perfection; second, of His goodness.

Note on the whole question. Just as in those questions to be elucidated which are more difficult and have something worthy of close attention, it is not worthy of one's honor, nor of the time and labor, to weave out a treatment exposed to censure, so also in easier questions, a treatment unworthy of censure must be composed. Therefore in this whole question, which is most easy, I

316. Juan de Torquemada (Turrecremata), Summa 4.35, on Amalric; Innocent III, cap. Damnamus, De summa Trinitate et fide Catholica (Fourth Lateran Council).

317. Aristotle, Physics 2.1; Metaphysics 5.4, on "nature" as substance, i.e., form, and matter called "nature" metaphorically.

wish to note only one thing from the foregoing doctrine, and from what we shall say in question 13, which is clearly gathered: namely, that in God certain perfections are contained eminently only and virtually (*eminenter* et *virtute*), whereas others are in Him formally and properly - or rather, the most simple nature of God virtually contains certain perfections, while others belong to Him formally. Those are said to be contained virtually which, in their intrinsic and essential concept, however abstract, include some imperfection; such are the perfections of corporeal things. But He is said to contain them eminently because He has in Himself an eminent power to produce them. Hence the perfection of a stone, which is in God eminently, has life in God Himself, but in the stone it is without life. Concerning the manner in which a thing is said to be "in God," we will say many things in disputations 51, chapter 3, and 70, chapter 2. Those perfections, however, which can be understood as purged of all imperfection are said to be in God formally and properly - not indeed as really distinct, as we shall discuss in disputation 116, but as conjoined without distinction in one most simple essence. The rest of what Cajetan and more recent authors treat on this question is easy and unnecessary for the things that must be said subsequently. In article 3, solution 4, it should have been noted why creatures are said to be assimilated to God, but God not to creatures; of this, however, we will treat in disputation 167, the last chapter.

Articulus I - Whether God is perfect

Objicitur 1. It seems that to be perfect does not befit God. For "perfect" is so called as if "wholly made"; but it does not befit God to be made; therefore neither to be perfect.

Objicitur 2. Further, God is the first principle of things; but the principles of things seem to be imperfect. For seed is the principle of animals and plants; therefore God is imperfect.

Objicitur 3. Further, it was shown above that the essence (*essentia*) of God is his very existence (*ipsum esse*); but existence itself seems to be most imperfect, since it is most common and the recipient of all additions; therefore God is imperfect.

But on the contrary: It is said in Matthew 5: "Be you therefore perfect, as also your heavenly Father is perfect."

Respondeo dicendum, that, as the Philosopher relates in Metaphysics 12, certain ancient philosophers - namely, the Pythagoreans and Leucippus - did not attribute what is best and most perfect to the first principle.[318] The reason of this is that the ancient philosophers considered only a material principle, which is most imperfect. For since matter, as such, is in potency (*potentia*), the first material principle must be maximally in potency, and thus maximally imperfect. But God is set down as a first principle not material, but in the genus of efficient cause (*causa efficiens*); and this must be most perfect. For as matter, as such, is in potency, so an agent, as such, is in act (*actus*). Hence the first active principle must be most in act, and consequently most perfect; for a thing is said to be perfect according as it is in act, since "perfect" is said of that to which nothing is lacking according to the mode of its perfection.

318. Aristotle, Metaphysics 12, reporting the opinions of certain ancients (Pythagoreans, Leucippus) about the first principle.

Ad primum ergo dicendum, that, as St. Gregory says, stammering as we can, we echo the lofty things of God: that which is not made cannot properly be called "perfect." But because in those things which are made we say something is perfect when it is led out from potency into act, the name "perfect" is transferred to signify whatever lacks nothing of being in act, whether it has this by way of being made or not

Ad secundum dicendum, that a material principle, which with us is found to be imperfect, cannot be simply first, but is preceded by another that is perfect. For seed, though it be the principle of an animal generated from seed, nevertheless has before itself the animal or the plant whence it falls; for it is necessary that before that which is in potency there be something in act, since a being in potency is not reduced to act except through some being in act

Ad tertium dicendum, that existence itself (*ipsum esse*) is the most perfect of all; for it is compared to all things as act: nothing indeed has actuality except insofar as it exists; whence existence itself is the actuality of all things, and even of the forms themselves. Hence it is not compared to other things as a recipient to what is received, but rather as what is received to a recipient: for when I say "the existence of a man" or "of a horse" or of anything whatsoever, the existence itself is considered as something formal and received, not as that to which existence befits

Articulus II - Whether the perfections of all things are in God

Objicitur 1. It seems that in God there are not the perfections of all things. For God is simple, as has been shown; but the perfections of things are many and diverse: therefore not all the perfections of things are in God.

Objicitur 2. Further, opposites cannot be in the same thing; but the perfections of things are opposed, for each species is perfected by its specific difference, and the differences by which a genus is divided and a species constituted are opposed. Since therefore opposites cannot be together in the same subject, it seems that not all the perfections of things are in God.

Objicitur 3. Further, a living thing is more perfect than a being, and a wise thing than a living thing. Therefore to live is more perfect than to be, and to be wise than to live. But the essence of God is his very existence; therefore he does not have in himself the perfection of life and of wisdom and other such perfections.

Sed contra is what Dionysius says, that in God the existences of all things pre-exist.[319][320]

Respondeo dicendum, that in God there are the perfections of all things; whence he is called universally perfect, because there is not lacking to him any nobility found in any genus, as the Commentator says on Metaphysics 5, text 21.[321] And this indeed can be considered from two points.

319. Pseudo-Dionysius, De divinis nominibus, cap. 5.
320. Pseudo-Dionysius, De divinis nominibus, cap. 2.
321. The Commentator (Averroes), In Metaphysicam 5, text 21.

First, from this, that whatever perfection is in an effect must be found in the efficient cause: either according to the same notion, if the agent is univocal, as a man generates a man; or in a more eminent mode, if the agent is equivocal, as in the sun there is the likeness of the things that are generated through the power of the sun. For it is manifest that the effect pre-exists virtually in the agent cause; but to pre-exist in the virtuality of the agent cause is not to pre-exist in a more imperfect mode, but in a more perfect mode, although to pre-exist in the potency of the material cause is to pre-exist imperfectly. Since therefore God is the first efficient cause of things, it is necessary that the perfections of all things pre-exist in God in a more eminent mode. And Dionysius touches this reason in the book On the Divine Names, saying of God that he is not indeed this or that, but is all things, as the cause of all.[319]

Secondly, from this, which was shown above, that God is existence itself subsisting of itself (*ipsum esse per se subsistens*); whence it must be that he contains in himself the whole perfection of being. For it is clear that if something hot does not have the whole perfection of heat, this is because heat is participated not according to its perfect notion; but if heat were subsistent of itself, nothing of the power of heat could be lacking to it. Hence, since God is subsistent being itself, nothing of the perfection of being can be lacking to him. But the perfections of all things belong to the perfection of being; for things are called perfect according as they in some way have existence: whence it follows that no thing's perfection is lacking to God. And Dionysius also touches this reason when he says that God is not existent in some way, but simply and without circumscription, and that the whole is in himself uniformly precontained, and afterwards he adds that he is existence for things subsisting.[319]

Ad primum ergo dicendum, that just as the sun, as Dionysius says, though it is one and uniform in itself and by shining uniformly, causes in sensible things many and different substances and qualities; so, in the cause of all, much more must all things pre - exist according to a natural union. And thus those things which are diverse and opposed in themselves, pre - exist in God as one, without any detriment to his simplicity

Ad secundum patet solutio by the same consideration

Ad tertium dicendum, that in the same chapter the same Dionysius says that existence itself is more perfect than life, and life itself than wisdom itself, if they be considered according as they are distinguished by notion; yet a living thing is more perfect than a being only, because a living thing is also a being; and a wise thing is a being and living. Although therefore "being" does not include in itself "living" and "wise" (for it is not necessary that that which participates existence participate it according to every mode of existing), nevertheless the very existence of God includes in itself life and wisdom, because none of the perfections of existing can be lacking to him who is subsistent existence itself

319. Pseudo-Dionysius, De divinis nominibus, cap. 5.
319. Pseudo-Dionysius, De divinis nominibus, cap. 5.

Articulus III - Whether any creature can be like God

Objicitur 1. It seems that no creature can be like God. For it is said in the Psalm: "There is none among the gods like unto you, O Lord" (Ps 85[86]:8); but among all creatures the more excellent are those who are called "gods" participatively; much less therefore can other creatures be said to be like God.

Objicitur 2. Further, likeness is a comparison; but there is not comparison of things which are of different genera; therefore neither is there likeness. For we do not say that sweetness is like whiteness. But no creature is of the same genus with God, since God is not in a genus, as was shown above; therefore no creature is like God.

Objicitur 3. Further, things are said to be like which agree in form; but nothing agrees with God in form, for the essence of no thing is existence itself except of God alone; therefore no creature can be like God.

Objicitur 4. Further, in things alike there is mutual likeness, for like is like to like, and the like is the like of the like. If therefore some creature is like to God, God will be like to some creature; which is against that which is said, Isaiah 40: "To whom have you likened God?"

Sed contra is that which is said, Genesis 1: "Let us make man to our image and likeness"; and in the First Epistle of John, chapter 3: "When he shall appear, we shall be like to him."

Respondeo dicendum, that since likeness is attended according to agreement or communication in form (*forma*), there is a manifold likeness according to the many modes of communicating in form. Some things are called like which communicate in the same form according to the same notion and according to the same mode; and these are not only said to be like, but equal in their likeness, as two things equally white are said to be like in whiteness; and this is the most perfect likeness. In another way things are said to be like which communicate in form according to the same notion, but not according to the same mode, but according to more and less; as what is less white is said to be like what is more white; and this is imperfect likeness. In a third way some are said to be like which communicate in the same form, but not according to the same notion, as is manifest in non-univocal agents. For since every agent acts so as to make something like itself insofar as it is an agent, and everything acts according to its form, it is necessary that in the effect there be a likeness of the agent's form. If therefore the agent is contained within the same species with its effect, there will be likeness between the maker and the made in form according to the same specific notion, as a man generates a man. But if the agent is not contained within the same species, there will indeed be likeness, but not according to the same specific notion: for the things that are generated by the power of the sun do indeed approach to some likeness of the sun, yet they do not receive the form of the sun according to a specific likeness, but according to a generic likeness. If therefore there be some agent that is not contained in a genus, its effect will still more remotely approach to the likeness of the agent's form, yet not so as to participate the likeness of the agent's form according to the same notion either of species or of genus, but according to some analogy, just as "being" (*ens*) itself is common to all. And in this way the things that are from God are assimilated to him insofar as they are beings, as to the first universal principle of all existence.

Ad primum ergo dicendum, that, as Dionysius says, when Sacred Scripture says that something is not like to God, this is not contrary to assimilation to him. For the same things are both like and unlike to God: like indeed insofar as they imitate him, according as it befalls that he be imitable, who is not perfectly imitable; unlike, however, insofar as they fall short of their cause, not only according to intensity and remissness, as the less white falls short of the more white, but because there is not a congruence either according to species or according to genus

Ad secundum dicendum, that God does not stand to creatures as a thing of a different genus, but as that which is outside every genus and the principle of every genus

Ad tertium dicendum, that a likeness of the creature to God is not asserted on account of communication in form according to the same notion of genus and species, but only according to an analogy: namely, in that God is being through essence, and others through participation

Ad quartum dicendum, that although in some way it is conceded that a creature is like to God, in no way is it to be conceded that God is like to a creature. For, as Dionysius says in De Divinis Nominibus, chapter 9, in those things which are of one order, mutual likeness is received, but not in cause and caused. For we say that an image is like to a man, and not conversely; and similarly one can in some way say that a creature is like to God, but not that God is like to a creature

Quaestio V - On the good in general

Then inquiry is made about the good. And first, about the good in general. Secondly, about the goodness (*bonitas*) of God.

In this question St. Thomas treats of the good universally, a treatment which properly belonged to the philosopher, so that in what follows he may prove that which pertains to the theologian, namely, that God is good. But since from the things we shall say it will be evident that one can err not a little in assigning the notion of goodness in God if he is ignorant of it universally, therefore those things which will seem to conduce to this theological truth, although they are philosophical, we have judged it necessary to recall into the question.

Articulus I - Whether the good differs in reality from being

Ad primum sic proceditur. It seems that the good differs in reality from being. For Boethius says in the book On ... (text truncated)

Objicitur. It seems that the good differs in reality from being. For Boethius says in the book On the Hebdomads: I consider in things one thing which is that they are good, and another which is that they are.[324] Therefore the good and being differ in reality.

1. Moreover, nothing is informed by itself; but the good is said by the informing of being, as is had in the Commentary on the book On Causes.[325] Therefore the good differs in reality from being.
2. Moreover, the good admits of more and less; but existence does not admit of more and less. Therefore the good differs in reality from being.

But on the contrary: St. Augustine says in the book On Christian Doctrine: inasmuch as we are, we are good.[326]

I answer: The good and being are the same according to reality, but they differ according to reason alone; and this is clear as follows. For the ratio of the good consists in this, that something be appetible; whence the Philosopher in Ethics I says that the good is that which all things desire.[327] Now it is manifest that each thing is appetible according as it is perfect; for all things desire their perfection. But each thing is perfect inasmuch as it is in act; whence it is manifest that, inasmuch as something is being, it is good: for existence is the actuality of every thing, as is clear from the foregoing. Whence it is manifest that the good and being are the same according to reality; but the good adds the ratio of the appetible, which being as such does not express.

Reply to the first: Although the good and being are the same according to reality, nevertheless since they differ according to reason, something is not predicated simply good and simply a being in the same way. For since being properly signifies to be in act, and act of itself has an ordination to potency, according to this something is said simply to be according as it is first discerned from that which is only in potency; but this is the substantial existence of each thing. Hence by its substantial existence each thing is said to be simply; but by superadded acts something is said to be in a qualified way; as to be white signifies to be in a qualified way. For to be white does not remove to be in potency simply, since it supervenes to a thing already existing in act. But the good signifies the ratio of the perfect, which is the appetible; and consequently it signifies the ratio of the ultimate. Hence that which is ultimately perfect is called simply good; but that which does not have the ultimate perfection which it ought to have, although it has some perfection inasmuch as it is in act, nevertheless is not called simply perfect nor simply good, but good in a qualified way. Thus therefore, according to the first substantial act, something is called simply being and good in a qualified way, that is, insofar as it is being; but according to the ultimate act something is called being in a qualified way and simply good. Thus therefore what Boethius says, that in things one thing is that they are good and another that they are, is to be referred to to be simply and to be

324. Boethius, De hebdomadibus.
325. Liber de causis, in the commentary, text 21.
326. St. Augustine, De doctrina Christiana, lib. 1, c. 32.
327. Aristotle, Nicomachean Ethics I.

good simply: because according to the first act something is simply being; and according to the ultimate, simply good; and yet according to the first act it is in a certain way good, and according to the ultimate act it is in a certain way being.

Reply to the second: The good is said by informing, insofar namely as the good simply is taken according to the ultimate act.

And similarly to the third: the good is said according to more and less by reason of the supervening act, for instance, according to knowledge or virtue.

Conclusion: The good and being are the same according to reality, but the good includes the ratio of the appetible, which being does not have.

Disputatio XXIII - What is the universal formal ratio of the good, and in what way it befits God

- Corollaria praecedentis doctrinae. cap. 7.

Caput I - The teaching of Durandus

In this article the true ratio and definition of goodness are delivered to us, from which we ought to gather that God is good; we must explain it so clearly that at the same time everything that pertains to the divine goodness becomes plain. And lest we repeat the same things again while explaining the nature of the good universally, we shall at once also show by what ratio God is good. Therefore, according to our customary method, let us examine the opinions of individuals on this matter. The first opinion is that of Durandus in II Sentences, dist. 34, q. 1, n. 22,[328] where, after he has at length impugned the opinion of Hervaeus,[329] in his explanation he teaches two things.

First, that goodness, or the formal ratio of the good in any entity whatsoever, is a relation of fittingness (relatio convenientiae), not along with appetite, as some impose upon Durandus, but along with another thing; and since he asserts that goodness is a certain respective entity, he judges it to be a real relation, as he also expressly affirms in the same question, n. 11. In God, however, this relation of fittingness by which he says that he is good he thinks to be an extrinsic denomination, as is the denomination "creator." He adds finally that in created things goodness is not found in the same way. For he esteems that in some things it is intrinsic and primarily existent - namely in

328. Durandus of St.-Pourçain, In Sententias II, dist. 34, q. 1, n. 22 (and n. 11).
329. Hervaeus Natalis.

those things which are intrinsically suitable to something either according to the habit of material cause or of formal cause, or of an integrating part, or lastly even of an accidental form inhering inherently; in other things, however, it is secondary and extrinsic, namely in those which are called good because they are optimally suited to and congruent with something else, either by the mode of efficient cause, or by some extrinsic condition. In the former way health is said to be intrinsically good for man, as also the soul, matter, and his parts. In the latter way medicine is good for the sick by the mode of efficient cause; and urine by the mode of a sign.

He proves first that goodness is something real in things by that number 11 which Durandus gathers from Aristotle, Metaphysics VI, c. 2, text 8, where he says that good and evil are in things as true and false are in the intellect.[330] Secondly, that it is a relation of fittingness he proves, because the formal ratio of the good is the same as the ratio of the fitting (conveniens); but the formal ratio of the good is goodness; therefore goodness is the ratio of the fitting, which, since it is nothing else than a relation of fittingness, with good reason goodness itself is called the relation of fittingness. Thirdly, that this relation of fittingness is attributed to God and to certain created things only extrinsically he shows thus. The ratio of fittingness is in things in the same way as the things themselves are said to fit with and be congruent to others; but by an extrinsic denomination we say that God fits with created things, and created things fit with certain other created things: therefore goodness in God and in some creatures is nothing other than an extrinsic relation of fittingness, which in God he thinks to be toward creatures. Finally, by the same reasoning it is proven that to certain other created things goodness belongs intrinsically, as was proved above. This is the first part of the sentence of Durandus.

Then he asserts in that same number 22 that good and being are reciprocal, not essentially but denominatively; which is plainly deduced from the prior part. For the exposition of which it must be presupposed, from the doctrine of Hervaeus, and Durandus himself also supposes in that question, n. 9, that certain things are said to be reciprocal in a twofold way: first, essentially, whenever one is the same formally and essentially with the other, as reality and entity are; and in the universe, things which differ only in name and are synonyms, as sword and blade. Then, denominatively, whenever two things so essentially accompany one another that the one is not without the other, and yet one is not formally and essentially the same as the other; thus "rational" and "man" are reciprocal denominatively, because man includes something beyond rational, and therefore is not adequately the same as it. And this kind of conversion is called denominative because we seem to predicate one of the other in the manner of accidents in the concrete by a denomination; for we seem to say in the same way, "man is rational," and "man is white," although in the former things they are reciprocal both in the abstract and in the concrete, with mutual consequence one being inferred and predicated from the other. And thus we say, if the thing is, it is being, and conversely; likewise, if there is reality, there is entity, and conversely.

On this foundation Durandus proves in that question, n. 11, the latter part of his opinion in this way. Those things convert essentially which differ in no way either in reality or in notion; but being and the good, entity and goodness, differ in ratio; therefore they do not convert essentially.

Otherwise it would be useless tautology to say "ens is good," just as if someone said "sword is blade"; and being and good would be synonyms as sword and blade, which is absurd. Moreover entity in its ratio does not include the relation of fittingness, which is the very ratio of goodness; and therefore goodness is not predicated of entity in the abstract

Caput II - Refutation of the preceding opinion

As to the opinion of Durandus, I grant that the latter part of it, if rightly understood, is true, as will appear below; but as to the former, nothing at all is proven. Wherefore, those things in it which seem false must be impugned briefly.

First, therefore, what he asserts - that goodness is a relation of fittingness - is refuted thus. Goodness, which is a passion of being, if it were that relation of fittingness, it would follow that God is not in himself formally good from the fact that he is in himself and for himself perfect, but from the fact that he has an order toward creatures; wherefore he would not be good in himself before creatures possible were understood, to which alone he would be good; and so in the very nature of God there would not be goodness in itself, but he would have goodness dependent upon possible creatures.

Durandus replies in that question, n. 26, that indeed God is not good save through an order to creatures; nevertheless he does not have goodness dependent upon them. And as if he were to say that he does not have it communicated from creatures, but only related to them; and thus he concedes this proposition: The goodness of God depends to creatures; because in this manner of speaking only order and relation to creatures seems to be signified; yet he denies this proposition: The goodness of God depends from creatures; because by this the same seems to be denoted - some origin and derivation of the goodness of God from creatures. Nor is it absurd to concede something to God through an order to creatures, in which manner we attribute to him many perfections; but it is altogether false to assert that any perfection of God is derived from creatures.

But this doctrine of Durandus does not dissolve the difficulty of the proposed argument. For neither do we, from his opinion, infer as an absurdity that God begs goodness from creatures - for this, as he himself very well noted, is gathered by no reason - but we infer that God in himself and for himself is not good and perfect, as he is wise and infinite, before possible creatures are understood; which also we judge to be absurd, as will appear more at large from those things which we shall say in Disputation 104 on the omnipotence of God, and in Disputation 154 on that property of the gift which befits the Holy Spirit from his origin. Now, however, it can be shown by this brief reasoning. The things which follow to God with the same degree of necessity with which God himself and the Trinity exist, themselves exist; and those follow to God which are more necessary than that creatures be possible. From which also, by the intrinsic argument-place, it is deduced that God would be the same even if creatures were not possible. Therefore likewise, God is

330. Aristotle, Metaphysics VI, c. 2, text 8.

by absolute necessity good and perfect in himself; and even if creatures were not possible, he nevertheless would be good and perfect. Therefore he is not good because he has an order to creatures, nor does his goodness hang upon them.

But rather, because he is in himself infinitely good and perfect, he also suits creatures, and is good.

Second, that goodness, which is a passion of being, does not belong to other things in this way, is shown thus. There is no thing which is not absolutely and simply good; or, if some are said to be evil, they are not said to be absolutely and simply [evil], but evil to certain others: as poison to living things; very few indeed, or none, suit all others and are good. Therefore created things are not said to be simply good from a respect of conveniency with others, but absolutely and according to themselves, by the notion of their entity. Moreover, by the same account by which things are suited to some and are good, to others they are evil and adverse: therefore they ought not rather to be called good than evil; and consequently good and being would not convert absolutely, but good and evil, as being and good, would depend upon a mutual consequence; which is absurd, and not a little inclines to the Manichaean error, who affirmed that certain substances are by their nature evil, as St. Augustine attests in many places, especially in book 2 of On the Morals of the Manichaeans, from chapter 1 to 8, where he elegantly shows that every substance created by God is in itself good; for, he says, just as evil is nothing other than a privation and is not a substance, which he himself calls an inconvenience hostile to substance and against nature; so also every substance, insofar as it is substance, is good, not because it suits another: just as it is not substantially evil because it is contrary to another.[331]

Third, even if the notion of goodness consisted in a relation of conveniency, nevertheless Durandus would not have rightly said that it is found intrinsically only in those things which inhere in another either after the manner of a form or after the manner of a part, but extrinsically in others. For although that which is suited to another after the manner of an efficient cause is not primarily and intrinsically good, but by reason of the effect, as the sun is good to that which is made cool by reason of the heat which it produces in it; nevertheless something which does not inhere intrinsically in a thing is yet to it good and suitable not remotely by reason of the effect, but proximally by reason of itself, namely as an object with respect to a potency; for this is to be an end, and a good proximate to a potency by reason of itself, and not by reason of an effect, against that same Durandus. We shall prove this against Durandus in I - II, q. 4, a. 1; and moreover, not all the things which are in a thing to which they are said to suit are referred to it by an intrinsic relation of conveniency: for the integral parts of some whole, and suiting the whole, are said by Durandus to be good to it; yet they are not referred to the whole by a real relation of conveniency, as is clear.

Caput III - Two other opinions on the same question

There is another opinion of certain recent writers, who agree with Durandus in this, that he asserts that goodness formally is a relation of conveniency of one thing with another: they differ, however, in that they think that relation in general to be of reason and not real. Yet this opinion ought, in the same way, to be impugned by the two prior arguments made against Durandus. Then too it can easily be shown that the relation of conveniency between some things is sometimes no less real than the relation of dissimilitude and contrariety. But these are lighter matters and do not require a longer disputation.

Another opinion was that of Capreolus in II, dist. 34, ... and 3, asserting that the goodness of a being formally consists in a relation of reason to appetite, which he himself calls the perfective notion of another: which opinion indeed is not to be embraced. For if he understands that goodness is a relation of conveniency, from which it follows that something is desired, it is to be impugned in the same way as the preceding opinions; but if he understands it to be a relation of the appetible, his opinion pleases us still less. For, as Cajetan very well noted on this question, articles 1 and 4, the notion or denomination "appetible" is posterior to the notion "good," just as the notion "visible" is [posterior] to the notion "color": for "appetible" is said by an extrinsic denomination from the very potency that desires, because it can be desired. Wherefore it is prior that one can desire a good, than that it be appetible. But before it is understood that the potency can desire, the good in the object is understood: therefore the notion of the good is prior to that of the appetible. This doctrine will be made clear from those things which we shall say in disputation 104, chapter 2. [332]

Caput IV - The prior part of the truer opinion

It remains to report only the opinion of Hervaeus, which (although it by no means pleases me) I will refer, and I will not undertake to impugn it formally. In passing, while setting forth our own opinion, we shall mark those things which in it are less true. For the sake of this, and of the things which must be said, a certain distinction of goodness, or of the good, must be premised. Therefore, in three ways something is called good, first, in itself, insofar as it is in itself good and not for another. Second, that is called good which is good for another, whose rationale seems to be placed in a relation of congruency and conveniency with another thing. Now this kind of good can still be contained in two ways. Either it is in natural things, as heat in due proportion, and health with respect to an animal; or it is in moral things, and thus a moral action, which is said to be according to right reason or suitable to a rational nature insofar as it is rational, is good. On the contrary, it happens likewise in three ways that there is evil: first, that which is opposed to the good absolutely and in itself. Second, that which is less convenient or contrary to another, and this in a twofold way, either in natural things, or also in moral matters: for warm water is said to be bad for the sick; and sin is bad for a rational nature insofar as it is rational.

331. St. Augustine, De moribus Manichaeorum, lib. 2, cc. 1 - 8.
332. Cajetan, on Summa theologiae I, q. 5, aa. 1 and 4.

With this foundation laid, our opinion on this matter consists in two points: one is about the good relatively and with respect to another; the other is about the good absolutely and in itself: we shall explain the former part in this chapter, and the latter in the following. Therefore the good relatively, and that which is good for another, is posited in a relation of conveniency; and in this I judge Durandus's opinion to be true. Whether indeed that relation is always of reason or real matters little. In moral matters, however, both goodness and malice are in general a relation of reason - I shall prove [this] in I - II, q. 71, a. 6.[333] Among those, however, which are called good in this way, some are primarily good, because they are primarily convenient to another, as are accidental forms inhering in a subject; others, however, are said to be secondarily good from an effect, because they make something good in the subject; in which way one substance is said to be good for another.

It must be observed, however, that goodness in this way is not a passion of being, as was proved against Durandus in chapter 2.

But some prove that this relation of conveniency, which we have said to be goodness, is not real, because that relation would be either good by another goodness, or not: if it were not good by another goodness, it would follow that being and good are not convertible, which is absurd; but if it were good by another goodness, there would be a process to infinity, unless we were to say that the goodness by which that prior relation and goodness is good is a relation of reason, but the prior [goodness] is real: whence it would follow that the goodness which is converted with being is not a real relation in general. But this argument, although it would convince that the goodness which follows upon the notion of being and is converted with it is not a real relation of conveniency, nevertheless does not prove that there is not some goodness which is placed in a real relation of conveniency alone. Whether indeed it altogether proves that goodness is not a real relation, we shall see in the following chapter.

By this kind of goodness God is supremely good to creatures: yet the relation of conveniency which is in him is not real but of reason, as we shall say of the relation of omnipotence below, disputation 104, chapter 6, and of others by which God is referred to creatures: nevertheless, the rationale of goodness in this way belongs to God primarily, not secondarily; that is, he is not therefore good to creatures because he effects something good in them (although this too is true), but because by reason of himself he is proximally convenient to them. First, indeed, to all things universally: even to brute and inanimate things; because he produces and preserves their whole existence, which indeed is not in those things in this way a good, since it is not distinguished from them in any way. Then to rational creatures he is especially good, as known and apprehended. For thus he is that of which we delight and which we desire: but desire and delight are of goods that are convenient.

Moreover, that God is the proximate object of desire and delight, we shall prove against Durandus on I - II, q. 4, a. 1.[334]

333. St. Thomas, Summa theologiae I - II, q. 71, a. 6.
334. Durandus, on I - II, q. 4, a. 1.

But with respect to a goodness opposed in this way, it must be said otherwise; for in himself God cannot be evil to us, but only by effect, because in us he can bring about something dissonant to nature; for which cause in the same article we shall also say that God is indeed the object of delight and of desire, but not of sorrow and of fear.

Moreover, concerning this genus of goodness, whereby something is said to be suitable to another, St. Thomas does not dispute in this question, nor is it the business of the following question to prove that God is good in this way.

Next it had to be said about moral goodness, which consists in a relation of suitability (*convenientia*) with rational nature; about this, however, it will be more convenient to dispute at I-II, q. 19, a. 20.[335]

In what way, however, God is good in this kind of goodness can now be easily explained. He is good, therefore, whether his goodness be considered in operations within himself, or in operations without; for he is the author of no fault or sin: yet his goodness is of another kind than that which is in a man or in an angel; for he is not a cause by participation, as it is in a man or in an angel. Of this kind of goodness St. Thomas does not treat in this question, nor in the following; nor is goodness in this mode numbered by St. Thomas or by any other doctor among the divine attributes. For attributes are to be assigned not according to a generic notion, but according to a specific account; but the account of moral goodness is generic, and is found in many virtues, of which some we attribute to God - truthfulness, fidelity, justice, mercy, etc. Therefore the attribute of goodness, about which St. Thomas and the other Scholastics dispute, is that which answers to a passion of being, which the philosophers call entitative goodness (*bonitas entitativa*), about which it must be treated in the following chapter.

One might think, besides the goodness which corresponds to a passion of being, that there should be assigned to God a certain goodness of holiness distinct from that which is in the individual acts of virtues, by which also baptized infants are holy. I answer: in us and in the angels, besides the goodness which they call entitative, and besides the moral goodness which is in individual acts of virtues, there is a goodness of holiness, which consists in this, that we adhere to God justly; but it is not necessary to attribute to God any goodness of holiness besides his entitative goodness, and besides a moral goodness in all his works utterly perfect and without fault, because he has no one to whom he must be conformed in order that he be just and holy; rather by this very fact he is the rule of all holiness.

The latter part is the truer opinion.

335. I-II, q. 19, a. 20.

Caput V - On the good that is convertible with being, and on the opposite evil

It remains that we speak of the good which is convertible with being, and of the evil opposed. Therefore the formal notion (*ratio*) of goodness which is convertible with being, in my opinion, is the integrity and perfection of a thing in its own existence (*esse*). Wherefore in this kind of goodness, good is the same as integral or perfect; in what manner, however, it is reciprocated with being, we shall immediately say.

St. Thomas conveys this opinion in express words in this question. For in Article 1 he says that the good is that which all things desire: but each thing is desired insofar as it is perfect; and in the first solution he says: "But the good expresses the notion of the perfect"; and after a few words: "Whence that which is ultimately perfect is called simply good; but that which does not have the ultimate perfection which it ought to have, although it have some perfection insofar as it is in act, is not called simply perfect nor simply good, but qualifiedly." And when in Article 1 at the end he subjoins: "The good expresses the notion of the appetible," he does not understand a relative denomination from the appetitive power, nor a relation of suitability, but the notion of the perfect, on which chiefly it is founded, and whence it comes about that some thing is desired. In Article 3 he teaches the very same thing; and finally in Article 5 he infers that the account of the good, which is set in perfection, consists in mode, species, and order.[336]

From which, although St. Thomas seems variously to explain "mode" in this question, Article 5, and in I-II, q. 85, a. 4, and in De veritate, q. 21, yet he comes to the same thing, as Cajetan very well notes on the aforesaid Article 5.[337] In whatever way it be explained, at least from St. Thomas we have that the account of the good consists of mode, species, and order; and thus the goodness of a being and its integrity complete from all these are the same. Which doctrine he took from St. Augustine, book On the Nature of the Good, chapters 3 and 4.[338]

Reason: This opinion can also be proved by reason: for if there is lacking to any thing something of those which ought to agree to its integrity, from that defect it is said to be, and is, evil - not because it is unsuitable to another; for thus it would not be called absolutely evil, but evil for some; since there is no thing which is unsuitable to all others: therefore the absolute goodness of a thing is placed in its integrity. In this way we say that that horse is evil to which an eye is lacking, or something else: for, as Augustine witnesses in that place, chapter 4, malice is nothing else than the corruption of mode, or of species, or of order.[339]

On behalf of our opinion Herveus reports in Quodlibet 3, question 2, article 2, where he teaches that the formal account of the good is either the very perfection of the thing, or something ordered to perfection, so that in this way he may defend that being and good are convertible. For it happens that some thing is not absolute and perfect; since, however, there is none which does not have something ordered to its perfection, therefore there is none which does not have goodness

336. In this question, art. 1, and the first solution; art. 3; and art. 5.
337. Cajetan, on the said art. 5; see also I-II, q. 85, a. 4; and De veritate, q. 21.
338. St. Augustine, De natura boni, cc. 3 - 4.
339. St. Augustine, De natura boni, c. 4.

Yet there was no need to contrive this evasion, as will straightway be clear in the following chapter. Moreover, Herveus seems to have followed Augustine's phrase, who, as we said a little before, calls those three things by which a thing is perfected - namely, mode, species, and order - three goods or three goodnesses; not because each of them by itself without the others constitutes simple goodness, but because they all contribute to the account of what is simply good, although when some one be lacking, the account of some goodness can remain, as we shall note below. And in this sense Herveus said that the good or goodness is an end, or something ordered to an end: for perfect and end are reciprocal; wherefore just as the good is either the perfect or ordered to perfection, so also it is either the end, or ordered to the end.

Caput VI - Certain objections against the foregoing doctrine

It remains that we dispel certain objections against the foregoing opinion, that the greater and greater clarity may be brought to it.

The first is, that from the foregoing doctrine it seems to follow that being and good are not convertible: for not every being is integral, nor has it all things necessary to its perfection; wherefore there will also be some beings evil: in which we would seem to agree with the Manichean, who taught that some substances are evil.

In order to meet this objection, let us first note that the Manichean taught not only that some substance - but also that nature, which is the same, as we shall show at I-II, q. 71, a. 6 - is evil, yes indeed that it is substantially evil, insofar as such a nature and substance is, by reason of its own entity; as is clear from St. Augustine, book 2 On the Morals of the Manichees, from chapter 1 to 8, and in the book On the Nature of the Good, chapter 16.[341] Wherefore Augustine contends against the Manichean only in those two places, and very often elsewhere, to show that no nature, insofar as it is nature and being, is evil. He openly concedes, however, in that book, On the Nature of the Good, chapter 4, that some nature or substance is evil when it is corrupted. But he calls corrupted, not that which now is not at all, but that which suffers some diminishment of itself: whence he infers that some nature is evil, which from its own genus is more excellent, better than the good of another genus; as a thing corrupted in part and imperfect is better and more excellent than a good, perfect thing of another genus. And he subjoins in the same chapter 5 these words: "But if corruption were to take away from corruptible things every mode, every species, every order, no nature would remain."[342]

Therefore, he says, an evil nature is not entirely so, but corrupted in part.

Next it should be observed that a thing can be perfected and be good in many ways. First, essentially, as man by body and rational soul. Second, substantially, namely by the parts which regard the integrity of the substance itself, as by the members. Third, accidentally, by the powers of the soul, by which a thing is perfected for acting, by perfections also immanent in operation, and by

341. St. Augustine, De moribus Manichaeorum, lib. 2, cc. 1 - 8; and De natura boni, c. 16.
342. St. Augustine, De natura boni, c. 5.

other accidents by which the good habit or condition of the thing consists. Since, however, malice is opposed to some finality - namely privation or corruption of integrity - it is necessary that in things malice be found in just as many ways.

First, then, the malice of a thing is a complete corruption: and in this way, since the very thing and substance do not remain to which such malice or privation might belong, nothing can be evil: wherefore everything is good by that whereby it is, namely by its nature and essence; for the things which are necessary for its essential constitution can never be lacking, and the thing itself remains. And so in that place, On the Nature of the Good, ch. 16, Augustine writes thus: "... Therefore malice is not, if the nature remains; and if it is evil, it is not of any nature; but if it is not altogether, it is of a good nature; and if into the very nature the evil were to pass, there would remain no good by which that nature might be recognized."[343]

Second, evil happens in the very substance by the defect of some member or part of integrity.

Third, from the privation of some quality or operation, which pertains to the state and due constitution of the thing; and in both ways, namely the second and the third, many substances and natures become evil. And this is what Augustine wished in the book On the Nature of the Good, ch. 16, where, when he conceded that some nature, or substance, is evil when it is corrupted, it is plain, therefore, that being and good are convertible: for every being, by the very fact that it is, has essential goodness.

Then someone can object thus in the second place. If goodness is the perfection of a thing, and integrity consists of many parts, it can agree neither to God, nor to simple things. For if, indeed, many things do not concur for forming their species, if they are simple, they are perfected by themselves; for their integrity will be their very essence or nature and goodness. And in general, even if we speak of the goodness which follows and accompanies essence, whether in simple things or also in composites, goodness cannot be distinguished from entity: for goodness arises from the concord of essential parts, as of matter and form, without which neither is there an essence nor can it be considered. Therefore in this way goodness will be the same as the very essence of the thing, so that they differ only in name, and will be reciprocated not denominatively but essentially, according to what we said in the first chapter of this disputation. Wherefore goodness cannot be assigned as a passion (*passio*) of being.

I answer: first, this argument proves only that the goodness which follows upon the essence of a being is not distinguished, according to the nature of the thing, from the essence itself: yet nothing hinders our distinguishing them according to our mode of understanding. For in one way we conceive some thing under the concept of constituted being, considering whether it consist of other things and be perfected, or have all things which integrate it and complete it: in which way we conceive the thing itself alone and its essence, accidents being excluded. In another way we understand it distinctly, considering of what things it consists, and whether nothing be lacking of those things by which it is constituted; then we consider the thing not only as thing and entity, but also as integral and good. And although the intellect does not assert that any thing can essentially

343. St. Augustine, De natura boni, c. 16.

subsist without the integrity of essential parts, nevertheless it can consider it confusedly, not attending to its integrity, which consists of essential parts. Whence it is clear how, by the diversity of the concept of being and of good in our intellect, namely that the one can be known without the other.

These things, however, which we have said, are to be understood of that goodness which most nearly follows the thing or essence. For there is another goodness which consists in integral parts or in accidents, and is distinguished from the thing itself and can be separated from it: for which reason Gregory Nazianzen in Oration 38, and Nicetas, his commentator, on those words "Immemor igitur," and likewise Pictius with him, note in Nicetas on Oration 42, on those words "Immemor igitur," etc., that they said God is simply good from whose nature goodness is - just as composition is not of a nature compounded, nor is from that very composition...[344]

Caput VII - On whether the notion of goodness is absolute or relative

But Nicetas and Psellus indeed say that the nature of God is one thing, simplicity another, which is considered about the nature and, as it were, surrounds it; and in fact they said this only on account of a distinction of our reason. If, therefore, simplicity and composition are thus compared with a thing simple or composed, in like manner the integrity of a thing ought to be compared with the thing itself. Therefore the argument does not prove that, universally, being and good are in no way to be distinguished.

Then I say that in simple things the notion of good can be fitting, not as something distinct from their essence by the nature of the thing, but only by our intellect; for we can consider it in either way just now explained. Nor does their simplicity prevent our conceiving them as, as it were, perfected out of many. For just as we apprehend in them several aspects distinct by our intellect, so too we can think of them themselves as, as it were, entire out of all the things that pertain to their entity, after the likeness of those which are constituted from many things really distinct. From which it may also be gathered that being and good do not reciprocate essentially, but denominatively, according to what was noted in the first chapter. In which place also the opinion of Durandus, there reported, is disproved, whose opposite Herveus thought true, teaching that good can convert essentially with being, and then that it is something abstracted from the absolute and the relative alike.

Corollaries of the preceding doctrine.

Someone will ask whether the ratio of goodness is absolute, or relative, or abstracted from both. I answer, on the basis of the higher doctrine, that goodness is in this way a relation, not indeed of the fittingness of one thing with another, as Durandus supposed, but of the integrity that comes from many. For the assemblage of all the things without defect necessary to the constitution of some thing is signified relatively; and this relation is to the very essence as to something to which it is fitting, but it is among those things which pertain to integrity: it also in a certain manner regards

344. St. Gregory Nazianzen, Oration 38; Nicetas, Commentator on the same, on the words "Immemor igitur"; and again in Oration 42; Pictius ad loc.

the essence itself as consummated and perfected from them. Whether, however, this relation is only of reason or real, I do not care: yet it is certain that, in simple things, it is only of reason; for the assemblage of those things which are distinguished only by reason cannot be real, as is evident. Wherefore, if this goodness were a real relation, it could be only in composite things. But the two reasons which seem to fight against this doctrine have no weight.

Third objection. Herveus argues thus: no relation has perfection, but it is indifferent to the perfect and the imperfect; therefore the goodness of a thing cannot formally be a relation, since the goodness of a thing is its perfection.

Solution. Perfection is said of something in two ways: first, the integrity of a thing; then, that which pertains to its integrity. Although, therefore, relation, as it pleases some, is not a perfection in the latter way - which, however, we shall show false in Disputation 122 - yet nothing hinders that it be a perfection in the former way formally: for the same is the perfect and the complete in all respects, which cannot be understood without some reference.

Fourth objection. The alternative reason of certain recent authors is of this sort: if goodness is a real relation, either that relation is good or it is not. If it is not good, then good does not convert with being; but if it is good, then there is another relation that is good, and so on to infinity.

Response. First, not every goodness is a real relation, as has been shown, but some is of reason; and therefore there will not be a regress to infinity. Then I say that good converts with being, even with the relative, yet in such wise that it converts with the bare being which is understood after the manner of a subject receiving perfection, not, however, with the perfection of being itself.

Moreover, to put an end to this disputation, let us infer from what has been said that which chiefly pertains to our plan: namely, that God is good, indeed supremely good, in this kind of goodness, which, as it were, is a passion of being; for he is constituted whole and perfect in his existence (*esse*), so that nothing can be lacking to him, whether of those things which pertain to essence, or to persons, or to operations and emanations. But this goodness of God surpasses the goodnesses of all things created: for their essence is always good in such wise that, although it cannot be separated from the goodness existing with it, yet it can have opposed to itself the malice, namely, of its corruption. Moreover, a created essence, remaining in its existence with its essential goodness, can otherwise be evil by defect of other things which accidentally perfect it, according to what has been said in the preceding chapter. But God is so necessarily always existent, and therefore good, that no malice at all can blot out his goodness; just as neither can his essence and existence be corrupted. Then, too, existing in the realm of things, he is so necessarily good and perfect on every side that from no defect can he be evil; from which plenitude of goodness that he has in himself, there comes that he is good to all created things.

Articulus II - Whether good, according to reason, is prior to being

Whether, according to reason, good is prior to being.

Proceeding thus to the second. It seems that, according to reason, good is prior to being. For the order of names is according to the order of the things signified by the names. But Pseudo-Dionysius, among the other names of God, puts good before being, as is clear in book 3, chapter On the Divine Names; therefore, according to reason, good is prior to being.[345]

1. Further, that is prior according to reason which extends to more: but good extends to more than being; for, as Dionysius says in the same place, good extends to existent and non-existent things, whereas being extends only to existent things: therefore good is prior according to reason to being.
2. Further, what is more universal is prior according to reason; but good seems to be more universal than being: for good has the aspect of the appetible; yet for some the very not-being is appetible: for it is said in Matthew 26 about Judas, "It were good for him if that man had not been born," etc.; therefore good is prior to being according to reason.
3. Further, not only existence is appetible, but also life and wisdom and many other things of this sort; and thus it seems that existence is something particular among appetibles, while good is universal: therefore good simply is prior according to reason to being.

But on the contrary is what is said in the book On Causes, that the first of created things is being.[346]

I answer that being, according to reason, is prior to good. For the aspect signified by a name is that which the intellect conceives of a thing and signifies by a word: therefore that is prior according to reason which first falls under the conception of the intellect. But first in the conception of the intellect falls being: because each thing is knowable insofar as it is in act, as is said in Metaphysics IX; whence being is the proper object of the intellect, and so is the first intelligible, just as sound is the first audible: therefore, according to reason, being is prior to good.

Reply to the first: Dionysius is determining in the Divine Names according as we name the things that import about God the relation of cause; for we name God, as he himself says, from creatures, as cause from effects: but good, since it has the character of the appetible, imports the relation of final cause, whose causality is first, because an agent acts only for an end, and by the agent matter is moved to form; whence it is said that the end is the cause of causes ...

... the cause of causes. And so, in causing, the good is prior to being: as the end is prior to the form. And for this reason, among the names signifying the divine causality, "good" is set before "being." And again, because according to the Platonists - who, not distinguishing matter from privation, said that matter is non-being - the participation of the good extends to more things than the participation of being: for prime matter participates the good, since it desires it; but nothing desires except what is like itself; yet it does not participate being, since it is held to be non-being. And therefore Dionysius says that the good extends to things that do not exist.[347]

345. Pseudo-Dionysius, De divinis nominibus, c. 3; cf. also the clustered citations as they stand in the text: In I Sent., dist. 19, q. 1, a. 2; Summa contra Gentiles III, c. 20; De veritate, q. 30, a. 3; and Dionysius, loc. cit.

346. Liber de Causis; cf. Aristotle as cited in the margin (Metaphysics IX).

347. Pseudo-Dionysius, De divinis nominibus, c. 3.

Whence the solution to the second is clear. Or one may say that the good extends to things that exist and to things that do not exist, not according to predication, but according to causality: so that by "things that do not exist" we understand not those which simply are not at all, but those which are in potency and not in act: because the good has the character of the end, in which not only the things that are in act come to rest, but toward which also the things that are not in act but only in potency are moved. But being does not import the notion of a cause, except of a formal cause only, whether inhering or exemplary; and the causality of such extends only to those things which are in act.

Reply to the third: Non-being, taken in itself, is not appetible, but per accidens: namely, inasmuch as the removal of some evil is appetible; and an evil is indeed taken away by non-being. Yet the removal of evil is not appetible except insofar as by evil some being is privated. Therefore that which is per se appetible is being; non-being is good only per accidens, insofar as a certain being is desired of which a man does not endure to be deprived; and thus even non-being is called good per accidens.

Reply to the fourth: Life, and knowledge, and other such things are desired as they are in act: hence in all these a certain being is desired; and thus nothing is appetible except being, and consequently nothing is good except being.

Conclusion: Being is prior according to reason to good. For the confirmation and explication of this doctrine a few things will suffice; for from the foregoing it is quite clear; yet it will become still clearer by the following doubt.

Dubitatio circa textum.

The doubt is, in what way being can be prior, in the order of reason, to all other intelligibles, as St. Thomas says. For either the discourse is of the order of reason according to itself; and thus the doctrine cannot be true: for nothing is prior to God, neither according to reality, nor according to intellect, as in Question 3, Article 1, the same St. Thomas taught; therefore the ratio of being cannot be prior to all others. But if the discourse be of things with respect to our intellect, it does not seem that the question proposed in the title of the article is satisfied, in which it is asked whether the ratio of being, according to itself, is prior to the ratio of good.

Cajetan answers this doubt in two ways. The latter solution is as follows. When it is asked whether St. Thomas understands about the order "as to us," the phrase "as to us" can be taken in two ways: either it is referred to the intelligibles, or to the order. If it be referred to the order, the sense is: whether, in the order as to us, the ratio of being is prior to the ratio of another intelligible. Wherefore the objection proposed at the beginning (says Cajetan) attains that which it strives to prove: and St. Thomas does not speak of the order "as to us," by which, namely, a thing is known by us, but of the order according to itself, by which one ratio is prior to another: wherefore, in his opinion, not the ratio of being, but God among other things is prior according to himself. But if the phrase "as to us" be referred to the intelligibles, Cajetan distinguishes between intelligibles to us and not intelligible to us; and in this way he thinks it is to be taken in the present place, so that the sense is: among the intelligibles to us, being is prior according to itself. Therefore, since here being

is compared only with the intelligibles to us, it cannot be compared with God, who absolutely, though not to us, is the first intelligible. Wherefore the doctrine of this article does not oppose the doctrine of Article 1, Question 3, where the Doctor said that nothing is prior to God, neither according to reality nor according to intellect.

Cajetan thinks moreover that this exposition squares at first sight with the letter of the text, because St. Thomas said that the ratio signified by the name is that which the intellect understands; in which fashion he seems to have spoken of the human intellect, to which names signify. Yet this does not hinder, says the same Cajetan, but that the sequel be understood of intellect absolutely, whose object is known to be being. Thus far the latter solution of Cajetan, which is far less acceptable to me than the former, as I shall presently say.

Another solution is that St. Thomas here compares the ratio of being with other ratios of things, and not with the things themselves. Now, the ratio of being is the first intelligible in this manner, because it is compared with the rest in such a way that it is not compared with the quiddity of God himself. For Cajetan understands the ratios of things to be those which in their concept do not formally include existence. Since therefore the essence or quiddity of God cannot be abstracted from existence, it must be reckoned not among the ratios of things, but among the existing things themselves. If, however, the ratio of being were compared not only with the ratios of things, but with the things themselves, among which God would be contained, the ratio of being would not be the first intelligible; for God among the rest is first, since he is intelligible not by participation, but by himself; for which reason St. Thomas, Question 3, Article 1, says that nothing is prior to God, neither according to reality, nor according to intellect. Here, however, he only asserts that the ratio of being is first intelligible, not indeed compared with God, but with the other ratios of things which we understand.

But who does not see that these subtilties of Cajetan contribute little to the illustrating of St. Thomas's doctrine, which, if it be compared with the doctrine of the preceding article, is most clear? In the explanation of it, note that those things which are not distinguished by the nature of the thing, but by the consideration of the intellect, cannot be distinguished by an intellect that sees the thing, as is the cognition, as they say, intuitive; but only by an intellect that knows the thing through species and alien concepts. Wherefore, since in the preceding article of this question the Doctor said that being and good are the same according to reality and are distinguished by reason alone, he plainly understands the human intellect, which, by reason of the imperfection of its mode of cognition, forms various concepts of the same thing, and thus distinguishes things which were altogether undivided in themselves. All this doctrine will be proved more fully below in Disputation 118.

Therefore, when in this article he asks what is prior according to reason between being and good, in respect of our intellect distinguishing the ratio of being and of good, he proposes a question: for since by Article 1 it is established that being and good are the same by nature of the thing, he could not inquire which of them by nature of the thing would be prior. For the order of prior and posterior necessarily presupposes a distinction between those things which are ordered. Wherefore such ought to be the order as is the distinction of those things which have an order. To

the question thus proposed he excellently replies, saying that the ratio of being is prior to the ratio of good: and he understands this in any thing whatsoever, even in God: and he understands not only the ratio of being in general and abstract, but also the ratio of such a being, as of man, of God, etc. And that this ratio is prior in our intellect than the ratio of good is manifest: for of any thing whatsoever we first know its entity, than that which we conceive of it under the mode of an affection and property, as is the ratio of the good and the perfect. For goodness, as compared by our intellect with the entity of the thing, is always understood under the mode of an affection and property; but the entity of the thing is conceived under the mode of substance and subject. And so we first conceive man or God, than that we understand in them the ratio of the good: and to this tends the reasoning of St. Thomas in this article.

But someone will object Dionysius, On the Divine Names, book 3, at the beginning, where, among other names of God, he first enumerates "good." Now the order of names seems to be assigned from the order of the things which they signify: therefore the ratio of the good in God is prior to any other.

St. Thomas answers in the reply, that Dionysius in that place is treating of names which in God signify some mode, or relation, of cause. Now since among causes the first place is held by the final cause, whose ratio is goodness (for this cause moves the efficient), with reason he enumerated the name "Good" in the first place.

However, the mind of Dionysius can be more easily unfolded in such a way that it in no way opposes the doctrine handed down. His words, according to the translation of Perionius, are these: "Let us first, if it seems good, consider the name of good, which is perfect, and the interpreter of all the processions of God," where he says that the name "good" is perfect and an interpreter - or, as another translation has it, manifestative - of the divine processions and emanations: for all processions are ascribed to God by reason of goodness, whose proper and per se act seems to be to communicate itself to others. From this it is not proved that the name "good" signifies the first of all the ratios in God. And by "emanations" Dionysius understands those by which God communicates himself to creatures.

Articulus III - Whether every being is good

To the third, it proceeds thus.

It seems that not every being (*ens*) is good (*bonum*).

1) For the good adds to being, as was said above: but that which adds something of its own to another is coarser than that other: thus substance, quantity, quality, and other such things contract being; therefore not every being is good.

2) Further, no evil is good; but some being, as we say, is evil: and "evil good" is said through an addition of something; therefore not every being is good.

3) Further, the good has the ratio of the appetible: but prime matter does not have the ratio of the appetible, but of the desire only; therefore prime matter does not have the ratio of the good; therefore not every being is good.

4) Further, the Philosopher says in Metaphysics 3 that in mathematics there is no good; but mathematical things are certain beings, otherwise there would not be science about them; therefore not every being is good.

But on the contrary: Every being that is not God is a creature of God; but every creature of God is good, as is said in 1 Tim. 4: God, moreover, is supremely good: therefore every being is good.

I answer: Every being, insofar as it is being, is good. For every being, insofar as it is being, is in act, and in a certain way perfect; since every act is a certain perfection. Now the perfect has the ratio of the appetible and of the good, as is clear from what has been said: whence it follows that every being, insofar as it is of this sort, is good.

Reply to the first: Substance, quantity, and quality, and the rest which are contained under them, contract being by applying being to some quidditative determination or nature: but in this way the good does not add anything upon being, but only the ratio of the appetible and of perfection, which belongs to the very act of existing in whatever nature it be: whence the good does not contract being.

Reply to the second: No being is called evil insofar as it is being, but insofar as it lacks a certain being: thus a man is called evil insofar as he lacks virtue; and an eye is called evil insofar as it lacks sharpness of sight.

Reply to the third: Prime matter is not being except in potency; thus neither is it good except in potency. And although, according to the Platonists, it could be said that prime matter is non-being by reason of the privation adjoined, nevertheless it participates something of the good, namely, an order or aptitude to the good: and therefore it does not befit it that it be appetible, but that it desire.

Reply to the fourth: Mathematical things, precisely as abstracted, do not contain in themselves the nature of the appetible, which follows upon actuality in things; and therefore, in that respect, "good" is not said of them by way of predication as of appetible things. Yet, insofar as they have being in the intellect, and exhibit order and a certain perfection of truth, they are not outside the scope of the good absolutely, since every being, under its proper mode of being, is proportioned to the ratio of the good.

Reply to the fourth: Mathematical things do not subsist separately according to existence (*esse*): because if they subsisted, there would be good in them, namely, their very existence. But mathematical things are separated according to reason (*ratio*) only, insofar as they are abstracted from motion and from matter; and thus they are abstracted from the notion of end (*finis*), which has the character of mover. Nor is it incongruous that in some being according to reason there be neither good nor the notion of the good, since the notion of being (*ens*) is prior to the notion of good, as was said above.

Explanation of the article. The conclusion affirms something whose explanation can easily be gathered from the doctrine of Article I. For, if the discussion be about moral goodness, not every being is good, as is clearly evident. But if it be about the goodness by which one thing is said to be good for another, not every being is absolutely and simply good: because no being besides God can be suitable to all other things, as has been proved. Finally, if we speak of that goodness which is the integrity and consummation of a thing, then every thing is good by that goodness which consists in the integrity of the essence (*essentia*), although from another point of view it can be evil by defect of accidental integrity, or of parts.

But St. Thomas argues in the fourth way as follows: Mathematical figures and quantities are certain beings, to which nevertheless the notion of the good does not befit: for Aristotle teaches in Metaphysics III, chapter 2, text 3, that in these there is found no good, and on that account mathematicians prove nothing by a final cause; therefore not every being attains the notion of the good.[348] The Holy Doctor replies that, if mathematical figures subsisted in reality, they would indeed be good, as any beings whatsoever; but because they are abstracted by our consideration from existence, therefore in them goodness is not found; for this is found in a thing existing in reality. Nor is it at all absurd that something in our consideration be without goodness; since the notion of being and of good are distinguished only in reason, and the notion of being is prior to the notion of good.

Cajetan, in his commentaries, in order to defend the doctrine of St. Thomas, endeavors to show that mathematical figures are abstracted from matter in such a way that no individual of theirs exists in the nature of things apart from matter; metaphysics, by contrast, abstracts from matter in such a way that some of its individuals exist separate from matter, namely, the intelligences. In this way he would prove that mathematical figures are not good, because even in their individuals abstracted from matter they do not exist; whereas metaphysical things are good, because some of their individuals exist in reality, even abstracted from matter.[349] Yet in this matter Cajetan labors in vain: for, as has been proved, in things however abstracted from matter and from existence, the notion of the good is found.

In my judgment, the mind of Aristotle in that place can more easily be explained. For when he denies that goodness inheres in mathematical figures and lines, he is not speaking of the good which formally consists in the perfection and integrity of the thing and is convertible with being; but of the good relatively taken, which is suitable to another. For this good has the character of an end (*finis*), and for the sake of which the rest is sought. Aristotle therefore teaches that the mathematical disciplines prove nothing from a final cause: for they do not consider what is fitting "for the sake of" which other things are done, since in them there is no principle of motion and operation, inasmuch as they consider figures as entirely abstract. For this reason Aristippus, as Aristotle testifies in the same place, despised these sciences, and preferred to them the leather-

348. Aristotle, Metaphysics III, c. 2, text 3.
349. Cajetan, Commentary on the Summa theologiae, ad loc.

worker's and the craftsman's arts, which consider the very "for the sake of which." Wherefore the notion of the good so follows upon the notion of being, and is convertible with it, that it also befits mathematical figures and things however much abstracted.

Articulus IV - Whether the good has the nature of a final cause

To the fourth, we proceed thus. It seems that the good does not have the nature of a final cause, but rather of other causes.

Objicitur 1. For, as Pseudo-Dionysius says in On the Divine Names, chapter 4, the good is praised as the beautiful; but the beautiful imports the notion of a formal cause; therefore the good has the nature of a formal cause.

Objicitur 2. Further, the good is diffusive of its own being, as is gathered from the words of Pseudo-Dionysius, who says that the good is that from which all things subsist and are; but a being diffusive of itself imports the notion of an efficient cause; therefore the good has the nature of an efficient cause.

Objicitur 3. Further, St. Augustine says in De doctrina Christiana that because God is good, therefore we are; but we are from God as from an efficient cause; therefore the good imports the notion of an efficient cause.

But on the contrary: The Philosopher says in Physics II that that for the sake of which a thing is, is as the end and the good of the others; therefore the good has the nature of a final cause.

I answer: Since the good is that which all desire, this manifestly has the notion of an end; therefore it is clear that the good imports the notion of a final cause. Yet the notion of the good presupposes the notion of the efficient cause and the notion of the formal cause. For we see that what is first in causing is last in the thing caused. Fire first heats before it induces the form of fire, although in fire heat follows upon the substantial form. But in causing, first there is found the good and the end, which moves the efficient cause; secondly, the action of the efficient cause moving toward the form; thirdly, the form arrives. Whence, conversely, it must be in the thing caused: what is first is the form itself, through which it is a being; secondly, in it is considered an effective power, insofar as it is perfect in being - for each thing is then perfect when it can make something like itself, as the Philosopher says in Meteorology IV; thirdly, the notion of the good follows, inasmuch as in that very perfection it is founded.

Reply to the first: The beautiful (*pulchrum*) and the good are the same in subject, because they are founded upon the same thing, namely, upon form; and for this reason the good is praised as beautiful. But they differ in notion: for the good properly regards the appetite, for the good is what all desire, and therefore it has the notion of an end, for appetite is as it were a certain motion toward a thing. The beautiful, however, regards the cognitive power: for those things are called beautiful which, when seen, please; whence the beautiful consists in due proportion, because sense

delights in things duly proportioned, as in its similars. For sense is a kind of reason, and every cognitive power is such because cognition takes place by assimilation, and likeness regards form; therefore the beautiful properly pertains to the notion of a formal cause.

Reply to the second: The good is said to be diffusive of its own being in the way in which the end is said to move.

Reply to the third: Everyone having a will is called good insofar as he has a good will: because by the will we make use of all the things that are in us. Hence a man is not called good because he has a good intellect, but because he has a good will. But the will regards the end as its proper object; and thus what is said, that God is good, is referred to the final cause.

Explanation of the article. The conclusion affirms that it is to be understood not of the good which is placed in the integrity of the thing itself, but of the good related to another, which is said to be fitting to something; of which kind of good there was speech in the preceding disputation. Moreover, as we noted there, this relative ratio of the good befits another, but arises from the goodness of the thing itself, which is its integrity and perfection, and is convertible with being. What Cajetan notes in this article concerning these three - good, end, and the appetible - we shall treat in I, q. 2, a. 4, where also in a. 1 it must be disputed whether apprehension is a condition or the notion of the end. Finally, whether the end is first in causality and last in acquisition we shall explain in a. 1 of that and other questions.

Articulus V - Whether the notion of the good consists in mode, species, and order

To the fifth, we proceed thus. It seems that the notion of the good does not consist in mode, species, and order.

Objicitur 1. For the good and being differ in notion, as was said above; but mode, species, and order pertain to the notion of being. Therefore the notion of the good does not consist in mode, species, and order.

Pulchrum, however, regards the cognitive power: for those things are called beautiful which, when seen, please; whence the beautiful consists in due proportion, because the sense takes delight in things duly proportioned, as in things like itself; for sense too is a certain reason, and every cognitive power. And because cognition takes place through assimilation, and likeness regards form, the beautiful properly pertains to the notion of the formal cause.

Reply to the second: the good is said to be diffusive of its own existence, in the way in which the end is said to move.

Reply to the third: whoever has a will is called good insofar as he has a good will; because through the will we use all the things that are in us: whence a man is not called good who has a good intellect, but one who has a good will. But the will regards the end as its proper object; and thus what is said, that God is good, is referred to the final cause.

Explanation of the article. The conclusion is not asserted of the good which is set in the thing's integrity, but of the good relative to another, which is said to be fitting to someone; about which genus of good it was said in the preceding disputation. Moreover, as we there noted, this notion of a good fitting to another arises from the goodness of the thing itself, which is its integrity and perfection, and is convertible with being. What Cajetan notes in this article concerning these three - good, end, and the appetible - we shall treat in I - II, q. 1, a. 4; where also in a. 1 it must be disputed whether apprehension is a condition or the notion of the end. Finally, whether the end is first in causality and last in acquisition we shall explain in a. 1 and a. 4 of that question.[350]

Whether the notion of the good consists in mode, species, and order

To the fifth, we proceed thus. It seems that the notion of the good does not consist in mode, species, and order.

Objicitur 1. For the good and being differ in notion, as was said above; but mode, species, and order seem to pertain to the notion of being, because, as it is said in Wisdom 11, "You have disposed all things in measure, number, and weight." To these three are reduced species, mode, and order: for, as St. Augustine says in On the Literal Meaning of Genesis IV, "Measure sets a mode for every thing; and number gives a species to every thing; and weight draws every thing to rest and stability."[351] Therefore the notion of the good does not consist in mode, species, and order.

Objicitur 2. Further, mode, species, and order are themselves certain goods; if therefore the notion of the good consists in mode, species, and order, it would also be necessary that mode have mode, species, and order; and similarly species and order: and thus there would be a process to infinity.

Objicitur 3. Further, evil is the privation of mode, and of species, and of order; but evil does not totally take away the good; therefore the notion of the good does not consist in mode, species, and order.

Objicitur 4. Further, that in which the notion of the good consists cannot be called evil; but one says a bad mode, a bad species, and a bad order; therefore the notion of the good does not consist in mode, species, and order.

Objicitur 5. Further, mode, species, and order are caused by weight, number, and measure, as is clear from the authority of St. Augustine just cited; but not all goods have weight, number, and measure: for St. Ambrose says in the first book of the Hexaemeron that "the nature of light is that it is not created in number, nor in weight, nor in measure."[352] Therefore the notion of the good does not consist in mode, species, and order.

350. Cajetan, Commentary on Summa theologiae I - II, q. 1, a. 4; cf. also a. 1 of the same question, on whether apprehension is a condition or the notion of the end, and a. 1 and a. 4 on whether the end is first in causality and last in acquisition.

351. Wisdom 11:21; St. Augustine, De Genesi ad litteram IV, c. 3.

352. St. Ambrose, Hexaemeron I, c. 9.

But on the contrary: St. Augustine says in the book On the Nature of the Good: "These three, mode, species, and order, are, as it were, general goods in things made by God; and thus these three, where they are great, are great goods; where small, small goods; where none, there is no good." Which would not be unless the notion of the good in them were set; therefore the notion of the good consists in mode, species, and order.[353]

I answer that one and the same thing is called good insofar as it is perfect: for thus it is appetible, as was said above; but that is called perfect to which nothing is lacking according to the mode of its perfection. Now since each thing is what it is by its form, but form presupposes certain things and certain things necessarily follow upon it: for something to be perfect and good it is necessary that it have form, and the things that follow upon it. Now there is pre-required for the form the determination, or commensuration, of the principles - either material or efficient - to the form itself; and this is signified by mode, wherefore it is said that measure sets the mode. But the form itself is signified by species; because through the form each thing is constituted in its species; and for this reason it is said that number gives species, because definitions signifying a species are like numbers, according to the Philosopher in Metaphysics VIII: for as unity added or subtracted varies the species of number, so in definitions the difference added or subtracted.[354] But to the form there follows also an inclination to the end, or to action, or to something of this sort: because each thing, insofar as it is in act, acts and tends toward that which is fitting to it according to its form; and this pertains to weight and to order: whence the notion of the good, insofar as it consists in perfection, also consists in mode, species, and order.

Reply to the first: those three do not follow upon being except insofar as it is perfect; and according to this it is good.

Reply to the second: mode, species, and order are called goods in the same way as beings are called beings: not because they are, as it were, subsistences, but because by them other things are beings and goods. Whence it is not necessary that they themselves have other things by which they may be good: for they are not thus called goods as if they were formally the good of other things, but because through them, formally, other things are good. Thus whiteness is not called a being because it itself is made by something else, but because through it something is, namely white.

Reply to the third: since every sort of being is according to the form of something, whence, according to whatever being a thing has, there follows upon it mode, species, and order: thus a man has species, mode, and order insofar as he is a man; and likewise insofar as he is something else he has mode, species, and order in another way; and insofar as he is virtuous, and insofar as he is learned, and according to all the things that are said of him. But evil deprives of a certain being, as blindness deprives of the being of sight: whence it does not take away every mode, species, and order, but only the mode, species, and order that follow upon the being of sight.

353. St. Augustine, De natura boni, c. 3 - 4.
354. Aristotle, Metaphysics VIII, text 10.

Reply to the fourth: as St. Augustine says in the book On the Nature of the Good, every mode, insofar as mode, is good; and likewise it can be said of species and order. But a bad mode, or bad species, or bad order, is said either because they are less than they ought to be, or because they are not accommodated to those things to which they ought to be accommodated; or they are said to be bad because they are alien and incongruous.[355]

Reply to the fifth: the nature of light is said to be without number, weight, and measure, not simply, but by comparison to corporeal things: because the power of light extends to all corporeal things, insofar as it is the active quality of the first body that alters, namely the heaven.

Conclusion: The conclusion is affirmative, about which enough has been said in the preceding disputation.

Articulus VI - Whether the good is fittingly divided into the honorable, the useful, and the pleasurable

To the sixth, we proceed thus. It seems that the good is not fittingly divided into the honorable, the useful, and the pleasurable.

Objicitur 1. For the good, as the Philosopher says in Ethics I, is divided by the ten predicaments; but the honorable, the useful, and the pleasurable can be found in one predicament: therefore the good is not fittingly divided by these.[356]

Objicitur 2. Further, every division is made by opposites; but these three do not seem to be opposites: for honorable things are also pleasurable; and no dishonorable thing is useful; which nevertheless would be required, if the division were made by opposites, so that the honorable and the useful would be opposed, as Cicero also says in the book On Duties; therefore the aforesaid division is not fitting.[357]

Objicitur 3. Further, where one is on account of another, there there is only one; but the useful is not good except on account of the pleasurable or the honorable: therefore the useful ought not to be divided against the pleasurable and the honorable.

But on the contrary: St. Ambrose in the book On Duties uses this division of the good.[358]

I answer that this division seems properly to be that of the human good, if we consider the notion of the good more deeply and more commonly, this division is found to belong properly to the good according as it is good. For the good is something insofar as it is appetible, and the terminus of the motion of appetite: the termination of whose motion can be considered from the consideration of the motion of a natural body. For the motion of a natural body is terminated simply at the ultimate; but in a certain respect also at the medium, by which it is carried to the ultimate, which terminates the motion: and something is called the terminus of motion insofar as it terminates some part of the motion. Now that which is the ultimate terminus of motion can be

355. St. Augustine, De natura boni, c. 3 - 4.
356. Aristotle, Nicomachean Ethics I, c. 6.
357. Cicero, De officiis.
358. St. Ambrose, De officiis.

taken in two ways, either as the very thing to which it tends, as place, or form; or as the rest in that thing. Thus therefore in the motion of appetite, that which is appetible terminating the motion of appetite in a certain respect, as a medium, by which it tends to another, is called useful; but that which is desired as the ultimate terminating totally the motion of appetite, as a certain thing to which of itself the appetite tends, is called the honorable, because honorable is said of that which is desired for its own sake. But that which terminates the motion of appetite as rest in the thing desired is the pleasurable.

Reply to the first: the good, insofar as it is the same in subject with being, is divided by the ten predicaments; but according to its proper notion this division belongs to it.

Reply to the second: this division is not by opposite things, but by opposite notions. Yet those things are properly called pleasurable which have no other reason for being appetible except pleasure, although sometimes they are harmful and dishonorable. But those things are called useful which have in themselves nothing from which they are desired, but are desired only as leading to another, as the taking of bitter medicine. But those things are called honorable which have in themselves that from which they are desired.

Reply to the third: the good is not divided into these three as something univocal equally predicated of them, but as an analogous term which is predicated according to prior and posterior: for first it is predicated of the honorable, second of the pleasurable, third of the useful.

Conclusion: The conclusion is affirmative, about which there is discussion at I - II, q. 1, a. 4; for the aforesaid division is most suitable for a moral treatment.[359]

Quaestio VI - On the goodness of God

Then we inquire concerning the goodness of God. And about this four things are asked:

Articulus I - Whether to be good belongs to God

To the first, we proceed thus. It seems that to be good does not belong to God.

Objicitur 1. For the notion of the good consists in mode, species, and order; but these do not seem to belong to God, since God is immense in himself and is not ordered to another: therefore to be good does not belong to God.

Objicitur 2. Further, the good is that which all things desire; but not all desire God, because not all know Him: for nothing is desired unless it be known; therefore to be good does not belong to God.

But on the contrary: it is said in Lamentations 3: "Good is the Lord to them that hope in him, to the soul that seeks him."[360]

359. Cf. Summa theologiae I - II, q. 1, a. 4.
360. Lamentations 3:25.

I answer that to be good belongs chiefly to God. For the good is something according as it is appetible; but each thing desires its own perfection; and perfection, and the form of the effect, is a certain likeness of the agent, since every agent acts something like itself; whence the agent itself is appetible and has the notion of the good: for this is what is desired of it, that its likeness be participated. Therefore, since God is the first efficient cause of all things, it is manifest that the notion of the good and of the appetible befits Him. Whence Pseudo-Dionysius in the book On the Divine Names attributes the good to God as to the first efficient cause, saying that God is called good as that from which all things subsist.[361]

Reply to the first: to have mode, species, and order pertains to the notion of created good; but the good in God is as in a cause: whence it pertains to Him to impose on others mode, species, and order; and thus these three are in God as in a cause.

Reply to the second: by desiring their proper perfections all things desire God, insofar as the perfections of all things are certain likenesses of the divine being, as is clear from what has been said. And thus of those that desire God, some know Him according to Himself, which is proper to a rational creature. But some know certain participations of His goodness, which extends even to sensible cognition. Some, however, have a natural appetite without cognition: as things inclined to their own ends by some higher knower.

Conclusion: To be good belongs chiefly to God.

Articulus II - Whether God is the highest good

Objicitur: 1. It seems that God is not the highest good. For the highest good adds something over and above good; otherwise it would belong to every good. But whatever has its being from an addition to something is composite; therefore the highest good is composite. But God is supremely simple, as was shown above; therefore God is not the highest good.[362]

1. Further, good is what all things desire, as the Philosopher says; but there is nothing else that all things desire except God alone, who is the end of all things. Therefore there is nothing else good except God. This also appears from what is said in Luke 18: "None is good save God alone." But "highest" is said in comparison to others, as "highest hot" is said in comparison to other hot things; therefore God cannot be called the highest good.
2. Further, "highest" imports a comparison; but things that are not of one genus are not comparable, as sweetness is not suitably called greater or less than a line. Since, therefore, God is not in the same genus with other goods, as is clear from the foregoing, it seems that God cannot be called the highest good with respect to them.

Sed contra: St. Augustine says in De Trinitate that the Trinity of the divine persons is the highest good, which is beheld by the most purified minds.[363]

---

361. Pseudo-Dionysius, De divinis nominibus IV; cf. Summa theologiae I, q. 44, a. 1.

362. The reference numbers in the margin here allude to loci already treated above in the work, especially the discussion of divine simplicity.

Respondeo: I answer that God is the highest good simply, and not only in some genus or order of things. For good is attributed to God (as was said) inasmuch as all desired perfections flow from him as from the first cause; yet they do not flow from him as from an univocal agent, as is clear from the foregoing, but as from an agent that does not agree with its effects either in the notion of species or in the notion of genus. Now the likeness of the effect is found in the univocal cause uniformly; in the equivocal cause, however, it is found more excellently, as heat exists in a more excellent mode in the sun than in fire. Therefore it must be that, since good is in God as in the first cause of all things and not univocally, it is in him in the most excellent mode, and on this account he is called the highest good.

Ad primum:

To the first it must be said that the highest good adds over and above good not some absolute thing, but only a relation. But the relation according to which something is said of God relatively to creatures is not really in God but in creatures, though in God according to reason. Thus "knowable" is said relatively to knowledge, not because it itself is referred to knowledge, but because knowledge is referred to it. And thus it is not necessary that there be any composition in the highest good, but only that other things fall short of it.

Ad secundum:

To the second it must be said that, when it is said "good is what all things desire," it is not to be understood as though every good were desired by all, but because whatever is desired has the notion of good. But what is said, "None is good save God alone," is understood of the good by essence, as will be said below.

Ad tertium:

To the third it must be said that those things which are not in the same genus, if indeed they are contained in diverse genera, are in no way comparable; but it is denied of God that he is in the same genus with other goods, not because he is in some other genus, but because he is outside genus and the principle of every genus. And thus he is compared to other things by excess; and by a comparison of this sort "highest good" is imported.

Conclusio: The conclusion is that God is the highest good simply, and not only in some genus or order of things. Concerning the doctrine of each of the two foregoing articles enough has been said in the preceding disputation.

363. St. Augustine, De Trinitate I, c. 2.

Articulus III - Whether to be good by essence is proper to God

Objicitur: 1. It seems that to be good by essence is not proper to God. For as one is convertible with being, so is good, as was had above. But every being is one by its essence, as is clear from the Philosopher in Metaphysics IV; therefore every being is good by its essence.

1. Further, if good is what all things desire, since existence itself is desired by all, the existence of any thing is its good. But every thing is a being by its essence; therefore every thing is good by its essence.
2. Further, every thing is good by its goodness. If therefore there is some thing which is not good by its essence, it will be necessary that its goodness is not its essence. Therefore that goodness, since it is a certain being, must be good; and if indeed by another goodness, then again inquiry will be made about that goodness. Either, then, we will proceed to infinity, or we will come to some goodness which will not be good by another goodness. By the same reasoning we must stand at the first: therefore every thing whatsoever is good by its essence.

Sed contra: Boethius says in the book De hebdomadibus that all other things from God are good by participation; therefore not by essence.[364]

Respondeo: I answer that God alone is good by his essence. For each thing is called good according as it is perfect. Now the perfection of a thing is threefold. First, according as it is constituted in its existence. Second, according as some accidents are superadded, necessary for its perfect operation. Third, the perfection of a thing is by this, that it attains something else as an end. For instance, the first perfection of fire consists in the existence which it has by its substantial form; its second perfection consists in heat, lightness, and dryness, and the like; its third perfection is according as it rests in its proper place. But this threefold perfection befits no created thing according to its essence, but God alone, whose essence alone is his existence, and to whom no accidents accrue; but those things which are said of others accidentally befit him essentially - namely, to be powerful, wise, and other such things, as is clear from what has been said. He also is not ordered to anything else as to an end, but he himself is the ultimate end of all things. Hence it is manifest that God alone has every kind of perfection according to his essence; and therefore he alone is good by his essence.

Ad primum:

To the first it must be said that "one" does not import the notion of perfection, but only of indivision, which befits every thing according to its essence. Now the essences of simples are individed both as to act and potency; but the essences of composites are individed according to act alone. And therefore it must be that every thing is one by its essence, but not good, as has been shown.

364. Boethius, De hebdomadibus.

Ad secundum:

To the second it must be said that, although each thing is good insofar as it has existence, nevertheless the essence of a created thing is not its very existence; and therefore it does not follow that a created thing is good by its essence.

Ad tertium:

To the third it must be said that the goodness of a created thing is not its very essence, but something superadded - either its very existence, or some superadded perfection, or order to the end. Yet this very goodness thus superadded is called good, just as "being" is. For it is called "being" by this account, because it is something, not because it is by some other. Hence by this account it is called "good," because it is something good, not because it has some other goodness by which it is good.

Conclusio: The conclusion is: God alone is good by essence. This at first glance seems easy; yet in the way in which it is understood by St. Thomas it is difficult, as will appear in the following disputation.

Disputatio XXIV - Whether to be good by essence is proper to God

Sententia S. Thomae, et Caietani. Exponitur difficultas praedictae sententiae. Cui conveniat bonum per essentiam.

Caput I - The view of St. Thomas and of Cajetan

The controversy proposed seemed so easy that no variety of opinions could arise about it; nevertheless, concerning the manner of expounding it, not all have the same view. The prior view is that of St. Thomas, which Cajetan follows in this article - namely, that it is proper to God to be good by essence, such that no other thing can be good by essence. For the sake of this point Cajetan notes that that particle "by essence" in the proposition ought rather to be referred to the predicate than to be considered as referred to the subject, namely to God; and thus the sense is: God by his essence is so good as not to be by something added. But the particle "by essence" is referred to the predicate, namely to "good," and thus the sense will be: that God is good by a goodness not participated, but which by essence is such. He calls participated goodness that which does not have the fullness of perfection befitting the formal notion of goodness, and this is finite and dependent on another. By contrast, goodness by essence is infinite in itself and has its being from no other.

Next, Cajetan notes that in the present difficulty, by reason of the matter, these two are altogether the same: for what is good by essence in the prior mode is also good by essence in the posterior mode. Yet because these two - "to be such by essence" and "that such be by essence" - do not universally fall into the same thing, but are formally distinguished (for Socrates by his essence is a man, and yet he is not a man by essence), and also because the present question in St. Thomas

is about the good which is good by essence, not about the essence of God, whether by itself or by something else it is good - for already in question 3 he had demonstrated that God is supremely simple, and hence that nothing accidental inheres in him, and thus it stood fast that God by his essence is good, not by something added - therefore in this article the particle "by essence" is to be referred to the predicate, not to the subject. So that the sense is: that God is good by a goodness which is goodness by essence.

Nevertheless, although this doctrine of Cajetan is true, yet it is not according to the mind of St. Thomas, whom he strives to interpret. For although from the argument "But on the contrary" it may seem to be gathered that he speaks of the good by essence, which is distinguished from the good by participation, yet because in all the other arguments he plainly refers the particle "by essence" to the subject of the proposition, not to the predicate - and this is clearly gathered from the doctrine of the article, as we shall presently show - therefore what seems to be deduced from the argument "But on the contrary" ought to be reckoned of less moment. For very often this kind of argument is not set down by St. Thomas so much to confirm what he teaches in the article, as to render the proposed question, after his usual fashion, doubtful on both sides. The sense of his position is always to be drawn from the solutions of the arguments and the doctrine of the article itself.

Accordingly, in the article St. Thomas teaches that there are three belongings or perfections of goodness in each thing. The first, he says, is the integrity of the thing as existing, and thus it is already constituted out of essence and existence. The second is the accident, by which things are well disposed. The third is the end to which it is ordered.

Caput II - The difficulty is explained

It is the attainment of its proper end. In a stone he shows these three: which is, first, perfected in its existence and essence; second, by gravity and other qualities; third, by its center and the term of its motion. Therefore the Holy Doctor says that to no creature by its own essence do any of these goodnesses belong: for if any belonged in this way, it would belong primarily for the very reason on account of which it belongs; because in no creature, but in God alone, to be is His essence. Therefore no creature by its essence has any goodness, but God alone. It would seem indeed that St. Thomas teaches that the first goodness, which follows upon the thing in the notion of being before the advent of existence and of any accident, does not belong to any thing considered according to its essence and according to possible being: for if before existence it were good, he would not say that nothing is good by its essence, because no created essence is its own existence.

This very point is gathered from the doctrine of the same St. Thomas below, q. 19, a. 3, as we shall note a little further down. But in order to defend this view, he must assert that in created things essence is really distinguished from existence, as he himself taught in Contra gentiles II, c. 52, and in De ente et essentia, c. 5, and with him other Scholastics, whom we shall report at III, q. 17, a. 2.[365][366][367] For if it were distinguished only by reason, every thing would be good by itself, that

365. Summa Theologiae III, q. 17, a. 2.

is, not by something adventitious and distinct from it. It would matter little to say that the goodness of created things is distinguished by reason from the essence as a consequent passion: for even in God in this way it is distinguished by us; nonetheless we say that God is good by His essence: therefore in the same way every created thing would be called good, just as God Himself.

Set forth is the difficulty of the aforesaid position.

First, because goodness is a passion of being and is convertible with it: therefore, of whatever is truly enunciated "being," goodness can be predicated. But of any essence, before it exists, "being" is truly enunciated: therefore also "good." For the copula - the verb "is" - in that proposition does not signify existence, but a connection according to the nature of the thing between subject and predicate; and hence of things not yet existing such propositions can be enunciated.

Second, as will be proved at III, q. 17, a. 2,[365] existence is entirely the same in reality as essence: if, therefore, things are good by existence, they will also be good by essence itself, although goodness be distinguished from their essence and existence by the mode of a passion only by reason; except that, just as things, before they actually exist, are said to be possible according to that same existence under possible being, so also goodness, before existence, will belong to the thing itself under merely possible being. And since the verb "is" in that proposition, "Man is good," or "a horse is good," does not denote existence but the connection of extremes, it follows that of man and of the horse, before they exist, the aforesaid proposition can be enunciated.

Moreover, just as goodness is not of the essence of any created essence, although it be entirely the same in reality with existence, because, however, it depends on another, before it is and after it exists it can fail to exist, therefore by a special reason existence is said not to be of the essence of that thing formally: so likewise we must say that the creature is thus good by its essence as that it can perish and be corrupted, and thus that some evil is opposed to it, as will be explained more fully in the following chapter.

Third, the same view is difficult, because, as we shall say in Disputation 79,[368] God so loves creatures according to possible being with the love of simple complacency that He loves them necessarily: therefore in them, before existence - even future existence - there is some goodness toward which the act of the divine will is borne. I confess nonetheless that, in the view of St. Thomas, possible creatures are not loved by God, but only those that will sometime be future; for which reason, since below at q. 19, a. 3, he had taught that creatures are loved by God freely, yet necessarily known, immediately in the solution of the sixth he assigns the difference between knowledge and love, namely, that things are known by God inasmuch as they are in Him, but are loved inasmuch as they are in themselves: and because in God they necessarily are, but in themselves not necessarily, therefore they are necessarily known, but not necessarily loved. Which would not be true, if things were loved by God according to possible being.

366. St. Thomas, Contra Gentiles II, c. 52; De ente et essentia, c. 5.
367. See likewise the Scholastics adduced at III, q. 17, a. 2.
365. Summa Theologiae III, q. 17, a. 2.
368. Vazquez, Disputationes 79 and 144.

Possible being. For this is so necessary, and in God is necessarily represented, just as the entity and truth of things; and hence, in the same way, it would be loved as it is known. He taught the very same thing in a. 6 of this question, to the second reply; and in I Contra gentiles, c. 81, in the last reason.[369] The doctrine of this article also agrees, when he says that in the essences of things before the advent of existence there is no goodness. Ferrariensis thinks the same in that place, c. 81, and IV Contra gentiles, c. 13; and where in c. 75, 9, it is said, 2, although indeed, of the first book, it is replied that he says that creatures are loved by God in Himself, inasmuch as He also loves Himself; and he repeats the same in IV Contra gentiles, c. 13, 6. These do not stand in the way: yet in my view he is not speaking of creatures according to the proper and formal reasons objected to the divine intellect, but of creatures inasmuch as they are said to be God Himself, or to be contained virtually in Him. In which way a stone in God is said to live the life of God, as we shall see in Disputation 70.[370] In this sense too St. Thomas said below at q. 19, a. 6, ad 2, that God does not will every good except inasmuch as He wills Himself, in whom virtually is every good.[371] What, however, Caietan thinks in this matter, must be said below in Disputation 79 and Disputation 144.[368]

Yet this doctrine seems difficult. For although a thing, before it exists, does not have goodness in act, just as it does not have existence in act, nor anything else, nonetheless any thing ought to be said to be simply good, even according to possible being, because the verb "is" in that proposition does not signify the existence of the predicate in the subject, but the agreement and connection with it. And just as the essence of a thing according to possible being is understood together with existence also possible, indeed in reality is the same with it, so also it is understood as good: wherefore nothing prevents God from loving things that are only possible: rather the will of God, whereby He wills some thing to be future, does not suppose future existence as the object toward which it is borne in the mode of love, but only supposes possible being. For it is posterior that a thing be future, than that God will it to be future. When, therefore, it is understood that God wills a thing to be future, already it is understood that He loves it as possible.

Finally, against the preceding view a reason can be framed. The goodness of a thing is the same as its integrity; but every essence, before it exists, is understood to be integral, either by itself, if it is simple; or by its essential parts, as matter and form, if it is composite: therefore by itself, before existence, it is good. To this reason Caietan in this article replies, that a thing is called good in two ways. First, relatively; and in this way any essence, before it is in the nature of things, is good by itself. Then absolutely; and thus it is never perfect and good, until it be in the nature of things; wherefore the being of existence is of the integrity of nature, and pertains to the goodness of that nature in this latter way: not as a part of the essence, but as its act. And when the essence of some thing is said to be more perfect than another, it must not be so understood (says Caietan) as if the

369. St. Thomas, Summa Theologiae I, q. 6, a. 6, ad 2; Contra Gentiles I, c. 81 (ultima ratio).
370. Vazquez, Disputatio 70.
371. St. Thomas, Summa Theologiae I, q. 19, a. 6, ad 2.
368. Vazquez, Disputationes 79 and 144.

essence of some thing by itself is good without anything else, unless only, as he says, radically. But when St. Thomas denies that some created thing is good by its essence, he understands it absolutely and sufficiently without another.

But from the things we have said it is plainly evident that this distinction of Caietan has no weight. For the essences of things, whether by themselves, or by something else, be good, must be said absolutely and simply to be good, before they exist. Because the verb "is" in a proposition does not signify existence. Moreover, that the essences of things are simply good by themselves is proved because they are called simply beings; but "good" and "being" are convertible.

Caput III - To whom goodness by essence belongs

I answer, therefore, to the proposed question: to be good by essence in a certain manner belongs to God alone, and in a certain manner also to creatures; which I explain in this way.

First, not God alone by His essence, without anything else really distinct from Himself, is good by that goodness which follows upon essence, but by any goodness whatsoever. Creatures, however, although they be good by their essence, that is, without something added which is really distinct from themselves, by that kind of goodness which follows upon essence; nevertheless they are not good by their essence with any goodness whatsoever: for they are perfected accidentally by something distinct from their essence, as was explained above. God, however, is not perfected in this way, because whatever is in God is of His essence.

Second, any created thing, even a spiritual one, although its essence and existence are not distinguished by nature of the thing, can fail to exist and perish, not by a departure and separation of its being and essence, which before might be held together by some conjunction, but because it depends upon the efficient will of God, as we shall say below in Disputation 18.[372] Wherefore, also, that which we number among the predicates of a creature ought not to be counted by us as that which, according to our mode of understanding, cannot but be; for, in our mode, man is understood by us according to his essence, his existence not being understood; yet we can understand that the essence of man can be corrupted, perish, and not exist. But to God it belongs so necessarily to exist that, although by our mode of not understanding His existence may be distinguished from His essence, just as also the attributes and the persons are distinguished, nevertheless He Himself cannot not exist; and thus it can by no means be enunciated of His essence, "not to be": for which reason the existence of God is said to be of His essence, although even the attributes, however much they are distinguished by reason from it, are so joined to it in reality that it implies a contradiction for Him to be without them.

Third, from these things it is gathered that, by a certain peculiar reason, it belongs to God to be good, which in no way belongs to creatures, even in that kind of goodness which follows upon essence. For God is so good that, just as His essence cannot not exist, so also His goodness cannot fail to be in Him. For not only is this proposition necessary: "God is good by essence," if the particle "by" denotes mere connection (for thus it would also be necessary of any created thing, which is

372. Vazquez, Disputatio 18.

called good by its essence, if the particle "by" denote a connection), but also if it denote existence itself; in which way it belongs to no creature to be good by its essence. For if together with any creature it is possible that it not be, so also it is possible that it not have the act of goodness.

Fourth, from the same principle it is inferred that no malice at all is opposed to the goodness of God, since His essence cannot not be; whereas to created goodness malice is opposed, which is corruption, or the destruction of the substance itself: for when this is taken away, the goodness of the thing is taken away altogether. From which it is clear in what way it is proper to God to be good by His essence, which does not belong to the creature.

Articulus IV - Whether all things are good by the divine goodness

To the fourth, the proceeding is thus. It seems that all things are good by the divine goodness. For St. Augustine says in De Trinitate VIII: "This good, and that good: take away this and take away that, and see the good itself, if you can: thus you will see God, not good by any other good, but the good of every good." Therefore each thing is good by its own good; therefore each thing is good by that good itself, which is God.[373]

1. Further, as Boethius says in the book De hebdomadibus, all things are called good insofar as they are ordered to God: and this by reason of the divine goodness: therefore all things are good by the divine goodness.[374]

But on the contrary: all things are good insofar as they are; but not all things are said to be beings by the divine existence, but by their own existence: therefore not all things are good by the divine goodness, but by their own goodness.

I answer that, nothing prevents, in those things which import relation, something from being denominated from without: just as something is denominated "located" from place, and "measured" from a measure. But about those things which are said absolutely there was a different opinion. For Plato posited the separate species of all things; and that from them individuals are denominated, as participating in the separate species: for instance, that Socrates is called "man" according to the separate idea of man. And just as he posited a separate idea of man and of horse, which he called "man-in-himself" and "horse-in-himself," so he posited a separate idea of being and a separate idea of life, which he called "being-in-itself" and "living-in-itself"; and by its participation each thing is called a being, or living, or good, etc., as is reported in Metaphysics I by the Philosopher, texts 4 and 10.[375]

But on the contrary: This which is "per se being" and "per se one," he posited to be the highest good; and because the good is convertible with being, as also the one is, he said that the per se good is God, from whom all things are called good by way of participation. And although this opinion seems irrational as regards that point wherein he posited the species of things as separated and

373. St. Augustine, De Trinitate VIII.
374. Boethius, De hebdomadibus.
375. Aristotle, Metaphysics I, texts 4 and 10.

subsisting per se (as Aristotle impugns in many ways), nevertheless this is absolutely true: that there is something first, which by its own essence is being and good, which we call God, as is clear from the foregoing; to this judgment Aristotle also agrees.[376] Therefore from that which is first - being and good by its own essence - each thing can be called good and being, insofar as it participates in that first by a kind of assimilation, though remotely and defectively, as has been shown above. Thus then each thing is said to be good by the divine goodness, as by the first exemplary, efficient, and final principle of all goodness. Nonetheless, each thing is said to be good by the likeness of the divine goodness inhering in it, which formally is its own goodness denominating it. And thus there is one goodness of all, and also many goodnesses. And by this the reply to the objections is clear.[377]

Conclusion: Whatever thing is said to be good, is said to be good by the divine goodness as by the first efficient, exemplary, and final principle of all goodness; but formally it is said to be good by the likeness of the divine goodness inhering in it, which is the formal goodness of each single thing.

Dubitatio circa articulum. We will examine in this article a single doubt and the mind and doctrine of St. Thomas. The doubt is whether a thing is called good by an extrinsic denomination alone, from the goodness of another. I explain the view of St. Thomas in this way. No denomination of a thing can be taken from an extrinsic form alone. I say the same of the goodness of a thing, which is its perfection from its conjunction with the end: for this is not taken from the end alone, but from the nature and quality of the thing taken together with the end. Yet there is a certain acceptation of goodness whose denomination in some things can be derived from the form and goodness of another: of this sort is the goodness of the fittingness of one thing with another, which, as we have noted in Disputation 23, is not a passion of being, nor is it found in all things. For there are some that by reason of themselves are not fitting to another, but by reason of the effect which they produce, as when the sun is good for what is cooled by reason of the heat which it produces in it. And although this goodness which is a relation of fittingness would be a relation of reason, and an extrinsic denomination in the universal, nevertheless it would not be found in the same mode in all things. For some things are good and fitting to another according to themselves, not by reason of some effect produced; wherefore they are primarily called good. But others are fitting by reason of an effect, and consequently are secondarily called good: and for this reason also we shall say below, in Question 20, Article 1, that moral malice, which in the universal is a relation of reason and an extrinsic denomination, is found primarily in certain human operations and secondarily in others.

From all these things one may gather that the denomination of "holy" and "just" with God is not of the essence of nature, so that no one could be called just from the justice and sanctity of another as from a form denominating, but from some quality in the just man himself, or from a change effected in act or in habit; add also the hypostatic union, as will be more fully explained in 1 - 2, q. 113, a. 2.[378] Wherefore no one can be said to be, or be, just by the justice of Christ or of God - nor

376. Li. 3. meta. a text. 20. víque ad fin. lib.; Aristot.
377. 9. 2. art. 3; 4. 4. art. 3.

yet by His favor only, or love, or law, as will be shown there. Therefore, when Christ is said to be "made unto us wisdom, and sanctification, and redemption" (1 Cor 1), this is to be understood in the same mode in which we say that by the goodness of God we are good, as by an efficient and exemplary cause, because He brings about in us whatever there is of good; and also as by an end, for "The Lord has wrought all things for Himself" (Proverbs 16). Thus therefore Christ, because by His merit He has procured for us our sanctification and redemption, is said to be our sanctification, wisdom, and redemption.[379]

Verum sententia S. Thomæ faciliori ratione confirmari posset hoc modo, tametsi denominatio relativa possit ab aliquo extrinseco tanquam a forma desumi, et quamvis the denomination of the good be relative, nevertheless it cannot agree to things save by reason of something intrinsic; nor is every relative denomination taken from something extrinsic, but there are many relations which posit in the thing they denominate something absolute and real - such as are all those of the first genus assigned by Aristotle in the Metaphysics, chapter 15, and many others. Such is the relation of goodness, which consists in integrity and follows the nature of being. For just as a thing cannot be integrated, whether substantially or accidentally, except by things inhering, so the denomination of that cannot be taken from an extrinsic form alone. I say the same of the goodness of a thing, which is the perfection of it from conjunction with the end: for this is not taken from the end alone, but from the nature and quality of the thing taken together with the end.

Quaestio VII - On the infinity of God

Post the consideration of the divine perfection, there is to be considered His infinity, and His existence in things. For it is attributed to God that He is everywhere and in all things in such wise that He is uncircumscribable and infinite. Concerning the first there are four questions.

Articulus I - Whether God is infinite

It is objected that: It seems that God is not infinite.

1) Every infinite thing is imperfect, because it has the nature of a part and of matter, as is said in Physics III; but God is most perfect, therefore He is not infinite.[380]

2) Further, according to the Philosopher in Physics I, the finite and the infinite belong to quantity; but in God there is no quantity, since He is not a body, as was shown above; therefore infinitude does not befit Him.[381]

3) Further, what is thus here and not elsewhere is finite with respect to place; therefore what is thus this which is not another is finite with respect to substance: but God is this, and is not another, for He is not a stone nor wood; therefore God is not infinite according to substance.

---

378. 1 - 2, q. 113, a. 2.
379. 1 Cor 1; Proverbs 16.
380. 3. Physic.
381. 1. Physic. text. 15.

But on the contrary: Damascene says that God is infinite, and eternal, and uncircumscribable.[382]

I answer that: All the ancient philosophers attribute the infinite to the first principle, as is said in Physics III. And this, reasonably considering that things flow from the first principle in ...[383]

...into the infinite. But because certain men erred about the nature of the first principle, it followed that they erred about its infinity: for since they posited the first principle to be matter, they consequently attributed to the first principle a material infinity, saying that some infinite body was the first principle of things. One must therefore consider that a thing is called infinite from the fact that it is not finite: but what is finite is, in a certain way, both matter by form and form by matter. Matter indeed is limited by form, inasmuch as, before it receives form, matter is in potency (*potentia*) to many forms; but when it receives one, it is terminated by that. Form, however, is limited by matter, inasmuch as form considered in itself is common to many, but by the fact that it is received in matter it becomes the determinate form of this thing. Now matter is perfected by form, by which it is limited; and therefore the infinite, in a certain respect, is attributed to matter and has the notion of the imperfect: for it is as it were matter not having form. But form is not perfected by matter; rather by it its amplitude is contracted: whence the infinite, insofar as it stands on the side of form not determined by matter, has the notion of the perfect. But that which is most formal of all is existence (*esse*) itself, as is evident from what has been said above; therefore, since the divine existence is not an existence received in something, but he himself is his own subsisting existence (*esse subsistens*), as was shown above, it is manifest that God himself is infinite and perfect. And from this the reply to the first [objection] is evident.

Reply to the second: The terminus of quantity is as it were its form: a sign of which is that figure, which consists in the termination of quantity, is a certain form about quantity. Whence the infinite which belongs to quantity is an infinite that holds itself on the side of matter; and such an infinite is not attributed to God, as has been said.

Reply to the third: From the very fact that the existence of God is per se subsistent, not received in anything, insofar as it is called infinite, he is distinguished from all others, and others are removed from him. Thus, if there were a subsisting whiteness, from this very fact, that it would not be in another, it would differ from every whiteness existing in a subject.

Conclusion: God is infinite.

Articulus II - Whether anything other than God can be infinite by essence

It is proceeded to the second as follows.

Objection 1: It seems that something other than God can be infinite by essence (*essentia*). For the power (*virtus*) of a thing is proportioned to its essence. If therefore the essence of God is infinite, it follows that his power is infinite: therefore he can produce an infinite effect, since the quantity of power is known through the effect.[384]

382. Liber de fide orthodoxa, c. 4.
383. 3. Physic.
384. Compare the common axiom that power is known by its act; cf. Aristotle, Metaphysics I (or X), text 10.

Objection 2: Further, whatever has infinite power has infinite essence: but the created intellect has infinite power; for it apprehends the universal, which can extend itself to infinitely many singulars: therefore every created intellectual substance is infinite.[385]

Objection 3: Further, prime matter is other than God, as was shown above, but prime matter is infinite: therefore something other than God can be infinite.[386]

But on the contrary: The infinite cannot be from some principle, as is said in Physics III. But everything that is apart from God is from God as from the first principle: therefore nothing that is apart from God can be infinite.[387]

I answer: It must be said that something other than God can be infinite in a certain respect, but not simply. For if we speak of the infinite as it belongs to matter (*materia*), it is manifest that everything existing in act has some form, and thus its matter is determined by form. But because matter, insofar as it is under one substantial form, remains in potency to many accidental forms - which is simply finite - it can be infinite in a certain respect, as wood is finite according to its form, yet is infinite in a certain respect, insofar as it is in potency to infinite figures. If, however, we speak of the infinite as it belongs to form (*forma*), thus it is manifest that those whose forms are in matter are simply finite and in no way infinite. But if there be some created forms not received in matter but subsisting per se, as some think about the angels, they will indeed be infinite in a certain respect, insofar as forms of this kind are not terminated nor contracted by any matter; but because a created form thus subsisting has existence, and is not its existence, it is necessary that its very existence be received and contracted to a determinate nature. Whence it cannot be simply infinite.

Reply to the first: This is against the notion of an effected thing, that the essence of the thing be its existence: for subsisting existence is not created existence. Whence it is contrary to the notion of an effected thing, that it be simply infinite. Therefore, just as God, although he has infinite power, nevertheless cannot make something not made - for this would be that contradictories exist at the same time - so neither can he make something simply infinite.

Reply to the second: This very fact, that the power of the intellect extends itself in a certain way to infinities, proceeds from this, that the intellect is a form not in matter, but either totally separated, as are the substances of the angels, or at least the intellectual power, which is not the act of any organ, in the intellective soul conjoined to the body.

Reply to the third: Prime matter does not exist in the nature of things by itself, since it is not a being in act, but only potency: whence it is rather something concrete, than created. Nonetheless, prime matter even according to potency is not simply infinite, but in a certain respect: because its potency does not extend itself except to natural forms.

Explication of both articles.

385. The objection uses the scholastic doctrine of the intellect's reach to universals.
386. See above, in the discussion on prime matter's distinction from God.
387. Aristotle, Physics III, text 30.

Conclusion: Nothing other than God can be simply infinite, although something may be infinite in a certain respect. St. Thomas calls "infinite in a certain respect" that which is commonly called "infinite in potency": and since in these two articles the question is not about the infinite according to quantity (of that he treats in articles 3 and 4), but about the infinite according to existence (*esse*) or by essence, as is clear from the title of article 2 and from its first argument, that which St. Thomas calls here in article 2 "infinite in a certain respect," that is, in potency, is not what can, without term, be increased according to number or quantity; but that which thus has its being determined by some form, as to be in potency without end to other [forms]. Such, says St. Thomas in article 2, is matter, which, although it is determined by only one form to be the being of this [thing], nevertheless always remains in potency to receive another, and another, to infinity. But "infinite simply" St. Thomas understands not according to quantity, but according to existence or essence. Therefore the conclusion of article 2, explained thus, illuminates the conclusion of article 1. Wherefore the doctrine of both articles can be comprehended in one proposition: It is proper to God to be simply infinite by essence and according to existence, in such a way that it cannot belong to another thing. For although in article 1 the Doctor says "God is infinite," he undoubtedly understands it through essence, about which infinity he inquires in article 2; to wit, that it is proper to God to be infinite, since to another it does not belong. Nor, when in article 1 he says "God is infinite," does he understand it, without doubt, through quantity, for this was established from question 3, that God is not corporeal, and hence not endowed with quantity.

Disputatio XXV - In what way it is proper to God to be infinite by essence

- Some explain the reason of God's infinity from infinite attributes. Caput 1.
- "God is infinite, because his existence is in no way received in another," some have thought. Caput 2.
- Certain explain the infinity of God from this, that he is not placed under a genus. Caput 3.
- Albert the Great expounds the infinity of God in two other ways. Caput 4.
- The true account of the infinite according to essence is, not to be from another. Caput 5.

Caput I - Some explain the reason of God's infinity from infinite attributes

All the scholastics, in I Sentences, distinction 43, in conclusion 2 of the article, agree, asserting that God is so infinite by essence that this infinity can belong to no other. Indeed the Philosopher, in Physics III, chapter 4, text 30, from the mind of Anaximander and of the natural philosophers, teaches that the first principle of all things is infinite; but he does not explain what kind of infinity that is, nor do our scholastics agree in assigning it. We shall therefore enumerate the several opinions, and lastly subjoin our own.

First, some more recent authors explain the reason of infinity according to existence - which they so call - from the infinite perfections and attributes that are wont to be assigned to God. For since the perfections of God are said to be infinite, he himself also will be infinite according to essence.

This opinion, however, the more common and popular it is, by so much the less is it supported by weight of probability: for, as will be evident in Disputation 116 and the following, the essence of God is so simple according to reality that it has only one essential perfection inhering in it, although by the reason of man as wayfarer there are distinguished in him many perfections and attributes: yet no one could distinguish in God infinite perfections. By this reason alone, then, we ought not to attribute to God infinity simply according to existence or essence.

Someone will reply, as an evasion, that God is infinite according to essence, because he has in himself the foundation from which, by the intellect of the wayfarer, perfections without number are assigned to him. This reply, however, is refuted first, because it is not clear whether there can be thought out infinite possible perfections in creatures which, considered in themselves, are so simply simple that they could be attributed to God; although there are infinitely many possible creatures specifically distinct - something which is still put forth only as an opinion - nonetheless no one can affirm that there are infinite possible perfections of creatures which, considered in themselves, could also belong to God; for not every perfection of creatures, even according to analogy, is attributed to God. And it is most certain among all that God is infinite according to existence: therefore, in this way, the account of God's infinity is not sufficiently explained.

Next, either the infinity of God consists in this, that perfections in him are actually distinguished without end - and in this way he would never be actually infinite - or it consists in this, that he has the foundation whereby infinite perfections are distinguished in him; and this infinity is either not simply infinity, but only according to a certain respect, if it is to be weighed from a multitude of perfections; or certainly it is another mode of infinity which hitherto has not been sufficiently explained.

Caput II - St. Thomas, Cajetan, and recent authors; Aegidius, and Richard

St. Thomas, Cajetan, and recent authors, in these articles and in Summa contra gentiles I, chapter 43, and Ferrarensis there, doctrine 6, treat this proposition. Aegidius, in I Sentences, distinction 43, art. 1, q. 1, and Richard, II Sentences, q. 1, in another way explain the infinity of God: infinite (they say) is altogether the same as "not finite and limited"; but a thing is finite by that which is terminated and contracted by another.[388]

Among created things composed of matter and form there is found the notion of the finite according to existence (esse): for matter is limited by form, and conversely form by matter; although matter is in a certain way infinite, because once informed it still remains in potency (potentia) toward other forms without end; in which respect the holy Doctor calls it infinite

388. St. Thomas Aquinas, Summa contra gentiles I, c. 43; Cajetan, ad loc.; Ferrarensis, ibid., doctrina 6; Aegidius, In I Sent., d. 43, a. 1, q. 1; Richard of St. Victor (or Richardus), In II Sent., q. 1.

according to what it is, that is, in potency; although in act by the form it is finite. To spiritual creatures also there belongs the notion of the finite according to existence, not because in them matter is limited by form and form by matter, but because they are composed of existence (esse) and essence (essentia), and their existence, received in their essence, is determined by it. They are therefore finite according to existence, because their existence is received and, by that in which it is received, limited. Since therefore the essence of God is his existence, and consequently his existence is not received in anything, he will be infinite and not limited. Wherefore, as was proved above in disp. 22, it is proper to God alone to be infinite according to existence, so that it belongs to no creature.

Scotus attacks this reasoning in I Sentences, dist. 2, q. 2, at the end: he shows thus. The existence (esse existentiae) of separate substances is an accident of the essence: therefore it cannot substantially limit it. Nay rather, he judges that every being is finite, whether according to quantity or according to substance, by a certain determined grade, to be first finite in itself before it is terminated by something extrinsic: just as the first heaven is finite in itself by reason of its quantity, although it is not limited by something extrinsic; and for that very reason it is terminated by something extrinsic because it is finite in itself, rather than conversely.

But this objection of Scotus is trifling. First, because the existence (esse existentiae) is not an accident of the essence according to the teaching of St. Thomas - though Scotus falsely ascribes this to him - but is its substantial act (actus); and the fact that it can be separated from it matters little: for even the substantial form can be separated from matter, and yet is not an accident of it. Secondly, St. Thomas did not say that the essence is terminated by existence, but on the contrary, that existence is by the essence, whose opposite Scotus imputes to him. Thirdly, when St. Thomas asserts that a thing is limited by that which is terminated by another, he is not speaking of bulk-quantity, to which it wholly happens to be enclosed and bounded by something extrinsic; rather, he is speaking of the substantial existence of some thing, and he says that by that very fact it is finite, namely, that it is received in another. Nor, indeed, does he suppose that the formal notion of the finite according to existence formally consists in the reception itself, but rather that that which by its nature demands to be received in another is by its very nature finite and limited, before it is received in another.

However, the foregoing reason by which the holy Doctor strives to explain and to prove the attribute of infinitude in God still seems to me difficult. For in things separated from matter I think that nothing is substantially received in another: for essence and existence are altogether the same in the nature of the thing, as will be proved in III, p. 1, q. 17, a. 2.[389] Moreover, spiritual things are not composed of matter and form, nor of some potency and substantial act according to reality, but only of genus and difference according to our reason: which composition, were nothing else to stand in the way, could be granted to God without any absurdity, as was proved in disp. 22.

389. Vázquez's own work, Part III, p. 1, q. 17, a. 2.

Therefore nothing substantial is in spiritual things that is limited and terminated by another according to reality: wherefore the reason of the infinitude of God and of the finitude of all creatures must be proved by another account.

Someone will say that even in spiritual creatures there is a composition of nature and personality, and that personality is distinguished from essence in the nature of the thing, as we shall show in III, q. 4, a. 2.[390] But this composition does not seem sufficient for essence to be so received in personality and personality in essence that by this very fact they would substantially limit one another. For personality is only a certain mode per se, which, although it terminates and contracts the nature so that it be a person, which can be communicated to no other, nevertheless does not seem to receive it in itself and substantially to terminate it so that it be finite according to existence, unless the notion of finitude befit it from elsewhere. Then too it is not sufficiently clear in what manner, because the form is received in matter or existence in essence, a thing becomes limited and finite according to existence: for although they mutually determine one another in such wise that from them there results a third substance, distinct from any other, from this it does not follow that that thing is finite, as Ferrarensis falsely thought in the place cited. For, as Alexander has most well noted, I p., q. 6, m. 1, ad 3, something is not finite by the fact that it is distinguished from another; thus God would be finite, since he is God in such a way as to be distinguished from the other things.[391]

Caput III - Some explain God's infinitude from this, that he is not placed under a genus

Some explain the infinitude of God from this, that he is not placed under a genus. For in this way he will be infinite, because he lacks both genus and definition. For definition, as Aristotle says, Metaphysics, text 22, is called a terminus, because it terminates and encloses the thing which it defines. Since therefore God is not placed under a genus, and thus has no definition from genus and difference, it follows that he is infinite. In this way St. Thomas reasons in Summa contra gentiles I, c. 43; and Ferrarensis there likewise; Capreolus, In I, dist. 43, q. 1, a. 1, concl. 1; Aegidius, a. 1, q. 1. To this also seems to look what Albert the Great teaches in the same distinction, namely, that God is infinite because he can neither be defined nor comprehended by our intellect.[392]

But in this way the aforesaid infinitude of God according to essence (essentia) is not sufficiently defended. First, that nothing hinders God's being placed under a genus from his being infinite has been shown above in disp. 22, cap. 3. Secondly, as regards definition and comprehension, this proves only that God is above every human intellect, not, however, that he is simply infinite: for that which cannot be seen, defined, or comprehended by a created intellect only proves that it cannot be finished off and terminated by the human intellect; but that in itself it is infinite, this does not sufficiently show: for one could say that God, by his own intellect and knowledge, is

390. Vázquez's own work, Part III, q. 4, a. 2.

391. Alexander of Hales, I, q. 6, m. 1, ad 3.

392. St. Thomas Aquinas, Summa contra gentiles I, c. 43; Cajetan and Ferrariensis ad loc.; Capreolus, In I Sent., d. 43, q. 1, a. 1, concl. 1; Aegidius (Giles of Rome), a. 1, q. 1; Albert the Great, In I Sent., d. 2, a. 1.

comprehended and is defined by himself, when he understands himself as he is. If you reply that the intellect of God is infinite and thus can define and comprehend his essence, this still had to be proved: for the infinitude of the divine intellect must be proved from the infinitude of the essence. Thirdly, since the created intellect can look upon God clearly and as he is, when the light of glory has been communicated to it, so that nothing of him is hidden, without doubt by that very created vision a definition can be had much better than other things in this life are defined by us. And although those seeing God as he is are not said to comprehend him, nevertheless their clear vision embraces within the latitude of its representation all the things that are in him formally. Nor are the blessed therefore said not to comprehend God because something of those things that are formally in him is outside their vision, but because they do not, by the force of the vision of the essence of God, know all the things which God will do or can do. Add that from this account there is gathered only the attribute of incomprehensibility, not, however, of infinitude according to essence, which certainly are distinct.

Caput IV - Albert the Great expounds the infinity of God in two other ways

Albert in another two ways expounds the infinitude of God in I, q. 43, a. 1: he proves that God is infinite, first because he lacks a beginning and an end of duration; then because he can be enclosed in no place adequate to him. St. Bonaventure records this view in the same distinction, a. 1, q. 2, and reports that some authors taught that God is indeed infinite to us, but according to the truth he is not: because to himself, who is Truth itself, he is not infinite. Yet he inclines in that opinion to that mode of infinitude on the side of comprehension.[393]

But as regards the two other modes, the one from place, the other from duration, this opinion can easily be attacked: for in the former way there is proved only the infinitude of God according to place, which is immensity; and this is not the present controversy. For the attribute of infinitude, which is now in question, is different from immensity, which must be treated in the following question. Nor, indeed, is the ratio of infinitude gathered from the notion of immensity, but rather the contrary. But in the latter way there is proved only that God is infinite in duration, that is, eternal: not, however, that he is infinite according to essence, of which infinitude there is now speech: for concerning eternity, which is another attribute, there will be disputation in q. 10; as also concerning incomprehensibility, which is another attribute than infinitude, to be treated below in q. 12. I pass over many other reasons by which St. Thomas in Contra gentiles, c. 43, and Scotus, in the cited q. 2, try to demonstrate the infinitude of God. From those there is gathered only in general that God is infinite according to essence, but what the account of this infinitude is, is not sufficiently explained.[394]

393. St. Bonaventure, In I Sent., d. a. 1, q. 2.
394. St. Thomas Aquinas, Summa contra gentiles I, c. 43; Scotus, In I Sent., dist. 2, q. 2.

Caput V - The true account of the infinite according to essence is, not to be from another

Since the infinite is altogether the same as the non-finite, and thus signifies the negation of an end, and every negation ought to be known from the opposite form which it deprives of, the account of any infinite must be explained from the end, as from its contrary. Note, however, first, that in this place "end" is not taken for the perfection and consummation of something. For thus an infinite thing would be the same as an imperfect thing; in which sense the account of infinitude would not befit God. But "end" is now the same as "terminus," beyond which a thing does not extend, but by which it is, as it were, enclosed; and as for the terminus of other things, from which they are called finite according to essence, it will also be made clear from the negation of which terminus God is said to be infinite in this way.

Secondly, note that a thing can in some measure be finished off in many ways: first, by definition or cognition; secondly, by the end of duration; thirdly, by the end of place; fourthly, by the end of the effect produced by it or that can be produced. Conversely, by the negation of an end in any of these ways a thing is called infinite. However, as is clear from what has been said in this disputation, by none of these ways is the formal notion of the infinitude of God according to essence sufficiently shown: but either only the infinitude of incomprehensibility, or of eternity, or of immensity, or finally of power, which are all distinguished from the infinitude of the essence, as is evident.

Thirdly, observe that, since every effect receives existence from its cause, and is therefore contained within the efficacy of that cause and cannot go forth beyond it, it comes about that whatever thing receives existence from another is said to be finite and limited according to essence, and to have a participated nature, and consequently to depend, to be limited, and to be ended. Wherefore every creature is finite according to essence for this reason, that it so depends upon God continually conserving it, that it cannot exist even for an instant without his influx. On the contrary, since God has existence from no one and is not conserved by any, but exists from himself, by no end or terminus can his existence and essence, in the genus of being, be limited: the proper account therefore of the infinitude of God according to essence lies in this, that he has existence from no cause. For which reason the infinitude according to essence is rightly distinguished from the other infinitudes, because it signifies a negation of end in a different way than the other infinitudes do, as from what has been said is plain. Whence it is that, although infinitude according to duration can be communicated to creatures, as we shall gather in disp. 177, yet even that belongs to God in a different way than it does to creatures. For since eternity in God, which is the infinitude of duration, has its foundation in the infinitude according to essence, it comes about that eternity belongs to God from within and from himself, but to creatures only by participation.

This mode of infinitude according to essence seems to have been handed down by Alexander, I p., q. 6, m. 1, ad 3 and 4. There he numbers three modes by which God is infinite. The first is, because he himself terminates other things and is terminated by no one - because, namely, he is in all things - which seems to insinuate the infinitude of immensity. The second mode of infinitude in God is because he is not perfected by another; he seems, however, to understand this as by an

efficient cause. To this also seems to pertain what certain Scholastics teach, whom we recalled in disp. 103, namely, that God is of infinite virtue and power, not because he moves through eternal time, but because he is from himself, not moved, nor depending upon another. This same thing Dionysius wished to teach, De divinis nominibus, c. 9, where, speaking of the greatness of God, he says: "And 'great' as said of God, both from his own greatness which, communicating itself with all the things that are great, diffuses itself through every greatness and extends itself, contains every place, surpasses every number, every infinitude, triply: both from the supreme force and magnitude of action, and from the gifts which flow from him as from a source." By these words Dionysius seems to have expressed not only the infinitude of immensity and of power, but also of the essence of God, when he said that he is himself the fount of all gifts which he communicates to all the others. For it was by that very divine greatness - which he immediately said to be infinite - not that, through some cause of his by which he would bestow finite gifts, he would be finite, but that he is the fount of all goods, in need of none, from whom the rest are derived. In the same sense St. Gregory Nazianzen, Oration 38, called God "a certain sea of essence, measureless and unbounded"; which words, although Nicetas, upon that same oration of his, ...[395]

Although in that oration the words, "God both was," etc., might seem to be interpreted of the infinity of eternity, immensity, and incomprehensibility, nevertheless they truly signify the infinity of his own existence and the essence (*essentia*) of God. For just before, St. Gregory Nazianzen had said that on Mount Sinai God named himself by the name "Who is," to indicate that he encloses within himself the whole of what is. But the name "Who is," as we shall say in Disputation 59, chapter 3, is said of God among the rest in the most proper way, because it signifies that he is through his essence and has existence from himself. Which opinion Nazianzen in that same place has Nicetas interpret with these words: "But God always is; and, to speak with the divine-tongued Dionysius, he encloses the whole essence in himself. For I, says Scripture, am the first, and I am after; and before me there is no other God, nor shall there be after me. For his whole essence, having neither beginning nor about to have an end, is as it were a certain vast sea of essence." Where, although Nicetas had regard to the infinity of duration, yet he also understood, in the way set forth by us, the infinity according to existence. For by those words, "Before me there is no God," he expressed not only the infinity of duration, but also of dignity and power. For to say, "Before me there is no God," is the same as to say, "I am from myself, and from no other cause do I receive essence and existence"; and this is the chief and first of all infinities, from which the rest proceed in notion.

Alexander says that the third mode of infinity in God is from this, that he is not for another as for an end, but all things are for him: for since God lacks a final cause, by this very reason he will be infinite, that is, without end. But this kind of infinity belongs not so much to essence and existence as to operation, so that in this way too God is infinite in operating, because he is not terminated by any other thing as by a final cause. Of this kind of infinity St. Thomas treats in q. 19, a. 5.[396]

395. Pseudo-Dionysius, De divinis nominibus, c. 9; St. Gregory Nazianzen, Oration 38; Nicetas (commentary on Gregory Nazianzen's orations).

396. St. Thomas, q. 19, a. 5.

Therefore that infinity which in the second place was set forth according to the mind of Alexander is a proper attribute of the infinity of God according to essence, which he is handling in this question.[397]

Articulus III - Whether something can be actually infinite according to magnitude.

Tertium sic proceditur. It seems that there can be something actually infinite according to magnitude.

1. In the mathematical sciences there is found nothing false: for of abstractions there is no lying, as is said in 2 Physics. But the mathematical sciences use the infinite according to magnitude; for the Geometer in his demonstrations says, "Let there be such-and-such a line infinite"; therefore it is not impossible that something be infinite according to magnitude.
2. Further, that which is not against the notion of anything is not impossible to belong to it; but to be infinite is not against the notion of magnitude, but rather finite and infinite seem to be passions of quantity; therefore it is not impossible that some magnitude be infinite.
3. Further, magnitude is divisible to infinity: for thus is the continuum defined, that it is divisible to infinity, as is clear in 3 Physics. But contraries are naturally about the same thing: since therefore addition is opposed to division, and increase to diminution, it seems that magnitude can grow to infinity; therefore it is possible that there be an infinite magnitude.
4. Further, motion and time have quantity and continuity from magnitude, over which motion passes, as is said in 4 Physics. But it is not against the notion of time and motion that they be infinite, since each indivisible sign-marked in time and in circular motion is a beginning and an end; therefore neither will it be against the notion of magnitude that it be infinite.

But on the contrary: Every body has a surface; but every body having a surface is finite, because surface is the terminus of a finite body; therefore every body is finite. And similarly it can be said of surface and of line: therefore nothing is infinite according to magnitude.

I answer: One thing is to be infinite according to its essence, and another according to magnitude. For granted that there were some body infinite according to magnitude, say fire or air, nevertheless it would not be infinite according to essence: because by its form its essence would be terminated to some species, and by its matter to some individual. And therefore, granted from the premises that no creature is infinite according to essence, there still remains to inquire whether something created be infinite according to magnitude.

One must know therefore that "body," which is a complete magnitude, is taken in two ways, namely mathematically, according as only quantity is considered in it; and naturally, according as matter and form are considered in it. And concerning a natural body it is manifest that it cannot be

actually infinite. For every natural body has some determinate substantial form: therefore, since to a substantial form there follow accidents, it is necessary that to a determinate form there follow determinate accidents, among which is quantity. Whence every natural body has a determinate quantity, both for the greater and for the less. Hence it is impossible that any natural body be infinite. This also is clear from motion: because every natural body has some natural motion; but an infinite body could not have any natural motion: not rectilinear, because nothing is moved naturally with rectilinear motion unless it is outside its own place, which could not befall an infinite body, for it would occupy all places, and so indifferently any place would be its place. And likewise neither could it be according to circular motion: because in circular motion it is necessary that one part of the body be transferred to the place in which another part was, which in a circular body, if it be posited infinite, could not be; because two lines drawn from the center, the further they are extended from the center, so much the further do they stand apart: if therefore the body were infinite, to infinity the lines would stand apart from one another, and thus one could never arrive at the place of the other.

Concerning the mathematical body the same reason holds: because if we imagine a mathematical body existing actually, we must imagine it under some form, because nothing is in act except through its form: whence, since the form of quantity as such is figure, it will be necessary that it have some figure, and thus it will be finite. For figure is that which is comprehended by a term or terms.

Reply to the first: The geometer does not need to assume that some line is actually infinite; but he needs to assume some line actually finite from which he may subtract as much as is necessary; and this he calls an infinite line.

Reply to the second: Although the infinite is not against the notion of magnitude in common, yet it is against the notion of any species of it, namely, against the notion of a magnitude of two cubits or three cubits, or circular, or triangular, and the like: but it is not possible for something to exist in the genus which is in no species; whence it is not possible that there be some infinite magnitude, since no species of magnitude is infinite.

Reply to the third: The infinite which belongs to quantity, as was said, is on the side of matter; but by division of the whole one approaches matter, for parts have the character of matter; by addition, however, one approaches the whole, which has the character of form: and therefore the infinite is not found in the addition of magnitude, but only in division.

Reply to the fourth: Motion and time are not wholly in act, but successively; whence they have potency mixed with act. But magnitude is wholly in act, and therefore the infinite, which belongs to quantity, as was said, being on the side of matter, is repugnant to the totality of magnitude, but not to the totality of time or of motion; for to be in potency belongs to matter.

Conclusion: There cannot be an infinite according to quantity, or continuous magnitude.

---

Articulus IV - Whether there can be an infinite in things according to multitude.

Ad quartum sic proceditur. It seems that it is possible that there be an actually infinite multitude

1. For it is not impossible that what is in potency be reduced to act; but number is multipliable to infinity; therefore it is not impossible that there be an actually infinite multitude.
2. Further, for any species it is possible that there be some individual in act; but the species of figure are infinite, therefore it is possible that there be infinite figures in act.
3. Further, things that are not opposed to each other do not hinder each other: but given some multitude of things, there can still come to be many other things which are not opposed to them; therefore it is not impossible that some other things again be together with them, and so on to infinity; therefore it is possible that there be things infinite in act.

But on the contrary is what is said in Wisdom 11: "Thou hast ordered all things in weight, number, and measure."

I answer: Concerning this there was a twofold opinion. Some indeed, as Avicenna and Algazel said, that it is impossible that there be an actually infinite multitude per se, but that an infinite multitude per accidens is not impossible. For a multitude is said to be infinite per se when it is required for something that the multitude be infinite; and this is impossible, because thus it would be necessary that something depend on infinites, whence its generation would never be completed, since it is not possible to pass through an infinite. But per accidens a multitude is said to be infinite when an infinity of multitude is not required for something, but it happens so to be. And this can be made manifest in the operation of a smith, for which a certain multitude is required per se, namely that there be art in the soul, and a moving hand, and a hammer; and if these were multiplied to infinity, a smith's work would never be completed, because it would depend on infinite causes. But the multitude of hammers, which happens from this, that one is broken and another is taken up, is a multitude per accidens: it happens indeed that he works with many hammers, and it makes no difference whether he works with one, or with two, or with more, or with infinite, if he were to work for infinite time. By this mode therefore they posited that it is possible that there be an actually infinite multitude per accidens. But this is impossible, because every multitude must be under some species of multitude. The species -

To the fourth, I proceed thus. It seems that it is possible that there be an infinite multitude in act.

1) For it is not impossible that what is in potency be reduced to act; but number is multiplicable to infinity; therefore it is not impossible that there be an infinite multitude in act.

2) Further, for every species it is possible that there be some individual in act; but the species of figures are infinite; therefore it is possible that there be infinite figures in act.

3) Further, things which are not opposed to one another do not impede one another; but, some multitude of things being posited, others can still be produced which are not opposed to them; and again, others not opposed to these; and thus to infinity. Therefore it is possible that there be infinite things in act.

But on the contrary: Wisdom 11:21: "You have ordered all things in measure, number, and weight."

It is answered: There was a twofold opinion. Some philosophers, as Avicenna and Algazel, held that it is impossible that there be an actually infinite multitude per se, but that an actually infinite multitude per accidens is possible.[398] They explained that for a multitude to be infinite per se it is required that something depend upon an infinite, and this is impossible; for thus generation would never be completed, since it would depend upon infinite causes. But per accidens it is said to be infinite when an infinite multitude is not required for some thing, but it happens to be so. And this can occur in an operation in which a certain multitude happens accidentally with respect to the art, as when the art is in the artisan, and the hammer is in hand. For if these instruments were lacking unto infinity, the work of the artisan would never be completed, because it would depend upon an infinite multitude of hammers; but the multitude of hammers which happens from this, that one is broken and another is taken up, is a multitude per accidens: for it happens that he works with many hammers, and it makes no difference whether he works with one, or with two, or with more, or with infinitely many, if he were to work through infinite time. By this mode, therefore, they asserted that an actually infinite multitude per accidens is possible. But this is impossible, because every multitude must fall under some species of multitude, namely a determinate number; and no species of number is infinite, since each number is a multitude measured by one. Hence it is impossible that there be an infinite multitude in act, whether per se or per accidens. Likewise, every multitude existing in the nature of things is created; and every created thing is comprehended under some definite intention of the Creator, for no agent works in vain. Whence it is necessary that all created things be comprehended under a definite number. Therefore it is impossible that there be an infinite multitude in act, even per accidens.

But that there be an infinite multitude in potency is possible: because the increase of a multitude follows upon the division of a multitude. For the more something is divided, so many more things result according to number. Hence just as an infinite is found in potency in the division of the continuous, because there is a proceeding to matter, as was shown above, by the same reason an infinite is found in potency in the addition of a multitude.

Reply to the first: Each thing which is in potency is reduced into act according to the mode of its being: for a day is not reduced into act so as to be whole at once, but successively; and likewise the infinite of a multitude is not reduced into act so as to be whole at once, but successively; because after any given multitude another multitude can be taken, to infinity.

398. Avicenna; Algazel (al-Ghazali).

Reply to the second: The species of figures have their infinitude from the infinitude of number. For there are species of figures, as trilateral, quadrilateral, and so on. Hence just as an infinite multitude enumerable cannot be reduced into act so as to be whole at once, so neither can the multitude of figures.

Reply to the third: Although, certain things being posited, others can be posited which are not opposed to them, nevertheless "infinite" as such is opposed to any species of multitude. Whence it is not possible that there be any actually infinite multitude.

Disputatio XXVI - On the infinite in created things

Caput I - Two extreme sentences on this matter

The materials of these articles belong properly to the philosophical disputation on the infinite, and are of little necessity for theological truths in various kinds. For as concerns the power of God, whether He can make such an infinite, this ought to be defined from this alone, whether an infinite involves a contradiction in itself or not. But whether by reason of magnitude or of multitude an infinite repugns, is to be examined solely from the principles of philosophy. Yet, because in Disputation 63 we have to prove that God actually knows infinite things, which some without cause deny, lest otherwise they think that God could bring about all absurdities; therefore, at present I will in a few words show whether an infinite according to magnitude, or according to multitude, can be made by God.

It should, however, be premised that this genus of infinity is of a wholly different notion from an infinity according to essence (*essentia*); and the same is to be said of an infinite in quality according to intensity. For although, when quantity or quality increases according to extension or intensity, the essence and nature of quantity and of quality likewise increase, and consequently with infinite intensity or extension the essence of quality and of quantity would be infinite; nevertheless neither is infinite essentially, or according to existence (*esse*), in that kind of infinity according to which we have thus far said that God is infinite: because both a quality according to intensity, and a quantity according to extension, would have a cause of their being, and consequently would be limited by a term on the part of the cause.

In the proposed question not a few theologians assert that an actual infinite according to magnitude, or according to multitude, cannot be made by God, because very many absurdities would follow, which we shall gather here into one. If, however, we should say otherwise, namely that an infinite can be made, in this sentence were St. Thomas, Cajetan, and other Thomists on articles 3 and 4 of this question; St. Bonaventure on 1, dist. 43, article 1, question 3; Durandus on question 2; Marsilius on 1, question 42, article 3, conclusions 6 and 7; and among philosophers not a few of our more recent age.[399] The reasons, indeed, by which they prove this we will report below;

399. St. Thomas, Summa theologiae I, q. 7, a. 3 - 4; Cajetan, ad loc.; St. Bonaventure, In I Sent., d. 43, a. 1, q. 3; Durandus, In I Sent., d. 43, q. 2; Marsilius, In I Sent., q. 42, a. 3, concl. 6 - 7.

from whose solutions it becomes manifest that nothing at all absurd is evidently deduced against the opposite sentence. Therefore the opposite opinion, not without probability, affirms that an infinite in act can be made in things, both in magnitude and in multitude, in spiritual as well as in corporeal things. And this is taught by Gregory on 1, dist. 43, question 4; by Bassolis in the single question, article 2; and is held as at least probable absolutely by Gabriel on 2, dist. 1, question 3; and by Ockham, at least in the multitude of spiritual things. In any genus, however, of multitude not per se ordered, Avicenna and Algazel defend it, whom St. Thomas mentions in article 4.[400]

Before we come to the arguments, it must be supposed - what in Disputation 63 will be expressly proved - namely, that an infinite both according to magnitude and according to number is one thing in potency (*potentia*), another in act (*actus*). It is said to be in potency, from which, if that be taken which actually exists, it is indeed finite and has a term. But if those things be regarded which can still be added to it, it is infinite. Such, says Aristotle in Physics III, chapter 6, are the day and the Olympic game: for from that in which they are in act they are finite; but from that which can be added to them, infinite. Thus, therefore, a multitude of things, to which addition can always be made without end, is said to be infinite in potency, although all the unities which they have are comprehended by a finite number.

Now then let us probably show, not only that there can be an infinite in potency, which the philosophers call syncategorematically infinite, that is, infinite with addition - for this, all admit, is already in things, as is clear from what has been said - but also an infinite in act, which is called categorematically infinite, that is, simply infinite. This is to be gathered from the solutions of the arguments of the prior sentence. And whether, besides these reasons which we shall collect here into one, another can be devised, which shows it impossible that an actual infinite be made by God, we leave to the judgment of others.

The first reason by which it is wont to be proved that an infinite according to magnitude cannot be made by God is of this sort. Either a body is natural, conjoined to matter and form, or it is altogether mathematical, in pure quantity abstracted from matter: but in neither way can it be infinite; therefore in no other way will it be able to be. First, it cannot be a natural body, both because such a body ought to have a determinate and finite substantial form; and every determinate form demands determinate accidents and quantity; and also because every natural body is moved, or can be moved; but an infinite body cannot undergo any motion, as Aristotle at length explains in On the Heavens I, chapter 5; therefore an infinite body conjoined to matter and form, that is, a natural body, cannot exist. Then, neither can it be a mathematical body: because every body of this sort has a figure, for this is the form of a mathematical body; but a figure is in the extremity and term of a body; therefore such a body cannot be infinite.

This reason is employed by St. Thomas in article 3 of this question; but it does not please Richard in question 5, and it can be dissolved in this way.[401] Although a mathematical body could not be infinite in mere thought, because it would always be apprehended by us after the likeness of

400. Gregory, In I Sent., d. 43, q. 4; Bassolis, Quaestio unica, a. 2; Gabriel, In II Sent., d. 1, q. 3; Ockham, ad loc.; Avicenna; Algazel; cf. St. Thomas, article 4 of this question.

401. Aristotle, De caelo I, c. 5; cf. St. Thomas, Summa theologiae I, q. 7, a. 3; Richard, q. 5.

other things which are finite, yet from this it is not gathered that in reality it cannot be made by God. For many things which we are not able to conceive it is not repugnant to be made by God. Then also, on the side of our thought nothing hinders: for we easily apprehend some vastness, or magnitude, beyond the heavens without any bound; therefore nothing repugnant remains why a mathematical infinite body could not be made by God. I grant indeed that such a body is not that of which the mathematicians dispute. For their demonstrations treat only of finite quantity; about the infinite, however, under the notion of the infinite, their science demonstrates nothing: yet this does not prove - what cannot be divided into two fires; but by aggregation, however, that one which can be divided into two. Ver -

They (the mathematicians) treat only of finite quantity; about the infinite, under the formal notion of the infinite, their science demonstrates nothing: yet this does not prove that such a magnitude cannot exist in reality. Wherefore, when Aristotle in Physics III, chapter 5, shows that the infinite is not, in text 39 he plainly professes that he does not dispute about mathematical and intelligible things. We shall quote his very words in what follows.[402]

If, however, we speak of a natural body, even if that body did not move, if it were infinite, as Aristotle very well proves in On the Heavens I in that chapter, nevertheless from this it is not gathered that it would not be natural, or that it would not have in itself a nature which is the principle of motion. It only follows that its nature would be impeded by the mass of that infinite quantity; for any part of it, separated and finite, could be moved without any substantial change. Wherefore, as Richard rightly teaches, nothing repugns that there be some body which cannot be moved.[403] Finally, from the fact that that natural body would have a determinate and finite form according to existence (*esse*), and consequently would require determinate accidents, and finite according to existence, it is not gathered that it would be determined according to magnitude. For these two genera of infinity - namely according to existence (*esse*) and according to quantity - are altogether distinct, as we admonished above. And if from a determinate nature according to existence it were inferred that a determinate quantity is necessary according to extension, it would follow that every natural body would also require a determinate extension; which is absurd: for fire, by addition of matter, could be increased without term, as Aristotle teaches in On the Soul II, chapter 4, text 41; and this has been verified by experience.[404]

Oppressed by this argument, Cajetan devised the following evasion: he asserts that "maximum fire" is understood in two ways: in one way, as that which is perfectly one; in another way, as that which is one by aggregation. He concedes, moreover, that there is indeed a maximum fire intrinsically determined, whose natural form of itself requires such a magnitude, but in some perfectly one individual, not in an individual by aggregation; for in this latter it could be increased to infinity. He calls an individual of fire "per se one" when it cannot be divided into two fires; and

402. Aristotle, Physics III, c. 5, text 39.
403. Richard of Mediavilla, quaestio cited in the text.
404. Aristotle, On the Soul II, c. 4, text 41.

"one by aggregation" when it can be divided into two. Therefore it is true (says Cajetan) that the natural form of fire, because it is determinate according to itself, also requires a determinate quantity and accidents.[405]

However, besides the fact that this distinction of Cajetan is fictitious - as appears at once - the argument in the same way proves what we are contending. First, that distinction is empty; this is evident from the fact that fire is altogether of the same nature in whatever quantity: it therefore always requires exactly the same accidents which pertain to the conservation of itself and to its right condition. Wherefore, if its quantity can grow, then even by aggregation it can grow to infinity; this is a sign that a determinate measure is not per se required. From which I also think it truer that neither towards a minimum nor towards a maximum is any bound of quantity necessary for the conservation of a non-living natural form; but that a termination occurs per accidens: it is corrupted by excessive diminution from the contrary; by increase, however, even to infinity, it would never perish; although Aristotle says in the passage cited that the increments of living things cannot occur to infinity, the words of which it has pleased me here incidentally to explain.

Accordingly Aristotle proves that living things are not increased by natural heat alone according to the proper nature of that heat, but inasmuch as it is a power and instrument of the soul. He gives the reason in these words: "For fire indeed advances to increase in infinitum." As if he said: if living things were increased by natural heat alone by its own power, they would grow to infinity. He then adds: "But of all those things which subsist by nature there is an end and a rule both of magnitude and of accretion." These words of Aristotle seem contrary to those which he had just said. For he had said that fire increases to infinity, and afterwards he seems to assert that natural entities have a bound of magnitude. But they admit of an easy explanation, and they cohere rightly with the preceding, if we follow the interpretation of Simplicius, who by the name "end" does not understand a limit and extremity, but the form which is said in reality to determine matter; or, as other texts have it, not "end" but "term." The text, therefore, is to be ordered in this way. "Of all natural entities, whether living or non-living, the end and term - that is, the form - is the rule, or ratio, of magnitude and of accretion; and hence in living things accretion is to be attributed to the soul, not to fire, that is, not to heat according to itself and to the account of increase itself, which we have said is the form; accretion is to be attributed, not however to the matter of nourishment": by which he rightly proves that the increase of living things, even if it occurs by means of heat, and nourishment is always added, does not proceed to infinity, because its impulse is moderated by the soul, to which increase is chiefly to be attributed as to the form.[406]

Moreover, if we admit Cajetan's distinction, at least the foregoing argument proves that nothing repugns to granting an infinite fire by aggregation, because such a fire by its nature does not require determinate accidents and quantity.

The second reason which St. Bonaventure uses to prove that an infinite body cannot be given, is as follows. Every actually infinite is pure act; otherwise, if it had something of potency, it would be finite: but nothing created can be pure act, because then it would be its own existence (*esse*), and

405. Cajetan, ad art. 3, n. 9.

consequently could not fail to be; therefore no created thing can be infinite. But from those points which I noted at the beginning of the disputation, this reason is easily dissolved: for that infinite which is according to existence (*esse*), and belongs to God alone - as we explained in the preceding disputation - is pure act, which cannot not be; but the infinite according to quantity, because it is finite according to existence and produced from nothing, is not pure act, and can fail to exist.[407][408]

A third reason: If there were a certain infinite length, and it were divided into two parts, one would be equal to the other, because each would be infinite on one side, but finite on the other: but this cannot be, both because to each of them something could be added, and so it would become greater, and also because it would follow that a part is equal to the whole. For let us assume that length infinite on one side, before anything is added to it on the other side, which is finite; it is indeed equal to itself, and then, whatever quantity is added to it, it is a part with respect to itself once the addition has been made: therefore a part would be equal to the whole. Richard brings a similar reason and replies that it proves nothing: because equal and unequal, greater and less, are passions of finite quantity; for they are relations according to measure between two quanta. But only those things which are finite can fall under measure. Therefore an infinite quantity compared to another infinite cannot be said to be equal, or unequal, greater or less. Wherefore, if to a quantity finite on one side and infinite on the other something were added - as indeed it could be added - on that account it would not be said to become greater.[409]

Furthermore, although Aristotle in Physics III, chapter 5 expressly proves that there cannot be in the nature of things any infinite body, he never used such a reasoning. Nor indeed could it stand satisfactorily with his own doctrine. For in Physics VIII, chapters 1, 2, and 3, and On the Heavens I, chapter 10, he proves that the world is ungenerated and from eternity, and consequently that its motion was without a beginning. If, therefore, the reason alleged proved that an infinite body cannot be given, it would also prove that there could not have been motion from eternity even unto this present day. For it would follow that something can be added to the infinite: for past time is perpetually being added; it would also follow that the first part of that time is equal to the whole: for time past up to yesterday seems to be a part when compared with the whole time up to today. Which if Aristotle had judged to be an absurd consequence, he would never have asserted that motion was from eternity.[410]

I for my part think that Aristotle taught above all that the infinite cannot exist, because he thought that this universe of things was constituted from eternity not by the will of God, but by necessity; whence he also proves that another universe cannot be. This being supposed, from those things which we see he rightly concludes that the infinite cannot be; which in his view comes to the same thing as proving that it is not now in act. For all the reasons which he uses in Physics III,

406. Simplicius, as an interpreter of Aristotle's Physics.
407. St. Bonaventure.
408. On pure act according to existence, see the preceding disputation.
409. Richard of Mediavilla, quaestio 5.
410. Aristotle, Physics VIII, cc. 1 - 3; On the Heavens I, c. 10.

chapter 5, and On the Heavens I, chapter 5 and the following, are taken either from generation and mixture, or from other things which are established by experience. From which it is not permissible to infer that by God's absolute power an infinite cannot be made.[411]

A fourth reason. Aristotle, On the Heavens I, chapter 5, therefore proves that an infinite body cannot be moved in a circle, because it would follow that an infinite distance is traversed in finite time. For from the center let two lines be drawn; the more they are prolonged, the more they are distant: since, therefore, they are prolonged to infinity, at length the distance will be infinite, through which it is necessary that the motion be performed at the same time as through the shorter distance between the same lines, in proportion as they are near the center. It furthermore follows that the distance between two lines is at length infinite; which seems absurd, since it is between lines, and thus bounded by lines.

I answer that by this argument it is rightly proved that the circular motion of an infinite body cannot exist, because it would follow that the infinite is passed over, in that the motion which would correspond to the space between two lines or to a small circle around the center could not be finite when compared with the whole magnitude toward the upper part; and unless we assign some highest sphere through which the motion is made, no circular motion at all can be understood. But if a sphere be assigned, the body must be finite and enclosed by the circle: nonetheless it is not concluded that there is some magnitude infinite between two lines: because wherever it be marked, it will always be finite; nor is there any supreme part in which the distance is assigned as actually infinite; but, whatever mark you set, which will be finite, another greater can be set, and so on to infinity. Wherefore, if someone says that an infinite body can be given but cannot be moved circularly, and also that there cannot be a sphere of finite magnitude which would carry out the motion, he says nothing absurd.

It is shown in the same way that an infinite multitude is not repugnant.

Caput III - On the infinite according to multitude

It remains that we prove the same about the infinite according to multitude, whether in spiritual things or also in bodily things, by setting out the reasons by which some are wont to show the opposite, and showing that they can easily be dissolved. But before all, it must be premised that Aristotle never spoke about an infinite multitude of spiritual things: rather, in Physics III, chapter 5, after he had proposed certain arguments by which some strove to persuade that the infinite is not something separated from matter, in text 39 he subjoins: "But this inquiry, perhaps, is more universal: whether there can be an infinite in mathematics and in intelligibles, and in those things which have no magnitude." "We, however," he says, "inquire and examine whether there be an infinite body as to increase in sensibles, about which we are making our doctrine." Then indeed he pursues the disputation about the infinite in things quantitative. He did not wish, therefore, to dispute about incorporeal things, because to him it was not so evident in spirituals as in corporeals that the infinite cannot be; since, indeed, in his opinion the world and the generations of men were

411. Aristotle, On the Heavens I, c. 5; Physics III, c. 5; and following.

from eternity. Whence it followed that either the rational soul is mortal, or it migrates from body to body, or there is an infinite number of souls. Next, it must be observed that this question is not about a multitude of causes per se ordered among themselves - for this is impossible, so that some effect might follow - but about a multitude of things of whatever sort. Now, then, let us see whether the opposed arguments prove anything.[412]

First argument. Every multitude must be under some species; but all the species of multitude are according to the species of number; and no species of number is infinite: therefore no infinite multitude can exist. St. Thomas uses this argument in the first place in article 4 and in the work On the Power of God. To the same purport seems the second, which Richard alleges in question 6, namely that all effects which are derived from one principle ought to have some order among themselves; but in an infinite multitude they could not: for the order of a multitude is not a relation to one first, and in an infinite multitude there is no first.[413]

But in either reasoning there is assumed what is not proved; and if it be denied, it cannot be proved. First, that every multitude must be in some species of number: whence it also follows that even the multitude of things, insofar as it is on the side of reality, does not have the formal and specific distinction of number; for it receives this from the intellect as it considers and divides. For before the intellect numbers, why will you say that this unity rather belongs to the quaternary than to the quinary, since it can be conjoined in reality just as well to the one as to the other, and in reality these numbers are not divided, but there is only one multitude of things?[414]

I answer: This argument cannot rightly be used to prove that there is circular motion of an infinite body, because it would follow that the infinite is traversed; for the motion that would correspond to the space between two lines, or to a small circle about the center, could not be finite when compared with the whole magnitude toward the upper part. Unless we assign some supreme sphere through which the motion is made, no circular motion can be understood; but if a sphere be assigned, it is necessary that that body be finite and enclosed by a circle. Nevertheless it does not follow that there is some magnitude infinite between two lines: for wherever it be marked, it will always be finite; nor is there any uppermost part in which a distance may be assigned actually infinite; but whatever distance is marked, which will be finite, a greater one can be assigned to infinity. Wherefore, if someone should say that an infinite body can be given, but that it cannot be moved circularly, he would not be saying anything absurd.

Nor does it repugn that an infinite should have order: for order in a multitude is not a relation to one first; but in an infinite multitude there is no first.

On infinity according to multitude

It remains to treat of the infinite according to multitude, whether in spiritual things or also in corporeal things; and let us prove the same in both, showing that the reasons by which some try to demonstrate the opposite can easily be dissolved. But before all, it must be premised that Aristotle

412. Aristotle, Physics III, c. 5, text 39.
413. St. Thomas, in article 4 and in De potentia Dei; Richard of Mediavilla, quaestio 6.

never spoke of an infinite multitude of spiritual things; rather, when in Physics III, c. 5, after he had proposed the reasons by which some attempted to persuade that the infinite is not separated from matter, at text 39 he subjoins: "But perhaps this is more universal: if it can be in mathematical things and in intelligibles, which have no magnitude. We, however, consider whether an infinite occurs in sensibles or not, and we pursue in particular the discussion about those things which belong to bodies, namely increase, generations and corruptions."] Therefore he did not wish to inquire about incorporeal things, in which, as I said, the question is not as perspicuous to the philosophers as in corporeal things, since for them it could not be sufficiently clear whether there were without beginning movements and generations of men from eternity. From which it followed that either the rational soul is mortal, or the soul migrates from body to body, or that there is an infinite number of souls. Next, it is fitting that we do not treat this question by a multitude of causes pursued in order, for this is impossible where no effect follows: in whatever multitude of things you please.

Let us go on to see whether the opposing arguments prove anything.

First argument. Every multitude ought to be under some species of number; but the species of multitude are according to the species of number, and no species of number is infinite; therefore an infinite multitude cannot be. St. Thomas uses this argument in article 4, first place.] The same also seems in some way to look to the teaching of Ricardus, q. 6, where he asserts that all effects deriving from one principle ought to be ordered among themselves; in an infinite multitude there could not be order, for order is a relation to one first; but in an infinite multitude there is no first.]

But in both lines of reasoning there is a fault. And if it be denied, it cannot be proved. First of all, that a multitude ought to be in some species of number, is not true in the same way on the side of the thing; whence it is clear also that multitude, insofar as it is on the side of the thing, does not have the formal and specific notion of number: for it receives this from the intellect considering and dividing. For before the intellect numbers, why will you say that this unity belongs rather to the quaternary than to the quinary, since it can be joined in reality to the one as well as to the other, and in reality these numbers are not divided, but there is only one multitude of things?

Cajetan. In this article, in order to confirm St. Thomas by this reasoning, Cajetan grants that not every multitude is in the species of number - not because he thinks there can be some infinite multitude which does not have the notion of number, but because he holds that the multitude of spiritual things does not pertain to the species of number, which he supposes to be constituted only from bodies.] He adds moreover that St. Thomas did not assume that proposition, "Every multitude ought to be under some species of number," but this: "Every multitude ought to be in some species"; then he drew his argument in this way: All the species of multitude ought to be according to the species of numbers - he did not say, "They ought to be species of numbers," but "according to the species of numbers," as if he were saying (Cajetan's words): they ought to have proportion with the species of numbers, just as the multitude of angels, although it is not in the predicament of quantity under the species of number, nevertheless has the same proportion with

414. Cajetan is being alluded to at the end of the page.

number, so as to be numbered; but an infinite multitude cannot have this; therefore such cannot be. Moreover, that every multitude has proportion with number, he proves from those things which we commonly see.

It is refuted. Against this doctrine there are some reasons. First, number according to its formal notion, which no one considers except the mathematician, is also found in angels: for mathematical demonstrations proceed in angels just as in corporeal things. Second, when the aforesaid argument assumes that every multitude ought to be in some species, either it is understood of some species which is not a species of number - and this is assumed altogether gratuitously; for if it is not a species of number under the genus of quantity, under what other genus or species will it be? Yet the preceding argument seems to suppose that that multitude ought to be in some species which is not a species of number. Or the argument assumes that that multitude ought to be in some species of number - and this too would have to be proved: for who will say that an infinite multitude is some species of number? Third, even if we grant that every multitude is in some species which is not a species of number, when then the argument subjoins that all the species of multitude ought to be according to the species of numbers - that is (as Cajetan wills) ought to have proportion with the species of numbers - and proves this gratis also by an appeal to what we see, it does not follow. For what Cajetan says seems to be clear to us from the fact that we see every multitude of things to stand thus, in equal measure: this indeed is found only in the multitude of created things; but he does not prove that there cannot be some multitude which has no proportion with number.

Second argument. Every creature is comprehended under some definite intention of the creator, since every agent, especially God, does not act indeterminately: therefore, if many are created, it is necessary that they be comprehended by a definite number; but an infinite multitude cannot be comprehended under a definite number; therefore it cannot be made. St. Thomas uses this argument also in article 4, in the second place.]

It is broken by Cajetan. But Cajetan objects three things, by which what he asserts in that second place seems to me to be weakened in this way. Although each created thing of some multitude ought to fall under the definite intention of the creator, nevertheless the universal multitude of individuals ought not to be comprehended in this way: for to each thing of this multitude there belongs its own proper and determinate creation, and hence the agent's intention is borne surely and determinately to individual things; but the whole multitude is not produced by one single creation; therefore it ought not to be comprehended by a definite intention and number.

Cajetan's solution. Cajetan replies for himself, § Ad 2, that the whole multitude which has the notion of a universe has also the notion of one created thing; therefore it ought to fall under some definite intention of the creator.

It is rejected. But this does not satisfy the reasoning which he objected to himself. For the whole universe of things cannot have the notion of one created thing, since it is produced not by one, but by many productions of individual things. And if the universe of things has some unity, it is only a certain order among the very things of which it consists; which order can be found in a finite

multitude. Moreover, since God by His most perspicacious intellect and omnipotent will, which cannot be deceived or fail, works all things, that infinite multitude of things would no less fall under the definite knowledge and will of God than if it were finite. Wherefore neither would His transitive action by which He produced individuals tend to what is indeterminate; for now He would not be able to produce individually those very things which He could before: if therefore this is not absurd, neither will that be; for just as it repugns that the power of God be exhausted, so also that it be diminished or restricted. Furthermore, since the production of things adds to God no perfection, but the whole perfection of omnipotence consists in this, that in Himself He be of such a nature as to whom it befits to produce all things that do not involve a contradiction, it follows that from His not being able to produce those things which involve a contradiction, there is no impotence in God, nor diminution or imperfection of power. Wherefore from this, that after the production of some things He cannot produce as many as He could before, or that, all possible things being produced, He cannot produce another thing, since both are impossible, there is no defect of power; and therefore on that account His power will by no means be said to be exhausted or diminished: for it is always and was with respect only to those things which for such or such a time do not involve a contradiction; nor was there or is there in God any power to produce something beyond every multitude which He Himself knows. No variation therefore can be in God, but in other things; nor any diminution. Wherefore His power in itself will by no means be said to be exhausted, diminished, or restricted.

Third argument. God cannot at once do everything which He knows to be possible to be done; therefore He cannot make an infinite. For if God produced an infinite, He would do all the things which He knows to be possible to be done: for these two seem to be reciprocal. But that God cannot at once do all the things which He knows to be possible, they prove by this reason: If God should at once produce all those things, nothing else would remain to be done; therefore the omnipotence of God would be exhausted, and thus less than before, or at least nothing. This is the reasoning of Alexander, 1 p., q. 21, m. 2, ad 3, which has seemed of great moment to many learned men of our age.]

It is weak. Yet that it is weak is easy to show from a twofold source. First, in order that that first consequence be good, it is necessary that those two which we said be reciprocal, namely, "an infinite" and "whatever God knows to be possible": but they are not convertible. Indeed it follows rightly, "He does all the things which He knew, therefore He does infinite things"; but it is not rightly gathered, "He does infinite things, therefore He does all the things which He knew." For God does not know only one infinite multitude, but many: in whatever species He knows infinities in individuals; He could therefore produce an infinite multitude in one species, if He produced at once all the individuals of that which He knows, and yet He would not at once produce all the things which He knows. Therefore those two are not reciprocal, and hence that first consequence is null.

Moreover, even if we grant that God produced at once all the things which He knew to be possible in whatever species, nothing absurd follows, as the argument intended. Wherefore also the latter consequence of that argument is not rightly inferred; and this can be proved by three

reasons. First reason: As the omnipotence of God stands to the whole multitude of possibles, so it stands to the singulars thereof; namely, if then, all things being at once produced, because another could not be produced, the power of God would be said to be exhausted, so also now, some one thing or many being produced, it would be diminished, or at least not so far-ranging as before. But now it could not then be said that the power of God was exhausted or diminished, since then it could not operate in things not yet existing, but also it would be operative in act; by the same reasoning, while He conserved the whole multitude altogether, He would be no less then than in the beginning exhausted or diminished. For now He would not be able individually to produce those very things which before He could; if therefore this is not absurd, neither will that be: for just as it repugns that the power of God be exhausted, so also that it be diminished or restricted.

Furthermore, since the production of things adds to God no perfection, but the whole perfection of omnipotence consists in this, that in Himself He be of such a nature as to whom it befits to produce all things which do not involve a contradiction, it follows that from His not being able to produce those things which involve a contradiction there is in God no impotence, nor diminution or imperfection of power. Wherefore from this, that after the production of some things He cannot produce as many as He could before, or that, all possible things being already produced, He cannot produce another thing, since both are impossible, there is no defect of power; and therefore on that account His power will by no means be said to be exhausted or diminished: for it is always and was with respect only to those things which for such or such a time do not involve a contradiction; nor was there or is there in God any power to produce something beyond every multitude which He Himself knows. No variation therefore can be in God, but in other things; nor any diminution. Wherefore His power in itself will by no means be said to be exhausted, diminished, or restricted.

Then, if the infinite multitude of all possible things had been produced, not only would the power of God not be exhausted on His part, but not even on the part of things: for something to be done would still remain in eternity. For, the multitude of all things which He knows having once been produced, He could still destroy the whole or a part and create again: therefore something to be done would remain over to the power of God.

Note. Add that that multitude would proceed from God in the same way continuously as at the beginning it had been produced: for the conservation of things is a certain continuous creation of them, by which no less continuously are things drawn out of nothing than in the beginning when they were first created, as we shall say in Disputation 34, cap. 3. Therefore, just as at the instant when that multitude would be created the power of God would by no means be said to be exhausted or diminished, since then it could not yet operate in things not yet existing, but would be operative in act, so also by the same reason, while He conserved the whole multitude altogether, it would by no means then be said to be exhausted, diminished, or restricted.

For the infinite is that outside of which there is nothing: therefore, outside infinitely many men no other thing could be produced. Then too, if something else were produced, there would be an addition made to the infinite, and consequently one infinite would be greater than another. By this

very argument some also think that it is very well demonstrated that generations of men have not been from eternity; because the number of souls would be infinite, outside of which no other thing could be created.

But the fourth argument is of no efficacy. For since the argument is drawn from another definition of the infinite which some think was handed on by Aristotle, and yet he himself nonetheless said that generations have been from eternity, it is not to be believed that it has any strength; and since the same argument can be made against the true opinion which says that actually infinite individuals under any given species are known by God, as we shall see in disputation 63, and it ought to prove nothing against that, so too in no way does it prove that an infinite multitude cannot be made.

Moreover, to satisfy the argument directly will not be difficult. For Aristotle does not hand down that definition of the infinite, but altogether rejects it in Physics III, text 62, in these words: "It happens that the infinite is in a contrary way to what others say: for the infinite is not that of which there is nothing outside, but that of which there is always something outside"; and in text 63: "Therefore the infinite, by reason of quantity, is that of which there is always something outside."[415] But that of which there is nothing outside - namely, that which is perfect, and actually so - is perfect, not infinite. For that is perfect which has all things in itself, and nothing is outside, of those things which are required for its constitution. The true definition of the infinite, according to Aristotle's mind, is that, when things are being taken from it, there always remains something to be taken. Of this sort he had said, at text 57, that what is wholly finite, that is, actually, is to be distinguished from what is infinite in potency: for the infinite in potency is like the Olympic game, which is wholly finite in act, yet can be made greater without end; but the infinite in act is that of which, when things are being taken, there is always something further to be taken from among those which are in it.

The second argument is taken from the order to the space which an infinite multitude would occupy, and it is of this sort. Let there be given an infinite multitude of stones; that will without doubt occupy an infinite place: therefore infinitely many men could not be made at once; therefore God could not produce all the things which he knows to be possible. I answer first, that by this argument it is not proved that an infinite cannot be made by God, but that all the things which God knows can be made cannot be made at once. Then too, it does not prove that several infinite multitudes cannot be made at once: for an infinite multitude does not necessarily occupy infinite space on every side, but, if it be extended into infinity from one side only, it can be innumerable.

But someone will press in this way. Let stones be placed in a straight line to infinity, which on one side have a terminus, but on the other extend into infinity. Then let this length be divided into infinite foot-length quantities, and let God separate the alternate ones from these, the others remaining and conjoined; or, if it be said that in that multitude there are not alternates - for the ratio of "every other" consists in proportion, which is not found in an infinite multitude - at least let each foot-length quantity be divided in two, and let each half be separated from the other, and let

415. Aristotle, Physics III, texts 62 - 63.

all the halves together, separated, be placed each in its own order: then without doubt there will be made two infinites according to length from one side, where previously there was but one: wherefore that same quantity will occupy a greater space than before. Or, if one prefers, let one series of those halves be extended toward Complutum to the east, and another from the same place toward the west, which God can do without motion, and now there will be made one infinite in act according to length toward both parts.

If someone should say that the halves of single quantities cannot be assigned, because that would be just the same as assigning alternates, let us suppose that God has produced infinitely many men toward the east, then let him separate the arms of each toward the west: now there will be made, as I said, one infinite in act on both sides, out of one which was infinite only toward the other side.

As for myself - omitting the many things which St. Gregory heaps up in that question, 4.2.2. ad 6, so as to dissolve this argument - I would candidly concede that from one infinite, according to multitude toward one side, there can be made another infinite from one side as well; and from both, one that is infinite from one and from the other side: from which I do not see that any contradiction can be gathered, although it seems repugnant to sense.[416] For from this it would not be licit to infer that the same infinite is made greater by itself, without anything extrinsic supervening. For "greater" and "less" can belong only to finite quantity, as was said above. Wherefore, however that quantity be disposed, it will never occupy a greater space. But if anyone should object that by the same reasoning it could be brought about that from one infinite, according to length from one side, an infinite would be made not only on both sides according to length, but also on every side in a circuit - which seems absurd - one replies that it is not rightly inferred: because only an addition could be made by a division carried out according to proportion from the single quantities; but this could not thus be done into infinity as to fill all possible space.

The last argument. If there were infinitely many men, and each had a single stone, they could throw them into one heap, and from that heap each might take ten, since the heap is infinite; and thus each would have more than he had before. I answer, that not all the men could take ten stones, but only single ones: for the fact that the stones are infinite matters little, when each has put in only a single one. You will say that, if each had put in ten, they could take ten; and the heap would be none the more infinite than if each had put in only a single one. I answer, the heap would indeed be infinite, neither greater nor less than if each had thrown in single stones; because "greater" and "less" cannot exist among infinite quantities or multitudes, as was noted above: yet if each had put in ten stones, there would be some in that infinite multitude who would not be in the other, namely, where single stones only had been thrown in; and this is enough that, in the former case, each can take ten, but in the other only single ones.

Objection. You will say that in the case in which single stones had been put in, at least as many men as can should take ten stones; then it is asked: how many will remain? If you say "infinitely many," then some from that multitude could now receive more than they put in. But if you say

416. St. Gregory, in that question, 4.2.2, ad 6.

"finitely many will remain," then already infinitely many men each have received ten stones. The reply: there is not a determinate number of men from whom each can take ten stones; but, a number of twenty men being fixed, more can also take sets of ten stones; and thus into infinity, without our being able to mark out a final limit. And if from that multitude ten men each were to take ten stones, it would be necessary that, from that infinite multitude of men, there remain also other men without the single stones which they put in. Wherefore, all things being rightly considered, I for my part up to now find that no evident contradiction has been alleged for which God could not produce an infinite in quantity.

Quaestio VIII - On the existence of God in things

Since it is agreed that the infinite is everywhere and in all things, it must be considered whether this befits God. And concerning this, four things are asked.

Articulus I - Whether God is in all things

To the first we proceed thus. It seems that God is not in all things. For what is above all things is not in all things; but God is above all things, according to that of the Psalm: "Exalted above all nations is the Lord, and his glory above the heavens" (Ps. 112:4). Therefore God is not in all things.

For what is above all does not remain encompassed. Therefore, as long as a thing has existence, so long it must be that God is present to it according to the mode by which he gives it existence.

Objection 1. It seems that God is not in all things. For what is above all things is not in all things; but God is above all things, according to that of the Psalm: "Exalted above all nations is the Lord, and his glory above the heavens" (Ps. 112:4). Therefore God is not in all things.

Objection 2. Furthermore, what is in something is contained by it; but God is not contained by things, rather he contains things: therefore God is not in things, but rather things are in him. Whence St. Augustine, in the book Eighty-Three Questions, says that in him rather are all things than that he himself be anywhere.[417]

Objection 3. Furthermore, the more powerful an agent is, the more its action proceeds to what is distant; but God is the most powerful of agents: therefore his action can reach even to those things which are distant from him, and it is not necessary that he be in all things.

Objection 4. Furthermore, demons are certain things; yet God is not in demons: for there is no agreement of light with darkness, as it is said in 2 Cor. 6. Therefore God is not in all things.

But on the contrary: Wherever something operates, there it is; but God operates in all things, according to that of Isaiah 26: "All our works you have wrought in us, O Lord": therefore God is in all things.

I answer that: God is in all things; not indeed as a part of the essence (*essentia*), nor as an accident (*accidens*), but as an agent is present to that in which it acts. For it is necessary that every agent be conjoined to that in which it acts immediately, and touch it by its power; whence, in the seventh book of the Physics, it is proved that the moved and the mover must be together.[418] But since God is existence (*esse*) itself through his essence, it is necessary that created existence be his proper effect, just as to set afire is the proper effect of fire itself. Now this effect God causes in things not only when they first begin to be, but as long as they are conserved in being: as light is caused in the air by the sun as long as the air remains illuminated. Therefore, as long as a thing has existence, so long it must be that God is present to it according to the mode by which it has existence. But existence is that which is most intimate to each thing, and which is more profoundly in all things, since it is the form (*forma*) and act (*actus*) of all the things which are in the thing, as is clear from what was said above. Whence it is necessary that God be in all things, and intimately.

Reply to the first: God is above all things by the excellence of his nature; and yet he is in all things as causing the existence of all, as was said above.

Reply to the second: Although corporeal things are said to be in something as in a container, nevertheless spiritual things contain those things in which they are, as the soul contains the body; whence also God is in things as containing things. Yet by a certain likeness of corporeal things all things are said to be in God, insofar as they are contained by him.

Reply to the third: The action of no agent, however powerful, proceeds to something distant except insofar as it acts upon it through intermediates. But it pertains to the greatest power of God that he act immediately in all things. Whence nothing is distant from him as though in itself it did not have God. Nevertheless things are said to be distant from God by dissimilitude of nature or of grace; just as he is over all by the excellence of his nature.

Reply to the fourth: In demons there is understood both the nature which is from God, and the deformity of guilt which is not from him. And therefore it must not be granted absolutely that God is in demons, but with this addition: insofar as they are certain things. But in things which denote an un-deformed nature, it must be said absolutely that God is.

Disputatio XXVII - Whether it is certain that God is everywhere

The doctrine of this article we can embrace in this brief conclusion: God is everywhere.

Caput I - Errors on this matter

That he is everywhere is so well established that, as Athanasius testifies, in the Oration against Idols after the middle, both reason and reputation have obtained this among all. By what reasoning St. Thomas confirms this, we shall see in the following disputation. However, there have not been lacking those who, in a matter so well known and commonplace, have erred grievously. I pass over

417. St. Augustine, Eighty-Three Questions, in principio quaest. 20.
418. Aristotle, Physics VII, on the simultaneity of mover and moved.

the Anthropomorphites, against whom I disputed expressly above in Disputation 21, who, affirming God to be corporeal, were compelled to assert that he also is contained in some finite and determined place: although this error is not expressly reported of them. For neither could he with his body penetrate the whole mass of the things capable of body, so as to be everywhere. Wherefore most aptly St. Gregory Nazianzen, Oration 34, which is the second on Theology, proves that God is not a body, because according to divine Scripture he is everywhere. "Which," he says, "could not be, if he were corporeal."

But among those who said that God is spirit, there were some - first philosophers, then heretics, and finally otherwise Catholic men - who asserted that God is not in all things. In the first place, Aristotle, in the book De Mundo to Alexander, asserted that he is nowhere else than in heaven: just as the king of the Persians is wont not to be in all his cities, but in the royal city of Ecbatana or of Susa. And not only in that book, which many deny to be Aristotle's, but also in the first book De Caelo, chapter 9 near the end, he contends that God and all intelligences and spirits are not within but outside heaven. After Aristotle, in the same error seem to have been the Manichees, against whom St. Augustine disputes in the book Contra epistolam fundamenti, chapter 16, who would seem to conclude that God is enclosed in some place. Lastly, among Catholics, St. Augustine Eugubinus, on those words of Psalm 138, "If I shall ascend into heaven, you are there," asserted that God by his essence and presence is only in heaven, just as the sun is situated by its position and its body in the heaven. But just as the sun by its illumination pervades these lower places, nor is it defiled by filthy things which it enlightens, so God (says Eugubinus) is present to all things and to the lower places by his knowing, enlightens all things, and yet is not disturbed or defiled by the lower places: which [presence] he thought to take place not by his substance and presence, but by knowledge and knowing alone.[419]

Caput II - The Catholic truth

But the Catholic doctrine is also most strongly proved by philosophers, which St. Thomas hands down in this article, namely, that God by his substance (*substantia*) is in all things. We presuppose from Question 3 that he is spirit, and that he does not occupy even the most subtle body. That this was especially the opinion of the Peripatetics and of the Platonists, Tully teaches in the First Academica; Aristotle also reports it, in the last chapter of De Anima, text 86, and in De Caelo to Alexander: that Thales of Miletus said that all things are full of gods. The same, Aristotle in the last chapter of De Partibus Animalium, relates of Heraclitus, that to those who were coming for the sake of seeing him and did not wish to enter into the bakehouse, he said: "Enter, for neither in this place are the immortal gods lacking." There is also a famous testimony of Orpheus, in Clement of Alexandria, and in St. Cyril, which we shall put forward a little later. Next, this is the common opinion of the Fathers, among whom, besides Athanasius and Nazianzen already mentioned, and others more whom we shall enumerate in the following article, St. John Chrysostom, Homily 5 on

419. Athanasius, Oration against Idols; St. Gregory Nazianzen, Oration 34; Aristotle, De Mundo ad Alexandrum; Aristotle, De Caelo I, c. 9; St. Augustine, Contra Epistolam Fundamenti, c. 16; St. Augustine Eugubinus, on Psalm 138.

chapter 2 to the Colossians, affirms that it must be firmly believed that God is everywhere. St. Augustine also expressly taught this, book VII of the City of God, chapter 30, where, among other things, about God he says: "You fill heaven and earth by a presence of power, not by a nature that is absent."[420]

Caput III - In what modes the presence of God in place is described

Moreover, in Sacred Scripture there are manifest testimonies of this truth. Jeremiah 23: "I fill heaven and earth"; and Psalm 138: "Whither shall I go from your Spirit? or whither shall I flee from your face? If I ascend into heaven, you are there; if I descend into hell, you are present," etc. Where, while he assigns the extreme places of the world, in which he says that God is, he plainly indicates that he is also in all the other parts. Nor is it lawful that these and many other testimonies of Scripture be interpreted otherwise than of presence according to substance. For unless they were to be understood in this way, Scripture would not say in that place of Jeremiah 23, "I fill heaven and earth," and in 3 Kings 8, "If heaven and the heaven of heavens cannot contain you"; and in Job 11: "He is higher than heaven - what will you do? deeper than hell - how will you know? longer than the earth is his measure," etc. In this sense the holy Fathers understood these and many other places of Scripture. Wherefore the scholastic Doctors, among the other attributes of God, rightly count immensity - which differs not only by reason from omnipotence and eternity, but also from the infinity of essence, as we noted in Disputation 25.

But what Eugubinus was adducing in confirmation of his opinion is plainly frivolous. For although God by his substance be intimately present to filthy things, it would be foolish for someone to suspect that he is defiled by them afterward, since he is supremely spiritual. This is very well explained by Hugh of St. Victor, book I De Sacramentis, part 3, chapter 17, and by the Master in the First Book of the Sentences, distinction 37: they are wont to show it by the example of the rational soul, which, because it is spirit, is not infected by a leprous body. The same thing, by the example of the sun, St. Augustine demonstrates, in the book De Agone Christiano, chapter 18, and in De Natura Boni, chapter 29. For God is spirit, and therefore immutable: even if his substance be present in the lower places of torments, he cannot be disturbed, just as neither can he be polluted by a body.[421]

Not only is God said in Scripture to be in a place, but by a certain peculiar way his presence in place is signified. For he is said to be in heaven as in a seat and throne, but the earth to be to him as a footstool of his feet. Various Doctors have understood this mode of speaking. Scripture uses it in Isaiah 66 and very often elsewhere. In this way of speaking, Orpheus also explained God's place and magnitude, as cited by Clement of Alexandria, Stromata V, near the end, and by Cyril, book V

420. Cicero, Academica I; Aristotle, De Anima, c. ult., and De Partibus Animalium, c. ult.; Aristotle, De Caelo ad Alexandrum; Clement of Alexandria, Stromata V; St. Cyril, Contra Julianum V; St. John Chrysostom, Hom. 5 on Col 2; St. Augustine, De Civitate Dei VII, c. 30.

421. Hugh of St. Victor, De Sacramentis I, part 3, c. 17; Peter Lombard, Sentences I, d. 37; St. Augustine, De Agone Christiano c. 18; De Natura Boni c. 29.

against Julian, after the middle. St. Cyril therefore thus explains that place of Isaiah: since God is in all things, the more precious, which are signified by the name "heavens," are said to be as his seat and throne; but the more vile, which are denoted by "earth," are said to be his footstool.

St. John Damascene explains the same in another way, book I De Fide Orthodoxa, chapter 16, namely, that the heaven is called God's seat because there are the blessed Angels who obey his will, and hence it is as it were his seat and dwelling; but the earth is called the footstool of his feet because God, made man, dwelt on earth with men. For the very flesh of Christ is called the foot of God (says Damascene), and hence the earth is the footstool of his feet.

Although these things are true, nevertheless it cannot be denied that by this way of speaking God's greatness and immensity are signified in Scripture in a human mode, namely, that he so fills the extremities of the world that, sitting in heaven, he has the earth as the footstool of his feet. But when it is said in Psalm 113, "The heaven of heavens is the Lord's, but the earth he has given to the sons of men," it was not therefore said because he is not on earth, but because heaven itself, and not earth, serves God as a royal court, since in heaven his glory appears to the blessed, whereas on earth the glory and dominion of men shine forth: and hence heaven is said to belong to God, but the earth to be given to the sons of men. For the same reason, heaven is called in Scripture the habitation of God, as in Psalm 112.[422]

Disputatio XXVIII - From God's operation in things, his presence in them is gathered

That from God's operation his presence is not proved was the opinion of Scotus. Caput 1.

What St. Thomas and others think. Caput 2.

Observation.

Caput I - The state of the question and Scotus's reasons

Although the Catholic doctrine which we set forth a little above, about the existence of God in all things, is, among all the Scholastic doctors, held without controversy, nevertheless they differ about the reason to be assigned for it. Those who think that the reason of God's existing in things is his operation (operatio) prove hence that he is everywhere, because he operates in all things. But those who affirm that God is in things by his bare essence (essentia), try to show that this does not befit him by reason of operation. We shall therefore report each party's reasons, and examine them in the usual manner.

Scotus's first reason is in I Sentences, dist. 37, the single question. There he asserts that from the presence of omnipotence one does not prove God's presence in things according to substance (substantia). And he calls "presence of omnipotence" the presence of operation, as if he were saying

422. Isaiah 66; Clement of Alexandria, Stromata V; St. Cyril, Contra Julianum V; St. John Damascene, De Fide Orthodoxa I, c. 16; Ps. 113:16; Ps. 112.

that from operation it is not sufficiently inferred that the presence of God's substance is in the place where he operates. Hence, concerning the estimation that operation is not only no reason for existing where one operates, but even that, by the place (as they say) intrinsically, by the force of operation itself and of omnipotence, there is nothing repugnant in God's operating at a distance, unless from elsewhere, by reason of his immensity, he be everywhere present.

Ockham follows Scotus in I Sentences, the same dist., the single question, where he expressly impugns St. Thomas's reasoning; as do Bassolis in the single question, and Gabriel in the single question, art. 3, dub. 1. Along with these also side with them those who think that God according to his substance is present in infinite imaginary places outside the heaven, which we shall report in Disputation 16. But all of them with one voice affirm, by the same reason, that this attribute of immensity befits God not by reason of operation, but immediately by reason of his substance.

Now Scotus confirms this his opinion by three reasons. The first is that, although no bodily agent can operate unless it be in contact with a body, or by a derived power through a continuous space and conjoined to it, nevertheless to a spiritual agent, especially of infinite power, such as God is, this is not necessary. For this agrees with a bodily agent because of its own imperfect and limited power. Wherefore, if the agent be of infinite power, it will not need proximity of place or continuity of space, nor can it be limited by them: therefore it is not repugnant to understand that God operates at a distance.

The second reason: God the omnipotent operates by the mere nod of his will; but his will can be concerned with what is absent and distant; therefore so also can his operation. The third reason: that God might create the universe at the beginning of duration, it was not necessary that he had first been present by an interval and imaginary space in which the world seems to have been created; therefore for operation he does not need presence according to substance. By these three reasons Scotus not only directly proves that presence according to substance is in no way prior, in order of reason, to God's operation in things, but also by the same, especially the second, he seems to prove that not even by the force of operation is God in the things themselves present according to substance, since it can rightly be understood that he operates in what is distant from him.

Caput II - What St. Thomas and others think

The contrary reasoning, by which others try to gather the same Catholic position about God's existence in all things, is taken from the operation of God as it passes into the very things which he creates and continually conserves; and thus, from the attribute of omnipotence, by which God operates all things, they prove the attribute of immensity, by which God by his substance fills all things. This reasoning is used along with St. Thomas by Cajetan, and some more recent writers in this article, as also Albert, Bonaventure, Aegidius, Durandus, Capreolus, Richard, Thomas of Argentina, the Ferrariense, and, it seems, Henry in his Summa, and the Antissiodorensis.[423] And

later Thomists, who use this reasoning, together with Cajetan, assert that a transitive operation is for God the reason and foundation of existing in things, just as for bodies quantity is the reason for filling place.

Now the more recent writers attempt to confirm that operation is the reason and foundation of God's existing in things in a twofold manner, first from Scripture, then from the Fathers, and lastly by reason. In the first place, from Scripture: Psalm 138, "If I shall ascend into heaven, thou art there; if I shall descend into hell, thou art present. If I shall take my wings early in the morning, and dwell in the uttermost parts of the sea," add "even there thou art." Then he subjoins the cause: "For there also thy hand shall lead me, and thy right hand shall hold me." Not amiss, except that, as Eugubinus says on that place, by those words the cause is not assigned, because in Greek it has "gar," and in Hebrew "gam," and the sense is, as he explains, "so far is it from my being able to flee thy presence, that even there thy hand would lead me."[424] But although we admit that interpretation, we still cannot help understanding a cause under those words. For if the right hand of God can lead me even there, then even if he himself were not present there by his substance, the Psalmist would say in vain, "So far is it from my fleeing thy presence that even there thy hand and power would lead me." The same seems to have been expressed by Paul, Acts 17, when he said of God: "He is not far from any one of us," and he subjoins the cause: "For in him we live, and move, and are," as also some of your own poets have said. Whose sentiment Paul seems to approve in such a way that he confirms his own by that most excellent reason.

In the second place, they think the same point can be gathered not obscurely from the Fathers. Philo, in the book On the Confusion of Tongues somewhat after the middle, says: "God fills all things, not as contained, but as containing." He says that God is not contained, because he is not circumscribed or bounded by place; but he says that he fills all things by containing them, because he holds together all things and fosters them by his operation. Therefore he judges that all things are filled with God's majesty because all things are conserved by him; wherefore as a foundation and reason for existing in things, God's operation is rightly assigned. This way of speaking is familiar among the holy Fathers. Thus speaks St. Hilary on that verse of Psalm 124, "The mountains are round about it," and in On the Trinity near the beginning; and so also St. Augustine in Confessions.[425] In a like manner Bernard,[426] Anselm in the Proslogion ch. 19, and Theophilus of Antioch, book 2 To Autolycus, say that God is not confined by place, because, if he had a place,

423. Cajetan on I Sentences, d. 37; Albert, I Sentences d. 37, q. 2, a. 1; St. Bonaventure, I Sentences, prolog. art. 1, q. 1; Aegidius (Giles of Rome), I Sentences d. 2, q. 1, a. 9, aa. 1 - 2; Durandus, I Sentences, q. 1; Capreolus, I Sentences, dist. 1 - 2, q. 1, conclusions 1 - 2, 3, in the solution of the argument against that position; Richard, II Sentences d. 1, q. 1; Thomas of Argentina, I Sentences q. 1, art. 1; the Ferrariense, Contra gentiles III, c. 68; Henry of Ghent, Summa, art. 30, q. 5; the Antissiodorensis, Summa, I, c. 15, q. 1, ad 1.

424. St. Augustine Steuchus (Eugubinus), on Psalm 138, ad locum.

425. St. Hilary, on Psalm 124; and On the Trinity, near the beginning; St. Augustine, Confessions, book 1.

426. St. Bernard, De essentia divinitatis, near the beginning; Sermon 6 on the dedication of a church; St. Anselm, Proslogion ch. 19; Theophilus of Antioch, Ad Autolycum, book 2. St. John Damascene, De fide orthodoxa I, c. 16; St. Anselm, Monologion chs. 20 - 21.

place would be greater than God. Rather, he himself is the place of all. He says that he is in a place in such a way that by his power he contains and conserves all the things in which he is, and so he is, as it were, their place; for every thing is said to be conserved by its own natural place.

More clearly this doctrine seems to be handed down, first by Isidore in On the Supreme Good, book 1, ch. 1, in these words: "This is the immensity of the divine greatness, that we understand him to be within all things yet not enclosed, outside all things yet not excluded; and therefore by his interior power he contains all things, and by the unbounded immensity of his greatness he encloses all things as by an exterior circumference. Therefore by that which is exterior he is shown to be the creator; by that which is interior it is shown that he governs all things." Accordingly, he is within every creature according to substance, because he so governs all things that their existence (esse) depends on him. Next, St. John Damascene, defining the "place" of the whole universe, asserts that God is "where his operation is manifest"; for, he says, "without any commixture he permeates all things and imparts efficacy to all things." Finally, Anselm in the Monologion ch. 21, near the end, after many things in that chapter and the preceding which seem to confirm this opinion, concludes in these words: "But since nothing at all can be anywhere or ever without it (namely, without the essence of God), it is necessary that it be everywhere and always." In which sense he had said in ch. 20: "When it is in one place, no good and no essence is meanwhile in other places," because without it nothing at all exists; as if he had said: if we confine God to one place, all other things must needs altogether perish; which would not be true if, as Scotus contends, God's operation could be understood without his presence in things.

In the third place this opinion is proved by reason in this way. A cause is necessarily conjoined with its effect, as the Philosopher teaches, Physics VII, from text 10 to 13. But God is the cause of all things, and indeed the proper cause of existence (esse) itself, as fire is the proper cause of fire and heat of heat, not only at the beginning when things come to be, but as long as their existence remains, because he continually cherishes and conserves all: therefore he must be conjoined to all things according to his substance.

Cajetan and the Ferrariense explain this argument thus, that the major proposition is to be understood of a cause which operates (as they say) by the immediacy of power (virtus) and of the supposit (suppositum). And according to Cajetan, it is the same thing for God to be present according to the power of one who operates proximately, and to be present according to essence and substance. They assert that that agent operates by immediacy of power which acts by its own power and not one borrowed from elsewhere; but by immediacy of supposit, that which, without any other cause set under it and interposed, operates upon something. So understood, the proposition follows very well, that God is everywhere: for he is the proper cause of existence itself in all things, in such wise that he produces it and by his own power, without any other intermediate cause, continually conserves it. Therefore he operates in all things by immediacy of power and of supposit, and hence ought to be conjoined to them according to substance. And they call "the being (esse) of things" not only existence, but the whole being of them, which by a kind of continuous creation is conserved by God. Moreover, explaining this opinion more fully, Cajetan says that this presence of God in things can be taken in a twofold way: both for God's contact with them - which

indeed is nothing other than God's operation - and also for the relation of presence, which in God is something of reason, of which operation is, as it were, the foundation. From this he infers that operation is to God the reason for existing in place, just as quantity is to bodies. In this sense Aegidius said on the same dist. 37, art. 2, q. 1, that God is in place not by a quantity of bulk, as bodies are, but by a quantity of power, which is his very operation.

Furthermore, some of the more recent writers confirm the said opinion thus. It is impossible that anything be moved, even by God, from one extreme to the other without a transit through the middle: therefore it is impossible that God operate into a distant place. For just as a mobile must be moved continually through the space, so any agent, even God, must act continually through the middle, and hence be in the whole middle where he operates, as a mobile is in the whole space through which it is moved. Lastly, others prove that, since God's power is infinite, it rightly follows, from the force of his operation, that God is everywhere. For, if God's power were confined to some peculiar place, it would be finite.

Caput III - Some observations for the explanation of this controversy

Before I set down my own opinion in this difficult matter, two things, worthy of note, must be premised. One is that, although every agent must necessarily be conjoined according to substance with its effect by the very fact that it operates, nevertheless this cannot in every respect befit God and created agents in the same way. For created agents, especially if they are bodies, of which Aristotle treats in Physics VII, at that already-cited text 10, in order to operate, need proximity of place. Wherefore, as something prior and requisite for acting, proximity precedes in them. That the same is the case with created spiritual agents, we shall show below in Disputation 189, ch. 2. God, however - even in the view of the more recent Thomists whom I recalled in the chapter above - is not therefore present to things in order to operate on them; nor does he require proximity of place as something necessary for operation; otherwise he could not have made the universe out of nothing, since before that he would not have been present to the very things which he at the beginning produced from nothing. Likewise, as we shall show in Disputation 29, before God produced the world, he was not in that imaginary vacuity in which some suppose the universe to have been created; and even if God had been in that empty space before the world's creation, yet in the very things created - which he produced at the beginning - he then began to be when he called them from nothing to be. Therefore, for their production it was not necessary that he first exist in them. And indeed, on every opinion, one must grant that God's presence either in things or in imaginary place is not necessary for the creation of things, because, since God's power is infinite, it ought not to be confined by nearness of place.

Next, if God, like other agents, needed proximity in order to act, it would suffice for him, as for all other agents, to be next to, and not within, the very things in which he operates. But now we are contending, from operation, ...

It is attempted to prove from operation, or from elsewhere, that God is not only near, but innermost to all things. From the doctrine therefore of Aristotle concerning the nearness of agents, the presence of God in things is not sufficiently shown. Durandus replies that spiritual agents excel bodies in this, that whereas bodies, having the limits of their quantity, cannot penetrate other things, it is enough if they are conjoined to the things upon which they act; but spiritual beings, since they lack quantity, can most excellently penetrate corporeal things.

But this is frivolous. For although by their nature a spirit can be within the mass of a body, yet a body cannot be within another body; nevertheless, by force of operation it does not follow that a spirit must be within the thing in which it operates in order to be able to act upon it, if for a body, which is a less perfect agent, it is enough to be next to the thing in order to act upon it. For it seems to pertain to the greater perfection of an agent to need proximity of place less for acting; and accordingly, it is the more perfect to operate upon that which is more distant, even across an intervening space.

Moreover, what I said about the creation of all things, namely that proximity of place is not necessary to God for creating, is also true about conservation, which is a certain continued creation. For although God is prior in duration, at least by an indivisible moment of time, in created things than He is in conserving them, nevertheless that presence is not something prior and necessary for conservation; but just as at the beginning God, not first existing in things, created them, so also by continuing the same operation, and without proximity of place required for this, He can conserve them. Wherefore the presence of God accompanies the conservation of things in such a way that it contributes absolutely nothing to it.

This very point is manifestly confirmed by the arguments of Scotus which we reported in the place of this disputation. Therefore Durandus does not speak rightly when, in the question cited, he says that in the conservation of things God behaves like a seal imprinting a figure in water, which is necessarily present to the water as long as the figure is preserved in it. For the presence of the seal on the part of the conserving cause is something prior and necessary for the preservation of the figure. But the presence of God, although it is connected with His operation by which He preserves things, is not something necessary for the operation, but is either a necessary consequent of it, as the later opinion contends, or something that necessarily accompanies it, as Scotus and others affirm.

Another point that must be observed: from the things said it follows that, in the opinion of the more recent Thomists, the presence is so conjoined with the operation of God that the operation is, as it were, the foundation of the presence, and hence in no way necessary for acting. For this reason I said that, in their opinion, the presence is not in God something prior and required for acting; but that the whole question is whether the presence is so conjoined with the operation that it follows it as a foundation, as the Thomists contend, or whether it comes from elsewhere, namely from the essence (*essentia*) of God alone, and necessarily accompanies the operation, as Scotus affirms. For Scotus does not say anywhere that God operates where His substance (*substantia*) is not; rather he asserts that God is present according to His substance wherever He operates, yet that the presence does not come from the operation, but from the immensity of the essence as from its proper cause.

Wherefore Dionysius the Carthusian ineptly and falsely reproaches Scotus in that place, distinction 37, question 1, for asserting that it does not repugn that God be confined in a particular place and operate at a distance, as if he held that this simply does not repugn. For Scotus did not think it possible simply that God be defined in some particular place; he only taught that, by force of the operation alone, it does not necessarily follow that He be where He operates, and accordingly, that by an intrinsic place it would not repugn, if from elsewhere it could be brought about, that God, existing in a particular place, should operate upon distant matter. Indeed, these two cohere in such a way that from the force of the one the contradictory of the other does not follow. Nevertheless Scotus and those who follow his opinion simply concede that it cannot come to pass that God be circumscribed in a particular place and operate upon what is distant, not because by force of the operation this is impossible, but because it repugns the immensity of His substance to be in some place and not elsewhere.

But the ancient Schoolmen above alleged, except for Giles, do not clearly explain whether the presence of God is something prior required for acting, or whether rather the operation is the foundation for God to exist in things. From them, however, St. Thomas seems to assert that it is not a foundation, but something prior.

Caput IV - The middle opinion is proved by answering the testimonies of the later position

Since among all the Scholastics it is undoubted that God, as immense, exists in all things, the whole controversy of this matter and the variety of opinions lies solely in assigning the reason of this catholic truth. Wherefore, what seems to me regarding the arguments adduced, following out also a probable line of reasoning from the foundations already laid, I shall submit in this chapter. Two things, then, seem to me: the first is that it is established for us, not by faith and Sacred Scripture alone, that God is everywhere, but that this can also be demonstrated by the best philosophical reasoning. The second is that, although absurdities do not follow from our saying that God is in things by reason of operation - absurdities which are brought against those who assert that a spiritual creature is also placed in a place by reason of operation - nevertheless the doctors of the later position do not efficaciously prove that God is in a place by reason of operation; indeed, by that reason it can hardly be made plausible. Concerning the former part of this position, I presuppose what I noted above, namely that the immensity of God in all things is contained rather expressly in Scripture, whose testimonies we cited in disputation 27, chapter 2; indeed, although St. John Chrysostom, homily 5 on chapter 2 of the epistle to the Colossians and homily 2 on the epistle to the Hebrews, not being much concerned about the reason, says that this truth is to be believed by faith alone, even if it seems absurd to reason, yet I judge that it can be most excellently demonstrated by natural reason.[427]

427. St. John Chrysostom, Homily 5 on Colossians 2; Homily 2 on Hebrews; and Homily 38 on the Acts of the Apostles. Theophylact, on Acts 17.

If God is not in things by reason of operation, about which there is now controversy, He is either in them by reason of His substance, or by reason of His will, namely either according as He is, or according as He wills. He cannot be in them by reason of His will; otherwise He could withdraw from one place and establish Himself in another place, and thus, like a created spirit, be moved locally - which is absurd. For, as we shall show in disputation 31, whatever effect God outwardly works by His will depends on Him so freely that it can also fail to be done by Him; wherefore, if God is in some place by His will, He could withdraw from it and betake Himself to another. Still, although by His will alone, without any other exterior operation, God were in a place, it ought not to be denied that He could be everywhere, that is, be in all things. For the infinite power of His will would not be limited to a determinate place and presence. It remains, therefore, that we say God is present to things or to places by reason of His essence; and since there is no greater reason why He should be in one place rather than in another, He will be equally necessarily in all.

I said "necessarily," the existence, however, of created things being supposed; for that which arises from the very essence of God, insofar as He is, does not proceed freely but necessarily. Wherefore it will not be free to God to be in one creature rather than in another, although absolutely He can fail to be present to things, if He should will freely to destroy the things themselves which He conserves.

The latter part of this position will remain confirmed if by induction it is established that the foundations of the prior opinion are not firm; which I will set forth in a brief enumeration. In the first place there were adduced testimonies of Scripture, which, if we attend to its customary manner of speaking, do not prove much. For when the Psalmist and Paul assign the cause on account of which God is everywhere and in each one of us, namely that in Him we move and are, and that by His power we are borne whithersoever and are everywhere sustained, they show not the cause of the thing but of our cognition, and in a human way accommodate themselves to us, so that from the power of God, by which in every place we are preserved, we may understand that He is everywhere; and, as St. John Chrysostom says in homily 38 on the Acts of the Apostles, whom Theophylact follows on that place of Acts 17, they declare by a, as it were, bodily example the presence of God in us, so that, just as it is not permissible to be ignorant that the air is diffused everywhere, since we live with it, so too we may not be ignorant that God is everywhere, because we live not only through Him but also in Him. But the reason and foundation by which the air is posited in a place is not operation; indeed, in order that it operate, it is necessary that it first be near us by reason of its quantity. Therefore from that it is not sufficiently shown that God is in us by reason of His operation.

There is added that Jeremiah 23 says in these words: "Do you think that I am a God near at hand, says the Lord, and not a God afar off? If a man will hide himself in hiding-places, do not I see him? says the Lord." Which passage, in the same sense and with only a few words changed, the Seventy also express.[428]

428. Jeremiah 23:23 - 24.

But on the contrary: The Seventy translated those words thus. Therefore the Lord says that all things, whether those which are near, or those which are farther distant, are manifest to Him, and consequently that nothing can be hidden from Him in hiding-places. Then He immediately adds a cause that is more manifest to common folk, in order to demonstrate what He had said: "Do not I fill heaven and earth? says the Lord." As if He were saying: if I fill heaven and earth, no one will be able to be hidden from Me either on account of distance or of the obscurity of a place. And yet the reason why all things are manifest to God is not His immensity and presence, or the nearness of place, as it is in a bodily eye in order that we look upon something; rather Scripture, by an example and in a human manner, urges upon us a perfect knowledge of God. In the same way, therefore, when it speaks of His immensity, it does not care whether operation be the reason and foundation of presence, as the authors of the later opinion contend, but it shows the presence of God in things by an easy reasoning accommodated to the human mind. Nor do I think that the Fathers wished to teach anything else; although in the places alleged for the later opinion they seem to hand down operation as the reason for God's presence in things.

Nevertheless, indeed, we ought not to think that Scripture wished to prove only by a common way of reasoning and by the example of bodily things (accommodated to the minds of men) either God's immensity in things from His operation, or the knowledge of all things from His presence, but that it wished by the best and most efficacious reasoning to demonstrate each. For although operation is not for God the foundation of presence, nor presence the reason for knowing all things, nevertheless it is rightly inferred that God is in all things if He operates in all; and that He knows all things if He is present to all. For if God is infinite in His power (*potentia*), so as to reach all things and not be limited by them, He will be no less infinite in His presence, so as to be in all and not be bounded by them. Then also, if God is so immense as to penetrate all things by His substance, He will be no less infinite in knowledge, so that nothing can lie hidden from Him; since His essence (*essentia*) must be equally perfect and infinite with respect to all. From this, however, it does not follow that operation of power is for God Himself the foundation of existing in things, but only that from power and operation the immensity of God in things is rightly proved.

Add that in that verse of the Psalm, "Whither shall I go from your spirit, and whither shall I flee from your face?" the Prophet wished to show the immensity of God's knowledge, from which nothing can be hidden: he showed and signified it by the name of "spirit" and "face," about which he had said much in that Psalm. Therefore when he answered, "If I shall ascend into heaven, you are there," he expressed the reason why he could not flee the sight of God - namely, because God is everywhere. Jeremiah also rendered that reason; although that reason is not why God knows all things, as was shown above. But when he adds, "For there also your hand will lead me," he assigns the proper reason why he cannot flee God's face if he should arise at the first light of dawn and flee through the breezes even to the sea. For since God does all things and directs them by His knowledge, which in that same place he calls His "right hand," that same hand would also lead and hold David even if he fled to the sea.

Finally, I judge it sufficiently probable that in Acts 17 Paul was not speaking of the immensity of God by which He is everywhere present, but that he wished to show how easily the true God can be known and adored by each one of us. This sense I seem to myself to gather clearly from the context of the chapter itself. For when at Athens Paul had seen an altar whose title was: "To the Unknown God," in order to convict of foolishness those who thought God to be unknown and worshiped Him as such, he said in these words: "What therefore you worship not knowing, this I announce to you. God who made the world and all things that are in it, He being Lord of heaven and earth, does not dwell in temples made with hands, nor is He served by human hands, as if needing anything, since He Himself gives life and breath and all things." That is, since God is the author of all things, He does not need temples made by human hands in order to be worshiped, since He gives life to all living things and preserves all things. He adds: "And He made from one every race of men to dwell upon the whole face of the earth, determining set times and the limits of their dwelling, to seek God, if perhaps they might feel after Him." As if he said: since He has produced every race of men, He has prepared the whole earth for its habitation, determining and distinguishing times into days and nights, months and years, for this end, that man may seek his author God and may find Him, not by site and local presence, but by true knowledge and religious worship. For this is "to feel after," the metaphor being taken from bodily touch, by which we seize upon things we are seeking when found. But because he had said, "If perhaps," which is a particle of one doubting and making a thing more difficult, as if correcting himself he added: "Although He is not far from each one of us." As if he said, it is not difficult to feel after Him in the way I have said, since He is not far from us, not only as to place and local situation, but also as to knowledge. "For in Him we live and move and are; as some also of your own poets have said, For we are even His offspring." That is, He is not far from us so as to be known; since, as even your poets have said, we are His handiwork, by Him we are sustained and preserved. Therefore from ourselves it will not be difficult to know Him. Then he draws the inference: "Since therefore we are the offspring of God" - that is, His handiwork and creature - "we ought not to think that the divinity is like to gold or silver or stone carved by art"; that is, that God is like to these things and needs them in order to be worshiped. For if we, who are God's handiwork, are superior to these vain things and cannot in any way be compared to them, much less will God need them. Therefore since that clause, "Although He is not far from each one of us," is referred to that, "if perhaps they might feel after Him," as is clear from what has been said, and since it does not befall that God is to be felt after by hands, but by our thought and affection, it follows that Paul was speaking not of local presence, which is required for the touching of hands, but of propinquity according to knowledge, by which God must be sought and felt after. But these things do not depend on local presence.[429]

The same view is confirmed by a solution of the arguments of the later opinion.

429. Acts 17:23 - 29.

Against the claim that operation is the foundation of God's presence

We have shown thus far that it is not sufficiently proved by authority, as the later opinion contended, that operation is for God the reason and foundation of existing in things. It remains that in this chapter we show that the argument brought forward for the same opinion is not sufficiently efficacious. But it rests upon the proposition of Aristotle in Physics VII, text 10, which we reported in chapter 2, namely, that the cause is necessarily conjoined with the effect.[430] Now already in chapter 3 of this disputation we have shown that that proposition is to be understood only of a bodily agent; indeed also that all bodily agents are, by a reason far different, conjoined according to situation with the effect, than God is present to the things in which He operates; wherefore for that cause alone that reasoning has not much strength.

But let us grant that some conjunction with the effect is necessary to any agent whatsoever: this, however, is to be understood not of any agent whatsoever, even created and bodily, but of that which is commonly said to operate by immediation of power (*immediatio virtutis*) and of supposit (*immediatio suppositi*), as I have explained from Cajetan in chapter 2 of this disputation. For thus he himself infers: if an agent is immediate in this way, it ought also to be conjoined with the effect by situation and place. Yet even by this reasoning nothing is proved. For from the fact that some agent is near in both ways, it does not follow that it is conjoined with the effect by place; therefore from that proposition understood as Cajetan wishes, the presence of God according to place is not proved.[431]

Furthermore, that it does not follow that it is conjoined by place with the effect, I show by this reasoning. In the sense of that view, an immediate agent by immediation of power is that which operates by its own proper power; but immediate by immediation of supposit is that which operates without another interposed and supposit cause subordinated to it. But this can be very well maintained and understood without local propinquity; for one thing is "immediately," that is, with no distance interposed; another is, to operate with no other intermediate agent. Therefore some agent could operate by immediation of supposit, that is, with no interposed second cause, and yet be far distant from the matter in which it operates. But if the Thomists say that the same thing is "to operate immediately by immediation of supposit" and "to operate with no body and no distance interposed" - about which there is wont to be a controversy of words rather than of things, as we shall see in question 23, article 2 - then indeed that major proposition is true, "every immediate agent ought to be conjoined with its effect"; but since under that major the assumption is taken, "God is an immediate agent," it certainly supposes what had to be proved, and hence can easily be denied; and if it be granted, only this follows, as I noted in chapter 3 of this disputation, that God is near to, not, however, within the things themselves. Which is not sufficient for explaining God's presence in things.

430. Aristotle, Physics VII, text 10.
431. Cajetan, on this disputation, chapter 2.

Moreover, others urge in this way. Every agent, by the very fact that it operates immediately by immediation of supposit, cannot remove and separate the effect from itself; therefore it must itself necessarily be conjoined: indeed, from the force of the operation there follows local propinquity.

Solution: But even in this way the argument adduced is no more efficacious. For when they say that such an agent cannot remove the effect from itself, if they understand this of local distance, it can easily be denied; and again they assume what they themselves had to prove. If, however, they understand that the effect is so connected with the cause that it cannot but depend upon it, that cannot be denied; yet from that it does not follow that they must at the same time be together according to place. Wherefore, if otherwise it does not repugn, God can produce and conserve all things and set them far away from Himself; and from the effects of creation and conservation it is not repugnant that this be so.

Someone might further, in confirmation of what we have said, bring forward Aristotle's opinion, that the conjunction of agent with effect is not to be understood universally so as to include God Himself, and therefore that from Aristotle's view nothing can be proved here. For although he says that God is in some peculiar place, not in all things, as we noted in the first chapter, nevertheless he also teaches that life itself is derived from Him into other things. For he says in On the Heavens I, chapter 5, at the end, that there is a certain divine eternity in the outermost region of the heaven, where there is neither void nor time, which things always are as such; and from it life and being flow to all other things. Which he had said more clearly in Metaphysics I, chapter 2, near the end: where, speaking of God, he says that with His untiring powers He bestows so great a benefaction as may be loved from afar, and that He sits at the highest summit of the heaven. Moreover, although in the book De Mundo to Alexander he said that not all things are governed and conserved by God immediately, nor yet by many intermediate instruments and machines, as kings govern their realms, but by a single simple motion of the heaven - just as a great artisan by a single pull of the cord sets before the eyes diverse images of things - still we need not be concerned with the authority of that work in this part. I nevertheless judge that, according to his opinion, God is not in all the things which He preserves immediately. That the other great intelligences have being from God Himself is clear from Aristotle's doctrine; but that they exist in Him he nowhere taught: for he taught only that in the extreme boundary of the heaven God is.

To the argument of the recent authors brought in the fourth place, I answer first that it does not repugn to God to move something from one extreme to the other without its passing through the middle; for if Christ were in the same thing in heaven and yet were to descend to the Host, He would truly be moved and yet not through the middle, just as now He does not pass through the middle; and for this reason He is not now said to be moved, because He does not leave the place in which He previously was. Nor are Angels less able by their own power to be moved in this manner, as we shall see in question 23, article 2. But although what they assume is true, nevertheless it is not necessary for the point they contend for. For if some agent, even a created one, operates, it is not necessary that it be within the thing in which it operates: it suffices if its effect be continually diffused through the intervening space, even if its substance remain near the middle in some determinate point-like place; and this happens not only in Angels and bodies. For the sun illumines

where its substance is not, by a certain continuation of its effect; thus therefore God can remain in some particular place, and His power be continually diffused as to the effect; and His immensity does not repugn to this: wherefore from the force of operation it is not gathered that God is everywhere.

Add also the difference between the motion of a body - which cannot but be continuous through a middle - and the infinite power of God, which can operate in a divine manner. For motion is in the mobile itself and therefore must be continuous in it; but an effect is not in the agent, and hence it does not seem to have the same necessity, that it be conjoined to it by the force of operation, unless from another source that be necessary. Nay rather, the infinity of power formally is virtual, notwithstanding distance from the effect, by which infinity it extends itself to all things and comprehends all. And indeed it is always conjoined to the effect, or rather, in either respect of immensity with which it is conjoined - which, however, is not of the formal concept of the power itself.

To the argument brought in the fifth place I reply, that the infinity of God's power does not consist in this, that it be placed in all things without being bound to any particular thing; but that comes from God's immensity and from other attributes of His, of which St. Thomas has spoken in this question. The infinity of power, however, is of another notion, to wit without any order to place: for it is said to be infinite only with respect to effects.[432]

Ad the argument, however, of the more recent authors brought in the fourth place I answer, first, that it does not repugn to God to move something from one extreme to the other without its passing through the middle. For if Christ did not remain in heaven, but descended to the host, He would truly be moved, and yet not through a middle, just as now He does not pass through a middle: but He is now not said to be moved, because He does not leave the place in which He previously was; and at present the Angels can by their own power be moved in this way, as we shall see in disputation 196, chapter 2. But even if what the adversaries assume were true, it still could not be rightly inferred, what they contend. Because, in order that some agent, even a created one, may operate, it is not necessary that it be inside the thing in which it operates: it is enough that its effect be continuously diffused through the space, even if its substance remain near the middle in some peculiar place; which happens in Angels and in bodies. For the sun illumines where its substance is not, continuously indeed by a certain effect: so then God could remain in some peculiar place, and His power be diffused by a certain continuous effect, if otherwise this did not repugn to His immensity; wherefore from the power of operation it is not concluded that God is everywhere. Add also the difference between the motion of a body - so that it cannot but be continuous through a medium - and the infinite power of God - so that it can operate at a distance. For motion is in the mobile itself, and thus must be continuous in it; but the effect is not in the operator, and therefore there does not seem to be the same necessity that it be conjoined to it by force of operation, unless otherwise this were necessary. Rather, the infinity of power formally, as

432. Cf. St. Thomas, Summa theologiae I, q. 8 (passim); q. 23, a. 2 (on angelic motion). Also Aristotle, On the Heavens I, c. 5; Metaphysics I, c. 2; Pseudo-Aristotle, De Mundo ad Alexandrum.

such, would operate notwithstanding distance, because this infinity extends itself to all things and embraces all. Yet it is always conjoined to the effect, or rather, within it by reason of the immensity with which it is conjoined - which is not of the formal concept of the power itself

To the argument brought in the fifth place I reply, that the infinity of God's power does not consist in this, that it should fill every place and be bound to none in particular; but that comes from immensity, which is another attribute, about which in this question St. Thomas treats differently. The infinity of power, however, is of another notion, namely without any order to place: for it is said to be infinite only with respect to effects.[434]

It is said to be with respect to the effect, as we shall say in disputation 105; but immensity is said to be infinite with respect to place. Moreover, infinity in respect of existence (*esse*) - unless it were conjoined to immensity formally - could of itself be understood even in a peculiar place; because this consists in something other than a respect to place, as has been set down and explained there. Therefore the adversaries wrongly confuse these ratios of infinity, so as to deduce from operation what belongs by reason of immensity.

One could further, in confirmation of what we said, assert Aristotle's opinion concerning the conjunction of a universal agent with its effect, not to be understood so that it should comprehend God Himself, and hence from his opinion nothing is proved. For although he asserts that God is in a peculiar place, not in all things, as we noted in chapter 1, nevertheless he teaches that His power is derived into other things. For he says in On the Heavens 1, chapter 9, toward the end, that a certain divine eternity is in the extreme region of heaven, where there is neither void nor time, which is so called from its always being; from which life and existence come to all the other things. Which he had said more clearly in Metaphysics 1, chapter 2, toward the end. There of God, he says, that He uses powers unwearied, to the extent of the beneficence He accomplishes, which may seem to be sent afar, and that He abides on the highest summit of heaven. However, since in the book On the World to Alexander he said that not all things are governed and conserved by God proximately, nor yet by many instrumental means and machines, as kings govern their kingdoms, but by the single simple motion of the heaven, just as great artisans by the stroke of one string set before the eyes diverse images of things - therefore not much weight is to be given to his authority in this part. I think nevertheless that, according to his opinion, God is not in all the things which He conserves proximately. For that the other intelligences have their being from God Himself is plain from Aristotle's doctrine; but that He exists in them he taught nowhere: for he asserts only that God is in the extreme part of heaven.[435][436][437]

It is therefore clear from what has been said that a real presence of God in all things is not sufficiently demonstrated from operation - that which in the preceding chapter we proposed to prove in a subsequent place. On that account, however, I do not judge that the opinion of Scotus

434. Gabriel Vázquez, Disputationes, disp. 105.
435. Aristotle, On the Heavens 1, c. 9, toward the end.
436. Aristotle, Metaphysics 1, c. 2, toward the end.
437. Pseudo-Aristotle, De Mundo ad Alexandrum.

can be proved by any efficacious reason drawn from its own principles; but only from this, that, in order to establish God as in place, without any urgent reason we ought not to have recourse to operation, but to attribute to His essence (*essentia*) in itself immensity.

A compelling reason in favor of St. Thomas's position seemed to me to underlie the matter, by which at least probably the latter opinion could be confirmed in this way. If God otherwise were not in all things by reason of His immensity, nevertheless by reason of the hypostatic union He would be in human nature: for it cannot be understood that a person is substantially united to an alien nature, if it be distant from it by place; and since for a substantial union that presence according to place is not necessary as a prior disposition, it follows that the hypostatic union is the reason and foundation of such a presence. In the same way, therefore, although God were not in things by His substance, nevertheless by reason of operation He would be conjoined to them. But in this argument the difficulty is this, that the union of an agent with its effect in its proper genus does not seem to suit things so intimately as the union of a person with a nature does; since this is a much greater and tighter conjunction than that of an agent with its effect. Wherefore it is not a wonder if the hypostatic union is a sufficient reason for presence according to place, but operation is not.

Articulus II - Whether God is everywhere.

The second proceeds thus.

Objicitur 1. It seems that God is not everywhere. For to be everywhere signifies to be in every place. But to be in every place does not befit God: to whom it does not befit to be in a place; for incorporeals, as Boethius says in the book On the Hebdomads, are not in a place. Therefore God is not everywhere.[438]

Objicitur 2. Further, as time is related to successives, so place is related to permanents. But one indivisible of action or motion cannot be in diverse times; therefore neither can one indivisible in the genus of permanent things be in all places. But the divine existence is not of succession, but permanent; therefore God is not in many places, and thus He is not everywhere.

Objicitur 3. Further, what is whole someplace, nothing of it is outside that place. But if God is in some place, He is whole there; for He does not have parts. Therefore nothing of Him is outside that place. Therefore God is not everywhere.

Sed contra is what is said in Jeremiah 23: "Heaven and earth I fill."[439]

Respondeo dicendum, that since place is a certain thing, to be something in a place can be understood in two ways. Either in the mode of other things, that is, as something is said to be in other things in whatever way, as the accidents of place are in a place; or in the proper mode of place, as things placed are in a place. In either way, however, according to something God is in every place: which is to be everywhere. First indeed He is thus in all things, as giving them

438. Boethius, De hebdomadibus; the title is "An omne quod est bonum sit" (On the Hebdomads), on its principles.
439. Jeremiah 23:24.

existence (*esse*) and power and operation: for thus He is in every place, as giving to it existence and the locative power. Likewise, things placed are in a place inasmuch as they fill a place; and God fills every place: not as a body - for a body is said to fill a place inasmuch as it does not tolerate with itself another body - but by this, that God is in some place, it is not excluded that other things be there; rather by this He fills all places: because He gives existence to all things placed, which fill all places.

Reply to the first: Incorporeals are not in a place by the contact of dimensional quantity, as bodies are, but by the contact of power.

Reply to the second: An indivisible is twofold. One kind is that which is the terminus of a continuum, as a point in permanent things and a moment in successives. And such an indivisible, in permanent things - because it has a determinate situation - cannot be in many parts of a place or in many places; and similarly an indivisible of action or motion - because it has a determinate order in motion or action - cannot be in many parts of time. Another indivisible, however, is that which is outside the whole genus of the continuous; and in this way incorporeal substances, as God, an angel, and a soul, are said to be indivisible. Such an indivisible, therefore, is not applied to a continuum as something of it, but inasmuch as it reaches that by its power; whence, according to the extent to which its power can extend itself to one or many, to small or great, according to this it is in one or in many places, and in a small place or a great.

Reply to the third: Whole is said with respect to parts. But there is a twofold part, namely a part of essence (*essentia*), as form and matter are called parts of the composite; and genus and difference parts of the species. And there is also a part of quantity, into which namely a quantity is divided. Therefore what is whole in some place by the totality of quantity cannot be outside that place, because local quantity is commensurated to the quantity of the place: whence there is no totality of quantity without the totality of the place. But the totality of essence is not commensurated to the totality of the place. Hence it is not necessary that that which is whole by the totality of essence in something be in no way outside it. As appears also in accidental forms, which have quantity according to accident: for whiteness is whole in any part of a surface, if totality be taken according to essence; because according to the perfect notion of its species it is found in any part of the surface. But if totality be taken according to the quantity which it has per accidens, in that way it is not whole in any part of the surface. In incorporeal substances, however, there is no totality either per se or per accidens, except according to the perfect notion of essence. And therefore, as the soul is whole in any part of the body, so God is whole in all and in each.

Observations for the explanation of the article:

- The doctrine of this article can be summarized in two conclusions. One is: God is in all things in the mode in which the accidents of a place are in the place; and in this way God is said to be in all things, inasmuch as He bestows on them power for operation, and consequently the locative power.

- The other is: God is in things as something placed is in a place, filling them; not as a body fills the sides of the containing surface - for thus it fills, that with it another thing cannot be; whereas with God a body can be - but for this reason God is said to fill all things, because by His inmost presence He penetrates them.

For a fuller explanation of this doctrine, first it must be observed that it is not the same thing, what St. Thomas asks in this article, and what in the preceding conclusion he had set down. In the preceding he had proposed the question, whether God is in all things, and he simply answers that He is in them. But in this article he inquires whether God is in things as in a place, as he proposed in the title, Whether God is everywhere. For the adverb "everywhere" signifies place. How, moreover, he answers that God is in a place, he sufficiently declares by setting out the twofold mode of being in a place.

Just as the power of a place is in a place, so too is that which is placed. Albert, however, in I, dist. 37, art. 2, distinguishes "God's being in things" from "His being everywhere" in this way: to be in things is to be in them conserving them; to be everywhere is to be in things by bestowing on them the power of place.[440] Yet St. Thomas spoke far better when he said that God is everywhere, and that He is in a place both as the power of place is said to be in a place and as that which is placed is in a place.[441]

Next, various modes of speaking of the holy Fathers are to be observed, which, although at first glance their locutions may seem difficult, nevertheless neither contravene the article nor the truth of doctrine. St. John Chrysostom, hom. 5 on the Epistle to the Colossians, says: "Nowhere is God, and yet He is everywhere."[442] Likewise Philo, in the book On the Confusion of Tongues, somewhat past the middle,[443] and St. John Damascene, De fide orthodoxa I, c. 16: "God - inasmuch as He is devoid of matter and circumscription - is in no way in a place. For He is the place of Himself, and, existing above all things, He Himself encompasses all things, and yet He is said to be in a place."[444] In the same sense Theophilus of Antioch said in book 2 To Autolycus, not far from the beginning, in vol. 5 of the Bibliotheca sacra, that God is not contained by place, but is Himself the place of all things; and Athanasius, in his rescript to Liberius, that God is incomprehensible by place; and St. Augustine, serm. 8 De verbis Domini, that God is contained by no place; and in the book On the Essence of the Divinity, at the beginning, that God is "illocal"; and in 83 Questions, q. 20, that God is "not anywhere"; and St. Basil, in the homily which we shall cite in the next disputation, that God is not in any place.[445]

What the Fathers just mentioned said must be understood not as if they denied that the substance (*substantia*) of God is truly present in all things, but because God is so in things that He is circumscribed by no surface - as Augustine seems to have noted in Quaest. in Hept., q. 20 - or

440. Albert the Great, In I Sent., dist. 37, art. 2.

because God is in no thing in such a way that He is defined by it and shut up within it, for which reason they said that He is "nowhere," and "in place incomprehensible," indeed that He is "the place of all things," inasmuch as, like a natural place, He contains and preserves all things; hence He is "His own place," because adequately He can be nowhere save in Himself. That other Fathers too followed this manner of speaking we shall see in the next disputation. Wherefore Bernard, book 5 On Consideration to Eugene, long before the middle, speaks thus: "Concerning Him, namely God, it is well known that He is 'nowhere,' because He is not shut up by place, and yet that He is 'nowhere not' [i.e., not absent anywhere], because He is not excluded by place."[446]

In the same way Augustine, in that book On the Essence of the Divinity, said that God is "illocal," because, as he says, from place to place He by no means passes, nor is He held by any place. Here he calls Him "illocal" not only because He is not circumscribed by a surface, as bodies are, but also because He is not determined to some particular place, as an angel is. Therefore Anselm spoke most fittingly of God in the Monologion, chs. 22 - 23: "If usage of speech allowed it, it would seem more fitting to say that God is 'with place' or 'with time' than 'in place' or 'in time'." Hence, in his sense one would say that God is "nowhere": for to be "somewhere" is to be in a place, not to be with place.[447]

Finally, we must note - as we shall explain more fully in the next disputation - that God's existence (*existentia*) in things is properly a certain substantial presence, which can be understood without any local presence. For "place," however it be taken, cannot be without some substance; and thus, insofar as they are not bodies, "place" can in no way be, nor can it be understood. But God is in things, even in spiritual things, in His immensity, not by local presence (because angels in themselves have no distance, as will appear in the next disputation), but by a substantial [presence]. Therefore God's existence in things can be separated from local presence. Hence it comes about that the primary existence of God in things is substantial; but because the bodies in which He is are "somewhere" by reason of their quantity, He too is said secondarily to be "in a place."

The reason why Anselm said that God is rather "with place" than "in place" is that "to be in a place," if we attend to the force of the words, seems to be said only of those things which are circumscribed or defined by place, just as "to be in time" is said of those things which time itself measures. But those which are "with place" or "with time" seem to be such as are in no way subject to place or time, but merely accompany place and time.

- That God can be outside heaven and can be in a vacuum has been taught by Maior and Cajetan.[448]
- That God is not outside heaven is the common opinion of the Scholastics and is affirmed by the Fathers.[449]
- The same common opinion is proved by reason.[450]

446. St. Bernard, De consideratione, l. 5, ad Eugenium.
447. St. Anselm, Monologion, chs. 22 - 23.

449. See below, Caput II; cf. the Fathers cited in Caput I above.

- Replies are given to the testimonies adduced for the prior opinion.[451]
- The arguments of the same opinion are dissolved.[452]

Disputatio XXIX - Whether God could be outside heaven or in the vacuum within heaven, or whether before the creation of the world He was somewhere

Caput I - The assertion of Maior and Cajetan

The matters that are called into controversy seem to have the very same question throughout. For if God can be in a vacuum within heaven, He will also be outside heaven in that imaginary and infinite space, and before the creation of the world He would have been in the same, and in that part in which the world seems to have been created. Therefore in this single disputation we shall weigh all these things together.

In it, let the first position be that which John Maior, in I, dist. 37, q. 1, and Cajetan, on that text of John 12, "I am come a light into the world," hand down: namely, that God was in the whole imaginary space before the creation of the world, and after it remained outside the region of heaven where He had been before, and hence - if a vacuum within heaven were granted - could remain in a vacuum even if some substance were destroyed. In favor of this position Durandus, Gabriel, indeed even St. Thomas, and Hugh of St. Victor are reported, who, however, assert the very opposite. Yet to theologians in general this opinion has seemed so easy to understand that it is far more plausible than the opposite. The authors of it try to persuade us in this way.

First, by the authority of philosophers. For Aristotle, De caelo I, c. 9, toward the end, asserts that God is outside heaven; and that this was also the opinion of the Stoics, Tertullian affirms in the book Against the Gentiles, c. 40, n. 593, where he says that, like a potter, He turns this mass of the heavens.[453]

Next, it can be confirmed by the testimonies of the Fathers and of Scripture. Among whom first Augustine seems expressly to have handed it down: for, in City of God, c. 5, arguing against those who said that God created the world from eternity, he says thus: "For if they conceive an infinite expanse of times before the world, in which it does not seem to them that God could have ceased from working; similarly therefore they conceive outside the world an infinite expanse of places, in which, if anyone says that the Omnipotent cannot be idle, will they not be forced to dream up, with Epicurus, numberless worlds?" As if to say, this should not be conceded; therefore it must be held that through infinite duration and in the vastness of infinite space God was without external work.[454]

450. See below, Caput III (as signposted in the running heads).
451. See below, Caput IV.
452. See below, Caput V.
453. Aristotle, De caelo I, c. 9 (toward the end); Tertullian, Adversus Gentes, c. 40, n. 593.
454. St. Augustine, De civitate Dei, V, c. 5 (arguing against those who posited an eternal world).

Secondly, Gregory Nazianzen, in Oration 34, which is the second on Theology, two leaves on, to show that God is not limited by place, says: "Is He nowhere, or is He somewhere? For if nowhere, someone of those who take special delight in the subtlety of inquiry and disputation might ask how He can also be. For if that which is not is nowhere, that also which is nowhere is perhaps nothing at all. But if you say that He is somewhere, since He certainly is, He is either in the universe, or above the universe. If in the universe, He is either in some part of it, or everywhere. If in some part, then He is circumscribed by this lesser part. If everywhere, then He will be contained by something much greater, if indeed it is to come about that God is held by the whole complex of the universe and is in no part free of circumscription. Into these absurdities one must fall who said that He is in the universe." Thus Nazianzen teaches that one must necessarily hold that He remains above and outside the universe, lest, if we say that He is only in the universe, we be forced to assert that He is circumscribed. It should also be noted, in what Nazianzen assumes in his argument, namely that what is nowhere is nothing; just as, conversely, what is nothing can be nowhere. From which it follows that before the creation of the world God was somewhere, lest - if we assert that He was nowhere - we say that He was nothing. Whence it follows that no spiritual substance, whether created or uncreated, can be nowhere, but must necessarily be somewhere; which, as will appear below, seems not a little to conflict with our opinion.[455]

Thirdly, Basil, in Homily 16 on "In the beginning was the Word," writes thus: "Whatever whole you know, and into whatever you penetrate with your spirit, is full of God; and together with the Son's hypostasis conjoined you will find [it]." Therefore God will be in that imaginary space above the heavens into which the spirit of our thought can penetrate.[456]

Fourthly, Philo, in book 1 of the Allegories, somewhat before the middle: "For God - He says - neither would even the whole world be a dwelling worthy of Him, since He is His own place, and is full of Himself, and unto Himself sufficient." He then subjoins the reason: "since God fills and contains every alien want, solitude, and emptiness." As if to say, since the whole world is not a sufficient dwelling for God, He fills with His presence the whole emptiness of infinite space above this universe.[457]

Lastly, there is added the common manner of speaking of the Fathers, who assert that God is not shut up within the world, but that He is above and outside the world. Thus Athanasius, in the letter of the Nicene Synod, not far from the beginning, says: "God is in all things according to His goodness and power, and the same is outside all things according to His own proper nature." In the same way Hilary speaks, book 12 On the Trinity, at the beginning, explaining those words of Isaiah 66, "Who holds the heaven in His palm," etc.; and Jerome on the same words of Isaiah 66; Augustine, On Genesis ad litteram, c. 36; and in On the Essence of the Divinity; Isidore, book 1 On the Supreme Good, c. 3. For they say that God is in all things, but not enclosed; outside all things, but not excluded; so that He is both containing and within; and infinite and surrounding, as

455. St. Gregory Nazianzen, Oratio 34 (Theol. Or. II).
456. St. Basil, Hom. 16 on "In principio erat Verbum."
457. Philo, Allegoriae, l. 1.

Jerome says. Wherefore Augustine, Confessions, c. 5, teaches that, compared to this universe, God is as an infinite sea which would contain and penetrate all kingdoms within itself, and would be outside them. And, what is chief, Scripture itself sufficiently clearly attests the same.[458]

A third argument. God was outside all time; therefore He was always outside all place. But outside place there is nothing else than imaginary space; therefore God was always in it. Wherefore it is necessary that, after the creation of the world, He also remain in it.

Caput II - That God is not outside heaven; the common opinion of the Scholastics, and the Fathers affirm it

For my part I judge that not only is the opposite opinion - which is the common one - far more probable, but indeed most probable; and pious authors on spiritual things and about God, as well as philosophers about bodily things, do not disagree. The common opinion, therefore, is that God is not in that imaginary space outside the heaven: that He neither, before the creation of the universe, was anywhere other than in Himself, nor could He remain in a vacuum. Many hand down this opinion expressly among the ancients and later Scholastics, affirming along with it that God cannot exist in that wherein there is nothing.[459]

But on the contrary:

- It is proved by the authority of Scripture. For 3 Reg. 8 says: "If the heaven and the heaven of heavens cannot contain thee"; Job 11: "He is higher than heaven - what wilt thou do? deeper than hell - how wilt thou know?"; and Baruch 3 has something similar.
- First reason for this opinion. Outside the heavens there is truly an empty space, in which a body and a spirit can be set: for what forbids a body or a spirit from being produced outside the heaven, if indeed a new heaven could be created above the Empyrean, and another universe outside this world? Then too, a man stationed at the extreme edge of heaven could stretch forth his arm; finally, this whole universe could be moved at once through that empty space, and change its place. God therefore will be able to be in that space; wherefore He will there be actually also: for His immensity necessarily fills the space that can be filled by Him, as was said above in disput. 28, cap. 4.
- Second reason. If this whole universe can simultaneously be moved through that vast emptiness, and God alone were in this universe, it would follow that He would be moved along with it - which is absurd: for together with the universe He would be changing His distance from the imaginary points.

458. Athanasius, Epistola Synodi Nicaenae; St. Hilary, De Trinitate, at the opening of l. 12; St. Jerome on Isaiah 66; St. Augustine, De Genesi ad litteram, c. 36; De essentia divinitatis; St. Isidore, De summo bono, l. 1, c. 3; cf. 3 Reg. (1 Kings) 8; Job 11.

459. Among the Scholastics who expressly defend that God is not outside heaven and cannot be in a vacuum: Alexander of Hales, Summa, I, c. 13, q. 1 (ad primam replicam); Bonaventure, In I Sent., dist. 37, a. 2, q. 3 (in corpore, ad 2); Richard of St. Victor, De Trinitate II, c. 4; Scotus, In I Sent., dist. 37 (var. loci); Durandus, In I Sent., dist. 37 (var. loci); Dionysius Carthusianus, ad loc.; Thomas of Argentina (as reported).

- Lastly, there is added the common manner of speaking of the Fathers, who assert that God is not enclosed within the world, but is above the world, and also that He is outside the world. Thus Athanasius in the epistle of the Nicene Synod says at length against the impious: "God is in all things according to His goodness and power, and the same is outside all things according to His proper nature." In the same way Hilary, in De Trinitate 12, explaining those words of Isaiah 66, "Who holds the heaven in His palm"; and St. Jerome upon the same passage of Isaiah; St. Augustine, De Genesi ad litteram, and De essentia divinitatis; and St. Isidore, De summo bono, say that God is in all things, but not included; outside all things, but not excluded; so that He is both outwardly and inwardly, infused and surrounding, as St. Jerome says. Wherefore Augustine, Confess. 7, c. 5, teaches that God, compared with this universe, is as an infinite sea which would contain and penetrate a sponge and be also outside it; and, what is most to the point, Scripture quite plainly bears the same witness in 3 Reg. 8; Job 11; and Baruch 3.[460]

I for my part think not only that the opposite opinion, which is the common one, is much more probable; but also that the authors of the former opinion philosophize about spiritual realities and about God as though they were bodies. Thus the common opinion is that God is not in that imaginary space outside the heaven; wherefore neither before the creation of the universe was He anywhere other than in Himself; nor can He remain in a vacuum: for in truth of these there is absolutely no reason at all.

The Scholastics have expressly transmitted this opinion: Alexander of Hales; St. Bonaventure; Richard of St. Victor; Scotus; Durandus; Capreolus; the Carthusian Dionysius; and Thomas of Argentina as reported.[461] He also recites these verses there: "Say where He then was, when besides Him there was nothing. Then, where now, in Himself; for He suffices to Himself."

To the same effect, along with the aforementioned Doctors, speak Alexander; Albert; St. Bonaventure; Aegidius; Thomas of Argentina; and Gabriel, when they assert that from eternity it by no means befits God to be everywhere, insofar as this way of speaking signifies being elsewhere than in Himself; yet that it does befit Him to be everywhere, if it be taken for this, namely, to be in Himself.

And all, taken together, agree that for God to be said to exist anywhere other than in Himself necessarily requires the existence of something other than God.

St. Thomas likewise agrees in the same place, q. 2, a. 3, saying that it does not befit God from eternity to be everywhere - not from any defect of His, but from the defect of things which did not exist from eternity, so that God might be somewhere. Nor does what Gabriel says stand in the way,

460. Athanasius, Epistola Synodi Nicaenae; St. Hilary, De Trinitate, at the opening of book 12; St. Jerome on Isaiah 66; St. Augustine, De Genesi ad litteram, c. 36; De essentia divinitatis; St. Isidore, De summo bono, l. 1, c. 3; see also 3 Reg. (1 Kings) 8; Job 11.

461. Among the Scholastics who expressly defend that God is not outside heaven and cannot be in a vacuum: Alexander of Hales, Summa, I, c. 13, q. 1 (ad primam replicam); St. Bonaventure, In I Sent., dist. 37, a. 2, q. 3 (in corpore, ad 1); Richard of St. Victor, De Trinitate II, c. 4; Scotus, In I Sent., dist. 37 (var. loci); Durandus, In I Sent., dist. 37 (var. loci); Capreolus (var. loci); Dionysius Carthusianus, ad loc.; Thomas of Argentina (as reported).

in 2, dist. 2, q. 2, a. 1, notab. 3, that God is in every place in such a way that by no place is He contained, because He is higher than heaven; for in this manner both the Fathers and the Scriptures speak; yet they do not oppose our opinion, as we shall show below. Finally, this opinion is gathered from the doctrine of St. Thomas in art. 1, where he infers that God is in a place from His operation, which cannot be in a vacuum.

To confirm this opinion by the testimonies of the Fathers and by reason, and at the same time to refute the prior opinion, will not be difficult. Among the Fathers, first it seems to be expressed by Tertullian in the book Contra Praxean, c. 5, with these words: "Before all things God was alone, and He was to Himself both place and all things." For if God had been in that imaginary interval, although He was alone, yet He would not have been "place" to Himself - inasmuch as He would have been in another, as in a place.

Secondly, Augustine, De fide contra Manichaeos, c. 37, when he argued against the Manichees attacking the Old Testament on the ground that many false and trifling things were contained in it, and suspecting the Gospel as though it were a divine Scripture, contends that one can argue in the same way against the Gospel as against the Old Testament; and hence that both must be explained in the same way. Then he subjoins: "For if someone be so foolish as to rebuke that saying of the Lord in the Gospel, 'Thou shalt not swear by heaven, for it is the throne of God; nor by the earth, for it is the footstool of His feet,' and say that you are wont to utter a marvelous thing: 'Where was God before there was heaven and earth?'" After certain other points which some might object against the Gospel, yet who seem to themselves to say something, he adds: "Do they not know where their head lies?" Finally, Augustine said that the question of the Manichees, where God was before the creation of the world, was foolish - for no other reason surely, except because He could not be anywhere other than in Himself. The same in those words of Psalm 122, "Who dwells in heaven," to show that the spiritual heavens, that is, holy men who are to remain for eternity, are indeed the habitation of God, but not the bodily heavens; thus he says: "For if we shall understand that this heaven, which we see with our eyes, is the habitation of God, the habitation of God will pass away, because heaven and earth shall pass away. Then, before God made heaven and earth, where did He dwell? But someone will say, 'Before God made the saints, where did He dwell?' He dwelt in Himself; and God is with Himself. Behold, there was no other place before the creation of the world besides Himself," Augustine grants to God. To which, likewise, Tertullian had said of God: "He was to Himself place and all things." These words Augustine seems to have taken up from the Master in 1 Sent., dist. 37, from the book 3 Contra Maximimum, although nothing of theirs is contained there.

To the same question Bernard, in the book De consideratione, long before the middle, answers in the same way. For after he shows that God Himself is in every place of the universe, thus he says: "But as to where He was before the world was made, there He is. There is no need for you to inquire further where He was: besides Himself there was nothing; therefore He was in Himself."

Finally, Theodoret is no small supporter, who, since he thinks the angels are free from any body (as we shall relate below in disput. 178), in Quaest. 3 in Genesis proves by reason that there was no corporeal world, because by their nature they are defined by place and circumscribed, that is, they

are so in one place that they cannot be everywhere, they cannot be in any body. He therefore judges that in that empty and imaginary space they could not be created: although his reason does not prove what he contends (as will be treated in its place), nevertheless as regards what we have established, we have from him the opinion that angels could not be in imaginary space; wherefore neither outside heaven: and by the same reasoning God - since He is spirit - could not be in that imaginary space, although He does not need any bodily place in order to exist, as Theodoret thought an angel needed.

The same common opinion is proved by reason.

Caput III - The same common opinion is proved by reason

However, in order to corroborate our reasoning for the first opinion, two positions must be supposed. One is, that for something to be said truly and properly to exist in another, two things are necessary. First, that there be two things really distinct, namely, that which is, and that in which it is: for in Himself nothing is said to be in reality, unless in a certain broader signification. Next, it is required that those two be real entities: for what is something real, if it be compared with that which is truly nothing, is by no manner of speaking said to be "in" it, or to be contained by it. Whence it comes about that an angel, or anything else, truly and properly cannot be in nothing or be contained by it. Nay rather, this existence and presence is so common that the thing would more truly be said to be nowhere; for nothing and nowhere are entirely the same.

The second is, that the true and real, not the imaginary and fictitious presence of God, is now the question - namely, whether it could have befit God to be outside the heaven and before the creation of the world.

With these foundations laid, it is proved in this way that God is not outside the heaven, nor in a vacuum. That vast imaginary expanse which is said now to be outside the heaven, and that emptiness which we say existed before the creation of the world, and that emptiness which we say exists within the sides of a body's vacuum, is altogether nothing: therefore, in it neither God nor an angel can truly and in reality be; or, if he is said truly to be "in it," it will not be anything but a chimera; for that emptiness is a being less feigned and nothing more than a chimera.

Someone will reply, first, that that space is not a chimera, but a certain distance of an interval; and therefore in it something can truly be. But this is manifestly false. For if that vastness is something, it must be either a substance, or quantity, or another accident. It is not a substance, as is sufficiently clear; nor an accident, because it would have to be in a substance; finally, not a quantity, both because this also must be in some substance, since it is an accident, and also because a body could be within a quantity; for two quantities cannot penetrate one another. On this ground the Philosopher, Physics 4, c. 4, refutes the opinion of those who said that place is a certain extended interval within the sides of the containing surface. He impugns it because, when the located thing arrives, two quantities would penetrate one another, or that quantity which is the interval and the place would be destroyed; wherefore the thing located would not be in a place. Therefore that emptiness is nothing other than imaginary space, as the Doctors also of the prior

opinion call it; and hence is constituted solely by our thought; wherefore in reality it will be nothing and the same entirely as "nowhere." It will be altogether the same, then, to set God or an angel in that imaginary space, and to consider the same there by mere thought, since in reality they are in nothing, that is, nowhere other than in themselves.

But someone may say, secondly, that emptiness is not entirely nothing, but a privation, which is a negation with aptness to something; so that that void is not filled, yet apt to be filled; and thus it can be filled by some created body, or even by a spirit created, or by God. In the same way, then, it will be said that God is in the imaginary space and fills it, just as a body can exist there and fill it. And to this seems to look the first reason which we adduced in cap. 1 for the prior opinion.

Refutation: Whether we speak of the imaginary space before the creation of the world, or of that which is said to be outside the heaven now, or of a vacuum within the surface of the surrounding body, this solution is futile and empty. For in order that some negation be a privation, which is with aptness, it must be in some subject; for aptness cannot exist outside a subject: wherefore no negation outside a subject can be a privation. But before the creation of the world there was no subject of that negation: therefore there was no "emptiness" which would be a privation, but altogether nothing and a pure negation. Then also the emptiness outside the heaven will not be a privation, since it can have no subject there. For which reason Aristotle, De caelo 1, c. 9, rightly said that outside the heaven there is neither place nor vacuum. But if that emptiness were a privation, it would truly be a vacuum, which is "not filled, yet apt to be filled."

Moreover, concerning a vacuum within the sides of a containing surface, we can speak in two ways: first, about the very negation which is "within" the surface and is called imaginary space; and this cannot be a privation, just as nothing can be privation within a surface; for that negation has no subject, and therefore is not a privation. Next, we can speak of that negation which is "in" the surrounding surface, and this is called a privation. For just as the surface which contains a body within itself is called filled, so also when it has no body within itself it is called deprived, that is, not filled, apt nevertheless to be filled.

From this it does not follow that God, or a spirit, can be within the surface and fill it. For a vacuum in this way is a place not filled by a body, yet apt to be filled by a body; therefore that negation is in the place or surrounding surface with the aptitude to contain a body, not a spirit: wherefore, by reason of this aptitude, a spirit cannot be within it. And if from elsewhere it could be within it, nevertheless it would remain void and with its own aptitude. And on this account I think St. Augustine said of God in book 2 On the Sermon of the Lord on the Mount, chapter 9: he is present everywhere, not by the spaces of places, but by the majesty of power.[462]

But if someone should say that there is in the surface also an aptitude to contain a spirit, besides the fact that we shall show below that a spirit by its very nature does not fill space and the sides of the surrounding place, that would be said without foundation; thus also it could be refuted without any other reason.

462. St. Augustine, De sermone Domini in monte II, c. 9.

Nevertheless someone will object thirdly in this way. Not only is the surrounding surface filled by a body, but also the space or interval that is within. For if the contained body should remain where it was, with the surrounding surface destroyed, it would by its quantity fill not the surface, which would no longer exist, but that interval which it would be said to occupy: in the same way as the highest sphere is now said to fill not the surface, since it has none above itself, but that interspace equal to its quantity; and just as a body, if it were made to exist outside heaven, would be said to fill some part of that imaginary vastness.

Solution: But from the foundations laid this objection is easily confuted. For since, besides the surrounding surface, that interval is nothing except in thought alone, as has been proved, it remains that a body which would remain without a surrounding surface, or be produced without it, would in very truth by its quantity fill nothing nor occupy [anything]; and hence it would be in nothing other than in itself. And it would be said to occupy the situation of another body only in this respect, not because that situation would be distinguished from its own quantity, but because together with its own quantity another body could not be. Wherefore, if a body outside heaven is not said to be in any space, nor in anything other than in itself, by no reasoning can God or an Angel be said to be outside heaven in anything other than in himself. But if the Doctors of the opposite opinion contend that God exists in himself outside heaven as a body would exist, so that he might be said to have in himself space and situation, distance, and that the adverbs of place should befit him; we shall indeed grant that God is in himself, yet that all the rest - namely situation, distance, the adverbs of place, and "outside heaven" - can in no way be attributed to him, as will presently be evident.

However, someone will argue in a fourth place to this effect, with a rather efficacious argument for the contrary opinion. Although bodies do not by their quantity fill that interval which is imaginary only, nevertheless they are said - even if they are outside heaven, or in a vacuum - truly to be "here" and not "elsewhere": just as the whole universe is now "here" and not "elsewhere"; and thus they can be moved within a vacuum or outside heaven. Thus therefore a spirit, even if existing outside heaven, although it is not in anything other than in itself, will be said to be "here" and not "elsewhere"; and just as a body, it will be able to be moved; and hence it will be no less outside heaven than a body, as the former opinion contended.

We adduced this argument first in favor of the prior opinion, the solution of which we did not wish to relegate with the others to the latter part of the question; but in order that we might more fully unfold the whole doctrine here, we have chosen expressly to weaken it itself. Although therefore we concede that there may be a body outside heaven; nevertheless it is not allowable to affirm that a body is in some space or interval distinct from itself, as from what has been said is sufficiently proved; but only that, by reason of its quantity, which by its nature has in itself interval and distance, and hence situation, and an aptitude to be contained by, and to fill, the surrounding surface and place, the adverbs of place, "Where," "There," "Somewhere," etc., do truly and properly befit it. From which it follows that outside heaven, or even in a vacuum, it can be moved, as will expressly be proved in Disputation 195, chapter 3, namely by changing not some space distinct from itself, or the surrounding surface containing it, but the mode of situation which it has in itself

from the nature of its quantity.[463] Now this situation is varied when the distance is varied, which we measure by imaginary points. Nor is this a fiction and mere imagination, that fixed points are designated by our thought alone: just as neither is the place which is called the first and immobile surface of the surrounding body some figment, although its immobility and the distance - changed wherewith place is said to be changed - we are accustomed to measure by imaginary points as well.

And the things we have said are to be understood whether we say that through local motion one acquires a form or intrinsic mode which is called "Where," or only an extrinsic respect, about which there will be controversy for us in Disputation 195; for although only an extrinsic respect be posited, at least it will have the foundation of its nature in the quantity of the body, to which both distance and whatever else is said according to place, do belong.[463]

Thus therefore God, or another spirit, cannot be outside heaven in anything other than in himself, since outside heaven absolutely nothing exists, neither space nor interval, as has been said: wherefore neither is he to be said to be in imaginary space, for to exist in this is the same as to be in nothing. Then neither by reason of his nature or substance can he be said to be "here," or "elsewhere," or "outside heaven," as a body; and therefore neither will he be able to be moved outside it. For to a spiritual substance - of God, or even of an angel - according to itself, a situation of distance or nearness cannot belong as it does to a body; to which indeed distance or nearness belongs because, by reason of its quantity, between it and another there can be some body of such and such a quantity whereby there is filled that aptitude of two bodies, which otherwise was said to be void. Therefore one body is said to be more or less distant from another inasmuch as a greater or a lesser body can be interposed between it and another. Finally, any body whatsoever, according to fixed points, will be said to be more or less distant even if there be no other from which it stands at a distance: for inasmuch as it is a quantum, it is apt together with another to contain so much and so much body; wherefore from this or that it is said to be so much and so much distant: whence it follows that a body, by reason of its quantity, can be moved, lengthened, brought nearer, be outside heaven, and be "here" or "there." For all these things consist in distance or in the variation of that distance, which seems to be inborn in a body.

But a spirit by its very nature is such that between it and another neither a body nor another spirit can be contained: not a spirit, because it lacks quantity and extremities; whence it cannot be a measure of distance between one Angel and another, or between one and another body. Not a body, because although a body has extremities, spirits nevertheless do not have within themselves extremities such as bodies ought to be contained within, to which the extremities of a body might correspond, so that adequately a body might be contained between the spirits.

But someone will say that Angels by their substance are in an indivisible, and between two indivisibles there can be a corporeal measure by which distance is constituted. But this objection is hindered by reason: because Angels are not individuals in the way in which points are, which have position in quantity; but they are indivisible in a spiritual mode; and hence, although between two

463. Vazquez, Disputation 195, cap. 3.

463. Vazquez, Disputation 195, cap. 3.

points there can be distance, nevertheless between two spirits it cannot be, just as neither [can there be] a measure of quantity: because the individual notion of a spirit does not have position in quantity. For this same reason we shall prove in Disputation 192, chapter two, that it is not rightly inferred that an Angel can be placed at a point of quantity, because he is indivisible in himself: since the spiritually indivisible has no proportion to the indivisible of quantity so as to be equal to it.[464]

It remains therefore that spirits and God, unless they are in a body, are not said to be in anything other than in themselves; and since in themselves they have neither interval nor the vastness of space nor situation - because their spiritual substance is indivisible - they are neither "here" nor "elsewhere," nor do they fill imaginary spaces.

Wherefore it does not befit spirits to be in a place primarily, but secondarily, by reason of bodies to which they are primarily joined by substantial presence, as we explained a little above. Therefore God, before the creation of the world, was in himself, but he neither filled anything, nor did he have in himself any extension of interval, nor was he said to be "here" or "there": but, when the universe was created, he began to be in it, and to exist therein according to the ratio of "here" and "there," according to the distance of bodies.

But the adversaries reply: God filled by substantial, not by corporeal, presence that imaginary space before he created the universe. Yet this solution is vain and trifling. For if that space was nothing, it could fill nothing other than itself. And he himself was said to fill himself alone, inasmuch as his substance sufficed for himself: yet this is not enough for it to be said that he was outside heaven - which indicates situation and extension - but only that he was in himself in an indivisible and spiritual mode; which no one denies. But if it werefit him to have in himself situation or distance, or if the adverbs of place befitted him, he would be outside and divisible; but since he is spiritually indivisible, and does not exist in anything other than himself, it could not be said that he is whole in one and whole in any part: and throughout any part, except for himself, there is nothing of which it might be said that he is "in"; nor indeed would he be whole in the whole and whole in any part; for since he has no parts in himself, he exists whole in the whole in an indivisible mode. Therefore the sentence of those Doctors is to be rejected, who think that God, before the creation of the world and now outside heaven, so fills by his presence some infinite space, as if he himself were of such and such size and extended.

But now it is needful that we collect and weigh the foundations of the prior opinion. And among the testimonies adduced, the first is that of Aristotle, in whose mind interpreters vary, namely whether he said that those separate substances are within the very body of heaven, or above its outermost surface: yet his words plainly suggest that they are above the summit of heaven. Nevertheless I answer that either he said that, not because he thought that God and the intelligences were in that imaginary place somewhere or elsewhere than in themselves, but lest he confine them, like bodies, within the quantity of heaven; or, certainly, that nothing is to be cared for about his opinion, when in assigning a place to God he so shamefully erred by a peculiar

464. Vazquez, Disputation 192, cap. 2.

conclusion about places, as we noted in Disputation 17.[465] Plato also, in the Phaedrus, or On the Beautiful, asserts that all the blessed and prudent intelligences are outside heaven; but he is to be interpreted in the same way as Aristotle; or else no credence is to be had for him, since he tells many fabulously excessive things about them there.

It is answered to the testimonies adduced for the prior opinion.

On the testimonies alleged for the prior opinion

Now indeed there is need that we overthrow the foundations of the prior opinion. Of the testimonies adduced, the first was Aristotle's; and in expounding his mind the interpreters vary, namely, whether he said that those separated substances are within the mass of the very heaven, or above its outermost surface: however, his very words plainly indicate that they are above the summit of heaven. Nevertheless I answer, either that he said that, not because he thought that God and the intelligences were in that imaginary place somewhere or elsewhere than in themselves, but lest he confine them, like bodies, within the quantity of heaven; or, certainly, that nothing is to be cared for about his opinion, when in assigning a place to God he so shamefully erred by a peculiar conclusion about place itself, as we noted in Disputation 27.[466] Plato also, in the Phaedrus, or On the Beautiful, asserts that all the blessed, and therefore the intelligences, are outside heaven; but he is to be interpreted in the same way as Aristotle; or else no credence is to be had for him, since he tells many fabulously excessive things about them there.

But that the testimonies of the holy Fathers favor nothing of the prior opinion we shall easily show. First indeed St. Augustine, against those Philosophers, does not place God in imaginary spaces, but was against them; and rightly he infers in this way. If God from eternity could not be idle, so as not from eternity to create the universe, by the same reason he could not, outside this world, in infinite spaces fail to produce infinite worlds: he did not say, he could not fail to exist in imaginary spaces, but, he could not fail to produce other infinite worlds outside this world. But this is rightly inferred, if God through infinite times could not cease from work. But if Augustine were speaking of the existence of God in imaginary spaces, as the adversaries contend, by his own argument he would prove that indeed God could have not been in those, just as he could, through infinite duration, do nothing. But the Doctors of the former opinion will not concede this: for when they assert that God exists in imaginary capacity, they affirm that he is there not freely, but necessarily; since they say that that does not come from the free will (*voluntas*) of God, but from his essence (*essentia*), so far as it is immense. Therefore Augustine would favor nothing of the prior opinion.

Second, St. Gregory Nazianzen, in the place alleged, only contends that God is not circumscribed anywhere: and therefore he tries to lead to absurdities those who said that God is in this whole universe, or in a part of it, circumscribed; and since by the words that follow he plainly teaches that God is not above, or outside, the universe as in a place, he does not assert that in any

465. Vazquez, Disputation 17.
466. Vazquez, Disputation 27.

way he exists there. Moreover, that which he assumes in the argument, he proposes not as certain, but under doubt, when he says, Perhaps: yet he could easily elsewhere suppose that God is either in the whole universe, or in a part of it; which no one would deny. Therefore he only wished to infer that God is so in the universe that neither by the whole, nor by a part of it, is he circumscribed: and whether he understand this of circumscription in the manner of a body, or of a particular and adequate definition of place, it is necessary and most true, as will be explained below.

Reply to Basil's testimony: Basil only intended to teach that wherever any one's thought has reached, there God is, together with the hypostasis of his Son necessarily conjoined to himself. But about the space outside the world which we constitute by thought alone, he cared nothing. For a little before, upon those words, "And the Word was with God," he says, Where was the Word? namely, in the beginning, he answers, Not in a place: but where was it? he answers, With God. But of imaginary spaces he said nothing.

Fourth, Philo said on that account that the whole world is not worthy to be a dwelling of God, not because he would be also outside it, but because he himself receives no utility from it, since place can be for himself, that is, to be in himself no less perfectly. Nay rather, he says, for something to be filled and contained by him is to have need and emptiness, not because he fills those imaginary spaces (for it would be too crude to say this), but because all things that are would be reduced to nothing and be vain, if they were not sustained by him.

In the fifth place there were adduced many Fathers, who, following the manner of speaking of Scripture, variously assert that God is outside, and inside, and above the universe. But they, just as also Scripture, by that way of speaking only wished to signify that God is so in the universe and within it as not to be by that whole circumscribed and defined, not because he is also outside in imaginary space, but because his infinite power and immensity can be in a greater and greater and in infinite other [things]: and to this look the various modes which Scripture and the holy Fathers have used, which indeed it would be too crude and absurd to interpret of that, as it were, corporeal existence outside heaven.

Nor indeed do they only wish to teach that God is not circumscribed, as a body by some surrounding surface, but neither defined and in some way bound to this universe as to a place adequate to him, as happens to Angels. Therefore God is said to contain the orb by a palm, that the greatness of his power may be declared, who, as it were, doing nothing, by a palm, that is, not by his whole effort, sustains all things. Nor indeed is there need to run through each point which we adduced in the fifth place; for from these they are easily explained. Moreover, when the holy Fathers say that God is above every creature, they sometimes, by the particle Above, do not signify the spaces of places, even imaginary, but power and potency, as St. Augustine plainly said in the book On the Nature of the Good against the Manichean, cap. 3, in these words: God is so above every creature, above every species, above every order; nor is he above by the spaces of places, but by ineffable and singular power, from whom is every mode, every species, every order.[467] And nothing other did Hugo of St. Victor wish to teach, book 1 On the Sacraments, part 3, cap. 17,

467. St. Augustine, De natura boni contra Manicheos, cap. 3.

whom it is wont, without desert, to be referred for the opposing opinion.[468] To which also alluding, the Trismegistus, who is commonly cited, compared God to a sphere whose center would be everywhere and circumference nowhere: not because he would fill that imaginary vastness, but because by the whole universe he would not be defined, as has been said.[469]

In this sense St. Thomas said, Quodlibet 11.2.1, that the infinity of God is such that he is not only in those things which are, were, and will be; but [also] in those which we can think: not because he is actually in pasts, futures, and possibles which are not and can be thought by imagination, since in that which is not yet, he cannot now actually be; but because it befits God, by reason of his infinity, to be in all things when they are, and his operation reaches all these in their time.[470] Wherefore, without foundation, some more recent men allege this text of the holy Doctor for the opposed opinion, to prove that in imaginary space, which can be apprehended by thought, God is: otherwise he would not only prove that God is in imaginary space which they suppose now to be outside heaven, but [also] in another universe which is thought by us, and which he could create outside this world; which is absurd. Nor indeed did St. Thomas say that God is in imaginary space now outside heaven, but in those things that can be thought, understanding possible things, not yet existing.

Caput V - The arguments of the same opinion are dissolved

From this point let us dissolve singly the opposite arguments. Concerning the first of which, enough was said already in cap. 3, where we showed the difference between body and spirit in the universe, namely why a body can be moved or exist in a vacuum or outside heaven, but a spirit not so; by which difference the whole force of the argument is weakened.

To the second some more recent men answer, that the whole universe cannot at once be moved by rectilinear motion; lest they be forced to concede that God is moved in place with the universe, which they deem absurd. Yet they say that the universe can be moved, if God should create some real space through which, or to which, it would be moved. Then however (they say) that absurdity would not follow, namely, that God is moved with the whole universe: for God would have been beforehand in that real space through which, or to which, the universe would be moved, and therefore he would not acquire a place which beforehand he did not have, nor would he be moved with the universe.

Yet I for my part do not see by what reason it would be impossible that this whole universe be moved at once by rectilinear motion, even if nothing else outside it were created. First indeed, because, if outside this world there were another, as can be done by God, each could approach the other, as the adversaries also grant: for, since a real terminus is created outside this universe to which it would be moved, they confess it could be rightly moved: but they must concede that it can be moved so as to reach even to the terminus, or to stand, as it were, in the middle road. Then

468. Hugo of St. Victor, De Sacramentis 1, part 3, cap. 17.

469. Hermes Trismegistus, the common comparison of God to a sphere whose center is everywhere and circumference nowhere.

470. St. Thomas, Quodlibet 11.2.1.

therefore, if the universe were being moved and did not reach the terminus created, it would follow that God is moved with it: for he would leave the prior site and would acquire another in the middle way which beforehand he did not have.

Then again, it matters little whether something real be created to which the mobile arrive, or that it be able to be moved through the emptiness of intermediates: for the terminus in motion, and as it were the last changed state, is not more necessary to motion; but the form which is continuously acquired so long as motion lasts: as in heating the whole latitude of heat; in local motion, the whole being-somewhere, which is divisible with the very motion. But without the extreme and last changed state, that which is called the first changed state in the terminus "to which," there could be excellently motion, namely when the motion would cease together with the mobile itself, at least by annihilation: for then the first not-being of the mobile is the first not-being of all the things which are in the mobile.

Lastly, although the terminus, that is, the extreme of motion, were necessary to motion, it ought not be some body, or containing surface, to which it is vulgarly said that the mobile is moved; but it ought to be the changed state existing in the mobile itself, which would be indivisible of that form and mode which the mobile acquires through motion. For the surrounding surface contributes nothing at all to motion, neither in the terminus, nor while the mobile is moved: nay, Aristotle, when he supposed that the first mobile sphere is contained by nothing else, even thought that it is moved around the place. In a vacuum too motion of a body can be, as was said in cap. 3, and will be more fully proved in Disputation 195.[471] Wherefore it is altogether accidental that space be full, that the mobile be moved.

Let us concede therefore to the second argument that which it assumes, namely, that the universe can be moved by rectilinear motion, as a body through a vacuum. But what from that was being inferred - that God, namely, is moved with the whole universe - some willingly also concede, so that only secondarily, and (as they say) per accidens, God be said to be moved, not by any intrinsic change wrought in God himself, but only by some extrinsic respect of distance varied, which secondarily befits him by reason of the body to which his substantial presence is conjoined. For as we said in cap. 3, and as we shall show in the disputation alleged, to God and to any spirit there befits secondarily the respect of distance, according to which there is motion: and indeed those who assert that God is not in imaginary spaces cannot deny that God can acquire a new extrinsic respect of presence by creating another new universe: nay even that he can acquire a new extrinsic respect in a new universe, by losing the prior respect, if he were to destroy this universe and create another outside it.

Yet the aforesaid Doctors add that God cannot be moved, neither per accidens, nor within this universe by a varied extrinsic respect alone, because he cannot be in the whole universe at once: wherefore that extrinsic respect of presence will always be the same, the same things remaining. And by this sole reason they assert that Augustine, De civitate Dei 16, c. 5, said that God is not moved by place, who is always and everywhere whole; and in the book On Essence...

471. Vazquez, Disputation 195.

I, however, do not see by what reason it would be impossible for this whole universe to be moved at once with rectilinear motion, even if nothing else were created outside it. First, indeed, because if outside this world there were another, as can be done by God, each could approach the other, as the adversaries too grant: for, a real terminus being created outside this universe to which it would be moved, they admit that it could be moved rightly; but they ought to concede that it could be moved in such a way that it should reach all the way to the terminus, or should stand, as it were, midway on the way. Therefore then, if the universe were moved and did not reach the created terminus, it would follow that God would be moved along with it; for he would leave his prior situation and acquire another midway along the way, which previously he did not have.

Secondly, it matters little that something real be created to which the mobile should arrive, rather than that through the emptiness of the intervening it should be able to be moved: for a terminus necessary to motion is not the extreme in motion and, as it were, the ultimate changed state; but the form which is continuously acquired so long as the motion lasts: such as, in heating, the whole latitude of heat; in local motion, the whole being somewhere, which is divisible along with the motion itself. And without there being an extreme and an ultimate changed state, namely what is called the first changed in the terminus to which, motion could very well exist when, to wit, the motion would cease together with the mobile itself, at least by its annihilation: for then the mobile's first not-being is the first not-being of all the things that are in the mobile.

Thirdly, although a terminus were necessary to motion, nevertheless it would not have to be some body, or a containing surface, to which it is vulgarly said to be moved; rather, it would have to be a change existing in the mobile itself, which is the divisible acquisition of that form and mode which it gains through motion. A surface contributes nothing at all, neither at the terminus, nor while it is being moved: indeed Aristotle, since he supposed that the outermost moving sphere was contained in no place, nevertheless thought that it is moved. Motion, too, can be in a void, as was said in the third chapter and was proved at greater length in Disputation 195; we demonstrated that the fullness is entirely accidental for the mobile to be moved.[472]

As to what was further inferred, that it is granted readily enough that God is moved along with the whole universe, yet only so that he is said to be moved, as they say, per accidens, no intrinsic thing being changed in God himself, but only a certain extrinsic respect of presence being varied, which belongs to him secondarily by reason of the body to whose substance his essence is conjoined; as was shown in the alleged disputation, and it belongs secondarily to any spirit according to motion: and indeed those who cannot imagine how God could acquire a new extrinsic respect by creating another new universe, likewise cannot deny that he could acquire for himself a new extrinsic respect in a new universe by destroying this universe and creating another outside it, while losing the prior respect.

Yet those aforesaid Doctors add that God cannot be moved, neither per accidens nor by a varied extrinsic respect alone within this universe, because he cannot be in the whole universe at once: wherefore that extrinsic respect of presence will always be the same, the same things remaining.

472. Vazquez, Disputation 195.

And by this sole reason they assert that St. Augustine, De civitate Dei 7, c. 30, said that God is not moved by place, who is always and everywhere whole; and in the book On the Essence of the divinity in the beginning, that God is non-local, because he is neither contained by place, nor moved from place to place.[473] The same was said by Justin in the Dialogue against Trypho, p. 95: "God neither is moved, nor is separable from a place, nor from the whole world, nor can he be comprehended."[474]

Nevertheless, it seems to me that not even by an extrinsic denomination can God be said to be changed, even if the universe were moved according to place, because, in order that something be moved according to place, that which is moved secondarily must have a new respect of distance from points, at least imaginary ones: but God can indeed have an extrinsic respect of presence, and vary it, if he becomes present substantially to various bodies: for when he begins to be substantially present to one body, he begins to have an extrinsic respect which previously he did not have; but a respect of distance also from imaginary points he cannot have, as a body has which is outside the heavens, and this whole universe outside which there is nothing in act.

The reason for the distinction is this: because a body outside which nothing is actually existent, as this universe, only in the mode which it has from its quantity is said to be at a distance, inasmuch as outside it there can be a body in which our imagination may fix points from which it can recede; and although no other body be outside, nonetheless on account of the aforesaid aptitude which it has, and which varies according to the mode of its quantity, it is said to change a respect of distance. But because outside God there can be neither a body, nor a point fixed by imagination, from which God should be at a distance - because by his very nature, wherever a point were fixed, God would be - nor could he be distant from it; therefore, even if this universe were moved according to place, God would not be moved. Furthermore, a spirit existing in a sphere cannot be moved with circular motion, since he is whole in the whole and whole in any part, as God is, because circular motion does not change the distance, but only the diverse respect of parts: wherefore, since a spirit has no parts, he remains always in the same way in the sphere, and therefore is not moved.

Reply to the third objection: I reply that God existed before all time, but not in another duration than in the eternity proper to him, in which he always is, although also in time, or (as Anselm prefers) with time, as was noted in the observations upon the article. But God was not before time in another duration than in eternity, because this was from eternity, and no other: in the same way, from eternity he was not in another than in himself, because besides himself from eternity there was nothing. But he, since he is indivisible, having neither breadth nor depth, was not said to fill a space or to have with himself a space, or site, or distance, as was demonstrated in the third chapter: whence from eternity he was nowhere except in himself, which certainly is not to be somewhere. Wherefore the argument can be turned back upon the adversaries in this way: God from eternity was not in an imaginary duration, but in eternity: therefore he was not in imaginary space, but in himself.

473. St. Augustine, De civitate Dei 7, cap. 30.
474. Justin Martyr, Dialogus cum Tryphone, p. 95.

Finally they object in this wise. Spirits are in place by an application of power before they operate: but God can apply this in the void and in imaginary space by producing something there: therefore he is first there before he produces. I answer that there are various opinions of the Doctors on this matter: however, although we concede that the Angels are in place by some kind of application of power, as will be explained in Disputation 188, nevertheless they could not be in imaginary space. For either the adversaries understand the application of power to be some external operation, and this cannot be in the void or in imaginary space; moreover, God does not by some external operation apply his power to operating before he operates: wherefore by that he cannot be in imaginary space. Or else it is an operation of the will, as Cajetan thought of the Angels in that article, which we shall there prove to be false; and for God the reason of existing in a place cannot be by a decree of his will, as was said in Disputation 28: and then, even if this were posited in things, it would not follow that in imaginary space - since there is nothing - anything could be placed in this way.[475][476][477]

Moreover, if to be in imaginary space is nothing other than to be in himself, assuredly this will befit God, not by will, but by his nature.

Articulus III - Whether God is everywhere by essence, presence, and power

But to the third we proceed thus.

Objection 1. It seems that the modes of God's existing in things are ill assigned, when it is said that God is in all things by essence (*essentia*), power (*potentia*), and presence (*praesentia*). For that is said to be in something essentially which is in it essentially. But God is not essentially in things: for he is not of the essence of any thing. Therefore it ought not to be said that God is in things by essence, presence, and power.

Objection 2. Further, to be present to some thing is this, namely, not to be lacking to it. But this is for God to be by essence in all things, namely, not to be lacking to any thing: therefore it is the same to be in all things by essence and by presence. Superfluous, therefore, was it to say that God is in things by essence, presence, and power.

Objection 3. Further, as God is the principle of all things by his power, so also by his knowledge and will. But he is not said to be in things by knowledge and will: therefore neither by power.

Objection 4. Further, just as grace (*gratia*) is a certain perfection superadded to the substance of a thing, so there are many other superadded perfections. If therefore God is said to be in some in a special mode by grace, it seems that according to any perfection whatsoever there ought to be accepted a special mode of God's being in things.

But on the contrary: St. Gregory says upon the Song of Songs, cap. 5, that God is in all things in a common manner by presence, power, and substance; yet in a familiar manner he is said to be in some by grace.[478]

475. Vazquez, Disputation 28.
476. Vazquez, Disputation 188.
477. Cajetan, on that article (as cited in the place).

I answer that it must be said that God is said to be in a thing in two ways. In one way by the mode of an efficient cause (*causa efficiens*): and thus he is in all things created by himself. In another way as the object of operation is in the operator: which is proper in the operations of the soul, according as the known is in the knower, and the desired in the desirer. In this second way, therefore, God is specially in the rational creature, which knows and loves him actually or habitually. And because the rational creature has this by grace, as will be clear below, he is said to be in this mode in the saints by grace. But in other things created by him, how he is must be considered from those things which are said to be in human affairs. For a king is said to be in his whole kingdom by his power, although he is not everywhere present. By his presence, however, a thing is said to be in all the things that are in his sight, as all the things which are in a house are said to be present to someone, who nevertheless is not according to his substance in every part of the house. But according to substance or essence a thing is said to be in the place in which its substance is held. There were, therefore, some, namely the Manichaeans, who said that spiritual and incorporeal things were subject to the divine power; but visible and corporeal things were said to be subject to the power of the contrary principle. Against these, therefore, one must say that God is in all things by his power. There were others, truly, who although they believed that all things were subject to the divine power, nevertheless did not extend the divine providence down to these lower bodies: on whose person it is said (Job 22): "He walketh about the poles of heaven, and he doth not consider our things." And against these it had to be said that he is in all things by his presence. There were others, moreover, who although they said that all things pertain to God's providence, nevertheless posited that all things were not immediately created by God, but that he immediately created the first creatures, and they created others. And against these it had to be said that he is in all things by essence. Thus, therefore, he is in all things by power, inasmuch as all things are subject to his power. He is by presence in all things, inasmuch as all things are naked and open to his eyes. He is in all things by essence, inasmuch as he is present to all as the cause of their existing, as has been said.

Reply to the first: Therefore it must be said to the first, that God is said to be in all things by essence, not indeed by the essence of the things, as though he were of their essence, but by his own essence, because his substance is present to all as the cause of their existing, as has been said.

Reply to the second: To the second it must be said that something can be said to be present to another inasmuch as it is subject to its sight, which nevertheless is at a distance from it according to its own substance, as has been said. And therefore two modes had to be posited, namely by essence and by presence.

Reply to the third: To the third it must be said that it belongs to the notion of knowledge and will that the known is in the knower, and the willed in the willing. Whence according to knowledge and will things are more in God than God is in things. But it belongs to the notion of power that it be a principle of acting upon another: whence according to power the agent is compared and applied to the external thing, and thus by power the agent can be said to be in another.

478. St. Gregory, Homilia 8 in Ezechielem; and In Canticum canticorum cap. 5.

Reply to the fourth: To the fourth it must be said that no other perfection superadded to substance makes God be in something as the object of what is known and loved, except grace; and therefore grace alone makes a singular mode of God's being in things. There is moreover another singular mode of God's being in man by union: of which mode we shall treat in its place, in the third part, question two.

Explicatio articuli - Explanation of the article

From this whole article five modes are gathered by which God is said to be in something. In three modes he is in all things, namely by essence, presence, and power; in two others only in the rational creature. In order, therefore, the fourth is that by which God is in men as in a temple, by some gift of grace: the fifth, by which he is said to be in Christ by the humanity. Each will be more fully set forth in the following disputation.

What rationale the modes by which God is said to exist in things have, is to be explained in Disputation 30.

Disputatio XXX - How the modes by which God is said to exist in things are to be explained

Caput I - Various opinions concerning the first three modes

The Doctors have disagreed in explaining the three prior modes, and this is no doubt. Therefore let us set down in this chapter those opinions which are not approved, so that we may submit the truer in what follows.

The first opinion is Alexander's, 4. p. 9. q. 10. memb. a, which Aegidius deems probable.[479] Now Alexander teaches that God is in things by essence, because by his essence he attains to the universe; by presence, indeed, by reason of operation; finally, by power, by reason of support. First, he himself does not declare more fully the first and third modes; yet they could be explained in a good sense.

This opinion, besides the fact that it does not sufficiently distinguish the first and the third mode, although it seems to explain each by a real co-existence, is easily refuted with regard to the first mode for this reason. However these two modes ought at least in thought to be distinguished, in order that three be enumerated; unless in the sense in which Durandus assigned it - which we shall refute below. Moreover, as St. Bonaventure very well says, many things are said to be present where they do not operate; therefore the mode of existing by presence is not on account of operation.

The second opinion is that of St. Bonaventure in 1, dist. 37, part 1, dub. art. 3, q. 2, in the replies to the arguments, which Gabriel also judges probable, namely, that it is the same for God to exist in things by presence and by non-distance, as he speaks, as if to say: it is the same as not to be distant

from the things themselves.[480] In the other two modes he does not seem to differ from the common opinion. But in the next chapter we shall show that this mode is rather by essence (*essentia*) than by presence, since one is sometimes said to be present who nevertheless is far away in place, namely to those things which he has in his sight.

The third opinion is that of Durandus, who explains all three modes otherwise than the other Scholastics, in this way. On God's side there are three: operation, the power from which it is to operate, and essence, in which is the power of operation. By reason of the first God is said to be in things by presence; by reason of the second, by power (*potentia*), because operation issues from power; by reason of the third, He is said to be by essence, inasmuch as the essence of God (as he himself says) co-exists with things so as to conserve them, just as a seal, in order to conserve the figure in water, ought to exist together with it. But the first - which contains the greater difficulty - he explains thus. By the operation of God a thing is produced in the realm of things, and forthwith is present to God existing, and from that God to the things themselves. For he thinks that from this God is said to be present to things, because they are present to Him, not conversely. But Durandus does not explain this mode of presence any further. My own opinion, however, is that it seems to consist only in this, that things produced by the force of operation co-exist with God, that is, are at the same time in the realm of things with God. Durandus established this opinion on no other ground than that one could not say that God is present to things by reason of cognition, as St. Thomas and others teach; therefore, in the manner we have said, he thinks the presence of God is more conveniently explained.

Yet this way of speaking is to be taken also from sense-vision, which, in order to know things, must have them present to view. Whence, by a transference to spiritual things, presence also is to be derived with respect to cognition; which St. Augustine taught in epistle 112, chapter 2, at the beginning, with these words: "Plainly perhaps it is enough if we understand here by presence that by which things are at hand to the senses, whether it be a word of mind or of body, whence something is done by the senses from one who is present."[481] Scripture also uses the same manner of speaking: for in 2 Machab. 12 and at the end it is said that they were wondrously delighted by the presence of God - namely, because by some vision God appeared to them - and in 4 Reg. 5 Elisha said to Gehazi, after he had received gifts from Naaman the Syrian: "Was not my heart present when the man turned back from his chariot to meet you?" (4 Reg. 5).

Nor does it stand in the way that in the law "Praesens", ff. De procuratoribus, it is said that one is held to be present at a suit, whether he is in the gardens, or in the forum, or in the city, or in the contiguous buildings. For in these cases the law reckons someone present so far as concerns the effect of the suit and of procuration, so that the procurator also is considered a procurator of one who is present, just as a procurator who manages the business of one present enjoys his privileges.[482] For there is another kind of procurator who conducts the business of one absent. But according

479. Alexander (4. p. 9. q. 10. memb. a), as reported by Aegidius.
480. St. Bonaventure, In I Sent. dist. 37, part 1, dub. art. 3, q. 2, in solutionibus argumentorum.
481. St. Augustine, Epistula 112, cap. 2 (initium).
482. Digest, De procuratoribus, title "Praesens".

to the usual manner of speaking which we have set forth up to now, by a figure of synecdoche he can be said to be present to the city; for gardens, forum, contiguous buildings, and suburbs are called parts of the city. Therefore by reason of one part he is said to be present to the whole; not, however, without respect to cognition, nor to any except those who know: not because one who is in the gardens is always known by someone else, so that he be called present to him as to a citizen and hence to the whole city; but because he who is in the gardens or contiguous buildings is wont to be seen by the citizens of that city and actually to be known. For he is where he can easily be met by others. And since he is wont easily to be present, he is counted present, and his procurator is said to transact the business of one present.

It must also be noted what the words of the law say which not only affirm that that alone is done "in the presence" of another which is known by him, but also that the same is "before" someone and that something is done with him present, just as we assumed according to our reasoning. Therefore, those things are said, in the common manner of speaking, to be present which present themselves to the knower, not conversely. Here too this way of speaking is taken from bodily sight, which, in order to know things, must have them present to view. Hence, by transference to spiritual things, presence is also to be taken with respect to cognition. This is what Augustine taught, as just cited.

Furthermore, whatever be the condition of two things existing together in the realm of things, even if they are placed in the same location, if one of them is not a knower, neither can be said to be present to the other, as is made clear by examples. For if two stones exist together in the realm of things, and one of them is even near to the other in place, it is not said to be present to it; nor conversely in the same way; nor tree to tree; nor is any non-knowing thing said to be present to one that knows, as a man to a wall or to a tree; nay rather, to an animate thing and capable of cognition nothing is said to be present unless it actually attends and knows. For it is the same thing to be present to someone and to be "in his presence", or that something is done "before him" or "with him present". But nothing is said to be done "before" someone unless he notices and knows, even if otherwise the thing is at such a distance that he could very well know it, and in a place said to be near him, as is expressly held in the law "Coram", ff. De verborum significationibus: "One ordered to do something before Titius does not seem to have done it in his presence unless he understands it; and thus if he be insane or an infant or asleep, he does not seem to have done it before him." Therefore nothing is said to be present to another unless to one who knows or understands. Accordingly, the mere real co-existence of things is not enough, as Durandus was saying, for one to be said present to another.[483]

Caput II - The common and truer opinion

The common and truer opinion is that which St. Thomas handed down in this article, and which Cajetan and more recent authors, Albertus, Aegidius, Ricardus, Capreolus, and Gabriel follow.[484] All of them in this way explain those three modes mentioned. First, they say that God is by essence

in all things, because His substance is not distant in place, but is conjoined to things, whether by reason of Himself or by reason of operation. In this way a king is not said to be in the whole kingdom, nor under the roof of his house; in which, however, he is said to be in another way, as will be clear below: but he is said to be in that part where either he sits or stands; and even if, by a synecdoche, he be said in this way to be in the whole kingdom, God is not on that account said to be in the whole universe only by a figure, but essentially, by reason of His immensity, to be present in the whole universe and in each of its parts.

Second, He is by presence everywhere, for all things are present to Him, or are done and conserved with Him present, in that He knows and cognizes all things. Thus a king, when he is present at public spectacles, is said to be present to the things that are done in the forum, and that they are done in his presence or "before" him; in which manner he could not be present at the same time to all things that are done in the kingdom. But God, by reason of His infinite knowledge, is present to all things. This mode, broadly confirmed and explained, remains from what was said above against Durandus; and it is distinguished a priori from the former, because even if the substance of God were not innermost to all things and He did not operate upon all, yet if His knowledge were infinite, by knowledge alone He would be said to be present to all things.

Third, He is by power in the whole universe, because wherever His operation reaches, there God is; just as a king is said to be in his whole kingdom, because throughout it his operation, at least through his ministers, is diffused. Wherefore, in this mode God is more perfectly in the whole universe than a king in his kingdom, since He Himself by His own efficacy immediately produces and conserves all things. This mode differs from the two preceding, because if God were not by His substance in things, nor present by reason of knowledge, yet if He operated in all things, His power would be everywhere, because His operation would permeate all things.

Objicitur: But someone will say that the first and second mode are easily confused, since we maintain that God is everywhere by reason of operation, which is, as it were, the ratio of His immensity; thus, by the same operation, God would be said to be in things both by essence and by power.

Solutio: I answer that this argument contends only against the opinion of those who teach that God is in things by reason of operation, not by reason of the bare substance - which, as we said elsewhere, is not sufficiently demonstrated - and not against our position.

It can be persuaded. But neither has it anything of moment against those points, as we shall presently see. Now Cajetan, who in this article follows the opinion of St. Thomas, answers that between those two modes, namely, "by essence" (essence, essentia) and "by power" (potency, potentia), there is a difference: the first is with immediation of virtue, but the other with immediation of the supposit (suppositum), which is rather obscurely said.

---

484. St. Thomas, in this article; Cajetan, ad loc.; Albertus, In I Sent. d. 37, art. 5; Aegidius, q. 2; Ricardus, art. 1, q. 1; Capreolus, art. 1, conclus. 3; Gabriel (Vazquez), q. unica, art. 1, notabile 3.

483. Digest, De verborum significationibus, law "Coram: Coram Titio aliquid facere iussus, non videtur praesente co fecisse, nisi is intelligat; itaque si furiosus, aut infans sit, aut dormiat, non videtur coram illo fecisse."

Yet more easily, in the opinion of St. Thomas, each mode can be explained and formally distinguished, if the operation of God's power be considered in a twofold way. First, as it is an act (actus) of God's power, even if it have not the force of joining His essence intimately to the things themselves: for by this sole reason, on account of operation, God would be said to be in things "by power." Therefore it is the same to be in things by power, and to operate in them; nor does any other thing formally need to be required for this existence: and thus this mode brings with it only the immediation of virtue, as Cajetan says, that is, it only denotes that the subject operates by its own proper virtue.

Then, the operation of God can be taken as a kind of contact of quantity, and a foundation, so that the substance (substantia) of God be intimately in things; and in this way it has something more than to be an act and an operation of God's virtue: and therefore it constitutes God in things in a new mode, namely, according to substance; which mode perhaps for this reason is said to denote immediation of the supposit in Cajetan's sentence, because it joins the substance of the cause to the effect, although to operate with the immediation of the supposit be another thing, as was explained in disputation 28, chapter 4. From these points it is clear that God is in all and each things in all three modes, and that they are distinguished for the best reason.

Now these three modes of the existence of God in things have been enumerated only by the Master and the Scholastics in I Sentences, distinction 37: for among the holy Fathers there is none who distinguishes them all in that way. St. Thomas in the argument "But on the contrary," the Master, Alexander, and St. Bonaventure in the places cited, report the testimony of St. Gregory the Great, who seems to recount all three: but I could not find that passage in another author than the Master. The author, however, of the book On the Knowledge of the True Life, chapter 28, in the ninth tome among the works of St. Augustine, distinguishes at least two modes in a certain way, one according to essence, the other according to power: there, indeed, against those who say that God is contained by His essence in some particular place, as heaven, but in the world and inferior things is only by His power, he argues in this way. If God is by His essence in heaven, and by His power on earth, His essence and power will not be the same, since the one is where the other is not found, which is absurd.

Yet this reason is easily refuted out of the doctrine handed down above. For if it were said that God is somewhere by His power, where He is not by His essence, He would not therefore be said to be there because the substance of His power were there and not the substance of His essence - for this is impossible, since essence and power are altogether the same - but because the effect of the power, that is, the operation, would reach somewhere where the substance of that [power] would not be. From this, however, it would not follow that the power itself in itself and the substance of God's essence would be locally sundered and distinct.

Some think that this threefold mode is expressed in those words of Psalm 138: "Whither shall I go from your Spirit, and whither shall I flee from your face?" and in Romans 11: "From him, and through him, and in him are all things." But no one of the Fathers, or of approved interpreters of Scripture, follows this exposition. That text, indeed, of Romans 11 the Greeks interpret thus: "From him," as from an author, are all things; "Through him," all things which have begun are preserved;

and "In him," the same are perfected and consummated. Which mode of speaking is familiar to Paul, that he may fully signify the omnipotent power of God. Let it suffice us, therefore, with the Scholastics, to have distinguished and explained with the best reason these three modes of existing in things.

Objection of Durandus. Against the mode of existing by presence, as we have explained it, Durandus argues in this way. By His knowledge God regards equally the things that are, that have been, that will be, and those that are altogether possible: but of all these God is not said to be present: therefore the knowledge of God alone is not a sufficient reason of presence.

Answer. I answer: God is not said to be present to things, nor are things said to be absolutely present to God, by reason of just any knowledge, but by reason of that cognition which terminates on things existing at that time. Wherefore the knowledge of possibles does not suffice to make God present to things; nay rather, neither does the knowledge of future or of past things suffice, even if this be called knowledge of vision: for this kind of existence in things by presence has been transferred from the presence of bodily sight. But sight is only of things existing in view; and a man, in respect of sight, is said to be present to them, so that by reason of no other sense is he said to be present. Although therefore all the things that God knows are said, in a broader signification, to be present to Him, namely objectively, nevertheless He Himself is not said absolutely to be in things by presence by reason of cognition, unless the things also exist.

Caput III - Two other modes of God's existence in things

It remains now to say something about the two other modes by which God exists in things. The fourth in order is that by which God is said to be in a rational creature as the known in the knower, and as in a temple in which He is worshipped. In this mode in general, by reason of cognition, He is said to be in any knower, and Himself to be adored; but peculiarly He is said to be by the gifts of grace, about which we shall say something in question 43, article 3. About this mode of existing there is hardly any controversy among the Doctors: and its nature is such that it would not suffice to constitute God in things by essence, if otherwise He were not in them by His immensity; for this mode joins man to God only by cognition, affection, operation, or habit.

There are, however, some more recent authors who think that, when to us these gifts of grace are conferred, not only the charismata themselves are given, but also the person of the Holy Spirit is so given to us, and that with the whole Trinity He so comes to us, that, if otherwise God were neither by reason of operation universally, nor by reason of substance immense and in all things, nevertheless by reason of these gifts He would exist in us according to essence. Whose opinion is refuted on this ground. Although it cannot be denied that the person of the Holy Spirit is said to be given to us by reason of the charismata and sent to us, and that the whole Trinity comes to us, as we shall also say in question 43, article 3, still this is not said because, by reason of the whole largess of the gifts, He would be in us according to substance, even if otherwise by His immensity He did not exist in us; but because, whereas He is otherwise in us, He deigns to appear in us by a new effect of grace; and since these gifts are appropriated to the Holy Spirit, He Himself also is said

to be given and to be sent to us, and with Him the whole Trinity to come. Moreover, that this effect is not sufficient to constitute the person of the Holy Spirit, or God according to essence, in us, if otherwise He were not by reason of operation universally, or by His substance immense, is easily proved: because these gifts, beyond the common notion of an effect of divine power, have this, that they join us to God according to affection, and as to a rule, to which we are said to be just, or as to a friend, to whom we are said to be beloved, and therefore holy and immaculate; but this effect, which is wholly in affection or by relation to Him, can be between those absent according to substance, as is manifest.

The fifth mode of God's existence in things is that by which the Word exists in the assumed humanity: and this union is such that, even if God were not otherwise by His immensity in that humanity according to essence, by reason of that union He would be in it, as we noted above in disputation 28, chapter 5. Yet this mode can be very well distinguished from the others: because it includes something peculiar, namely the sustentation of the human nature, by reason of which the divine Word is directly and perfectly the supposit of that nature; but the other two persons [are there] concomitantly by necessary connection with the Word, as we shall show in the Third Part, question 3, article 4.

Articulus IV - Whether to be everywhere is proper to God

To the fourth we proceed thus. It seems that to be everywhere is not proper to God. For the universal, according to the Philosopher, is everywhere and always; so too prime matter, since it is in all bodies, is everywhere. But neither of these is God, as is clear from what was premised: therefore to be everywhere is not proper to God.

1. Moreover, number is in things numbered: but the whole universe is constituted in number, as is clear from Wisdom 11; therefore there is some number that is in the whole universe, and thus everywhere.
2. Moreover, the whole universe is a certain perfect whole body, as is said in the first book On the Heavens and the World. But the whole universe is everywhere, because outside it there is no place. Therefore not God alone is everywhere.
3. Moreover, if some body were infinite, there would be no place outside it: therefore it would be everywhere; and thus to be everywhere does not seem to be proper to God.
4. Moreover, the soul, as St. Augustine says, in the sixth book On the Trinity, is whole in the whole body and whole in any part of it. If therefore in the world there were only one animal, its soul would be everywhere. And thus to be everywhere is not proper to God.
5. Moreover, as St. Augustine says in the Epistle to Volusianus, the soul, where it sees, there it feels; and where it feels, there it lives; and where it lives, there it is. But the soul sees, as it were, everywhere; for successively it also sees the whole heaven: therefore the soul is everywhere.

But on the contrary is what St. Ambrose says in the book On the Holy Spirit: "Who would dare to call the Holy Spirit a creature, who is in all things, and everywhere, and always? which manifestly is proper to divinity."

I answer that to be everywhere first and per se is proper to God alone. I say that to be everywhere "first" is that which, according to its whole self, is everywhere; for if something were everywhere according to diverse parts existing in diverse places, it would not be "first" everywhere: because what belongs to something by reason of a part does not belong to it first; as if a man is white because of a tooth, whiteness does not belong first to the man, but to the tooth. And to be everywhere "per se" I say of that to which it does not belong to be everywhere per accidens on account of some supposition made: as, if a grain of millet were everywhere, on the supposition that there were no other body. Therefore to be everywhere belongs per se to something when it is such that, no matter what position be made, it will follow that it is everywhere. And this properly belongs to God: because however many places be posited, even if infinite be posited beyond those that are, it would be necessary that God be in all of them; for nothing can be unless through Him. Thus, then, to be everywhere "first" and "per se" belongs to God, and is proper to Him: because, however places are posited, it is necessary that in any one there be God, not according to a part, but according to Himself.

Reply to the first: The universal and prime matter are indeed everywhere, but not according to that being by which God is; for neither the universal nor matter exist per se, but in something.

Reply to the second: Number, since it is an accident, is not per se, but per accidens, in place. Nor is it whole in any one of the things numbered, but according to a part: and thus it does not follow that it is first and per se everywhere.

Reply to the third: The whole body of the universe is everywhere, but not first: because it is not whole in any place whatever, but according to its parts. Nor per se: because, if some other places were posited, it would not be in them.

Reply to the fourth: If there were an infinite body, it would be everywhere, but according to its parts.

Reply to the fifth: If there were only one animal, its soul would be everywhere, not indeed first, but per accidens.

Reply to the sixth: When it is said that the soul sees somewhere, this can be understood in two ways. In one way, as we have heard some say, it determines the act of seeing on the side of the object; and so it is true that, when it sees the heaven, it sees in the heaven, and in the same way it senses in the heaven: yet it does not follow that it is there where it sees; for acts are in the agent, not in the object, and therefore the soul is rather where it is by its essence than where it is by its act.

Reply to the sixth: When it is said that the soul sees somewhere, this can be understood in two ways. In one way, as this adverb "somewhere" determines the act of seeing on the side of the object; and so it is true that, when it sees the heaven, it sees in the heaven; and for the same reason it senses in the heaven: yet it does not follow that it either lives in heaven or is in heaven; for to live

and to be do not signify an act passing over into an external object. In another way it can be understood as the adverb determines the act on the side of the one seeing, according as the act of seeing proceeds from the one seeing. And thus it is true that where the soul senses and sees, there it is and lives, according to this mode of speaking; and so it does not follow that it is everywhere.

Explication of the article: The conclusion is: It is proper to God to be everywhere. These words St. Thomas understands in this way, namely, that it is proper to God to be everywhere, as things now are: for, the hypothesis being posited that there were nothing in the order of things except man, even man would be everywhere; and the same must be said of a grain of millet, and of any most minute thing. For, as we used to say, a body carries along with itself situation by reason of quantity, and therefore the adverbs "somewhere" and the like can befit it, and consequently even the adverb "everywhere," when outside it there is nothing else: for then there would not be another "where" than its own: it therefore would be everywhere, that is, in every place.

Furthermore, it must be observed that God differs from other things in this, that other things are not apt to be everywhere, no matter what supposition is made about the existence of things; but God can be everywhere without the places in which his effects exist being posited. Add that, in order that God be said to be everywhere, there is no need that he exist outside the heaven, where there is nothing, as we said in that disputation. Wherefore I have rightly noted here that many Scholastics said that it did not befit God from eternity actually to be everywhere, indeed not even to be anywhere, because from eternity there was nothing where he might be. Wherefore this attribute is not one of actual existence in things, but that aptitude by which God is everywhere. Nor, moreover, is it the same as the essence according to formal ratio: for immensity includes a reference at least of aptitude to created things, just as omnipotence, by reason of which it is considered by us as a passion of the essence, and hence it is placed among the attributes. In what way, moreover, it is distinguished from the attribute of infinity, we have expressly noted elsewhere. And these things are enough about this article and about the whole question.[485]

Quaestio IX - On the immutability of God

Consequently, it must be considered concerning the immutability and the eternity of the divine, of which eternity follows upon immutability. Concerning immutability two things are asked.

485. Vazquez alludes to his earlier discussions: "as we used to say" and "we have expressly noted elsewhere," with marginal pointers in the edition (e.g., disput. 29, c. 3; disput. 25).

Articulus I - Whether God is altogether immutable

Objicitur: It seems that God is not altogether immutable. For whatever moves itself is in some way mutable. But, as St. Augustine says in On the Literal Meaning of Genesis, book 8, the Creator Spirit moves himself, neither through time nor through place: therefore God is in some way mutable.

1. Furthermore, in Wisdom 7 it is said of Wisdom that she is more mobile than all mobiles. But God is Wisdom itself: therefore God is mobile.
2. Furthermore, to draw near and to withdraw signify motion: yet such things are said of God in Scripture, James 4: "Draw near to God, and he will draw near to you": therefore God is mutable.

But on the contrary: it is said in Malachi 3: "I am God, and I do not change."

I answer that it must be said that, from the foregoing, it is shown that God is altogether immutable. First indeed, because above it has been shown that there is some first being, which we call God; and that such a first being must be pure act (*actus*) without any admixture of potency (*potentia*), since potency is simply posterior to act. But whatever in any way is changed, is in some way in potency. From which it is clear that it is impossible for God to be changed in any way.

Second, because whatever is moved, as to something it remains and as to something it passes over; just as that which is moved from whiteness to blackness remains according to substance, and so in every thing that is moved, some composition is observed. Now it has been shown above that in God there is no composition, but he is altogether simple. Whence it is manifest that God cannot be moved.

Third, because whatever is moved by its motion acquires something and reaches that to which previously it did not reach. But God, since he is infinite, comprehending in himself the whole plenitude of perfection, of all being (*esse*), cannot acquire anything, nor extend himself unto something to which previously he did not reach. Whence in no way does motion befit him. And hence it is that certain of the ancients, as if compelled by the truth itself, posited that the first principle is immobile.

Reply to the first: In the place cited Augustine speaks according to the mode in which Plato said that the first mover moves itself, calling every operation "motion"; according to which even to understand and to will and to love are called certain motions. Therefore, because God understands and loves himself, they said on this account that God moves himself, not however according to that motion and change which belongs to an existent in potency, as we now speak of change and motion.

Reply to the second: Wisdom is said to be mobile by way of likeness, inasmuch as its likeness is diffused down to the lowest things: for nothing can be which does not proceed from the divine Wisdom through some imitation, as from a first efficient and formal principle, just as even things made by art proceed from the wisdom of the artisan. Thus therefore, insofar as the likeness of the

divine Wisdom proceeds by degrees from the highest, which more participate in its likeness, down to the lowest of things, which participate less, it is called a certain procession and motion of the divine Wisdom into things; just as if we were to say that the sun proceeds as far as the earth, insofar as the ray of its light reaches all the way to the earth. And in this way Pseudo-Dionysius expounds it, in the first chapter of the Celestial Hierarchy, saying that every procession of the divine manifestation comes to us "from the Father of lights."[486]

Reply to the third: Things of this sort are said of God in the Scriptures metaphorically. For as the sun is said to enter a house or to go out, insofar as its ray reaches to the house, so God is said to draw near to us or to withdraw from us, insofar as we perceive the influx of his goodness, or fail from it.

Articulus II - Whether to be immutable is proper to God

Objicitur: It seems that to be immutable is not proper to God. For the Philosopher says in Metaphysics 2 that matter is in everything that is moved: but certain created substances, such as angels and souls, do not have matter, as it seems to some: therefore to be immutable is not proper to God.

1. Furthermore, whatever is moved, is moved for some end: therefore that which has arrived at the ultimate end is not moved. But certain creatures have arrived at the ultimate end, as all the blessed: therefore some creatures are immobile.
2. Furthermore, whatever is mutable is variable; but forms are invariable: for it is said in the sixth book of Principles that the form is simple and invariable, and that essences are consistent: therefore it is not proper to God alone to be immutable.

But on the contrary is what St. Augustine says in the book On the Nature of the Good: "God alone is immutable; but the things which he made, because they are from nothing, are mutable."

I answer that it must be said that God alone is altogether immutable, but every creature is in some way mutable. For it must be known that something can be called mutable in a twofold manner. In one way, by a potency which is in the thing itself; in another way, by a potency which is in another. I call "potency" here passive potency (*potentia passiva*), according to which a thing can attain its perfection, either in being (*in essendo*), or in attaining the end. If, therefore, the mutability of a thing be considered according to its potency to being, thus there is not mutability in all creatures, but in those only in which that which is possible in them can stand together with non-being.

It is objected: Further, all the blessed; therefore some creatures are immobile.

1. Furthermore, whatever is mutable is variable; but forms are invariable. For it is said in the sixth book of the Metaphysics that form consists in a simple and invariable essence; therefore it is not proper to God alone to be immutable.

486. Pseudo-Dionysius, De coelesti hierarchia, cap. 1.

But on the contrary is what St. Augustine says in the book On the Nature of the Good: "God alone is immutable; but the things which he made, because they are from nothing, are mutable."

I answer that it must be said that God alone is altogether immutable, but every creature is in some way mutable. For it must be known that something can be called mutable in a twofold manner. In one way, by a potency which is in the thing itself; in another way, by a potency which is in another. I call "potency" here passive potency (*potentia passiva*), according to which a thing can attain its perfection, either in being (*in essendo*), or in attaining the end. If, therefore, the mutability of a thing be considered according to its potency to being, thus there is not mutability in all creatures, but in those only in which that which is possible in them can stand together with non-being. Wherefore in lower bodies there is mutability, both according to substantial being, because their matter can be together with the privation of their substantial form, and as to accidental being, if the subject is compatible with the privation of the accident: thus this subject, man, is compatible with non-white, and therefore can be changed from white to non-white. But if there be an accident which follows upon the essential principles of the subject, the privation of that accident cannot stand together with the subject. Hence the subject cannot be changed according to that accident, as snow cannot become black. In the heavenly bodies, however, matter is not compatible with privation of the form; because the form perfects the whole potentiality of the matter: and therefore they are not mutable according to substantial being, but according to local being; because the subject is compatible with the privation of this place or of that. But incorporeal substances, because they are themselves subsisting forms, which nevertheless stand to their own being as potency to act, do not admit in themselves the privation of this act; because being (*esse*) follows upon form, and nothing is corrupted except by this, that it loses its form. Hence, in the form itself there is not a potency to non-being; and therefore such substances are immutable and invariable according to being; and this is what Pseudo-Dionysius says in the Divine Names, that the created intellectual substances are free from generation and from every variation, as being incorporeal and immaterial; yet there remains in them a twofold mutability: one, according as they are in potency to the end, and thus there is in them a mutability according to choice from good to evil, as St. John Damascene says; the other, according to place, inasmuch as by their finite power they can reach to certain places which previously they did not reach - which cannot be said of God, because by his infinity he fills all places, as was said above.[487] Thus, therefore, in every creature there is a potency to change: either according to substantial being, as in corruptible bodies; or only according to local being, as in the heavenly bodies; or according to the order to the end and the application of power to diverse things, as in the angels; and universally all creatures in common are mutable according to the potence of the Creator, in whose power is their being and not-being. Wherefore, since God is mutable in none of these modes, it is proper to him to be altogether immutable.

Reply to the first: That objection proceeds from what is mutable according to substantial or accidental being. Of such motion the philosophers have treated.

487. Pseudo-Dionysius, De divinis nominibus, cap. 4; St. John Damascene, De fide orthodoxa, lib. 2, cap. 4.

Reply to the second: The good angels, over and above the immutability of being, which befits them according to nature, have immutability of choice by divine power; yet in them there remains mutability according to place.

Reply to the third: Forms are called invariable because they cannot be the subject of variation; yet they are subjected to variation inasmuch as the subject is varied according to them. Whence it is clear that according as things are, thus are they varied: for they are not called "beings" as if they were a subject of "being," but because there is something to them.

Observations concerning the whole question.

There follows another attribute of the divine essence, which is called immutability, in which, besides the essence, there is also signified a certain respect, although by way of negation; on account of which respect this new attribute can most fittingly be numbered. Concerning the whole question a few things are noteworthy, yet nothing that requires a long disputation; wherefore we shall treat it briefly.

It must be observed, therefore, first, that a threefold genus of mutation can be conceived of in a rational nature. The first, according to being, namely, that a thing be such as to be able not to be; and in this way God cannot be changed - not because he is his own existence (*esse*), but because he does not depend on another; and this is the proper cause or ratio of incorruptibility, not, however, that essence is not distinguished from existence by the nature of the thing; we shall show in Disputation 183, chapter 5, where we shall demonstrate that the angelic nature can be mutable by this genus of mutation, although in reality it is its own being. Therefore the question which some here dispute concerning the incorruptibility of God and of the angel, we remit to that place.

The second genus of mutation is according to some accident: in which way every creature can be changed. Wherefore, since there is no accident in God, as was proved at q. 3, art. 6, by this genus of mutation he cannot be changed; and how he cannot be moved by place, was explained in Disputation 29, chapter 5.

The third genus of mutation is of purpose and will, or of knowledge: as when one who before thought something true, afterwards judges it false; and what he before had decided to do, afterwards he does not wish. And it will be clear from the places cited below that this genus of mutation cannot be fitting to God. The immutability indeed of the knowledge of God is deduced from the certitude of the science which he has; and this we shall more fully declare at q. 14, arts. 2 and 15. But the immutability of the decree is deduced from another source, as we shall say at q. 19, art. 7.[488]

Regarding the first genus of immutability, that is understood which is in 1 Timothy 6: "Who alone has immortality." Concerning the second can be taken the testimony of James 1: "With whom there is no change, nor shadow of turning." For for "change" the Greek has a word which denotes conversion; and Proclus uses it in his Sphere for the conversion of the sun.[489] Therefore James signifies that to God - whom he had called the Father of lights - there does not befit the alternation

488. For the immutability of divine knowledge, see q. 14, arts. 2 and 15; for the immutability of the divine decree, see q. 19, art. 7.

of light and shadow which we see in our sun; for by reciprocation and conversion from the East into the West the sun is overshadowed to us; wherefore night is said to succeed. But God, because he has in himself no change, is of right called not only light, but also the Father and source of light, into whom no conversion, or reciprocal turning, can fall. But what he subjoins, "Of his own will he begot us by the word of truth," is not to be referred to the immutability of his will - about which nothing had been said - but to that which he had said a little before: "Every best gift," etc. Concerning the third genus of mutation the other testimonies of Scripture are to be understood, which we shall set down below at q. 19, art. 7.

Then it is to be noted that, since by our mode of understanding we attribute to God various perfections after the manner of passions, in like manner one proceeds from another, not as from a cause, but as from a ratio. And concerning this attribute of immutability not a few think that it is born proximally from the ratio of immensity; and therefore St. Thomas, after he had treated of immensity, immediately disputed of immutability. But from those things which we have thus far said it is easy to gather that this is not true. For, first, the genus of immutability which befits God from the fact that he does not depend on another, in which the ratio of incorruptibility consists, is present to God by the ratio of infinity according to essence, as we proved in Disputation 25, chapter 5; therefore immutability in this mode arises rather from infinity than from immensity. The second genus is born from this, that in God there is no accident; which pertains to divine simplicity: and therefore upon that matter, which is of the simplicity of God, it has been disputed at q. 3. This immutability therefore has its origin from simplicity, in which genus there is also immutability according to place, which is attributed to God by reason of immensity. Finally, the third genus is the immutability of the knowledge and will of God, which arises from the infinity and certitude of his knowledge and will, as will clearly be evident from the places cited. Wherefore only immutability according to place comes from immensity; and hence the opinion which asserts that the attribute of immutability proceeds from immensity cannot be universally true.

489. 1 Tim. 6:16; James 1:17; on the Greek term for "change," cf. Proclus, in his work on the Sphere, where he uses it for the sun's conversion.

Quaestio X - On the eternity of God

Articulus I - Whether eternity is fittingly defined as the interminable possession, all at once, of life

First, it seems that it is not a fitting definition of eternity which Boethius posits in book 3 of the Consolation, saying that "eternity is the interminable possession, all at once and perfect, of life." For "interminable" is said negatively. But negation is not of the notion except of those things which are deficient; which does not befit eternity: therefore in the definition of eternity "interminable" ought not to be placed.

1. Furthermore, eternity signifies a certain duration; but duration regards being (*esse*) more than life; therefore life ought not to have been placed in the definition of eternity, but rather being.
2. Furthermore, whole (totum) is said of that which has parts. But this does not befit eternity, since it is simple; therefore it is unfittingly said "all at once" (tota).
3. Furthermore, many days cannot be at once, nor many times. But in eternity days and times are said in the plural; for it is said in Micah 5: "His going forth is from the beginning, from the days of eternity"; and in Romans 16: "According to the revelation of the mystery kept silent for eternal times": therefore eternity is not "all at once."

But to the first, it is answered, that simple things are wont to be defined through negation, as a point is that which has no part: which is not because the negation is of their essence (*essentia*), but because our intellect, which first apprehends composites, cannot arrive at the cognition of simples, save by the removal of composition.

Reply to the second: That which is truly eternal is not only a being, but a living thing; and living itself extends in a certain way to operation, not, however, to being. But the stretching-out of duration seems to be attended more according to operation than according to being; whence also time is the number of motion.

Reply to the third: Eternity is said to be "whole" (tota), not because it has parts, but inasmuch as nothing is lacking to it.

Reply to the fourth: Just as God, since He is incorporeal, is named in the Scriptures by the names of corporeal things metaphorically, so eternity, existing all at once (tota simul), is named by temporal names of succession.

Reply to the fifth: In time two things are to be considered, namely time itself, which is successive, and the now of time, which is imperfect. Therefore he says "all at once," to remove time; and "perfect," to exclude the now of time.

Reply to the sixth: That which is possessed is held firmly and at rest. Therefore, to designate the immutability (*immutabilitas*) and indefectibility of eternity, he used the name of "possession."

The conclusion is affirmative. The text of St. Thomas needs no explanation.

Disputatio XXXI - How eternity and immutability are distinguished, and which of them presupposes the other

Caput I - In what way eternity and immutability are distinguished

Before we examine the doctrine of this disputation, it must be premised in what way St. Thomas, and the other Scholastics, distinguish eternity from immutability as a different attribute. Now it is without controversy that these two attributes differ in notion (ratione). Thus St. Thomas hands this down in the following article, and Cajetan supposes it thus in the present. Aureolus also agrees, as Capreolus reports in I, dist. 9, the only question, art. 2, arguments of the first order.[490]

Besides these, however, and some more recent writers, no other, whom I have read, made mention of this difference: which indeed is hard to assign. First, because the Fathers seem to confuse these two: for Tertullian in the book Against Hermogenes, ch. 39, says that the laws of eternity are that it cannot suffer dispersion and alteration, wherein the proper notion of immutability seems to be placed.[491] St. Augustine, however, in the book On the Nature of the Good, ch. 39, speaks thus: "But that is true eternity, which is true immortality, that is, that highest incommutability, which God alone has."[492]

Then also, if we attend to the notion, to distinguish these two appears no less difficult: for since the eternal is that which lacks beginning and end of its being, it seems altogether the same as if you were to say that it always is in the same way; but this is immutable. For immutability, insofar as it is constituted as a divine attribute, is not only a negation of mutation which is properly called mutation, to wit, with the subject remaining, but of any change whatsoever, even that which is from being to non-being, as is gathered from the doctrine of St. Thomas, q. 9, art. 2, and as Ferrarensis teaches, Contra gentiles, ch. 15, at the beginning.[493]

These things, however, do not prevent eternity from being distinguished in notion from immutability: for immutability is a fullness of being itself signified by the negation of change; but eternity expresses something else, namely duration and perseverance in being, which is said to be, as it were, the age or aevum of God's very being; this immutability does not so expressly denote. Eternity moreover adds the negation of measure, which immutability does not formally signify. Therefore eternity is God's duration without measure; immutability, rather, is the state of a thing full in its being, capable of no change. Wherefore, whether you consider the negation or the

490. St. Thomas, in the following article; Cajetan, on the present article; Aureolus, as reported by Capreolus, In I Sent., dist. 9, unica quaest., art. 2, arguments of the first order.

491. Tertullian, Adversus Hermogenem, ch. 39.

492. St. Augustine, De natura boni, ch. 39.

493. St. Thomas, q. 9, art. 2; Ferrarensis, Contra gentiles, ch. 15, at the beginning.

positive ratio, immutability is not the same in notion with eternity, but eternity so closely follows it that we easily understand the one by the other. And therefore the Fathers, not being very solicitous about the formal notion of these attributes, easily confuse the one with the other.

Caput II - The opinion of Cajetan on the proposed question

It is certain among the Scholastics that not only the formal notion (*ratio formalis*) of duration, but also the negation of measure, is contained in the concept of eternity, from which negation it is called interminable. The controversy, however, is whether, besides these two, there also belongs to it some respect of reason, by which its formal notion may be fully unfolded, or whether it is wholly real, so that it is not completed by the intellect. Now when we ask whether the whole notion of eternity is real, we do not call into question whether it is some thing distinct in reality from the Deity by nature, or not: for whatever is in God is God Himself, as we will show in disputation 116 and the following; but we ask whether by the name of eternity we signify some notion that is only real, though in our intellect distinct from the essence, or whether we also denote some respect of reason as a complement of it under that name. All also, as a certain point, suppose that by the name of eternity only a respect of reason is not denoted. But in the question thus understood the Doctors' opinions vary.

The first is Cajetan's in this article, who holds first that the formal notion of eternity - which he calls "objective" - is wholly real, nor is it completed by any respect of reason. And he says that this notion is uniformity, so that, he says, eternity is formally uniformity; and that St. Thomas taught this, when he said that eternity consists in the apprehension of the uniformity of that which is outside motion. He said "in the apprehension of uniformity," not because it would consist in some respect of reason arising from apprehension, but because that whole ratio of uniformity is apprehended - that is, the objective concept of uniformity, which is real.

Cajetan indeed proves this by no reason; yet it can be recommended in this way. The notion of uniformity is unity in form: therefore it is real, and consequently so is eternity. This ratio nevertheless supposes what is most important, namely, that in eternity there is uniformity, as St. Thomas plainly taught. Moreover, because in this article he also taught that not only uniformity pertains to the notion of eternity, but the negation also of beginning and end - although we include it in the concept of eternity, as all teach - still the same conclusion is altogether proved. For that negation is without any order to the intellect: therefore the whole notion of eternity, even if you include the negation, is completed without any respect of reason.

Secondly, amplifying his view, Cajetan says that eternity is uniformity itself formally, not materially - that is, not the unity of uniformity, as some wished; for thus it would be materially uniformity itself - but uniformity itself as such. Whence it is clear how ill some recent authors understood him, who assert that according to his mind eternity is uniformity itself abstract, not, however, concrete in the divine nature; so that uniformity would not be unity in the divine nature. Nothing could he have thought less, as is clear to one who reads him: for rather he says that unity and uniformity are the same, except that uniformity is unity contracted to form; for it is unity in

form; whereas unity is an abstract and common notion. Cajetan only contends that eternity is not the unity of uniformity, as St. Thomas should be understood to have spoken formally, when he said that eternity consists in the apprehension of uniformity, and thus it is uniformity itself formally, not the unity of uniformity, which would be materially. Then too it would be a useless repetition, which logicians are wont to call a nugation, if we were to say "the unity of uniformity." For it would be just as if we were to say "the unity of unity in form." For uniformity is unity in form.

Thirdly, Cajetan's view must be explained still more. For some recent Theologians have interpreted it in a sinister way. It must therefore be noted that he never taught that eternity is a real measure of the divine nature, as they falsely impute to him. He only said that its formal notion is real, namely the uniformity of the divine nature without beginning and without end. And what he added - that it is also a measure of God Himself - he did not subjoin because he thought it to be a real measure, since it is manifest that it is not really distinct from God Himself, and that nothing can really measure itself; nor did he think that any notion of measure is contained in the objective concept of eternity; but he only taught that eternity itself is a measure which could accidentally befit it. This is Cajetan's doctrine faithfully rehearsed, which we, setting it forth and confirming it, will refute below.

Caput III - What the more recent authors think

The second opinion is that of some recent authors, different indeed from Cajetan's view by a little, namely, that the formal notion of eternity is the uniformity of God's duration taken in recto, which they say is real; but that it connotes in obliquo the notion of measure, which they teach to be only a respect of reason: wherefore this attribute is truly something real before every operation of the intellect, in whose notion the ratio of measure is contained fundamentally (as they say), not formally; but it is completed formally by the intellect - just as many think that time is in reality the duration of motion, to which there supervenes a respect of reason, which is not of its essence.

Moreover, besides the fact that below the falsity of this opinion, as also of the preceding, will be expressly shown, to pass over that, I say that in it it is not sufficiently intelligible how in the notion of eternity there should be contained a respect of reason connoted in obliquo, and yet the notion of eternity be real before the intellect: for if that respect is denoted by it, something of order to such a respect must belong to its notion; but order and connotatum are always included in the formal notion of a connotative term. Otherwise it is absurd, and in the judgment of its own patrons, because they hold that the notion of eternity is before the intellect: now an order to a respect of reason cannot be real; nor absolutely can there be an order to a respect of reason, whether real or of reason, since there is no relation to a relation. Therefore that order to the connotatum must be of the notion of the connotative term; which is proved by this, that as often as we say that by the name of one thing something else is connoted, the connotatum is not of the essence, but some order to it belongs to the notion of the connotative, though not connatural to it. Therefore, as often as by the name of one thing something else is connoted, the connotatum cannot be a respect, but something absolute; the order, however, to that is of the notion of the connotative.

Caput IV - The third opinion: eternity as composed of real duration and of the ratio of measure

Its falsity, as also of the preceding, will be expressly shown; yet, to touch this by the way and briefly, and to say something of reason, namely that it be completed in the measure of the divine substance, and thus that the notion of eternity be essentially completed by the intellect: in this I do not sufficiently understand how, in the notion of eternity, there is contained a respect of reason obliquely connoted, and yet the notion of eternity is real before the intellect. For if that respect be denoted by the same [term], there must belong to its notion some order to such a respect: for order to the connotatum is always included in the formal notion of the connotative. But this is absurd, both in their own view - because it would then follow that the notion of eternity is not before the intellect; for an order to a respect of reason cannot be real - and also absolutely, since there cannot be an order, whether real or of reason, to a respect of reason, because there is not a relation to a relation. Moreover, that that order to the connotatum must be of the notion of the connotative is proved by this, that as often as we say that by the name of one thing something else is connoted, the connotatum is not of the essence, but some order to it [belongs to the notion]; otherwise by that very name it would not be connoted. Therefore, as often as by the name of one thing something else is connoted, the connotatum cannot be a respect, but something absolute; the order, however, to that is of the notion of the connotative.

They bring in, moreover, an example for their doctrine in this way: just as wisdom in God is a real perfection, yet it connotes the notion of an attribute, which is by the intellect; so too eternity is a real duration (*duratio*) in God, yet it connotes the notion of measure (*mensura*), which is by the intellect. But this example is not apt: for although wisdom is an attribute of God, and the notion of attribute is said by the intellect (for our intellect attributes something to God after the mode of a passion), nevertheless wisdom, and any perfection of God signified by its proper name, does not connote this notion of attribute, but denominatively alone is called an attribute; just as the name animal so signifies the substance (*substantia*) of the animal that it does not connote the notion of genus, although the animal itself is denominated a genus.

The third opinion is, that to the formal notion of eternity there pertains something real, namely a duration without beginning and without end, and also something of reason, to wit that it be completed in the measure of the divine substance; and thus that the notion (*ratio*) of eternity be essentially completed by the intellect: just as time has both the duration of motion, which is something real, and its number, which is of the reason that numbers. This sentence is handed down by Ferrarensis in Contra gentiles, ch. 15, not far from the beginning; while among the ancient scholastics, who do not mention this difficulty, some quite plainly affirm that eternity is the measure of the divine substance. Whether, however, its whole formal notion is the notion of measure, or is a complement, or something of these, they do not explain. Thus teaches St. Thomas in the present question, art. 2, reply to obj. 3; Albertus in I, dist. 9, art. 8, and in the little treatise De quatuor coaevis; and Henry in q. 3, art. 1, and Henry again in the Summa, art. 31, q. 7.[494]

St. Thomas only adds that eternity is not a real measure, but [a measure] by the intellect: whether this be true, we shall say below. Ferrarensis scarcely confirms this opinion. Behold, for it would have been enough if he had explained and defended it. Yet it can be proved by this reason. Eternity, besides duration, just as also time, formally has the notion of measure: but this belongs to it by the intellect; for since it is not distinguished from the substance of God, of which it is the measure, it cannot be a real measure.

This opinion will be easily impugned below; meanwhile, however, it must be noted that certain more recent [authors], not sufficiently consistent in their doctrine, wrongly assert that eternity is not formally a duration, but the measure of the duration of the divine substance; which by no reason can be defended. For if it is the duration itself that falls under measure, it does not seem that anything else in God could be the measure of that: for neither can uniformity measure the duration - for that is the very permanent duration, as was said above - nor immutability, because this is distinguished from eternity, as we proved in that place; therefore the notion of measure belongs to duration, if it is to belong to anything.

Caput V - Notes in favor of the truer opinion

Accordingly, in this matter my mind is that eternity in some respect is constituted essentially by something real and also by something of reason, and is so constituted essentially. The real [component] is a duration remaining and uniform, without beginning and without end; the [component] of reason is not a measure, but the negation of a measure. Wherefore eternity must be defined in this way: a duration remaining, uniform, without beginning and without end, lacking a measure. This sentence seems to agree with that which Ferrarensis handed down, when he said that the notion of eternity is completed both by something real and by something of reason. Yet it differs in this, that he thinks that that [element] of reason, which he says pertains to the notion of eternity, is the notion of measure; whereas we, on the contrary, assert that it is not a measure, but the negation of it. Why we say that this is of reason will be explained in the following chapter. From which it is also clear how far this our sentence differs from the others that we have mentioned. But in its explication and confirmation certain things must be observed.

First: if there could be some real measure of any thing, it would have to be really distinguished from the very thing of which it is the measure; for the same thing cannot measure itself by a real measure. Therefore all plainly admit that no real measure can be applied to God; but those who say that eternity is His measure affirm that it is not real, but according to reason and our mode of understanding.

Second, a definition of measure must be premised, which Aristotle clearly gathers in Metaphysics X, chs. 2 and 3. Although, moreover, the name measure among approved authors also signifies that by which something is bounded by weight, or capacity, length, height, or breadth, and by mind - what philosophers call passive measure, or mensurability - and the instrument by which

494. Ferrarensis, Contra gentiles, ch. 15, near the beginning; St. Thomas, in this question, art. 2, ad 3; Albertus, In I Sent., dist. 9, art. 8, and the tract De quatuor coaevis; Henry, Quodl., q. 3, art. 1; and Henry, Summa, art. 31, q. 7.

we measure, which is called active measure; and although Aristotle defines only the active measure; nevertheless, from that it will also easily be evident what measure is in the former way; and the explication of both will not a little illuminate our sentence.

Measure, therefore, says Aristotle (he understands the active [measure]), is said in a twofold way. First, in each genus, that which in some manner measures the rest belonging to that genus, inasmuch as those are said to be more perfect the more they are like to it. And in this way any first species is something real; yet the ratio of measure, which we attribute to it, is of reason. For the first species of the thing itself does not measure others, but our intellect uses the first species as an instrument for knowing and defining the perfection of the others. Next, measure is said properly and most of all (says the Philosopher) of quantity (*quantitas*): yet by quantity he understands whatever is signified after the mode of it, which he indicated not obscurely in ch. 3. For he said that the measure ought to be homogeneous with that which it measures, and thus that the measure of lengths is length, of voices, voice, of weights, weight. But it is clear that voice is not properly a quantity, or at least no one would concede this of weight, since it is a quality; and yet in weight, as in length, we properly speak of measure. Therefore measure is homogeneous, as weight is with weight, not with length. And in the same way the duration of any thing whatsoever, about which there is now controversy, must be measured by some duration, not by weight; to which [point] the measure of voice also, whose length and shortness has been adduced, can be reduced.

Wherefore Gabriel, on II Sent., dist. 2, q. 1, art. 1, note 1, assigns, in accord with the four modes of quantity, four modes also of measure. The first he says is of perfection, which Aristotle recounted in the first place. The second, however, which Aristotle placed in quantity or in things which are signified after the mode of quantity, Gabriel distributes into three others. The first he says is of multitude, the second of extension, the third of duration. But besides these four there is another, as is clear from what has been said, namely of weight. Wherefore it is better to reduce all these to one, which is of quantity or after the mode of it, and to distinguish only that which is of perfection.

Moreover Aristotle defines measure properly in that same ch. 2 thus: it is that by which the how-much is known. That is, upon whose quantity being inspected we understand how much another thing is, whether by length, or by weight, etc. Forthwith he subjoins these words: As the how-much, either by number, or by unity. But every number [is measured] by one. As if he said: that by which we know how much is either number or unity; and by how-much he understands the continuous, not the discrete: but the continuous is best known by number, just as the quantity of bread [is known] by the number of wines; by no other continuous quantity equal to it could it be known, because no other would be better known; but number cannot be known by another number, but by unity repeated; for if to a multitude you apply another multitude, you could not measure it unless, by unity repeated, you arrive at the ultimate limits. Therefore Aristotle added, Every number [is measured] by one, and finally concludes that the first measure is unity. He thus said that the how-much, that is, the continuous, is known either by number or by unity: for in the end number is reduced to unity as to the first measure. From which doctrine, in the following chapter, we shall easily deduce that measure is formally a respect (*respectus*) of reason.

Third, it must be noted from Durandus on II, dist. 2, q. 5, n. 11, that quantity, which extends the substance subject to it, is not the measure of that [substance]; and by the same reason duration is not the measure of the substance in which it is. For measure is that by which something is known; but a thing so far as it is quantitative is not known by its own quantity, nor is a substance that endures known by its own duration: therefore neither quantity nor duration are the measure of the substance in which they inhere. Nay rather, quantity so extends the substance, and duration in its own way also affects it, that it renders the substance subject to measure, that is, measurable. For when quantity is applied, the substance is measured as quantitative, because the substance is extended by quantity; which could not be if it lacked it. Duration also, when it is extrinsic and another's, applied by the intellect, measures another substance which has duration in itself, by reason of which it can fall under measure; but the proper duration of each thing cannot measure that [same thing], because it cannot be the cause that by it [the thing] be known as how much.

Then the same is proved from that place of Aristotle: for he teaches that the measure ought to be homogeneous, that is, of the same ratio with the thing it measures; as magnitude with magnitude, length with length, weight with weight, and in the same way duration with duration. Where he always assigns that one magnitude is the measure of another magnitude, and one length of another length, etc., but never quantity as the measure of a naked substance; for thus the measure would not be homogeneous. Wherefore as often as a substance is subjected to measure, it is by reason of its proper quantity, or of something having itself after the mode of quantity, that it is subjected. Thus, then, a substance is not subjected to its own proper duration as if to a measure, but by reason of its proper duration it falls under the measure of another duration. The property, therefore, of quantity, which is wont to be called mensurability, is not an active measure of the substance in which it is, but a passive [one], by which the substance is rendered capable of measure, that is, measurable.

But if someone should contend too strongly that there is a certain genus of active intrinsic measure, and in this way that quantity and duration are the measure of the substance in which they are; and that Aristotle defined the measure which we apply extrinsically: let him produce the definition of this intrinsic measure, and he will find it to be nothing other than passive [measure], which we gladly concede: for any thing by its quantity or duration becomes measurable not by that [quantity or duration] itself, but by another applied extrinsically.

Fourth, it must be observed that we in a certain way call sense and science a measure of things, as the same Aristotle teaches in the place cited. They are said, however, to be a measure not of their objects, as Averroes, Alexander, and St. Thomas interpret that place, but they are said to be a measure of all things which fall under measure, inasmuch as by sense and science we apply the unity by which we measure things, knowing how much they are. Wherefore they seem to pertain to active measure, just as Aristotle in Physics IV, ch. 14, text 131, and in De Anima said that [measure] is a number by the one numbering, because by cognition it divides and numbers motion; but straightway Aristotle subjoins in that same book III, ch. 3, as if correcting what he had said: But they are measured rather than that they measure; yet it happens to us as if by another measuring us we should know how much we are, because a cubital measure has been applied to us. These

words seem difficult and contrary to what he had said. They are thus to be understood. Science and sense rather fall under measure than are a measure of other things at all; for they are disposed just so when we apply a measure for knowing a quantitative thing, as if a measure were applied to us by another, so that thence we might know how much we are. Then, however, our science and sense would be as it were passive; and therefore Aristotle said that they are rather measured than that they measure. Therefore they are disposed in the same way when we ourselves apply the measure. But sense is said to fall under measure inasmuch as the known thing is comprehended under measure, and thus, as is known, the known thing becomes in a certain way also a cause of the very cognition. Nor, indeed, does Aristotle deny that cognition also pertains to active measure; but...

But he says that it rather falls under measure: for it itself has two things, both to apply or compare the measure with the thing that falls under measure - this, inasmuch as it pertains to action - and then to know how great the thing is to which the measure is applied; and this, inasmuch as it seems to pertain to passion. And since this second more properly belongs of itself to science and to the intellect than to apply a measure - which can be applied by another - the science itself ought rather to be reduced to passive measure than to active.

Finally, it must be noted that a measure is always something extrinsically applied for measuring, as Scotus most aptly taught in II, dist. 2, q. 2, § 5. For the second part: whether the unity which is applied for measuring be a thing and some distinct substance - or one and the same as the cloth to be measured, which is a part of the same thing which is to be measured (as in the motion of the heaven, one part of which we take and, repeating it over the remainder, apply it, and measuring by dividing the whole); or whether it be the mere formal ratio of unity by which, in repeated multitude, number is discerned - measure is therefore always something extrinsic to the thing which we measure, and nothing can measure itself. From all which it is plainly clear that the notion of measure and of the measurable consists only in a respect of reason.

The doctrine set out above is confirmed.

The first is that it belongs to the notion of eternity to be a duration, which is something real - in which I do not see the Doctors' opinions to be discrepant; but whether in the notion of duration there be connoted something extrinsic, among them there is some controversy. The second part of this position is that to the essence of eternity there in no way pertains the notion of measure. This is proved as follows.

If eternity in itself had the notion of measure, it would either be a real measure or one by the intellect. It cannot be real, neither referred to the substance of God, nor to anything else. The first, because eternity of itself really measures no other real duration, as is evident; then, because the substance of God cannot really be measured, since it is not really distinguished from it - as is clear - which would have been necessary in order that it be a real measure, as was said in the first notation. Finally, because every measure is formally something of reason, as we showed in the same place; and every unity is called a measure only insofar as it serves our intellect for knowing the quantity of some thing: but this is a certain respect of reason. For from the fact that some thing

is assumed by the intellect as an instrument by which the quantity of another is discerned, nothing other than a respect of reason can befit it. It is therefore clear that eternity is not a real measure either of substance or of another duration.

Nor can it be a measure of reason, as is any measure whatsoever, that is, by respect to an intellect that knows one thing from another: for then it would be the measure either of the substance of God, or of other durations. Not indeed of the substance of God; because, as we have from the third observation, no duration, just as neither quantity, measures the thing of which it is, but renders it measurable. Therefore, since the eternity of God is the duration of his substance, it will not measure it; but according to our mode of knowing - if that could be done - it would render it measurable. Why, however, even this it does not effect, will be said a little later; and by this reasoning Durandus proves in II, dist. 2, q. 5 that the same is not the measure of Angels, of which there will be fuller treatment in Disputation 33.[495]

Next, it cannot be the measure of other durations: for although it is a measure in the prior way out of those which we enumerated in the second notation from the doctrine of Aristotle, namely of perfection - because the other durations are known to be the more perfect, the more they are assimilated to eternity - yet it cannot be a measure in the posterior way, about which there is now controversy, namely a measure of quantity, or of something after the mode of quantity. For this latter, as was there explained, is unity or number, which is assumed by the intellect for knowing the quantity of some thing: but eternity cannot serve any intellect for this; therefore it cannot be the measure of other durations. And first, not for the divine intellect itself, to which all things are per se known, and not from another: that is evident. Then neither for a created intellect, even angelic, as is proved. For no one can from the eternal duration of God know how great is the duration of some other thing, whether this be finite on both sides, or on one side only, or on neither.

For if it were finite on one side, or on both, it would have no proportion with the eternity of God; therefore it could not be defined by it. But if it were infinite on both sides - as if God had created from eternity a creature which also would be going to endure forever - by the eternity of God it could not be made known how great its duration was. For although in common speech we might say that it would endure with God, yet for that reason we would not measure it by the eternity of God, because both would remain equally unknown and undefined. There is added that every measure, in order to be better known, ought to be reduced to unity, as is evident from the third notation. Wherefore whenever we measure life or other motions by time, we therefore take as measure the motion of the first movable, because it is better known to us and defined by some part of it, as by a repeated unity, by which also we distinguish hours, days, months, and years: but this in eternity we cannot do; therefore it cannot be our measure.

From these it is clear that to the notion of eternity it belongs not only not to be a measure, as the second part of our view asserts, but also that the notion of measure in no way befits eternity, which is attributed to time, to weight, and to other quanta. This is expressly taught by Durandus in I, dist. 19, q. 2, ad 1; Gabriel in II, dist. 1, q. 2, a. 3, dub. 1, about the middle; and Ockham in II, q. 13,

495. Durandus, In II Sent., d. 2, q. 5; see also the fuller treatment on Angels' duration in Disputatio 33.

somewhat from the beginning.[496] I pass over the former reason by which Durandus proves this; for, if it is to have any force, it must be reduced to some one of ours. The latter reason is of this sort: just as what is first in any genus does not fall under the measure of something of the same genus, so also what is first in the universe of things, which is God, cannot be defined by any measure. Therefore eternity is not the measure of God. It is, however (says Durandus), a heterogeneous measure of all other things. Wherefore he does not deny that eternity is the measure of other things, but only of God; and Albert, in I, dist. 9, a. 8, seems to have taught the same.

If, indeed, Durandus understands by measure that of perfection, which is a measure in the prior mode, as we said in the second notation, his opinion is true; and his reason only proves that eternity is not the measure of God in this way, about which there is no controversy. But if he speaks of the measure of quantity, which is a measure in the posterior mode, eternity cannot be the measure of other things, as has been shown; nor does it follow that God does not fall under measure on this account, that what is more perfect in one genus does not fall under the measure of what is more imperfect in the same genus. For sometimes we measure what is more noble by something less noble, as by the motion of the first movable we measure the duration of an Angel, as we shall say in Disputation 33. Rather, therefore, eternity for this reason cannot be a measure, because the duration of it is without principle and end.

Someone will object, Gregory Nazianzen in the Oration on the Nativity, which is the 38th, a little before the middle, where he speaks thus: Eternity is neither time, nor any part of time (for it does not fall under measure), but what for us is divided by the motion of the sun is time; that, however, is, as it were, a certain temporal motion and interval which is extended together with the eternal things. Therefore, according to his opinion, eternity is referred to the eternal things as time is to temporal things; but time is distinguished from temporals; therefore also eternity from eternals. Then too, eternity is extended together with the eternal things, just as time with temporal things: therefore, as time measures temporal things, so also eternity eternal things. He has the same words in the third Oration on Theology, which is the 35th, a little after the beginning; and in the second on Easter, which is the 42nd, before the middle, where Prelusius in the same place, and Isellus too, seem to say the same.

I answer: I take Nazianzen not to teach that eternity is the measure of the eternal things, but rather to allege that eternity lacks measure. For if eternity cannot be defined by any measure, it follows that it is not the measure of the eternal things themselves. And if sometimes eternity is called a measure of God, it is not so called because the definition of measure fits it, but so as to show that God can be defined by no measure; we say that his measure is eternity.

It should also be observed that Nazianzen seems to have defined not only the intrinsic duration of God, which is true eternity, but also another duration as if adjacent to the eternal things, which he called an interval and a kind of temporal motion extended together with the eternal things, that is, equal to them. But this "eternity" is nothing in reality, but is fashioned by imagination only; and

496. Durandus, In I Sent., d. 19, q. 2, ad 1; Gabriel [Biel], In II Sent., d. 1, q. 2, a. 3, dub. 1 (circa medium); Ockham, In II Sent., q. 13.

he called it a "quasi-motion," as Nicetas very aptly noted on that 42nd Oration, to show that an exact description of eternity cannot be given, but that it is to be understood after the manner of a flowing motion and of a space having latitude.

Wherefore the same Nazianzen in Iambic 15, among other definitions of things, of which he thus speaks, says: Aevum, which without time flows unceasingly; and by "aevum" he calls the very eternity as the common mode of the whole, as we noted in Disputation 33, c. 1. He said, moreover, that it flows without time, and meant to signify that the thing itself has no succession, although it be conceived after the manner of a flow.

In the same sense St. John Damascene, De fide, also speaks of eternity; and Albert, in I, dist. 8, a. 8, adds a definition of eternity handed down by Isaac, framed thus: It is the universal common measure of things. Albert, however, holds that in this way there is defined only a certain extrinsic eternity, and one adjacent to the eternal things. True eternity, however, is the duration of the substance of God, or rather God himself, as says St. Gregory, Moral. XVI, c. 10; and St. Augustine on that Psalm 101, "In generatione et generationem." In what way, moreover, God himself also is said to be the author of eternity, we shall say below in Disputation 33, c. 1.[497]

The third part of our opinion remains, which from what has been said is easily gathered, namely, that to the notion of eternity - signified by this name - there belongs something of reason. Yet that is not some positive relation, nor merely the negation of something real, such as to lack beginning and end, but the negation of a certain respect of reason, namely, of measure; and this seems to be expressed by that word of the definition, "interminable." For this does not only signify the negation of beginning and of end in a duration which is real, but also the negation of being measurable: for it is called "interminable" because it cannot be determined or defined by any measure. And since measure is formally some respect of reason, as was proved in the fourth notation, the negation of it will also be the negation of some being in another way than other negations - which, although they are beings of reason, that is, have no other entity than that they exist through the intellect, are nevertheless real negations and, in respect of their being negations, have no order to the intellect.

This negation, however, insofar as it is a negation, is of some being of reason; and thus "always" seems to be signified affirmatively, although it is expressed by that negation. For "it is said to be always," that is, under whatever span of duration can even be thought; but the negation of measure, as I said, aptly expresses that formal element of eternity: by which reason time and eternity are opposed. For just as time is not only the duration of the first mobile's motion, but also - as we shall show in Disputation 33, c. 2 - a duration measured and defined by an intellectual apprehension; so, on the contrary, the formal element of eternity is a duration lacking every boundary or limit. Accordingly, Scripture says that God's years do not fail; and elsewhere, that his

497. St. John Damascene, De fide; Albert the Great, In I Sent., d. 8, a. 8; St. Gregory the Great, Moralia XVI, c. 10; St. Augustine, on Ps. 101 "In generatione et generationem."

"years are without number," not because some years can be numbered, but to signify that, as regards our knowledge, number and measure have no place there, which is precisely what "interminable" conveys.[498]

Disputatio XXXII - Whether any succession belongs to eternity

Caput I - The common doctrine on this matter

There is no disagreement among the doctors on this matter. For all judge that perfect eternity, of which we have thus far spoken, is wholly simultaneous and without any succession. Hence Boethius, in defining it, said not only that it is an interminable possession of life, but a perfect and whole-at-once possession, that is, one without any succession; or, as St. Thomas explains, one uniform and without any variety. The same definition, in nearly the same words, was handed down by Anselm in the *Monologion*, ch. 24, and it is the common doctrine of the Fathers.[499]

Dionysius teaches the same near the end of *On the Divine Names*, ch. 10; likewise Prosper in the *Book of Sentences of Augustine*, sentences 3 and 183; and Augustine himself in the book of 83 questions, q. 19, with these words: "Not every immortal is, strictly speaking, called eternal; for even if something lives always, yet if it suffers mutability, it is not properly called eternal."[500]

He adds in Sermon 38 on the words of the Lord, a little before the middle, that this is the difference between eternity and time: that in time there is changeableness, in eternity stability; in eternity all things stand still; in time some things come on, others succeed. He subjoins moreover: And although, perhaps, one may be found without the other, nevertheless the meaning of the two is distinguished. When he says, "perhaps one is found without the other," he leaves it in doubt whether there now exists in reality some sempiternal thing which lacks beginning and end and yet is not truly eternal as God is. For he would not hesitate to say that nothing is created from eternity; but he said "perhaps," because it is not sufficiently clear whether a creature from eternity could be made, in which the sempiternal would be found without the eternal.

This very point was taken from St. Augustine by Isidore in Etymologies, book 7, chapter 1, and by Anselm in the Proslogion, chapters 18 - 19; and St. Gregory Nazianzen and Bede bear witness in the places soon to be cited; among the philosophers Plato taught it expressly in the Timaeus not far from the beginning: for of God he says, "Accordingly he resolved to fashion a moving image of eternity; and as he adorned the heaven, he made a certain image of eternity abiding in unity, flowing along according to number, which we call time."[501]

---

498. Allusions are to scriptural expressions about God's "years," used to express the absence of measurable limit rather than any temporal succession.

499. Boethius, *De consolatione philosophiae*, book 5, prose 6; St. Thomas on Boethius's definition of eternity; St. Anselm, *Monologion* 24.

500. Pseudo-Dionysius, *De divinis nominibus* 10; Prosper, *Sententiae ex Augustino delibatae* 3 and 183; St. Augustine, *De diversis quaestionibus octoginta tribus* 19.

501. Isidore of Seville, Etymologiae 7.1; Anselm of Canterbury, Proslogion 18 - 19; St. Gregory Nazianzen, various places; the Venerable Bede, on John 16; Plato, Timaeus, near the beginning: "He made time, the moving image of eternity... an image of eternity abiding in unity, an everlasting image flowing along according to number, which we call time."

According to the doctrine of these, which is most approved among the Scholastics, in order that something may be called simply and properly eternal, it is not enough that it lack beginning and end. For this, although it would be called "eternal," or rather "from eternity," would be but a participated eternity, an imitation of that which is true: for since in it there would be some variety, it could be defined by beginning and end in some respect. Thus, if the heaven or an angel were from eternity, although not in respect of their substance, yet in respect of motion and operation there would be a beginning and an end; and so in the motion of the heaven we could mark out years and months and days; in angels, these and those operations terminated with a beginning and an end, which we could define by time. But in God, who has the true and primary eternity, neither on the part of substance nor of operation can a beginning or an end be assigned in any way. And if God himself (who is omnipotent) were to create some substance from eternity without any variation at all - even according to accidents - and with operations remaining in the same state, which should seem to have a true and proper eternity, nevertheless its eternity would be participated: for that thing would not have of itself its duration or that state of immutability; since, its nature being left to itself, it would necessarily be subject to variation and change.

From this same doctrine Richard of St. Victor, On the Trinity, book 2, chapter 4, asserts that it is one thing to be sempiternal, another to be eternal. For, he says, that seems to be sempiternal which lacks a beginning and an end; but that is eternal which lacks both and every changeability.[502]

Objections against the foregoing doctrine

Against the doctrine hitherto set forth something may be objected; the first objection seems rather difficult. First, I say, according to all difference of time, Scripture truly predicates of God "was, is, and will be": Psalm 109, "Before the daystar I begot you"; Proverbs 8, "Before all the hills I was brought forth"; Apocalypse 1 and 14, "Who is, and who was, and who is to come"; Hebrews 13, "Jesus Christ yesterday, and today, the same for ever." Therefore, in God's eternity there is some succession; otherwise neither words of the future nor of past time could be ascribed to him. This difficulty Plato mentioned in the Timaeus; but he replies in these words: "As to the 'was' and 'shall be', these are species of time; we do not rightly ascribe them to the eternal substance. For of that we say 'is, was, and shall be'; but truly 'is' alone befits it." St. Gregory Nazianzen has almost the same words in Oration 42, which is the second for Pascha; and Eusebius, Preparation for the Gospel, book 11, chapter 7, after the middle, where they assert that it is more correct to say of God, "he is," than "he was" or "he will be." This very thing St. Augustine taught in On True and False Religion, chapter 49, and on that Psalm "In generation and generation," and in the book of 83 Questions, question 19. Nazianzen and Augustine adduce that text of Exodus 3, "He who is sent me to you," where by a verb of the present tense they say the perseverance and perfect stability of God in his being are signified. But the Hebrew text uses a verb of the future tense, "I shall be," to denote God's eternal duration without end, as we shall show below in Disputation 19

Yet, although this be so, whether we consider the thing itself, or the common phrase and mode of speaking of men according to our way of understanding, it must be weighed.

502. Richard of St. Victor, De Trinitate 2.4.

Note: Two points, for the understanding of Scripture, are to be noted.

- According to this familiar mode of speaking, Scripture rightly conjoins the three times together; and it ascribes all together to God, to denote perseverance in being. It uses, moreover, the imperfect of the past, erat, which signifies a thing not yet finished; not, however, the perfect preterite, fuit, which denotes a completed thing; so as to express the perseverance of eternity. And therefore it says, "who is, and who was," not, "who is, and who has been"; although, if Scripture had said "who has been," adding the two other times, it would sufficiently remove every suspicion. But the verb "begot" it uses in the perfect preterite, not in the imperfect "was begetting," to express the Son's generation as perfect and entire; for it was much more expedient to express the integrity and perfection of the generation than its perseverance. That text of Hebrews 13, "Jesus Christ yesterday, and today," many Fathers understand of him according to his humanity; but that, "the same for ever," of the same according to his divinity, as we shall see below, part 3, question 16, article 9. That the whole of it, according to the divinity itself, be understood, is to be explained in accordance with what we have said.
- Two things remain to be briefly noted for the solution of this argument. First, those who clearly behold the essence of God and the things that are in him, since they see him and the things that are in him as they are in reality, can express in like manner the mode and duration proper to his very being. The second is, that when we enunciate some external operation of God - such as justification, creation, apparition, and the like - it is best and most proper to use words of the past, and of any time whatsoever: for these truly have succession, and are terminated with a beginning and an end; they can be defined by our time. But what we have said is to be understood of God's internal operations.

The second argument: In the same individual moment of duration two contradictories cannot be true at once. But in eternity two contradictories are true, as "Peter is sick," "Peter is not sick": for eternity embraces all times, and therefore the being and not being of things are constituted at once; therefore we must assign in it succession and various instants, lest we say that in one and the same individual those two contradictories are true. Some more recent writers do not think it absurd, in the same individual moment of a higher order, ...

It is objected that, in an order of instants of a higher kind, such as that of eternity, two contradictories might be granted at once; and thus, the proposed argument would seem to be very well satisfied. But the reply is frivolous: for an instant of a higher order does not swallow up and take away the contradiction, but the propositions remain in that instant under the state of contradiction; how then could they be true at once? For if in one and the same genus of duration and of the instant they cannot be true, they will be able in none; since in whatever they remain, they remain of the same kind and opposition.

Therefore it is answered that those propositions which we mentioned, and others of that kind, are not contradictory in God's eternal cognition, or in eternity, even if in it - according to the existence of the thing - they were present, whenever they are referred to diverse instants or

durations of time. They are therefore contradictory only when not only are they present in eternity, but the very copula of them enunciates the thing for one and the same moment of time. Thus, however, never are both true in eternity. Rather, we understand the propositions to be referred to the duration of our time whenever they are enunciated absolutely with no addition: as when we say, "Peter is sick," "Peter is not sick," which are never true under the same duration of time. For since words have been imposed by us to signify, they denote things under that duration by which our actions and passions are defined; thus the word "is sick" signifies sickness under the present time, otherwise under the future, and so forth; therefore under the same [time] both cannot be true.

But in order to enunciate the matter as referred to eternity, it is necessary to express its duration, which the words, taken absolutely and of themselves, do not signify. With that addition, however, and other conditions being observed, they will be contradictory, yet not at once true: for example, "Peter's sickness is in eternity," "Peter's sickness is not in eternity," of which one is false. If, however, someone should speak thus: "Peter is sick in eternity," "Peter is not sick in eternity," there would also be a contradiction; and, the hypothesis being made that at some time he was sick, this would be false: "Peter is not sick in eternity." For the sense is: Peter's sickness is in no way present to eternity. Nor does it render this sense: "Peter's not-being-sick is present in eternity," but "Peter's being-sick is not present to eternity," which sense is false. But these would not be contradictory: "Peter's being-sick is in eternity," "not-being-sick is in eternity." For both would be affirmative, since the latter has negation only on the part of the subject, not negating, but indefinitely, as the logicians speak; and hence both can be true.

Thirdly, the argument is of this sort. The duration of eternity is greater today than yesterday: for instance, if an angel had been created from eternity and were then annihilated at the beginning of the world, it would have lasted less than if it were annihilated now. Therefore eternity has a succession of past and future; otherwise it could be neither greater nor less, since addition is not made except of the past.

I answer, first, that this is not true and proper eternity of which we now speak. For true eternity cannot have a term; but if an angel were created ab aeterno, its eternity would be participated. Yet because of that [participated eternity], just as of "wherein," there must be the judgment that no succession can be in them, it is necessary still in another way to satisfy the argument.

Thus I say, secondly, as was said about a time which would have been from eternity (Disputation 26, cap. 2): although a duration which is from eternity - whether it have succession, as time, or not, as participated eternity - can have something added to it, it is not for that reason greater or less. For "greater" and "less" are proportions of finite quantity and duration.

Thirdly, I add: if on the part of infinity it were not repugnant, nothing else would hinder that among participated eternities one should be greater than another; yet this would not be because there were any succession "in which" or in eternity. For it would not be said that one "when," or one participated eternity, is greater than another because an accession of the future is made to one; but because one "when," or one eternity, would be such in itself by nature and more perfect, as to

be apt to be delimited by a greater span of our time - or at least because our thought, with a larger interval flowing, could measure one "when," or one eternity, than another. Wherefore we can say: "it has lasted thus far, and eternity has lasted thus far"; yet the adverb "thus far" would denote no succession "in which" or in eternity. Therefore most aptly Plato in the Timaeus, in the place cited about true eternity which befits God, says: "But an eternal substance, since it is always the same and immobile, perseveres, and is never older with respect to itself, nor younger, nor was it hitherto, nor will it be hereafter."[505]

By which words he wished to teach that in eternity, as such, there is no succession. But when in Scripture God is called "the Ancient of Days," and that an old man appeared to the Prophets, it was said to signify God's ancient eternity, not a change of youth into old age.

Articulus II - Whether God is eternal

Objicitur secundum sic proceditur. It seems that God is not eternal.

1. Nothing made can be said of God; but eternity is something made. For Boethius says that the flowing now makes time, the standing now makes eternity; and Augustine says in the book of 83 Questions that God is the author of eternity: therefore God is not eternal.[506]
2. Furthermore, what is before eternity and after eternity is not measured by eternity. But God is before eternity (as is said in the Book of Causes), and after eternity; for it is said in Exod. 3 that "the Lord shall reign forever and beyond": therefore to be eternal does not befit God.[507]
3. Furthermore, eternity is a certain measure; but it does not befit God to be measured: therefore it does not befit him to be eternal.
4. Furthermore, in eternity there is not present, past, or future, since it is the whole all at once, as has been said. But in Scripture words of present, past, and future time are said of God: therefore God is not eternal.

But on the contrary: Athanasius says in his symbol: "Eternal Father, eternal Son, eternal Holy Spirit."[508]

I answer that the notion of eternity follows upon immutability, just as the notion of time follows upon motion, as is clear from what has been said. Whence, since God is most immutable, it most befits him to be eternal. Nor is he only eternal, but he is his eternity: since in created things no other thing is its own duration, because it is not its own existence (*esse*). But God is his own uniform existence. Whence, as he is his own essence, so he is his own eternity.

505. Plato, Timaeus, on true eternity befitting God: "But an eternal substance, since it is always the same and immobile, perseveres, and is never older with respect to itself, nor younger, nor was it hitherto, nor will it be hereafter."

506. Boethius, frequently reported as: "the flowing now makes time; the standing now makes eternity." St. Augustine, De diversis quaestionibus octoginta tribus 23.

507. Liber de Causis (Book of Causes), prop. 2; Exod. 3.

508. The Athanasian Creed (Quicumque vult).

Reply to the first: The "standing now" is said to make eternity according to our apprehension. For just as the apprehension of time is caused in us, in that we apprehend the flux of the very now, so the apprehension of eternity is caused in us, in that we apprehend the now as standing. But what Augustine says, that God is the author of eternity, is understood of participated eternity. For in that way God communicates his eternity to certain [things], just as he communicates his immutability.

And through this the solution to the second [objection] is also evident. For God is said to be "before eternity" inasmuch as it is participated by immaterial substances. Whence, also in the same place it is said that "intelligence is made equal to eternity." But what is said in Exodus, "The Lord shall reign forever and beyond": you must know that "forever" (aeternum) is there taken for "age" (saeculum), as another translation has it. Thus, then, it is said that he will reign "beyond eternity," because he endures beyond any age, that is, beyond any given duration. For an "age" is nothing else than the period of any thing whatsoever, as is said in the first book De Coelo. Or it is said also that he will reign beyond eternity, because even if something else were to exist forever (as the motion of the heaven, according to some philosophers), nevertheless God reigns beyond, inasmuch as his reign is the whole all at once.[509]

Reply to the third: Eternity is not other than God himself. Whence God is not said to be eternal as if he were in some way measured; but there is taken there the notion of measure according to our apprehension only.

Reply to the fourth: Words of diverse times are attributed to God, inasmuch as his eternity includes all times, not that he himself is varied by present, past, and future.

The conclusion is affirmative and of faith. It is had everywhere in Scripture, in the symbol of Athanasius, and in the chapter Firmiter on the supreme Trinity and the Catholic faith. But as to the manner in which God is said to be his eternity, and how he is distinguished from it, the question is common with the other attributes, of which we must treat in Disputation 116 and the following.[510]

Articulus III - Whether to be eternal is proper to God

It proceeds to the third thus. It seems that to be eternal is not proper to God alone.

1. For it is said in Dan. 12 that "they that instruct many unto justice shall be as stars unto perpetual eternities." But there would not be many eternities unless not God alone were eternal; therefore God alone is not eternal.
2. Furthermore, Matt. 25 says: "Depart, you cursed, into eternal fire." Therefore God alone is not eternal.
3. Furthermore, every necessary thing is eternal; but many things are necessary, as all the principles of demonstration and all demonstrative propositions; therefore God alone is not eternal.

509. Aristotle, De Coelo I; cf. the opinion of some philosophers about the everlasting motion of the heavens.
510. Fourth Lateran Council, cap. Firmiter credimus, on the supreme Trinity and the Catholic faith.

But on the contrary is what Augustine says in the book On the Faith to Peter, chapter 6: "God is he who has no beginning; but whatever has a beginning is not eternal; therefore God alone is eternal."[511]

I answer that eternity truly and properly is in God alone: because eternity follows upon immutability, as is clear from what has been said. But God alone is wholly immutable, as has been shown above. Yet, secondly, since certain things receive immutability from him, accordingly certain things share in his eternity. Some, therefore, are strengthened by God with respect to this immutability, namely, that they never cease to be; and in this respect it is said in Ecclesiastes 1 of the earth, that "it stands forever"; and thus eternity can be attributed to the angels, according to that of Ps. 75: "Illuminating wonderfully from the eternal mountains." Some things also are called eternal in the Scriptures because of a long duration; although they are corruptible, as in the Psalms mountains are called eternal; and Deut. 33 also says "of the fruits of the eternal hills." But some participate more in the notion of eternity, inasmuch as they have intransmutability either according to being, or further according to operation, as the angels and the blessed who enjoy the Word: for, with respect to that vision of the Word, thoughts are not changeable in the saints, as St. Augustine says in On the Trinity, XV. Whence also those who see God are said to have eternal life, according to that of John 17: "This is eternal life, that they may know [thee]," etc.[512]

Reply to the first: It is to be said that many eternities are spoken of in the sense that there are many who participate in eternity from the very contemplation of God.

Reply to the second: The fire of hell is called eternal only on account of its interminability. Yet there is in their punishments a change, according to that of Job 24: "They pass from the waters of snow to excessive heat." Whence in hell there is not true eternity, but rather time, according to that of Ps. 80: "Their time shall be forever."

Reply to the third: "Necessary" signifies a certain mode of truth, ...

Reply to the third: It is answered that "necessary" signifies a certain mode of truth. But truth, according to the Philosopher in Metaphysics VI, is in the intellect.[513] According to this, therefore, truths and necessities are eternal, because they are in the eternal intellect, which is the divine intellect alone. Hence it does not follow that anything outside God is eternal.

Notes concerning the doctrine of the article. The conclusion is: Perfect eternity, such as was described above, belongs to no other than God. About the matter of this article there is no controversy among the Doctors. Yet for the greater perspicacity of it two points are to be observed by us.

One is that eternity can be taken in a twofold way. First, commonly, for any duration which lacks beginning and end; and thus it can also befit creatures, if it be not repugnant that some creature be created from eternity. Then, more properly, eternity is called the duration without beginning and without end, with stability of that whose duration it is; and this can befit God alone,

511. Ascribed here to St. Augustine, De fide ad Petrum, c. 6; the sense is also found in patristic sources.
512. St. Augustine, De Trinitate XV; John 17:3.
513. Aristotle, Metaphysics VI, text 8.

if we say that stability is not only the negation of some mutation, but such a disposition of nature that it can in no way be varied. This, indeed, is called an eternity of its nature, or eternity through essence (*aeternitas per essentiam*); but other things which would be without beginning and without end would be said to participate some vestige of eternity, as St. Thomas rightly noted.

The second concerns the solution of the third, namely, for what reason the essences (*essentiae*) of things are said to be eternal; in which matter the Metaphysicians have spent more than was necessary, all of which we shall touch briefly. They are called eternal, not because they are outside God, produced by some act from eternity (for thus they would also exist from eternity, which is absurd); nor for this reason, that they are in God formally (for no notion of a created essence befits God formally); nor only because they are eminently in God, as in an efficient cause, or as in an intelligence: for, as we shall show in disputation 104, by priority of reason it is the case that the essences of things are possible in themselves, before they can be produced by the power of God, or be known by God. For they are not possible from the fact that they can be produced, or from the fact that they are known; but on the contrary, from the fact that in themselves they do not imply a contradiction, they are understood by God and can be produced by God, as we shall show in that disputation. Therefore the essences of things are called eternal, because they are eternal truths, that is, because something can be enunciated of them from eternity. For the word "is" in enunciations, when something is enunciated of the essences of things, does not signify actual existence (*existentia*), but the agreement of extremes; and therefore the essences are called eternal truths, as we shall explain in disputation 78.

Articulus IV - Whether eternity differs from time

Objicitur: 1. It seems that eternity is not other than time. For it is impossible for there to be two measures of duration at once, unless one be a part of the other. For two days or two hours are not together; but a day and an hour are together, because the hour is a part of the day. But eternity and time are together; each of which imports a certain measure of duration. Since, therefore, eternity is not a part of time, because eternity exceeds time and includes it, it seems that time is a part of eternity, and not other than eternity.[514]

1. Further, according to the Philosopher in Physics IV, the "now" of time remains the same throughout the whole of time.[515] But this seems to constitute the notion of eternity, that it is the same, holding itself indivisibly throughout the whole discourse of time. Therefore eternity is the now of time. But the now of time is not other according to substance than time; therefore eternity is not other according to substance than time.

514. Internal cross-references as in the margin: infra art. 5; I, dist. 10; II, q. 1, a. 1; II, q. 1, a. 2; IV, 2, 9, 1, articul. 1; and Quodlib. 5, q. 4; Quodlib. 10, 9, 2; and De potentia 9, 3, 2, 14, 18.

515. Aristotle, Physics IV, texts 121 and 104 (tom. 2).

2. Further, as the measure of the first motion is the measure of all motions, as is said in Physics IV, so it seems that the measure of the first being (*esse*) is the measure of all being. But eternity is the measure of the first being, which is the divine existence (*esse*). Therefore eternity is the measure of all being. But the existence of corruptible things is measured by time. Therefore time either is eternity, or is something of eternity.[516]

But on the contrary: Eternity is "all at once" (tota simul). But in time there is a before and after. Therefore time and eternity are not the same.

I answer that it is manifest that time and eternity are not the same. But some have assigned the reason for this diversity from the fact that eternity lacks beginning and end; whereas time has a beginning and an end. But this is a difference per accidens and not per se: because, granted that time has always been and will always be, according to the position of those who assert the motion of the heavens to be sempiternal, still there would remain a difference between eternity and time, as Boethius says in the book of the Consolation, from this, that eternity is all at once, which does not befit time: because eternity is the measure of abiding being, but time is the measure of motion.[517]

If, however, the aforesaid difference be considered so far as regards the things measured (*mensurata*), and not as regards the measures (*mensurae*), thus it has another rationale: because only that is measured by time which has a beginning and end in time, as is said in Physics IV. Wherefore, if the motion of the heavens were to last forever, time would not measure it according to its whole duration, since the infinite is not measurable; but it would measure any circulation which has a beginning and end in time. Yet it can have another rationale on the part of these measures themselves, if the end and beginning be taken in potency: because, even granted that time always last, nevertheless it is possible to mark in time both beginning and end by taking some of its parts, as we say that the beginning and end of a year are said; which does not occur in eternity. Yet these differences follow upon that which is per se and first, to wit, the difference from this, that eternity is all at once, whereas time is not.

Reply to the first: That reasoning would proceed if time and eternity were measures of one and the same genus: which is plainly false from the things whose measures time and eternity are.

Reply to the second: The now of time is the same in subject throughout the whole time, but different in reason: because as time answers to motion, so the now of time answers to the movable. But the movable is the same in subject in the whole course of time, but different in reason, inasmuch as it is here and there; and this alternation is motion. Similarly, the flow of the now itself, according as it alternates in reason, is time. But eternity remains the same both in subject and in reason. Hence eternity is not the same as the now of time.

Reply to the third: As eternity is the proper measure of existence itself (*ipsius esse*), so time is the proper measure of motion. Hence, according as some existence recedes from the permanence of existing and is subjected to transmutation, according to this it recedes from eternity and is

516. Aristotle, Physics IV.
517. Boethius, Consolation of Philosophy V, prose 6.

subjected to time. Therefore the being of corruptible things, because it is transmutable, is not measured by eternity but by time. For time measures not only the things which are actually undergoing transmutation, but also the things which are transmutable. Hence it measures not only motion, but also rest, which belongs to that which is apt by nature to be moved and is not moved.

Note concerning the article. The conclusion is affirmative. About the matter of this article, and of the two following which will come below, there will be a disputation. Now it is enough to take note that the title of the article, which commonly circulates, is falsely inscribed in this way: "Whether eternity differ from aevum and time"; whereas in truth the Blessed Thomas in this article only disputes the difference of eternity and time. The title, however, as it has been prescribed by us, is gathered from the words of the same St. Thomas at the beginning of the article, where he premised the title of the article.

Articulus V - Whether aevum differs from time

Objicitur: 1. It seems that aevum does not differ from time. For Augustine says on Genesis according to the letter, that God moves the spiritual creature through time; but aevum is said to be the measure of spiritual substances. Therefore time does not differ from aevum.[518]

1. Further, it belongs to the notion of time, that it have a before and an after; but to the notion of eternity, that it be all at once, as was said. But aevum is not eternity: for it is said in Ecclesiasticus 1 that eternal wisdom is before the aevum. Therefore it is not all at once, but has a before and after, and thus is time.
2. Further, if aevum does not have a before and after, it follows that in a being of aevum there is no difference of "it is," "it was," or "it will be." Therefore, for that to which it is impossible not to have been eternal, it follows that it is impossible for it not to be going to be; which is false, since God can reduce it to nothing.
3. Further, since the aeviternal duration is infinite on the side of the future, if the aevum were all at once, it would follow that something created is infinite in act, which is impossible. Therefore aevum does not differ from time.

But on the contrary is what Boethius says: he "bids time to go forth from the aevum."[519]

I answer that aevum differs from time and from eternity as a mean existing between them. But some assign their difference thus, saying that eternity lacks beginning and end; aevum has a beginning but not an end; time, however, has a beginning and an end. But this difference is per accidens, as was said above: because even if the aeviternal things had always been and would always be, as some posit, or even if at some time they were to fail, which would be possible to God, still aevum would be distinguished from eternity and from time.

518. St. Augustine, De Genesi ad litteram X.
519. Boethius, Consolation of Philosophy (book and prose as cited in the margin).

Others, however, assign the difference among these three by this, that eternity does not have a before and after; time has a before and after with innovation and with becoming-old; aevum has a before and after without innovation and without becoming-old. But this position implies contradictories. This indeed is manifest if innovation and becoming-old be referred to the measure itself. For to that for which the before and after of duration cannot be together, if aevum has a before and after, it is necessary that, the prior part of the thing receding, the posterior newly come; and thus there will be innovation in the aevum itself, as in time. But if it be referred to the things measured, still an inconvenience follows. For from this it is that a temporal being is measured by time, that it has a transmutable existence, and from transmutability to be measured there is a before and after in the measure, as is clear from Physics IV. If therefore the aeviternal itself is not alterable nor mutable, this will be because its existence is intrinsically immutable. Therefore its measure will not have a before and after. It is therefore to be said that eternity is the measure of abiding existence; according as something recedes from the permanence of existing, according to this it recedes from eternity. And those things which thus recede from its permanence, in such a way that their existence is subject to tran -

Objicitur 1. It seems that the aevum does not differ from time. For St. Augustine says that God moves the spiritual creature by time, but the aevum is said to be the measure of spiritual substances.[520] Therefore time does not differ from the aevum.

Objicitur 2. Further, it belongs to the notion of time that it have a before and after; but it belongs to the notion of eternity that it be altogether at once, as has been said. But the aevum is not eternity; for it is said in Ecclesiasticus that eternal wisdom is before the aevum. Therefore it is not altogether at once, but has a before and after; and thus it is time.

Objicitur 3. Further, if in the aevum there is not a before and after, it follows that in aeviternal things there is no difference between to be, to have been, or to be going to be. Since therefore it is impossible that aeviternal things should not have been, it follows that it is impossible that they will not be; which is false, since God can reduce them to nothing.

Objicitur 4. Further, since the duration of aeviternal things is infinite on the side of what is after, if the aevum be altogether at once, it follows that something created is infinite in act; which is impossible. Therefore the aevum does not differ from time.

Sed contra: What Boethius says: "You who bid time to go..."[521]

Respondeo dicendum, that certain things have an existence which either consists in change, or is established in change; and these are measured by time: thus every motion, and even the existence of all corruptible things. Others recede less from the permanence of existing, because their existence neither consists in change, nor is the subject of change; nevertheless they have change adjoined, either in act or in potency: as is clear in the celestial bodies, whose substantial existence is immutable, yet they have an immutable existence with mutability according to place; and similarly it is clear of the angels, that they have an immutable existence with mutability

520. St. Augustine, De Genesi ad litteram VIII, c. 10 (comm. 3).
521. Boethius, Consolation of Philosophy (as cited in the margin).

according to choice, so far as pertains to their nature; and with mutability, in their own mode, of their acts of understanding and affections, and of places. And therefore such are measured by the aevum, which is a mean between eternity and time. But the existence which eternity measures is neither mutable, nor has mutability adjoined. Thus, then, time has a before and after; but the aevum does not have a before and after in itself, although a before and after can be conjoined to it; whereas eternity neither has a before nor an after, nor is compatible with them.

Ad primum ergo dicendum, that spiritual creatures, as to the affections and intellections in which there is succession, are measured by time. Whence also St. Augustine says in the same place, that to be moved by time is to be moved by affections. But as to their natural existence, they are measured by the aevum. Yet as to the vision of glory, they participate in eternity

Ad secundum dicendum, that although it be altogether at once, yet the aevum is not eternity, because it is compatible with a before and after

Ad tertium dicendum, that in the angel's existence considered in itself there is no difference of past and future, but only according to the changes adjoined. Hence when we say that an angel is, or was, or will be, it differs according to the intellect's acceptance, which takes the angel by comparison to diverse parts of time. And when one says that an angel is, or was, he supposes something with which the opposite does not lie under the divine power. But when he says that it will be, he supposes nothing as yet. Wherefore, since to be and not to be of the angel lies under the divine power, considering absolutely, God can make that the angel's being will not be; yet He cannot make that it is not while it is, or that it was not after it has been

Ad quartum, dicendum that the duration which is infinite is such because it is not terminated by time. But that there be some created thing infinite in such a way that it is not terminated by some other measure is not incongruous

Conclusio articuli est: The aevum differs from eternity and from time.

Articulus VI - Whether there is only one aevum

Quaeritur: Whether there is only one aevum.

Objicitur 1. It seems that there is not only one aevum. For it is said in the apocryphal Esdras: "Majesty and power of the aevums is with you, O Lord."[522]

Objicitur 2. Further, different genera have different measures. But some aeviternal things are in the genus of corporeal things, namely the celestial bodies; others are spiritual substances, namely the angels. Therefore there is not one aevum only.

Objicitur 3. Further, since the aevum is a name of duration, of which there is one year, there is one duration; but not all aeviternal things have one duration, because some begin to be after others, as is most manifest in human souls. Therefore there is not one aevum only.

522. The apocryphal Esdras (as cited in the margin).

Objicitur 4. Further, things which do not depend upon each other do not seem to have one measure of duration. But aeviternal things do not depend upon each other, since one angel is not the cause of another. Therefore there is not one aevum only.

Sed contra: The aevum is more simple than time, and stands nearer to eternity. But time is one only. Therefore, much more, the aevum.

Respondeo dicendum, that concerning this there is a twofold opinion. For some say that there is one aevum only; others, that there are many. What of these is truer must be considered from the cause of the unity of time. For by an ignorance of spiritual things we come through corporeal things. Now some say that there is one time of all temporal things on this account, that there is one number of all things numbered; since time is a number, according to the Philosopher.[523] But this does not suffice, because time is not a number as abstracted outside the numbered, but as existing in the numbered; otherwise it would not be continuous, since ten ells of cloth have their continuity not from number, but from that which is numbered. But number existing in the numbered is not the same for all, but diverse for diverse things. Hence others assign the cause of the unity of time from the unity of eternity, which is the principle of every duration. And thus all durations are one, if their principle be considered; they are many, however, if the diversity be considered of those things which receive duration from the influx of the first principle. Others again assign the cause of the unity of time on the part of prime matter, which is the first subject of motion, of which time is the measure. But neither assignment seems sufficient; because those things which are one by a principle or subject most remote are not one simply, but in a certain respect. Therefore the ratio of the unity of time is the unity of the first motion, according to which, since it is most simple, all the others are measured, as is said in the tenth book of the Metaphysics.[524] Thus time is compared to that motion not only as measure to the measured, but also as an accident to its subject, and so it receives unity from it; but it is compared to the other motions only as measure to the measured. Hence it is not multiplied according to their multitude, because one separated measure can measure many. This being laid down, it is to be known that concerning spiritual substances there was a twofold opinion. Some indeed said that all proceeded from God in a certain equality, as Origen said; or at least many of them, as some have posited. Others said that all spiritual substances proceeded from God according to a certain grade and order. And this seems to be favored by Pseudo-Dionysius, who says in chapter ten of the Celestial Hierarchy that among spiritual substances there are first, middle, and ultimate, even within one order of angels.[525] According to the first opinion it is necessary to say that there are many aevums, according as there are many first equal aeviternals. But according to the second opinion it must be said that there is one aevum only, because since each thing is measured by that which is most simple in its genus (as is said in the tenth of the Metaphysics), the measure of all aeviternals must be the first aeviternal, which is the more simple the more prior. And because the second opinion is truer (as will be shown below), we concede for the present that there is one aevum only.

523. Aristotle, Physics IV, text 101.
524. Aristotle, Metaphysics X, texts 3 - 4.
525. Pseudo-Dionysius, Celestial Hierarchy, c. 10.

Ad primum ergo dicendum, that "aevum" is sometimes taken for a "saeculum", that is, the period of duration of some thing; and thus many aevums are said, as many ages

Ad secundum dicendum, that although the celestial bodies and the spiritual substances differ in the genus of nature, nevertheless they agree in this, that they have an immutable existence; and thus they are measured by the aevum

Ad tertium dicendum, that not all temporal things begin at the same time, and yet there is one time of all, by reason of the first, which is measured by time. And thus all aeviternal things have one aevum by reason of the first, even if not all begin at the same time

Ad quartum dicendum, that for things to be measured by some one thing, it is not required that that one thing be the cause of them all, but that it be more simple

Conclusio articuli est: There is one aevum only, which is the measure of all, just as there is one time.

Disputatio XXXIII - On the various significations of aevum and Bonaventure's opinion

Caput I - Various acceptions

Before we examine the proposed question, it has seemed good to note the various significations of the word "aevum" (*aevum*), so that the matter about which the disputation is undertaken may be made clear. Now to the Latins "aevum" is the same as what the Greeks call *aiōn*; the Latin word seems to be derived from the Greek, with only the letter *u* inserted; and in Latin "aevum" is the same as "saeculum," for which reason what the Greeks call "the ages of ages" (*aiōnas tōn aiōnōn*) we render "saecula saeculorum." Properly, however, *aiōn* is what eternity (*aeternitas*) is; for in Greek *aiōn* is, as it were, from *to aei on*, that is, "always existing," as Nicetas notes in the place to be cited below.

Nonetheless "saeculum," or *aiōn*, has various significations. First, it signifies the lifetime of any man, which is commonly completed with seventy years, according to Psalm 89: "The days of our years in them are seventy years"; and in this way it also signifies a space or "age" of seventy years, as St. Jerome notes at the end of Ezekiel 26, and Damascene and Nicetas also teach in the places cited.[526] Second, it signifies a period of a thousand years, as Damascene and Nicetas hand down in the same places. Third, it signifies the whole heap of our time, and for that reason we have been accustomed to call the most ancient things "eternal," as Pseudo-Dionysius taught, *De divinis nominibus*.[527] Therefore in Deuteronomy and in the Psalms the hills or mountains are called "eternal," because they are most ancient; and at Titus 1 times are called "eternal": "In hope," he

526. St. Jerome, on Ezekiel 26; St. John Damascene, De fide orthodoxa, II, c. 1; Nicetas, Oration 2 on St. Gregory Nazianzen.

527. Pseudo-Dionysius, De divinis nominibus.

says, "of life everlasting, which God, who does not lie, promised before secular times." Augustine reads it thus, *lib. 83 Quaest.*, q. 72, and *De civitate Dei*, XII, c. 16: "eternal times." In Greek it is "before eternal times" (*pro tōn chronōn aiōniōn*). And since *aiōn* signifies both "age" and "eternity," Augustine translated *aeterna*, whereas our Vulgate said *secularia*; and he asserts that "aeterna" among us is what is in Greek *aiōnia*, nor did the Latins dare to translate *aiōnia* as "secularia," because "secular" sometimes signifies what quickly passes away, whereas *aiōnion* signifies either what has no end or what extends up to the end of this age; where Augustine also concedes that *aiōnion*, i.e., "eternal," sometimes denotes the whole mass of our time. But by "eternal times" Augustine himself, in the place alleged, and Jerome and Anselm on Titus 1, understand certain "eternal" times before the creation of the world, which, as Augustine there notes, were not coeternal with God.

For my part, I do not sufficiently understand what "eternal" times, apart from God's very eternity, could have preceded the creation of the world. If there was any time at all, it could only have been imaginary. But if before there was an eternity without beginning, as those Doctors above seem to affirm, it follows that it would have been coeternal with God, and that before it God could not have promised or determined eternal life. Therefore Paul, as I think, by "secular times," or "eternal" times - Greek *aiōniōn* - understood all time, and so he said "before secular times," as if he said, "before the age." For the whole heap of time is called "age," as we were noting a little earlier. In which sense that at the end of Romans is also taken: "according to the revelation of the mystery kept silent for eternal times." "Revelation of the mystery kept silent for eternal times" (Rom 16) means "through the whole time since the world was founded not yet hitherto made manifest," as St. Thomas interprets in his commentary on that chapter of Pseudo-Dionysius.[528]

So too Ecclesiasticus 1 says: "Wisdom is from the Lord God; and with him she was always; she is before the aevum," that is, before all time. In like manner God is said to be before the ages and to have made them, as Damascene teaches in the place cited.[529] Wherefore Pseudo-Dionysius, *De divinis nominibus*, c. 5, somewhat past the middle, calls God the author and effecter of eternity, that is, of all time. In this sense too St. Augustine, *lib. 83 Quaest.*, q. 23, said that God is eternal and wise "in another way" than the rest: for they can be such by a certain participation; but God is eternal and wise because he is the author of eternity and of wisdom, and, as if he were saying, because he has these from himself and not as communicated by another; for which reason he called him the "author of eternity." Likewise, at Titus 1, "God, before all times, promised life everlasting," not by the word of a voice - since there were not yet those to whom he would promise it in that manner - but by his predestination. Thus interpret Chrysostom, Anselm, and Augustine, *De Civitate Dei*, XII, c. 16.[530]

Fourth, it can be said that "saeculum," or the space of years - *Ghola* among the Hebrews is the same as the Greeks' *aiōn*, as Jerome teaches in the great commentaries on Galatians 1 - designates different things according to how it is written. For whenever among the Hebrews that word is

528. St. Thomas, Commentary on Pseudo-Dionysius, De divinis nominibus, on the relevant chapter.

529. St. John Damascene, De fide orthodoxa, II, c. 1; Nicetas, Oration 2 on St. Gregory Nazianzen, on the words "Iam vero cum immensitas...".

written with a certain letter, it signifies eternity; when, however, it lacks that letter, it signifies the Jubilee year, which was the fiftieth. Thus in Exodus 21, where God prescribes that he who has bought a slave should in the seventh year grant him liberty; but if he refuses: "He shall bore his ear with an awl, and he shall be a servant forever (in *saeculum*)." And Deuteronomy 15 has the same, except that in place of "in *saeculum*" it puts "in *aeternum*." In the Hebrew the word is written without that letter and signifies the time of the Jubilee; elsewhere, however, where it is written with it, it signifies eternity, or "age," in another sense. Vives took this doctrine from Jerome, *De Civitate Dei*, XII, c. 19. Yet it is not approved by more recent Hebrew writers, among whom is Mercerus, since in Scripture it is written indifferently in both ways; and indeed, if we speak of the Hebrew codices that are now in hand, we cannot deny this. Still, it is to be believed with certainty that in Jerome's time, as he himself noted, this word was wont to be written in various ways to signify diverse things; but after the addition of the vowel-points in the assembly at Tiberias this distinction was not maintained.

Fifth, Damascene and Nicetas, in the places cited, teach that from the creation of the heavens to the end of the world seven ages are numbered, the eighth being that of the future life.[531] Sixth, Pseudo-Dionysius in that chapter, and likewise Damascene and Nicetas, say that "aevum" is used for eternity itself, of which we have hitherto spoken, which lacks end and beginning and every variety.[532]

However, the aevum of which our forthcoming disputation treats is taken for the duration of an Angel, or of a rational soul, which, although it has a beginning, lacks an end; some Fathers too seem to have made mention of this. St. Basil, *lib. 2 contra Apologeticum Eunomii*, somewhat before the middle, says thus: "For common usage subjects every interval either to times or to ages. For what time is to sensible things, that is, over and above, to mundane things 'age.'" He calls "age" aevum, which in Greek is *aiōn*. And that he speaks not only of God's aevum but also of that of spiritual creatures is gathered from this, that he opposed it to "supermundane" things, not to all created things universally, but to sensible and bodily things.[533] Augustine, *lib. 83 Quaest.*, q. 19, teaches that what is immortal is sometimes, albeit improperly, also called eternal. Since therefore according to the primary signification of the name, eternity (*aeternitas*) is the same as aevum, as was said above, if immortal things are called eternal, their duration too will be called eternity, or aevum.[534] Finally, Nicetas, in the place already cited, says about the aevum, which in Greek is called *aiōn*: "But of Angels and souls it can in no wise be said properly. For their aevum has a beginning, but will not have an end." Wherefore they are in part participants of aevum, because they are incorruptible and immortal; in part of time, because they belong to the class of created things. Therefore in a broader signification the duration of Angels and of incorruptible things is called aevum, with a stronger reason than the lifetime of any man. For in their duration there is

530. St. John Chrysostom, on Titus 1; St. Anselm, on the same; St. Augustine, De civitate Dei, XII, c. 16.

531. St. John Damascene, De fide orthodoxa, II, c. 1; Nicetas, in the place cited.

532. Pseudo-Dionysius, De divinis nominibus, the cited chapter; St. John Damascene, De fide orthodoxa, II, c. 1; Nicetas, in the place cited.

533. St. Basil, Contra Eunomium, II (Contra Apologeticum Eunomii), near the middle.

534. St. Augustine, lib. 83 Quaest., q. 19.

something of eternity, which is properly called *aiōn*, or aevum - namely, the lack of end. Indeed this seems a less improper usurpation of the name than the others mentioned: for in the latter both beginning and end are found; in this, however, there is no end. But since in all there is a certain long duration, which is commonly expressed by the adverb "always," the name "aevum" has been, by a certain extension, accommodated to them. Now the usage of the Schoolmen has prevailed that "aevum" be said only of the duration of created and incorruptible things, about which we must presently dispute.

Caput II - What Bonaventure holds

In order that we may explain more fully the nature of the aevum (aevum) according to its ultimate mode and signification, and distinguish it from eternity (aeternitas) and time (tempus), we must first see whether in the aevum there is any succession. In this first question the opinion of St. Bonaventure, II Sent., dist. 2, art. 1, q. 3, is that the duration of a spiritual substance is not without some succession, in which a "before" and "after" can be assigned, yet without any variation.[535] This opinion Scotus, II Sent., dist. 2, q. 1, "Qui vult tenere," judges to be probable; Richard also, in the same place, a. 1, q. 3, holds it; and some attribute it to Gabriel, who, in my judgment - as we shall report a little later - follows the opposite.[536]

Bonaventure explains it thus. There is a twofold kind of succession. One kind is with variation, such as is found in time, in that when one part arrives another wholly ceases; and such succession is not in the aevum of Angels and of spiritual things: in this succession there is truly a future after a past. The other kind is without variation, which does not consist in a bare extension of duration - for this, if it could exist all at once, would in no way be succession - but is in an extension in which something is future without a past, and therefore without the variation which we said befits time. And in this way Blessed Bonaventure is to be understood when, defining this kind of succession, he says it is "a certain extension" of duration. I grant indeed that an extension cannot be found in duration which is without a future or a past. Wherefore Bonaventure speaks best when, defining this kind of succession, he says it is "by a mere extension": for if the whole were at once present, there would be no succession; therefore it is in an extension in which something is future without a past, and consequently without the variation that we said belongs to time.

This opinion, explained in this way, can be proved by the testimonies of the Fathers. First, all those whom I have noted in Disput. 32, c. 1 and 2, seem to attribute to God alone perseverance of duration without any succession, just as they also seem to attribute immutability to him alone; therefore this perseverance is not to be ascribed to the aevum even of spiritual things, so that we may conveniently constitute a difference between eternity and aevum: for otherwise no difference seems able to be assigned except this, that eternity lacks beginning and end, whereas aevum has no beginning but has an end. Yet in this way the difference cannot be explained for the universal case. For it can happen that a spiritual thing be created from eternity and to be going to endure without

535. St. Bonaventure, In II Sent., dist. 2, art. 1, q. 3.

536. John Duns Scotus, In II Sent., dist. 2, q. 1 ("Qui vult tenere"); Richard (of St. Victor), in the same place, a. 1, q. 3; Gabriel (commonly taken to be Gabriel Biel).

end. Then the duration of that thing will lack both end and beginning; wherefore St. Thomas, in the cited place, confesses that in no way can aevum and eternity differ except in that aevum has succession, whereas eternity does not. In particular, St. Anselm in the Proslogion, c. 20, seems to have delivered Bonaventure's view, when he says of God: "Do you in this way also transcend all eternals, because the present of your eternity is present to you with respect to them, whereas they do not yet have, of their eternity, what will come to be for them, as they already have what is past? For thus you are always beyond them, to whom you are always present there where they have not yet arrived." This mode of questioning Anselm often employs; and it is familiar also to Aristotle. Now Anselm in that place compares God with all eternal things, namely, such spiritual things as are not going to have an end; in the eternity of such, therefore, he seems to concede there is succession.[537]

Second, Bonaventure proves it from Jerome, in the Epistle to Marcella, which is 136, from which he reports these words: "But God is that Being who does not know 'to have been' and 'to be going to be.'" Since therefore these two things agree with all other things, and cannot be without succession, it follows that succession also agrees with the aevum of spiritual things. However, the words cited are not Jerome's, but those of the Gloss on Exodus 3, "Qui est misit me," which the Gloss itself added after what Jerome had cited there. It took them from Isidore, Etymologies, VII, c. 1, where he explains the ten names of God.[538]

Third, it is confirmed from Damascene, De fide orthodoxa, II, c. 1, where he asserts that a "saeculum" is a certain space, or interval, which ...

[Damascene] says that the "saeculum" is a certain space or interval that is stretched out together with eternal things. By "eternal things" he calls those that will never have an end.

Fourth, in favor of this opinion Scotus adduces certain words of Boethius, On the Trinity, book 1, who teaches that between the "now" of our things and that of divine things there is this difference, that the "now" of our things always flows, but the "now" of divine things always perseveres. He therefore thinks that only the "now" of the divine essence is without succession, but that of other things is not without it.[539]

By reason, moreover, this same opinion is proved in two ways, first on the part of the action conserving the things themselves; then on the part of the things themselves. On the part of the action, first because even spiritual things are not only created by God, but also, after they have been first produced, they straightway receive existence and are conserved. But if there be in them no extension of duration nor succession, conservation, which is a certain continued creation, cannot be distinguished from the first production itself. Next, unless this succession were posited in their duration, immediately upon being first brought forth they would receive the whole of their existence in the ultimate mode in which they could receive it; whence it would follow that they would no longer need conservation. Besides, annihilation is nothing other than the negation of the conserving action; but annihilation is after the production of the thing and after some conservation

537. St. Anselm, Proslogion, c. 20.
538. Jerome, Ep. 136 ad Marcellam; the Gloss on Exodus 3 ("Qui est misit me"); Isidore of Seville, Etymologiae, VII, c. 1.
539. Boethius, De Trinitate, lib. 1.

of it: therefore after some conservation, future annihilation is also a certain part of conservation, the negation of which part annihilation would be. For since annihilation is the privation of conservation, and future annihilation is the privation of future conservation, if there were no future conservation, future annihilation could not be understood.

Likewise this same opinion is proved on the part of the things: first, because if there were no succession in the aevum of angels, it would at once be true in it to have been, to be, and to be going to be. Wherefore, just as it is impossible that the angel himself now should not have been, so it would be impossible that he should not be going to be. For the reason why things that have been cannot now not have been is this, that once "to have been" is posited, it implies a contradiction that that thing should not have been; but the same reason will obtain about the future in spiritual creatures, if that is now present and the future does not remain: therefore by the same token it would have to be said that a created spiritual thing cannot not be going to be.

Someone will reply: "It is thus impossible that the future not be, as it is that the past not have been, as we will show in disputation 68, chapter 4; therefore there is nothing absurd if we say that 'the angel will be' cannot 'not be,' just as 'he has been' cannot 'not have been'." But the proposed reason not only proves that "the angel will be" cannot "not be" - for this is true universally - but that the angel himself cannot "not be," which is manifestly absurd. For in that disputation we will say that the difference is this: on the one side there is past and present; on the other, future; that what is true only about the future is this, that the future cannot "not be going to be": but this cannot be said about the thing itself that is future, without repeating the future; "this thing cannot 'not be'." In the past or in the present it is not only true to say, "the past cannot 'not be past' and the present cannot 'not be present'," but also, "this thing, which is now past, cannot now 'not have been', and what is present cannot now 'not be'," because, as a thing in itself, it is outside its causes to have been or to be, whereas "to be going to be" is not yet outside its causes. If therefore "to be," "to have been," and "to be going to be" are together for the angel, they will be so outside causes; wherefore, just as an angel cannot now not have been and not be, so likewise he will not be able not to be going to be, not only with the repetition insofar as he is "to be going to be," but even without any repetition.

Then, if there were no succession in the aevum, one angel could not be produced after another, because "before" and "after" are founded only in succession. Finally, because if God, by reason of His eternity - for it is "the whole at once" without succession - knows all future things, on the ground that by reason of a permanent eternity He has all things at once as present, the same would likewise befit an angel by reason of his [aeviternal] duration, which is absurd.

[Here it is that the common opinion holds there is no succession.]

Caput III - That in the aevum there is no succession, as the common opinion holds

The opinion which more Scholastics follow is to be embraced, namely, that there is no succession in the aevum: this was handed down by Alexander in I, q. 12, memb. 9; Albert in the Opuscula; St. Thomas with Cajetan on this article 5 and in Quodlibet X, a. 4, where he expressly

impugns the opinion of Bonaventure; Henricus in Quodlibet V, q. 18; Durandus, In II, dist. 2, q. 3; Capreolus, q. 2, a. 1, concl. 5; Gabriel, In II, dist. 2, q. 1, a. 1, notabilia 3 et 4; Ockham, In II, q. 10. Richard and Scotus judge it probable in the places cited above; nay, Scotus judges it more probable.[540]

In order to explain this opinion, it must be observed that we can speak of the aevum of angels in two ways. First, insofar as it is conceived by us as a certain imaginary interval of duration, which in this way is not without succession, since it cannot be thought by us except after the manner of time that succeeds. And in this way Nazianzen and Damascene seem to have spoken of the aevum in the places alleged in the preceding chapter; but the present controversy must not be understood about this. Then we can speak of the real duration of the angel, as it is in itself, which, as Gabriel and Ockham have most aptly said, is not distinguished from the very existence (*esse*) of the thing. And it is about this, understood in this way, that there is dissension among the Doctors: in which we have said that truer is the opinion of those affirming that no real succession befits the aevum in itself considered without relation to some extrinsic duration. But if the aevum be taken relatively to some extrinsic duration, Gabriel and Ockham teach that by its name not only permanent duration is signified, but there is also connoted at the same time some succession: whether this is true or not, we shall say a little later.

With this foundation laid, our opinion is proved first by the testimony of St. Augustine, De civitate Dei, book 12, near the end; where, to show that the angels could not be equal to God in eternity, he says: "But time, since it runs on by mutability, cannot be coeternal to immutability; and therefore even if the immortality of angels does not pass away in time, nor is the past as if it were now no more, nor the future as if it were not yet, nevertheless their motions, by which times are completed, pass from the past into the future, and therefore they cannot be coeternal to the Creator." These are Augustine's words. He manifestly calls the immortality of angels the duration of their substance, which cannot be corrupted by a secondary cause, as we will show elsewhere; and he admits that in it there is nothing past and nothing future.[541] And he holds that succession is only in the operations of angels. We, however, are now disputing about the aevum of angels, that is, the duration of the substance; about the duration of operations we shall speak below.

By a single reason, which Blessed Thomas touched upon on this article 5, this same thing is proved in this way. No succession can even be conceived without variation; but in angels there is no variation, as St. Bonaventure also teaches: therefore neither is there succession. Moreover, that succession cannot be without variation is proved, first on the part of duration itself considered only under the ratio of duration; then on the part of the angelic substance itself, of which duration is the duration.

540. Alexander of Hales, Summa theologiae, I, q. 12, memb. 9; Albert the Great, Opuscula; St. Thomas Aquinas, on this article 5 and Quodlibet X, a. 4 (with Cajetan ad loc.); Henricus of Ghent, Quodlibet V, q. 18; Durandus, In II Sent., dist. 2, q. 3; Capreolus, q. 2, a. 1, concl. 5; Gabriel (commonly taken to be Gabriel Biel), In II Sent., dist. 2, q. 1, a. 1, notabilia 3 - 4; William of Ockham, In II Sent., q. 10; Richard of St. Victor and John Duns Scotus in the places cited above.

541. St. Augustine, De civitate Dei, XII, c. 15.

On the part of duration formally: if in it there is a future, which is not yet, and which will at some time be present, then when that arrives which will be present, that which before was present will become past; for it cannot remain together with that which arrives, since only one "now" ought to be present, and that altogether indivisible. Since therefore the future cannot be unless there is also the past, and if variation only occurs in the past, as Bonaventure wishes, it follows that in the duration of the aevum there is variation of the past

Scotus, in the cited place, In II, dist. 2, q. 1, no. 6, being refuted by this reasoning, admits that wherever there is "the future," there must necessarily be "the past." Nevertheless he defends the opinion of Bonaventure in another way. He says that in some delay, as it were, of duration taken formally, there can be variation of the past, although that variation is not in the thing itself whose duration it is. And in this way, in the duration of angels there would indeed be variation of the past, but not in their substance: nor, he affirms, did Bonaventure wish to teach anything else. He adds an example: if flesh were posited under quantity, not having parts, then indeed in the extension of quantity there would be parts, not in the flesh itself, whose quantity that is; so likewise in the duration under which the angel's substance is, there would be parts of past and future, yet in the angel's substance itself they would not be.

Cajetan mentions this doctrine of Scotus on this article. Yet, omitting his refutation, by this reasoning it is easily overthrown. It cannot be that flesh have quantity inhering in it, and yet the extension itself not be in the subject, just as it cannot have whiteness and yet not be white: for "extended" is the formal effect of quantity just as "white" is of whiteness. But here the discussion is about the duration of angels, which inheres in them; indeed, it is altogether the same in reality with their substance - although there can be an extrinsic duration to the angel, such as our time, by which it may be defined as by a measure, as we shall say below - and in that extrinsic duration there can be variation of past and of future, while in the angel's substance itself there is not; nevertheless intrinsic duration to the angel cannot be with that variation, without the angel's substance itself being varied: for just as there cannot be whiteness in a body without making the body white, nor quantity without making it "quantum" and extended into parts, so also, taking the duration of angels formally, there cannot be succession of the future without variation of the past, as Bonaventure wished.

Nor can there be succession in the very substance of the angel. For if the angel's "to be" (*esse*) is future, that will at some time be present; either therefore it is the same as that which was before, and thus it was not future but present; or it is other, and then of necessity, when it arrives, that which was present will pass away, or else two things will at once remain together. Therefore, in the very entire angelic existence either there will be no succession of the future, or, if there is succession, there must be variation of the past.

Someone will say that succession of the future in the angel's substance is not of the whole substance, but of a part, because in that way succession would come from something future without that which was before being present passing away, but would remain wholly, as in the substance of a man nothing would be taken away when a new part of substance comes by nutrition; there would indeed be succession of the future, but not variation of the past. But this is frivolous.

First, because the angel's substance is altogether individual, as is now evident; nothing therefore can accrue to the substance itself - let them show us, as Augustine expressly noted in the place cited, what that is which by the succession of the future is added to the substance of the angel. Next, because even if it were so, nevertheless there is not in the substance itself succession of the whole substance's being: for that some part should arrive does not suffice for there to be succession of the whole "to be"; but rather, as to the whole true "to be," aside from succession it always remains the same. Wherefore, in the duration of the substantial "to be" of corruptible substances which by nutrition or in another way can acquire new parts, there cannot be succession of the future. For the whole of what is future is now and always was, albeit not under so great a quantity and multiplicity of matter: to speak more clearly, man is man from the beginning, and, while he lives, he does not cease to be man; nor is he who will be a different man.

St. Thomas, Henricus, and others, together with Bonaventure's opponents, contend that there is always some variation wherever there is succession of the future, inasmuch as what will be will at some time be present, and ceases from being future, and is defined as present. Now Bonaventure does not deny that there is variation in that which arrives, but he denies that, by reason of the future's arrival, the past is thereby introduced and what was present ceases. But we, for our part, have proved that such variation is necessary wherever there is the future. If that is so, it plainly follows that succession belongs to nothing save to that whose whole is not together, but consists of past, present, and future parts: such is the condition of motion and its being; not of substance and its being.

Some nevertheless defend in this way that there is succession in the duration of an angel, namely, that succession is said only with respect to duration, not of the angel's substance; because succession inheres proximately to duration, not to substance. They think that duration is really distinct from the substance of an angel, just as the duration of motion is distinguished from motion: for while the motion remains the same, its duration is varied according to swiftness and slowness; from which variety a distinction, at least modal, from the thing is argued. Thus also, they say, in other things duration is distinguished from substance.

But I think otherwise. First, if duration were thus distinguished from the thing itself of which it is the duration, it could be that there would be succession in the duration, even if there were not in the substance itself. Second, even if the duration of motion be distinguished from motion itself, it does not follow that the duration of substance ought to be distinguished from the substance itself: for although in the duration of motion there appear some varieties which would not be in the motion itself - on account of which one might say that duration is distinct from motion - yet it would follow that in the duration of substance also there would be varieties that are not in the substance itself, which neither can be separated from it nor be opposed to it. Without any foundation, therefore, do they teach that the duration of substance is distinguished from the substance itself as a mode from a thing. Third, moreover, one and the same substance cannot, according to the same part and in the same respect, be at once successive and not successive; and conversely.

... or to be swift, or to be varied in duration in some way, as experience has established. Wherefore there is no reason why, in motion itself, its duration should be distinguished from it; but universally, the duration of any thing is the same as the thing itself, of which it is. And therefore, if there is succession in the duration, it must also be in the substance itself of which it is.

Obiectio. Moreover, the aforesaid authors prove that duration is distinguished from the substance of an angel by this reason. This substance can exist without this duration, though not conversely: therefore at least duration is distinguished from the substance of an angel as a mode from the thing of which it is the mode. But that the substance of an angel can exist without this duration, they show thus. The substance of an angel, which now has this duration, can be annihilated and produced again; and when it is produced again, it is the same substance in number, not the same duration: therefore duration is distinguished from substance. The same argument can be made regarding motion.

Solutio: I answer that the same substance in number can, after being annihilated, be produced again; yet then it does not have another intrinsic duration, but the same as if it had continued without interruption. One may only say there is a different extrinsic duration with respect to other extrinsic measures with which it coexisted: just as the same angel is said now and formerly to have endured, and hereafter to be about to endure, whereas in reality he has altogether the same duration. But concerning motion I pronounce that the same motion in number cannot return, not even by the power of God; because the unity of a motion is taken from time.

Note: Further, that we may set a limit to this latter part, it must be observed that Ockham and Gabriel have followed this opinion in such a way as to concede that in the thing itself and in the substance of an angel, or even in duration, inasmuch as it is in itself, there is no succession of the future; but that it is so signified by this name, Duration, that it at the same time connotes the succession of another duration with which it can exist and endure together. Wherefore, if such a duration could not be together with that succession which belongs to an angel, it could not be signified by this name, Duration.

It is rejected: Nevertheless they are plainly mistaken. For although the name Duration seems to be derived and extended from sensible things, in which there is some succession, to spiritual things, because every duration is more conveniently conceived after the manner of a certain succession, yet it does not follow that the name duration, inasmuch as it signifies the duration of an angel, connotes any succession; just as the name Wisdom, since it is derived from created things and adapted to the divine, does not in that way signify God's perfection as simultaneously to connote what is created. For it is one thing to signify it after the fashion of what is created; another thing truly is to connote what is created at the same time.

Caput IV - On reconciling the testimonies of the Fathers and distinguishing aevum from eternity

That we may satisfy the testimonies of the Fathers and the reasons adduced for the prior opinion, it must be observed that there is a difference between the aevum (*aevum*) of created spiritual things and the eternity of God, which Blessed Thomas assigns in the article.[542] They differ, therefore, not because the aevum has a beginning while eternity does not have one; for it can happen, according to the opinion of many, that a spiritual thing is created from eternity: then the aevum would not have a beginning, nor would it differ from eternity on that score. Rather, they differ because eternity is so the permanent duration of God without succession that it has conjoined to itself no succession, neither in the very substance of God, whose duration it is, nor in operation, nor in any other thing; whereas the aevum of created things is the permanent duration of the substance, yet in the accidents and operations which are together with it there is succession. Wherefore eternity is the duration of a thing in every respect; but the aevum is only, from the side of the substance, permanent and wholly at once.

From this it is easy to understand what the holy Fathers, earlier commemorated for the prior opinion, wished to say. First of all, therefore, all those who attribute only to God the perseverance of duration without any succession, just as immutability, clearly speak of eternity, which is in every respect without succession. This they attribute to God alone, as also immutability; and these are distinguished from the aevum, as was said above. For the aevum, although it has perseverance of duration without succession on the part of the substance - of which it is the duration - nevertheless has conjoined the vicissitude of operations and of accidents...

- The notion, which by its very nature is subject to the change of accidents and operations.

In the same way Anselm, cited there, should be understood; which is most clearly deduced from his words. For he asserts of things other than God, which he also calls eternal because their duration is called the aevum, that they do not yet have of their eternity what is to come, just as they already do not have what is past. But this is not true, if it be referred to the duration of their substance: for in this there is nothing past, but the whole of its being remains. He therefore speaks of the aevum itself of things, in so far as it has conjoined with itself a variation of operations and of accidents: of these, just as they do not yet have what is future, so they now do not have what is past. Wherefore the testimony of Anselm favors in nothing the opinion of St. Bonaventure: for this author contends that in the aevum of the angels, in so far as it is the duration of the substance, there is a succession of the future without a variation of the past. But Anselm says that in the aevum of the angels and of other things besides God there is not only a succession of the future, but also a variation of the past; which cannot be understood except of the variation of accidents and operations.

542. St. Thomas, in this article.

In the same manner Isidore could be explained, if he had said that in the tenor of the words which we reported. But if his words be faithfully related, they favor nothing of the prior opinion. For he said in this way: "God alone knows being, who does not know having been, or being to be." He did not say, as Bonaventure reports: "Only God is he who does not know having been, or being to be." Wherefore Isidore's words have no difficulty, as is evident.

Of St. John Damascene it must be said that he speaks of that imaginary interval of eternity, which is conceived by us after the manner of a flowing, about which there is no present controversy.

To Boethius I say that he too spoke as Anselm and the other Fathers: wherefore he is alleged in vain for the prior opinion.

Solvuntur duae primae rationes. Now let us address the arguments adduced on the opposite side. To the first two, which are taken on the part of conservation, we say that, as the eternal generation of the Son of God is always being perfected, and the Son proceeds from the Father by generation perpetually, without any succession or variation of the future: so a spiritual creature is by a certain perpetual creation produced and conserved by God. Nor is there need, either really or even according to reason, to distinguish the first creation of a thing from its conservation otherwise than by respect to various instants and to the duration of our time; so that, in so far as it is referred to the first instant, it be called creation; but in so far as to the rest of time, with which also it simultaneously endures, it be called conservation, although it be the same act in reality and in notion. If we could not compare it with our time, we would not distinguish creation and conservation: but there would be only one single act, by which a thing is perpetually drawn out by God from nothing, which always has as its terminus from which the nothing, not because that nothing preceded the thing itself in time and duration, but because the thing which is conserved by God would fall into nothing if it were left by him; and because there is not anything else from which a thing according to the whole of its being is made by God. Wherefore even if the production of some creature were eternal, it would be from nothing, as remains explained.

In the same way, to the second argument it must be granted that to all spiritual things created, the whole of their being was communicated complete in the first instant, and that there was not anything future to be added to it; from this, however, it does not follow that they do not need conservation. For they receive that being from God in such a way that by their very nature they are always referred to him as to an author and as to one actually creating. Just as the Son of God, even if he received the whole being from the Father, nonetheless proceeds from him by perpetual generation, and regards him as actually generating.

Solutio tertii. To the third, from the same ground I answer that, although there is no succession in the conservation of a thing, nevertheless there is succession between it and annihilation, as between the being of the thing and its not-being. For since these two cannot be together, nor can any medium exist between them, it is necessary that the one succeed the other. Nor indeed is there need to say that annihilation is the negation of the conservation which would be future, as the argument contends, but that it is the negation of the conservation which has preceded it, so that

what before was conserved by God, now when it is annihilated is conserved no longer. Just as the not-being of the thing is the negation of its being, not indeed of that which was future, but of that which has preceded. Wherefore between these two there is a succession of future and past, although in conservation itself there is none.

Therefore, although annihilation is the privation of conservation, nevertheless future annihilation is not the privation of future conservation: for to annihilation there does not belong a futurity from the thing which it deprives, but it is of itself future after conservation, because it succeeds conservation: and thus from this same fact it does not have both the being of annihilation and the being of the future. And thus far concerning the arguments taken on the part of conservation.

Solvitur primum argumentum ex parte rei sumptum. But to the first, on the part of the things themselves, which was the other medium, Capreolus answers in the Second Book, distinction 2, question 2, article 3, to the second against the condemned conclusion, after ten other arguments; and Durandus in the same distinction and question to the second; and many recent authors in this article as well: therefore an angel can be annihilated, because although he has his whole being together, even the future, nevertheless that being is of a nature to exist together with the future of our duration. Wherefore, before that future arrives, he can be destroyed just as any other thing whose being is truly future; but on the contrary it cannot be that, after he has existed together with the past, he did not exist, because to the past there is no potency.[543]

Reijicitur recentiorum solutio. But this doctrine does not remove the difficulty of the argument: for it seems to matter little, if the aevum is apt to exist together with some future thereafter, in order that it may be able to be annihilated and not be; for from the very thing itself, without an order to something extrinsic, it seems to be the question whether it lies within the power of God to destroy it. From the fact therefore that it can exist together with some other future, it ought not to be inferred that it can be annihilated. For although it could not come about that there be some being having succession in its being, with which permanent things also could exist together, but every created being would be permanent, having the whole being together; nonetheless any creature by its very nature could be destroyed by God for this sole reason, that in its permanent and perpetual being it needs to be conserved by him. Therefore the force of the fact argued remains, namely, if the future of a permanent thing is already with it, as the past is, the thing itself will no longer be able not to be, just as neither not to have been.

Auctoris responsio. For my part I think an easier answer can be given, if that common proposition be rightly understood, "There is no potency to the past," which is to be taken thus, that to the same duration "to have been" and "not to have been" be referred: for thus "to have been" and "not to have been" contradict each other. Similarly it is to be understood: the present cannot not be present; and the future cannot not be future, as we shall say in Disputation 68, chapter 4. And since now in the thing there is something past and present, even of the thing itself which is past and present, without repetition of the past or the present we say "it cannot not have been," "it

543. Capreolus, In II Sent., d. 2, q. 2, a. 3, ad 2, contra conclusionem damn.; Durandus, In II Sent., d. 2, q. 3, ad 2.

cannot not be," because in reality the contradictory is supposed in the same duration. But if we refer the not-being to a different duration than the being or having been, very well can both be true at once. For a thing which was past, although it cannot not have been, can nonetheless now not be, and afterwards not be going to be; and a present thing, although it cannot now not be, can nonetheless afterwards not be going to be, and before not have been. Wherefore, in the angel, since we posit that the whole of his duration is present, and nothing of it future, so that in him there is not "to be going to be," but "to be," we must philosophize of him as of any present thing. Most truly therefore we can say: the angel who is, cannot not be, referring both to present duration; yet the angel who is can not have been, and afterwards not be going to be; and therefore be annihilated. For although in the angel there is not "to be going to be," nor "to have been," but the whole is "to be," yet there is "not to have been" and "not to be going to be." For in his being itself there is no succession; but between his being and his not-being, or conversely between not-being and being, there is succession, as has been proved in this chapter. Wherefore we do not say that the angel has being after being; but well, that he has being after not-being, and not-being after being. God alone it is who so has his whole being together that after it there cannot succeed not-being: not because the whole permanent being is without succession - for from this side it would not be impossible, as has already been shown of angels - but because, as Durandus very well noted in the said place, distinction 2, question 3, to the reply, and Capreolus likewise in that article 3, after the third solution against the condemned conclusion, he depends on no other, nor is conserved by any other as by a cause. Wherefore neither can any cause of his not-being be conceived.[544]

Ad secundum, secundum aliquos. To the second, from the same ground Capreolus answers in that article 3, to the ninth, against certain moderns, that between the creation of one angel and of another there cannot be in reality any succession: wherefore, in their opinion, it would not be said that God creates one angel after another, unless there were some time with succession, at least imaginary, with which those creations of angels might be compared. And if now we say that one soul has been created by God after another, we speak with respect to our time which is in succession, with which we compare and in a certain manner measure the creations of souls according to before and after. It would still be said that God creates one, when the other does not exist. But their whole reason is that "before" and "after" indicate succession; yet there is none of this in the being of the same angel; likewise they say that even between the creations of two angels it follows. This very thing Henry seems to have taught in Quodlibet 10, question 19, when he asserts that between the creation of one angel and of another there can only be an imaginary succession by an order to some true succession thought of

Nevertheless, although in the aevum and duration of each angel there is no succession, it does not follow that between two creations there cannot be; for in any instant there is no succession, yet one instant can succeed another. For who would deny that between the very thoughts of an angel there truly is succession, and that one after another is thought by the angel, without any comparison with our time? - of which the angel is said by St. Augustine to be moved from one to another, as we shall report in Disputation 35; yet each thought in itself is permanent and whole at

544. Durandus, In II Sent., d. 2, q. 3, ad resp.; Capreolus, In eod. art. 3, post solutionem 3, contra conclusionem damn.

once. But of the very creations the same is clearly proved. For between the not-being of an angel and his being there is no succession, as was said; and likewise between the not-being of an angel and his creation, and between his annihilation and his not-being: but the creation of Gabriel, by the very nature of the cause, could be together with the not-being of Michael, since he himself is created after his own not-being; therefore the creation of Gabriel would precede the creation of Michael. For just as, if one angel were created, and afterwards destroyed, and thereafter the same were created again, there would be succession between the former and the latter creation, as Capreolus grants in the tenth solution against the second conclusion; so in like manner between the creation of one, which is together with the not-being of the other, and that other's creation, which is after that not-being, there ought to be succession: and therefore he no less ought to concede a discrete time between the creation of one and of another, than between the creation and the re-creation of the same.[547][548]

It would not be said that God creates one after another, unless there were some time with succession, at least imaginary, with which those creations of angels might be compared. And if now we say that one soul has been created by God after another, we speak with respect to our time which is in succession, with which we compare and in a certain manner measure the creations of souls according to before and after. It would still be said that God creates one, when the other does not exist. But their whole reason is that "before" and "after" indicate succession; yet there is none of this in the being of the same angel; likewise they say that even between the creations of two angels it follows. The same thing Henry seems to have taught in Quodlibet 10, question 19, when he asserts that between the creation of one angel and of another there can only be an imaginary succession by an order to some true succession thought of.

But if we now say that one soul has been created by God after another, we speak with respect to our time which is in succession, with which we compare and in a certain manner measure the creations of souls according to before and after. It would still be said that God creates one, when the other does not exist. The whole reason of theirs, however, is that before and after indicate succession; but these are in no wise in the same angel; likewise they say they follow even between the creations of two angels. Henry himself seems to have taught this in Quodlibet 10, question 19, when he asserts that between the creation of one angel and another there can only be an imaginary succession by an order to some true succession conceived.

It follows, therefore, that there can be a discrete time between the creation of one and of another, as between the creation and re-creation of the same.

It is objected: One cannot create another unless there were some time with succession, at least imaginary, with which these creations of the angels could be compared. But if now we say that one soul after another is created by God, we speak with reference to our time, which is in succession, with which we compare, according to before and after, the creations of souls, and in some way we measure them. Yet it would be said that God creates the one, the other not existing. Their whole

547. Capreolus, loc. cit., solutio 10 contra conclusionem secundam.

548. Ibid., on the parity between the interval of different angels' creations and that between a creature's creation and re-creation.

reason is this, that "before" and "after" indicate succession: but this, just as it is not in that in which the angel himself is, so also it cannot be between the creations of two angels. Henry seems to have taught this very thing in that Quodlibet, q. 19, when he asserts that between the creation of one angel and of another there can only be an imaginary succession by an order to some true succession conceived.[549]

It is answered: Granted that in the aforesaid "where" and duration of each angel there is no succession, it does not follow that there cannot be succession between two creations; for although in any instant there is no succession, nevertheless one instant can follow upon another. For who would deny that between the angel's very thoughts there is true succession, and that one thing is thought by the angel after another, no comparison having been made with our time, as when, from one thought passing into another, there is succession among angels - whence Augustine says an angel is moved, as we will report in Disputation 35 - yet each thought remains in itself and is wholly at once? But concerning the creations themselves this is manifestly proved. For between the non-being of the angel and his being there is succession, as was said; and consequently between the angel's non-being and his creation, and likewise his annihilation. But the creation of Gabriel, for example, can be simultaneous with Michael's non-being, which truly precedes the creation of the latter, because he is created after his own non-being: therefore Gabriel's creation will then precede Michael's creation. For just as, if one angel were created and afterwards destroyed, and then subsequently the same were created anew, between the prior and the later creation there would be succession, as Capreolus admits in solution 10 against the second conclusion, so in like manner between the creation of the one, which is simultaneous with the non-being of the other, and the creation of that other, which is after that non-being, there must be succession; and hence one ought no less to concede that there is a discrete time between the creation of the one and of the other, than between the creation and the re-creation of the same.[550]

Objection. But someone will urge by this argument: If one creation can be after another without any order to an imaginary time, then one can also precede another more or less; yet more or less in that precedence cannot be assigned except in order to a greater or lesser succession of our time, since the being of each angel is altogether individual: therefore neither can precedence simply be without order to our time. But if this argument has any weight, it proves likewise that there is not succession among an angel's operations without order to our time, and that from them a discrete time is not composed. For each of those operations is individual, and therefore from them alone a more or less in precedence cannot be assigned. Yet among operations all the Schoolmen concede succession, which they call a discrete time: therefore the argument can have no weight.

Solution. I answer, therefore, that without order to our time there can be precedence among an angel's operations and creations, as was said, from this alone, that one is while the other is not, and conversely; but that a more or less in that precedence cannot be designated without order to our time, because this cannot be done unless some external measure be applied. Now, as we will say in the next disputation, no aevum (*aevum*) is the measure of that in which it is, nor can one be the

549. Henry of Ghent, Quodlibet X, q. 19.
550. Capreolus, In II Sent., d. 2, q. 2, a. 3, solutio 10, contra secundam conclusionem.

measure of another; but the whole reason for measuring even spiritual things ought to flow back to our time: therefore without order to it a more or less in precedence cannot be assigned, because this consists in a measure. Nevertheless, the precedence itself can simply be, because it is without a measure. Finally, from the same ground we will say most at large in Disputation 65, where we will show that nothing future has to the eternity of God a present existence and real presence, and consequently neither can the angel's aevum have it. Yet if to God in this way future things were present, no weak argument would be derived from the angel's aevum, as we will show there.

Further they argue: Just as an angel cannot be placed in a greater and greater place unless his mode of existing in it be extended, so neither can any substance be in a greater and greater time without some extension succeeding. But this argument is frivolous. First, because nothing is under our time by reason of some mode that it has in itself, but by its duration alone; and it can itself persevere without being changed in itself, even if the time under which it is said to be should succeed: just as a place remains the same, exists, and without its own succession embraces many bodies succeeding one another; and God also, without any succession, is together with the time that succeeds. Then, that when an angel is in a greater place he is said to have a more extensive mode, ought not to be understood of the extension of quantity, but of that which is in a habit with respect to more conclusions; and this is necessary, because an angel and spirit is conjoined to a body, not proximally through his own substance, but through some other mode by which he is united to it, as we will say in its own place below. Wherefore the ratio is not the same in both cases, as the argument contended.

Disputatio XXXIV - On whether the aevum is the measure of permanent things

Caput I - Various opinions

From this controversy too we shall exactly understand the nature of the aevum (*aevum*), and by what ratio it differs from our time. Now, there is in it the opinion of certain Doctors, who judge that the aevum is the measure (*mensura*) of permanent things, just as eternity is of God Himself. In which opinion agree St. Thomas, Cajetan, and the more recent Thomists there; Alexander; Albert; Aegidius in his tract on the measure of angels; Henry in a Quodlibet; St. Bonaventure in II; Richard; Thomas of Argentina; and Capreolus.[551]

The first way of holding is that of St. Bonaventure, Aegidius, and Thomas of Argentina, who teach that, besides a certain common extrinsic measure by which all immortal things are defined, there is in each of them its own aevum, which is the intrinsic and proper measure of each. Now Thomas proves that the aevum of each thing is its measure, because not all immortal things which are contained under the aevum and live began at the same time, as is clear about souls; therefore in

551. St. Thomas; Cajetan; Alexander of Hales (Summa, I, q. 12, m. 9, a. 3, ad 2; and art. 2); Albert the Great (De quatuor coelis, q. 3, a. 1); Aegidius (De mensura Angelorum, q. 2); Henry of Ghent (Quodlibet, r., q. 11); St. Bonaventure (In II Sent.); Richard; Thomas of Argentina (Summa, I, dist. a., q. 1 - 2); Capreolus (on Thomas of Argentina, q. 1, 2, 4).

each there ought to be its own measure, which may be proper to it, and also more certain. Besides this, there is a common aevum of a superior [order]; this he recommends by the following reason. Just as in other things which are corrupted, besides the intrinsic measure of each, which is its duration, there is a certain common and extrinsic measure which measures all, namely time; so in angels it ought to be.

Of these Doctors, St. Bonaventure does not so openly concede this common measure; but Aegidius thinks this measure to be the aevum and eternity of God; Thomas, however, [thinks it to be] the aevum of a superior angel, with whom many others agree in this, as we will see in this question.

The second way is Scotus's, who says two things. One is that no thing's own duration is the measure of an angel, or of any other thing in which it is. Thus he delivers in that question 2, to the second part. He proves it because a measure always differs from that which it measures; for the same does not define nor measure itself. For although sometimes the same quantity measures itself, this is done only with some part of it assigned and then replicated over the remainder by the intellect; but in an angel there is nothing of this sort. Then too, the angel's aevum is not distinguished from the angel's substance itself: therefore it is not its measure.

The other [thesis], which Scotus teaches in q. 3, is that there is some aevum which is an extrinsic measure of angels. But this (he says) can be explained or defended in three ways. Passing over, however, the first mode, which is about a measure of perfection, not of duration - according to which a more perfect species is called the measure of the less perfect species, of which there is now no controversy - two further [modes] remain. One is that the aevum of each superior angel should be the measure of the inferior, and this in an order down to the last. He proves that the duration of a superior is the measure of an inferior angel, because a measure ought to be by nature better known than that which it measures; although sometimes to some intellect, often to a human one, because it is imperfect, the measured may by nature become better known. But the aevum of a superior angel is by its nature better known, because it is more perfect, than that of the inferior; therefore that [aevum] is the measure of the inferior. The other [mode] is that there is only one aevum, namely the duration of the highest angel, which is the measure of all the others. He proves this by the same reasoning which St. Thomas uses in confirmation of his own view, which we will presently report. But in whatever way we speak, from the foregoing doctrine it necessarily follows that the highest angel will be the measure of none: not of his own, because nothing measures itself, as we said out of Scotus's own doctrine; not of an inferior, because that is to be measured which is superior to the thing measured, as he himself also teaches; not of a superior, because he has none: therefore he is without a measure.

A third way is philosophized by St. Thomas, Cajetan, Alexander, Albert, Henry, Richard, and Capreolus, which is especially approved by the more recent authors. They affirm that all immortal things are contained under one common aevum as under a measure; yet St. Thomas, Richard, and Henry assert that that common aevum is not the proper measure of those things that are contained under it, because it is not the cause of the others: just as the motion of the heaven, which, since it is

the cause of the others, is rightly said to be their measure. But, as St. Thomas most fittingly noted at article 6, reply to 4, and Albert and others [likewise], for something to be the measure of another it is not necessary that it be the cause of it; which will be made plain in the next disputation.

However, in their view it seems one must say that that highest aevum is not only the measure of inferior things, but even of the highest angel himself in whom it is, so that thus all immortal things may be contained under whose measure they are, as all corporeal things under time; which Caietan expressly taught at article 6, although the others made no mention of this. Whether indeed the very aevum of each angel can be its own measure is not sufficiently explained by the cited Doctors. From the more recent [writers], however, some seem to teach that the intellect of each angel holds his own aevum to be the measure of himself; whence they seem to incline to the opinion of Argentina and the others. This opinion is confirmed by the same reasons with which the opinion of Argentina and Scotus is supported, which, since it agrees with this [view], there is no need to repeat.

Caput II - The easier opinion

I indeed judge this controversy not great, but of such a sort; and for that reason the Doctors fight among themselves because they do not take the notion of measure in the same way. Truly, in accordance with those things which we delivered concerning measure from Aristotle in Disputation 30, c. 5, we can gather an easier opinion about this matter; which no author will doubt, who admits the definition of measure handed down by Aristotle. The opinion is this: neither any supreme aevum, nor the aevum of any thing, is the measure either of itself, in which it is, or of another. This is taught by Durandus; Gabriel; Ockham; and, in the same sense and in those places, others.[552] For the confirmation of which, two things must be proved by us, one being presupposed: namely, this is, in whichever...

Although others have treated of the measure of perfection, not of duration (duratio), according to which a more perfect species is said to be the measure of the remaining ones - a question about which there is now no controversy - two other ways remain. One is, that the aevum (aevum) of each superior Angel is the measure of the inferior, and so in order down to the last. And they prove that the duration of the superior is the measure of the inferior Angel, because a measure ought to be, by its own nature, more known than the thing it measures: although at times, to some intellect, namely to the human, because it is imperfect, the measure is not more known by its nature; yet the nature of the superior Angel is, by its own nature, more known, because it is more perfect, than that of the inferior: therefore it is the measure of the inferior. The other is, that there is only one aevum, namely the duration of the highest Angel, which is the measure of all the others. And this as well they prove by the same reason that St. Thomas brings in confirmation of his own opinion, which we shall presently report. Yet, however we speak, from the foregoing doctrine it must necessarily be admitted that the highest Angel has the measure of no aevum: not of his own,

552. Durandus, In II Sent., d. 2, q. 3; Gabriel Biel, q. 1, a. 2, concl. 5 - 6, and art. 3, dub. 1; William of Ockham, In II Sent., q. 13.

because nothing measures itself, as we said from the doctrine of Scotus; not of the inferior, because a measure ought to be superior to the thing it measures, as he also teaches; not of a superior, because he has none: therefore he lacks a measure.

In a third way St. Thomas, Cajetan, Alexander, Albert, Henry, Richard, and Capreolus philosophize, and this is especially approved by the more recent authors. They affirm that all immortals are contained under one common aevum as under a measure. Yet Richard and Henry assert that that common aevum is not properly the measure of those which are contained under it, because it is not the cause of the others: just as the motion of the heaven, since it is the cause of other things, is most fittingly said to be their measure. But, as St. Thomas most aptly noted, a. 6, ad 4, and Albert and others, for something to be the measure of another it is not necessary that it be the cause of that other; as will be made clear in the next disputation. However, in the opinion of these authors it seems one must say that that supreme aevum is not only the measure of the lower things, but also of the very highest angel in whom it is; so that in this way all immortals are contained under one measure, just as all corporeals are contained under time: which Cajetan expressly taught.[553]

The easier opinion

I for my part judge that this controversy is one not of things, but of words; and on that account the authors are at odds with one another, because they do not conceive the notion of measure in the same way. But according to the things which, from Aristotle, we handed down about measure in Disputation 30, chapter 5, we can choose an easier opinion on this matter; which I think will be doubtful to none who has admitted the notion of measure handed down by Aristotle. The opinion is this: that neither some one supreme [aevum], nor the aevum of any immortal thing, is, in that in which it is, a measure - neither of itself, nor of another, nor of anything else. This is taught by Durandus, by Gabriel, and by Ockham.[554] For the confirmation of which, two things must be proved by us, one being presupposed. And this is: that in whatever immortal thing there is its own proper duration, which is called its aevum. For just as in whatever motion there is its own duration, which is not distinguished from the being (*esse*) of that motion (I do not say [there is thereby] a measure, nor [that this duration is] time), so also in each thing that remains, whether immortal or liable to corruption. For a thing is not said to persevere and endure in its own being by the duration of another - this is, because one thing endures - just as it is not said to be of such quantity - by the quantity of another; although by the duration of another, as also by the quantity of another, it be defined as by a measure.

This being posited, which is most certain and without controversy to all, and in which Scotus agrees with us, the first part of our opinion must be proved, namely, that each thing's proper aevum is not the measure of itself. And we speak not of a measure of perfection, but of duration,

553. Cajetan, on article 6, ad 4.

554. Durandus, In II Sent., d. 2, q. 5; Gabriel Biel, q. 1, a. 2, concl. 5 - 6, and art. 3, dub. 1; William of Ockham, In II Sent., q. 13.

which is commonly called a measure according to the definition of Aristotle in Metaphysics X, chapters 2 and 3.[555] Ockham and Gabriel prove it thus: the measure of an Angel is either its existence (*esse*), or some respect founded in it: not the first, because the same thing cannot be the measure of itself. For, since that which is defined by the measure is the Angel's existing, his existence, or existence - which is the same - it cannot be the measuring measure: nor any respect, for a measure ought to be more known than the thing it measures, but that respect cannot be more known; nor something compounded from both: therefore there is no intrinsic measure in the immortal things themselves. I pass over other arguments of these authors which do not please me: nay, even this which I set down does not altogether explain, and it proves that which we proposed.

Therefore the best reason is that of Durandus which, in my opinion, is the sole and the firmest foundation of this matter. It is taken from the definition of measure handed down by Aristotle; which indeed, since we fully explained it in Disputation 30, chapter 5, so that we might prove that the eternity of God is not the measure of himself, we shall here only touch upon. The reason is in this way: the duration of any thing, although it renders that thing subject to measure, just as the quantity makes the thing in which it is [to be] something measurable, nevertheless quantity cannot be that by which the thing itself is known and defined, as I showed at length in the same disputation, chapter 5, notation 3; but some other extrinsic duration must be applied by the intellect, to which the proper definition of measure set down there in notation 2 will agree: nor is it only the substance of the thing that is considered by measure, but also its duration is considered according to another extrinsic [standard], applied by the intellect.

Moreover, in the opinion of those [who speak of a common aevum] it seems one must say that that supreme aevum is not only the measure of lower things, but also of the very highest angel in whom it is, so that thus all immortals may be contained under one measure, just as all corporeal things are under time: which Cajetan expressly taught.[553]

The latter part of our opinion is, that no aevum, not even that of a superior angel, is the extrinsic measure of another; which from the same doctrine handed down in Disputation 30, chapter 5, Durandus, Ockham, and Gabriel easily prove. For a measure ought to be more known than the thing it measures, as was explained there: for indeed by it we are made more certain about the quantity, or position, or duration of the thing which we measure. Indeed, there is nothing else to measure some thing than to know its quantity, weight, or duration through another: every measure is a measure for some intellect, as we said in that place. But the aevum of a superior angel, or even of the highest, is not more known than the aevum of an inferior, inasmuch as duration is after the manner of an extended quantity: therefore it cannot be the measure of the inferior.

Furthermore, that the aevum of a superior angel is not more known is clear by induction: first, it is not [more known] to the divine intellect; for to it all these things which are patent and manifest are not defined through another. Second, not to the intellect of the superior angel: for although he sees that his own aevum is of a more perfect nature, and that his substance is less subject to variety

555. Aristotle, Metaphysics X, chs. 2 - 3.
553. Cajetan, on article 6, ad 4.

than that of the inferior - whence he has it as a rule and measure of perfection - yet from his own duration he is not rendered more certain about the duration of the inferior, namely, how great it has been; and in this consists the proper notion of the measure of which we are disputing. For he sees that all began and persevered together; and although some of them afterwards might have begun, as souls, nevertheless from his own duration he would not know how great was the duration of the others, nor could he measure it. Third, it is not more known to the intellect of the inferior angel than to that of the superior: for each one knows his own duration so well that he cannot define it better by another's duration; so that he does not use the aevum of another as an instrument for discerning how long he himself has endured. For that he himself says and knows that he has endured as long as the highest Angel has endured, is not to define his own duration by the aevum of the superior: for it would be the same as to refer it to that of the inferior; wherefore his own aevum would be no less a measure for himself of the superior's than the superior's aevum would be a measure of his. Fourth and finally, since the [aevum] of the superior is in no way more known to our intellect, as experience shows - for as to various durations we are not rendered more certain through anything else, but only through our time, as we shall say in the following chapter - it remains, therefore, that no aevum be the measure of another, since it can serve no intellect for this.

Some more recent authors reply that a measure ought not to be more known to the intellect that uses it, but it is enough if it is of its own nature more known: of this kind is the superior, which, because it is more perfect, is more known also by its nature; as the motion of the heaven, although to our intellect it is not more known than the motions of the lower, is nevertheless their measure, because by its own nature it is more known.

But this reply is easily refuted, first, from the very definition of measure: for, as we proved in Disputation 30, chapter 5, of the ratio of measure is an order and relation to an intellect, whose proper function it is to be made more certain about some quantity, or about something having a kind of quantity, which is to measure a quantum thing; wherefore measure is an instrument of the intellect, by which it measures and defines a thing; and so in the very intellect that defines by it the measure itself ought to be more known: for if to that intellect it were not more known, it could not serve as an instrument for measuring; therefore it matters little that something which is a measure is more known by nature: what is required is that it be more known to the intellect which uses it.

Then it is false that the motions of these lower things are more known to our intellect than the motion of the heaven: for, besides the fact that in that case it could not serve us as the measure of these lower motions, as is clear from the foregoing - which is absurd - yet insofar as it is the measure of other [motions], it is the most known of all to us. For although, if we consider causes and other properties and modes of motions, the motions of the lower are more known to us, still the motion of the heaven, insofar as it is a certain duration and has the character of a measure, is more known, because it persists in the same proportion in its succession; wherefore it is rightly established as the rule of the rest, which ought to be more known to the very intellect that uses it. This also is clear from experience: for if you ask someone how long the game was, how long the reading was, or something else of this kind among these lower things, no one will be able to explain

their duration unless he compares it with the motion of the heaven, or with some lower motion first defined through the motion of the heaven, such as the motion of a clock, or of sand, or of water. For which cause, as we shall explain a little later, the motion of the heaven is for us time, because it is an instrument by which we measure the other motions into days, months, and years, the very luminaries of the heaven being distinguished by God for this very purpose; to which we also add another artificial division, namely into hours and minutes, so that we may reduce this measure to a briefer unity which may serve us more conveniently and for measuring more things.

From which (to say this in passing) it follows that, although time is in motion, nevertheless not in any motion whatsoever, as some more recent authors judge. For time formally is not only the duration of motion, which indeed is found proper to any motion, but it is the duration of the first motion so divided and distinguished by the intellect that it may be an instrument and measure for measuring other motions, to which the others are reduced; and therefore time has been called by Aristotle the number of motion, as if he were saying, a number of motion divided by the intellect and assumed for measuring other durations. Wherefore he subjoins that, if it is impossible for there to be a numerating [subject], namely the intellect, it would also be impossible that there be number, that is, something numerated, which he said time is. Therefore time is either a being of reason, to wit the relation of measure in motion, or at least it is completed by that; wherefore it must not be placed in the predicament of real quantity.

By these things that have been said, not only is the latter part of our opinion confirmed, but also the opinion of others is refuted, inasmuch as it says that there is one aevum which is the extrinsic measure of the rest, or that any higher aevum can be the measure of a lower, as Scotus supposed.

... since he himself does not know and define it; wherefore he does not use the aevum of another as an instrument for discerning how long he himself has endured. For that he himself says and knows that he has lasted as long as the highest Angel has lasted, is not to define his own duration by that of a superior; for it would be just the same as to refer it to that of an inferior; wherefore his own aevum would be no less to himself a measure of that of the superior, than the aevum of the superior would be a measure of his own. Fourth, finally, since that of the superior is not better known to our intellect, as experience shows, because concerning the duration of one we are made certain in no wise through another, but only through our own time, as we shall say in the following chapter, it remains therefore that no aevum be the measure of another, since it can serve no intellect for this.

Some more recent authors answer that a measure need not be better known to the intellect that uses it, but that it suffices if it be by its own nature more known: of such a sort is that which is higher, which, since it is more perfect, is also by its nature more known; as the motion of the heavens is not more known to our intellect than the motions of inferior things, yet it is their measure, because by its own nature it is more known.

It is refuted. Yet this answer is easily refuted, first from the very definition of measure: for, as we proved in disputation 30, chapter 5, the formal account of measure is an order and relation to the intellect, whose proper function is to render one more certain of some quantity, or of

something that is related after the mode of quantity, which is to measure a quantifiable thing. Wherefore a measure is an instrument of the intellect, by which it measures and defines some thing; and accordingly the measure itself ought to be better known to the very intellect that defines: for if it were not better known to it, it could not serve as an instrument for measuring. Therefore it matters little, for something to be a measure, that it be more known by nature; but it must be more known to the intellect that uses it.

Then it is false that the motions of these lower things are better known to our intellect than the motion of the heavens: for besides the fact that the latter could not serve us as a measure of these inferior things, as is clear from what has been said - which is absurd - yet inasmuch as it is the measure of the others, it is to us the best known of all. For although, if we consider causes and other properties and modes of motions, the motions of lower things which we see before our eyes every day may be better known to us, nevertheless the motion of the heavens, inasmuch as it is a certain duration and has the notion of measure, is better known, because it persists with the same proportion in its succession; wherefore it is rightly constituted as a rule of the others, which ought to be better known to the very intellect that uses it. This also is clear from experience: for if you ask someone how long a game lasted, how long a lesson, or other such like among these inferior things, no one will be able to explain their duration unless he compare it with the motion of the heavens, or with some lower motion previously defined by the motion of the heavens, such as the motion of a clock, or of sand, or of water. For which reason, as we shall explain a little later, the motion of the heavens is to us time, in that it is the instrument by which we measure the other motions into days, months, and years; and the very luminaries of the heavens are set apart by God for this very purpose; to which we also add another artificial division, namely into hours and minutes, so that we may reduce this measure to a briefer unity, which may serve us more conveniently and for measuring more things.

From which (to say this in passing) it follows that although time is in motion, yet it is not in just any motion, as some recent authors judge. For formally time is not only the duration of motion, which indeed is found as its own in any motion whatsoever, but it is the duration of the first motion so divided and distinguished by the intellect that it can be an instrument and measure for measuring the other motions, to which the rest are reduced; and so time was said by Aristotle to be the number of motion, as if he were to say, motion divided by the intellect and assumed by it for measuring other durations. Wherefore he adds that, if it were impossible that there be a numerating [subject], namely the intellect, it would also be impossible that there be a number, that is, something numerated, which he said time is. Therefore time is either a being of reason, to wit, the relation of measure in motion, or at least it is completed by that; wherefore it ought not to be placed in the predicament of real quantity.

By these things that have been said, not only is the latter part of our opinion confirmed, but also the opinion of others is refuted, inasmuch as it says that there is one aevum which is the extrinsic measure of the rest, or that any higher aevum can be the measure of a lower, as Scotus supposed.

Arguments.

It will not be difficult to dissolve the opposing arguments from the foregoing doctrine. To the first, which was common to all, I answer: it is not necessary to assign some higher measure proper to spiritual things. For since a measure by its nature is not something higher than that which it measures, it is not necessary that higher substances have a more excellent measure; but since a measure is an instrument of the intellect, that will be the measure which the intellect uses for measuring. And since no one can use a higher aevum for defining that which is lower, it follows that no aevum, even if higher, is the measure of what is lower. Whether time can be the measure of spiritual things, and in what manner it cannot be applied to God, we shall say in the following disputation. Nor indeed has any of the Fathers ever taught that the aevum is the measure of the Angels; for those whom we recalled in disputation 33, chapter 1, assert that aevum is also taken for the duration and, as it were, for the age of the Angels, which we likewise concede. Whether, however, it can be subject to a measure, and what its formal ratio is, by which it differs both from eternity and from time, will be seen in the following disputation. Finally, as to the arguments of each of the singular opinions, I think from the foregoing doctrine that satisfaction also has been given.

Disputatio XXXV - Whether the aevum of the Angels can be defined by our time as by a measure

Caput I - What St. Thomas and his disciples, and Durandus, held

The first opinion is that of St. Thomas in Quodlibet 10, article 4, and of Capreolus in the places cited in the former disputation,[556] whom some more recent authors follow, who hold that time indeed is for us the measure of the Angels, because our intellect defines their duration; then, that by its nature and in itself it is not time, but the aevum of them is their measure, as in the former disputation, out of their opinion, was set forth, the reason of which we also touched upon there. For they think that a measure ought to be of some higher order and by its nature more known; but time is a certain duration inferior to the aevum of the Angels.

The second opinion is that of Durandus, who not only denies that the aevum is the measure of any Angel, as we saw in the preceding disputation, but also says that time truly and properly is the measure of each one. This opinion would altogether commend itself to us, had he not added that this kind of measure is heterogeneous and of another sort of ratio; not because the substance of the Angels is immortal, whereas time is subject to corruption - if it is true that the substance of the heavens can be corrupted, or at least that the motion of it is by its own nature not perpetual, since it proceeds from an extrinsic active principle, namely an intelligence - but because time is extended and has succession, whereas the duration of the Angels is individual and all at once. Wherefore (says Durandus) an Angel is defined only by our time, inasmuch as he exists together with it, not because the duration of each is congenerous.

556. St. Thomas, Quodlibet 10, art. 4; Capreolus, in the places cited in the preceding disputation.

Caput II - This too is a controversy of words, not of things

Now this controversy also is a disagreement about words, not about things. For St. Thomas and the authors of the first opinion seem to be speaking of the measure of perfection; but the others of measure as it is defined by Aristotle in the Metaphysics, chapters 2 and 3.[557] Concerning this, the opinion of Ockham and Gabriel [Biel] in the places cited above pleases me,[558] which no one will deny, namely, not only that the aevum is not the measure of the Angels, as has been proved, but also that our time...

Our time truly and properly is their measure. And hence, against Durandus we add that this measure by which the Angels are measured is also congenerous with them. For, according to the opinion of Aristotle in Metaphysics X, chapters 2 and 3, it is not necessary that the one be the superior of which the other is the measure; for this it is enough that each be a duration.[559] For duration does not have gravity or weight for its measure, but another duration. Nor does it matter that the Angels' duration is individual and permanent, whereas the duration of time is flowing and extended: for the Angel's duration, or aevum, is conceived by us after the manner of flowing; and this is why we most fittingly apply a flowing duration as its measure. And since measure is not something outside the soul, but only in the intellect, as was proved in disputation 34, cap. 5, it also seems enough that an individual thing be truly and properly said to be a subject of measure, if it is conceived by us after the manner of something flowing and having succession; nor is it necessary that it be really extended and flowing, like that which is assumed as its measure.

Therefore it follows, from the aforesaid definition of measure, that time is the measure of the Angels. For that is a measure by which one discerns the quantity of another, if the duration is conceived after the mode of quantity; and by time we best come to know how great the Angels' age has been, and by how much they were more ancient than the Flood, or than the creation of any soul; nor can we learn this otherwise: therefore it is truly and properly a measure of the Angels. Finally, for the confirmation of this opinion certain points must be observed.

First, a measure ought not by its nature to be more perfect than the thing it measures, nor to be its cause: for this was not expressed by Aristotle in the definition of measure, but it ought to be better known, since it is assumed as a principle or instrument for coming to know that which is obscure.

Second, it ought not to belong to a nobler substance, nor even to the same; for it accidentally belongs to a measure to lead us into the cognition of the thing we measure. Wherefore by gold we can measure the weight of iron, and length by length, and by the motion of the heaven all the other motions of these lower things. Thus, too, it is not necessary that the duration be nobler, or even of the same sort: it is enough that by our intellect it reduce the thing to knowledge.

Third, since every measure is referred to the intellect, time is a measure of the aevum of Angels to our intellect, not to the Angelic or the divine: for ours alone needs some measure and unity in order definitely to know things. But God or an Angel, since he contemplates the things themselves

557. Aristotle, Metaphysics, chs. 2 - 3.

as they are, neither needs these nor can in any way use them: yet that is enough for it to be called truly and properly a measure, since a measure is not from the nature of the thing, but is assumed only by some intellect.

Lastly, it must be noted that, when we say time is the measure of the aevum of Angels, we are to understand that we do not take it absolutely as it will be perpetually future, but, as it were, on one side. Namely, because it had a beginning, we can by time define how long an Angel, or a soul still living up to now, has lived, and by how much an Angel is more ancient than a soul; but we certainly cannot measure the Angel altogether with respect to the future: for just as that which lacks a beginning cannot fall under a measure, so also that which lacks an end cannot from that side be defined. But God, since on every side He is of infinite duration without beginning and without end, in no way has a measure, as Gabriel and Ockham very well noted, not because He is of a superior nature (for a measure need not be nobler than the thing it defines, as was said above), but because every measure is reduced to unity, so that by repetition a thing may be counted: wherefore a fixed terminus is required, whence the counting may begin again, which nonetheless God does not have in reality, nor can it be designated by our intellect in His very eternity. It would be otherwise in the motion of the heaven, if it were eternal: for since it would have a flowing succession and days, months, and years assigned in it of themselves, a beginning also could be set.

Caput III - What is the definition and nature of the aevum

It remains to gather from what has now been said the nature and definition of the aevum. Concerning which, although the authors have said nothing expressly, I judge that, by a certain proportion, they would speak as they do of eternity. For Ferrarensis says that to the notion of the aevum there pertains not only real duration, but also the relation of measure, which he says is of reason.[560] But more recent Thomists hold that both also somehow pertain to the notion of the aevum; yet that the respect of reason is not included directly, but only connoted. Each of these, however, could easily be impugned from the things said there and in this disputation. It is better, therefore, if we say, as Cajetan said of eternity (although in his opinion it did not seem proved to us), that the nature of the aevum, formally, is nothing other than a certain permanent and individual duration of the Angel and of each substance - even corporeal - in its own existence, to which, however, there can be joined a variety of operations and accidents. And in this way the whole real notion of the aevum will be constituted, nor will there formally pertain to it either the notion of active measure (for this in no way befits it, as has been proved), or the notion of passive measure: for although, as things now are, it can fall under a measure, nevertheless, if it had not a beginning, it could not; yet it would still be called an aevum of the same notion. I think, therefore, that by the name "aevum" there is neither expressly signified nor connoted a respect of passive measure, nor the negation of it, but only that permanent duration; whereas by the name "eternity"

558. Ockham and Gabriel [Biel], in the places cited above.

559. Aristotle, Metaphysics X, chs. 2 - 3.

560. Ferrarensis (Francisco de Ferrara), on the aevum: he says that to the notion of the aevum there pertains not only real duration but also the relation of measure, which is of reason.

there is signified that negation of measure, as was explained in the aforesaid disputation, cap. 6.[561] From this it is evident that it differs from eternity, both because eternity is so permanent that it has no variety joined to it, whereas the aevum has variety joined to it; and also because eternity includes the negation of measure, but the aevum does not. It differs from time, however, because time is not only the duration of motion, but also its number and the measure of other things, and thus either is something of reason, or is completed by something of reason; whereas the aevum has nothing of reason, but is only the duration of a permanent thing, as has been said.

Disputatio XXXVI - What is the measure of the operations of Angels, of the beatific vision, and of bodily things subject to corruption

On the operations of the Angels, cap. 1. On the beatific vision and grace, cap. 2. On bodily things and those subject to corruption, cap. 3

Caput I - On the operations of the Angels

Since it has pleased us in one disputation to embrace all these topics, because there is one and the same reason of them, and from the doctrine handed down one ought to philosophize in the same manner concerning each, yet, that we may proceed more clearly, we must speak of them individually.

Concerning the immanent operations of the Angels, the first opinion is that of Scotus in 2, dist. 2, q. 4, who teaches that the natural operations (about the beatific [vision] the controversy will be in the following chapter) are to be defined, like the Angel's very substance, by the aevum as their proper measure. He proves the first point, because their existence is permanent and entire at once, like that of substance: therefore the aevum will be their measure, as it is of substance. Nor does it matter that the Angel's substance will endure without end, but not the operation: for even if the Angel were not about to remain forever, the proper measure of that substance would still be the aevum, since its being is permanent and all at once.

Then, because the measure of the clear vision of God is, in everyone's judgment, the aevum; but vision includes or presupposes a natural operation, and nothing aeviternal - that is, nothing which is contained by the aevum - includes or presupposes something posterior, such as what is temporal; therefore that act, or natural operation, which is contained in, or presupposed by, the vision, is not defined by time but by the aevum, and consequently all the rest ought to have the same measure. For this reason Scotus said that, in vision, an operation or natural act is included or presupposed, because the vision is produced by the soul's very natural potency, which is indeed the cause of it together with the light of glory. But since, according to Scotus's opinion (which we reported in disputation 34, cap. 1), no aevum is the measure of that which is in it, but that aevum which is extrinsic and is in another thing is the measure of another, it must be said, consequently,

561. See the explanation given earlier in the cited disputation, cap. 6.

that the measure of the operations of an Angel is not the aevum which is the duration of those operations, but another aevum, either of the Angel's very substance, or finally the aevum of one operation being the measure of another.

The second opinion asserts that neither by eternity, nor by the aevum...

They say that neither the aevum, nor our time, is the measure (mensura) of these operations, but a certain peculiar time proper to them, which they call a discrete time. This is the opinion of St. Thomas, in the First Part, q. 14, art. 1; of Cajetan, and the recent authors there; of Henry in Quodlibet 12, q. 3; and of Capreolus on II Sentences, d. 2, q. 2, a. 1, concl. 3.[562] Now they call that a discrete time which consists of different instants, separated and in no way continuous. But each instant is the duration of each operation, which, although it lasts together with our time, is wholly together and in itself individual; and because among the operations themselves there is a certain succession, they therefore say that it is a discrete time: for it is like our time, whose being consists in succession. It differs, however, because it is not continuous. Thus likewise the same St. Thomas teaches in q. 13, art. 3, that the discrete motion of Angels is defined by a discrete time as its measure, and even that continuous motion is defined by a continuous time, yet of another kind than is ours.[563]

Now this kind of discrete time seems to our Doctor to be gathered from St. Augustine, On Genesis literally, ch. 20. But concerning our thoughts, even of the intellect, some more recent authors teach that they fall under the measure of our time, because they depend on the phantasm, although in themselves they are spiritual; but the phantasm must be set under the measure of our time. And finally, St. Thomas teaches that the aevum is the measure of that natural cognition by which the Angel understands himself and God; and with him not a few more recent authors, just as also of the substance of the Angel himself, because from that operation the Angel never ceases, and in the same way perseveres without end as does his substance.[564]

But from what has been said in other disputations it is easily deduced what is to be said in this matter. For either the discussion is about the intrinsic duration of operations, not considering in it the notion of measure, or about their proper and true measure. If we speak in the former way, in which the authors alleged seem to have spoken, the question is of no great moment, since it appears to be one of words, not of things. For if we regard what is in the thing, no one can deny that any operation of the intellect of an Angel and of a man is, at its beginning and end, individual, wholly together, permanent - unless perhaps it happens to become more intense by itself, or remiss; then indeed there will be some succession in it. Secondly, it is certain that the cognition by which the Angel understands himself and God is individual and wholly together, with a beginning and without end, without any variation, if it is always elicited with full endeavor - about which there is not now room to dispute. Thirdly, without doubt there is among the Angel's operations a certain discrete succession: yet it matters little to call this or that kind of duration by this or that

562. St. Thomas Aquinas, Summa theologiae I, q. 14, a. 1; Cajetan, ad loc.; Henry of Ghent, Quodlibet 12, q. 3; John Capreolus, In II Sent., d. 2, q. 2, a. 1, concl. 3.

563. St. Thomas Aquinas, Summa theologiae I, q. 13, a. 3.

564. St. Augustine, De Genesi ad litteram, c. 20; St. Thomas Aquinas, Quodlibet 5, a. 7.

name - namely, that it be called an aevum, not only the duration of the cognition of himself and of God, as St. Thomas holds, but also of each intellection, as Scotus contends; or certainly that the intellections succeeding one another be called a discrete time. The Scholastics alone, indeed, fight among themselves about this matter, and impose various names as each one pleases.

But none of the Fathers made mention of this matter. St. Augustine alone, in the place cited, asserts that a spiritual and a bodily creature were made by the Lord, of which the spiritual would be moved according to time, not according to places, but the bodily according to both. From this, however, it is not lawful to conclude that this time of which Augustine speaks is discrete or other than our own; and that he might prove what he had said, he subjoins thereafter: "For example, the mind is admonished by time either by remembering what it had forgotten, or by departing from what it knew." There Augustine does not speak of a discrete time, but of our own; whether the opinion of those more recent authors is true, who were saying that the thoughts of our intellect are defined not by a discrete time but by our own. Finally, since Augustine says nothing other than that the spiritual creature is moved in time, there is no reason why it should be understood rather of that discrete time than of our common time, which aptly measures angelic operations also.

But if we speak in the latter way about the measure of the Angel's operations, as measure (mensura) is defined by Aristotle in Metaphysics X, chapters 2 and 3, in which way St. Thomas and other Scholastics whom he alleges do not seem to speak, one must say precisely what we taught in the preceding disputations about the measure of essence (essentia). First, that no intrinsic duration of an angelic operation is its measure, just as the aevum of an Angel is not the measure of his substance; for the same reason is present in both. Secondly, that no duration of an operation, whether of a higher or a lower one, is the measure of another, just as the aevum of one Angel is not the measure of another. The common reason also is: because no intellect can discern how great was the duration of one's own operation by the duration of another, just as neither the duration of one's own substance by the aevum of another, as is evident from what has been said. Thirdly, finally, that our time is properly and truly the measure of the Angel's operations, just as we said it is the measure of their substance; and this by precisely the same reason, because by it we definitely know how great was the duration of the Angel's operation. Now it is a measure to our intellect alone; for neither the angelic nor the divine use any measure, as was proved in the preceding disputation. And with better reason is our time the measure of the Angel's operations than of his substance: for this has a beginning but not an end; operation, however, has both; and thus it can plainly be defined by a measure. Therefore there is no need to distinguish between the Angel's external and internal operations: but all of them are to be subjected indiscriminately to our time as to their measure.

Caput II - On the beatific vision and grace

Concerning the beatific operation St. Thomas teaches in article 5, reply to the first; Cajetan and the recent authors therewith, that its measure is neither any time nor the aevum, but an eternity inferior to the divine, which they call a participated eternity; and some think this to be the opinion

of St. Augustine in the book of 83 Questions, q. 23, where (they say) Augustine declares that our beatitude is a participated eternity.[565] They prove it by reason: because, since that operation is of a more immutable and higher nature than another operation of an Angel, or even than his substance, it comes about that it is contained under a higher measure; but this seems to be no other than a certain participated eternity. Some teach the same about habitual grace, which, although it is corrupted when sin supervenes, yet by its own nature cannot be corrupted by any created thing, unless by God alone, by whom also alone it is created, that is, infused; for they think that sin does not exclude habitual grace by its own nature.

But Scotus, in the place alleged, holds that the measure of beatitude is not any eternity, but the aevum. He taught the same in IV, distinction 49, question 6, 5. As to the second doubt, it can be proved from Fulgentius, On the Faith to Peter, ch. 28. What he says, however, we shall report below. He then confirms it by reason, because the substance of an Angel, in itself, is no less immutable than beatitude: therefore the aevum ought to be its measure, as it is the measure of the Angel's substance.[566]

For my part, by the same proportion as in the foregoing difficulty, it seems that one should say the following. First, if we speak of the intrinsic duration of the vision itself or of habitual grace, that it is wholly together and individual, of a certain supernatural order above the substance and nature of the Angel; that it has a beginning and, in the future life, no end. And if for this reason it pleases the Thomists to call this duration a participated eternity superior to the aevum; or if Scotus wishes also to name it an aevum; there is no need to contend with them about a word, provided that we know the nature of those durations. Whether grace is by its nature liable to corruption and can be destroyed by none but God alone, we shall say in I, 3, q. 71, a. 4, and q. 113, art. 2, where we shall dispute about the opposition of grace and mortal sin. About the beatific vision we shall speak in I - II, q. 5, a. 2, and q. 46, a. 10.[567]

Moreover, without foundation Augustine is cited for either opinion, one and the other. For where he is alleged for the first opinion, he only teaches that someone is chaste, good, and eternal in one of two ways: first, by the chastity, goodness, or eternity which he himself begets, and of which he is the principle and cause that it be - this is, what he has by his own nature from himself - and chaste, good, and eternal in this way cannot but be such; next, by participation of chastity, and in this way one who is chaste can be not chaste. In this manner, he says, the soul is eternal by a certain participation of eternity, but God in such a way as to be the author of eternity itself, as was explained in Disputation 33, ch. 1; nor in that chapter did Augustine adduce the example of the beatific operation - although, had he adduced it, he would not have proved that the duration of the beatific operation is more a participated eternity than the duration of the substance of the soul itself. And by the common opinion of the Scholastics, the duration of the rational soul is not a

565. St. Thomas Aquinas, ad I, a. 5; Cajetan, ad loc.; St. Augustine, De diversis quaestionibus octoginta tribus, q. 23.
566. John Duns Scotus, In IV Sent., d. 49, q. 6; Fulgentius of Ruspe, De fide ad Petrum, c. 28.
567. See the places indicated by the author for the treatment of grace and of the beatific vision.

participated eternity, but is called an aevum. Therefore Augustine, by the name of participated eternity, understood the aevum. For aevum can be so called; for among its other significations there is one in which it is taken for the life of each man, as from Damascene and others.[568]

Next, what Scotus reports from Augustine for his own opinion is frivolous. For there he only asserts that men who are just, who die in grace, will be equal in the state of beatitude to the Angels of God; and moreover he says that they cannot be changed therefrom; and that the eternal life of all would be vain if it could be otherwise - whence Scotus, for that reason, infers that their beatitude is contained under the aevum as its measure.

Furthermore, if the discussion is about the measure of beatitude and of grace in the way measure is defined by Aristotle, in which sense the Scholastics alleged in this chapter speak, it must be said in exactly the same way and by the same reason as about the other operations of Angels - namely, that their measure is not the intrinsic duration itself, nor any other duration besides our time; nor are these two, measure and definition, defined by any other intellect than by ours, as is clear enough from what has been said.

Caput III - On corporeal things and those liable to corruption

Finally, concerning substances that are corrupted, Durandus undertook a lengthy disputation in II, dist. 2, q. 6, which we shall dispatch briefly. First, certain persons, as Durandus reports in the same place, thought that the measure of these things is discrete time, just as the Thomists said that even the operations of the Angels have such a measure. Durandus refutes this at great length; but this discrete time can scarcely be explained. Next, Durandus and St. Thomas, in II, q. 4 of this question, ad 3, teach that their measure is our time; except that Durandus added (as he had also said of the Angels) that time is a heterogeneous measure of these things, and he proves this by the same reasoning.

However, from the foregoing doctrine the solution of the question is already evident. First, if the question be about the intrinsic duration (*duratio intrinseca*) of these very things under the aspect of corruptibility, it is certain that it is all at once, and that it is not a measure, nor an individual thing that is held by a beginning and also an end, but rather is terminated by them; which, in my judgment, is not time, since it is not the number of motion nor set in succession: yet it is not inaptly called an aevum (*aevum*). Augustine therefore, by the name of participated eternity, understood that mode of duration which is above time though not absolutely eternal.

Further, if the discussion be of the measure of beatitude and of grace, in the sense in which measure is defined by Aristotle - according to which sense the Scholastics alleged in this chapter speak - one must say precisely the same and by the same reasoning as was said about the other operations of Angels: namely, that their measure is not the intrinsic duration itself, nor any other duration besides our time, nor are these two, measure and definition, determined by any intellect other than our own, as is clear enough from what has been said.

568. St. John Damascene, and other authors, on the signification of "aevum" as the life of each man.

Concerning corporeal things and those subject to corruption: Aristotle explicitly teaches this in Physics IV, chapter 14, text 133, where he says to this effect: human affairs and the rest of the things which are subject to natural motion and to generation and corruption, I declare to be as it were circular. And this is because they are judged by the time of the universe, and they undergo both an end and a beginning, just as though there were some kind of return; for time itself seems to be a certain circle. Now time measures the duration of these things otherwise than that of Angels. For the duration of the latter it does not measure absolutely, but as it were in part, as we noted in the preceding disputation; but the things that are corrupted it measures simply and absolutely, because they are concluded by a beginning and an end. And how time is the measure of these things, and the cognate matters, in opposition to the opinion of Durandus, is also sufficiently manifest from what has been said in the same disputation; and so much for this whole question of the Holy Doctor.[569]

Quaestio XI - On the unity of God

After what has been premised, we must consider the divine unity. And on this there are four questions.

Articulus I - Whether "one" adds something over and above being

Objicitur primo sic. It seems that "one" adds something over and above being. For everything that is in some determinate genus stands in the mode of addition to being, which circles about all the genera. But "one" is in a determinate genus: for it is the principle of number, which is a species of quantity. Therefore "one" adds something over and above being.

Objicitur secundo. That which divides some common notion stands to it by way of addition. But being is divided by "one" and "many." Therefore "one" adds something over and above being.

Objicitur tertio. If "one" does not add over and above being, it would be the same to say "one" and "being." But it is nugatory to say "being being." Therefore it would be nugatory to say "being one," which is false. Therefore "one" adds something over and above being.

But on the contrary: Dionysius says, in the last chapter of On the Divine Names: Nothing among existing things is multiple that does not participate in the One.[570] Which would not be the case if "one" added to being in a way that contracted it. Therefore "one" does not have its standing by addition to being.

I answer: "One" does not add any thing over and above being, but only the negation of division. For "one" signifies nothing else than being undivided. And from this very point it appears that "one" is convertible with being. For every being is either simple or composite. Now what is simple is undivided both in act (*actus*) and in potency (*potentia*). But what is composite does not have existence (*esse*) so long as its parts are divided, but after they come together and compose the

569. Aristotle, Physics IV, c. 14, text 133.
570. Pseudo-Dionysius, De divinis nominibus, cap. ult.

composite itself. Whence it is manifest that the existence of any thing consists in a certain undividedness. And hence it is that each thing, just as it preserves its own existence, so it preserves its own unity.

Reply to the first: Certain persons, supposing that that "one" which is convertible with being is the same as that which is the principle of number, were divided into contrary positions. For Pythagoras and Plato, seeing that the "one" which is convertible with being does not add any thing over and above being, but signifies the substance (*substantia*) of being as undivided, thought that the same should be held about that "one" which is the principle of number. And because number is composed out of units, they believed that numbers were the substances of all things. Avicenna, on the contrary, considering that the "one" which is the principle of number adds some thing over and above the substance of being (otherwise a number composed of units would not be a species of quantity), believed that the "one" which is convertible with being adds some thing over and above the substance of being, like white over man. But this is manifestly false: because every thing is one by its own substance. For if each thing were one by something other, since that other again is one, if it were again one by something other, there would be a process to infinity. Wherefore one must stand in the first position. Therefore it is to be said that the "one" which is convertible with being does not add any thing over and above being; but the "one" which is the principle of number adds something over and above being, belonging to the genus of quantity.

Reply to the second: Nothing prevents that which is in one way divided from being in another way undivided: just as that which is divided numerically is undivided according to species; and thus it happens that something is in one way one, in another way many. Yet if it is undivided simply - either because it is undivided according to that which pertains to the essence (*essentia*) of the thing, although it is divided as to those things which are outside the essence of the thing (as what is one in subject and many according to accidents), or because it is undivided in act and divided in potency, as what is one whole and many according to parts - such a thing will be one simply and many in a qualified sense. If, on the contrary, something is undivided in a qualified sense and divided simply, as for instance because it is divided according to its essence and undivided according to its notion, or according to a principle or cause, it will be many simply and one in a qualified sense: as those things which are many in number and one in species, or one by a principle. Thus, therefore, being is divided by one and many, as by one simply, and many in a qualified sense.

Reply to the third: It is not nugatory when one says "being one"; because "one" adds something according to notion over and above being.

Conclusion: "One" over and above being adds only the negation of division.

Although the matter of this article belongs to the metaphysician, who ought to dispute more fully about the very "one" and the formal notion of unity, yet it will not seem alien to our purpose if we do not examine it at length, so that those things which are to be said about the unity of God in a later article may be rendered more perspicuous: for which cause, concerning the notion of the goodness of God, we treated more fully in order to explain the divine attribute of goodness; and

about truth we must speak so as to show in what way God is true. But because the whole controversy concerning the formal notion of unity is situated in this, whether formally it is something positive, or only a negation of division; and for proving that God is one and not many - which is what is chiefly in this question and most necessary for a Theologian - it matters little whether one philosophizes thus or otherwise about the formal notion of unity: for experience will show that of necessity the discussion will have to be resumed about this matter in disp. 128, where we shall say not a little about it; therefore I have resolved in the present disputation to forbear here.

Articulus II - Whether one and many are opposed

Objicitur primo sic. It seems that "one" and "many" are not opposed. No opposite is predicated of its opposite; but every multitude is in a certain way one, as is clear from what has been said. Therefore one is not opposed to multitude.

Objicitur secundo. No opposite is constituted out of its opposite; but one constitutes multitude. Therefore it is not opposed to multitude.

Objicitur tertio. "One" is opposed to "one"; but "much" is opposed to "few." Therefore "one" is not opposed to "many."

Objicitur quarto. If "one" is opposed to multitude, it is opposed to it as the undivided to the divided; and thus it will be opposed as privation to habit. But this seems incongruous, because it would follow that "one" is posterior to multitude and is defined through it, whereas nevertheless multitude is defined through one. Whence there will be a circle in the definition, which is incongruous. Therefore "one" and "many" are not opposed.

But on the contrary: Those things whose notions are opposed are themselves opposed. But the notion of the one consists in indivisibility; whereas the notion of multitude contains division. Therefore one and many are opposed.

I answer: "One" is opposed to "many," but in different ways. For the "one" which is the principle of number is opposed to the multitude which is number, as the measure to the measured. For "one" has the character of a first measure, and number is a multitude measured by one, as is clear from the tenth book of the Metaphysics. The "one," however, which is convertible with being, is opposed to multitude by way of privation, as the undivided to the divided.[571]

Reply to the first: No privation wholly removes being, because privation is a negation in a subject, according to the Philosopher. Yet every privation removes some being. And therefore, by reason of its commonness, it happens in the case of being that the privation of being is founded in being; which does not happen in the privations of special forms, as of sight, or of whiteness, or of something of this sort. And as it is with being, so it is with one and good, which are convertible with being. For the privation of the good is founded in some good; and likewise the removal of unity is founded in some one. And hence it follows that a multitude is in a way a one, and an evil is in a way

571. Aristotle, Metaphysics X, text 2; cf. the discussions post Praedicamenta on opposites; see also Metaphysics, text 4.

a good; and a non-being is in a way a being. Yet the opposite is not predicated of its opposite: because one of these is said simply, and the other in a qualified sense. For what is being in a qualified sense (as in potency) is non-being simply, that is, in act; or what is being simply in the genus of substance is non-being in a qualified sense as to something that is an accident of such a sort. Likewise, therefore, what is good in a qualified sense is evil simply or conversely; and similarly what is one simply is many in a qualified sense, and conversely.

Reply to the second: A whole is twofold. One is homogeneous, which is composed of similar parts; another is heterogeneous, which is composed of dissimilar parts. In any homogeneous whole, the whole is constituted out of parts having the form of the whole, as every part of water is water: and such is the constitution of a continuum out of its parts. In any heterogeneous whole, however, every part lacks the form of the whole. For no part of a house is a house, nor is any part of a man a man. And such a whole is multitude. Therefore, inasmuch as a part of it does not have the form of multitude, a multitude is composed of units, as a house is composed of non-houses; not that the units constitute the multitude according to that which they have of the notion of indivision, in which respect they are opposed to multitude, but according to that which they have of entity; just as the parts of a house constitute a house by the fact that they are certain bodies, not by the fact that they are non-house.

Reply to the third: Multitude is taken in a twofold way. In one way absolutely, and thus it is opposed to one. In another way according as it imports a certain excess, and thus it is opposed to few. Whence, in the first way, two are many, though not in the second.

Reply to the fourth: The one is opposed privatively to the many, inasmuch as in the notion of the many there is that they be divided. Hence division is prior to unity, not simply, but according to the order of our apprehension. For we apprehend the simple before the composite. Whence we define a point as that whose part is not, or as the principle of a line. But multitude also is known according to a notion consequent upon, and related to, one: for we do not judge division to have the character of multitude except insofar as we attribute unity to each of the divided things. Hence the one is placed in the definition of multitude, but not conversely is multitude in the definition of one. But division falls within the intellect by the very negation of being, so that first being falls within the intellect; secondly, that this being is not that being, and thus secondly we apprehend division; thirdly, one; fourthly, multitude.

Conclusion: The "one" which is convertible with being is opposed to "many": for it is a negation or privation - namely, the undivided opposed to the divided. Concerning the formal character of this opposition we say nothing further in this article: for its entire explanation depends upon the doctrine of the preceding article; and of both there will be further discussion in the third article that follows.

Ad decimum sic proceditur. It seems that God is not one... (the objections follow)

Ad tertium sic proceditur. It seems that God is not one. For it is said to the Corinthians, 1 Cor. 8: "For there are many that are called gods and lords." Also: The "one" which is the principle of number cannot be predicated of God, since no quantity is predicated of God. Likewise, neither can that "one" which is convertible with being be predicated of him, because it imports privation, and every privation is an imperfection, which does not befit God. Therefore it is not to be said that God is one

But on the contrary: It is said Deut. 6: "Hear, O Israel, the Lord our God is one God."

I answer that it must be said that God is one, and this is shown in three ways. First indeed from his simplicity. For it is manifest that that whereby something singular is this particular something is in no way communicable to many. That whereby Socrates is a man can be communicated to many; but that whereby he is this man cannot be communicated, save to one alone. If therefore Socrates were a man by that whereby he is this man, just as there cannot be many Socrateses, so there could not be many men. But this is the case with God: for God himself is his nature, as was shown above. Therefore, by the same thing, God and this God are the same. It is impossible, therefore, that there be many gods.

Secondly, from the infinity of his perfection. For it has been shown above that God comprehends in himself the whole perfection of existing. If therefore there were many gods, they would have to differ. Something then would belong to one which did not belong to another. If this were a perfection, it would be lacking to the other; and thus the one in whom there were privation would not be simply perfect. Therefore it is impossible that there be many gods. Hence also the ancient philosophers, as though constrained by the very truth, when positing an infinite principle, posited only one principle.

Thirdly, from the unity of the world. For all things that are, are found to be ordered to one another, insofar as certain things serve others. But things that are diverse would not agree into one order unless they were ordered by some one. For many things are better reduced into one order by one than by many: because one, per se, is the cause of one; and many are not the cause of one, except per accidens, inasmuch as they are in some way one. Since therefore that which is first is most perfect and per se, not per accidens, it must be that the first reducing all things into one order be one alone. And this is God.

Reply to the first: They are called "many gods" according to the error of certain people who worshiped many gods, thinking the planets and other stars to be gods, or even the single parts of the world. Hence he adds: "But to us there is one God," etc.

Reply to the second: "One" insofar as it is the principle of number is not predicated of God, but only of those things which have existence in matter. For the one which is the principle of number is of the genus of the mathematical, which has existence in matter, but according to the account is abstracted from matter. But the one which is convertible with being is a certain metaphysical (that is, beyond-physical) [notion], which according to existence does not depend on matter. And although in God there is no privation, nevertheless according to the mode of our apprehension he

is not known by us except by way of privation and remotion. And thus nothing prevents certain things said privatively from being predicated of God, as that he is incorporeal, infinite, and similarly that God is one.

Confirmation of the doctrine of the article.

The conclusion is affirmative, and is to be presupposed as a necessary principle for the theologian; it is expressed in Scripture, Deuteronomy 6; and, as St. John Damascene most aptly noted, among those who believe the sacred Scripture, it is altogether beyond controversy.[572] Moreover, besides the gentiles, who give no credence to sacred Scripture, there have been many heretics who dared to assert many gods. First indeed Manichaeus, who although he did not concede many good gods, yet posited two first principles of things, one good, the other evil - which Cerdon had done before, of whom we shall speak elsewhere. Then the Peratae, as Theodoret testifies; and Philoponus, as Suidas writes under the entry "Ioannes Grammaticus," and Nicephorus in his History, who divided the divine nature into three persons, and hence were rightly called Tritheites.[573] The same error some ascribe to Joachim the Abbot, of whom we shall speak below at q. 39, a. 6. But Bernard of Luxembourg in his Catalogue of heresies wrongly attributes it to Raymond Lull, as though he had taught that the three persons are three essences (*essentiae*), since nothing of the sort is found in his works. He only said: "Essence in God 'essentiates'," not because it produces another essence (as some falsely interpret), but because he assigns "to be" as a proper act (*actus*) of essence; or, to show intrinsic correlatives, which he everywhere endeavors to establish, about which in Disputation 134 we must say something in due place.[574]

Finally, in these calamitous times, in which heresies so prevail that those long since buried and condemned are now rekindled through Poland, Transylvania, Germany, France, and England, Valentinus Gentilis of Cosenza, a disciple of Calvin, followed the same heresy. But when he saw that this "Trinity of gods" could not be defended from Scripture, he afterward declined to Arianism. This heresy must be refuted in the same manner as the error of the gentiles, who used to say that there is a family of many gods. Against whom, omitting the innumerable testimonies of Scripture and the Fathers, we could enter here upon a lengthy disputation and, from the ancient philosophers and even the Sibyls of the gentiles, prove the unity of God, had not St. Augustine Eugubinus done this most accurately in the beginning of book 3 of his Perennial Philosophy.[575] Lactantius had undertaken such a disputation in book 1 of the Divine Institutions; likewise in the Apologetic he wrote to the Nations; Tertullian, and St. Thomas in the Contra gentiles I, chapter 42.[576]

572. St. John Damascene, De fide orthodoxa I, cap. 5.

573. Theodoret, Haereticarum fabularum compendium, c. 18; Suidas, s.v. "Ioannes Grammaticus"; Nicephorus, Historia, lib. 18, c. 48.

574. Bernard of Luxembourg, Catalogus haereticorum; on Raymond Lull's manner of speaking about essence and "to be."

575. St. Augustine Eugubinus (Agostino Steuco), De perenni philosophia, lib. 3 (at the beginning).

576. Lactantius, Divinae institutiones, lib. 1; Tertullian, Apologeticus; St. Thomas, Contra gentiles I, c. 42.

It will suffice for us, then, both against Manichaeus and against the gentiles, to demonstrate by one single reason, which Tertullian in the book against Marcion (c. 3 - 4), Athanasius in the Oration against Idols, and St. John Damascene in the place cited have touched upon, that there are not two or more Gods.[577] Now we must suppose what has been discussed and stands proved, namely, that by the name "God" among all nations is signified that which has no superior and is not from another; for that which depends upon another, without doubt ought to acknowledge that other as God. Indeed, no nation was ever so barbarous as to say that the true God is of (or from) another true God. For although it was customary among the gentiles to call distinguished men, such as emperors, "divi," in that they were referred to the society of the gods, nevertheless they were never called "dii." For this reason among Christians holy men are not undeservedly called "divi," because they have been admitted to God's society; although some, being overly scrupulous, execrate this appellation as proper to the pagans and sacrilegious.

Therefore in this controversy about the unity of God, by "true God" we understand him who does not depend upon another, but upon himself. Now that this is the true God, I prove by this reason. If there were two gods, it would be necessary that the one not depend on the other, as we have supposed; and thus, even the other being unwilling, the one could be and exist. Wherefore (as Athanasius says), there would be equal power and equal weakness in them both: equal power, in that the one would overcome the will of the other, by the very fact that he could exist with the other unwilling; but equal weakness, in that, they themselves being unwilling, those things which they would not wish would nonetheless come about - since one would exist contrary to the will of the other. Athanasius sets this down as absurd, to prove against Manichaeus that there are not two gods, one evil and one good; for thus the one would be contrary to the other, and would in the end destroy him. Rightly therefore does Tertullian pronounce the catholic truth (Adv. Marcion. l. 1, c. 3): "God, if he is not one, is not."

But since some gentile might assert that there are indeed two gods, and that they are good, who of necessity love each other mutually, and hence that there is in them no weakness but equal power, let us press the argument further and prove that there is by no reason a possibility of there being two in this way. If there were two, not only would they themselves be from themselves, but also all other things would have to be from them; for this belongs to the notion of God and of the first principle.

Confirmation of the doctrine of the article. The conclusion is affirmative, and as a necessary principle is to be presupposed by the theologian; it is expressed in the Scripture of Deuteronomy 6, and, as St. John Damascene most aptly noted, in De fide orthodoxa I, chapter 5.[578]

Errors about this controversy. Among those who believe the sacred Scripture there is absolutely no controversy. But besides the gentiles, who give no credence to sacred Scripture, there have been many heretics who dared to assert several gods. First indeed Manichaeus, who, although he did not concede several good gods, yet posited two first principles of things, one good, the other evil; which

578. St. John Damascene, De fide orthodoxa I, cap. 5.

Cerdon had formulated earlier and more crudely, about whom we shall speak further elsewhere. Then the Peratae, as Theodoret, in his Book of "Compendium of Heretical Fables," chapter 18, testifies; and Philoponus, as Suidas, under the entry "John the Grammarian," and Nicephorus, History, book 18, chapter 48, write - who divided the divine nature into three persons, and hence are rightly called Tritheites. The same error some ascribe to Joachim the Abbot, of whom we shall speak below, q. 39, art. 6. Yet Bernard of Luxembourg, in his Catalog of Heretics, wrongly attributes it to Raymond Lull, as though he had taught that the three persons are three essences; whereas nothing of the sort is found in his works. He only said: "Essence 'essentializes' in God," not because it produces another essence, as some falsely interpret, but because it imparts "to be" as a proper act to essence; or, in order to set forth intrinsic correlatives, which he everywhere is eager to establish, of which we must treat somewhat in disput. 134.[579]

Finally, in these calamitous times, when heresies so prevail that those long since buried and condemned are again stirred up through Poland, Transylvania, Germany, Gaul, and England, Valentinus Gentilis of Cosenza, a disciple of Calvin, followed the same heresy. But when he saw that this "Trinity of gods" could not be defended from Scripture, he afterwards declined to Arianism. This heresy is to be impugned in the same way as the error of the gentiles, who were wont to posit a whole family of gods. Against whom, omitting the innumerable testimonies of Scripture and of the Fathers, we could begin here a long disputation, and, from the ancient philosophers and from the very confession of the gentiles, prove the unity of God - were it not that Augustine of Eugubium had done this most carefully at the beginning of book 3 of De perenni philosophia. This disputation had been undertaken earlier by Lactantius in book 1 of the Divine Institutions, and by Tertullian in the Apologeticus against the Gentiles, and by St. Thomas in Contra gentiles I, chapter 42.[580][581]

It will therefore suffice for us, both against the Manichaean and against the gentiles, to demonstrate by one single reason that there are not two or more gods, but one God - namely, the reason which Tertullian touched upon in the book against Marcion, chapters 3 and 4; and Athanasius, in the Oration against idols; and St. John Damascene in the place cited.[582] Now it must be presupposed - that which remains proved above - namely, that by the name "God" among all nations is signified that which has no superior and is from no other: for whatever depends upon another, without doubt ought to be reckoned as belonging to that other rather than as God. And indeed no nation was ever so barbarous as to say that the true God is of another true God. For although among the gentiles it was customary to call outstanding men, such as emperors, "divine," so that they might be reckoned in the society of the gods, nevertheless they were never called

580. St. Augustine Eugubinus (Agostino Steuco), De perenni philosophia, lib. 3 (at the beginning).

581. Lactantius, Divinae institutiones, lib. 1; Tertullian, Apologeticus; St. Thomas, Contra gentiles I, c. 42.

582. Tertullian, Adversus Marcionem, lib. 1, cc. 3 - 4; Athanasius, Oratio contra idola; St. John Damascene, De fide orthodoxa I, cap. 5.

"gods." By this very reason among Christians holy men are not undeservedly called "divine," inasmuch as they are admitted to the society of God; although some, out of over-scrupulousness, repudiate this appellation as proper to pagans and as sacrilegious.

Therefore, in this controversy about the unity of God, by "true God" we understand Him who depends upon Himself and not upon another. In this sense we demonstrate by reason that the true God is one. If there were two gods, it would be necessary that one not depend upon the other, as has been presupposed; and, to that extent, that the one could exist and subsist even with the other unwilling. Wherefore (as Athanasius says) there would be in both equal power and equal weakness: equal power, because the one would overcome the will of the other by the very fact that he could exist with the other unwilling; equal weakness, because things would happen against their will - if indeed the one should exist contrary to the will of the other. Athanasius urges this as an absurdity, that he may prove against the Manichaean that there are not two gods, the one evil and the other good: for thus the one would be contrary to the other, and would be able to destroy even God Himself. Therefore rightly Tertullian pronounces in the said book, chapter 3: "God, if He is not one, is not."

But since some gentile might assert that there are indeed two gods, and those good, who necessarily love one another, and therefore that there is no weakness in them, but equal power - let us press the argument further, and prove that by no reason can there be two in this way. If there were two, not only would they themselves be from themselves, but also all other things would have to be from them; for this belongs to the notion of God and of the first principle. Therefore, either the rest could be conserved and produced by the one alone without the other - if so, that one would be more powerful and more perfect, and thus he alone would be God: both because "God" means the supremely perfect, to whose perfection nothing is lacking; and also because the other would either be from that one, or from himself. If he were from that one, he could not be God but the creature of that one; if from himself, like the other, he would be of exactly the same nature and equally perfect: wherefore, for the same reason that the rest would be from the one, in like manner they would be from the other; and thus, being equal in perfection and altogether equal, the other would be wholly superfluous. Hence they would be said to be two rashly and without reason: not only would one be superfluous, since without him all other things could equally well be brought about; but also because, together with the other, he would have absolutely no effect. For when the whole effect is altogether from one cause, in the same kind and equally first, it cannot be done, or helped, by another - as we shall show more fully in III, q. 3, art. 6.

But to say that any created thing is produced by each of those two together as by a partial cause, as a certain burden is carried by two - this is ridiculous. For we cannot so divide spiritual things, nay nor even bodily things according to their substance, as to assign one part to one God, another to the other; nor can we so measure the powers of the gods as to say that to produce such an effect one suffices, but for such an effect two, or more, are necessary. Furthermore, to assert that they agreed among themselves that certain things should proceed from the one, certain things from the other, by free choice, is altogether fictitious and without foundation. Therefore neither assertion is to be maintained.

Finally, for whatever reason someone would say that there are two gods of equal perfection and nature, by the same reason he would have to concede that there are infinitely many. For there is no greater reason why there should be two, or three, rather than more - since they must necessarily exist and depend on no one; and accordingly, if their number once exceeds unity, it can be determined by no one, as Tertullian clearly proves in book 1 against Marcion, chapter 4 and the following.

Objicitur quarto sic proceditur (see q. 18, art. 3; and q. 39, art. 6). It seems that God is not maximally one.

1. For "one" is said according to the privation of division; but privation does not admit of more and less. Therefore God is not said to be more one than other things which are one.
2. Further, nothing seems to be more indivisible than that which is indivisible in act and in potency, of which sort are the point and unity. But a thing is said to be more one, inasmuch as it is more indivisible. Therefore God is not more one than unity and the point.
3. Further, what is by essence good is maximally good. Therefore what is by its essence one is maximally one. But every being is one by its essence, as is clear from the Philosopher in Metaphysics IV. Therefore every being is maximally one; therefore God is not more one than other beings.[581]

But on the contrary: Boethius says that among all things which are called one, the unity of the divine Trinity holds the highest place.[583]

I answer: Since the true one is an undivided being, in order that something be maximally one, it must be maximally being and maximally undivided. But both belong to God. For He is maximally being, inasmuch as He does not have some existence determined by a nature to which it accrues, but is existence (*esse*) itself subsisting, indeterminate as to all modes. And He is maximally undivided, inasmuch as He is divided neither in act nor in potency according to any mode of division, since He is in every way simple, as was shown above. Whence it is manifest that God is maximally one.

Reply to the first: Although privation, taken in itself, does not admit of more and less, nevertheless according as its opposite admits of more and less; and in this way something is said to be more one, inasmuch as it is more being and more undivided.

581. Lactantius, Divinae institutiones, lib. 1; Tertullian, Apologeticus; St. Thomas, Contra gentiles I, c. 42.
583. Boethius, De Trinitate (cap. 1).

Objicitur: It seems that God is not most one. For "one" is said according to the privation of division. But privation does not receive more and less. Therefore God is not said to be more one than other things which are one.

1. Furthermore, nothing seems to be more indivisible than that which is indivisible both in act and in potency, of which sort are the point and unity (as the principle of number). But something is said to be more one inasmuch as it is more indivisible. Therefore God is not more one than unity and the point.
2. Furthermore, that which is by essence (*essentia*) good is maximally good. Therefore that which is by its essence one is maximally one. But every being is one by its essence, as is clear from the Philosopher in the fourth book of the Metaphysics. Therefore every being is maximally one; therefore God is not more one than other beings.

But on the contrary: Boethius says that among all the things which are called one, the summit is held by the unity of the divine Trinity.[584]

I answer: Since the one is an undivided being, for something to be maximally one it must be both maximally being and maximally undivided. But each of these belongs to God. For he is maximally being, inasmuch as he does not have existence (*esse*) determined by some nature to which it befalls, but he is subsisting existence itself (*ipsum esse subsistens*), undetermined by every mode. And he is maximally undivided, inasmuch as he is divided neither actually nor in potency according to any mode of division, since he is in all ways simple, as was shown above. Whence it is manifest that God is most one.

Reply to the first: Although privation in itself does not receive more and less, nevertheless according as its opposite admits of more and less, even privative things are spoken of according to more and less. According, therefore, as something is more divided, or more divisible, or less, or in no way, in this way something is said to be more and less, or maximally, one.

Reply to the second: The point and unity, which is the principle of number, are not things maximally beings, since they do not have existence except in some subject. Whence neither of them is maximally one. For just as the subject is not maximally one because of the diversity of accident and subject, so neither is the accident.

Reply to the third: Although every being is one through its substance, nevertheless the substance of each is not equally ordered to causing unity, because the substance of some is composed of many things, but of others not.

Explicatio doctrinae articuli. The conclusion is affirmative. Nor does it need a long disputation; rather, the matter can be explained briefly. Therefore one must observe that, whether unity is formally the negation of division, that is, indivision, or whether it is something positive, it reciprocates with indivision and is opposed to multitude, such that wherever there is greater indivision and a lesser plurality or multitude, there is greater unity. And because where there is

584. Boethius, De Trinitate, cap. 1.

greater simplicity there is less plurality and more indivision, for that reason there is greater unity. And since the simplicity of God is according to its genus the greatest that can be thought, because his essence (*essentia*) is not distinguished from his existence (*esse*) by nature, nor indeed from the supposit (*suppositum*), nor does any accident (*accidens*) befall him, but all the same altogether are what he is, it follows that his unity is greater than can be understood in creatures. For in them, although existence and essence are the same according to reality, as we shall say below, nevertheless the unity of all of them is composed in reality from substance and accidents, from nature and supposit. And this truly derogates from the divine simplicity the opinion of Scotus, who affirms that the divine attributes are distinguished among themselves and from the essence by the nature of the thing before the operation of the intellect - a point which will also be made very clear in disputation 120. In this sense perhaps the ancient philosophers, such as Melissus and others whom Eugubinus reports, called God "the One" (to hen), that is, unity itself or the very one; just as also "the Being" (to on), that is, existence itself: because especially before all others these two belong to him.[585] Nor indeed does the plurality of persons in God hinder his unity from being maximal. For in God we do not conceive unity in the person, but in the nature; and we have said that this is maximal, as is clear from what was said above; but as for the persons there is true plurality, as will appear in the matter of the Trinity. Hence, in fine, no distinction between person and nature is to be inferred, nor any composition from the nature of the thing; this too will be made clear in disputation 120.

Quaestio XII - How God is known by us

By the ways we considered above how God is according to himself, it remains to be considered how he is in our cognition; that is, how he is known by creatures.

Among the various modes by which the Angelic Doctor considers God's substance and perfection, as we noted at the beginning of the third question, the second is inasmuch as God is referred to our intellect; of which we treat in this question 12 on the vision of God, and the following 13 on his names. For these are imposed on God by us, and they signify him to us according to the mode of cognition that we have of him. In this question, therefore, St. Thomas treats the perfection of the divine substance, inasmuch as it can be seen by us.

Articulus I - Whether some created intellect can see God through his essence

Objicitur: It seems that no created intellect can see God through his essence. For St. John says, "No one has ever seen God"; and Chrysostom, expounding that saying, says that what God is, not only have the prophets not seen, but neither the angels nor the archangels have seen. "For since it

585. "In this sense perhaps the ancient philosophers, such as Melissus and others whom Eugubinus reports, called God 'the One' (to hen), that is, unity itself, or the very one; just as also 'the Being' (to on), that is, existence itself: because especially before all others these two belong to him." See Agostino Steuco (St. Augustine Eugubinus), De perenni philosophia, lib. 3, c. 7.

is of a created nature, how will it be able to see that which is uncreated?"[586] Dionysius also, in On the Divine Names, chapter 1, speaking of God, says: "Neither is he sense, nor imagination, nor opinion, nor reason, nor science."[587]

1. Furthermore, every infinite, inasmuch as it is such, is unknown. But God is infinite, as was shown above. Therefore he is unknown in himself.
2. Furthermore, a created intellect is not cognoscitive except of things that exist. For the first thing that falls under the apprehension of the intellect is being. But God is not an existent, but is above existences, as Dionysius says. Therefore he is not intelligible, but is above every intellect.
3. Furthermore, there must be some proportion of the knower to the known, since the known is the perfection of the knower. But there is no proportion of a created intellect to God, because they are distanced to infinity. Therefore a created intellect cannot see the essence of God.

But on the contrary: "We shall see him as he is" (1 John 3:2).

I answer: Since each thing is knowable according as it is in act (*actus*), and God, who is pure act without any admixture of potency (*potentia*), is, as far as he is concerned, maximally knowable, nevertheless that which is maximally knowable in itself is not knowable to some intellect because of the excess of the intelligible above the intellect; as the sun, which is maximally visible, cannot be seen by the bat because of the excess of light. Noting this, some have posited that no created intellect can see the essence of God. But this is said inappropriately. For since man's ultimate beatitude (*beatitudo*) consists in his highest operation, which is the operation of the intellect, if a created intellect could never see the essence of God, then either it would never obtain beatitude, or its beatitude would consist in something other than God - which is alien to the faith. For in him is the ultimate perfection of a rational creature, who is to it the principle of existing. For each thing is perfect insofar as it attains to its principle. Likewise, it is contrary to reason; for there is in man a natural desire of knowing the cause when he contemplates the effect, and from this arises wonder among men. If, therefore, the intellect of a rational creature could not reach the first cause of things, the natural desire would remain vain. Hence it must simply be conceded that the Blessed see God's essence.

Reply to the first: Both authorities speak of a vision of comprehension. Hence Dionysius, immediately before the words proposed, says: "To all he is universally incomprehensible, and he is not sense," etc. And Chrysostom, a little after the aforesaid words, adds that by "vision" here he signifies the most certain consideration of the Father and a comprehension as great as the Father has of the Son.[588][589]

586. St. John Chrysostom, Homilies on John, hom. 14 (on John 1:18): "No one has ever seen God... what God is, not only have the prophets not seen, but neither the angels nor the archangels.... For since it is of a created nature, how will it be able to see that which is uncreated?"

587. Pseudo-Dionysius, De divinis nominibus, cap. 1: "Neither is he sense, nor imagination, nor opinion, nor reason, nor science."

Reply to the second: The infinite which stands on the side of matter not perfected by form is unknown in itself, because all cognition is through form. But the infinite which stands on the side of form not limited by matter is in itself maximally known. And thus God is infinite, and not in the first mode, as appears from what was said above.

Reply to the third: God is not said to be "non-existing," as if in no way existing, but because he is above every existent, inasmuch as he is his own existence (*esse*). Whence from this it does not follow that he can in no way be known, but that he surpasses every cognition; and this is precisely to be incomprehensible.

Reply to the fourth: Proportion is said in two ways. In one way, a certain habit of one quantity to another, as double, triple, and equal are species of proportion. In another way, any relation of one thing to another is called proportion. And thus there can be a proportion of the creature to God, inasmuch as it is related to him as effect to cause and as potency to act. And according to this, a created intellect can be proportioned to the knowing of God.

Explicatio Articuli. The conclusion is: It can happen that a created intellect sees God clearly, as he is. St. Thomas does not say, "by its natural power"; but that in some way this can and ought to be, as he explains below (article 4), the mode, namely, by which he can and ought to be seen. From this, indeed, he proves that God can be seen, because in us there is a natural desire of seeing him: for once effects are seen, each naturally longs to see the cause. Therefore, with creatures seen, man will naturally desire to see God, the author of all. But no natural desire is vain: therefore it must turn upon something possible; therefore it is possible to see God.

Dubitatio circa textum Articuli. Concerning this reasoning, however - leaving aside the question that is usually treated here, namely, of what sort that natural desire of seeing God is, which we shall examine more fully in the First Part of the Second [Part] - now it is only to be seen in what way the reasoning of St. Thomas proves the proposed conclusion. For this purpose, it must first be premised, as is proved in the context of this article, namely according to the sentence of St. Thomas and in accordance with ancient doctrine, that there cannot be in a rational creature a natural appetite after the manner of an innate potency to the clear vision of God; but the natural appetite of seeing God is an elicited desire, which follows upon nature and upon cognition; as from the text of this article is not obscurely gathered. That is, we do not therefore naturally desire the vision because we are capable of it - for this is not a natural potency, nor is a natural appetite after the manner of a potency, but what theologians are wont to call obediential capacity - but because we see the effects and creatures of God and know God to be their author, we naturally desire and long to see him himself. And this desire theologians call elicited appetite; while that former desire they call innate appetite. Moreover, the Holy Doctor calls that elicited desire a natural appetite, not because it is had from the powers of nature, nor because it is elicited by a natural object, but because in a certain way it is necessary, namely as to its specification. For no one, unless deceived

588. Pseudo-Dionysius, De divinis nominibus, cap. 1: "To all he is universally incomprehensible, and he is not sense," etc.

589. St. John Chrysostom, Homilies on John, hom. 14: he adds that the "vision" there signifies the most certain consideration and a comprehension as great as the Father has of the Son.

by some error, can hate the vision of God itself, inasmuch as it is considered in itself. Therefore, since we are said naturally to desire what we necessarily desire, according to the doctrine of the same St. Thomas (I - II, q. 10, a. 1), this elicited appetite of seeing God, which is in a certain way necessary, must also be called natural.

Obiectio ad enervandam rationem S. Thomae. Yet from this there does not seem to be effectively proved what Blessed Thomas contends, namely that God can be seen. For many impossibles, once apprehended as good, man can desire naturally, that is, in a certain necessary way, if in them no note of evil appears on account of which they could be hated. For that our desire can be borne toward an impossible, we shall show below in disputation 234, chapter 2. Thus, if someone considers the subtle spirituality of an angel and should desire to be such, since he apprehends in this no note of evil, he will necessarily, as to the specification, desire it; yet this desire is certainly vain: for since it is turned toward the impossible, it can in no way be fulfilled. Therefore, from the natural elicited desire St. Thomas does not rightly infer that God can be seen; whereas from a desire and appetite after the manner of an innate potency it would be concluded most aptly. For there is no natural potency which cannot be reduced to act.

Explicatio Articuli. Conclusio est. It can happen that a created intellect see God clearly as He is. St. Thomas does not say by its natural power, but that in some way this can be; and the manner in which He can and ought to be seen, he explains in articles 4 and 5. Thence he proves that God can be seen, because in us there is a natural desire of seeing Him: for once the effects are seen, each one naturally desires to see the cause; therefore, when creatures are seen, man will naturally desire to see God the author of all things; but no natural desire is in vain: therefore it must bear upon something possible: it is therefore possible to see God.

Dubitatio circa textum Articuli. Concerning this reasoning, leaving aside that question which is usually treated here - namely, of what sort that natural desire of seeing God is, which we shall examine more fully in 1 - 2, q. 5, a. 2 and 8 - now it is only to be seen how the reasoning of St. Thomas proves the proposed conclusion. For this purpose it must be premised, what in article 3 will be proved, namely according to the mind of St. Thomas and the sounder doctrine, that there is not in a rational creature, naturally placed after the mode of a potency, a clear vision of God, but that the natural appetite of seeing God is a desire which follows cognition; as from the wording of the article one can not obscurely gather. For we do not therefore naturally desire the vision of God because we are capable of it - for there is not a natural potency, nor an appetite after the mode of a potency; what the theologians are wont to call obediential capacity - but because we naturally know the creatures of God and their author, and naturally desire to see Him. Theologians call that second desire an elicited appetite; but the first they call an innate appetite. Moreover St. Thomas calls that desire a natural appetite, not because it is had in the nature, or because it is an elicited natural appetite, but because it is necessary, namely as to the specification of beatitude (*beatitudo*); for how, unless by some error, could one be said to hate that very vision of God which we consider? what we desire, according to the doctrine of St. Thomas in 1 - 2, q. 10, a. 1, is in this way necessary, and thus natural.

Obiectio. Yet it does not seem to be effectively proved what St. Thomas contends, namely that God can be seen: because many things, apprehended as good, a man can naturally, that is necessarily, desire, if in them there appear no reason of evil on account of which they could be hated; our appetite can be borne toward them, as we shall show below in disputation 234, chapter 2. Thus, if someone were to consider the subtlety of an angelic nature, and to be such himself, since he would apprehend in this no evil, he would necessarily as to the specific character desire that state; but this desire is vain: for since it is truly impossible, it is in no way able to be fulfilled. Therefore from a natural elicited desire St. Thomas infers that God can be seen; yet from a desire and appetite of an innate potency it would be better inferred: for there is no natural potency which cannot be reduced to act.

Respondeo. I answer, although concerning an object which is impossible there can be a simple affect of complacency, and that in some way it can be desired, nevertheless that desire cannot be necessary as to specification, and therefore cannot be natural: for if it be rightly considered, it is of itself an evil to one who necessarily desires it, namely the non-being of himself. Hence in the object itself there is something evil, by reason of which it can be hated; as in the example proposed, a man's being an angel is an evil in reality, because it is the man's not being; although it can be desired, because it is apprehended under the aspect of good, as in the place cited we shall explain. But the vision of God is not of this sort, for of itself it cannot be an evil for us, nor be apprehended as such: therefore it cannot of itself be hated, just as neither can any science. For this reason Aristotle, Metaphysics I, chapter 1, said that there is a natural desire (he means an elicited one) of knowing.[590] Only on account of extrinsic impediments can someone hate it; just as he can also hate some science, because it is laborious to attain it: yet this does not prevent the desire of it from being truly natural, as has been explained. This reasoning, however, has greater force if we consider that the natural appetite of beatitude and of seeing God is in all: for as St. Augustine rightly said, book 4 against Julian, chapter 3, far from the beginning, "Nor would all men by a natural instinct wish to be immortal and blessed, unless we were able to be so."[591] Therefore St. Thomas rightly infers from the natural desire of seeing God that it is possible; for if it were impossible, it could not be naturally desired and sought.

Usually in this article it is disputed whether to a wayfarer there can be communicated an evident quidditative knowledge of God, which is not an intuitive vision of Him: but that we shall dispute more fully below in disputation 135.

590. Aristotle, Metaphysics, I, c. 1: on the natural desire to know.

591. St. Augustine, Contra Julianum, l. 4, c. 3: "Neque omnes homines naturali instinctu immortales, beati esse vellemus, nisi esse possemus."

Disputatio XXXVII - Whether the vision of God, as He is, can be communicated by God to a created intellect

Caput I - The error of the Armenians and of Abelard

It happens in several ways to see or to know any thing: first, as it were by intuiting the thing itself as it is, which is to see through its essence (*essentia*); then through some image and likeness of itself, as we know a friend absent in his image, and in some manner God in His effects, in one case more perfectly than in another. Therefore there was an error of the Armenians, reported by Armacanus in book 14 of the Questions against them, chapter 1, and of more recent Greeks, as the same author relates, who asserted that God is neither seen clearly by the blessed according to His essence, nor can be so seen, but only through a certain likeness of Him, or a light derived from Him. Alphonsus de Castro, against heresies, under the word Beatitudo, heresy 1, and Gabriel Pratcolus in his Elenchus under the word Armeni, ascribe to them the same error; although Nicephorus, book 18, chapter 53, while recounting their errors, does not number this among them.[592][593][594][595] Sander, however, in book 7 De visibili monarchia, heresy 118, thinks the sole error of the Armenians to have been that they said, before the day of judgment, God is not seen by the blessed; but I do not know whence he gathers this. For although Alphonsus says in heresy 6 that the Armenians taught that, nevertheless he does not so attribute this error to them as to say that according to their opinion God is seen after the day of judgment. Therefore I think Armacanus to be in the right, who very well knew their errors.[596]

Alphonsus ascribes the same error under that first heresy to Abelard, and gathers it from Bernard, epistle 190. Abelard, indeed, was followed by Arnold of Brescia, as the same Alphonsus attests. But neither in that epistle, nor elsewhere in Bernard, could I find such a thing: nay rather, when in epistle 189 he recounts the heads of Abelard's errors, he does not list among them this one. About Arnold, however, there is no doubt that he was of that mind, if Abelard taught it: for, as Bernard testifies in epistle 190, he followed Abelard as his master.[597][598] Finally, as the same Alphonsus writes, Almericus taught the same doctrine in the time of Innocent III, at which time also the Albigenses in Gaul began to dogmatize.[599]

But what is principal is that not a few of the graver Fathers of the Church seem to have been not far from this opinion. Chiefly St. John Chrysostom, that he might decline to the opposite extreme the error of the Anomoeans, who said that by their own power they comprehended God, homily 14 on John, before the middle, while he treats that text John 1, "God no one has ever seen," says in these words: "What God is, not only have the prophets not seen, but neither the angels nor the

archangels; but if you question them, you will hear nothing from them about the substance of God, but only their saying, 'Glory to God in the highest'." And below he not only says that it is impossible to see God, but, showing what the Son has declared to us, he says: "That to see God is impossible, because since no one knows Him except the Son." He even adds that before the Incarnation God was invisible to the angels, but through the flesh assumed He was made visible; and when that text was objected, Matthew 18, "Their angels always see the face of my Father," he replies that the same sense is to be had as in that Matthew 5, "Blessed are the clean of heart, for they shall see God": "For by thought and imagination," he says, "according to our powers, we grasp Him, which he calls a vision." He states this much more clearly in tom. 5, homilies 3 and 4 De incomprehensibili natura Dei, whose words we shall adduce a little later, that there be no need of repetition. Chrysostom was followed by Euthymius and Theophylact on that John 1, "God no one has ever seen"; Theodoret too in the dialogue which has the title "Immutabilis," after folio 3; and other Fathers whom we shall mention below.[600][601][602][603]

Caput III - How some endeavor to excuse Chrysostom

Sixtus Senensis, book 6 Bibliotheca sancta, annotation 182, and others, try to defend Chrysostom; and by the same line of reasoning Sixtus as well strives to interpret in a good sense all the other Fathers who seem to have followed him or to have taught the same.[604] They say, therefore, that a threefold explanation can be given: first, that they are speaking of a vision not intellectual, but bodily; as of St. Jerome Augustine reports in epistle 111, about the middle, that he said God is invisible to bodily eyes, even of angels; but in such a way that, as Augustine there shows, God is in every way invisible.[605]

To this interpretation, however, there is a first objection: that according to the mind of Chrysostom and Theodoret - whom the rest followed as masters - angels are not corporeal but incorporeal, as we shall report in disputation 178: therefore they do not speak of a bodily vision when they say that not even by angels can God be seen; for, in their opinion, since angels are incorporeal, they are not endowed with bodily vision. Then also, even if Chrysostom and others were to assert angels to be corporeal, endowed also with bodily eyes, they still could not be explained of bodily vision: for when Chrysostom says of the angels, "If you question them, you will hear nothing from them about the substance of God," it follows that he speaks also of the vision of the intellect: for, so that the angels might report something to us about the substance of God, it would be sufficient, nay much better, if they looked upon God with the eyes of the mind and of the intellect, even if they had not seen Him with bodily eyes. Therefore it would have been inept for Chrysostom to have said that angels can say nothing to us of the substance of God because they did not see Him with bodily eyes. Moreover, in those homilies De incomprehensibili natura Dei

600. St. John Chrysostom, Hom. 14 in John 1:18 ("Deum nemo vidit unquam").
601. St. John Chrysostom, Hom. 3 (and 4) De incomprehensibili natura Dei.
602. Euthymius Zigabenus and Theophylact on John 1:18.
603. Theodoret, Dialogus "Immutabilis".
604. Sixtus of Siena (Sixtus Senensis), Bibliotheca sancta, l. 6, annot. 182.
605. St. Augustine, Ep. 111, on St. Jerome's statement about God being invisible to bodily sight.

Chrysostom disputes against the Anomoeans, who said that not by the eye of the body, but by the eye of the mind, God was comprehended by them, as is clear from Chrysostom himself there. Therefore of that very thing Chrysostom asserts that neither by us, nor by the angels, is He seen.

Secondly, they interpret those Fathers as speaking only of man in this mortal life, in which he cannot, by the keenness of his mind, see God as He is. Yet this interpretation cannot fit Chrysostom, Theodoret, and others: for they speak not only of man in this mortal life, but even of the angels themselves, as is plainly clear from the words to be cited below and already cited.

Third, it seems an even less probable way of excusing them to understand them not of any clear vision of God, but of that which the School calls comprehensive (comprehensiva); for they assert that God cannot be seen by anyone, even by the blessed and endowed with the light of glory. For St. John Chrysostom, in those homilies on the incomprehensible nature of God, frequently uses the name "comprehension" when he proves that God is comprehended by no intellect, not even an angelic one; which can especially have place if we say that those Fathers were speaking of a created intellect not endowed with the light of glory, but considered only in its natural power - as some more recent men also try to interpret them. For thus not only that imperfect vision, which the Schoolmen call non-comprehensive (non comprehensiva), but not even any clear knowledge, could see God as he is.

Moreover, this interpretation too cannot be made to square with the testimonies of the Fathers, because they clearly speak of the intellect of the blessed as well. For Chrysostom, Homily 14 on John, contends that from that place Matthew 18, "Their angels always see the face of my Father," etc., it is not sufficiently gathered that God is clearly seen by angels; and so too Theodoret, in the place cited below. Since, therefore, no one doubts that those angels, namely of the little ones, are blessed, no one can doubt that Chrysostom, Theodoret, and the other Fathers were speaking not only of the wayfarer's intellect, but also of that of the blessed.[606]

Yet we can prove no less clearly that the Fathers are not to be understood as speaking of that vision which the Schoolmen call comprehensive, but of any clear and intuitive knowledge of God as he is. First: Chrysostom, in those homilies on the incomprehensible nature of God, disputes against the Anomoeans, whom it does not appear to have taught that God is so perfectly seen by the blessed that he is comprehended by them in that sense in which some of the Schoolmen speak of comprehension (comprehensio). For we shall prove in Disputation 52 that before the times of the Schoolmen the Fathers did not speak of comprehension in that mode. The Anomoeans were merely contending that by its own proper power the created intellect could clearly see the whole God as he is - which they called "comprehension."

Nor, indeed, does it matter that Theodoret, in Book 4 of the Heretical Fables, says of Eunomius, who was in the error of the Anomoeans, that he dared to affirm that he was ignorant of nothing about God, nay, that he knew the very substance (substantia) of God so exactly that he had the same knowledge about God as God himself has of himself. For Eunomius was not so mad as absolutely to equalize the knowledge which he had about God with the knowledge and cognition

606. St. John Chrysostom, Homily 14 on John 1:18 ("Deum nemo vidit unquam").

which God has of himself. He said it to be equal only on the part of the object, because there would be nothing of those things which are formally in God that would be known to God which Eunomius himself would not also see. But this, as regards the blessed, must necessarily be conceded - that of those things which are formally in God and are God himself (since all are the same with the essence), nothing can be hidden from the blessed himself, as we shall say in Disputation 53.

Then I show that those Fathers are not speaking of that cognition of comprehension in this way. If Chrysostom, against the Anomoeans in those homilies, merely wanted to prove that God is not comprehended by the blessed in that sense, he would not assert that the substance of God is seen by no angelic intellect, but only something derived from it. From this, indeed, he plainly denies not only the comprehensive vision but even the intuitive, that is, clear, vision of the divine essence. And he explicitly affirms this in different words in Homily 3 on the incomprehensible nature of God. For of those Seraphim who, beholding the majesty of God, were covering their faces (Isa. 6), because they could not bear that light of God, thus he says: "Although they were not beholding the mere light itself, not the sincere and pure substance itself; rather, what they beheld was condescension, with indulgence." By which, when Chrysostom denies a vision of the sincere and pure substance of God, he also denies the vision which we call intuitive and of God as he is. For this is the substance sincere, admixed with nothing, and pure, as it is itself. Then he explains what that condescension is in these words: "When God does not show himself as he is, but insofar as he can be seen by him who has merited such a sight, he measures and tempers the representation of himself to the strength of the one seeing; this we say is to condescend for a time, and such condescension we name indulgence." In the same way he says of the Prophets that they did not see the substance of God, but that condescension - yet more obscurely than the angels. Therefore, since he compares the angels with the prophets, and the prophets did not see God according to his essence, the same must be said of the angels in the opinion of Chrysostom.[607][608]

The words cited seem to me so manifest that there is by no means any need to weigh and examine them further.

Finally, in order that the angels might be able to recount to us something of the substance of God, it was not necessary that they should have seen him with a comprehensive (comprehensiva) knowledge; rather, it would have been enough if they clearly, as he is, saw the whole substance of God, as all the blessed behold. If, therefore, the blessed angels saw God clearly but did not comprehend him, Chrysostom would speak badly when, in that Homily 14 on John, he says: "If you question them, you will hear nothing from them about the substance of God, but only their saying, 'Glory to God in the highest,' etc." The same is no less clearly asserted by Theophylact and Euthymius on that John 1, "No one has ever seen God."[609]

Most clearly, however, Theodoret, in the Dialogue "Immutabilis," after folio 3, where Orthodoxus and Eranistes, speaking thus, introduce themselves:

607. St. John Chrysostom, Homily 3 (and 4) On the incomprehensible nature of God.
608. Isaiah 6, on the Seraphim beholding the glory of God.
609. Euthymius Zigabenus and Theophylact on John 1:18.

ERANISTES. How, then, are we to understand that the angels always see the face of your Father? ORTHODOXUS. As we are wont to understand those things that are said of men who are thought to have seen God. ERANISTES. Speak more clearly; for I do not understand. ORTHODOXUS. Can God be seen by men? ERANISTES. By no means.

Proving this, ORTHODOXUS, after he showed that the divine substance cannot be seen by any man, subjoins: "So, therefore, let us understand it of the angels when we hear 'they see the face of your Father every day': for they do not see the divine substance, which can neither be circumscribed nor comprehended nor in mind perceived, nor can the universe comprehend it; but they see a certain glory which corresponds to their powers and is accommodated to them." These are Theodoret's words. If he wished only to deny comprehension in the sense in which the Schoolmen speak, not a clear vision, he would not say that the essence of God can neither be circumscribed, nor comprehended, nor perceived, nor be seen except only in that glory which corresponds to the powers of creatures.[610]

With Chrysostom and the aforesaid, certain others also among the Latins and the Greeks seem to have felt thus.

Caput IV - Further Latin Fathers concurring

To these Fathers we seem to be able to add St. Jerome on Isaiah 1, on those words, "Hear the word of the Lord, you princes of Sodom," Primasius on that of 1 Cor. 13, "I shall know, even as I am known," and Isidore in chapter 41 of Exodus, where he thus speaks of Moses: "What is meant by 'you cannot see my face' unless this - that even when human nature after the resurrection is borne on as far as to an angelic equality and rises untiring to the contemplation of God, still it is not able fully to see his essence, which neither does the very angelic perfection attain wholly or integrally?"[611][612][613]

Someone might be able to reply - some Theologian who would wish to draw the Fathers' words into the sense of the Schoolmen - that Isidore is to be understood as speaking of comprehension (comprehensio), as they speak, not of clear vision, which all grant. But besides the fact that the words cited indicate this in no way (for he says only that God is not seen by the angels in whole, or integrally, or fully - which certainly signifies that God is not known as he is; for if he were seen in that way, he would be known as whole and entire and fully), those things also which he subjoins do not suffer this interpretation. For he says: "To the Trinity alone, indeed, is the Trinity integrally known; to the humanity assumed, which is the third person in the Trinity." Now if Isidore were speaking of comprehension as the Schoolmen speak, he ought thus to reserve it to the Trinity alone, that he would not even grant it to the humanity of Christ - as we say in III, q. 10, a. 2; and surely, if God could grant it to the assumed humanity, he could, if he willed, not deny it to any other.

610. Theodoret, Dialogue "Immutabilis."
611. St. Jerome, In Isaiam, Book 1, on Isaiah 1:10 "Audite verbum Domini, principes Sodomorum."
612. Primasius, on 1 Corinthians 13:12 "Cognoscam, sicut et cognitus sum."
613. Isidore of Seville, on Exodus 33:20 (cited as c. 41).

Incidentally, it must also be noted why the person of the Word is called by Isidore the third in the Trinity: for he is not attending to the order of origin (in which he is second), but to number, in which the Son can be counted in the third place, since this order is only by the intellect; and the same seems to be as if it were said, "one of the three."

No less clearly St. Ambrose has handed on the same thing in Book 1 on Luke, in the chapter on the apparition of the Angel, explaining that John 1, "No one has ever seen God." Augustine reports this place of Ambrose in Epistle 112, c. 5, and says nothing against it, although he himself openly teaches that God is seen by the blessed.[614][615]

Among the Greeks the following also seem to have consented to the same opinion: St. Basil, Book 1 against Eunomius, after the middle; Epiphanius, Heresy 70; St. Cyril of Alexandria, Book 1 on John, ch. 22; and the Hierosolymitan in Catechesis 6; but more clearly St. Gregory of Nyssa in the book On the Beatitudes, explaining that "Blessed are the pure in heart, for they shall see God" (Matt. 5). For after he had taught that the substance of God is invisible except through certain effects and likenesses (and he was, in fact, treating of the reward of that beatitude itself), he adds that the promise "they shall see God" is to be understood in such a way that "to see God" is the same as "to have God," according to that of Psalm 127, "And may you see the good things of Jerusalem." These Fathers, if we wish to speak sincerely, we can scarcely interpret in a good sense, as is manifest from what has been said. For all seem to speak in the same way as Chrysostom. Yet I shall show in the following chapter that the opposite opinion is to be embraced.[616][617][618][619][620]
According to our faith, God, as he is, can be seen.

Caput V - The contrary opinion must be rejected as contrary to Catholic teaching

I judge the contrary position not only truer, but, according to the Catholic faith, necessarily to be maintained: namely, that the divine essence is clearly seen by the blessed as it is in itself. Although St. Thomas speaks somewhat cautiously in this article, in *De veritate*, question 8, article 1, he calls the contrary position heretical, and in the following article erroneous. This will become very clear from what follows.

First, Evaristus in his first epistle, from that 1 John 3, "We shall see him as he is," expressly affirms that the substance of God is seen by the blessed. The same is asserted by the Council of Frankfurt in its epistle to the bishops of Spain in these words: "We preach him (namely Christ) to be true God and one, and truly God himself; and may we merit to arrive at the most blessed spectacle of him, in which is eternal beatitude." They prove this in the same epistle from that 1 John 3, "It has not yet appeared what we shall be; but when it appears, we shall be like him, because we shall see him as he is." To these add Eugenius IV and the Council of Florence: in the

614. St. Ambrose, On Luke, Book 1, chapter on the apparition of the Angel, explaining John 1:18.
615. St. Augustine, Epistle 112, especially c. 5; also De videndo Deum, cc. 4 and 8.
616. St. Basil, Contra Eunomium, Book 1 (post medium).
617. Epiphanius, Panarion, heresy 70.
618. St. Cyril of Alexandria, In Ioannem, Book 1, ch. 22.
619. St. Cyril of Jerusalem, Catechesis 6.
620. St. Gregory of Nyssa, De Beatitudinibus, on "Beati mundo corde."

letters of union, which were truly received and subscribed by the whole Synod, although afterwards, through certain frauds, some of the Greek patriarchs and the emperor of the Greeks receded; among other things they define that those who, having received baptism or having completed penance, have died in grace, are forthwith received into heaven and clearly behold the very God, triune and one, as he is. Finally, Benedict XII, in a certain Extravagant which is reported by Major on IV, the last question, and by Gabriel in the Supplement on IV, dist. 49, q. 2, a. 3, dub. 3, defines that the souls of the departed who have died in grace are truly blessed before the day of judgment by the clear vision and fruition of God.[621][622][623][624][625][626]

Second, among the Fathers also many and of great name have handed on the same to us: Pseudo-Dionysius, On the Celestial Hierarchy, ch. 4; Martial in the Epistle to the men of Toulouse, ch. 27; Origen, Book 1 of the Principles, ch. 1, explaining that Psalm 35, "In your light we shall see light"; and St. Gregory Nazianzen, Oration 25, at the end, where he says as follows: "In this, therefore, common name (namely of God) believe, go forward prosperously, and reign; and from here you shall pass over to the beatitude of the other life. And further, as it seems to me, it lies in a more express knowledge and comprehension of these things." With the Fathers, however, "comprehension" (comprehensio) is taken for the clear vision of God, as we shall say in Disputation 52, about which they were disputing against the Anomoeans; yet more at length Irenaeus teaches the same, Book 18, ch. 38. Augustine agrees in Epistle 112, On seeing God, ch. 4 and 8; and what in the end of that epistle he doubts, whether God is now seen by the angels, does not stand in the way; for as to all the blessed it is a matter of doubt in Augustine whether before the day of judgment they clearly behold God; he does not, however, doubt whether God is at some time to be seen.[627][628][629][630][631][615]

Gregory the Great is added, Moral. Book 18, ch. 28, where he mentions the opposite opinion and from Scripture more fully confirms this one; Damascene in the History of Barlaam, ch. 8 near the end, where he says that the greatest punishment of the damned is to be deprived of the face of God; and in the "First, On the Faith," ch. 1, where he says that God will be seen by no one unless God willed to reveal it; and although he asserts that God is incomprehensible by nature, he does not speak as Clichtoveus and many of the Schoolmen suppose, who think that comprehension is

615. St. Augustine, Epistle 112, especially c. 5; also De videndo Deum, cc. 4 and 8.

not altogether the same as clear vision; nor is he speaking in the sense of Chrysostom's sentence, but he said that God is incomprehensible by nature - that is, by his nature he cannot be clearly seen by a creature unless the Son willed to reveal it.[632][633][634][635]

Third, from Scripture this truth is proved so clearly that it is a wonder that very weighty Fathers ever taught the opposite.

- The first place is Matthew 5: "Blessed are the pure in heart, for they shall see God." Augustine so understands it, Epistle 112, ch. 4; Hilary, Canon 4 on Matthew; indeed Augustine from this place seems to deduce that this is of faith. For he says: "We know that God can be seen, because it is written, 'Blessed are the pure in heart, for they shall see God,' etc. If perhaps I ought not to have said, 'We know,' but 'we believe,' because it is written in Scripture to which we believe, it was yet most fittingly said at once, 'We know,' because when he shall appear, we shall be like him; because we shall see him as he is; with which we ought to join, 'as something that he firmly believed.'"
- The second place is Matthew 18: "Their angels always see the face of my Father who is in heaven." There "face" they interpret as the very substance (*substantia*) of God as he is - Hilary, Canon 18; and on that of Psalm 118, "I besought your face," Augustine frequently in the same epistle, particularly ch. 4; St. Gregory the Great in the place cited; and Nicetas, in Oration 44 of St. Gregory Nazianzen, on those words, "Afterwards": for a certain corporeal face, under which by likeness and the appearance of a man God might appear, cannot be understood; for although, if we speak about the bodily vision of a man, that vision is more principal in which the face of some figure is seen than another part, since that part of human figure is most noble; nevertheless the angels, who with the eye of the mind alone gaze and by that part attain beatitude, cannot see by face, rather than by another part of a bodily figure, but by the vision of the substance of God as he is they can be blessed. Therefore the Fathers cited most fittingly understand by "face" the substance of God, which metaphorically is called "face": because just as then we are glad, when we see the countenance of a friend or a prince, upon which gladness shines, so also then we are blessed when we clearly gaze upon the substance of God as he is. Therefore the Greek Fathers mentioned above interpret less well by "face" that descent, that is, the light derived from God himself, to whom God is always present by his continual presence.

Nor does that which is said in 1 Peter 1 seem to stand in the way: "Into which things the angels long to look." First, because - as both St. Gregory the Great, in the place cited, and Bede, Tom. 8, Book of Questions, q. 9, most excellently interpret - that "desire" is not said with anxiety, nor does it signify absence of the thing, but only denotes, as is commonly said, a certain tending of desire; but, as Peter shows, that the blessed shall enjoy a certain satisfaction without satiety, according to

632. St. Gregory the Great, Moralia, Book 18, ch. 28.
633. "Damascene," Historia Barlaam et Iosaphat, ch. 8, near the end.
634. St. John Damascene, De fide orthodoxa, Book 1, ch. 1.
635. Josse Clichtove, on the distinction between comprehension and clear vision.

that of Psalm 16: "I shall be satisfied when your glory shall have appeared," therefore he said that they are perpetually held by the desire of beholding the face of God: for he who desires something does not loathe it. This sense Isidore followed, Book of Sentences, sentence 22. Then, if we did not read, "Into which the angels desire to look," but, "Into whom the angels desire to look," nothing of the things we said could stand in the way. Now, however, all the Greek Fathers so read, and also some of the Vulgate codices. Then truly the sentence would be formed in this way: Peter had said before concerning that salvation which the prophets inquired and searched into, etc.; he subjoins then, "To whom it was revealed that not to themselves, but to us, they were ministering those things which now have been announced to us by the Holy Spirit sent from heaven, into whom the angels desire to look": that is, which mysteries the angels desire to look into, or with great desire long to understand the mysteries of our redemption and the manifold wisdom of God, which were foretold by the prophets, according to that of Ephesians 3: "That it may be made known to the princes of the Church," etc., because in the course of time the mysteries were revealed to the angels as they were being accomplished: now, however, the Vulgate, emended by Sixtus V, reads, "Into which."

But if the angels see the substance of God, we too shall see it, when we shall have been made equal to them, as Augustine most excellently infers, Epistle 112, ch. 8 at the end, according to that of Matthew 22: "They shall be as the angels of God." Although that place of Matthew is not understood of equality of vision - for men will see God, as also the angels see, but of the incorruption of life, which neither needs marriage nor is subject to corruption. For the Sadducees foolishly objected concerning the woman who had seven husbands, whose wife she would be in the resurrection, that thus they might attack the resurrection; but the Lord answered that then men would be like the angels of God (namely, incorruptible), and thus would not need marriage: which Luke said much more clearly, ch. 20, in these words: "Neither do they marry, nor are they given in marriage, nor can they die any more: for they are equal to the angels." Hence it follows rightly that, if men are to be immortal just as the angels are, the same clear vision of God must also be granted to them.

- The third place is 1 Corinthians 13: "We see now through a mirror in an enigma, but then face to face; now I know in part, but then I shall know even as I am known." He says, "even as I am known," as Theodoret explains, that is, as one known and familiar who clearly gazes on the face of a friend. Jerome says, "Perfectly, as I shall behold God by vision"; Theophylact understands it likewise; and St. John Chrysostom says, "And he himself anticipated me, when first he knew me." Others think "I am known" is put for "I am taught." But if in the other life the divine essence itself did not appear, and instead were seen only in some light derived from it, then it would still be seen in an enigma and under an obscure veil, not face to face; nor would we know as those who are known and familiar, but only in part, though more perfectly than on the way. For the soul, as Augustine testifies, *De Trinitate* 15, chapter 9, is itself a kind of obscure likeness when through one thing we wish to signify another. Therefore, since any light or creature derived from God is far more different from God

himself than one creature is from another, it follows all the more that such a medium would be an enigma of God, rather than a direct sight of him.

- The fourth place is 1 John 3: "We know that when he shall appear, we shall be like to him, because we shall see him as he is." There indeed it is plainly a discourse about the Deity, not about the humanity of Christ, as is clear first from the context: for a little before he had spoken about the Father, that is, about God: "See what manner of charity the Father has given us, that we should be called and should be the sons of God"; and he continues about the same when he says, "Most beloved, now we are the sons of God; and it has not yet appeared what we shall be. We know that, when he shall appear, we shall be like to him, because we shall see him as he is": when I say, he who gave us to be sons of God: but when he presently subjoins, "And you know that he appeared to take away our sins," he is also speaking of God who deigned to appear in the flesh.

Secondly, the Council of Frankfurt, in the epistle to the bishops of Spain; Evaristus in the first epistle; and Augustine, Epistle 112, ch. 7, treating this place, teach that it is to be understood of a spiritual, not a bodily, vision; just as also in one way we will be similar to God in spirit, not in body. Therefore indeed we shall be similar, because we shall see as he is. Therefore we shall be similar, because we shall not only be satiated as sons (for now also we are), but without sin, as he is: therefore it has not yet appeared what we shall be, because although we are now sons, we are nevertheless with some sin. About which likeness Irenaeus said most aptly in the place cited: "If, which is by the manifestation through creation of God, bestows life upon men on the earth, much more that which is by the manifestation through the Word of the Father, bestows life upon those who see God."

Thirdly, that John does not speak of the vision of the humanity of Christ, but of the Deity, is shown by Armacanus, Book 14 of Questions of the Armenians, ch. 3, for this reason, which he seems to have taken from Fulgentius, in the book of Responses to Ferrandus the Deacon, Response 3 after the middle: because even the wicked will see the humanity of Christ - Matthew 24: "They shall see the Son of man" - and yet sinners will not be like him, nor even the just from this alone, that they will see the humanity, but from the vision of the Deity. Therefore there is promised (as Augustine says in that epistle, ch. 10) a spiritual vision by which the just will see one and the same Christ with the Father in the divinity.

By reason indeed this sentence is confirmed first, because - as we said without doubt about the text - by the natural appetite, by which we desire to see God as he is, it is most excellently proved that that desire can be fulfilled. For if it were impossible, it would not be a natural desire. If therefore we grant that there is a natural appetite of seeing God as he is, to know or to see the cause, it follows rightly that it is possible to see God. But that there is a natural appetite stands, because it cannot be that the vision of God is apprehended by us as evil, just as neither is the vision of any other cause which we desire to see: therefore we naturally desire to see God. Then that a

vision of God is possible is sufficiently gathered from those things which in the following we shall say in the solution of the opposing reason, where it is shown that it does not imply a contradiction that God be seen by a created intellect.

Caput VI - The arguments for the Armenian position are proposed and answered

For the sentence of the Armenians and of St. John Chrysostom, first there seems to be that of John 1: "God no one has ever seen; the only-begotten Son, who is in the bosom of the Father, he has declared him." And consonant to this is that of the First to Timothy, ch. 6: "Who alone has immortality, inhabits light inaccessible, whom no man has seen nor can see."

To dissolve this difficulty Jansen, book 15 of the Concordance of the Gospels, asserts that when it is said "God no one has ever seen," this is, "no one," not only man, but even Angel, is to be understood; yet John is speaking not only of the clear vision of God as he is, but also of that which the theologians call "comprehensive," by which God alone comprehends himself.[636] However, although it is true that by that kind of knowledge God alone sees himself, nevertheless John must be understood not only of this knowledge, but of any also clear vision of God as he is. For, in order that someone might be able to declare to us the mysteries of God which we had never seen, it would have been enough if he himself had clearly seen God as he is, and his counsel had been made manifest to him.

I answer therefore that John understood man alone, when he said, "God no one has ever seen," as if he said, "no man." Thus explains St. Augustine in that epistle 112, ch. 4.[637] Those, however, who interpret it also of Angels, as St. John Chrysostom, St. Ambrose, and others, say likewise that neither by men nor by Angels can the essence of God ever be seen as it is, as we reported above in this disputation. According to the interpretation therefore of St. Augustine, John said the same in ch. 6: "Everyone who has heard and learned from the Father comes to me: not that anyone has seen the Father, except he who is from God, he has seen the Father" (John 6:45 - 46): that is, I, who am begotten of the Father; as if he were to say: he who comes to me does not come because he, as a man, has heard anything from the Father himself, since, just as no one has heard from him with a bodily ear, so neither has anyone seen him; but he who comes, has heard from the Father, who through me teaches, because I have seen the Father and I know him (cf. John 7:29; 8:38). And the same is consonant with that of the First to Timothy, ch. 6: "whom no man has seen nor can see."

For when John in ch. 1 had said, "The law was given by Moses; grace and truth came by Jesus Christ," he subjoins, "God no one has ever seen" (John 1:17 - 18). As if he were to say: neither Moses, who gave the law, nor any other man in this mortal life; but this one alone, who is the only-begotten, through whom grace and truth came, has declared the things which he saw. But John said this either to prefer Christ to Moses and the prophets, or to show that the things which he had narrated about God, saying "In the beginning was the Word," etc., he had not spoken nor learned

636. Cornelius Jansen, Concordia Evangelica, lib. 15, on John 1:18.
637. St. Augustine, Epistola 112, c. 4.

from any man, because no one had seen God who could declare those things, but that he had received them from the only-begotten Son of God, of whose glory he had said, "We have seen his glory, the glory as of the only-begotten from the Father" (John 1:14). He affirms therefore that God has never been seen by any of men, not only before Christ's advent, but neither after, not only by their own power, but not even by a divine one (that is, by an extraordinary divine communication) among those, I say, with whom we pass our life in this mortal state, and whose daily converse we use, and by whom we can be taught; and that this was granted in this mortal life to the only Son of God alone, because he was to be the teacher and redeemer of all. He therefore declared to us the things which he saw.

1. Then that saying of Exodus 33 can be adduced for the sentence of Chrysostom: "Man shall not see me and live" (Exod 33:20). About this, however, we shall speak more opportunely below in disputation 55.
2. For the same sentence there seems to be a reason. Because the divine essence no less exceeds the efficacy of our intellect than a spiritual thing exceeds the power of the visive faculty: for the divine essence is compared to our intellect as the infinite to the finite, whereas the substance of an Angel is compared to the bodily eye as the finite to the finite. But the bodily eye cannot be perfected by any spiritual gift so that it may see the substance of an Angel: therefore much less can a created intellect see God.

It is answered: although both the substance of Angels and the faculty of seeing are finite; the essence of God, however, is infinite, and the created intellect finite; nevertheless the substance of an Angel and the faculty of seeing agree less and have between themselves a less proportion than God and the created intellect. For the proportion of these latter should not be mathematical according to a measure of perfection; for thus indeed God surpasses the created intellect more than the substance of Angels surpasses the bodily eye; but according to the ratio of object and power: thus, however, God has a due proportion with any intellect; but the substance of an Angel preserves absolutely none with the bodily eye: wherefore it is more distant from it than the essence of God is from the created intellect. For the substance of God is contained under the adequate notion of intellect, which is being (ens) according to the whole latitude of its analogy, which even on the way, without a supernatural gift, we can know obscurely and in some way understand; but the substance of an Angel is not contained under the object of the faculty of seeing or sensing, and therefore in no way can it by its own power be seen.

Hence it comes about that the intellect, endowed with some supernatural gift, such as is the light of glory (*lumen gloriae*), which has the character of an intelligible species of God himself, as will be made clear in disputation 43, ch. 5,[638] can be perfected so as to behold perfectly God as he is, whom it cannot see by other natural species: for it is itself capable of any gift within the intelligible genus; but no power of sensing can be furnished with any gift so as to be able to see, or sense, the substance of an Angel, because that is by no means contained under the notion of a sensible object:

638. See Disputation 43, ch. 5.

just as also in no way can it happen that sight perceive sound, or hearing color: yet it seems able to happen that the eye be moved by some gift of God to see color indivisible without quantity; because color by its notion is within the latitude of the object of sight; about which in the Third Part of St. Thomas, q. 76, a. 7, we shall speak more fully.[639] All this doctrine was not obscurely indicated to us by the Holy Doctor in Contra Gentiles III, ch. 54, around the first argument, to which again the discussion will return in disputation 40, ch. 2, and disputation 43, ch. 6.[640]

Articulus II - Whether the essence of God is seen by a created intellect through some likeness

To the second we proceed thus. It seems that the essence of God is seen by a created intellect through some likeness.

1. For it is said in 1 John 3: "We know that when he shall appear, we shall be like to him, and we shall see him as he is" (1 John 3:2).
2. Further, St. Augustine says in book 9 On the Trinity: "When we know God, there arises some likeness of God in us."[641]
3. Further, the intellect in act is the intelligible in act, just as the sense in act is the sensible in act. But this happens only inasmuch as the sense is informed by the likeness of the sensible thing, and the intellect by the likeness of the thing understood. Therefore, if God is seen in act by a created intellect, it is necessary that he be seen through some likeness.

But on the contrary is what St. Augustine says, book 15 On the Trinity, that when the Apostle says: "We see now through a mirror and in an enigma" (1 Cor 13:12), under the name of mirror and enigma all likenesses can be understood which are accommodated to understanding God. But to see God through his essence is not an enigmatic or specular vision, but is opposed to it. Therefore the divine essence is not seen through likenesses.[642]

I answer that to vision, both sensible and intellectual-actual, two things are required, namely a visive power and a union of the thing seen with the seeing. For there is not vision in act except by this, that the thing seen is in some way in the one seeing. And in corporeal things indeed it is manifest that the thing seen cannot be in the seer through its essence, but only through its likeness. Thus the likeness of a stone is in the eye, through which there is vision in act, but not the very substance of the stone. But if it were one and the same thing which were both the principle of the visive power and the thing seen, it would be necessary for the seer both to have from that thing the visive power, and the form by which he saw. Now it is manifest that God both is the author of the intellective power and can be seen by the intellect. And since the intellective power itself of the creature is not the essence of God, it follows that it is some participative likeness of him who is the

639. St. Thomas Aquinas, Summa theologiae, III, q. 76, a. 7.
640. St. Thomas Aquinas, Summa contra gentiles, III, c. 54; see also Disputation 40, ch. 2, and Disputation 43, ch. 6.
641. St. Augustine, De Trinitate, lib. 9, cap. 3 (or c. 1 as cited).
642. St. Augustine, De Trinitate, lib. 15, cap. 9.

first intellect. Whence also the intellective power of a creature is called a certain intelligible light as if derived from the first light: whether this be understood of the natural power, or of some perfection superadded of grace or of glory. Therefore there is required for seeing God some likeness of God on the part of the visive power, by which namely the intellect be made efficacious for seeing God. But on the part of the thing seen, which must of necessity be in some way united to the seer, by no created likeness can the essence of God be seen.

First indeed, because, as Dionysius says, through likenesses of things of a lower order higher things by no means can be known: as through the species of a body the essence of an incorporeal thing cannot be known. Much less therefore through any created species can the essence of God be seen.[643]

Secondly, because the essence of God is his very existence (*ipsum esse eius*), as was shown above; which can befit no created form. Therefore no created form can be a likeness representing one seeing the essence of God.[644]

Thirdly, because the divine essence is something uncircumscribable, containing in itself, supereminently, whatever can be signified or understood by a created intellect. And this can in no way be presented through any created species: because every created form is determined according to some particular notion, whether of wisdom, or of virtue, or of existence itself, or of some such thing. Whence to say that God is seen through a likeness, is to say that the divine essence is not seen. Which is erroneous.

It must be said therefore that for seeing the divine essence there is required some likeness on the part of the visive power, namely the light of divine glory strengthening the intellect for seeing God. Of which it is said in the Psalm: "In thy light we shall see light" (Ps 35[36]:10). But through no created likeness can the essence of God be seen, which would represent the divine essence itself as it is in itself.

Reply to the first: That authority speaks of the likeness which is by participation of the light of glory.

Reply to the second: St. Augustine there is speaking of the knowledge of God which is had on the way.

Reply to the third: The divine essence is existence itself. Whence, just as other intelligible forms which are not their own existence are united to the intellect according to some act of being by which they inform the intellect itself and make it to be in act; so the divine essence is united to the created intellect, making the intellect to be in act by itself, as by that which of itself makes the intellect to be in act.

Conclusion of the article is: For seeing the essence of God there is required some likeness on the part of the power, namely the light of glory; but through a created likeness, which would represent that very essence, it cannot be seen as it is in itself.

643. Pseudo-Dionysius, De divinis nominibus, cap. 1: "multum procul a principiis," on the inadequacy of lower likenesses for higher things.

644. Above, q. 3, art. 4.

Some observations, worthy of note, could be brought forward for the exposition of the article and of the mind of St. Thomas; for his interpreters and disciples vary; yet more conveniently in the following disputation we shall declare what he himself thought.

Disputatio XXXVIII - Whether by God's absolute power an intelligible species of God can be given, by which He may be clearly seen

Caput I - Two opposed opinions

The present question has place only among those who assert that the beatific vision is not produced by God alone, as Richard and the Nominalists taught, against whom we shall dispute in I - II, q. 3, art. 2, but also by the created intellect. And it is to be understood of the species and intelligible likeness which, with respect to other objects, is commonly assigned as the principle of intellection, whether as disposition to the act or as principle of seeing the object, so that the object may be seen; which species is called "impressed" by the Schoolmen. The question, however, is not about the word itself which is wont to be called the "expressed species," although we shall also say something of this.

Concerning the impressed species there are two opposed opinions. The first is that an impressed species of the divine essence cannot be produced by God. Those who have handed this down are Henry in Quodlibet 3, q. 1, and Quodlibet 4, q. 7, and in the Summa art. 33, q. 2; Aegidius in the Castigatorius, art. 1, and in the little work De divina induta in Beatos, c. 1; Cajetan, and more recent theologians in this article; Durandus in IV, dist. 49, q. 2, n. 13 and following, who not only deny universally intelligible species of other things, but also with a peculiar reason teach that the species of the divine essence cannot be produced; likewise Capreolus in the same place; Sotus, q. 2, art. 3; the Ferrariense Doctor, III Contra gentiles, c. 49; note what foundation is added by Marsilius in III, q. 10, art. 2, part I, art. in dubio incidens, conclusion 2, in which, although he asserts only de facto that there is not given a species of the divine essence for a clear vision of it, yet in the second reason he seems to think that it even cannot be produced; finally Thomas of Argentina in IV, dist. 49, q. 2, art. 2; and Paludanus, q. 1, art. 2, conclusion 3 - who, even if they do not dispute whether such a species can be effected by God or not, nevertheless affirm that de facto it is not given. Lastly, St. Thomas is reported for this opinion; but what he himself thought we shall see in the following disputation; the reasons of this opinion we shall set forth and examine one by one in chapter 4. 645646647648649

645. Henry of Ghent, Quodlibet 3, q. 1; Quodlibet 4, q. 7; Summa, art. 33, q. 2; Aegidius, Castigatorius, art. 1; Opusculum De divina induta in Beatos, c. 1; Cajetan, in this article.

646. Durandus, In IV Sent., dist. 49, q. 2, n. 13 sqq.

647. Capreolus, in the same place; Dominicus Soto, q. 2, art. 3; the Ferrariense Doctor, on III Contra gentiles, c. 49; Marsilius, In III, q. 10, art. 2, part I, ad dubium incidens, concl. 2.

648. Thomas of Argentina, In IV Sent., dist. 49, q. 2, art. 2; Paludanus, q. 1, art. 2, concl. 3.

649. On St. Thomas: see II Sent., dist. 3, q. 9, where he grants a quidditative species of God for abstractive, not intuitive, cognition.

The posterior opinion, now common enough in the Schools, asserts that nothing hinders God by His power from being able to produce such a species and to infuse it into a human or angelic intellect, by which, being instructed, it could behold God Himself clearly, as He is. Whether indeed God now grants it to the blessed we shall say in Disputation 43, c. 7. This opinion was followed by Aureolus, as he is cited by Capreolus in the place cited, art. 2; and among others Richard also counts it as probable in III, dist. 14, art. 1, q. 3; for, of the four which he recounts, he himself defends only two: one, which asserts that de facto God is seen through a species eliciting the vision by the potency and the species; the other, which affirms that the vision is effected by God alone, but that the light of glory is only given for receiving the vision in the intellect. Alexander also favors it, II, part, q. 24, membr. 1, who speaks in the same way as St. Thomas; and although on the side of the object seen, namely God, he says that no species is given for seeing Him Himself, nevertheless on the side of the intellect and the potency he says that a likeness is required. Finally, Scotus in IV, dist. 49, q. 11, before the solution of the arguments - which he had promised to treat elsewhere (which place I could not find) - yet in the Response, therefore, after the middle, affirms that the reasons by which it is commonly proved that there is not given a species of the divine essence prove nothing: he understands, in truth, not only of the possible, but also of the de facto. For in II, dist. 3, q. 9, he teaches that there is given a quidditative species of God, not for the clear vision, which they call intuitive, but for the quidditative alone, only abstractive, and he concedes it.[650]

Conclusion: The opinion which affirms that a species of the divine essence can be given, by a likeness from the production of the Word, is proved.

Caput II - The opinion which affirms that a species of the divine essence can be given is proved by a likeness from the production of the Word

Indeed, this latter opinion has always seemed to me much truer, and then at length did I judge it much more probable, when I clearly perceived that it in no way contradicts St. Thomas. The reasons for this opinion, however, have to be proved to me in a twofold way and confirmed. First, by a certain argument from a likeness, which in this chapter and in the following I shall more fully pursue; then by solving one by one the arguments which are commonly adduced on the opposite side. Thus it will be shown that nothing at all repugns that such a species be able to exist, and consequently that it can be produced by God.

The argument from a likeness goes thus: In the clear vision of God there is a species and expressed likeness of Him who represents Him in act just as He is; this the theologians call the Word. Why, then, will an impressed species of God in the intellect of the blessed be repugnant to be produced, which does not expressly nor in act, but habitually (as it is wont to be said) also present Him, because, namely, it is the principle for producing with the intellect an expressed likeness, which we have said to be the Word? This reason so ill torments the authors of the prior opinion that it has divided them into various positions.

650. Scotus, In IV Sent., dist. 49, q. 11; and II Sent., dist. 3, q. 9.

The first evasion is Henry, Quodlibet 3, q. 1, and Quodlibet 4, q. 8; Cajetan, and the more recent Thomists on this article, whom Ferrariense seems to follow in that place cited at the end, plainly deny not only that there is given an impressed species which is the principle of the vision of God, but they also think that by the very vision the Word is produced, or that God is seen by some word produced; for they suppose the same reason for each and say that the arguments which persuade that an impressed species cannot be produced, do in like manner altogether prove the same of the Word. Capreolus, however, in the place cited, art. 3, in the solution of arguments against the first conclusion, remains indecisive and does not dare to define anything concerning the Word; nevertheless he asserts that a response can be made to the proposed argument, if we say that intellection universally is not in itself a likeness, although it be called such by reason of the principle from which it proceeds, namely by reason of the intelligible species; and especially that this is true if we assert that intellection is not an action of the genus quality, which is only called a "grammatical action," but of the genus of true action and production; which he also taught in II, dist. 3, q. 2, art. 3, ad 2, in the confirmation of the first argument, from those things which were adduced in the second place against the fourth conclusion. Thus, therefore, concerning the vision of God we can say that it is not a likeness, neither in itself, as neither are the other intellections, nor by reason of the principle, because it does not proceed from an impressed species.[651][652]

But it can in no way be denied that any intellection, precisely insofar as it is intellection or vision, is an expressed likeness of the thing known or seen, or at least that by it an expressed likeness is produced. For either any intellection is an action of the predicament of action, which is truly a production, or it is only an action (as they say) grammatical, of the genus of quality: if it is an action of the predicament of action, it follows that something is produced by it; for production cannot be understood, unless by it something be produced: but that something will be a certain quality of the mind, which the Thomists call the Word, a certain representation and likeness more expressed of the object than is the impressed species which is the principle of intellection. But if (which I judge truer) it is an action of the genus of quality, as Scotus in Quodlibet 8, and Durandus in I, dist. 27, q. 2, and Gabriel, q. 2, teach universally, assuredly there will be an expressed likeness of the object by which formally the intellect is rendered intelligent or seeing, just as by whiteness a body is made white: nevertheless, it will not be a production of that quality and likeness, as St. Bonaventure relates in I, dist. 3, part 1, distinction ar. 1, q. 1, ad ult., Anselm, and others whom we shall report below. It is called a "grammatical" action because by it nothing is produced; yet it is signified around the object after the manner of action and operation, when we are said to see and to know the object - which is nothing else than that the object itself be presented to the intellect; otherwise the expressed quality which renders the intellect formally intelligent cannot be explained, unless it be said to be such that by it the intellect has the object present to itself, which can only be done by representation; therefore, since every intellection makes the object in some way present to itself - as experience also makes clear - it is brought about that every intellection also is an expressed likeness of the object.[651][652]

651. Scotus, Quodlibet 8; Durandus, In I Sent., dist. 27, q. 2; Gabriel (Biel), q. 2.
652. St. Bonaventure, In I Sent., dist. 3, part 1, distinction, ar. 1, q. 1, ad ult.; St. Anselm, as cited below.

This Augustine taught explicitly in De Trinitate IX, c. 10 near the end, and c. 11 in the beginning, where he asserts that cognition is a likeness of the thing known; from which he infers thus in these words: "Insofar as we know God, we are similar, but not to equality similar, because we do not know Him as He is"; therefore, conversely, if we had known Him as He is - as it will be in the fatherland - we would have a likeness equal to His essence. Vain, then, is what Capreolus, Cajetan, and Ferrariense teach in the cited places, that cognition in general is called a likeness of the object, not by reason of itself, but by reason of the principle from which it proceeds, namely by reason of the intelligible species. For who does not see that that which according to itself is not such, although it be named such, is only because the principle of it is such? Add that, since in their opinion in the fatherland there is not given an impressed species of the divine essence, the vision of it will be able to be called a likeness neither according to itself, nor by reason of the principle of some other likeness; Augustine holds that we shall be most perfectly similar by the vision itself, since we shall see God as He is: therefore he thinks that the vision itself, according to itself, is a likeness.[653][654]

Nor did Augustine only teach the generation of the Word from cognition, or that the vision of God is a likeness; he also most clearly says that either in the blessed in the fatherland the most perfect Word is produced, or at least that in the intellect there is always formed a word of the thing understood from the word which we now conceive in this life about God and in the fatherland we shall conceive, speaking thus: since in our mind now there is so great an image to the likeness of God and of the Word of God (that is, of the word which we conceive about God), nevertheless of this some imperfect likeness being compared, that too is to be attended: that also when we shall be like, since we shall see Him as He is, that word which we then shall have will not be false, since we neither err nor are deceived.[655]

Most clearly indeed Anselm asserts this very thing in these words in the Monologion, c. 31: "It cannot be denied by any reason that, when the rational mind by thinking understands itself, it forms in its very thought the image of itself, and establishes in itself its own image to its own likeness, as if formed by its own impression. For whoever thinks of a thing either forms for himself from the impression of sense a likeness of the thing by the imagination of the body, or seizes by reason the likeness of the thing in his thought; and he strives to express in his thought that likeness, as much as it avails in itself; and the more truly he does this, the more truly he thinks the thing itself." From this Anselm concludes the procession of the eternal Word from the Father. This testimony of Anselm is choice indeed, which our sentence which we have proposed just now strongly favors. For not only does he call cognition expressly a likeness of the thing known, but he expressly uses the word "impression" for the image, and to that perfection to which the perfection

of likeness extends. Therefore, however clear and perfect that cognition would be, so certain it is that the thing itself is present to the eyes of the mind, as he himself says; and thus the very word which we have will be a likeness.[656]

By the same reason, in sense, the same must necessarily be conceded. Whence it follows that, in the absence of the object, a visible species must in a certain way be considered to remain in the eye in order to perfect the act; and, if by a vision which God should bring about, the presence of the object were posited by reason of the word, both as to the act of seeing and as to the known term remaining, then, as a matter of fact, albeit imperfectly, it is perceived even by the senses that from a certain brilliance some sensible form remains, by which the eye is in some manner affected and disposed - as Aristotle teaches in De Anima, book III, c. 14, text 138, and in the books On Dreams and Images; and Augustine, De Trinitate IX, c. 12, although the contrary is alleged also by Gregory in II, dist. 7, q. 4, and by the Major in II, dist. 3, q. 9. Finally, everyday experience confirms this which Augustine also notes: when one looks upon bright lights, at once, when he closes his eyes, certain little flames, as it were, are seen lingering in the darkness. They respond that...[657]

The learned men of Ferrara, in the places cited, teach that cognition of anything whatsoever is called a similitude of the object, not by reason of itself, but by reason of the principle from which it proceeds, namely the intelligible species. For who does not see that what according to itself is not such is ineptly called such merely because its principle is such? Add that, since in their opinion in the fatherland there is not given an impressed species of the divine essence, the vision of it will be able to be called a similitude neither according to itself, nor by reason of a principle; but St. Augustine contends that we shall be most perfectly similar by the very vision, because we shall see him as he is: therefore the very vision, according to itself, ought to be held to be a similitude.

Nor did St. Augustine only teach, by the generation, that the cognition or vision of God is a similitude, but he also clearly affirmed that a word is produced by the blessed in the fatherland; for, showing how in the intelligent there is always formed the word of the thing understood, of that word which we conceive of God in this life and in the fatherland, he speaks thus: "Wherefore, since there is now in this enigma so great a dissimilarity of God and the word of God (that is, of the word which we conceive of God), in which, however, some similitude has been discovered: this also must be granted, that even when we shall be similar, when we shall see him as he is, etc. Then indeed our word will not be false, because neither do we lie, nor are we deceived."[658]

But most clearly St. Anselm asserts this very thing in the Monologion, c. 31: "By no reasoning can it be denied that, when the rational mind understands itself by thinking, an image of itself is born in its thought - indeed, that the very thought of itself is an image of itself according to its likeness, as though formed from its impression. For whatever thing the mind desires truly to think - either by the body's imagination or by reason - it strives, as far as it can, to express its likeness in

its own thought; and the more truly it does this, the more truly it thinks the thing itself." And from this he gathers the procession of the eternal Word from the Father.[659] Thus far St. Anselm, who in my judgment could not have more clearly asserted what we have said. For he not only says that in the knower there is expressed the similitude of the thing known, but also that the very expressed similitude is cognition, and is the more perfect, the more perfect is the cognition of the thing as it is, and in reality.

However clear and manifest be the cognition of a thing as it is, nevertheless a clearer cognition ought to be a certain more expressed and brighter similitude.

But the Thomists answer, as alleged, that an expressed similitude is therefore necessary so that it may supply for absence by representing; but when the thing is intimately present by essence, as God is present to the intellect of the blessed, the word and the similitude are posited in vain; for one can behold the thing itself more perfectly in itself without any medium: and so the word is rightly denied to the blessed; and by the same reasoning in vision and in the bodily senses an expressed species is not given, since the mere presence of the real object suffices.

But on the contrary: Against these, first and foremost, stands St. Augustine, a little above cited, who grants a word to the blessed, and St. Anselm, who says that by it the similitude of the thing known in the intellect ought to be more expressed and clearer, in proportion as the cognition itself is more perfect. Moreover, an expressed similitude in the intellect of the seeing or understanding is not posited in order that it may make the object present according to place, or the thing itself present to the intellect - for in this mode God is always present to the intellect of all, who nevertheless do not see him - nor in order that it may unite the object with the potency after the manner of a principle for eliciting a vision, but that it may be actually known. For he who knows, by that very fact has that which he knows present in a peculiar way and as it were set over against him - not indeed by presence according to place, but by very thought and intellection.

By this same reasoning, in sense the same must necessarily be conceded. Whence it follows that, if in the absence of an object according to place the visible species in the eye and the very vision were perfectly preserved - as God can do - the presence of the object, in that respect in which it was known and seen, would remain entirely the same; and in fact it does remain, though imperfectly, from departing sensibles, when some luminous body has been seen, as Aristotle testifies in On the Soul, III, c. 14, text 138, and in the book On Dreams and Images; and St. Augustine likewise, De Trinitate, book 9, c. 12; although St. Gregory in II Sent., dist. 7, q. 4, and the "Major" on the Master in II Sent., dist. 3, q. 9, think the opposite.[660]

Moreover we can verify this by experience: for he who, as St. Augustine says, has attentively gazed at latticework suffused with light, immediately shuts his eyes and sees the same latticework as it were in the dark. But the aforesaid Doctors reply that then there is not seen that object which was seen before, but the quality and the impression made in the eye.

659. St. Anselm, Monologion, c. 31.

660. Aristotle, De Anima, III, c. 14, text 138; On Dreams and Images; St. Augustine, De Trinitate, book 9, c. 12; St. Gregory, II Sent., dist. 7, q. 4; Peter the Lombard's Major, II Sent., dist. 3, q. 9.

This is plainly rejected: because then the same figure, magnitude, and distance appear; but if only an impression that was inside were seen, the figure, quantity, and distance of it would not appear, since such cannot be inside the eye. Others reply that it comes only from the apprehension of the imagination, such that something seems to appear with eyes closed or with the sight turned elsewhere; yet this solution can be manifestly refuted. For if it appeared from imagination alone, by our will such a vision could be impeded; and yet this is not in anyone's power, but for some time there remains in the eye itself a little motion until by degrees it fades away; therefore in truth some impressed species remains and the object appears, although imperfectly, which before was seen more clearly. The imperfection indeed comes from this, that by the absence of the object the species gradually vanish which were preserved by it, not from anything that the presence of the object, as regards the notion of object insofar as it is seen, contributes.

Caput III - The differences that some establish between the impressed species and the word are impugned

There are authors who uphold the former opinion, who grant that in the word produced and expressed by the blessed God is seen, and nevertheless that no impressed species of the divine essence can be produced in them, although the word proceeds from them; wherefore they strive in various ways to assign a distinction between these two. Now the word of the divine essence in the blessed is conceded by Capreolus in I, dist. 27, q. 2, ar. 3, ad 3, against the first conclusion, from the things which were adduced in the second place; Sotus, in IV, dist. 49, q. 2, a. 3, after the second conclusion; and the Doctor of Ferrara, in I Contra Gentiles, c. 53. The fifth is this. Sotus tries to prove it from that text of 1 John 3: "When he shall appear we shall be like him, because we shall see him as he is"; and from St. Augustine, De Trinitate, book 14, c. 17. However, John, and even Augustine, are not speaking of similarity of cognition, but of similarity of life and morals.

The first difference between the species and the word is what the Ferrara Doctor assigns, in this way. Whenever it is denied that there is given a species of the Godhead, it ought to be understood not only of the impressed [species], but also of the expressed [species] produced from the impressed, not of the expressed [species] produced from the divine essence as taking the place of an intelligible impressed species in first act. He gives the reason only in these words: "Since the intellectual species and the word expressed from it have the ratio of one perfect and total representation of the thing understood to the intellect." This of the Ferrara Doctor, nor do we add more to his words: but the reason is exceedingly obscure, and in the sense which (as I judge) his words bear, it seems to me futile and empty. The sense of these words is this: from an impressed and expressed species - even if it were granted of the divine [essence] - there would be made one likeness so perfect and entire as to equal God himself and represent him in the most perfect mode; which cannot be done by a created species and likeness. For every creature, since it is inferior to God, cannot represent him as perfectly and equally as he himself requires. But if we concede that the word and the expressed species produced by the intellect together with the divine essence supply the place of the intelligible species, it does not follow that they are most perfect and equal in

the manner in which a created thing is such, but insofar as it is from the divine essence and contains it. Here, as far as I could conjecture, this seems to be the sense of the Ferrara Doctor, for it is somewhat obscure.

But that this distinction is frivolous, I now show in a few words. The clear vision of God, indeed any cognition, is so an expressed similitude of its object - even in the judgment of these Doctors - that it is in itself distinct from the impressed species, from which alone, as from a principle, it proceeds: therefore it does not have from the impressed species, as from a form, but only from an efficient [cause], its representation. Wherefore, if it can be produced by the divine essence as by an efficient [cause], why could it not proceed also from another created species? And since the representation belonging to cognition is much more perfect than that of the intelligible species - for the latter (as they say) is habitual, but the former actual and expressed, and is the more perfect, the clearer the cognition itself is - and in fact this takes place in the blessed.

For the blessed, the word or vision, which in the opinion of these Doctors is an expressed likeness, why cannot an impressed species (species impressa), which is only habitual and represents the object less perfectly, be given? I pass over that distinction between an expressed species (species expressa) produced by the divine essence and supplying the place of the impressed species, and [an expressed species] produced by the impressed species; for it can scarcely be explained, much less understood.

The second difference is that which Dominicus Sotus assigns in the place cited: since the species is substituted in the place of the object as a principle of cognition, it ought to be purer and more spiritual. For if it were less spiritual, it could not supply its place; but since the expressed likeness, which is the word, is not substituted in the place of the object, certainly it need not be purer than the object itself and more free from matter: wherefore, since no impressed species can be purer and more spiritual than God, none will be able to supply his place in the intellect (intellectus) of the blessed; but it is necessary that the divine essence itself, of itself, as it were as an impressed species of itself, bestow the power upon the intellect for the clear vision of itself. Yet nothing hinders that in the intellect of one seeing God the species of the divine essence be expressed, which we call the word. This distinction also seems devised without any foundation. For although an impressed species may supply the place of the object, it is not for that reason necessary that it be more spiritual than the object itself; or at least this is so freely and gratuitously assumed that it can be proved by no reason: nay rather, the opposite is plainly evident. For even in the opinion of these Doctors, there can be an intelligible species (species intelligibilis) of an angel, either in the intellect of a man, or even in the intellect of another angel. But that [species] is not more spiritual than the angel; since the species is an accident (accidens), but the angel is a spiritual substance, and pure from all matter. But in order that a species may supply the place of an object, it is only necessary that it be of such a nature as can inhere in the intellect, and render it as it were disposed and able for eliciting the cognition or vision of the object; which it can very well accomplish even if it be not more spiritual than the object. For that it is sometimes purer and more without matter, happens from this, that the object itself is a material thing: but from that which happens in one case, it is not lawful to infer that it is always required from the nature of the thing. Finally, if we consider the

nature of the species and of the vision itself, the vision itself and the word ought to be no less spiritual and without matter than the impressed species: for each alike is in the same spiritual potency, namely, in the intellect.

A third difference is established by certain more recent authors between the impressed species and the word in this way. If an impressed species of the divine essence were given, that indeed would be produced immediately by God alone, and therefore it would be infinite and without bound: but the word is produced not by God alone, but also by a created power; wherefore it comes forth finite and limited: but nothing created can be infinite and without term, otherwise it would be God himself: therefore an impressed species of the divine essence cannot be given, although the word thereof can well be produced. Furthermore, they prove that an impressed species, from the mode of its production, would proceed from God in such wise that it would be infinite and without term: because in no respect could its production be limited; first, not by the efficient cause, for that [cause] is of infinite power; next, not by another created agent of finite and limited power, because none would cooperate in its production, but it would be made by God alone, as is supposed: therefore there would be nothing by which it could be ended and limited: but the word, or expressed species, even if it be from God, yet because it is made by the cooperation of a created power which is finite, comes forth from it finite and limited.

In assigning, however, this difference, the aforesaid authors do not rely upon a firm foundation. For either the discussion is about a limit and end according to existence (esse), or according to intensity. If about an end according to existence, from this alone would that species be limited and finite according to essence, and consequently it would not be God, because it would be made by another, as by a cause: for infinity according to existence consists only in this, that something lack the cause of its existence; as has been demonstrated by us at length above in disputation 25. Therefore, since that species would proceed from God as from a cause, by him also it would be said to be limited according to essence. But if we follow the opinion of the Angelic Doctor, who in that place thought that the notion of infinity is placed only in this, that something have existence received in another, the cause of finitude and limitation would likewise be manifest in that species: for it would be received in a subject; wherefore by it, according to essence, it would be limited. In no opinion, therefore, does it follow that that species will be God and infinite according to essence. Or the discussion is about infinity according to intensity: and still it does not follow that that species will be infinite in this way; because although the intellect, which is the subject of the intelligible species, be of infinite capacity, since without any end it can receive a more and more intense species, it does not for that reason necessarily have to receive a species of infinite intensity: for the same intellect, without any terminus, can elicit a more and more perfect intellection in infinitum according to intensity: yet in fact, in any one of the blessed it is limited, although God can produce a greater and a greater [intellection], and the very faculty of the created intellect can cooperate to a greater and still greater one in infinitum. Therefore, just as the vision is limited solely by the will of God, who produces it as he wills, so also could the impressed species be limited. Nor does it matter if it be said that the vision is limited not by the will of God alone, but by the light of glory as by a second cause, whereas the impressed species can be terminated by no second

cause: for although in fact the light is posited as the proximate principle of vision, as we shall say in disputation 43, nevertheless God could wholly supply its place, and, by his will alone producing the vision itself, limit it, as we were saying.

Finally, in a fourth way a difference is wont to be assigned, namely, that an intelligible impressed species proceeds from the object according to nature, and inasmuch as it is, not voluntarily, as is established in all other things besides God: therefore that impressed species of God would proceed from him, inasmuch as he is, not inasmuch as he wills: but thus it would not be a creature, but God; which is absurd: for every creature is produced by God voluntarily. Furthermore, if that species were to proceed from God voluntarily, it would be produced through some particular idea; but in that way it could not represent God as he is, totally and altogether, but according to that ideal ratio: it is therefore necessary to assert that the impressed species is to be produced by God naturally, that it might wholly and altogether represent God; which is absurd; but the beatific vision does not proceed from God naturally, but voluntarily cooperating with our intellect; just as by his will he concurs with all other causes. Wherefore it is not repugnant that an expressed species be given through the vision itself, or which is the very vision; yet it is repugnant that an impressed species be produced.

But neither is this distinction approved by me. For although other things, whether sensible or intelligible, of themselves produce a likeness naturally, not voluntarily, it does not for that reason follow that God cannot create by his will an intelligible species of himself, which naturally he cannot produce, as the proposed argument most excellently proves. For any created thing can be, and ought to be, produced by the will of God alone. In this God differs from other agents, that others produce something outside themselves naturally, whereas God produces nothing besides the persons which are produced by procession within God. Therefore, just as God voluntarily concurs to produce the clear vision of himself and the expressed species, so also could he by his will effect an impressed species; and just as the vision, by which he represents the whole God, he produces through a peculiar idea, so also could he produce the impressed species. But when we say that each species is produced through a peculiar idea, we do not assert that there is a peculiar idea of the object which is represented by the species or the vision; for this is God himself, of whom there can be no idea; but we say that each species is produced through an idea peculiar to each. For just as in God there is an idea of the clear vision of God, and of the expressed species, but not of God clearly seen, so also there is an idea of the intelligible species itself, but not of its object, which is God.[661]

Caput IV - On solving the objections against an impressed species of the divine essence

Thus far, by that argument from likeness which in chapter 2 we adduced, it has been proved that nothing hinders an impressed species of the essence of God from being given: now indeed the same will be shown no less clearly by solving the reasons by which this is wont to be proved impossible: and first, the three reasons which St. Thomas brings in this article - if they be

661. On the talk of a "peculiar idea" in God for producing the clear vision and the species, see the common doctrine of divine ideas; compare also the internal cross-reference to disputation 43.

understood of an impressed species, which is posited as a principle (*principium*) of vision, while it itself is not seen - at once appear to be of absolutely no weight; although in another sense, which the Holy Doctor maintains, of which mention will be made in the following disputation, they seem to me indeed to be demonstrations. Since therefore the Thomists also use them here to prove that an impressed species of the divine essence cannot be given, we shall briefly relate them here and refute them.

Dionysius. The first reason, to which the other two can be reduced, is taken from Pseudo-Dionysius, On the Divine Names, not far from the beginning, where he teaches that by the likenesses of things of a lower order the things of a higher order can in no way be known; for example, by the species of a body that which is incorporeal cannot be known; and that is much more true if we speak of cognition and of the clear vision by which a thing is seen as it is: therefore, likewise, by a created species that which is uncreated cannot be seen. This is the first reason. From the same principle St. Thomas rightly also infers in the second reason, that by a species, whose etc., which is not of the essence whose the created species is, God, whose is his very essence, cannot be seen. And similarly, very likely in the third reason, it rightly follows that by a species which by its nature and essence is limited, it is not possible to see God, who according to essence is infinite. To these same reasons St. Thomas also has recourse in Contra Gentiles, c. 49.[662] It also pleased [me] to add to these a fourth of Durandus in IV Sentences, dist. 49, q. 2, n. 11 and the following, which is as follows: If some species of God were posited, it would have to be of the same kind and nature as God himself; for the species of a certain nature is of the same kind with the object itself; but no created species can be of the same nature and kind with God: therefore no species of God can be produced.[663]

But, as we have said, if these reasons intend [to speak] of an impressed species, which is only the principle of vision and is not itself seen, we shall easily show that they are of no moment. And first, against Durandus we suppose that by no reason can it be proved that the species and its object must be of the same kind and nature between themselves. For a likeness representing a substance, or an angel, must not be a substance, or an angel; which is manifest with respect to cognition itself: for every cognition is an expressed representation of the object, and a certain likeness of it; yet no cognition of a substance is a substance, nor is the cognition of a man a man, and so of the others. Nor is this true only of spiritual intelligibles: for it is also true of sensibles; for the species of color is not color in reality; this is shown at length in De Anima III, c. 7. And hence also Durandus's reason is solved: he gratuitously assumes what can by no reason be proved, namely, that the species and its object must be of the same kind and nature.

Likewise false is what Cajetan asserts in this article, that for a species to represent a substance it must be substantial, and for [a species] to represent an accident it must be accidental. For every intelligible species is either a principle of intellection, or represents to the intellection itself, by the mode of a habit or by the mode of an act, the object; by its nature it ought to be an accident inhering in another in potency; which, as I think, follows in the case of every sensible species. Nor

662. St. Thomas, Contra Gentiles, c. 49.
663. Durandus, In IV Sent., dist. 49, q. 2, n. 11 and following.

can I sufficiently understand by what reason Cajetan tries to prove that the species and the object must be of the same order, if he understands this according to essence: for according to representation they ought to agree; that is, the object ought to be represented by the species as that object is, and yet more perfectly or more imperfectly, the more the species itself is more perfect or more imperfect. Therefore it is not necessary that the species, according to its mode, be of the same kind and nature as the object; but it suffices if it achieves its representation, as remains explained. It can also happen that a species which is an accident should represent a substance; and that a created and finite [species] according to existence (*esse*) should represent God, who is not created nor finite and whose essence is his very essence; because it suffices if they agree by representation, although according to essence the reasons be altogether diverse.

Nor is it against what we have said, that which Pseudo-Dionysius asserts, whom St. Thomas alleges on his side. For he, as will be explained in the following disputation, speaks only of that likeness by which we are led from the vision of one thing into the cognition of another; not, however, of an impressed, or of an expressed species, which either is the principle of cognition, or is the cognition itself.

Dionysius. The first argument, to which the other two can be reduced, is taken from Pseudo-Dionysius, On the Divine Names, not far from the beginning, where he teaches that by likenesses of things of an inferior order the superior cannot in any way be known, as by the species of a body that which is incorporeal cannot be known; and this is much more true if we speak of cognition and a clear vision by which a thing is seen as it is. Therefore likewise by a created species that which is uncreated cannot be seen; and this is the first argument. From the same principle St. Thomas rightly infers in the second argument that by a species whose existence (*esse*) is not its essence (*essentia*), such as a created species, God, whose existence is his very essence, cannot be seen. And similarly, as he gathers in the third argument, it rightly follows that by a species which by its nature and essence is limited, God, who is infinite according to essence, cannot be seen. These same arguments are used by St. Thomas in Contra Gentiles, book 3, chapter 49.[664] It pleased me, moreover, to add a fourth argument from Durandus in IV Sentences, dist. 49, q. 2, n. 12 and following, which is as follows. If there were posited some species of God, it would have to be of the same ratio and nature as God himself; for every species is of the same nature with its object. But no created species can be of the same nature and ratio with God. Therefore no species of God can be produced.[665]

But, as we have said, if these arguments are understood of the impressed species, which is only the principle of vision and is not itself seen, we shall easily show them to be of no moment. And first, against Durandus we suppose that by no reason can it be proved that the species and its object must be of the same ratio and nature between themselves. For a likeness ought not to be substance, or an Angel, to be an Angel; which is manifest from cognition itself. For since every cognition is an expressed representation of the object, it is also a likeness of it; yet no cognition of a substance is a substance, nor is the cognition of a man a man, and so of the others. Nor is this true

664. St. Thomas, Contra Gentiles, III, c. 49.
665. Durandus, In IV Sent., dist. 49, q. 2, n. 12 sqq.

only of spiritual intelligibles, but also of sensibles: for the species of a color is not a faint color, as is clearly shown in On the Soul, book 2, chapter 7.[666] And hence Durandus's reason is solved: for he supposes altogether gratuitously that which by no reason can be proved, namely that the species and the object must be of the same ratio and nature.

In the same way it is false, what Cajetan in this article asserts, that it is accidental for the species to agree in being either a substance or an accident. For since every intelligible species is either the principle of intellection, or the intellection itself representing the object after the mode of a habit or after the mode of an act, by its nature it ought to be an accident inhering in a potency; and the same follows manifestly of every sensible species. Nor could I sufficiently understand by what reason Cajetan tries to prove that the species and the object must be of the same order, if he understands this according to existence (*esse*). For they ought to agree according to representation, that is, such ought the object to be represented by the species as it is, yet more or less perfectly as the species itself is more or less perfect. Therefore, if there is no need that the species, according to its own existence, be of the same ratio and nature with the object, but it is enough if it agrees with it by representation, as has been explained above, it can also happen that a species which is an accident represents a substance, and that which is created and finite according to existence, and whose existence is not its essence, represents God, who is not created nor finite, and whose existence is his very essence; because it is enough if they agree by representation, although according to existence they be altogether of diverse ratio.

Nor is it against what we have said, that which Pseudo-Dionysius asserts, whom St. Thomas alleges on his side. For he, as will be explained in the following disputation, speaks only of that likeness by which we are led from the vision of one thing into the cognition of another; not, however, of an impressed, or of an expressed species, which either is the principle of cognition, or is the cognition itself, and which, not being itself known nor seen, leads us to the thing understood or seen. Although however this kind of species ought not to be of the same nature and ratio with the object according to existence, but only ought to agree with it according to representation, as we have explained, nevertheless a thing similar which, seen or known beforehand, leads us into the cognition of another, ought to be of the same nature and order with that other according to existence; otherwise, if it be of an inferior nature and order, it cannot lead us perfectly into the cognition of that other, but imperfectly, namely by detracting and denying something of it, just as from creatures in this life we know God. Most fittingly therefore, Pseudo-Dionysius, speaking of that first kind of likeness, said that by things of an inferior order the superior cannot be known and seen.

There remain three other arguments by which some strive to prove that a species of the divine essence cannot be produced.

Marsilius. The first is that of Marsilius in the place cited: for if such a species created by God were posited, once a single one had been produced, since it would be finite, God could produce another and another more perfect (he means different according to specific ratio). But various

666. Aristotle, De Anima, II, c. 7.

species cannot be produced in this way; for, since the beatific vision according to specific ratio is one and not many, it demands only one principle according to specific ratio; therefore no species of the divine essence can be produced.

Solution. I answer: from the fact that a species produced is finite, it does not follow that God can produce another and another more perfect, distinct according to species, but only that within the same specific ratio it be more or less perfect: just as from the fact that a man produced is of finite perfection according to essence, it does not follow that there can be produced another and another more perfect man of another nature; but another and another more perfect within the same specific nature.

Second objection. The second argument: between that species of the divine essence and God himself there would be a relation of likeness; but this ought to be founded in unity or equality in form, therefore it would be of the same nature with God himself, which is impossible.

Solution. I answer that the relation of likeness is twofold: one is that which is founded in unity of form; and this is between things of the same nature, as between two white things, and it is placed in the first species of relation among those enumerated by Aristotle, Metaphysics V, chapter 15.[667] The other is the likeness of representation; and this can be between things altogether of diverse natures, as we said a little before. But some press us in this fashion: the whole being (*esse*) of a species is representation, or at least this is its specific being; but a representation which would represent an infinite object, such as God, would be infinite in the ratio of representation; therefore it would be of the same nature with God. True, but on the contrary the same argument can be turned: first, if we say that vision is an expressed likeness of the object, as is well known. Then even if we do not say that, since its whole being is the being of cognition; therefore, if it is of an infinite object, it will be infinite in that genus, and hence of the same ratio with God. Wherefore I answer: from the fact that some representation or cognition is of an infinite object, it does not follow that it itself, whether in the genus of representation or of cognition - which is its proper being - be intrinsically and formally infinite in itself; but only that it is conversant about something infinite, either representing it or cognizing it. It is therefore of the infinite, but not infinite. Wherefore it does not follow that it is of the same nature with God, but of a much inferior order.

Third argument of Henry. The third argument is this. If a species of the divine nature were given, an angel could by his natural power know it; for it would be something created. And since it would be his proper and quidditative likeness of God, the angel by his own power, seeing it, could also clearly contemplate God. This argument is used by Henry in the Summa, 2.33, q. 2, ad 3 arg., and it can be confirmed by a like case: for just as by the species which we see refracted in a mirror, we behold the very thing itself from which it is derived, properly and as it is, as St. Thomas teaches below, q. 14, a. 5, and Cajetan in this question, art. 8, and for the evidence of these the same Doctor in Contra Gentiles, book 3, chapter 49, in the beginning, nay rather St. Augustine, On the Trinity,

667. Aristotle, Metaphysics V, c. 15.

book 15, chapter 8; so also by that species proper to the divine essence, impressed upon the intellect of the Blessed, and as it were refracted in some mirror, one angel by his own power could contemplate God himself.[668669670671672]

Solution of the argument. This argument bears a greater appearance of probability; yet, if it be more deeply considered, it will appear no less than the preceding ones infirm and weak. First, those who contend that that impressed species can be given, consistently assert that it is of a supernatural order, like the very light of glory and habitual grace. But those things which are supernatural according to their own nature, and not only by reason of the mode of the efficient cause, cannot by the natural power of any created intellect be known, as we shall say below in disputation 14; the opposite of which Henry seems to suppose as if it were known.[673674]

But let us grant that that species can by the created intellect be known by its own power: nevertheless it does not follow that by it, first seen, the divine essence could also be clearly seen. First, because the same argument could be made of the beatific vision, especially if that be an expressed likeness of the object, as is well known. Next, even if we do not say that, since its whole being is the being of cognition, therefore if it is of an infinite object, it will be infinite in that mode; and so that which was first known would lead to the cognition of another; and since in itself it would not have the whole ratio and entity of God, nor would it be of the same ratio with him, but altogether different, it could not be that by such a medium God would be clearly seen. And indeed this is expressly noted by Gregory in I Sentences, dist. 3, and in II, dist. 9, q. 2, and by Gabriel in the same place, q. 2, a. 5, dub.[675676] For then it would be a medium of the former sort, namely, that the prior known would lead into the cognition of another; whereas in itself it would not contain the whole ratio and entity of God, nor would it be of the same ratio with him, but altogether diverse: therefore by that medium God could not be clearly seen, although after that species, whether impressed or expressed, had been seen, God would be clearly beheld by it. But by this species, once seen, there could be elicited some evident knowledge of the Trinity; we will say this in disputation 43, chapter 21.[677]

Then, as Scotus most aptly observed in a certain Quodlibet, "To other things": in a twofold way can an object be known through some cognitive medium. In one way, the medium ought first to be itself known; and in this way nothing can be the medium for cognizing another quidditatively and as it is, if it does not contain the whole ratio of that thing. For if it does not have it, by it the other cannot be seen according to the whole, which, as is my own view, can be said only of that which is in no way such, but only numerically diverse from another, if it be of the same nature according to

species, which can be the same medium of seeing that thing as it is, in the way we have said. Most true, however, is what Scotus says, namely that that which does not contain in itself the whole ratio and entity of another cannot be the medium of seeing that other as it is. In the other way, one and the same thing can be a medium of knowing another, not as first known, but either as the ratio of cognizing, or as the principle eliciting the vision, such as is the impressed species; or as the word in which the thing is expressed, which either is the term of the cognition produced by itself, or, what I more truly think, is the intellection itself: and this medium then is only so far a ratio of seeing, in whose intellect from which, as from the sole principle, either the principle eliciting the vision can be, or it can be the word in which the thing itself is seen.[678]

Hence it follows that even if someone by his own power sees the impressed species of the divine essence, or the word of it in another's intellect, nevertheless by it he cannot clearly see God himself; a thing expressly noted by Gregory in I Sentences, dist. 3, and in II, dist. 9, q. 2, and by Gabriel in the same place, q. 2, a. 5, dub. For then it would be a medium of the former kind, which, being first known, would lead into the cognition of another; and since in itself it would not have the whole ratio and entity of God, nor would it be of the same ratio with him, but entirely different, God could not be clearly seen by such a medium; whereas by that prior medium of cognition expressed neither, in that way, is God seen in the blessed intellect.

And for the confirmation, it must be answered with Scotus in the Quodlibet cited, that the likeness of the thing existing in a mirror is not seen by us, but by refraction in some polished body the species is conveyed into the eye, which very thing we look upon, and not that which is behind; otherwise a thing placed in another region would be seen. Wherefore it does not follow that, by the species of a thing first seen, the thing itself, as it is, is ever seen. Moreover, that the species existing in a mirror is not seen, although the contrary appears to us, is clearly proved by two experiments and by various reasons. One experiment is of this sort: if the species existing in the mirror were seen, it would appear nearer, in the same depth and at the same distance as the mirror itself, since all accidents which in some subject have the same distance are seen together with it; but the thing which is presented to the mirror appears much further within and is seen at a deeper distance than the mirror; indeed, the more the thing itself is distant from the mirror and from the region in which it is placed, the deeper within the mirror it seems to us to appear: therefore it is an evident sign that the species itself existing within the mirror is not seen, but the thing placed opposite, which, on account of the refraction of the species, is represented in that mode along with the whole distance.

Disputatio XXXIX

Conceding, once an impressed species has been seen, that that species can by the created intellect be known by its own proper power; nevertheless it does not follow that, by means of that previously seen, one can also clearly see the divine essence. First, because the same argument could

678. Scotus, Quodlibet, ad "Ad alias" (quodlibetal question indicated in the locus cited).

be made about the beatific vision - especially if that species were a likeness of the thing known; and although it is not a likeness, as Henry, cited above in ch. 2 of this disputation, thought, still the same consequence seems to follow: for the vision of the object itself can no less be a medium of knowing the object than the intelligible species; the vision of that object has greater agreement with the object than its impressed species. But from the fact that there is a clear vision of God nothing absurd follows; therefore neither does anything absurd follow from the fact that an impressed species of him is produced.

Next, as Scotus very well observed, an object can be known through a medium in a twofold manner.[679] In one manner, such that the medium must first be known; and in this way, nothing can be a medium of knowing something else quidditatively, and as it is, if it does not contain in itself the whole notion and entity of that other. For if it does not have this, the other thing cannot be seen in it according to the whole that it is. And in my judgment nothing of this sort can exist, even if it were only numerically different from another yet of the same nature according to species, that could be a suitable medium of seeing that other thing as it is, in the way we said. Yet it is most true, as Scotus says, that that which does not contain in itself the whole notion and entity of another cannot be the medium of seeing that other as it is. In the other manner, one thing can be a medium of knowing another without being first known, but because it is the ratio of knowing, either as a principle eliciting the vision - as an impressed species is - or as a word in which the thing is expressed, which either is the terminus of cognition produced by it, or, what I judge more true, is the intellection itself. And this medium is a ratio of seeing only for him in whose intellect it is; for to him alone it can either be the principle eliciting the vision, or be the word in which the thing itself is seen.

Hence it follows that, even if someone by his own power sees the impressed species of the divine essence, or the word of it in another's intellect, by means of that he cannot clearly see God himself: a point expressly noted by Gregory in I Sentences, dist. 3, and in II Sentences, dist. 9, q. 2, and by Gabriel in the same place, q. 2, a. 5, dub. r.[680] For then it would be a medium in the former manner, which, being first known, would lead to the cognition of another; and since in itself it would not have the whole notion and entity of God, nor be of the same order with him, but altogether different, it could not be that by means of such a previously known medium God would be seen; whereas nevertheless the intellect in which that impressed or expressed species is could, by means of those, clearly behold God, since they are only a medium in the latter manner - either by way of an eliciting principle, or by way of expressed cognition. Therefore nothing forbids that there be such a species in the intellect of the blessed. But whether by this seen species one could be led to some evident knowledge of the Trinity, we shall say in disputation 135, ch. 2.

But to the confirmation I answer, with Scotus in the Quodlibet cited, that we do not see any thing by means of the likeness of the thing existing in a mirror, but by refraction in any polished body a species is conveyed into the eye, by which we gaze upon the thing itself that is behind, since otherwise it could not be seen unless placed face to face; wherefore it does not follow that, by the

679. Scotus, Quodlibet.
680. Gregory of Rimini, In I Sent., d. 3; and In II Sent., d. 9, q. 2; and Gabriel, ibid., q. 2, a. 5, dub.

species of a thing previously seen, the thing itself, as it is, is ever seen.[679] Moreover, that the species existing in a mirror is not seen, although the contrary appears to us, is proved clearly by two experiments and by one evident reason.

One experiment is of this sort: if the species existing in the mirror were seen, it would undoubtedly appear within the depth and distance of the mirror itself; for an accident that is in a subject has the same distance as the subject, under which it is seen together with the subject; but that thing which appears to the mirror as object is seen much further within, and at a deeper distance, than the mirror: indeed, the more the thing itself placed opposite the mirror is distant from the mirror, the deeper it seems to us to appear within the mirror. Therefore it is an evident sign that we are not seeing the species itself which exists within the body of the mirror, but the thing placed opposite, which, on account of the refraction of the species, is represented together with its whole distance in that way.

The other experiment is this: those who are endowed with such a visual faculty that they see very well at close range, but at a distance have need of a certain special kind of spectacles - even if they have a mirror set sufficiently near opposite, and, for looking at it, they do not need spectacles to see well what is in it - nevertheless need them to see the things that are set behind and appear by refraction in the mirror, if they are placed at a long distance. It is therefore a sign that what is seen is not in the mirror, since the mirror itself and the things that are in it are set at an optimal distance so as to be seen rightly without spectacles, but the very thing set behind is seen, which, since it is not at a proper distance, cannot, even though refracted in the mirror, rightly appear to sight without spectacles.

The reason is of this sort. A visible species is not a color, even a faint one, but is different from every color and light, as is proved more at length in De Anima II, c. 7; therefore it cannot be seen; for the object of sight, as the same Aristotle testifies in that chapter, is color or light.[681]

But someone will object to us the authority of the Apostle, 1 Corinthians 13, when he said: "We see now through a mirror in an enigma, but then face to face."[682] There, since he compares the obscure vision of God which we have in this life to a vision in a mirror and in an enigma, it is necessary to say that in a mirror the thing itself is not seen according to itself, as it is, but after first seeing its likeness - just as the vision of something in an enigma comes about after the enigma itself is first seen; otherwise, if in a mirror the thing itself, as it is, were seen as if placed opposite, Paul would not have rightly compared the obscure vision of the way to that which is in a mirror, and the clear one which we have in the fatherland to that by which we behold a thing placed opposite.

I answer: Paul did not say that a thing is seen "in" a mirror, but "through" a mirror; for since in it the species are refracted and reach the eye, which otherwise would not happen to it, we are rightly said to see through a mirror, not something that is in it, but the thing whose species is received in it. He compares to this vision which comes about by refraction in a mirror the obscure cognition which in this life we have of God; for although through a mirror the thing itself is seen

679. Scotus, Quodlibet.
681. Aristotle, De Anima, II, c. 7.
682. 1 Cor 13:12.

according to itself, nevertheless it does not appear altogether unchanged, nor so perfectly as "face to face." For both quantity is varied, and even the very disposition of colors and figure is not wont so perfectly to appear as it is. He therefore most aptly compared the vision of the fatherland to the vision of a thing which we gaze upon face to face. And because it did not seem to Paul that he had sufficiently explained the obscurity of the cognition which we have of God in this life by comparing it to the vision of a thing through a mirror, he subjoined "in an enigma," to show that it is more obscure than that which is through a mirror; for an enigma, as St. Augustine bears witness in De Trinitate XV, c. 9, is a certain obscure likeness of something, as when we wish through one thing to signify another, as in Proverbs 30: "The leech has two daughters," etc.[683] Yet we cannot deny that St. Augustine, De Trinitate XV, c. 8 and 9, was of the opinion that the likeness of the thing received in the mirror is seen; still it is far more true, and more in harmony with philosophy, what we have hitherto proved; and this is enough about this question. But whether de facto in the blessed there is an impressed species, which up to now we have proved could exist, we shall say in disputation 43, ch. 7, where we shall also satisfy the argument which some use in this way against the foregoing position: "If a species can be given, therefore it must be posited de facto: why then is it commonly said that the divine essence stands in the place of a species?"

Caput I - The true interpretation of St. Thomas's view

I hold that only one opinion is true - namely, that which I followed in the preceding disputation - and that it by no means opposes the doctrine of St. Thomas, as in this disputation I shall clearly show, in which I shall also, incidentally, set forth his mind and the text of the article. It pleased me to dispute this expressly, because many, although clearly seeing from the arguments of the previous disputation that there is absolutely no repugnance in positing that a species impressed of the divine essence be produced, nevertheless, solely on account of the authority of the holy Doctor - whom they interpret in the contrary direction - do not dare to assert it. All, however, admit that he plainly speaks not only of the fact, but also of the absolute power of God; for his reasons tend to show a manifest contradiction and repugnance in supposing that the divine essence be seen in its whole beauty, as Pseudo-Dionysius says in De divinis nominibus IV, that it be seen as a species.[684]

But by many of his disciples - of whom the chief seems to have been Cajetan, cited in ch. 1 of the preceding disputation - it has been thought that St. Thomas is speaking of a species impressed of the Godhead which would be only the principle eliciting the clear vision of God; wherefore they maintain, according to the intention of the holy Doctor, that such a species in no way can be produced.[685]

Yet to me, after a more exact consideration of the words of the article, the exposition which the most learned Francisco de Vitoria was wont to apply in his commentaries on this article has been exceedingly pleasing. For he used to say that St. Thomas speaks only of a species and some likeness of the Godhead which, being first seen, leads us into the clarity of the vision itself; and that this

683. St. Augustine, De Trinitate, XV, cc. 8 - 9; Prov 30:15.
684. Pseudo-Dionysius, De divinis nominibus, IV.
685. Cajetan, cited above, ch. 1 of this disputation.

cannot be produced, he judged; and by the same reasoning he denied an expressed word in the intellect of the blessed, which, in his opinion, must first be seen so that in it things and objects be known, as will be explained below; but that he did not deny an impressed species, which on the part of the potency stands disposed for eliciting the vision - nay rather, that he in set terms granted it de facto, as will appear in disputation 43, ch. 7.[686]

This is, in fact, what I am persuaded of from various places of the same holy Doctor. First, from the argument Sed contra of this article, which is taken from St. Augustine, De Trinitate XV, c. 9, and runs thus: since the Apostle says, "We see now through a mirror in an enigma, then face to face," by "mirror and enigma" he understands any likeness accommodated to understanding God; but to see clearly the essence of God is not an enigmatic vision, since the Apostle opposes to an enigmatic vision the clear one; therefore the divine essence, which is seen clearly in the fatherland, is not seen through a likeness. Here St. Thomas plainly speaks of a likeness which, being first seen, would be the ratio of seeing God; for this is what is called an enigma; but that which would be only a principle of eliciting the vision would be inaptly called an enigma. Since, therefore, he strives only to prove that God is not seen through an enigma, he excludes only the species and likeness through which, once first seen, God would be seen.

Second, because in art. 4 of this question, where he gives as the first argument for proving that an angel can, by his natural power, know God - namely, because he clearly intuits himself - he himself declares that the angel is as it were a pure mirror receiving species; yet he denies that the angel can clearly see God by first seeing himself as a likeness of God: but there he denies this only for this reason, that, the likeness being first seen, God, as he is, cannot be clearly seen; therefore he denies in this article in a similar way; for if in this article he were only solving that no impressed species, which is a principle eliciting the vision, is bestowed, he would have replied unsuitably to that argument, and would have said: "As has been said," namely, in this same sense in art. 4.[687]

Third, in art. 2 of this question, to prove that God cannot in this mortal life be seen, he argues thus: in this life nothing can be known except material things; through these, however, God cannot be clearly seen; for it has been shown above (he says) that a cognition through any created likeness whatsoever is not the vision of his essence; therefore in this life God cannot be seen. There he is plainly speaking of a likeness which, once first known, would cause God to be seen, so that from there he might prove that through no creature previously known can we in this life clearly behold God. Therefore, since he asserts that this has been shown above, he is not speaking here in this art. 2 of this kind of likeness about the impressed species which is the principle of vision; and this necessarily must be understood in this article.[688]

Fourth, in this art. 2 he not only grants to our intellect the light of glory by which it is made efficacious for seeing God, but he also asserts that this is a likeness of God, attributing to the faculty of the intellect the power whereby it may see God. Therefore he grants a likeness impressed

686. Francisco de Vitoria, Commentaries on this article; see also below, disp. 43, ch. 7.

687. St. Thomas, Summa theologiae I, q. 16, a. 3 (on the mode in which the angel, on the way, knows God); and the present q. 12, a. 4.

688. St. Thomas, Summa theologiae I, q. 12, a. 2 and a. 4.

upon the potency as the principle of intellection, which, not being first understood, causes God to be seen. Some reply that St. Thomas does not concede a species impressed of God himself, but the light of glory, which, since it is some effect of God, he calls a likeness of him in a general way; and since it strengthens the intellect so that it may see, he says that it is a likeness on the part of the potency; whereas, when he denies a species on the part of the thing seen, that is, of God himself, he is speaking of a likeness which, being first known, would from itself make God to be seen.[689]

I am convinced of this by various places of the same holy Doctor. First, from the argument "But on the contrary" of this article, which is taken from St. Augustine, De Trinitate XV, c. 9, and is of this sort. When the Apostle says, "We see now through a mirror in an enigma, but then face to face," by "mirror" and "enigma" he understands any kind of likeness accommodated to the understanding of God: but to see clearly the divine essence is not an enigmatic vision, since the Apostle opposes clear vision to it: therefore the divine essence, which is seen clearly in the fatherland, is not seen through a likeness. Here St. Thomas is plainly speaking of a likeness which, being first seen, would be the cause of seeing God: for this is what is called an enigma; whereas that which would only be the principle of the vision would be ineptly called an enigma. Therefore, since he only strives to prove that God is not seen through an enigma, he excludes solely the species and likeness by which, being first seen, God is seen.

Second, because in article 4 of this question, when the first argument to prove by conjecture that the angel could by his natural power see God was that the angel clearly understands himself, and he himself is a pure mirror receiving, if he is such, as Dionysius says, De divinis nominibus IV, he answers in solution to the first that it is natural to the angel to know God through some likeness of him shining in himself; but to know God through a created likeness is not to see him as he is. In the same way in that article 4 he says that God cannot be seen clearly by the angel by the angel's seeing himself as a likeness of God: there he only denies by way of clarification that, with that likeness being seen, God, as he is, can be seen clearly: therefore he denies in this article likewise. And if in this article he meant only that there is not given an impressed species which is the principle of eliciting vision, he would have ineptly answered that argument, and would have added, "As was said," namely in that article.

Third, in article 11 of this question, where he contends by conjecture that God cannot be seen in this mortal life, he argues thus. In this life nothing can be known except material things; but through these God cannot be seen clearly: for it was shown above that the knowledge of God through any created likeness is not the vision of his essence. Therefore in this life God cannot be seen. Here he is plainly speaking about the likeness which, being first known, makes God to be seen, so that he may prove from this that through no creature first known can we in this life clearly behold God. Since therefore he asserts that this was shown above, it is clearly to be understood that he was speaking in article 2 about this kind of likeness of things, not about the impressed species which is the principle of vision: and thus that article is to be understood.

689. On the "light of glory" as a similitude on the part of the potency in St. Thomas, see the same q. 12, a. 5 - 6.

Fourth, in this article 2 he not only speaks about the light of glory on the part of our intellect, by which it is made effective for seeing God, but from the same he gathers and asserts that this is a likeness of God, which strengthens the power of the intellect so that it may see him: therefore he grants a likeness impressed on the potency as a principle of intellection, which, not being first understood, makes God to be seen. Some answer that St. Thomas does not grant an impressed species of God himself, but the light of glory, which, because it is some effect of God, he in a general way calls a likeness of him, inasmuch as it strengthens the intellect to see: hence he says that it is a likeness on the part of the potency, but denies a species on the part of the thing seen, which (he says) must be united in some way to the intellect that sees according to the mode in which it is seen: plainly he asserts that there is not given an intelligible species of the divine essence which would be united to the intellect that sees it. For he had said before, about bodily vision, that there is necessary both the power of the faculty for seeing and the union of the thing seen with the sight, because there is no vision in act except by this, that the thing seen is in some way in the seer: and since the thing seen cannot be there through itself, it must be there through some likeness of itself. But about the intellect seeing God he says that, besides the intellect, there must also be given the light of glory, which he calls a likeness on the part of the potency, for strengthening it: but that on the part of the thing seen, that is, of God himself, there is not given a likeness by which he is united to the potency, but that he is united through himself. Therefore he denies an intelligible species impressed of God himself, just as, on the contrary, he granted that in the eye there is given an impressed species of color, by which the potency is united, in which way other things, according to themselves, cannot be united to the cognoscitive potency, but God can most excellently.

This line of argument almost compels all Thomists to assert that in the doctrine of the holy Doctor there is not an impressed species of the divine essence. To me, however, it seems that in this article he only denies an expressed species. For when he says that in the faculty of seeing a power is necessary on the part of the faculty itself, he understands not only the native power, but also another coming from without, which constitutes that native power in first act, and thus he includes the impressed species too, which is said to be on the part of the potency because it seconding it. But when he adds that a likeness is also necessary, through which the vision is made, he does not mean the impressed species, but the expressed one, by which the vision is made in act, or rather which is itself the form by which one sees. And applying this doctrine to the clear vision of God himself, he says that for it there is necessary a power of the potency, not only native, but also of the light of glory, which is (he says) a certain likeness of God: and thus he thinks the light to be an impressed species. For this reason he asserts that that likeness, or species, is on the part of the potency, because it seconding the potency to elicit the vision, which is common to all impressed species; but he adds that this species is not on the part of the thing seen, because it is not first seen so as to make the object to be seen; and this alone he denies in the intellect that sees God as he is: that is, he thinks there is not given any expressed species which, being seen, would make God to be seen; but that God himself is united immediately and through himself to the potency actually seeing, in the place of the expressed species by which vision is wont to be wrought, as by a non-efficient form: which will be made clearer in the following chapter.

Finally, what we were saying is supported from the mind of St. Thomas, and the preceding reason is made more firm, because unless he himself were speaking of an expressed species which, being first seen, would make the object to be seen, when he denies that a species of God can be produced; but were understanding an impressed species which would be the principle of vision, so that, being first seen, it would make the object to be seen; then the reasons by which he strives to prove that it is impossible for it to be produced in the intellect of the blessed would be futile and vain, as was shown in the preceding disputation, ch. 4. But if he speaks of an expressed species which, being first seen, makes the object to be seen, they plainly, in my judgment, show that God cannot be seen through any species. For, as we there said from the opinion of Scotus, one thing cannot be seen clearly through another previously seen clearly as through a medium, if in that medium there is not the whole entity and ratio of the other. Wherefore through an expressed species previously seen, which is of an order inferior to God, and is not its own existence, nor infinite, God, who is his own existence, of a higher order and infinite, cannot be seen clearly. Therefore, lest we say that the reasons of the holy Doctor are frivolous, but rather effective, it is better to interpret his mind in the sense that we have set forth, in which he also plainly seems to have spoken, if one carefully read Contra Gentiles III, c. 49, and De veritate q. 8, a. 1.[690] Nor in IV, dist. 49, q. 2, a. 1, nor anywhere else did he teach the opposite.

Objection: Perhaps you will say that the Blessed Thomas asserts that the divine essence is in the place of an impressed species for eliciting the vision, which he would not assert if he thought that such a species could be given.

Answer: I reply, he nowhere taught this, as we shall show in disputation 43.[691]

Difficulties are resolved from the same St. Thomas against the foregoing interpretation.

Objections and replies regarding expressed and impressed species

To this exposition of St. Thomas four things seem at first to object. First is in this article 2, which we touched in the preceding chapter: namely, that he only denies a species of the divine essence, by which God is united to the intellect, as color is united to the eye through its likeness: but the species by which color is united is an impressed species: therefore he also denies in the intellect of the blessed an impressed species of the divine essence. Again, in the eye there is not any species which, being first seen, makes the object to be seen: but in the intellect of the blessed St. Thomas denies that species which has the role like that which we posit in the eye, by which color is united to it: therefore he is not speaking of an expressed species of the divine essence which, being first seen, makes the object to be seen.

It is answered: In the doctrine of the Angelic Doctor, that species which he says to be on the part of the potency is only the impressed one, which, not being seen, is the principle of the vision of the object; but that which is on the part of the object is the expressed one by the power of the very potency, and, being first seen, makes the object to be seen; and he thought this to exist not only in the intellect when a thing is understood, but also in bodily vision. To this, therefore, he compares

690. St. Thomas, Summa contra Gentiles III, c. 49; De veritate, q. 8, a. 1.
691. See below, disputation 43.

the species of the divine essence which is on the part of the object, which he denies to exist: for he never said that it was necessary for eliciting the vision, or for constituting the potency in first act, but said that it is that through which vision is in act, or by which a thing is seen by someone: which indeed is to be understood thus, that either it is the terminus of the vision, or it is the vision itself. St. Thomas, then, thought that color is seen by the eye through the likeness of it expressed by the eye itself, and that any thing whatsoever is understood by us in this same way, whenever that thing does not have the power which God has, to be united according to itself to the intellect, as a thing actually understood. And for this reason he proves that God is seen in the fatherland as he is, because he is seen according to himself immediately, not after some likeness of himself first seen.

Moreover, at least St. Thomas thought that any thing, when it is understood by the intellect, is understood by a likeness of itself first: this is plainly established from Contra Gentiles I, c. 53, and more clearly from IV, c. 11, where he calls the word and the expressed species an "intended intention" of the intellect, and holds that its existing is nothing other than its being understood. He immediately subjoins: "Whence it is necessary that in a man understanding himself, the interior word conceived is not a true man, having the natural being of a man, but is a man only of the intellect; when that which is in the intellect is a likeness of the man truly existing according to natural being."[692]

But you will object from the same St. Thomas in Contra Gentiles IV, c. 11, that he says the expressed likeness is distinguished from the thing known: and he proves it thus, that it is one thing to understand the thing, but another to understand the intention itself, that is, the word produced and expressed; for this the intellect knows when it reflects upon itself: he therefore thinks that the word is not understood directly by the intellect when in the same act it knows the thing.

I answer from the mind of the holy Doctor that the word and the expressed species can be known in two ways: first, inasmuch as it is a likeness referred to the object itself: and thus it is known by the same act by which the thing itself and the object is known, indeed there is nothing else for the thing itself to be known and for the object than to "see" the likeness of it, since, as St. Thomas taught, that which is seen by the intellect is not the very thing according to its natural being, but the idol and likeness of it expressed in the intellect. About this mode of knowing the expressed species St. Thomas speaks in the places a little above cited. Then, secondly, the word and the likeness can be known inasmuch as it is a certain quality in the intellect, not as an act related to an object: and this is done by a reflex act, of which he speaks in that later place, Contra Gentiles IV, c. 11.[693]

Indeed, the explicit doctrine of Aristotle seems to agree, in the little works On Sleep and on Phantasms (at the end), and more clearly in De memoria et reminiscentia, c. 2, where he says in sum that we receive memory of a thing from a trace remaining of the thing perceived; for just as we discern colors by sense and receive sounds by hearing, so in the animate subject there remains, as it were, what is impressed in a tablet, so that there is in the animal an image; and this image, which

692. St. Thomas, Contra Gentiles I, c. 53; IV, c. 11.
693. St. Thomas, Contra Gentiles IV, c. 11.

we call phantasm, must be kept in us as a kind of disposition from sense, through which, remaining and being referred to other things, images are rendered and, by a certain motion of the soul, the past is recalled as by a picture; whence he concludes that to remember is to be affected by an image preserved within us, which both represents the thing and is itself a certain affection.[694] By which Aristotle plainly hands down to us that twofold mode of knowing the likeness inwardly expressed.

Second, against the foregoing interpretation of St. Thomas it seems to stand that he himself teaches in IV, dist. 49, q. 2, a. 1, ad 1, and elsewhere, that there is a triple kind of medium in corporal and intellectual vision. The first is the "medium under which," and this is either light, bodily or spiritual, which perfects the potency in general, without determining it to any particular object. The second is the "medium by which" the thing is seen, and this (he says) is the visible or intelligible form. The third is the "medium in which," namely that by inspection of which sight is led to another thing, as a mirror stands to bodily sight. He then says that in the clear vision of God only the first medium is found, namely light, not however the second and the third: therefore he holds that there is not there an impressed intelligible species, which he had called the second medium.

We reply that it is easy to reconcile this with our interpretation. For he did not there teach against what we have thus far said of the expressed species: for when he denied the second medium, by which a thing is seen, which he had said to be the intelligible form, we can interpret him of the expressed species, which also is an intelligible form, indeed making the intellect to be in act: moreover, he called that medium the "by which," not the "what," not because he thought that it is not known, but because he called it the "by which" since it is the medium that another thing be known; and for this reason alone it is a "by which." Nor therefore is this medium confused with the third, even if that be first known, because the second medium is seen in the intellect in such a way that it is as the "what," and is the ratio for seeing the object, since it perfects the potency, and of its nature is such as to be known. The third medium, however, is outside, and its nature is not to be known.

Third, against the same interpretation we can object what he himself says below, in q. 8, a. ... namely, that all things which the blessed behold they see in the Word at once, because by one intelligible species, namely the divine essence, they behold them: but that species which, when it is seen, is itself seen at the same time.

I answer that by the "intelligible species" St. Thomas understands the expressed word; and because he thought that there is nothing in the blessed besides the divine essence itself, which, according to itself, is seen by no other medium, therefore he said that it is in the place of an intelligible species, that is, of the expressed species or word: yet he nowhere said that it is an intelligible species for eliciting the vision.

I pass over what he asserts in q. 9, a. 3, even if it may seem to fight against the aforesaid exposition, unless he himself had proved what he himself feels.

694. Aristotle, De memoria et reminiscentia, c. 2; cf. the Parva naturalia on sleep and phantasms.

Nevertheless, although I think that St. Thomas holds that the word and the expressed species are first seen, so that by it we understand the object; and therefore in the beatific vision no other word is expressed than this, that the very essence of God is in the place of the expressed species; yet we shall prove, together with many Thomists, I think, the opposite, as has been said. In the preceding chapter 2 I have proved that in every beatific cognition alike the word and the expressed likeness are produced, or rather the intellection or vision itself, of which the word is nothing else than the very vision or intellection of the thing which is set forth as the object, so that it is not known first, but from it the object is at once known; and by this medium the object is understood.

... in this way of knowing an expressed species St. Thomas speaks in the places a little earlier alleged. Then too the word and that likeness can be known insofar as it is a certain quality in itself, and not as actually referred to the object: and this is done by a reflex act, of which he speaks in that latter place, Contra Gentiles IV, c. 11.[695]

But indeed the doctrine of Aristotle seems expressly to confirm this, in the book On Dreams and Images, the last chapter, and more clearly in On Memory and Recollection, c. 2, where he says: "We are therefore able to recover the memory of an absent thing; for although one cannot discern the thing with the eyes when it is absent, nor receive by the ears whether it is so, yet as in an animal painted on a tablet there is both the animal expressed by the brush and the image, so we ought to hold that the phantasm is in us: taken separately, it is like a mere apparition or phantasm; inasmuch as it is referred to another, it becomes an image and is accommodated to memory. And thus, since the nature of this moves the sensitive soul, insofar as it is taken separately, to that extent the soul is affected by that sense, and seems, as it were, to undergo a notion or phantasm. But if it issues from another, the man contemplates it as an image; and though he has not looked upon Coriscus, he looks, as it were, upon Coriscus." By which Aristotle plainly hands on to us that twofold mode of knowing the likeness inwardly expressed.[696]

Second objection. Second, against the above interpretation of St. Thomas there seems to be what he himself teaches in IV, dist. 49, q. 2, a. 1, ad 1: namely, that there is a threefold medium in bodily vision and in the intellect. The first is the medium under which; and this he says is light, or the bodily or spiritual organ, which perfects the potency universally, not however determining it to some particular object. The second is the medium whereby the thing is seen; and this is (he says) the visible or the intelligible form (*forma intelligibilis*). The third is the medium in which, namely by the inspection of which the sight is led to another thing, as a mirror stands related to bodily sight. He says then that in the clear vision of God only the first medium is found, namely light, but not the second and the third: therefore he holds that there is not there an impressed intelligible species (*species intelligibilis impressa*), which he had said was the second medium.[697]

Answer. We could reply, first, that in that same place St. Thomas taught the opposite; yet from the other testimonies alleged our exposition, which we have set forth, can very well be gathered. Then again it can be further defended that nothing is there taught contrary to what we have so far

695. St. Thomas, Summa contra Gentiles IV, c. 11.

696. Aristotle, De insomniis (On Dreams), last chapter; De memoria et reminiscentia (On Memory and Recollection), c. 2.

said about the expressed species: for when he denied the second medium whereby the thing is seen, which he had called the intelligible form, we can with him interpret this of the expressed species (*species expressa*), which also is an intelligible form, indeed making the intellect to be in act. Moreover he called this the medium whereby (medium Quo), not the medium which (medium Quod), not because he thought that it is not known, but therefore he called it a medium whereby, because it is the medium by which another is known; and for this reason only is it a Quo. Nor is this medium for that reason confused with the third, even if that is first known, because the second medium, at least in the intellect, is so seen as a that-which (quod), and is the reason of seeing the object, as something within the potency, and its being is to be known. The third medium however is outside, and its being is not to-be-known.

Third objection. Third, against the same interpretation we can object what he himself says below, I, q. 58, a. 2: namely, that all the things which the Blessed gaze upon in the Word are seen simultaneously, because they behold them by one intelligible species, namely the divine science; but what is seen by one species is seen at once. I answer: by "intelligible species" St. Thomas understands the expressed word, and because he thought there is no other in the Blessed besides the divine essence itself, which in itself is seen by no other medium, therefore he said that it stands in the place of an intelligible species, that is, in the place of the expressed species, or of the word: yet he never said that it is an intelligible species to elicit the vision. I pass over what he asserts below, q. 16, a. 3, even if it seems to fight against the aforesaid exposition; for what he himself held will be explained there.[698]

Author's opinion. Nevertheless, although I think this to be St. Thomas's meaning, namely, that the word and the expressed species are first seen, so that by it we may understand the object, and that for this reason in the beatific vision no other word is expressed, but that the very essence of God is in the place of the expressed species; yet more probably, together with many Thomists, I hold the opposite, as in the preceding disputation, c. 2, I have proved: namely, that in every beatitude of the fatherland alike the word and the expressed likeness are produced, or rather that the intellection or vision itself is the very word, which is thus the vision, or intellection, of the thing that is set forth as the object, so that it itself is not known first, but without any medium first known the object is understood: a thing proved by experience. For whether in the intellect, or in the phantasy, when I think of some absent thing, and a great one, as a mountain, or a city, that which appears so great is not some likeness inhering in the very faculty of the intellect or of the phantasy: for what is in the phantasy is small; but what is in the intellect is utterly without any quantity and figure: rather, it is the thing itself, the object represented, which is thus known that it is not understood or known after the manner of some form and likeness expressed in us. And in this way nothing hinders in the clear vision of God but that there be the word of the divine essence, which, not first seen, represents that essence as it is, and causes it to be known: which it could not accomplish, if it had first to be seen, as the reasons of St. Thomas excellently demonstrate, as was said in the preceding chapter.

697. St. Thomas, In IV Sententiarum, d. 49, q. 2, a. 1, ad 1.
698. St. Thomas, Summa Theologiae I, q. 58, a. 2.

But someone will object Anselm in the Monologion, c. 31, where he says thus: "For when I think of a man known to me who is absent, the keenness of my thought is formed into such an image of him as I have drawn into memory through the sight of the eyes, which image in thought is a word." By which words he seems to signify that the very word of the mind is known by us. I answer: in that same place Anselm says that this image is the very act of thinking, and that the thinking is not that which is thought and known, except by a reflex act; by the words cited he did not wish to signify that the image itself is seen, but only that the edge (acies), that is, the power of the intellect by eliciting that image in itself, is so formed that it becomes knowing of the thing which it represents.[699]

Articulus III - Whether the essence of God can be seen with bodily eyes

To the third we proceed thus. It seems that the essence of God can be seen by the bodily eye. For it is said in Job 19: "In my flesh I shall see God," etc.; and in 42: "With the hearing of the ear I have heard you, but now my eye sees you."

1. Further, Augustine says, at the end of the City of God, c. 29: "Therefore the power, that is, the sharpness, of their eyes will be greater, namely of the glorified; not that it may see more keenly than some animals are said to see, serpents or eagles. For however great the acuteness of seeing in these animals may be, they can see nothing other than bodies; but [the glorified] will see even incorporeal things. Now whoever can see incorporeal things can be lifted up to see God; therefore the glorified eye can see God."[700]
2. Further, God can be seen by man in an imaginary vision. For it is said in Is. 6: "I saw the Lord sitting upon a throne," etc. But imaginary vision has its origin from sense; for the phantasy is a movement made by sense according to act, as is said in De Anima III: therefore God can be seen by sensible vision.

But on the contrary is what Augustine says in the book On Seeing God, to Paulinus: "God no one has ever seen; neither in this life, as He is; nor in the life of the Angels, as these visible things which are discerned by bodily vision."[701]

I answer that it must be said that it is impossible for God to be seen by the sense of sight, or by any other sense, or by any potency of the sensitive part. For every potency of this sort is the act (*actus*) of a bodily organ, as will be said below. Now an act is proportioned to that of which it is the act. Whence no potency of this sort can extend itself beyond corporeal things. But God is incorporeal, as was shown above, q. 3, a. 1; whence He can be seen neither by sense nor by imagination, but only by the intellect.

699. St. Anselm, Monologion, c. 31.
700. St. Augustine, De civitate Dei XXII, c. 29.
701. St. Augustine, De videndo Deum ad Paulinum (Epistula 112), c. 9.

Reply to the first. To the first, therefore, it must be said that when it is said, "In my flesh I shall see God my Saviour," it is not understood that he will be about to see God with the eye of flesh, but that, existing in the flesh after the resurrection, he will be about to see God. Likewise, when it is said, "Now my eye sees you," it is understood of the eye of the mind; as in Ephesians 1 the Apostle says: "May he give you the spirit ..."

This is plain from what he premised: "Therefore they will belong to another power, namely the glorified eyes, if through them that incorporeal nature will be seen." But afterwards he determines this, saying: "It is very credible that we shall then see the mundane bodies of the new heaven and the new earth in such wise that we may behold with most clear perspicuity God present everywhere, and also governing all corporeal things; not as now the invisible things of God are beheld, understood through the things that are made, but as we see the men among whom, being alive and exercising vital motions, we live: as soon as we look upon them, we do not believe that they live, but we see it." From which it is evident that he understands that the glorified eyes will see God in this manner, as now our eyes see someone's life: but life is not seen by the bodily eye as a thing visible of itself, but as a sensible by accident; which indeed is not known by sight, but at once together with sense is known by some other cognitive power. And that, immediately upon bodies being seen, the divine presence in them should be known by the intellect, happens from two things, namely, from the perspicuity of the intellect, and from the refulgence of divine brightness in the renewed bodies.[702]

Reply to the third: In imaginary vision the essence (*essentia*) of God is not seen, but some form is formed in the imagination, representing God according to some mode of likeness, as in the divine Scriptures divine things are metaphorically described by sensible things.

The conclusion is: God cannot be seen by the bodily eye. And this is understood not only of God's ordained power, but also of His absolute power, since it plainly contains a contradiction in itself that God be seen by the bodily eye. The doctrine is among the Scholastics without controversy, which we shall explain a little later in the following disputation, Whether the essence of God is seen by the eye of the body by the blessed. Disputation 40.[703]

Disputatio XL - Whether the essence of God is seen by the eye of the body by the blessed

Caput I - What St. Augustine thought on this matter

It was indeed sufficiently undoubted among the Scholastics and the other Fathers of the Church that God cannot be seen by the eye of the body. St. Augustine, however, who, as being of a keen wit, was wont happily to dispute concerning very hidden matters, seems to have taught in De civitate

702. St. Augustine, De civitate Dei XXII, c. 29.

703. The transition to the following disputation is authorial; cf. the topic there stated expressly: "Whether the essence of God is seen by the eye of the body by the blessed."

Dei XXII, c. 29, that God can be seen by the bodily eye, and even now by the blessed; which place of Augustine St. Thomas reports in this article, in the second argument, and, interpreting it in a good sense, asserts that Augustine there defined nothing certain, but merely proposed it inquiringly, and as it were doubting: for after he had seemed to say that God can be seen by the bodily eye, yet one having a spiritual mode, moderating his opinion in some way at the end of the chapter, he says in these words: "Either, then, by those eyes will God be so seen that they shall have in such excellence something like to the mind, whereby even an incorporeal nature is discerned - which it is either difficult or impossible to show by any examples without the testimonies of the divine Scriptures - or, what is easier to understand, God will be so known and conspicuous to us that He will be seen in spirit by each of us." Thus far Augustine; and he thereupon admits that it is difficult or impossible, from the testimonies or examples of the Scriptures, to show that there is in the blessed's bodily eyes anything spiritual whereby God Himself is seen, as he had previously in that chapter taught: yet he does not absolutely deny that God can be seen by the bodily eye having a spiritual mode.[704][705]

Moreover, the same Augustine, in Epistle 111, excuses himself with Fortunatus, and prays God Himself to reconcile to him a certain Bishop whom he had offended by his letters, especially because he had said that God neither can be seen nor ought to be seen by bodily eyes: which he attests he taught, lest, as the Anthropomorphites said, God should be believed to be corporeal. He confirms this also by the testimonies of St. Ambrose, St. Jerome, St. Gregory Nazianzen, and St. Athanasius, who said that God is invisible, and for this reason was never seen either by Moses or by the Prophets, unless, as Ambrose says in the commentary on Luke, chapter on the apparition of the Angel, under some form which the will of God chose, not nature formed: but at length, at the end of the epistle, he dares to define nothing; for he says: "If, however, this brother, as to what I still inquire about concerning the spiritual body, now holds it for most certain to himself, unless I shall hear a gentle teacher, so let him also gently hear me inquiring; he will have whence he may be less angry." By which words he shows that he still remains under that doubt and inquiry.[706]

Caput II - That God cannot be seen by the bodily eye

And although neither by the testimonies of Scripture, nor of the Councils, nor of the Fathers has it been expressly defined that God cannot be seen by the bodily eye; yet this is proved by so efficacious a natural reason that the opposite must be judged a manifest error: since from natural reason alone it plainly follows that God is corporeal, as the heretical Anthropomorphites falsely asserted. The reason, indeed, is of this sort.

704. St. Thomas, Summa Theologiae I, q. 12, a. 3, arg. 2.

705. St. Augustine, De civitate Dei XXII, c. 29.

706. St. Augustine, Epistula 111, to Fortunatus; cf. also St. Ambrose, In Lucam, cap. de apparitione Angeli; St. Jerome; St. Gregory Nazianzen; St. Athanasius.

Either vision, and any cognition whatsoever, is so the act of the one seeing and knowing that it also depends upon him as upon an efficient cause, and cannot be produced by God alone - which I hold as truer, as will be shown in I-II, q. 3, a. 2 - or else it is only a grammatical act by way of a mere form affecting the subject, yet so depending upon it that it can be brought about by God alone; and in either way it is clearly proved that God cannot be seen by the bodily eye.

First part: if such bodily vision depends upon the eye in such a manner that without its concurrence it cannot be effected. For vision needs to have in itself some power productive about the object which it ought to see, even if it requires a peculiar concurrence of God, as our intellect requires for seeing God: and therefore, although we should say that God can assume as an instrument any created thing whatsoever unto any other effect whatsoever, nevertheless we do not say that any power can be elevated by God unto knowing something unless that thing be contained within the latitude of its object; because about any other thing it has no vestige of innate efficacy: for this reason the eye cannot be elevated to hear a sound. The reason of this is, that any vision whatsoever, even if supernatural, insofar as it is a vision and an operation of life, by its nature depends upon some determinate faculty of a living thing: therefore, since the object of sight, according to all its latitude, is contained within the notion of body, nothing that is spirit can be seen by it, nor can it by a peculiar and supernatural efficacy of God be elevated unto the vision of such: for it would be a like elevation to see a spirit as to see a sound: for spirit has less congruity with sight than sound has; for the latter can be naturally known by some sense, but the former by none: but God is spirit; therefore to the vision of Him no divine power can bring the bodily eye.

Second part: moreover, even if vision could be produced by God alone, nevertheless the vision of God Himself could not be effected in the bodily eye. For as the vision of color cannot be posited in a stone, because it is not a fitting subject for it, so neither could the vision of God - which ought to be spiritual - be posited in a corporeal sight; therefore neither could God be seen by it. This reason avails not only in the opinion of those who agree that a vision can indeed be produced by God alone, yet cannot be posited in any subject whatsoever; but also in the opinion of those who say that it can indeed be posited in any subject whatsoever, as in a stone, yet not under the ratio of a vision, but of a certain quality - which seems to me false, as I shall prove in the next article 2. For it is impossible that some form be in some subject and not bestow upon it its proper formal effect and according to its own species.

From what has been said there follows that which we said in Disputation 37, chapter 6, and which St. Thomas very well noted, that things spiritual and created, although they be finite, are, according to the ratio of the object, far more distant from the sentient faculty than God - who is infinite - is from our intellect: because, as we there said, although God, according to the ratio of being, infinitely exceeds any created faculty; nevertheless, according to the ratio of the object, He has a congruity with the intellect, seeing that He is contained within its latitude. But spiritual substances, on the contrary, although according to the ratio of being they less exceed the power and the sentient faculty than God exceeds our intellect; nevertheless, according to the ratio of the object, they are far more distant and have less congruity with it than God has with our intellect. For God agrees with the intellect as its proper object with its proper power, as has been explained; but

spiritual substances have no congruity with sense, because they are not contained within its latitude. Wherefore he who says that God, in Himself, can in any way be seen by the bodily eye, is driven to fall into the error of the Anthropomorphites, who said that God is corporeal. For true philosophy teaches that only a corporeal object can be seen.[707]

Objections drawn from places of Scripture

Nevertheless, by certain places of Scripture it seems to be proved that God can be seen by the bodily eye. One is Job 42: "With the hearing of the ear I have heard Thee; but now my eye sees Thee." Treating this place, St. Augustine asserts in De civitate Dei XXII, that perhaps to Job was communicated a great power of beholding with bodily eyes God Himself. Yet the plain sense of that place is another, from which nothing can be gathered against the truth which we have thus far established. For when Job reproved himself, that he had seemed to murmur against God's providence, and therefore had said: "Therefore I reprehend myself, and do penance in dust and ashes," after he had by experience in himself known God's providence toward himself, he subjoined the words which we have cited, "With the hearing of the ear I have heard Thee," as if he were to say: "Of Thy providence, O God, toward men I had heard many things; now, however, by experience I have learned and known, and as it were with my very eyes I have seen in myself what sort of providence Thou hast toward Thy own."[708]

Another place, by which we can argue to the same effect, is Job 19: "And in my flesh I shall see God my Saviour." Lest it seem to anyone that he speaks only of the humanity of Christ when he says "my Saviour," it must be observed that in the Hebrew - nay, in some common codices, and in the edition corrected by Sixtus V - there is not had that word "my Saviour," but "God" absolutely. Yet even if we admit this, this testimony has no force against the doctrine set forth. For if we were to follow the interpretation which Eugubinus applies to this place, we should have to say that Job does not speak of the resurrection from death in his own flesh, but of health to be recovered anew, which on the dunghill he had lost; and therefore that he said: "I believe that my Redeemer and Avenger, God - who will free me from this misery - lives and thinks of me; and on the last day of this misery and calamity which I suffer, from the earth, or dust of this dunghill on which I lie, I shall rise; and again with my skin and flesh, which I lost through leprosy and ulcers, being restored I shall be renewed; and in my flesh I shall see God," in a corporeal figure, to wit, in which He will appear to me: and this hope remains fixed in my heart. For Eugubinus thinks, on that place, that Job saw with his bodily eye God, yet in a corporeal and visible form in which He deigned to appear to him, with his pristine health now recovered; and that, foreknowing this event, he said: "And in my flesh I shall see God my Saviour": yet this does not prove the point.

But others, following the same interpretation of Eugubinus, expound the later words in this way: "My pristine health being now restored, in my very flesh thus re-established, and as it were produced anew, I shall acknowledge God as the author of my salvation, and I shall look up to His

707. See St. Thomas, Summa contra Gentiles III, c. 54; St. Bonaventure, In II Sent., dist. 3, part 1, distinctionis, a. 1, q. 1, ad 2; Durandus, In IV Sent., d. 49, q. 2, n. 13; Paludanus, q. art. 2, in fine.

708. St. Augustine, De civitate Dei XXII, c. 29; Job 42:5.

mercy and providence toward me, which I myself to my no small advantage will diligently consider; nor shall I leave it only to others to meditate and to preach: and this hope of my health to be restored rests not lightly upon my heart."

Nor would anything stand in the way of this exposition, which some more recent writers allege, namely, that Job had already despaired of his bodily health, since in that same chapter he had said: "My bone has cleaved to my skin with my flesh consumed"; and again, "Only the sepulcher remains to me." For these words are not those of one despairing, but of one weighing and exaggerating his calamity: as if he were saying, "I am so wretched and afflicted that a greater calamity cannot befall me than death itself." Yet, lifted up into the hope of health to be recovered, he straightway added: "Who will grant me this, that my discourses be written?" and the other things which we have just explained; by which, although he acknowledged his misery to be extreme, nevertheless, not dismayed in spirit, he asked that his words - by which he desired to profess his hope - might abide written in perpetuity. So much for the former sense.

But if we follow the common and true interpretation, which some, together with St. Augustine, embrace, so that Job is speaking of the resurrection from the dead on the last day of judgment, "in the flesh and in his own body," when he says that he is going to see God living, this ought not to be understood of the bodily eye, but of the keenness of mind and of the intellect (*intellectus*), though the resurrection has been wrought in the flesh. For, as St. Augustine observed in the chapter cited, he did not say, "By my flesh," but "In my flesh," to show that it is by his intellect alone - while he is, however, existing in the flesh - and not by the eye of the body, nor by the flesh, that God is to be seen by him; and when he says, "And my eyes shall behold," he understands not the eye of the body, but of the mind. Therefore from that passage nothing can be proved against the truth which we have stated.

Articulus IV - Whether some intellect by its natural powers can see the divine essence

Objicitur 1: It seems that some created intellect by its natural powers can see the divine essence (*essentia*). For Pseudo-Dionysius says that the Angel is a pure and most bright mirror receiving the whole (if it be lawful so to speak) beauty of God; but each thing is seen when it is seen in its mirror. Therefore, since an Angel by his natural powers understands himself, it seems that by his natural powers he also understands the divine essence.[709]

Objicitur 2: Further, that which is most visible becomes less visible to us on account of a defect of our sight, whether bodily or intellectual. But the intellect of an Angel suffers no defect; since therefore God in Himself is most intelligible, it seems that He is most intelligible to an Angel. If then an Angel can understand other intelligibles by his natural powers, much more can he understand God.

709. Pseudo-Dionysius, De divinis nominibus IV.

Objicitur 3: Further, a bodily sense cannot be elevated to understand an incorporeal substance, because that is above its nature (*natura*). If therefore to see God by essence be above the nature of any created intellect, it seems that no created intellect can attain to see the essence of God - which is erroneous, as is clear from what has been said above. Therefore it seems that it is natural to a created intellect to see the divine essence.

But on the contrary: It is said in Rom. 6: "The grace of God, life everlasting." But life everlasting consists in the vision of the divine essence, according to John 17: "This is life everlasting, that they may know thee, the only true God," etc. Therefore to see the essence of God befits a created intellect by grace, and not by nature.

I answer that: It is impossible that any created intellect should see the essence of God by its natural powers. For knowledge comes about according as the known is in the knower. But the known is in the knower according to the mode of the knower. Whence the knowledge of any knower is according to the mode of its nature. If therefore the mode of being of some known thing exceeds the mode of the knower's nature, it is necessary that the knowledge of that thing be above the nature of that knower.

Now there is a manifold mode of being of things. For some are such that their nature has existence (*esse*) only in this individual matter; and of this sort are all bodily things. But others are such that their natures are per se subsisting, not in any matter, which nevertheless are not their own existence, but are beings having existence; and of this sort are incorporeal substances which we call Angels. But God alone has as His proper mode of being that He is His own subsistent existence. Therefore, to know those things which do not have existence except in individual matter is connatural to us, because our soul, by which we know, is the form of some matter. Yet it has two cognitive powers: one which is the act of a bodily organ; and to this it is connatural to know things according as they are in individual matter. Hence sense knows only singulars. The other cognitive power is the intellect, which is not the act of any bodily organ. Hence by the intellect it is connatural to us to know natures which indeed do not have existence except in individual matter, yet not according as they are in individual matter, but according as they are abstracted from it by the consideration of the intellect. Whence according to the intellect we are able to know such things in the universal; which is above the faculty of sense.

But it is connatural to the angelic intellect to know natures not existing in matter; which is above the natural faculty of the intellect of the human soul, according to the state of the present life, in which it is united to the body. It remains therefore that to know subsistent existence itself is connatural to the divine intellect alone, and that it is above the natural faculty of any created intellect, because no creature is its own existence, but has a participated existence. Therefore the created intellect cannot see God by essence, unless insofar as God by His grace joins Himself to the created intellect, as an intelligible to the same.

Reply to the first: This mode of knowing God is connatural to the Angel, namely, that he know Him by a likeness of Him shining in the Angel himself. But to know God by some created likeness is not to know the essence of God, as has been shown above. Whence it does not follow that an Angel by his natural powers can know the essence of God.

Reply to the second: The intellect of the Angel does not have a defect, if defect be taken privatively, so that he lack that which he ought to have. If however it be taken negatively, thus every creature is found deficient when compared to God, inasmuch as it does not have that excellence which is found in God.

Reply to the third: The sense of sight, because it is wholly material, can in no way be elevated to something immaterial. But our intellect, or the angelic, because according to its nature it is in a certain way raised above matter, can beyond its nature be elevated by grace to something higher. And a sign of this is that sight is in no way able to know in abstraction that which it knows in concretion; for it can in no way perceive a nature except as this nature. But our intellect can in abstraction consider what it knows in concretion. And although it knows things having form in matter, nevertheless it dissolves the composite into each of the two and considers the form itself in itself. And likewise the intellect of the Angel, although it is connatural to him to know existence as concrete in some nature, nevertheless he can discern existence itself by the intellect, while he knows that one thing is himself and another is his existence. And therefore, since a created intellect by its nature is apt to apprehend a concrete form and a concrete existence in abstraction by way of a certain resolution, it can by grace be elevated to know a separated substance subsisting, and a separated existence subsistent.

Note concerning the rationale of the article.

The conclusion is: A created intellect - neither human nor angelic - cannot by its own power see God. Cajetan and the Thomists spend much labor in this article to explain and to defend St. Thomas's reasoning whereby he proves that conclusion; for Scotus vigorously attacks it in the places cited by Cajetan. I have nevertheless resolved to pass over all this, because I judge that it is not so easy, by purely philosophical reasoning, universally to prove this of every intellect, even the angelic. For from Scripture and from the Church's definition it is manifest that God, by His own power, can be seen clearly by none, not even by an Angel. As to the human intellect joined to the body, this is best shown by the following reason. By experience it is clear that in this mortal life nothing is understood by us except by the ministry of the senses; but God, and anything spiritual whatsoever, cannot be apprehended by sense; therefore neither can He be seen by the intellect, in this state, as He is.

Articulus V - Whether a created intellect needs some created light in order to see the divine essence

Objicitur 1: It seems that a created intellect does not need some created light in order to see the essence of God. For that which is lucid of itself among sensible things does not need another light in order to be seen; therefore neither does it among intelligibles. But God is an intelligible light; therefore He is not seen through some created light.

Objicitur 2: Further, when God is seen through a medium, He is not seen by His essence. But when He is seen through some created light, He is seen through a medium. Therefore He is not seen by His essence.

Objicitur 3: Further, that which is created is not prevented from being natural to some creature. If therefore the essence of God is seen through some created light, that light could be natural to some creature; and thus that creature would not need any other light in order to see God. But this is impossible. Therefore it is not necessary that every creature, in order to see the essence of God, require a superadded light.

But on the contrary: It is said in the Psalm: "In thy light we shall see light."

I answer that: Everything which exceeds its own nature must be disposed by some disposition which is above its nature. Thus, if air ought to receive the form of fire, it must be disposed by some disposition to such a form. But when some created intellect sees God by essence, the very essence of God becomes the intelligible form of the intellect. Whence it is necessary that some supernatural disposition be superadded to it for this, that it be elevated to so great a sublimity. Since therefore the natural power of a created intellect does not suffice for seeing the essence of God, as has been shown, it must be that by divine grace there accrue to it an added power of understanding. And we call this increase of the intellectual power the illumination of the intellect, just as the intelligible itself is called a light, or brightness. And this is the light of which it is said in Apocalypse 21, that "the brightness of God shall enlighten her," namely, the society ...

...of the blessed seeing God. And according to this light they are made deiform, that is, like unto God; according to that 1 John 3: "When he shall appear, we shall be like him, and we shall see him as he is."

Reply to the first: A created light is necessary for seeing the essence of God, not that by this light the essence of God be made intelligible - which in itself is intelligible - but that the intellect be made able to understand, after the manner in which a potency is made more potent for acting by a habit. Thus too bodily light is necessary in exterior vision, insofar as it makes the medium actually transparent, so that it can be moved by color.[710]

Reply to the second: This light is not required for seeing the essence of God as a likeness in which God is beheld; but rather as a certain perfection strengthening the intellect itself for seeing God. And therefore it can be said that it is not the medium in which God is seen, but that under which he is seen. And this does not take away the immediacy of the vision of God.

710. "10.4.d.49."

Reply to the third: A disposition to the form of fire cannot be natural except in one having the form of fire. Hence the light of glory cannot be natural to a creature, unless the creature were of the divine nature - which is impossible. For by this light the rational creature is made deiform, as has been said.

Conclusion is affirmative, and it follows from the doctrine of the preceding article. For if no intellect by its natural power, and by the principles due to it by right of creation, is able to see God as he is, it follows that some supernatural gift is needed; and since it ought to be a principle of seeing, it is rightly called a light, as will be made clear in Disputation 42.

Disputatio XLI - Whether the created intellect can see God by its own power

Contra errorem Anomoeorum statuitur doctrina Catholica.[711]

Caput I - Against the error of the Anomoeans the Catholic doctrine is established

Some philosophers, as St. Gregory Nazianzen relates in Oration 42, which is the second for Easter, dared to assert that in this life God can be comprehended by our intellect by its own power - that is, be clearly seen as he is - and wholly known. He testifies that these men were of the school of Plato; Nicetas and Psellus, in commenting on the words of the same oration, add that Eunomius was their leader. The same error is also attributed to Eunomius by St. John Chrysostom in the homily De incomprehensibili natura Dei, and by Theophylact on Ephesians 3, "To evangelize the unsearchable"; St. Basil, in book 1 against Eunomius (after the middle); Theodoret, in book 4 of the Haereticarum fabularum; St. Jerome, on Matthew 11, "No one knows the Son." Chrysostom calls these men Anomœi, or Anomoi, as if "without rule"; and St. Epiphanius also calls them thus, in Heresy 76, and thinks that their leader was Aëtius, although he ascribes this error only to the Arians. Nicephorus, in book 11 of his History, chapter 11, thinks they were called Anomœi, as being "without rule and equality," because they taught that the Son of God was unequal to the Father; and he reports the same of Aëtius and his disciples. But since Eunomius taught precisely the same inequality of the Son, he too could rightly be called Anomœan; thus he got this name, not because he said that God could be clearly seen by the created intellect by its own power, but because he affirmed that the Son is unequal to the Father.[712] The same error concerning the vision of God was later taught by the Beguards and Beguines in Germany, as is reported in the Clementine constitution Ad nostrum, De haereticis, where among other errors of theirs the fourth is counted thus: "Man in this life can attain the beatitude which the saints have in another." And the fifth is reported thus: "That every intellectual nature is in itself naturally blessed, and that the soul does

not need the light of glory elevating it for seeing God and for enjoying him beatifically." When they say that it is naturally blessed, they do not mean, as Alphonsus de Castro explains against heresies under the word Beatitudo, heresy 4 and 3, that by some operation its substance and nature alone is most nearly blessed; wherefore Alphonsus, interpreting their error in that sense, impugns it in vain. Rather, they said "naturally" that by its own natural power the rational creature could see God as he is, and thus be blessed.

This error is condemned in the Council of Vienne, and is recounted in the Clementine constitution just mentioned, where the doctrine of faith is set forth in articles 4 and 5. Alphonsus de Castro writes against this error in heresy 4 and 3; but most amply and excellently St. John Chrysostom does so in those Homilies De incomprehensibili natura Dei, albeit he must be read with caution, as we have shown in Disputation 37, chapters 2 and 3: so much did he wish to avoid the Anomoean error that he seemed to fall into the extreme.

From Scripture, indeed, it can easily be refuted. First, in Romans 6, where it is said: "The grace of God [is] life eternal," and for justification, which is the way to eternal life and beatitude, we need a special help of God, and nature alone does not suffice; much more, then, for seeing God as he is, will a special help of God be necessary. Again, if faith, by which we hold the mysteries in an enigma, is the peculiar gift of God, as we shall prove in 1 - 2, q. 109, a. 2, by a much stronger reason the clear vision of God itself will be. Next, Chrysostom refutes the contrary error in Homily 3 De incomprehensibili natura Dei, from that text to the Philippians 3: "I do not think that I have comprehended." For if Paul had not yet comprehended the essence of God - that is, clearly seen it - it was rightly known to them that Paul had not yet comprehended, that is, clearly seen, the essence of God, and persevered in its vision. Therefore, he would say in vain: "I do not think that I have comprehended"; and he adds: "One thing, namely, forgetting what is behind, and stretching forth to the things that are before, I follow after to the goal for the prize of the supernal calling of God," and so forth; as if he were saying: this one thing I do - namely, forgetting the good deeds rightly done by me before, and, as it were, turning my back on them; to that which lies before, and still remains to be acquired, I stretch out myself, as if with my whole body and with outstretched hands, pressing on to that mark of perfection which, as it were, is set before me as a prize by my calling. By these words Paul shows that he is still striving with all his strength toward an increase of virtue and perfection. Therefore, he did not say that he had not comprehended beatitude, but perfection. A little earlier, moreover, he seems to have spoken more clearly about the comprehension of the very essence of God, when he says: "If by any means I may attain to the resurrection which is from the dead; not that I have already received, or am already perfect; but I follow after, if I may comprehend," etc. - that is, I labor for this one thing, that I may come to the glorious resurrection from the dead, because I have not yet received the prize and the palm, nor have I attained the end of virtue; where without doubt he means the prize which he says he has not yet received, which the just shall receive in the resurrection, namely, the vision of the essence of God.

Most clearly, indeed, the Anomoean error is confuted by that [text] 1 Timothy 6: "[God] dwells in light inaccessible, whom no man has seen, nor can see." For which reason God is rightly called by the Fathers invisible and incomprehensible, because by no natural intellect can he be seen by its own power.

But the Anomoeans argued, as is [reported] in Chrysostom in the homily De incomprehensibili natura Dei, after the middle of it, in this manner. "What then," say these Anomoeans, "do they infer by their preeminent wisdom from what we have said (namely, that God cannot be seen)? Therefore you are ignorant of the God whom you worship." And as it is in Nazianzen, they gathered as follows: God is of a simple nature; therefore he is either altogether comprehended, or altogether unknown. For, as Aristotle teaches in Metaphysics IX, chapter 12, it does not happen to our intellect, in regard to simple substances, to be deceived; but either altogether to attain them, or altogether to be ignorant of them; and, as Nicetas reports on that oration of Nazianzen already cited, the Anomoeans said that this could happen only in regard to composites - to know some part of them on one side, and to be ignorant of something; but that in regard to simples it is necessary either wholly to be ignorant, or to comprehend.

To this objection Chrysostom replies with these words: "If there should arise a dispute between two about the magnitude of the heaven - one denying that the eye of man can perceive it; the other contending that it is possible easily to traverse the whole mass by measuring with the palm of his hand - whom would you say knows the magnitude of the heaven: him who knows how many palms complete the circuit of the heavens, or him who confesses that he does not know? The latter, surely." Such are the words of Chrysostom. Yet it is necessary that we meet their opposition directly.

Nazianzen, however, replies thus: "What indeed that simple nature is, we inquire: neither is simplicity proper to that nature; since neither is composition solely [the notion of] composition." By these few words Nicetas and Psellus, in commenting on Oration 42 of Nazianzen, judge that Nazianzen answers the Anomoeans; yet the reply is difficult. Therefore Nicetas, explaining Nazianzen's mind, says that God is in a certain way incomprehensible, in a certain way comprehensible, in a certain way knowable as comprehensible. The first is with respect to his nature, because he cannot, as he is, be seen by us. The second, because this alone do we comprehend of God, that he is incomprehensible. The third, because the attributes which we predicate of God we ascribe to him by our intellect from effects, and we can with difficulty know and enumerate them.

From this doctrine the Anomoeans are answered in this way: although God in himself is most simple, and his essence is the very highest simplicity; yet as he is conceived by us, we attribute various predicates to him, nor do we apprehend his simplicity as if it were, to us, his very nature and substance, just as neither do we conceive composition as the nature and essence of composite things, but as something circumstancing them. Because simplicity in simples, and composition in composites, is apprehended after the manner of an affection, although in reality it is the very nature and substance of the things themselves. Therefore, since God - who in reality is of the most simple nature - is by us, from his effects and creatures, understood and named in various ways; it is

necessary that so long as he is conceived by us only in this way, we understand him, as it were, by parts. Wherefore it does not follow, even if he is in himself most simple, that he must be either wholly unknown or wholly comprehended. For this can be true only of the cognition of a thing as it is in itself. But when a thing is known by comparison of it with another - which is proper to the human intellect - a most simple thing can be understood by parts, according as it is compared in different modes with various things or effects; indeed in this way it must be known. Therefore it does not happen that simple things are either altogether known or wholly unknown, as the Anomoeans contended. Hence Paul in 1 Corinthians 13 said: "We know in part, and we prophesy in part," where he calls the science and knowledge which we have of God in this life "in part," because in truth the whole of what God is is not known.

But Aristotle, Metaphysics IX, chapter 12, when he says that concerning simple substances deception does not occur, but that they are either altogether known or altogether unknown, does not deny that spiritual and simple things can be understood after the manner of bodily and composite things, and conceived by parts in the way we have just explained, by variously enunciating many things about them; rather, he contends that by a quidditative concept they are either altogether conceived, or altogether unknown - that is, in no way known. Yet concerning simples there is no deception; for he holds that falsity and deception exist only in the composition and division of one judging, as will be at length explained in Disputation 76, chapter 2.[713] We, however, say that various things can truly be enunciated of God, not by explaining and comprehending what he is, but by knowing him in a certain way in part; since in any judgment and enunciation there can be truth or falsity.

Caput II - By natural power the intellect cannot see God; against Durandus it is proved

Durandus's position. Durandus in IV Sentences, distinction 49, question 2, number 24, after reviewing two positions on this matter and refuting them, seems to embrace a certain third view; for he strives with all his might to dissolve all the opposing reasons. He asserts, then, two things. One is that God cannot, according to the order of nature fixed as we experience it, be seen by us as he is - wherein he dissents from the error of the Beguards and Beguines. He proves this because according to this order we cannot understand anything by the intellect unless it has first been known and apprehended by sense and imagination; but God cannot be perceived by any sense; therefore he cannot be seen clearly by the intellect.

The other is that God can be seen by our intellect according to the order set by divine grace. Although at first glance this doctrine appears Catholic and far removed from the heresy of the Anomoeans, nevertheless Durandus explains it in such a way that it is not entirely free from the note of error. For he says that the order of grace does not consist in the intellect's being strengthened by the light of glory, or by a species, or by some quality, but in the sole extrinsic manifestation of the object and the removal of the impediment whence obscurity arises. Thus, once the impediment has been removed, he thinks there is in our intellect sufficient power and native

713. "disputatio 76. cap. 2."

efficacy, so that, without anything further, we may clearly behold God as an object openly set before us. He proves this on the ground that every cognitive faculty, whose power is somehow ordered to some object, once the extrinsic impediment is removed, at once clearly knows that object when it is manifestly proposed - just as is evident in vision with respect to colors. But our intellect is ordered toward the divine essence as its object, since it knows that essence, and it is contained within the latitude of the intelligible object; therefore, once the extrinsic impediment is removed, it can clearly see God present, as he is. This impediment, according to the ordained order of nature, he says to consist in this, that by the ministry of the senses we come to know God from creatures; but God could remove that impediment, if he were to make himself immediately present to our intellect.

Some think that Scotus agrees with Durandus: for he asserts that the intellect without the habit of the light can see God, if we say that vision is produced by the intellect. Thus he seems to have taught in III, distinction 14, question 1, in the first question, near the end; for there, according to the opinion which says that the vision of God is effected by the intellect, he asks whether it can be without the habit of the light of glory, and answers that one should speak in the same way as he had taught about love in distinction 13, question 4, to the third and to the fourth question; for he had said that our will can love God without the habit of charity; but whether that can be done as well without supernatural aid, by the sole natural power of intellect and will, he does not settle.[714]

This position of Durandus does not lack the note of error. For, first of all, it seems to be condemned in the Clementine constitution Ad nostrum de haereticis, where the fifth error of the Beguards and Beguines is reported in this way: that any intellectual nature in itself is naturally blessed, and that the soul has no need of the light of glory elevating it to the vision of God and to the blessed enjoyment of him; which position was condemned by the Council of Vienne. It is therefore not only an error to assert that God can be seen naturally, but even to deny that some light is necessary, or some gift by which the intellect is strengthened and rendered efficacious for seeing God. But this is plainly what Durandus denies, as is clear from what has been said.[715]

But lest the definition of the Council seem without foundation, let us show the point by the best reasons.

First reason. The assent of faith in this life not only requires the exterior proposing of the object, or preaching, but also an interior light and the help of grace, as will be proved in the Prima Secundae, question 109, article 1, and as is known to all; therefore much more does a clear knowledge of God require it. But someone will reply that, for believing the mysteries of faith, grace is necessary because, since they are obscure, they do not so easily move the intellect to assent; whereas, when the divine essence is clearly manifested to our intellect, the whole impulse of the intellect is naturally borne toward it.

714. Scotus, III Sent., dist. 14, q. 1, in prima quaest., circa finem; and dist. 13, q. 4, ad 3 et ad 4, on love and fruition.

715. Clementine constitution Ad nostrum de haereticis, reporting the fifth error of the Beguards and Beguines; condemned by the Council of Vienne. See also the definition that an infused light, added to nature, is necessary for the vision of God. See further St. Thomas, Summa theologiae, Prima Secundae, q. 109, a. 1.

Refutation. Yet, granted that it is true that, after the clear vision of God and the manifestation of the object, nothing of difficulty remains for assent, but that with full natural endeavor the intellect is borne toward the divine essence itself, and that it no longer needs any further gift of grace, since the very vision of God is a judgment and an assent - still, in order that it be manifested and be seen clearly, grace is no less required than it is for our intellect, after the preaching of the mysteries has been made, to arrive at an obscure assent to them. Therefore some light or gift must be conferred upon the intellect, that it may clearly behold God himself; for the sole manifestation of the object, that is, the exterior proposition, and the removal of the exterior impediment do not suffice; indeed, it is scarcely intelligible how these could come about, as will presently appear.

Second reason, of compelling force. In order that God be clearly seen by us - who is not now seen - there must come about some change either in the intellect, or in God himself, or the removal of some extrinsic impediment. But neither can God be changed in himself, nor can some extrinsic impediment be removed, as Durandus falsely imagines; therefore it is necessary that the intellect be changed, and accordingly be furnished with some infused gift or light, that it may be able to behold God.

Now that neither can God be changed nor can an external impediment be so removed that vision should follow at once is proved, first, with respect to God. God cannot be changed intrinsically in himself, as is known to all, nor extrinsically by becoming present to the intellect when previously he was not; for he is always intimately present to all things, and to our intellect according to his essence, nor can he be present in any other way. Wherefore, if he were naturally intelligible by us, and nothing else on the part of the intellect were necessary besides his presence - since he is intimately in the intellect - he would be seen naturally by all, unless he also had to be united to the intellect by some form by reason of which he would be present not only according to reality but also according to the formal aspect of an object. For God would not be forcing the intellect by denying it his concurrence for the vision, if by its natural power it were inclined to that end.

Next, no external impediment can be removed such that, once it is removed, God is at once present to our intellect not only by an influx and according to reality, but as an object apt and proper to it. For no other impediment seems to exist - just as Durandus himself thought - than the connection of our intellect with the senses, upon which in operation it depends, and without which it is unable to understand anything. But even once this impediment is taken away, God cannot be seen by the natural power of the intellect: for the separated soul and an Angel lack that connection, and yet they cannot naturally see God - otherwise the demons too would behold him. Therefore the fact that God cannot be seen by a created intellect does not arise solely from the impediment of the senses. It is thus clear that God cannot be fitted to our intellect as an object such that by its own proper power he would be clearly seen either by some intrinsic change in himself or by an extrinsic one. Wherefore it remains that he can only be conjoined with the intellect as an object accommodated to it through some infused quality and power, which is the principle of eliciting the vision and of producing a more expressed likeness of himself - whether you choose to call that quality a light, because it manifests the object; or a species and impressed likeness, because it

produces a more expressed [conformity]; or any other designation whatsoever. Therefore Durandus asserted falsely that our intellect, naked and by its mere creation, is so sufficient and efficacious that, without anything else than the removal of the impediment of the senses, it can behold God - since the Council of Vienne expressly defines, as was cited above, that an infused light added to nature is necessary, by which it is elevated and made more powerful for seeing.[715]

Third reason, by absurdity. From Durandus's position it follows that either all the blessed see God equally, or that he who has had fewer and lesser merits sometimes sees him better - which is heretical, as will be shown more fully in the following article. For either the intellects are of equal perfection, or unequal. If equal, as Durandus holds, and able by their natural power, once only the impediment of the senses is removed, to see God - since this impediment ought altogether to be removed and ought not to affect one more than another - it follows that he is seen equally by all; for an equal and equally unhindered power has an equal effect. Or the intellects of the blessed are of unequal power; and since it can sometimes happen that one who has fewer and lesser merits is of better power for understanding, it follows that by him God will sometimes be better seen - once the impediment is removed, which in all ought to be equal, as has been said.

Durandus's first reply is absurd. Durandus is wont, in the face of this argument, to maintain that the intellects of the blessed are equal as to the faculty of understanding, and that the removal of the impediment is likewise equal, and therefore that the vision of God, according to his essential and intrinsic predicates, will be equal in all hereafter - a consequence which ought not to be conceded, since then neither the Blessed Virgin nor the human soul of Christ would have seen God more perfectly, which is absurd; rather, an inferior Angel would behold God more perfectly than the Blessed Virgin or the soul of Christ, because he is endowed with a more perfect natural intellect. Nor is it enough that Durandus adds that the blessed will differ in the revelation of other things and mysteries which they will behold in the clarity [of glory]; for those do not pertain to the essential reward but to the accidental; whereas inequality must necessarily be posited in the essential reward itself, which must necessarily correspond to unequal merits.

Not content with this reply, Durandus adds another solution. He says, then, that the blessed will be unequal in the clear vision of God regarding his essential predicates, even if they are of equal power for understanding; for God can more efficaciously move one intellect than another to the vision of himself. Granted indeed that this cannot be denied, and all theologians admit that the intellects of the blessed can be moved unequally by God to vision, so that one who is inferior by his own power may behold God more perfectly - still, this is not sufficiently consistent with Durandus's principles and doctrine. For he denies that the power of the intellect with respect to the vision of God is perfected in any way on its own part, or elevated so as to see God, but says that by the mere removal of the exterior impediment it naturally beholds God; therefore each one will see God in accord with the measure of his own efficacy. But we, since by its own proper power the intellect

715. Clementine constitution Ad nostrum de haereticis, reporting the fifth error of the Beguards and Beguines; condemned by the Council of Vienne. See also the definition that an infused light, added to nature, is necessary for the vision of God. See further St. Thomas, Summa theologiae, Prima Secundae, q. 109, a. 1.

cannot be led to the vision of God unless it be elevated above nature by God, say in consequence as well that a more perfect intellect, or an equal one, can see God more perfectly if it be more perfectly elevated to this - whether by some infused quality, or by God's aid and cooperation.

Therefore Durandus must assert one of two things: either that the natural impulse of one intellect for seeing God more than another is restrained by God, so that it beholds him less than another - which he calls violent; or that the very difficulty of the vision proceeding from the clarity of God is from God alone, and that according to his greater or lesser will he infuses into one intellect a greater or lesser influx, or himself in the end seems to infuse it. But this, besides being false - as we show in the Prima Secundae, question 9, article 1, where we prove that no operation of life, especially of knowing or willing, can be produced by God alone - is not sufficiently consonant with Durandus's own doctrine. For he teaches that the vision of God is from our intellect, indeed that it proceeds by its natural power, once only the impediment is removed by God's grace, as has been explained; unless he were also to say that God is seen by the blessed with a twofold vision: one infused by God alone - and in this the blessed are unequal - and another elicited by the natural intellect by its own efficacy. From this, however, the same absurdity follows which we were urging above: namely, that one who is endowed with a more perfect intellect, even if he has fewer and lesser merits, would see God more clearly, and would in that respect be more blessed. Moreover, it is frivolous to assert that there are two visions in the intellect of the blessed. Therefore Durandus vainly refuses to concede that the created intellect needs some supernatural elevation whereby it may be strengthened so as to be able to see God - since this has plainly been defined, as we said, by the Church.

It is answered: If, with only the impediment of the senses removed, they are able to see God - since this impediment ought altogether to be taken away, nor can it be taken from one more than from another - it follows that He is seen equally by all: for an equal power, and one equally unobstructed, also has an equal effect. Or else the intellects of the blessed are of unequal power; and since it can sometimes happen that he who has fewer and lesser merits is of better power for understanding, it follows that by him God is seen better, although the removal of the impediment ought to be equal in all, as was said.

Durandus, convicted by this argument, admits that the intellects of the blessed are equal in capacity for understanding, and likewise that the removal of the impediment is equal, and accordingly that the vision of God, according to His essential and intrinsic predicates, will be equal in all. Wherefore he must concede, on this showing, that neither by the Blessed Virgin, nor by the humanity of Christ, is God seen more perfectly, which is absurd. Nay rather, an inferior Angel will behold God more keenly than the Blessed Virgin, or the soul of Christ, since he is endowed with a more perfect natural intellect. Nor is it sufficient that Durandus adds that the blessed will be unequal in the revelation of other things and mysteries which are beheld in the essence: for these do not pertain to the essential reward, but to the accidental; whereas inequality in the very essential reward must necessarily be assigned, which must of necessity correspond to unequal merits.

Not content, however, with this solution, Durandus applies another. He says, therefore, that the blessed will be unequal in the clear vision of God with respect to His essential predicates, because, even if they are of equal power for understanding, God can move one intellect more efficaciously than another to His vision. Yet although it cannot be denied - and all Theologians admit it - that the intellects of the blessed can be thus unequally moved by God to the vision, so that he who is inferior in his own power may behold God more perfectly, nevertheless this is not sufficiently consistent with the principles and doctrine of Durandus himself. For he denies that the power of the intellect, on its own side, can be perfected in any way, or elevated, so that it may see God, but only that by the mere removal of an exterior impediment it naturally contemplates God: accordingly, each one will see God according to the measure of his own efficacy, and no more will be taken from one than from another. We, however, who profess that by its own power the intellect cannot attain to the vision of God unless above nature it be elevated by God, consequently also say that the more perfect intellect, or the equal one, can see God more perfectly, if it be elevated to this more perfectly - whether by some infused quality, or by God's help and cooperation alone.

Therefore Durandus must assert one of two things, namely that the natural impetus of one intellect to see God more than another is restrained by God, so that one beholds Him less than another - which, just as it is violent, so also is hard to believe - or that the clear vision of God is produced by God alone and, according to His will, more or less is infused into this or that intellect, as he seems to insinuate. This, however, besides being false - as we shall show in Prima Secundae, question 3, article 2, where we shall prove that no operation of life, especially of knowing or willing, can be produced by God alone - does not sufficiently accord with Durandus's own doctrine. For he teaches that the vision of God is effected by our intellect, indeed that it proceeds from it by natural power with only the impediment removed by the grace of God, as was explained; unless he should also say that God is seen by the blessed by two visions: one infused by God alone - and in this the blessed are unequal - and another elicited by the intellect by its native efficacy. From this, however, there follows the same absurdity which we urged above, namely that he who is endowed with a more perfect intellect, even if he has fewer and lesser merits, would see God more clearly, and would in that respect be more blessed.

Moreover, it is frivolous to assert that there are two visions in the intellect of the blessed. Therefore Durandus vainly refuses to concede that the created intellect needs some supernatural elevation whereby it may be strengthened so as to be able to see God - since this has plainly been defined, as we said, by the Church.

From which definition indeed it cannot so clearly be refuted and branded as erroneous (as some of the recent writers contend) the opinion of those who say that the clear vision of God, produced by God alone, is infused into the intellect of each blessed person, as the position of Durandus can. For he, since he says that only the removal of the impediment is necessary in order to see God, and that afterwards by natural power the intellect sees God, in no way can say that the light of glory, or the elevation of the intelligent faculty, is necessary for beholding God clearly. Those others at least assert that an elevation of the intellect by the light of glory and a supernatural quality is necessary, so that it may receive the vision; and for this sole effect some Theologians have maintained that the

light of glory is necessary, although they assert that the vision is so effected by the intellect that it cannot be produced by God alone, as we shall see in the following disputation. Or certainly they could say that the very vision infused by God alone into the blessed is a supernatural light, because it is the manifestation of the object; and that by it the intellect is elevated to see God, because it receives it from God alone above its own power and efficacy. Therefore we have certain by faith only this: that some elevation is necessary for seeing God; but whether for eliciting the vision, or for receiving it, or rather that the vision itself is that elevation, is not defined. Likewise it is not certain by faith whether the light of glory, which is defined by the Council of Vienne for elevating the intellect, is some habit, or only an act, as we shall see in the following disputation.

Disputatio XLII - Whether the light of glory necessary for seeing God is a habit, or an operation

Caput I - The common opinion of the Scholastics

It is undoubted among the Scholastics that the light of glory (*lumen gloriae*), which on the part of the intellect is necessarily required for beholding God, is a certain habit and a quality, distinct from the vision itself. This is handed down, together with St. Thomas in this article, by Cajetan and the recent Thomists; by St. Bonaventure in III, dist. 14, art. 1, q. 3, ad ult., and art. 2, q. 1, ad 3; by Major; by Richard in art. 1, q. 3, and in IV, dist. 49, art. 3, q. 2; by Capreolus on that same distinction, 49, q. 4, art. 1; by Thomas of Argentina, q. 2, art. 1; by Sotus, q. 2, art. 4; by Gabriel in I, dist. 2, q. 2, art. 3; by Marsilius on III, q. 9, 10, art. 2, I part, art., conclusion 2, and on the incidental doubt, opinion 4, conclusion 1; by Henry in Quodlibet 3, q. 1; by the Ferrarian in Contra gentes III, chs. 53 and 54 - although not all grant a habitual light of glory to the same effect.[716]

There is one, Scotus, who pronounces nothing about the habit of the light of glory. For in III, dist. 14, q. 2, in the first question, he alleges that if we follow the opinion of those who assert that the vision is effected by God alone, while our intellect only receives it, such a habit is not necessary; but if the vision proceeds from the intellect as from an efficient cause, it is necessary that, together with the intellect, it be a principle of the vision, as he had taught in III, dist. 13, q. 4, on the fourth question, concerning love and fruition. This very thing he affirms in IV, dist. 49, q. 1: "I answer, therefore"; but in the end he seems more to incline to this, to think that the vision is produced by God alone, as he held in III, dist. 31, q. 5: "I answer"; and Gabriel in the same distinction, q. 1, art. 3, doubt 1, says the same. I pass over Durandus, who, since he asserts that the natural power of the

716. Cajetan, on this article; recent Thomists; St. Bonaventure, In III Sent., dist. 14, art. 1, q. 3, ad ult., and art. 2, q. 1, ad 3; Major; Richard, art. 1, q. 3, and In IV Sent., dist. 49, art. 3, q. 2; Capreolus, In IV Sent., dist. 49, q. 4, art. 1; Thomas of Argentina, q. 2, art. 1; Sotus, q. 2, art. 4; Gabriel, In I Sent., dist. 2, q. 2, art. 3; Marsilius, In III Sent., q. 9 - 10, art. 2, I pars, art., conclus. 2, and in the incidental doubt, opin. 4, conclus. 1; Henry of Ghent, Quodlib. 3, q. 1; the Ferrarian, Contra Gentiles III, chs. 53 - 54.

intellect suffices for seeing God with an extrinsic impediment removed, therefore judges that for no reason is any habit of light necessary, nor even any illustration which they call "actual." But we have said in the preceding disputation that this opinion is false and worthy of the mark of error.

Accordingly, not only is the opinion false which asserts that the vision is produced by God alone - as we shall demonstrate in I-II, q. 3, art. 2 - but also that which is necessarily gathered therefrom, namely that no habit of light is given to our intellect for seeing God, since it clashes even with a false foundation.

Caput II - What in this matter has been defined by the Church

Some Scholastics assert not only that the intellects of the blessed are endowed with a habit and quality of the light of glory distinct from the vision itself, but indeed that this is certain by faith and defined in that Clementine constitution; they affirm this consistently. Thus thought Capreolus on IV, dist. 49, q. 4, art. 3, in the solution of the arguments of Scotus which were brought in fifth place against the second conclusion; Cajetan on this article, to the fourth argument of Scotus; the Ferrarian in Contra gentes IV, ch. 54; Thomas of Argentina on IV, dist. 49, q. 2, art. 1, conclusion 2; the Supplement of Gabriel, q. 2, art. 3, doubt 2 - although he thinks this habit of light is not distinct from the habit of charity, as the same Gabriel already alleged elsewhere holds.[717] They prove this position by the foundation laid by Cajetan, the Ferrarian, and Sotus, namely that the Council of Vienne in the aforesaid Clementine seems to have sent away the controversy which previously was being debated among the Scholastics; but this was about the habit of the light of glory: therefore the definition of the Council ought to be understood of it. Likewise, in the same Council it seems to have been defined (says Sotus) that to little children in baptism grace and the habits of the virtues are infused - about which also then there were various opinions of Theologians.

I, however, judge more true the common opinion of more recent Theologians, who teach that in that Clementine nothing is defined about the habit of the light of glory, which some think that Dominicus Sotus thought; but in truth he asserts nothing else than that this opinion is more approved by more recent Theologians. From the authors cited in the preceding chapter, moreover, there is no other who makes mention of this matter: they only teach that this habit of the light of glory is infused into the minds of the blessed; whether indeed it is thus defined in the Church, they neither affirm nor deny. Scotus alone, who, since he deems it probable - nay much more true - that the light of glory is not necessary if the vision is produced by God alone, ought likewise to assert that it is not certain by faith that such a habit is infused.

Furthermore, nothing is proved to have been defined by the Council, because it intended only to condemn, and to define the opposite of, what the Beguards and Beguines were saying. But they erred only in this, that they asserted that God can be seen by the power of the human intellect alone without any other help and aid. Therefore it intended to define nothing else except that the

717. Capreolus, In IV Sent., dist. 49, q. 4, art. 3, in the solution of Scotus's arguments; Cajetan, on this article, ad 4 argumentum Scoti; the Ferrarian, Contra Gentiles IV, ch. 54; Thomas of Argentina, In IV Sent., dist. 49, q. 2, art. 1, conclus. 2; Supplementum Gabrielis, q. 2, art. 3, dub. 2.

created intellect by its own power is not able for this, and accordingly needs a special help of God by which it is elevated to such an office. Whether, however, this can be done through a habit, or rather through God's special concurrence alone supplying the place of that habit, the Council does not concern itself with. Moreover, that the intellect can quite well be elevated by God without a habit, by His special concurrence and aid alone, we shall demonstrate in Disputation 42.

Disputatio XLIII - On the effect of the light of glory in the minds of the blessed

Caput I - The opinion of Richard and others

Almost all the Scholastics cited in the preceding disputation steadily affirm that the intellect of the blessed is endowed with the habit of the light of glory; nevertheless they vary in assigning the reason or cause on account of which such a habit is necessary; it has seemed good to relate their opinions with their foundations in detail, that from them we may easily gather the more probable.

First, then, there seems to be the opinion of those who teach that such a habit is necessary not for eliciting the vision, but to dispose the intellect and render it apt for receiving it. Thus Richard, cited in the preceding disputation, cap. 1, teaches, if we follow the opinion that strongly inclines to assert that the vision is produced by God alone. The same is very plainly affirmed by Marsilius in III, quaest. 10, art. 2, part 1, conclusion 1, who absolutely defends that the vision is effected by God alone. The same thing ought to be said by all who think that the vision is not from the intellect as an efficient cause; although Gabriel, also cited there, who felt this very thing about the vision, says nothing about the effect for which the light of glory is posited. Finally, Major, in III, dist. 14, q. 2, dub. 2, and in IV, dist. 49, q. 4, teaches that the vision is not produced by God alone but also by the intellect; nevertheless he places the habit of the light of glory solely for disposing and fitting the intellect so that it may receive the vision; that it is necessary, he asserts.

The common foundation of this opinion is that which St. Thomas seems to have insinuated in article 5: because, just as natural forms need some disposition of the same order in order to be received in a subject suitably disposed, so too a supernatural form, such as is the vision of God, requires a supernatural disposition, that it may be able aptly to be present; but what this is other than the habit of the light of glory does not appear; therefore for this end alone such a habit is necessary.

A mention of this opinion is made by Scotus in III, dist. 14, q. 2, in the first question; and by Durandus in IV, dist. 49, q. 2, n. 22; and they both very well impugn it and prove that the habit of light is in no way required for receiving the vision. Laying aside other reasons, it is shown thus: for a subject in order to receive some supernatural form and to be apt for it, no other form is necessary, but by itself it is able immediately to receive it; otherwise the process would be to infinity without a terminus. For either the subject must be disposed for the supernatural form by other supernatural things, or by other natural things: by the natural it could not be made more apt

for the supernatural than it already was according to itself; but if another supernatural thing were necessary, it would follow that another also would be required to receive that, and thus to infinity; therefore there would be a process without terminus.

Someone will reply from the doctrine of Cajetan on article 5, reply to the first, that although he does not approve this opinion of Richard and the Nominalists, yet he embraces another of the Thomists, against which the argument is made in almost the same way; and thus he will reply to that proposition: "Everything that receives a supernatural form must be disposed by another supernatural form"; that it is true only of that supernatural form which is the terminus of supernatural generation, not of that which is the way to the terminus. Thus grace, which is as it were the terminus of supernatural generation, is received with dispositions of the same order in the subject. In the same way those who follow this opinion concerning the habit of light could say in the proposed difficulty that it is necessary to render the subject apt so that it may receive the vision, because the vision is as it were the terminus of supernatural generation; but for receiving the very light, no other disposition is required, because the light itself is, by its nature, a disposition; and a disposition does not need another disposition.

This doctrine does not have a firm foundation: because, although among substantial and accidental forms we find this order, namely, that the accidental disposition is ordered to the substantial, because substance is preserved by accidents lest it be able on the contrary to be corrupted; yet in accidental forms, whether natural or supernatural, to constitute this order by their own nature is not necessary; but the subject is of itself apt, and receives any accidental form, unless when one accident is in the substance by means of another accident. For then that, by which by a mean another is received in the substance, is as it were a disposition to that other. In this way quantity is compared to color, and to other bodily qualities; and a power or cognitive faculty to an operative habit. But a vision, in order to be received in the soul in the mode of intellection, does not need any habit; therefore the light of glory is posited in vain as its disposition. Wherefore, without any foundation, the adversaries answer that vision is as it were the terminus of generation, and therefore, that it may be received in the subject, it needs the habit of light.

Nor indeed does the example of habitual grace, which is received in the soul by means of dispositions, prove anything: first, because it is dissimilar; of that light of glory we ought to say rather that we must assert that the very light of glory is received by the medium of the vision, as habitual grace is received by the medium of contrition, than the contrary. For in general habit is not posited for receiving an operation, but rather an operation for a habit, as Scotus very clearly noted in III, dist. 14, q. 4, in the first question. Nay more, he adds that a habit should be posited solely on account of an act and operation that passes over; not on account of an act that remains, such as is the vision; in which, however, he is mistaken: for he too posits charity in the will, although he says that its operation remains perpetually in the fatherland.

Next, dispositions to grace are not required by the nature of the thing, but by God's ordinance. Wherefore grace is infused into little children even if, in whatever way, another's dispositions are had; but that with respect to the light of glory God has so ordained does not at all appear; and whether a moral disposition is required for receiving the vision is doubtful; indeed it does not seem

by what reason it could be established in the mode of a moral disposition, although penitential acts are established: for these God has rightly posited, that he might infuse habitual grace. For it is just that he who sinned by his own will should also by his own will, stirred by God's help, ask pardon from him and obtain habitual grace. And from what has been said there remains only this foundation of that opinion.

Caput II - What Capreolus and other Thomists thought

By the common and received opinion of the Thomists two other effects are ascribed to the light of glory. One is to dispose the intellect, that it may receive the divine essence in place of an impressed intelligible species, which may be the proximate principle for eliciting the vision. The other is to strengthen and instruct the intellect for seeing God; and that the vision concurs as the efficient principle. This is the expressed opinion of Capreolus, in IV, dist. 49, q. 4, art. 3, conclusion 2, article 3, and to Scotus he objects in the same: against cap. 54; Sotting in IV, dist. 49, q. 4, article 4; and the Ferrarian in IV Contra Gentiles, ch. 54; and Cajetan on this article; and elsewhere to these questions, and wherever he treats of this matter he establishes the same.[718]

This opinion is so well known and established in St. Thomas's doctrine that St. Thomas almost places it as a principle, when he sets down the divine essence in place of an impressed species to be the very principle of the blessed's act of intellection, and hence he provides that the intellect concur, as the general cause of eliciting the vision, not only as to general and remote causes and effects, but proximally and precisely as to the species impressed in the cognoscitive faculty. And this we truly gather from what the holy Doctor often reckons, that the divine essence is for us as a cognizable form.

Hence, supposing this, it is proved that the light of glory is necessary for those two effects: first, for receiving the divine essence in the place of a species; for since, as often as something is elevated above something according to a higher nature, it owes a peculiar disposition -

The second part of the position is proved first. Then it is necessary that there be a light, to render the intellect efficacious for eliciting the vision, they prove in a twofold way. First, because, as Soto says, two things are necessary for vision. One is the power's virtue; the other is the union of the object with the power either per se, or by its likeness. But the virtue or efficacy of the cognitive faculty is prior to the union of the object with it; indeed, the latter requires the former, so that the object can be united with it. Wherefore, since the faculty of sense does not have the virtue of knowing spiritual things, it cannot receive their species for understanding: so then, since our intellect of itself does not have the virtue and efficacy of seeing God as He is, it cannot receive the species of the divine essence, or God Himself in the place of a species, so as to see Him clearly. Therefore it must first be fitted by the light of glory, and, by means of it, be brought to a second act, so that it may be able to receive the essence of God in first act for understanding.

718. Capreolus, In IV Sent., dist. 49, q. 4, art. 3, in the solution of Scotus's arguments; Cajetan, on this article, reply to Scotus's fourth argument; the Ferrarian, Contra Gentiles IV, ch. 54; Thomas of Argentina, In IV Sent., dist. 49, q. 2, art. 1, concl. 2; Supplementum Gabrielis, q. 2, art. 3, dub. 2.

Secondly, the same is proved, because although God could by His help alone elevate the intellect so that it might see God; nevertheless, in order that the intellect may have in itself an inhering principle by which it may be able connaturally to gaze upon God as a second and proper cause, and not only be elevated by God by way of an instrument with a peculiar concurrence, the habit (*habitus*) of the light of glory is required, which may be the principle of cognition.

This position teaches two things which least cohere with one another: both that the divine essence by itself supplies the whole place of a species (*species intelligibilis*), and also that there is given a habit of the light of glory so as to render the intellect efficacious; for one of these seems superfluous. For either the divine essence is the proper and proximate principle efficiently causing the vision, or it does not itself, as a proper cause together with the intellect, produce the vision, as certain men philosophize universally about species impressed in any faculty for knowing, asserting that they are only a condition required on the part of the object, conferring, however, no efficacy upon the intellect. I said, as a proper cause, for the divine essence cannot but produce the vision by a certain general account and efficacy, as all other things depend on it as on an efficient cause.

If the divine essence produces the vision only in this general way, not as the object and proper cause of it, although it can rightly be said that the essence is united to our intellect by the light of glory, as we shall show in the following chapter, nevertheless it follows that it cannot take the place of an impressed species, but only be the object known. For either the reception of the species is the vision itself - and this, besides being false in all other species of created things, both because the vision is distinguished from the impressed species itself, and also because the intellect produces and effects the vision, whereas it only receives the impressed species - therefore in this way the divine essence could not supply the place of a species. For since a species is received into the intellect, it could formally render it intelligent and seeing; but the divine essence, since it does not inhere but only assists the intellect, cannot afford such an effect unless it produce and effect something else, namely the vision.

Or an impressed species is only a condition determining the intellect so that a thing be seen, yet in such a way that the vision is distinguished from it: and this also is false. First, because we could assert the same of habits, namely, that they are only a condition sine qua non of operations; and, universally, of any thing, upon the positing of which something else follows and upon its removal is taken away - which is to confound every kind of efficient cause with a condition. Then also because if an impressed species were a condition, it would be so for this sole reason, as some assert, that in it, as in a mirror, the object would shine forth, and in it would be seen: but this is fictitious; for a thing is not seen in the impressed species, but in the expressed, which we say is the vision itself; otherwise an impressed species would always move and stir up to cognition, which is false.

Moreover, even if an impressed species were a condition sine qua non, still in this way the divine essence could not supply its place. For impressed species of other things inhere in a power: wherefore by their inherence they could determine the intellect by way of a condition; but the divine essence, since it only assists, even if it be a condition sine qua non of the vision itself, cannot be so by way of a species, but only as the object is universally the cause or condition of its own cognition: therefore the divine essence is said in vain to be united to the intellect by way of a

species, and it has no peculiar efficacy in the vision itself such as a species has, but only determines as an object that is understood, and thus will rather be the thing known and the object, as indeed it is in reality, than supply the place of a species.

Finally, if the intelligible species impressed be said to be the principle of intellection in the manner in which Cajetan thought, in article 3 of this question, around the solution of the third, namely, by way of a form giving being, so that to understand be, as it were, a substantial species; still it cannot be defended that the divine essence is in the place of a species, if it is not itself the proper and proximate efficient principle of the vision. For just as esse does not follow save from an informing form, so neither will understanding follow from a species unless it be an informing, formal species. Nor does it make any difference if it be said to be an effect in the genus of the intelligible, not in the genus of a thing: for in order that it be the effect of a species, and not, as it were, of an inhering, giving form, it remains that it be derived from it as from an efficient. Therefore it remains proved that the divine essence does not supply the place of an intelligible species, if it does not by a peculiar account, as a proximate and proper principle, effect the vision.

For if the divine essence supplies the place of a species, it does not seem what effect the light of glory has in the intellect of the blessed. First, it does not serve to render the intellect apt to receive the essence itself as a supernatural form: both because, as was proved in the preceding chapter, a supernatural form by its very nature does not need any disposition; and also, if the divine essence needed a disposition on the part of our intellect, the divine essence itself ought to be an inhering form: since therefore it cannot inhere, but only assist the intellect, in vain would the intellect have to be fitted by some disposition, unless at least by reason of the effect it were necessary; but the effect, which is the vision itself, does not need the light of glory in order to be received in the intellect, as was shown already in chapter 1: therefore no disposition is necessary, such that understanding be, as it were, an esse for which the divine essence would have to assist. And from these points the first argument of the opposing position remains solved.

Next, the habit of light is not necessary in order to bestow efficacy upon the intellect so that it may be able to receive the divine essence in the place of an impressed species, as Soto was saying in his second reason. For although in a cognitive faculty there is necessarily a virtue and efficacy, of its own genus, with respect to some object, so that it can receive its species - on account of which hearing cannot receive the species of color, nor sense the intelligible species - yet for this it is enough if the faculty itself have from itself a virtue with respect to that object, not a determined one, but in general with respect to an object universally, even if it need to be completed by something coming from without with respect to this or that particular object; just as the sense of sight, before it receives the species of whiteness, has an efficacy from itself, not indeed complete and determined with respect to whiteness so that it could see it, but in general with respect to color.

- Therefore, just as sight, before it receives the species of whiteness, has an efficacy from itself, not indeed complete and determined with respect to whiteness so that it could see it, but in general with respect to color in universal, so that it must be completed by this or that

species in order that it may be able to see this or that object; so, in order that our intellect may receive the essence of God after the manner of a species (*species*), or the species of that [essence], there is no need that it have from itself a determinate and complete productive power with respect to God himself, so as to be able to see God as God; but it is enough that in general it have that power, namely, that from itself it have the power of understanding whatever is intelligible, yet in such a way that its efficacy is completed by a peculiar species with respect to this or that object. But if the whole force and efficacy for seeing God were to come to our intellect from something extrinsic, then any other faculty whatsoever, namely the sensing faculty, could receive a power from something extrinsic so as to see God, and would receive the divine essence in the place of a species - which is absurd. And if by no means can this be done, the reason is that the sensing faculty from itself has absolutely no power or efficacy, even in general, under which the vision of God could be contained; therefore it can be completed neither by any species nor by the divine essence itself in the place of a species, so that it might contemplate God himself clearly.

- From these points it is also plainly evident how frivolous is the second argument of the opposing view, employed by Dominicus Soto, who says that a habit of light is necessary to confer on our intellect an efficacy and power by which it may be able to receive the divine essence in the place of a species.
- Accordingly, the opinion also of certain more recent authors is to be rejected as false in the same way, who say that the intellective faculty has from itself no efficacy, not even that which they call partial, for seeing God and for supernatural acts, but has it all from a light, or from a supernatural form infused into it; for from this it follows first that the act of charity on the way would in no way proceed as from an efficient principle, namely the native virtue of the will, but wholly under every respect would be from a supernatural principle infused from without. Therefore the operation could be neither vital (*vitalis*), nor free (*libera*), nor meritorious (*meritoria*): for all these, under this ratio, require by their very nature to be produced by a native principle of life in such wise that they cannot be done by God alone.
- Next, since the beatific vision is a certain intellection (*intellectio*), it cannot fail to have this formal character from the native virtue of the intellect as intellect, nor can it beg the whole power of understanding from an extrinsic principle. Wherefore this opinion is no less improbable than that which asserts universally that the intellect has no power at all for understanding, not even inchoate, but receives its whole efficacy from a species. For it is impossible that for such a kind of operation the whole principle should be external; rather, some vital principle is required, whose efficacy at least is such that, once something external is added, it is completed. But if the adversaries grant in the intellect some, even the least, innate efficacy for seeing God, then it can most fittingly be completed and assisted by the light of glory alone or by the divine essence alone in the place of a species.
- They further prove their position. First, because it is impossible to assign one first cause to the generic ratio of intellection and another to the specific ratio: for each is one undivided reality in the effect; therefore each cause ought to concur to such an effect according to every

ratio, and thus the intellect will bring about the vision according to every ratio of it. Add that, since the vision also according to the specific ratio is vital, it ought also under that ratio to be from the intellect.

- I answer: when we say that in the vision there is a generic ratio and a specific ratio, and that the intellect is the principle of it according to the generic, not according to the specific, we do not mean that there are two distinct things, one of which is assigned to one cause and the other to another; but that one and the same effect has from one cause, namely from the intellect, that it is intellection - which ratio it could not have without the intellect; whereas from the light or the species it has that it is such [an intellection], which it would not have from the other. The vital ratio does not belong to intellection because it is of such an object, but because it is intellection - indeed, according to a more common ratio. Likewise the supernatural ratio it does not have from the fact that it is intellection, but from the fact that it is such; for insofar as it is intellection, it is not supernatural, but has a certain common ratio.

Obiectio secunda: - Then they prove [thus]: since, if the intellect from itself had some partial power for supernatural acts and were completed by a light or species as it is completed for natural acts, it would follow that it must be compared in the same way with natural and with supernatural acts.

Solutio: - I answer that the ratio is different for this reason alone, that for supernatural [acts] it is completed by a supernatural form (*forma*), whereas for natural [acts] by a natural [form] coming from without. You will say: whence then is the supernatural form recognized, if not from the fact that it bestows on the intellect the whole power of acting, since the same is true of the natural [form]? I say they are alike in this: they differ, however, in that a natural form can be given in a natural order and from natural causes; a supernatural [form], however, cannot, nor does any nature naturally require it for itself: and that form, in its own constitution, is supernatural, not by an order to an efficient cause, as we shall say in the following disputation.

Alius modus explicandae praedicta differentia: - But again, some, in order to defend the foregoing view which we just now impugned, philosophize in another way. They say, then, that the whole principal efficacy comes to the intellect from the light in such manner that by the light itself, as by an instrument, it is wholly elevated, itself supplying no native efficacy, and thus it operates as an instrument; and by this reasoning they think the vital character and cognition in act are best defended.

Impugnatur: - I for my part judge that all the absurdities which we were inferring in the former way against that opinion also follow in this way. First, if the intellect contributes nothing of its own proper and native efficacy, it follows that it contributes only that which it has as it were derived from the principal agent; therefore, since the principal agent is an extrinsic infused habit, there will be no efficacy proceeding from life and from the intellect as intellect; and consequently the action

can be neither vital nor cognitive: for these require to proceed from life as from their first root. Wherefore the act of vision is vital and cognition for this reason, that it is from the intellect, not because it is from the light.

- Next, no act of this sort could be free, nor even the very act of charity on the way: for if the will begs its efficacy from an extrinsic infused principle, and itself contributes nothing of its own, but only what it has from the habit, it will not be in its power to use the habit when it wishes and as much as it wishes; therefore its act will not be free, unless you reduce all liberty to the will from this alone, that it can set an opposite impediment. But this is not enough for us to say that an act is free as to both specification and exercise together, and as to such and such intensity, as is well known.
- Wherefore I for my part do not see by what probable reason in the acts of the will of this life, which are meritorious, this view can be defended; since from it all liberty, and therefore the ratio of merit, is removed. For if the will from itself contributes nothing of native efficacy in supernatural acts, it follows that it does not perform these works from itself, and consequently is not determined by itself; for since to determine oneself is to act, and it does not act from itself, but by a begged virtue from another, it will in no way be determined by itself, but wholly by another, from whom it receives the power of acting; and so no trace of liberty will remain in it: for this is the indifference of a faculty from itself.
- Others finally concede that our intellect from itself has an inchoate power of a sort for seeing God, as they also assert that in any created nature there is this power for any effect whatsoever, which they call an active obediential potency (*potentia obedientialis activa*). But they say that it is an instrumental power, because it must be completed only by a concurrence not due to it naturally, but supernatural, in order to effect. Yet that this power is in no creature, and that every native power, even inchoate, has the character of a principal cause, we shall show below in disputation 176, cap. 4; and concerning the virtue of the intellect for seeing God, by a peculiar argument we shall prove it; nor does it have anything in common with the error of Pelagius, as some object, as we shall convict them.[719] And if once we concede some native inchoate power in our intellect for seeing God, the light of glory will not be necessary for eliciting the vision, if the divine essence supplies the place of a species, as we shall show in the following chapter.

Caput V - Finally, the opinion of Capreolus is impugned

- Lastly, in this chapter against Capreolus we have still to show that the light of glory (*lumen gloriae*) is not necessary, if the divine essence is in the place of a species. And first, such a habit is not necessary in order that our intellect be strengthened to receive the divine essence so that it might be able to receive it as a species: on the ground that the divine

719. Infra disputatione 176. cap. 4. & de virtute intellectus ad videndum Deum.

essence is a certain excellent object; and therefore, unless the faculty of the intellect were strengthened, it could not sustain it; just as sight cannot receive the species of some vehement sensible unless in some way it is made more powerful.

- Accordingly, in this way the habit of light is not necessary, and the example adduced proves nothing. First, because no sense needs to be strengthened in order to receive the species of some vehement sensible. For since the species has no physical action which it exerts in order to cause cognition, it cannot in any way, physically speaking, harm the faculty; and so, without any further disposition or strengthening, sense can receive it. A clear sign of this is that no internal sense is harmed by the species of some vehement sensible, although cognition may be harmed by reason of some affect consequent upon a terrible object. But an external sense is harmed by some vehement sensible, and so needs to be strengthened in order to perceive it without lesion, by reason of the physical operation by which it touches the very sensing faculty - yet not by the mere inpouring of the sensible species. In this way vision is harmed by a vehement light, which sends its rays as far as the pupil - not by the species of that light; hearing is harmed by sound, not by the species of sound, but by the vehement percussion of the air, which dulls the ears themselves; and so with the others.
- The a priori reason is that no species of any vehement object is opposed to the temperament of the sensing faculty; therefore it cannot be harmed by it - indeed, it ought rather to be perfected by it. Physical sensible qualities, however, can have some physical action contrary to the temperament; therefore, since this reason has no place in the intellect with respect to receiving the very essence of God in the place of a species, there is no ground to say that such a habit is necessary in order to strengthen the intellect for receiving the essence, since by it, as by an excellent object, it cannot be harmed.
- Next, even if the sensing faculty were harmed by the species of a vehement object, nevertheless the intellect is harmed only by a species that inheres, not by one that merely assists. And indeed harm cannot occur except from an inhaerent effect; but the divine essence assists the intellect alone, if it holds the place of a species; therefore by that very fact it cannot harm the intellect: for even now it assists all our intellects, yet harms none. Nor does it matter that some say in common that the divine essence does not assist all as a form intelligible, but as a first cause; and that therefore it is necessary for the intellect to be strengthened so that it may assist it after the manner of an intelligible form. This matters nothing: for for the divine essence to assist the intellect as a species is nothing other than to cooperate of itself to the vision - which it can effect without any change of its own. Therefore, although it does not assist all by its actual operation to produce vision, nevertheless it assists in that very way by which it could, if it willed, produce it; from this assistance, whether it cooperates to the vision or does not operate, no lesion at all can arise in the intellect.
- Moreover, it is not necessary that the habit of the light of glory, as though a principal [cause], concur efficiently in the intellect to the vision, so that from both together - namely, the intellection and the light - there be made one integral principle and efficient cause of the

vision. Therefore in this way the habit is not necessary, if we say that the divine essence supplies the place of a species and, as the proper principle of the vision, also concurs to it together with the light and the intellect: which is proved by this reason.

- To one and the same effect several causes that are proximate and proper, even if mutually ordered, cannot concur so as to be univocal in the effect; for to one and the same effect the ratio of cause answers in some peculiar way. I said proper and proximate causes: for the first cause of all, namely God, in a universal manner of principle concurs with all particulars.[719]

In the operations of cognition there is a manifest example of this. For a vision of white has that it is a vision, not an audition; and this it has from the faculty of seeing, not from the species; for it is a vision because it proceeds from sight, not from hearing. It has also that it is of white; but this it does not receive from sight as such (for sight regards white as well as black), but from the species of white. And hence neither would it be a vision if it were not from sight, nor would it be of white if it were not from the species; therefore by both together there is completed one proximate and proper cause of the vision of white. Therefore, if to one effect several causes concur according to its various ratios such that the efficient principle is complete and no new ratio remain in the effect to which a proper cause must be assigned, it is superfluous to add several other causes for the complement of that principle; and accordingly, if they be added, they will produce no effect. We will confirm this principle again,[720] and we will dissolve certain objections of recent authors of little moment.

This being supposed, it is proved either that the divine essence does not bear the office of a species as the proper principle of vision, or that the habit of the light of glory is superfluous. For if the essence hold the place of the species, it will not only be a principle of the vision as it is of other things, but it will be a proximate and proper principle as the very species would be, in whose place the divine essence is substituted. Therefore, according to every ratio that we can devise in the species itself, the vision would proceed from the created intellect and the divine essence as from a sufficient, integral, and proper principle; in vain, therefore, do we add the habit of light for eliciting the vision. And that it is not to be posited for any other effect is manifest from the things said in this chapter. Moreover, that the vision proceeds sufficiently in every respect from the intellect and from the divine essence in the place of a species is shown by the following induction.

The clear vision of God has a threefold ratio under which it falls: the first is of cognition or intellection; the second is of its being a cognition of such an object; the third is of clarity, by reason of which the Scholastics call it intuitive and quiditative. Now all these are sufficiently assigned, as integral causes, to the intellect and to the divine essence in the place of a species. The first ratio, namely cognition or intellection, is from the intellect, not from the essence; for if it were not from the intellect, there would be no vision nor intellection, since the intellection essentially depends on the intellect according to the ratio of intellection. The second ratio, namely that it be of such an

719. Infra disputatione 176. cap. 4. & de virtute intellectus ad videndum Deum.

720. We will confirm this principle again at I-II, q.9, a.1, and we will dissolve certain objections of recent authors of little moment.

object, is from the divine essence in the place of a species; for a species makes that the intellection or cognition be of such an object and not of another; for the species modifies and determines the intellect so that it understand this rather than that.

But the third ratio, namely clarity, which seemed most fitly to be ascribed to the light of glory, is also sufficiently from the divine essence in the place of a species: because the divine essence is not posited in the place of just any species, but of a proper and quiditative species which by its very nature would make one see God as he is. Therefore, since it holds the place of such a species, it must also supply the efficacy and proper power of that species; and that power is, that, being added, it move the intellect to a clear and, as they say, intuitive knowledge of the object. Therefore to this the divine essence in the place of a species moves as the proper and proximate cause - otherwise than if it supplied the place of a species not proper nor quiditative, such as, namely, are derived in the intellect through the senses. For these cannot generate a manifest and quiditative knowledge of the object truly, not only by themselves, but not even when any infused light is added; for no light will make that species more sufficient and effective, so that, together with the intellect, it produce an express similitude of the object, quiditative and intuitive, to whose order it does not itself belong. Now this is what some assign to the light of glory as a cause; and therefore it will be altogether superfluous. For that the vision is a supernatural operation is not a special ratio for adding some new cause; for from the foregoing it follows of itself. For by that very fact that it is the clear vision of God - which is sufficiently from the intellect together with the divine essence in the place of a species - it is also supernatural; and therefore a new cause cannot be added for this, that it be supernatural.

Objicitur: But one could say that, besides the divine essence which is in the place of a species, a habit of the light of glory is also required in the way in which the theologians concede that, besides intelligible species, a habit of faith is infused in wayfarers.

Respondeo: The case is far different. For in the act of faith, which is supernatural, one thing answers to the species and another to the light. The species answer to the act of simple apprehension; for by them we apprehend that formal object to which faith is ordered - namely the First Truth - either by the help of supernatural light in the vision of God, or by apprehension of the signs, in which the same principle is found; and that the cause of simple apprehension is the same as that cause, according to which the divine essence in the place of a species is a sufficient cause of seeing and of intuitive apprehension; but another is the judgment of assent. (For although by acquired species the intellect may at some time arrive at apprehensions clear, and a judgment of assent be posited in the same act, nonetheless the habit of faith is placed as distinct from the species, because they are the proper and quiditative principle of apprehensions, and the habit alone is of assent, and of that assent in the act of faith; whence the habit of faith is inserted, as it were, into the rational powers, not as derived from species; nor is there any habit of faith because some mode constitutes the intellect in the first act by a species, but alone as it is the first act from a species, but not the entire act, which is the principle of the actual representation in words of the mysteries to be believed; and that it be not of a material thing produced by species in the intelligible, but a habit alone is assent, this connection is extreme.)

But, not to delay, it is clear that a habit of the light of glory is not to be posited for this effect; for the reason is easily demonstrated. In order that something act by a form inhering to it after the mode of a secondary and proper cause, and that it act after the mode of an instrument by the mere motion of the principal agent applying it to such an effect, it is required that some ratio in the effect produced correspond to those forms. For if nothing be assigned in the effect, it is in vain that we posit it; and to say that it is posited for some other effect is contrary to what must naturally be determined about any form that is set down: namely, that it be necessary for operating something in the effect. For either the effect proceeds connaturally from that cause - then it will suffice without it; or, if it does not, it will be able to effect nothing in it. And this also becomes clear from the solution of the third argument which Capreolus brings forward in the second chapter, as we have set forth above.

Finally, someone will reply that the light of glory is nevertheless necessary for that effect which the second opinion in the third argument was saying: namely, that the vision of God proceed from our intellect as from a second cause connaturally. For in this respect a second cause differs from an instrument elevated to act, that the second cause has in itself an inherent form by which its power is completed so that it may act; but the instrument does not have this, but only the motion of the principal agent to such an effect. Wherefore, since the divine essence, as in the place of a species, does not inhere but assists the intellect, it seems to elevate the intellect alone as an instrument for seeing; which, however, if it had in itself the habit of the light of glory, would then operate by the mode of a second cause by a power inhering in it.

But that the light of glory ought not to be posited even for this effect can easily be shown: because, for some agent to act by a form inhering in it after the mode of a second and proper cause, and not as an instrument, it is necessary that to that form there correspond some rationale in the effect produced. For if nothing be assigned in the effect, it is in vain that it is posited, as has been said; and therefore a form ought not to be established for connaturally operating which is not even necessary for effecting something in the effect. For how will it connaturally produce the effect, if it can effect nothing in it? From which there becomes clear also the solution of the third reason which, especially from Capreolus in the second chapter, we have set forth above.[721]

Objection. But you may object that an acquired habit is given to us, and is not superfluous to the potency, even if it effects nothing in the operation; therefore the light of glory likewise could be so.

Solution. I answer: if a habit effected nothing in the operation, it would not be posited as a principle for connaturally operating that; but only for making the potency ready or facile, as Durandus thought, by removing only the impediment and rendering the potency more expeditious; or, if it is posited for connaturally operating, it is necessary that it effect something in the effect, besides the connaturality. For this is the mode of operating of a cause, as we have said, which does not befit an effect unless that cause which is given for connaturally operating effect something further. Wherefore the same argument will tell also against the acquired habit, if we say that even here an effect is given. And certainly there is no one who asserts that an acquired habit is given for

721. John Capreolus, In IV Sent., d. 49, cap. 2 (as cited above).

connaturally operating; because bare potency is a second cause sufficient for operation: but all say that it is given for facility and for a delectable mode, which is either a mode of expedition of the cause, influencing nothing in the effect (as Durandus supposed), or is a certain mode of operation added to the substance of that [operation]. Whence it is not posited for connaturally operating the substance of the operation, but for a peculiar mode of it. I except Cajetan and others who affirm that an acquired habit is given to the substance of a singular operation; for these, even if they say it is given for connaturally operating, nevertheless concede that something is produced by the habit in the substance of the operation: whether this is true, we shall say in its proper place; but we contend that a habit is not posited for connaturally operating unless it effect something in the effect; nor have I hitherto read anyone who says that an acquired habit is given for connaturally operating.

Moreover, I have heard some Theologians asserting that the light of glory neither disposes the subject to receive the essence in the place of a species, nor to receive the vision, as a principle of that effect; but only as a condition on the part of the potency. And so they ascribe the whole efficacy to the intellect together with the divine essence as in the place of a species. They explain, however, this mode of "condition" by this reasoning: just as the faculty of seeing sometimes needs to be inwardly strengthened against bleariedness, and yet that strengthening is only a condition, not a principle, of vision; so the intellect for seeing God is strengthened by the light of glory.

It is rejected: But this evasion is frivolous; and, first, on this account: in this way we could no longer posit a form inhering on the part of the intellect, such that it itself, by the mode of a second cause and not as a bare instrument, elicit the vision. Then, secondly, it is not sufficiently understood what this "condition" is: for thus we could call whatever is required on the part of the agent "conditions," not efficient principles. Lastly, whenever on the part of some agent there is a necessary quality which, being posited, the effect is posited, and being removed, the effect is taken away, there is no reason why we should deny that it is a principle of that effect. The example, moreover, of the bodily eye is inept. For the eye sometimes needs to be inwardly strengthened; and that strengthening, or disposition, is not a principle of seeing, but a condition, because the power of seeing is in the bodily organ and needs its right disposition, which being removed the faculty itself is either diminished or altogether extinguished. But this cannot happen to the eye of the mind, nor anything similar, on account of which we should say that the light is only a condition, not a principle, of vision.

Caput VI - That the intellect together with the light of glory alone is the complete principle of the vision, is proved by authority

This opinion seems to surpass the others by the Author's judgment, and it is to me highly approved: namely, that which asserts that the divine essence is not conjoined to the intellect in the place of an intelligible species, but concurs with the intellect toward the vision by a certain general rationale, as the first mover, and that it is only the object of that [vision]; and that the intellect itself, furnished with the habit of light, is the sufficient and complete principle of it. This seems to

be the view of Richard, in IV, dist. 49, art. 3, q. 2. For he teaches that, if we follow the opinion which asserts that the vision is elicited by the blessed themselves - which he deems probable - the light of glory is necessary in order to second the intellect for eliciting the vision; but nowhere does he assert that, besides this, the divine essence is in the place of an impressed species, as the principle for eliciting the vision. Nay rather, in III, dist. 14, art. 1, q. 3, he defends as probable the opinion of those asserting that now God is seen by the blessed through a species which is the principle of the vision; but he impugns the opinion of those who teach that the divine essence is substituted into the place of a species.[722]

With Richard Scotus agrees, in the places cited in Disputation 42, chapter 1. For he judges that, if the vision is elicited by the intellect of the blessed, the habit of the light of glory is necessary for this, so as to impart power to the intellect for seeing; whence he thinks that both are the principle of the vision. But nowhere does he assert that the divine essence is in the place of a species as the principle of vision; nay rather, in IV, dist. 49, q. 11, he says that the light of glory without a species suffices for eliciting the vision, because the object is present - yet he does not say that the object itself supplies the place of a species. Moreover, that the object does not supply the place of a species Thomas of Argentina had expressly asserted in IV, dist. 49, question 2, art. 3; and yet in that article he had said that the habit of light is required for vision. And the same Scotus, on IV, dist. 49, question 11, in the section "Respondeo dicitur," judges that the reasons by which it is wont to be proved that God is not seen through a species prove nothing; and he understands this also de facto.[723]

Furthermore - and this is the chief point - this opinion not only is not opposed by St. Thomas, but even from him it can not obscurely be gathered. First, indeed, wherever he treats of the habit of the light of glory, he either indicates or also openly teaches that it is given for strengthening the intellect so that it may elicit the vision - that is, that it confer power upon it and complete its efficacy for producing the vision. Thus he taught in this article, a.5, ad 1 and ad 2; and in Contra Gentiles III, ch. 54 and 55, in the first argument; and most clearly in ch. 53.[724] But he nowhere taught that which his disciples defend - namely, that it is in the intellect of the blessed in the place of an impressed species for eliciting the vision; for to this effect he only asserts that the light of glory serves.

There are, however, certain places in which the Holy Doctor seems to teach that the divine essence is in the place of a species, by which his disciples seem to have been drawn into that opinion; yet they have an easier exposition.

722. Ricard., in IV Sent., d. 49, art. 3, q. 2; and in III Sent., d. 14, art. 1, q. 3.

723. Scotus, at the places cited above in Disputatio 42, cap. 1; and in IV Sent., d. 49, q. 11. Thomas de Argentina, in IV Sent., d. 49, q. 2, art. 3.

724. St. Thomas, Summa Theologiae I, q. 12, a. 5, ad 1 and ad 3; Contra Gentiles III, chs. 53 - 55.

The principal one is the reply to the third objection of this question in this article, where he says thus: "Just as other intelligible forms which are not per se species are united to the intellect according to a certain being, whereby they inform the intellect itself and make it to be in act; so the divine essence is united to the intellect, so that it makes the intellect itself to be in act through itself."]

But from this testimony our opinion rather than that of the adversaries is confirmed. For although he compares the divine essence to forms - that is, to intelligible species - which inform the intellect, and, being inherent in it, are united to it, and he asserts that it is united to the intellect according to its own being (and he understands this from the fact that it inheres), nevertheless he does not affirm that it is united to the intellect as a form and an impressed intelligible species for eliciting the vision; rather he says that it is united to the intellect as the intellect in act - that is, as a thing actually understood, which makes the intellect itself to be in act, namely intelligent. He does not say "in first act," but "in act"; and he understands "second act": for thus a thing actually understood is referred to the intellect. He therefore compares the divine essence not to the impressed species, but to the expressed species, and to the word, which he himself also calls the intelligible form in De Veritate, q. 3, a. 2; and he teaches that the divine essence has the place of the Word in the vision itself. For, as we said above in Disputation 39, St. Thomas everywhere plainly holds that the essence of God is seen by the blessed according to itself without any Word; whereas other natures are known by the intellect not according to themselves, but by their Word; indeed the Word itself is seen first.[725]

Then, in four other places - namely, in this article, a.5, ad 1 and ad 3; in Contra Gentiles III, ch. 54 and ch. 53; and in De Veritate q. 8, a. 1 - he teaches that the divine essence is not made intelligible by the light of glory, but is of itself such; while the light is infused so that the intellect may be able to elicit the vision. But if the light had the place of an impressed species as the principle of vision, God would be made intelligible in first act by it, just as other things are by their impressed species. Therefore, since the essence itself is of itself intelligible according to the mind of St. Thomas, it would follow that it is in the place of an impressed species, and that it is united to the intellect of the blessed in this mode.

From these places, however, and from their doctrine, if rightly weighed, our opinion can be confirmed. For this reason the Holy Doctor said that God is not made intelligible by the light - even if that light constitutes the intellect potent in first act for seeing - because the divine essence, through itself, without any Word is seen, and terminates the vision itself; otherwise than other things which are understood through the Word as a medium, and by it become intelligible and visible. In which sense the Blessed Thomas himself, in IV, dist. 49, q. 2, a. 1, said that, in the same way, there comes to be one thing from the intellect of the blessed and from God himself, when he is seen according to himself, as there comes to be one thing from the intellect and the species or intelligible form when the intellect understands. He did not say, "when the intellect is constituted in first act by an impressed species," but, "when it actually understands by the Word." For that

725. St. Thomas, De Veritate q. 3, a. 2; see also Disputatio 39 above.

much-repeated and common axiom, "From the intellect and the intelligible there is made one," is much better understood of the intellect actually knowing than of the intellect constituted in act by an impressed species. This, surely, I take to be the mind of the Holy Doctor; nor did he teach the opposite anywhere, as his disciples commonly feign. Only that seems to oppose us which he delivered in Contra Gentiles III, ch. 51; and in De Veritate q. 8, a. 1; and in IV, dist. 49, q. 2, a. 1, ad 3 - namely, that the divine essence in beatitude is both that by which it is seen and that which is seen: which would in no way be true unless the divine essence were in the place of an impressed species, by which rationale it is that which is seen; for inasmuch as it is the object of vision, it is that which is seen, the thing seen. I answer, however, from the same doctrine which up to this point...[726]

So far we have said that, according to St. Thomas, by the medium by which God is seen, he does not understand the principle for eliciting the vision, such as an impressed species, although even this too can be called that by which he is seen; rather, he understands the Word, by which also things are seen. For, since St. Thomas holds, as I have often noted, that in the vision of God there is no expressed word given, but that God himself is seen of himself, this peculiar prerogative God has among other intelligible things, that the others are only that which is seen, because they do not have the place of the Word and are not seen of themselves, but are seen in the Word; whereas for God both are true, because, since he holds the place of the Word, he is both that by which and that which is seen. It remains, therefore, that, according to the mind of St. Thomas, it is sufficient for eliciting the vision that the intellect of the blessed be furnished and be made according to the light of glory, and that nothing else be in the place of an impressed species; whether, however, the very light can be called an impressed species, we shall explain briefly in the following chapter.

Caput VII - The same opinion is confirmed by reason and is further explained

Now indeed, from the things said above it will not be difficult to confirm this opinion by reason. For among the Scholastics it is indubitable that the habit of the light of glory is infused into the intellects of the blessed, and that together with the light of glory the divine essence cannot supply the place of an impressed species, as was proved in chapter 3; it remains, then, to say that the intellect, instructed by the habit of light alone, is the principle of the vision, but that God himself alone is its object. Indeed, as we shall say in Disputation 46, God could, without the habit of light, move the intellect to elicit the vision; then he himself would be in the place of the light, whose efficacy he would supply, and consequently he would occupy the place of the impressed species which is wont to be the principle of vision. But since all the Scholastics hold, as we saw in the preceding disputation and proved, that there is a habit of light, and that it is the principle of the vision, it follows that the divine essence is not to be subrogated in the place of an impressed species; nor does this need any greater confirmation than the refutation of the other opinions, from which indeed our opinion is gathered.

726. St. Thomas, Contra Gentiles III, ch. 51; De Veritate q. 8, a. 1; IV Sent., d. 49, q. 2, a. 1, ad 3.

It remains to explain why that quality is called the light of glory and whether it can be said to be an impressed species of the divine essence in the mind, or not. First, it is called the light of glory because it manifests God himself, who is our glory and beatitude; yet not all sufficiently explain how it manifests. This must be understood as follows. Since that quality is a principle, together with the intellect, for eliciting the vision of God, and vision is a certain manifestation and representation of God himself, in that respect the light of glory is said to manifest God, not formally, but efficiently, namely by producing the vision itself, which is the manifestation of God. Wherefore we ought not to suppose that the light of glory illuminates and manifests our object in such a way that the illumination and manifestation by the light precede the vision of the object, as corporeal light illuminates colors before they are seen, that is, illuminates the medium through which sensible species may be conveyed to the organ, by which we behold colors. For that cannot even be conceived, much less explained, in our case. Rather, the illumination and manifestation by the light of glory is the very vision of God itself, in the manner we have explained.

Next, I would not hesitate to call the light of glory itself an impressed species of the divine essence, by which the vision of him is elicited. First, because among the ancient Scholastics - even among those who say that God is seen through a species, whom we reported in chapter 4 - there is no one who distinguishes the light of glory from the species of the divine essence. Then, St. Thomas in article 2 of this question and in the Contra Gentiles, book 3, chapter 4, around the third argument, more than once calls the light of glory a similitude of God, which he takes on the side of the potency; not, indeed, as certain recent disciples of St. Thomas explain it, in a merely general sense in which any creature can be called a similitude of God - for to assert that of the light of glory would be frivolous and wholly beside the point - but because, just as an impressed species seconds the intellect or the cognitive faculty so that it may know the object, so too the light of glory seconds the intellect. He did not wish, however, to call it a species on the side of the object, not because it is not a species of that object - for if it is its similitude, it will also be a species - but because by "species on the side of the object," as we explained at length in Disputation 39, he understands only that which, being first seen, makes the object be seen. But since, as we showed in Disputation 38, chapter 2, nothing prevents an impressed species of the divine essence from being produced, why should it be denied that de facto it is given?

Finally, the same St. Thomas in the Prima Secundae, question 50, article 6, concedes that there are intellectual habits in the angels, and, explaining what sort of habits these are, he says that they are intelligible species; and all Thomists in that place call the intelligible species of the angels "habits," nor do they concede any other habit of the intellect to the angels.[727] Wherefore, what St. Thomas said in this place, question 12, article 5, ad 1, namely that the intellect is made, for understanding, by the light of glory, just as a faculty is rendered more powerful for acting by a

727. St. Thomas, Summa Theologiae I-II, q. 50, a. 6; see also his language about angelic intelligible species as "habits." Also compare the present place: I, q. 12, a. 5, ad 1. Further, St. Thomas calls the light of glory a "similitude of God" more than once: Contra Gentiles III, c. 4 (around the third argument).

habit, ought not to hinder in any way that the light of glory be called a species. For although he expressly called that light a habit, nevertheless it could be called a species, since, as we were just saying, St. Thomas himself calls intelligible species "habits."

Some object that this is against St. Thomas and all the theologians who say that God is not seen through a species. But neither St. Thomas nor the rest of the Scholastics said that in another sense than the one we have proved in Disputation 39. And among the other Scholastics, Scotus and Richard, cited above in chapter 4, defend that de facto God is seen through an impressed species by the blessed; many others say nothing about this matter. Only some Thomists, adduced in chapter 2 of this disputation, on the basis of certain words of St. Thomas, affirm that God is in the place of a species and that no other species of him is given; but concerning these places enough, and more than enough, was said in the preceding chapter, for which reason about that Thomist opinion there is no need to be concerned. Whether, however, beyond the infused species of things which were given to Christ, there was in him some light distinct from those species, we shall speak of in the Third Part, question 11, articles 2 and 5.

Add also that, since we are assigning the entire and sufficient principle of vision, if, together with the light, we conjoin to our intellect the habit of light, then, if we also add the divine essence in the place of an impressed species, the light of glory will be superfluous, as was shown in chapter 3; wherefore there is no reason for us to refuse to call the light itself an impressed species. For if the light completes the efficacy of the intellect so that it may elicit vision, it follows that God himself in the clear vision of himself holds the place of an expressed species; whereas the other things cannot in this way be brought to the intellect unless all are seen through the Word, and by an expressed likeness.

But I do not admit this difference. For, as I noted in Disputation 38, chapter 2, in every cognition there is a word, or rather the known thing itself is an expressed likeness of the object; wherefore not only other things, but God himself is not, of himself, intelligible in second act, nor is he, of himself, the intellect; rather, all things that are understood are seen by a medium of an expressed similitude. Yet this similitude, or word, does not precede in such a way that, by it, the intellect is led to the object, nor is it itself that which is seen, nor, as we have there shown, does it make the object be seen as though it were the viewed thing, in which respect we proved in that same second chapter that nothing absurd is entailed if we say that not only can God be seen through an impressed species, as is set forth in Disputation 38, but that de facto he is so seen.

They respond: that God does not only concur, after the manner of a first cause by will, to the vision of himself, but also by nature, inasmuch as he is, as object; and thus the vision of God proceeds from him alone freely, inasmuch as he freely applies himself to the intellect and is united to it for operating; but naturally, inasmuch as, as object, he cooperates with it.

I answer: We must reply that God does not so concur only as first cause, by will, to the vision of himself, but that this doctrine contains a manifest absurdity. For, as St. Thomas excellently teaches in the Prima Pars, question 19, article 4, God cannot act by necessity of nature outside himself; otherwise there would be an aggregation to infinity in a produced essence. For this reason, apart

from productions within God, no theologian concedes that anything is produced by God by a necessity of nature and inasmuch as he is; but all things are produced inasmuch as he wills, and by a most free motion; and he not only freely applies himself to the intellects, but also, by will, freely flows into the very effect. Besides, it is scarcely intelligible that in God there should be some union with an intellect which would be free and would precede his very cooperation with another; for to be united to the intellect is to cooperate with another. Therefore, since in all other cases God concurs with all causes, and yet he does not possess, in the operation, that mode proper to an object, but as first cause only he operates, it follows that, since a species can be given which, in the place of the object, naturally operates together with the intellect, that will be the connatural mode of operating.

Moreover, what some contend they prove from that text: "We walk by faith and not by sight" (2 Cor 5), where the cognition of the present life which Paul calls "by faith" is opposed to another cognition which he calls "by sight," cannot be admitted. For there Paul does not call "species" the similitude representing the object, but rather he designates by "sight" that open, face-to-face vision itself of God, adopting a metaphor from bodily vision, which is most perfect when it is not through a sign or image, but face to face; and thus by "sight" he means that manifest cognition which the blessed have, as he himself elsewhere says: "We shall see him face to face" (1 Cor 13). Therefore, that Pauline text lends no support to the view at hand against us.

Finally, Durandus adds a reason, namely that a species is posited in the place of the object because the object, according to itself, cannot be united to the potency, nor can it move it. And for this reason we attribute to the angel the species of himself so that he may see himself, because he is most intimately united to his own intellect; thus the species is, as it were, a supplement. Wherefore, since God can of himself be united to the intellect and move it, the species will be superfluous, if we attend to the natural mode of operating.

I reply: As we shall show below in Disputation 204, it is not sufficiently certain, as that opinion asserts, that the essence of an angel, so that he may understand himself, concurs as the proximate and proper principle of vision. But even if we concede, as our adversaries contend, what concerns the essence of the angel, nevertheless that same thing does not seem to be conceded concerning the divine essence. For, if the essence of the angel concurs to vision as the proximate cause and the next principle, it ought to concur according to its substance, naturally, inasmuch as it is, not inasmuch as it wills. But God cannot concur to the vision unless inasmuch as he wills; and thus, whereas he concurs with all other causes, he does not have in operation that mode proper to an object; but as first cause only he operates. Therefore, since there can be given a species which, in the place of that [object], naturally operates together with the intellect inasmuch as it is, with the intellect, that will be the connatural mode of operating.

Nor should anyone suppose that therefore we would remove what St. Thomas so often and so well teaches, namely, that other things are understood through a word and an impressed likeness, whereas God is seen by his very essence. For, as we have already explained, to say that God is seen by his essence does not exclude that there be in the intellect an impressed likeness habitualiter (as they say), or in first act, by which he is represented; for on that account some quality is said to

represent the object in this way, because it is a principle for eliciting a vision which, as we showed in Disputation 38, chapter 2, is an actual and expressed representation of the object. Therefore, since the light helps the intellect to express such a similitude of God himself, it can fittingly and suitably be called an impressed species, which habitually represents God.

And certainly, if an impressed species of the divine essence can be given - as remains proved in that Disputation 38 - it is rather to be said that that is communicated to the intellect for seeing God than that the divine essence is in the place of a species; because this more accords with the order of things and the common mode of operating, namely, that since God can effect things by some form, he should not do it by himself immediately, but that he should assume it as a secondary cause. Therefore, if he can in this way produce the vision of himself, just as the visions of other things, let it be that, with the natural order of operating preserved, the vision be produced not by himself proximately, but through his species.

They reply, rather, that it is more connatural a mode of operating that the vision of himself be produced without an impressed species than that it be produced with it; because a species is posited in the place of the object, since the object according to itself cannot be united to the potency, nor can it move it. And for this reason we attributed to the angel the species of himself, that he might see himself, because he is most intimately united to his own intellect; thus therefore the species is, as it were, a supplement. Wherefore, since God can of himself be united to the intellect and move it, the species will be superfluous, if we attend to the natural mode of operating.

I answer: We shall show below in Disputation 204 that it is not sufficiently certain what this opinion asserts concerning the essence of the angel, namely, that it concurs, as proximate and proper principle, in order that it may understand itself. But even if we concede, as the adversaries contend, this about the essence of the angel, it does not seem that the same thing should be conceded about the divine essence; for, if the essence of the angel concurs to vision as the proximate cause and the next principle, it must concur according to its substance naturally, insofar as it is, not insofar as it wills. But God cannot concur to vision unless insofar as he wills; and thus, whereas he concurs with all other causes, he does not have in operation that mode proper to an object, but, as first cause, he alone operates. Therefore, since a species can be given which, in the place of the object, naturally operates, inasmuch as it is, together with the intellect, that will be the connatural mode of operating.

What some moreover contend, they confirm from that text: "We walk by faith, not by sight" (2 Cor 5), where Paul opposes to the cognition of this life, which he calls "by faith," another cognition which he calls "by sight." By "sight," however, Paul does not call the similitude representing the object, but he calls that very open vision, for which reason he adds, "face to face" (1 Cor 13). He takes the metaphor from bodily vision, which is most perfect when it is had, not by a mirror or an enigma, but when each thing is recognized face to face. Therefore that text, rightly understood, is far from our question, and by no means excludes that there be in the intellect some impressed likeness by which the intellect is seconded to elicit the vision, while God himself is that which is seen.

But the very God himself in the clear vision of himself is in the place of a species, which, as it were, naturally operates in place of that, inasmuch as he is, with the intellect; that will be a mode connatural for operating. They answer: They answer that God not only concurs, after the mode of a first cause, by the will unto the vision of himself, but also by nature, inasmuch as he is as object, so that the vision of God proceeds from him alone freely, inasmuch as he freely applies himself to the intellect and is united to it, to operate; but naturally, inasmuch as, as object, he co-operates with it. Yet this doctrine contains a manifest absurdity. For St. Thomas excellently teaches, in the First Part, q. 19, a. 4, that God cannot act outside the necessity of nature inasmuch as he is, but inasmuch as he wills: for if outside himself, inasmuch as he is, he were to act, he would produce another infinite in essence; for which reason, besides the productions within God, no Theologian grants anything to be produced by God by necessity of nature and inasmuch as he is, but all things inasmuch as he wills, and freely; not only by reason of a free application, but also by a will freely influencing into the effect itself. Moreover, it can scarcely be understood in God that there should be some union with the intellect which is made freely and precedes the very co-operation with it: for to be united to the intellect is to co-operate with it; for that union which is of presence according to essence contributes little to the vision, as we said against Durandus, Disputation 41, cap. 2: therefore it is much better to concede a species for seeing God, which is the very light of glory.

Wherefore it can be said most rightly that God is seen by a species as he is, not indeed by a species previously seen (for in that case he, as he is, could not be seen), but by that which is the principle for eliciting the vision; just as also the other intelligibles are understood and seen and move the intellect, not by themselves, but by their likeness and impressed species. There is, however, this difference: that the other intelligible things in this way move the intellect toward their vision, since they cannot by themselves move it; but the divine essence can: wherefore it alone can be said to be per se intelligible in act first. In another way also St. Thomas in the preceding chapter of this treatise said that God is a most perfect intelligible form; other things are not so, because God alone cannot be seen by a previously expressed species.

But the very God himself in the clear vision of himself is in the place of an expressed species: the other things, however, are not to be referred to the intellect in this mode, but all are seen through the Word and an impressed likeness. Yet I would not admit this difference; for, as I noted in Disputation 38, cap. 2, in every cognition there is a word, or rather the cognition itself is an expressed likeness of the object: wherefore not only other things, but even God himself, is not per se intelligible in second act, or per se the intellect; but all the things that are understood are seen or known by a medium expressed likeness: yet that likeness, or word, intervenes in such a way that it itself is not seen, nor does it make the object to be seen first, as was proved in cap. 2 of this chapter; nothing, therefore, is absurd if we say not only that God can be seen through an impressed species, as was said above in Disputation 38, but also that in fact he is thus seen.

But what some contend to prove by that text, 2 Cor 5: "For we walk by faith, not by species [speciem]," where he opposes the knowledge of this life, which Paul calls "by faith," to another knowledge, which he calls "by species," is of no weight. For in that place Paul by "species" does not

call a similitude representing the object, but the very face itself; wherefore the vision of God was fitly named "facial," the metaphor being taken from bodily vision, which then is most perfect when it is not from behind, but face to face, whereby, when each thing is recognized, we gaze upon the thing itself. For Paul says in Greek: di' eidous, that is, "by form"; for eidos signifies not only the likeness and idea of a thing, but also the form or face - whence Porphyry, in the Isagoge, in the chapter on species, says that species is sometimes taken for form; according to which signification we are wont to say "the first form (species) is worthy of rule," and for this reason someone is called "fair" (speciosus) from his form. Therefore the sense of Paul is: we now know God by faith; we do not yet, however, behold his face and form, that is, his essence and nature, as he had also said in the First to the Corinthians 13: "But then, face to face"; and although there he does not employ the Greek name eidos, but prosopon, nevertheless the sense is altogether the same. Thus St. Augustine seems to have spoken on Psalm 21 at the beginning, when he says: "Believing in him whom we do not see, we shall be able, when we shall have seen, and to our faith there will succeed the species of his light," understanding by "species," according to the Apostle's phrase, the very face, or form, that is, the essence of God, not any likeness.

Caput VIII - The arguments by which it is proved that the light of glory is superfluous are dissolved

Nothing else seems to remain in this question than that we dissolve two arguments, by which it can be proved that the habit of the light is superfluous. One is in Durandus, IV, d. 49, q. 2, n. 21 and 22, in this way: If the light of glory is necessary, so that it render the intellect efficacious, it ought to effect this in one of two ways: either by intensifying the natural power of the intellect, or by concurring with it and aiding it after the mode of a partial agent, as two who draw a ship help one another. But it can be done in neither way; therefore the light is superfluous. In the first way it cannot be done, both because our intellect does not admit of more and less according to intensity and remission - especially since it is a proper passion of the soul - and also because, if the light were to intensify the intellect, either it would intensify it of itself formally, as one degree of heat intensifies another previously produced, as the Sun, producing some degree of heat, intensifies the preceding degree; but it cannot intensify itself formally, because light is of another kind than intellect; or it would do so by some effect produced by itself; but the light in the intellect does not produce another degree of the intellect: therefore the light of glory does not bestow power upon the intellect in that first way. Nor in the second: for if the habit of light and the intellect were to have the place of a single agent, each by itself would suffice to elicit the vision, although not so perfect as both together; for two, drawing a ship, thus constitute one principle, that each by himself could do something to the ship - at least impress an impetus. In this way, then, the intellect by itself could have some vision of God, although remiss and less perfect than with the light - which seems absurd.

But if someone were to say that in neither way ought the light to be compared with the intellect, but that it is necessary, as light in the eye of the body is necessary for seeing color, the reason stands in the way. For corporeal light is not necessary on the part of the object, nor on the part of

sight; for in darkness things are seen by the species of the thing being transmitted to vision; but on the part of the medium, in order that through it the species of visible things be transmitted to the sight: in this way, however, the light of glory does not seem necessary in the intellect.

I answer that light is not required in that former way, nor as corporeal light is required for bodily vision, but in the latter way: for from the light and the intellect there is made one integral principle of vision; wherefore by the light itself the power and efficacy of the intellect for seeing God is completed. But light and intellect are not related to vision as two drawing a ship are related to drawing. For in two ways two agents can concur to the same effect: in one way, according to altogether the same ratio in the effect itself, in which way two drawing a ship and two fires burning concur; to each agent, in the effect produced, there corresponds the same generic and specific ratio; that is, the effect proceeds from each according to the same ratio. And in this way intellect and light are not related: for these agents are of such a nature that each by itself can produce the same effect according to altogether the same generic and specific ratio, although within the same ratio more or less perfectly; hence any fire can burn; likewise anyone drawing a ship can by himself draw the ship, or at least impress some impetus toward it; but the intellect by itself, or the light by itself, can effect nothing at all in the clear vision of God.

In another way, two agents meeting to the same effect are united as ordered to one another, so that in the effect the same ratio does not correspond to them; not that one entity of being be attributed to one and another to the other; but because the effect proceeds of such a nature that, if it were from such an agent, it would not be of such a nature, ratio, and kind. And in this way intellect and light are referred to vision, as intellect and the species of such an object are referred to the cognition of that object: for thus from two there is born a vision, or cognition, of such an object, such that it would not be an intellection unless it were from the intellect, nor would it be of such an object unless it were from the light, or the species of that object; by this the power of the intellect is determined and completed, so that it elicits the vision of this object rather than of another, as was proved in cap. 3. Wherefore neither cause can operate, because neither completely corresponds to the effect according to every generic and specific ratio. Of this we have a very apt example in the intellect and the species, which necessarily compare themselves to one another for any intellection whatsoever. But because Durandus universally denies intelligible species in our intellect, let another example serve against him, of the habit of charity, which he does not deny in the will: for together with it there is the principle of the love of God, so that neither the will by itself, nor the habit, can effect anything of that love; because, inasmuch as it is love, it proceeds from the will; but inasmuch as it is of God, it proceeds from the habit of charity determining it to this object rather than to another.

The second objection is of this sort. Between the knowing faculty and the object there ought to be a congruity; which, if the faculty according to itself is not sufficiently accommodated to the object, but needs some quality in order to operate about it, it is necessary that, at least with that quality added, it should have congruity with it; otherwise that quality would be added in vain. But, the light of glory being posited in the intellect, there is still no proportion and congruity of it with God for eliciting the vision of God; therefore the light is posited in vain. Now that there is not

proportion between the intellect and God, even with the light of glory added, is clear: because the intellect remains within the limits of a finite being, but God is infinite; and there is no proportion of the finite to the infinite. In the same way Durandus argues this argument: if the light of glory were necessary in the intellect, it would be so in order that it proportion the intellect to the object; but this by no reason can light effect; for the intellect remains finite along with the light, but God is infinite; therefore light is posited in vain.

To this argument it is answered, from the doctrine handed down in Disputation 37, cap. 3, and Disputation 40, cap. 2, that between the object and the knowing (or appetitive) faculty there ought to be proportion and a certain equality, not arithmetical and of quantity, nor after the mode of quantity (for this cannot be between the finite and the infinite according to essence), but there ought to be equality and proportion in the ratio of the object and of the potency, so that the object be contained within the latitude of the object adequate to that potency, and the efficacy of the potency about that be complete. And thus does God stand with the created intellect: for he is contained under the ratio of being; he is the adequate object of the intellect; then the efficacy of the intellect is completed by the virtue of the light of glory infused, as has hitherto been proved in this disputation and the preceding ones.

This doctrine is taught by St. Thomas, Contra Gentiles III, c. 54, ad the fifth argument, and by Ferrariensis at the same place, and in the present article, ad 4; by Capreolus; by Scotus in IV, d. 49, quaest. 1, in the Respondeo in medio; by Capreolus, quaest. 4, art. 3, ad 3; by Scotus against the first conclusion; and it seems to be that of Cajetan in this article, ad primum of Durandus, when he asserts that the light of glory must be posited, not that the potency be equated to the object by augmenting it according to perfection, but lest the excellence of the object impede the efficacy of the potency - that is, that it render the intellect efficacious for seeing God, which is to establish the intellect in the due proportion of the potency with its object.[728]

Disputatio XLIV - Whether the light of glory can be made natural to some creature

That this cannot at all be done. Cap. 1. That the very vision of God is connatural to the intellect endowed with the light of glory. Cap. 2.

Caput I - That this cannot at all be done

The Scholastics commonly call the light of glory a supernatural form; that is, above the perfection of created nature, properly speaking. But since something is called "supernatural" in a twofold way, as we shall show in Disputation 44, cap. 3: one supernatural according to its

728. St. Thomas, Contra Gentiles III, c. 54, ad 5; Ferrariensis at the same place; and in the present article, ad 4. Capreolus; Scotus, IV, d. 49, quaest. 1, Respondeo in medio; Capreolus, quaest. 4, art. 3, ad 3; Scotus against the first conclusion; Cajetan on this article, ad primum Durandi, asserting that the light of glory is to be posited not to make the potency equal to the object by augmenting its perfection, but lest the object's excellence impede the potency's efficacy, that is, to render the intellect efficacious for seeing God, establishing it in the due proportion to its object.

substance, which by its own nature is above the perfection of any created nature and fits none by its own proper principles; the other supernatural only on the side of the efficient cause, because it is brought about outside the natural and common order of things, as when sight is restored to a blind man. Here we need not dispute in what way the light of glory is supernatural; from what we shall say in that disputation it will easily be clear what ought to be held on this matter. Here, therefore, it must only be explained whether the light of glory, which we here suppose to be of a supernatural order according to its substance and its own nature, can become natural to some created intellect.

St. Thomas, in article 3, reply to the third, plainly teaches that this form cannot become natural to any created intellect; which is as much as to say that no created intellect, from the principles of its own nature alone or from the perfection naturally due to it, can see God, but for this needs some perfection added above its nature, such as the light of glory. This is evident with regard to intellects already created, whether human or angelic. For if any creature could by nature see God, it could by nature be blessed; but this cannot be. By the very fact that something is a created nature, it cannot but be peccable, as will be proved below in Disputation 231; and therefore it needs the grace of God, that it may be freed from sin, be adopted as a daughter of God, and be made an heir of beatitude. Hence no creature is blessed by its own nature; indeed, we shall show there that there is no true natural beatitude of a rational creature.

Moreover, although in the Clementine *Ad nostrum* concerning heretics it is defined only of the human intellect that it needs the light of glory in order to see God, the same reasoning seems to me to hold for the angels. Hence Maior wrongly asserts, in IV, dist. 49, q. 4, at the end, that it is not certain whether there is, or could be produced by God, some angel who by his own nature could see God without some higher light. Maior is mistaken. First, because if angels could by their nature see God, they could also by their nature be blessed, and so would not need the grace of God for the attainment of beatitude. Next, because there does not seem to be greater reason for the intellect of a created angel, or of any other intellect that could be created, to prevail by its own power to see God than for the intellect of man; for the intellect always remains within the limits of a finite creature, whereas God is infinite in essence.

Moreover, certain theologians, prying too curiously into such matters, ask whether at least some rational nature could be created that would itself be of a supernatural order, and for which the light of glory would therefore be natural. I do not see on what ground this is asked. If the notion of the supernatural is rightly considered, it can belong only to an accidental form, not to a created substance. For a created substance would be called "supernatural" either because it is higher than another substance, and thus there would be innumerable supernatural substances; or because it is produced by God alone through creation, and thus all souls and angels would be of a supernatural order, which no one will dare to say. It remains, therefore, that the notion of the supernatural belongs only to a created accidental form. Since such a form is the perfection of a created substance, which is called a natural thing, it is then called supernatural when it perfects that substance above what the substance itself, or any other created substance, demands from its own principles and natural constitution. This will be explained more fully below in Disputation 21, cap.

2; there too we shall show from Cajetan's doctrine on this article, in the third reply against Scotus in the prologue question and in IV, dist. 49, q. 8, that in our forms the natural and the supernatural are to be taken not only from their order to a cause operating in this or that manner, but from the forms considered in themselves. Some forms are called natural because they perfect some substance from its principles and its proper constitution; others are called supernatural because they perfect no substance in that way.

Some say that a supernatural substance could therefore be produced, because there could be something of the same order as God. But they can in no way explain how it could be of the same order as God, and an argument can readily be brought against them. However spiritual such a substance might be, if it is to be of the same order as God it must be rational; yet no creature can be produced that cannot sin, and therefore none can be produced that is supernatural in this sense. For if a creature can sin and be damned, how will it be of the same order as God? That no nature can be created which cannot sin will be proved from the doctrine of the Fathers and from reason below in Disputation 231.

Caput II - Whether the very vision of God is connatural to the intellect endowed with the light of glory

Dominic de Soto, in IV, dist. 49, q. 2, art. 4, asks whether the vision itself is connatural to the intellect of the blessed. He answers that not only is the vision supernatural to the intellect according to itself, but also to the intellect furnished with the light of glory. He proves this: because since that very light is supernatural to the intellect, the vision too, which is elicited by virtue of the light, will be [supernatural]. But for an action to be natural, it is necessary that the potency, which is the principle of that action according to its nature, be natural, even if it has been restored above nature on the side of the efficient cause, as is the eye of a blind man: for the faculty of seeing is so natural to man in itself that the vision elicited by it is also natural.

Cajetan. Scotus. Ferrariensis. Contrariwise, the way of speaking of Cajetan in this article, reply to the second argument of Scotus and of Ferrariensis, ad 3, cap. 54, around the fourth objection, is proven to me, who say that the clear vision of God, if the vision be referred to the bare intellect and considered according to itself, is supernatural to it, as is abundantly established; but referred to the intellect endowed with the supernatural light, it is natural to it. And the reason is manifest: for that which is supernatural to something exceeds its powers and natural perfection; but that which does not exceed it is not supernatural to it. Now the blessed vision exceeds the powers of the intellect according to itself, but not the powers which it has from the light of glory: therefore, although it is supernatural to the intellect according to itself, yet to the intellect having the light it will be natural; otherwise indeed than the bodily vision is compared to the restored eye and to the man himself. For, as Ferrariensis well notes, although the restitution of the eye is supernatural on the part of the manner of the efficient cause, nevertheless the restored eye is a natural form to the man himself, and is naturally conserved in him; whence it comes about that the vision elicited by it is natural not

only to the man having the eye, but also to man according to himself, since the eye is a natural perfection of man. To the intellect, however, having the light, the vision of God is natural in another way.

We must observe, when we say that the vision is natural to the intellect endowed with the light of glory, that it is not to be understood in such a way that it is natural to it as to the subject receiving it: for since it is both proximately received in the naked intellect according to itself, and not through the medium of the light of glory or another supernatural disposition, as was set down in the preceding disputation, cap. 1, it follows that for the intellect receiving the vision it is a supernatural perfection, because it is above the nature of that in which it is received. Yet the vision is said to be natural to the intellect having the light of glory, as to an agent, because the intellect equipped with such a light, by its own virtue, naturally elicits the vision; and thus the vision is natural to the principle eliciting it, not to the subject in which it is received.

Disputatio XLV - Whether, besides the light of glory, the light of the agent intellect is necessary for seeing God

Caput I - The two scholastic opinions

Prima sententia. Apart from Capreolus and Ricardus, I find no other among the Scholastics who treated this question; and since it seems to be of slight moment, I will dispatch it briefly; yet I will first say what the two cited authors hold. Thus Capreolus, in IV, dist. 49, q. 4, art. 3, ad argumentum 3, in the place adduced from Aureolus against the second conclusion, teaches that the light of glory is not infused into the blessed in order to give power and efficacy to the agent intellect, since no species is abstracted for seeing God - which seems to be the proper office of the agent intellect - but in order to strengthen the possible intellect, as remains explained in Disputation 43, cap. 2, according to his opinion.[729]

Secunda sententia. By contrast, Ricardus, in IV, dist. 49, art. 3, q. 2, affirms that both lights, namely of the agent intellect and of glory, are necessary for seeing God, whether we say that the vision is produced by God alone - for thus both are required as a disposition for receiving the vision, the light of glory principally, but the light of the agent intellect in second place - or even if we assert that the vision is produced by the intellect: for to this effect it is necessary that the intellect be helped by both lights; but he proves neither by any reason.[730]

Caput II - What the light of the agent intellect is, and whether it contributes anything to the clear vision of God

We shall easily reply to the difficulty if first it be explained what the light of the agent intellect is; for from this it will be plain whether it contributes anything to the clear vision of God or not. Certain philosophers said that the agent intellect is really distinct from the possible, and serves to

illumine the phantasms and from them to abstract intelligible species. But if that were true, in no way would it be necessary, either for receiving or eliciting the vision of God, as is evident: for the vision is not received save in the possible intellect, nor is it produced by any other than by it.

For what some assert, that the light of the agent intellect not only abstracts species but also illumines first principles so that they be seen, is fictitious; for it can hardly be understood, much less explained, what that "illumination" of the agent intellect about principles might be.

Besides Capreolus and Richard I have found no other among the Scholastics who treated this question; and since it seems to be of slight moment, I will dispatch it briefly; yet I will first say what the two authors thought. Capreolus, then, in IV, distinction 49, question 4, article 3, to argument 3 adduced from Aureolus against the second conclusion, teaches that the light of glory is not infused into the blessed so as to give force and efficacy to the agent intellect - since no species is abstracted for seeing God, which seems to be the agent intellect's proper office - but rather to strengthen the possible intellect, as remains explained, according to his opinion, in Disputation 43, chapter 2.[731] Richard, on the other hand, in IV, dist. 49, art. 3, q. 2, affirms that both lights, namely that of the agent intellect and that of glory, are necessary for seeing God: whether we say that the vision is produced by God alone - for thus both are required as dispositions for receiving the vision, principally the light of glory, in the second place the agent intellect's light - or whether we assert that the vision is produced by the intellect; for to this effect the intellect must needs be helped by both lights. But neither point does he prove by any reason.[732]

The true opinion, however, is that the name "light" is rightly given to the agent intellect precisely inasmuch as, by means of the species it produces from the phantasm, it produces the act of seeing or knowing the object, which is its manifestation; the object's "illumination" can also very well be so called. From this doctrine, which seems quite consonant with philosophical principles, the solutions to the present difficulty are gathered plainly. First, since for eliciting the vision of God no species is abstracted by the power of the agent intellect, it follows that by no reason is its light necessary for that vision, or conducive to it. Next, since the vision, according to what is truer, is elicited by the possible intellect and by the light of glory, it follows that the light of the possible intellect is conducive to the vision, but not the light of the agent; without the latter it is sufficient for eliciting the vision and manifesting God himself.

Disputatio XLVI - Whether our intellect can be moved to the vision of God without the habit of the light of glory

Prior opinion of Capreolus and others. Cap. I. Truer opinion. Cap. II.

729. Capreolus, *In IV Sent.*, dist. 49, q. 4, art. 3, ad 3, drawing on Aureolus against the second conclusion.
730. Ricardus, *In IV Sent.*, dist. 49, art. 3, q. 2.
731. Capreolus, IV, dist. 49, q. 4, a. 3, ad arg. 3 (citing Aureolus) against the second conclusion; cf. Disp. 43, cap. 2.
732. Richard, IV, dist. 49, art. 3, q. 2.

Caput I - The prior opinion of Capreolus and of others

The present controversy is not whether a created intellect, by its native power and by God's common concurrence owed to it, can see God clearly; for that cannot be done, as was sufficiently proved against the Anomoeans and Durandus in Disputation 41. Rather, it is whether, without the habit of the light of glory, by a special divine concurrence and efficacy our intellect can be sufficiently helped so that it sees God clearly, as it could do with the habit. Whether, moreover, it be contrary to the Clementine "Ad nostrum" De haereticis to assert that de facto the habit of the light of glory is not given, but that by special aid alone our intellect is helped, has already been said in Disputation 42.

On the question thus understood, the first opinion is that God cannot by any special concurrence supply the force and efficacy of the light; and therefore, without it, He cannot move our intellect to a clear vision of Himself. Thus thought Capreolus in IV, disputation 49, question 4, article 3, to the doubts adduced from Scotus, 4th place, against the second conclusion, to the 3rd and 4th; and at the end of the article Dominicus de Soto, on the same distinction, question 2, article 4; but most fully is this handed down by Ferrariensis, Contra gentiles, cap. 54, n. 9, "Ad quartum dicitur," and by some more recent Thomists, who indeed do not say that without the habit of light and a permanent quality the thing cannot be done, but at least that it cannot be done without some light which is a quality distinct from the vision itself and received in the intellect - even if it remains after the manner of a passion - of the sort they think was in Paul when he is said to have seen God; Cajetan also indicates their opinion briefly in this article, solution to the objections; likewise a second part of Scotus, and Durandus to the second

Further, they grant that the vision itself, under the notion of a certain quality, can be produced by God without any light, which is a quality distinct from the vision itself; by that, however, the intellect cannot see the object. Whether indeed it can thus be produced by God alone, or also at the same time with the intellect, they do not define. Rather, they say that the vision, which makes the intellect to be seeing, cannot, as has been explained, be produced by the intellect without some light, even with some special concurrence of God aiding.

Their opinion is proved first thus. It belongs to the notion of a vital operation to be produced by an intrinsic principle of that operation, in which it remains, so that in no way can this be supplied by God; if He were to supply it, that operation would not have the character of a vital act, but of a certain quality. But the light, which is the principle of vision, is the internal principle of it; therefore the efficacy of that light cannot be supplied by God; or if it be supplied, that vision will remain only under the notion of a certain quality, not of a vital operation.

Next: if God were to supply the force of that quality and light, the intellect would be referred to God not as a second cause, whose proper part it is to operate by a form inhering in it, which is the proper principle of the operation and effect, but as an instrument for eliciting the vision: wherefore God would be the principal cause; therefore He rather than the intellect would be said to see by

that vision - which is absurd; for an action more properly denominates the cause than the instrument. For this reason some more recent men think that our intellect can in no way be helped by God to the vision by way of an instrument.[733]

Caput II - The truer opinion

I, for my part, see nothing repugnant to God's being able, by His power and special concurrence with the created intellect, to supply all the efficacy of the quality, and with the intellect alone to produce the vision of Himself. This is the opinion of Paludanus in IV, dist. 49, q. 1, art. 3, concl. 2; of Thomas of Argentina, q. 2, art. 1, concl. 1; and of Maior, q. 4, cap. verum: they confirm the first point by this reason. Among theologians and physicists it is indubitable that all the efficacy of a form which acts can be supplied by the concurrence of God, and that the effect which otherwise required to be brought about by a secondary cause can be brought about immediately by God alone; they except only the principle of a vital operation precisely as vital, for this ought to be so innate to the living thing that without it a vital operation cannot be performed by God alone, according to the more common opinion of theologians, which we shall treat in I - II, q. 3, art. 2; although there are not lacking those who assert that even this kind of principle can be supplied by God.

Be that as it may, although, as I said, this cannot be done, no one, however, doubts that God's mere concurrence and aid can be substituted in the place of a non-vital principle, and that, without an intrinsic principle from which the operation has the notion of being vital, an operation can be produced by God alone. Now the light of glory, whether as a habit or as that quality distinct from the vision, is not the principle of vision as it is a vital operation, for in this respect the vision has it from the intellect; but that it be clear and of such an object, it has from the light: therefore God can by Himself supply the force of that. For not every form inhering in the intellect or in the cognitive faculty - such as a habit or a species - is the principle of cognition as it is a vital operation: for these qualities come from without and are not native to the living thing itself, as the cognitive or appetitive faculty is; wherefore from these faculties comes the ratio of the vital in the operation, not from other qualities.

Then it is proved that God can supply the power of the intelligible species; indeed, according to Capreolus and others consenting to his opinion, de facto the divine essence is substituted in the place of the impressed species, which otherwise inheres in the intellect for eliciting the vision; likewise, God can move the will without the habit of charity and without any other quality distinct from love: therefore He can also supply the power of the light for eliciting the vision.

By these reasons it is proved not only that the vision of the divine essence can be produced by God alone with our intellect, inasmuch as it is a certain quality which does not render a man seeing - this the Doctors of the prior opinion concede - but also inasmuch as it is a vision and renders the intellect seeing. Moreover, as we shall show at length in I - II, q. 3, art. 2, those things which the

733. Capreolus as above; Dominicus de Soto, IV, dist. 49, q. 2, a. 4; Ferrariensis, *Contra gentiles*, cap. 54, n. 9, ad 4; recentiores Thomistae; hints in Cajetan, in this article, ad sol. Scotus and Durandus referenced in the same loci.

Doctors of the prior opinion teach do not rightly cohere among themselves, namely that the vision can be produced by God alone with the intellect, yet so that it does not render the intellect seeing; for if it is a vision, it cannot fail to impart its formal effect to the subject, namely to the intellect; but the effect is to be seeing. If it does not impart this effect, that is a sign that that quality is not a vision, but something else.

From what has been said the first argument of the prior opinion is solved. To the second I reply: although God were to supply the efficacy of the light and were the principal agent of the vision, while the intellect were only instrumental, nevertheless the vision would not denominate God either principally or at all, but the intellect. Indeed, God would in no way be rendered seeing or be denominated as such; for in this way God is not called "seeing," although He is the cause of the vision; nor is it inferred from the fact that He is the principal cause that He should be denominated chiefly from the vision. It is altogether accidental that some agent be denominated from an action, whether it be the principal or only the instrumental agent - although sometimes the principal is more chiefly denominated. In an immanent operation, this is what must be peculiarly observed: that only that agent is denominated by the operation in which the operation itself is received - whether the immanent operation is formally a production, or is a quality and the action only (as they say) grammatical. Therefore this kind of action denominates only the having subject, not the producer; and hence, in that case, even if God were the principal agent of the vision, He would not be denominated by it, but only the intellect, which would nonetheless be the instrumental agent, because it would be the subject of that vision.

In transitive actions, however, it happens otherwise: for those actions are wont to denominate the agents in which they do not remain, although sometimes not all of them, but the proximate and proper ones: as generation, by which one man generates another, which is an origin of a living being from a living being, from a conjoined principle in the likeness of nature, does not denominate God, although He is the chief author of it, yet not the proper and proximate [author]; but it denominates only the man. This happens whenever an action connotes a peculiar respect and mode of operating of one cause rather than of another, as is manifest in the example adduced.

...it is manifest: whence it comes about that a man produced by a man and by God is not said to be begotten of God, nor is he called His son; rather, he is properly named the son of the man.

Articulus VI - Whether among those seeing the essence of God one sees more perfectly than another

It is proceeded to the sixth thus. It is objected that, among those who see the essence of God, one does not see more perfectly than another. For it is said in 1 John 3: "We shall see him as he is"; but he himself is in one way. Therefore he will be seen in one way by all. Therefore it will not be the case that some see more perfectly and others less perfectly.[734]

1. Further, St. Augustine says in the book 83 Questions that one man cannot understand one and the same thing more than another.[735] But all who see God through His essence understand the essence of God; for God is seen by the intellect, not by the senses, as was said above.[736] Therefore, among those seeing the divine essence one is not more clearly seeing than another.
2. Further, that something be seen more perfectly than something else can arise from two sources: either on the part of the visible object, or on the part of the power of sight in the seer. On the part of the object: by the fact that the object is received more perfectly in the seer, namely according to a more perfect likeness; which does not obtain in the present case. For God is not present to the intellect of the one seeing through some likeness, but is present through His essence. Therefore, if one sees more perfectly than another, this is due to a difference of intellectual power. And thus it follows that he whose intellectual power is naturally higher will see more clearly. But this is unfitting, since to men there is promised in beatitude an equality with the angels.

But on the contrary: Eternal life consists in the vision of God, according to that of John 17: "This is eternal life," etc. Therefore, if all see the essence of God equally in eternal life, all will be equal; the contrary of which the Apostle says, 1 Corinthians 15: "One star differs from another star in brightness."

I answer that, among those seeing God through His essence, one will see Him more perfectly than another. And this certainly will not be by reason of some more perfect likeness of God in one than in another, since that vision is not going to be through any likeness, as has been shown; but it will be by reason of this, that the intellect of one will have a greater power or faculty for seeing God than that of another. Now the faculty of seeing God does not befit the created intellect according to its own nature, but through the light of glory (*lumen gloriae*), which establishes the intellect in a certain deiformity, as is clear from the foregoing. Whence the intellect that participates more in the light of glory will see God more perfectly. And he will participate more in the light of glory who has more of charity (*caritas*); because where there is greater charity, there there is a greater desire.

734. 1 John 3:2. The marginal references (4. dist. 49; q.2, a.4; et 3. contr. cap. 56) point to loci paralleling St. Thomas's method in this article.

735. St. Augustine, De diversis quaestionibus octoginta tribus, q. 32.

736. Cf. above, this question, article 3.

And desire in a certain way makes the one desiring apt and prepared for the reception of what is desired. Whence he who will have more of charity will see God more perfectly and will be more blessed.

Reply to the first: When it is said, "We shall see him as he is," the adverb "as" determines the mode of vision on the part of the thing seen; so that the sense is: we shall see that He is as He is, because we shall see His very "to be," which is His essence. It does not determine the mode of vision on the part of the seer, so that the sense would be that the mode of seeing will be as perfect as it is in God the perfect mode of existing. And from this the reply to the second is also evident.

Further reply (to the second): When it is said that one man does not understand one and the same thing better than another, this is true if it is referred to the mode of the thing understood; because whoever understands that a thing is otherwise than it is, does not truly understand. But it is not true if it is referred to the mode of understanding; because the understanding of one is more perfect than the understanding of another.

Reply to the third: The diversity of seeing will not be on the part of the object, because the same object will be presented to all, namely the essence of God; nor through a diverse participation of the object by different likenesses, but it will be through a diverse faculty of the intellect - not indeed natural, but glorious, as has been said.

Note concerning the text of the article.

Conclusion. According to the measure of charity - that is, of merits and of sanctification in this life - one will see God more than another. This is quite certain among the theologians, although there are some difficulties about it which must be examined in the following disputation. But before we approach that, it is here briefly to be explained from the doctrine of the Angelic Doctor what he means, when he asserts that the inequality of the visions of God in the blessed does not arise from a diversity of species through which God is seen, but from the light which is not communicated to the blessed in the same way. He therefore does not deny an impressed species on the part of the intellect for seeing, which we shall prove to be the very light itself; but he denies a species by which God, once seen, is seen again, as we explained in Disputation 39; and for this reason he rightly denies that God is seen unequally by the blessed because unequal species of God Himself, which, once seen, would make God to be seen, are formed: for by these He is not seen, as we have also shown at length there.[737] Therefore the whole reason for inequality proceeds on the part of the light by which the intellect is equipped to elicit the vision: for according as one is strengthened by this very light in varying degrees, so too it elicits the vision in varying degrees, as we shall show more fully in the following disputation.

Disputatio XLVII - Whether God is seen equally by the blessed

- Caput I - The Catholic truth is established against the heretics.

737. See Disputation 39, where Vazquez argues at length that God is not seen by an impressed species distinct from the light of glory; rather, the light itself equips the intellect for the intuitive vision.

- Caput II - Three other places of Scripture are examined, by which this same truth is wont to be proved.
- Caput III - What the Fathers think concerning the parable of the laborers (Matthew 20).
- Caput IV - The parable is explained according to its proper sense, and an answer is given to Jovinian's argument.
- Caput V - The first argument against the Catholic doctrine is solved.
- Caput VI - Another argument against the same doctrine is refuted.

Caput I - The Catholic truth is established against the heretics

The heresy of Jovinian, as St. Jerome writes in book 2 against him, asserted that all the rewards of the blessed are equal and the same; and that therefore God is not seen more perfectly by one than by another.[738] Thus he taught in the time of Pope Siricius, as Alphonsus de Castro testifies against the heresies under the word "Beatitude," heresy 7, and Sanders in book 7 De visibili monarchia, heresy 87; for, as Alphonsus also says, under Damasus he was a monk, under Siricius he cast off the monastic life and taught the aforesaid error. Whether moreover he held the same opinion regarding the equality of sins, we shall say in I - II, question 73, article 2.[739] This error was condemned in the Council of Thelense under Pope Siricius, in the epistle of the Council to him - which is the 81st among the epistles of St. Ambrose, who was present at that Council - and in the Council of Florence under Eugenius IV, in the last session, in the letters of union, the Catholic truth was likewise defined: namely, that, according to the distinction of merits, the very essence of God is seen by the blessed in various degrees; how moreover in the same individual vision this variety can be assigned will be more fully explained in the last chapter.[740]

Against Jovinian the Fathers wrote excellently, St. Jerome in that dialogue, and St. Augustine in the book De sancta virginitate; and of the more recent, Alphonsus de Castro in the cited place; and St. Jerome refutes his error by many testimonies of Scripture, of which we shall adduce some

The first place is 2 Corinthians 9: "He that sows sparingly shall also reap sparingly; and he that sows in blessings, shall also reap of blessings"; where an abundant recompense of reward corresponds to abundant merit, and a lesser to a lesser.

The second place is Ephesians 4: "But to every one of us is given grace according to the measure of the giving of Christ"; where there is no doubt that the Apostle speaks of the various gifts of grace which Christ, as it pleased Him, as head, distributed to the members of His Church; nor did He bestow the same gift upon all indiscriminately, but, as Paul says, "And he gave some indeed Apostles, and some Prophets," etc.; by which words he indicates the various offices of the members

738. St. Jerome, Adversus Iovinianum, lib. 2.

739. Alphonsus de Castro, Adversus haereses, s.v. Beatitudo, haer. 7; Nicholas Sander, De visibili monarchia, lib. 7, haer. 87; cf. St. Thomas, Summa theologiae, I - II, q. 73, a. 2.

740. Council of Thelense under Pope Siricius (as reported in the epistle counted as no. 81 among the letters of St. Ambrose); Council of Florence (under Eugenius IV), last session, in the Decree of Union.

of the Church. Therefore, since the reward of this life corresponds to merit, and since in this militant Church Christ communicated various merits, it follows that He has also reserved various and unequal rewards in beatitude.

The third place is 1 Corinthians 15, which, according to the common interpretation of all the Greeks and Latins, appears to express this same truth. For there, speaking of the future resurrection of bodies - which some thought impossible - Paul says: "One is the brightness of the sun, another the brightness of the moon, and another the brightness of the stars; for star differs from star in brightness; so also is the resurrection of the dead." This place, besides St. John Chrysostom, Theodoret, Theophylact, and Oecumenius, Primasius, and Bede, and other Latin Fathers, St. Jerome in the book against Jovinian, and St. Augustine in De sancta virginitate, chapter 26, understood in this sense, to prove that the rewards of merits will be diverse in the other life; whose exposition most pleases me.[741] For when Paul had there treated of the future resurrection of bodies, he proposed the doubt in these words: "But some man will say: How do the dead rise again?" and he answers thus: "Fool, that which thou sowest is not quickened, except it die first; and that which thou sowest, thou dost not sow the body that shall be, but bare grain, as of wheat, or of some of the rest. But God giveth it a body as he will; and to every seed its own body." By this example he showed that it is not impossible for God, after the death of our body, again to recall us to life and to give us a body and a life, as the seeds of merits will have demanded.

Then he shows the diversity of bodies as able to be produced by God, in these words: "All flesh is not the same flesh, but one indeed of men, another of beasts," etc.; and this in animals. But in other things after this manner: "And there are bodies celestial, and bodies terrestrial" - supply "there are" - "but one is the glory (that is, the beauty) of the celestial, and another of the terrestrial; one is the brightness of the sun, another the brightness of the moon, and another the brightness of the stars; for star differs from star in brightness; so also is the resurrection of the dead." To what purpose, moreover, would Paul have said that God gives to the seed a body, to each one according to its proper power, and would have shown such diversity of bodies made by God, unless he wished from there to declare the resurrection of the dead? Would he not be saying, "So also the resurrection of the dead," unless he wished to declare a diversity of merits and of the glory of brightness? Observe well then that Paul, when he applies the example which he adduced from the seed to the resurrection, observed only in that comparison that "it is sown a natural body, it shall rise a spiritual," that is, immortal, as is clear from the subsequent words; but he never applied to the diversity of merits an example from the diversity of bodies. And thus someone could say that the whole variety of bodies was brought in by Paul only that he might show the wisdom and omnipotence of God, who knows how to create so many and such diverse bodies for diverse, nay even for the same, genera of things; that so he might persuade that God is also able to bring forth into incorruption the animal and mortal body which in this life dies and is as it were sown in death.

741. St. John Chrysostom; Theodoret; Theophylact; Oecumenius; Primasius; Bede; St. Jerome, Adversus Iovinianum; St. Augustine, De sancta virginitate, c. 26.

But the former exposition, especially strengthened and confirmed by the authority of the Fathers, pleases me more. The Catholic truth was handed down in this same way by the Fathers whom we have cited above; but the arguments which are wont to be made against it will be solved below.

Caput II - Three other places of Scripture are examined, by which this same truth is wont to be proved

Besides these testimonies of Scripture, St. Jerome in the cited dialogue adduces other passages which, if one consider rightly, will not seem so efficacious; of which it has pleased me to report only three. The first is Matthew 5: "He therefore that shall break one of these least commandments, and shall so teach men, shall be called the least in the kingdom of heaven." But where there is a least, there must be a greater; therefore not all are equal in the kingdom of heaven. Yet, as we shall say in the following chapter, in that place Christ wished not to signify...

... not to signify that such a Doctor would indeed be in heavenly glory, yet in the very lowest rank; rather, he said "least," that is, "to be by no means admitted and not to be numbered among the sons." For he speaks of one who has taught, but has not kept the whole law; and such a one, undoubtedly, will not be a sharer of heavenly beatitude. Therefore from that passage nothing can be proved.

It is objected: In that place the discourse is about the least precepts, the transgression of which is only a venial sin; and of these Christ said: "Whoever shall break one of these least commandments and shall so teach men, shall be called least in the kingdom of heaven" (Matt. 5); that is, he will have less reward in beatitude.

It is rejected: Yet this exposition cannot be true. For the greatness of the reward must be weighed by the greatness and multitude of merits and of grace; but it can happen that one who has broken one of the least commandments - namely, those obliging only under venial sin - may have greater merits and more grace than others who have not broken them. Such a one, therefore, will not be inferior in beatitude, but much greater, after he has paid the penalties in purgatory.

The second passage is Matt. 11: "There has not arisen among those born of women a greater than John the Baptist; yet he who is least in the kingdom of heaven is greater than he." Therefore, if in the kingdom of heaven - that is, in eternal beatitude - there is someone "less" who, compared with John, is greater than he, it follows that not all will be equal in beatitude. But in those words Christ was not speaking of John's sanctity before God, when he compares him with the others born of women; nor did he prefer him to all others in sanctity, or assert that none was to be preferred to him - so holds Jansen in book 47 of the Concordia Evangelica - although in the same chapter Christ with other words praised the sanctity of John; and this is manifest from the context of Luke 7: "I say to you, among those born of women there is no greater prophet than John the Baptist." And although some Greeks in Luke do not add the particle "prophet," yet the corrected Latin Vulgate places it, and the context seems to require it. Therefore, Christ prefers John to others in the dignity of prophet, not in merits and sanctity before God. And wishing indeed to express that very dignity, a little earlier he had called him "more than a prophet," not because he had known by the prophetic

Spirit alone that Christ was the true Messiah whom before he had not seen, but also because he had pointed to him with his finger. But what he immediately subjoins - according to St. Jerome's way of taking the passage - "Yet he that is least in the kingdom of heaven is greater than he," is not interpreted in the same way by all. Some understand it of the angels who then were in the kingdom of beatitude, so that the sense would be: the lesser who is now in beatitude is holier than John; and this sense could very well serve St. Jerome.[742]

This interpretation is put forward by St. Augustine, book 3 Contra adversarium legis, c. 5, and St. Ambrose on that place of Luke 7, and Tertullian, book 4 Contra Marcionem, c. 28 - unless, as Pamelius has noted, Tertullian in the same place, with a different punctuation, reads thus: "He who is lesser or modest" - that is, in humility in this life - "is greater in the kingdom of heaven than he," namely than John the Baptist living in this life.[743] Yet this exposition is hindered by what we have said and have clearly proved from the text of Luke, namely, that in that place John is not compared with the others born of women in sanctity, but in the excellence of prophecy. Wherefore the clause "He that is least in the kingdom of heaven is greater than he" must be understood in the same way: namely, not of degree of sanctity, but of revelation and knowledge of the mysteries. So understood, however, it does not prove what St. Jerome contends. For since the quality of the reward of beatitude - consisting in the clear knowledge of God - could be such that one, by a peculiar revelation, would know more mysteries than another, as will be made clear in Disputation 50, nothing follows for inequality or equality of sanctity per se.

Others, however, refer the clause "He that is least in the kingdom of heaven" to Christ himself, who was speaking; and thus, whether the comparison be made in the gift of prophecy and the knowledge of mysteries, or even in sanctity, it is most true to say: "He is greater than he," that is, than John the Baptist. Tertullian and Augustine so understand it in the places cited; and the same Augustine in Tractate 13 on John; Bede on that Luke 7; St. John Chrysostom, Theophylact, and Euthymius on that Matt. 11. Then, as Bede admonishes, and as Pamelius rightly taught in the cited place, according to Tertullian's mind, it must be read with this punctuation: "But he who is lesser - in the kingdom of heaven - is greater than he." Now, Christ is said to be lesser either in age, or also in dignity and sanctity, according to the opinion of the crowd, as the aforesaid authors have noted. On this exposition, however, the exposition of St. Jerome, from that place, can gather nothing, as is sufficiently clear.

On further testimonies of Scripture

Nor will anything be proved from that place if we follow a third interpretation, which seems to me quite consonant with the letter: that by those words Christ compared John, as to the dignity of prophesying and of explaining mysteries, with the prophets who preceded him. Thus when he says of the prophet, "There has not arisen a greater," he not only denies that anyone was greater than

742. St. Augustine, Contra adversarium legis et prophetarum, lib. 3, c. 5; St. Ambrose, on Luke 7; Tertullian, Adversus Marcionem, lib. 4, c. 28; on Tertullian's punctuation, see Pamelius, ad locum.

743. Cornelius Jansen (Jansenius), Concordia Evangelica, c. 47; Bede, on Luke 7; St. John Chrysostom, Hom. in Matth. 11; Theophylact and Euthymius, on the same passage; Augustine, Tractatus 13 in Ioannem; Pamelius, ad Tertullianum.

John, but he also seems to indicate, with respect to the prophets, that John was more excellent than the rest; for by a common way of speaking we are accustomed by "greater" to signify "more excellent." This sense is confirmed by what had preceded: "But what went you out to see? A prophet? Yea, I say to you, and more than a prophet." For John saw and, taught by the prophetic Spirit, pointed with his finger to him whom the others had foretold and desired to see, but did not see; therefore, he is rightly said to be greater than all the other prophets. Moreover, that John alone in the gift and dignity of prophecy is preferred to the rest we have already shown from the text of Luke. But when it is said, "He that is least in the kingdom of heaven is greater than he," it is surely understood of the same gift of prophesying; and "the kingdom of heaven" denotes not the homeland of beatitude, but the future preaching of the evangelical law. Therefore, one lesser than Christ's Apostles and disciples - who was to be a prophet in the gift both of explaining and preaching the mysteries of our evangelical faith - is preferred to John, not in sanctity, but in the gift of knowing and explaining the mysteries. For by far more mysteries were to be explained to the Christian people after John's death than John expounded; and the dignity of a prophet is to be weighed not from the foretelling of future things alone, but also from the explication of mysteries; indeed, in this sense "prophecy" and "prophet" are used in 1 Cor. 14.

Finally, that by "the kingdom of heaven" the preaching of the evangelical law is signified, can be gathered not only from other places of the Gospel, but manifestly from that same chapter of Matthew 11. For in Luke 8 the "kingdom of God" is compared to a man who, while he was sowing, cast part of the seed among thorns. And after setting forth the parable, Christ said to his disciples: "To you it is given to know the mystery of the kingdom of God," namely, what lay hidden in that parable, etc. The parable, however, indicated the event of the future evangelical preaching. And in chapter 9 the same preaching is called the "kingdom of God." In Matthew 10 it is called the "kingdom of heaven" in these words, "The kingdom of heaven has drawn near," and in Luke 10, "The kingdom of God has drawn near unto you." But Matthew 11, when Christ spoke of that same John, says: "From the days of John the Baptist the kingdom of heaven suffers violence, and the violent seize it." For Christ did not signify that those who were to obtain the kingdom of heaven - that is, beatitude - must do violence to their own inordinate affections; that would be an improper way of speaking: for it is one thing to do violence to oneself, another to do violence to the kingdom of heaven. The sense, therefore, is this: from the preaching of John the Baptist - who prepared the way for the evangelical preaching, and therefore is called "more than a prophet," and the "angel" whom the Lord sent before the face of Christ, than whom there has not arisen a greater - many strive with all their might to hear the evangelical preaching, and, persevering and brave (whom Matthew calls "violent"), to embrace it. This sense Luke clearly expresses to us in chapter 16 in these words: "The Law and the Prophets were until John" (supply: they foretold the evangelical preaching), for thus Matthew 11 says of John: "All the Prophets and the Law prophesied until John"; for he with his very finger pointed out the author of the Gospel. Wherefore in him every prediction of Christ ceased. "From that time (namely, John) the kingdom of God is gospelled," that is, it is no longer foretold, but announced, "and everyone does violence into it." Matthew, indeed, had said, "Suffers violence."

The third passage, which St. Jerome also adduces against Jovinian, is 1 Corinthians 15: "And as in Adam all die, so also in Christ shall all be made alive; but each in his own order." Now Paul, as we saw a little earlier, was treating of the resurrection; therefore, when he says "each in his own order," it follows that not all will be equal. For "order" is the relation of many to one first; and consequently some diversity must be among them. Yet the other Fathers interpret this passage thus: St. John Chrysostom, Theodoret, and Theophylact refer that "order" to the good and the wicked, who are to be set in a different order: the wicked at the left, but the good at the right. But the exposition of Oecumenius and Primasius seems to fit the text better: they say that that order is to be established between Christ, who raises, and the others who are raised in him. For when he has distinguished all who are to be made alive in Christ, he immediately adds: "Each in his own order: the firstfruits indeed, Jesus Christ; then those who are of Christ, who have believed at his coming; then the end." In this order, then, he assigns that Christ should rise first, both in time and in dignity, as Primasius says; then the just should rise again, and finally should follow the destruction of the wicked. No one, however, so far as I have read, among the Fathers refers that "in his own order" to a diversity of rewards paid out for their merits, except St. Jerome. Wherefore from that place I myself can prove nothing; and as to other testimonies of lesser moment (for to pursue them one by one would be troublesome), I pass over them.

Caput III - What the Fathers hold about the parable of the laborers, Matt. 20

Against this Catholic doctrine Jovinian argued - as is gathered from St. Jerome, book 2 Contra Iovinianum, and St. Augustine, De sancta virginitate, c. 26 - from that parable which Matthew 20 adds, which seems to signify the reward of eternal beatitude from the laborers, to whom the householder paid an equal wage for their toil, namely of one denarius, although not all had toiled equally in the vineyard. From this, not only is it proved that the remuneration of eternal life is equal, but also that the merits of this life are equal, insofar as one might seem to have toiled more than another, since rewards correspond to merits. This parable is indeed difficult for many to explain, and becomes especially more difficult for those who think that the reward of eternal life is signified by it. For whereas many difficulties are contained in it, first of all it is very obscure who the husbandman is and what end Christ proposed in it - about which the Doctors vary in their opinions

The common opinion of the Fathers is that, if the parable signifies the reward of eternal beatitude - something which they take to be signified by that diverse denarius - St. Gregory Nazianzen in Oration 40 (on holy Baptism), and in the same place his commentator Nicetas on the

words "He drew up a fish"; St. John Chrysostom, homily 63 on Matthew; St. Jerome elsewhere against Jovinian; the Venerable Anselm on that passage of Matthew 20; St. Thomas; Scotus; and the more recent theologians: yet they do not all interpret the parable in the same way.[744]

- First, therefore, St. Thomas, Scotus, and the other recent Doctors teach that by the denarius is signified one and the same eternal life, the same as to its formal essence - namely, the operation by which, laying hold of God himself, the blessed are made blessed - which is common to all the blessed; but that the diversity of labors will have a diverse fruit as to degrees of glory. Thus equality is kept as to the kind of reward signified by the denarius, while inequality remains as to the measure or degree of glory according to merits.[745]
- However, this interpretation seems to be opposed by the murmuring introduced in the same parable of those who, since they had labored more in the vineyard, thought they would receive a greater wage for their work than the others. For in the remuneration of eternal life there can be no just murmuring; and although in parables not everything that is asserted must be spiritually applied, yet that which the parable chiefly aims at ought not to be neglected in the application. Now it seems to aim at this: that in the eternal remuneration those who have labored less will receive an equal pay with the others; which, if understood of the formal beatitude itself, would not sufficiently square with the doctrine, established above, of the diversity to be kept, according to the proportion of merits, even in the very vision which is the summit of the blessed life.

Therefore St. John Chrysostom, St. Gregory Nazianzen, and Nicetas affirm that by the "last" who labored in the vineyard are signified those who, as far as human judgment goes, appear to have labored less in this life, and yet - because of the divine goodness which distributes without injustice and beyond all human comparison - are made equal as to the possession of eternal life, while nevertheless the precedence of those who truly labored more in fervor, diligence, and constancy is kept in the degrees of glory.[746]

But the exposition of Oecumenius and Primasius seems to fit the text better, who say that that order is to be set between Christ who rose and the others who are to be raised in him. For when he had said that all are to be made alive in Christ, he immediately adds: "Each in his own order"; and very next he subjoins: "The firstfruits, Christ; then, those who are Christ's, who have believed at his coming; then, the end." In this order, therefore, he assigns that Christ rose first, both in time and in dignity, as Primasius says; then the just are to rise; and at length the consummation of the world is to follow. Yet no one of the Fathers, so far as I have read, except St. Jerome, refers that phrase "in

744. St. Gregory Nazianzen, Oration 40, In sanctum baptisma, with Nicetas's scholia; St. John Chrysostom, Hom. 63 in Matthaeum; St. Jerome, Contra Iovinianum; St. Anselm, on Matt. 20; St. Thomas; Scotus; and later scholastic authors.

745. See especially St. Thomas, Summa theologiae, I - II and III, where he treats of merit and beatitude; Scotus, in the Sentences, on the diversity of glory according to merit.

746. St. John Chrysostom, Hom. 63 in Matthaeum; St. Gregory Nazianzen, Oration 40; Nicetas, Commentarius in Orationem 40.

his own order" to a diversity of rewards which are destined to the just on account of their own merits; wherefore from that place he himself can prove nothing. I pass over other testimonies indeed of less moment, for to pursue each in detail would be burdensome.

What the Fathers hold concerning the parable of the laborers (Matt. 20)

But on the contrary: Against this Catholic doctrine Jovinian argued, as is gathered from St. Jerome in that second book against him, and from St. Augustine, in the book On Holy Virginity, chapter 26, from that parable which in Matthew 20 seems to be adduced to signify the reward of eternal beatitude concerning the laborers in the vineyard, to whom the householder paid an equal wage for their work, namely of one denarius, although not all had labored in the vineyard alike. From which is proved not only that the remuneration of eternal life is equal, but also that the merits of this life appear to be equal, although one may seem to have labored more than another; since rewards correspond to merits. This parable has seemed to many difficult to explain, and it becomes more difficult especially for those who think that the prize of eternal life is signified by it. In which, although there are many difficult points, first of all it is very obscure what was the scope and end which Christ proposed in it; about which even the Doctors think variously.

The common opinion of the Fathers is that the end of the parable is the prize of eternal beatitude, which is signified by that diurnal denarius. Thus St. Gregory Nazianzen in Oration 40 on holy baptism, and there also his commentator Nicetas on those words, "Fathers." And one may add St. John Chrysostom, hom. 65 on Matthew; St. Jerome, Against Jovinian, near the end; St. Augustine, Sermon 69 on the words of the Lord; St. Anselm on that place of Matthew; St. Thomas, I - II, q. 4, a. 2, ad 1; Soto on IV Sent., dist. 49, q. 3, a. 2; and more recent Thomists; yet the interpreters of the parable do not all interpret it in the same way.[747]

First interpretation on the object of beatitude. - First then, St. Thomas and Soto and other recent authors say that by the single denarius is denoted one and the same essence (*essentia*) of God, which is precisely the same object of beatitude in all; not, however, beatitude itself, which the Scholastics call formal, namely the operation by which, attaining God himself, we are made blessed: for this will be diverse according to the diversity of merits and of labors.

Refutation. - Yet this interpretation is blocked by the murmuring that is introduced in the same parable of those who, since they had labored more in the vineyard, thought they would receive a greater wage for their work than others. For in the remuneration of eternal life there will be no murmuring; and although it is not necessary to apply spiritually everything that is brought forward in parables, nevertheless that to which the parable chiefly looks ought not to be left without application. Now it seems to be this, that in the eternal retribution those who labored less received an equal wage with the others, so that thus the last became equal to the first; which assuredly seems unusual. Wherefore, although in the eternal judgment of God there will not be a future

747. St. Gregory Nazianzen, Oration 40, In sanctum baptisma, with Nicetas's scholia; St. John Chrysostom, Hom. 65 (63) in Matthaeum; St. Jerome, Contra Iovinianum; St. Augustine, Sermo 69 De verbis Domini; St. Anselm, on Matt. 20; St. Thomas, Summa theologiae I - II, q. 4, a. 2, ad 1; Domingo de Soto, In IV Sent., dist. 49, q. 3, a. 2; and later Thomist authors.

murmuring of the good against the distribution of rewards; yet Christ in that parable seems to have signified something unusual and beyond expectation. But nothing unusual and beyond expectation would happen if, in the very vision by which we are to be blessed, there were a disparity to be observed according to the due proportion of merits, even if the same divine essence were to be the object.

Second interpretation in Chrysostom, Nazianzen, Nicetas. - Therefore St. John Chrysostom, St. Gregory Nazianzen, and Nicetas assert that by the last who labored in the vineyard are signified those who in this life seem to have labored less because they were called and converted to God at the last period of life; although in reality, more than the former, sometimes someone compensates for the lateness of the time by solicitude and diligence, and merits with God more than others who from the first time of their life applied themselves to virtue; and this too has something unusual, and therefore fits the end of the parable very well.

Against this interpretation an argument is brought from the parable itself. - However, against this interpretation we can argue from the parable itself. First, if it were to be understood thus, the murmuring of the laborers who had been called first would be introduced in vain; for they could easily be convinced that those who began at the last hour had worked more, or equally; which in reality could not have been hidden from them. Why then are they made to say: "These last worked one hour," etc.?

Chrysostom's reply. - Chrysostom replies that not everything that is said in parables is to be explained spiritually; wherefore neither by that murmuring of the vineyard laborers is any contention of the good in God's judgment to be signified.

Refutation of the first point. - Against this reply there are manifest reasons. First, although murmuring, as evil and unjust, such as occurred in the vineyard laborers, will not take place in the distribution of eternal beatitude, nor ought the parable for that reason to be applied; yet it clearly indicates that in God's judgment there will be something that happens beyond everyone's expectation. For the whole parable seems to look to this, that someone by the gift of God may receive more than was owed to him by right; which, although it is not a cause of future murmuring in the blessed, will yet be a cause of admiration, to which the best reason will be given, as the householder satisfied the querulous laborers. But this would not be true if the last had in reality labored more, although by reason of the brevity of time they might seem to have labored less; for what wonder is it if he who labored more in a shorter time also receives a greater reward? And if the admiration proceeded only from ignorance, because the last were thought to have labored less in this life than he who began to labor first, the householder would not have replied: "Did you not agree with me for a denarius? Take what is yours and go; but I will give to this last as well as to you. Or is it not lawful for me to do what I will?" but rather would have shown that the last had overcome the tardiness of time by solicitude and labor. Therefore, since he convinces the first that he wills to make the last equal to them gratuitously, it follows that he did not attend to the greatness of the labor and of the merit; and consequently the last did not labor on an equal footing with the first, so as to receive an equal reward with them.

Secondly that interpretation is refuted. - Next, even if we were to follow the explanation of Nazianzen and Chrysostom, that sentence which the Lord gathers from the parable as its conclusion, "So shall the last be first, and the first last," that is, the elect, and the first the last, that is, the reprobate, could not cohere with the parable itself. For that which some interpret in this way - "the last as it were first, and the first as it were last, because they will be equal" - in no way squares with the reason which the Lord subjoins in these words: "Many are called, but few are chosen."

And as to what Chrysostom asserts, that this sentence is not the conclusion of the parable, because it is placed after the parable under a causal particle, this does not stand. For the particle "So," which is placed at the end of the parable, denotes the conclusion and application of it; then the causal is added for a fuller explication of it, as if he said: the last will be first, and the first last, since in truth it is so, that many are called by God, but few are chosen.

Third interpretation in Augustine. - Lastly, Anselm only says that by the diurnal denarius eternal beatitude is signified, and that it will be diverse; but he does not examine the difficulty of the parable. Augustine, however, interprets in this way: that we are all equal in that reward, as the last the first and the first the last; because for them the denarius is eternal life. For although by the diversity of merits one will shine more, another less; nevertheless, as regards eternity, it will be equal for all; where he teaches that there will be equality in duration, and compares it to the diurnal denarius. But as to the degrees of the vision itself, he neither asserts that it will be equal, nor denies it; he only says that the blessed are to be distinguished by a diversity of merits. And unfolding that distinction in the reward as well, he subjoins: "But chastity in marriage will be there in one way; integrity in virginity there in another; the fruit of good work there in another; the crown of passion there in another." By which words he seems to assign diversity in the accidental reward; for from the fact that there is the merit of conjugal chastity or of virginity it does not follow that what pertains to the essential reward is diverse. But besides the fact that it is not enough to assign a diversity of the accidental reward, since plainly in the Council of Florence, in the last session, in the letters of union, the very vision of God is constituted as that which, as a perfect reward, corresponds to merits, the difficulty of the parable which we set against the others still remains: namely, how the last are first and the first last. For whether we speak of the essential reward or of the accidental, since according to each one's labor and merit the reward is given, it does not appear how the last are first and the first last. And if we say that all the blessed will be equal in the vision, we must needs fall into the opinion of Jovinian. And to the same it returns when the same Augustine, in the book On Holy Virginity, chapter 26, says that by the single diurnal denarius this alone is signified: that we shall all be in eternal life and the kingdom of heaven; that we shall all rise in incorruption. Yet just as in the same heaven there are many stars and, while they have a common firmament, one nevertheless shines more than another; so also will the blessed be. The diversity, however, of rewards by which the merits of the Saints will variously shine forth he himself does not explain; wherefore the same difficulty always remains.

Caput IV - The parable is explained according to its own sense, and Jovinian's argument is answered

A far easier and more contextually consonant interpretation seems to me that which Jansenius employs in the Concord of the Gospels, chapter 101. For he thinks that in that parable there is not signified the prize of eternal life and its distribution according to the quality of merits; but rather the donation of grace and its distribution as it pleases God, whereby the last become first, and the severity of the divine judgment whereby the first become last. From which it comes to pass that in the judgment which will be after this life, in which alone it is allowed to work, those who were thought to be last for reigning with Christ will be chosen; but those who were considered first will be cast out from the kingdom.

I am clearly persuaded of this opinion for a twofold reason. First, because from the context, namely from the antecedents and sequents of the parable, this is manifestly gathered to be its end. Then, because, when all the things narrated in the parable can most fittingly be made to agree and to be applied, that point especially in which the whole force of the parable seems to consist - the murmuring, namely, of the laborers - cannot be explained spiritually according to the exposition of others. And although Jansenius omits some things, and does not apply them to the spiritual sense, yet all can be excellently accommodated, as will appear in the course. Three things, moreover, must be explained by us, by which the whole parable and its signification will become clear: first, its end; second, the murmuring of the laborers; third, the reply of the householder.

First, therefore, the parable looks to this, that the Lord might show that those who seemed last and reprobate by the Lord are to be chosen; but, on the contrary, those who seemed first are to be altogether rejected from the kingdom of God, and not to receive the diurnal denarius of eternal life. For after, in Matthew 19, the Lord had said to the Apostles, "You shall sit upon twelve seats, judging the twelve tribes of Israel," he soon subjoins, "Many, moreover, shall be last who are first, and first who are last"; and then, in chapter 20, for the same purpose the Lord brought forward the parable in question, from which again he concludes the same sentence, saying: "So shall the last be first, and the first last." And by adding to these words, "For many are called, but few are chosen," he plainly indicates that those few chosen will be the first; but the others, called and not chosen, will be the last. Now those who are called and not chosen are not to receive the denarius of beatitude, but are to be cast out of the kingdom of God; therefore those first who in reality are to be last will not be partakers of eternal life; they are therefore called "last" on the day of judgment, who are to be altogether reprobate. A like sentence is had in Luke 13 and Mark 10. Therefore Christ did not adduce the parable to show that those first who labored in the Lord's vineyard would be lesser in the remuneration of eternal life; but that those who here seemed first and to have labored more in the vineyard of God - when in reality it was not so - are to be altogether cast out of the kingdom of heaven. On the contrary, those who appeared last are to be first and chosen for the kingdom of heaven, and in this manner to be preferred to others; as is clearly gathered from Christ's sentence in Luke 13, where, after he had said, "There shall be weeping and gnashing of teeth, when you shall see Abraham and Isaac and Jacob and all the Prophets in the kingdom of God, and you yourselves

cast out," he subjoins: "And they shall come from the East and the West and the North and the South, and shall recline in the kingdom of God; and behold there are last who shall be first, and first who shall be last" (Luke 13). There he calls the very Pharisees "last," who seemed first: not that they were to be at all partakers in beatitude, but because they were altogether to be excluded...

They were to be excluded; but he calls the Gentiles "first," who seemed last: not that they were to receive more reward, but that they were simply to be admitted into the kingdom while others were rejected. In the same sense Christ said to the Pharisees in Matt. 21, "Publicans and harlots go before you into the kingdom of God": what is "go before"? Not indeed that the Pharisees themselves had made less progress in the kingdom of God than the publicans, but that they had in no way admitted the faith of the preaching, which the harlots and publicans had embraced. For he immediately subjoins: "For John came to you in the way of justice, and you did not believe him; but the publicans and the harlots believed him." So also it is said in Matthew, "He shall be called least in the kingdom of heaven, who shall break one of the commandments," not because he is to receive a small reward, but because he will be wholly without it, as we noted in chapter 2.

It is objected: Nor does it stand in the way that in the parable there are brought forward first and last, who really labored in the vineyard, and merited the reward of their labor and received it; so that from this we might infer that the first, who are to be last in the kingdom of heaven and are signified by that parable, will also receive the reward of beatitude. For this manifestly conflicts with the conclusion of the parable, as has been sufficiently shown. But the parable is adduced for this sole purpose: that just as among the laborers who worked in the vineyard the first truly labored more than the last, because they bore the burden of the day and the heat, yet beyond the expectation of all the last were made first in the payment, and the last were made first, because both in place, and for a small labor, they received an equal wage with the others - and this without any injustice, from the mere liberality of the one paying - so also in the kingdom of God it will come about beyond expectation, that those who were thought first, and to have labored more in the vineyard of the Lord, such as the Scribes and Pharisees, will on the day of judgment be wholly excluded from the kingdom; because by the just judgment of God they were permitted to fall, and truly did not labor; and thus they will be last, who in truth were not first but only seemed so. On the other hand, those who here were judged last and abject will be first and chosen to reign with Christ - something that must finally be referred to the grace and liberality of the one paying. For although he duly remunerates the merits of works, nevertheless, because he gave the grace by which they might merit, the whole must be ascribed to his grace. Thus the Apostles, on whose occasion the parable was introduced, beyond all expectation will appear seated on twelve thrones, to judge the twelve tribes of Israel.

In the second place, the murmuring of the laborers is to be explained. This is to be applied spiritually, not to those who will truly receive together with others the reward of eternal life. For since in that distribution equality must be maintained, there will be no cause for murmuring or astonishment. Rather, the murmuring must be applied to those who in this life seemed to be first, but in reality were not, and afterwards in the kingdom of heaven appeared as last, such as the Scribes and Pharisees. These, therefore, will speak against the Lord, that when they themselves

were reprobated, God by his grace chose and preferred publicans and sinners, whom they held in contempt and placed in the lowest place - not that they received an equal reward with them for a lesser labor. For just as, at the beginning of the nascent Church, the Jews envied the Gentiles because the grace of the Gospel also benefited them, so on the last day of judgment the Scribes and Pharisees will envy the publicans, and complain against God that he chose them by his grace in that manner.

An objection: Someone objects that this application does not agree with the very narrative of the parable. For the laborers did not murmur because the householder had preferred the last before them in the labor, but because he had made them equal in payment; therefore the spiritual murmuring must also be understood to have been made on account of the equality of the payment and of the wage.

It is answered: Although in the narration of the parable the first laborers seem to complain of the householder because he had made the last equal to them in the payment - and thus the letter sounds - yet in reality the complaint was that he had preferred the last before them. For to have made them equal in the distribution of the wage was the same as in reality to have preferred them: for an equal wage was given for a lesser labor, which in proportion was much greater; and, besides, because the last received the reward of labor in the first place. Therefore the cause of the murmuring was that the last were in reality preferred to the first, to which the whole parable seems to tend, as has been said. Therefore in the same way, on the day of judgment, the Scribes and Pharisees, when they are cast out of the kingdom of heaven and are not allowed to recline in the bosom of Abraham their father, but the Gentiles coming from the East and the West are admitted, will murmur against the Lord that he has set them before them in the kingdom of heaven.

In the third place, from what has been said, the answer of the householder can be easily explained and accommodated: "Friend, I do thee no wrong: didst thou not agree with me for a denarius? Take what is thine and go," for this, according to the aforesaid interpretation, is not to be understood thus, as if to the Pharisees - who were thought the first laborers and were made the last - some reward of beatitude had been previously promised and paid, and so it had been said to them, "Take what is thine and go." For it is clear from the foregoing that they were wholly cast out of the kingdom of heaven. But just as the householder, defending what he had done in giving to the last, out of liberality, what was not owed to them, answered one of the first laborers, "Friend, I do thee no wrong," that is, that I prefer the last to thee in the payment; for thou didst agree with me for a denarius; and so what is thine is nothing else: therefore take what is thine and go. But I wish also to grant this favor to this last man, that for the least labor he may receive an equal wage: which truly it is lawful for me to do by my own substance - so also the Lord, on the day of judgment, to the Pharisees complaining that they were cast out of the kingdom, but the Gentiles admitted, will answer: "Take what is thine and go," namely thy sin: is it not lawful for me to choose these Gentiles, who were thought the last, not by their merits, but by my grace, which I had justly denied to thee? Therefore, "Take what is thine and go." But that other statement, "Didst thou not agree

with me for a denarius?" is brought in for this sole purpose, that the Lord may show no wrong had been done to the Pharisees who were cast out, because nothing had been taken away from what was theirs.

Finally, what is added at the end, "But I will also give to this last, as to thee," is to be understood, as we were just saying, not in this sense, that the last were only made equal to the first - for thus the lot of all would have been the same - but that they were preferred. Therefore "To give to this man as to thee" amounts to this, that I prefer this last man to thee: for the payment which seemed equal to all was richer to the last laborers. In the same way the Lord would say to the Pharisee, "Take what is thine and go: but I will, by my grace, prefer this last Gentile to thee in my kingdom": for this is the spiritual sense of that saying, "To give to this man as to thee." From all these things it is clear how vain is the argument of Io. Jovinian, who from this parable drew, contrary to Catholic truth, the denial of diversity of reward and of vision.

But John Major, in IV Sentences, dist. 49, q. 1, objects that it is in no way possible that an Angel and a man, who have had equal merits in the way, should also obtain, as reward, an equal vision of God. Since the intellect of the Angel, which is its proper passion, and the intellect of the man differ in species, it is necessary that their operations differ in species. For things which demand to be produced by diverse principles according to species differ in species; but, on the contrary, things which are of the same species and nature demand to be produced by a principle of the same species. If, then, the operations of the angelic and human intellect are different in species, it follows that the visions also, by which they see God, are different in species; and if the visions differ in species, it comes about that one is more perfect in perfection than the other; and hence, however much one becomes more intense, it can never arrive at the perfection of the other.[748]

Major answers that indeed the intellect of the Angel and of the man differ in species; and hence the intellections and even the visions which they have of God, as the proposed argument proves, differ in species; nevertheless, on account of the diversity of merits, God can be seen more perfectly by the human intellect than by the Angel, if the very vision which the man has is perfected in intensity within the latitude of its own species and nature: just as gold, which by its nature, according to species, is more perfect than silver, yet, if an addition be made to silver according to quantity, can in value surpass gold.

For "species" are not said to differ among themselves by an infinite distance because one is infinitely more perfect than another (for all are of finite perfection), but because the lower, however much it be perfected from elsewhere, can never attain to the nature and perfection of the higher: wherefore they seem to be separated by an infinite interval, which cannot be passed across. The example too is different: for however much silver be multiplied, although in the estimation of men, so far as contracts and the usefulness of the present life are concerned, it may be able to be more precious than gold itself, yet it cannot arrive at the natural nature and perfection of gold. Thus, therefore, the vision of God which is from the human intellect, if it is of a lower nature

748. John Major, In IV Sent., dist. 49, q. 1.

according to species, will not be able, in natural perfection, to be equated to the vision which is produced by the angelic intellect; and consequently the Angel will be blessed in a more perfect manner, even if the vision which he has of God be remisser.

I answer, therefore, to the argument with Durandus in III Sentences, dist. 14, q. 1, n. 8, and Domingo de Soto in IV Sentences, dist. 49, q. 3, art. 2, that the vision of God in an Angel and in a man is of the same nature according to species. Wherefore the absurdity which he was contending for does not follow. Durandus proves this because grace and merits in man and in Angel are of the same species; therefore the vision of God, which corresponds as the reward, will be of the same species. Others prove it from that Matt. 22 and Luke 20, "They shall be as the Angels of God"; but there is no one among the Fathers, nor among recent interpreters of Scripture, who understands that place thus: for there it is not of the vision, but of the incorruption of the future life that it is treated, as I noted in article 1 of this question, disputation 37, chapter 2.[749]

Far better is it proved thus: for although the intellect of the Angel and of the man is distinguished in species, and the effect which their nature can of itself produce proceeds diversely according to species, it does not follow that the vision of God produced by the angelic intellect and that produced by the human differ specifically. For here we must say that a specific cause is not the diversity of the generic principle, but of the specific and particular principle. Now, as to the effect - namely, the vision of God - whether it is produced by an Angel or by a man, the very principle that determines the universal efficacy of the intellect to the species of the vision of God is the same: the light of glory (lumen gloriae), which in place of a specific form and as a particular principle is one and the same in the angelic and in the human intellect; and it determines the universal efficacy of the intellect to the species of the vision of God. And the same reasoning holds of the love of charity (caritas) in the will of the Angel and of the man: for the same is the particular and specific principle, namely charity. This reasoning is indicated by Soto in the place cited.[750]

Diluted is the second argument against the same doctrine.

There is, in fact, another very difficult argument, which divided many of the Scholastics into various opinions, and it is of this sort. It can happen that two men have in this life equal merits, of whom one is endowed with a better intellect: then, however, according to the quality of the merits, they will obtain an equal light of glory (lumen gloriae); but with an equal light, he who is more perfect will operate more perfectly: therefore he will see God more perfectly. Conquered by this argument, many Nominalists - whom we will cite at I - II, q. 3, a. 2, disp. 2 - said that the beatific vision and the love of charity in the homeland are not operations elicited by the soul, but are infused in the blessed by God alone; and by this reasoning they escape the force of the argument, and show how, with an equal light, the less perfect intellect can see God equally with the more perfect.[751]

749. Durandus, In III Sent., dist. 14, q. 1, n. 8; Domingo de Soto, In IV Sent., dist. 49, q. 3, a. 2. On Matt. 22 and Luke 20, see above, article 1 of this question, disputation 37, chapter 2.

750. Domingo de Soto, In IV Sent., dist. 49, q. 3, a. 2.

751. On the Nominalist position, see the discussion promised at I - II, q. 3, a. 2, disp. 2.

But since I think it impossible that the operations of life, such as cognition and appetite, be produced by God alone without the faculty of the living subject, it must be answered otherwise. And truly, as far as the present question is concerned, the argument could be easily dissolved: for if the more perfect intellect, with an equal light, were to see more perfectly, God could, with due proportion of merits observed, bestow upon the perfection of the intellect which, while having equal merits with a lesser intellect, is the more perfect, so much the less of the light of glory as is in reality necessary, that each may see God equally; and thus equal rewards of the prize would follow.

On the occasion of this argument, however, it also pleases me to examine something further, and to see whence indeed the measure of vision is to be taken

It is asked from where the measure of the vision is to be taken; whether from the perfection of the natural intellect, or from the quantity of the light. In this matter the Doctors who affirm that the vision is produced by the intellect itself think variously.

Prior opinion. Richard, in IV Sent., dist. 49, art. 2, q. 8; Major, q. 10, ad 7, argum.; Scotus, in IV, dist. 50, q. 6; Durandus, in III, dist. 14, q. 1, ad ult.; Robert Holcot, in his Determinations, q. 8, art. 1, ad 4, assert that, an intellect more perfect, being furnished with an equal light of glory, sees God more perfectly.[752]

Argument one. This opinion is proved, first, because a more perfect cause with an equal instrument not only works more perfectly, but also an equal cause with a more perfect instrument - a thing manifest to all: therefore, whether we say that the intellect is the principal cause and the light its instrument, or conversely; we must always assert that, from a more perfect intellect with an equal light, God is seen more perfectly. And the same follows if we say that neither the intellect is the instrument of the light nor conversely, but that they are two subordinated causes concurring, as it were, by the mode of one, to the same effect. For from this it also follows that the vision will be more perfect from a more perfect intellect: for the more perfect is the cause which to the same effect aids another, the more perfect also is the effect.

Second argument. Then, just as a more perfect intellect with an equal species works more perfectly, so in like manner, with a greater light of glory, it will better see God. Nor does this happen only in natural matters, but also in supernatural ones: for a more perfect intellect, with the same habit of faith, penetrates many mysteries far better than a less perfect intellect.

The latter opinion is true. For my part, however, I approve the opinion of Soto in IV, dist. 49, q. 3, art. 2, and of recent authors, who say that the measure of the vision must altogether be taken from the quantity and perfection of the light, and in no way from the native efficacy of the intellect.[753]

First explanation of that opinion. Soto gives this reason first: since the act is above the nature of man, the measure ought to follow the light, which is the supernatural principle; just as, when water is heated by heat communicated to it above its nature, the whole measure of the heating

752. Richard of St. Victor, In IV Sent., dist. 49, art. 2, q. 8; John Major, q. 10, ad 7, argum.; Scotus, In IV, dist. 50, q. 6; Durandus, In III, dist. 14, q. 1, ad ult.; Robert Holcot, Determinationes, q. 8, art. 1, ad 4.

corresponds to the heat which is in the water, and answers to it. This example has the greatest force against Cajetan, and certain philosophers, who think that the intellect of itself has no efficacy for understanding, but that the whole is communicated to it by the species, as heat to water - inasmuch as the latter becomes more one with it than matter and form are one.[754] For if in us the whole power for acting is the species itself, the light of glory also in the blessed will be the whole power for seeing God, since it stands in the place of the species, or is the very species of the divine essence itself.

But in the opinion of those who say that the intellect of itself is second toward understanding, whatever efficacy it has, because it is common and generic, ought to be completed by some peculiar form for producing this effect rather than another: the aforesaid example has no weight. For water heats by heat conjoined to it in such a way that it contributes nothing of power with it, but the whole efficacy is that of the heat; water, however, is only the subject to which the heat adheres, that it may exist and operate; wherefore by the philosophers it is wont to be called the vehicle of heat. The intellect, however, contributes something by its own efficacy to the vision, so that the vision depends by essential connection upon it, and God cannot make up its concurrence with the light, as we shall say at I-II, q. 3, art. 2, disputation 2.[755] Therefore the difficulty of the arguments for the first opinion remains.

Second explanation. Others distinguish two things in the vision of God, namely its substance and its mode. They say that the substance is of the natural order, and that it is produced by the intellect by its natural power; wherefore the measure of it is in this way to be taken from the natural power of the intellect. But the mode is supernatural, and is conferred by the light alone as proper cause; and from this the measure of its perfection proceeds. Beatitude, however, is not the mere vision according to its natural being which it has, but according to the supernatural mode of it: and hence with equal light there is always equal beatitude.

This is a contrivance. Indeed, if this doctrine and distinction were true, it would entirely remove the difficulty for the first opinion; yet since it is plainly fictitious, the latter opinion cannot be defended or explained in this way. The figment of this doctrine is shown thus. That in the clear vision of God we may distinguish those two, we must first establish some cognition produced in species, to which a supernatural mode should come as, so to speak, an accident supervening; and yet we are not able to assign any operation of this sort there which by its nature is natural, nor to understand a mode added to it: therefore that distinction is contrived. Now that there is no operation in the vision which by its nature is natural is evident: for that operation, according to its substance, must be a cognition of some object - not other than God Himself: therefore it is either clear and intuitive, or obscure and not intuitive. Not, indeed, obscure: for thus it would be of faith, or such as we have of Him on the way: wherefore afterwards clearness could not supervene to it, that it might become intuitive; for thus it would be altogether changed: not clear and intuitive; for this is altogether above nature, and by his natural strength man cannot attain to it. Therefore no

753. Domingo de Soto, In IV Sent., dist. 49, q. 3, art. 2.
754. Cajetan; and certain philosophers who hold that the intellect's efficacy is wholly from the intelligible species.
755. See above at I-II, q. 3, art. 2, disp. 2.

natural cognition can even be conceived according to substance, to which a supernatural mode should be added, that it might become the clear vision of God as He is: nor, moreover, can that mode be conceived, much less explained - what its nature is, in what it consists, and in what way it should supervene to the operation of the intellect. Therefore this seems rather an evasion devised without foundation, than true.

Third explanation. Certain others, coming nearer to the very matter, confirm the latter opinion, and answer the argument of the former in this way: since the light of glory is the principal cause of the vision, and the intellect is an instrument, the vision ought to follow the perfection and measure of the light, not of the intellect. However, although this is true in material subject-matter, yet it does not happen so universally: for, as we were saying for the former opinion, an equal cause with a more perfect instrument works better; just as the carpenter with a better adze or saw makes a better bench or chair. Wherefore, in like manner, the difficulty proposed still remains for the former opinion, to which, that it may be fully satisfied, we must say something else and examine this matter more deeply.

First foundation. Therefore, for the sake of this matter, it must be premised first, that the light of glory (*lumen gloriae*) is, as it were, the principal cause of the vision, but the intellect is, as it were, an instrument subject to the power and efficacy of the light: because the vision is a supernatural operation and of an order higher than our intellect, by reason of which the intellect is said to be elevated by the light to such an operation beyond its natural order. Therefore the light of glory is compared otherwise to our intellect than the intelligible species impressed and acquired from things: for these do not elevate the intellect, nor act upon it, nor imprint a power upon it; rather the intellect gives a second act to the species, and moves it to the vision, and elevates it, and has it as, so to speak, an instrument subjected to itself - although the universal, as it were generic, efficacy of the intellect is determined and completed by the species to this intellection rather than that to be elicited.

Second foundation. Then it should be noted that our intellect is compared with the light of glory by way of instrument otherwise than an adze or saw is compared with an artisan. For these instruments of the craftsman have an action of their own, namely cutting, to which, as to a subject, the effect of art accrues, that is, the mode by which the very cutting is rendered (as it is wont to be said) artful. Hence it happens that it can be perfected in the notion of cutting even if it is not perfected in the notion of artfulness: wherefore an equal artisan with a better adze makes a better work of art, inasmuch as the work of art consists of two things - of the cutting, which with a better instrument is better; and of the mode of art, which proceeds equally perfect from an equal art. Conversely, however, because the mode of art supposes that action of cutting, by so much the less perfect is the work from an equal art, by how much the instrument is less apt; for the mode of art has its foundation in the cutting, and from there too it can be impeded. But the intellect and the light concur to the same vision as two causes ordained between themselves: one is universal, according to the generic notion of the operation, namely the intellect to intellection, inasmuch as intellection is; the other is particular, according to the specific notion, namely the light of glory to intellection, inasmuch as it is clear or intuitive of God Himself.

Therefore the proposed difficulty is easily answered, and the latter opinion is proved. For since some effect cannot be perfected according to the generic notion unless it be perfected according to the specific notion - because it is the same individual according to reality - it follows that the vision cannot be perfected on the part by which it is from a more perfect intellect, namely in the notion of intellection, unless it also be perfected inasmuch as it proceeds from the light; therefore the perfection and measure of the vision are to be set according to the perfection of the light.

It proceeds, namely, according to the notion of such an intellection. But if the light in two intellects is equal, even if one be more perfect, it follows that the future vision will be equal: for, insofar as it is such, it ought to be equally perfect, since it is from an equal light; and otherwise it cannot be perfected, unless, insofar as it is such, it be perfected: therefore in each it will remain in the same way. Wherefore the intellect will stand in relation to the vision as universal causes to particular effects. For just as the universal power of such causes is such that it can produce a better and better effect, nevertheless it is limited and determined according to that which the second cause, with which it is conjoined, demands, nor does it produce a better effect than the power of the second cause calls for, which is modified universally; so our intellect, which of itself has a universal power and could produce a better and better vision, is determined by the light of glory (*lumen gloriae*) to this vision, so that with the same light it cannot produce a more perfect one. In the same way something must be said of the will with the habit of charity.

But as to the craftsman and the instrument there is another account: since they do not concur to the same effect according to species, but in the effect there are two things altogether different in species, namely, the cutting and the artificed mode, the effect can be perfected in that part in which there is cutting, even if it be not perfected according to the artificed mode; and thus, with a better instrument, an equal art produces a better effect. Then also, since the cutting itself, according to the notion of cutting, greatly conduces to the artificed mode, as has been explained, it also happens that the same craftsman with a better instrument effects a better mode also of the artificed work.

But concerning the intellect with a species acquired from things, the account is not the same as concerning the very light of glory. For the species is as it were a particular agent modifying the universal power of the intellect, just as we said of the light, so that it lies under the intellect as an instrument and is made to act by it; wherefore it too is moved by it according to the greater or lesser effort which it applies, to produce a lesser or greater effect: but the light of glory, since it is of a supernatural order, raises up the intellect, renders it able for seeing, and moves it itself; indeed, by its power it draws it after itself as far as it can. Whence it comes about that it always sees God in the same way, nor can it in the least remit the vision: therefore we rightly said that the measure of the vision must be taken from the very light.

From these things that have been said, not only does our opinion remain sufficiently explained and confirmed, but also the two arguments of the former [objection] are altogether solved.

It remains that we say something to that which was brought forward in confirmation of the second argument, about a more perfect intellect for knowing the mysteries of faith. In the act of faith two things can be distinguished: one is, as it were, material - namely, the cognition and

apprehension, or the explication of the mysteries; and since this is not done through infused species, but acquired ones, and a more perfect intellect uses the acquired ones more perfectly, as we were just now saying, it follows that it is more perfect in the better intellect: and thus a Doctor of Theology apprehends and expounds the mysteries of our faith much better than one who is ignorant and rustic. The other is the assent to the proposition, which is from the habit of faith: and this is not more perfect the more perfect the intellect is, but the more perfect the habit is and the greater is the excitation of divine grace. For we do not always use the habit of faith or another infused [habit] according to the whole power and efficacy which it has, but insofar as the grace that excites moves to consent and assent.

But someone will object in this way: our intellect can use the habit of faith more and less, and the will can do so with the habit of charity: therefore the perfection of their acts is not to be taken from the habit, but entirely from the effort of our will and intellect. It is answered that we cannot have an act more perfect than the habit itself and its power demands, unless God supply by His aid the efficacy of it: whence the measure of a supernatural operation is to be taken from the habit in this sense, that at least its efficacy not be exceeded; although a man can sometimes act more remissly with these habits, because in this life we do not use them necessarily, but they are subject to our liberty: but the light of glory so necessarily impels the intellect to see God as He is, that he can neither see Him less nor more clearly than the power of the light demands.

Finally, it is to be briefly explained in what way in the blessed the vision of God can be clearer without anything in God appearing which did not appear by a less clear vision: for in bodily vision it never happens that something is seen more clearly without something new appearing in the thing seen. It must therefore be said that in God, since He is most simple, nothing can newly appear, no matter how much the vision be rendered clearer: since, being most simple, either the whole that is in Him is seen, or nothing. But in a visible bodily thing, either according to intension or according to extension, something new always appears, the more the vision is perfected. Moreover, just as in a bodily thing, when it is seen more clearly, not only does something new appear, but that which did appear is seen more clearly, so in the vision of God it must be said that the very same thing that was seen by a less clear vision appears by a clearer [vision] more perfectly and more clearly; and this perfection is in the vision itself, which, just as it has degrees of intension, so also has [degrees] of clarity. Nor do I think we must dwell any longer on this matter, in which certain recent authors invent many things and toil without fruit.

Articulus VII - Whether those who see God through His essence comprehend Him

To the seventh, the proceeding is thus.

It is objected that those who see God through His essence do comprehend Him. For the Apostle says, Phil. 3: "I follow after, if by any means I may comprehend."[756] But he did not follow in vain. For he himself says, 1 Cor. 9: "So I run, not as uncertainly."[757] Therefore he himself comprehended; and by the same reason others, whom he invites to this, saying: "So run that you may comprehend."[757]

Further, St. Augustine says in the book On Seeing God to Paulina: that is comprehended which is so wholly seen that nothing of it is hidden from the seer; but if God is seen through His essence, He is wholly seen, and nothing of Him is hidden from the seer, since God is simple: therefore by whomever He is seen through His essence, He is comprehended.[758]

But on the contrary: it is said in Jeremiah 32: "Strong, great, mighty art Thou; Lord of hosts is Thy name: great in counsel, and incomprehensible in thought." Therefore He cannot be comprehended.[759]

I answer that to comprehend God is impossible for any created intellect to attain; yet to see God in any way whatsoever is great beatitude, as Augustine says.[758] For the evidence of which, it must be known that that is comprehended which is known perfectly; but that is known perfectly which is known as much as it is knowable. Whence, if that which is knowable by demonstrative science be held by opinion conceived from some probable reason, it is not comprehended; for example, if someone knows by demonstration that a triangle has three angles equal to two right angles, he comprehends that. But if someone should accept its opinion probably, on this account that by the wise or by many it is said thus, he does not comprehend it: because he will not reach that perfect mode of cognition by which it is knowable. But no created intellect can reach that perfect mode of cognition of the divine essence by which it is knowable, which is clear thus. Each thing is knowable according as it is being in act (*ens actu*). Therefore God, whose existence (*esse*) is infinite, as has been shown above, is infinitely knowable. But no created intellect can know God infinitely. For a created intellect knows the divine essence more perfectly or less perfectly inasmuch as it is flooded with a greater or lesser light of glory (*lumen gloriae*). Since therefore a created light of glory, received in any created intellect, cannot be infinite, it is impossible that any created intellect know God infinitely. Whence it is impossible that he comprehend God.

Reply to the first: Comprehension is said in a twofold way. In one way strictly and properly, according as something is included in that which comprehends. And thus in no way is God comprehended, neither by an intellect nor by anything else: because, since He is infinite, He can be included by no finite [thing], so that something finite contain the infinite; just as He Himself is infinite. And of comprehension thus understood is the present question. In another way comprehension is taken more broadly, according as comprehension is opposed to pursuit. For he

756. Phil. 3:12: "Sequor autem si quo modo comprehendam."
757. 1 Cor. 9:26; cf. Phil. 3:12 - 14.
757. 1 Cor. 9:26; cf. Phil. 3:12 - 14.
758. St. Augustine, Epistula 112, De videndo Deum ad Paulinam, cap. 9, circa principium.
759. Jer. 32:19: "Fortissime, magne, potens, Dominus exercituum nomen tibi: magnus consilio, et incomprehensibilis cogitatu."
758. St. Augustine, Epistula 112, De videndo Deum ad Paulinam, cap. 9, circa principium.

who attains someone, when now he holds him, is said to comprehend him. And thus God is comprehended by the blessed, according to that of Canticles 3: "I held him, nor will I let him go."[760] And in this way are understood the authorities of the Apostle concerning comprehension. And in this way comprehension is one of the three endowments (*dotes*) of the soul, which corresponds to hope, as vision to faith and fruition to charity. For with us not everything that is seen is already held or had, because sometimes things at a distance are seen, or things that are not in our power. Nor again do we enjoy all the things that we have, either because we are not delighted in them, or because they are not the ultimate end of desire, so that they fill and quiet our desire. But the blessed have these three in God: for they both see Him, and by seeing hold Him present to themselves, having it in their power always to see Him; and holding, they enjoy [Him], as the ultimate end filling desire.

Reply to the second: God is not on this account called incomprehensible as if there were something of Him that is not seen, but because He is not seen so perfectly as He is visible: just as when some demonstrable proposition is known by some probable reasoning, there is not something of it that is not known, neither the subject, nor the predicate, nor the composition; but the whole is not known so perfectly as it is knowable. Whence Augustine, defining comprehension, says that "the whole is comprehended by seeing which is so seen that nothing of it is hidden from the seer," or "whose bounds can be surveyed or circumscribed"; for then the bounds of something are surveyed when one comes, in the mode of knowing that thing, to its limit.[758]

Reply to the third: "Totally" says the mode of the object; not indeed so that the whole mode of the object fall not under cognition, but because the mode of the object is not the mode of the knower. Therefore he who sees God through His essence sees this in Him, that He exists infinitely and is infinitely knowable. But this infinite mode does not befit him, namely, that he himself know infinitely. Just as someone can know probably that a certain proposition is demonstrable, although he himself does not know it by demonstration.

Conclusion of the article: Those who see God clearly do not comprehend Him; concerning the explication of which and the exposition of the mind of St. Thomas, in disputation 52 and the following we shall say more.

Articulus VIII - Whether those who see God through His essence see all things in God

Objicitur: It seems that those who see God through His essence see all things in God. For St. Gregory says: "What is there that he does not see, who sees him who sees all things?" But God is the one who sees all things; therefore those who see God see all things.[761]

760. Cant. 3:4: "Tenui eum, nec dimittam."
758. St. Augustine, Epistula 112, De videndo Deum ad Paulinam, cap. 9, circa principium.
761. St. Gregory the Great, Dialogi, book 4, chapter 33: "Quid est quod non videat, qui videntem omnia videt?"

Again, whoever sees a mirror, sees the things that shine in the mirror. But all things whatsoever that come to be, or can come to be, shine in God as in a certain mirror: for He Himself knows all things in Himself. Therefore whoever sees God, sees all things that are and that can be.

1. Moreover, he who understands what is greater can understand things that are least, as is said in On the Soul III. But all the things that God does or can do are less than His essence. Therefore whoever understands God can understand all the things that God does or can do.
2. Moreover, a rational creature naturally desires to know all things. If, therefore, by seeing God he does not know all things, his natural desire is not at rest. And thus by seeing God he will not be blessed - which is unfitting. Therefore by seeing God one knows all things.

Sed contra: The Angels see God through His essence, and yet they do not know all things. For the lower Angels are purged by the higher from ignorance, as Dionysius says in the Celestial Hierarchy VII. They themselves also do not know future contingents and the thoughts of hearts. This belongs to God alone. Therefore not everyone who sees the essence of God sees all things.[762]

Respondeo: I answer that a created intellect, by seeing the divine essence, does not see in it all the things that God does or can do. For it is manifest that things are thus seen in God, according as they are in Him. But all other things are in God as effects are virtually in their cause. Therefore all things are seen in God as effects in their cause. But it is manifest that the more perfectly a cause is seen, the more of its effects can be seen in it. For one who has an elevated intellect, as soon as one demonstrative principle is set forth, from it receives the knowledge of many conclusions. This does not befit one who is of a weaker intellect; rather, each item must be explained to him. Therefore that intellect can know in the cause all the cause's effects and all the reasons of the effects, which totally comprehends the cause. But no created intellect can totally comprehend God, as has been shown. Therefore no created intellect, by seeing God, can know all the things that God does or can do. For this would be to comprehend His power. Yet of those things that God does or can do, the more perfectly someone sees God, the more of them does his intellect know.

Reply to the first: Gregory speaks with respect to the sufficiency of the object, namely of God, who, as far as lies in Himself, sufficiently contains and manifests all things. Yet it does not follow that each and every one who sees God knows all things, because he does not perfectly comprehend Him.

Reply to the second: One who sees a mirror does not of necessity see all the things in the mirror, unless he comprehends the mirror by his sight.

Reply to the third: Although it is greater to see God than to see all other things, nevertheless it is greater to see God in such a way that all things are known in Him, than to see Him in such a way that not all, but fewer or more things, are known in Him. For it has already been shown that the multitude of things known in God follows the mode of seeing Him, whether more perfect or less perfect.

762. Pseudo-Dionysius, De coelesti hierarchia, cap. 7.

Reply to the fourth: The natural desire of a rational creature is to know all those things that pertain to the perfection of the intellect, and these are the species and genera of things, and their reasons, which everyone seeing the divine essence will see in God. But to know other singulars, and the thoughts and deeds of persons, is not of the perfection of a created intellect; nor does its natural desire tend to this; nor again to know those things which are not yet, but can be made by God. Yet if God alone were seen - who is the fount and principle of all existence (*esse*) and of truth - He would so fill the natural desire of knowing that nothing else would be sought, and one would be blessed. Whence St. Augustine says: "Unhappy is the man who knows all these things, namely creatures, but does not know You. But blessed is he who knows You, even if he does not know those things. And he who knows You and them is not more blessed because of them, but because of You alone he is blessed."[763]

Conclusion: The blessed do not know all things possible in the divine essence; nevertheless they see some, and each sees the more, the more perfectly he sees the essence of God. The common opinion holds that, for the nature of comprehension, it is necessary that nothing of that which one comprehends by his vision lies hidden from the one seeing, as we shall see in disputation 52. Of the things, moreover, which comprehension ought to embrace and which pertain to the thing comprehended, some are intrinsic to it and in it formally (as proper predicates), others are extrinsic (as effects); and in this way possible creatures are referred to God. It will therefore be worth the effort, before we treat of comprehension in disputation 52, to examine whether the blessed, besides those things which are formally in God, can know all His effects; and because St. Thomas disputes this in article 8, it has pleased us to explain these two articles together, and to set our disputations in the following order.

- Whether one seeing God as He is necessarily sees the things that are in Him formally. Disputation 48.
- What Scotus and others with him think. Chapter 1.
- The common and truer opinion. Chapter 2.
- The passage of John 14 ("He who sees me, sees also my Father") is explained. Chapter 3.
- Scotus's arguments are answered. Chapter 4.

Disputatio XLVIII - Whether one who sees God as He is necessarily sees the things that are in Him formally

Caput I - What Scotus and others with him hold

In this disputation it must be discussed concerning the attributes and the persons, whether, according to all their perfection, they are necessarily seen by the blessed together with the essence; and on this point there are various opinions of the Scholastics. Let the first be that of Scotus in I, distinction 1, question 2, who asserts two things: first concerning the intellect, namely, that a

763. St. Augustine, Confessiones, book 5.

creature cannot by its own power and faculty see the essence without seeing the persons; and concerning the will, that the created will cannot enjoy the essence without enjoying the persons.[764] He proves the point about the intellect because it is not a free faculty, but, the object having been manifested, it is carried toward it naturally and necessarily, for the reason that it is manifest: but God shows Himself in three persons; therefore it is not in the power of the intellect not to be carried toward Him precisely as He is in the three. As to the will he proves the same, since although it is a free faculty, and enjoyment and love of God even in the fatherland are within its power (as he too had taught in the same distinction, question 4, article 1), nevertheless the negative of this article is not free to it, namely, to enjoy in this or that way; but, the object being posited, if it wills to enjoy that object, it ought to enjoy and love it in the mode in which it is objected. Wherefore, if He is objected in three persons, it must necessarily enjoy the very persons, if it wishes to go forth into act. For although it is within someone's power as to an operation - such as the act of sinning - to do it or not do it; yet it is not free that malice not follow upon his operation, if he operates. Hence he gathers that not only de facto is God seen in three persons, but also that He cannot be seen in any other way without a miracle; indeed, it would be a miracle if God were to show His essence without manifesting the persons.

Scotus teaches another thing in that question 2, 9, with respect to this article, namely, that by His absolute power, and aside from the common course and law, God can bring it about that the essence alone is seen, with the persons not seen, and that one is seen without another - there being nonetheless perfect beatitude. And that by this vision alone someone can be made blessed, Scotus proves, because the eternal Father, in the priority of origin, before He is understood to have a Son, by His very own essence is understood as blessed, the persons not yet being understood; therefore a man seeing the essence alone without the persons would in the same way be perfectly blessed. But that the divine essence can be seen with the persons not seen, we can prove from his doctrine. For since the essence is distinguished from the persons by a distinction of the nature of the thing, as from his view we shall report below in disputation 120, it follows that the essence can be seen without the three persons, or without any one of them; which is confirmed also on this ground and is further explained as follows. Just as the essence is communicated to the Son, paternity not being communicated, and filiation terminates the human nature in Christ, without the nature and essence of the Son terminating it, why will it not be able that the essence be seen while the person is not seen, or even conversely, so that one terminates the clear vision and another does not terminate it? And although Scotus in that question 2, 5 (Ista quaestio) proposes only that the question be examined concerning essence and persons, and not yet about essence and attributes - because (he says) it has not yet been shown how they are distinguished among themselves and from the essence - nevertheless from his doctrine the very same entirely follows, namely, that the essence can be seen without the attributes, and one attribute without another; for in I, distinction 8, question 4 he affirms that they are distinguished from the essence and among themselves by a distinction of the nature of the thing.

764. Scotus, In I Sent., d. 1, q. 2; and the same, d. 4, q. 1.

In favor of this view, insofar as it speaks of the vision of one attribute without another, some are cited - Capreolus on I, distinction 27, question 2, article 3, to the 8th; Durandus against the first conclusion; Ferrarien. against the Gentiles, chapter 53; and Cajetan in this, the first part of question 27, article 1, to the third doubt - who, in my judgment, teach nothing of the sort.[765]

Capreolus, then, asserts that the blessed form one single word of the divine essence and of the persons and of all the attributes, yet habitually several words concerning the attributes and concerning creatures seen in God; whence sometimes more, sometimes fewer are expressed by him. This opinion is reported by Ferrarien., yet he neither approves it nor gives any judgment on this matter. From this, however, Capreolus does not affirm that one attribute can be seen without the essence, or the essence without the persons; but he is speaking either of words expressed by a non-intuitive cognition of God Himself, such as we have of Him on the way; or, if he speaks of intuitive cognition, he understands those multiple words to be formed in order to distinguish according to reason one attribute from another - yet in such wise that, without the word by which the whole divine essence is seen together with the attributes, these distinct words could not be formed.

Cajetan, for his part, teaches only that the blessed cannot express a word adequate to the cognition which they have of God, because they know more than they are able by the word of their mind to say of Him; whence he proves that those who see God as He is express no word proportioned to their vision - so far is he from either following Capreolus's view or favoring Scotus.

Into that same opinion concerning the attributes there are wont to be alleged Richard in the third book, distinction 14, article 1, question 4, to the last, and St. Bonaventure in article 1, question 2, as if they asserted that something of the profundity of God Himself is hidden from the blessed. But they assert nothing of the sort: they only teach that God is not known by the blessed altogether according to that which is demanded for being known - something which they understand on the side of the mode of knowing, not on the side of the thing known. Yet Ferrarien. seems to favor that opinion in Contra Gentiles III, chapter 56, paragraph "Pro solutione," toward the end of that chapter, when he asserts that the infinity of God is seen by the blessed according to every degree of intensity, "as to a certain extent" (he says), "not distinctly distinguishing in Him every degree of being, and every relation to the effects which He is able to produce." He then adds that the blessed are not able in God to distinguish all the things that can be distinguished in Him, according to the mode which we have reported from Capreolus. Whether, however, one thing can be seen in God without another, as Scotus contends, from among the things which we say to be formally in God - so that one should appear and another lie hidden - he does not determine.

Caput II - On the common and truer opinion

And enough has been said about the opinion of Scotus, and of those who follow it.

Common and truer opinion.

765. Capreolus, In I Sent., d. 27, q. 2, a. 3, ad 8; Durandus, ad primam conclusionem; Ferrariensis (Franciscus de Ferrara), Contra gentiles, cap. 53; Cajetan, In Iam, q. 27, a. 1, ad 3.

To behold anything formally of God, all things are necessarily opened.

PVT II.

Granted the opinion which in the schools is indeed common, it not only commends itself to me, but I also think it can be demonstrated by evident reason. The opinion is this: that by the clear vision the blessed see all the things that are formally in God, in such wise that the Blessed cannot behold one without the other; nor can they behold the essence (*essentia*) without the persons, or conversely; nor one person without another; nor the essence without the attributes, or conversely; nor one attribute without another. Thus teach Henricus, quodlib. 13, q. 1; Cajetan, II - II, q. 2, a. 8; Dominicus Soto, In IV, d. 49, q. 3, a. 3, concl. 2, in the exposition of that point; and the more recent Thomists commonly.[766] Moreover, Soto in that conclusion affirms that the divine essence cannot be seen without the persons by an apprehensive knowledge (which he calls intuitive), yet it can be by a judicative knowledge; and he explains it thus, that that judicative knowledge is not the vision itself, but a certain cognition which the blessed possess together with the clear vision of God Himself, as they also have on the way (in via). For concerning the clear vision, whether it be taken as an apprehension or as a certain judgment about God, he thinks one ought to say the same, namely, that the essence cannot be seen without the persons, nor conversely. And this, in my judgment, everyone ought to admit; for that same vision of God has the character both of simple apprehension and of judgment at once.

This opinion, by a single reason, and that in my judgment an evident one, is established, on the supposition of a certain principle - which we shall prove no less clearly, both from the principles of faith and from natural philosophy, below in disputation 120 - namely, that in God, on account of His supreme simplicity, the essence is altogether the same as the persons and the attributes, and the very attributes among themselves; so that, from the nature of the thing, there is no diversity at all, not even the least distinction. Wherefore, from the nature of the thing, there are not in God a plurality of perfections which we name attributes, nor does the same attribute have any latitude of intensification; but all those things which, by reason of our defective cognition on the way, are distinguished by us, are in God like a point altogether undivided - which will be proved in that disputation.

With this supposed, I prove our opinion in the present question thus: the vision whereby the blessed behold God is the vision of God Himself as He is, so that He does not appear in the blessed's mind otherwise than He is in Himself. But in Himself He is altogether simple, and nothing in Him is distinguished from another, except the three persons, who are really distinct from one another. Therefore it is necessary that the other things which are here by us named as many should there appear altogether undivided. For if by that very vision the intellect of the blessed were to see one thing without another, assuredly that which is in God would not be clearly

766. Henricus of Ghent, Quodlibet 13, q. 1; Cajetan (Tommaso de Vio), Summa theologiae II - II, q. 2, a. 8; Dominicus Soto, In IV Sent., d. 49, q. 3, a. 3, concl. 2.

represented within the compass of that vision, but in a far different manner; for he who distinguishes does not conceive a thing by a proper, quidditative, and intuitive concept - as will be proved in disputation 138.
