Wherefore what Ferrariensis and Capreolus were saying - that the blessed, besides the clear vision of God by which they see all things together, can form several concepts of God, as it were partial and inadequate, so as to distinguish by that single vision the things which they see together - seems absurd also, unless one says that those concepts, as it were partial, are such as a wayfarer has of God through alien species. For thus nothing hinders the blessed from distinguishing many perfections in God. But some clear knowledge of God, which they call intuitive, certainly cannot be such as to distinguish those things which in God are undivided. Wherefore several concepts of God cannot be multiplied. Thus, although the blessed, nay God Himself, knows in Himself many attributes distinguished for wayfarers, nevertheless neither God of Himself, nor the blessed of God Himself, has any kind of cognition by which distinct attributes are represented - as we shall show more fully in disputation 116.

The argument made thus far further proves that not even by divine power can it be brought about that He be clearly seen, the persons and the attributes not being seen; nor that any attribute be seen without another; nor that in the same attribute something be seen while another [aspect] is not seen; but that the whole must of necessity be known, which is altogether individual and simple. Whether, however, the blessed know every respect which we attribute to God toward creatures under a possible or future existence, we shall see in the following disputation.

Dubium. Further, if in God the attributes were distinguished by the nature of the thing among themselves and from the essence, and the essence also from the persons, there would be a difficulty whether, without a miracle, according to the natural order prescribed to things, one could be seen without another. Scotus, with that principle supposed, nevertheless taught that it could not be; and we have already reported his reason also, namely, that once the object has been manifested clearly as it is, the blessed cannot restrain the intellect from being borne wholly and entirely toward it. But if one understands Him so that some clear manifestation of God Himself precedes the vision in act, this is altogether false: for the whole manifestation of God is the vision itself. Granted, however, the vision, the intellect cannot but see the whole which it represents; yet it could elicit the vision in such a way as to behold what is represented as one thing without another, if the principle of that vision were subjected to the will. Wherefore we must have recourse to the nature of the principle, namely the light of glory (*lumen gloriae*), to see whether one thing could naturally be seen without another, even if they were distinguished, as Scotus supposed.

I say, then: if the light of glory is of such a nature (as all suppose) that it naturally carries the intellect with it to see, and is not like other habits which we use when we will, even if they are intellectual, then it cannot, according to the order prescribed to it, be that one thing in God is seen without another; because it would naturally move the intellect equally to one and to the other. Yet God, by His omnipotence, could concur with it to elicit the vision of one and not of the other. But if such were the habit that the intellect used it as the blessed might will, then indeed it could apply it to the vision of one and not of the other. When, however, we say that the essence could be seen

without the persons, if they were distinguished by the nature of the thing, and that we would use the light of glory at will, we do not say that the same vision would exist which, as it were varied, would now be of the essence and the persons, then of the essence alone; but that there would be diverse cognitions, numerically different, evident and clear, and (as they say) intuitive of the thing as it is, any one of which the light of glory could elicit of itself.

Explanation of the passage John 14: "He who sees me, sees also my Father."

Caput III - That one divine person cannot be seen without the others

From what has been said it is gathered that one person cannot be seen while another is not seen; because, although they are really distinguished among themselves, nevertheless they are the same as the very essence; whence it comes about that one person is said to be in another by circumincession (as the theologians speak), and consequently, one being seen, the other is seen in it. Nay, some think this is expressed in John 14, where, when Philip had asked for the clear vision of the Father, and [the Lord] had said that this would suffice them as a consolation for the sorrow which the disciples were going to suffer from Christ's departure, Christ answered: "Have I been so long a time with you, and have you not known me, Philip? He that sees me, sees my Father also." Concerning this clear vision according to the divinity, Hilary seems to have understood this place, in De Trinitate 7; Athanasius, in the confession of faith to Epictetus; Nazianzen, oration 36, no. 82, where he says that the Son of God is therefore deservedly called Logos, because He is, as it were, the definition of the Father, by the knowledge of which the Father Himself is known; and oration 49: "He who sees me, sees the Father," not without reason, because by unity of substance, or unity of divinity, they are one; and Augustine seems to have understood it in the same way, De Trinitate, cap. 8, and on Psalms 84 and 85.[767]

Some Thomists, however, press Scotus with this passage of John, because to Philip asking for the clear vision of the Father, Christ the Lord replied: "He who sees me, sees also my Father: how sayest thou, Show us the Father? Do you not believe that I am in the Father, and the Father in me?" - as if He were to say: since we are of wholly the same nature, it cannot be that he who has seen me should not see the Father; where He infers from the unity of nature that one cannot be known without the other, not from the mutual relation of the persons: so that by this reasoning we should also understand that the essence cannot be seen without the persons.

But this exposition agrees neither with the interpretation of the Fathers, who expressly elucidate that passage, nor with the context of John. First, Tertullian treats this place carefully in Against Praxeas, chapter 24; Cyril, book 9 on John, chapter 37; Chrysostom, homily 73 on John; Augustine, tractate 70 on John: yet none of these says that Philip asked of Christ the clear vision of the Father, as it is, namely the vision in which the intellect is spiritual; for if he had asked that, how would Christ by His reply...[768]

767. St. Hilary of Poitiers, De Trinitate, book 7; St. Athanasius, Epistula ad Epictetum (confession of faith); St. Gregory Nazianzen, Oration 36, no. 82, and Oration 49; St. Augustine, De Trinitate, book 1, cap. 8; Enarrationes in Psalmos 84 and 85.

It is further made clear from these things that, if Philip had asked of Christ the clear vision of the Father as He is, namely the vision in which the intellect is spiritual, if He had granted him that clear vision, He would have satisfied him by saying: "He who sees me, sees also my Father." For then Philip could have replied: "With the acumen of mind we have not yet seen your divinity, but only with bodily eyes have we known your humanity. It is therefore no wonder if, after so long a time of conversing with you, we have not yet clearly seen you yourself according to divinity, nor the Father: therefore show Him to us clearly, and it suffices for us."

Second exposition. That Philip desired to see God the Father with bodily eyes, and asked for this, Tertullian, St. John Chrysostom, and St. Cyril teach. Tertullian says: "And therefore he is rebuked, for desiring to see the Father as if visible: he is taught that the Father becomes visible in the Son by the power of His works, not by personal representation; that is, not because the person itself, as such, is shown." Therefore he interprets: "He who sees me, sees also the Father;" that is: "If someone sees me, he also sees Him," that is to say, neither I nor He can be seen [by bodily sight]. For Philip was seeking a cognition of sight.

St. John Chrysostom explains what is added, "And you have not known me": "Although I have done so many works, which are proper to God, you have not yet known me, because I am encompassed with flesh."

Third exposition. Finally St. Cyril refers Philip's petition to a corporeal vision, not as though he were asking to behold the divine substance with bodily eyes, but as desiring to see God the Father in some corporeal figure - of fire, or of some other thing - just as He appeared to the prophets. Thus Cyril subjoins these words: "Do you then, Philip," he says, "when you can see the Father far better in me than the ancients saw Him in the fire, desire some other mode of seeing the Father?" And again: "But you ask to see the Father, because you have not yet fully believed that I am in the Father, and the Father in me."

Fourth and fuller exposition. St. Augustine, in the tractate cited, and in Epistle 112, chapter 6, refers Philip's petition not to a bodily vision, as the Fathers cited take it, but to a cognitive act of the mind. He does not say that Philip asked for a clear vision of the essence of the Father, but for simple cognition - namely, who the Father might be, to whom Christ Himself said He was going; and I take this to be the genuine and native sense of the text. That we may explain this better, let us set forth the text of John. Christ had said: "Because I go to prepare a place for you; and if I shall have gone and prepared a place for you, again I am coming and will take you to myself, that where I am, you also may be; and you know where I am going, and you know the way." Thomas says to Him: "Lord, we do not know where you are going, and how can we know the way?" Jesus says to him: "I am the way, and the truth, and the life; no one comes to the Father except through me. If you had known me, you would indeed have known my Father also; and from now on you shall know Him, and you have seen Him." Then Philip spoke up: "Lord, show us the Father, and it suffices for us," etc. By these words He was not speaking of the clear vision of God which is for the

768. Tertullian, Adversus Praxean, cap. 24; St. Cyril of Alexandria, In Ioannem, book 9, cap. 37; St. John Chrysostom, Hom. 73 in Ioannem; St. Augustine, Tract. 70 in Ioannem.

intellect in the homeland, but He was speaking of the true knowledge of the Father, as will soon appear from the context itself. For when Christ was near to death, so as to go over, according to the flesh, to immortal life with His own Father God, that He might console the hearts of His disciples, He said: "And even if I shall have gone off and prepared a place for you, I am coming again, I will take you to myself." By which words He signified that He would go before, so as also to prepare a place for them, and that He would return, so as to transfer them together with Himself to that same vision. Then He subjoins: "And you know where I am going, and you know the way;" that is: You know very well the place to which I am going, and the way by which I am going, so that you may be able to follow me. But Thomas, not understanding what Christ was saying, said: "We do not know where you are going, and how can we know the way by which it is reached?" Christ, however, replied: "I am the way, the truth, and the life; no one comes to the Father except through me;" that is, I am the true way by which one goes to immortal life with the Father: for no one can come to the Father except by my merits. "If you had known me, you would indeed have known my Father also; and from now on you shall know Him, and you have seen Him." As if He were saying: If you had known me, who am the way, fully, you would most excellently also have known the Father, to whom I am going; but a little later, namely when the Paraclete shall have come, you will know Him; and certainly, if you had wished to attend to my works and doctrine, you have already known Him enough. Then Philip - still ignorant who the Father might be, to whom He was saying that He would go - said: "Show us the Father, and it suffices for us;" that is: Tell us who this your Father is, to whom you are going, and we shall be content with this alone. For that Philip was ignorant what Christ was saying that His Father was, Augustine attests in the place alleged. But the Lord then most fittingly replied: "So long a time I have been with you, and you have not known me;" that is, after so long a time during which I have conversed with you, you have not yet known that I am God? "He who sees me, sees also my Father;" that is, he who perfectly knows me from my works and doctrine, will plainly understand me to be God of the same nature (*natura*) with the Father, and hence will know my Father, to whom I said that I am going, to be God. "Do you not believe that I am in the Father, and the Father in me? The words that I speak to you, I do not speak from myself; but the Father abiding in me, He Himself does the works. Do you not believe that I am in the Father, and the Father in me? Otherwise, believe because of the works themselves." In this way Tertullian expounds it, when he says that from the works and powers of Christ the Father becomes visible, that is, known.[769]

Objection from the context. Against this exposition that whole context can be objected: since Christ had first said, "You know where I am going, and you know the way," later Thomas said: "Lord, we do not know where you are going, and how can we know the way?" From which Philip's ignorance of who His Father was, to whom He said He was going, followed; and he added: "Show us the Father," etc. How then had Christ said, "You know where I am going, and you know the way"?

769. Tertullian, Adversus Praxean, cap. 24; St. Cyril of Alexandria, In Ioannem, book 9, cap. 37; St. John Chrysostom, Hom. 73 in Ioannem; St. Augustine, Tract. 70 in Ioannem.

Reply, first. Augustine answers this difficulty with these words: "The question is easily solved, if we say that some of them knew, some did not know; and among those who did not know was Philip, and perhaps we can number Thomas," and Augustine speaks only of Philip.

Reply, second. Others explain those words "You know where I am going, and you know the way," in this manner: that the Apostles excellently knew God, and to Him Christ was going, and the kingdom of heaven to which He was going; but they did not know that Christ Himself would go there; and also, in order to know that Christ Himself was the spiritual way, whose merit would lead to eternal life, they did not yet know Him to be the way. Therefore they knew in one manner, and in another they were ignorant, as in John 9 Christ said to the man born blind whom He had healed: "Do you believe in the Son of God?" and he answered: "Who is He, that I may believe in Him?" To whom Christ said again: "You have seen Him, and He is the one who speaks with you." For he had seen Him when He healed him, who was the Son of God, but he did not yet know Him to be the Son of God.

A third reconciliation. Or we can reconcile these things in another way, namely that the disciples already quite well knew that Christ was to die, as is clear from John 12, and that by His death He would draw all things to Himself; they knew also that He would rise to immortal life; but Thomas and others did not know whether that very thing which He was saying in John 14 would happen then. Forgetful, therefore, altogether that Christ, by the imminent death, was to pass over into immortal life, and supposing, after the supper, that He wished to retire into some hidden place, they said: "We do not know where you are going, and how can we know the way?" But He, showing them the way of which He was then speaking, said: "I am the way," and at the same time He also showed that He was to go to the Father when He said: "No one comes to the Father, except through me." Moreover, since they had not sufficiently understood that His Father was God, He subjoined: "If you had known me," and the rest, to which Philip added his request.

It remains to reply to the arguments of Scotus as they are taken up by Cajetan. Concerning the first argument there are many things. Cajetan, in II - II, q. 2, a. 8, asserts this, in order to prove that to the formal ratio of beatitude there pertains not only the vision as terminated at the essence, but also as it regards the persons; the opposite Scotus had taught. But this is not our present controversy; for now we only doubt whether the essence (*essentia*) could be seen without the persons, whether the persons per se pertain to the object of beatitude or not: of this we shall treat in I - II, q. 3. Still, let us say in passing, that although, according to our mode of understanding, which we have of God in this life, we most well conceive the essence of God without the persons, and that by the sole vision of that [essence] the eternal Father in the priority of origin is Blessed - because when so we understand God to be, we understand the highest good, which formally is the object of beatitude - yet, if we consider that very clear vision of God, as on the part of the thing it is terminated at God, it does not of itself regard the divine essence separated from the persons, in such wise that if the persons were varied, this vision would remain; rather, since the persons themselves are contained within the object of beatitude, therefore not only this proposition "The divine essence makes us blessed," but also this, "The three persons make us blessed," is per se in the fourth mode of saying "per se." For thus most perfectly the divine essence agrees with the

Trinity of persons, so that if the Trinity were taken away, the essence of God could not subsist; and this follows by an intrinsic locus from the nature of the thing. Therefore, if the persons are said per se of the essence, and the essence is said per se to be blessed by the vision of itself, it will also per se agree with the persons, in the fourth mode of saying "per se."[770]

But laying aside this difficulty, let us come to the latter argument, which has place for the present. We say, therefore, that for this reason the essence cannot, even by absolute power, be seen without the persons: because from the nature of the thing it is not distinguished from them. But it is impossible - which Scotus too would gladly concede - that that which from the nature of the thing is most simple, and has in itself no distinction, if it be seen as it is, by a clear and intuitive cognition, be divided into several, or that some part of it be seen without another, when it is not one thing and another. But that the essence is not distinguished from the persons we shall prove below in Disputation 130. Now, however, we deny what is assumed in the argument, namely that the essence is distinguished from the persons, or the attributes either from the persons or among themselves by the nature of the thing, as Scotus thought; this will be proved in the place cited. This foundation being removed, the argument proves nothing, as we said: namely, that if it were distinguished by the nature of the thing, one could be seen without the other; and this was explained in the second chapter.

To what is brought forward in confirmation, namely that the essence is communicated, the persons are not communicated; that a person terminates a human nature, the divine nature does not terminate a human nature; I reply that such propositions and the like - of the kind that some among us commonly propose - do not suffice to prove a distinction by the nature of the thing between the essence and the persons, as Scotus contends; and to show this sufficiently against us the disputation cited will suffice. The true solution lies in the close of the reasoning: according to our mode of understanding, we enunciate some things about a person which cannot be said about our [essence]; but from the examples posited it is not proved that a clear and intuitive cognition can see one thing without another; for to this truth all of us who hold that no vision without another [object] is valid agree that a distinction from the nature of the thing is necessary. Whether, however, the difference required for the aforesaid propositions, which we said are truly enunciated, be from the nature of the thing, not all concede; Scotus contends that from it a distinction from the nature of the thing is rightly proved; but we shall show the opposite; and if this be once shown, that a distinction from the nature of the thing is not gathered from those, it follows, as we have already noted, that neither can one be seen without the other.

770. Cajetan (Tommaso de Vio), Summa theologiae II - II, q. 2, a. 8; for the broader controversy see also Henricus of Ghent, Quodlibet 13, q. 1; Dominicus Soto, In IV Sent., d. 49, q. 3, a. 3, concl. 2.

Disputatio XLIX - Not all futures and not all possibles are seen by the blessed

Caput I - Not all future things are seen by the Blessed

The question proposed is about future things, not about Christ; for about this we shall dispute in the Third Part, q. 10, a. 2. Nor is it about the mode by which the Blessed are said to see other things besides God - whether by the same vision, and whether from the force of that very vision by which they see the divine essence they also see what is connected to it - for this the following disputation will concern; but about the number of things which, besides God, they see: whether they know all things other than Him - both future and possible.

And although, as to Christ, some Doctors have different statements, as we shall see in the place cited, nevertheless, with regard to other Blessed, there is no one who lays down as a law that each of the Blessed sees all things created, both as to essence and existence. Yet Durandus, in IV, dist. 49, q. 3, and St. Thomas, in I, q. 12, a. 9, say expressly that all things in God are not seen by the Blessed.[771]

On the contrary, the opposite opinion is followed by the same St. Thomas in this article, and elsewhere in the place alleged, and certain others in the passages that will be cited in the following disputation: which opinion is understood of possibilities and futures, and the like, so that without limit they be denied to be seen. And to prove this, they bring forward St. Dionysius, when he teaches that the lower angels are purged, illuminated, and perfected by the superiors; and they add that text: "Who is this that comes from Edom?" By which the angels are understood, according to Dionysius, to have examined, inquired about, and learned from the higher mysteries of the Incarnation, what was to be done and suffered by the inferior One, which they could not have been ignorant of if all future things had been open to them. They add also that of Ephesians 3: "That the manifold wisdom of God may be made known to the principalities and powers by the Church;" where Paul speaks of the mystery of the Gospel law, which he himself preached, that by it what had been hidden from the beginning in God might be made known to the principalities; in which words it is openly indicated that, as to that mystery, the supernal powers learned from the apostles; therefore they did not have beforehand the cognition of this mystery in all its parts

ad Rom. 11: "How incomprehensible are his judgments and untraceable his ways; who has known the mind of the Lord?" There is added that of Mark 13 and Matthew 24: "But of that day or hour no one knows, neither the angels in heaven." It is clear, however, that they were then blessed; therefore the blessed do not know all future things. As to the reason why it is there said: "Nor the Son of Man," this will be more fully explained in III, q. 10, art. 2. Finally, as will be proved in Disputation 29, angels do not know the thoughts of the heart; therefore the blessed do not know all future things

771. Durandus of St.-Pourçain, In IV Sent., d. 49, q. 3; St. Thomas Aquinas, Summa theologiae I, q. 12, a. 9.

Caput II - Not all possibles are known by the blessed

Further, as to the things that are possible, it cannot so easily be proved that not all are known by the blessed. St. Thomas and more recent Thomists prove that they are not known, because, if a blessed person knew all things, he would without doubt comprehend the essence of God; but this is most impossible and contrary to faith: therefore the blessed cannot know all possible things. They think this so true that they affirm that not even by absolute power could God communicate to the blessed the knowledge of all those things in the Word and in his essence, because the absurdity which we stated would follow therefrom. Yet, as I shall show in Disputation 53, this argument proves only that not all things can be seen in God by force of the vision of the essence, but it does not show that, in fact, the blessed do not behold all possibles by a special revelation; as some also assert, and we shall say in the following disputation, that the things which, besides God, a blessed person knows are seen in him only in such a way that, if by that mode a blessed person knew all possibles, he would not comprehend God himself; as we shall see in the cited disputation.

Moreover, even if someone were to say that all things can be seen by force of the vision, nonetheless - according to the doctrine of St. Thomas and of others - one could assert that God is not comprehended; for, as the Doctor asserts in article 7, and with him the others who use this line of reasoning: for knowledge to be the comprehension of some object, it is necessary that it be of the same measure of perfection and entity as is the thing itself which is said to be comprehended, so that God might be comprehended, it would be necessary for the vision of God to be infinite according to nature, just as God himself is; because knowledge must be proportioned to God in order to comprehend him. But it would not follow that the vision is infinite, if the essence of God were seen as it is, and by the force of that vision all other things which are said to be in it; for it is not necessary that knowledge be infinite, even if the objects known are infinite, as I shall say below in Disputation 50. And although, in the same proportion, the vision would necessarily increase, nevertheless the increase would take place only in accidental perfection, so that the vision would be infinite according to intensity, not, however, according to its nature; whence it would not follow, according to the doctrine of St. Thomas which we have reported, that such knowledge is a comprehension of the divine essence. For, in order that it be comprehension, it would have to be infinite in the same manner and of as great perfection as is the divine essence itself; but the essence is infinite by its nature and in itself, not by accidental perfection or intensity; therefore even then that vision would not be comprehension. Lastly, I do not think it is a manifestly condemned error to assert that God is in some way comprehended by the blessed - though that be false, as we shall see in Disputation 52 - therefore it is not of faith, as some Thomists thought and related, to say that not all possibles are known in the Word or the divine essence, even by force of the vision. Yet I am sufficiently persuaded that not only do the blessed not see all future things, as was said above, but neither do they see all possibles (although, about possibles, it is not so certain); for it would be in vain and without foundation for us to say that God has revealed to the blessed an innumerable

multitude of things which he will never make. Moreover, that those things are not known by the blessed by force of the vision of the essence of God will be made manifest in the following disputation.

An the blessed see anything in the Word. Disputation 50. - The opinion of Durandus. Cap. 1. - What Henry thinks. Cap. 2. - The position of the Thomists. Cap. 3. - It is shown a priori that, by force of the vision of God, nothing created is seen. Cap. 4. - It is proved from an absurdity that, by force of the vision of God, no creature is seen in him. Cap. 5. - That no creature is seen by force of the vision of God, but by a special revelation, is the truer position. Cap. 6. - Creatures are seen in the Word by a different knowledge than God himself is seen. Cap. 7.

Disputatio L - Whether the blessed see anything in the Word

Caput I - The opinion of Durandus

We understand entirely the same thing when we say that certain things are seen in God or that the essence of God is seen, and that they are seen in the divine Word: for they are not said to be seen in the Word because they are not seen in the Father and the Holy Spirit, but because, when it proceeds through the intellect, the work of cognition is, by appropriation, attributed to him, just as the work of justification is attributed to the Holy Spirit. But when we inquire whether the blessed see anything in God, we understand other things besides God, that is, creatures according to their own proper rationes (*rationes propriae*), not insofar as they are said to be in God; for a stone, insofar as it is in God, is said to have the life of God - thus, in that sense, it is entirely the same thing to see God and to see creatures in him, in which way St. Augustine frequently speaks, as will appear in the following disputation.

With these things briefly premised, in the present controversy the first opinion to be examined is that of Durandus in IV, dist. 49, q. 3, and in IV, dist. 49, q. 6, a.; as Capreolus reports in III, dist. 14, q. 2; which opinion, in the beginning, was that of Godfrey in Quodlibet 6, q. 3; and Bassolis followed him in Question 4 of the Prologue, article 3. These two teach. One is that not only Christ, but also any of the blessed, by force of the vision, behold in the Word the essences of all the things that can be made. The other is that nothing future is known in the Word, insofar as it is future - which they call the thing as to existence - but that future things, which they see by a peculiar revelation, are known by them.[772]

They prove both by a single argument, which appears very plausible in this matter. When the intellect clearly sees some thing, by that very fact it sees all the things which are naturally represented in it and necessarily appear; but what are represented freely, by force of that vision, it cannot see unless a new revelation be made to it. Now, all possibles, as to essence, are naturally

772. Durandus of St.-Pourçain, In IV Sent., dist. 49, q. 3; dist. 49, q. 6, a.; Capreolus (Jean Capreolus), In III Sent., dist. 14, q. 2; Godfrey of Fontaines, Quodlibet 6, q. 3; Bassolis, Quaestiones in Prologum, q. 4, art. 3.

represented in the divine essence; but future things, as to the existence which they will have, are represented only freely. Therefore, by force of that vision, possibles are seen, not futures, unless by a peculiar revelation.

But certain things must be proved by us in confirmation of this reasoning.

First, that those things which are naturally represented in the essence of God are truly seen by force of the vision of that essence; this indeed is easy to grant, for if certain things are naturally represented in it, they necessarily also appear in it; but what necessarily appears cannot fail to be seen: therefore, if in the divine essence all possibles are necessarily represented, they cannot fail to be seen by force of the vision - especially since nothing else hinders; for on the part of the divine essence, which represents, nothing can hinder, since in it these things shine forth clearly and necessarily; nor on the part of the intellect of the blessed. For if anything hindered, the chief thing would be that the finite intellect cannot see infinites; but it is far less repugnant to know the infinite essences of possible creatures - each of which, according to its essence, is finite - than to see the very infinite nature of God according to being (*esse*). Therefore, since the blessed, endowed with the light of glory, see the essence of God, nothing prevents them from beholding in it also the infinite essences of possible things.

Second, that in the divine essence the possible essences of things are necessarily represented. This is gathered both because God necessarily knows in himself all possible things, nor was it in his power not to know them, just as neither was it in his power to make them not be possible; therefore, in his essence, as in the Word and as in the cognition of them, they are naturally represented. Then also because, since God by his very nature can make all those things and is their cause by his omnipotence, in a higher way he is said necessarily to contain them in himself.

Third, that future things are not represented in God naturally and necessarily. For just as he willed from eternity to produce certain things in their times, so he could have willed others, and he could have willed to do nothing; therefore what he is going to do is known by God as free, just as they are freely future, and consequently they are freely represented in him; but what is represented freely in God cannot be seen, by force of the vision of the divine essence, in him. For from the fact that from eternity that essence represents those things, it has nothing new which otherwise it would not have, even if it did not represent them; otherwise there would be in God something eternal and free which could not be, and thus something contingent would be in God - which is impossible.

But then there would be in God something free, which could not be, and thus God would be free with respect to something that could not be God - which is absurd. For all things which exist in God are God himself; therefore in God there is nothing, by reason of which the Blessed could behold and clearly know those things which are said to be represented in him freely.

Godfrey confirms this opinion with other arguments, by which below we shall prove that no creature can be known in God: for either none or all ought to be seen.

Refutation of Durandus's opinion. Yet to me this opinion of Durandus is not approved; for besides the fact that it is not true, neither is it sufficiently proved by Durandus himself that certain possibles - much less all - are seen by the Blessed by force of the vision of the divine essence, as, against other opinions, we shall show below; the distinction which he posits between possible and future things, insofar as they are referred to the divine essence and are represented therein, is futile and empty: this, then, is what I intend now to show against Durandus alone. Therefore I set forth that all have the same reason, so that in the same way they are either known in God, or not known in God.

First, both possibles and futures, according to their own formal reasons, are not formally in God; therefore on this score they are equal. Next: either possibles are known in God by force of the vision of that essence, because they are in him as in the knower, and hence they are in him as in a mirror; but not only possibles are in God in this manner, but also futures, insofar as they are future; for as future they are known by God as possibles. Or possibles are known in God by force of the vision of God himself, because they are in God as in a cause; but when the cause is known, the effect is known, and consequently, when omnipotence is known, those things are known which can be made by it: yet futures too are in God as in a cause which is going to operate; therefore, when God himself, who is going to operate, is seen, that which will be future will be clearly known in him; just as, once omnipotence is known, that which can be done by God is straightway known.

And this argument has its force especially from this, that God is the cause of things by reason of the knowledge which he has of them; wherefore one who sees in God the dictate by which he judges it good to do some thing, and the will by which he wills to effect it, can very well know future things, if possibles are seen in the way we have said.

But the distinction which Durandus establishes between possibles and futures - namely, that the latter are represented in God freely, the former necessarily and naturally - has no weight. For from this there follows only that those things which are represented naturally cannot in any case fail to be seen, because they cannot fail to be represented; whereas those things which are represented freely, since they could fail to be represented, could also fail to be seen: but indeed, once the representation is supposed, the things appear, and cannot fail to be seen. Just as an image in a mirror is not represented naturally and necessarily, but freely - just as freely the mirror itself is placed opposite us, in which the images are refracted - yet once, by our liberty, the object is placed opposite, and thus the image of it is freely also refracted, the eye, applied to the mirror, cannot fail to see the thing. In the same way, therefore, after things exist by God's will, they cannot fail to be represented in the divine essence as set over against it, even insofar as they are future; therefore, once the divine essence is seen, by this same reasoning they cannot fail to be known - especially because, once futures have been represented in the divine essence, they can no longer fail to be represented.

Someone will reply on behalf of Durandus's opinion, that to God there accrues only a respect of reason, from the fact that futures are represented or known in his essence, and from the fact that he is going to produce them in time; wherefore it is no wonder if the vision of the divine essence, which of itself is absolute with respect to future things, does not make the futures themselves to be

seen. I certainly cannot deny that in this way one very well satisfies the argument, so that it may not prove absolutely that future things are seen in the divine essence, even if they are said to be represented in it and to be known by it - which I shall show more clearly in chapter 4 of this disputation. For the present, however, I contend only against Durandus that possibles and futures have the same reason; and therefore, if futures are not known (as we shall concede there), the same must be said of possibles. Moreover, it is clear that there is no difference: for possibles are so represented in the divine essence naturally, and are so necessarily known by it, that there is in God no real relation to them, just as neither to futures - as will be shown more fully in Disputation 104, chapter 6; nevertheless they are said to be known by God and to be represented in the divine essence; therefore, since futures no less are said to be known by God himself and to be represented in his essence, even if there is no real relation to them, by force of the vision of the divine essence they can be seen no less than possibles; or, if futures cannot be, neither will possibles be able to be known. Therefore the distinction assigned by Durandus is empty; and from what has been said the solution to his arguments is evident.

Caput II - What Henry (of Ghent) holds

Henry is usually cited on behalf of the opinion of those who teach that nothing at all created is seen in the essence of God by force of that vision by the Blessed. But he handed down his own view to us otherwise, in Quodlibet 7, questions 4 and 5, where he teaches three points.[773]

First part of the view. First, that the divine essence, seen by the Blessed insofar as it is with respect to itself, not as an idea of creatures, is not for the Blessed a reason of seeing anything created, whether future or possible. This can be proved, since the divine essence, considered in this way, regards no creature; therefore, by the vision of itself, it cannot lead the intellect into the cognition of any creature.

Second part. Second, that the essence of God seen under the concept of idea is for the Blessed the reason of knowing only the species of possible things, not individuals; and he establishes the difference between species and individuals thus: that there are not in God ideas of individuals, but only of species; therefore the essence, seen under the aspect of idea, does not lead into the cognition of individuals, but only of species. Henry, however, indicates that individuals too are seen by the same vision together with the divine essence, not by force of that vision, but by a special revelation, or at least by some other, different vision. He proves, moreover, that the species of possible things are seen by force of the vision of the essence in God; because the divine essence, inasmuch as it is an idea, has a bearing and relation to creatures; therefore it can of itself lead into the cognition of creatures.

Third part. Third, that God can manifest himself to the Blessed as he is with respect to himself, without any order to creatures, that is, by manifesting the essence insofar as it is essence, not under the aspect of idea. Wherefore he says that God can be seen in himself, with no creature at all seen, by force of such a vision; just as a science, which is a certain quality with a relation to its object, can

773. Henricus (Henry of Ghent), Quodlibet 7, qq. 4 - 5.

be seen as a quality, with the relation not being known; and then it is not necessary to see or to know the object. He proves this on two grounds: first, from a real limitation of the intellect, which is by nature suited to know one thing without another; then from the fact that God is a voluntary mirror, and therefore can manifest himself to the Blessed in one way and not in another.

From these Henry infers that Christ did not see in the Word all possibles; and he ought to say the same concerning the others who are Blessed; but this he proves by no reason. Yet it can be urged from this, that God would be comprehended, if in him every notion of idea were known, and by force of it every possible specific nature - which is absurd. Wherefore Henry is driven to say that not every notion of idea which is in God can be communicated to the Blessed, but that something of God must necessarily be hidden from them.

Passing over, however, the first part of this opinion - in which I agree with Henry, and will confirm against some disciples of St. Thomas in chapter 4 - what he asserts in the second and third place is by no reason proved to me. What he asserts in the second place I refute on this ground: either the respect and relation of the divine essence, inasmuch as it is an idea of creatures, is real, or it is of reason. That it is real cannot be, as we shall show below in Disputation 104, chapter 6; but if in God there were such a relation, it would be not only a reason of knowing and seeing natures as specific in general, but also of knowing and seeing the individuals and singulars of them one by one: both because an intellect seeing a thing quiditatively and by a proper concept does not distinguish the generic and specific notion (as we shall prove in Disputation 118, chapter 3 - for this arises from imperfection of cognition), and also because the divine essence is not only the idea of species, but also of any individual whatsoever, one by one, as we shall say in Disputation 74, chapter 2. Nay more, since God's idea is his knowledge, and he himself does not distinguish in things the generic from the specific notion (as we shall show there), things will be seen rather as singulars than as specific natures in general; at least it cannot be denied that all singulars which can come to be are most perfectly known by God by that very reason by which they can come to be; by this reason, then, the divine idea will be determined to them one by one: therefore, whether there be one common idea of the whole species, or we assign to each individual its own, by that very reason by which a specific nature is known through the idea, by that same reason the individuals too must be seen.

Or if the relation which the divine idea has to creatures is a relation of reason, and belongs to God only according to our way of understanding - which indeed is what must truly be said - then in this way it cannot be a clear reason for seeing creatures in God himself. For if God is seen in himself, he will be seen as something altogether absolute with respect to creatures; and although respects of reason are conceived as long as a thing is conceived under the notion of relation, and while under that relative name it is termed, nevertheless such a notion is attributed to God only by the intellect of wayfarers, who do not see him himself as he is, but, after the manner of other things, conceive him as related. But the Blessed, who clearly see God, and have him present to their intellect in the very way in which he truly is, cannot in him conceive a respect of reason toward creatures, nor can they esteem such a notion to consist in the clear vision of God himself; nay rather, even if such a relation by name would be conceived in God by wayfarers, this would not

suffice that from it they should clearly see creatures all, or those to which it is terminated; for we apprehend in some object a respect of reason toward something else, but this is not for that reason a sufficient cause of our seeing clearly that thing to which it is terminated.

From what has been said it follows that what Henry taught in the third place is false - namely, that the vision of God can be communicated to the Blessed in two ways: as he is in himself absolutely, and then as he is referred to creatures under the aspect of idea. This position is to be rejected; for if the divine essence is clearly seen as it is, it must necessarily be seen by the intellect in one manner only; for with respect to that idea there is either a real relation or one of reason. If it is real, then by the same necessity it will be the same as the essence itself, as are the personal relations; and it will not be possible to show that the essence is seen without it, as will be proved in Disputation 48 on the divine essence and the personal relations. But if it is a respect of reason, it will always be known indeed by the Blessed as absolute; for such a respect belongs only according to the intellect of wayfarers, as was said above; hence the same thing cannot be seen in a twofold manner - namely, as referred to creatures and as absolute - but only in one and the same way, according as it truly is.

The foundations of Henry are moreover easily overturned. First, that claim whereby the divine essence - even insofar as it is an idea - could not be a reason of knowing or of seeing creatures, has already been sufficiently shown to be false. Then, as to his saying that the intellect is of its nature able to know one thing without another: from this it is not gathered that, when it beholds the thing itself as it is, it can fail to see in it the whole that it is. For although, when the thing is not itself presented, our intellect, by a certain mode of our own, can understand one thing without another, nevertheless when it beholds the thing as it is, it cannot fail to see in it the whole of what it is; and the natures in it do not distinguish themselves; wherefore, if in it there is some respect to creatures, it cannot fail to be known at the same time with the thing itself by the same vision; but if there is not, then the essence cannot be seen in that twofold way. Lastly, when God is called a voluntary mirror, this is not to be so understood as if he could cause that, of those things which are in him, one be manifested without the other; for these are manifested by God to the intellect, and are seen by him and from him, not by any defect or option extrinsic to him; rather he is called a voluntary mirror because, from created things, he can, as he wills, clearly set forth and reveal this object or that; but whether he can reveal them in himself in this way will be said more seriously below.[774]

Caput III - The Thomists' position

A third opinion is that of those who assert that, by force of the vision by which the divine essence is seen, certain creatures too are seen, and the more of them the more perfectly one beholds God's essence; yet never that in this way all possibles can be seen in the divine essence. This opinion is embraced by Cajetan, by Capreolus, by Soto, by the Ferrarian, and by more recent

774. On God as a "voluntary mirror" and the question whether he can reveal creatures "in himself," see below in this Disputation.

Thomists in this article; and it is also set down by Richard.[775] They say that St. Thomas seems to speak to this effect, as does Ferrarius; and although St. Thomas may appear to incline otherwise in article 8, nevertheless from the things that follow, when expounded, his opinion is gathered not obscurely. This opinion the Thomists prove first from that text of 1 Corinthians 13: "We see now through a glass, in an enigma."[776]

"But now through a glass, in an enigma; but then face to face": which the Fathers thus explain, that the things which we now believe by faith, in the other life, seeing the essence (*essentia*) of God, we shall contemplate face to face.

Then they strive to strengthen it by testimonies of the Fathers. First, there are very many testimonies of St. Augustine, by which he seems to have expressed this, as in book 4 on Genesis to the Letter, chapter 23, where he says: "There is, to be sure, a great difference between the knowledge of any thing whatsoever in the Word of God, and the knowledge in its nature, so that the former pertains to the day, the latter to the evening." The same he hands down in the book of 65 Questions, question 26. More testimonies to this point could be produced from St. Augustine, but I omit them; for in the following disputation we must treat more fully of his mind.[777]

Second, they adduce the well-known saying of St. Gregory, Dialogues 4, chapter 33, at the end, where, showing how the Blessed in the other life know not only those whom they knew in this life, but whomever else of the good, he says: "Because there all, in a common clarity, behold God: what is there that they do not know there, where, knowing him who knows all things, they know?" The same words are had of the blessed Angels in book 2 of the Moralia, chapter 2.[778]

The third testimony is of St. Bernard, book 5 of On Consideration to Eugenius, at the beginning, where, explaining that of Romans 1, "The invisible things of God," etc., thus he says: "Surely this ladder (that is, of creatures) citizens do not need, but exiles; as the author of this knowledge saw, who, when he said that the invisible things are conceived through the visible, significantly added, 'by the things that are made.' And truly, what need is there that he mendically seek a knowledge of the Maker by the lens of this world? He has one far more sublime, by which rather he beholds these: he sees the Word, and in the Word the things made through the Word; nor has he need, from the things that have been made, to beg a knowledge of the Maker. For neither, that he may know them themselves, does he descend to them themselves, who sees them there where they are far better than in themselves." Thus far Bernard, who seems clearly and expressly to teach this opinion.[779]

Fourth, the Council of Sens, in the decrees of faith, when it condemns the error of those who say that the Saints are not to be invoked, subjoins these words: "But how much this is discordant, not only with the truth, but also with the Scriptures, he will easily understand who does not ignore that

to the Blessed there is open that manifold mirror of divinity, in which whatever pertains to them shines forth." Therefore it holds that the prayers which we pour out to them, because they pertain to them, are seen by them in the divinity, as in a mirror.[780]

Finally, it is proved by reason, since, if from a known cause effects are known, when God is known, creatures also will be able to be known from him; and just as, the more perfectly the cause is known, so the more of its effects are seen; but if it be thoroughly understood and comprehended, it is necessary that all its effects be known and seen: so also, the more clearly the Blessed see the essence of God, who is the cause of all creatures, and the more deeply they penetrate his omnipotence, the more also they will know creatures in him. This reason, moreover, proves not only that creatures are seen by the same vision with God, as Angels by a single species and known species are able to know many things at once; but truly that they are known in God himself, as in a cause, by the vision by which God himself is seen. For it cannot happen that one sees God without, in him, contemplating the notion of omnipotence; but this cannot be known, nor be clearly seen, unless the things which can be done by it are known. And since no repugnance can be assigned in this, on account of the doctrine of the Fathers and the Scholastics, this opinion seems to be preferred to the others.

Moreover, for this reason they teach that not all creatures can be known in God in this way, because otherwise the divine essence would not only be seen clearly, but would be comprehended by the Blessed, which the recent authors think to be against the faith.

Then certain more recent authors, who follow this third opinion, teach that God can be seen clearly, such that by the force of the vision of God no creature is seen. In none, however, of the ancient Scholastics could I find this, except Henry, who in his own way, as we saw in the preceding chapter, teaches this. They prove it, first, by the testimony of Augustine, Confessions, chapter 4, where he says: "Blessed is he who knows thee, even if he knows other things not." Then by this reason: it can happen that some cognition is borne to the primary object and does not pass over to the secondary; but the divine essence is the primary, and the creature the secondary: therefore there can be a vision of the essence which does not regard creatures.

A reason a priori is set forth, that by the force of the vision of God nothing created is seen.

Caput IV - Refutation of the Thomists' opinion; first argument

This opinion, which we have just set forth, among the others hitherto enumerated is the principal one which in this chapter and the next I have determined expressly to impugn; for by its refutation the truer opinion, altogether contrary to it, which we shall afterwards follow, will be confirmed.

Now this can be confuted by four reasons, of which the first we shall propose in this chapter, but the other three in the next. But first, against it, one must note that which the more recent Thomists were saying in the second place, to wit, that it manifestly clashes with the former part of their

780. Council of Sens, in the decrees (on the invocation of the saints).

opinion. For if God is seen as he is, from the fact that he is the cause of things, he leads the one seeing into the knowledge of them, there will be possible no vision of the Godhead so slight that, if it is clear and quidditative, it does not make some creature to be seen in it. For if, from the fact that some cause is known - even if it is not seen by a quidditative and proper concept - some effect of it is wont to be deduced, as experience shows; much more, from a clear and quidditative and proper vision of the cause, however remiss, some effect will be seen. But the vision of the divine essence is clear, quidditative, and proper: therefore from it some created effect is necessarily known, if the divine essence, seen of itself as the cause of creatures, leads into their knowledge.

Henry, indeed, when he concedes that the essence can be seen in such a way that by the force of such a vision no creature is seen, does not teach this of a remiss and slight vision alone, but of any even most perfect one, in which the divine essence alone is seen as it is, absolute and unto itself: for he thinks that by such a vision no creature can be seen unless the essence appears under the relative notion of idea; he judges that from the force of that vision no creature is known, so that it cannot fail that some be seen: and hence indeed it must be distinguished whether by the force of the vision some creature be seen, or not. For if once we concede that the essence, thus seen, that is, under such a notion - namely, absolute - is a cause, by the force of that vision a creature is not seen, not only must this be said of a remiss and slight vision, but of a very great and most perfect one, provided, however, that the object seen - namely, the divine essence - always be seen under the same notion; but if it appears under a relative, ideal notion, then, according to their doctrine, thus it will come about that by the force of the vision some creature be seen.

Now let us attack that opinion with our own proper reasons. The first reason a priori, which we touched upon against Henry in chapter 2, is of this sort: the divine essence in itself is absolute from every created thing, nor is it referred to any by a relation of the nature of the thing: therefore it cannot be a medium whereby any creature is known; much less, that in it a creature be clearly seen. For if it were a medium of knowing some creature, either it would be so because creatures are in the divine essence formally, and, when something is seen, those things are seen which are in it formally; or because they are in it virtually...[781]

By power only, and by efficacy, as in a cause; or certainly as in a knower: yet in none of these ways can any creature be seen in God. Therefore the essence of God, clearly seen, does not lead the viewer into a clear knowledge of any creature. That what we have said holds in each single way will appear by induction.

As to the first: no creature is in God formally according to its own proper nature and ratio; wherefore inanimate things are thus said to be in God that they are also said to have life in him, as in the following disputation we shall show from the mind of St. Augustine: for a creature in the first way in God is nothing other than God himself. Now, however, we are speaking of the cognition of creatures according to their proper created rationes, inasmuch as they are something distinct from God himself; in which respect they are not formally in God.

781. On the Thomists who favor this third opinion, see Cajetan, on this article 8 and the following; Capreolus, IV, dist. 49, q. 6, a. 1 and 3; Soto, q. 3, a. 3; Ferrariensis on Contra Gentiles III, cc. 56, 59, 60; and Richard of St. Victor, III, dist. 14, a. 2, q. 3; and IV, dist. 49, a. 3, q. 3.

As to the second and third the same is proved: for although things are said to be in God as in a cause (which the Scholastics call to be eminently), and to be in him by the mediation of the knowledge of simple intelligence, by which, as by an art and a principle, he can produce them; this is not enough for one who clearly sees God as he is to know a creature in him in any way, much less to behold it clearly. The same likewise holds in the way in which creatures are said to be in God by the knowledge of vision, which is not their cause, but in a certain order is posterior to them, as we shall say in disputation 68, chapter 7.[782] For in either way the divine essence - which is of itself the cognition of creatures, whether of possibles or of futures - is really absolute and referred to itself: therefore, seen in itself, it cannot carry us into the cognition of those things to which it is not referred, as, against Henry, was more fully proved in chapter 2.[783]

Nor is it enough if we say that the divine essence, at least by a relation of reason, is referred to creatures, inasmuch as it is their idea or cognition, so that, seen in itself, it might be the ratio for seeing some creature: for, against that same Henry, we showed there that no relation of reason - which is attributed to God only by the intellect of a wayfarer - can be a cause for the intellect that clearly sees God, such that, God being seen, it beholds some creature in him.

Moreover, about the knowledge of vision, which the Fathers call the foreknowledge of future things, and about the relation of reason by which it is referred to futures and is distinguished from the knowledge of simple intelligence, this can be shown far more clearly: for we understand that this knowledge, or foreknowledge, befits the eternal God by a relation to future things, in such wise that, if nothing were going to be, such a knowledge would not be in God; yet from this nothing would be lacking to God, nor would his essence be in any other way than it now is, as Hugo of St. Victor testifies, book i On the Sacraments, part 2, chapter 16, and the reason itself plainly shows: since whatever things are in God are necessarily God himself; which will be explained more fully in disputation 80, chapters 1 and 2.[784][785]

Therefore let us suppose that the divine essence were clearly seen when there were going to be no futures, nor would it itself foreknow anything of that sort: then certainly it would not appear to the intellect clearly beholding it in any other way than it now appears; nor is it now seen otherwise than it would then be seen. Let us also suppose the same grade of vision with respect to intensity to be then and now: from these it necessarily follows that, if then the essence of God seen were not a ratio for seeing some future, neither is it now. The same thing, seen in the same way both on the side of itself and on the side of the viewer's intellect, if it is once a ratio for seeing another thing, will always be such; and if it is once not such, it will never be such: for the same, as the same, is always apt to do the same. Therefore we have at least that the divine essence, clearly seen, is not the ratio for seeing future things.

A similar argument can be made about the knowledge of simple intelligence of possible things: for all possible things are so compared with God that, if nothing were possible, nevertheless God would be, as we shall show more at large in disputation 104, chapter 6: wherefore, if man were not

782. Disputatio 68, cap. 7.
783. Above, cap. 2, against Henry.
784. Hugo de Sancto Victore, De sacramentis, lib. I, pars 2, cap. 16.

possible, nor any other creature besides an angel, then in the same way God would be seen by the angel in himself as he is now seen; but then there would not be a ratio for knowing anything else possible, therefore neither is there now; and what was proved about futures remains proved.[786]

From what has been said it is inferred in what way the Blessed, by the clear vision of the divine essence, cannot behold the decree of his will by which he decreed to produce something: for since such a decree is free, and so befits God freely, although from eternity, in such wise that from eternity too it could not be in God, it cannot be some ratio or relation in reality, nor an elicited act from the essence, nor anything else than a respect of reason to future things, as we shall also say in disputation 80: wherefore the essence itself, inasmuch as it is compared with future things, is called by us, in a relative name, the free will. Since therefore it would not appear otherwise to one beholding it, if nothing else were going to be, than it now appears; it follows that now no decree is seen in it, but the bare essence; and that to see the decree of God is nothing else than to see his essence, and to know the futures which he is said to have decreed.[787]

Finally, because of the respect of reason of the divine essence to possibles or futures, neither a possible nor a future can be known from the fact that God is seen under that respect. For besides the fact that that respect is not apprehended by the Blessed, as we said above, even if it were apprehended, it would not suffice: because, since it befits the essence from the fact that things are either possible or future, a future or possible thing must be understood first, before the essence of God under that respect; wherefore rather the things themselves are the cause for knowing the divine essence under that respect, than conversely: or at least it is the same thing to know a future thing and to know the essence of God under that respect. Therefore from what has been said we have that, by the force of such a vision by which God is seen, however perfect and intense it be, there is not first seen anything in God - neither a knowledge nor a decree - by virtue of which anything either possible or future is known.

Objection. But someone will object thus. The divine essence is for God the ratio of seeing possibles and futures, although it has only a respect of reason to them: therefore it can be for the Blessed the ratio of seeing both possibles and futures; and accordingly, to the Blessed who sees it as it is, it can in the same way serve for seeing other things.

It is answered: the ratio is different. For the essence of God is for him the ratio of seeing creatures possible or future, not because it is for itself the primarily known object and from the force of such a knowledge he sees them (as we shall say more at large in disputation 60, chapters 2 and 3), but because at once it is the cognition of all of them, which it has present after the mode of an expressed species. But for the Blessed the divine essence cannot be for the cognition and vision of created things as it is for God himself; but only as the object known: whereas, as we said in disputation 38, chapter 4, intuitive vision of some thing cannot be had through another thing

785. Disputatio 80, cap. 1 - 2.
786. Disputatio 104, cap. 6.
787. Disputatio 80.

previously seen, which is wholly diverse and does not contain the entire ratio of that thing. Since therefore God is wholly diverse from creatures, he cannot, first being seen, be the cause that they be seen.[788][789]

Nor only can the divine essence not be the cause for a Blessed one to behold creatures clearly; but neither to know them in any way: since God in himself is a thing wholly absolute, and according to himself is referred by no relation to creatures: wherefore no cognition of them can be inferred from God seen. And far better, from a species seen or from the vision of some object in the mind and intellect of an angel or a man, can the object be known (though not seen, as in the same chapter 4 was proved): for these at least are really referred to the object, by reason of which they can be a way to the cognition of it - though not to a clear vision.

And from this the argument which we adduced for the foregoing opinion remains solved: for although the cognition of a created cause leads us into the cognition of the effect, as also conversely, nevertheless the former does not happen by intuitive cognition: for this cannot come about through some medium previously seen, as was said in disputation 38, chapter 4. Next, a created cause has a real order to its effect; wherefore it is no wonder if from an intuitive knowledge of such a cause the effect also be clearly seen: but the divine essence is a thing wholly absolute, even if by us it be named under the relative concept of omnipotence: therefore, seen as it is in itself, it cannot be the ratio for seeing any effect of it.

It is proved by an absurdity that by the force of the vision of God no creature is seen in him.

Proofs a posteriori and by absurdity that by the vision of God no creature is seen in Him

Now that we have sufficiently set forth the a priori reason on account of which one who contemplates the essence of God, by the force of such vision, sees in him nothing created, possible, or future; now indeed we can not less easily and effectively, a posteriori and by absurdity, prove the same. Three reasons especially occur to me, which in this chapter I shall set forth one by one.

First reason: if some creatures were seen by the force of such a vision, all the others that are possible and future would be seen, since there is no greater reason...

First reason: if some creatures were seen by the force of such a vision, all the others that are possible and future would be seen, since there is no greater reason why one should be seen rather than another; but no one grants that by the vision of God all creatures are seen, otherwise God would be said to be comprehended by a created intellect: therefore no creature can be seen. By this argument Paludanus uses against the preceding opinion, which he himself reports in second place in IV, dist. 49, q. 2, art. 2.[790] Moreover, that there is no greater reason for one creature than for another to be seen in the divine essence is clear by induction.

788. Disputatio 60, cap. 2 - 3.
789. Disputatio 38, cap. 4.
790. Paludanus (Peter of Ailly), IV Sent., dist. 49, q. 2, art. 2.

First, on the part of the divine essence, in which creatures are said to be, or to be represented, so that they may be seen, as in a knowing subject, or else not at all: therefore an equal reason seems to stand. For all are equally as it were in the knower, since He does not know one through another, but each immediately and in itself; likewise, all are equally in the cause as equals, either because God is the cause of things by intellect and will, and in this way, as if in a cause, they are produced in Him, as St. Thomas teaches below at I, q. 19, a. 4;[791] or because by His essence He operates and executes immediately, as others suppose. And in either way all are contained equally in God: for He neither knows one through another, nor produces one through another. Therefore there is not a greater reason on the part of the divine essence on account of which one should be seen rather than another.

Next, neither on the part of the light of glory: for any light is the principle of a less intense vision, another indeed of a more intense; yet all the lights are of the same species, and within the same species they can differ only according to more and less: but intensity and remission within the same species, on the part of the principle, cannot be the cause of seeing this object rather than that, but of seeing the same object more or less perfectly.

Certain men who defend the preceding opinion answer that the difference arises not from intensity and remission, but from a variety of individuation of the lights themselves, by reason of which variety one light manifests this object rather than that. But this is fabricated: for, besides the grade of intensity, there does not seem to be any variety in light from which it would follow that it produces this effect rather than another; just as neither in heat and other forms which are intensified and remitted. Or at least that assertion is made gratuitously and without foundation; which will become more evident from what follows.

From this, however, it would follow that all the species of things possible that are inferior to Angels or to men, and even infinite individuals, would be seen: for since all the blessed know in the Word the species of the things that have been made, and the highest of the Angels, or at least the human species, it follows that by them also in the Word all the other lower species that are possible are known; and if there is an infinite multitude of species beneath human or angelic nature, as some think, it follows that an infinite multitude of species is now known by a blessed one; or if those are not infinite, as we shall show below in Disputation 106, at least it follows that infinite individuals are seen by the blessed, for under each single species infinite individuals can be constituted. Nay rather, it would also follow that all the secrets of the human heart and future thoughts are seen by the blessed; for these individuations of an accident are much less perfect than those of a substance: or at least, if the blessed see some thoughts of hearts, as the prayers which we pour forth to them, it follows that they see all as well: because there is no greater reason why by the force of the vision, without a special revelation, one should be seen rather than another.

But some answer, at pleasure, that that difference, namely that one creature is seen rather than another by the force of the vision of the essence of God, proceeds not from the intensity of the vision, but from a variety of the individual grade of this and that vision. Yet, as I said about the

791. St. Thomas, Summa Theologiae I, q. 19, a. 4.

light, so also it seems about the vision itself, that this is without foundation. For if the individual grade does not make the divine essence, as such, to be seen in diverse modes, but the difference lies only in the intensity of the vision, it cannot be a cause of knowing diverse creatures. Furthermore, that the difference lies only in intensity is clear, because the divine essence itself appears to the blessed in the same way, namely whole as it is, and no diversity at all can appear in it: therefore the variety can only be in the intensity around the same thing. And certainly, if on the part of the thing known the divine essence, as the primary object, is seen in the same way, it will also in the same way be a cause, or not be a cause, that other things be known from the fact that it is seen: for the same, as the same, always produces the same. But if by reason of some peculiar mode of vision which would not pertain to intensity, this species rather than that should be seen, whereas the divine essence would appear in itself in the same way; assuredly the divine essence itself could not be the reason, as the primary object, of knowing this created nature rather than that, because it is a primary object and reason of knowing inasmuch as it appears as such: therefore, if it always appears the same, either it is not a reason of knowing diverse things (but those are known from elsewhere), or it is a reason of knowing all.

This argument also proves against those who posit, without foundation, a relation from the nature of the thing in God toward possible creatures. For that respect always appears in the same way to one seeing God; and if it were true (as some assert) that the essence of God can be seen under a respect toward creatures in general, and then under a respect toward creatures severally, one would have to admit that it is seen in a diverse way, and that in the prior way something of God was hidden, which is absurd. For when the respect is seen distinctly toward individuals, something appears in the object that did not appear when the respect toward all in general was seen; and consider, for illustration, as can be seen in other objects. From which it is also inferred that that is false which some say, and which we have recalled above, namely that to the blessed are given diverse lights, that they may behold more or fewer creatures in God - diverse, I say, lights, not in intensity, but in individual mode, which we may call extension. For no diversity can be devised in a light except according to intensity. For a habit which is the principle of cognition cannot be diverse in any other way than according to intensity, if it is always a principle of seeing the same object, according to the same reason. Thus, no other variety can be in the vision than that of intensity; and therefore neither in the light, which is the principle of that vision, can there be any other variety than that of intensity. Since therefore, in whatever clear vision of God, God appears the same and in the same way on His part, and thus in the vision itself there can be no other variety than that of intensity, as has been proved above: it follows that in the light which is the principle of that vision, too, no other variety can be than that of intensity.

Besides, others, crushed by this argument, answer that among the blessed there are lights of glory diverse according to species, so that the visions which they have of God also differ in species; by which reasoning it will not be difficult to understand that by one vision more, and by another fewer, species of things possible or future are seen than by another. But this is fabricated; for since the light of glory by its power primarily regards the essence of God, toward which the vision then bends the intellect; and since the essence of God, seen in itself, appears likewise the very same to

all who see, and cannot vary according to the seers; therefore both the light and the vision in this matter exclude specific diversity in any intellect; otherwise the very visions of the divine essence in the blessed would differ in species, which is ridiculous and absurd.

Second reason: If future individuals were seen in the Word, the more things someone saw, the more perfectly he would contemplate the divine essence; as St. Thomas seems to teach in I, q. 10, a. 2.[792] Therefore it could happen that someone who had equal merits with another would be more blessed than he. For sometimes it happens, as even the authors of the preceding opinion teach, that one who is equal in merit with another sees more individuals, either of the prayers which are offered to him, or of those things which pertain to his own state; as the founders of religions: which, if on the contrary all singulars are seen in the divine essence under the vision of that same essence, it follows that such persons see the divine essence itself better, and hence are more blessed; whereas nevertheless they are of equal merit. For in the vision of God no other diversity can obtain than intensity and remission, from which it is necessary that there arise for them also the difference of seeing this rather than that, more individuals rather than fewer. Moreover, that there can be no other diversity except intensity is evident: because on the part of God, since He is most simple, that which appears to one appears to another in the same way in the same essence; otherwise there would be in the essence of God certain varieties or differences by the nature of the thing, which is absurd.

Therefore I do not sufficiently understand how what St. Thomas says can be true, namely that in the divine essence certain creatures are more manifest than others, as if some were more hidden than others.[793] The adversary, however, will reply that, the vision of those singulars which one sees being granted by God, he attains the knowledge of others which are communicated in another way; thus they are equal in beatitude, provided they have been equal in merit. But this is frivolous: for if the singulars are seen by the light and by the vision of the divine essence according to the second mode; and these equally from the same

Next, this does not involve a repugnance, as if it were necessary that there be given an infinite light according to intensity, as seems to be gathered from the argument set forth above. First, because, in the opinion of those who say that lights of different species are given, we can easily say that, for seeing the divine essence together with all creatures, a greater light of glory is required than for seeing the essence alone; yet for this reason it is not required that it be infinite according to intensity, but that there be a certain light, specifically diverse from all the others. But when it is objected in this way: that for seeing the essence with ten creatures a greater light is required than for seeing it with two, and that, the more there are that must be seen, the greater light is necessary; therefore, for seeing infinitely many, an infinite light is required; I answer thus: the argument would prove something, if within the same species a greater increase of light had to be made, whereby more creatures would be cognoscible; but if there be given some light of another species, it is sufficient, if according to the aforesaid enumeration we ascend: so that, the more are seen, the more perfect a light is required; yet, for infinitely many to be seen, another light entirely diverse is

792. St. Thomas, Summa Theologiae I, q. 10, a. 2.
793. The reference string as printed: "S. Tho. q. 8. ad 3. 4. ad 12."

necessary. A similar argument is wont to be formed in this fashion: to see some perfection by nature a greater power is required, therefore for an infinite perfection, such as God is, an infinite power is required. It has no force, because it is sufficient if another light of a different species be given, whereby we may be able to see the essence of God. On this account I said that this line of reasoning has force in the opinion of those who say that there can be given diverse lights according to species.

However, even if we say that diverse lights are not given, but that there is only one according to species, from that enumeration there follows only this, that an infinite light is given according to intensity, and an infinite vision in the same manner; and this does not seem to repugn so expressly, as is gathered from what we have said, disput. 26, cap. 2. Add that, if to see the divine essence together with one creature a certain grade of intensity is required, and to see it together with more there is required a more intense [light], and so on to infinity, it would follow that Christ has a light infinitely intense, because he sees infinitely many future individuals, as will be said in III, q. 10, a. 2.[794]

But if they object that here a peculiar absurdity follows, namely that God is comprehended by the blessed if an infinite light be granted, I say that this absurdity is better avoided in another way than by denying that an infinite light can be given. For even if this be true, it by no means follows best that God cannot be comprehended by the blessed; but to deny an infinite light for this sole reason, lest that follow which we are striving to infer from the argument, namely, lest God be said to be comprehended, is a manifest begging of the question: for that is adduced as a reason, as if absurd, which we wish to infer from the argument.

Thus far there has been disputation against the third opinion, from which it only remained that we should respond to the testimonies of the Fathers. Of these, I now reply concerning St. Gregory, that he does not assert that creatures are seen in the Word by the force of the vision, indeed he does not even say that they are in any way known together with it, but only affirms that the blessed in beatitude know not only their relatives and others known in this life, but also all the rest of the good who were before unknown to them. He proves this a maiori: for if it be granted to them to see God, who knows all things, by greater reason will it be granted to them also to know the rest. But he does not say that they behold them in the knowledge of God; this, indeed, has already been shown sufficiently to be impossible.

As to the Council of Sens, which is provincial and not confirmed, I answer that the Fathers there merely define that our prayers are known to the saints in the fatherland, so that we may safely implore them; but what it says, that all that shines and appears in God as in a mirror, it does not define, but adduces as a reason. Nor does it say that things are seen in God by the force of that vision, but as in a mirror; which we concede: because it has the likeness of a mirror, in that it manifests other things - not by the force of the vision itself, but it does so by a special revelation, on account of which it is called by Theologians a voluntary mirror, as will be alleged in the following chapter. Indeed, in a material mirror things are not therefore said to appear or be seen because the

794. St. Thomas, Summa Theologiae III, q. 10, a. 2.

mirror itself is seen (nor is anything existing within the mirror seen; we have already demonstrated this in disput. 38, cap. 4); wherefore, even if the mirror itself did not appear, if the species were refracted in it, other things would be seen. In this therefore he compares the divine essence to a mirror: just as a mirror is the cause of knowing things, because from it the species of them are derived by refraction, even if we do not behold the species themselves because the mirror is seen; so the divine essence, revealing other things to the blessed, causes them to be seen, not because it itself is beheld. As for the testimonies of St. Augustine and St. Bernard, we shall speak in the following disputation. In the same way can be understood what St. Augustine teaches: in the book On the Triple Habitation, q. 10, c. 6, where he says that in God, as it were in a mirror, are found both other things and we ourselves; nevertheless, about Augustine, and about the testimonies of the Fathers, a subsequent disputation must be instituted.[795]

Caput VI - The truer opinion is that no creature is seen by the force of the vision of God, but is seen by a special revelation

From the confutation of the aforesaid opinions one can easily gather the truer opinion, which asserts two things: first, that no creature is seen in God by the force of his vision; second, that by a special revelation other possible or future creatures are known by the blessed, not by the same vision together with the divine essence, but by a different one. The former part is followed by St. Bonaventure,[796] by Scotus,[797] by Gabriel,[798] by Almain,[799] by the Major,[800] by Marsilius,[801] by Ockham,[802] by Petrus Alliacensis;[803] in this sentence too can be reckoned the Thomist Paludanus in IV, dist. 49, q. 2, art. 2, where he impugns the preceding opinion, which he himself elsewhere numbers in the second place, and finally asserts that by the force of the vision of God creatures are not necessarily seen. Nay more, from the doctrine of St. Thomas below, q. 57, a. 1, it is efficaciously confirmed, as so many testimonies being alleged also seem to be confirmed physically; for he asserts that the mysteries of our faith are known to the blessed Angels in the Word, according to what God willed to reveal; and the more in proportion as they are higher, because the perspicacity of seeing the essence of God - he immediately subjoins concerning these mysteries - that this is how they are known by an Angel from the beginning of his beatitude, and certain others in the course of time; whence also it most manifestly follows that they are not seen in the Word by the force of the vision itself, but by a special revelation: which he indicated clearly by the previous words. For if they were seen by the force of the vision, it would be necessary that there be a change and an increase of the vision so that they begin to be seen in the course of time. For how could it be that one and the same vision, remaining unchanged, would not make something to be seen at the

beginning, and afterwards would make it to be seen? But the vision of God is neither intensified nor changed: otherwise it would follow that Angels day by day became more blessed; therefore neither are those mysteries seen by the blessed by the force of the vision of the divine essence.

Cajetan, in one article explaining the mind of St. Thomas, labored not a little; accordingly, he says that things are seen in the Word in a twofold way: in one way by the very vision by which God is seen; in another way by another vision arising from a special illumination. And in this way also are things said to be seen in the Word (as he says) causally; because the Word is the cause of that revelation, which he afterwards more at large explains. And certainly, in one way, by which St. Thomas can conveniently be understood, the Doctor also in this part seems to favor our sentence.

This opinion is thus explained and proved by certain Doctors who follow it, and by St. Augustine and St. Anselm, who seem to teach that God is a voluntary mirror. Cajetan, however, replies in article 3 that therefore God is called by Augustine a voluntary mirror, not as if, when he wills to be seen, he is seen by us, but because that which it pleases him should appear, appears in him. But the Fathers teach this for a far different reason. Augustine, aiming to show that God is invisible to the eyes of the body, says that to be invisible can result either from a thing's own nature or from the divine will; and that God, although invisible by nature, at times through his own free will manifests himself in various modes of appearance. Of this Ambrose bears witness, recounting certain visions; and Augustine often repeats in many places that God, when he chooses, presents himself under sensible appearances for the instruction of men. Likewise, in Anselm one may find in that place an explication in keeping with our opinion; and similarly the narratives of many apparitions in the Gospel make for this.[804]

He compares the divine essence (*essentia*) to a mirror, in this way: just as a mirror is the cause of knowing things, because from it their likenesses are derived by refraction, even if we do not gaze upon the likenesses themselves, from the fact that the mirror is seen; so too the divine essence, by revealing other things to the blessed, makes them to be seen, not because the essence itself is seen. About the testimonies of St. Augustine and St. Bernard we shall speak in the next disputation. In the same way one can understand that which St. Augustine teaches, in the book On the Threefold Dwelling, in the ninth question, chapter 6, where he says that in God, as in a mirror, we contemplate other things and ourselves; yet concerning the testimonies of Augustine and the Fathers a following disputation must be undertaken.

By refuting the foregoing opinions one easily gathers the truer position, which asserts two things: first, that no creature is seen in God by force of the vision (*visio*) itself; second, that by a peculiar revelation some creatures, whether possible or future, are known by the blessed, not by the same vision together with the divine essence, but by a different [vision]. The first part is followed by St. Bonaventure in III, dist. 14, art. 2, q. 3, at the end; by Scotus, q. 2; by Gabriel [Biel], in IV, q. 1, a. 2, nota 3; by Almain, in IV, q. 1, a. 13; by the Major, in IV, dist. 49, q. 16; by Marsilius, in III, q. 10, a. 8, for the most part; by Ockham, in IV, q. 13, art. 2; and by Peter of Ailly, in I, q. 12;

804. This paragraph gathers the patristic and scholastic testimonies adduced in the margin: Cajetan, In I, q. 12, a. 13; Augustine, various places; Anselm, Monologion; Ambrose, and other narratives of divine apparitions frequently cited by Augustine.

and in IV, q. 3, art. 2. To this opinion there can also be referred, among the Thomists, Paludanus, in IV, dist. 49, q. 2, art. 2, where he himself numbers it second in place, and finally asserts that by force of the vision of God creatures are not necessarily seen.

Nay rather, from the doctrine of St. Thomas below, q. 57, art. 5, this is efficaciously confirmed, although in the places alleged in chapter 3 he seems to teach the opposite; for he asserts that the mysteries of our faith are known by the blessed Angels in the Word, according as God willed to reveal them, and the higher they are, the more [they know], because they behold the essence of God more perspicaciously; yet he adds of these mysteries that some are known by an Angel in this manner. But if those mysteries were seen by force of the vision itself, manifestly it would follow that they were seen from the beginning of their beatitude, not in the course of time; whence it clearly follows that they are not seen in the Word by force of the vision itself, but by a peculiar revelation. For if they were clearly indicated by the words of the vision, and as they begin to be seen in the course of time, it was necessary that the vision be changed and made more intense. For how could it happen that one and the same vision, remaining immutable, should from the beginning not make something to be seen, and afterwards make it to be seen? But the vision of God is not intensified nor changed; for then Angels would day by day become more blessed; therefore neither are those mysteries seen by force of the vision of the divine essence by the blessed.

Cajetan, in that same article, labors not a little in explaining the mind of St. Thomas: he says, therefore, that some things are seen in the Word in a twofold manner, some by the very vision by which God is seen, others by another vision and peculiar illumination; and in this latter way also things are said to be seen in the Word (as he says) causally, because the Word is the cause of that revelation, which will be explained more broadly below. And certainly I do not see by what other way St. Thomas can conveniently be understood; and in this respect the holy Doctor also favors our opinion.

St. Augustine, in Epistle 112, chapter 4, in order to show that God is invisible to bodily eyes, said: "I answer that he is invisible by nature; to be seen, however, when he willed, as he willed; for very often he has been seen, not as he is, but as it pleased him to appear. What the will chose, not nature formed, that is, what he voluntarily assumed, nor was it natural to him." He speaks, however, of the bodily image in which he appeared in various ways to the ancients. He took almost word for word this sentence from St. Ambrose, on Luke, chapter 1, in the chapter on the apparition of the Angel; the same Augustine repeats in chapters 5, 7, and 10 of that same epistle. But in the place of Anselm alleged we could not find that same opinion; yet in the exposition upon the Gospel, chapter 17, on Matthew, "After six days," he says: "Clouds and darkness are round about him," because there lies hidden a certain obscurity of his incomprehensibility, nor can he be known by a creature unless so far as he wills to reveal. There Anselm does not treat of the clear vision of God, in which sense even with the opinion and exposition of Cajetan it would very well agree, but of the cognition even of the way, which we cannot have of God unless in the measure that he deigns to grant it by his grace; therefore, as regards the first part of this opinion, in my judgment it remains sufficiently confirmed from the refutation of the others, especially of that which we reported in chapter 3 and impugned in chapters 4 and 5.

Nothing can appear anew in the vision, unless the vision be changed; but it cannot with the greatest foundation be said that the vision which the blessed have of God is so easily changed: therefore there is no reason why we should say that with the same cognition they see God and creatures in such a way that creatures are also seen successively. Those, then, who would teach that with the same numerically one vision the divine essence and creatures are known, do not say this because the essence of God is seen, but because God by a peculiar revelation willed to manifest creatures, as Gabriel [Biel] taught on the Canon, lecture 31, letter E. To assert this, however, they must grant that there is no variation and succession in that vision itself, but that all things which the blessed are said to know in the Word - whether possible or future - they see simultaneously from the beginning. I, however, judge the opinion of Peter of Ailly, Ockham, Almain, and the Major, in the places cited at the beginning, to be more probable: namely, that any creature is known by the blessed by another cognition distinct from that by which they see God; not that it is repugnant for God and a creature to be known simultaneously by the same vision - for that can be defended probably, just as by one species many and various things are known by an Angel - but because it is easier to assign diverse cognitions to God and to creatures, and with this the common mode of speaking is most excellently preserved, according to which things are said to be seen in God or in the Word of God; there is no reason to force into the straits of one cognition God and creatures together, so as to say that they are seen by the same cognition. Then too in this way we can easily defend that which a little before we reported from St. Thomas, namely, that many mysteries and other created things are revealed to the blessed day by day, which, however, are said to be seen in the Word: thus no absurdity will follow.

Besides, it is difficult to explain, if that cognition were the same of God and of creatures, what principle it would have as regards creatures, inasmuch as it is terminated to creatures; for it cannot proceed from the light of glory (*lumen gloriae*), unless we say either that by the vision of the divine essence they are seen, or else unless we posit diverse lights according to species constituted for seeing God, with these creatures, and with those. For the same light within the same species, even if it differs according to greater and lesser intensity, cannot be for knowing various creatures according to species, and much less for knowing God and creatures together; wherefore it is much more probable to assert diverse cognitions: to see God, and to see creatures.

Caput VII - That in the Word creatures are known by a cognition different from that by which God himself is seen

It remains, for the confirmation of our opinion, to explain and confirm the latter part of it - namely, how creatures are said to be seen in the Word, even if they are not known by the same vision, but by other diverse cognitions. On this matter the Doctors alleged in the preceding chapter do not speak in the same way. St. Bonaventure, Marsilius, and Scotus merely say that created things are seen by the blessed in the Word by a peculiar revelation and will, as we said in the preceding chapter; they add also that in act they can be seen in the Word successively, but simultaneously in habit: that is, as St. Bonaventure and Marsilius say, that there is one habit by which things can be seen and read in the Word; but what that habit is, they do not explain. Scotus

speaks in the same way, but he says that this habit by which the blessed are able to see and read all creatures in the Word is the very vision of the divine essence, not because by force of it there follows the knowledge of other things, but for another reason, which he does not explain.

But if the aforesaid authors mean that creatures are seen together with the Word, and in it, by the same vision, and nevertheless can be understood successively - now one, now another - still their opinion does not please me; for as Peter of Ailly, in I, q. 12, letter X, and Ockham, Gabriel [Biel], Almain, and the Major teach in the cited places, it cannot happen that, with the same vision altogether immutable, something begins to be seen which previously was not known; therefore by the vision of God nothing other than God can be seen successively, unless the vision itself vary. Nor can it be said on any very great foundation that the vision which the blessed have of God is so easily changed; therefore there is no reason why we should say that by the same cognition they see God and creatures in such a way that creatures are also seen successively. Those, then, who would teach that with the same numerically one vision the divine essence and creatures are known, not from the fact that the essence of God is seen, but because God by a peculiar revelation has willed to manifest creatures - as Gabriel taught on the Canon, lecture 31, letter E - must assert this in such a way that they grant no variation and succession in that vision itself, but that all things which the blessed are said to know in the Word, whether possible or future, they see simultaneously from the beginning.

I, however, judge the opinion of Peter of Ailly, Ockham, Almain, and the Major, in the places cited at the beginning, to be more probable: namely, that any creature is known by the blessed by another cognition distinct from that by which they see God; not that it is repugnant for God and a creature to be known simultaneously by the same vision, for that indeed can probably be defended, just as by one species many and various things are known by an Angel; but because it is easier to assign diverse cognitions to God and to creatures, and with this the common mode of speaking, according to which things are said to be seen in God or in the Word of God, is most excellently preserved, there is no reason to force into the straits of one cognition God and creatures together, so as to say that they are seen by the same cognition. Then too in this way we can easily defend that which a little before we reported from St. Thomas, namely, that many mysteries and other created things are revealed to the blessed day by day, which are nevertheless said to be seen in the Word: thus no absurdity will follow. Moreover, it is difficult to explain, if that cognition were the same of God and of creatures, what principle it would have as regards creatures, inasmuch as it is terminated to creatures; for it cannot proceed from the light of glory unless we say either that by the vision of the divine essence they are seen, or else unless we posit diverse lights according to species constituted for seeing God, with these creatures, and with those; for the same light within the same species, even if it differs according to greater and lesser intensity, cannot be for knowing various creatures according to species, and much less for knowing God and creatures together; wherefore it is much more probable to assert diverse cognitions: to see God, and to see creatures. But by what reason the blessed is said to see these created things in the Word, if neither from the fact that he sees the Word, nor by the same vision with it he knows them, must be explained. The Doctors most recently cited say that to see something in the Word is nothing else than that God

should cause the cognition of those things in the intellect of him who sees him; and Cajetan also grants this mode of speaking below, q. 57, art. 5, in the place cited, namely, that things are said to be seen in the Word because by it revealing, and as by the cause of cognition, they are seen, not only because, as a known object, it is the cause of their cognition. But by what reason the blessed is said to see these created things in the Word, if neither from the fact that he sees the Word, nor by the same vision with it he knows them, must be explained. The Doctors most recently cited say that to see something in the Word is nothing else than that God should cause the cognition of those things in the intellect of him who sees him; and Cajetan also grants this mode of speaking below, q. 57, art. 5, in the place cited, namely, that things are said to be seen in the Word because by it revealing, and as by the cause of cognition, they are seen, not only because, as a known object, it is the cause of their cognition.

But we on our part say in only this sense that created things are seen in the Word by the blessed: that God himself is the efficient cause (*causa efficiens*) of that peculiar revelation and cognition of them, not as the object first known. Moreover, that God is the cause of this peculiar revelation while the intellect sees God himself, as the aforesaid Doctors were saying, has little bearing on this, that those things be said to be seen in the Word of God. Wherefore not only the blessed, but also wayfarers are truly said to see some things in the Word of God, or in God, or even in his foreknowledge, because, God's foreknowledge revealing, they know. They are said, however, rather to see in the Word than in the Holy Spirit, or in the Father, as we noted at the beginning of the disputation, because since the Word proceeds by the intellect, works of revelation are appropriated to him, just as works of grace are to the Holy Spirit.

This is further established by authority. St. Thomas below, q. 62, art. 1, ad 3, teaches that an Angel contemplates created things in the Word with a twofold cognition: first, with the cognition which he has of God according to his nature, as it were on the way, and he calls this imperfect; then by the clear vision of the divine essence, and he says this is perfect; where plainly he speaks not of the Word of God that is by voice, but of the second person of the Trinity. St. Thomas also favors this below, q. 57, art. 5, who asserts that the mysteries are known by Angels in the Word with the succession of time, when they come to be; which cannot be true if he called vision in the Word that by which the Word itself also is seen. Wherefore Cajetan, in the same place, 2.2, q. 83, art. 4, solution 2, teaches that not only are those things said to be seen in the Word which are seen by the same vision with the Word, but also those which are known by a peculiar revelation made by the Word.

Therefore, following only this latter mode and rejecting the former, we do not improperly say that some created things are seen in the Word. With this phrase I think also Bernard spoke, in Sermon 17 on the Canticles, when, speaking about Lucifer, he says: "It could have happened (if, however, it be not thought incredible) that men, more fully instructed and more perfectly in heart, could have foreknown that they would be future, even that they would advance to equal glory; but if he foreknew, in the Word of God, without doubt he saw." And yet it was sufficiently clear to Bernard that Lucifer had not yet clearly seen God. Some reply that Bernard spoke not of the substantial Word of God, but of an external word; in which sense it is said in Scripture that the

word was made to such-and-such a Prophet. But this evasion seems contrived; for you will scarcely find this phrase "external word" either in the Fathers or in Scripture; on the contrary, of the very substantial Word of God you will find it in Augustine; wherefore I do not doubt that Bernard made use of the phrase of Augustine - whose doctrine he also knew most excellently - and that, as also in that book V to Eugenius he followed Augustine's doctrine and spoke in the same sense, as will be evident in the following disputation.

There is added that the ordinary Gloss, on Isaiah 38, "Set thy house in order," teaches that the Prophets read in the book of God's foreknowledge the things which they foretell. St. Thomas, 2.2, q. 173, a. 1, ad 1, explains this when he says that for this reason the Prophets are said to read in the foreknowledge of God, because from it future things are revealed to them; therefore by the same reason the blessed and the wayfarers will be said to read, or to know, in the Word of God those things which are revealed to them. And in this way one can understand St. Bonaventure and Scotus, who teach that the blessed, in the Word which they clearly contemplate, read future things and created things, in so far as the Word itself has willed to manifest them to them. They took this way of speaking from Augustine, Confessions, book 13, chapter 15, who says of the blessed: "They have no need to look up at this firmament, to learn by reading your Word. For they see your face always, and there they read, without syllables of times, what your eternal will wills: they read, they choose, and they love always: they read, and what they read never passes away. For by choosing and loving they read the very unchangeableness of your counsel." But when Augustine says that the book of the blessed is not this firmament - namely, the heaven adorned with stars - which also announces the praise of God, and in which, as in a book, God himself can be read and known, but [that their book is] the very clearly seen Word of God, he does not think that in it, by force of the vision -

Caput VIII - Which species of things the blessed know in the Word

But he does not think that, by force of the vision, the will of God is manifested to the blessed; rather, that they read it there clearly, because He Himself manifests His counsel to them. They are said to read by choice and by love, because, since they love and are friends of God, He, as to friends, reveals; not because they formally read by love itself, since reading happens only by the intellect. Moreover, when St. Augustine says that the blessed read God's will not by the syllables of times, he does not say this because no new revelations are made to the blessed - for St. Thomas also taught that, as we saw a little above - but because they clearly behold Him Himself, and from Him, who is eternal and whose will cannot be changed, they immediately know the counsel of His will, not through the heaven or other creatures that pass in time. In the same way must be taken that which the same Augustine, City of God, book 9, chapter 22, teaches, when he assigns a difference between the blessed Angels and the demons: that the former know future things in the eternal and unchangeable laws of God; but the demons understand temporal things by temporal and mutable things.

To these testimonies of Augustine, and to the doctrine set down above, there also agrees that of Isidore in book 1 of the Sentences, or On the Supreme Good, chapter 12, sentence 17: "The Angels know all things in the Word of God before they are; and those things which are still future among men, the Angels have already learned by revelation from God." There Isidore takes as equivalent "in the Word" and "to be known by revelation from God," namely, that future things are seen by the Angels in the Word before they come to be, and that by God Himself revealing they are known. The other testimonies of Augustine which seem to prove that, by force of the vision, creatures are seen in the Word - which have been alleged for the opposite opinion - we will examine in the following disputation, as we also promised; and there we shall say what St. Gregory, St. Ambrose, and the Fathers of the Council of Sens, cited in the same place, held.

Which species of things the blessed know in the Word.

It is much more difficult, in the opinion of those who teach that certain creatures are seen in the Word by force of the vision, to discern which things either possible or future or already existing in reality are seen in it; whereas in our opinion, which affirms that nothing is known from the vision, but some things are known by a special revelation, the matter is easy.

Opinions. - St. Thomas in that place, and along with him more recent Thomists, and the third book Against the Gentiles, chapter 59, and Ferrariense in the same place, Sotus in the Fourth Book, distinction 49, question 3, article 3, conclusion 6, and other Thomists of our time, assert that all the species of things are seen by any blessed one, but not individuals.[805] They prove this because that alone pertains to the perfection of the natural desire of knowing which ought to be satisfied in the beatitude of any human being; but this perfection consists in knowing all the species of things, not individuals: therefore the knowledge of the species will satisfy the natural desire of knowing; and since man's desire in beatitude ought to be satisfied, it follows that the knowledge of species, not of individuals, should be communicated to him. From this reasoning Sotus gathers that St. Thomas spoke only of natural species, because for knowing supernatural species the natural desire is not sufficient.

Refuted. - But I, first, judge that, without reason, the mind of St. Thomas is restricted to natural species alone; for nothing in his reason indicates that at all. For from what he says, that the natural desire of knowing, or appetite, ought to be fulfilled in beatitude, there does not follow that he speaks of the species only of natural things: because from his own teaching it follows not only that there is a natural desire of knowing the things that are natural, but also of seeing God, which is supernatural, as he clearly teaches in article 1 of this question, as we noted there, and we shall say more fully in First of Second, question 5, last article.

Second, I do not see by what reason it is proved that, in fact, the species are seen by any blessed one, but not individuals. For, if the natural desire of knowing ought altogether to be fulfilled, not only the knowledge of species, but also of individuals ought to be communicated: for these too we naturally desire to know, if the natural desire is taken as St. Thomas takes it and as we explained

805. Cajetan, Secunda Secundae, q. 83, a. 4, around solution 2; the third book Against the Gentiles, c. 59; Ferrariense there; Sotus, In IV Sent., d. 49, q. 3, a. 3, concl. 6.

above in article 1 of this question; it would then be necessary that all possible species be known - which, however, cannot be so affirmed. Nor does any one of the Doctors cited assert that all possible species of things are seen by the blessed; nor should that easily be affirmed: for there is no firm reason that persuades all that; and likewise in the opinion of those who say that, for beholding the divine essence together with created things, a greater light is required than for beholding that alone, and that the more numerous the creatures are with which it is beheld, the greater light is necessary, it follows that, if infinite species were known in the Word by force of that vision, an infinite light would also in fact be given. Moreover, since the blessed knows things as they are, by a proper concept, and does not abstract a universal from singulars, as we shall say in disputation 118, we ought not to say that only species in general are known by them, and not individuals.

Finally, as to future species, I do not see why we ought to deny that all of them are seen by the blessed; and of these I would also understand the Doctors cited, although there is no effective reason or authority beyond that of the Scholastic Doctors that compels one to assert it. For what was brought forward about the natural desire of knowing proves too much, as I was saying a little before; and the state of beatitude, by the vision of God alone, is so sufficient and fulfills the appetite, that it leaves no anxiety of desire for knowing remaining for other things besides God. For the rest, besides Him, the blessed who behold His essence reckon as nothing. But when we say that all future species are in fact seen by the blessed, we understand this of some individual and only of natural [species], not of all supernatural ones, nor of all thoughts of hearts, but of those which wayfarers direct to the blessed. And all these things that we have said must be understood according to the doctrine delivered by us above in chapter 7, namely, that these species or individuals are so known by the blessed in the Word that neither from force of the vision, nor by the same act as by which they behold the Word itself, but by a special revelation they are known.

Caput IX - Which future things the blessed see in the Word

Finally, in the last place, let us say a little about future singulars, about which the Doctors also speak in various ways. First, the Angelic Doctor, in the Third Part, question [blank], article [blank], teaches that the blessed see in the Word all the singulars that pertain to themselves, and the prayers that are made, and those that pertain to the state of a congregation of which he himself was the head. Cajetan agrees in Secunda Secundae, question 83, article 4, around the second solution; Sotus in the Fourth Book, distinction 49, question 3, article 3, conclusion 10; and other Thomists of our time.[806] Sotus adds that all these things are known by a blessed one at once in the Word from the beginning of his beatitude; but others, about prayers, say they are not seen from the beginning, but are known by a succession of time; but other singulars which happen and seem to pertain to the state of the blessed, such as those that occur in some religious order of which he is the founder, are seen in the Word from the beginning.

806. Cajetan, Secunda Secundae, q. 83, a. 4, around solution 2; Sotus, In IV Sent., d. 49, q. 3, a. 3, concl. 10; cf. also St. Thomas, Tertia Pars, q. [unspecified], a. [unspecified], as cited by the author.

Finally, Cajetan in the place alleged asserts that only those singulars are seen at that time when someone begins to be blessed and pertain to the state of that person, and from the beginning of his beatitude are seen at once in the Word by force of that vision; but the rest, which afterward occur, are not known from the beginning, but at the time when they occur; nevertheless, as Cajetan says, they are said to be seen in the Word causally, that is, because the Word, by a special revelation made to them, is the cause that they know them; and with this agrees the doctrine of the same, First Part, question 57, article 5, which we reported in chapter 7. Wherefore some more recent men wrongly assail Cajetan. First, because he seems to establish some variation in the vision of God, when he says that some future things are seen by the blessed in the Word by a succession. For these do not attend to the fact that Cajetan never said that the same things are seen by the same vision as the Word, but different things are seen by a different cognition. Then they argue frivolously: because if the blessed saw future things successively, Christ would see them successively, which is absurd. But this reasoning is of small moment: for although Cajetan thinks thus of other blessed men, nevertheless it is not necessary to affirm the same of Christ.

We, however, always leaning upon the principles of our opinion, affirm universally that all the future things which the blessed know, as they are and of whatever sort they are, which in some way pertain to their own state, and the prayers which are made to them, they know by a cognition distinct from that by which they behold the Word; and therefore it is not necessary that all at once from the beginning of beatitude be known by them. For if those things were seen by the same vision as the Word, they could not be known in the course of time unless some change were made in the vision itself, as we proved above in chapter 7. Nay rather, as we said there, it could happen that one who had more merits would sometimes see fewer secrets, if fewer singulars belonged to the state of that one, as could happen in some anchorite. For, in order to see more individuals by force of the vision of God, that very vision would have to be more perfect: for perfections of that sort could not be in different [blessed] from a diverse cause of knowing; and thus it follows also against Cajetan, who says that those things which at the beginning of beatitude are present are known by a blessed one in the Word from force of that vision; but those which are future are comprehended successively in the Word by some peculiar revelation. For it can happen that to the state of someone who has greater merits, more individuated things pertain at the time when he begins to be blessed; therefore then he will see more by force of the vision than another would see the Word, and hence he would gaze more perfectly upon the Word itself.

It is answered by certain Thomists that it is not necessary that, the more things are seen in the Word, the more perfectly the Word is seen, unless the things that are seen differ in species; because the apprehension of singulars does not pertain to the perfection of the intellect, but only those things which St. Thomas is thought to have said pertain to it, namely, in 3 p., q. [blank], art. [blank]: that more things are known in the Word, namely, that the blessed person should see the Word more perfectly. This is ridiculous. First, because the Doctors in that article are not speaking only of the species, but also of individuals, thoughts, and prayers that pertain to the state of the blessed; for he said that many things are seen by the blessed because he sees the Word more perfectly on account of the abundance of intelligible lights, which is a mark of a more copious act.

For it is, indeed, a "natural desire," and the perfection of the intellect consists not only in knowing the species, but also in knowing individuals; chapter 7 proved this. And besides, it is the same to say that, in order that individuals be seen in the Word, it is necessary that more things be known by that vision, as it is to say that the Word itself must be seen more perfectly. For if in two equally perfect visions one could see in one more because of one cause of seeing more, and in another another [could see more] because of another cause; we therefore choose to flee all these inconveniences and to hold by far the better and safer course: to say that nothing at all is seen in the Word by force of that vision which Thomists consider to be the sole vision, and that by revelation peculiar [things] are known.

The rest object: that if the blessed, from the very principle of beatitude, and so from the moment they know themselves, ought to pray to God to reveal our prayers to the blessed - yet the Church is not wont to do this; therefore it is a sign...

...he would see God the less, if fewer singulars belonged to his state, as could happen in the case of some anchorite. For, in order to see more individuals by force of the vision of God, that same vision would have to be more perfect; for if it were of the same perfection, it could not, in different persons, be the cause of knowing different things. But this also follows against Cajetan, who says that the things present at the beginning of beatitude are known by the Blessed in the Word by force of that vision, while those that are future are seen by some special revelation in the course of time. For it can happen that to the state of someone who has fewer merits more individuals pertain at that time when he begins to be blessed: therefore then he will see more by force of the vision by which he sees the Word, and consequently he will gaze more perfectly upon the Word itself.

Some Thomists reply that it is not necessary that, the more are seen in the Word, by that very fact the Word be seen more perfectly, unless the things that are seen differ in species; for knowledge of singulars does not pertain to the perfection of the intellect. And they think that St. Thomas said only of those things in IIIa, q. 10, a. 2, that the more are known in the Word, the more perfectly the Word itself is also seen.[807]

It is refuted. This, however, is ridiculous. First, because the holy Doctor in that article was speaking not only of species, but also of individuals pertaining to the state of the blessed - future thoughts and prayers - and he said that the more are seen by the blessed, the more perfectly he sees the Word, undoubtedly understanding those things which he adduced as examples. Then also, because it pertains to the natural desire and to the perfection of the intellect not only to know species, but even individuals, as was proved in chapter 7. Moreover, if individuals are seen in the Word by the same vision and by virtue of it, it is necessary that, the more are known, the more perfectly the Word itself be seen. For if in two persons the vision is equally perfect, it cannot be in one the cause of seeing more, or different, things than the other knows. Therefore, in order to flee all these inconveniences, it is much better to assert that nothing - neither what is future nor what is possible - is seen in the Word by force of that vision (as the Thomists contend), but is known by another vision and by a special revelation.

807. St. Thomas, Summa theologiae, IIIa, q. 10, a. 2.

But some object that, unless the blessed from the very beginning of their beatitude, and at once, knew all these things, we would have to ask God to have our prayers revealed to the blessed - which pertains to their state, as could happen in the case of some anchorite - yet this the Church is not accustomed to do; therefore it is a sign that the Church holds as certain for herself that all these things are seen by the blessed from the beginning of beatitude.

It is answered: I answer that for this reason the Church does not ask it of God, because she already has it certainly persuaded for herself that these things are known to the blessed by this or by that most certain way, and that they in no way depend upon our prayers; wherefore it is not necessary to say that all these things are known to the blessed from the beginning of beatitude.

Furthermore, that all these things are seen by the blessed, besides the scholastics already cited, is taught by St. Augustine in the book On Care to Be Taken for the Dead, by St. Jerome in the book Against Vigilantius, and by St. Gregory in book 12 of the Moralia, chapter 12, on that verse of Job 12, "Thou hast strengthened him a little."[808] Yet they vary as to the mode: Augustine seems to indicate the mode, namely, that the souls of the blessed learn these things from the report of angels; Jerome, that the souls themselves by a certain marvelous swiftness of nature are present everywhere. But since presence according to place contributes little to spiritual knowledge, which is not made through the senses, they assign this cause in vain; Gregory does not define the mode by which those things are known. Finally, the scholastics also, as we have related, vary; from all of whom we have chosen that special mode which we mentioned a little above, namely, that future thoughts and prayers are known by a peculiar revelation.

Disputatio LI

Caput I - The various opinions of the scholastics on interpreting Augustine's mind

On the occasion of that division which Augustine often repeats in his books - namely of morning and evening cognition - there was introduced among the scholastics this manner of speaking, whereby we commonly assert that creatures are known in God or in the Word by the blessed. But neither do all teach in the same way that creatures are seen in the Word (as we saw in the foregoing disputation), nor do they interpret the mind of Augustine in the same sense. How the scholastics think that creatures are seen by the blessed in the Word has now been said by us enough; it remains that we say in this disputation something about the mode in which he himself interprets Augustine; from which too we can gather that the opinion of Augustine and of Bernard is in no way

808. St. Augustine, De cura pro mortuis agenda, cap. 15; St. Jerome, Contra Vigilantium; St. Gregory, Moralia in Iob, XII, c. 12, on Job 12.

opposed to our opinion, which we set forth in the preceding disputation. Therefore in this chapter we shall enumerate the various modes of interpreting Augustine; but in those that follow we shall deduce his genuine interpretation from his very words

- First mode: By Albert in part 2 of the Summa, tractate 4, q. 14, memb. 3, art. 2, part 2, in the body, and in the incidental question; and by Aegidius in II Sent., d. 13, q. 1, art. 3, dub. 3. They say that the morning cognition is not the clear vision of God, but a natural cognition of God, by which angels and men know him as the author and principle of all things. Then, using a metaphor taken from the root, they add two other cognitions, namely evening, by which creatures are known, and meridian, which they call supernatural; nor do they sufficiently explain whether this is a vision of the divine essence, or also of creatures.[809] But if we speak only of explaining Augustine's mind, this opinion can have no foundation at all in him. For we shall show in the following, that in Augustine the morning is the clear vision of God, not the natural knowledge which we can have of him as he is the author of all things. Nor in Augustine should meridian cognition be distinguished from morning and evening.
- Second mode: By St. Bonaventure in II Sent., d. 4, a. 2, q. 1 and 2, and by Richard in II Sent., d. 4, q. 1 and 2. They hold that morning cognition can be said in a twofold way: first, the clear vision of God, in which God himself is seen and creatures in him; then the very clear cognition of creatures through infused species, by which the mind is lifted up to the consideration and praise of God. Richard adds a third, which he himself, properly, calls morning: namely, of the things themselves in themselves through innate species, without the mind's rising to the praise of the Creator; but he calls evening the cognition of the creatures in their proper genus.[810] However, besides the fact that in this way, according to Richard, evening cannot well be distinguished from morning in angels, unless we say that the morning which is improperly so called is properly evening, in the following chapter we shall plainly show that this is not the mind of blessed Augustine. But what they assert about the vision of creatures in the Word must be taken in the same manner as we reported their sentences in the preceding disputation - namely, in what way they are seen in the Word either by force of the vision, or only by the will of God.
- Third mode: By Scotus in II Sent., d. 3, q. 9, at the verse "Tertio persuadetur," asserting that "vision" or "morning cognition" is also used by Augustine in two ways: first, for the very vision of the divine essence; and further for the quidditative and proper cognition of God, which is indeed lower than the intuitive, and higher than knowledge through alien species which wayfarers have of God.[811] But, as we shall show in the following chapter, Augustine called only the clear and intuitive vision of God "morning." Whether he understands the vision even of creatures in God, and in what way, must be explained there. It is added that, as will be proved in disputation 135, chapter 3, that intuitive vision of God which Scotus

809. Albertus Magnus, Summa, part 2, tract. 4, q. 14, memb. 3, art. 2, part 2, in corpus, and in the incidental question; Aegidius (Giles of Rome), In II Sent., d. 13, q. 1, art. 3, dub. 3.

810. St. Bonaventure, In II Sent., d. 4, a. 2, q. 1 - 2; Richard (of St. Victor), In II Sent., d. 4, q. 1 - 2.

811. Scotus, In II Sent., d. 3, q. 9, at the verse "Tertio persuadetur."

contrives is a fiction, nor can it be given, even according to the absolute power of God - this will be made manifest.[812] But Scotus proves his opinion from that sentence of Augustine which is commonly circulated, namely, that the angels had morning before evening cognition, so that those days in Genesis 1 may be suitably distinguished into morning and evening according to that subtlety of Augustine; but not all had the clear and intuitive vision: therefore another vision must be called "morning"; and none is more suitably called morning than that middle cognition which we mentioned: rightly, then...

It is solved: therefore that too is called morning. Still, as we shall see in the following chapter, when Augustine himself calls the intuitive vision of God morning, and says it is prior to evening, Scotus does not rightly infer what he contends; rather he too ought, as we do, to interpret Augustine. Add that Augustine so clearly explains himself as to leave no place at all for doubt.

- Fourth mode: St. Thomas in IV Sent., d. 58, a. 6 and 7, and Cajetan in the Commentaries, call "evening cognition" that which the blessed have of creatures in their proper genus, that is, through their proper species; but "morning" that of the same in the essence of God, not according to their own proper formal reasons, but according to that whereby in God they are the very life of God.[813] Now this cognition of creatures in the Word clearly seen seems to be gathered from Alexander, part 2, q. 23, especially memb. 6, by which he teaches that the demons did not have morning cognition.[814] This indeed is the doctrine of St. Thomas in that place, although here in I, q. 62, a. 1, ad 3 he also concedes morning cognition in wayfaring angels, by which they knew things in the Word by a natural cognition, inasmuch as from themselves - so to speak, as from some effect and species - they knew God himself, and in him the other creatures; and he thinks this to be the mind of Augustine, book 4 of the Literal Meaning of Genesis, chapters 34 and 22, and book 5, chapter 5, when he distinguishes the six days from the beginning of the world by the morning and evening of angelic understanding.[815]

- Fifth mode: Lastly, more recent Thomists interpret the mind of Augustine and of St. Thomas otherwise; for they assert that morning cognition is the cognition of creatures in the Word, by which they are known by force of the vision of the Word according to their proper formal reasons - not insofar as in God they are called the very God according to the notion of God, by which reason all things in him are said to have life. But evening cognition, they say, is that by which the creatures are known according to their own proper formal reasons, not by the vision by which the divine essence is seen, but by their own species, whether infused or acquired. About this opinion of the Thomists, so far as it asserts that, by the vision of the

essence of God, creatures are seen in him according to their own proper formal reasons, enough was said in the preceding disputation. What he asserts, however, in interpreting the mind of Augustine, must be explained.

Caput II - The true interpretation of Augustine's view

This opinion in expounding Augustine's mind is indeed quite different from what is plainly deduced from his own express places. And it consists of two points. One is that the morning and evening cognition are distinguished only in the blessed angels, and never in wayfaring men nor in angels while wayfarers; in which I agree with Alexander and many disciples of St. Thomas.[816] The other is that "morning cognition" is not called by Augustine that cognition of creatures which the blessed have according to their own proper created formal reasons, whether those be seen in their proper genus and through their proper species, or in the divine essence by force of that vision, or in some other way; but that it is the cognition of creatures according to what they are in God - the very life of God - and is itself immutable; whereas evening is the creatures' own knowledge according to their proper formal reasons. Our whole opinion is contained in these two propositions, of which the former must be proved for us in this chapter; and if anything from the same Augustine seems to be opposed to the same, it must be explained.

The former part is gathered from these places of Augustine himself. In De civitate Dei XI, c. 7, he plainly assigns to the blessed angels "morning" to the vision of God, but "evening" to the cognition of creatures; and in c. 9, when he had said that the angels do not learn by sounding words what God is, but by his very presence - which he plainly understands of the clear vision of him - there he subjoins: "There therefore, as in a daytime cognition; in themselves, as in an evening," as we said above (namely, that they know themselves). And in the book of Questions, book 65, q. 26, when he asserts that a creature known in God is morning and in itself evening, by which two a day is constituted, I do not see how this can be understood unless of the blessed. This indeed Scotus readily admits. And he very clearly hands this down in book 4 of the Literal Meaning of Genesis, from chapter 21 even to 32, as Scotus freely confesses.

... In chapter 19 he says: "Will anyone then say, or if he should say it, ought he to be listened to, that that heavenly city among the thousands of Angels either does not contemplate the eternity of the Creator, or is ignorant of the mutability of the creature, or from some lower kind of knowledge does not praise the Creator? They can indeed at once do this whole thing; they at once do this whole thing: therefore at once they have day and evening and morning." Read chapter 24, where he also most clearly taught the same.[817]

But on the contrary: against this interpretation Augustine himself seems to stand, who in many places asserts that morning knowledge is prior to evening knowledge. First, in book 6 of the Questions, question 26, he says that morning is the knowledge of the creature in the Word, but evening, the knowledge of the creature in itself.[818] He renders the reason in these words: "Because

816. Cf. Alexander of Hales and many disciples of St. Thomas, as cited in the preceding caput.
817. St. Augustine, De Genesi ad litteram, IV, c. 19, 24.

the creature is first seen in the Word than in itself." Then in book 4 of the Literal Meaning of Genesis, chapters 24, 31, and 32, he teaches the same. In that chapter 32 he says: "The angelic mind, cleaving by pure charity to the Word of God, after it had been created according to that order so as to precede the rest, saw beforehand in the Word of God the things that were to be made, than when they were made; and thus they were first in his knowledge, when God said that they should be made."[819] By which places he plainly teaches that in the Angel morning knowledge was prior to evening knowledge. But Angels were not created in beatitude, but as wayfarers, as all the scholastics admit, and we shall explain more at length below in Disputation 226; therefore Augustine understood morning knowledge not to be the clear vision of God. Scotus uses these testimonies in order to prove that morning knowledge is that quidditative knowledge of God inferior to intuitive.

I answer: that "prior" in Augustine is not of time, but of order and dignity; this I clearly gather from Augustine himself. First, from chapter 30 of book 4 of the Literal Meaning of Genesis, where he affirms that this is the difference between our day, temporal by the visible sun, and the intellectual day according to the light of angelic cognition, and the evening: that to us the day, morning, and evening are not present at the same time temporally; but to Angels in their fatherland all these are always present. Nor does evening arrive upon the withdrawal of morning and of the day; but it is together with them. He understands indeed not a succession of duration; therefore, when he says in other places that morning knowledge is prior, it must be understood not of duration or causality, but of dignity and order.

He teaches this most clearly in chapter 32 of that book, where he says: "And thus also, although there are no intervals of temporal delays, the rationale of establishing the creature in the Word of God, when he said, 'Let there be light,' preceded." And in chapter 34 about the same cognitions, namely evening and morning, thus he says: "But in these matters what is first and what is later, intervals of times do not demonstrate." He explains by the example of the bodily eye, which at the same time sees the rising sun and the intervening space; yet in order it first sees the space. But it must be observed, when we say morning knowledge is prior in a certain order, not of time, it is not to be understood of the order of causality: for although some Theologians, as we saw in the preceding disputation, say that the vision of God is the cause of seeing creatures in him according to their proper formal reasons, no one has said that morning knowledge is the cause of evening. Therefore the doctrine of Augustine must be understood of a certain order of dignity and excellence: for what is more noble is also called "prior," as Aristotle testifies in the Predicaments, in the chapter on the modes of the prior. And although in the example of the eye, which Augustine adduces, the space is not seen as prior in order of dignity to the sun, but only in order of position (which is reckoned according to another genus of prior and posterior, as is clear from Aristotle in the same chapter), nevertheless there cannot be between morning and evening knowledge any difference of temporal priority; for this he set forth the example so that we may understand that

818. St. Augustine, Quaestiones in Heptateuchum, VI, q. 26.
819. St. Augustine, De Genesi ad litteram, IV, cc. 24, 31 - 32.

between them there is no priority of duration, but only of order: just as the vision of the space is not prior in time to the vision of the sun, although that order of prior and posterior is altogether diverse in one case than in the other.

This order of dignity and perfection the same Augustine most fittingly indicated in the same book 6 of the Questions, question 26, in these words: "Because the creature is first seen in God than in itself, therefore the creature is seen more in the art by which it was made than in itself, in which it was made." Where he thinks the same thing, that to be seen first and to be seen more, that is, more perfectly, are the same. The same is gathered from his doctrine, which he hands down in book 4 of the Literal Meaning of Genesis, chapter 32, when he asserts that the angel was created in that order so as to precede the rest, although it is clear from our opinion, which we shall set forth in Disputation 224, that at the same moment the corporeal creature was founded; especially since he himself thinks that in one day and moment of time all things were produced by God, and that those days of Genesis 1 are enumerated as understood spiritually. Therefore, when he says that the Angel in his creation preceded the rest, he understands precedence in dignity, just as in Job 40 Behemoth is called "the beginning of the ways of God," not in time, but in dignity; as we shall explain below in Disputation 224, chapter 2.[820]

Secondly, against the same interpretation one is wont to object by this reason. If the days distinguished in Genesis, according to the sentence of Augustine, are according to knowledge, and each day is said to consist of those two cognitions, namely morning and evening, it is necessary in the state of angels on the way, before they were blessed, to assign both: for since they were created, together with all other things, not yet blessed, and in their knowledge those seven days ought to be assigned, it follows that before they were blessed they must have had both morning and evening knowledge. With this argument the reply of St. Thomas yields, who in I, q. 62, a. 1, ad 3, concedes that there was in Angels before beatitude a certain morning knowledge and an evening knowledge, by which also, as wayfarers, Angels were said to know things in the Word, so that in this way a day may be distinguished according to the mind of Augustine; but he calls "morning" improperly what properly is the knowledge which is in the Word clearly seen.[821]

It is answered: I for my part think that Augustine nowhere ever called "morning" that knowledge which is the clear vision of God, as is sufficiently evident from the places cited. Wherefore I answer to the argument, that in Augustine's meaning the days are to be understood metaphorically, and that by those six days it is signified that the universe, and the kinds of things which God is said to have created, were known by the Angel by morning and evening knowledge does not hinder at all that they be assigned according to the knowledge of the fatherland, which in Angels was later in time than the creation of the world.

Moreover, the number of the days according to this metaphor of Augustine, from the doctrine of the same in the places cited - especially in question 26 and in book 11 of the City of God, chapter 7 - is numbered thus. The first day, on which light is said to have been created, is the knowledge of the

820. Job 40:14 (Vulg. 19): "Principium viarum Dei"; cf. the author's Disputation 224, cap. 2.
821. St. Thomas, Summa theologiae, I, q. 62, a. 1, ad 3.

angelic nature, which is compared to light, and is prior in dignity to the rest. This day, however, is constituted out of morning and evening knowledge, because the Angel knew himself in those two modes. The second day is the knowledge of the firmament, likewise consisting of those two cognitions, and so with the rest.

Caput III - The latter part of the aforesaid opinion is proved

The latter part of our opinion can be proved no less clearly from Augustine himself. It is this: that morning knowledge of creatures is the very vision of the divine essence (*essentia*), and that of those things only which formally are in God, and thus of creatures themselves, insofar as they are said in God to have being (*esse*) and the life of God, not according to their proper created and corruptible formal reasons. In this sense he himself explains that saying of John 1: "What was made, in him was life," in the Tractates on John, tract. 1; and St. Thomas below in q. 18, a. 4. But evening is another knowledge distinct from the very vision of God, by which creatures are known through their proper species, and according to their proper formal reasons. Now that morning is not of creatures according to their formal reasons, St. Thomas clearly taught, whom I follow in this part; and it is evident from some testimonies of Augustine.

The first is book 11 of the City of God, chapter 7, where he says thus: "Yet there is made the evening of this day, and also the morning otherwise, in this sense: forasmuch as, when created knowledge is compared with the Creator, in a certain manner it declines to evening." By which words Augustine does not distinguish morning and evening by a diverse mode of knowing, as our Theologians commonly do after St. Thomas, namely, morning because the creature is seen in the Word (that is, together with the very vision), evening because they are seen in their proper genus (that is, through their proper species). Rather Augustine distinguishes them on the side of the thing known. For he calls the knowledge of God "morning," and the knowledge of creatures "evening." He did not say "the knowledge of creatures in the Word," but that the knowledge of God is morning; and what he subjoins forthwith, that "the knowledge of the creature dawns and there is made morning," since it is referred to the praise and love of the Creator, chapter 4, must be explained.[822]

The second testimony is in the same book, chapter 29, where, in order to show that things are seen in the Word in another way than in themselves - which is what the adversaries gather for those two cognitions of creatures, namely morning and evening - he says thus: "As rectitude of lines, or the truth of figures, is known one way when it is beheld with the intellect, another way when it is written in dust: as if he were to say, in the intellect each thing is perfect; but when it is written in reality, in dust, it cannot be without some defect. Thus, therefore, things are incorruptible in the intellect of God, whereas in themselves they are subject to corruption." He then adds: "And there is one manner in which they are described by the truth unchangeable, another in the soul"; that is to say, Augustine says this for no other reason than because justice as an idea, and the thing which is in God, is God himself unchangeable; in itself, however, by sin it can be

822. St. Augustine, De civitate Dei, XI, c. 7; c. 4.

corrupted. So when Augustine speaks of things as they are in God as objectively existing according to their proper formal reasons, he would not say that they are in God in one way, and in themselves in another: for they are known by God as they are on the part of the thing subject to change and corruption. He therefore speaks about them insofar as in God they are God himself, namely, the ideas; and among others, that which is justice, is God himself.[823]

The third is book 6 of the Questions, question 26, where he evidently teaches that by morning knowledge the creature is seen far better in God and in its art than in itself, adducing John 1: "What was made, in him was life." He subjoins these words: "Altogether, therefore, because they were made in him, they have not life in themselves; in the life of God they are; but in themselves they are not." Whence he immediately infers: "And more perfectly are they seen by the holy Angels in the Word of God, where they are life, than in themselves." From Augustine's tenor in that place it would follow that things would be seen in the Word according to their proper reasons, which cannot be; for then they would live, as the stone would seem to live; and the corruptible would be incorruptible. Therefore it is a sign that Augustine speaks of the divine essence itself, insofar as it is called the idea and thing of creatures, which is God himself; and when God is seen, that is seen; and what is not present to us is not denied: and for this reason creatures are seen better in God than in themselves, not because their own nature is better known, but because in that mode they have a better and more perfect being than in themselves. This the same Augustine at length pursues in tractate 1 on John, on those words "What was made, in him was life," where, against the Manichaeans, he proves that the stone does not live, as that man said, deceived by the words of John; but that one sees the idea of the stone, which is God himself. In this sense he says, that things are better in God, that is, that their idea, which is the very divine essence, is better.[824]

The fourth testimony is in book 83 of the Questions, question 46, where, disputing of the ideas in the divine mind, he thus defines them in these words: "They are indeed the principal ideas, certain forms or stable and unchangeable reasons of things, which themselves are not formed, and therefore are always in the same manner, inasmuch as they consist in the divine intelligence." He says that these are seen by the blessed. But these in God are not created and are incorruptible; they are God himself, not creatures; it is wholly according to the objective being which they have in the divine mind. For the creatures, even as objectively existing in the divine mind, are corruptible in themselves, that is, when disjoined from God, just as they are in reality; therefore, if corruptible in reality, God knows them in that way.[825]

Wherefore we cannot but marvel at the Thomists, who from all these places, or from some of them, gather - against Scotus, Gabriel, and others - that the ideas in God of created things are not the very things objectively existing in the intellect according to their proper formal reasons, but are the very essence of God, insofar as it represents them, and insofar as it is theirs: whether this be true or not, we shall say in Disputation 72, chapter 3. And yet from these same places, not

823. St. Augustine, De civitate Dei, XI, c. 29.
824. St. Augustine, Tractatus in Ioannem, tract. 1, on John 1:3 - 4.
825. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46.

remembering, as they ought, they prove that creatures are seen in God by the power of the vision, not only according to that by which they have in God the life of God, but also according to their own proper formal reasons.

And one of them, St. Thomas, in I, q. 18, a. 4, ad 1, according to this doctrine of Augustine, asserts that all things which are in God as in the knower live in him, because they are not other than his essence. But when he says that they are seen in God by their proper reasons, he understands "by the ideas": for about the "reasons" of the forms of each creature the ancients speak; but of man, according as he is a rational animal, he could not say that all created things have in God the life of God; since in this mode things are said to be in God only objectively, in the mind of God, whence, with the divine essence, they do not live in God. Therefore, when he says that creatures, as in God the knower, live with the life of God, he does not understand that things are only objectively in him, but according to that very form which is the very essence of God: about which, in Disputation 72, it will have to be treated more at large.

From these things someone might suspect, with St. Thomas, to say that creatures are known in ...

The third testimony is in book 6 of the Questions on the Heptateuch, question 26,[826] where, speaking of morning knowledge, in order to show that a creature is seen better in God and in its art than in itself, he adduces that passage John 1: "What was made, in him was life"; he then subjoins these words: "Therefore all things which were made are life in him, and do not have life in themselves; in the Word of God they are life, in themselves they are not life." Whence he immediately infers: "And by this they are more seen by the holy Angels in the Word of God, where they are life, than in themselves." But if, according to Augustine's mind in that place, things were seen in the Word according to their proper notions, it could not be that things not living, like a stone, should be seen to live, and things corruptible to be incorruptible: it is therefore a sign that Augustine is speaking of the very divine essence, by which there is said to be the idea and art of creatures, which is God himself, and, God being seen, is seen; about which there is for us no present controversy: and for this reason creatures are seen better in God than in themselves - not because their proper natures are better known, but because in that mode they have a better and more perfect being than in themselves. Augustine himself unfolds this very point at length in tractate 1 on John, on those words, "What was made, in him was life," where, against the Manichee, he proves that a stone does not live, as the Manichee said, deceived by John's words, but that the idea of the stone lives, which is God himself. Therefore in this way he says that things are much better in God.

But to speak of creatures in the Word "by force of the vision," in this way, namely, inasmuch as they are in God as the life of God himself - this cannot stand with what he himself says, namely, that by so much the more creatures are seen in the Word by how much the essence itself is better seen: which cannot be true unless it be of creatures existing only objectively in God: for as to the things themselves as they are the divine essence and the life of God himself, one does not see more

826. St. Augustine, Quaestiones in Heptateuchum, VI, q. 26.

of them than another, since in the essence the one contemplates the very same thing as the other. Augustine, however, never taught that more creatures are seen in the Word of God the better the essence itself is seen.

The fifth and best testimony of Augustine is book 4 of the Literal Meaning of Genesis, chapter 32,[827] where he plainly assigns the difference between evening and morning knowledge in the way we assigned at the beginning of this chapter. Augustine's words are: "There was made evening, because it was necessary, and thus a cognition by which the creature should be distinguished from the Creator, otherwise known in itself than in him." From which it is clearly gathered that, according to Augustine's mind, by morning knowledge alone the Creator could not be sufficiently distinguished from the creature. But if by morning knowledge the creatures were known in the Word according to their proper created formal notions - as that man is a rational animal, and so of the others - then evening knowledge was not necessary to this, that the intellect of the blessed should distinguish creatures from the Creator. If, however, morning knowledge was nothing else than a cognition of the divine essence itself, which is the art of all creatures, there was need without doubt of the evening for that effect: for by morning knowledge a stone was not distinguished from God, since the creature, inasmuch as it was in God, was known to have the life of God - which is nothing else than to know the divine essence itself in itself, which is the art and idea of all things. There had therefore to be another cognition, by which the stone should be known in itself according to its formal notion, as not having life.

To this also pertains what Augustine says in book 5 of the Literal Meaning of Genesis, chapter 34,[828] about the Angel knowing creatures by morning and by evening knowledge: for he says: "When at once he contemplated the whole universe, as it was made all at once, and in the first and incommutable reasons by which it was created, then on account of the day; and when it was known in its own nature on account of the evening; and when even from that lower cognition he praised the Creator on account of the morning, lest he should praise on account of the morning." By which words Augustine distinguishes the evening and the morning about the creatures themselves, known in different ways. For he calls morning that which the Angel has of creatures, inasmuch as they are in the very eternal reasons of God: thus, however, they are God himself; evening, on the other hand, inasmuch as he knows them according to their proper natures. But if the creatures known in God were seen according to their proper formal notions, then already they would be known in their proper nature, and the evening cognition posited by Augustine about creatures known in their proper nature would be posited in vain.

Caput IV - Oppositions against the latter part

Against this latter part of our opinion the very same Augustine seems to be on the other side in some places; especially in book 9 of the City of God, chapter 22, and book 13 of the Confessions, chapter 15, where he teaches that these temporal and mutable things are known by the blessed

827. St. Augustine, De Genesi ad litteram, IV, c. 32.
828. St. Augustine, De Genesi ad litteram, V, c. 34.

Angels in the Word of God; and that therefore they are known by them more certainly than by the demons, because (as Augustine says there) "They behold in the Word of God their principal causes, through which the world was made; by which causes some things are approved, some reproved, all are ordered. But the demons do not contemplate the eternal causes of times, which are, as it were, the cardinal ones in the wisdom of God." In which place Augustine plainly speaks of the cognition of creatures in the Word according to their proper created notions, according to which they are known by the demons. So also Isidore, in the book On the Supreme Good or the Sentences, chapter 12, sentence 17, says of the Angels that in the Word of God they know all things before they come to be in reality, etc

I answer first: neither Augustine nor Isidore in those places called that cognition "morning" by which created things are said to be seen in the Word according to their proper notions; and how, in those places, Augustine and Isidore do not mean that creatures are known by the same vision with which the Word is seen and by force of that vision, has already been explained by us above, chapter 7 of the preceding question. Therefore, wherever Augustine calls the vision of creatures in the Word "morning," and the vision of the essence of God, and distinguishes it from the cognition of those in themselves, which he calls "evening," we say it must be explained as we noted above.

Secondly, someone could object the same Augustine, who not only posits those two cognitions, morning and evening, but also adds a third, which he calls the day: and this, he says, is of the very divine essence; therefore the morning ought to be of creatures. Thus he has it in book 4 of the Literal Meaning of Genesis, chapter 30.[831] I answer: It is true that those three are there enumerated by Augustine; and he says that "day" is taken for the contemplation of the divine essence; and "day" and "morning" - or rather that "morning" of the day which is before the evening - are used in this sense. Besides "day" and "evening" he again takes "morning," and shows how, for the following day after the evening, the light returns, by which the following day begins and after the first the second is numbered. He assigns the order thus: first he puts the day, then the evening, lastly the morning, inasmuch as the mind, by angelic cognition of creatures, which was the evening of the day, rises up unto the praise of God, and is interiorly turned to him for that work, namely to the very art and idea of God, and thence begins to be said the morning of the following day. To this pertains what he says in book 11 of the City of God, chapter 7:[832] after he has said that the knowledge about the creature, in comparison to the knowledge which the Angels have of God, is in a certain way the evening, he subjoins: and that knowledge is the morning inasmuch as the creature itself is referred to the praise and love of the Creator. He understands, indeed, that the morning of the following day is made: and this has been explained by us. Thus he does not divide one and the same day into those three: for the morning which he places after the day and the evening he numbers not for the preceding, but for the following day: otherwise he ought first to put the morning, then the day, lastly the evening.

Wherefore in that same book 4, chapter 23, he says that the knowledge of creatures in the Word, which throughout that book he commonly calls "morning," pertains to the day; but of creatures in themselves, to the evening. These things have been said to explain the mind of Augustine - not only

that we may understand him, but also that it may appear how, since among the Scholastics that doctrine of the cognition of creatures in the Word was introduced, from it a weak argument could be drawn against the opinion which we confuted in the preceding disputation, from Augustine's words.

It remains that we say something about Bernard, whom, in chapter 3, we brought forward disputing for the opinion opposed to that of the Thomists. And in my judgment he speaks in the same way as Augustine - since he was very much versed in his doctrine - namely, about the creatures themselves not according to their proper formal notions, but inasmuch as they exist in God and are said to be God, or the life of God, as has been explained by us. And in this sense Bernard said, concerning the blessed, that "they see the Word, and in the Word the things that were made through the Word": which we can gather even better from Bernard himself; let us subjoin what he writes. Explaining that of Romans, "The invisible things of God," etc., he says thus: Surely this ladder (namely, of creatures) is not needed by them, but by exiles; as the sense knows not an anchor who, when he said that the invisible things are seen through the visible, would have piled up superfluous ascents; for they are the creatures of God. And truly, what is needed is at hand for one who holds the ladder with his hand. For there you have, because of those things which are made, the reason why we see the Word, and in the Word the things made through the Word; they bear the traces of the Maker; the rest of the world - if you descend to them as though dead - you will see that there they are scarcely much better than in themselves.

Thus far the words of Bernard. From which words it is to be observed, first, that when he says that creatures are better in the Word than in themselves - whence he seems to collect that the Word and the things themselves are seen in it by the same vision - he is alluding to Augustine's manner of philosophizing, of which enough was said in the preceding chapter: according to which created things are said to be better in God than in themselves, because in God they are not subject to corruption, and all live by the life of God, whereas in themselves it is otherwise. From which it is plain that Bernard, as also Augustine, understands by "creatures in God" not the things themselves objectively existing in the divine mind according to their proper formal notions - for thus they too would be subject to corruption, nor would they live the life of God, since, although they are set before the divine intellect as its object, in themselves they are corruptible, and some even inanimate - but he understands the very art and ideas of creatures, which are God himself; and on this account creatures are said to be better in God than in themselves, in the sense in which Augustine speaks, as we said in the preceding chapter.

Then, when Bernard says that, for the blessed to know created things, they do not descend to the things themselves, because they behold them in God, where they are better, he clearly indicates that they are not known according to their own created formal notions, but according to that whereby they are in God, that is, the art and idea of God. For if he had understood about the things themselves, that their own proper notions are understood in God, he ought to have said that the blessed, from the cognition of the essence of God - according to their proper notions understood -

831. St. Augustine, De Genesi ad litteram, IV, c. 30.
832. St. Augustine, De civitate Dei, XI, c. 7.

proceed to the things themselves; whereas he says that they do not descend to the things themselves, but contemplate according to that whereby they are in God, and the idea of God. For in God indeed the proper notions are understood as ideas and as the art; but he ought to have said that the blessed, from the cognition of the essence of God, according to the proper notions of the things understood, proceed to the things themselves; rather than that they should "descend" to the things as to steps: he ought, instead, to have said that the blessed, from the cognition of the essence of God, understand the proper notions as ideas.

Secondly, one could object on the authority of St. Augustine, who not only posits those two cognitions, the morning and the evening, but also adds a third, which he calls the day: and he says that this is of the divine essence; therefore the morning ought to be of creatures. So he has it in On Genesis literally, IV, c. 30.[833]

It is answered: It is true that these three are taken for the contemplation of the divine essence; but I say that day and morning, or a part of that which is before the evening, are taken by way of use. Besides the day and evening, he again resumes the morning, so as to show how, for the following day, after the evening the light returns, by which also the following day begins; and thus after the first, the second is numbered. He assigns indeed this order: first he puts the day, then the evening, finally the morning, inasmuch as the angelic mind, from the cognition of creatures, which was an evening, rises up into the praise of God, and therein sees the art of God and the idea, and from there the morning of the following day begins to be said. Wherefore the same Augustine, City of God XI, c. 7, after he had said that the science of the creature, in comparison with the science which the Angels have of God, in a certain manner becomes evening, adds that that science grows light and becomes morning, when the creature itself is referred to the praise and love of the Creator: he truly understands it to become the morning of the following day, as has been explained by us. Therefore he does not divide one day into those three: for the morning which he puts after the day and evening, he numbers not for the preceding but for the following day; otherwise he ought to have put the morning first, then the day, and lastly the evening. Wherefore in that same book IV, c. 23, he says that the cognition of creatures in the Word, which he commonly in that book calls the morning, pertains to the day; but of creatures in themselves, to the evening.[834]

These things have been said in order to explain the mind of Augustine, not only that we may understand him, but also that it may appear on what foundation among the Scholastics this doctrine was introduced concerning the cognition of creatures in the Word, and how weak an argument against the opinion which we followed in the preceding disputation can be taken from the words of Augustine.

It remains that, about Bernard - whom also in the foregoing disputation, cap. 3, we adduced for the opinion opposed to the Thomists - I should say something. Explaining that passage to the Romans 1, "The invisible things of God," etc., thus he says: "Truly, of this ladder (namely of creatures) citizens have no need, but exiles; as the author of this opinion saw, who, when he said

833. St. Augustine, De Genesi ad litteram, IV, c. 30.
834. St. Augustine, De Genesi ad litteram, IV, c. 23.

that the invisible things are beheld through visible things, significantly added, 'by the creature of the world.' And in truth, what need is there of ladders for one already holding the throne? That creature of heaven is present; he has that by which he rather looks upon these things: he sees the Word, and in the Word the things made by the Word; nor has he need to beg the knowledge of the Maker from these things which are below. For neither, that he himself may know, does he descend to the things themselves, since there he sees them, where they are far better than in themselves." So far Bernard.[835]

In whose words it must first be observed, when he says that creatures are better in the Word than in themselves, whence it seems he gathers that by the same vision the Word is seen and they themselves are seen in it, that he alludes to the manner of philosophizing of Augustine, of which enough has been said in the preceding chapter, whereby created things are said to be better in God than in themselves: because in God they are not subject to corruption, and all live the life of God; otherwise in themselves. Hence Bernard understands creatures in God, as also Augustine, not as themselves existing objectively in the mind of God according to their own proper formal notions; for thus they also are subject to corruption, nor do they live the life of God, since they are objected to the divine intellect as they are in themselves corruptible, and some even inanimate; but he understands the very art and the ideas of creatures, which are God himself, by reason of which the creature is said to be better in God than in itself: in which way Augustine speaks, as we said in the preceding chapter.

Then, when Bernard says that, for the Blessed to know created things, they do not descend to the things themselves, because they behold them in God, where they are better, he clearly indicates that they are not known according to their own created formal notions, but according to the fact that they are the very art and idea of God. For if he understood them according to their own created notions, he ought to have said that the Blessed descend from the cognition of the essence of God to the cognition of creatures, just as in turn the wayfarer ascends from the cognition of those things to the cognition of God, from the higher cognition, namely of the essence of God, to the notion of creatures, which is lower, to pass over - there is a certain descent; therefore, when he says that there is no descent there, he understands that it is not so, because while the blessed sees creatures in God, he sees God himself; and while he sees him, he holds the throne and abides in it, because he knows creatures in God, as they are God himself, not according to their own proper and formal notions.

835. St. Bernard, De Beatis: "vident verbum, et in verbo facta per verbum" (as cited by Vázquez).

Disputatio LII - Whether it is a dogma of faith that God cannot be comprehended by any creature, even the blessed

Caput I - What is called "comprehension" in St. Augustine and the other Fathers

Since from the common manner of speaking of Scripture, the Fathers, and the Councils, we ought to gather what in this matter is certain of faith; it has seemed good, leaving to the following disputation various definitions of comprehension which the Scholastics hand down, to bring forward here only that which is approved by the holy Fathers. Which Augustine, with his accustomed clarity of mind, explains to us in Epistle 112, c. 8, distinguishing between "to see a thing" and "to comprehend it" itself, with these words: "One thing it is to see, another to comprehend the whole by seeing: for that is seen which is present and in some wise is perceived; but the whole is comprehended by seeing, which is thus seen that nothing of it is hidden from the seer; or whose limits can be surveyed: just as the present will of yours is hidden from me; but you can survey the limits of your ring. By way of example, I have set two things, of which one pertains to the glance of the mind, the other to the bodily eyes."[836]

Therefore comprehension is a vision of a thing, of which nothing is hidden from the one seeing; or which includes not only the entity but also the bounds and extremes of the thing; finally, whereby the whole thing itself is known, and there is nothing of it which is not seen. This definition is followed by Bede upon that 1 John 3, "We shall see him as he is"; it is also gathered from Nazianzen, Oration 36, which is the fourth on Theology, n. 66; from Nicetas and Psellus in the same place; and from Chrysostom, Homily 5 On the Incomprehensible Nature of God.[837][838] Hence Augustine, Sermon 38 On the Words of the Lord, teaches that with the bodily eye no body can be comprehended by us by sight, because we cannot at once see it through every part of itself and its extremes. For if we see it from the anterior part, the posterior is hidden: which must of necessity occur in every body. Which also must be said of a ring, which nevertheless the same Augustine, Epistle 112, c. 8, brought forward to us as an example of comprehension, because its ends can very well be seen at once. But according to his doctrine the example does not exactly explain the matter to us: for if the anterior part is seen, the posterior cannot be seen.

From the same definition Augustine also infers, City of God XII, c. 18, that the infinite multitude of things which he asserts to be known by God cannot be infinite with respect to the science of God, by which it is comprehended. He had given a little above the reason with these words: "Because whatever is comprehended by one who knows is limited by the knower's comprehension." As if he were to say: a thing which is comprehended by someone is enclosed by the comprehension itself; and therefore it ought to be finite: because nothing of it can be outside the comprehension. Thus, if some multitude is comprehended by cognition, since it ought to be wholly within that, it also must

836. St. Augustine, Epistola 112, c. 8.
837. St. Bede, on 1 John 3: "Videbimus eum sicuti est."
838. St. Gregory Nazianzen, Oration 36 (the fourth on Theology), n. 66; Nicetas; Psellus; St. John Chrysostom, Homily 5 De incomprehensibili natura Dei.

be terminated, enclosed, and limited: which is best explained by a corporeal example, whence the metaphor seems to be taken. For if some sphere is comprehended by a hand or by another thing, it must be wholly within the limits of that hand, and be limited by its capacity.[839]

Caput II - What Scripture teaches about the comprehension of God

Although all the Scholastics, whom we shall mention in the following disputation, plainly teach that the essence of God is comprehended by no intellect, even a blessed one, however clearly it may behold it, yet no one except Soto, in IV, dist. 49, q. 3, art. 1, and certain more recent theologians, openly says that this is certain of faith, although some strive to prove that doctrine from Scripture itself. Therefore Soto and others more recent think it is a dogma of faith, which cannot be denied without manifest error against the faith; and they attempt to establish this by the testimonies of Scripture and the Fathers, which we shall examine a little later.[840]

I, however, judge it to be of faith that God cannot be comprehended by the blessed, if comprehension is taken, as it is defined by some, for a knowledge equally perfect with the object itself: for no created vision can be in this way equal with God himself. But because it is not sufficiently certain whether this belongs to the notion of comprehension, and the theologians vary in assigning its notion, and some Scholastics say that the very vision by which whatever is in God formally is seen is also comprehension, in which manner some Fathers, indeed even Scripture itself, speak, as we shall show below; therefore there does not seem to be a firm foundation from this side to say that it is of faith that God, according to every mode of speaking, is incomprehensible, even to the blessed - although that he cannot be comprehended by wayfarers is of faith. Wherefore, leaving this matter to be defined by the judgment of others, I shall attempt to examine whether Scripture and the Fathers assert that the substance (essence) of God is incomprehensible to the blessed endowed with the light of glory, or only to creatures considered in their own proper power; meanwhile pronouncing that it is not licit, but plainly rash, to teach absolutely that God can be comprehended by the blessed, since the common school of the Scholastics teaches the opposite, although in the manner of explaining it the Scholastics themselves think variously.

The first place of Scripture which is wont to be adduced to prove as of faith that God is incomprehensible, even if he be clearly seen, is Jeremiah 32: "Great in counsel, and incomprehensible in thought"; upon which place St. Jerome says: "Whom thought does not comprehend, how can speech comprehend?" - which words the author of the Interlinear and the Ordinary Gloss took from him; Nicholas also on that place, and certain Scholastics, so interpret it.[841][842][843] I, however, think that Jeremiah was not speaking of the comprehensibility of the essence and substance of God, but of his counsels, of which he had said, "Great in counsel": which counsels

839. St. Augustine, De civitate Dei, XII, c. 18.
840. Soto, In IV Sententiarum, dist. 49, q. 3, art. 1.
841. St. Jerome, on Jeremiah 32: "Quem non comprehendit cogitatio, quomodo potest sermo comprehendere?"

843. Nicholas (of Lyra), Postilla on Jeremiah 32.

the same prophet forthwith explained with these words: "Whose eyes are open upon all the ways of the sons of Adam, that thou mayest render to each according to his ways, and according to the fruit of his inventions; who hast set signs and wonders in the land of Egypt," etc. Therefore he is said to be "great in counsel" because he so attentively beholds the way of all, that he may render to each according to his merits. But when he had said, "Great in counsel," explaining the greatness of the counsel he added, "And incomprehensible in thought": that is, so great that he cannot be known by any created intellect: this is what "incomprehensible" signifies in that place: for not the angelic intellect, much less the human, with its own cleverness and industry can know what God has decreed: indeed, it cannot even by any reasoning suspect it, since more often it turns out not as man thought, but the contrary. Yet who would deny that by a special revelation, if God willed, the counsels of his will could be comprehended by Angels and men? I do not speak of counsels insofar as they are the very divine essence, whose being is to understand and to know; about this neither does the Prophet speak - for to what end would he have mixed this metaphysical consideration in his discourse? - but about the things which he decreed to do, which the Prophet calls the counsels of God. Just as when one asks what counsel the king has taken, he does not ask about the quality of the intellect by which he deliberated, but about the thing itself: wherefore another answers, the king's counsel was to go to Toledo, to take this city, and the like. In the same phrase we say that the counsels of a certain prince are inscrutable, not for any absolute reason than because that which he deliberates is hidden: for about the quality of the mind itself we assert nothing of that sort.

Therefore God is said to be incomprehensible in thought, of himself, because unless he himself openly reveal, those things which he has thought to do cannot be known. For both in Scripture and among the Fathers "to comprehend" signifies the same as to hold something thus by thought and to know it on every side, that nothing of it be unknown. Thus, then, I do not think it impossible that the counsels of God be comprehended in the sense explained, if God should will to reveal them. For this reason also in Scripture he is called ...

But I for my part think that even the blessed Jeremiah was not speaking of the comprehensibility of the essence and substance of God, but of His counsels, of which he had said, "Great in counsel"; and he forthwith explained His counsels in these words of the same prophet: "Whose eyes are open upon all the ways of the sons of Adam, that Thou mayest render to every one according to his ways, and according to the fruit of his devices, who hast set signs and wonders in the land of Egypt," etc. Therefore He is called great in counsel, because He so attentively and exactly looks upon the way of all, that He renders to each according to his merits. But when he had said, "Great in counsel," explaining the magnitude of the counsel he added, "and incomprehensible in thought": that is, so great that He cannot be known by any created intellect. For "incomprehensible" signifies only this; since neither the angelic intellect, much less the human, by its own cleverness and industry can know what God has decreed; indeed, it cannot even in any way conjecture it, since frequently, rather than what man supposed, the opposite occurs. Yet who will deny that by a special revelation, if God willed, the counsels of His will could be grasped by angels and men? I do not speak of counsels insofar as they are the very divine mind and essence, whose being (*esse*) is to understand and to know; for of this neither does the Prophet speak - for to what

end would he have mingled such a metaphysical consideration with his prayer? - but of the things which He has decreed to do, which the Prophet calls the counsels of God. Thus too, when one asks what counsel a king has taken, one does not ask about the quality of the intellect by which he deliberated, but about the thing itself: wherefore another answers, "The counsel of the king was to go to Toledo, to take this city," and the like. In the same phrase we say that the counsels of some prince are unsearchable, for no other reason than that what he had deliberated is hidden: for of the very quality of mind we assert nothing of the sort.

Therefore God is said to be incomprehensible in thought in Himself, because unless He Himself openly reveal them, the things which He has thought to do cannot be known: for both in Scripture and among the Fathers "to comprehend" signifies the same as "to hold something in thought in such a way and to know it on every side that nothing of it is unknown." Thus then I do not think it impossible that the counsels of God be comprehended in the sense explained, if God should will to reveal them. For this reason they are called in Scripture "incomprehensible," because no creature can attain to them by its own intelligence: nor did St. Jerome, the author of the Ordinary Gloss, and Nicholas [of Lyra] wish to teach anything else, if one follow the sense of the Scholastics.[844]

In the same sense does Scripture speak in Psalm 91: "Thy thoughts are become exceeding deep"; and then it is added, "the senseless man shall not know, nor will the fool understand these things": as if to say, he who has not been enlightened by Thy divine wisdom and revelation will not understand nor comprehend; otherwise he who is endowed with them. And to the Romans 11: "How incomprehensible are His judgments, and unsearchable His ways! For who has known the mind of the Lord," etc. In which words it is plain that he speaks not of the essence itself in itself, but of the things which He is said to have decreed by His counsel: namely, why the Jews were rejected, but the gentiles chosen, etc. The same was expressed by Zophar the Naamathite, Job 11: "Wilt thou by searching find out God? wilt thou find out the Almighty unto perfection?" - who truly said excellently in this: yet he was speaking not of the essence of God clearly seen by the blessed, but of the ways, that is, the counsels of the Lord, as has been explained, which according to themselves it is repugnant to comprehend unless they be revealed; just as also Job 9 says of God: "Who does great things and incomprehensible, marvelous things," which is the same as that these cannot altogether be known.

The second place, which seems to be understood of the substance of God, not of His counsels, is Ecclesiasticus 43: "Do not labor, for you will not comprehend," which some Scholastics bring forward in confirmation of the opinion which asserts that God, by those who see Him, is not comprehended. Yet from it I seem to gather the contrary: wherefore, if the word "I comprehend" were taken in the Scholastic sense in that place, their opinion would easily be impugned. First, for Ecclesiasticus there speaks with men of the present age, and exhorts them to the praises of God, that, as far as it is lawful, they should commend and proclaim Him; but that they should not so labor as to suppose that they can proclaim His praises as they are in act: therefore he said, "Do not labor, for you will not comprehend": he renders the reason in these words, "Who shall see Him,

844. St. Jerome; the Glossa ordinaria; Nicholas of Lyra, on Jeremiah 32 ("Magnus consilio et incomprehensibilis cogitatu").

and narrate? And who shall magnify Him as He is from the beginning?" - as if he were saying: since no one has seen Him as He is, no one can set forth His praises for us; but if anyone had seen, then he could narrate; just as John 1 says: "No one has ever seen God: the only-begotten Son, who is in the bosom of the Father, He has told [Him]" - that is, no one has seen God so as to be able to preach these mysteries, except the Only-begotten who is in the bosom of the Father; about which place many things were said in disputation 37, chapter 6, where we said that that place is to be understood not of angels but of men.[845] Therefore, just as Ecclesiasticus said, "Do not labor, for you will not comprehend," so also afterward he seems to say that he can "comprehend" God with praise who sees Him; as, on the contrary, he who has not seen cannot. For this reason I said that, if the word "I comprehend" be taken there in the Scholastic sense, rather the opposite would be deduced from that testimony. True exposition of the place: I for my part think that there "to comprehend" is used for exposition, knowledge, and praise of the thing as it is; as elsewhere too in Scripture with Paul, as the Scholastics admit. Wherefore I do not doubt that Ecclesiasticus is not speaking with angels who see Him, restraining their endeavor lest they think they praise God as He is. For indeed, just as they see Him with the word expressed by their mind as He is, so also they praise Him and declare the substance and excellence of God as He is. Why, however, according to the sense of Scholastic discipline the angels are not said to "comprehend" God, will be made clear in the following disputation.

The third place is 1 Timothy 6, where it is said of God, "Who inhabits light inaccessible, whom no man has seen nor can see" - that is, "light incomprehensible." But that place, just as also in the same epistle, chapter 1, where God is also said to be "invisible," is to be understood as that one of John of which we spoke in disputation 37, chapter 6; namely, that God can be seen by no human intellect, nor even by the angelic, by its own proper power. Wherefore if there be anything in those places that signifies incomprehensibility - such as the word "inaccessible" - it signifies the very same as the word "invisible"; whence it does not follow that by the blessed, who, endowed with divine light, see God, He is not comprehended. In the same sense Pseudo-Dionysius, Epistle 1 to Gaius, and On the Divine Names, book 7 at the beginning, said that God is "above every mind and understanding": because, as he says in that epistle, "perfect ignorance" of Him is true knowledge, in that, as wayfarers, through negations we know Him, understanding rather what He is not, than what He is; as we explained above in disputation 22, chapter 6.[846]

Caput III - What the Latin Fathers think on this matter

Further, let us show whether the Church and the Latin Fathers, when they say that God is incomprehensible, speak of His incomprehensibility with respect to the blessed, or with respect to the creature considered according to its own proper power. And indeed, with such diligence as I could, in the year of the Lord 1585, when I publicly taught theology in our College, I adduced many testimonies of the holy Fathers, both Latin and Greek, by which it seemed to be proved that God is

845. John 1:18; cf. Vázquez, Disputation 37, cap. 6 (on whether "no one has seen God" is to be understood of angels or of men).

846. Pseudo-Dionysius, Epistola 1 ad Gaium; De divinis nominibus, c. 7 init.; cf. Vázquez, Disputation 22, cap. 6.

not comprehended even by the blessed; which I examined one by one and showed that this is not demonstrated by them; testimonies which afterwards certain more recent authors have used, to show that it is of faith that God is in no way comprehended by the blessed. These I have resolved to examine in this and the following chapter.

And first of all, from the Councils only the Lateran under Innocent III can be brought forward, whose decree is reported in the chapter Firmiter, On the most high Trinity and the Catholic faith, where it says: "We firmly believe that there is one only God, eternal, immense, incomprehensible."[847] Yet since in the same chapter it is said "ineffable," and nevertheless that the blessed by the light of glory, as they see clearly, so also with the tongue of the mind can utter and express Him as He is, nor is He said to be ineffable to them; so neither will He be said to be incomprehensible to them. Therefore God is said to be ineffable, incomprehensible, and invisible to wayfarers, or to rational creatures considered according to their nature; but whether He be said to be comprehended by the blessed themselves, the council does not at all treat.

Objicitur: But some urge in this fashion. In the same place it is defined in the same manner that God is immutable and incomprehensible; but He is immutable by absolute power, therefore also incomprehensible.

Respondetur: I answer that the account is different. For He is called immutable absolutely, not only because He can be changed by no contrary, but because He cannot be changed even by Himself; and, just as He is not called "incomprehensible" by Himself but by the creature, so it is also denied that He can be comprehended by a creature - unless He Himself should will to reveal Himself.

But from the Fathers we shall first adduce the Latins, who can be alleged for the opposite opinion, and we shall explain them; afterwards we shall bring forward the testimonies of the Greek Fathers, from all of which we shall prove that the Fathers never spoke of "comprehension" as the Scholastics speak, whenever they deny that God can be comprehended by a creature; but that by the name "comprehension" they meant only the clear vision of God.

The first testimony is of St. Gregory, in the Moralia, book 7 (elsewhere 10), in these words: "On the summit of retribution the Almighty can indeed be found by a kind of contemplation, yet not perfectly; because, even if we sometimes behold Him in His brightness, nevertheless we do not fully gaze upon His essence." In "the summit of retribution" he seems to signify eternal beatitude: if therefore there the blessed do not fully behold the essence of God, then either we must say that Gregory, with St. John Chrysostom, thought that God is not seen clearly by the blessed - the opposite of which is established from disputation 37, chapter 2 - or [we must say] that [they do not behold Him] so perfectly that it may be said "to be comprehended," as the Scholastics teach. Which the following words confirm, by which he gives the reason for what he had said: "For the angelic or human mind, when it longs for unbounded light, by that very fact as a creature it narrows itself, and though it strives to go beyond itself by advancement, nevertheless, even enlarged, it does not suffice to 'comprehend' its splendor."

847. Lateran Council under Innocent III (1215), cap. Firmiter, De summa Trinitate et fide catholica.

Exponitur: But I think that Gregory is speaking, not of the blessed who see God as He is, but both of men and of angels, yet as wayfarers and without the light of glory, endowed only with the grace of contemplation: of these indeed he says "on the summit of retribution," that is, in a higher grade of contemplation, which in this life is as it were the reward of good works, although the creature itself, indeed by its nature narrow, enlarge itself as it may, cannot see within itself the splendor of the divine essence. But when he says that God is beheld by us "in His brightness," he is not speaking of clear vision, but of the contemplation of this life, by which we look upon the essence and brightness of God, yet not fully, that is, not clearly and as He is, we gaze; as also a little below he said that His splendor - that is, of God - is not "comprehended" by us.

The second testimony is of the same Gregory, Moralia 18, chapter 28, at the end, where he openly says of the blessed: "... we shall not see as He sees Himself; for by far otherwise does the Creator see Himself than the creature [sees] the Creator: for, as regards the immensity of God indeed, a measure is set for us ..." and shortly after: "... as He is: for thus those words seem to limit [the matter]; and the sense will be: we shall see Him as He is."[848]

Vera loci expositio: I answer that in that place Gregory is speaking of wayfarers, and that his intention is indeed to mark out the difference between God and the created intellect: not that God "comprehends" Himself (as the Scholastics say), whereas the created intellect does not "comprehend" God; but because God, seeing Himself, rests in Himself and does not pass over to another, whereas we, so that by resting we may truly see God, tend toward Him by a kind of way of vision, so as to rest in Him; and thus nearly is his speech to be taken, that it is not "as He is" in this life that we see Him, but that "as He is" we shall see Him then; for thus those words seem to limit [the matter], and the sense will be: "we shall see Him as He is."

Germani sensus expositio: I for my part think those words are to be understood of wayfarers and to be referred rather to the immediately preceding [context]. For after he had said that we are enlightened to that which Moses sought - namely, His essence and His nature - while He appeared in a bodily figure, and he had seemed to say that this had been granted to him, or to someone else, in this mortal life, he added: "Not that God's plenitude ...," by which he denies to wayfarers the clear vision of the divine nature in itself, which he calls the plenitude of God, and grants only that by which they looked upon Him in a bodily figure; and thus he marks a difference between this vision and "comprehension," but not between the clear vision of the nature of God in itself and the "comprehension" thereof.

The third testimony is from Bede on 1 John 3, "We shall see Him as He is," which, under their wording, some allege thus: "It is promised to us to see God, not by comprehending, but by beholding..." But these words must be weighed from the sense into which Bede himself interprets them when his words are compared; for his very words are these: "We know that when He shall appear we shall be like to Him, because we shall see Him as He is": not as men see men when they wish, not in the guise in which He willed to appear to the fathers, but in the nature in which He is in Himself; for that which Moses asked was to see Him "as He is" when he said, "Show me Thyself";

848. St. Gregory the Great, Moralia in Iob, XVIII, c. 28 (in fine).

not that anyone can "comprehend" the plenitude of God - not by the eyes of flesh, nor sometimes even by the mind itself - but that we may see something of Him according to the mode of that vision.[849]

This moreover is chiefly confirmed from the fact that the same Bede - whom we have referred to in disputation 54, chapter 3 - plainly affirms that God in His substance was not seen by Moses, nor by any other Prophet, but only in the figure in which He willed to appear. Wherefore Bede would not doubt to grant that the essence had been seen by Moses if a clear vision had been granted; if it had been granted, there would have been a clear vision, which carries with it "comprehension": so far is he from asserting that "comprehension" is something other than clear vision.

Augustine too is cited for this opinion, Epistle 112, chapters 8 and 9, where he distinguishes the vision of a certain thing from its "comprehension." But how far this is true in a bodily vision of some thing, as we explained in chapter 1; yet, in the clear vision of the divine essence, the distinction assigned by Augustine will not remain.

The fourth testimony is Augustine, On the Knowledge of True Life, chapter 21, at the beginning ...[850]

In sermon 38, On the Words of the Lord, on that passage John 1: "In the beginning was the Word," after he had said that bodies indeed can be seen by us, but cannot be comprehended, because they cannot be seen according to every part of themselves, he subjoins: "Behold, let us speak of bodies subject to our eyes: we are not able to comprehend them by sight. Who then has with the eyes of the heart comprehended God? It is enough that he touch Him, if his eye is pure. But if he does touch, by a touch he touches what he loves, an incorporeal and spiritual [touch]; yet he does not comprehend: and this if he is pure; and the man becomes blessed by touching with the heart that which remains always blessed; and that is perpetual beatitude," etc.[851]

It is explained. Augustine clearly speaks about one on the way, when he says that God cannot be comprehended, although He can in some manner be touched. But what he says, "And this if he is pure; and the man becomes blessed," he does not understand of perfect beatitude, but of this life; "perpetual beatitude," however, he there calls God Himself, who is the object of our beatitude, whatever that may be: just as he calls Him the everlasting light, by which man is illumined, not only in the other life, but even in this one; he also calls Him everlasting life, "whence" (says he) "man is alive"; he understands, however, any life whatsoever.

Further, that Augustine is speaking only of those on the way when he says that God is not comprehended by them, is clear, first, because when he speaks of the eye of their mind he says, "It is enough that he touch"; but with respect to the blessed it would not be rightly said that God is only touched by them, since they see within Him whatever He is; for to touch is to touch a thing lightly.

849. St. Bede, In primam Epistolam S. Ioannis, on 1 John 3:2, "Videbimus eum, sicuti est"; cf. Exodus 33:18 - 23 ("Ostende mihi te ipsum").

850. St. Augustine, Epistola 112, cc. 8 - 9; De cognitione verae vitae, c. 21.

851. St. Augustine, Sermo 38 de verbis Domini, on John 1:1 ("In principio erat Verbum").

Then it is clear from the words of the same author a little above: for after he had said that that which had been read in the Gospel about the Word of God is incomprehensible, he adds: "And yet it was read, not that it might be comprehended by man, but that man might be grieved because he does not comprehend, might find whence he is impeded from comprehension, remove those things, and gape after the perception of the unchangeable Word, himself changed from worse to better." Therefore he does not judge the comprehension of God to be simply impossible, even as he himself a little below defines it, whose definition we adduced in the first chapter of this disputation, but only that it is impossible to those on the way, insofar as they are wayfarers. For if he thought it to be impossible even for those who see God as He is, he would not exhort to the removal of those things which impede it; therefore, when he says that we can only touch God, not comprehend, he understands it of the state of the way. Likewise, when he says that "to touch God a little" is great beatitude, but to comprehend is impossible, necessarily he must be understood of wayfarers; otherwise the entire discourse would not cohere, as is clear from what has been said. Wherefore, from this passage of Augustine it is not only not proved that God cannot be comprehended by the blessed while beholding Him, but rather from it the opposite seems to be gathered, as is quite clear, even if one take the definition of comprehension in strictness, as Augustine himself defines there and in other places.

There are other testimonies of Augustine which the adversaries could allege for their opinion with a greater appearance of probability; but even from them nothing can be proved. First, in the fourth book On Genesis to the Letter, chapter 6, at the end, concerning those who see God, he says: "Although even if we were to bear most pure hearts and most simple minds, and were already equal to the holy Angels, nevertheless the divine substance would not be known to us as it is to itself."[852] But Fulgentius, both an excellent interpreter of Augustine's mind and himself a theologian nourished on Augustine, seems to have interpreted this best, in the book of Responses to Deacon Ferrandus, to the third question, where, after he has said that Christ had full knowledge of the divinity, yet did not know it as it knows itself, he gives the reason: "Because the divinity knows itself in such a way that it finds itself to be that which it knows; but the soul knows the deity in such a way that the deity is not [i.e., is not the soul]. For," as he himself says, "the deity by its nature is its own knowledge."[853]

Then in the book of Meditations, chapter 29, at the end, he says that God is not seen as He is by the Angels, and that the whole Trinity is known completely to none but Himself; and in the book of Soliloquies, chapter 31, he says that the whole Trinity is known completely only to Himself. But it is more certain that the first of these books is not by Augustine; and, moreover, the author of those books speaks plainly either in this sense, that the whole Trinity cannot clearly be seen naturally by anyone except by Himself, or, as he said in the Genesis to the Letter, that by others it cannot be seen so perfectly as by Himself; the difference we have already assigned. But from this Augustine

852. St. Augustine, De Genesi ad litteram IV, c. 6 (in fine).
853. St. Fulgentius, Responsio ad Ferrandum diaconum, quaestio 3.

does not infer that therefore God is not comprehended by the blessed, nor did he say anything about comprehension. On the part of the thing known, however, it is most certain from Disputation 47, chapter 2, that absolutely nothing at all of the divine essence fails to be seen by the blessed.[854]

I pass over the testimony of St. Hilary in the book On the Unity of Father and Son, straightway at the beginning, where he calls God invisible; and of Cyprian, or of the author of that book if it is another, in the prologue on the principal works of Christ, who likewise call God incomprehensible. For if the words that follow were considered, these Fathers clearly speak of men on the way, or also of Angels considered only in their own nature.

Caput IV - What can be gathered concerning the comprehension of God from the Greek Fathers

Lastly some adduce very many testimonies of the Greek Fathers, long since alleged by us, who at first glance seem to have taught that God is not comprehended by the blessed. In the first place they allege St. John Chrysostom, who in many places says that God indeed is seen by the blessed, but not exactly, nor perfectly, nor is He comprehended: so he has it in many places cited by us in Disputation 37, chapter 2. They allege also Theodoret on that Psalm 103, "Thou coverest Thyself with light"; Epiphanius, heresy 70; St. Cyril of Alexandria, book 11 of the Thesaurus, chapter 1, at the beginning; and finally St. Cyril of Jerusalem, Catechesis 6, where he speaks thus: "Therefore our Lord admonishes us of our weakness, saying, 'No one has seen God at any time.' What then, will someone say, is it not written that the Angels of the little ones always see the face of the Father who is in heaven? The Angels indeed see, but not as He is, but according to what is proportioned and as they themselves grasp. For He Himself elsewhere says that no one has seen the Father except he who is from heaven; this one sees the Father. The Angels see as they can; and the Archangels as they are able; the Thrones and Dominations indeed more than those, but less than according to the benignity of God; but the Holy Spirit alone sees as He ought."[855]

But all these things are not so manifest that from them a theologian may assert that it is a dogma of faith handed down by the holy Fathers that God cannot in any way be comprehended by the blessed themselves with the clear vision. For, as we showed in Disputation 37, chapter 2, Chrysostom and Theodoret were of the opinion to deny that God, as He is, can be seen by the blessed, as we have demonstrated with clear arguments. In the same opinion we said that Epiphanius was in that place, and Cyril of Alexandria on John, chapter 22, and Euthymius, Theophylact, St. Basil, St. Gregory of Nyssa, and among the Latins St. Jerome, Primasius, Isidore, and St. Ambrose; wherefore their opinion contributes nothing at all to proving what the adversaries contend. Moreover, in the place now alleged, Cyril contends for nothing else than to refute the Anomoeans, who said that God is comprehended by them by His own proper power; therefore he asserts nothing [against us]. Concerning Cyril of Jerusalem I think the same reasoning

854. Vázquez, Disputation 47, cap. 2.

855. St. John Chrysostom; Theodoret on Psalm 103; Epiphanius, Panarion (haer. 70); St. Cyril of Alexandria, Thesaurus, XI, c. 1 (init.), and In Ioannem, c. 22; St. Cyril of Jerusalem, Catechesis 6; Euthymius Zigabenus; Theophylact; St. Basil; St. Gregory of Nyssa; St. Jerome; Primasius; Isidore; St. Ambrose.

holds as concerning Chrysostom, who, to the Anomoeans objecting in this way, "If the divine substance is incomprehensible, why do you discourse at such length?" himself replies with these words: "Is it then because I cannot drink a whole river dry that I shall not draw from it according to what is fitting for me?" etc. To which objection Chrysostom replies in homily 5 On the incomprehensible nature of God, in almost the same way as we reported in Disputation 40, chapter 1. Wherefore on the same occasion I think Cyril and Chrysostom were of the same opinion.[856]

In the second place they adduce Gregory Nazianzen, oration 1, page 119, and Elias on those words of the same oration, "This my inferior [part]"; where Nazianzen says of God, "And however much He is grasped, He always just so much withdraws, and He snatches His lovers from what they are, and, as it were, when caught, He springs away to things above illicit to us": the same he had said a little above. It can also be cited from oration 34, which is the second On Theology, numbers 9 and 19; and oration 36, which is the fourth, number 66; and oration 49, which is On Faith after the middle, where he teaches that God cannot be comprehended. But plainly each author speaks of those on the way, which is clearly gathered from that oration 34, number 19, where, asking why God did not grant us the comprehension of His essence, Nazianzen answers with three causes, of which the third is: "That something so illustrious might be reserved for us as the reward of the toil of this life." Which would not be true, if even in the other life there were granted for merits only such a vision as is not comprehension. From which rather, according to the phrase of Nazianzen, it should be said that God is comprehended by us; so far is it from being the case that from it the opposite should be deduced.[857]

But in that same Oration 34, n. 9, there are these difficult words: "But the whole matter (that is, God) to comprehend with the mind is altogether impossible, not only for the slothful and faint-hearted, sinking downwards, but also for great and lofty men, endowed with love of God, and for mortals, equally for all upon whom, with respect to the knowledge of truth, this dimness and the gross darkness of the flesh pour forth shadow. And I do not know whether this, too, has not been denied even to those more sublime and intelligent natures; for since they are more closely joined to God and shine with all that splendor, they can surely, perhaps, behold, if not utterly, at least more fully than we; more solidly, and some things to some rather than to others, according to each one's rank, either more abundantly or more sparingly; but let this be the end here" - so Nazianzen.

However, since a little below, concerning the same comprehension (*comprehensio*), he openly admits that it is reserved as a reward for man, as we have just noted, it is not to be believed that here he wished to deny it to the blessed Angels; therefore he must be understood as having spoken under doubt, as the words indicate: when he says of the Angels that they can behold God more fully than we, yet not comprehend. Because he seems to hesitate whether He is also seen clearly by them or not, although he asserts nothing, but immediately leaves the disputation. That he himself elsewhere thought that God is clearly seen by the blessed, we have shown in Disputation 37, cap. 2. Moreover, from that very Oration n. 19 this is plainly gathered, when he says that comprehension is

856. St. John Chrysostom, Homilia V de incomprehensibili Dei natura; cf. Vázquez, Disputation 40, cap. 1.

857. St. Gregory Nazianzen, Oration 1 (p. 119); Oration 34 (secunda de Theologia), nn. 9, 19; Oration 36 (quarta), n. 66; Oration 49 (De fide, post medium); Elias (the commentator) ad loc.

reserved for us in another life: therefore, in order to show in that n. 9 the great difficulty on the part of our intellect in this life for comprehending God, he also in some way doubted even about Angels who see Him.

Secondly, Irenaeus is wont to be cited, book 4, cap. 36, in the beginning, where he teaches that God is incomprehensible; but since there he himself speaks against those who said that by our own proper power God is comprehended by us, as is manifest from the text, nothing can be proved therefrom. This is gathered especially from the things he says in cap. 37; for he says: "And they who see God are in God, perceiving His brightness"; and below: "And for this cause He, who is incapable [by nature], renders Himself visible and comprehensible and attainable to men." Therefore, since that which in cap. 36 he had denied, he seems so plainly to concede in cap. 37 - namely, that God is incomprehensible - it is manifest that he is not speaking of the same intellect and in the same way, but of wayfarers in cap. 36 against the Anomoeans, and of the blessed indeed in cap. 37, everywhere understanding by "comprehension" the clear vision (*visio clara*) of God as He is.

Thirdly, Damascene is finally cited, book 1 De fide, caps. 1 and 4, where he says that God is incomprehensible, nor can He be explained by any reason; and since he says the same even of Him if He be compared with the intellect of the Seraphim and Cherubim, he seems already to speak of those who see God as He is, and hence to distinguish comprehension from the clear vision of God; and in this sense Clichtoveus there takes his words, following the reasoning of the Scholastics in explaining the nature of comprehension.[858]

Nevertheless, I think that Damascene spoke no otherwise than the other Fathers; so that by the name "comprehension" he understands the clear vision of God; and therefore he calls God incomprehensible in every way, not only to men, but also to Angels: because Angels by their nature, by whatever way, cannot see Him. For he adds that by none of them can God be comprehended, unless He shall have willed to reveal Himself: but according to the Scholastics' opinion, by His will God cannot reveal Himself to the blessed as comprehended; He can, however, show Himself to be seen: therefore by the name "comprehension" Damascene understood clear vision, as the other Fathers understood it.

From all of which it is plainly evident that not only from the Fathers is it not certain what the adversary asserts - namely, that God is not comprehended by the blessed - but even from some of them, according to their own phrase, the opposite can be gathered. And therefore, lest for the sake of defending the common opinion of the Scholastics, who deny that God is comprehended by the blessed, we should be forced to interpret the Fathers in such a way that by the name "comprehension" they understood clear knowledge of God; since God is seen wholly in Himself, nor does anything of Him lie hidden, not inaptly by the Fathers the clear vision of God is called "comprehension." Therefore, now let us, with the Scholastics, take up the question about the thing

858. St. John Damascene, De fide orthodoxa I, cc. 1, 4; Jodocus Clichtoveus, ad loc.

itself, and explain why God, even to the blessed endowed with the light of glory (*lumen gloriae*), is deservedly called incomprehensible, Whether, as God is clearly seen, so too He can be comprehended by a creature. Disputation 53.

Disputatio LIII - Whether, as God is clearly seen, He can also be comprehended by a creature

Caput I - By what reasoning Francisco de Vitoria and other recent authors assert the incomprehensibility of God

By what reasoning Francisco de Vitoria and other recent authors establish the incomprehensibility of God. cap. 1. In what manner St. Thomas and other Scholastics explain the incomprehensibility of God. cap. 2. The opinion of Ockham and the Nominalists on the same. cap. 3. An easier explanation of incomprehensibility. cap. 4.

All the Scholastics with one voice affirm that God is so incomprehensible (*incomprehensibilis*) that by no clear vision of Him can He be comprehended by any creature, however much elevated by supernatural light. Thus teach Alexander,[859] St. Thomas in this article 7, and in III, q. 10, arts. 1 and 2, and Cajetan and the more recent Thomists there, St. Bonaventure in III, dist. 14, art. 1, q. 2, Richard, art. 1, q. 4, Durandus, q. 1, n. 10, Paludanus, q. 1, in the end to a certain argument, Gabriel, quaest. unica, art. 3, dub. 2, Almain, quaest. unica not far from the end; Scotus in IV, dist. 49, q. 1, ad primum argument, in the second solution of the proof of argument 2; Major there, q. 15; Sotus, q. 3, art. 1; and I know of no one who teaches the opposite, unless the Nominalists alleged, if they accept comprehension in the first of the five senses which they assign, as we shall see in cap. 3; for if they accept comprehension in one of the other modes, they plainly say that God is not comprehended. And since among the Scholastics there is no settled agreement about what belongs to the notion of comprehension (*comprehensio*), no one ought to think that the mode of comprehension which he himself defends is most certain and that in this sense Scripture and the Fathers wished to teach that God is incomprehensible to the blessed; for each one explains God's incomprehensibility in his own way; indeed Scripture and the Fathers sometimes call the clear vision of God "comprehension."

Therefore a common difficulty presses upon all the Scholastics, if those things are true which, from St. Augustine and other Fathers, we set down concerning the definition of comprehension in the preceding disputation, namely, that to comprehend something by cognition (*cognitio*) is nothing else than that nothing of it be hidden, but that the whole of what it is be known and seen.

859. Alexander of Hales, Summa theologiae, I, q. 7, memb. 1; St. Thomas Aquinas, Summa theologiae I, q. 12, a. 7; III, q. 10, aa. 1 - 2; Thomas de Vio (Cajetan), ad loc.; St. Bonaventure, In III Sent., d. 14, a. 1, q. 2; Richard of St. Victor, De Trinitate, art. 1, q. 4; Durandus of St. Pourçain, In III Sent., d. 14, q. 1, n. 10; Peter of Palude (Paludanus), In I Sent., q. 1, in fine ad quoddam argumentum; Gabriel Biel, Quaest. unica, art. 3, dub. 2; John Almain, Quaest. unica, near the end; John Duns Scotus, In IV Sent., d. 49, q. 1 (ad primum arg., in secunda solutione probationis argumenti 2); John Major, In IV Sent., q. 15; Dominicus de Soto, In I Sent., q. 3, a. 1; William of Ockham, In IV Sent., d. 13, q. 1, a. 1.

For since those who clearly see God behold all that is in Him, as was proved in disp. 1 of this article, it seems to follow that either God is comprehended by the blessed, or else the nature of comprehension ought to be defined in some other way. Pressed, then, by this difficulty, the Scholastics variously defend God's incomprehensibility, and in its defense they teach not a few difficult things, whence it may be conjectured that the matter is not so open as to have been defined by the Church de fide. Therefore we shall report various ways of defending and explaining the common opinion, and lastly we shall subjoin our own.

The first way is that of certain theologians of our time (whom some also attest to have been the opinion of Francisco de Vitoria), who assert that for this reason God is not comprehended by the blessed, although He be clearly seen in His essence and the persons and all His attributes, because they do not see these according to every grade of intensity; wherefore something of God lies hidden to them, nor can they enumerate every grade of His perfection; but if they knew all this, without doubt (they say) they would comprehend God. From this they insert two other points: one is that, the more a blessed person penetrates by seeing the divine essence and the grades of perfection, the more creatures he sees in God; the other is that no created vision of God can be infinite, nor can anyone assign an infinite intensity of attributes, nor see infinite creatures in God.

This opinion, in the judgment of all, has no probability. For two absurdities follow from it. One is not only wondrous, but by the ordinary and common way, that the essence of God could be seen without the persons; indeed that one attribute could be seen without another. For if in the same attribute something is hidden and something is seen, much more, with the essence seen, a person could lie hidden; and with one attribute seen, another might not be seen. Nor does one attribute differ less from another, or the person from the essence, than one degree of the same attribute differs from another, if indeed it be lawful to devise degrees of intensity in the divine attributes. And yet even Scotus concedes that the essence can by a miracle be seen without the persons, as we saw in Disputation 40; therefore no one grants that without a miracle one grade of an attribute could be seen without another. Wherefore we must say that, as a matter of fact, the attributes according to every intensity are fully seen by the blessed: for it would be idle to say that a miracle is done lest God be comprehended by the blessed; since otherwise by the natural force of the light of glory He would be comprehended. Moreover, just as in that Disputation 40 it was proved that neither even by God's absolute power can the essence be seen without the persons, on account of Their supreme identity with Them and with any one of Them; by the same reason neither can one attribute be seen without another: for the same reason, therefore, it must be said that nothing of one attribute can lie hidden if something of it be seen.

The second consequence is this: that God is not seen if something of Him lies hidden. For God is the whole wisdom, not something of it; and where there is not the whole wisdom, there is not God: therefore, if He is not wholly seen, God is not seen. But, in our opinion, there is no difficulty in why he who sees more of God also sees more creatures in God; for since we say that, by the force of the vision of the essence, nothing created is known, but that by a peculiar revelation even in this very way it must be said that more creatures are known in God. But if, by the force of the vision of the essence, they were seen, at least by this way this opinion could not be defended, although other

ways are not without difficulty; yet from them there does not follow that manifest absurdity against the faith, as from this one: wherefore this reason for explaining God's incomprehensibility ought to be rejected and not defended.

The second consequence - which follows - is that God is not seen if something of Him lies hidden: for God is the whole wisdom, not something of it, and where there is not the whole wisdom, there is not God; therefore if He is not wholly seen, He is not seen. Wherefore why he who sees more of God also sees more creatures in God, in our opinion has no difficulty: since when we say that, by the force of the vision of the essence, nothing created is known, in this way also it must be said that more creatures are known in God. But if by the force of the vision of the essence they were seen, at least by this way this opinion could not be defended. Although the other ways are not without their own difficulty, nevertheless from them that conclusion does not follow which is manifestly absurd against the faith, as from this one: wherefore this account of incomprehensibility ought to be explained and defended otherwise.

The true account of the Thomists. They do not say that a thing is to be known in the better way in which it can be: for thus an ant would not be comprehended by an inferior Angel, since it could be known in a better way by God and by some superior Angel; but that it is necessary for a thing to be known with as perfect a cognition as it of itself demands; that is, that the cognition be in itself of as great perfection in the genus of cognition as the object is in the genus of the knowable. Wherefore, since God is from Himself infinite, and therefore demands to be known infinitely, no cognition will be adequate to Him unless it be infinite, such as is that by which God has of Himself; therefore by this alone will He be comprehended.

This reason (as I said) is St. Thomas's in this article 7, and of almost all the Thomists: Bonaventure seems to have followed it in III, dist. 14, art. 1, q.; but Richard expressly, art. 1, q. 4; Scotus, q. 1, ad primum argument, in the second solution of the proof of argument 1; Durandus, q. 1, n. 10; Major, in IV, q. 15; Sotus, quaest. 3, art. 1. Wherefore, in the opinion of these Doctors, in order that God, seen by a created intellect, be comprehended, an infinite vision according to intensity would not suffice; for this would still not be adequate to God's infinity; and hence only that cognition of God which is infinite according to existence (*esse*), as the essence itself is, will be called comprehension of Him. This reason they gather first from the words of St. Augustine, De civitate Dei XII, where he says in substance: "Whatever is comprehended by knowledge, by the knowledge that comprehends it is limited"; therefore, since God cannot be limited by any created cognition, it follows that by no created vision can He be comprehended. Then it could be proved by the testimony of St. Gregory, Moral. XVIII, c. 18, near the end, whose words we cited above in the preceding disputation, cap. 3.[860]

Other Scholastics to be adduced below, together with St. Thomas in art. 7 of this question, try to explain this difficulty by another account.

860. St. Augustine, De civitate Dei XII (esp. cc. 7 - 8); St. Gregory the Great, Moralia in Iob XVIII, c. 18 (toward the end).

They say therefore in this way, that for a thing to be comprehended (*comprehensio*), it is not enough to see whatever is in it, but also in every manner in which it is required to be known: for by this account alone can the cognition be adequate to the known object, and consequently contain it within itself, and, as it were, embrace it in its own bosom; for otherwise there is always something truly hidden, and so what is as it is, is not seen. For as often as a thing is not known by its proper and (as they say) intuitive concept, something of it always lies hidden: indeed, what it is, is not seen.

Now this definition is very well proved from bodily comprehension, whence the name Comprehension was transferred to spiritual things: for among bodies one is comprehended by another when the convex sides of the surface of the one are contained within the concave sides of the other; and on this account the contained is bounded by the containing, and both are mutually equalled. Wherefore, whenever one sphere is so contained within a hand, or within another [sphere], that nothing of it is not contained, it is said to be comprehended by it. In like manner, in a spiritual way, the representation (*repraesentatio*) of cognition is compared with the thing known as the concave surface of the containing body with the convex [surface] of the contained: therefore, just as the containing surface according to extension (*extensio*) is equalled to the surface of the contained whenever the whole of it is corporally contained within that [other surface], so too the cognition is said to be made adequate to the thing known, and to contain it within its bosom and, as it were, its own concavity, whenever the whole thing is represented and known. For the bosom and capacity of cognition, whereby the object is said to be contained, is the very representation: then therefore the thing known is bounded by cognition when nothing of it is not represented by that cognition; for no other spiritual quantity or extension in cognition can be conceived, by reason of which cognition may be said to limit or embrace the object, than representation itself: nor in the thing known is there anything else than the entity which is known; and in this alone is the adequation of the two to be considered, that the thing itself may be said to be comprehended, and not in the essential perfection of each. For just as, that one body may comprehend another by bodily comprehension, it matters little that it be of the same nature and perfection (for a sphere of gold can very well be comprehended by one of iron), but all that is required is that the convex quantity be adapted to the concave quantity so that the whole of it may be said to be within: so too, that an intelligible object may be comprehended by intellection, it is not required that the intellection itself be of the same perfection according to existence (*esse*) as that of which the intelligible itself is; but it is required, and it is enough, if the representation of it be so wide as to contain within itself, distinctly and as it is, whatever in the thing itself can be represented: then even if the object be infinite according to existence, and the cognition according to existence be finite, nevertheless the representation, as to extension, will be said to be infinite; and within it even the infinite object will be bounded. And this alone St. Augustine wished to teach in De civitate Dei XII, c. 18, when he says: "That which is comprehended by knowledge is bounded by the knower's comprehension," that is, the whole is contained in that cognition; as we shall explain more at large below in Disputation 63, cap. 2.[861][862]

861. St. Augustine, De civitate Dei XII, c. 18.

Next, that a cognition may be said even to comprehend the object, it is not necessary that it be of equal perfection according to intension (*intensio*) with it; for just as perfection according to existence does not answer to perfection according to existence, so as to be adequate and that the one should comprehend the other, but quantity and latitude to latitude: so likewise neither does intension answer to intension. Therefore intellectual comprehension is attended to according to the latitude of its representation and of that which is represented: and thus the definition handed down by the Fathers stands very well. Hence it is altogether accidental and extrinsic to the thing, that something be comprehended, namely, that it be known in every manner in which it can and ought [to be known], if that manner ought to be on the side of cognition itself, whether according to existence or according to intension. Wherefore, that the infinite be comprehended, it is not necessary that there be a cognition infinitely perfect according to existence, or according to intension; but it is required that the thing itself appear in every way in which it can be known: that is, that in it whatever is, and as it is, be seen: but this manner is on the side of the thing known, not on the side of cognition: and in this way the blessed see the substance of God in every way in which it can be seen, that is, the whole of what is in him, and as it is in him. This doctrine and explanation of comprehension is all the more approved by me, the more it approaches the definition handed down by St. Augustine - nay, it is altogether the same with it - namely, that comprehension is a cognition of a thing so perfect that in every way the whole thing, as it is, is seen.

Thus far, a priori, the difficulty of the aforesaid opinion remains explained. Moreover, from conceded points we can refute some authors of this opinion: for many, together with St. Thomas in art. 8 of this question, refuse to concede that such a vision of the divine essence can be communicated to the blessed, that in it all creatures, which are infinite, be seen: because, to wit, it would follow that the divine essence be comprehended by some created intellect, which is absurd: for he who in some cause sees all its effects, comprehends the cause itself. But this absurdity does not seem to follow in their opinion, even if they grant that in the divine essence all creatures can be seen by the blessed. For although from this it be inferred that that vision would be infinite according to intension, if it is true that the more things are seen the more intense that vision is; nevertheless it is not gathered that it will be comprehension, if for the notion of comprehension it be required that there be as great perfection in the cognition according to existence as the object itself has: for thus, since the object - God always - is infinite according to existence, the cognition in like manner would have to be infinite, and not only according to intension.[863]

862. Below, Disputation 63, cap. 2.
863. St. Thomas, Summa theologiae I, q. 12, a. 8.

Caput III - The opinion of Ockham and the Nominalists on the same matter

It is familiar to the Nominalists, when pressed by the difficulty of some thing, to devise various acceptions of it, so that they may be able to escape the difficulty; and hence it is free for them to coin various definitions of things, as is common: which in this controversy has in fact happened to them. Therefore, to satisfy the proposed difficulty, they assert that comprehension is employed in various ways.

First, something is said to be comprehended by vision whenever it is so seen that nothing of it lies hidden from the seer; and in this way they say that God is comprehended by the blessed, because nothing of him is hidden from them.

Secondly, to comprehend something is to see it and to distinguish among its parts; and in this way God is by no means comprehended: for he has no parts, among which he who sees him may distinguish.

Thirdly, to comprehend is to see a thing in the best way in which it can be seen: thus not only is God not comprehended by the blessed; but no creature is comprehended by another than by God, who alone knows himself and the rest in the better way in which they can be known.

Fourthly, to comprehend is to know a thing under all the predicates which can befit it; and thus God alone comprehends himself, because he alone knows all the predicates which can be ascribed to himself and that befit him.

Finally, in a fifth way, to comprehend something happens whenever the cognition has the same proportion with respect to other cognitions that the thing known has with respect to other things. Wherefore, since no cognition by which the blessed see God so exceeds other visions and cognitions as God surpasses them all, it follows that in this fashion God is perfectly comprehended by himself alone. And this follows in this opinion not only if we say that although the beatific vision is not infinite according to intension, yet also in this way it is infinite; because even so it will not have the same proportion with other cognitions that God has with all things, and it will have to have some [proportion]. In this fifth mode of comprehension these Doctors agree with the authors of the preceding opinion.

Many indeed seem to have contrived these various significations and acceptions of the name Comprehension without foundation; and, as we noted above, the signification of this name and of the verb "to comprehend," translated from bodily things to spiritual, ought to be used with that signification which is approved among Latin authors for both bodily and spiritual [uses], with proportion preserved. Therefore the signification transferred and the metaphor in spiritual matters ought to be taken variously just as in bodily matters it is said in proper speech that someone "comprehends" a thing when in a new way he has grasped or has enclosed some thing; and even if something remains outside in part, he is said to have comprehended it, even if the whole of its quantity is not within the latitude of what contains; as when we hold something from one side. To this bodily comprehension there corresponds, by transference, the spiritual [comprehension], which pertains to cognitive use; whence the Apostle speaks: "that you may be able to comprehend

with all the saints what is the breadth," etc. (Eph. 3). And in this sense the Fathers in the disputation cited above speak when they say that God is not comprehended by wayfarers, and is in a certain manner comprehended by the blessed, especially St. Augustine in that sermon on the words of the Lord, where he expressly distinguishes comprehension from every other kind of cognition, and even of vision.[864]

- Fourth: In the fourth way, to comprehend (comprehensio) is to know a thing under all the predicates that can be attributed to it and befit it; and in this way God alone comprehends himself, for he alone knows all the predicates that can be attributed to him and that befit him.
- Fifth: Finally, in a fifth way, to comprehend something happens whenever the cognition has the same proportion to other cognitions as the thing known itself has to other things. Therefore, since no cognition by which the blessed see God so exceeds other visions and cognitions as God surpasses all things, it follows that in this way God is perfectly comprehended by himself alone. And this, on this opinion, follows not only if we say that any beatific vision is not infinite in intensity, but even if in this way it were infinite; for even so it would not have the same proportion to other cognitions as God has to all things, if he is to be said to have any proportion at all. In this fifth mode of comprehension these Doctors agree with the authors of the preceding opinion. To me, however, these various significations and acceptions of this name "comprehension" seem devised without foundation; and, as I noted above, the signification of this name and of the verb "to comprehend," when transferred from bodily to spiritual things, ought to be employed with the same transferred signification that has been received among approved authors of the Latin tongue both about bodily and about spiritual matters. Therefore, with the proportion of the transferred and metaphorical signification preserved, in spiritual things it is to be taken in a variety corresponding to bodily things; but in the latter there are two ways in which someone is said to comprehend a thing. In one way it is the same as to apprehend or attain to some thing: thus, even if we hold a thing from one side, we are said to "comprehend" it, even if the whole of its quantity is not within the latitude of what contains; as when we hold something in the hand from one side. To this bodily comprehension there corresponds, by transference, the spiritual one, which is any cognition at all; thus Paul to the Ephesians 3: "that you may be able to comprehend with all the saints what is the breadth," etc.[865] And in this sense the Fathers cited in the preceding disputation, cap. 3 and 4, do not speak, when they say that God is not comprehended by wayfarers, and when they insinuate that he is in a certain way comprehended by those who see him; especially St. Augustine in that Sermon 38 on the words of the Lord: for there he expressly distinguishes comprehension from every other kind of cognition, and even of vision; and he says that it is reserved to men as a reward, as from his words in that cap. 3 we have deduced.[866]

864. Eph. 3:18.
865. Eph. 3:18.
866. St. Augustine, Sermon 38 De verbis Domini.

In another way one is said to comprehend some bodily thing when he not only holds it by some part, but also embraces within himself, and encloses, its entire intrinsic quantity; as when we hold a certain sphere in the hand in such a way that it is wholly within the hand. In the same way in spiritual things, that cognition is called comprehension by which we so see a thing that nothing of it is hidden from us, but we see it as it is. In this sense Augustine takes "comprehension," insofar as it is referred to the intellect, in the places cited in the preceding disputation, cap. 1 and 3, where he distinguishes it from vision and from cognition in general. Therefore, beyond these two modes of comprehension, both in bodily and in spiritual matters, the Nominalists fabricate others without foundation. Wherefore, since they concede that God is comprehended by the blessed, if to comprehend a thing is to see it in such a way that nothing of it is hidden from the seer, they ought simply and absolutely to concede this; for this is the more proper mode of comprehension. Yet I do not see that this is contrary to the doctrine of the Fathers; indeed, some of them taught thus: for so Augustine in that Sermon 38 on the words of the Lord, and St. Gregory Nazianzen in Oration 34, as in my judgment we noted in Sermon 38 of Augustine on the words of the Lord and that Oration 34 of Nazianzen in cap. 3 and 4 of the preceding disputation; nevertheless, it is against the common sense of the Schoolmen.[867]

But let us show in detail that some acceptions of comprehension which the Nominalists assign are frivolous. First, the second acceptation vainly requires a distinction of parts for something to be called comprehension: for comprehension, even in bodily things, is not said from the fact that the parts are distinguished, but from the fact that they are all enclosed and contained; therefore, much less will that be necessary in spiritual things. The third acceptation too is posited without foundation; it is not required that someone, in order to comprehend a body, should embrace it in the best manner he can; it is enough if he encloses the whole within himself. Therefore, that we be said likewise to comprehend a thing by the intellect, it is not necessary to know it in the best mode we can; but it is enough if we adequately, that is, as to whatever is of it, understand and see it. About the fifth mode enough has been said by us in the preceding chapter. About the fourth, which I judge truer, and which must be said in the first chapter, it will be treated in the following chapter.

Caput IV - An easier explanation of incomprehensibility

Indeed, that opinion allows the incomprehensibility of God to be explained more easily, even if we suppose the definition of comprehension handed down from Augustine and other Fathers in the first chapter of the preceding disputation: namely, that to comprehend is to see a thing as it is, so that nothing of it is hidden from the seer; for whatever beyond this we shall say to belong to the notion of comprehension will not be without some difficulty, if we attend to the force of the very

867. St. Gregory Nazianzen, Oration 34.

name - something which clearly appears from that from which the metaphor was taken, as was said above. Moreover, there are two ways in which it happens that we know of some thing what it is, namely, to see it so that nothing of it is hidden.

- In one way, by knowing only that which is in it formally and intrinsically pertains to its essence, or even to its intrinsic properties; and in this way Augustine in Sermon 38 on the words of the Lord, and Nazianzen in that Oration 34, seem to have taken it, when they teach that comprehension of God is reserved to us as a reward in the other life. For it is clear that they speak, not of any sort of cognition, but of that by which there is seen whatever is in the object: for Augustine openly distinguishes this from cognition in general, when he says that it is one thing to see some thing, but another to comprehend the thing itself by seeing it. And Nazianzen speaks of a comprehension which no mortal man can attain in this life: by the name therefore of "comprehension" he understands something more than cognition taken commonly.[866]
- In another way, a thing is said to be comprehended when we not only know whatever is in it formally, but also whatever can follow upon it or depend upon it; for all that pertains to it in some way. And in this way we judge that God cannot be comprehended by us; and thus also the common opinion of the Schoolmen can be rightly explained. For although the blessed man sees in God whatever is in him formally, nevertheless he does not see all the things that can follow upon him and depend on him: for the Blessed does not know all possibles, nor the future things that depend on the counsel of God. Wherefore it is rightly said that God himself is not comprehended by the blessed. For the same reason we are said not yet to comprehend some man whose counsel and will we do not know; and likewise not to comprehend some principle until we so penetrate it that from it we see all the conclusions that can be deduced. Therefore, since the blessed man who sees God does not see all the possibles that God can do, nor the future things that he will bring about, he will not be said to comprehend him.

This mode of incomprehensibility is indicated by St. Thomas in article 8 of this question, although in article 7 he handed down another, about which it was said in cap. 2 of this disputation: the same is followed by Alexander, I, q. 7, member 1; and the Nominalists cited in the preceding chapter, in the fourth mode of comprehension, seem to number this, when they said that God is therefore not comprehended because he cannot, according to all the predicates that befit him, be seen by the Blessed. They undoubtedly understand this not of the intrinsic predicates of God himself (for thus there is nothing in him that is not seen, as is clearly proved from the foregoing), but of predicates that befit God by relation to extrinsic things which are his effects, namely to creatures; as that he can do this or that, and that he will do this or that.[868][869]

866. St. Augustine, Sermon 38 De verbis Domini.
868. St. Thomas, Summa theologiae I, q. 12, a. 8; and a. 7.
869. Alexander of Hales, I, q. 7, memb. 1.

Objicitur primo: But someone will object first: for some body to be said to be comprehended, it is enough if its entire intrinsic quantity is enclosed within another body; therefore, for some thing to be said to be spiritually comprehended by the intellect, it is enough if the whole of it, as it is, is seen in itself, even if its extrinsic predicates are not known.

Respondeo: I answer that the reason is different: for things that are beyond some bodily quantity are not said to pertain to it corporally; wherefore, in order that it be corporally comprehended, it is enough that the whole that is in it intrinsically be enclosed and contained. But as for an intelligible thing, insofar as it is referred to the intellect, not only are those things said to pertain to it which are intrinsic to it, but also those that can be made from it or deduced from it, as something belonging to it; for thus we understand what it itself further is. Wherefore, in order that it also be comprehended by intellectual cognition, it is necessary that not only the whole that is in it intrinsically be known and seen, but also those things that can arise and be deduced from it.

Objicitur secundo: Again someone will argue thus: it can happen that God even reveal to the Blessed all possibles and all future things; for we showed in Disputation 49 that this is not repugnant: therefore, although in fact no one comprehends God, nevertheless he could be comprehended by them; therefore he will not be incomprehensible by his nature.

Respondeo: I answer that something can be known together with something else in two ways: first, from the power of the cognition by which the other is seen; next, only concomitantly and without necessary connection with it. I say, therefore, that in order that something be comprehended by the intellect, not only must whatever is in it be known, but also whatever can be done by it or derived from it, from the power of the same vision by which that thing is seen; that is, the vision of the primary object ought to be so perfect that it shows of itself even those things that are derived from it. For if it did not show that of itself from the fact that it is cognition of the primary object, it would not of itself be comprehension of the object, but would be as it were helped from elsewhere in order to comprehend and altogether to know the object. But in this way no creature can be known or seen in God, as we proved in Disputation 49 and in Disputation 4; rather only by a special revelation, or only concomitantly. And therefore, although in this way the Blessed might know all possibles and all future things, he would not comprehend the very essence (essentia) of God. God, however, in his own wisdom, knows himself in such a way that his very cognition is also, from the power of his own cognition, cognition of creatures, as will be explained in Disputation 60, cap. 4, toward the end: and therefore God alone can comprehend himself. And this suffices about the incomprehensibility of God, and about the seventh and eighth articles of St. Thomas.

From all these things it is clear that the whole disputation about the incomprehensibility of God is placed almost not in a controversy of things, but of words; and that all the Schoolmen, except Victoria, think exactly the same in reality, and differ only in word: because "comprehension" is variously employed by them.[870]

870. See Disputation 49; also Disputation 4; and Disputation 60, cap. 4.

Articulus IX - Whether the things that are seen in God are seen through certain similitudes

Ad nonum

Objicitur: To the ninth it proceeds thus. It seems that the things which are seen in God by those who see the divine essence (*essentia*) are seen through certain likenesses (*similitudines*). For every cognition is through an assimilation of the knower to the known: thus the intellect (*intellectus*) in act is the intellect in act, and sight in act is the visible in act, insofar as it is informed by its likeness, as the pupil is by the likeness of color. Therefore, if the intellect of the one seeing God through the essence understands in God certain creatures, it must be informed by their likenesses.

1. Moreover, we keep in memory the things which we have previously seen; but Paul, seeing in rapture even the very essence of God (as St. Augustine says in On Genesis, Book 12, to the letter), after he ceased to see the essence of God, remembered many things which he had seen in that rapture; whence he himself says that he heard secret words which it is not permitted for a man to speak (2 Cor. 12). Therefore it must be said that certain likenesses of those things which he remembered remained in his intellect; and for the same reason, when he was presently seeing the essence of God, he had certain likenesses or species (*species*) of the things which he was seeing in it.[871]

Sed contra: On the contrary, by one species a mirror is seen and the things which appear in the mirror; but all things are thus seen in God as in a certain intelligible mirror. Therefore, if God himself is not seen through some likeness, but through his essence, neither are the things which are seen in him seen through certain likenesses or species.

Respondeo: I answer that those who see God through his own essence do not see the things which they see in the very essence of God through any species, but through the very divine essence united to their intellect. For thus is each thing known, according as its likeness is in the knower. But this happens in a twofold manner. For, since whatever are similar to one and the same are mutually similar, the cognitive power can be assimilated in a twofold way to some knowable. In one way, according to itself, when it is directly informed by its likeness; and then that thing is known according to itself. In another way, according as it is informed by the species of something which is similar to it; and then the thing is not said to be known in itself, but in its likeness. And there is one cognition by which a man is known in himself, and another by which he is known in his image. Thus therefore to know things through their likenesses existing in the knower is to know them in themselves, that is, in their proper natures; but to know them according as their likenesses pre-exist in God is to see them in God. And these two cognitions differ. Whence, according to that cognition by which things are known by those who see God through the essence, they are not seen through some other likenesses, but through the sole divine essence present to the intellect, through which also God is seen.

871. St. Augustine, De Genesi ad litteram XII, cap. 3 and cap. 28; 2 Corinthians 12.

Ad primum: To the first, therefore, it is to be said that the created intellect of one seeing God is assimilated to the things which are seen in God, insofar as it is united to the divine essence, in which the likenesses of all things pre - exist

Ad secundum: To the second it is to be said that there are some cognitive powers which from species first conceived can form other species. Thus imagination, from pre - conceived species of a mountain and of gold, forms the species of a golden mountain; and the intellect, from pre - conceived species of genus and difference, forms the account of species. And in like manner, from the likeness of an image we can form in ourselves the likeness of that of which it is an image. And thus Paul, or whoever else was seeing God, from the very vision of the divine essence can form in himself likenesses of the things which are seen in the divine essence, which remained in Paul even after he ceased to see the essence of God. Yet this vision, by which things are seen through likenesses of this sort conceived thus, is another than the vision by which things are seen in God

Observationes circa articulum. The conclusion of the article is: The things which the blessed see in the essence of God are not seen through any likenesses, but through the very essence of God united to their intellect. For greater perspicuity two things must be observed.

First is that the conclusion can have a twofold sense. One is that created things are seen in God through the essence of God as it were by an impressed species (*species impressa*), which is not only the principle of his own vision, but also of creatures - in which sense some disciples of St. Thomas interpret him. This sense, however, I would not approve, since I have shown sufficiently in Disputation 43, from the mind of the holy Doctor, that the divine essence is not in the place of a species for eliciting even its own vision, how much less for eliciting the cognition of creatures.[872]

The other sense is that St. Thomas speaks of the likeness, that is, of the expressed species (*species expressa*), and says that things are not seen in God by an expressed species of them, or by their own word, which in his view is always seen prior to the thing of which it is the word; indeed, to see any thing is nothing else than to know the idea and word of it. And in this way he says that things are seen in the Word, so that they are not seen by a middle expressed species of themselves; but since the divine essence, which is seen immediately and which itself is in the place of the Word, so also through itself, and not by some other word, are created things seen in God. And I judge this sense to be the ultimate and genuine one; and it agrees with the doctrine of the Angelic Doctor, which we have explained in that disputation. But whether it is true we shall say below. However we speak, since it remains proved in Disputation 38, cap. 2, that in the clear vision of God a word is produced, we must also say that God himself, and whatever is seen in him, are seen through some likeness - not indeed one previously seen, but one which is the ratio of seeing and representing, or rather which is itself the vision and representation.[873]

Alterum notandum est: it must further be noted that things created can be seen in God in a twofold way. First, according as they are ideas in the mind of God, and thus they are God himself; and those things which do not have life in themselves live in God in this way, as was said in

872. See Disputation 43.
873. See Disputation 38, cap. 2.

Disputation 51, cap. 3. Then secondly, according to their proper formal reasons (*rationes formales*), existing objectively only in the intellect of God.[874] And indeed, if St. Thomas speaks of the vision of created things in the Word according to their proper formal reasons, I do not know on what ground it can be true that they are not known by some other likeness, which according to the opinion of St. Thomas ought to be previously seen, but by the sole essence of God previously known. For next to God nothing created can be seen in the likeness of God: since God differs much more from any creature than one creature from another; therefore, since one creature cannot be known quidditatively through another, neither can it be through God. Add that although a creature be known according to its proper reasons, the divine essence having been previously known as the primary object, nevertheless there would still have to be formed prior a proper concept of the creature itself distinct from the concept of God, lest the creature be confused with the Creator; then indeed an expressed species of God himself would be unnecessary.

But if St. Thomas speaks of the vision of created things in God according to that they are the very life of God, then if for seeing God no expressed species is required, as the holy Doctor thought, neither will it be necessary for seeing creatures. And indeed, if one attentively read St. Thomas, he seems to speak of the vision of creatures in God according to that they are God himself. For in this article he compares the vision of creatures in God to the vision of a thing in some likeness, which clearly is not according to the proper reason of the thing itself; consequently he ought to be speaking of the vision of them according to proper reasons, as he had discourse about them in the preceding article. For what he asserted about these - that they are seen in God according to their proper reasons - remains proved in Disputation 51, cap. 3. However we speak, since it remains proved in Disputation 38, cap. 2, that in the clear vision of God a word is produced, we must also say that God himself, and whatever is seen in him, are seen through some likeness, not indeed one previously seen, but which is the ratio of seeing and of representing; or rather is itself the vision and representation.[875]

Articulus X - Whether those who see God through the essence at the same time see all the things which they see in him

Objicitur: To the tenth it proceeds thus. It seems that those who see God through the essence do not at the same time see all the things which they see in him. Because, according to the Philosopher, it happens to know many things, but to understand one.[876] But the things which are seen in God are understood. For God is seen by an intellect. Therefore it does not happen that by those seeing God many things are at the same time seen in God.

1. Moreover, St. Augustine says in On Genesis, Book 8, to the letter, that God moves the spiritual creature through time, that is, according to intellect and affection. But the spiritual

874. See Disputation 51, cap. 3.
875. See again Disputation 38, cap. 2.
876. Aristotle, Topics IV, cap. 4 (in declaration of the locus).

creature is the angel, who sees God. Therefore those who see God understand and are affected successively. For time imports succession.[877]

Sed contra: On the contrary is what Augustine says in De Trinitate: "Our thoughts will not be whirling, passing from some things to others and returning, but we shall behold the whole of our knowledge at once with a single simultaneous gaze."[878]

Respondeo: I answer that the things which are seen in the Word are not seen successively, but at once. For the understanding of this, it must be considered that we are not able to understand many things at once, because we understand many things through diverse species, but the intellect cannot at the same time be actually informed by diverse species for understanding through them; just as neither can one body at the same time be formed by diverse figures. Whence it happens that when certain many things can be understood through one species, they are understood simultaneously; just as in the species of man we understand animal and rational; and in the species of house we understand the wall and the roof. But diverse parts of some whole, if each is understood by its own proper species, are understood successively and not simultaneously. If, however, all are understood by one species of the whole, they are understood simultaneously. But it has been shown that the things which are seen in God are not seen singly by their own likenesses, but all through one essence of God. Whence they are seen simultaneously and not successively.

Ad primum: To the first, therefore, it is to be said that we understand, as to natural cognition, with one species we understand one; but many understood under one species are understood simultaneously. Thus, in the species of man, we understand animal and rational; and in the species of house, the wall and the roof

Ad secundum: To the second it is to be said that angels, as to the natural cognition by which they know things through diverse species impressed in them, do not know all things simultaneously; and thus they are moved according to intelligence through time; but according to that by which they see things in God, they see them simultaneously

Conclusio: The conclusion is: All the things which are seen in the essence of God are seen simultaneously. Which conclusion, if it be understood of creatures according to that they are God himself, as we shall explain presently, there is no doubt that all things are seen simultaneously in the Word; because the whole God is seen at once, and whatever is said to be in him. But if we speak of those according to their proper formal reasons, there is difficulty among the Doctors whether at least some are seen with a succession of time; which we shall examine briefly in a disputation.

Disputatio LIV - Whether some creatures according to their proper formal reasons are seen successively in the Word

Two opposing opinions of the Thomists. Caput 1. The truer opinion. Caput 2.

877. St. Augustine, De Genesi ad litteram VIII, cap. 22 - 23.
878. St. Augustine, De Trinitate XV, c. 16.

Caput I - Two opposing Thomist opinions

Among those who teach that creatures are seen in God by the same vision by which God himself is [seen], not all teach in the same way regarding the proposed question. These are the Thomists, who are divided into two opinions: one is that of Scotus in IV, distinction 49, question 3, article 3, and of some more recent Thomists, who affirm that both the species of created things and the singulars which the blessed see in the Word are seen simultaneously from the beginning of beatitude; likewise concerning the prayers which are directed to them...

Moreover, they prove that succession cannot befit the beatific vision by a twofold testimony of St. Augustine. One is in the book 83 Questions, question 23, where (so they say) Augustine teaches that the measure of the clear vision of God is a participated eternity; but eternity is unchangeable: however, that Augustine did not wish to teach this in that place, I have shown more at length above in Disputation 36, chapter 2.[879] The other testimony is in On the Trinity, book 15, chapter 16, which St. Thomas adduces in the argument, But on the contrary, and his disciples set great store by it; although in truth the holy Doctor does not prove his conclusion from that passage, but, as is his custom, brings it in the Sed contra to set forth a doubtful question. For Augustine says there that in eternal beatitude our thoughts will not be voluble; if anything were seen by a successive vision of God, that vision would be voluble - how much more the other thoughts.

However, Augustine's mind in that chapter is different; and first, if he taught what the Thomists wish, it would follow that there will not be new revelations in the blessed - yet that is false, and against the same holy Thomas, below, question 17, article 5, who plainly grants that certain mysteries were revealed to the Angels in the course of time. For Augustine affirms there not only about the clear vision of God, but about all things as well, that there will not be voluble cogitations. But the true sense of Augustine is deduced from the preceding chapter 15. For there he had said that the word of our mind is that which we form for ourselves, not any sort of voluble and discursive thought, but that by which we come to that which we know, which is perfect; for then we, as it were, bring forth the concept, which Augustine calls a "word." He adds, moreover, that neither in God nor in the blessed is there a word first formable by an imperfect cogitation, so that later it might be formed; and therefore he denied to the blessed voluble cogitations - that is, those imperfect cogitations - although he did not assert this absolutely, but leaves it under doubt. His words, which by what has been said are easily understood, in that chapter 15 are these: "What, I ask, is this formable, and not yet formed, but something of our mind, which we toss hither and thither with a certain voluble movement of thought, whereby now this, now that, as it has been found or has occurred, is considered; and then there is a word when that which we say we were tossing with voluble thought has come to that which we know, that is, has been begotten." Therefore, by the name "voluble thought," Augustine understands a laborious thought, with discourse and consultation, which has not yet arrived at judgment, which in chapter 16 he says is not in God, and thus there is not in him a "formable" word prior to its formation.

879. St. Augustine, 83 Quaestiones q. 23; see also Disputation 36, cap. 2.

But about us in the beatitude of the blessed, after he has there shown that the word which we form of God clearly seen is true and produced at once without voluble cogitation, at the end of the same chapter 16 he concludes about other cogitations in these words: "Perhaps even our cogitations will not be voluble, going and returning from one thing to another; but we shall behold all our knowledge with one simultaneous view. Yet when even this shall have come to be - if even this shall have come to be - the creature will then have been formed, which was formable, so that nothing may be lacking to its form, to which it ought to come." These are Augustine's words, from which it very clearly appears that Augustine does not care whether we may know something with the course of time, but that he insists upon the act itself which we know, that there be not a volubility of cogitations coming and going back, as has been explained. They therefore can prove nothing from Augustine.

I also judge that it is asserted without foundation, nor can it be defended without absurdity, that the beatific vision itself is changed in the course of time; yet it would be necessary in this way, if not all things are seen from the beginning at once; how, however, that is necessary, if not all are seen at the beginning simultaneously, we shall show in chapter 2. And so much for the first opinion.

The second opinion is that of Ferrar. on Contra Gentiles III, chapter 59, at the words "Sed remanet dubium," who asserts that indeed the species of the things which the blessed see in the Word are all seen at once with the same vision by which they see the Word itself; but that the singulars of them can be seen with a succession of time even by the same vision. In this opinion, Dominicus de Soto and the Thomists report Scotus; but which opinion he followed, we shall show in the next chapter. Ferrar. proves this by one reason: for if this could not be done, it would be because in the vision itself no variation can occur, which nevertheless would necessarily have to occur, if the singulars were seen with a succession of time; but it is not necessary that the vision be changed in some way, so that they may be thus seen: therefore nothing hinders that they be known in this way. Furthermore, he asserts that after the clear knowledge of the species and the essential natures of things has been obtained, singulars ensuing can be known without any intrinsic change of cognition, by a merely extrinsic denomination, which in that cognition arises from the variation of the objects. The Thomists commonly reject this opinion, which we shall easily confute by argument in the next chapter.[880]

Caput II - How, on the foregoing foundations, the blessed can receive new revelations, and also see in the Word, with a succession of time

From the foundations laid in the preceding chapter, it is easy business to gather in what way the blessed can with a succession of time receive certain revelations, nay further, even see in the Word. Among the Scholastics, indeed, several assert that things are thus seen in the Word as they come to pass in reality, so that from the beginning they are not all seen, but with a succession they are seen. Thus teach Bonaventure in III, distinction 14, article 2, question 3; Scotus in the same distinction, question 2; and Marsilius in III, distinction 10, article 2, part 3 of the article; for about Christ they

880. Ferrar., on Contra Gentiles III, cap. 59, at the words "Sed remanet dubium"; see also below, Disputation 54, cap. 2.

hold that he knew all future things in the Word, not all at once, but habitually, in such a way that, with time going on, he read in the Word future things as it pleased him. Explicitly, however, about the other blessed they hand on the same thing - Ockham, Gabriel, Almain, Major, and Alliacen; and also St. Thomas, below, question 17, article 5, ad 2 and ad 3; and Cajetan on question 83, article 4, ad 2 and ad 3, and on question 10, article 2.[881]

However, if their opinion be understood as Ferrar., whom in chapter one we reported, followed it - that is, that by the same vision, with a succession of time, some things would be seen - I would by no reason be persuaded. For if it cannot be that the same vision, remaining in the same mode, should by the sole change of the objects newly represent something which before was not seen: for how can the same, remaining wholly the same in itself, now actually present that which previously it did not present? A change, in truth, seems necessary not only for it to represent some specific form, but also an individual; for in an individual there is not merely a specific ratio, but also an individual and singular one, and one thing is really diverse from another. How, therefore, whether by a change of vision or not, can that vision represent singular things which previously it did not represent? Moreover, that the intellect begin anew to see that which it did not see requires that it have a new formal effect, by which, from being one who does not see, it become a seer; but a new formal effect cannot be without a new form.

Wherefore, from the Doctors cited - Ockham, Gabriel, Almain, Allhacen, Major, Innocent, and Cajetan - say that those things which are seen in the Word are seen with a succession of time by a vision distinct from that by which the Word itself is seen; in what sense, with this change, they are said to be seen in the Word we have explained in Disputation 50, chapter 7.[882] Cajetan, however - besides other Doctors cited - thought that many are seen in the Word by the force of the vision by which the Word itself is seen, and by the same vision as the Word; and about these he taught that all which are seen in the Word are known from the beginning and at once, lest any variation and change be conceded in that very vision; but because he also thought that some things are seen in the Word by a vision different from that by which the Word itself is seen, about these he granted a succession of time, that they are not known from the beginning. Thus is St. Thomas to be understood in the places cited, where he affirms that the blessed see some things in the Word with a course of time. And in this sense I judge Scotus, Bonaventure, and Marsilius to be speaking universally, although, as I noted in that chapter 7, they do not explain themselves enough; with whom I too, in general, think it true that all created things which a blessed person sees in the Word are seen by a vision distinct from that by which he sees God himself; and therefore with a succession of time new things are there revealed. This opinion, thus explained, was handed down by Ockham, Gabriel, Major, Almain, and Alliacen.

881. Bonaventure, In III Sent. d. 14, a. 2, q. 3; Scotus, ibid. q. 2; Marsilius, In III Sent. d. 10, a. 2, part 3; Ockham, Quodl. 4, q. 13, a. 2; Gabriel, In III Sent. d. 14, q. (art. i, notabil. 3); Almain, q. 1, a. 1; Major, Quodl. q. 3; Alliacen; St. Thomas, infra q. 17, a. 5, ad 2 et 3; Cajetan, q. 83, a. 4, ad 2 et 3; in q. 10, a. 2.

882. See Disputation 50, cap. 7, where it is explained in what way, under this account, things are said to be seen "in the Word."

Articulus XI - Whether someone in this life can see God through his essence

To the eleventh, we proceed thus. It seems that someone in this life can see God through his essence.

1) For Jacob says in Genesis 32: "I have seen God face to face." But to see face to face is to see through the essence, as is evident from that which is said in 1 Corinthians 13: "We see now through a glass and in an enigma, but then face to face": therefore God can be seen through his essence in this life.

2) Moreover, in Numbers 12 the Lord says of Moses: "I speak to him mouth to mouth; and he sees God openly, and not by riddles and figures." But this seeing is to see God through his essence: therefore someone in the state of this life can see God through his essence.

3) Moreover, that in which we know all other things, and through which we judge about other things, is to us known of itself. But even now we know all things in God. For Augustine says in Confessions XII: "If we both see that what you say is true, and we both see that what I say is true, where, I ask, do we see this? Neither I in you, nor you in me, but both of us in that unchangeable truth which is above our minds." Therefore God is seen by us now as he is in himself; and thus through his very nature's form he is seen by us.

But on the contrary, it is said in Exodus 33: "Man shall not see me and live." And likewise: "No one has ever seen God" (John 1:18). And it is said in 1 Corinthians 13: "We see now through a glass and in an enigma; but then face to face": therefore God cannot in this life be seen through his essence.

I answer that it must be said that by a man in the pure state of this life God cannot be seen through his essence, unless he be separated from this mortal life. The reason for this is that, as was said above, the mode of cognition follows the mode of the nature of the knower. But our soul, so long as we live in this life, has its being in corporeal matter; hence naturally it does not know anything except what has a form in matter, or what can be known by means of such. But it is manifest that the divine essence cannot be known through the natures of material things. For it has been shown above that the cognition of God by any created likeness whatsoever is not a vision of his essence; therefore it is impossible for the human soul, while living according to this life, to see the essence of God. And a sign of this is that our soul, the more it is abstracted from corporeal things, the more capable it becomes of the abstraction of intelligibles; whence divine revelations are received more by alienations from the senses of the body, and by previsions of future things. Therefore that the soul should be elevated up to the highest of intelligibles, which is the divine essence, cannot be while this mortal life is lived.

Reply to the first: It must be said that, according to Dionysius and as is gathered from the Gloss and from St. Jerome, in the Scriptures one is said to have seen God insofar as certain figures have been formed - either sensible or imaginary - representing something divine according to some likeness. Therefore what Jacob says, "I saw God face to face," is referred not to the divine essence

itself, but to the figure in which God was represented. And this very thing seems to pertain to a certain eminence of prophecy, namely that the person of God as speaking - or God speaking - be represented in a figure; although in this mortal life it is seen by certain images.

But on the contrary: It is said in Exodus 32: "Man shall not see me and live." The Gloss: So long as one lives here in a mortal way, God can be seen by certain images.

Further: It is said in 1 Corinthians 13: "We see now through a glass and in an enigma; but then face to face": therefore in this life God can be seen by essence.

1. Further, in Numbers 12 the Lord says of Moses: "I speak to him mouth to mouth." But he who speaks to God mouth to mouth sees God plainly and not by enigmas and figures; but this seeing is to see God by essence. Therefore someone in the state of this life can see God by essence.
2. Further, that in which we know all other things, and by which we judge about other things, is to us known essentially. But even now we confess that we know all things in God. For Augustine says in Confessions 12: "If both of us see that what you say is true, and we both see that what I say is true, where, I ask, do we see this? Not I in you, nor you in me, but both in that truth itself which is above our minds, the unchangeable truth." Therefore God Himself is seen by us.
3. Further, according to Augustine, On Genesis ad litteram 12, "By intellectual vision those things are seen which are in the soul by their essence." But an intellectual vision is of intelligible things, not through certain likenesses, but through their essences, as he himself says in the same place. Therefore, since God is in our soul by His essence, He is seen by us through His essence.[883]

I answer: It must be said that by a pure man God cannot be seen unless he be separated [from this life]. The reason is that the mode of knowing follows the mode of the nature of the knower. But the soul - so long as we live in this life - is in a material body; hence it does not know anything except as it grasps form in matter, or things that can be known by the mode of abstraction from material things. But it is impossible that the divine essence be known by this mode derived from material things. It has been shown above that knowledge of God by a similitude created of His essence is impossible; and therefore by this way it is impossible in this life to see God. And thus our soul, the more it is abstracted from corporeal things, the more capable it becomes of intelligibles; whence in dreams, and in certain alienations from the senses, divine revelations and previsions of future things are more often perceived, provided, however, that the soul be raised as far as the highest of intelligibles, which is the divine essence - something that cannot be so long as it uses this mortal life.[884]

883. St. Augustine, On Genesis ad litteram 12; and the book De videndo Deum, on Moses the teacher of the Jews and Paul the teacher of the Gentiles.

884. Compare the standard Thomistic demonstrations in this question: that knowledge of God by a created likeness of His essence is impossible; hence by this way God cannot be seen.

Reply to the first: According to Pseudo-Dionysius, De caelesti hierarchia 4, in Scripture someone is said to have seen God inasmuch as certain figures are formed, whether sensible or imaginary, which represent something divine according to a likeness. Therefore what Jacob says, "I have seen God face to face," must be referred not to the divine essence itself, but to the figure in which God was represented. And this very thing pertains to a certain eminence of prophecy, namely that the person of God as speaking - or God speaking - be seen, although by an imaginary vision, as will be made clear below when we speak of the grades of prophecy; or Jacob says this to designate a certain eminent intelligible contemplation above the common state.[885]

Reply to the second: Just as God miraculously works something supernaturally in bodily things, so also, supernaturally and beyond the common order, He raised the minds of certain persons living in this flesh, though not using the senses of the flesh, up to the vision of His essence, as Augustine says, On Genesis ad litteram 12, and in the book On Seeing God, concerning Moses, who was the teacher of the Jews, and Paul, who was the teacher of the Gentiles. And this will be treated more fully when we speak of his rapture.[883]

Reply to the third: We are said to see all things in God, and according to Him to judge about all things, inasmuch as through a participation of His light we know and discern all things. For the very natural light of reason is a certain participation of the divine light, just as we also say that we see and judge all sensible things in the sun, that is, through the sun's light. Hence Augustine says in the first book of the Soliloquies: "The spectacles of disciplines cannot be seen unless they be illumined by some sun, as it were their own, namely by God." Therefore, just as in order to see something sensibly it is not necessary that the substance of the sun be seen, so to see something intelligibly it is not necessary that the essence (*essentia*) of God be seen.[886]

Reply to the fourth: An intellectual vision is of those things which are in the soul through their essence, as intelligible things are in the intellect. But thus God is in the soul of the blessed; not, however, in our soul, but by presence, essence, and power.

Explication of the article.

The conclusion is: A pure man in this mortal life cannot see God. Thomists understand this in various ways.

First, Ferrariensis, on Contra gentiles III, chap. 47, so explains it: the sense of the conclusion is that it is impossible to see God, as He is, by the use and exercise of the senses. This, first of all, is clearly proved by the arguments of St. Thomas in this article and in that chapter. And thus "mortal life" is the same as the use of those very senses; if in this way the conclusion be understood, it is true not only according to the ordained power of God, but also according to His absolute power. For it is of itself impossible that, by the ministry and exercise of the senses, God be apprehended as He is, namely, that He is spiritual and incorporeal. Wherefore neither by this way can the intellect see Him as He is. In this sense some recent Thomists understand St. Thomas; and indeed this

885. Pseudo-Dionysius, De caelesti hierarchia, cap. 4.

883. St. Augustine, On Genesis ad litteram 12; and the book De videndo Deum, on Moses the teacher of the Jews and Paul the teacher of the Gentiles.

886. St. Augustine, Soliloquia, lib. 1, cap. 8 (in principio).

exposition would be most pleasing to me, were it not that the holy Doctor added "by a pure man," which he added on account of Christ, who, even in this mortal life, clearly saw God, who nevertheless could not be seen by the ministry of the senses. Wherefore if by "mortal life" St. Thomas understood the operation of the senses, he would not have excepted Christ from the universal doctrine which he had handed down, but would have comprehended Him too; for neither according to the absolute power of God could God be seen by the senses. This interpretation certainly fits very well with the text of St. Thomas in that chap. 47 of the Third Book Against the Gentiles, which alone Ferrariensis strives to explain; yet it does not fit so well with the text of this article, for there he did not add that exception which in this article he added concerning the "pure man."[887888889]

Then others think that St. Thomas in this article spoke of the ordained power of God, not of the absolute; and by "mortal life" he did not understand the operation of the senses, as the preceding opinion said, but the very corruptible life of man. He says, therefore, that while we are in this life, God cannot be seen by us, because by His ordained power, according to His own law, that vision is communicated to no one; he excepts, however, from this rule Christ, and he understands the conclusion only of a "pure man." This exposition is attributed to Cajetan - which, however, is not sufficiently certain to me - although it very much pleases me.[888]

Yet against it there seems to be that St. Thomas uses the same reasoning in this article as in the Third Book Against the Gentiles, in that same chap. 47, namely about the ministry of the senses; and that reasoning proves, not only according to the ordained power of God, but also according to the absolute, that in this life, as was said above, God cannot be seen.

It is resolved. I answer that by that reasoning something is proved even according to the absolute power of God, namely, that by the ministry of the senses God cannot be seen; but because it supposes that a man in this mortal life does not understand in any other way than by the ministry of the senses according to the ordained power, therefore it does not follow "according to the absolute," but only "according to the ordained," that God cannot be seen. And for this reason he said that, while we are in this body, naturally nothing is known by us except what has form in matter, that is, sensibles; he added, however, "by a pure man," in order to except Christ, who, although He used the ministry of the senses, nevertheless had another superior mode of knowing, in no way depending on the senses, and therefore He most excellently knew spiritual things, and, with the light of glory communicated to Him, could see God. Moses and Paul also are excepted, in St. Thomas's mind, for he thinks that to them the divine essence was revealed clearly, as it is - something which, according to the power of God ordained by His own law, was granted to no other.[883]

887. St. Thomas Aquinas, Summa contra Gentiles III, cap. 47.

888. Cajetan, on De veritate q. 12, a. 9; and 2 - 2, q. 172, a. 1, ad 1.

889. On the comparison of this article with Contra Gentiles III, cap. 47.

888. Cajetan, on De veritate q. 12, a. 9; and 2 - 2, q. 172, a. 1, ad 1.

883. St. Augustine, On Genesis ad litteram 12; and the book De videndo Deum, on Moses the teacher of the Jews and Paul the teacher of the Gentiles.

Further, St. Thomas's doctrine must be noted and explained, namely, that in sleep and in alienation from the senses divine revelations are more aptly communicated. He gives the reason, because our soul, the more it is abstracted from corporeal things, the more it is made apt to intelligibles and to spiritual things. Cajetan vigorously defends this doctrine and reason in this article against Scotus, whom he thinks taught what is contrary to the holy Doctor. For Scotus, in IV Sentences, d. 45, q. 2, s., as is held here - near the end of that place - seems to teach that in sleep man is less fit for understanding spiritual things; for if he were therefore more apt because he is abstracted from the operation of the senses, it would follow that he becomes so much the more apt the more he is abstracted, and consequently in a heavier sleep he would be made much more apt - which seems absurd. Therefore Scotus asserts that, if we consider the internal power of the soul for contemplating spiritual things, in sleep it is not rendered more apt for understanding spirituals; but if we attend to external impediments, and to the aptitude coming from their removal, the soul (says Scotus) is more apt in sleep to be moved by God to understand spirituals, because it can be less distracted by the sensible things themselves. Hence Scotus concludes that it is a greater miracle for truth to be revealed in sleep than in wakefulness, because the force of reason for judging truth is vigorous in wakefulness, but in sleep it is, as it were, bound.

On the contrary, Cajetan thinks that the sentence of St. Thomas must be explained otherwise out of St. Thomas's own mind in De veritate q. 12, a. 9, and 2 - 2, q. 172, a. 1, ad 1, namely, that in cognition there are two things, the reception of it and the judgment about the thing known. Therefore, according to Cajetan's reading, St. Thomas teaches the soul to be more apt in sleep for receiving knowledge and revelations; but for pronouncing judgment about the thing, in wakefulness - for judgment about a thing is made by a resolution as to whether the things understood are consonant to sensibles. However, if Cajetan had wished to interpret Scotus's mind benignly, he could easily have seen that Scotus is not his adversary; for when Scotus says that the soul is more apt in sleep by reason of the removal of external impediments, not, however, from an internal principle, he clearly understands that it can more aptly receive revelations from God moving it, though not more aptly render a judgment

Disputatio LV - Whether Moses in this mortal life clearly saw the divine essence

The opinion of St. Augustine and St. Thomas. Chapter 1. Moses in this life did not clearly see the essence (*essentia*) of God as it is. Chapter 2. From the Scripture of Exodus 33, not only is it not established that Moses clearly saw the essence of God, but the opposite is also not obscurely gathered. Chapter 3. What it was that Moses asked in those words of Exodus 33, "Show me your glory." Chapter 4. From Numbers 12 it is not established that the essence of God was clearly revealed to Moses. Chapter 5.[890]

890. See below, Disputation 55, chaps. 1 - 5.

Caput I - The opinion of St. Augustine and St. Thomas

The innumerable multitude of the Fathers and the pontifical authority of Pope Evaristus compel me to judge that Moses never in this mortal life saw God clearly. This opinion was taught first and foremost by Evaristus himself in his first decretal epistle, a little after the middle, who, although he does not wish to define it ex professo, yet, defining that the nature of both the Son and of the Father is a light inaccessible, against those who said that this belonged to the Father alone, adds in passing as something known, that in the other life God is to be clearly seen by any blessed one - not as Moses (he says) and the other Prophets through enigmas and figure, but the very Godhead will be truly beheld in the Son as in an image.[891]

The Fathers, moreover, who follow this opinion, are distributed into three classes.

- The first class is of those who say that God is clearly seen by the Blessed as He is; these we reported in Disputation 37, chapter 5. Yet they affirm that to Moses in this life He did not so appear. Thus affirm Dionysius, De caelesti hierarchia, cap. 4, in the first epistle to Caius; Irenaeus, book 4, cap. 37; Origen, Periarchon, book 2, cap. 4; St. Hilary on those words of Psalm 118, "I have sought thy face"; St. Gregory Nazianzen, Oration 34, which is the second On Theology, a little after the beginning; St. Gregory, Moralia 18, cap. 28; Bede, in the eighth tome, in Questions on Exodus, q. 42.[892]
- In the second class are those who neither openly say nor deny that God is clearly seen by the Blessed; yet they assert that in this mortal life He was never seen by Moses in that way. Such are Tertullian, book 4 Against Marcion, cap. 22 near the end; and the book Against Praxeas, cap. 14 at the beginning; and it is gathered also from what Origen teaches, homily 7 on Numbers; from Phaebadius, book Against the Arians, rather after the middle; from Marius Victorinus, book 4 Against Arius, before the middle - of which last two St. Jerome makes mention in the book On Ecclesiastical Writers, whose works are found in the sacred Bibliotheca.[893]
- In the third class are all the Fathers who, in my judgment, as I showed in Disputation 37, chapters 1 and 2, taught that the essence (*essentia*) of God as it is is not seen by the Blessed, and they said peculiarly of Moses that he never saw it in this life. Thus held St. John Chrysostom, homily 14 on John, tome 3, and homilies 13 and 4 On the incomprehensible nature of God, tome 4; St. Cyril, book on John, cap. 22; Isidore on Exodus, cap. 41; St. Gregory of Nyssa, book XI; Epiphanius, heresy 70; Theodoret in the dialogue entitled Immutabilis; St. Ambrose, on Luke, book 1, chapter on the apparition of the Angel; I pass

891. Evaristus, Epistola decretalis I (post medium): defining the nature of the Son and of the Father to be "light inaccessible," he adds incidentally that in the other life God will be clearly seen by any blessed one, "not as Moses and the other Prophets through enigmas and figure, but the very Godhead will be truly beheld in the Son as in an image."

892. Pseudo-Dionysius, De caelesti hierarchia, cap. 4 (epist. 1 ad Caium); St. Irenaeus, Adversus haereses IV, 37; Origen, Periarchon II, 4; St. Hilary, on Ps. 118; St. Gregory Nazianzen, Or. 34 (II de Theologia); St. Gregory the Great, Moralia XVIII, 28; Bede, In Exodum, q. 42.

893. Tertullian, Adversus Marcionem IV, 22; Adversus Praxean 14; Origen, Hom. 7 in Numeros; Phaebadius, Contra Arianos; Marius Victorinus, Contra Arrium IV; Jerome, De scriptoribus ecclesiasticis.

over Theophylact and Euthymius, whom I cited in that disputation; and St. Jerome on those words of Isaiah, cap. 1, "Hear the word of the Lord, ye princes of Sodom," who in general teaches that the essence of God is not clearly seen by the Blessed: of Moses, however, they make no peculiar mention.[894]

Among the Scholastic Doctors, Alexander of Hales taught the same about Moses, Part 1, q. 4, m. 1, art. 4; Cajetan on Numbers cap. 12; Faber Stapulensis on cap. 1, book 1 of St. John Damascene.[895]

Now since it is not doubtful - as we noted in the observations on the article - that nothing at all stands in the way whereby God could communicate to a wayfarer a clear vision of His essence, and the only controversy is whether de facto He has communicated it to someone, and this depends on the will of God alone, it must be judged solely from His revelation whether the essence of God, as it is, was revealed to Moses in that way or not. But such revelation can be established for us either by the Church's tradition and definition, or by Scripture. By the Church's tradition, which is conserved in the teaching of the Fathers, it rather stands that God never showed His essence to Moses, since almost all with one voice affirm that constantly. From the Church's definition, however, we have absolutely nothing. It remains, therefore, that we must gather it from Scripture. From this, I judge, our opinion can be proved sufficiently effectively in a twofold way: first, by some testimonies from which it is manifestly gathered; then by showing that there is no place of Scripture from which the opposite can be deduced - indeed, from some which are commonly adduced in confirmation of the opposite, ours is not obscurely proved. In this chapter, therefore, we will endeavor to confirm our opinion from Scripture in the former way; but in the following chapters we will show the same in the latter way.

Accordingly, it is first proved from John 1: "No one has ever seen God" (Deum nemo vidit vnquam): which we proved in Disputation 37, chapter 6, must be understood of men with whom we converse in this mortal life. Therefore Moses in this mortal life, as long as he lived among men, did not see God, since universally the Evangelist asserts: "No one has ever seen God." Nay rather, if we attentively weigh the context itself, it seems that this is said in particular also of Moses. For he had said before in John 1: "The Law was given through Moses; grace and truth came through Jesus Christ," so as to show the difference between Christ and Moses, who was held the greatest among the Prophets, and to prefer Christ Himself to Moses. He shows Christ's excellence not only in this, that grace and truth came through Him, but also that He alone, who is the Only-begotten in the bosom of the Father, has seen God, so that He could unfold His mysteries to us; and therefore he subjoins: "No one has ever seen God; the Only-begotten Son, who is in the bosom of the Father, He has told us." Therefore, if Moses had clearly seen God as He is, he himself could have told it to us, and not Christ alone.

894. St. John Chrysostom, Hom. 14 in Ioann., tom. 3; Hom. 13 and Hom. 4 De incomprehensibili natura Dei, tom. 4; St. Cyril of Alexandria, In Ioannem, cap. 22; Isidore, In Exodum, cap. 41; St. Gregory of Nyssa, lib. XI; Epiphanius, Haer. 70; Theodoret, Dialogus "Immutabilis"; St. Ambrose, In Lucam I, cap. De apparitione Angeli; Theophylact and Euthymius; St. Jerome, In Isaiam I, "Audite verbum Domini, principes Sodomorum."

895. Alexander of Hales, Summa, Part 1, q. 4, m. 1, art. 4; Cajetan, on Numbers 12; Faber Stapulensis, on lib. 1, cap. 1 of St. John Damascene.

The same truth is proved from that place John 6: "Every one who has heard and learned from the Father comes to me. Not that anyone has seen the Father, except he who is from God; he has seen the Father." Besides the rest, as we explained in Disputation 37, chapter 6, add also that of 1 Tim. 6: "Whom no man has seen, nor can see"; which place also we explained in that sixth chapter along with others.

Caput III - From the Scripture of Exodus 33 it not only does not follow that Moses clearly saw the essence (*essentia*) of God, but the opposite also is not obscurely gathered.

We too shall not lightly confirm our opinion, if we demonstrate that there is no place of Scripture from which St. Augustine, and those who follow him, could have deduced that the essence of God as it is was clearly revealed to Moses: for thus it will be proved that it was said without any foundation. For if, as we said, it can be established neither by tradition nor by the Church's definition, nor by Scripture, and would hang upon the will of God alone, by what reason could Augustine affirm it? Now there are two places of Scripture from which he tries to elicit this doctrine: one is Exodus 33; the other Numbers 12. Of the former we must speak in this chapter; of the latter we shall examine in the next.

Accordingly, in Exodus 33 there are some words from which Augustine's opinion seems to be gathered. First, when it is said: "But the Lord spoke to Moses face to face, as a man is wont to speak to his friend." Yet from these words Augustine does not deduce his opinion; for all understand that place of the visible face in which the Lord appeared. Thus in Genesis 32 Jacob said: "I have seen the Lord face to face, and my soul has been saved"; for he was speaking of that visible form in which the Angel, under the name of God, appeared, with whom he wrestled until morning.

Then it seems to be proved from this, that Moses said: "Show me thy face, that I may know thee." From which words Augustine strives to gather his opinion by this reasoning: Moses then asked to see what he had not yet seen, not what he had already seen; but he had not yet seen God according to His essence, whereas he had seen Him in a bodily figure: therefore he asked to see the essence of God, not the face of a bodily figure. In this way, with Augustine, some hold that Moses asked for a clear vision of the divine essence. Thus teach Philo, On Fugitives, a little before the end; Irenaeus; Hilary; and Tertullian, in the places cited in chapter 2, §2. To this petition God assented, for He said in the same chapter: "My face shall go before thee, and I will give thee rest."

But to this reasoning Augustine himself does not give much credence, and at length he admits that nothing is proved from this place; for at the end of the same chapter, Exodus 33, when Moses asks to see the glory of God, the Lord expressly denies it, as will be said below. So too Abulensis, who felt with Augustine that Moses in this life saw the essence of God (q. 34 on Numbers 12, and q. 17 on Exodus 33), grants that in Exodus 33 a clear vision of the divine essence was not granted to Moses: the same is taught by Lyranus, who taught the same opinion as Abulensis.

And from the context itself, according to the various expositions of the Doctors, the same can be proved. For clearer explanation of which it must be observed that that colloquy of Moses with the Lord, which is described throughout that chapter 33, did not take place on Mount Horeb, but in the

tabernacle, after he had once received the law and had come down from the mount. As to that, however, which Moses then asked of the Lord, the Doctors vary; but whichever exposition we follow, from it there cannot be proved that God granted to Moses the clear vision of His essence.

We too shall not lightly confirm our own opinion, if we shall have shown that there is no passage of Scripture from which St. Augustine, and those who follow him, could have derived that the essence (essentia) of God, as it is, was clearly revealed to Moses; for thus it will be proved that the statement was made without any foundation. For if, as we said above, it neither stands by tradition nor by the definition of the Church, nor can it be established from Scripture, and depends only on the mere will of God, by what reasoning could Augustine have affirmed it? Now there are two passages of Scripture from which he tries to elicit this doctrine: one is Exodus 33, the other Numbers 12. Concerning the former we must speak in this chapter, as the task at hand requires; in the next we shall examine the latter.

Therefore in Exodus 33 there are certain words from which Augustine's opinion seems to be gathered. First, when it is said: "But the Lord spoke to Moses face to face, as a man is wont to speak to his friend." From these words, however, Augustine does not deduce his position; for all understand that place concerning a visible face, in which the Lord appeared. Thus in Genesis 32 Jacob said, "I have seen the Lord face to face, and my soul has been saved" (Gen 32): for he spoke of that visible form in which the Angel, under the name of God, appeared, with whom he wrestled until morning.

Then it seems to be proved from what Moses said, "Show me your face, that I may know you." From these words Augustine endeavors to gather his very opinion, and this by the following reasoning: Moses then asked to see what he had not yet seen, not what he had already seen; but he had not yet seen God according to his essence, while he had seen him in a corporeal figure: therefore he asked to see the essence of God, not the face of a corporeal figure. By this reasoning, together with Augustine, some hold that Moses asked for the clear vision of the essence of God. Thus relate Philo, Irenaeus, Hilary, and Tertullian in the places cited; and God assented to this request, for in that same chapter he said: "My face shall go before you, and I will give you rest."

But to this argument Augustine himself does not grant much, and finally admits that nothing is proved from this passage; indeed, at the end of that same chapter, Exodus 33, the Lord expressly denies to Moses, who asked to see the glory of God, as will be said below. Thus also Abulensis agreed with Augustine that Moses in this life saw the essence of God; yet he concedes that in Exodus 33 a clear vision of the divine essence was not granted. The same is taught by Lyranus, who held the same opinion as Abulensis. And from the very context, according to various positions of the Doctors, the same can be proved.

For a clearer explanation, observe first that that colloquy of Moses with the Lord which is described in the entire chapter 33 did not take place on Mount Horeb, but in the tabernacle, after he had once come down from the mountain with the received law. Concerning what Moses asked there from the Lord, the Doctors differ; yet, no matter which exposition is followed, it cannot from

there be proved that God granted Moses a clear vision of the essence, where he says not, "I will show my face to you," but: "My face shall go before you, and I will give you rest," promising a leader and, at last, rest.

Concerning Moses's petition there is a first opinion. First: if we say that by those words, "Show me your face," Moses asked for a clear vision of God, as Philo, Tertullian, Irenaeus, and Hilary held, it does not follow that it was granted to Moses; for the Lord only replied, "My face shall go before you," by which words God did not signify that a clear vision of himself was to be communicated to Moses. For neither Augustine, nor those who follow his opinion, contend that during the entire time of the wandering the essence of God, as it is, clearly appeared to Moses, but either on Mount Horeb or in the tabernacle, when he again dealt with the Lord concerning the law; yet the face of the Lord always went before him during the whole time of the wandering.

Then, by those words, "Show me your face," Moses did not ask for a clear vision of God, as the Doctors commonly think, although they do not sufficiently agree on what he is said to have asked. Some, as Abulensis reports on Exodus 35, interpret it thus: "Show me your face," that is, show yourself to me as gracious and propitious; according to that verse of Psalm 118: "Make your face shine upon your servant." But this interpretation is not approved by Abulensis himself; for what he immediately added, "that I may know you," does not seem consonant with this petition: for, in order that he might know him well, it did not seem to matter that God show himself as propitious and gracious, but rather that he reveal his face, by which men are wont to be known. Therefore Abulensis thinks that Moses asked of the Lord a greater knowledge and understanding of himself. For previously God had spoken to him through Angels, and since a man is known from the face, therefore he asked to see his face - not a clear and intuitive vision of the essence, but such as can be communicated to one on a journey. Yet this opinion does not approve itself to me; for Moses had already known enough about God, though he had appeared to him through the ministry of angels; wherefore he rather desired the clear vision of the divine essence, nor is there any cause for saying that he sought some other knowledge of him.

I for my part judge that by those words Moses asked of the Lord that he would be the leader on the journey by which he was to lead that people. And this I first gather from the response of the Lord; for he did not reply, "I will show my face to you," but: "My face shall go before you, and I will give you rest" - that is, promising a leader for the people of Israel, and at last rest to Moses after his labors. Therefore, since the answer ought to fit the petition, it follows that he only asked of the Lord that he would go before them on the way and show it.

Secondly, in the Hebrew it does not say, "Show me your face," but "your way"; and thus it is read in some common Vulgate codices; and this reading agrees with what precedes and follows. For Moses had said: "You command that I bring out this people and you do not show me whom you will send with me, especially since you said, 'I know you by name, and you have found grace in my sight'; if therefore I have found grace in your sight, show me your face" - or, as the Hebrew and some common Vulgate codices have it, "your way": as if he were saying, "If you command that I lead this people here, why do you not show me whom you will send with me, that he may show me the way of this journey by which you will that I should lead this people?" Therefore he asked of the

Lord some guide for this journey, not to see his essence on Mount Horeb. And this sense not only pleases me if we follow the Hebrew text or a common Vulgate that has "your way", but also if we follow the corrected Vulgate which has "your face": for Moses did not ask to see the face of God, that is, his essence as it is, nor yet any face of a corporeal figure in whatever way, but his face as the leader of the journey; for by the face the way is indicated. And to this petition, thus explained, the response of the Lord fits, saying, "My face shall go before you."

Nay rather, that exposition which Abulensis does not approve, and which we mentioned before in the first place, can be adapted to this text, so that the sense may be: show yourself to me as gracious and propitious in this journey by which you command that I lead your people, that I may know you - that is, your will - in leading this people with power and portents, as you have led them hitherto. For Moses was not content, when the Lord said to him, "My Angel shall go before you"; therefore, not content with having an Angel as the leader of the journey, he asks for the presence of God himself - not because he did not know that God always appears through an Angel, but he desired striking signs, miracles, and portents, such as he had seen up to that point, that it might thereby be manifest to all, through special providence and power, that God was the leader of that people. This interpretation is gathered from Abulensis, question 4 on Exodus 33; and in this sense the translation of the Seventy can also have a place: "Show me yourself manifestly," that is, as a leader. Wherefore Augustine Eugubinus, approving only the Hebrew reading in that Exodus 33, without reason reproves the translation of the Seventy and the Vulgate, which has "your face."[896]

Thirdly, by those words "Show me your face," Moses did not ask for a clear vision of the divine essence; this is proved because at the end of that same chapter 33 of Exodus Moses added a new petition, saying, "Show me your glory"; and by these words, as some - indeed most - think, he asked for a clear vision of the essence of God: therefore by those earlier words he did not ask it. But if by these later words he demanded that vision, as Philo, Tertullian, Irenaeus, Hilary in the places cited, and Athanasius in the book of Questions to Antiochus, question 23, assert, it clearly follows that God was never seen by Moses. For the Lord replied: "You shall see my back parts, but my face you cannot see"; and a little before he had said: "You cannot see my face; for no man shall see me and live." He denied, therefore, to Moses that which he had asked. Wherefore, if to see the face is to see the essence, it follows that the vision of it was not granted to Moses, but only the vision of the posterior part, when he said, "You shall see my posteriora," namely, either the effects or the creatures of God, as Philo, Irenaeus, Hilary, and Athanasius interpret, or the humanity of Christ on Mount Tabor, as Tertullian and Irenaeus in the places cited, and St. Gregory Nazianzen in oration 34 a little after the beginning, teach. Nor did Moses desire, or ask for, the clear vision of the divine essence when he said, "Show me your glory"; in the next chapter we will show this. And therefore, neither did he ever see God as he is; from that chapter of Exodus 33 this is plainly gathered; so far is it that the sentence of Augustine and others is proved from it.

Abulensis (Alonso Tostado), various questions on Exodus 33.

Caput IV - What Moses asked in those words of Exodus 33, "Show me your glory."

Our position will be even more strongly confirmed if we show that by those words Moses did not ask for the vision of the essence of God, but for the glory of the corporeal figure in which the Lord was about to appear. This can be deduced without difficulty from the context itself. For after Moses had come down from the mountain, having once received the law, and, inflamed with anger on account of the people's idolatry, had broken the tablets and taken vengeance upon the people, the Lord again appeared to him in the tabernacle, urging him to go up into the mountain to receive the law anew; and then Moses asked of the Lord to see his glory on the mountain. By the glory of the Lord, however, he understood the majesty of that corporeal figure in which the Lord would appear. For when on the mountain he first spoke with the Lord, Exodus 19, and received the law written by the finger of God, it is not read that he saw the Lord or his glory; rather it is read that the Lord descended in a dense cloud which covered the whole mountain, that lightnings also and thunders appeared. But after these things the Lord appeared to him, Exodus 33, in the tabernacle, speaking with him familiarly as a friend is wont to speak with a friend. Therefore it is no wonder if Moses, about to go up again into the mountain, should ask of him to see the majesty and glory of the corporeal form under which he was to descend upon the mountain, namely, his face, in which the majesty and glory of someone especially shine forth. But the Lord, partly assenting to his petition, replied: "You cannot see my face; for no man shall see me and live"; and again: "Behold, there is a place by me, and you shall stand upon the rock; and when my glory shall pass by, I will set you in a cleft of the rock, and protect you with my right hand till I pass; and I will take away my hand, and you shall see my back parts; but my face you cannot see." Therefore the Lord denied the vision of his face; he granted, however, that his back might be seen. This cannot be understood except of a corporeal figure. And he denied it because the brightness of the countenance was so great that no bodily eye could bear it; and on that account he said, "No man shall see me and live." If this were not to be understood in this way, the Lord would have said in vain, "I will set you in a cleft of the rock, and protect you with my right hand." For unless there were danger of death, namely, from that excessive brightness of the countenance of a corporeal figure, there would have been no need to be protected by the hand of the Lord in the cleft of the rock until the Lord should pass by; and thus, as is shown in the next chapter, with his face, when it is said, "The Lord passed by before his face," namely, before Moses's face, "and said, Dominator, Lord, God," etc. It is possible, moreover, that Abulensis, on questions 19 and 20 concerning Exodus 33, thought that God covered him upon the cleft of the rock lest Moses should see the face and the glory of the Lord's countenance as he passed by. He concedes, moreover, that Moses saw the posterior part of that figure in which he appeared, because in it there was a lesser splendor of light, such as he could bear; and this is what the Lord said in that chapter: "I will show all my good to you"; not that the whole majesty of the countenance might be displayed, but that glory and splendor which Moses could bear; whence it may be conjectured how much greater were the rest of the brightness of that countenance which he could not bear. This exposition is given by Abulensis on questions 17 and 18 on chapter 33 of Exodus; and from all this it is clear that Moses asked not for the essence of God, as it is, to be seen clearly, but for that corporeal figure.

Therefore the interpretations of that passage, "No man shall see me and live," which Augustine and others put forward, do not seem to fit the letter exactly; some refer it to the vision of the clear essence of God, and they say that God cannot be seen by a man in the flesh without the man immediately dying; which, they say, Scripture wishes to express in Exodus 33. Thus Tertullian insinuates it, Contra Praxean, chapter 14; and Athanasius seems to suppose it, Sermon 3 against the Arians, where afterwards, when he says that not only the divinity but also the soul descended to the lower regions, he argues from this place in this way: Christ descended to the lower regions to save souls, not to destroy them; therefore the divinity alone did not descend: "No man shall see me and live," lest at the sight of the Father, together with the soul, souls should perish in the presence of the Father's countenance. Yet I do not approve this interpretation; first, because it is not evident that the clear vision of God brings death and not rather the highest spiritual delight. Then, this at most could happen only to a man living in mortal flesh, as Tertullian seems to insinuate, but not to a separated soul, which is immortal and incorruptible; how could death be brought upon it? Lastly, how could the soul of Christ, united to the divinity, despise that divinity, if it were dangerous to see it?

Augustine indeed, in Epistle 112, chapter 13, and again on that passage of 2 Corinthians, "He was caught up," thus interprets "No man shall see me and live," namely, that a man, while in this mortal life, does not see it, unless he be rapt from the operation of the senses. Many other Fathers, whom we have cited elsewhere, concede indeed that a clear vision was not granted to Moses; but they explain "No man shall see me while he is in this mortal life." None of these interpretations fits the letter. For as we said above, if the Lord had meant this, he would not have added: "I will set you in the cleft of the rock" etc.; by which it is plainly indicated that there he would defend and protect Moses, lest, by the brightness of his countenance, he should perish.

Therefore, plainly, the sense of that passage is what we have already said: namely, that a man cannot bear the brightness of the countenance of the figure in which he was about to appear, lest he should die.

But for a fuller explanation it must further be noted that elsewhere in Scripture the same sentiment is found, although in another sense. For in Judges 13: "We shall die, because we have seen the Lord": which, without doubt, was drawn from that saying, "No man shall see me and live," that is, he shall die. Yet whenever this saying is found (with the exception of that instance in Exodus 33), it must be understood in another way. For men who fear God, when they see him in some visible form, as it were by a sign, are afraid of death - not because they are hurt by any brightness of his - but in order to preserve a devout opinion of God. Hence Jacob says, as something wonderful (Gen 32): "I have seen the Lord face to face, and my soul has been saved": as if to say, even though I have seen God face to face, yet my soul, that is, my life, has been preserved unharmed. And more clearly with Manoah, Judges 13; after they had seen the Angel of God, when Manoah had learned that it was the Lord, he said: "We shall die, for we have seen the Lord." But his wife consoled him with these words: "If the Lord had willed to kill us, he would not have received holocausts and offerings from our hands," etc. Therefore the danger of death there arose

not from any actual peril, nor from the splendor of his countenance, but from a devout and pious opinion about God; whereas in the case of Exodus 33 the brightness itself of that countenance was such that no bodily eye could endure it.

He could bear it. And for that reason He said, "No man shall see me and live"; which, unless it were so understood, the Lord would have said in vain, "Place yourself in the cleft of the rock, and I will cover you with my right hand." For unless there were danger of death in beholding that excessive brightness of the countenance of the bodily figure, there was no need to be protected by the hand of the Lord in the cleft of the rock until the Lord had passed by; and that in fact it was so is shown by the following chapter, when it is said that when God had passed by him, namely by Moses, Moses said, "Sovereign Lord, God," etc. Abulensis thinks that a cloud was placed by God above the cleft of the rock, lest Moses should see the face and the glory of the Lord as He passed. But Moses was allowed to see the posterior part of that figure in which He appeared, because in it the splendor of the light was more tempered, so that his sight could endure it; and this is what the Lord said in that chapter, "I will show thee all good," not that He was going to show the whole majesty of the countenance, but that glory and splendor which Moses could bear, that from it he might conjecture how great was the glory of that countenance which he desired to see. Abulensis gives this exposition; from all of which it is clear that Moses at that time did not ask to contemplate clearly the essence (*essentia*) itself of the Lord, as it is, but that bodily figure.[897]

Therefore the interpretations of that place, "No man shall see me and live," which Augustine and others employ, do not seem to fit the letter. Some refer it to the vision of the clear essence of God, and say that God cannot be seen by a man in the flesh without the man's dying; and this the Scripture of Exodus 33 willed to express. Tertullian insinuates as much, and it seems to be presupposed by Athanasius, where, in order to show that not the divinity alone descended to the lower regions, but together with a soul, he argues from this place in this way: Christ descended to the lower regions in order to save, not to destroy, souls; therefore the divinity alone did not descend: "No man shall see me and live": therefore the divinity had to be tempered by a soul, so that souls could endure the sight of Him.[898] I wonder, however, at the exposition of these Fathers, first, because it does not seem how the vision of the clear God could bring death, and not the highest spiritual delight. Then, even if it were so, it could only befall a man living in mortal flesh; but for souls made ready, which are immortal and incorruptible, how could it bring death? Lastly, how could the soul of Christ united to the divinity temper it, so that without danger it might be beheld?

Augustine, however, in Epistle 112, c. 12, and Anselm on that passage of 2 Corinthians 12, on the words "He was caught up," thus interpret "No man shall see me": "No man shall see me while he is in this mortal life, unless he be rapt from the operation of the senses."[899] Many of the other Fathers, whom we cited in chapter 2, who say that the clear vision of God was communicated to Moses, explain it thus: "No man shall see me while he lives in this mortal life." But none of these

898. Tertullian, Contra Praxean 14; Athanasius, Sermo 3 contra Arianos.
899. St. Augustine, Epistle 112, c. 12; Anselm, on 2 Corinthians 12, "Raptus est."

interpretations fits the letter. For, as we were saying before, if the Lord had wished to say any of these things, He would not have added, "Place yourself in the cleft of the rock," etc., by which He clearly indicated that there He would be defending and protecting Moses, lest by the brightness of His countenance he should be terrified and die, by that glory and splendor.

But for greater explanation it must further be noted that in Scripture this same sentiment is found, yet in another sense; for it is said in Judges 13, "We shall die, for we have seen the Lord," which seems altogether the same as, "No man shall see me and live," that is, he shall die. Nevertheless, wherever this sentence is found, apart from Exodus 33, it must be understood otherwise. For men had commonly conceived a fear concerning God, that, if they had seen Him in some visible form, they would die; and this Scripture willed to show, not because they would be harmed by the excessive splendor of that, but because they had conceived about God this opinion: and therefore Jacob said, as something wondrous, Genesis 32, "I have seen the Lord face to face, and my soul has been saved," as if he said, "Since I have gazed upon God face to face, my soul, that is, my life, has been preserved"; and Judges 13, when the Angel appeared in the place of God, after Manoah recognized that He was the Lord, he said, "We shall die, for we have seen the Lord." But his wife consoled him with these words: "If the Lord had willed to kill us, He would not have received holocausts and libations from our hands," which in truth would have been no consolation if the danger of death had not arisen from the opinion which they had conceived concerning God, but from the splendor of that countenance and from the bodily figure.

Likewise, that fear arose in the same way from that figure and bodily form. Thus also in Judges 6, when Gideon had seen the Angel of the Lord, who was carrying out the offices of God Himself, he said, "Alas, my Lord God! for I have seen the Angel of the Lord face to face"; and the Lord said to him, "Peace be to thee; fear not; thou shalt not die." Indeed the Israelite people conceived this same fear when they heard the Lord speaking; whence, as something wondrous to that people, Moses said in Deuteronomy 5: "Behold, the Lord our God has shown us His majesty and His greatness; we have heard His voice from the midst of the fire; we have proved this day that when God speaks with man, man lives." In this sense, therefore, Scripture is understood whenever it asserts, "We shall die, for we have seen the Lord"; but that of Exodus 33, "No man shall see me and live," must be understood in another way, as remains explained. For neither did Moses, who had often spoken with the Lord and experienced His benignity, who said in Deuteronomy 5 the words cited, conceive this fear concerning God; and if he had it, he would not have asked to see God; wherefore, lest he die by excessive brightness, the Lord said to him, "No man shall see me and live."

From Numbers 12 it does not follow that the essence of God was clearly revealed to Moses.

For there the Lord established a distinction between Moses and the other Prophets, even those to arise from the Israelite people, so as thereby to demonstrate to Aaron and Mary, who had murmured against Moses, not only the dignity and not only the excellence of Moses. He therefore says: "Hear my words: If there be among you a Prophet of the Lord, I will appear to him in a vision, or I will speak to him in a dream; but it is not so with my servant Moses, who is most faithful in all my house: for I will speak to him mouth to mouth, plainly, and not by riddles; and he sees the

likeness of the Lord." From which place this argument can be formed: to some Prophets God appeared not only in an imaginary vision, or by sound, but also under a visible figure; thus He appeared to Abraham God in Genesis 17 and 18, and to Jacob in Genesis 32, to Gideon in Judges 6, to Manoah in Judges 13; but Moses is preferred to all the Prophets in seeing God: therefore more than in dreams, or by a common vision, indeed more than under a visible form, did He appear to him. For if God had appeared to Moses alone under a bodily form, there would be no reason why he should be preferred to all the other Prophets on this account, that he had seen the Lord face to face. Add that, if to Moses alone God had been seen in a corporeal figure, He would truly have been seen only through imagined forms and figures: how then would Scripture say, "Not by riddles and figures, but plainly did he see the Lord"? And this is confirmed most of all by the translation of the Seventy, which has thus: "I will speak to him mouth to mouth in vision, not by riddles; and he saw the brightness of the Lord."

- It is confirmed first by the context: for it follows that He would speak to him "mouth to mouth," not "by riddles and figures," but plainly he saw the Lord; therefore by that very context it is openly shown that the Lord was to appear to Moses not only by imagined forms and figures.[900]
- Second, it is confirmed by the reading of the Seventy, which has thus, "I will speak to him mouth to mouth in vision, not by riddles; and he saw the brightness of the Lord." By "the very brightness of the Lord," which is set over against a riddle and a figure, nothing else can be understood than the essence of God Himself; and hence it is also gathered that it was granted to Moses what he had asked in Exodus 33, saying, "Show me Thy glory," even if we understand that he had asked not the brightness of a bodily figure, but the essence itself of the Godhead.

Before I answer the argument of Augustine drawn from this place, I am persuaded that from that place nothing is proved; for if Moses had somewhere seen the essence of God, and Scripture had wished to indicate this in that place in Numbers 12, surely it would have narrated that it was done somewhere - either on Mount Sinai, or in the tabernacle of the covenant, or elsewhere; but it narrates that it was done nowhere, and chiefly not on the mount. For if it narrated that it was done somewhere, it would do so especially in Exodus 33; and if there Scripture were treating of the vision of the essence of God in itself, and not in some bodily figure, we ought rather to gather that it was denied to Moses when he asked, than granted, as was proved in the preceding chapter. Furthermore, no discourse is had there about the clear vision of the divine essence, nor do we show even obscurely that Moses had asked this: therefore Scripture does not narrate that Moses saw the essence of God on the mount. Then neither in the tabernacle: for in Exodus 33 and elsewhere, when the appearance in the tabernacle is written, Scripture only says that God descended in a bodily figure, and there spoke with Moses face to face as a friend with a friend speaks: therefore, since nowhere does Scripture report that Moses saw the essence of God, there is no reason why we should assert it.

900. Septuagint reading of Numbers 12:8; cf. Vulgate and Hebrew variants discussed below.

Moreover, to show that nothing is proved from that place Numbers 12, it must be noted first that there Moses is preferred by the Lord to all the Prophets who were to arise in the Israelite people; expressly, however, he is not preferred to those who had preceded, although by the gift of prophecy and of revelations he is to be preferred to them all. For it says in Deuteronomy 34, "There has not arisen a Prophet since in Israel like Moses, whom the Lord knew face to face": it did not say, "who knew the Lord," but "whom the Lord knew." For since God spoke with him with familiar converse, Moses was said to know face to face, in a human manner indeed, by which we are accustomed to signify the familiarity of one person with another.

Second, it must be noted from the doctrine of St. Thomas that the kinds of prophecy must be taken through intellectual contemplation and through imaginary vision; of this he assigns many differences in article 3, and finally in the body of that article he concludes that the grades of prophecy properly so called are to be designated according to the imaginary vision.[901] Noting these things, Alexander in the place cited in the second part says that the difference between Moses and the Prophets is this: to the others the mysteries were revealed by imaginary vision, to Moses, however, by intellectual. Yet this difference does not satisfy me, first, because, as St. Thomas most rightly teaches, the prophecy of David was by intellectual, not by imaginary, vision; therefore in that respect Moses could not be preferred to David; and then also because Scripture proposes Moses above the other Prophets on this account, that he saw God familiarly, and spoke with Him as a friend with a friend; and this cannot be understood of intellectual vision alone and of the gift of prophecy.

Therefore there is a much easier exposition of that place, from which it cannot be gathered that to Moses the clear vision of the divine essence was granted; which will be seen to be most true whether we follow the version of the Seventy, or the Hebrew reading, or the Vulgate. The Seventy have thus: "I will speak to him mouth to mouth in vision, not by riddles, and he saw the brightness of the Lord." Then that, "he saw the brightness of the Lord," is to be read by itself and not joined with the preceding; but the sense is this: "I will speak mouth to mouth," and "plainly without figure and riddle with Moses," and "he saw the brightness of a bodily, namely a visible, figure in which I appeared to him." The Hebrew reading renders the same sense, which says thus: "I will speak to him mouth to mouth, plainly, not in riddles; and he saw the idea, or likeness, of the Lord." Where that also, "and he saw the idea or likeness of the Lord," must not be joined with what precedes, but read by itself; and when he says, "and he saw the idea or likeness of the Lord," he plainly indicates that he did not see the essence itself of God, but some figure in which the Lord deigned to appear; which the Seventy called "the brightness of God."

The Vulgate edition reads: "Hear my words: If there is among you a Prophet of the Lord, I will appear to him in a vision, or I will speak to him in a dream; but it is not so with my servant Moses, who is most faithful in all my house. I will speak to him mouth to mouth, and plainly; not by riddles and figures, he sees the Lord." According to which reading that, "he sees the Lord," is to be referred to what precedes, and does not yield any sense if taken by itself; but if it be referred to

901. St. Thomas, Summa theologiae II-II, q. 174, aa. 2 - 3.

what precedes, it has this sense: "I will speak to Moses mouth to mouth, and he sees, or will see, the Lord, not by riddles and figures, but plainly"; in which way the text of Scripture more favors the opinion of Augustine. Nonetheless, even if it be referred to what precedes, I still judge that the plain sense of that place is as I have said, nor does it favor the opinion of Augustine at all.

There, therefore, the Lord, so as to show the dignity and excellence of Moses among the other Prophets, assigns two differences between Moses and the others. The first is, that to others He would appear and speak either in a vision (namely, imaginary) or in dreams; which Oleaster expounds, that the apparition alone would be in an imaginary vision, but the locution only in dreams, a view which does not satisfy me; but I think that God promised both - that is, either in dreams or in an imaginary vision; and that in the Prophets, as in Ezekiel and John the Evangelist, both were in vision in spirit we often read. Yet in Numbers 12, for brevity's sake, Scripture said that the one was done in a vision and the other in dreams. But to Moses God both appeared and spoke under a visible form, mouth to mouth, as a friend to a friend: which we do not read to have been done with the later Prophets. For although Isaiah saw the Lord's majesty in chapter 6, and Ezekiel the glory of the Lord in chapters 1 and 2, and John in the Apocalypse, and the other Prophets, nevertheless those visions were imaginary; which is defined concerning Ezekiel in the Canon Episcopi, which is of the Council of Ancyra or Ancyritanum, saying so.[902]

Disputatio LVI

Gratian, who reports and records the same thing, and Burcardus in his decree, book 1, chapter 1, and book 1, part 1 of his decree, chapter 30, also show that the revelations of John in the Apocalypse were "in spirit," that is, in an imaginary vision, as is gathered from the first chapter and often elsewhere, where John says, "And I was in the Spirit"; and St. Thomas, II-II, q. 174, a. 3, thinks that the grades of prophecy properly so called are to be taken according to imaginary vision.[903]

Objection is met. Nor does it stand in the way that after Moses Manoah and Gideon saw the Lord in a bodily and visible form, and spoke with him, Judges 6 and 13. For these were not Prophets, nor was the Lord going to speak to them as to Prophets, so as to announce mysteries and future things to the people. Then too, it was not the Lord who appeared to them, but an Angel; that is, the Angel who appeared to them always spoke to them in his own name, not in the name of God; whereas, on the contrary, to Moses God manifestly spoke many mysteries to be revealed to the people by the prophetic spirit. And although God appeared to him by the ministry of Angels, according to the doctrine of Pseudo-Dionysius, On the Celestial Hierarchy, book 4 (as we shall say more at length in Disputation 186), nevertheless the Angel always spoke with Moses in the name of God; not so with Gideon and Manoah.[904]

902. On imaginary visions in the Prophets, cf. Canon Episcopi, attributed to the Council of Ancyra (Ancyritanum); see also commentators under the name Oleaster.

903. Gratian, Decretum, dist. 1; Burcardus, Decretum, lib. 1, c. 1 and part 1, c. 30; cf. Apocalypse 1 ("I was in the Spirit"); St. Thomas, Summa theologiae II-II, q. 174, a. 3.

If God appeared to Abraham and to Jacob, Genesis 18 and 19 and 32, that matters little; first, because not so familiarly as to Moses, who spoke with him for a long time in conversation in the tabernacle. Then also because he did not appear so openly to Abraham and Jacob in the name of God as to Moses. In addition, all of them were before Moses; but Moses is not compared to those before him, but to those who were to come after him among the Prophets: and to these indeed he is rightly preferred in the point which we said. And although St. Thomas, II-II, q. 174, a. 3, ad 1, compares the Prophet David with Moses, and in certain points even sets him before Moses, nevertheless it is enough for us that Moses was more excellent in this, that he spoke with the Lord face to face under a bodily figure, under which he did not appear to David; and in this Moses is set before all the Prophets to come after him, Numbers 12.[905] And so much concerning the first difference and excellence of Moses which is promised in that chapter as to the vision of God face to face.

The latter difference is in the mode of speech and revelation: for to the other Prophets many, indeed the chief things, were revealed through riddles and obscure figures; for an "enigma" is a thing obscure and difficult, which signifies something other than it seems, or, according to the doctrine of St. Augustine, De Trinitate 15, c. 9, in this way Jeremiah saw "a rod watching," and "a seething pot," and so of the other Prophets; but to Moses the Lord revealed all things manifestly and without riddle, and, as a friend is wont to speak with his friend, thus he spoke with him. Therefore, when the Vulgate edition says of Moses, "For I will speak to him mouth to mouth, and openly, and not by riddles; and he sees the Lord's likeness," even if the clause "he sees the Lord" be referred to that "openly and not by riddles and figures," nevertheless it does not signify that the divine substance, or God himself, was seen by Moses without riddle and figure: for if he appeared in a bodily form, therefore he was seen in an enigma and figure. Rather it denotes that the divine revelations were communicated to Moses not by riddles and obscure figures, but manifestly; and this is "to see God not by riddles," namely, not indeed his substance, but the one revealing the mysteries. Since, then, there is no passage of Scripture, no tradition of the ancient Fathers, nor definition of the Church, by which it is established that God willed to reveal himself to Moses clearly, as he is, the more probable opinion seems to be the one which alleges that the divine essence was not seen by Moses.[906]

Caput I - Two opposing opinions.

St. Augustine in the same Epistle 112, and Anselm on that place, 2 Corinthians 12, "He was rapt into Paradise," and St. Thomas, II-II, q. 175, a. 5, and in this article 11, ad 2, affirm that in that ecstasy and rapture which he recounts about himself, 2 Corinthians 12, there was revealed to Paul a clear vision of the divine essence, as it is; the same is asserted by authors who in the previous

904. Judges 6; 13; Pseudo-Dionysius, De coelesti Hierarchia 4.
905. Genesis 18; 19; 32; Numbers 12; St. Thomas, Summa theologiae II-II, q. 174, a. 3, ad 1.
906. Augustine, De Trinitate 15, c. 9.

disputation, chapter 1, taught the same concerning Moses, except Abulensis, who in that place speaks only about Moses, but in chapter 1, 2 Paralipomenon, q. 18, expressly, though in passing, embraces this opinion also; we shall see the foundations of this opinion straightway.[907]

But to me, as I said concerning Moses, the opposite opinion is proved: on its side stand, first, all the Fathers of the third class whom I cited in the previous disputation, chapter 2. Of the Fathers of the second class, Pseudo-Dionysius expressly affirms this in book 4, in that chapter De caelesti Hierarchia; Tertullian, Against Praxeas, chapter 14; and of those who were in the first class, Gregory of Nazianzus also teaches it in express words, Oration 34: the rest only affirm it in general, that the divine essence has never been seen by anyone in mortal flesh, nor by Moses and the Prophets; but they make no special mention of Paul beyond those already cited. Among the more recent, Catharinus follows this opinion on that passage of Paul, 2 Corinthians 12; Clicthoveus in book 1, chapter 1 of De fide Damasceni; and Cajetan seems to indicate it on the same passage of Paul.[908]

The reason, in my judgment, is manifest. For, as we said of Moses, something is not to be asserted without a first foundation, either of the Fathers or of Scripture, since that same Paul in general says, 1 Timothy 6: "Whom no man has seen, nor can see." But that there is no such foundation is sufficiently plain, since the Fathers, with one or another exception, say the contrary. And that there is no foundation in Scripture is easily shown: for if there is any in it, chiefly it is in that 2 Corinthians, chapter 12; but that passage certainly does not force us to grant anything other concerning Paul than that he endured an ecstasy and transport of mind, so that very lofty mysteries might be revealed to him, even if he did not see the divine essence clearly: therefore from that passage it is not to be affirmed that he saw the divine essence, as it is; and very rightly Cajetan noted on that place that Paul did not say, "And I saw ineffable words," but, "I heard," in order to indicate that he did not see certain things but heard mysteries. Whether truly it happened to Paul in several raptures, and what the "third heaven" is, is not for us to dispute here.[909]

Incidentally, however, it seems to be noted that Abulensis spoke amiss when he said that therefore Paul was rapt away from the senses of the body by ecstasy, because otherwise he could not see the divine essence, as it is, if he were intent on the operation of his senses. For this is false, since our Lord Christ had both; nor could the operation of the senses be an impediment to the vision of the essence, which ought to be brought about by the light of glory, or by a special concurrence of God.

Furthermore, Augustine tries to prove his opinion from Ambrose, in the chapter on the apparition of the Angel on Luke, where he says: "Nor did all the Apostles see Christ"; for, says Augustine, he gave this testimony on purpose, "Nor all the Apostles," because he believed that the vision of which he was speaking could even then have been granted - certainly besides Paul.

907. St. Augustine, Ep. 112; Anselm, on 2 Corinthians 12, "Raptus est"; St. Thomas, Summa theologiae II-II, q. 175, a. 5, and in this article 11, ad 2; Abulensis on 2 Paralipomenon (Chronicles) q. 18.

908. Pseudo-Dionysius, De coelesti Hierarchia, cap. de eodem; Tertullian, Contra Praxean 14; St. Gregory of Nazianzus, Oration 34; Catharinus on 2 Cor. 12; Clicthoveus, De fide Damasceni, lib. 1, c. 1; Cajetan, in 2 Cor. 12.

909. 1 Timothy 6:16; 2 Corinthians 12:2 - 4; Cajetan, on 2 Corinthians 12.

However, from Ambrose, if we pay attention to his text, nothing can be plainly proved; we shall see. For he was speaking at that time when Christ said, John 14: "So long a time have I been with you, and have you not known me?" Therefore, if at that time not all, but some, had seen Christ, let it be in the first times, that he had been seen by others than by Paul. For then neither had Paul seen God, nor was he then among the others: therefore it follows that Ambrose could not have been asserting about Paul that he had seen God at that time. Besides, Christ there was not speaking of the vision of the divine essence, but of the perfect knowledge of the way by which the Apostles ought to have known him to be God, as we showed above, Disput. 48, chapter 3. Wherefore I do not see why Augustine brings in Ambrose for his opinion, especially since he himself very vehemently indicates, as we noted in Disput. 57, chapter 4, that God, as he is, is never clearly seen by anyone.[910]

Caput II - On others to whom some think a clear vision of the divine essence was conceded.

There are other illustrious and holy men, to whom some Doctors think a clear vision of the divine essence was granted in this mortal life; but they have taught this no less without foundation and reason concerning them than they did concerning Moses. What do they assert about Adam in that sleep in which the Lord cast him down in Paradise, and suppose, on the doctrine of Augustine, De Genesi ad litteram 9, last chapter, and Bernard, Sermon 2 De Septuagesima? Those Fathers merely assert that he was raised in ecstasy to a certain marvelous understanding of mysteries: but as to the vision of the divine essence itself, not even a word.

Secondly, others affirm that of the blessed Benedict, which Gregory seems to set forth, Dialogues, book 2, chapter 35. Yet St. Thomas explains Gregory, II-II, q. 180, a. 5, ad 3, and Quodlibet 1, a. 1, where he teaches the opposite, namely, that he is speaking of some eminent vision and revelation, not of the clear vision of the divine essence.

Thirdly, finally, Augustine himself, Confessions 9, chapter 10, about himself and his mother, when they were at the mouth of Tiber, says as it were the very same thing, because indeed, as the vision of mind which they had there was great, so too are these words: "Contemn these things, and let these visions be withdrawn, that perseverance may be useful, such as an intelligent mind of the good has, which sees its own wickedness; is not this to enter into the joy of my Lord?" - that is, he spoke thus either because he thought the head of the vision to be to see God; or, in order to extol the greatness of the contemplation and ecstasy which he had experienced, he compared it to the eternal joy and blessedness, of which it is said: "Enter into the joy of your Lord." And indeed thus one could easily say of all the saints whom in this disputation, and in the preceding one, we have numbered among those to whom God plainly revealed his essence; rather I believe that he did not in this life show it clearly. For who would dare to assert that, if by a special privilege it had been granted to others, it was denied to the Virgin? and that, of the rest whom we have, anything is produced which piety does not support, and which does not become discipline, to be believed about

910. Augustine, citing St. Ambrose, on Luke 1, De apparitione Angeli; John 14:9 ("So long a time have I been with you..."); see above Disput. 48, c. 3; Disput. 57, c. 4.

her? And who would dare to assert that after John the Evangelist there was granted to any the clear essential revelation of God, when that most noted and unique saying is found of Christ alone: "No one has ever seen God; the only-begotten, who is in the bosom of the Father, he has declared him" (John 1:18). By now I could say nothing further, except that, if indeed certain others besides Christ had seen God in such a way that they could relate it to us as eye-witnesses, their testimony would remain to us; of which, above in chapter 5, we have brought forward what suits the matter.[911]

On the knowledge of God

Articulus XII - Whether by natural reason we can know God in this life

Proceeding to the twelfth article:

It is objected that by natural reason we cannot know God in this life.

1) For Boethius says in the book Of Consolation that reason does not grasp a simple form. But God is above all a simple form, as has been shown above. Therefore to his knowledge reason by a natural power cannot attain.[912]

2) Further. By natural reason the soul understands nothing without a phantasm, as is said in the third book De Anima. But of God, since he is incorporeal, there cannot be a phantasm in us. Therefore he cannot be known by us by natural cognition.[913]

3) Further. The cognition which is by natural reason is common to the good and to the wicked, as nature is common to them: but the cognition of God belongs only to the good; for Augustine says in book 1 De Trinitate that the eye of the human mind is not fixed in so excellent a light unless it be purified by justice and faith. Therefore God cannot be known by natural reason.[914]

But on the contrary is what is said Romans 1: "That which is known of God is manifest in them," that is, that which is knowable of God by natural reason.[915]

I answer: It must be said that our natural knowledge takes its beginning from sense. Whence only so far can our natural knowledge extend as it can be led by the hand through sensibles. But from sensibles our intellect cannot attain to this, that it see the divine essence: because sensible creatures are effects of God not adequate to the power of the cause. Whence by knowing from sensibles the whole power of God cannot be known, and, consequently, neither can his essence be seen. But because they are effects depending on the cause, from them we can be led to this, that we know that God exists, and that we know those things which necessarily belong to him according to what he is the first cause of all things, and so that we know and recognize him through those things which necessarily suit him, according to what he is the first cause of all... (continues).

911. Augustine, Confessiones 9, c. 10; Gregory the Great, Dialogi 2, c. 35; St. Thomas, Summa theologiae II-II, q. 180, a. 5, ad 3; Quodlibet 1, a. 1; John 1:18.
912. Boethius, De consolatione philosophiae.
913. Aristotle, De anima III.
914. St. Augustine, De Trinitate I.
915. Romans 1:19.

...And to these words: "If this be continued, and other visions be withdrawn, and there be a vital life everlasting such as was this moment of intelligence for which we sighed, is not this: Enter into the joy of thy Lord?" - surely either St. Augustine, captivated by the sweetness of the vision, thought that he had seen God; or, that he might extol the greatness of the contemplation and ecstasy which he had experienced, he compared it to the eternal joy and blessedness of which it is said, "Enter into the joy of thy Lord." And indeed, if to any among all those so great ones whom in this disputation and the preceding we have enumerated God had openly revealed his essence in this life, it would be more credible that he did so to his Mother: for who would deny to the Virgin a special privilege granted to others? Yet we have nothing certain concerning her; but whatever does not oppose piety and faith may also piously be believed of her. But who would dare to affirm that after so many ages since John the Evangelist the essence of God has been clearly revealed, so that that singular encomium which he said of Christ alone - "No man hath seen God at any time; the Only-begotten, who is in the bosom of the Father, he hath told it" (John 1:18) - could no longer be said, if indeed there were others besides Christ who had seen God, so that they could recount to us as eye-witnesses? Concerning which testimony more things have already been said in the previous disputation, chapter 5.

Whether by natural reason we can know God in this life

To the twelfth, we proceed thus.

It seems that by natural reason we cannot in this life know God at all. For Boethius says in the book of the Consolation, near the end of the fifth prose, that reason does not grasp a simple form; but God is the most simple form, as was shown above. Therefore to his cognition reason cannot attain.[916]

Further, by natural reason the soul understands nothing without a phantasm, as is held in the third book of De anima.[917] But since God is incorporeal, he cannot have a phantasm. Therefore he cannot be known by us with a natural cognition.

Further, the cognition which is through natural reason is common to the good and the bad; but the cognition of God belongs only to the good. For St. Augustine says in book 1 On the Trinity, chapter 2 (and also chapter 3), that the keenness of the human mind is not fixed in so excellent a light unless it be cleansed by the justice of faith.[918] Therefore God cannot be known through natural reason.

But on the contrary is what is said in Romans 1: "That which is known of God is manifest to them," that is, what is knowable of God by natural reason.

I answer that, our natural cognition takes its beginning from the senses. Whence so far only can our natural cognition be extended as it can be led by means of sensibles. But from sensibles it cannot come so far as that our intellect should behold the divine essence: because sensible

916. Boethius, De consolatione philosophiae, V, prose 5.
917. Aristotle, De anima III, text 30; see also De memoria et reminiscentia.
918. St. Augustine, De Trinitate I, c. 2 - 3.

creatures are effects of God not adequate to the virtue of the cause. Whence from the cognition of sensibles the whole virtue of God cannot be known, and consequently neither can his essence be seen. But because they are effects dependent upon his cause, from them we can be led so far as to know of God whether he is; and to know of him those things which must necessarily befit him, inasmuch as he is the first cause of all, a cause exceeding all its caused things. And thus we know of him his habitude to creatures, namely, that he is the cause of all; and the difference of creatures from him, namely, that he is not anything of those things which are caused by him; and that these things are not removed from him on account of his defect, but because he surpasses them.

Reply to the first: Reason cannot attain to a simple form so as to know of it what it is; yet it can attain so as to know of it that it is.

Reply to the second: God is known by natural cognition through the phantasms of his effects.

Reply to the third: The cognition of God through his essence, since it is by grace, belongs only to the good; but that cognition of him which is by natural reason can belong to both good and bad. Whence Augustine says in the book of Retractations: "I do not approve what in prayer I said, 'Thou, O God, who willedst that none but the clean should know the truth'": for one can reply that many not clean also know many truths, namely, by natural reason.[919]

Conclusion: From sensibles the whole virtue of God cannot be known, and therefore neither can his essence be seen.

Articulus XIII - Whether through grace a higher knowledge of God is had than that which is had through natural reason

To the thirteenth, we proceed thus.

It seems that through grace a higher knowledge of God is not had than that which is had through natural reason. For Dionysius in the first book of the Mystical Theology says that he who is most perfectly united to God in this life is united to him as altogether ignorant of him.[920] But to be united to God by being ignorant of what he is also happens through natural reason. Therefore through grace God is not more fully known by us than through natural reason.

Further, by natural reason we cannot arrive at the cognition of divine things except through phantasms; likewise not even, it seems, according to the cognition of grace. For Dionysius says in the first chapter of the Celestial Hierarchy, that it is impossible for the divine ray to shine upon us otherwise than as encircled by the truth of sacred veils.[921] Therefore through grace we do not more fully know God than by natural reason.

Further, by grace through faith our intellect adheres to God; but faith does not seem to be a cognition. For Gregory says in a homily that those things which are not seen have faith, and not recognition.[922] Therefore by grace there is not added to us any more excellent cognition of God.

919. St. Augustine, Retractationes I, c. 4, on Soliloquia I, c. 1.
920. Pseudo-Dionysius, De mystica theologia I.
921. Pseudo-Dionysius, De coelesti hierarchia, cap. 1.
922. St. Gregory the Great, Homiliae in Evangelia, hom. 26.

But on the contrary is what the Apostle says (1 Corinthians 2): "To us God has revealed, by his Spirit," namely those things "which none of the princes of this age knew," that is, the philosophers, as the Gloss expounds.[923]

I answer that, through grace a more perfect knowledge of God is had by us than through natural reason. This is clear, for the cognition which we have by natural reason requires two things: namely, phantasms received from sensibles, and the natural intelligible light, by the power of which we abstract intelligible conceptions from them. And with respect to both our human cognition is helped by the revelation of grace. For both the natural light of the intellect is strengthened by the infusion of gratuitous light, and sometimes also phantasms are formed divinely in the imagination of a man, more expressly representing divine things than those which we naturally receive from sensibles, as appears in the prophetic visions. And sometimes even certain sensible things are formed divinely, or even voices, to express something divine, as in the baptism the Holy Spirit was seen in the appearance of a dove, and the voice of the Father was heard: "This is my beloved Son."

Reply to the first: Although by the revelation of grace in this life we do not know of God what he is, and thus we are joined to him as to one in a manner unknown; nevertheless, we more fully know him, inasmuch as more and more excellent effects of his are shown to us, and inasmuch as we attribute to him certain things from divine revelation, to which natural reason does not attain, as that God is three and one.

Reply to the second: From phantasms, whether taken from the senses according to the natural order, or divinely formed in the imagination, a more excellent intellectual cognition is had, the stronger the intelligible light has been in a man. And thus by revelation from phantasms a fuller cognition is received through the infusion of divine light.

Reply to the third: Faith is a certain cognition, inasmuch as the intellect is determined by faith to some knowable object. But this determination to the one does not proceed from the vision of him whom you believe, but from the vision of that which is believed. And thus, insofar as the vision is wanting, it falls short of the ratio of science; for science determines the intellect to the one by a vision and understanding of first principles.

Conclusion: By grace a higher knowledge is had than by natural reason. Around articles 12 and 13 I find nothing worthy of annotation. Their doctrine remains quite clear.

Quaestio XIII - On the names of God

With these things considered which pertain to the divine cognition, one must proceed to the consideration of the divine names: for each thing is named by us according as we know it.

923. The Gloss on 1 Corinthians 2; cf. St. Jerome, In epistolas Pauli, tom. 9.

Articulus I - Whether any name befits God

To the first, we proceed thus.

It seems that no name befits God. For Dionysius says in the first chapter of On the Divine Names that neither is there a name of him, nor an opinion; and in Proverbs 30 it is said: "What is his name, and what is his Son's name, if you know?"[924]

Further, every name is said either in the abstract or in the concrete; but names signifying in the concrete do not befit God, since he is simple; nor names signifying in the abstract, because they do not signify something perfect subsisting. Therefore no name can be said of God.

Further, names signify substance with quality; verbs and participles signify with time; pronouns, however, with demonstration or relation. None of which befits God: because he is without quality and without every accident and without time; and he cannot be sensed so as to be pointed out, nor relatively signified, since relatives are reminiscent of some of the aforesaid - either of nouns, or of participles, or of demonstrative pronouns. Therefore God in no way can be named by us.

But on the contrary is what is said in Exodus 15: "As it were a man of war, the Omnipotent is his name."

I answer that, according to the Philosopher, words are signs of conceptions, and conceptions are likenesses of things.[925] And thus it is clear that words are referred to things to be signified through the mediation of the intellect's conception. Therefore according as something can be known by our intellect, thus can it be named by us. But it was shown above that in this life God cannot be seen by us through his essence, but is known by us from creatures, according to the relation of a principle and by way of excellence and of remotion. Thus, therefore, he can be named by us from creatures. Yet not in such a way that a name signifying him should express the divine essence according to what it is: as this name "man" expresses by its signification the essence of man according to what it is; for it signifies his definition declaring his essence. For the "notion" which a name signifies is a definition.

Reply to the first: In this sense it is said that God has no name, or is above nomination, because his essence is above that which we understand of God and signify by voice.

Reply to the second: Because we arrive at the cognition of God from creatures, and from them we name him, the names which we attribute to God signify in this way, namely, according to what befits material creatures, the cognition of which is connatural to us, as was said above. And in suchlike creatures those things which are perfect and subsistent are composite; but the form in them is not something complete subsisting, but rather that by which something is: as whiteness signifies that by which something is white. Since therefore God is simple and subsistent, we

924. Pseudo-Dionysius, De divinis nominibus I; Proverbs 30:4.
925. Aristotle, Peri Hermeneias I, c. 1.

attribute to him abstract names to signify his simplicity, and concrete names to signify his subsistence and perfection; although both kinds of names fall short of his mode, just as our intellect does not know him as he is, according to this life.

Reply to the third: To signify substance with quality is to signify a supposit with a determinate nature or form in which it subsists. Hence, just as certain things are said of God in the concrete to signify his subsistence and perfection, as has been said, so also names signifying substance with quality are said of God. Verbs, however, and participles, which signify time, are said of him on account of this, that eternity includes all time. For just as we cannot apprehend and signify simple subsistences except by the mode of composites, so neither can we understand or express simple eternity except by the temporal mode of things; and this because of the connaturality of our intellect to composite and temporal things. But demonstrative pronouns are said of God according as they make a demonstration to that which is understood, not to that which is sensed. For according as something is understood by us, according to that it falls under demonstration. And thus, according to that mode in which names and participles and demonstrative pronouns fall under demonstration, they are said of God.

... according as it is understood by us, according to that it falls under demonstration. And thus, according to that mode in which names and participles and demonstrative pronouns fall under demonstration, they are said of God.

Disputatio LVII - On whether a name can be imposed upon God that signifies His essence quiditatively

Caput I - The various opinions of the theologians

Conclusion and sum of the article is this: A name cannot be imposed upon God which expresses His essence as it is, just as the name "man" expresses the essence of man, because it signifies his definition; nevertheless a name taken from creatures can be imposed which in some manner signifies God Himself.

Whether the essence (essence, essentia) of God can be signified by some name as it is, and (as they say) quiditatively. Disputation 57.

Various opinions of the theologians.

This controversy is understood not only concerning wayfarers, but also concerning the blessed; for it is asked quite universally whether by any created intellect there can be imposed upon God a name which signifies His essence as it is, and, as they say, quiditatively. Theologians, however, differ among themselves; and the variety of opinions seems to have arisen from a different way of speaking, for in reality they are not at variance with one another. I shall therefore report what others think, and at length I will explain my own opinion.

Capreolus on I Sentences, dist. 22, art. 1, q. 1; Bassolis, q. 1, art. 2, conclusions 3 and 4; and Cajetan on this article; as also Ferrariensis, Contra gentiles, cap. 31; and some of the more recent, assert two things. One is that a name cannot be imposed by wayfarers upon God which signifies Him quiditatively and as He is. The other is that such a name can indeed be imposed by the blessed. The ancient theologians likewise seem to have taught these two points: the Autissiodorensis, in Summa, book 1, cap. 3; St. Bonaventure on I Sentences, dist. 22, art. 1, q. 1; Richard, art. 1, q. 1, in the body and to the 3rd and 4th arguments of the second order; Marsilius on I, q. 25, art. 2; Henry in the Summa, q. 73, q. 9; and St. Thomas, I Contra gentiles, c. 31, indeed the same holy Doctor in this very article; Alexander likewise in I, part ... [text truncation in margin, sense: the same position is found in Alexander].[926][927][928]

But Henry, among the Doctors just cited, in some point dissents, in Summa, art. 73, q. 9. In the first two points he seems to agree with them. For he asserts that God can impose upon Himself a name by which He signifies Himself in the mode in which He is seen by them, that is, essentially and quiditatively; and that the blessed among themselves are similarly able; yet that wayfarers cannot impose upon God a name which signifies Him essentially. But further, that God Himself cannot yet impose upon Himself some name by which He would signify Himself to the blessed according to the notion (ratio) of immensity. He proves this, however, from a different principle: for although he thinks it necessary that a thing be known quiditatively by him who imposes a name, so that some name may signify it quiditatively - for which reason he said that indeed a name can by the blessed be imposed upon God signifying Him as He is, but not by wayfarers - he nevertheless subjoins that it is also necessary that those to whom the name signifies should know the thing in that same mode in which names are said to signify. And so he judges that the signification of a name must be weighed from the mode of cognition of both, that is, both of the hearer and of the imposer of the name. Therefore, since God alone is known to Himself according to the notion of immensity, and not to creatures, even to the blessed; it follows that God cannot impose upon Himself a name signifying Himself according to the notion of immensity. Moreover, that a thing ought to be known by both in the very mode in which it ought to be signified by a name - namely, both by the one imposing the name and by the one hearing it - Henry proves, because names are certain symbols between him who speaks and him who hears: therefore, in order that they may signify in this or that mode, they must be known in this or that mode by both. Hence the signification of a name must be weighed from both.

Furthermore, it must be observed that when Henry says that God alone knows Himself according to the notion of immensity, he does not mean what Scotus imputes to him in In Sentences, d. 22, q. 1, namely, that the attribute of immensity is known to God alone - which would

926. Albert the Great, In I Sententiarum, dist. 2, art. 16; Durandus, In I Sententiarum, dist. 22, q. 1, n. 5; Thomas de Argentina, q. 1, art. ... (although not so openly, since he speaks only about wayfarers) seems to have handed down the same opinion.

927. The foundation of that view, so that they assert that the imposition of names must be weighed from the cognition of the thing which he has who imposes the name. From this principle Capreolus, Bassolis, and Cajetan prove the two points which we have retained.

clearly be false, as the same Scotus very well proves; for every blessed person seeing God sees all His attributes, as was proved above, Disputation 48, cap. 2 - but Henry understands that God alone comprehends Himself, and this is what he says: that God alone knows Himself according to the notion of immensity. And therefore, when he denies that God can impose upon Himself a name by which He signifies Himself according to the notion of immensity, he only means to teach that God cannot impose upon Himself a name whose signification is comprehensive; the opposite of which some Doctors of the former opinion taught. This indeed Henry teaches, because although he thinks the mode of signification of a name must be taken and weighed from the mode of cognition which the imposer of the name has of the thing, he nevertheless judges that this is not enough, but that the same mode of cognition is also required in the one who hears the name and to whom the speech is directed, for the reason given above. Therefore, although God comprehends Himself, since there is no intellect to which God's speech could be directed that comprehends God, there will be no name signifying God (as they say) comprehensively.

But on the contrary: Not only the blessed, but also wayfarers can impose upon God a name which signifies Him essentially and quiditatively.

Caput II - The assertion that not only the blessed but also wayfarers can signify God essentially and quiditatively

Here is proved the opinion of Scotus, although, as I noted above, this disagreement is only about words, not about things. He therefore asserts in I Sentences, dist. 22, the single question (whom Ockham follows in the same place, the single question; and Gabriel also, especially in art. 3), that wayfarers can use names already imposed to signify God distinctly and properly, that is, essentially and quiditatively.[929] For the explanation of this, certain points must first be observed. First: a thing can be signified distinctly and properly by some name in two ways. In one way, if the name signifies some concept that so belongs to the thing that it cannot belong to another; and thus God can by any name imposed to signify Him be properly and distinctly signified. Wherefore wayfarers, even among themselves, can use in this way the names signifying God properly and distinctly: for this name "Omnipotent" thus signifies God, so that it signifies nothing else. In another way one says that a thing is said to be signified distinctly and properly by some name, when the name generates the quiditative concept of the thing, not connoting another thing, nor after the manner of another; and this happens whenever a thing is understood through its proper, not through alien, species, just as it is in itself. Now the whole controversy is about this latter kind of signification, whether wayfarers can use names to signify God essentially and by a quiditative concept of Him, as He is.

928. Autissiodorensis (Summa, lib. 1, cap. 3); St. Bonaventure on I Sentences, dist. 22, art. 1, q. 1; Richard, art. 1, q. 1, in the body, and to the 3rd and 4th arguments of the second order; Marsilius, on I, q. 25, art. 2; Henry of Ghent, Summa, q. 73, q. 9; St. Thomas, Summa contra gentiles I, c. 31; likewise Alexander in I, part ...

929. Scotus, In I Sententiarum, dist. 22, the single question; Ockham, the same place, the single question; Gabriel, likewise the single question, especially art. 3.

Second, it must be noted - which Henry very well observed - that names are certain symbols between him who speaks and him who hears: wherefore a name is not said to signify the thing to the one using the name itself, or imposing it, but to the hearer. For, as Augustine teaches in book 2 of On Christian Doctrine, c. 1, and plainly all admit, a sign is a thing which, besides the appearance which it presents to the senses, makes something else come into cognition. Therefore, a sign in the voice, which is a name, besides the sound which is perceived by the ear, makes something else known, namely the thing for the signifying of which we know the name to have been imposed. But it does not cause that the one who utters or imposes the name should come to know the thing: indeed, rather the opposite; he himself first knows it, and, in order to express it to another and make it known by him, he imposes or utters the name. Therefore names do not signify the thing to the imposer or the speaker, but to the hearer.[930]

Third, it must be premised, according to the mind of Aristotle, that voices and names are signs of concepts, not of those which philosophers call formal concepts - that is, qualities which are in our intellect of the things which they call "objects of obedience" (that is, of the things which the one who uses the name knows, and which he is said to have present in his mind, as we shall show in Disputation 75, cap. 3) - but they are set in the place of formal concepts and of thoughts, even if they do not signify these themselves.[931] Hence Gabriel is deceived in the question cited, art. noted 1, when he contends that not all names signify concepts, but only those which are set to declare affections of the mind, such as an interjection, etc. For although these and not all signify a formal concept, nevertheless all signify the objective concept, that is, the thing known itself insofar as it is known by the one who speaks. For although names do not, strictly speaking, signify concepts (i.e., formal concepts), they nevertheless signify the thing, and as known, and thus they signify the objective concept or, as others say, the cognition itself, most closely; the things themselves, however, they signify more remotely, through those very concepts.[932]

With these foundations laid, by a single effective reason this opinion of Scotus and of others is proved; but first it must be explained in this way. Wayfarers can signify God by a proper and quiditative concept, or essentially as He is, not to other wayfarers, but to the blessed who see God as He is. Whether indeed they can signify God Himself in this fashion to God, and whether God and the blessed can signify to wayfarers, we shall say in the following chapter. Now, however, the opinion thus explained is proved by this reason: the measure of the signification of names is not to be taken from him who imposed the name, nor from him who uses the name, but from him who hears and understands the concept of the speaker. But when wayfarers utter the voice or name "God," and others, the blessed themselves understand quiditatively and essentially that which the wayfarers express and signify by their voice. Therefore, to the blessed they signify that essentially and quiditatively.

This reason evidently proves it, if the major proposition is true, namely, that the perfection of the signification of names is not to be weighed from him who imposed the name, or from him who uses it, but from him who hears and comes into cognition of that which is said. This proposition, by

930. St. Augustine, De doctrina Christiana, II, c. 1.
931. Aristotle, De interpretatione (Peri Hermeneias), I, c. 1.

examples and by reason, can be made clearer; and first of all Cajetan, and some more recent Thomists, do not deny that someone can signify to another more clearly and more distinctly than to himself by a voice already imposed, when the hearer can understand by that which the speaker himself cannot understand so distinctly, as experience shows every day. If some Spaniard, who has never seen Rome, nor those holy places of it, nor the marks of its antiquity, from mere report, and from the reading of books, has all the names, and might recount many things which would call them to my memory, at the same time he does not recall them better to me than to himself, if I understand; for I myself, from the name alone, will have not only the notion, but the thing known; and he too will have only the name, and perhaps through alien species will have the thing represented to him, as in a picture, rather than as proper and as through the thing itself by nature ... [the example continues].

First, according to Aristotle,[933] voices and names are signs of concepts; not of those which the philosophers call formal (that is, of the qualities that are in our intellect), but of those which they call objective, that is, of the things which are known by him who uses the name and which are said to be present in his mind; as we also showed in Disputation 75, cap. 3. Wherefore Gabriel was deceived when he maintained that not all names signify concepts, but only those which are set to denote affections of the soul, as "understanding," "knowing." For although these names, and not all, signify a formal concept, nevertheless all signify the objective concept, that is, the very things thought and known by him who speaks. Therefore, from what we say, that names signify concepts (namely, objective ones), we do not deny that they also signify the things themselves immediately.

Second, it is to be noted, as Henry very well observed, that names are certain symbols between him who speaks and him who hears; therefore a name is not said to signify the thing to the user of the name himself, or to the one who imposes it, but to the hearer. For, as St. Augustine teaches in De doctrina Christiana, book 2, chapter 1, and as all plainly acknowledge, a sign is a thing which, besides the appearance it impresses on the senses, causes something else to come into cognition; therefore a sign in voice, which is a name, besides the sound which is perceived by the ear, causes something else to be known, namely the thing for the signifying of which we know the name to have been imposed. But it does not cause that he who utters or imposes the name know the thing; indeed, rather the contrary: he first knows it, and in order to express it to another and to cause it to be known by him, he imposes or utters the name. Therefore names do not signify the thing to the imposer or to the speaker, but to the hearer.[934]

Third, it must be premised from Aristotle, De interpretatione, chapter 1, that voices and names are signs of concepts; not of those which philosophers call formal, but of those which they call objective, that is, of the things known by him who uses the name and which are said to be present in his mind. And some recent Thomists do not hesitate to concede to Scotus that someone can signify a thing much more clearly and distinctly to another by a voice already imposed to signify it than he himself understands it: which is manifest from this everyday example.

932. Gabriel (Biel), in the cited question, art. noted 1.
933. Aristotle, De interpretatione, I, c. 1.
934. St. Augustine, De doctrina Christiana, II, c. 1.

If some Spaniard who has never seen Rome, nor its holy places, nor those traces of antiquity, from report alone and the reading of books should recount them to me, who have seen all, he would recall them much better to my memory, and therefore signify them to me much better than he himself understands. For he, either has only the knowledge of the names or words, or, if he also has knowledge of the things, he has it only through alien species and after the likeness of other things, or of a picture which he has seen; but I have a proper concept born from the thing itself. From this it also happens that, if I recount those things which I saw at Rome, I should much less well signify them to him than he to me; and yet I understand them better than he. Therefore the perfection of signification must be weighed from the perfection of cognition which is in the mind of the hearer, not from the cognition of the speaker. Therefore, if he who hears me speaking knows the thing essentially and quiditatively, even if I, who speak, know it only confusedly and after the manner of other things, I shall nevertheless signify it to him essentially and quiditatively; because he who hears knows it essentially indeed, and the perfection of signification is weighed from the mode of knowing which he who hears has, not from the author who speaks, as the example proves and remains. But the blessed see God as He is; therefore wayfarers who speak to the blessed and express God by some voice, even if they themselves do not know Him essentially, but confusedly, nonetheless signify Him essentially to the blessed. Therefore at least we have, against Cajetan and others, that we, using names imposed beforehand, can signify God essentially and quiditatively to the blessed, even if we ourselves think of Him after the manner of visible things; therefore we can name God essentially and quiditatively to the blessed, in such wise that nothing more could be desired in the signification of His essence.

Moreover, that wayfarers also can impose some name first signifying God essentially and quiditatively is moreover evidently proved by examples against Cajetan and the recent authors; for they deny this, and on this ground defend their opinion, so that at least it may not be possible for a first name to be imposed on God by wayfarers signifying Him essentially and as He is. It is proved by examples. First, if someone ignorant of the Hebrew tongue and of its characters were to impose names upon the characters themselves, preserving the order among them, so that he should assign one name to the first character, another to the second, a third to the third, and so on, certainly those names would more distinctly and clearly signify the characters to those who know the Hebrew letters than the imposer himself understands the very letters.

Second, if King Philip were to send out his army and command a general to call the island or city which he first captured by his own name Philippina, would not the name of that island more clearly and evidently signify it to the general and the soldiers who saw it with their own eyes than to Philip, who imposed the name, knew it?

Third, if some blind man had imposed names on things he had never seen, would he not signify them better to hearers than the blind man himself would know them? For it is not necessary that he who imposes a name know the thing itself evidently; but it can happen that he who hears the name has an evident and, as it is, knowledge of that thing. Therefore it is clear from the examples that the signification of a name is not to be weighed from the perfection of the cognition which he has who imposed the name or who uses the imposed name, but from him who hears. It is not, then,

a wonder if the names which wayfarers have imposed on God in this life - wherein they are no otherwise situated with respect to God than blind men are to colors - should more fittingly signify God to the blessed, who see God, than He was known by the very wayfarers; which the following reason will also declare more.

Therefore the proposition assumed in the argument is proved by reason: for, as we supposed secondly, names are signs and symbols between him who speaks, that is, who imposes the name, and him who hears; nay rather, they are not said to signify to the imposer of the name or to the user of it, but to the hearer, because they only cause the thing to be understood; but to signify is to make that the thing be understood, as was proved there. But it can happen that he who hears understands the thing much better than he who imposed the name or uses it; therefore he can signify the thing better to him than the imposer understands it. Wherefore the imposition can procure only this, that, upon hearing the voice, such a thing, in the place of which the name is substituted, be at once understood from the imposition and common consent. But whether this thing is known in this or that way, better or less well, does not depend on the imposition, but on the mode of cognition of him who hears.

And if it sometimes happens that he who hears understands the thing better from one person than from another, this does not come from a better imposition of the names or from a better cognition which he has who imposed the name, but from this, that he who uses the imposed names, in order to explain the thing, uses more comparisons, or a better composition of names. If, however, the same two should use the same names, and in the same way for expressing and signifying the thing which they themselves know, even if one understand the thing better than the other, nevertheless they will signify the same thing to the same hearers. Therefore the whole difference of signification is taken from the hearers, not from the users or imposers of names. From all which the true opinion we proposed is gathered: namely, that not only by the blessed, but even by wayfarers, a name can be imposed on God signifying Him essentially and quiditatively, as He is. But because we said that the measure of signification is to be weighed from the hearers, not from those who use the names, in the following chapter we shall show in detail how men can by names signify God to others, namely, to wayfarers, to the blessed, and to God Himself.

However, the Schoolmen who follow the first opinion, taking the measure of imposition from the cognition of the imposer, rightly said that a name cannot be imposed to signify God quiditatively unless by him who himself knows Him quiditatively; as if they were saying that one cannot by a voice express quiditatively God whom he has in mind, unless he has in his mind a quiditative concept of Him.

First, from the preceding doctrine it plainly follows that neither by God Himself, nor by the blessed, much less by wayfarers, can any name be imposed by which, to wayfarers remaining in the state of wayfarers, God should be signified quiditatively and as He is - if indeed the perfection of signification is to be taken from the hearers, as we said. We presuppose, moreover, that to wayfarers remaining in the state of wayfarers - that is, to whom the clear and intuitive vision of God is not communicated - no other quiditative and proper [knowledge] can be communicated; as against Scotus and the Nominalists we shall prove in Disputation 135, cap. 3. And this very point

follows: for if this could be communicated to them, some name also could signify God quiditatively and properly as He is, whether it were imposed by God Himself, or even by the blessed, or by wayfarers, as is gathered from the same doctrine.

On this ground also Pseudo - Dionysius says in De divinis nominibus that of God there is neither sense, nor imagination, nor opinion, nor name, nor speech; he said neither name nor speech, because neither by one name nor by a discourse, which consists of many words, can He be explained; and he says that He is better than every name, because by no name can the whole that is in Him, as He is, be explained. He means this with respect to every created intellect considered in its nature, which does not see God as He is, and thus by no name whatever can God be entirely signified

In the same way Justin in the Apology for the Christians, not far from the end, says that a name cannot be imposed on God; and if anyone contend this, it is a sign of extreme impiety. And in the Paraenetic Oration to the Gentiles, in the middle, he teaches the same; finally, in the first Apology for the Christians, after fol. 2, he says that to God no name has been imposed; because with whatever name, there is something more ancient than it. He seems to allude to the opinion of Rabbi Eleazar, which Galatinus reports, in book 2 De arcanis catholicae veritatis, cap. 10: "When as yet the world was not created, God, holy and blessed, was, and His name." Which ought not to be understood of some vocal name imposed on Him, even of the tetragrammaton which was called sacred by the Jews; but either of His eternal Word which He by generation begot to Himself from eternity, or Justin takes "name" there for the very thing, as is frequent in Scripture, as in Philippians 2: "In the name of Jesus every knee should bow," and Acts 4: "There is no other name given under heaven whereby we must be saved."

St. Gregory Nazianzen likewise, in Oration 34, which is the second on Theology, reports Plato's opinion in the Timaeus, saying that it is difficult to grasp God with the intellect; but to express Him is impossible. Nazianzen then expounds his own sentiment, saying that God can be explained by no words, can be comprehended by the mind much less. Nor does he in any way contradict Plato, who taught that it is more difficult to express God than to grasp Him; for Plato spoke about the cognition of God such as is granted to wayfarers, obscure; and in this sense he said that it is difficult to perceive without falsity God and the things said about Him, but to utter Him and to explain exactly, and so to express, is impossible - which is the same as he meant in saying that to express is impossible. Nazianzen, however, says that it is impossible to explain God not only quiditatively and as He is, but even all those things which could be said of Him under a veil: for there is always something left to be added. But to see Him Himself as He is, with Nazianzen is called to comprehend; as we said in Disputation 5, cap. 4; to be sure this is the more impossible, for it is even more remote from the cognition of wayfarers than to explain God exactly under the veil and obscurity of faith.

It is treated of the knowledge of God which is granted to wayfarers, obscure, and under this veil; he said that it is difficult to perceive God without falsity, and the things said of Him; but to explain Him Himself exactly, as He is (for by "to speak" he meant to signify this), is impossible. Nazianzen, however, says that it is impossible to explain God not only quiditatively and as He is, but even all

those things which could be said of Him under a veil: for there is always something left to be added; but to see Him Himself as He is, which with Nazianzen is called to comprehend, as we said in Disputation 5, chapter 4, is surely the more impossible: for it is even more remote from the cognition of wayfarers than to explain God exactly under the veil and obscurity of faith.[936]

But on the contrary: St. Augustine speaks of another mode of cognition: "God is more truly thought when He is said than He is thought; but He is more truly than He is thought." Thus he teaches in On the Trinity VII, chapter 4. But this is understood of wayfarers, who at times conceive more by contemplation of God than they can explain; although still God is better and more truly in Himself than He is thought by us. Moreover, these things do not hinder, if we speak on the part of him who hears the names or the discourse about God, that the signification of those names or discourse be equal to the cognition which he himself has of God: for, as has often been said, the cognition of the hearer measures the signification of the name. With respect also to wayfarers hearing the names of God, the same Nazianzen, in the Oration on the Faith which is the forty-ninth, after the middle, says elegantly of God in these words: "Surely this is God, that when He is said, He cannot be said; when He is estimated, He cannot be estimated; when He is defined, He grows by the very definition." Which things he took word for word from that Augustine, Sermon 190 de tempore, which is the second on the Trinity. Now Nazianzen said that "God grows by the very definition," because although the definition says the end and the term of the thing, and the thing is enclosed, nevertheless when we strive to define and determine God, it is thus that something of Him always remains outside our grasp: because His nature cannot by the proper power of a created intellect be known; nor can it be sufficiently explained to a wayfarer and described by a definition.[937]

This very point Elias of Crete most excellently handed down in the first Apologetic on Nazianzen, explaining those words: "and a living creature visible and invisible." For he says in this way: "The divine Numen, as holy Dionysius says, if you look to the essence, by no means can be thought, nor comprehended; for there is in it neither sense, nor imagination, nor opinion, nor speech, nor science, nor any contact: but from things effected it is considered in a congruent mode (with one likeness from another, as it were, concurring to some one simulacrum of truth) before it is grasped while fleeing away, before, when it is thought, it snatches itself away: for not only is the thought not held, but it is not even perfectly thought," etc. By all of which he plainly indicates that to wayfarers God is so hidden that by no discourse can He be explained to them as He is.

Athanasius also agrees, in the Epistle to those dwelling the solitary life, and in the Epistle on the Synods of Ariminum and Seleucia; and Nyssen, in the book against Eunomius, when they assert that it is not possible to comprehend what God is; yet he says that it is possible to know what He is not: finally John Cyparissiotes in Decade 4 heaps up many testimonies of the saints which teach

936. St. Gregory Nazianzen, Oration 34 (the second Theological Oration); cf. what was said above, Disputation 5, chapter 4.

937. St. Gregory Nazianzen, Oration on the Faith, 49, post medium; St. Augustine, Sermon 190 de tempore (the second on the Trinity).

this very thing, especially indeed in chapter 9, where he shows that by the name "God" is signified the divine nature "what is," not "what it is." I have cited also other testimonies of the Fathers suited to this doctrine above, Disputation 22, chapter 5.[938]

Secondly, how a name can signify God to the blessed essentially and as He is is also clearly gathered from the doctrine of the preceding chapter: since the perfection of signification is taken from the knowledge of the hearer of the discourse; and the blessed see, as He is, quiditatively and essentially; it follows that to them any name signifies God essentially and quiditatively, whether God Himself use it, or another blessed, or even a wayfarer. Nor does it matter that the name itself has been imposed from created things, such as those which wayfarers use: because, for a name to signify essentially, one must not attend either to the imposition of the name, or to the notice of the thing which the one who uses the name has, as if it were the term of the thing; but to the knowledge which of the thing the one who hears has. Nor, for a name to signify God essentially to a blessed person, is it necessary that the blessed from the very name begin to know God essentially, as before he had not known: for if, with me seeing some thing, someone should name it, without doubt he would signify it to me; because he would cause me to know that he too has it in his mind; which is a sign of the same thing being in his own mind too.

Nevertheless, no name can to the blessed denote God comprehensively. For as a name can to the blessed signify God essentially and quiditatively, even if wayfarers use it, and it has been imposed by them; so also it cannot to them denote God comprehensively, even if God were to use it, and it were imposed by Him. In which matter the sentence of Henry seems to me to be exceedingly proved against other Doctors cited in the first chapter, who said that God can impose a name upon Himself which should signify Him comprehensively. But the reason from the preceding doctrine is evident: because since a name is a symbol and sign between him who speaks and him who hears, and is said to signify the hearer inasmuch as it makes him understand the thing itself; it is brought about that such be the signification of the name as is the knowledge of the thing had by the one who hears; not such as he has who speaks: therefore although God comprehends Himself; yet because the blessed person who hears one speaking about Himself does not comprehend Him; the name does not signify God comprehensively to the blessed, but essentially only, as He is known by him.

The opinion of certain more recent Thomists. But certain more recent Thomists, whom in chapter 1 of this disputation I recalled, think that no name can be imposed by the blessed upon God which would signify Him essentially to other blessed also who see; whose opposite is followed by Cajetan with St. Thomas, and others whom I recounted there.[939] And they affirm that the measure of signification of names is the knowledge which the one who imposed the name, or uses it, has. Therefore those more recent men prove by this reason that a name cannot be imposed by the blessed: because, as we have proved, to the signification of names there is to be attended the

938. St. Athanasius, Epistle to those dwelling the solitary life; Epistle on the Synods of Ariminum and Seleucia; St. Gregory of Nyssa, Against Eunomius; John Cyparissiotes, Decade 4, especially chapter 9. See also above, Disputation 22, chapter 5.

939. Cajetan and others with St. Thomas, as recounted in the place cited; cf. the enumeration given above. Disputation 38, article 8, is cited further below.

knowledge which of the thing itself generates the name in the minds of hearers; and from that it must be estimated: but no name can generate essential knowledge of God in the minds of hearers: because just as God cannot be seen essentially through some impressed species that should present Him, so neither can He be represented essentially by a name: therefore no name can signify God essentially.

It is answered: Yet this reason has no force. First, because God can very well be presented by an impressed species, as has been proved by us in Disputation 38, article 8; and at least by an expressed species, namely the word of the mind, that He Himself be seen, is very certain, as we showed there. Then, even if He could not be seen by the intellect through an impressed or through an expressed species, it would not on that account follow that He cannot be signified by a name: for a name makes one know the thing by a different account than a similitude which is in the intellect. For if it is impressed, it is the principle of eliciting the vision with the intellect; if it is expressed, it is the very vision and the actual representation of the object in the intellect itself, rendering him who formally sees; or at least it is the intrinsic term of that, produced by it, as others will; and each is a natural representation of the object to its knower: but a name certainly signifies by the free imposition of men, by which it has been agreed among them, that when someone utters such a voice, another immediately understand this thing, or that that be in the mind of the one uttering: and in this way a name is substituted in the place of cognition and of the formal concept of him who speaks. What, then, hinders by this imposition of a name, that the one who hears, if he sees God as He is, understand essentially and quiditatively God whom he who speaks says that he has in his own mind? which is enough that it signify Him essentially and quiditatively.

Thirdly, because since we can also speak with God about Himself, it must be seen how we can signify to Him Himself. But from the preceding doctrine it would seem it must be said that we can signify and express to God Himself not only essentially and quiditatively, but comprehensively too, because the perfection of signification is to be weighed from the hearer, as has been proved; therefore since God knows Himself essentially and comprehensively, in this mode also we could signify Him to Himself; if nothing else stood in the way. But there is that which stands in the way, namely that to God we can in no way signify anything by speaking: wherefore neither can the names which we use be said to signify to God: for the use of voices has been introduced that the conceived thing which lay hidden in the mind be expressed by the voice itself, the concept being substituted, and be made known to the hearer.

Articulus II - Whether any name is said of God substantially

...be made known to the hearer, so that from it he may know the thing; and thus voices are said to signify to hearers insofar as by them there is expressed to them in this mode that which someone has in his mind. But since God beholds the hearts of men and their thoughts, we can express nothing to Him by voices or indicate anything by manifesting our concepts which He already knew beforehand; therefore neither can we signify anything to Him by voices. Hence, when we use vocal speech, we do not properly signify to God our affections, which He best knew; rather we use speech

that our affection, expressed by word, may be more inflamed. Therefore wayfarers cannot by any name signify God essentially or comprehensively to Him; nor does God speak to Himself by any other word than by His own eternal Word produced from Himself. Therefore there is no name which can comprehensively signify God to anyone.

Thus one proceeds. It seems that no name is said of God substantially. For Damascene says: Each of the things which are said of God ought not to signify what He is according to substance, but to show what He is not, or some relation, or something of those which follow nature or operation.[940]

Again, Pseudo-Dionysius says in the first chapter of On the Divine Names: "You will find the hymn of all the holy theologians dividing the manifest and laudatory appellations of God according to the thearchic processions"; and the sense is that the names which the holy doctors assume in the praise of God are distinguished according to the processions of God. But that which signifies some procession of a thing signifies nothing pertaining to its essence. Therefore the names said of God are not said of Him substantially.[941]

Besides, on this account names signify something by us, according as it is understood. But God is not understood by us in this life according to His substance. Therefore neither is any name imposed by us said of God according to His substance.

But on the contrary: St. Augustine says in book 7 On the Trinity that in God "to be" is the same as to be wise - and whatever you say of that simplicity by which His substance is signified.[942] Therefore all such names signify the divine substance.

I answer that it must be said that, regarding the names which are said of God negatively, or which signify His relation to creatures, it is manifest that they in no way signify His substance, but either the removal of something from Him, or His relation to another, or rather the relation of something else to Him. But concerning the names which are said of God absolutely and affirmatively, as "good," "wise," and the like, many have held diverse opinions. Some have said that all these names, although they are said affirmatively of God, are nevertheless found more to remove something from God than to posit something in Him. Hence they say that when we say "God is living," we signify that God is not in the mode in which inanimate things are; and similarly must it be taken in other cases - and Rabbi Moses put this.[943] Others have said that these names are imposed to signify His relation to creatures, so that when we say "God is good," the sense is "God is the cause of goodness in things," and the same reason holds in others.

But both of these seem unsuitable for three reasons.

First, because according to neither of these positions could any reason be assigned why certain names would be said of God more than others. For thus He is the cause of bodies as He is the cause of goods. Hence if nothing else is signified when it is said "God is good" but that God is the cause of

940. St. John Damascene, De fide orthodoxa, book 1, chapter 4.
941. Pseudo-Dionysius, De divinis nominibus, chapter 1, proemial argument.
942. St. Augustine, De Trinitate, book 7.
943. Moses Maimonides.

goods, it could be said similarly that God is a body, because He is the cause of bodies. Likewise, by this that one says something is a body, it is removed that it be a being only in potency, as prime matter is.

Second, because it would follow that all names said of God would be said of Him by posteriority, as "healthy" is said by posteriority of medicine, insofar as it signifies only this, that it is the cause of health in the animal, which is called "healthy" first.

Third, because this is against the intention of those speaking about God. For they intend to say something else when they say "God is living" than that He is the cause of our life, or that He differs from inanimate bodies.

Therefore it must be said otherwise, that such names do signify the divine substance and are predicated of God substantially, but they fall short of the representation of Him; and this is clear as follows. For names signify God according as our intellect knows Him. But our intellect, since it knows God from creatures, thus knows Him according as creatures represent Him. Now it has been shown above that God in Himself prepossesses all the perfections of creatures as simply and universally perfect. Hence each creature represents Him and is like to Him inasmuch as it has some perfection, yet not so as to represent Him as something of the same species or genus, but as an excellent principle from whose form the effects fall short, although the effects do follow with some likeness of that form - just as the forms of lower bodies represent the solar power. And this was explained above when we treated of the divine perfection. Thus therefore the aforesaid names signify the divine substance, yet imperfectly, just as creatures imperfectly present it. Accordingly, when it is said "God is good," the sense is not "God is the cause of goodness" or "God is not evil," but this is the sense: that which we call goodness in creatures pre-exists in God; and indeed according to a more eminent mode. Whence it does not follow from this that it befittingly belongs to God to be good insofar as He causes goodness, but rather conversely: because He is good, He diffuses goodness in things, according to that of St. Augustine, On Christian Doctrine: inasmuch as He is good, we are.[944]

Reply to the first: Damascene therefore says that these names do not signify what God is, because from none of these names is expressed what God is perfectly; but each one signifies Him imperfectly, just as creatures imperfectly present Him.

Reply to the second: In the signification of names, that from which a name is sometimes imposed to signify, and that to which the name is imposed to signify, are different. Thus the name "stone" (lapis) is imposed from "hurting the foot" (laedit pedem), yet it is not imposed to signify "hurting the foot," but to signify a certain species of bodies; otherwise everything that hurts the foot would be a stone. So therefore it must be said that such divine names are indeed imposed from the processions of the Deity. For just as, according to diverse processes of creaturely perfections, creatures represent God, albeit imperfectly, so our intellect, according to each procession, knows

944. St. Augustine, De doctrina Christiana, book 1, chapter 32.

and names God. Yet these names are not imposed to signify the very processes themselves; as when it is said "God is living," the sense is not "life proceeds from Him," but to signify the very principle of things, in which life pre-exists, though in a more eminent mode than we understand or signify.

Reply to the third: We cannot in this life know the essence (*essentia*) of God according to that which it is in itself, but we know it according as it is presented in the perfections of creatures. And thus the names imposed by us signify it.

Conclusion. Not all the names which are predicated of God, but some, are said of Him substantially.

Dubitation concerning the sense of the article. The question proposed in the title of the article they treat from the Fathers - Damascene, book 1 On the Orthodox Faith, chapters 4 and 12; and Nicetas, in the scholia upon St. Gregory Nazianzen's Oration 32, number 53, and in Oration 42 upon the words "What then of our piety?" - and from the Scholastics with St. Thomas; then Cajetan, and more recent Thomists; St. Bonaventure, in the First Book, distinction 22, article 1, question 4; Richard; Alexander; Aegidius, question 4; Durandus, question 2; Marsilius, in the First, question 25, article 3, doubt 2; and Alexander of Hales, First Part, question 48, in the fourth article, 3 and 2. Although they thought in various ways, since they did not teach things opposed to one another, but different things, and each one in his own sense asserted truths, I shall not take care to enumerate their opinions singly. Wherefore we must focus only on expounding the mind of the Blessed Thomas, which, if rightly understood, is true and contains doctrine worthy of such a man; yet his disciples have not interpreted it quite in harmony with his words, and Cajetan and the recent men, in this article, seize upon that particle "substantially" or "according to substance" in the title and in the body as signifying "not accidentally," and they think that the names which are said of God do not predicate accidentally. He himself, however, would have to concede - if he were to take the particle "substantially" or "according to substance" in the title and in the body for "not accidentally" - that the names which he said at the beginning of the article do not signify the substance in God, namely the negative names and those signifying relation to creatures, are not in dispute. He undoubtedly thought that those are not said of God according to substance; but that these are not said of Him accidentally is clear: for they are said accidentally either by an accidental predicamental mode, or by an accidental predicable mode. Not in the predicamental mode, because there is no form in God that inheres, as an accident; nor in the predicable mode, because although in this way "substance" is sometimes predicated, as when we say "The circle is wooden," nevertheless all those names which we mentioned cannot be predicated of God in this way - "incorruptible," "immortal," and the other negatives. For to be predicated accidentally by an accidental predicable is nothing else than for the predicate to be able to be affirmed of and denied from the subject, the nature and essence of the subject remaining intact; so that even of opposites...[945]

945. For the patristic and scholastic sources surveyed here: Damascene, De fide orthodoxa, book 1, chapters 4 and 12; Nicetas, Scholia on St. Gregory Nazianzen, Oration 32, number 53, and Oration 42 on the words "Quin pietatis nostra"; John Cyparissiotes, Decade 4, chapter 9; St. Thomas; Cajetan and more recent Thomists; St. Bonaventure, In I Sent., dist. 22, art. 1, q. 4; Richard; Alexander; Aegidius, q. 4; Durandus, q. 2; Marsilius, In I, q. 25, art. 3, dub. 2; Alexander of Hales, Summa, I, q. 48, art. 4, 3, 2.

Doubt about the sense of the article. The question proposed in the title of the article is treated from the Fathers by St. John Damascene, in book 1 On the Orthodox Faith, chapters 4 and 12; by Nicetas in the Scholia on St. Gregory Nazianzen, Oration 32, number 53, and on Oration 42 at the words "Quin pietatis nostra"; and by John Cyparissiotes, Decade 4, chapter 9.[946] Among the Scholastics it is handled by St. Thomas in this place; by Cajetan and more recent Thomists; by St. Bonaventure, In I Sent., dist. 22, art. 1, q. 4; by Richard and Alexander; by Aegidius, q. 4; by Durandus, q. 2; by Marsilius, In I, q. 25, art. 3, dub. 2; by Alexander of Hales, Summa, I, q. 48, art. 4, 3, 2.[947] Although they thought variously, since they did not teach things opposed to one another, but diverse, and each one in his sense said something true, I shall not take pains to enumerate their opinions item by item. Therefore it is incumbent on us only to set forth the mind of the Blessed Thomas, which, if it be rightly understood, is true and contains doctrine worthy of such a man; whereas his disciples have not been sufficiently consonant in interpreting his sayings.

The mind of St. Thomas. Cajetan and the recent writers in this article take that particle "substantially" or "according to substance" to mean the same as "not accidentally," so that the sense is to be: whether names are said of God not accidentally. The recent writers, however, labor to show whether relative names are said of God substantially; which, nevertheless, is easy to explain. For if by "substance" we understand the absolute essence (*essentia*) of God, names that denote only an order to creatures to come - such as foreknowledge, predestination, creation - are said of God accidentally by the fifth predicable, since they signify an order to future creatures. For God could, if He willed to do nothing, as He could, neither foreknow what was to be, nor predestine, nor create. But those that denote a relation to possibles are not said of God accidentally, as is evident; for by the necessity of the nature of the thing they belong to Him.

Therefore the sense of St. Thomas in the title of the article is that certain names are said of God according to substance, or substantially, that is, names which signify that which is truly and really in God, whether it be substance or relation. He most fittingly answers that not all, but some, are said of God according to substance; for negative names do not say what God is, but what He is not; and names which signify only a relation to creatures as future do not denote that which is in reality in God, but how He is spoken of from creatures.

But concerning the other names which affirm something of God and do not signify solely a relation from time to creatures, as "Creator," St. Thomas reports two opinions, as is clear from the article. The first is that of Rabbi Moses in the book called Doctor dubiorum, where he asserts that those names which posit something and do not denote only a relation to creatures are said of God only for removing something from Him, not for attributing something positive to Him. The second opinion is that of those who assert that these names signify in God only a relation of cause to that form, not the form itself which they seem to announce; for example, when it is said "God is good," they think it is signified only that God is the cause of goodness, not that He Himself is in Himself

946. St. John Damascene, De fide orthodoxa, book 1, chapters 4 and 12; Nicetas, Scholia on St. Gregory Nazianzen, Oration 32, number 53, and Oration 42 on the words "Quin pietatis nostra"; John Cyparissiotes, Decade 4, chapter 9.

947. St. Thomas; Cajetan and more recent Thomists; St. Bonaventure, In I Sent., dist. 22, art. 1, q. 4; Richard; Alexander; Aegidius, q. 4; Durandus, q. 2; Marsilius, In I, q. 25, art. 3, dub. 2; Alexander of Hales, Summa, I, q. 48, art. 4, 3, 2.

good, and so forth. He impugns both opinions with three most excellent reasons. The first reason at once fights against and establishes the true opinion, and is of this sort: If names signified only negation in God, we could use any name whatsoever and attribute it to God; hence we could call Him "bodied" and "corruptible"; one way, if we wished to signify only the negation of body and of corruption; the other way, if we denoted only the cause of these things. For it would be truly said "bodied," that is, "not having a body"; and "corruptible," that is, "not subject to corruption"; or "corporeal," that is, "cause of body"; and "corruptible," "cause of corruptibility." The two later reasons, which you have in the text of St. Thomas, most excellently attack the latter opinion.

Therefore St. Thomas concludes from the doctrine of the article that those names of the third order, that is, negative ones, and those that denote a relation from time to creatures, are not said of God according to substance; but the remaining names which are said of God signify in God substance, or are said of God substantially, that is, they signify something which truly is in God. Whether, however, that be substance or accident, St. Thomas did not treat in this article; for he supposes from q. 3, art. 6, that there is no accident in God. In this sense no Scholastic has spoken otherwise. Yet this is doctrine and a judgment worthy of the Angelic Doctor; and it seems that John Cyparissiotes taught it earlier in Decade 4, chapter 9 cited above, as our Francis Turrianus noted in the scholia on that chapter. He says that those names from Dionysius, De divinis nominibus, book 2, are called theoprepē, that is, "descending to God."[948]

These three genera of names are most excellently explained by Damascene in the places cited above, in these words: "Thus, therefore, it is to be thought that all the things which are recounted of God either signify something in the substantial notion truly to be, or explain what is not, or some affection to something of the things that are distinguished from Him, or finally declare some operation." Of the first genus, he says, are the names signifying what God is not, as "incorruptible." Of the second genus are those which denote some affection to something of the things that are distinguished from Him, that is, a relation from time to creatures. Of the third genus are those signifying something of the things that regard nature, that is, those which signify the attributes of God. These, according to our mode of understanding and naming, follow nature after the manner of passion; similar are those which signify an operation within God: for those which denote an action from time are to be placed in the second genus; whence, and so forth.

But someone will object against the things which we have said: "Omnipotence, wisdom, and knowledge in God signify a relation of reason to creatures which God can produce and which He knows; therefore these names are not said of God according to substance in the sense explained." It is answered: that names which signify some relation to creatures from eternity - whether that relation belong to God freely, as is the relation of foreknowledge and predestination, which necessarily, as a relation of omnipotence and of simple knowledge, can truly be said of God according to substance. For although they are relatives, nevertheless we wish them to signify not only a relation, but a certain affection of God which in created things corresponds to some quality, which we also signify by a relative name. Therefore, because by them we signify what the essence

948. Pseudo-Dionysius, De divinis nominibus, book 2; and Francis Turrianus, scholia on John Cyparissiotes, Decade 4, chapter 9.

(*essentia*) of God is like, they are truly said of Him according to substance. But those which signify in God a relation from time do not denote any affection which is in God - neither after the manner of quality or substance, nor after the manner of an immanent operation - but only an order of an agent outside itself; and because this is not formally in God, but only extrinsically by denomination, therefore St. Thomas rightly said that these names do not signify in God substantially, or are not said of God according to substance, as was explained above. This, however, must be understood with respect to the formal signification of the names; for as to the material signification of those of them which are concrete, as "Creator," this is God Himself. For when this name is heard, we conceive the very God whom we call Creator. But about the mode in which we know and name God by the negation of other things, we have said enough elsewhere, Disputation 22, chapter 6.

Articulus III - Whether any name is said of God properly

We proceed thus to the third. It seems that no name is said of God properly. For all the names which we say of God are taken from creatures, as was said. But the names of creatures are said metaphorically of God, as when it is said, "God is a rock," or "a lion," or something of this sort. Therefore the names said of God are said metaphorically.

Further, no name is said properly of that of which it is more truly removed than predicated. But all such names - "good," "wise," and the like - are more truly removed from God than predicated of Him, as is evident through Dionysius, in the second chapter of the Celestial Hierarchy. Therefore none of these names is properly said of God.

Further, names of bodies are not said of God except metaphorically, since He is incorporeal. But all such names imply certain bodily conditions: for they signify along with time, and with composition, and with other things of this sort which are conditions of bodies. Therefore all such names are said of God metaphorically.

But on the contrary is what St. Ambrose says in book 2 De fide: "There are certain names which clearly show the property of the divinity, and certain which express the manifest truth of the divine majesty; but others are said of God translatively by similitude." Therefore not all names are said of God metaphorically, but some are said properly.[949]

I answer that, as was said, we know God from the perfections proceeding in creatures from Him; and indeed these perfections are in God in a more eminent mode than in creatures. But our intellect apprehends them only in the mode in which they are in creatures; and according to what it apprehends, so it signifies by names. In names, therefore, which we attribute to God, there are two things to be considered: namely, the perfections themselves signified - such as goodness, life, and the like - and the mode of signifying. Therefore, as to that which such names signify, they properly belong to God, and more properly than to the creatures themselves, and primarily are said of Him. But as to the mode of signifying, they are not properly said of God, for they have a mode of signifying which belongs to creatures.

949. St. Ambrose, De fide, book 2, to Gratian, chapter 10.

Reply to the first: Some names signify the perfections of this sort proceeding from God into creatures in such a mode that the imperfection which belongs to a created nature is included in that very signification; as "rock" signifies something material. And such names cannot be properly attributed to God, but metaphorically. But some names signify the perfections themselves absolutely, without implying any mode which is proper to a participator and falls under the signification of such names: as "being," "good," "living," and the like; and such names are properly said of God.

Reply to the second: It must be said first that, when Dionysius denies that such names are said of God, he denies it because of that which the name does not fittingly signify of Him - namely, the mode which the name signifies - rather than because of that which the name signifies according to a more excellent mode. Whence he says, On the Divine Names, that God is above all substance and life.

Reply to the third: It must be said that, although such names are said of God, they import bodily conditions, not by that which is signified by the name, but by the mode of signifying. But those which are said metaphorically of God import a bodily condition in their very signification.

Explanation of the doctrine of the article. The conclusion is: Some name is said properly of God, that is, not translatively and not metaphorically. But more amply St. Thomas explains this doctrine, noting that the names of God could be considered in a twofold way: in one way as to that which they signify - even as to the mode of signifying; in the prior way some signify God properly, not metaphorically, as "wisdom," since by its signification we will to signify that which truly is found in God and that which is the perfection of Him; in the latter way not all are said of God properly, since they all suffer some improper mode of signifying. But this very thing has been set forth above at Disputation 22, chapter 6, and what in this same Question 13 we understand concerning the perfections and the mode in which we understand them from the mode of creatures. Hence accordingly and in the same way we name them. This doctrine, thus understood, is most easy according to the doctrine of this disputation in the way of speaking concerning the signification of names with respect to the viators and the blessed; and as for Himself, if He spoke, none of the names would signify God metaphorically in any mode. And this which we have said, that the names are not said of God metaphorically with respect to that which is signified, but are said metaphorically only with respect to the mode of signifying, St. Thomas in this article most excellently unfolds in solution 3.

The doctrine which John Cyparissiotes hands down in Decade 4, chapter 9, as our Turrianus noted and most excellently expounded, is the same; and there he says: "It is plain that the divine names represent our sense and represent in some manner divine nature according to our consideration; and from these there are gathered concepts of the names when we understand creatures. For we ascribe essence, substance. Properly they signify that which is, not as we think it is, but as we can; names are drawn from that which is most known to us, whence the names taken from things, which we attribute to God, do not signify God Himself, but God as He is conceived from creatures, which is what it is called metaphorical of God inasmuch as it signifies from us, as has been explained: but that which truly is, that which is signified by the name, insofar as it is

conferred on God, signifies God properly, and according to that it is called proper concept; and (as he himself also says) it is not what it is, but it is as it is, insofar as it is conceived by us" - which agrees with what we said above about knowing through effects. And thus this doctrine is to be understood concerning the signification of names in the way of the viators, not of the blessed.

In the same sentence John Cyparissiotes cites St. Cyril, Thesaurus, book 7, where Eunomius contended that the very word "unbegotten" is not the proper word of the Son: "Moreover the word in Scripture is called 'Son'; and the production of the word signifies the good meaning; we understand, not according to our custom expressing ourselves with sounds and a few syllables." And he adds: "Whenever, therefore, something is said of God in a human manner, as if one were to say that He hears, not in a human manner is it understood, but according to the divine." And so forth.[950]

to the first: Certain names signify suchlike perfections proceeding from God into created things in this way, that the very imperfect mode by which the divine perfection is participated by the creature is included in the signification of the name itself; thus "stone" signifies something ens in a material way: and names of this sort cannot be attributed to God, except metaphorically. But certain names signify the perfections themselves absolutely, without any mode of participating being enclosed in their signification: as "being" (ens), "good" (bonum), "living" (vivens), and the like: and such are properly predicated of God. Reply to the second: Therefore Dionysius says that names of this sort are denied of God, because that which is signified by the name does not belong to Him in the mode in which the name signifies, but in a more excellent mode. Hence in the same place Dionysius says: "He is above every substance and life."[951]

Reply to the third: Those names which are said properly of God import corporeal conditions, not in the very thing signified by the name, but as to the mode of signifying. But those which are said metaphorically of God import a corporeal condition in their very signified.

Explication of the doctrine of the article.

Conclusion. Some name is said of God properly, that is, not by transference and metaphor. But in order further to explain this doctrine, the Holy Doctor notes that the names of God can be considered in a twofold way: in one way with respect to that which they signify, in another with respect to the mode of signifying. In the first way, some signify God properly and not metaphorically, as "wisdom": because by their very signification they signify that which is truly found in God and which is His perfection. In the second way, not all, nay no name, is said of God properly, but under all there lies some mode of metaphor. We have explained this exactly above in disputation 22, chapter 6, namely that in this life we understand God and His perfections after the mode of created things: and therefore we name Him after the mode of those. This too is to be understood according to the doctrine of that disputation, speaking namely of the signification of

950. John Cyparissiotes, Decade 4, chapter 9; St. Cyril of Alexandria, Thesaurus, book 7.

951. Pseudo-Dionysius, De divinis nominibus, book 2; St. John Damascene, De fide orthodoxa, book 1, chapters 4 and 12.

names among wayfarers: for to the blessed, who see Him as He is, no name signifies God metaphorically in any way. But which names are said of God metaphorically as to the thing signified, St. Thomas excellently explains in this article, in the reply to the third.

John Cyparissiotes hands on this doctrine in Decade 4, chapter 9, as our Turrianus there notes and very well expounds, where at the end he says as follows: "From these things it is plain that both are true, namely that names represent the divine operation, and not the divine nature, when we consider their material, and whence these have been procured and collected for us" - by "operation" he understands the creature. "And further, that they also properly signify the substance of God, which 'is,' not however what it is, when from each name we are led to the very thing subject." And he speaks thus: if we attend to that whence the names are taken which we attribute to God, they do not signify God Himself, but created things, which is to signify God in a certain metaphorical way, as we have explained; but that for signifying which they are accommodated, signifies God properly, not quidditatively and by a proper concept, and (as he himself says) not what He is, but that He is, that is, by that concept by which He is known by us in this life.[952]

In the same sense John Cyparissiotes cites St. Cyril in book 7 of the Thesaurus, chapter 2, where, when Eunomius contended that "Word" is not a proper term of the Son in Scripture, St. Cyril replies: "Moreover, 'Word' in Scripture is called 'Son'; and by the utterance of the voice a sharp-sounding man - Eunomius - thinks thus, ignorant that from our custom the word has been taken." And, with a few things interposed, he adds: "When therefore something is said of God in a human manner, as 'he hears,' it is not understood in a human manner, but let him who hears understand it spiritually and divinely," and so forth.[953]

From this doctrine also, which we explained above, disputation 22, chapter 6, it is understood what Dionysius, there cited often, explains: namely, that in God there is neither wisdom, nor substance, nor anything of those things which we say of Him; and that other Fathers sometimes teach with Dionysius that the name of "Father" and of "Son" comes to be said of God by transference: for as to the mode of signifying, and as to that whence the names are taken, some metaphor lies under these words; not as to the thing signified, of which Damascene treats many things in that chapter; and we have also noted some things against Damascene there.[951]

Articulus IV - Whether the names said of God are synonymous

To the fourth we proceed thus.

Objection 1. It seems that those names said of God are synonymous. For synonymous names are those which signify entirely the same thing: but those names said of God signify entirely the same thing in God, because the goodness of God is His essence, and likewise wisdom: therefore those names are entirely synonymous.

952. John Cyparissiotes, Decade 4, chapter 9; Francis Turrianus, scholia on John Cyparissiotes, Decade 4, chapter 9.
953. St. Cyril of Alexandria, Thesaurus, book 7, chapter 2.
951. Pseudo-Dionysius, De divinis nominibus, book 2; St. John Damascene, De fide orthodoxa, book 1, chapters 4 and 12.

Objection 2. If it be said that those names signify the same according to the thing, but according to different rationes; on the contrary, a ratio to which nothing corresponds in the thing is vain: if therefore those rationes are many and the thing is one, it seems that those rationes are vain.

Objection 3. Moreover, that is more one which is one both in thing and in ratio than that which is one in thing and multiple in ratio. But God is maximally one: therefore it seems that He is not one in thing and multiple in ratio. And thus the names said of God do not signify diverse rationes; and so they are synonymous.

But on the contrary: All synonyms joined together add a tautology, as if one were to say "garment clothing." If therefore all names said of God are synonymous, it could not suitably be said "God good," or anything of this sort; whereas it is written in Jeremiah 32: "Mighty, great, powerful, Lord of hosts is Your name..."[954]

I answer that, it must be said that names of this sort said of God are not synonymous. This indeed would be easy to see, if we were to say that names of this sort were introduced either to remove, or to designate, the relation of cause with respect to creatures. For then there would be diverse rationes of those names according to diverse respects, or according to diverse effects connoted. But according as it has been said, that names of this sort signify the divine substance, albeit imperfectly, it plainly appears, according to the foregoing, that they have diverse rationes. For the ratio which the name signifies is the conception of the intellect concerning the thing signified by the name. But our intellect, since it knows God from creatures, forms for understanding God conceptions proportioned to the perfections proceeding from God into creatures. Now these perfections pre-exist in God in an undivided and simple way, but in creatures they are received in a divided and multiple way. Therefore, just as to the diverse perfections of creatures there corresponds one simple principle represented through diverse perfections of creatures, variously and multiply; so too to the various and multiple concepts of our intellect there corresponds something wholly one and simple, imperfectly understood according to conceptions of this sort. And therefore the names attributed to God, although they signify one thing, nevertheless, because they signify it under many and diverse rationes, are not synonyms. And thus the reply to the first is clear: because synonymous names are said to be those which signify one thing according to one ratio. But those which signify diverse rationes of one thing do not primarily and per se signify one, for a name does not signify the thing except through the mediation of the conception of the intellect, as has been said.

Reply to the second: The many rationes of these names are not empty and vain: because to all of them there corresponds one simple thing, represented through all these in a multiple and imperfect way.

Reply to the third: This very thing pertains to the perfect unity of God, namely that those things which are multiple and divided in others, in Him are simple and one. And from this it happens that He is one in thing and many according to ratio: because our intellect so multiplies its apprehension of Him as the things variously represent Him.

954. Jeremiah 32:18 - 19.

Explication of the doctrine of the Article.

Conclusion of the article is this. Not all things said of God are synonymous. St. Thomas calls them not, as some say, equivocal. For each of them equally signifies many things under diverse rationes: but two or more names are called synonymous by the Scholastics which denote the same thing under precisely the same ratio, as "sword," "point," and "blade"; "garment," "clothing." Therefore, since of God many names are said, as "omnipotent," "good," "wise," etc., the Holy Doctor says that not all are synonymous; because although they signify the same God, nevertheless they denote Him under diverse rationes. For, as Caietan most aptly observes, a mere distinction of reason among the things signified suffices, nor is there need for some distinction among them from the nature of the thing, in order that the names not be synonymous. Wherefore, since the attributes among themselves, and from the essence, are distinguished according to our mode of understanding, as we shall show at length below in disputation 117, it follows that names which signify diverse attributes, although distinguished solely by reason among themselves and from the essence, are not synonymous among themselves, nor with the names that signify the essence.[955]

Note: Nevertheless it is to be observed that judgment concerning the synonymy of names must be sought not from the side of the imposer of them or of the user, but from the side of the hearer, for whom they are said to signify. For, as was demonstrated in the preceding disputation, chapter 2, the signification of a name must be measured by the cognition which the hearer has of the thing, not by that of him who speaks or who imposed the name. It must therefore be seen why these names are not synonyms, and whether for anyone they can be.

Caietan, in this article, notes that God in Himself does not distinguish diverse rationes of the attributes; whence it follows that, for God, all the names imposed upon Him, from this side would be synonyms, unless something else stood in the way. I said "from this side," because if by the names we were able truly and properly to signify something to God, all the names, whether of one or of another attribute, would be synonymous for Him: because each of them would signify to Him in the same way, since He understands Himself in the same way always. Of the blessed Caietan says nothing. There are, however, those who think that by the very beatific vision there are distinguished in God by them diverse attributes: which if it were true, the names of the attributes would not be synonyms for them. But because, as we shall demonstrate below in disputation 118, the blessed cannot by the very clear vision of God distinguish many rationes in Him, it follows that for them seeing God in this way the names are synonyms. And since only wayfarers, knowing God not as He is but through other species, after the likeness of created things, distinguish in Him diverse attributes: for them alone, and for those knowing God in this manner, these names of attributes will not be synonyms. Wherefore if the blessed also knew God in the same manner as wayfarers, and not solely by clear vision, for them too, knowing Him in this way, they would not be synonyms.

955. Cajetan, commentary on this article of St. Thomas, Summa theologiae I, q. 13, a. 4.

In this article it is commonly disputed whether the attributes of God are distinguished among themselves and from the essence from the nature of the thing, or are distinguished solely by reason; of this, however, we shall defer treating below in disputation 116.[956]

Articulus V - Whether those things which are said of God and of creatures are said univocally of them

To the fifth we proceed thus. It seems that those things which are said of God and of creatures are said univocally of them.

Objection 1. Every equivocal is reduced to the univocal, as many to one. For if this name "dog" is said equivocally of the barking animal and of the sea-fish, it is necessary that it be said univocally of some things, namely of all barking animals. Otherwise there would be a process to infinity. But there are found some univocal agents which agree with their effects in name and definition, as man generates man; and there are some equivocal agents, as the sun causes the hot, although it itself is not hot, save equivocally. It seems therefore that the first agent, to which all agents are reduced, is a univocal agent. And thus those things which are said of God and of creatures are predicated univocally.

Objection 2. Moreover, according to equivocal things no likeness is attended to. Since therefore to God there is some likeness in the creature, according to that of Genesis 1: "Let us make man to our image and likeness," it seems that something is said univocally of God and of creatures.

Objection 3. Moreover, a measure is homogeneous with the things measured, as is said in Metaphysics X. But God is the first measure of all beings, as is said there: therefore God is homogeneous with creatures. And thus something can be said univocally of God and of creatures.[957]

But on the contrary: Whatever is predicated of some according to the same name, and not according to the same ratio, is predicated of them equivocally. But no name belongs to God according to that ratio according to which it is said of the creature. For wisdom in creatures is a quality; not, however, in God. Now the genus is varied when the ratio is changed, since it is a part of the definition; and the same is to be said in other cases. Therefore whatever is said of God and of creatures is said equivocally.

I answer that, it must be said that it is impossible for anything to be predicated univocally of God and of creatures. For every effect which does not equal the virtue of the agent cause receives a likeness of the agent not according to the same ratio, but deficiently; so that what is in the effects dividedly and multiply, is in the cause simply and in the same mode. Thus the sun by one power produces multiform and various forms in these lower things. In the same way, as was said above, all the perfections of things, which in created things are divided and multiple, pre-exist in God in unity. Therefore, when some name pertaining to a perfection is said of the creature, it signifies that perfection as distinct according to ratio and definition from others; as when this name "wise" is said of a man, we signify some perfection distinct from the essence of man, and from potency, and

956. See below, disputations 116 - 118.
957. Aristotle, Metaphysics X (book 10), on measure and the homogeneous.

from his act of being, and from all things of this sort. But when we say this name of God, we do not intend to signify something distinct from His essence, or from His potency, or from His act of being. And thus, when this name "wise" is said of a man, it in a certain way describes and comprehends the thing signified; not, however, when it is said of God: rather it leaves the thing signified incomprehended in the concept, and exceeding the term of the name's signification. Whence it is plain that not according to the same ratio is this name "wise" said of God and of man; therefore not univocally.

It is objected:

1) Moreover, every equivocal is reduced to the univocal, as many to one. For if this name "dog" is said equivocally of the barking animal and of the sea-star, it must be said univocally of some things, namely of all barking animals; otherwise there would be an infinite regress. But we find some univocal agents, which agree with their effects in name and definition, as man generates man; and some equivocal agents, as the sun causes heat, although it is not itself hot, except equivocally. It seems therefore that the first agent, to which all agents are reduced, is a univocal agent. And thus the things that are said of God and creatures are predicated univocally.

2) Further, according to things said equivocally no likeness is attended to. But since the creature is in some way like to God, according to that of Genesis 1, "Let us make man to our image and likeness," it seems that something is said univocally of God and of creatures.

3) Further, measure is homogeneous with what is measured, as is said in Metaphysics X.[958][959] But God is the first measure of all beings, as is said in the same place: therefore God is homogeneous with creatures. And thus something can be said univocally of God and creatures.

But on the contrary: Whatever is predicated of several according to the same name, and not according to the same concept (ratio), is predicated of them equivocally. But no name befits God according to that concept according to which it is said of the creature. For wisdom in creatures is a quality, but not in God; and a genus, when varied, changes the concept, since it is a part of the definition; and the same holds for the others. Therefore whatever is said of God and creatures is said equivocally.

Further, God is at a greater distance from the creature than any creatures are from one another. But on account of the distance of certain creatures it happens that nothing can be predicated of them univocally, as of those which do not agree in any genus. Therefore much less can anything be predicated univocally of God and creatures; but all are predicated equivocally.

I answer: It is impossible that anything be predicated of God and creatures univocally. For every effect that does not equal the power of the agent cause receives the likeness of the agent not according to the same concept, but defectively: so that what is in the effects in a divided and multiple way, is in the cause simply and in the same manner. Thus the sun by one power produces many and diverse forms in these lower things. In the same way, as was said above, all the perfections of things, which are in created things in a divided and multiple way, pre-exist in God

958. Aristotle, Physics VIII; Metaphysics XII (on demonstrations about God).
959. Aristotle, Metaphysics X, on measure and the homogeneous.

united. Therefore, when a name pertaining to a perfection is said of a creature, it signifies that perfection as distinct by reason of the definition from others: for instance, when this name "wise" is said of a man, we signify some perfection distinct from the essence (*essentia*) of man, and from potency (*potentia*), and from his existence (*esse*), and from all things of this kind. But when we say this name of God, we do not intend to signify something distinct from His essence, or potency, or existence. And so, when this name "wise" is said of man, it in a certain way describes and comprehends the thing signified; not, however, when it is said of God: rather it leaves the thing signified incomprehended, and exceeding the term of the name's signification. Whence it is plain that not according to the same concept is this name "wise" said of God and of man; and the same reason holds for the others. Therefore no name is predicated univocally of God and creatures.

But neither purely equivocally, as some have said. For according to this, from creatures nothing could be known or demonstrated about God; rather there would always be the fallacy of equivocation. And this is as much against the Philosopher, who proves many things about God demonstratively, as also against the Apostle saying in Romans 1: "The invisible things of God, being understood by the things that are made, are clearly seen."[960] Therefore it must be said that such names are said of God and creatures according to analogy, that is, proportion. And this happens in names in two ways: either because many things have proportion to one, as "healthy" is said of medicine and urine, inasmuch as each has an order and proportion to the health of the animal, of which this indeed is a sign, that a cause; or from the fact that one has proportion to another, as "healthy" is said of medicine and of the animal, inasmuch as medicine is the cause of the health which is in the animal. And in this way some things are said of God and creatures analogically, and neither purely equivocally nor univocally.

For we cannot name God except from creatures, as was said above. And thus whatever is said of God and creatures is said according as there is some order of the creature to God as to principle and cause, in whom excellently pre-exist all the perfections of things. And this mode of commonness is midway between pure equivocation and simple univocation. For neither in those things which are said analogically is there one concept, as in univocals; nor are they totally diverse, as in equivocals; but a name thus said in multiple ways signifies diverse proportions to something one. Thus "healthy" said of urine signifies a sign of the animal's health; but said of medicine signifies a cause of the same health.

Reply to the first: Although in predications equivocal terms must be reduced to univocal, nevertheless in actions a non-univocal agent of necessity precedes a univocal agent. For a non-univocal agent is the universal cause of the whole species, as the sun is the cause of the generation of all men. But a univocal agent is not an agent cause universal of the whole species (otherwise it would be the cause of itself, since it is contained under the species), but is a particular cause with respect to this individual, which is constituted in the participation of the species. Therefore the universal cause of the whole species is not a univocal agent. But a universal cause is prior to a particular. Now this universal agent, although it is not univocal, is not, however, wholly equivocal:

960. Romans 1:20.

for otherwise it would not make its like; but it can be called an analogical agent. Thus, in predications, all univocals are reduced to one first, not univocal but analogical, which is "being" (*ens*).

Reply to the second: The likeness of the creature to God is imperfect: because it does not represent the same even according to genus, as was said above.

Reply to the third: God is not a measure proportionate to measured things. Whence it is not necessary that God and creatures be contained under one genus.

But the things that are on the contrary conclude that such names are not predicated univocally of God and creatures, not, however, that they are predicated equivocally.

Conclusion of the article: It is impossible that anything be said univocally of God and creatures.

Articulus VI - Whether names are said primarily of creatures rather than of God

To the sixth we proceed thus.

1) It seems that names are said primarily of creatures rather than of God. For according to the mode by which we know something, according to that we name it, since, according to the Philosopher, names are signs of the concepts in the intellect. But we know the creature before God: therefore names imposed by us first suit creatures rather than God.[961]

2) Further, according to Pseudo-Dionysius, we name God from creatures; but names transferred from creatures to God are said primarily of creatures rather than of God, as "lion," "stone," and the like. Therefore all names which are said of God and creatures are said primarily of creatures rather than of God.[962]

3) Further, all names that are said commonly of God and creatures are said of God as of the cause of all things, as Pseudo-Dionysius says. But what is said of something through its cause is said of it afterwards: before we say "healthy" of medicine, which is the cause of health, we say "healthy" of the animal. Therefore such names are said primarily of creatures rather than of God.[963]

But on the contrary is what is said in Ephesians 3: "I bend my knee to the Father of our Lord Jesus, from whom all paternity in heaven and on earth is named": and the same reason seems to hold for other names which are said of God and creatures. Therefore such names are said primarily of God rather than of creatures.

I answer: In all names which are said analogically of many it is necessary that all be said with reference to one. And therefore that one must be placed in the definition of all. And because the concept which a name signifies is a definition, as is said in Metaphysics IV, it is necessary that the name be said first of that which is placed in the definition of the others, and afterwards of the others according to the order by which they approach that first, either more or less.[964] Thus

961. Aristotle, De interpretatione (Peri hermeneias), book 1: names are signs of concepts.
962. Pseudo-Dionysius, De divinis nominibus, book 1.
963. Pseudo-Dionysius, Theologia mystica (or De divinis nominibus), book 1: names said of God as cause.
964. Aristotle, Metaphysics IV, text 28: "the concept which a name signifies is the definition."

"healthy," which is said of the animal, falls into the definition of "healthy" which is said of medicine, which is called healthy inasmuch as it causes health in the animal, and into the definition of "healthy" which is said of urine, which is called healthy inasmuch as it is a sign of the animal's health.

So then, all names which are metaphorically said of God are said primarily of creatures rather than of God; because said of God they signify nothing else than likenesses to such creatures. For as to say that a meadow laughs signifies nothing else than that the meadow has a certain likeness to a man in beauty when it blooms, as a man when he laughs, according to a likeness of proportion: so the name "lion" said of God signifies nothing else than that God likewise is so disposed as to work strongly in His works, as a lion in his. And so it is clear that according to that which is said of God, their signification cannot be defined except through that which is said of the creature.

But of the other names, which are not said metaphorically of God, there would be the same reason if they were said of God only causally, as some have posited. For thus, when it is said, "God is good," it would be nothing else than that God is the cause of goodness of the creature. And so this name "good" said of God would include in its concept the goodness of the creature: whence good would be said primarily of the creature rather than of God.

But it was shown above that such names are said of God not only causally but also essentially. For when it is said, "God is good" or "wise," it is signified not only that He is the cause of wisdom or goodness, but that these exist in Him more eminently. Whence, according to this, it must be said that, as to the thing signified by the name, they are said primarily of God rather than of creatures, because from God such perfections flow into creatures. But as to the imposition of names, they are imposed by us upon creatures, which we know first. Whence also they have a mode of signifying which befits creatures, as was said above.

Reply to the first: That objection proceeds as to the imposition of the name.

Reply to the second: There is not the same reason for names which are said metaphorically of God and for the others, as was said.

Reply to the third: That objection would proceed if such names were said of God only causally and not essentially, as "healthy" of medicine.

Conclusion: If you look to the thing signified, names are said primarily (that is, more principally) of God than of creatures; but if you look to that whence the names are imposed, they are said first of creatures than of God. In these two articles our theologians have for the most part busied themselves in disputing about the analogy of names. But the disputations worthy of theology have been exactly handed on by us above in Disputation 22, chapter f. Let the rest be left to the physicists and metaphysicians.

Articulus VII - Whether the names which import a relation to creatures are said of God from time

To the seventh we proceed thus.

1) It seems that the names which import a relation to creatures are not said of God from time. For all such names signify the divine substance, as is commonly said. Whence also St. Ambrose says that this name "Lord" is a name of power, which is the divine substance; and "creation" signifies God's action, which is His essence. But the divine substance is not temporal, but eternal. Therefore such names are not said of God from time, but from eternity.

2) Further, of whatever something befits from time, it can be said to have been made such. For what is white from time "becomes" white. But it does not befit God to have become. Therefore nothing is predicated of God from time.

3) Further, if some names are said of God from time on account of this, that they import a relation to creatures, the same reason seems to hold for all that import a relation to creatures. But certain names importing a relation to creatures are said of God from eternity. For from eternity He knew the creature and He loved it, according to that of Jeremiah 31: "I have loved you with an everlasting love." Therefore also other names that import a relation to creatures, such as "Lord" and "Creator," are said of God from eternity.

4) Further, such names signify a relation. Therefore that relation must either be something in God, or be only in the creature. But it cannot be only in the creature: because thus God...

Objicitur quartum: Such names signify a relation (*relatio*). Therefore that relation must either be something in God, or be only in the creature. But it cannot be only in the creature: because thus God would be denominated "Lord" from the opposite relation, which is in the creature; yet nothing is denominated from its opposite. It remains, therefore, that the relation is something in God. But in God nothing can be from time, since He is above time. Therefore it seems that such names are not said of God from time.

Objicitur quintum: Further, according to a relation something is said relatively: for example, according to lordship, "lord," just as according to whiteness, "white." If therefore the relation of lordship is not in God according to the thing, but only according to reason, it follows that God is not really lord - which is plainly false.

Objicitur sextum: Further, in relatives which are not simultaneous by nature, one can exist without the other: as the knowable exists without knowledge, as is said in the Categories. But the relatives which are said of God and creatures are not simultaneous by nature. Therefore something can be said relatively of God to the creature even when the creature does not exist; and thus such names, "Lord" and "Creator," are said of God from eternity, and not from time.

But on the contrary: St. Augustine says in On the Trinity that this relative appellation "Lord" belongs to God from time.[965]

I answer: Certain names importing a relation to the creature are said of God from time, and not from eternity. To understand this, it must be known that some have maintained that relation is not a thing of nature, but only a thing of reason. Which clearly appears to be false from this, that things themselves have a natural order and habitude to one another. Nevertheless, one must know that,

965. St. Augustine, De Trinitate, c. 16, com. 3.

since relation requires two extremes, it is in a threefold way that it is constituted as a thing of nature and of reason. Sometimes indeed it is only of reason, when namely an order or habitude cannot exist between certain things except according to apprehension by reason only: as when we say "the same is the same as the same." For according as reason apprehends something as one, it sets it down as if it were two; and thus it apprehends a certain habitude of it to itself. And similarly for all those relations that are between being and non-being, which reason forms inasmuch as it apprehends the non-being as a certain extreme. And the same holds for all relations that follow an act of reason, as genus and species and the like. Certain relations, however, are, as to both extremes, things of nature: when namely there is a habitude between two things according to something really belonging to each extreme; as is evident about all the relations that follow quantity - greater and smaller, double and half, and the like. For quantity is in both extremes. And it is similar regarding relations that follow action and passion - mover and mobile, father and son, and the like. Sometimes, however, relation is, in one extreme, a thing of nature, and in the other, a thing of reason only; and this happens whenever the two extremes are not of one and the same order: as sense and knowledge are referred to the sensible and the knowable, which, inasmuch as they are certain things existing in natural being, lie outside the order of what is sensible and intelligible. And therefore in knowledge and in sense there is a real relation, according as they are ordered to knowing or sensing things; but the things themselves, considered in themselves, lie outside the order of such things; hence in them there is no relation really to knowledge and sense, but only according to reason, inasmuch as the intellect apprehends them as the terms of the relations of knowledge and sense. Whence the Philosopher says in Metaphysics V that things are not called relative because they themselves are referred to others, but because other things are referred to them; and similarly "right" is not said of a column except insofar as an animal is placed to the right of it. Therefore such a relation is not really in the column, but in the animal.[966] Since, then, God is outside the whole order of creatures, and all creatures are ordered to Him and not conversely, it is manifest that creatures are really referred to God; but in God there is no real relation of Him to creatures, but only according to reason, insofar as creatures are referred to Him. And thus nothing prevents such names importing a relation to the creature from being predicated of God from time, not on account of any change in Him, but on account of a change of the creature; just as a column becomes right with respect to an animal when the animal is moved, no change occurring about the column itself, but the animal being translated.

Reply to the first: Certain relatives are imposed to signify the very habitudes of relation - such as lord, servant, father, and son, and the like; and these are called relatives according to being. Others, however, are imposed to signify the things which certain habitudes follow - such as mover and moved, head and headship, and other such things; and these are called relatives according to predication. Thus also around the divine names this difference must be considered in two ways. For some signify the very habitude to the creature, as "Lord"; and such do not signify the divine substance directly, but indirectly, inasmuch as they presuppose it, just as lordship presupposes

966. Aristotle, Metaphysics V (Book 5), on relatives; cf. the example that "right" is said of a column only insofar as an animal stands to its right.

power, which is the divine substance. Others, however, signify the divine essence directly, and consequently import the habitude - just as "Savior," "Creator," and the like signify the action of God, which is His essence. Yet both kinds of names are said of God from time, as regards the habitude which they import, either principally or consequently, but not as regards this, that they signify the essence either directly or indirectly.

Reply to the second: Just as the relations which are said of God from time are in God only according to reason, so neither "to become" nor "to have been made" is said of God except according to reason, no change existing about Him; as is said in the Psalm: "Lord, you have been made our refuge."

Reply to the third: The operation of the intellect and of the will is in the agent; and therefore names which signify relations consequent to the action of the intellect or of the will are said of God from eternity. But those which follow actions proceeding, according to the mode of understanding, to exterior effects are said of God from time, as "Savior," "Creator," and the like.

Reply to the fourth: The relations signified by such names, which are said of God from time, are in God according to reason only; but the opposite relations are in creatures according to the thing. Nor is it unfitting that from relations really existing in the thing God be denominated; yet according to the way that opposite relations are understood by our intellect to be in God, thus God is said relatively to the creature because the creature is referred to Him; just as the Philosopher says in Metaphysics V that the "knowable" is said relatively because "knowledge" is referred to it.[967]

Reply to the fifth: Since by that same account God is referred by reason to the creature, by which the creature is referred to Him, and since the relation of subjection exists really in the creature, it follows that God is lord not according to reason only, but really. For He is called "Lord" in the very way that the creature is subjected to Him.

Reply to the sixth: To know whether relatives are simultaneous by nature or not, one must not consider the order of the things of which the relatives are said, but the significations of the relatives themselves. For if the one in its concept includes the other, and conversely, then they are simultaneous by nature, as double and half, and father and son, and the like. But if the one includes the other and not conversely, then they are not simultaneous by nature. And in this way knowledge and the knowable stand. For the knowable is said according to potency; but knowledge according to habit, or according to act. Hence the knowable, according to the mode of its signification, pre-exists knowledge. But if the knowable be taken according to act, then it is simultaneous with knowledge according to act; for nothing is known unless there be the knowledge of it. Therefore, although God is prior to creatures, nevertheless in the signification of "Lord" there is included that He have a servant, and conversely; and thus the two relatives "lord" and "servant" are simultaneous by nature. Hence God was not Lord before He had a creature subject to Him.

Explicatio doctrinae articuli.

967. Aristotle, Metaphysics V: the "knowable" is said relatively because "knowledge" is referred to it.

Conclusion is: Some of these are said of God from time. St. Thomas explains this in the solution to the third: what names are those which are said of God from time. And he says that they are those which follow transient actions - such as "Creator," "Lord," "Redeemer," and so forth; for the foundation by which it can be said that God is creator begins in time, so that from eternity He cannot be said "creating": because a transient action, which begins in time, is signified by that name. Other names, however, signifying a relation which follows an immanent action, although they are not attributed to God from eternity because there was not one who would use them, nevertheless could have belonged to God from eternity, because the foundation of that relation is eternal, namely the immanent action about possibles or futures, which are from eternity possible and, if future, future.

Around these names indeed, which by reason of immanent action are said of God, it must be noted that not all signify a necessary order in God. For some denote an order to future creatures, which does not belong to God necessarily: He could, remaining the same, have brought it about that nothing would ever be future; whence He would not be "predestining," "prescient," or "providing." Others, however, signify an order to possible creatures, which necessarily belongs to God, although it be not real, but of reason, because creatures are necessarily possible, and hence the foundation of this relation is necessary. Nevertheless, all these names belong to God from eternity, nor can they belong to Him from time only: because both the possible creature and the future - if it is to be future - are from eternity possible or future. Whence also we shall prove in question 14, article 15, the immutability of God's foreknowledge; and in question 19, article 7, the immutability of His will.[968]

Around the reply to the third, there is commonly disputed here, by some Nominalists, whether the relations of "Creator" and "Lord," which are attributed to God from time, just as the names of them, are real or are of reason; and indeed, about the relation in God I see that there can be controversy among Catholics. For no one can assert, nor has anyone hitherto said, that those relations are real, that is, really and intrinsically in God, either arriving to Him from time, or adhering to Him from eternity not necessarily but freely - as we shall show by evident reason in Disputation 80, chapter 2. That they belong to Him freely cannot be doubtful: for they are with respect to creatures future or present, which are not necessarily future or present. Wherefore, since Ockham and Gabriel in I, dist. 30, q. 5; Durandus, q. 3; Marsilius in I, q. 32, art. 1; and Gregory in I, dist. 28, q. 3, art. 1, call these relations "real," although they do not err in the thing itself, yet they are to be noted for impropriety of speech: for they themselves do not say that these are...

Articulus VIII - Whether this name, God, is a name of the nature

It is objected to the eighth as follows.

968. Vazquez's cross-references: q. 14, art. 15 on the immutability of God's foreknowledge; and q. 19, art. 7 on the immutability of God's will.

1) It seems that this name "God" is not a name of the nature. For St. John Damascene says in I De fide orthodoxa, cap. 12, that "God" (Theos) is said from theasthai, which is to care for and foster all things, or from aithein, that is, to burn - for our God is a consuming fire - or from theasthe, which is to consider all things. But all these pertain to operation: therefore this name "God" signifies an operation, and not the nature.[969]

2) Further, something is named by us according to the way in which it is known. But the divine nature is unknown to us: therefore this name "God" does not signify the divine nature.

But on the contrary: St. Ambrose, in the book On the Faith, says that "God" is a name of the nature.[970]

I answer: It must be said that it is not always the case that that, from which the name is imposed in order to signify, and that, to which the name is imposed to signify, are the same. For just as we know the substance (*substantia*) of a thing from its properties or operations, so also do we name the substance of a thing, whenever from some operation or property of it we denominate it. Thus we denominate the substance of a stone from some action of it, because it hurts the foot; yet this name is not imposed to signify that action, but the substance of the stone. But those things which in themselves are known to us, like heat, cold, whiteness, and the like, are not denominated from other things. Hence in such cases that which the name signifies and that from which the name is imposed to signify are the same. Because therefore God is not known to us in his nature, but becomes known to us from his operations or effects, from these we are able to name him, as was said above. Hence this name "God" is a name of an operation as regards that, from which it is imposed to signify; for this name is imposed from the universal providence of things. For all who speak of God intend by this to name that which has universal providence over things. Thus also Pseudo-Dionysius says in On the Divine Names XII, a little before the middle, that Deity is that which sees all things with providence and with perfect goodness. From this operation, accordingly, the name "God" is taken and is imposed to signify the divine nature.

Reply to the first: All the things Damascene has set down pertain to providence, from which this name "God" is imposed to signify.

Reply to the second: Although we are able to know the nature of some thing from its properties and effects, and in this way to signify it by a name; whence, because we are able to know the substance of a stone from its property by knowing in itself what a stone is, this name "stone" signifies the nature of stone, according as it is in itself. For it signifies the definition of stone, by which we know what a stone is. For the account which a name signifies is a definition, as is said in Metaphysics IV. But from divine effects we are not able to know the divine nature according as it is in itself, so as to know of it what it is; rather we know it according to the mode of eminence, causality, and negation, as was said above. And thus this name "God" signifies the divine nature. For the name has been imposed to signify one who stands over all things, which is the principle of all and removed from all. This in fact those who name "God" intend to signify.

969. St. John Damascene, De fide orthodoxa I, cap. 12; cf. Heb 12:29 ("our God is a consuming fire").

970. St. Ambrose, De fide, prologue near the beginning; cf. also Comm. in Gal. cap. 3, post medium; and De fide ad Graecos (as cited in the margins of the edition).

Conclusion of the article: The name "God," as to that whence it has been imposed, signifies an action; but as to that for the signifying of which it has been imposed, it signifies the substance and the very nature of God.

- Concerning the doctrine of the article.

Disputatio LVIII - Concerning the doctrine of the article

Caput I - What the Fathers thought about this name, God

No one among the Scholastics, besides Cajetan and other Thomists, disputed this matter; but among the Fathers St. John Damascene in De fide orthodoxa, cap. 12, handled it diligently, whose opinion St. Thomas set forth this article to explain.[971] Damascene teaches that the name Theos - whence the Latin name "Deus," with a few letters changed, seems to be taken - is derived from theasthai, that is, from the verb that signifies "to look over, to behold," because God looks over all things; or from the verb that means "to run" (theein), because, as it were, running through all created things he cherishes and preserves each one; or from aithein, which is "to burn," since God is said to be a fire consuming vices. This etymology of the word was also handed down by Athanasius in the book On Definitions not far from the beginning, and in part approved by St. Gregory Nazianzen, Oration 16, n. 70.[972]

Then Damascene teaches that this name "God" and that one of Exodus 3, "He who is" (Qui est), are principal; but that the rest do not so perfectly signify God; and among these two he assigns the prior place to the name "He who is." The same had been taught by Nazianzen in the place cited, by Nicetas in Oration 42 of Nazianzen, on the words "God always was," and by Elias of Crete on Oration 23 of Nazianzen, on the words "Grant, O Piety," etc. From these, however, Nazianzen and Nicetas assert, for this reason, that among the other names these two are the chief: because that name "He who is" signifies being itself; but "God" signifies his most perfect operation, namely, to look over all things. In which they seem to be opposed to the doctrine of this article: for in it the Holy Doctor maintains that the name "God" also signifies the substance. But how St. Thomas and Damascene did not teach contraries, we shall soon demonstrate. Elias, for his part, thinks these two names are the most principal among the others because they more aptly signify the substance of God than the others: wherefore he seems to support St. Thomas's opinion.[973]

The same also was taught by Athanasius in a certain Epistle On the Decrees of the Nicene Synod, which begins "Refute what has been done," after the middle, where he says: "When we say 'God' and name 'Father,' we signify none of the things which are around him, but his very substance." Nor is that a counterargument which Damascene says, De fide orthodoxa I, cap. 12 - namely, that among God's names the first is "Good," as is also gathered from that same book, caps.

971. Cajetan and other Thomists on this article; St. Thomas, Summa theologiae I, q. 13, a. 8.

972. Athanasius, De definitionibus (near the beginning); St. Gregory Nazianzen, Oration 16, n. 70.

973. Nicetas, Oration 42 on St. Gregory Nazianzen, on the words "Deus semper erat"; Elias of Crete, Oration 23 on St. Gregory Nazianzen, on the words "Quin pietatis...".

2, 3, and 4 - because, as Clichtove has very well noted on that same cap. 12, among the names which show forth the substance of God through effects, "Good" holds the first place; but the name "He who is" is chief and first for signifying the substance and nature of God as it is in itself, most hiddenly lying concealed.[974]

Caput II - The opinion of St. Thomas on the same matter

This opinion of the Fathers St. Thomas explains. He first proposes this notation: If you look to that whence the name "God" has been taken, it signifies an action - namely, either of foreseeing, or of running through, or of burning; but if you look to that for the signifying of which it has been imposed, it denotes the very substance of God, as in the conclusion of the article we have set down.

For a fuller explanation of this matter a few points must first be observed.

First notable. The name "God" is sometimes accommodated, in a figurative way, to men, as in Psalm 81: "God stood in the synagogue of gods": but we are not now treating of its signification in this mode; in the common and proper way it signifies first of all the being that is the cause and principle of all things.

Second notable. It must be noted that there are three kinds of names which are ascribed to God on the ground of action: some are adjectives signifying an action, such as "omnipotent," "wise," and the like; others are substantives likewise signifying an action, as "creator," "judge," "ruler," and the like; others, however, which from the derivation or application of the appellation were taken from an action, no longer formally signify the action, but denote the very substance; and of this sort St. Thomas judges the name "God" to be. Now between these there is a manifest difference: for the names of the first and second genus, although on the part of the subject, because they supposit for the material signified, denote the substance of God, nevertheless on the part of the predicate they always signify and formally express the action; wherefore, when we say "The Father is God," we do not signify that the Father looks over all things, or runs through, or burns; but that the Father is that first substance which we call by this name. But on the contrary, when we say "The Father is omnipotent" and "creator," we denote that he can do all things and create the universe, which is to signify an action formally.

What has been said about the name "God" agrees also with other names of created things: for the name "stone" (lapis), derived from "hurting the foot" (laedendo pedem), and also many household names taken from some action or effect, by usage itself are now adapted to signify the substance itself. A sign of this is that those who use these names to denote that thing altogether ignore the derivation: therefore they are not assumed to signify that whence they have been taken. Moreover, although the name "God" denotes the substance of God and not his operation, nevertheless it does not signify what he is, but that he is, as we noted above in article 3 on the authority of Cyparisthoto.

974. Athanasius, Epistle On the Decrees of the Nicene Synod ("Redarguite factum"), after the middle; St. John Damascene, De fide orthodoxa I, caps. 2 - 4, 12; Clichtove on the same cap. 12.

Caput III - In what sense the name "God" can be said to be connotative

Some assert that the name "God" is connotative of creatures, that is, that it signifies God himself in such a way that at the same time it somehow denotes creatures. But Gabriel, in I, dist. 22,

- Prior to this article there was to be noted, in what pertains to the relations which are between God and creatures, that certain authors call those relations "real," yet do not wish to call them relations of reason, because with no intellect operating God really creates and is that which is called "creating"; Gregory, however, speaks much more obscurely than the rest. Those authors differ from others only in this, that they are unwilling to call those relations relations of reason. It must be said, however, that the foundation from which the relation is taken, and from which a relative name is attributed to God, is real - either present, or future, or possible; wherefore by some an extrinsic real relation is wont to be named. But in God himself without doubt only a relation of reason is to be posited. Therefore, when an extrinsic real denomination is spoken of, the operation of our intellect is not entirely excluded, because denomination is a work of reason; but it is signified that there is something real from which our intellect took that denomination. Wherefore, if we speak of that relation whose denomination is derived from that extrinsic foundation, insofar as it is said to be in God or to befit him, it is to be called a relation of reason - thus St. Thomas calls it in this article, and Cajetan too "as to the fourth"; and the same St. Thomas in Contra gentiles II, cap. 12, and there the Ferrariensis.[975] On this proposition, and on what follows, see St. Bonaventure in I, dist. 30, q. 3; Richard, q. 4; Scotus ad q. 2; Capreolus, q. 1, art. 1, concl. 3, and art. 2, concl. 2 and 3; Deza Hispanus, art. 1; Henry, Quodlibet 9, q. ...[976] Moreover, whether there is in God an eternal real relation to creatures, we shall say below in Disputation 104, last chapter; and whether rather there is in God a relation of reason formed by the very divine intellect, and how by the human intellect, we shall treat below in Disputation 118, cap. 2; finally, how these denominations befit God from eternity, since they are relations of reason, will be explained in q. 14, art. 15. Concerning the same solution Cajetan disputes, whether relatives of the third genus are referred really to an absolute term or to a term in some way relative, and likewise about other relatives. Nevertheless, about this matter we shall say a little incidentally below in Disputation 160, cap. 6, lest we overstep the bounds of Theology.[977]

Some hold that many names derived from action do indeed formally signify and express the action, under which God himself is signified. But names of the third genus, such as "God" (Deus), although they were derived from action, by usage now do not signify the action, but the substance; and therefore, even if the name "God" be placed on the side of the predicate - where, according to

975. St. Thomas, Summa theologiae I, q. 13, a. 7 - 8; Contra gentiles II, cap. 12; Ferrarensis (commentary ad loc.).
976. St. Bonaventure, In I Sent., dist. 30, q. 3; Richard; Scotus ad q. 2; Capreolus, In I Sent., q. 1, art. 1, concl. 3; art. 2, concl. 2 - 3; Deza Hispanus, art. 1; Henry of Ghent, Quodlibet 9, q. ...
977. Cajetan, on relatives of the third genus; see also Vazquez, Disputationes 104 (cap. ult.), 118 (cap. 2), and 160 (cap. 6); and q. 14, a. 15 on the immutability of God's foreknowledge.

the opinion of some, names stand only for the formal signified - it never denotes action, but the substance and nature of the first cause itself. By contrast, names such as "omnipotent" and "creator," and the like, of the first and second genus, although on the side of the subject, because they stand for the material signified, they denote the substance of God; yet on the side of the predicate they always signify action, and formally they express it. Hence, when we say, "The Father is God," we do not signify that the Father sees all things, or reasons, or burns; but that the Father is that first substance which we designate by this name. By contrast, when we say, "The Father is omnipotent and creator," we denote that he can effect all things and create the universe, which is to signify action formally.

What has been said about the name "God" holds also for other names of created things. For the name "stone" (lapis) is derived from "hurting the foot," and many names of families are also taken from some action or effect; and yet by usage they are now accommodated to signify the very substance. A sign of this is that those who are entirely ignorant of the derivation use these names to denote that very thing; therefore they are not taken to signify that whence they are derived. Nevertheless, although the name "God" denotes the substance of God and not his operation, yet it does not signify what he is, but that he is, as we noted above in art. 3.

By this reason the name "God" can be said in a certain way to be more connotative.

Second opinion. Some assert that the name "God" is connotative of creatures, that is, that it signifies God in such a way that at the same time it somehow denotes creatures. Gabriel, however, in I, dist. 22, q. 1, art. 2, and other more recent theologians teach that some divine names are not connotative; and they judge that the name "God" is such.[978] Perhaps among them there is not a difference of things, but of words. For if we understand as "connotative" that which so signifies one thing as to denote it under some respect to another - as is commonly said of a connotative name - then the name "God" will not be connotative, because it does not signify God under any relation to creatures. Other names, however, such as "creator," "omnipotent," "wise," are connotative in this way. For although the name "God" has been derived from an action, by reason of which in this way it ought to be connotative, nevertheless by usage it has already been accommodated to signify the substance of God itself, not an action. And that Nazianzen counted the name "God" among relatives matters little; for he was attending more to the etymon of the name than to the very signified which it now has by usage. Hence neither Nicetas, in that Oration 42 on Nazianzen, nor Damascene in the places cited, place this name "God" among relative names of God. The other names, however, which denote the relation of God to creatures, can in this way be called connotative.[979][980]

But if a connotative name is that on hearing which we are also compelled to conceive something other than the thing signified itself, there is no doubt that all the names of God are connotative. For since we conceive God after the likeness (*instar*) of visible things, we cannot, on hearing the word "God," so understand him as not to apprehend something else whose likeness God himself is

978. Gabriel Biel, In I Sent., dist. 22, q. 1, a. 2; and others among recent theologians.
979. St. Gregory Nazianzen, Oration 36, n. 71.
980. Nicetas, Oration 42 on St. Gregory Nazianzen; St. John Damascene, De fide orthodoxa I, in the loci cited.

known by us to be - which no Scholastic can deny. Yet this does not seem to be a proper connotation. For connotation properly belongs to a name whenever, on hearing it, by force of the very imposition and usage of it, we conceive something other than the precise signified; and this is for it, by its own force, to express and connote something else. But upon hearing any name which by imposition is absolute, to conceive something else, besides the direct signified, by whose likeness we come to know that which is signified by the name, does not suffice for the name itself to be connotative. This doctrine is gathered from St. Thomas in this question, art. II, ad 3.[981]

Articulus IX - Whether this name "God" is incommunicable

Objicitur. 1. It seems that this name, "God," is communicable. For whatever is communicated according to the thing signified by a name, the name itself is communicated. But this name "God" (as was said) signifies the divine nature, which is communicable to others, according to that 2 Peter 1: "He has given us great and precious promises, that by these we may be made partakers of the divine nature." Therefore this name "God" is communicable.

1. Further, only proper names are not communicable. But this name "God" is not a proper name, but an appellative; which is clear from this, that it has a plural, according to Psalm 81: "I have said, You are gods." Therefore this name "God" is communicable.
2. Further, this name "God" is imposed from operation, as was said. But other names which are imposed on God from operations or effects are communicable, as "good," "wise," and the like. Therefore this name "God" is communicable.

Sed contra: It is said, Wisdom 14: "They imposed on wood and stones a name that cannot be communicated"; and he is speaking of the name of deity. Therefore this name "God" is an incommunicable name.

Respondeo. It must be said that a name can be communicable in two ways: one way, properly; the other, by likeness. Properly, that is communicable which, according to the whole signification of the name, is communicable to many. By likeness, however, that is communicable which is communicable according to something of what is included in the name's signification. For example, the name "lion" is properly communicated to all those in whom the nature signified by this name "lion" is found. But by likeness it is communicable to those who participate in something leonine, as boldness or strength; such men are called "lions" metaphorically.

Now to know which names are properly communicable, one must consider that every form existing in a singular supposit, by which it is individuated, is common to many, either according to the thing, or at least according to the notion. Thus human nature is common to many both according to the thing and according to the notion. The nature of the sun, however, is not common to many according to the thing, but only according to the notion; for the nature of the sun can be understood as existing in several supposits. And this is because the intellect is of the nature to

981. St. Thomas, in this question, art. II, ad 3.

understand the form of any species by abstraction from the singular. Hence to be in one singular supposit or in several is besides the notion of the species' nature. Therefore, the notion of the species' nature remaining, it can be understood as existing in several. But a singular, because it is singular, is divided from all others. Hence every name imposed to signify some singular is incommunicable both in reality and in notion. For the plurality of this individual cannot fall under apprehension. Whence no name signifying some individual is communicable to many properly, but only according to likeness: as someone can metaphorically be called "Achilles," insofar as he has something of Achilles' properties, namely, fortitude.

But forms which are not individuated by another supposit, but by themselves - namely, because they are simple subsisting forms - if they were understood according to what they are in themselves, could be communicated neither in reality nor in notion; but perhaps by likeness, as is said of individuals. But because we cannot understand simple subsisting forms according to what they are, but we understand them in the mode of composite things having forms in matter, therefore, as has been said, we impose on them concrete names that signify the nature as in some supposit. Hence, as regards the rationale of names, the same rationale holds both for names imposed by us to signify the natures of composite things and for names imposed by us to signify simple subsisting natures. Accordingly, since this name "God" is imposed to signify the divine nature, as has been said; and since the divine nature is not multipliable, as has been shown above; it follows that this name "God" is incommunicable indeed according to the reality, but communicable indeed according to opinion: just as the name "sun" would be incommunicable according to the opinion of those positing many suns. And according to this it is said, Galatians 4: "You served those who by nature are not gods"; the Gloss: "not gods by nature, but by the opinion of men." Yet this name "God" is nevertheless communicable, not according to its whole signification, but according to something of it, by a certain likeness, so that those are called "gods" who participate in something divine by likeness, according to that: "I have said, You are gods." But if there were any name imposed to signify God, not on the side of the nature, but on the side of the supposit as it is considered "this something," that name would be in every way incommunicable: as perhaps is the Tetragrammaton among the Hebrews. And it would be similar if someone imposed a name on the sun designating this individual.

Ad primum: Therefore it must be said that the divine nature is not communicable except according to a participation of likeness

Ad secundum: This name "God" is an appellative and not a proper name, because it signifies the divine nature as in a bearer, although God himself is neither universal nor particular according to the reality. For names do not follow the mode of being which is in things, but the mode of being which is in our cognition. And yet, according to the truth of the matter, it is incommunicable, as was said with respect to the name "sun."

Ad tertium: These names "good," "wise," and the like are indeed imposed from perfections proceeding from God into creatures; yet they are not imposed to signify the divine nature, but to signify those very perfections absolutely. And therefore also according to the truth of the thing they are communicable to many. But this name "God" is imposed from the operation proper to God, by which we continually experience it to be used to signify the divine nature

The conclusion of the argument is this: The name "GOD" cannot in reality be properly communicated to many; yet it can be communicated analogically and according to opinion; and further, it can truly be communicated by way of participation, as when eminent men are called "gods."

Articulus X - Whether this name "God," said of God by participation and by nature and by likeness, is equivocal

Objicitur. 1. It seems that this name "God" is said univocally of God by nature, and by participation, and by likeness. For where there is diverse signification, there is not a contradiction between one affirming and one denying: for equivocation impedes contradiction. But the Catholic, saying "The idol is not God," contradicts the pagan saying "The idol is God": therefore "God" taken in both places is said univocally.

1. Further, just as the idol is "god" according to opinion and not according to truth, so the enjoyment of carnal pleasures is called "happiness" according to opinion and not according to truth. But this name "happiness" is said univocally of this imagined happiness and of this true happiness. Therefore also this name "God" is said univocally of God according to truth and of "god" according to opinion.
2. Further, those are called univocal of which there is one ratio. But the Catholic, when he says that there is one God, understands by the name "God" a thing omnipotent and most to be venerated; and the gentile understands the same when he says that the idol is God. Therefore this name is said univocally in both places.

Sed contra: What is in the intellect is the likeness of what is in the thing, as is said in Perihermeneias I. But "animal," said of a true animal and of a painted animal, is said equivocally. Therefore this name "God," said of the true God and of "god" according to opinion, is said equivocally.[982]

1. Further, no one can signify that which he does not know. But the gentile does not know the divine nature. Therefore, when he says "The idol is God," he does not signify the true deity; but the Catholic signifies this when he says that there is one God. Therefore this name "God" is not said univocally, but equivocally, of the true God and of "god" according to opinion.

982. Aristotle, Perihermeneias (De interpretatione) I, cap. 1.

Respondeo. It must be said that this name "God," in the three aforesaid significationes, is taken neither univocally nor equivocally, but analogically; and this is clear from the following. For of univocals the ratio is altogether the same; of equivocals the rationes are altogether diverse; but in analogicals it is required that the name, taken according to one signification, be placed in the definition of the same name taken according to the other significations. Thus "being" (ens), said of substance, is placed in the definition of "being" as said of accident; and "healthy," said of an animal, is placed in the definition of "healthy" as said of urine and of medicine - for of this "healthy" which is in the animal, the urine is a sign and the medicine a cause of health. So it happens in the present case. For this name "God," according as it is taken for the true God, is included in the account of "God" as it is said according to opinion or by participation. For when we call someone "god" by participation, we understand by the name "God" something having a likeness to the true God; similarly, when we call an idol "god," by this name "God" we understand something to be signified of which men have the opinion that it is God. And so it is manifest that there is a distinct signification of the name; but one of these significations is contained under the others. Whence it is clear that it is said analogically.

Reply to the first: Multiplicity of names is not attended according to men's predications, but according to significations. For this name "man," of whomever it is predicated, whether truly or falsely, is said in one way; but it would be said in many ways if, by this name "man," one intended to signify what we see to be a man, and another intended by the same name to signify a stone or something else. Whence it is plain that the Catholic, saying that the idol is not God, contradicts the pagan asserting this, because each uses this name "God" to signify the true God.

Reply to the second and to the third together: The reasons there proceed according to a diversity of predication of the name, and not according to a diversity of signification.

Reply to the fourth: The term "animal," said of a true animal and of a painted one, is not said purely equivocally. But the Philosopher in a broad sense takes "equivocal" so as also to include analogical names: and thus even "being," which is said analogically, is sometimes reckoned among the equivocal.

Reply to the fifth: As to the divine nature itself, the gentile does not know it; yet he knows it according to some rationale of causality, or of excellence, or of remotion, as was said above. And according to this he can take this name "God" in the same signification as the Catholic takes it when he says, "The idol is not God." But if there were someone who, according to no rationale, knew anything of God, neither would he name him - unless perhaps as we sometimes utter names whose significations we do not know.

Explicatio Articuli. The conclusion is that of God according to nature, and of "god" according to opinion, and by participation the name "GOD" is said according to analogy. The sense of St. Thomas in this article seems difficult. For if he is saying that those three significata of the name "GOD" cohere analogically under the same name...

The name God, in the three aforesaid significations, is taken neither univocally nor equivocally, but analogically: which is clear from this. For of univocals there is wholly the same rationale; of equivocals, a wholly diverse rationale; but in things said analogically it is required that a name, taken according to one signification, be placed in the definition of the same name taken according to other significations. Thus, being is said of substance, and is placed in the definition of being as it is said of accident; and healthy, said of an animal, is placed in the definition of healthy as it is said of urine and of medicine. For of this healthy which is in an animal, urine is a sign, and medicine a cause. So it happens in the present case. For this name God, insofar as it is taken for the true God, is taken in the notion of God according to that by which God is said according to opinion or participation. For when we name someone a god by participation, by the name God we understand something that has a likeness of the true God. Likewise, when we name an idol god, by this name God we understand something to be signified of which men have the opinion that it is a god; and thus it is manifest that the signification of the name is one thing and another; but one of those significations is included within the others. Whence it is manifest that it is said analogically.

Reply to the first: Multiplicity of names is not considered according to a man's predication, but according to signification. For this name man, of whomever it be predicated, whether truly or falsely, is said in one way. But then it would be said in many ways, if by this name man we intended to signify diverse things - suppose one intended by this name man to signify that which is truly a man, and another intended to signify by the same name a stone, or something else. Whence it is clear that the Catholic, saying that an idol is not God, contradicts the pagan affirming this; because each uses this name God to signify the true God. For when the pagan says an idol is God, he is not using this name according to that by which it signifies a god according to opinion. For thus he would speak truly, since even Catholics sometimes use this name in such a signification, as when it is said, "all the gods of the nations are demons." And similarly is to be said to the second and the third. For those reasons proceed according to a diversity of predication of the name, and not according to a diverse signification.

Reply to the fourth: Animal, said of a real animal and of a painted one, is not said purely equivocally. But the Philosopher in a broad sense takes equivocal things as including within themselves analogical ones; because even being, which is said analogically, is sometimes said to be predicated equivocally of diverse predicaments.

Reply to the fifth: The very nature of God, as it is in itself, neither the Catholic nor the pagan knows; but each knows it according to some rationale of causality, or excellence, or remotion, as was said above. And according to this, the gentile can take in the same signification this name God, when he says, "the idol is God," in which the Catholic takes it when saying, "the idol is not God." But if there were someone who, according to no rationale, knew anything of God, neither would he name him, unless perhaps as we sometimes utter names whose significations we do not know.

Explicatio Articuli. The conclusion is, that of God according to nature, and of "god" according to opinion, and by participation, the name GOD is said according to analogy. The sense of St. Thomas in this article seems difficult; yet from the body and from the reply to the first, I think I can gather it. It is therefore to be noted that the gods of the gentiles can be signified by the name God in a

twofold way, inasmuch as the signification is referred to diverse intellects: first, to the intellect of the gentile, who is persuaded that there are many gods, and for him the name God signifies univocally many - whether among them we include the true God of the Christians, or only many of the gentiles; for in the intellect of the gentile himself all are true gods, since he thinks the true nature of deity befits them, although this is only according to opinion, not in reality. But to the faithful intellect, which holds that there is one only God, and that the rest of the gentiles' [so-called gods] are false, the name God does not signify univocally many gods, although those whom the gentiles adore the faithful also call "the gods of the gentiles"; rather it signifies analogically, because the name God to the faithful properly signifies the true God, but the others, according to the opinion of the gentiles: nor does he apprehend them as true gods, but as thought-to-be gods. And with respect to this intellect St. Thomas speaks in this article, when he says that the name God is said analogically of the true God, and of "god" according to opinion. For to the gentile intellect it signifies all gods univocally, because although he supposes to be gods those who really are not, yet he thinks them to be true [gods], and not only according to opinion. Wherefore the Christian, who says, "An idol is not God," truly contradicts the gentile saying, "An idol is God"; and each takes the name God in the primary signification of the true God, which is the proper one. Therefore the name God, for the gentile, is univocal to the true and to the false gods whom he deems true; otherwise, the Catholic denying that an idol is God would not contradict him, because the Catholic uses that name in its proper signification for the true God, whereas if the gentile used it analogically, there would be no contradiction - since the term would not be the same, which is necessary for contradiction.

Articulus XI - Whether the name "Who is" is God's proper name, and more suited to the divine nature

To the eleventh, one proceeds thus. It seems that this name, "Who is," is not the most proper name of God. For this name God is an incommunicable name, as has been said. But this name "Who is" is not an incommunicable name. Therefore this name "Who is" is not the most proper name of God.

1. Moreover, Pseudo-Dionysius says in book 3, chapter on the Divine Names, that the appellation "Good" is most excellently manifestative of all the processions of God. But this chiefly befits God, that he is the universal principle of things; therefore this name Good is the most proper of God, and not this name "Who is."
2. Moreover, every divine name seems to import a relation to creatures, since God is not known by us except through creatures. But this name "Who is" imports no habitude to creatures. Therefore this name "Who is" is not the most proper name of God.

But on the contrary is what is said in Exodus 3: to Moses asking, "If they shall say to me, what is his name? what shall I say to them?" the Lord answered him: "He Who Is has sent me to you." Therefore this name "Who is" is the most proper name of God.

I answer that this name "Who is" is, for a threefold reason, the most proper name of God. First, on account of its signification. For it does not signify some form, but the very existence (*esse*). Wherefore, since God's existence is his very essence, and this befits no other, as was shown above, it is manifest that among other names this most properly names God. For each thing is denominated from its form.[983]

Second, on account of its universality. For all other names are either less common, or, if they are convertible with it, nevertheless they add something over and above it according to their rationale. Hence they in some manner "inform" and "determine" the thing itself. But our intellect cannot know God's very essence in via, as it is in itself; rather, whatever mode it determines concerning that which it understands of God, it falls short of the mode in which God is in himself. And therefore, the less determinate, and the more common and absolute certain names are, by so much the more properly are they said of God by us. Whence also St. John Damascene says that "Who is" is the most principal among all the names said of God; for "comprehending wholly in itself it has the very existence, like an infinite and indeterminate sea of substance." For by any other name some mode of the substance of a thing is determined; but this name "Who is" determines no mode of being, but is indeterminate as to all. And so it names the very sea of infinite substance.

Third, from its mode of signifying: for it signifies existence in the present. And this is said most properly of God, whose existence knows not a past or a future; as St. Augustine says in book 5 On the Trinity.[984]

Reply to the first: This name "Who is" is a more proper name of God than the name God, as to that from which it is imposed - namely, from existence (*esse*) - and as to the mode of signifying and consignifying, as has been said. But as to that to signify which the name is imposed, this name God is more proper, which is imposed to signify the divine nature. And yet more proper is the Tetragrammaton, which is imposed to signify God's very incommunicable and (so to speak) singular substance.

Reply to the second: The name Good is the principal name of God insofar as he is a cause, yet not simply; for existence absolutely is presupposed to "cause."

Reply to the third: It is not necessary that all divine names import a habitude to creatures; it suffices that they are imposed from certain perfections proceeding from God into creatures, among which the first is existence itself, from which this name "Who is" is taken.[985][986]

Conclusion of the article: The name WHO IS more properly, and especially among the rest, expresses the essence of God; St. Thomas most fittingly explains it in the body of the article; and among the holy Fathers, whom in the next disputation we shall mention, it is without controversy; yet in the replies St. Thomas has a more difficult doctrine, which we willingly examine in detail.

Disputatio LIX - Whether "Who is" is the same as the Tetragrammaton

Caput I - Two extreme opinions; the prior opinion of St. Thomas

Whether the name QUI EST and the Tetragrammaton, which is commonly said IEHOVAH, are the same. Disp. 59.

Two extreme opinions on this matter.

The prior opinion is St. Thomas's in the first reply: that there are two distinct names of God imposed to signify him himself, the name "Who Is," and the name Tetragrammaton, or the name Iehovah, which St. Jerome had earlier handed down in the Epistle to Marcella, number 138. This is proved from the fact that in Exodus 3, when Moses was being sent by the Lord to the sons of Israel, and he asked the Lord with these words, "If they shall say to me, What is his name? what shall I say to them?" he answered, "Who Is has sent me to you." But a little later, when in the same chapter it is said, "The Lord God of your fathers," in the Hebrew there is set the name יהוה, Iehova, which is called the Tetragrammaton; therefore they are distinct names.[987]

In this opinion Burgensis is included; who, however, in the addition to chapter three of Exodus, although he deems this opinion of the holy Doctor probable, himself taught otherwise. For he asserts that when in that chapter the Lord said, "I am who am," and again, "Who Is has sent me to you," he did not wish to impose upon himself any name by which he might peculiarly denote his essence (such as some think that "Who Is" is), but he wished only to indicate that he would be leader, and would be present in all the labors of the Israelites' pilgrimage. For where the Vulgate reads, "Ego sum, qui sum," in Hebrew it stands thus, אהיה אשר אהיה, Eheh aser eheieh, that is, "I will be, who will be"; and again, where the Vulgate reads, "Who Is has sent me to you," in Hebrew it is said thus, "He-who-will-be has sent me to you." The sense, says Burgensis, is: "I will be, who will always be with you"; and again: "He-who-will-be," that is, "he who said, I will be with you," has sent me to you. And he says this is the exposition of the Hebrews. Wherefore, since later in the same chapter of Exodus it is said, "The Lord God of your fathers," where the Tetragrammaton Iehova is put, there is not set some other name; but since earlier no peculiar name of God had been set, here that name is set which is called first and ineffable.[988][989]

Caput II - The truer opinion

A more probable and common opinion is that which teaches that "Who Is," which is had in Exodus 3, and the Tetragrammaton, which is put there as well, are entirely the same. This opinion contains two points. One is that "Who Is" is a name of God, and that the Lord in Exodus 3 used it in

987. St. Jerome, Epistula ad Marcellam (no. 138).
988. Burgensis, Addition to Exodus 3.
989. The Venerable Bede, on Exodus, to the same effect.

order to impose a name on himself and to express his essence to Moses. The other is that it is entirely the same name, and imposed to signify the same thing in the same way. We shall prove the former part in this chapter, but the latter in the following.

For which purpose, first it is to be noted, as Lippomanus most aptly observed in the Catena on Exodus on that passage which we cited from chapter 3, that it matters little that the Vulgate renders in the present the future tense which is in the Hebrew - namely, "I will be who will be," and again, "I-Will-Be has sent me to you" - rendering it as "I am who am," and again, "Who Is has sent me to you." For in Hebrew very often the future is put for the present, of which the Hebrew lacks a proper form; as in Genesis 37, when Joseph, seeking his brothers in the field, said - in Hebrew, "What wilt thou seek?" or "What wilt thou be seeking?" - our Vulgate has, "What do you seek?" And in Tobit 1 the Vulgate reads, "Whence do you come?" whereas the Hebrew says, "Whence will you come?" And in our common Spanish tongue we sometimes say in a similar interrogation about the future, "So then you will be coming from such a place," as if we were saying, "you are coming." Accordingly, even if one were to say that there the future is not put for the present, nevertheless in either way the divine nature and essence are peculiarly set forth both in the present and in the future - "I am who am," and "I will be who will be" - as will be set forth more fully below.[990][991]

Caput III - The latter part of the opinion, that the name WHO IS, and the tetragrammaton, are the same

By authority this can likewise be proved, namely, that the name "Who is" and the tetragrammaton, which is commonly said "Iehoua," are altogether the same. First, among the Fathers this is attested by Clement of Alexandria, who says that Iehoua is the name of God, which we interpret "Who is" and "Who will be"; the same is expressly handed down by Theodoret, a most skilled knower of the Hebrew tongue, in the Questions on Exodus, q. 15.[992][993] Among the other Fathers cited in the preceding chapter, there is none who treats of this matter; concerning that name Nazianzen teaches this alone in that oration 36, that among the Hebrews it was ineffable and held in the highest veneration, so that with those characters no other [name] was written.[994] Among the more recent authors the same is taught by Pagninus and Mercerus in the Thesaurus, by Galatinus, by Lippomanus in the Catena on that place Exodus 3, by Eugubinus on the same place, and by Genebrard in the book On the Trinity.[995][996][997][998][999][1000]

990. Lippomanus, Catena on Exodus, ad Exod. 3.
991. Hugh of St. Victor, Annotations on Exodus, book 1.
992. Clement of Alexandria, Stromata.
993. Theodoret, Quaestiones in Exodum, q. 15.
994. St. Gregory Nazianzen, Oratio 36 (the fourth on theology), no. 72.
995. Santes Pagninus, Thesaurus.
996. Johannes Mercerus, Thesaurus.
997. Petrus Galatinus, De arcanis catholicae veritatis, lib. 2, cap. 10.
998. Lippomanus, Catena on Exodus, on Exod. 3.
999. Eugubinus (Agostino Steuco), on the same place of Exodus.
1000. Genebrardus, De Trinitate.

Moreover Galatinus, Mercerus, and Genebrard teach especially that that name of God was ineffable for the sake of religion, just as we also reported from Nazianzen, so that in its place the name Adonai would be read - unless, as Mercerus says, the same name Adonai had immediately preceded; for then Elohim was read. This, however, was preserved outside the Temple; for as Galatinus and Genebrard hand down from the ancient Hebrews, when the priest blessed the people, he pronounced this name with its proper vowels; and in this way they understand that passage Num. 6, "So shall you bless the sons of Israel," that is to say, thus, that is, with my ineffable name. So taught Rabbi Aben Ezra in the preface to Moses, and to the same point Josephus, alluding, relates in the Jewish War, book 4, chapter 12, that Annanus the high priest boasted that he had put on the pontifical garment, and for that reason cried out the ineffable name of God. And this religious rite of not pronouncing that name the Jews observe even to this day.[10011002]

Furthermore, that the tetragrammaton Iehoua and the verb yihyeh, that is, "he will be," are the same is easily evident: in that yihyeh, which is the future of the verb hayah, it has the same consonants as the tetragrammaton, except that yod is changed into vau, as is frequent among the Hebrews. For by what reason could the tetragrammaton be ineffable, unless because it signified the nature and essence (*essentia*) of God far more perfectly than [any] other? But that cannot be better denoted by another name than "Who is," or "Who will be": for it signifies that peculiar mode of essence, either what is through itself, or what is always in the same way; therefore it is the same name, with only (as I said) one letter changed, as is familiar among the Hebrews in many other [cases].

As to the pronunciation of the name Iehoua: it is now pronounced in the common way "Iehoua," which pronunciation Mercerus testifies to have been expressed from the beginning by Greek letters; from which some think the name Iouis was derived. But it is not pronounced "Iehovah" as it ought to be uttered with its proper vowels, since it is the future of the verb "to be"; because now it has vowels not proper to that future, but to the name Adonai; and from the time when the Hebrews wrote the points and vowels under the consonants, it is always written with the vowels of the name Adonai; except that, since Adonai in the first place has a guttural letter, it requires a compound sheva with pathach, whereas in the word Iehoua a simple sheva without pathach is set, because the first letter is not guttural.

Mercerus, moreover, reports from Jerome that, if the name Iehoua were to be pronounced with its proper vowels, it would be read "Iao." Yet I myself have found in Jerome, column [edition], in epistle 142, which is to Damasus, that in the middle of it with two lambdas doubled, that ineffable name is to be set down, each of which is itself also a name of God - how this is to be understood I do not know. I pass over the many mysteries which the ancient Hebrews said were in this tetragrammaton, which Galatinus more fully explains in the cited chapter and what follows; but as to what pertains to the mystery of the Trinity and is contained in that same name, we will speak in Disputation 108, chapter 3.

1001. Rabbi Abraham ibn Ezra, Preface to Moses, and to Joseph.
1002. Josephus, De bello Iudaico, lib. 4, cap. 12.

Two things only remain to be observed in this disputation. The first concerns what St. Thomas teaches, namely, that the name "God," with respect to that for the signifying of which it was imposed, is more proper to God than the name "Who is." This, indeed, I do not see how it can be defended: for although the name "God" signifies the very substance of God, as was explained above in Disputation 58, nevertheless that [substance] is also signified by the name "Who is," or by the tetragrammaton; therefore they are equal with respect to that for the signifying of which they were imposed. Furthermore, the name "God" is derived from an action, as we said there; but the name "Who is" [is derived] from the very proper act (*actus*) of the nature, namely from existence (*esse*). Besides, the name "Who is" more explicitly and distinctly denotes the nature (*natura*) of God; but the name "God" signifies it confusedly.

The second [thing] to be noted is that it is not true what Galatinus teaches, book 2 On the Secrets of Catholic Truth, chapter 10, from Rabbi Moses in the Moreh, par., chapter 60, namely that the name "Who is," or the tetragrammaton, does not signify anything common to God and creatures, as the other names of God signify, such as "wise," etc. For if you use the name "Who is" in its whole breadth, it is clear that it is common to creatures: for they also are; just as the name "wise" is common, according to the whole extension even of analogy. But if you take it for the principal signification, that is, for that which is through essence, or always without any change, without end and beginning, it signifies nothing common: yet by the same reason the name "wise," taken for its principal signification, does not denote anything common to creatures; for it signifies "wise through essence," which does not befit creatures.

Articulus XII - Whether affirmative propositions can be formed about God

To the twelfth [article] thus we proceed. It seems that affirmative propositions cannot be formed about God.

1. For Pseudo-Dionysius says in Celestial Hierarchy, chapter 2, a little before the middle, that negations about God are true, but affirmations are incomplex.[1003]
2. Moreover, Boethius says in the book On the Trinity that a simple form cannot be [as] a subject. But God is especially a simple form, as was shown above. Therefore he cannot be [a] subject; but everything of which an affirmative proposition is formed is taken as [a] subject. Therefore an affirmative proposition about God cannot be formed.[1004]
3. Moreover, every intellect understanding a thing otherwise than it is, is false; but God has existence (*esse*) without any composition, as was proved above. Therefore, since every affirmative intellect understands something with composition, it seems that a true affirmative proposition about God cannot be formed.

But on the contrary:

1003. Pseudo-Dionysius, Celestial Hierarchy, c. 2 (a little before the middle).
1004. Boethius, De Trinitate.

It seems that affirmative propositions cannot be formed about God. For Pseudo-Dionysius says in the second chapter of the Celestial Hierarchy that the negations about God are true, but the affirmations are incompact.

1. Further, Boethius says in the book On the Trinity that a simple form cannot be a subject. But God is most of all a simple form, as was shown above. Therefore he cannot be a subject; but whatever it is about which an affirmative proposition is formed is taken as a subject. Therefore an affirmative proposition cannot be formed about God.
2. Further, every intellect that understands a thing otherwise than it is, is false; but God has existence (*esse*) without any composition, as was proved above. Since therefore every affirmative intellect understands something with composition, it seems that a true affirmative proposition cannot be formed about God.

But on the contrary: What is subject to faith is not false; but certain affirmative propositions are subject to faith, for instance, that God is three and one, and that he is omnipotent. Therefore affirmative propositions can truly be formed about God.

I answer: Affirmative propositions can truly be formed about God. For clarity in this, one must know that in any true affirmative proposition it is necessary that the predicate and the subject signify the same according to the thing in some way, and different according to reason. And this is evident both in propositions that are about an accidental predicate and in those that are about a substantial predicate. For it is manifest that "man" and "white" are the same in supposit, and differ in ratio; for one ratio is that of man, and another that of white. Likewise when I say, "man is an animal": that very thing which is man is truly animal. For in the same supposit there is a sensible nature, by which it is called "animal," and a rational nature, by which it is called "man." Hence here too the predicate and the subject are the same in supposit, but diverse in ratio.

But in propositions in which the same is predicated of itself, this in a way is found in that the intellect draws what it posits on the part of the subject to the side of the supposit; but what it posits on the part of the predicate it draws to the nature of the form existing in the supposit; according to which it is said that predicates are taken formally, and subjects materially. To this diversity, which is according to reason, there corresponds the plurality of predicate and subject; the identity however in reality the intellect signifies by the very composition.

But God, considered in himself, is altogether one and simple; yet our intellect under diverse conceptions knows him, because it cannot see him as he is in himself. Yet however it understands him under diverse conceptions, it knows that one and the same thing simply corresponds to all its conceptions. Therefore by this plurality, which is according to reason, it represents by the plurality of predicate and subject; but unity it represents by composition.

Reply to the first: Pseudo-Dionysius says that affirmations about God are incompact, or "inconvenient" according to another translation, insofar as no name befits God according to the mode of signifying, as was said above.

Reply to the second: Our intellect cannot comprehend the simple subsistent forms as they are in themselves; but it apprehends them according to the mode of composite things, in which there is something that is subjected, and there is something that inheres. And thus it apprehends a simple form under the ratio of subject, and attributes something to it.

Reply to the third: This proposition, "the intellect understanding a thing otherwise than it is," is twofold: from the fact that this adverb "otherwise" can determine this verb "understands" either on the side of the thing understood, or on the side of the one understanding. If on the side of the thing understood, thus the proposition is true, and the sense is: whoever's intellect understands a thing to be otherwise than it is, is false. But this does not have place in the present matter, because our intellect, forming a proposition about God, does not say that he is composite, but simple. If however on the side of the one understanding, thus the proposition is false. For the mode of the intellect in understanding is other than the mode of the thing in existing. For it is manifest that our intellect understands material things existing below it immaterially, nor does it understand them to be immaterial; but it has an immaterial mode in understanding. And likewise, when it understands simple things that are above it, it understands them according to its own mode, namely, composite; yet not in such a way that it understands them to be composite. And thus our intellect is not false in forming a composition about God.

Conclusion of the article: Affirmative propositions can be formed and enunciated about God. But since, in order that a proposition be formal and not identical (as the Logicians say), it is necessary that the subject and the predicate in some way agree, and in some way also differ, it is customary in this article to treat of the distinction of the attributes from the divine essence and among themselves. Of this we shall speak more conveniently in Disputation 116 and the following, where we must dispute universally about every distinction of reason in the things that are in God; and incidentally we shall see in what way not only some propositions about God can be truly enunciated, but also that some are false. For the present question, let what we have said suffice.

Quaestio XIV - On the knowledge of God

After the consideration of those things which pertain to the divine substance, it remains to consider those things which pertain to its operation. And because one operation is that which remains in the agent, but another which proceeds to an external effect: first we shall treat of knowledge (*scientia*) and will (for to understand is in the intelligent, and to will is in the willing), and afterwards of the power of God, which is considered as the principle of the divine operation proceeding into an external effect. And because to understand is a certain living, after the consideration of the divine knowledge, the divine life must also be considered. And because knowledge is of true things, there will also be consideration of truth and falsity. Again, since everything known is in the knower, but the rationes of things, according as they are in God knowing, are called ideas, together with the consideration of knowledge there must also be added the consideration of the ideas.

Concerning knowledge there are sixteen points of inquiry.

According to the division that we premised (above at the beginning St. Thomas begins from this question up to the twenty-sixth to dispute about the perfections of God which consist in an immanent operation; among which the first is knowledge and the operation of the intellect, about which, and about the things pertaining to it, he treats from this question up to the eighteenth):

Articulus I - Whether in God there is knowledge

First, thus it is proceeded. It seems that in God there is not knowledge. For knowledge is a habit, which does not befit God, since it is intermediate between potency (*potentia*) and act (*actus*). Therefore there is not knowledge in God.

1. Further, knowledge, since it is the conclusion of reasoning, is a certain cognition caused by another, namely, from the cognition of principles. But nothing caused is in God. Therefore there is not knowledge in God.
2. Further, every knowledge is either universal or particular. But in God there is not universal and particular, as is evident from the foregoing. Therefore in God there is not knowledge.

But on the contrary: The Apostle says: "O the depth of the riches of the wisdom and knowledge of God" (Rom 11).

I answer: In God there is knowledge most perfectly. For evidence of this, it must be considered that knowers are distinguished from non-knowers in this, that non-knowers have nothing but their own form only; but the knower is of a nature to have also the form of another thing: for the species of the thing known is in the knower. Whence it is evident that the nature of a non-knowing thing is more narrowed and limited. But the nature of knowing things has greater breadth and extension. Wherefore the Philosopher says in the third book On the Soul that the soul is in a way all things. But the contraction of form is through matter. And so we said above that forms, insofar as they are more immaterial, to that extent more approach a certain infinity. Therefore it is evident that the immateriality of a thing is the reason why it is cognitive, and according to the mode of immateriality is the mode of cognition. Whence in the second book On the Soul it is said that plants do not know because of their materiality. But sense is cognitive because it is receptive of species without matter; and the intellect is still more cognitive, because it is more separate from matter and unmixed, as is said in the third book On the Soul. Whence, since God is at the summit of immateriality (as is evident from the foregoing), it follows that he is at the summit of cognition.

Reply to the first: Since the perfections proceeding from God into creatures are in God in a higher mode (as was said above), it is necessary that whatever name taken from any perfection of a creature is attributed to God, there be excluded from its signification everything which pertains to the imperfect mode that befits the creature. Hence knowledge is not a quality in God, nor a habit, but substance and pure act. The conclusion is affirmative.

Reply to the second: Those things which are divided and multiple in creatures are in God simply and unitedly, as was said above. But man, according to different objects of knowledge, has different cognitions. For according as he knows principles, he is said to have understanding; but knowledge, according as he knows conclusions; wisdom, according as he knows the highest cause; counsel, or prudence, according as he knows things to be done. But God knows all these by one simple cognition, as will be made clear below. Hence the simple cognition of God can be named by all these names; in such a way, however, that from each of them, insofar as it comes into divine predication, whatever imperfection there is is excluded, and whatever perfection there is is retained. And according to this it is said in Job: "With him is wisdom and strength, he has counsel and understanding."

Reply to the third: Knowledge is according to the mode of the knower. For the known is in the knower according to the mode of the knower. And therefore, since the mode of the divine essence (*essentia*) is higher than the mode by which creatures are, the divine knowledge does not have the mode of created knowledge, that it should be universal or particular, or in habit or in potency; or disposed according to any such mode.

Articulus II - Whether God understands himself

In the second place, thus it is proceeded. It seems that God does not understand himself. For it is said in the Book of Causes that every knower who knows his essence is returning to his essence by a complete return. But God goes forth outside his essence, nor is he moved in any way; and thus it does not befit him to return to his essence. Therefore he is not one who knows his own essence, and so God does not understand himself.

1. Further, to understand is a certain being-passive and being-moved, as is said in the third book On the Soul; and knowledge is also a likening to the thing known, and it is also the perfection of the knower. But nothing is moved or is passive or is perfected by itself, nor is a likeness to itself, as St. Hilary says. Therefore God is not one who knows himself.
2. Further, precisely on account of the intellect we are like to God: because according to the mind we are to the image of God, as St. Augustine says. But our intellect does not understand itself, unless as it understands other things, as is said in the third book On the Soul. Therefore God does not understand himself, unless perhaps by understanding other things.

But on the contrary: It is said, 1 Cor 2: "The things that are of God no one knows, except the Spirit of God."

I answer: God understands himself. For the evidence of which it must be known that, although in operations which pass over into an external effect the object of the operation, which is signified as the terminus, is something outside the agent, nevertheless in operations which are in the very agent the object which is signified as the terminus of the operation is in the agent itself; and according as it is in it, so the operation is in act. Whence it is said in the book On the Soul that "the sensible in act is sense in act, and the intelligible in act is intellect in act." For from this it is that we

sense or understand something in act, that our intellect or sense is informed in act by the species of the sensible or of the intelligible. And according to this alone the sense or the intellect is other than the sensible or intelligible: because a power is in potency. Since therefore God has no potentiality, but is pure act, it is necessary that in him intellect and the intelligible be the same in every way, namely, that neither he should lack an intelligible species, as our intellect does when it understands in potency, nor that the intelligible species be other than the substance of the divine intellect, as happens in our intellect. And thus he understands himself through himself.

Reply to the first: To return to one's own essence is nothing other than for a thing to subsist in itself. For form, insofar as it perfects matter by giving existence, is poured out, as it were, into another; but insofar as it has existence in itself, it returns into itself. Therefore cognitive powers which are not subsisting, but are the acts of certain organs, do not know themselves, as is evident in the several senses. But the cognitive powers which are subsisting, know themselves. And on this account it is said in the Book of Causes that the knower of his own essence returns to his essence. But to subsist through himself (*per se*) most properly befits God. Hence, according to this mode of speaking, he is most of all returning to his essence, and knowing himself.

Reply to the second: That "to be moved" and "to be passive" are taken equivocally when it is said that to understand is a certain being-moved, or being-passive, as is said in the third book On the Soul. For to understand is not a motion, which is the act of an imperfect thing, which is from another into another; but it is the act of a perfect thing existing in the very agent. Likewise also that the intellect be perfected by the intelligible, or be likened to it, befits that intellect which is at times in potency: because by this, that it is in potency, it differs from the intelligible; and it is likened to it by the intelligible species, which is a likeness of the thing understood, and it is perfected by it, as potency by act. But in the divine intellect, which in no way is in potency, it is not perfected by the intelligible, nor does it -

Reply to the second: Therefore the divine intellect, which in no way is in potency (*potentia*), is neither perfected by the intelligible, nor is it assimilated to it; but it is its own perfection, and its own understanding.

Reply to the third: Natural being (*esse naturale*) does not belong to prime matter, which is in potency, except in so far as it is reduced into act by form (*forma*). But our possible intellect holds itself in the order of intelligibles as prime matter does in the order of natural things; in that it is in potency to intelligibles, just as prime matter is to natural things. Hence our possible intellect cannot have the operation of intelligibles, except in so far as it is perfected by the intelligible species of some thing; and thus it understands itself through an intelligible species, just as it does other things. It is also manifest that from this - that it knows the intelligible - it understands its own understanding; and through act it knows the potency of the intellect. But God is, as it were, pure act (*actus purus*), both in the order of beings and in the order of intelligibles: and therefore through himself he understands himself most perfectly.

Nota concerning these two articles.

The conclusion is affirmative. Nothing occurs in these two articles that is of such difficulty as to be worth a special note. Cajetan labors strenuously in examining St. Thomas's arguments: yet that has seemed to me quite superfluous. For the doctrine of the holy Doctor is so perspicuous as not to need confirmation. Nor has there ever yet been anyone who dared to say that God is foolish or ignorant: for this is a perfection most of all to be attributed to God. It is, however, to be observed, according to the doctrine of Pseudo-Dionysius which we reported above in Disputation 22, chapter 5, that the Fathers, when they ascribe to God wisdom, intelligence, and the other things that pertain to the intellect, mean that all these are not found in God in the same mode in which they are in us, but in a far more eminent way; yet so that they cannot be explained or understood by us except through those things which we see and experience in ourselves: for in God the science (*scientia*) of these is nothing other than his substance (*substantia*), which, receiving in itself no change according to the variation of things, is nevertheless variously named by us - namely, science of simple intelligence, or of vision - as we shall see in the course of this question.

Articulus III - Whether God comprehends himself

To the third, this is the procedure.

It seems that God does not comprehend himself. For St. Augustine says in the book On 83 Questions, that that which comprehends itself is finite to itself.[1005] But God is in all ways infinite. Therefore he does not comprehend himself. And if it be said that God is infinite with respect to us, but finite with respect to himself: on the contrary, a thing is truer according to what it is in God than according to what it is in us. If, therefore, God is finite to himself but infinite to us, it is truer that God be finite than infinite - which is against what was determined earlier. Therefore God does not comprehend himself.

But on the contrary: St. Augustine says in the same place, "Everything that understands itself, comprehends itself."[1006] But God understands himself. Therefore he comprehends himself.

I answer that God perfectly comprehends himself; and this is clear as follows. A thing is then said to be comprehended when one arrives at the end of knowledge of it; and this is when a thing is known as perfectly as it is knowable. Thus a demonstrable proposition is comprehended when it is known through a demonstration, and not when it is known through some probable reason. Now it is manifest that God knows himself as perfectly as he is perfectly knowable. For each thing is knowable according to the mode of its act. A thing is not known according to what it is in potency, but according to what it is in act, as is said in the ninth book of the Metaphysics.[1007] But God's power in knowing is as great as his actuality in existing: for by the very fact that he is in act, and separated from all matter and potency, God is cognoscitive, as has been shown. Hence it is manifest that he knows himself as much as he is knowable. And for this reason he comprehends himself perfectly.

1005. St. Augustine, De diversis quaestionibus octoginta tribus, q. 2.
1006. St. Augustine, De diversis quaestionibus octoginta tribus, ibid.
1007. Aristotle, Metaphysics IX (Theta), text 20.

Reply to the first: To comprehend, if it be taken properly, signifies to have and include another. And so it is necessary that everything comprehended be finite, as that which is enclosed. But God is not thus said to be comprehended by himself, as if his intellect were other than himself, and seized and included himself. Rather such ways of speaking are to be construed by negation. For just as God is said to be "in himself" because he is contained by no exterior thing, so he is said to be "comprehended by himself" because nothing of himself lies hidden from himself. For St. Augustine says in the book On Seeing God addressed to Paulinus, that "that is wholly comprehended in seeing God, which is so seen that nothing of it lies hidden to the seer."[1008]

Reply to the second: When it is said, "God is finite to himself," this is to be understood according to a certain likeness of proportion, because thus does a thing behave in not exceeding its intellect, as something finite behaves in not exceeding a finite intellect. But in no way is God said to be finite to himself in such a way that he would understand himself to be something finite.

Conclusion is affirmative: although somewhat difficult, since it contains a difficulty common with that which we treated in Disputation 53; from what we said there, it can easily be gathered what we ought to say about this matter.

Articulus IV - Whether God's understanding is his substance

To the fourth, this is the procedure.

It seems that God's very act of understanding is not his substance. For to understand is a certain operation. But an operation signifies something proceeding from an operator. Yet the substance of an operator does not proceed from the one operating. Therefore God's very act of understanding is not his substance.

Further: When someone understands that he understands, this is not to understand something great or the principal object of intellect, but something secondary and accessory. If, therefore, God is his act of understanding, to understand God will be like when we understand "to understand." And thus it will not be something great to understand God.

Further: Every understanding is to understand something. Therefore, when God understands himself, if he himself is not other than his understanding, he understands himself to understand; and he understands himself to understand himself to understand; and so on to infinity. Therefore God's very act of understanding is not his substance.

But on the contrary: St. Augustine says in the seventh book On the Trinity: "For God, to be is the same as to be wise. But to be wise is to understand. Therefore for God to be is to understand." But God's to-be is his substance, as was shown above. Therefore God's understanding is his substance.[1009]

I answer that it is necessary to say that God's understanding is his substance. For if God's understanding were something other than his substance, it would follow, as the Philosopher says in the twelfth book of the Metaphysics, that something other than God's substance would be the act

1008. St. Augustine, Epistola ad Paulinum, De videndo Deum, c. 19.

and perfection of the divine substance, to which the divine substance would be related as potency to act - which is altogether impossible.[1010] For to understand is the perfection and act of the one understanding. Now how that is so must be considered. For, as said above, to understand is not an action that proceeds to something external, but remains in the operator as an act and perfection of him, just as to be (*esse*) is the perfection of the existing thing. For as being follows upon form, so to understand follows upon the intelligible species. But in God there is no form which is other than his own to-be, as was shown above. Whence, since his very essence is the very intelligible species, it follows of necessity that his very act of understanding is his essence and his to-be. And thus it is clear from all the premises that in God the intellect (*intellectus*), the one understanding, the thing understood, the intelligible species, and the very act of understanding are altogether one and the same. Hence it is clear from this that, when God is called "understanding," no multiplicity is posited in his substance.

Reply to the first: To understand is not an operation going forth from the operator; rather it remains in him.

Reply to the second: When it is understood that one understands, that which is understood is not something subsistent; and therefore it is not something great, as when we understand our understanding. Nor is it so in the divine case: for the divine act of understanding, which is subsistent in itself, is of itself and not of something other; so that it would be necessary to proceed to infinity.

And from this the reply to the third is also clear. For the divine understanding, which is subsistent in himself, is of himself and not of something other; so that it would be necessary to proceed to infinity.

Observation: A certain question could, however, be examined here, namely whether the science of vision is the substance of God. The reason for doubting is that this (namely, the science of vision) is in God from eternity in such a way that from eternity, if God willed, it could not be; therefore it seems by its nature able of itself to be absent and to be present to God without corruption of him; and hence not to be the substance of God, which should always necessarily be in the same way. But because this is a difficulty in common with that which we shall treat concerning the will of God below in Disputation 79, we will for the present abstain from the discussion.

Articulus V - Whether God understands things other than himself

To the fifth, this is the procedure.

It seems that God does not know things other than himself. For whatever things are other than God are outside himself. But St. Augustine says in the book On 83 Questions that God looks upon nothing outside himself. Therefore he does not know things other than himself.[1005]

1009. St. Augustine, De Trinitate VII, c. 3.
1010. Aristotle, Metaphysics XII (Lambda).
1005. St. Augustine, De diversis quaestionibus octoginta tribus, q. 2.

Further: The understood is the perfection of the one understanding. If, therefore, God understands things other than himself, something other than himself will be a perfection of God, and nobler than God - which is impossible.

Further: The very act of understanding has its species from the intelligible, as every act has from its object. Whence also the act of understanding is so much the nobler as that is nobler which is understood. But God is his very act of understanding, as is clear from what has been said. If, therefore, God understands something other than himself, God will be specified by something other than himself - which is impossible. Therefore he does not understand things other than himself.

But on the contrary: It is said in Hebrews 4: "All things are naked and open to his eyes."

Ad primum ergo dicendum, quod to understand is not an operation that goes forth from the agent, but one remaining in the agent

Ad secundum dicendum, quod when there is understood that "understanding" which is not subsistent, nothing great is understood, just as when we understand our own understanding. And therefore it is not similar in the case of the divine understanding, which is subsistent

Et per hoc patet responsio ad tertium. For the divine understanding, which is subsistent in itself, is of itself, and not of anything else, so that there would be need to proceed to infinity.

Conclusio est affirmans: and this is deduced by the best natural reason from what was said above, namely, that if some other thing were the act and perfection of the divine substance, the divine substance would have potency to act - which is altogether impossible. For to understand is the act and perfection of the intelligent. Now, to make this clearer, one must consider that, as was said above, understanding is not an action progressing to something outside, but remains in the operator as its act and perfection, as the perfection of what exists. Just as existence follows upon form, so understanding follows upon the intelligible species. But in God there is not a form which is other than his existence, as was said above. Hence, since his very essence is also the intelligible species, it follows of necessity that his very understanding is his essence and his existence. And thus it is clear from all the premises, that in God the intellect, the one understanding, and that which is understood, and the intelligible species, and the very act of understanding, are altogether one and the same. Whence it is plain from this, that by the fact that God is called "intelligent," no multiplicity is posited in his substance.

But on the contrary: It is said in Hebrews 4: "All things are naked and open to his eyes."

Whether God knows things other than himself

I answer that it must be said that it is necessary that God know things other than himself. For it is manifest that he perfectly understands himself; otherwise his existence would not be perfect, since his existence is his understanding. But if something is perfectly known, it is necessary that its power be perfectly known. Now the power of a thing cannot be perfectly known unless those things

to which its power extends are known. Therefore, since the divine power extends to other things, in that it is the first efficient cause of all beings (as is evident from what was said above), it is necessary that God know things other than himself. And this becomes even clearer if there be added that in the case of the first efficient cause, namely God, his existence is his understanding. Hence, whatever effects pre-exist in God as in the first cause, must be in his very understanding; and all things must be in him according to an intelligible mode. For whatever is in another is in it according to the mode of that in which it is.

But to know how he knows things other than himself, one must consider that something is known in two ways: in itself, and in another. A thing is known in itself when it is known through its own proper species adequate to the knowable thing; as when the eye sees a man through the species of the man. But something is seen in another when it is seen through the species of that which contains it; as when a part is seen in the whole through the species of the whole, or when a man is seen in a mirror through the species of the mirror, or in whatever other way it happens that something is seen in another. Thus, then, it must be said that God sees himself in himself, because he sees himself through his essence. But he sees things other than himself not in themselves, but in himself, insofar as his essence contains the likeness of the others that are from him.

Reply to the first: The word of St. Augustine saying that God beholds nothing outside himself is not to be understood as though he did not behold anything which is outside himself, but because that which is outside himself he does not behold except in himself, as has been said.

Reply to the second: The understood is the perfection of the intelligent, not indeed according to its substance, but according to its species, according to which it is in the intellect as its form and perfection. For a stone is not in the soul, but its species, as is said in On the Soul III.[1011] But those things which are other than God are understood by God insofar as the essence of God contains their species, as was said. Hence it does not follow that anything other than the divine essence is the perfection of the divine intellect.

Reply to the third: The very act of understanding is not specified by that which is understood in another, but by that principal thing understood, in which the other things are understood. For the act of understanding is specified by its object only insofar as the intelligible form is the principle of the intellectual operation. For every operation is specified by the form which is the principle of the operation, as heating is by heat. Hence by that intelligible form is specified the intellectual operation which makes the intellect to be in act. And this is the principal species of the thing understood, which in God is nothing other than his essence, in which all the species of things are contained. Hence it is not necessary that the divine understanding, or rather God himself, be specified by anything other than by the divine essence.

Conclusion: God knows all created things not in themselves, but in his own essence.

1011. Aristotle, On the Soul (De anima) III.

Articulus VI - Whether God knows things other than himself by a proper cognition

It is objected that:

1) God seems not to know things other than himself by a proper cognition. For he knows things other than himself, as has been said, according to that according to which things other than himself are in him; but things other than he are in him as in the first, common, and universal cause. Therefore, things are known by God as in the first and universal cause. But this is to know in universal, and not by a proper cognition. Therefore God knows things other than himself in universal, and not by a proper cognition.

2) Further, as far as the essence of the creature is distant from the divine essence, so far is the divine essence distant from the creature's essence. But through the essence of the creature the divine essence cannot be known, as was said above. Therefore neither through the divine essence can the essence of the creature be known. And so, since God knows nothing except through his own essence, it follows that he does not know the creature according to its essence so as to know of it what it is, which is to have a proper cognition of the thing.

3) Further, A proper cognition of a thing is not had except through its proper ratio. But since God knows all things through his essence, it does not seem that he knows each thing through its proper ratio; for that cannot be the proper ratio of many and diverse things. Therefore God does not have a proper cognition of things, but a common one. For to know things not according to their proper ratio is to know things only in common.

But on the contrary: To have a proper cognition of things is to know things not only in common, but according to the way in which they are distinct from one another. But thus God knows things. Whence it is said in Hebrews 4 that he "reaches even to the dividing of soul and spirit, of the joints also and the marrow, and is a discerner of the thoughts and intents of the heart; and there is no creature invisible in his sight."

I answer that, concerning this, certain people have erred, saying that God knows things other than himself only in common, namely insofar as they are beings. For just as fire, if it knew itself as a principle of heat, would know the nature of heat and all other things insofar as they are hot, so God, insofar as he knows himself as the principle of existing, knows the nature of being and all other things insofar as they are beings. But this cannot be. For to understand something in common and not in particular is to know something imperfectly. Hence our intellect, when it is reduced from potency to act, arrives first at a universal and confused cognition of things than at the proper cognition of things, proceeding as from the imperfect to the perfect, as is plain in Physics I, in the preface.[1012] If therefore God's cognition of the things other than himself were only in universal and not in particular, it would follow that his understanding was not in every way perfect, and consequently neither would his existence be - which is contrary to the things shown above. It must therefore be said that he knows things other than himself by a proper cognition, not only according to that in which they are common in the notion of being, but according to that by which

1012. Aristotle, Physics I, prooemium (opening discussion).

one is distinguished from another. And for the evidence of this one must consider that some, wishing to show that God by one thing knows many, use certain examples: as, for instance, that if a center knew itself, it would know all the lines proceeding from the center, ...[1013]

But these examples, although they are in some respect similar, namely as regards universal causality, nevertheless fail in this, that multitude and diversity are not caused by that one universal principle as regards that by which it is a principle of distinction, but only as regards that in which things communicate. For the diversity of color is not caused by light alone, but by the diverse disposition of the diaphanous recipient; and similarly the diversity of lines by diverse position. And hence it is that a diversity and multitude of this sort cannot be known in their principle according to a proper cognition, but only in common.

But in God it is not so; for it was shown above that whatever perfection there is in any creature at all, the whole of it pre-exists and is contained in God according to an excellent mode. And not only that in which creatures communicate - namely, existence (*esse*), which pertains to perfection - but also those things by which creatures are mutually distinguished: as to live and to understand, and the like, by which things living beings are distinguished from non-living, and intelligent beings from non-intelligent. And every form by which any thing is constituted in its proper species is a certain perfection. And thus all things pre-exist in God, not only as regards that which is common to all, but also as regards those things according to which things are distinguished. And thus, since God contains in Himself all perfections, the divine essence (*essentia*) is compared to all essences of things, not as the common to the proper, as unity to numbers, or the center to lines, but as a perfect act (*actus*) to imperfect acts: as, if I were to say, man is to animal; or the senary, which is a perfect number, is to the imperfect numbers contained under it. Now it is manifest that by a perfect act imperfect acts can be known not only in common, but also by a proper cognition. Thus, one who knows man knows animal by a proper cognition; and one who knows the senary knows the ternary by a proper cognition. Therefore, since the divine essence has in itself whatever perfection the essence of any other thing has, and even more: God in Himself can know all things by a proper cognition. For the proper nature of each thing consists in this, that it participates in some mode of the divine perfection. Nor would God perfectly know Himself unless He knew in what way His perfection is in any way participable by others. Nor would He perfectly know the very nature of existing unless He knew all the modes of existing. Whence it is manifest that God knows all things by a proper cognition, according to that by which they are distinguished from others.

Reply to the first: To know something "as it is in the knower" can be understood in two ways. In one way, insofar as this adverb "so" (sic) imports a mode of cognition on the part of the thing known; and thus it is false. For the knower does not always know the known according to that being (*esse*) which it has in the knower. For the eye does not know the stone according to the being which it has in the eye, but by the species of the stone which it has in itself it knows the stone according to the being which it has outside the eye. And if a knower should know the known according to the being which it has in the knower, nevertheless it also knows it according to the

1013. The example is a standard one in the scholastic tradition; see the Commentator (Averroes) for comparisons of knowing many through one.

being which it has outside the knower. Thus the intellect knows the stone according to the intelligible being which it has in the intellect, inasmuch as it knows that it understands; but nonetheless it knows that the stone exists in its proper nature. But if it be understood insofar as this adverb "so" imports a mode on the part of the knower, it is true that only thus does the knower know the known, namely, according as it is in the knower. For the more perfectly the known is in the knower, the more perfect is the mode of cognition. Therefore it must be said that God not only knows things to be in Himself, but, by that which He contains in Himself, He knows things in their proper nature - and the more perfectly, the more perfectly each thing is in Him.

Reply to the second: The essence (*essentia*) of the creature is compared to the essence of God as an imperfect act to a perfect act. And therefore the essence of the creature does not sufficiently lead to the cognition of the divine Essence, but conversely.

Reply to the third: The same cannot be taken as the formal reason (*ratio*) of diverse things by way of adequation. But the divine essence is something exceeding all creatures; hence it can be taken as the proper formal reason of each individual thing, according as it is participable or imitable in diverse ways by diverse creatures.

Notationes circa articulum.

The conclusion is affirmative. Concerning this article 6 one should observe first that the error of Avicenna and Averroes existed, as St. Thomas reports; for they asserted that God does not know the rest of things individually and distinctly, but only Himself. Thus Averroes taught this on Metaphysics XII, commentary 51, and in the little work entitled Distinctio distinctionum, which is found in the ninth tome of his works; and he defends this opinion as Avicenna's against Algazel, while Ferraris excuses him at the end against the book Contra gentiles, chapter 50.[1014]

What pertains, however, to the cognition of other things, even of singulars and of the least things: the opinion of Averroes which we reported is a most manifest error, about which there is no doubt. It was refuted above by that of Ps. 32: "Who fashions individually the hearts of them all, who understands all their works"; and Heb. 4: "All things are naked and open to his eyes, and no creature is invisible before him." Moreover, since in that disputation 86 it must be proved that God has providence of all things individually and particularly, it plainly follows that He has also a proper knowledge of them, without which providence cannot be.

Next it must be observed against Ockham in I, dist. 35, q. 2, a. 1, l. 1, and Gabriel, q. 2, art. 2, conclusion 2, that it can be proved evidently even by natural reason that all things are known by God individually and particularly - which they unjustly deny, admitting only a probable reason. Furthermore, it clings to the minds of all that God is intelligent just as that God is; so that each seems to be known almost per se, in the manner which we explained in disputation 19: for God would be in vain if He were such that He did not know certain created things. Gregory also attempts to prove this truth by natural reason in I, dist. 35, question unica.[1015]

1014. Averroes, Commentarium 51 on Aristotle, Metaphysics XII; and the opusculum Distinctio distinctionum (in the ninth tome of his works). He defends this opinion as Avicenna's against Algazel; Ferraris excuses him at the end against Contra gentiles, c. 50.

But St. Jerome, on that passage of Habakkuk 1: "Thy eyes are pure, that thou mayest not see evil," has words that are overly difficult: "Moreover it is absurd to bring down the majesty of God to this - that at each single moment He should consider how many gnats are born and how many die, what is the multitude of bedbugs and fleas and flies upon the earth, how many fishes swim in the waters, and which of the lesser must yield as prey to the greater. Let us not be such foolish flatterers of God that, while we even drag down His power to the lowest things, we are most injurious to ourselves, saying that there is the same providence of rational beings as of irrational." Whence that apocryphal book is to be condemned for foolishness, in which it is written that a certain angel named Tyre is set over reptiles.[1016] But the Master benignly interprets Jerome in the First Book of the Sentences, dist. 36, cap. 4, and the Bishop of Lucca in the book of Admonitions on the sixth tome of Jerome, question 5: first, that Jerome does not deny that God has at each single moment knowledge anew of these things (such as flies, etc.), but rather says that by a single eternal intuition He has seen all things. And about this, and about Cicero on the cognition of future things, we shall speak in disputation 64, chapter 1.[1017]

As to men and other things of greater moment, he ought to have said the same; but Jerome thinks that these are to be known in a different way than those which are the least. Then also of those things of which he denies in God a distinct knowledge, as is clear from the cited words, he concedes a certain general knowledge and providence in these words: "In other animals, indeed, we can understand the general disposition and order and course of things from God: for example, how a multitude of fishes is born and lives in the waters; how reptiles and quadrupeds live on land, and with what foods they are fed; but it is absurd to bring down the majesty of God to this," etc., which we have reported. By which, although he denies to God a peculiar knowledge of things, nevertheless he grants a certain general cognition of them - in which he seems to have followed Aristotle, a doctrine of which we shall speak in disputation 86. Then the same Master and the Bishop of Lucca interpret Jerome as denying that God exercises care for the least things in the same way - namely, by appointing to them an angel, by imposing also precepts and assigning rewards - as He has care for men; in this way Hugo of St. Victor also explains Jerome in the Summa, tractate 1, chapter 12, where he also mentions the preceding exposition. Yet this exposition does not much commend itself to me, since Jerome's words plainly indicate something else, as can be evident to a reader; and he grants only a general knowledge and providence of those least things. But for this reason Jerome's view in this place ought not to undermine Catholic truth. We have also in his favor a manifest testimony of his own in Matthew, chapter 10, where, explaining that "Are not two sparrows sold for a penny?" he says: "If small animals do not fall

without God as their author, and there is always providence in all things - which I shall seek in these matters - if they do not perish without God; you, who are eternal, ought not to fear, since you live by God's providence."[1018]

Disputatio LX - Whether God knows all things in Himself

Caput I - Two opposing opinions

By this single disputation we shall endeavor to clear up both of the preceding articles; for from the mode by which God knows created things it will be easy to infer whether He knows all individually according to their proper formal reasons.

Now concerning the mode by which God knows other things, about which article 5 treats, there are various opinions of theologians. The first is that of Gabriel in I, dist. 35, art. 2, conclusion 2, and of Ockham on the same distinction, question 3, and of Aureolus as he is cited by Capreolus on the same I, dist. 35, q. 2, art. 1, in the arguments against the first conclusion: they affirm that creatures are seen by God so immediately in themselves that He does not see them in His own essence as in a primary object previously seen. This opinion seems to be gathered from Scotus in I, dist. 3, q. 1, 5, ad ista, in the middle of that passage, where first he teaches that the divine intellect by its own essence is constituted in first act to understand not only its own essence, but also all creatures. He then asserts that God in act, as it were in second act, understands Himself and other things; and although in his doctrine the primary object of the divine intellect is His essence - as we shall report below in disputation 143 - yet he nowhere teaches that the divine essence is known first in such a way that in it, as in a primary object first known, creatures are seen; rather, just as the intellect of God is constituted by His essence in first act for the cognition of Himself and of other things, so he teaches that in second act He knows Himself and all other things, and not one before another.[1019]

It is proved first: Creatures are not in God according to their own proper formal reasons, therefore neither can they be seen in Him according to those reasons; for here we are treating of the cognition of creatures according to their proper reasons, not insofar as in God they are said to be God Himself, as was explained in disputation 51. Moreover, if creatures were seen as they are in God, they would not be seen distinctly; for when something is seen in another, it cannot be known distinctly. But God knows them distinctly and individually according to their proper reasons; therefore He does not see them in Himself, but in themselves.

1018. St. Jerome, Commentary on Matthew 10:29: "Nonne duo passeres asse veneunt...?"

1019. Gabriel Biel, In I Sent., d. 35, art. 2, concl. 2; Ockham, In I Sent., d. 35, q. 3; Aureolus as cited by Capreolus, In I Sent., d. 35, q. 2, art. 1; Scotus, In I Sent., d. 3, q. 1, ad ista; see also disputation 143.

Caput II - Secunda sententia

The second opinion is that of Durandus, in I Sentences, dist. 35, q. 2, in the body to the second; Thomas of Argentina, q. 1, and most expressly in concl. 4; Capreolus, q. 2, art. 1, concl. 1 and 2; Cajetan, and some more recent authors on this article, who assert that God in Himself, as in the primary object previously known, knows all creatures distinctly and by a proper concept according to the proper formal reasons of the same. When they say "as in the object previously known," they mean that the divine essence is not only as it were a species for eliciting the vision of creatures, but is also the primary object in the knowledge of which first the creatures are seen. Then, when they add that in this way creatures are known by God according to their own proper reasons, they clearly understand that they are not only known inasmuch as, existing in God Himself, they are said to be God Himself, as we said above, but also that they are known according to created reasons by which they are distinguished from God.[1020]

Durandus and Cajetan then explain this opinion more at length as follows: creatures are said to be known in God, because they are in His essence as in a higher cause and are united to it in a certain way; yet in such a way as if they were contained in it distinctly, so that in it they are distinctly and perfectly known. Hence they say that they are not known in God as in a mere mirror or by a species, but also as in the object previously known. To this opinion St. Thomas in this article, and in Contra gentiles, c. 53, is commonly referred; likewise Aegidius in I, dist. 35, q. 3; Alexander, I p., q. 23, m. 2, art. 1; Henry, quodlib. 9, q. 2, who affirm that God knows creatures in Himself, not in themselves.[1021]

This opinion is proved, first, from Pseudo-Dionysius, De divinis nominibus, c. 7, after the middle, where he not only teaches that God knows creatures in Himself, but also that He understands them in Himself as in a cause and through a cause. Second, because St. Augustine, in the book of 83 Questions, q. 46, says that God contemplates nothing outside Himself. Third, it is proved by reason: for if God knows the rest of things not from the fact that He knows Himself as the primary object, it follows that He does not comprehend Himself; for by this sole reason we said in disputation 53, c. 4, that God is not comprehended by the Blessed, namely because they cannot so see God that, by force of the vision by which they see Him, they are able to behold the other created things which in some manner pertain to Him. Wherefore, even if a Blessed should see God Himself and all created things from some other source than from God Himself previously known, in our opinion he would not be said to comprehend God. Therefore, in order that God may comprehend Himself, it is necessary that God should see Himself and, by virtue of this vision, all the rest; otherwise we must fall into one of those positions which, in that disputation, we expressly impugned. Fourth, there is nothing to prevent God from knowing Himself and creatures in Himself

1020. Durandus, In I Sent., d. 35, q. 2, in corpore ad secundum; Thomas of Argentina, q. 1, concl. 4; Capreolus, In I Sent., d. 35, q. 2, art. 1, concl. 1 - 2; Cajetan, on this article.

1021. St. Thomas, on this article; Contra gentiles, c. 53; Aegidius, In I Sent., d. 35, q. 3; Alexander of Hales, I p., q. 23, m. 2, art. 1; Henry of Ghent, Quodlibet 9, q. 2.

in this manner; we ought not to deny this to Him, since it seems the most perfect mode of knowing, namely, the effect in the most perfect cause, in which it exists in a much more perfect way than in itself.[1022]

But on the contrary: That God does not see all creatures in Himself as in a cause is the more probable opinion.

I, for my part, judge that God in His own essence beholds all created things, yet in a different way than Cajetan supposed - namely, that God knows them in Himself, not because He first understands Himself as cause and as the primary object, but in Himself as in the Word and express species. In order, however, to explain and prove this opinion, two things must be observed.

Observatio prima. One is that all the things which God knows, even if compared with His essence, are known together among themselves and together with it, not only together in time or duration, but also by nature: because the knowledge which God has of Himself and of other things is one and most simple. In that one and the same knowledge no before and after by nature can be assigned; yet a certain priority of reason can be constituted, inasmuch as on the part of the objects which are known one is conceived by us as the reason whereby God knows another, because one is more closely conjoined to God the knower than another. Therefore it must now be seen whether the essence of God stands related to God Himself, the intelligent knower, in such a way that it may be called the primary object, by knowing which first all the rest are known by Him.

Observatio secunda. Another thing to be observed is that in God there is an essential knowledge, which is common to the three persons, and a notional knowledge, which is proper to the Father. The former knowledge is plainly the essence of God absolutely, according to the thing, which, in our manner of understanding, is said to have both the character of an impressed species and of act in the first sense, and the character of an express species (that is, of a word) and of act in the second sense; the latter knowledge has the relation of the real production of the Word, who is the second person of the Trinity. Now there is this difference between our cognition and the divine - whether it be essential or notional - that by our cognition and intellection the Word itself is not known, which is a real action, nor the Word itself, which, so far as it is only by way of action, is (as they say) understood in a merely grammatical manner, as we shall explain in disputation 141, c. 4. But in God the Word is produced really, who is the second person; and this very divine essence - which is, as it were, the word of those things which God by essential intellection understands - is directly known by the same intellection, either essential or also notional, by which it is really produced. Hence the Word in both ways is that in which things are known and is itself known.[1023]

From the two points which our opinion contains, the first to be proved by us in this chapter is that God does not see creatures in Himself as in a cause and as in the primary object previously seen. The second will follow, and we shall confirm it in the following chapter. The first is shown as follows.

1022. Pseudo-Dionysius, De divinis nominibus, c. 7; St. Augustine, De diversis quaestionibus octoginta tribus, q. 46.
1023. See Vazquez, disp. 141, c. 4.

Primo. If the divine attributes be considered by us according to the proper formal reasons which we conceive of them, not all of them have such a character that, according to our manner of understanding, they appear connected among themselves - namely, that one depends by reason upon another. For if we speak of God's knowledge, it does not, according to its formal notion, presuppose omnipotence; for God is not said to know all things because He is omnipotent. Nay rather, on the contrary, that is seen to be omnipotent which knows all things, as we shall say below in disputation 102. For by His infinite knowledge, and by His will, He is said to be able to do all things, or at least to be the proximate and directive principle for carrying things into effect, according to the opinion of those who ascribe to the divine essence, as it is, the power for executing, and to the intellect and will the direction. Therefore, even if God were not understood to be omnipotent by a principle taken from within (as they say, "per locum intrinsecum"), it would not follow that He is not understanding of all things. He would, then, know all things by some source other than by His essence known as omnipotent. For if by this sole medium, namely by the intrinsic principle, He understands, it follows most fittingly that, omnipotence being taken away - by the knowledge of which He knows creatures - the knowledge also which He has concerning creatures is taken away. Therefore, since according to our manner of philosophizing the science which God has of creatures does not presuppose omnipotence, neither does it presuppose His essence as known as their cause, and consequently neither as the primary object by knowing which first He understands creatures. All of this rightly follows, if we philosophize according to our mode of understanding; and that we must philosophize thus we presuppose from the previous notation.

Secundo. It is proved because, as we have shown elsewhere,[1024] an object previously known cannot be a medium for knowing something else quidditatively and by a proper concept, if it does not contain in itself the whole notion of that other and is not altogether of the same formal order with it; for if it is different, how could something else be known quidditatively after the manner of it? But God does not contain in Himself formally the notion of creatures; rather, He is in Himself altogether dissimilar to them. Therefore, known first, He cannot be the medium of knowing creatures.

Tertio. As we said in those disputations,[1025] since God in Himself is altogether absolute from every relation and order to creatures, He cannot be for any intellect, even the divine, a medium for knowing any creatures as the primary object previously known; for one thing previously known does not lead into the cognition of another unless of that to which it is referred.

Obiectio. You will say that God is referred to creatures by a relation at least of reason, though not really, and that this suffices to lead to a clear cognition of creatures.

1024. See Vazquez, disp. 38, c. 4; disp. 50, c. 4 - 5.
1025. See Vazquez, disp. 50, c. 4 - 5.

Diluitur. But this is frivolous; for, as we said in that place, such relations of reason are conceived only by wayfarers, not by the Blessed who see the thing as it is, and accordingly they do not feign relations in God which are not in Him, since they conceive Him as He is. How much less will God conceive Himself under that respect of our reason, He who so intimately understands Himself as He is that by His knowledge He changes nothing at all in Himself. And so much for the first part.

Deum in se tanquam in speculo creaturas videre.

For the divine essence is so related to God that it is not only the essence by which God is, but it is also to Him His own cognition of Himself; thus it not only constitutes God in the nature of God, but also makes Him intelligent of Himself. Hence it is to Him as it were an express species and the word of Himself, and it is the object known. Moreover, it actually represents creatures and is their cognition; wherefore it is related to them as their word. For this reason, therefore, God knows creatures in Himself first known: not indeed first known merely as the primary object and cause, but as the Word, which is also the word of creatures, representing them. And although the essence does not lead God into the cognition of creatures so far as it is known by God alone; nevertheless, from the fact that first it constitutes God intelligent of Himself, it then constitutes Him intelligent of creatures; and this latter so depends upon the former that, by an intrinsic principle, it rightly follows that, if the divine essence did not make God intelligent of Himself, it would not make Him intelligent of creatures - yet not conversely, that if it did not make Him intelligent of creatures, it would not make Him intelligent of Himself.

In the same way it must be said of the notional Word of God really produced: for it so primarily terminates the notional intellection of God that at the same time the Father is seen, and it represents the divine essence; and from this it represents creatures - which nevertheless it would not represent, nor would they be known in it - unless in that first the divine essence were seen. In this sense the Doctor (St. Thomas), and the others whom we said were alleged for the second opinion, could be explained when they assert that God knows creatures in Himself. Nor would the authors of the first opinion deny what we have said. Wherefore I think only Durandus, Capreolus, Thomas of Argentina, Cajetan, and some recent Thomists oppose this our opinion. And when he says that God sees creatures in Himself, not in themselves, it must be understood thus: namely, that God does not know creatures except by the medium of His own essence as species. But in the doctrine of St. Thomas, to know something "in itself" is to behold it without any medium species; thus he judges that God is seen by the Blessed "in Himself," because He is seen without any express medium species, as we said in disputation 35. Otherwise, God would know creatures in themselves and not in another, that is, not confusedly from the cognition of some other object, but by a proper concept by which they are known by God in themselves and not through another.[1026]

The meaning of St. Thomas, and of the authors adduced for the second opinion, is thus explained; and as to what St. Thomas says in art. 6, that creatures are known by God through His own essence, we grant it; but it is to be understood that they are known through that same essence

1026. See Vazquez, disp. 35.

as an express species - that is, as the Word - by which creatures are represented and made present to the divine intellect, not, however, through the essence as absolutely considered being the prior and primary object by the cognition of which other things are known.

Soluuntur argumenta primae, et secundae sententiae.

Wherefore, when Gabriel and Ockham and others of the first opinion affirm that creatures are not known by God in Himself, they do not deny that the very essence of God is in the place of an express species, by which creatures are represented - and this secondarily; for primarily it is that very essence which makes God understand Himself, as has been explained. And Scotus, as we reported above, concedes that the essence of God is the primary object of the divine intellect, first indeed known, but secondarily the creatures are known.[1027]

Argumenta quoque secundae sententiae nihil habent difficultatis. Primum quidem locus ex Pseudo-Dionysius eo loco solum contendit, God does not receive knowledge from things, as we do, but has from Himself the knowledge of all things from eternity. The words of Pseudo-Dionysius are these: "For the divine mind does not, learning from the things that are, know from the things that are, but from itself and in itself, through the cause, it has beforehand and previously comprehended the knowledge, science, and the anticipated essence of all things; not because it should consider each thing through a species, but because with one complex of the cause it knows all; just as also light, through its cause, has within itself an anticipated and informed knowledge of darkness, because it knows darkness from nothing else than from light. Therefore divine Wisdom, knowing itself, knows all things without matter that which consists of matter without division, that which is divided many things together, while Itself with one [intuitive] act knows and produces all things."[1028] When he says that God has "anticipated knowledge not through a species," he signifies that it comes from Himself, not from things, and on that account he called it "anticipated," that is, knowledge which is had concerning things before the things themselves exist. When he says that He does not consider singulars "through a species, but with one complex of the cause," he means that He does not have singular cognitions of singular things and consider them one by one, but with one intuition, as it were in Himself, as in a cause, they exist together; and this is what he said, "with one complex of the cause." But since God is the cause of things through intellection and His knowledge, we must understand that in this way all things are in God as in a cause, encompassed by one cognition and knowledge; and this is what he meant by "one complex of the cause."

In the same way must be understood what a little later he says in these words: "For the very [knowledge of God], knowing itself to be the cause of all things, will by no means be ignorant of those which have proceeded from itself; by this, therefore, God knows those things which are, not by a knowledge of things, but by a knowledge of Himself," that is, not by a knowledge received from things, but from Himself; nor by the same knowledge, in so far as it is terminated only to the essence, does He know them as though they formally existed in Him, but indeed by the same knowledge, which however is referred to the things themselves existing outside, or possible.

1027. On Scotus's concession, see above, cap. 1 (as cited in the discussion).
1028. Pseudo-Dionysius, De divinis nominibus, c. 7.

But the likeness which he adduces of light and darkness tends to this - not that God knows creatures because He first knows Himself as the primary object, according to the likeness of which He understands them, but to show that the knowledge of God is not received from the things themselves, as if light understood darkness and from itself knew it.

To the testimony of St. Augustine I answer that the sense of his words is very different. For he says, "He did not look upon anything placed outside Himself, so as to determine, according to that, what He determined; for to imagine this is sacrilege." And immediately he teaches that the reasons of all things to be created are in God. St. Augustine therefore wishes to teach that God did not create this universe of things by looking at something outside Himself, in the likeness of which He would create it - as painters who have some picture placed before them so that they may imitate it - but that within Himself He conceived what He was about to do; not that He only looked at His own essence, in the likeness of which He would make all the rest (for we shall show this is not true in disputation 72), but because within Himself He had a distinct and proper knowledge of each of the singular things which He was going to make, about which more at length in that disputation.[1029]

But to the reason for the second opinion I reply that it is indeed necessary for the notion of perfect and true comprehension by the intellect that he who comprehends should understand the object in such a way that, from the complex of living intellection, he can also embrace whatever can be attributed to the object, even if it be something extrinsic and its effects, as we said in disputation 55, chapter 4. Now this can be done in two ways. First, so that from that which is first known - namely the object itself - and by penetrating with an intimate cognition, there are known thence all the other things which can be attributed to it; and the object, inasmuch as it is something known first, leads to the knowledge of others, either by discourse or without it. And in this way God does not comprehend Himself; for He does not, because He knows Himself, understand other things, as has been shown. Then there can be a comprehension such as befits God - because His essence, which is His knowledge of Himself, so renders Him one who knows Himself that thence He has the power also to make creatures to be known, nor could He represent them from any other source unless it were the knowledge of God Himself; and this mode of comprehension is by far more perfect, since of so great perfection is the knowledge by which God understands Himself, that thence He has the knowledge of all other things. And this is enough concerning the doctrine of articles 5 and 6; for the rest which Cajetan notes are easy.

Articulus VII - Whether the knowledge of God is discursive

To the seventh, we proceed thus.

1029. See Vazquez, disp. 72.

It seems that the knowledge of God is discursive. For the knowledge of God is not according to knowing in habit. But, according to the Philosopher in the Topics, to know in habit it happens to know many things at once, but to understand in act only one at a time. Therefore, since God knows many things (for He knows both Himself and other things, as has been shown), it seems that He does not understand all things at once, but runs from one to another.

1. Further, to know an effect through its cause is to know as one who discourses. But God knows other things through Himself, as an effect through its cause. Therefore His knowledge is discursive.
2. Further, God knows each creature more perfectly than we know it. But we, in created causes, know their effects, and thus we discourse from causes to caused things. Therefore it seems to be likewise in God.

But on the contrary: St. Augustine says in book 15 On the Trinity, that God does not see all things by parts or one by one, as if with alternating concept now here, now there; but He sees all things at once.[1030]

I answer: In divine knowledge there is no discourse at all; which is clear thus. In our knowledge there is a twofold discourse. One according to succession only. For after we have understood something in act, we turn to understanding another thing. Another discourse is according to causality, as when by principles we arrive at the knowledge of conclusions. The first discourse cannot befit God. For many things which we understand successively, if each of them be considered in itself, we understand them all together if we understand them in some one thing; for example, if we understand the parts in the whole, or if we see diverse things in a mirror. But God sees all things in the One which is Himself, as has been said. Whence He sees all things at once and not by succession. Likewise, the second discourse also cannot befit God. First, because the second discourse presupposes the first: for those proceeding from principles to conclusions do not consider both at once. Then, because such discourse is of one proceeding from the known to the unknown. Whence it is manifest that when the first is known, the second is still unknown; and thus the second is not known in the first, but from the first. But the terminus of discourse is when the second is seen in the first, by resolving effects into causes; and then the discourse ceases. Whence, since God sees His own effects in Himself as in a cause, His knowledge is not discursive.

Reply to the first: Although it is only one thing to understand in itself, nevertheless it happens that many things are understood in some one thing, as has been said.

Reply to the second: God does not know through a cause as if, the effect being unknown, the cause were first known; but He knows the effects in the cause. Hence His knowledge is without discourse, as has been said.

1030. St. Augustine, De Trinitate, XV.

Reply to the third: God indeed sees the effects of created causes in the causes themselves much more [perfectly] than we; yet not in such a way that the knowledge of the effects is caused in Him from the knowledge of created causes, as it is in us. Whence His knowledge is not discursive. From which it follows that His knowledge is not discursive.

The conclusion is negative, which St. Thomas most aptly explains, and which Pseudo-Dionysius had previously delivered in De divinis nominibus, chapter 7. Why the knowledge of God is not accompanied by discourse is very evident, and can be easily gathered from the things we shall say in disputation 222.[1028][1031]

Articulus VIII - Whether the knowledge of God is the cause of things

To the eighth, we proceed thus.

It seems that the knowledge of God is not the cause of things. For Origen says, on the Epistle to the Romans: "Not for this reason will something be, because God knows it will be; but because it will be, for that reason it is known by God before it happens."[1032]

1. Further, the cause being posited, the effect is posited; but the knowledge of God is eternal. If therefore the knowledge of God is the cause of created things, it seems that creatures are from eternity.
2. Further, the knowable is prior to knowledge and its measure, as is said in Metaphysics, book 10. But that which is posterior and measured cannot be a cause. Therefore the knowledge of God is not the cause of things.[1033]

But on the contrary: St. Augustine says, book 15 On the Trinity, that all creatures, both spiritual and bodily, God does not know because they are, but they are because He knows them.[1034]

I answer: The knowledge of God is the cause of things. For the knowledge of God stands to all created things as the knowledge of an artificer stands to things made by art. But the knowledge of an artificer is the cause of the things made by art, because the craftsman operates through his intellect. Whence it is necessary that the form of the intellect be the principle of operation, just as heat is the principle of heating. But it must be considered that a natural form, inasmuch as it is a form abiding in that to which it gives existence, does not name the principle of action, but according as it has an inclination to an effect. And in like manner an intelligible form does not name the principle of action according as it is only in the knower, unless there be joined to it an inclination to an effect, which is through the will. For since the intelligible form is related to opposites (since the same knowledge is of opposites), it would not produce a determinate effect unless it were determined to one by appetite, as is said in Metaphysics, book 9.[1035] But it is manifest

1028. Pseudo-Dionysius, De divinis nominibus, c. 7.
1031. See Vazquez, disp. 55, c. 4; disp. 222.
1032. Origen, Commentary on Romans.
1033. Aristotle, Metaphysics, X, on the knowable as measure of knowledge.
1034. St. Augustine, De Trinitate, XV.
1035. Aristotle, Metaphysics, IX (on the same science being of opposites).

that God causes things by His intellect, since His existence is His understanding. Whence it is necessary that His knowledge be the cause of things according to the mode in which it has the will conjoined. Whence the knowledge of God, in so far as it is the cause of things, is wont to be named "knowledge of approval."

Reply to the first: Origen spoke attending to the aspect of knowledge, to which the notion of causality does not belong unless the will be adjoined, as has been said. But what he says, that "for that reason God foreknows some things, because they are future," is to be understood according to a cause of consequence, not according to a cause of effecting. For it follows: if some things are future, that God has foreknown them; yet future things are not the cause that God knows.

Reply to the second: The knowledge of God is the cause of things in so far as things are in the knowledge. But it was not in the knowledge of God that things should be from eternity. Whence, although the knowledge of God is eternal, nevertheless it does not follow that creatures are from eternity.

Reply to the third: Natural things are in the middle between the knowledge of God and our knowledge. For we receive knowledge from natural things, of which God, by His own knowledge, is the cause.

It is objected that the knowledge of God is not the cause of things. For Origen, on the Epistle to the Romans, says: Not therefore will something be because God knows it will be future, but because by His own will He has ordained it; therefore it is known by God before it happens.[1036]

Further, once a cause is posited, the effect is posited; but the knowledge of God is eternal. Therefore, if the knowledge of God is the cause of created things, it seems that creatures are from eternity.

Further, the knowable is prior to knowledge and its measure, as is said in Metaphysics X. But that which is posterior and measured cannot be a cause. Therefore the knowledge of God is not the cause of things.[1037]

But on the contrary: St. Augustine says in De Trinitate XV: God does not know all creatures, spiritual and corporeal, because they are; rather, they are because He knows.[1038]

I answer: The knowledge of God is the cause of things. For the knowledge of God stands to all created things as the knowledge of an artisan stands to his artifacts. But the artisan's knowledge is the cause of the things made by art, because the artisan operates through his intellect. Hence it is necessary that the form (*forma*) of the intellect be a principle of operation, just as heat is a principle of heating. Yet it must be considered that a natural form, in so far as it remains in that in which it exists, names a principle of action, inasmuch as it has an inclination to an effect. In like manner, the intelligible form does not name a principle of producing an effect inasmuch as it is only in the one who understands, unless there be joined to it an inclination to an effect, which is through the will (*voluntas*). For since the intelligible form is of opposites, it does not of itself

1036. Origen, Commentary on the Epistle to the Romans.
1037. Aristotle, Metaphysics, X, on the knowable as the measure of knowledge.
1038. St. Augustine, De Trinitate, XV.

produce a determinate effect, unless it be determined to one by appetite, as is clear in Metaphysics IX. Now it is manifest that God produces things by His intellect, since His very existence (*esse*) is His act (*actus*) of understanding. Hence it is necessary that His knowledge be the cause of things according to will conjoined. Wherefore the knowledge of God, in so far as it is a cause, is wont to be named knowledge of approval (scientia approbationis).

Therefore it must be said that Origen spoke while attending to knowledge under a ratio to which the ratio of cause does not belong unless added to the will, as when he says that therefore God foreknows because they are going to be future; this is to be understood according to a cause of consequence, not according to a cause of effecting. It follows, if certain things are going to be future, that God has foreknown; not, however, that things are future because God knows.

Reply to the first: It must be said that the knowledge of God is the cause of things in so far as things are in the knowledge. But it was not in the knowledge of God that things should be from eternity. Whence, although the knowledge of God is eternal, nevertheless it does not follow that creatures are from eternity.

Reply to the third: Natural things are in the middle between the knowledge of God and our knowledge. For we receive knowledge from natural things, of which God, by His own knowledge, is the cause. Whether, however, the knowledge of God is practical or rather speculative, and what is practical and what only speculative, we shall say in article 16 of this question.[1039]

Explication of the Article. The conclusion is affirmative, yet to be understood thus: that the knowledge of God, together with the will, each in its own order, as also happens in us, is the cause of things. Whether, however, besides knowledge and will there are in God, at least by our reason, such distinct powers as would be the proximate principle of executing and of operating what the intellect has ordered and the will has chosen, we shall say below in disputation 101; and whether knowledge stands more proximately than the will toward the production of things, we shall show in disputation 87.[1040]

Articulus IX - Whether the knowledge of God is of non - beings

Explication of the Article. The conclusion is affirmative, yet to be understood in this way: there is in God a twofold knowledge for us to distinguish, not because in Him there is a twofold operation of knowing, but on account of diverse objects to which it is referred. For certain things God knows as possible before they are future from eternity; and this is commonly called knowledge of simple intelligence (*scientia simplicis intelligentiae*). Others He knows as already future from eternity; and this is called knowledge of vision (*scientia visionis*), because, just as sight is always terminated to existing things and never abstracts them from existence, so that knowledge is terminated to things under some existence: which, although it is about things future or past in time, since God knows past just as He knows future in the same way and has no need of the presence of the thing,

1039. See Vazquez, disp. 68, c. 6; and art. 16 of this question.
1040. See Vazquez, disp. 101, on the order of knowledge and will in God with respect to the production of things.

both these are commonly called knowledge of vision - although some are unwilling to call knowledge of vision anything except that which is conversant about things present in time; but this question is of little moment and is about a word alone.

Further, when it is said that the knowledge of God is the cause of things, this must be understood of the knowledge of simple intelligence, which precedes the futurition of all things; for the knowledge of vision of future things is the cause of their effect inasmuch as it presupposes that they are to be, which cannot be, because it already supposes things to be future, as is explained in disputation 68, chapter 6.[1039] Whether, moreover, the knowledge of God is practical, or rather speculative, and which is practical and which is only speculative, we shall say in article 16 of this question.[1041]

It is objected, on the contrary, thus: It seems that God does not have knowledge except of beings. For the knowledge of God is only of truths. But the true and being are convertible. Therefore the knowledge of God is not of non-beings.

Further, knowledge requires likeness between the knower and the known. But those things which are not cannot have any likeness to God, who is existence itself (*ipsum esse*). Therefore those things which are not cannot be known by God.

Further, the knowledge of God is the cause of the things known by Him. But it is not the cause of non-beings, because non-being has no cause. Therefore God does not have knowledge of non-beings.

But on the contrary is what the Apostle says to the Romans 4: "Who calls the things that are not, as the things that are."

I answer: God knows all things whatsoever that are in any way. Now nothing prevents those things which are not simply from being in some way. For simply are those things which are in act. But those things which are not in act are in potency, either of God Himself or of the creature, whether in active potency or in passive, or in the potency of opining or imagining, or in any way of signifying. Whatever things, therefore, can be made by a creature, or be thought, or be spoken, and also whatever He Himself can make, God knows all, even if they are not. And for so much it can be said that He also has knowledge of non-beings. But among those which are not in act, a certain diversity must be attended to. For some, although they are not now in act, nevertheless either were or will be; and all these God is said to know by knowledge of vision. For since the understanding of God - which is His very existence - would be measured by eternity, which, existing without succession, comprehends the whole of time, the present intuition of God is borne to the whole of time and to all things which are in any time, as to things present to Him. Others, however, are such as are in the potency of God or of a creature, which nevertheless neither are, nor will be, nor were. And with respect to these He is not said to have knowledge of vision, but of simple intelligence. And it is called this for this reason: because the things which are seen among us have a being distinct outside the seer.

1039. See Vazquez, disp. 68, c. 6; and art. 16 of this question.
1041. See the discussion in art. 16 of this question on practical and speculative knowledge in God.

Reply to the first: In so far as they are in potency, so have those things truth which are not in act; for it is true that they are thus in potency; and thus they are known by God.

Reply to the second: Since God is "existence itself" in so far one, whatever is, in so far as it participates in the likeness of God, is; just as anything is hot in so far as it participates in heat. Thus also those things which are in potency, even if they are not in act, are known by God.

Reply to the third: The knowledge of God is the cause of things with the will conjoined. Whence it is not necessary that whatever God knows are, or were, or will be; but only those which He wills to be, or permits to be. And again: It is not in the knowledge of God that those things are, but that they can be.

An inquiry whether the knowledge of God is of non-beings. Disputation 61.

Certain notes for the solution of the question. Chapter 1.

Certain notes for the solution of the question. Chapter 2. How non-being is referred to the intellect of God.

Disputatio LXI - On whether the knowledge of God is of non - beings

Caput I - The ground of doubting

By what way non-beings can be said - for things impossible, such as a man's being a horse, and the like, we can very well doubt - whether the knowledge of God is of these non-beings as it is of beings and of possible things. One could be bold to say that the knowledge of God is terminated to non-beings such that, by the same very concept by which God knows beings, He knows non-beings; as it is wont to be said that by the habit of privation things are known also in our mind: and that there is in the intellect of God a proper concept of non-beings, as there is of beings and of the things that are. For this seems to be expressly taught by Pseudo-Dionysius, De divinis nominibus, after the middle of chapter 7, where, on the way by which God knows things, he says thus: Not that He should consider singulars through a species, but that by one complex of cause He knows and contains all things, in the way in which also light, by its own cause, has beforehand the knowledge of darkness and informs us of darkness, which we know from light. Behold how Dionysius teaches that darkness is known through light, and with this he compares the mode by which God understands things: wherefore someone could say that, in the same way, being (*ens*) and non-being (*non ens*) are referred to the divine intellect, as light and darkness are compared in corporeal sense.[1042]

Caput II - How non - being is referred to the intellect of God

It follows from these things in what manner non-being is referred to the intellect of God, and is said to be understood by it.

1042. Pseudo-Dionysius, De divinis nominibus, c. 7, on the mode by which God knows things.

First, God gives in no way assent to non-being, that is, to a false proposition, whether it be an affirmative or whether a negative which is truly false; rather, to it He always dissents, because to the divine intellect a thing is never objected except as it is; whence that which is not is not objected as though it were; and therefore of it there is always dissent; and in this way the divine intellect is referred and terminated to non-being. Wherefore just as the will (*voluntas*) too of God is of good and evil - of evil by displeasure, of good by complacency - so also the divine intellect is of the true and the false - of the latter by dissent, of the former by assent; that is, these objects are so referred to the divine intellect that He Himself thence takes a denomination, as hearing is said of silence, sight of darkness, not because around these there might be some act of cognition (for privation is called the proper object of a sense, because the privation of its proper object's act gives rise to the proper operation: whence a man discerns, not by sight but by the intellect, that there is not light in the middle, because, with eyes open, he does not see; yet from this he does not discern silence, but from hearing, when that sense, with the object applied to it, does not hear; and so of the others). But sight does not perceive darkness, nor any interior sense; rather, by reasoning the intellect determines that, because sight has not the species of them, otherwise it would perceive the situation and quantity of the darkness, if darkness were referred to it as its proper sensible. The common sensible of quantity indeed is plainly seen, if it is conjoined with the proper; but the interior senses perceive only those things of which they have species derived through the external senses, although from the things they have received they sometimes fashion monsters never seen. Therefore, if darkness has not been in the external sight, it comes about that it cannot be in the interior either.

First note. It is to be noted first that in the divine intellect (*intellectus*) there cannot be many acts, as in ours; but the intellect of God and the intellection which He has of things are His most simple essence (*essentia*), which, in so far as it is referred to diverse objects, or diverse objects are compared with it, is called such and such intellection, namely assent or dissent.

Second note. Secondly, it must be observed that in our intellect, besides the simple apprehension of simples, there is also judgment, which in us is made by composition or division. But judgment is either assent to that which appears true - when, namely, it is known that the predicate is fitting to the subject in an affirmative proposition - or dissent from that which appears false - when, namely, it seems that the predicate does not fit the subject in a similarly affirmative proposition; and in this way is understood that of Aristotle, Posterior Analytics, book 2: "What is not is not known," that is, what appears not to be is not known by the intellect through assent; or to that which appears false the intellect does not offer assent: otherwise, if by assent and dissent we speak, the intellect is of the true and the false, as the will is of good and of evil - of the true by assent, of the false by dissent; the will of good by prosecution and complacency, of evil by flight and displeasure: otherwise than sight is said to be of light and darkness, hearing of sound and silence. For a sense is said to be of a privation of its proper object, not because it has some act of cognition around it, but because from the privation of its proper object the proper operation arises; and hence a man discerns, not by sight but by intellect, that there is not light in the middle, because, with eyes open, he does not see; yet from this he does not discern silence, but from hearing, when

with the object applied he does not hear; and so of the rest. But sight does not perceive darkness, nor any interior sense, but by the ratiocination of the intellect it is established, because sight does not have the species of them; otherwise it would perceive the situation and quantity of darkness, if darkness were referred to it as its proper sensible. The common sensible of quantity indeed is perfectly seen, if it is conjoined with the proper; but the interior senses perceive only those things of which they have species derived through the external senses, although, from those they have received, they sometimes fashion monsters never seen; therefore, if darkness has not been in the external sight, it comes about that neither can it be in the interior.

Third note. Thirdly, it must be premised that non-being, that is, that which is false and is the object of dissent in composition and division, is sometimes conceived by us after the mode of a certain simple being, and of it we enunciate many things, as if it were some being; thus we conceive and name the chimera, which is an impossibility, namely that a man be at once a horse, lion, and ox, after the mode of a certain being; and therefore it is called an ens of reason, a negation, just as also a privation, because in the same way it is apprehended by us and is named.[1043]

Assent and dissent are attributed to the divine intellect according to the mode explained in the first notation.

Second, the divine intellect of itself is referred, by way of assent (*assensus*), to being, that is, to the true proposition, whether it be affirmative or negative; by way, I say, of assent, that is, he so understands to be what is, and not to be what is not, that to each he is said to assent, and this of itself, not by knowing the negation through the affirmation. This, however, is to be understood thus: because God, by a simple intuition whereby he sees each extreme, also sees whether the one agrees with the other or not, as we shall likewise say of the Angels below in disputation 223, chapter 2.[1044] There is, however, a difference: an Angel, as we shall there explain, cannot by one species divide in his intellect, and thus not by one simple formal concept, but by two at least; for he conceives more things by more species, among which there must be division. But the divine intellect, by one simple formal concept, that is, by his own divine essence, conceives two extremes, which in reality are divided from each other and are mutually contrary; therefore, by understanding them thus, he also understands of itself that they are divided, and that the one repugns the other and that they are contraries, as indeed they are; and this is that division be conceived by the divine intellect, or a true negation - which is the same. And thus not only is God said to have a proper objective concept of being, but also of non-being. Nor, indeed, does God understand non-being after the manner of being; this happens to our intellect, which understands the one through the other. Wherefore neither is non-being, as a chimera, conceived by God after the manner of being, as by the human intellect, which philosophizes about it as about some thing, as we said in the notation; for this is a certain figment which cannot be attributed to God.

Yet with this it must be said, as will appear in the following article, that a privation (*privatio*) is not known by God unless the opposite habit (*habitus*) is also known - not, however, by the concept of the habit itself, I say by the objective concept; for since habit is one thing, negation another, and

1043. Aristotle, Posterior Analytics, II, on "what is not is not known."

God understands the things which are or are not in the mode in which they are or are not, each thing can and must be of itself objected to the divine intellect; although the formal concept which is in the intellect of God be the same for both, namely the divine essence itself. It remains that we answer to the testimony of Dionysius, who seems to have taught the opposite; about which, however, we shall speak in the following disputation.[1045]

Articulus X - Whether God knows evils

It is objected:

1) It seems that God does not know evils. For the Philosopher in De Anima III says that the intellect which is not in potency does not know a privation. But the intellect of God is never in potency, but, as is clear from what has been said, is always in act. Therefore it seems that God does not know evils.[1046]

2) Further, every science is either the cause of what is known, or is caused by it. But the science of God is not the cause of evil, nor is it caused by evil. Therefore the science of God is not of evils.

3) Further, everything that is known is known either by its likeness or by its opposite. But whatever God knows, he knows by his own essence, as is manifest from what has been said. But the divine essence is neither a likeness of evil, nor is anything contrary to evil; for nothing is contrary to the divine essence, as St. Augustine says in City of God XII. Therefore God does not know evils.[1047]

4) Further, what is known not through itself but through another, is known imperfectly. But evil is not known by God through itself, for then evil would be in God; for the known is in the knower. If, therefore, it is known through another, namely through the good, it is known imperfectly by him. But this is impossible, because no cognition of God is imperfect. Therefore the science of God is not of evils.

But on the contrary: it is said in Proverbs 15: "Hell and destruction are before the Lord."[1048]

I answer: Whatever knows something perfectly, must know all the things which can befall it. But there are certain goods to which it can befall that they be corrupted by evils. Hence God would not perfectly know goods unless he also knew evils. Moreover, each thing is knowable according as it is; whence, since the being of evil is that it is a privation of good, by this very fact that God knows goods, he also knows evils, just as by the light darknesses are known. Whence Pseudo-Dionysius says: "God through himself receives the vision of darkness; you do not otherwise see darknesses than from the light."[1049]

1044. See below, disp. 223, c. 2, on angelic intellection and the division of opposites in one concept.
1045. Pseudo-Dionysius, De divinis nominibus, c. 7.
1046. Aristotle, De Anima, III.
1047. St. Augustine, De civitate Dei, XII.
1048. Prov 15:11.
1049. Pseudo-Dionysius, De divinis nominibus, c. 7: "non aliunde vides tenebras quam a lumine."

Reply to the first: The word of the Philosopher is to be understood thus: that the intellect which is not in potency does not know a privation as existing in itself. And this agrees with what he had said above: that a point and every indivisible is known through the privation of division. This happens because simple and indivisible forms are not in act in our intellect, but only in potency; for if they were in act in our intellect, they would not be known through privation. And thus simple things are known by the separate substances. Therefore God does not know evil through a privation existing in himself, but through the opposite good.

Reply to the second: The science of God is not the cause of evil, but it is the cause of the good through which evil is known.

Reply to the third: Although evil is not opposed to the divine essence, which is not corruptible by evil, yet it is opposed to the effects of God, which he knows through his own essence; and by knowing them, he knows the evils opposed to them.

Reply to the fourth: To know something by another alone is imperfection of cognition, if that other is knowable per se. But evil is not knowable per se, because it belongs to the notion of evil that it be the privation of good; and thus it can neither be defined nor known except through good. Therefore the science of God is of evils.

Explication of the Article.

The conclusion is affirmative. And it must be understood not only of evils of fault (*mala culpae*), but also of evils of punishment (*mala poenae*): and not only of the positive thing which in the evil of punishment torments, but also of the privation of the good which it inflicts; likewise, it must be understood not only of the positive thing which is in sin, but also of the privation of rectitude of knowledge and will, whatever there is with respect to the very act of sin.

Moreover, since a twofold knowledge is said to be in God - one of approval, or practical, by which God is said to "not know" some, as in Matthew 25; and another, a simple knowledge of things - the conclusion is not to be understood universally of practical or approving knowledge, because God neither approves evils of fault, nor does he make them as they are evils of fault, as Alexander very well notes.[1050] Although in either way the knowledge of God is referred to evils of punishment, nevertheless with respect to simple knowledge, comprehending speculative knowledge, even of future things, the conclusion is in general true of every evil, both of fault and of punishment; and this is manifest enough in Scripture and the doctrine of the Fathers. About the mode, however, in which God knows the evil of fault, there is among the Doctors some controversy, and there will presently be for us a disputation.

1050. Alexander of Hales, Summa, I, q. 23, m. 3, a. 3, on the sense in which God is said in Matthew 25 not to know.

Disputatio LXII - Whether God knows the malice of sin through his goodness

Caput I - Whether God can, by his own goodness, know the evil which is of fault

The view of certain Thomists. God not by himself, but by the opposite virtue, understands every sin.

On this matter it was said enough in the preceding disputation concerning privation; wherefore neither do we ask whether by a concept of his own proper goodness God knows the malice of sin. But since a privation is the privation of some habit, and consequently it is impossible for it to be known unless the opposite habit be known; and since malice is by many said to be the privation of goodness; the controversy now is, whether, in order that God may know the malice of sin, which is said to consist in privation, it suffices for him to know his own goodness, or whether he must also necessarily know some created goodness. We presuppose, moreover, from the opinion of many, that malice is the privation of a due goodness in being; whether this be, universally, true of every malice, even of the malice of the commission of sin, or not, we shall say in I - II, q. 71, a. 6

This supposed, certain recent Thomists think that from this alone - that God knows his own goodness - he can most excellently know the malice of sin, just as, if the sun knew by its own light, it would most clearly understand any darknesses. Durandus makes mention of this opinion; I could find no one of the more ancient Scholastics who held it; it can, however, be approved from Pseudo-Dionysius: where, to show in what manner God has in himself the knowledge of things, he says in these words, that "just as light, by its causality, has within itself anticipatively and informatively the knowledge of darknesses, in that it knows darknesses from nothing else than from light," therefore by the same reason God, who is the supreme light of goodness, through himself will know the darknesses which are the malice of sin.[1052]

It is proved by reason, first, because God in himself is the highest goodness: therefore he contains in himself every notion of goodness, and consequently by it he will know every recession from his goodness. But sin is a certain recession from it; therefore by it he can know sin.

Second reason. Then too, every sin is a privation and aversion from God himself; therefore God, of himself, as by the opposite habit, will understand every sin.

Deum non per se, sed per oppositam virtutem, intelligere omne peccatum.

Caput II - The opposed sentence, more probable: that God does not by himself, but through the opposite virtue, understand every sin

The opposed sentence is much more probable, which teaches that God can perfectly know the malice of sin, but that he necessarily understands it through the opposite virtue. Thus asserts Durandus,[1053] whom some recent authors plainly follow; and among the more ancient, Alexander,

1052. Pseudo-Dionysius, De divinis nominibus, c. 7; Durandus of St. Pourçain, In I Sent., d. 36, q. 1, n. 12.

[1054] St. Thomas in this article to the second and third replies,[1055] St. Bonaventure in the First Book, distinction 36, article 3, question 1, in the body, and to the arguments of Richard, a. 1, q. 2, to the first and second,[1056] strongly favor it: for they teach that evil is known through the good opposed to it. Moreover, it is clear that they are not speaking of the goodness of God - to which sins are also in a certain manner opposed - for St. Thomas plainly speaks of a created good which is an effect of God; the others speak of the good which in God has a likeness and an idea. But the goodness of God does not have in God an idea and likeness; rather only the created good has it, as is evident. Therefore they all speak of created good, not of the uncreated goodness of God himself.

By reason this opinion is proved. First reason: because the malice of sin, even if it consist in privation, is not opposed to the goodness of God as to its proper habit, but only in a certain common ratio, as we said in the third reason above; but a privation cannot be known except through the proper habit to which it is proximately opposed; therefore it cannot be understood through the goodness of God alone. Likewise, the sin of intemperance, if it is the privation of rectitude, is indeed the privation of the virtue of temperance, which certainly is not formally in God; for it exists only in moderating the pleasures of taste and touch. Therefore not every evil of fault can be known by God through his goodness alone.

Second reason. Furthermore, sin is called, by that reason alone, a privation of God and of his goodness, inasmuch as it separates from his friendship and grace, whereby it deprives in respect of God himself, as in the thing and in the object - not as an opposite form, as charity deprives of color, not indeed as a contrary form, but as of an object; and to sight, as of an opposite habit. But a privation cannot be known only through the object which it deprives of (for this deprives remotely and secondarily), but through the opposite quality and form. Therefore neither can the malice of sin be understood through the goodness of God alone, by which, as by an object, it deprives; but it must be known through the opposite created goodness which ought to be in the soul; and because there is a twofold goodness which ought to be in the soul, of which mortal sin deprives: one common, namely grace and charity by which man is joined to God; and another, of virtue...

First reason. The malice of sin, even if it consists in privation, is not opposed to goodness as to a proper habit, but under a common notion, as was said in the third reason; but a privation cannot be known through the proper habit to which it is immediately opposed. Therefore, by the divine goodness alone it cannot be known.

Second reason. Again, if sin is a privation of rectitude, it is a privation of the virtue of temperance, which is not formally in God: for temperance is in moderating pleasures of touch. Therefore a fault cannot be known solely through the divine goodness.

Third reason. Sin is said to be referred to God and to his goodness only in this respect, that it deprives of his friendship and of the grace by which one is joined to him; but a privation cannot be known solely through the object which it deprives one of - this it does remotely and secondarily -

1053. Durandus, In I Sent., d. 36, q. 1, n. 9.
1054. Alexander of Hales, Summa, I, q. 23, m. 3, a. 3.
1055. St. Thomas, Summa theologiae, I, q. 14, a. 10, ad 2 - 3.
1056. St. Bonaventure, In I Sent., d. 36, a. 3, q. 1; Richard of St. Victor, De Trinitate, I, q. 2.

but rather through the opposite habit and form. Therefore the malice of sin cannot be understood by the divine goodness alone, which it deprives one of as of an object; rather it can be understood through the opposite created goodness which ought to have been present and which is taken away: and that goodness is twofold. One is the common goodness which ought to be in the soul and of which mortal sin deprives, namely grace and charity, by which one is conjoined to God; the other is the goodness of a particular virtue, to which sin is properly and proximately opposed, as justice, temperance, etc. Hence it does not suffice, for knowing the malice of sin, to understand only the goodness of grace; it is also necessary to know the goodness of the particular virtue.

As to the testimony of Pseudo-Dionysius adduced for the first opinion, I answer, first, that in that place Dionysius is not treating of the cognition by which God understands the malice of sin, as if he were to say that it is understood by God through his uncreated goodness; but rather of the knowledge and the mode by which God knows all created beings.[1057]

Second, I say that there is a manifest difference between the example of light compared with darkness and of the divine goodness with the malice of sin: for light is a proper form opposed to darkness; but the divine goodness is opposed to the malice of sin only in a general way, not as an opposite form, as has been explained. Wherefore Dionysius did not bring forward the example for that for which the prior opinion supposed it.

Third, I say that by the example of Dionysius he wished only to explain the mode by which God has from himself anticipated knowledge and cognition of all things, that is, before the things themselves exist, and not in any way received from the things themselves. And the example of light is thus to be explained: if light were intelligent, it would know darkness of itself, nor would it have need to beg the knowledge of them from the things themselves. We have more fully explained the text of Dionysius above, in disputation 60, chapter 4.[1058] And what must be answered to the two reasons adduced for the prior opinion is clear from what has been said.

Articulus XI - Whether God knows singulars

To the eleventh we proceed as follows. It seems that God does not know singulars. For the divine intellect is more immaterial than the human intellect; but the human intellect, on account of its immateriality, does not know singulars, but, as is said in De Anima II, the intellect concerns universals, the sense particulars. Therefore God does not know singulars.

1. Further, only those powers in us are cognitive of singulars which receive species not abstracted from material conditions; but in God things are most abstracted from all materiality. Therefore God does not know singulars.

1057. Pseudo-Dionysius, De divinis nominibus, c. 7.
1058. Gabriel Vázquez, Disputation 60, cap. 4.

2. Further, every cognition is through some likeness; but the likeness of singulars, insofar as they are singulars, does not seem to be in God, because the principle of singularity is matter, which, since it is a being only in potency, is altogether dissimilar to God, who is pure act. Therefore God cannot know singulars.

But on the contrary: it is said (Prov 16:2): "All the ways of men are open to his eyes."

I answer that God knows singulars. For all the perfections found in creatures pre-exist in God in a higher mode, as is clear from what has been said. Now to know singulars pertains to our perfection; hence it is necessary that God know singulars. For the Philosopher also judges it unfitting that anything should be known by us which is not known by God, and he argues against Empedocles that it would follow that God were most unwise if he were ignorant of discord.[1059] But those perfections which in lower beings are divided, in God exist simply and in unity. Hence, although we by one power know universals and immaterial things, and by another singulars and material things, nevertheless God by his simple intellect knows both.

But as to how this can be, some, wishing to make the matter plain, have said that God knows singulars through universal causes. For there is nothing in any singular which does not arise from some universal cause; and they propose an example: just as, if some astrologer were to know all the universal motions of the heavens, he could foretell all future eclipses. But this does not suffice; because from universal causes singulars receive certain forms and powers which, however much they are conjoined among themselves, are not individuated except through individual matter. Hence one who would know Socrates through this, that he is white, or that he is Sophroniscus' son, or whatever else of the sort is said, would not know him insofar as he is this man. Therefore, according to the aforesaid mode, God would not know singulars in their singularity.

Others have said that God knows singulars by applying universal causes to particular effects. But this is nothing: for no one can apply something to another unless he first knows that other; whence such an application cannot be the reason for knowing particulars, but rather the cognition of singulars is presupposed.

Therefore it must be said otherwise, that since God is the cause of things through his knowledge, as has been said, his knowledge extends as far as his causality extends. Hence, since the active power of God extends not only to forms, from which the notion of the universal is taken, but also to matter, as will be shown below, it is necessary that the science of God extend even to singulars, which are individuated by matter. For since he knows things other than himself through his essence, insofar as it is the likeness of things, or as their active principle, it is necessary that his essence be a sufficient principle for knowing all the things that are made through him, not only in the universal, but also in the singular. And it would be similar in the case of the science of an artisan, if it were productive of the whole thing and not of the form only.

Reply to the first: Our intellect abstracts an intelligible species from individuating principles; whence the intelligible species of our intellect cannot be a likeness of individual principles. And on this account our intellect does not know singulars. But the intelligible species of the divine intellect,

which is the essence of God, is not immaterial by abstraction, but is of itself the principle existing of all the principles which enter into the composition of a thing, whether they be principles of the species or principles of the individual. Hence by it God knows not only universals but also singulars.

Reply to the second: Although any species of the divine intellect, according to its being, does not have material conditions as do species received in imagination and sense, nevertheless by its virtual power it extends itself to incorporeal and to material things, as has been said.

Reply to the third: Although matter, according to its potentiality, recedes from the likeness of God, nevertheless insofar as it has being even thus, it retains a certain likeness of the divine existence.

The conclusion is affirmative. But what in this article appeared to be to be disputed concerning the conclusion has a common question with what is commonly disputed about divine providence - namely, whether God provides for singular things - which must be treated in disputation 87. But what some here treat concerning the mode by which singulars are known by us seems to be altogether beside the point.

Articulus XII - Whether God knows infinite things

To the twelfth we proceed thus. It seems that God cannot know infinite things. For the infinite, insofar as it is infinite, is unknown: because of the infinite there is this, that to those who take its quantity there is always something further to take, as is said in Physics III.[1060] And St. Augustine also says in De civitate Dei XII, that whatever is comprehended by knowledge is limited by the knower's comprehension. But infinite things cannot be limited; therefore they cannot be comprehended by the science of God.

If it be said that those things which in themselves are infinite are finite for the science of God: on the contrary, the notion of the infinite is that it is untraversable, and a finiting is made through what is traversable, as is said in Physics III. But the infinite cannot be traversed either by the finite or by the infinite, as is proved in Physics VI. Therefore the infinite cannot be made finite to the finite, nor even to the infinite; and thus infinite things are not finite to the science of God, which is infinite.

1. Further, the science of God is the measure of things known. But it is contrary to the notion of the infinite that it be measured; therefore infinite things cannot be known by God.

But on the contrary is what St. Augustine says, De civitate Dei XII, c. 18: "Although there is no number of infinite numbers, nevertheless it is not incomprehensible to him whose knowledge has no number."[1061]

1059. Aristotle, De Anima III; Metaphysics III, where he argues against Empedocles that God would be most unwise if he did not know discord.

1060. Aristotle, Physics III; VI.

1061. St. Augustine, De civitate Dei, XII, c. 18.

I answer that, since God knows not only those things which are in act, but also those things which are in potency, whether of themselves or of the creature, as has been shown, and these are plainly infinite, it is necessary to say that God knows infinite things. And although the science of vision, which is only of those things which are, or will be, or have been, is not of an infinite number of things, as some say, since we do not posit that the world has existed from eternity, nor that generation and motion remain forever, so that individuals should be multiplied into infinity; nevertheless, if it be considered more carefully, it must be said that God also by the science of vision knows infinite things. For God knows also the thoughts and affections of hearts, which will be multiplied without end, rational creatures remaining without end. And this is so because the cognition of any knower extends according to the mode of the form which is the principle of cognition. For the sensible species, which is in the sense, is a likeness only of one individual; whence by it only an individual can be known. But the intelligible species of our intellect is a likeness of the thing as to the nature of the species, which is participable by particulars without number. Whence our intellect, by the intelligible species of man, knows men in a certain manner, even infinite men, but not insofar as they are distinguished from one another, rather insofar as they communicate in the nature of the species, because the intelligible species of our intellect is not a likeness of man as much as to individual principles, but rather as to the principles of the species. But the divine essence, through which the divine intellect understands, is a sufficient likeness of all things which are, or can be, not only as to the common principles, but even as to the proper principles of each one, as has been shown above. Whence it follows that the science of God extends to infinite things, even insofar as they are distinguished from one another.

Reply to the first: The notion of the infinite befits quantity, according to the Philosopher in Physics I; and the notion of quantity is the order of parts. To know, therefore, the infinite according to the mode of the infinite is to know part after part; and so in no way does it happen that the infinite be known, because however great a quantity of parts may be taken, there always remains something beyond what is taken. But God does not thus know the infinite, or infinite things, as if by numbering part after part, since he knows all things at once, not successively, as was said above; whence nothing prevents him from knowing infinite things.

Reply to the second: A traversal imports a certain succession among parts; and thence it is that the infinite cannot be traversed, neither by the finite, nor by the infinite. But to the notion of comprehension suffices adequation: for that is said to be comprehended, of which there is nothing outside the comprehender. Whence it is not contrary to the notion of the infinite that it be comprehended by the infinite. And thus that which in itself is infinite can be said to be finite to the science of God, as comprehended, though not as traversable.

Reply to the third: The science of God is a measure of things, not a quantitative one (which kind of measure lacks the infinite), but one by which he measures the essence and truth of the thing. For each thing has so much of the truth of its nature, inasmuch as it imitates the science of God, just as the thing made by art, inasmuch as it agrees with art. Granted, however, that there were some things infinite in act according to number - for instance, infinite men - or according to continuous

quantity, as if a sphere were infinite (as certain ancients said), nevertheless it is manifest that they would have a determined and finite existence: because their existence would be limited to certain determinate natures; whence they would be measurable according to the science of God.

The conclusion is: God not only knows infinite possibles, but also futures: and the doctrine of this we shall examine in the following disputation.

Disputatio LXIII - Whether God knows actually infinite things, not only possibles but also futures

Opinio Almaini & recentiorum.

Caput I - What is certain among all

Among all the Scholastics it is most certain that all possibles and futures are known by God, although among the Scholastics some judge that not all, still future - if you include future thoughts and all operations - are known by the soul of Christ: of which we shall speak in 3, q. 10, a. 3. But whether God, while he understands all possibles and futures at once, knows actually infinite things, is among Scholastics a great question. Of whom Durandus in 1, dist. 39, q. 2, and Almainus in 3, dist. 14, q. 1, after the first conclusion (whom many of the more recent follow), although he says that the soul of Christ knows not only all future substances and their individuals, but also all the thoughts and operations of men and angels unto eternity, nevertheless affirm that it does not know the infinite in act, which the Logicians call categorematically infinite, but [only] the infinite in potency, which they call syncategorematically infinite: and they must say the same of the very divinity, namely, that by it the infinite in act is not known. And although no other of the ancient writers follows this opinion, now in the schools it is very plausible to recent theologians, not only when they speak of the science of Christ's soul, but also when they speak of the science of the Godhead itself. They prove it in this way.

It is proved first: Things are known in the same mode in which they are; but futures are infinite in potency and not infinite in act: for of these we can say, there are not so many futures but that there could be more, which seems to be the definition of the infinite in potency: therefore God knows only the infinite in potency.

Second: If God knew possibles or futures actually infinite, then an actually infinite could be made by him - which seems absurd.

Third: Concerning the science of vision, both of Christ and of God, it is proved that the infinite in act cannot be known, because this science is only of future things; but there will never be futures actually infinite, but only in potency: therefore God, or the soul of Christ in this way, does not know actually infinite, but infinite in potency. And this seems to have been handed down by St. Thomas concerning the soul of Christ, in 3, q. 10, a. 2, when he asserts that the soul of Christ, by that

science which regards being in act, does not know the infinite, even if they be taken according to any time whatsoever: from which he seems to concede that by this science only infinite in potency are known by the soul of Christ.

Sententia opposita probabilior.

Caput II - The opposite sentence more probable

Among the more ancient Scholastics I do not see that there was any controversy about this matter: but as many as made mention of this question, plainly affirm that God knows infinite [things], both of possibles and of futures. This is the opinion of St. Thomas in this article 12, and of Cajetan there, and in Contra Gentiles, c. 69, and of Ferrariensis there, especially toward the end, of St. Bonaventure in 1, dist. 39, part 2, art. 1, q. 3, in the solution of the arguments, of Richard in art. 1, q. 3, of Walden as cited below.[1062]

Observation the first. It must be much observed what Aristotle teaches in Physics III, c. 6, who assigns two kinds of infinities, one of the infinite in potency, the other of the infinite in act, whose difference the authors of the former sentence seem plainly to confound. Aristotle says that the infinite in potency, which he thinks to be in the nature of things, is such that it never comes to be actually infinite, but is like the Olympic game and the day: such, I say, of a nature as is partly being made and can partly be made; for thus to a thing which is being made, and even to that which actually is, because that which is actually of it is finite, an addition can be made without a term, if we attend only to its nature: as to the Olympic game and the day, which are truly finite, there can be added something without end. Therefore Aristotle defines the infinite in potency in these words: that always another and another be taken; and that which is taken is indeed finite: but that which can be added is in potency; which he signified by those words, and something else always; that is, there always remains something to be added, but not yet taken and conjoined to the multitude. Wherefore Aristotle in that chapter plainly concedes that the infinite in potency is now in the nature of things; for to those things which are actually in a finite multitude - such as men, stones, etc. - more can be added to infinity, either by generation, or by division of the continuum, which nevertheless are not in act: for if those things which can be added to infinity were in act, and could be added with a term, there would indeed be an actually infinite multitude, as will immediately be clear. Finally, in the same chapter Aristotle adduces that definition, "of which nothing is outside," which some thought to be of the infinite, and says that it is the definition not of the infinite but of the perfect: for it is the same as if we were to say, "of which nothing is lacking"; and he subjoins the definition of the infinite in these words, "of which something is always outside," that is, to which something can always be added; and he thinks this to be the definition of the infinite in potency; for that which is outside ought to be in potency, not actually conjoined to the multitude, otherwise it would also be actually infinite. Therefore that is the infinite in act which Aristotle in that chapter distinguished from the infinite in potency, and said not to be in the nature of things - at least in

1062. St. Thomas, in this article; Cajetan there; Contra Gentiles I, c. 69; Francis of Ferrara there, especially toward the end; St. Bonaventure, In I Sent., dist. 39, pars 2, art. 1, q. 3, in the solution of the arguments; Richard, art. 1, q. 3; Thomas Waldensis, in the place cited below.

corporeal things - just as he had said about the infinite in potency [that it is there], [namely] a multitude of things which exist at once, in which one cannot take and assign the first and the last. Otherwise indeed I do not see how these two infinites can be distinguished. For if the infinite in potency be said to be that to whose takings something always remains to be taken - as some assert - and if that which remains to be taken be actually in the multitude itself, so that it only remains to be taken by numbering through the intellect, surely in this way there will be no infinite in act, distinct from the infinite in potency. Wherefore, just as Aristotle concedes in the nature of things an infinite in potency, he will also concede an infinite in act. Therefore it must be said that the infinite in act is a multitude of things actually collected, in which, for those taking some part, there always remains something to be taken by enumeration: which is the same as that in that multitude a first unity and a last cannot be designated by enumeration - and this concerns the former [i.e., the infinite in act as defined].

Observation the second. There was the error of Wyclif, as Walden reports,[1063] that there is not an infinite multitude of those things which God has not made and can make. Wherefore he seems to conclude with a certain number all the things which are possible to God: which opinion Walden in the place alleged thinks manifestly erroneous. For who would say that in the possible multitude of men, out of which God daily could add more besides those whom he has created, there is a last man, so that the whole would be defined by a certain number? These points being posited, which, in my opinion, no one can deny, unless he prefers to contend about a word rather than about the thing, our opinion is proved by this reason.

A reason for the truer opinion. In that multitude which God has at once in his sight - whether it be of possible things or of future things - without any consideration of others which can be added to that multitude, we cannot assign a first and a last: therefore it is a multitude actually infinite. For we said that the multitude infinite in potency differs from that which is actually infinite in this, that the former indeed, the unities considered which it then contains in itself, is actually finite, and has a first and a last: yet because something further can be added to it, and among those things which can be added to it there is no last, it is called infinite in potency. But a multitude actually infinite is that which, considered in itself, among the things which it has in itself in the same way, without any addition of something else, has neither a first nor a last, nor can they be designated by numbering. Now the multitude of possible things or of future things, which at once is known in the sight of God, without anything coming to it from elsewhere, but with those unities alone considered which it has in the mode in which at once they are in the intellect of God, has neither first nor last: therefore it is actually infinite, not in potency. For the infinite in potency must be partly in act - and in that part finite - and partly in potency, because in potency there is something to be added; and in that part it is without term and end: wherefore it does not have all the unities in the same way, but certain ones in act, certain ones in potency. But in the multitude which God knows, all the unities are indeed in the same way: wherefore either the whole multitude ought to be said to be in act, or the whole in potency; not, however, partly in act, partly in potency.

1063. Thomas Waldensis, tom. 1, lib. 2, art. 1, cap. 14, reporting the error of Wyclif.

Effugium is shut off. But if you say that the whole multitude of those things is in potency, because each of them is in potency, and thus that the multitude is infinite in potency, by the same reasoning it would be said that the multitude of men which will be until the end of the world is finite, not in act, but in potency: but this is ridiculous. Therefore, just as a multitude is not said to be finite in act from this - that the things and the unities exist in act - but because by a certain number up to the last unity it can be numbered by some intellect, even if the things do not exist in act: so also nothing prevents it from being said to be infinite, namely, the multitude of possible or of future things, although those things do not exist actually outside the intellect, as often as all the unities are together in it in the same way as they are together in the intellect of God, and in them a first and a last cannot be assigned.

The proper sentence is confirmed and explained. Furthermore, when we say that that multitude is actually infinite, we do not say that it is of things existing in act; it is, indeed, only of possibles and futures: but we assert that, in it so accepted and known even by God himself, there is no last which can be assigned by numbering. Since also whenever all the things which God knows, possibles or futures, he were to make at once, no one would hesitate to say that the multitude is actually and simply infinite: therefore, when we inquire about that multitude as it is at once wholly in act in the intellect of God, we ought to say the same. For it is altogether the same in the notion of multitude.

It is confirmed second. And this has greater force in the opinion of those who think that in eternity all futures are together with a certain real presence. For thus the multitude of futures will be together: and if in it there is not a first and a last, to which someone could arrive by numbering, it follows that it is infinite, and, simply.

For when Aristotle called the infinite in potency and said that it is in the nature of things, he signified only the multitude of those things which exist in act and, according to themselves, as they exist in act, are finite, if there be considered what can be added to it from those things which are possible, [namely] that it is infinite in potency. But in that multitude which God knows together, that multitude is not infinite in potency which in itself in act does not have those [further things] which would make it infinite, but there can at the end be added now this unity, now that. But the multitude of things which is in the intellect of God is not thus: but it actually contains in the intellect of him whatever it can have; and from those which it has in act, a first and last unity cannot be assigned: therefore it is actually infinite.

It is confirmed finally. Lastly, if all the possibles or futures which God knows he were to make together, no one would doubt to say that the multitude is actually and simply infinite: therefore, since we inquire about that multitude as it is at once wholly in act in the intellect of God, we ought to say the same. For it is altogether the same in the notion of multitude.

The testimony of St. Augustine concerning comprehension is confirmed. And that the infinite multitude of possible things is most well known by God, not only did St. Augustine teach in City of God 18, c. 12, but also that it is, in an ineffable way, bounded by the divine intellect, because it is comprehended by him. "For whatever is comprehended by science is bounded by the

comprehension of the knower," says St. Augustine; which is to be understood for this reason: not that God sets a bound to that multitude in such a way that he would find a term to the first and last unity (for that is repugnant to an infinite multitude), but because that whole [multitude] is so contained within his science.

Caput III - Solutions to the arguments of the prior opinion

But on this account he concludes and comprehends it in such a way that nothing is outside of it: and whatever is within something else seems to be bounded and finished by it as by a terminating and enclosing limit. He said this, moreover, against certain Philosophers who falsely supposed that there are not infinite possibles which could be made by God; for, if they were infinite, they could not be known by God with certain science, and thus through an infinite eternity - in which they thought God had not been idle, but always working; some said that he had not always made new things, but had repeated the old and done them again, lest they should say that he did things by chance - therefore St. Augustine teaches that there is an infinite multitude of things, which God so comprehends and knows with certain science that it is said even to be bounded by him, in the way which we have set forth.

Furthermore, no one doubts that future thoughts are infinite who believes that souls and Angels - both the blessed and the damned - are going to endure forever: for thus the blessed will not always remain in that clear vision of God without acts; therefore there must be future cognitions without end and without a last. That these are infinite actually must be proved by the same reasonings by which we demonstrated that possibles also are actually infinite.

It is answered to the arguments of the prior view.

Solutio. From what has been said the reasons of the prior opinion can easily be dissolved.

Reply to the first: I say that that infinite multitude (about which we can say that there are not in it so many units that more and more cannot be added without end, so that what can be added is not yet understood to be actually conjoined) is indeed infinite in potency (*potentia*): because what is to be added is not yet added, but can be added. But that multitude in which, from the things that are in it - as we are speaking of it - we cannot by numbering take so many that we cannot add more from the very things which in the same way it contains in itself, and take them, is infinite in act (*actus*): because that in which there is no last unity is, in the same mode, conjoined to the rest of the multitude. Therefore, since in the multitude of possible or future things, which are known together in the sight of God, by considering only those unities which they have in the mode in which they are together in the intellect of God, there is neither first nor last, therefore it is infinite in act, not in potency. For what is infinite in potency must be in part actual, and in that part finite; and in part in potency, because something remains to be added; and in that part it is without term and without end. Wherefore it does not have all the unities in the same mode, but some actually and some potentially. But in that multitude which God knows, all the unities are in the same mode: wherefore either the whole multitude must be said to be actually, or the whole in potency - yet not partly in act and partly in potency.

But if you say that the whole multitude of those things is in potency, because each one of them is in potency, and thus that the multitude is infinite in potency, certainly by the same reasoning it would be said that the multitude of men who are to be all the way to the end of the world is finite, not actually, but in potency: but this is ridiculous. Therefore, just as a multitude is not said to be finite in act from this, that the things and unities exist actually, but because by a certain number up to the last unity it can be numbered by some intellect - even if the things do not actually exist - so also nothing hinders that the multitude of possible or future things be said to be infinite actually, although those things do not actually exist outside the intellect, whenever all the unities are together in it in the same mode, as they are together in the intellect of God; and in them neither first nor last can be assigned.

Reply to the second: I answer that nothing hinders God - if he willed - to make an infinite multitude of things, which he knows, not only of spiritual but also of corporeal things, as was shown at length above in Disputation 26, where I also demonstrated that many arguments which are wont to be used to prove that an infinite multitude cannot be made by God, clash no less against the science of God than against an infinite multitude if it be said to exist in the nature of things.[1064] And, to say it in a word, since the adversaries affirm that God knows infinities in potency and not in act, lest they be driven to say that God can make an infinite multitude, at least let them grant us that all those things which God knows can be made together by him. For who would deny that what is infinite in potency can be made? But if they say that it cannot be done that that multitude which God knows be produced in reality, because what was infinite in potency in the science of God would already be made infinite in act produced: besides that this is said without foundation - because it would be the very same multitude which God knows and which he would produce - at least the argument always remains in its force for proving that God can make an infinite multitude: because he knows it distinctly and clearly, and he is as powerful for knowing as for making, about which we said more in the place cited. Cajetan tries to establish a difference between the science of God, as he knows infinities, and the power, as he does not make infinities. For in the science of God those things are united which in themselves would be divided; in effect, however, and in production they are divided. But from this no contradiction can be inferred if on the side of the thing there be an infinite multitude of things, which does not follow from its being in the science of God, as we showed in that place: and thus the one consequence rightly follows from the other.[1065]

Reply to the third: I say that, although in no designated time future things are infinite, but up to whatever designated time there is only a finite multitude future; nevertheless in the whole heap of time future, which God has together in his science, there is an infinite multitude; and if in time all future things were present simultaneously, as they are in the science of God, together with the whole succession of time, without doubt the multitude would be infinite.

1064. Above, Disputatio 26, where Vázquez argues at length for the possibility of an actually infinite multitude made by God, and examines the standard arguments to the contrary.

1065. Cajetan's attempt to distinguish the divine science (as uniting many) from divine power (as not making infinities).

But what St. Thomas said about the science of Christ, namely, that he did not know infinities of things which are future in some difference of time, he clearly understands of substances which are generated and corrupted; for these are future finitely, because the duration of generation extends only to the end of the age - not of cognitions, which must be multiplied in eternity - , as Peter of Bergamo taught in the Concordances of the places of St. Thomas, dub. 477, and we shall speak in the Third Part, q. 10, a. 4.[1066] And although St. Thomas were truly speaking also of cognitions, that would only prove that the soul of Christ, according to St. Thomas's opinion, did not know infinite cogitations - about which there will be controversy in that place. But now we are dealing with the science of God, who without any controversy knows all things. Finally, what he asserts - that the things which are future in whatever difference of time are finite - even if we understand it of cognitions, is most true, as we have said. But the things that are future in the whole heap of time, which also lacks an end, cannot be finite; and since God at once embraces the whole by his intellect, it comes about that he also knows cogitations to be infinite.

But Durandus argues in the First Book, dist. 39, q. 1, art. 2, to prove that an infinite multitude is not known by God actually, but only in potency, in this way: In the way in which God knows infinite future cogitations, he knows the infinite division of the continuum, and hence he would see the continuum itself divided in every part; but he does not know every division of the continuum, nor the continuum itself divided in every part actually, but in potency: therefore neither does he know cogitations actually infinite, but in potency. For if God knew the continuum divided actually, or knew it divided into all the individual parts no longer divisible, this cannot be done: because a continuum cannot be divided into indivisibles, since it does not consist of them alone; or else it would be into divisible parts, and thus it would not be divided in every part. And thus the minor proposition remains proved.

Solution. I answer that, since God knows things as they are, and what cannot be in things is not known by God as if it were, it happens that, just as singular cogitations in any temporal difference at all, indeed in the whole heap of the succession of time, are without doubt certainly known by God; and because singular ones are future among themselves, distinct and mutually separate, and each one is neither conjoined with another nor can be further divided, he knows infinities divided by an ultimate division, divided one by one. But he cannot in like manner know a continuum actually divided in every part: although he can most perfectly, from a continuum, separate infinitely many parts by his intellect; because no division in every part is possible, as is gathered from the reasoning made above; and thus by God it cannot be known as having been made. For what is not, is not known. Yet an infinite multitude of parts communicating can be drawn out by God from a continuum; but in such a way that in each there remains infinite divisibility, and the multitude of parts is in potency separable, but not yet separated. Therefore there is a diverse mode of knowing infinite cogitations and the division of a continuum into its parts. Wherefore what Durandus assumes in the major proposition is false; the reason of the distinction is manifest enough from what has been said.[1067]

1067. Durandus of St.-Pourçain, In I Sent., dist. 39, q. 1, art. 2.

Articulus XIII - Whether the knowledge of God is of future contingents

It is objected to the thirteenth thus. It seems that the science of God is not of future contingents. For from a necessary cause proceeds a necessary effect; but the science of God is the cause of the knowable, as was said above. Since therefore it itself is necessary, it follows that its knowns are necessary. Therefore the science of God is not of contingents.[1068]

1. Besides, every conditional, whose antecedent is necessary absolutely, has a consequent necessary absolutely. For thus does the antecedent stand to the consequent as principles to the conclusion. But from necessary principles no conclusion follows except a necessary one, as is proved in the Posterior Analytics. But this is a certain true conditional: "If God knows this to be future, it will be," because the science of God is not fallible. But the antecedent of this conditional is necessary absolutely - both because it is eternal, and because it is signified as present. Therefore the consequent also is necessary absolutely. Therefore whatever is known by God is necessary. And thus the science of God is not of contingents.
2. Besides, everything known by God must be; for also everything known by us must be, although the science of God is more certain than our science. But no future contingent must be. Therefore no future contingent is known by God.

But on the contrary: It is said in Psalm 32: "He who fashioned their hearts one by one, who understands all their works" - namely, of men. But the works of men are contingent, as subject to free will. Therefore God knows future contingents.

I answer that: Since it has been shown above that God is of all things, not only of those which are in act, but also of those which are in his potency, or in the creature's; and among these some are contingent for us as future; it follows that God knows future contingents. To see this more clearly, it must be considered that some contingent can be considered in a twofold way. In one way, in itself, namely, when already it is in act; and thus it is not considered as future, but as present; nor as undetermined to either, but as determined to one: and on this account, in this way it can be subjected to sure and infallible cognition, as to the sense of one seeing, as when I see Socrates sitting. In another way, a contingent can be considered as it is in its cause; and thus it is considered as future, and as contingent, not yet determined to one: because a contingent cause is related to opposites, and thus the contingent is not subjected with certainty to any cognition. Whence whoever knows a contingent effect only in its cause does not have of it except a conjectural cognition. But God knows all contingents, not only as they are in their causes, but also as they are in themselves. And he does not know successively contingent things as they are in their own coming-to-be - as we do - but at once: because his cognition is measured by eternity, as is his existence. But eternity, being the whole at once, encompasses the whole of time, as was said above. Whence all things which come to be in time are present to God from eternity, not only by that reason that he has the rationes of things present with him - as some say - but because his gaze from

1068. See the common loci: In I Sent., dist. 38, a. 5; dist. 39, q. 2; Contra Gentiles I, c. 67; and De veritate q. 2, a. 12; as well as I, q. 14, a. 13.

eternity bears over all things as they are in their own presence. Whence it is manifest that contingents are known by God both infallibly and unchangeably, insofar as they are subjected to the divine view according to their own presentness; and yet they are future contingents when compared to their causes.

Reply to the first: Therefore I say that although the supreme cause is necessary, nevertheless the effect can be contingent on account of the proximate cause being contingent: just as the sprouting of a plant is contingent because of the proximate cause being contingent, although the motion of the sun, which is the first cause, is necessary. And similarly the things known by God are contingent on account of proximate causes, although the science of God, which is the first cause, is necessary.

Reply to the second: It is said by some that this antecedent - "God knows this future contingent" - is not necessary, but contingent: because, although it is present in eternity, ...

[on divine knowledge]

That God knows future contingents

Reply to the second: Some say that this antecedent - "God knew this future contingent" - is not necessary, but contingent: because, although it is past, nevertheless it imports a respect to the future. But this does not take away the necessity: for that which had a respect to the future must needs have had it, even if sometimes the future does not follow. Others truly say that this antecedent is contingent, because it is composed of the necessary and the contingent, just as this statement is contingent, "Socrates is a white man." But this too is nothing: for when it is said, "God knew that this contingent would be," "contingent" is put there only as the material of the verb, and not as a principal part of the proposition. Hence its contingency or necessity matters nothing to this, whether the proposition be necessary or contingent, true or false. For thus it can be true that I said a man is an ass, just as that I said Socrates runs or that God is; and the same ratio holds of the necessary and the contingent. Wherefore it must be said that the antecedent is absolutely necessary. Yet it does not follow, as some say, that the consequent is absolutely necessary: because the antecedent is a remote cause of the consequent, which, on account of a proximate cause, is contingent. But this is nothing. For a conditional is false whose antecedent would be a remote necessary cause and whose consequent would be a contingent effect: as, for example, if one were to say, "If the sun moves, the herb will sprout." And therefore it must be said otherwise, that when in the antecedent something is posited pertaining to an act of the soul, the consequent must be taken, not according to the being which it has in itself, but according to that which it has in the soul. For the being of a thing in itself is one thing, and the being of a thing in the soul is another. For example, if I say, "If the soul understands something, that thing is immaterial," it must be understood that that thing is immaterial according as it is in the intellect, not according as it is in itself. And similarly, if I say, "If God knew something, it will be," the consequent must be

understood as it falls under the divine knowledge, namely, as it is in its presence. And thus it is necessary, as also the antecedent is necessary. For "whatever is, when it is, must be," as is said in the first book of the Peri hermeneias, chapter 8, near the end.[1069]

Reply to the third: Things which are reduced into act temporally are known by us successively in time; but by God they are known in eternity, which is above time. Hence, for us - because we know future contingents inasmuch as they are such - it cannot be that they be certain; but to God alone, whose understanding is in eternity above time. As he who goes along a road does not see those who come after him, but he who from some height looks upon the whole road at once sees all who pass along the road. And therefore that which is known by us must be necessary even according as it is in itself: for those things which are in themselves future contingents cannot be known by us. But those things which are known by God must be necessary according to the mode by which they are subject to the divine knowledge (as has been said), not, however, absolutely, according as they are considered in their proper causes. Whence also this proposition, "everything known by God is necessary to be," is commonly distinguished, because it can be taken de re or de dicto. If it be understood de re, it is divided and false; and the sense is: every thing which God knows is necessary. Or it can be understood de dicto; and thus it is composite and true; and the sense is: this dictum - "to be known by God" - is necessary. But some object, saying that this distinction has place in forms separable from the subject. As if I were to say, "the white is able to be black": which indeed de dicto is false and de re is true. For the thing which is white can be black, but this dictum, "the white is black," can never be true. But in forms inseparable from the subject this distinction has no place; or if I should say, "a black crow is able to be white," in either sense it is false. Now "to be known by God" is inseparable from the thing: since what is known by God cannot be not-known. This objection, however, would have place if "known" imported some disposition inhering in a subject. But since it imports the act of the knower with respect to the thing known itself, although it be always known, nevertheless something can be attributed to it according to itself which is not attributed to it inasmuch as it stands under the act of knowing. Thus "to be material" is attributed to a stone according to itself, which is not attributed to it according as it is intelligible.

The conclusion is affirmative and most true. But concerning that conclusion, and the things which St. Thomas teaches in the article, there are many points worthy of discussion, which in the following disputations must be examined by us. Status quaestionis: On the state of the present disputation and the kinds of futurities.

That the state of the present disputation be understood, it must be noted that there are, universally speaking, two genera of futures. Certain are altogether necessary, which not only come to pass from a natural cause and are determined to one, but also cannot be impeded by any natural opposition of causes, as is the rising of the sun and an eclipse and other things of that kind. And these are known with certitude not only by God, but also by angels and by men, with a certitude not subject to controversy, as is obvious.

1069. Aristotle, Peri hermeneias, book 1 (De interpretatione), c. 8, toward the end.

But other futures are simply contingent. Yet these are said in a twofold way. Certain futures proceed wholly from a natural cause, which nevertheless can be impeded by some other cause, either free or natural; but because this is accidental to that cause, the event which follows therefrom is also called "contingent": because thus it will come about as it is to come about, yet it can also not come about - such as future rain and other impressions natural in these lower parts, sicknesses, maladies, and the like. These, however, although by men they are not so certainly known that in their knowledge they cannot be deceived, are nevertheless known certainly and evidently by the angels, as we will show in Disputation 207, whenever in such events there intervenes only the concurrence and conjunction of natural causes, and no free cause in any way interposes.[1070] For if these events come about or do not come about by some free cause, either applying or impeding, their condition is the same as that of effects which proceed proximate from free choice: and neither the one nor the other can be known certainly and infallibly, even by an angel, as we will show there.

Concerning those, therefore, which depend solely upon natural causes, and in no way upon a free [cause], the proposed question is not to be taken: for it is manifest that these are known by God more certainly than by angels.

There is, moreover, another genus of contingent effects, which first and proximately, or at least remotely, depend upon free choice; and it is about these that we must dispute at present. We now suppose what we will say more briefly in Disputation 68, chapter 1: namely, that the free choice of man and of the angel can by its native faculty act and not act concerning one thing and concerning its opposite.[1071]

Disputatio LXIV - Whether God knows future contingents certainly by their real presence in eternity

According to the Catholic faith and philosophical reason, God foreknows all future things. Chapter 1.

According to the opinion of Richard and of some Thomists: future contingents are present in eternity, and hence are known by God with certitude. Chapter 2.[1072]

Things are not really present to eternity from eternity, nor is such a presence the reason of the certitude of God's knowledge - the truer opinion holds. Chapter 3.

The arguments for the former opinion are satisfied. Chapter 4.

What St. Thomas thought about this "presence." Chapter 5.

1070. See below, Disputation 207, where this is shown at length.

1071. See below, Disputation 68, cap. 1, on the liberty of the will of men and of angels to act or not act concerning the same thing and concerning its opposite.

1072. Richard of St. Victor is commonly named among those who hold this; some Thomists also attribute such a view.

Caput I - According to the Catholic faith and philosophical reason, that God foreknows all future things

Concerning the knowledge of these future contingents, St. Augustine reports the error of Cicero, in the City of God, book 5, chapter 9: in order to defend fortune, the heavens, and freedom in acting, he denied even to God the infallible knowledge of future contingents, so that, on this basis, he might declare divination and prophecies to be uncertain.[1073] But - to omit disputing against the alien wanderings of that writer, which Quintus his brother in the first book of On Divination confutes by his very words - nothing is so consonant to reason and constancy as that we grant not to fortune, nor to chance, nor to lot, the governance of future things, as though they should fall out vacantly, by chance, or at random. Therefore, we, following Aristotle's interpretation and approving his conclusions, reject as empty the contentions about a "future" that is not anything determinate, but sheerly fortuitous; for if (namely) God exists, it neither can happen that there be events that come to pass without order, nor is there any sequence of future things of which he is not provident.

By the best prior natural reasoning we will show: God, by the very fact that he is God, knows all things - each and every one - certainly, with all their singularities; and thus all future things, of every kind, are known by him with infallible certitude.

With this truth premised, which is confessed by all, there still remains, with many of the Scholastics, no small discussion in assigning the reason why, since future contingents are neither necessary nor determined to one, but indifferent, so that they can be and not be, God is nevertheless able not only to know them, but also to comprehend them with certain and infallible certitude. For all Catholics, and even the most skilled philosophers, led by most fitting reason, must maintain that God's knowledge of future things is everywhere, on his part, so certain that it cannot fail; but a certain and infallible knowing excludes every imperfection of conjecture. For conjecture is so imperfect a knowledge that it cannot fall in God, who is the highest truth and goodness, and an intellect free of every species-derived imperfection. Concerning the cause, therefore, why God certainly knows future contingents, we must now discourse; and in this disputation we will examine that present question, as it were in terminis, namely, what is the ratio proposed.

Caput II - According to the opinion of Richard and of some Thomists, future contingents are present in eternity, and thus are known certainly by God

After the difficulty posed, Richard in I, dist. 38, q. 3, and dist. 39, art. 1, q. 1, Capreolus on I, dist. 36, Cajetan at I, q. 14, art. 2, and on dist. 38, q. 1, 2, conclusion 1 and 2, Cajetan himself and more recent Thomists in this article, the Ferrariense on Contra Gentiles, c. 66, the second doubt, and Catherinus in his little work on foreknowledge and providence, not only maintain that all

1073. St. Augustine, De civitate Dei, V, c. 9; he recounts and refutes Cicero's denial of divine foreknowledge of future contingents.

future contingents have always been really present in the measure of God's eternity, but also that this is the unique reason why God knows future things not by probable conjecture but certainly.[1074] Cajetan wonderfully praises this opinion and, with his usual subtlety, explains it accurately. Indeed, after long consideration he greatly boasts that he first discovered it and fitted it suitably to the mind of St. Thomas; although he added nothing new to the doctrine of Richard. Whether in truth St. Thomas also held that, we will say below, in chapter 5.

Note, then, that he himself observes that things can be said to be present by a real presence to eternity in a twofold way: first, such that they are present at any instant of time whatsoever, and that their existence falls in eternity under the measure of any time whatsoever; and he judges this doctrine to be altogether false, nor did it ever come into the mind of the Holy Doctor, nor did he ever dream it; and in this sense he says that the adversaries manifestly slander the opinion of St. Thomas. Moreover, that the doctrine thus explained is false is clear: for since the rising of the sun to be tomorrow does not fall under the measure of any time you like, but only of the future day of tomorrow, it cannot be that it has been, from eternity, present to the eternity of God for any duration of time you like and for any instant; for it would be as if it had begun from eternal time and had lasted; therefore, for any time you like, that is, as existing at any time you like, it cannot be present to eternity.

Next, this doctrine can be explained thus: in any now or instant of eternity, which is wholly simultaneous, future things are present to eternity and to the intellect of God by a real presence and (as they say) by a real co-existence. Understood in this way, the opinion is most true, and according to the mind and sense of St. Thomas. Wherefore (he says) these propositions and the like must be distinguished: "All things are present to eternity," "All things are always present," "All things are from eternity." For either the verb "are" signifies only the duration and measure of eternity, and then they are true; or it also at the same time denotes the measure and duration of time, and then they are false. From this doctrine he thinks all the arguments of Scotus and Durandus can be easily dissolved.

This opinion is proved first by the authority of the Fathers, then by reason. Among the Fathers, first is St. Augustine, who seems to have expressed it in book 2 to Simplicianus. For after he taught that in God there is so-called "foreknowledge" just as there is "repentance," not because He truly foreknows, or because He Himself repents, but improperly and metaphorically, because He is disposed after the manner of one repenting and of one foreknowing, he adds something, and proves it by these words: "For what is foreknowledge if not the knowledge of future things? But what is future to God, who surpasses all times? For if He has the very things in His own gaze, they are not future to Him but present; and on this account it can no longer be called foreknowledge, but only knowledge." From which words the following argument can be drawn: either Augustine speaks of the real presence of future things in eternity - and thus he supports Cajetan's position - or of the presence that they call objective, whereby, namely, by knowing things of any sort

1074. Richard of St. Victor, In I Sent., dist. 38, q. 3; dist. 39, art. 1, q. 1; Capreolus, In I Sent., dist. 36; Cajetan, In I, q. 14, art. 2; In I Sent., dist. 38, q. 1, 2, conclus. 1 - 2; Ferrariense, In Contra Gentiles, c. 66, "Secundum dubium"; St. Ambrose Catharinus, Opusculum de praescientia et providentia.

whatsoever, whether past, or future, or merely possible, He by the very knowledge of them makes them present to Himself, because He is said to represent them to Himself. He does not speak of objective presence; for thus he would not rightly prove that in God there is not properly speaking foreknowledge: for the prophets are truly and properly said to foreknow the future, and yet by the very act of prediction and foreknowledge they have those things present to themselves objectively. Then also from this, that future things are not truly present to God, Augustine infers that the same things are known to us by God in an identical way, as we shall report below; but that does not follow if we speak only of objective presence. For if the same thing were known by God twice, first it would be when that thing was still future, and then when it was now present; but that which is known by God is always present by objective presence, which is wholly simultaneous, and is never objectively future, as is plain. Therefore Augustine is not speaking of objective, but of real presence. [1075]

Boethius teaches the same no less clearly, book 5 of the Consolation, the last prose: "He considers all things that are now coming to be in His simple cognition; nor, if you wish to weigh the foreknowledge whereby He discerns all things, will you judge it to be a foreknowledge as of something future, but a knowledge of a never-failing instant." From which he thereupon infers that in God it should not be called "pre-vision" but "pro-vidence."[1076] Gregory also adds, who in book 20 of the Moralia, chapter 23, alias 24, taught the same, when he affirms that in God foreknowledge is said in exactly the same way as repentance; and proposing a doubt, he says: "How is He 'foreknowing' (namely, God), when nothing is foreknown except things that are future; and we know that to God nothing is future, before whose eyes the past are none, the present do not pass, the future do not come? For everything that to us has been and will be is present before His sight; and whatever is present He can know rather than foreknow." But why nevertheless God is commonly said to "foreknow," a little later he subjoins: "And because those things which are future to us you see are nevertheless always at hand to Him, He is called 'foreknowing,' although by no means does He foresee as future what He sees as present."[1077]

In these words, besides the argument which we brought forward from Augustine (for the same could now also be done), it must be observed, that solely for this reason, according to the sense of Gregory, is "foreknowledge" said metaphorically in God, because the things that are future to us are not so to Him; which must necessarily be understood of real presence. For if he were speaking only of objective presence, it would be altogether false that "therefore" in God there is said to be foreknowledge of future things, because those things are future to us objectively. For even the things present at this time that we do not yet know, but afterwards will know, do not for that reason make it so that God is now said to "foreknow," even improperly and metaphorically, on the ground that they are to be known by us, and that we shall come to have their objective presence; by the same reason it would be said that God "foreknows" the past which we do not yet know but later

shall come to know. Finally, it is manifest that Anselm, in the little work On the Concord of Free Choice and Predestination, cap. 2, and Hugh of St. Victor in the Summa Sententiarum, tract. 1, c. 12, took the same opinion and the words from Augustine.[1078]

Moreover, Fathers can be adduced who teach that to God nothing is future, but that in Him only there is found "It is," not "It will be," or "It was"; of whom we brought forward many in Disputation 32, c. 2. But as it regards the knowledge of God, the same Gregory seems to have expressedly handed on this, in book 9 of the Moralia, c. 26, alias 25, in these words: that "to Him (namely, to God) neither do things past slip away, nor do things yet to come fail, as if they did not appear; because He who has being always, beholds all things as present to Himself; and since He is not stretched to look to 'after' and 'before,' the gaze undergoes no change." The same says Bede in tome 8, book of Questions, q. 13, after the middle; but most clearly Anselm, in the little work On the Concord of Free Choice and Predestination, cap. 1, after the middle, where, concerning the eternity of God, to which he asserts that "It is" alone befits, writes thus: "For just as the present time contains the whole of place, and whatever is in any place; so the eternal present simultaneously comprehends the whole of time, and whatever is in any time. Therefore, since every place is simultaneously really present to the present time, so also all time is simultaneously under eternity itself."[1079]

By reason, indeed, this opinion is proved first, because the duration of God, since it is infinite and eternal, cannot fail to embrace all time and the durations of all things, past and future; and it is wholly simultaneous: therefore at once without succession it contains all things within itself; and hence it is compared by St. Thomas, I Contra Gentiles, c. 66, to the point of a center, so that just as all the points of a circumference constantly correspond, although they are distant and separated among themselves, so also to eternity all created individuals, which in their temporal duration are mutually distant and separated, are permanently referred.[1080]

Second, it can be confirmed by the reason which Augustine uses in the place cited, so as to prove that in God there is not foreknowledge as in us, namely, as if future things were not yet with God, just as it now happens in the order of things; but God by His knowledge anticipates future things. Therefore, says Augustine, "He apprehends them in two ways, in one way according to the foreknowledge of future things, in another according to the knowledge of present things." By which words Augustine himself inserts the inconvenience, namely, that the same things are by God known twice, if future things are not present to Him. But besides his authority, it is also proved by reason that this follows in such wise: for God is said first to know a thing when it is truly future, then when it is already really present; although from this no real change in God follows, yet the mere change of the things suffices, that the knowledge of God, as referred to them, may be said in various ways and diversified: just as He is said to know things future in one way, but only possible things in another way; that is, His essence, altogether unchanged in itself, when compared to

possibles, is called "knowledge" in one mode, but when collated with future things, it is called "knowledge" in another mode. What wonder, then, if, collated with things future and compared with things present, He is said in a different mode to know the same things, no change being made in Himself.

The third argument: unless we say that, by reason of presence in eternity, contingent things are known by God with certain and infallible knowledge, scarcely can another cause be assigned for the certainty of God's knowledge. Therefore this opinion rightly grants that, lest the patrons of it be compelled, with some Scholastics, to confess that the cause of such certainty is hidden. But whether this was the opinion of St. Thomas, to which his own disciples strive to draw him, we will say in chapter 5.

By reason, this same opinion is proved first: because the duration of God, since it is infinite and eternal, cannot fail to embrace all time and the durations of all things past and future; and it is wholly simultaneous: therefore at once without succession it contains all things within itself; and hence it is compared by St. Thomas, I Contra Gentiles, c. 66, to the point of a center, so that just as all the points of a circumference constantly correspond although they are distant and separated among themselves, so also to eternity all created individuals, which in their temporal duration are mutually distant and separated, are permanently referred.

Caput III - The truer opinion holds

Although the preceding opinion was, some years ago, fairly popular in the schools, the opposite is now more received; and in fact even among the older Scholastics it was more common and has far better foundations. That opposite opinion asserts two things. First, that future things are not present to eternity from eternity with a real presence, but only by an objective presence in the mind of God. Second, that the presence which the prior opinion posits is not the reason why God knows future things with certainty; rather, as we shall show a little below, even if they were present by reason of the eminence of eternity, still, prior by nature to their being thus present, they would be known by God.

The first part is defended by Alexander,[1081] St. Bonaventure,[1081] Scotus,[1081] Durandus,[1081] Gabriel,[1081] Gregory,[1081] Marsilius in his Castigatorium on the exposition of this article of St. Thomas, where he reports that the prior opinion was noted by many Doctors at Paris, and was falsely attributed to St. Thomas; add also other Thomists, whom we shall report in chapter 5.[1081]

It could first be proved by the authority of St. Augustine, book 12 On the City of God, chapter 25, at the end, where he says of God: "And if he were to withdraw, so to speak, his creative power from things, they would not be, just as before they were made, they were not; but I say 'before' by eternity, not by time." Therefore Augustine holds that, before things existed in their own time, not only were they not in a prior time, but neither were they in eternity; but if they had been really present to eternity from eternity, they would have been in it before time.[1082]

Then it can be confirmed by reasons. The first is Scotus's, thus. As the immensity of God is not present from eternity to all places that will be in time - or conversely, places are not filled by the immensity of God from eternity - so neither are future things contained by eternity itself from eternity.

Second, Scotus argues: if things are from eternity really present to eternity, or, as the adversaries say, really coexist with eternity, and do not merely have that diminished being, that is, objective being, which Scotus teaches, it follows that they cannot be produced in time and in their proper measure; for the same thing would be produced twice while remaining in its own being. This reason will be more clearly illustrated by the fourth reason, which we shall pursue at greater length from Durandus.

1082. St. Augustine, De civitate Dei, XII, c. 25.

The third reason: whenever several things exist together, or "coexist" (as the Scholastics say) together with some third thing, it is necessary that they also exist or coexist among themselves; but not all future things really coexist among themselves, for some are prior to others; therefore they do not really coexist with eternity either.

To these two later arguments Cajetan thinks one can answer sufficiently from the doctrine set down in the first chapter: because it is not rightly argued from the duration of eternity and from a real coexistence with it, to the duration of time and the proper duration of the things themselves, and to their coexistence among themselves according to that. Wherefore it is not rightly inferred (says he): the thing is really present to eternity before it comes to be; therefore it cannot really be produced. For what is under an alien measure can be newly produced in its own measure; therefore, since things are in eternity, not as in their own, but as in an alien measure, nothing hinders their being afterwards newly produced in their own. In the same way it does not follow: many things coexist to eternity, therefore they coexist among themselves; for they coexist to eternity because of its highest latitude, which embraces all, but they coexist to it in an alien measure; whereas among themselves they can coexist only by their proper duration and measure.

Yet by this solution the fourth reason - which is also Durandus's - impugns effectively: because what as yet is nothing in itself and has nothing of its own proper being and proper duration (which is not distinguished from its being) cannot coexist to an alien measure and duration. For to coexist to another seems to suppose as a first and necessary foundation the proper existence of the thing that coexists; but future things, even necessary ones, were from eternity nothing in themselves, nor did they have anything of a proper duration; therefore neither could they have coexisted to eternity.

To this reason I do not see what Cajetan, or the Thomists, reply; and I hold it evident. But I further press the adversaries thus. Lower things are not said to be in eternity in such a way that eternity is their intrinsic and proper duration; for just as they do not exist by the existence (*esse*) of God, nor are they said to be by God's very existence, so each thing, as it has its own being (*esse*) in itself, so also it has its own duration, by which it is truly and really said to endure, as was often said in Disputation 33. Created things, however, are only in eternity, or coexist to it, just as they are also under time and the motion of the first movable as under an extrinsic duration and measure. For although eternity is not the measure of other durations, as was said in Disputation 31, nevertheless for other things besides God eternity is a certain extrinsic duration, to which they also are said to coexist. Whether, however, it be called a measure now matters little; for in this way or in another, eternity does not confer being and duration upon things. How then can it come about that other things, which do not yet have true being and proper duration in themselves, be said in any way to coexist to eternity, which is for them an altogether extrinsic duration? For how can that which in itself is not yet anything be comprehended by eternity through an altogether extrinsic coexistence? Moreover, why eternity is said to be above every duration, this gives only that, whatever time things exist in, eternity embraces them, and that they all coexist to it at that time; but it cannot bring it about that those things somehow coexist to it which do not yet have proper being or existence: for by an alien duration or existence nothing can in any way exist or endure. Therefore

eternity, since it is extrinsically present to other things, will not make them be in any way; wherefore neither will it make them coexist to itself. For this consists in an extrinsic denomination, which supposes the true being of the things which it denominates.

This, however, agrees only with cognition, in so far as cognition is such as by its own power to make things objectively present to the intelligent subject even when they are not yet; for that being of presence is only to be represented; and what is merely possible also can be represented; but truly to coexist in no way can be.

The fifth reason is from an absurdity. It would follow that future contingents also could be known with certainty by an angel. For the duration of that substance which is called the aevum is wholly "at once," as we shall show in Disputation 33; therefore it embraces at once all subsequent things and all that coexist to it at once. If therefore the existence of future things in eternity is a sufficient cause for their being known by God with certainty and infallibly, the existence of future things in the aevum of angels will be a cause for their being known also with certainty by angels.

I have heard that some, convinced by this argument, concede that future things are indeed known by an angel, not, however, as future, but as present now in his aevum - which is plainly false and absurd. For from this it would follow that those things which are really future for us are known for certain by angels, even though they are present to them; and thus they would know the day of judgment most excellently, contrary to Matt. 24 and Mark 13: "Of that day no one knows, not even the angel of God." Nor, indeed, does the prior opinion attribute to God the knowledge of future things in any other way than because they are present to his eternity; therefore now they would concede to angels that which they attribute to God.

Others reply with Cajetan in this article as follows. Although the aevum measures the whole substantial being of an angel, nevertheless it does not measure his cognition, but discrete time. From this they infer that those things which are future for us are present to the knowledge of God, because this is measured by eternity no less than his substance; but they are not present to the knowledge of an angel, because that is measured by discrete time, not by the aevum; yet they are present to the substance of the angel, which is measured by an aevum wholly at once and permanent. But it matters little that future things are really present to the substance of an angel, for them to be known for certain by an angel, if they are not present to his cognition.

But this solution does not satisfy. For when the opposite opinion says that from real presence future things are known with certainty by God, it does not speak of objective presence; for thus there would be a useless repetition: that therefore God knows the future because they are objectively present - presence, as if we were saying: therefore they are known with certainty, because they are known with certainty. For to be objectively present is entirely nothing other than to be represented to the knower. If, then, from real presence in eternity objective presence is to be proved, the same in the angel is also evidently concluded; and this pertains to the first part of our opinion.

Moreover, we can press the Cajetanians further. For in the Thomist position there is some intellection of the angel which is not measured by discrete time but by the aevum, as his substance is measured by it; to this intellection, therefore, all future things could be really present, and, by reason of this presence, be known. For if not only as present to the angel according to his substance, but also by some intellection the angel has perseverance in his own being, and remains all at once for some part of our time - as is commonly held of an angel's act, that it lasts longer or shorter in permanence - therefore to that intellection the future things of that part of time could be present, and thus be known with certainty by an angel.

And if anyone were to say that future things must not only coexist to the intellection of an angel according to being by a real presence, but also by an objective presence, so that they may be known by him with certainty; but that future things cannot be objectively represented to an angel until they are present in their own proper duration and measure: this solution is manifestly nugatory and contains a useless repetition, as we noted a little before. For if from a real presence in the duration of eternity the objective presence were not to be inferred - so that things really present to God are known by him - but that from the objective presence this were to be proved; then the labor of proving a presence in eternity has been in vain: one ought rather to begin straightway from the objective representation, namely, that future things are objectively represented to God, and are therefore known. But if, for anything to be represented as future, it matters little whether it be present by a real presence, then it is in vain that the permanence of eternity, which by its duration embraces all successive things, is adduced to prove that all future things are present to God; or, if in God the objective presence is proved from the real presence, in the angel too it is evidently inferred: and this is of the prior part of our opinion.

The latter part also can easily be proved. First, from what has been said: if this presence of future things in eternity is of a kind such as we have chiefly shown, it follows that it cannot be the reason why God knows the future with certainty; the reason for that certainty is most perfect and proper, as we shall set out in the following disputations; and it is this: that God, the best and most perfect, knows creatures because he is their efficient and proper cause; and a certain and infallible knowledge of future things he has, because they are before him as determined in their causes and measures, and in time when they will be present in their own measure; whereas to be present in eternity, if that presence be something merely possible (as in Disputation 66 we shall show), it is not required before he understands future things as present in eternity, for a certain and infallible science from God to be had.

Some more recent Thomists seem to have sensed this; wherefore they maintain that this presence of future things in eternity is not necessary so that future things be known certainly and infallibly, but only so that God's science concerning future things be intuitive - that is, what they call "intuitive," a science which bears upon the same as present in act. Yet this necessity is not found in the ancient Thomists, who posited the presence of future things in eternity only so that the science of God might be certain and infallible, because, before they were understood as present in eternity, they seemed to them not to be determined so as to be known. But if once we concede that future things can be known by a proper and infallible concept, as they are in themselves

future, what need is there to grant also to God that knowledge which they call intuitive, that is, of the same future things as present in eternity? For this science has no greater perfection than that which is borne upon future things as they are in themselves future; and since the supreme perfection of knowledge seems to consist in this, that God know future things as future - namely, as they are - there is no need to ascribe to God an intuitive cognition of future things as present in eternity, before they are present in their own proper measure; and, moreover, that difficult opinion about a presence in eternity is superfluously introduced.

Satisfaction is given to the arguments of the prior opinion.

Caput IV - On testimonies of the Fathers; against naming God's knowledge of future things "foreknowledge"; and on the distinction between the science of vision and of simple intelligence

But moreover, that the science of future things, as they are future, is as certain and infallible as when they are present, will be clear from what we shall say in the following disputation. Add this also, that, as we shall show in Disputation 134, intuitive science is not to be called only that which is borne upon a presence according to place or proper time, but that which is borne, with a proper concept, upon a thing not abstracted from existence, but existing in its own time. And indeed a greater perfection, which can befit cognition, is that it be borne upon the things themselves, as they themselves are - either future, or past, or present - than to be borne upon future things as present.

In this way satisfaction is made to the arguments of the prior position.

It is necessary, however, to overturn the foundations of that prior opinion. But, in order to reply to the testimonies of the Fathers adduced before and to the reasons we drew from them, note the doctrine which we brought above from the same St. Augustine and Aristotle, in Disputation 38, chapter 2, at the end - namely, that a thing can even be seen by the bodily eye while absent, if God conserve its species; and that this can be done so perfectly that, when the object is again present in reality, absolutely nothing is added to the perfection of the vision, but it remains just as clear in the absence of the object, if the perfect species be conserved, as it would be in its presence. Hence a thing which would be seen in this manner, while the object were absent, would not be seen anew by another vision when the object became present.[1083]

Then it must be observed that foreknowledge (*praescientia*) among men is as it were a certain praesentience and pre-cognition of a future thing - so confused and obscure that, when the thing itself is present and actually present, it is seen much more clearly, and thereby that cognition of praesentience is changed into a clearer one. Wherefore with us, commonly, foreknowledge is as it were an anticipated and immature science. And this is true not only in the foreknowledge and divination of contingent things, but also of necessary things: for an astrologer knows a future eclipse in one way, but sees the present one in another. St. Augustine indicated this mode of foreknowing future things in Confessions XI, chapter 18, where he says: "When, therefore, things

1083. St. Augustine and Aristotle, cited above in Disputation 38, cap. 2, at the end.

future are said to be seen, it is not the things themselves, in that they are not yet, that is, in that they are future, but perhaps their causes are seen, which already are. Therefore they are not future but present to those who see them, from which future things are predicted. But God, with that perspicacity which is his in understanding, thus vividly beholds the things which are future for us, and judges that they will be future at one time, present at another, and past at yet another, that the variation of things in themselves add nothing to, nor detract anything from, the perfection of the science of God."[1084]

Accordingly, when Augustine, Gregory, Boethius, and Anselm say that in God there is foreknowledge, as there is repentance, they speak improperly of foreknowledge in the human mode, which is an obscure kind of praesentience of things. For this is not in God, but in men; yet God is said to foreknow because, before things befall us, he already knows them - wherein alone he agrees with foreknowledge taken more properly: just as, when God destroys what he made, he stands in the place of one who repents of an act. And therefore, in the judgment of these Fathers, God is more fittingly said to sense, and to know, and to see, than to foreknow, to praesentiate, and to foresee; for, although things be future for us, he beholds them as perfectly as they are future, just as we see things present to us - and far better.[1085]

From this same doctrine one can easily respond to the argument brought in that place on behalf of the prior position. For if in God there were foreknowledge, that is, that imperfect praesentience of future things, undoubtedly God would know the same thing twice, and the later notion would be more perfect: and this is the absurdity that Augustine intends to infer; for if God's prior cognition were obscure on account of the object's distance and absence, the later would be more perfect on account of the object's presence. But if God from eternity sees future things just as perfectly as if they were really present - because his cognition is borne upon the thing itself so distinctly and with its proper concept that, when a future thing becomes present with real presence, nothing of cognition is changed in God - then Augustine rightly said that God's science is not to be called foreknowledge, but science; nor that he foresees future things, but that he sees; and that he bears himself toward future things just as toward present things.

From which it is also inferred that certain recent authors are wrong to refuse to call the science which God has of future things, as they are future, "science of vision" (*scientia visionis*), and to call it instead "science of simple intelligence" (*scientia simplicis intelligentiae*). For Boethius, in accord with that doctrine of Augustine, says that in God it is rather to be called providence than "prevision." For if these authors shrink from calling it science of vision, they will also say that God does not see future things, but foresees; not that he knows, but that he foreknows.[1086]

But whether, in our mode of conceiving, a twofold mode of science of future things can be distinguished in God - one as of future things, the other as of present things - just as we distinguish the science of possibles from the science of future things, can also be determined easily from what has been said. And first, even if a twofold science, in our mode of conceiving, be distinguished in

1084. St. Augustine, Confessions XI, c. 18.
1085. St. Gregory, Boethius, St. Anselm, and St. Augustine are here named together for this usage.
1086. Boethius is invoked according to the Augustinian line, that in God it is called providence rather than prevision.

God, and thus we should say that the same thing is known by God not only in two ways but in three - first, insofar as it is only possible; second, insofar as it is future; third, insofar as it is present - nevertheless there does not follow the absurdity which, in the place cited above, Augustine contends for; for that follows only if we were to say that a future thing is first known by God under a shadow and confusedly, then with a distinct and clear knowledge when the thing itself is present - which would be a great variation and imperfection in God.

But those who would distinguish a twofold science in God - one of future things, the other of present things - diverse solely according to our mode of conceiving, just as the science of possibles is distinguished from the science of future things, would not thereby be compelled to assert that the science of future things is obscure and imperfect, and that it is perfected or changed upon the advent of the science of present things; rather they ought to assert that the same science is equally perfect according to the thing, and is distinguished only, in our way of conceiving, by its order to diverse objects.

Then I say that, even according to our way of conceiving, God's science ought not further to be distinguished into a science of future things and a science of present things; otherwise, by exactly the same reasoning, we would all have to say that another member must be added - namely, a science of past things - which, however, none of the Scholastics has said up to now.

And if science, insofar as it is of future things, ought to be called "science of simple intelligence," as recent authors wish, then, by the same reasoning, the science of past things ought also to be called "science of simple intelligence." But why, in God, there ought not to be distinguished, even in our way of conceiving, any science except a twofold one - one, the science of simple intelligence, which is of possibles; the other, the science of vision, which embraces future, past, and present things together - the reason is sufficiently plain: because, on the part of the object, the science of future, past, and present things does not differ, in that in any of those modes the science of God is borne upon the thing according to essence (*essentia*) and existence (*esse*) in act. But that this existence be understood as past, or future, or present, does not arise from a diversity in the thing known, but from time to which the thing known is referred: for the same thing, with its existence distinctly known, as it is referred to one time, is called past; as it is referred to another, it is called future; and, finally, as it is referred to another, it is called present. But the science of simple intelligence, by which a thing is known only as possible, certainly considers the thing in itself in another way than the science of vision does; for it understands the essence of the thing alone without its existence. Since, therefore, such is the diversity on the part of the thing considered, we rightly, in our way of conceiving, distinguish a twofold science in God: one of simple intelligence, the other of vision.

The testimonies of the Fathers adduced later are answered more readily. First of all we say that the Fathers cited in Disputation 32, chapter 2 - who assert that in eternity there are not those three times, "was, is, will be," but only "is" - do not deny that created things, which fall under those three temporal differences, are successively comprehended by eternity itself and successively co-exist

with it; nor do they assert that they must exist together with it all at once; but only deny that there is in eternity itself an intrinsic succession, because no variation at all can be in it: yet nothing prevents those things which in themselves, under those three -

Those things which in themselves have succession, and mutually succeed one another, also successively co-exist with eternity: for to a permanent reality, such as eternity is, other things which succeed one another must also in turn stand by successively; and in this sense Anselm said that all time is concluded by eternity itself - not because, gathered together at once, all things co-exist with eternity, but because eternity, ever remaining, at length embraces all the things that come to be successively, and perseveres with them all, even if they themselves pass away and are succeeded by others.

Moreover, what Gregory, Bede, and Anselm say - that all things are present to the eternity of God in His sight - we do not deny: for this ought to be understood only of objective presence, and of things as they are in time; and therefore God sees all things at once by one intuition. But this does not prove the real presence which the Doctors of the former opinion devise, as is plainly clear from the words cited for that former opinion; which is further confirmed from the words of St. Gregory the Great, which he subjoins a little below. For when he had said that what is future is not foreseen by God, because He sees it as present, he adds: "For even whatever things are, they are not therefore seen from eternity because they are; but they therefore are, because they are seen." If Gregory were speaking here of a real presence in eternity, he ought to have said, in accordance with the doctrine of the former opinion, that for that reason things are known, because they are in eternity. But since he says that they therefore are, because they are known, he clearly indicates that he is speaking of objective presence - of which he rightly said that things therefore "are," that is, are present, because they are known: for since cognition is the express representation of the thing, it makes the thing present.

Now indeed the arguments of the former opinion can be dissolved much more easily. Reply to the first argument: although eternity, in itself, is wholly at once without any succession of its own, and embraces all things existing in time, nevertheless it does not comprehend them all at once, but successively, just as they themselves are; for it cannot contain them otherwise than by existing with them at once, persevering in its existence together with theirs. Wherefore, in order that it should exist together with them, and so constantly contain all, it would have been necessary that they too should persevere and be together; but since they succeed one another, it also comprehends them successively - not by a succession on its own part, but on the part of those very things which are said to be contained. And therefore, if any succession is posited in eternity from this fact, it is only an extrinsic denomination from the things contained that succeed one another among themselves; just as the same place, remaining the same without any succession in itself, contains many things successively, by reason that the things themselves succeed one another in the place. As to the second argument, enough has already been said; and as to the third, from those things which we shall say in the following disputation it will be evident what answer must be given. For there it will be clear that there is another sufficient and proper reason why the future, however contingent and

apt for either outcome, is known by God certainly and determinately. Therefore there is no need to have recourse to this "presence," and to rack the wits of men to no purpose in a matter most manifest.

Caput V - What St. Thomas thought about this presence

The view of the Thomist school in our time commonly teaches that that real presence which the former opinion asserts is from the mind of St. Thomas. They prove it first from the words of this art. 13, where he says: "All things that are in time are present to God from eternity, not only in that way in which He has the reasons of things with Him as present (as some say), but because His intuition is borne from eternity upon all things, as they are in their own presentness." If he were speaking only of objective presence, then the reason by which he proves that the future is known by God with certainty - namely, because those things are present to Him - would be a nugatory begging of the question. For it would be as if he said: He therefore knows certainly, because he has things objectively present; and since to have things objectively present is nothing else than to know them, it would be the same as saying: they are therefore known, because they are known. By this reasoning, which Ferrariensis deduces from this place, Contra gentes I, c. 66, he is persuaded that that opinion is St. Thomas's.[1087] Next, there is another testimony in the same Contra gentes I, that same c. 66, in the sixth reason, where he says that nothing can co-exist with the eternal "in part," but must of necessity co-exist "with the whole"; and therefore also that the divine intellect looks upon all future things as if present. But by objective presence a thing is not said to co-exist with God; therefore there St. Thomas is not speaking of objective, but of real presence, by which things truly and really co-exist with God; since from real co-existence, by which things are present to God from eternity, he infers that they are known by God. He seems to speak in the same way In I Sentences d. 38, a. 5, and in De veritate q. 2, a. 12.[1088]

But the more ancient and no less weighty Thomists understood the mind of St. Thomas otherwise - and, in my judgment, much more truly, and in closer accord with his intention. They held that St. Thomas nowhere taught that real presence of future things in eternity. So judged the Archbishop of Seville, Deza, on I Sentences d. 38, q. 1, a. 2; Herveus on the same distinction; and Sylvester in defense of St. Thomas's doctrine; indeed Aegidius, himself once a disciple and hearer of St. Thomas, in his Castigatorium against the corruptor of Thomas, in his observations on this art. 13, strives to vindicate the Holy Doctor from this opinion, as from a calumny which certain Parisian Doctors in his time were attributing to St. Thomas, and on account of which they were accusing him of error.[1089] The Thomists cited teach that St. Thomas, wherever he speaks of presence, speaks of objective, not of real presence; and of the presence of things in God Himself,

1087. "Ferrariensis" adduces this from St. Thomas, Contra Gentiles I, c. 66.

1088. St. Thomas, In I Sententiarum d. 38, a. 5; De veritate q. 2, a. 12.

1089. Deza, In I Sent., d. 38, q. 1, a. 2; Herveus, the same distinction; Sylvester, in defense of St. Thomas; Aegidius, Castigatorium adversus corruptorem Thomae, Observations on this art. 13.

not outside Him; so that nothing outside God co-exists with Him from eternity, but only in Him are things said to be from eternity. This is to be understood of objective existence. And this will become manifest if we show that in this article there is nothing of that real presence.

Exposition of the former place of St. Thomas, and of others. Therefore he teaches three things in this art. 13. First, that God knows all future things. He proves this, not from the fact that they are present (as some falsely think), but from this, that He comprehends all things that are in His power and the creature's power. Wherefore, since all future things are in His power and the creature's power, He necessarily knows them all. Second, that future things are known by God in themselves, not in their causes. This too he does not prove from real presence, but because causes are of themselves indifferent to either outcome; and so in them there can be nothing from which future things should be known with certainty. Therefore, since God knows them certainly, He must know them not in their causes but in themselves. Third, that God beholds all these future things from eternity without succession. He proves this because His eternity is wholly at once; therefore His cognition also, whose duration is eternity itself, will be wholly at once. Hence he infers that the intellect of God is at once, from eternity, borne upon all future things as if they were present, lest there be any succession in His knowledge. From this too he gathers that all things which in time are future are present to God - not only in the eternal exemplars (as some say), that is, in His essence, as it has the notion of an intelligible species, but because His intuition and actual knowledge are borne upon all future things; wherein he speaks openly of objective presence. For they are said by St. Thomas to be present to God for this reason, that His intuition is borne upon them. But if St. Thomas were speaking of that real presence of Cajetan, he ought to have said conversely: the intuition of God is borne upon things because they are present. By these words he does not intend to give the reason why they are known by God, but to explain the mode by which God has all things present to Himself at once - which is the sense in which he also spoke above in art. 9. Then he subjoins these words: "Whence it is manifest that contingent things are known infallibly by God, inasmuch as they are subject to the divine sight according to their presentness, and yet, compared with their causes, they are future contingent." By these words he likewise does not give the reason why future things are known by God - namely, because they are subject to His sight (for of this presentness he plainly speaks); for this would be a nugatory begging of the question. Rather, he explains the mode whereby God's knowledge is infallible: namely, because it is borne upon the things themselves which He has present to His sight; and nevertheless, when compared with their causes, future things are contingent and indifferent. Let these points suffice for the exposition of the article; from them the other testimonies of the Holy Doctor can easily be explained, and an answer can be given to the argument which Ferrariensis had advanced.

Whether any account of the certainty of the knowledge by which God knows future things can be assigned. Disputation 65. - Various scholastic opinions. Caput 1. - From the decree of the divine will a sufficient, though remoter, cause of the certainty of knowledge can be assigned. Caput 2. - Solution of the objections against this opinion. Caput 3. - From the truth of future things and the infinity of the divine intellect, the certainty of His knowledge is most fittingly inferred. Caput 4.

Disputatio LXV - Whether any account of the certainty of the knowledge by which God knows future things can be assigned

Caput I - Various scholastic opinions

The same is more clearly declared and confirmed by a later reason of Scotus, which is as follows: an idea in God precedes every act of His will, as will be clear from what we shall say in disputation 72; therefore it naturally represents that of which it is the idea. Accordingly, there are also ideas of possible things, which are of necessity represented in the divine essence: therefore an idea, as an idea, does not represent future things insofar as they are future.

But if someone, on behalf of St. Bonaventure, were to answer that by the ideas, or rationes, existing in the mind of God there are not understood those which precede every act of will, as has been explained, and are the principle of producing creatures and pertain to His practical knowledge; but rather the simple representation in the essence of God, which pertains to speculative knowledge; certainly no sufficient account is thereby rendered of the certainty of knowledge, but the proposed difficulty returns in the same way. For if that representation of future things be posited in the divine essence after the manner of an impressed species (*species impressa*), and in first act (*actus primus*) for understanding, or as in an expressed species (*species expressa*) in second act (*actus secundus*), a reason is still to be given of this: namely, why future things, since they are indifferent and in an undetermined cause, should be represented in the divine essence determinately, either in second act or even in first act. Therefore the same question always remains, especially if the discourse be about representation in second act and as in an expressed species. For it is entirely the same thing to be represented in second act or in an expressed species, and to be known, as has been frequently inculcated in the whole of Question 12.

Caput II - From the decree of the divine will a sufficient, though remoter, cause of the certainty of knowledge can be assigned

Multiple, in my judgment, are the accounts that can be given of the certainty of the knowledge of God. The first is indeed sufficient, but remote, of which we shall speak in this chapter; the second is proper and proximate, and is evidently deduced from natural principles: about this we shall speak briefly in chapter 4.

Therefore the first account by which the certainty of the knowledge of God is proved and declared is taken from the decree of His will, by which He defined all future things that are to be produced in time. This reason is employed by Scotus in I, dist. 39, q. 1, 5; against this there is an argument, and a tract On Contingency, by Richard, I, dist. 38, art. ...; and Durandus thinks this to be the only one, I, dist. 39, q. 3, num. 9; for all the other things which he assigned in that question, from which the certainty of the knowledge of God might be gathered, do not sufficiently prove it, as

anyone can easily see. Among more recent Thomists too, who think that from real presence in eternity future things are known with certainty by God, there are some who also say that they are known with certainty not from that presence alone, but together with the decree.[1090]

In order to prove this position, and from the decree of the will of God to deduce by the best reasoning the certainty of His knowledge, it must be premised that, in a certain order, any given thing is first future before God understands it to be future, as we shall show in disputation 68, chapter 6. Then, that nothing is future without some particular will and definition of God concerning it: which is to me so certain that I think it can in no way be denied. There are indeed some more recent theologians who, not being able in any other way to explain how God provides all the necessary helps for acting well and meriting eternal life, say that it is necessary that God has decreed, one by one, all our works insofar as they are good; or, not being able in this way to reconcile the will of God with our freedom, they affirm that God has not defined everything individually, neither Himself alone, nor with the second cause to concur with it; but that by a certain general ratio He has established with Himself to concur with every cause and free choice, even with sufficient calling being foregiven, and to be prepared for this. Wherefore, neither by our mere consideration do there arise in God many decrees of His will concerning our works, nor one which is borne distinctly upon individual things, but one in general. And therefore they say that from the decree of God, which is universal and indifferent, future contingents and the works of our free choice cannot already be known with certainty.

However, that this is false, and that from the divine decree one can very well gather the certainty of the knowledge of God, I now show. First, either the will of God is engaged distinctly and individually with respect to our several works, no less than His knowledge is; or else there is only a decree of the will of God concerning future things in general and in a confused way; as if someone, within himself not attending to individual things in detail nor willing them one by one, were to determine in general to aid all causes that would need his help. If God decreed our works only in this latter way, it follows that He only confusedly and indistinctly willed from eternity to do the things that He was going to do in time; and when He concurs in time, then God would not will to concur determinately and individually to that work, but to act only by that constant and universal will. Wherefore we can say against these what St. Jerome says in the Dialogue against the Pelagians, who asserted that the help of the grace of God is not necessary for individual works, beyond the grace of creation and free choice: namely, that God determines in our works; we, however, could add what seems to serve our present purpose. For in that fashion one might say that He once for all decreed with Himself to concur with all causes in general, and thereafter cares nothing individually: which derogates much from the divine mode of providence; for thus one lapses into the view of Aristotle, who, in the book On the Heaven addressed to Alexander, thought that God does not provide for all things proximately and individually, but governs all things through universal causes; about which we shall speak in disputation 87.[1091]

1090. Scotus, In I Sententiarum d. 39, q. 1, 5; Richard of Middleton, In I Sent., d. 38, art. ...; Durandus, In I Sent., d. 39, q. 3, num. 9.

1091. St. Jerome, Dialogus contra Pelagianos; Aristotle, in the book On the Heaven addressed to Alexander.

But if, when in time He concurs with this cause, He wills to concur with it no less determinately and distinctly than if He alone were acting, as reason itself shows, it follows that from eternity He also had this will distinctly and individually concerning this operation and all the others; otherwise the singular will of God concerning some operation would have begun in time, which is absurd.

Let it be supposed, therefore, that we say the decree and definition of the will of God to have been from eternity distinct and individual concerning each of the things He was going to operate in time, whether operating by Himself alone or concurring with a second cause; whether, according to our manner of conceiving, we distinguish that decree into many, or say that it is one - about which we need not be much concerned. For it is certain that with God most good He willed all things, and each thing, by one most simple and eternal act of will; for the will itself and the operation of the will are the same as His essence, which is simple and individual. Whether, however, according to our way of understanding, there are many operations of will in God by which He wills individual things on the ground that His will is borne distinctly and individually upon individual things, I for my part judge that they can and ought to be distinguished, as commonly they are distinguished by diversity of objects. Yet if anyone prefers to concede that, even according to our way of understanding, there is one most simple act of will, I shall not care: for our present undertaking is sufficiently served, and it matters greatly, if you grant that there is a decree of God by which from eternity He has defined and willed to concur with all causes, even free ones, distinctly and individually, not confusedly and in general; which, moreover, shall be treated in its place, in disputation 87.

This being supposed, it is easily shown how, together with the indifference and freedom of causes, there is with respect to future things the certainty of God, and what the scholastics call infallibility.

Next we suppose that this decree of the divine will is, in a certain order of causality, prior to a thing's being future; indeed, it is from it that something is future, because God willed it. For a future thing cannot be understood as future save from its causes; but among its causes is the decree of God, as we shall explain. Therefore, before a thing is future, in a certain causal order God has willed it to be future; the decree of God accordingly precedes the future thing as future - whether we say that it also precedes the concurrence and determination of the secondary free cause, or that it only matures that concurrence, or rather that it effects it; in whatever way free choice be compared, the decree posits in the thing itself that will be future something prior upon which it follows.

From this decree, in a certain way, the certainty of the knowledge of God can be inferred, because the decree is necessary and cannot fail, nor can anything be done or occur against it; wherefore, since God knows that decree, from it He can rightly also know the future. Authors who wish in this chapter to deduce the certainty of the knowledge of God from His decree proceed in this way; but that from the decree alone this certainty can be gathered so that, without requisition of the concurrence of the secondary cause, it be inferred - I for my part judge otherwise; rather, in another way ...

But if someone were to say that the decree of the will of God concerning future things deals with our works only in a universal and confused way, as if someone, not attending within himself to the several particulars nor willing them one by one, were to determine in general that he would aid all causes which would need his help: if in this latter way God decreed our works, it would follow that He willed only in a confused and indistinct way to do those things which in time He was about to do; and, when in time He concurs, He would then not will that work determinately and one by one to concur, but only to operate with that confused and universal will. Wherefore we can say against these what St. Jerome says in the first Dialogue against the Pelagians, who asserted that no other help of the grace of God is necessary for individual works beyond the grace of creation and free will: "Therefore God sleeps in our works" once free choice having been given; and we on our side can add whatever seems conducive to our plan. And after He once decreed with Himself to concur with all causes in general, for the rest He cares for nothing one by one - this greatly derogates from divine providence; for thus we fall into the opinion of Aristotle in the book On the Heaven to Alexander, who thought that God does not provide for all things proximately and individually, but governs them through universal causes, of which I shall speak in Disputation 87.[1092] But if, in time, when He concurs with this cause, He wills to concur with it no less determinately and distinctly than if He alone were going to operate, as reason itself shows: it follows that from eternity He also had this will distinctly and one by one concerning this operation and the other individual ones; or else that the singular will of God concerning that operation began in time - which is absurd.

It remains, therefore, that we must say that the decree and definition of the will of God from eternity was distinct and particular concerning individual things which in time He was going to operate, whether by Himself alone or in concurrence with a secondary cause; whether, according to our way of conceiving, we distinguish that decree into several [operations], or say that it is one - about which there is not much need to be concerned. For it is certain among all that God willed all things and each thing by one most simple act of His will: for the operation of His will is the same as His essence, simple and individual. Whether, however, according to our way of understanding, there are in God several operations of will by which He may will individual things out of this, that His will is borne to individual things distinctly and one by one, I for my part judge that they can and should be distinguished, as commonly they are wont to be distinguished from the diversity of objects. If, however, someone were to insist too much that even according to our way of understanding there is one most simple act of will, I shall not be concerned: for in our present design it is enough, and it matters very much, if they at least concede the decree of God, by which from eternity He defined and willed to concur even with free causes distinctly and one by one, not confusedly and in a general way, with individual future things, as has been shown; of which matter there will again be treatment in Disputation 87, chapter 2. This being supposed, it is easily shown how, with the indifference and liberty of causes with respect to future things, there is the highest certainty of God and, as the Scholastics call it, infallibility.

Next we suppose that this decree of the will of God is in a certain order of cause prior to the thing's being future: indeed from it something is future, because God willed it. For a future thing cannot yet be understood as future except from its causes; but among its causes is the decree of God, as has been explained, since nothing is done without the will of God. Therefore, before the future thing exists, in a certain order of cause God willed that it be future: the decree of God therefore precedes the future thing as future - whether we also say that it precedes the concurrence and determination of the secondary free cause, or only accompanies it, or is posterior to it; in whatever way it be compared with free choice, with respect to the thing itself future it is conferred as something prior.

From this decree, then, some infer in this way the certainty of the knowledge of God: because since the decree cannot fail nor be deceived, nor can anything be done or occur against it, it comes about that God, knowing that decree, from it can rightly also know future things, since He sees the decree from which they infallibly follow. Thus the authors cited in this chapter seem to deduce the certainty of the knowledge of God from His decree; indeed, some contend that it can be gathered from the decree alone, so that, without the pre-requisition of the concurrence of the secondary cause, it be inferred.

But I for my part judge that in neither way can the certainty of His knowledge be rightly gathered from the decree of the will of God. First, it is proved that because God sees His decree in Himself He does not know future things as from a cause: for although the essence (*essentia*) of God is understood by us through the mode of decree and will as a cause of future things, nevertheless, as we said in Disputation 48, chapter 4, and will prove below in Disputation 80, the free decree of the divine will adds nothing beyond the bare essence except a respect of reason (*respectus rationis*) to future things. Wherefore, from the fact that God is said to have decreed something from eternity, there is nothing in Him except a respect of reason understood according to our way, which is toward future things and is derived extrinsically from them as from a foundation. Now then, just as we showed there that no Blessed one, from the fact that he sees such a decree, beholds in God anything future, so by the same argument it is proved that God Himself, from the fact that He knows His own decree in Himself, cannot know future things with certainty. First, because beyond His bare essence nothing else is added except a respect of reason; but this respect God cannot see: for it is only objectively in the intellect of a created wayfarer, as must be proved in Disputation 118; and hence only that created intellect can feign such a respect. Next, even if God were to see Himself under that respect, that respect could not be the reason and, as it were, the medium of seeing future things: rather He would have had to see the future things first. For that from which the respect of reason proceeds - as from an extrinsic foundation - must be known prior to the respect itself; or at least the respect cannot be the reason for knowing such a foundation, as is plain by innumerable examples. Therefore God from His decree cannot know future things for certain in the manner which we have said above.

1092. St. Jerome, Dialogus contra Pelagianos; Aristotle, De caelo ad Alexandrum.

What if you say that from this doctrine it follows that a thing is future before there is a decree in God, since from it is derived the respect of reason by which the decree of the will of God is said to be constituted? I answer: without doubt a circle cannot be avoided in this matter; for it is very difficult, but about this more at length must be said in Disputation 80.

Then too, even if in this way God were to see future things, it must in no way be said that He could know them for certain from that alone, not understanding the determination of the secondary cause. For that manifestly implies a contradiction. How could it be that He know a future thing from some cause, and not see the future determination of the cause and its cooperation? Therefore, by the topic "from the consequent" (as they say), it necessarily follows that, from the sole fact that God sees a future thing - by whatever account He knows it - He also sees the future determination of its cause and the cooperation, without which the effect cannot be intelligible.

With these matters, then, omitted, it must be said in another way how the decree is a sufficient cause, though remote, so that future things be known. Because by the decree of God any future thing is, and to one thing determined, and prior, in that a future thing is known by God, it is said to be defined and willed by Him: from this fact, that it is future, it can be best known, as we shall say in chapter 4. Therefore the decree of God can be assigned as a sufficient cause, albeit remote. Then, although future contingent things are indifferent in themselves, nevertheless there can very well be certainty and infallibility in the knowledge of God concerning them, about which there is now controversy. For there ought not to be a greater certainty of knowledge than the efficacy of the divine will which cannot be impeded. If, therefore, before God knows future things, in a certain order He is first said to will and to define them, and His decree cannot be rendered void, it follows that His knowledge is most certain, which cannot be deceived, so that the knowledge of God be made like to His decree in all things. From the decree, therefore, of God there is assigned in God a sufficient cause of knowing future things, and there is also rendered a sufficient reason of the certainty of the knowledge which God has.

Some recent authors, and certain Scholastics of earlier times, attack our position; but their objections can be dissolved without great difficulty.

First objection of the recent writers. First they argue thus: from that decree the liberty of our will is taken away, since we cannot in any way resist it.

Then also, if that decree concerning our individual works were necessary one by one, it would follow that remedies simply necessary have not been provided by God for all; for this decree of concurring with all is necessary, and yet it is not in God with respect to all; for with those with whom in time He is not going to cooperate, He never decreed from eternity to concur.

Reply. I answer first, that even if we were to concede now that from that decree, were it posited as wholly antecedent to our free determination, our liberty would be taken away; nevertheless, if that decree either follows our determination or contains it, nothing of our liberty perishes. Which of these is truer, from all these matters we shall show in Disputation 99. Moreover, whether it be posited in this way or that, an excellent argument is now taken from the decree to show the

certainty and infallibility of the knowledge of God, as has been proved above; and how God does not on that account withdraw sufficient helps even from those with whom He did not decree to concur in time, and also how their liberty and power for the good remain, will not obscurely be evident there.

Second objection of Gregory, Gabriel, and Ockham. Secondly, they argue with Gregory in the third book, distinction 38, question 2, article 2, and with Gabriel and Ockham in the places cited, as follows: if the decree of God were the cause, or the reason, of knowing future things, there would have to be in God an instance of prior and posterior; for prior would be the decree, which is the reason of knowing the future, and posterior the knowledge of the things themselves; we would also have to admit that there is in God some medium of knowing something - both of which cannot be in Him.

Solution. We reply that the reason of our defense is different: for we do not say that the decree is the medium by which future things are known; but we say that the decree is the sufficient cause on account of which they can be known by God. Certitudes are indeed to be kept as to the efficacy of the will, which cannot be impeded nor fail; and indifferentia of future things in themselves does not remove the effect of the will, which can render the cognition certain; nevertheless we do not say that the decree is the medium by which, but the sufficient cause on account of which, they are known: God, from His antecedent essence and will, sees all things at once; and the decree is posited as ordering among things according to the necessary order of causes, which is sufficiently explained above in Disputation 8. Hence we collect that the decree is a sufficient cause that the future be able to be known; we do not say that it is the medium by which, through which, and in it they are known: God, by the preceding express power of knowing, sees all things; but, as we say, that cause on account of which they are able to be known follows. Certainty, therefore, of knowledge is from the efficacy of the will, which cannot be impeded; nor, however, do we say that indifferentia of future things in themselves removes the effect of the will, which can render cognition certain.

Third objection. Thirdly they argue: from this decree God can only know the good things which He Himself is going to do in time; but not sins, since these He has never decreed to do, nor does He do them in time: therefore the reason from which the certainty of the knowledge of God is gathered cannot be in every case.

Response. I respond: almost every sin consists either in the omission of some good which ought to be done, or in the commission of some act which, with its concomitant circumstances, is necessarily accompanied by malice - whether it be of omission or of commission, albeit in a different way. In omission, nothing is posited except that which is required, and only the cause of sin is posited - for instance, the cause of not hearing Mass at the due time. But in the sin of commission, the act is positive, which is said to be against the law, and in which the malice and the formal element of sin are in its proper subject, namely the will; for the formal element of sin is a privation which is in the sinning will. Hence God in time can posit the positive acts as to their natural entity and as to the circumstances which are the material element that is in the sin; consequently, if God willed from eternity, and Himself knew, that in some case there would be

posited in time that act as the cause, or as the material subject of sin, it follows indeed that He would know that it would be posited; and yet from that it does not follow that He would know the malice which is in the will on account of the defect of order; for God does not will it, but hates it; nor does He will it from eternity. But how God at the same time does not will the material element of sin as sin, although nothing takes away liberty in the will and free choice, nor does He of Himself posit the malice which is the formal element of sin, has been discussed in Disputation 98 and in the solution to question 79 above, and it will be said below.

Third objection. They also add, if that decree about our works fixedly and of necessity were set, it would follow that there are not for all men simply necessary remedies on the part of God; for this decree of concurring with all is necessary, and yet it is not in God with respect to all; since with those with whom in time He is not going to cooperate, He never decreed from eternity to concur.

It is answered. I answer first, although we might grant now that from that decree - if it were posited altogether antecedently to our free determination - our liberty would be taken away: yet if that decree either follows upon our determination or accompanies it, it takes nothing away from our liberty; but which of these is truer, we will show in Disputation 99. Moreover, whether it be posited in this way or that, an excellent argument is now taken from the decree to show the certainty and infallibility of the knowledge of God, as was proved in the preceding chapter. Next, how God does not deny sufficient helps even to those with whom He has not decreed to concur in time, and yet in that very thing He preserves their liberty and the power for good, will appear not obscurely in the same place.

Second objection. Secondly, St. Gregory in III, dist. 38, q. 2, a. 2, Gabriel, and Ockham in the places cited, chapter 1, argue in this way: if the decree of God itself were the cause, or the ratio, of knowing future things, there would have to be conceded in God an instant of the prior and of the posterior: for the decree by which future things are to be known would be prior, but the knowledge of them posterior. We would also have to admit that there is in God some medium for knowing something - two things which cannot befall Him.[1093]

It is answered. But these things are trifles; for first, the instance of a prior and a posterior in the mind and will of God is to be conceded from the order of things among themselves of necessity, as from the doctrine of the Fathers and reason we will gather clearly enough below in Disputation 82. Next, from this, that we say the decree is a sufficient cause for knowing certain future things, we do not say that it is a medium by which, or in which, God knows them, as we noted expressly in the preceding chapter. Rather, we say it is a cause because, the decree being posited, the future things which follow upon it can be known by it. But the certainty of knowledge is inferred from the efficacy of will, which cannot be impeded, not from the indifference of future contingents; for since will cannot be without its effect, it is less indifferent to future events.

1093. St. Gregory, In III Sent., dist. 38, q. 2, a. 2; Gabriel [Biel], and Ockham, the places cited, cap. 1.

Third objection. A third argument: from this decree God can know only the goods which He Himself is going to do in time; not sins, because He never decreed to do these, just as He does not do them in time: therefore the reason from which the certainty of God's knowledge is gathered could not at least be a universal one.

Reply. It is answered: every sin, whether of commission or of omission, has conjoined to it some positive act, from which with all its circumstances there necessarily follows the malice either of omission or of commission; yet it is in one way in one, and in another way in the other. For in the sin of omission the positive that is found is only a cause of sin - for example, taking a journey is the cause of not hearing Mass at the due time. But in the sin of commission the positive is the act which is said to be against the law, and in which, as in its proper subject, there is the malice and the formal element of sin; for the act itself is called the material element which is in the sin. Therefore, since God is in time the cause of every positive act which is either the cause, or the material subject, of sin, it follows that He wills that act; and consequently that He willed it from eternity. And that being known, the malice which necessarily follows that act cannot fail to be known, even if God does not will it, but rather hates it, and in no way decreed it from eternity. But how, although God from eternity has determined the material of sin or the cause of it, nonetheless He neither takes away liberty from the will, nor is properly the cause of the malice which is the formal element of sin, will be said in Disputation 99, and in I-II, question 79, article 1, as was said above.

Fourth objection. A fourth argument: God not only knows future things absolutely, but also future things under a condition, about which there is no decree of His: therefore the decree is not a sufficient cause of knowing all future things.

Solution. I answer first, wherever there has been a decree, from that it is excellently inferred that God certainly knows all the future things which He has decreed. But if in conditional futures there is no decree, the certainty of their knowledge must be proved from another source, as will be said in the following disputation. Next, even in these conditional futures the decree of God is nonetheless included under the condition, as will be said there: without that decree nothing can be future.

Ultimate objection. Finally, Ockham, Gabriel, and St. Gregory argue against Scotus: even granted the decree of God, the created will remains free and indifferent to either part; how, then, can knowledge be determinate?

It is answered. Truly, this argument no more proves against the knowledge of God than against the decree of His will. For just as the decree of God cannot be rendered void, even if our will is of itself indifferent; what wonder, then, if the knowledge of God nonetheless remains infallible, however indeterminate our will may be? Therefore, what will be said about the decree can be said about the knowledge; and we will give the reason for each below, when we treat of the harmony of the knowledge and will of God with ours, in Disputation 68 and Disputation 99.

Note. This reason so evidently shows what we are contending that no one can deny it, if only that minor proposition be sufficiently proved, namely, that in singular propositions about the future one part of a contradiction is determinately true, the other false: but this must be proved

expressly in the following disputation. Eighteen years ago I publicly taught this line of argument in Spain; I frequently explained this matter in public lessons and disputations; afterwards at Rome in the year 1588, reading closely through the writings of Scotus, I found it, and I taught and defended it in the same way; and afterwards I heard it commonly employed by some theologians of our age; among the other Scholastics I find no mention of it; Scotus, however, briefly sets it down in I, dist. 39, q. 1, n. 9, in the discussion on contingency.[1094]

Caput IV - From the truth of futures and the infinity of the divine intellect is best inferred the certainty of His knowledge

Although from the decree of the divine will the certainty of the knowledge which God has of future things can be sufficiently gathered; yet, because that is a remote cause, as we said, one must strive to assign the proper and proximate reason of the certainty of divine knowledge; and that reason is very facile, which anyone can readily allege or understand by ratiocination taken only from the infinity of the divine intellect and the truth of future things; it is as follows. Because the divine intellect is of infinite power, whatever is intelligible it must necessarily embrace and understand; for if something could not be understood by an infinite intellect, it could be understood by another: but future things, however free and contingent by their nature, are intelligible, because they are determinate with respect to truth; but the true and the intelligible are convertible: therefore they can be understood by the divine intellect: and since they must be understood only in the mode in which they are, namely, as future or as not future, it follows that the knowledge of them in God must be most certain; for if God could be deceived, it would be because He would know some future thing as not going to be future; but thus there would already lurk in the divine intellect some intelligible falsehood, which is impossible.

Note. From this doctrine certain things can be collected, by which the very doctrine will be further elucidated, and some things must also be observed for its greater explanation. First, therefore, it is most true what St. Gregory and Gabriel affirm in the places cited in the first chapter, namely, that the virtue of the divine intellect is infinite, so that, although God by His omnipotence were not the cause of future things, still His virtue would be infinite for understanding, in such a way that now He would certainly and infallibly understand singular future things; if indeed future things existed from chance, or from other causes, or from another God. Which hypotheses, however impossible they are, nonetheless excellently declare the proper and proximate reason on account of which future things are known certainly by God. For with all these suppositions there would nonetheless be truth in enunciations about the future and infinity of virtue for understanding in God, as we suppose: therefore it follows by an intrinsic consequence, that future things will be known certainly by God in the same way as they are now known: since the cause is altogether the same in both cases. Therefore, the reason for the infallibility of the knowledge of God is not the truth alone, but the infinity of the divine intellect, which, precisely because it is infinite, cannot fail to be referred to that which is true, as to its proper object.

1094. Scotus, In I Sent., dist. 39, q. 1, n. 9, in the discussion on contingency.

Next it is inferred that future things are not known by God in their cause in a confused way and as it were by discursus. For in themselves causes have nothing real by which they incline of necessity more to this part than to another; nor could any intellect infer a certain judgment from a cause unless by its own power it could reach future things directly: but God knows the future in themselves, because in themselves they have truth and are truly something future: and so, according to themselves, they fall under the power and efficacy of the divine intellect by their own concept. Nonetheless He also knows them in their cause in this sense, namely, that just as He sees that this or that will be future, so too He sees it will be future from this cause, not from another; indeed, from the fact that future things are known, it necessarily follows that they are known as future from such-and-such a cause, not because that cause, as seen according to itself, leads to an infallible cognition of the effect, but because a future cannot be understood unless as connected with this or that cause.

Second note. It must further be observed that the future is thus the object of the infallible knowledge of God, according to that very thing which will in reality be future; yet to our mode of understanding it presupposes the decree of God as its cause, before which nothing is truly understood to be future. For although every future thing is future from eternity, yet in a certain order of reason a thing is prior possible than future; and according to our mode of understanding we distinguish two instants of reason, in the first of which things are only possible from themselves, because from themselves they do not imply a contradiction, and another in which they are understood as future; and although this possibility of things supposes as prior the possibility and existence of God Himself, yet it does not suppose God as endowed with the power to produce, or as the cause producing, as will be explained at length below in Disputation 104. But because no thing is future from itself, but from the will and omnipotence of God, therefore before it be understood as future, the will of God is supposed as its cause - not, indeed, in the order of duration, but of reason: therefore, in that prior instant, in which the thing is possible, it is not yet understood as future, for it is first possible, and then future; as, indeed, the consequence of conversion has no force: just as "animal" is prior to "man."

Objection. But you may say: in that prior instant, in which the thing is considered possible, it can be said to be future in respect of the subsequent.

It is answered; the difficulty is solved. I reply, the term "future" is not said in respect of the prior and posterior in that order of reason, but in the order of duration in time. But that which is future in time, and from eternity is said to be going to be future in time, is not future in that instant of reason in which it is only possible: for if the thing is first possible, it is not yet future. Therefore, just as a creature is not yet possible until God is understood to exist, who is the first being of all; so too a creature is not yet future until the decree of will is understood to exist, from which, as from a cause, it is future: or if in that instant of reason some futurition could be conceded, it ought not to be the futurition of the things; for those are first in potency alone. Therefore, what some vainly attempt, to assign something present, at least in its cause, by the reason of which the future may be known by God, is in vain; because being, which is the universal object of the intellect, is not only the present, but also the future, the past, and the possible.

First note on the mode whereby truth and falsity are predicated of things. Further, two other points must be observed for the greater explication of this matter. One is, when we say that future things are known certainly by God, because they are determinate with respect to truth, this must not be understood as though the formal ratio of truth primarily belongs to the future things themselves; for truth is an affection primarily belonging to the intellect, as we will say below in Disputation 77, chapter 3; but future things are said to be of determinate truth because in reality the thing is such that it will be future or not future in a determinate way, so that of one part of a contradiction the judgment can be true, and the enunciation true, and of the other part, if a judgment be made or an enunciation be uttered, in such a judgment and enunciation there is also falsity. This, however, is enough for there to be in the things themselves what logicians call "fundamental truth," which suffices that things be intelligible and the object of a true judgment; therefore, since God is infinite, He could not be deceived: for then it would be because He knew some future as not future; but thus there would already lurk in the divine intellect some intelligible falsehood, which is impossible.

Second note: The object of the science of God is the very thing which of itself is future in reality, not, according to our way of understanding, something that presupposes God as cause, before anything is truly future. For although every future is from eternity, nevertheless in a certain order, first a thing is possible, which, according to our way of understanding, we distinguish in reason into two: one in which things are of themselves possible, that is, of themselves do not imply a contradiction; another, in which they are understood to be possible because of God's omnipotence to produce them, or as cause in the order in which the thing is future from a cause in reason, in which order it is said to be future, namely, because God's will is the cause of its futurition. Now, since there are two "instants" of reason, of which the first is that in which the thing is considered as possible, the second that in which it is considered as future: and since it does not follow conversely that, because it is future, it was possible, therefore, in the order of reason, the decree of God precedes the futurition of future things. Second note: The object of the science of God is the very thing which of itself is future in reality, not, according to our way of understanding, something that presupposes God as cause, before anything is truly future. For although every future is from eternity, nevertheless in a certain order, first a thing is possible, which, according to our way of understanding, we distinguish in reason into two: one in which things are of themselves possible, that is, of themselves do not imply a contradiction; another, in which they are understood to be possible because of God's omnipotence to produce them, or as cause in the order in which the thing is future from a cause in reason, in which order it is said to be future, namely, because God's will is the cause of its futurition. Now, since there are two "instants" of reason, of which the first is that in which the thing is considered as possible, the second that in which it is considered as future: and since it does not follow conversely that, because it is future, it was possible, therefore, in the order of reason, the decree of God precedes the futurition of future things.

Objection: But you will say: in that first instant, in which the thing is considered as possible, it is not yet future; yet one would have to posit a futurition of the futurition; that is, when it is possible that the thing will be, at the same time there would be a being-about-to-be of the future, or a future

futurition. But to posit "a futurity of the future" is foolish; therefore in that prior instant in which the thing is considered possible, it is not yet considered future. Wherefore what some say, that in that prior instant it is true to say "the future things will be in the next instant," amounts to the same as to say "then there will be a future future," which reflection, although in some way it can be considered in our words, yet to attribute it to God is foolish: for a "future of the future" cannot be given, as we said above.

From this it is inferred that the opinion of some moderns is false, who say that future things, as being of determinate truth, are represented in the essence of God, without any pre-intellection of His will's decree. For if this were so, it would follow that it was not in the power of God that future things not be represented in His essence, if, without His decree and liberty, they are truly understood to be future and are represented in the divine essence: but this is absurd. For God could, if He had willed, produce nothing; then nothing would be future. Surely, if things were not to be future from God, yet nonetheless the decree of God could be represented in the essence of God or otherwise, and by His infinite wisdom be certainly known by God, as was said above: nevertheless possibles would be understood before futures, and in the instant of reason in which possibles would be understood, they would not yet be future: now, however, not only in a later instant of reason are they understood to be future, but also with God's decree supposed, and not otherwise: because unless from their cause, which is the divine will, they are not understood to be future.

A question is proposed: But someone will ask, whether God in that prior instant, in which He is conceived by us as understanding possible things, at least understands His own decree as future, even if things are not yet future outside. I answer: God's own decree is not known by God as future in that prior instant, because in God, beyond His bare essence, the decree of His will truly is nothing other than a respect of reason toward future creatures, as will be proved in Disputation 80; wherefore neither according to that "instant" is there anything intrinsic to God and really future, even with respect to that instant of reason. For His essence will be in the same manner within itself, and also in the subsequent instant: it will only have a certain respect of reason: and since in that instant in which only possible things are understood, they are not yet future, there will not yet be any respect of a decree toward future things: because neither can a future respect toward future creatures be understood without the futures themselves: but nothing else can be understood as being truly future in God, or added to the essence; therefore in vain do some recent authors say that in that prior instant God not only knows possible creatures, but also His own decree as future; especially since God in Himself never knows that respect of reason, but His bare essence, as was often said.

Add also that, when we distinguish instants of reason, so that we may consider one thing in God prior to another according to our way of understanding, this order is not assigned by God Himself, and so in His intellect He does not have His decree under the aspect of future in a subsequent instant: because He, to know in this way the future, would have to distinguish instants: but we only in this way distinguish instants in God, that when God at once knows two things of Himself, both His bare essence and it under the notion of decree, in our way of understanding He first knows the

essence before the decree: yet not as if the decree were in any way future, since it is never to be future, but is from eternity present. For instants of reason with respect to various objects are divided in such a way that one is not mixed with another, even under the aspect of the future.

A singular proposition about a future contingent - whether it is true. Disputation 66.

What Aristotle and some Scholastics thought. Chapter 1. According to our faith, in contradictions of singular propositions about a future contingent, one part is distinctly true, the other false. Chapter 2. By philosophical reason the same truth is proved. Chapter 3. Solution of the reason for the prior opinion. Chapter 4.

Disputatio LXVI - Whether a singular proposition about a future contingent is true

Caput I - What Aristotle and certain Scholastics thought

We promised to prove the proposition in the last chapter of the preceding disputation; namely, that in contradictions of singular propositions about the future, one part is determinate to be true, the other determinate to be false. Whence it will also be clear that free future things are of determinate truth, so that they can be understood by God: and that we may perform this task more satisfactorily, it is our pleasure to set forth what Aristotle and certain Scholastics thought about this matter.

The opinion of Aristotle is proposed. Aristotle therefore, in On Interpretation, chapter 8, after he had taught in the preceding chapters that in universal contradictions one part is true, the other false, says concerning singulars and concerning the future contingent, that it is not the case that one part is true and the other false, but that each may be true or false. And Aristotle understands this not in the sense in which logicians say "disjunctive," but "disiunctus" (as separated), as he concludes toward the end of the chapter in these words: "It is necessary that everything either is or is not; likewise that it will be or will not be: yet it is not necessary to say distinctly the one of the two. For it is indeed necessary that there will be a naval battle tomorrow or that there will not be one; yet that there will be a naval battle tomorrow is not necessary; nor again that there will not be one." And a little further down he repeats the same sentiment.

What logicians call the "disjunctive" sense is this, when each member of the proposition is to be taken under a disjunction in such a way that of neither member separately is that to be said which is said of both under the disjunction; as in the example given, this is not necessary: "Some one of these parts, the naval battle will be, the naval battle will not be," and yet the whole, "it will be, or it will not be," taken together is necessary. But the "disiunctus" sense is this, whenever concerning one part it is truly said what we assert; as if someone says: "Peter is disputing," or "Peter is not disputing," one of those parts is true, and not only the whole complex under that disjunction. In

this latter way the truth of a proposition is discerned by "ascent and descent" (as the logicians say), that is, by resolution made into some determinate part: in the former way that complex ought not be divided, and therefore the logicians say that ascent or descent cannot be made.

In this sense, therefore, Aristotle says that in singular contradictions about the future contingent it is not the case that one is true and the other false, but it is necessary that each, taken by itself, be true or false disjunctively; yet not true or false distinctly, that is, that none of them distinctly and individually have truth, and that none have falsity, but that they have truth or falsity disjunctively.

That this is Aristotle's mind is affirmed by Catherinus in the little work On the Truth of Enunciations, and Ockham also interprets him thus (as Mair reports on I Sent., dist. 38, q. 1); likewise "Greg." on I Sent., dist. 38, q. 1, art. 1; St. Bonaventure in the same distinction, art. 2, q. 1, ad 2; and the ancient interpreters in that place.[1095] I have said this because many in our time twist Aristotle's opinion into another sense, and among the ancients some Scholastics do the same. For, first, Capreolus on I Sent., dist. 39, q. 1, art. 2, ad 3, against the sixth conclusion, says that Aristotle did not deny in these contradictions that one is true and the other false - this, he says, is false - but only taught that each part of a contradiction is disposed equally toward truth and falsity.[1096] But, as Catherinus most aptly noted against Capreolus in that little work, what else is it "to be disposed not more toward truth than toward falsity" than not to have one part distinctly true, the other false?

Second, Richard on I Sent., dist. 38, art. 1, q. 5, ad 1, and Mair in the place cited, explain Aristotle thus: that he says that neither part is determinate to be true, that is, so true that it cannot be false; nor the other part determinate to be false, that is, so false that it cannot be true: wherefore they seem to use the particle "determinately" in place of "necessarily."[1097]

This interpretation, however, can be refuted from Aristotle himself. First: if Aristotle were contending that in propositions about the future contingent there is no necessary truth, he would prove that future events do not happen by necessity, but freely: but this nowhere in that chapter does he prove; rather, he presupposes it as known. And those who assert that some proposition is distinctly true he drives to an absurdity, so that from that they may grant that nothing happens by chance and indifferently to either outcome: and also from the fact that he says that one part is distinctly true and the other false, he infers that the true is necessarily true and the false necessarily false. Wherefore John Mair falsely interprets that particle "determinately" as "necessarily," for Aristotle once uses "necessarily" in that chapter, and precisely the same is signified by him with "distinctly," which particle he often uses: and when he contends that no part is distinctly true, he means the same as "individually and not confusedly": which he very well concedes, namely, that each taken together is true or false, but not distinctly true or distinctly false.

1095. Catherinus, Opusculum de veritate enunciationum; Ockham (as reported by Mair on I Sent., dist. 38, q. 1); Greg., in I Sent., dist. 38, q. 1, art. 1; St. Bonaventure, in the same distinction, art. 2, q. 1, ad 2; and the ancient interpreters in that place.

1096. Capreolus, In I Sent., dist. 39, q. 1, art. 2, ad 3, against the sixth conclusion.

1097. Richard, In I Sent., dist. 38, art. 1, q. 5, ad 1; John Mair, the place cited.

Then, if the particle "determinately" signified the same as "necessarily," and Aristotle only wished to prove that in contingent propositions about the future there is no necessary truth, he should have said the same about some propositions about the present. For there are some present-tense propositions that are not necessary, for example "Peter is disputing." Therefore, since he says only in propositions about the future that it is not the case that one is false and the other true, he contends not only that neither is one necessarily true or necessarily false, but also that neither is true distinctly nor false distinctly.

Third, there are those who explain Aristotle thus: that in propositions about the future neither part is false, the other true, determinately, in the sense that it can be signified by us. But this exposition is most vain; because even in propositions about present things many there are in which neither by men nor by angels could the truth or falsity be signified - such are those which signify an interior affection of the soul. Then also, because from the fact that one part is true and the other false, Aristotle would infer that it had been thus a year ago and a thousand years ago and forever, that is, from eternity, whether anyone had said this or not. For a proposition is true or false from this, that the thing is or is not, not from this, that it is said or not said. But Aristotle thinks that even in this way the proposition would from eternity have been true, necessarily or contingently in its assertor; he is not concerned whether it be true in such wise that it can be signified by us, but whether it is thus true that from eternity it followed from the thing itself, for example, because the thing itself was in this way going to be.

Therefore the opinion of Aristotle is manifest: that in contradictions about the future it is not the case that one part is distinctly true, the other distinctly false; but that each, as such, is qualifiedly true or false. This opinion, thus explained, Catherinus defends to the best of his ability in the place cited; and in this opinion was Aureolus on I Sent., dist. 39, q. 1, art. 1, conclusion 1, and elsewhere, as is reported by "Greg." on dist. 38, q. 2, art. 1; and Catherinus, in that same little work, as reported by "Greg.," says that Aureolus taught it to be false to assert as follows: that God determines of any future singular that it shall be, or shall not be, distinctly; but only "it will be, or it will not be," disjunctively or conjunctively. Cajetan too favors this opinion. In this chapter we shall pursue these things further, and in Chapter 2 reply to the objections.[1098]

Caput II - On the principal reasons for that interpretation

The prior of their reasons: They prove it also by reasons. First: a future free event is therefore called contingent because it is indifferent toward either part; for if it were determined toward one, it would not be contingent nor free: for what is free or contingent seems to be the same as what is indifferent, equally disposed toward being and not being, toward happening and not happening. But if one part of a contradiction is true, the thing is already determined toward that part; therefore it is not indifferent, nor free. Next, this part of the contradiction is true and that false; therefore the event will necessarily occur, and consequently consultation about future things is in

1098. Aureolus, In I Sent., dist. 39, q. 1, art. 1, conclusion 1; reported by Greg., dist. 38, q. 2, art. 1; Catherinus, the same little work, book 1 (as Greg. reports); Cajetan, in this matter, and responses to objections.

vain. Furthermore, from a truth detected to be true it necessarily follows - as Aristotle most clearly proves in that same place - that if this part "Peter will sin" is true, therefore that same proposition has always been true: for it makes little difference whether someone said it a year ago or a thousand years ago, and thus to infinity: indeed, it would have been true even if someone had said it or if no one had said it, because a proposition is not true from the fact that it is said, but from the fact that the thing is so; and there is no distinction according to time in that which is always true, it cannot not be true: for there is not a time when it can not be true; therefore it is necessarily true: and thus the event necessarily happens. But if it happens necessarily, all consultation is abolished, as is evident; for what from eternity was true, that it would be thus, what place is there for consultation, when no fruit will be had from that consultation? From which things this last follows, which "Averroes" (as some report) asserted in that place: that God knows nothing else about future things than "that they will be, or will not be" disjunctively; but He knows nothing of either part distinctly.[1099]

According to our faith, in contradictions of singular propositions about the future contingent, one part is distinctly true, the other distinctly false.

The common consensus of the Scholastics against Aristotle teaches that in these singular contradictory propositions about a future contingent, one part is distinctly true from eternity and the other false, from the fact that the thing itself either is future or is not future. Thus teach Richard, Capreolus, and Mair in the places of chapter and question cited; St. Bonaventure on the First Book, distinction 38, article 2, question 1, to the second reply; Gabriel, question 1, article 1, notable 7; Ockham, question 1, to the principal first; Gregory, question 1, article 2; Scotus on the First Book, distinction 39, question 1, Vision on contingency, and to the principal arguments; Marsilius on I, question 40, to the third principal; Holcot on II, question 2, article 7; Dominic Soto on Romans, chapter 9, epistle, part 3, near the end; and Cordubensis, book 1, question 55, doubt 2; which opinion I judge truer not only according to philosophical reason, but also, according to right faith, necessarily to be asserted - something we will show in this chapter by arguments taken from the principles of our faith.[1100]

From the Fathers, moreover, those to be cited first in disputation 68, chapter 6, taught this very same thing, who assert that therefore God foreknows future things because they are in very reality future, not conversely. For if God's knowledge, which He has of future things (as we shall immediately infer), is eternal, it is necessary that simultaneously from eternity the thing itself be future. But if that is therefore known by God because it is future, it follows that the thing from eternity, from its causes, was future, not from the knowledge of God; and hence an enunciation about the future has truth from itself. Moreover, Anselm, in the little work On the Harmony of Foreknowledge, Predestination, and Free Choice, and in On Free Choice, chapter r., in my

1099. The opinion attributed to Averroes that God knows future things only disjunctively ("it will be, or it will not be"), not either part distinctly.

1100. Richard, Capreolus, and Mair, in the places of chapter cited; St. Bonaventure, In I Sent., dist. 38, art. 2, q. 1, ad 2; Gabriel, q. 1, art. 1, notab. 7; Ockham, q. 1, ad primum principale; Gregory, q. 1, art. 2; Scotus, In I Sent., dist. 39, q. 1, Vision "De contingentia" and "Ad argumenta principalia"; Marsilius, In I, q. 40, ad 3 principale; Holcot, In II, q. 2, art. 7; Dominic Soto, In c. 9, epist. ad Rom., part 3, circa finem; Cordubensis, Lib. 1, q. 55, dubit. 2.

judgment expressly disputes against Aristotle for this reason, that Aristotle would infer necessity in things from the truth of propositions about the future; and he clearly shows that God's knowledge is most certain, and that things future are future from eternity, and that from this something follows of necessity, which we shall explain in the following disputation; yet from that nothing is taken away from the liberty of our will. But Aristotle, when he inferred necessity from truth, did not know how to reconcile with it the liberty of free choice; and so, in order to assert liberty, he took truth away from propositions about the future; but once that is removed, it is necessary that knowledge about future things, even God's own, be taken away from the midst, as we shall soon infer.[1101]

Primary theological reason against the opinion of Aristotle. It is therefore proved first by a theological reason that one proposition about a future contingent is distinctly and determinately true, but the other, its contradictory, is false. For, as Aristotle himself concedes in that eighth chapter, if a proposition about the future were true, whoever enunciated it a year before, or a thousand years before, or at any time at all, would speak the truth; therefore, conversely, if someone enunciating a proposition about the future speaks the truth, it necessarily follows that the proposition itself is true, and that that future is truly future. For if it were indeterminate to be and not to be, and the proposition had to be neither distinctly true nor distinctly false, but true or false confusedly, it would follow that he who uttered that proposition would speak neither truth nor falsehood, but truth or falsehood; indeed, as we shall say in the following chapter, whoever asserted distinctly the one part would always speak falsehood. And yet propositions about a future contingent are truly foretold by the Prophets and by God, and we call such a prediction distinctly and determinately true: therefore it is a sign that the proposition itself is distinctly and determinately true. The same argument can be made about knowledge: for if some knowledge of future things is true, it follows that the very future things which are known are truly future, and that the enunciation about them is true. But the knowledge of the Prophets and of God, which He has about future things, is true: therefore the very future things are truly future, and the enunciation about them will be true.

Catherinus replies, in that little work, whom some of the more recent follow, that indeed a proposition about the future is true insofar as it is announced by God or known by Him, because God has it present in His eternity; but if it be referred to the cause from which the thing is future, the one part of the contradiction is not distinctly true, but true or false.

It is refuted, first: If from this very fact that God truly knows, or truly pronounces, that some thing will be future, it follows that it is present in eternity so that it is known by God certainly and determinately, it follows also that that thing is truly future. For how can it be determinately present to God - either by a real presence, or even by the true presence of its object - if it itself is not yet determinate and truly future?

1101. St. Anselm, Opusc. De concordia praescientiae, praedest. et lib. arbit., cap. r.

Second: It cannot be that what God knows will be in time is not future - whether its being will come about from God's knowledge or will, or from a created cause. For it follows very well: some intellect truly knows that a thing will be future; therefore that thing will be future. From whatever source, then, that future comes to be, the proposition enunciating it distinctly and determinately will be true.

Third: And since words are substituted in the place of intellections and concepts, if any knowledge of future things is true, the proposition enunciating those future things will be true; as if the Prophet or God, who knows future things, truly knows them, He also truly foretells and can simply affirm with truth. Wherefore, if Aristotle believed that there is some true knowledge about future things, whether of God Himself or revealed by Him to the Prophets, by what reasoning would he deny truth to propositions about the future?

It is therefore my persuasion that Aristotle, just as also Cicero, so that he might defend the liberty of free choice, denied truth, and consequently all knowledge of those propositions. For if truths of those things can be known, truth also must be in the things; and conversely, if truth is in them, some knowledge can exist; but if no truth is in them, neither will there be any knowledge of them, even divine. Therefore I would say that Aristotle tacitly denied to God certain knowledge of future things, since he even denied truth to future things. This is the more probable to me, because from the opinion of some of the Fathers, as we shall infer from some passages of Aristotle himself in disputation 87, he plainly also denied to God providence over all singular things; and for this reason I would judge that the opinion of Aristotle, as it has been explained by us, is adverse to the true faith, since from it knowledge of future things is removed from the midst.

Second theological reason. Secondly, we have from Aristotle himself that it makes absolutely no difference for some proposition about the future to be true whether it be enunciated by someone or not; and by the same reasoning he ought to say that it also makes no difference whether that thing be known to be future or not, provided only that the thing itself be future. And he gives the reason in these words: For not because an affirmation is uttered, or a negation, will the thing be or not be; for things, just as they are in themselves, are objected to God in that manner, nor are they such because they are objected, but rather conversely. From which there is also inferred that which Aureolus said, namely that God does not know that Antichrist will be, but [only] that he will be or will not be: which is manifestly against the faith. For, as Boethius well noted, in the Consolation of Philosophy, prose 3, if there were in God no other foreknowledge than this, what could be called foreknowledge? Or how would God's foreknowledge differ from that ridiculous oracle of Tiresias (in Horace, Book 2 of the Sermones): "Whatever I say, either it will be, or it will not be"? What also has divine providence surpassed human opinion in, if, like men, it indicates things uncertain?[1102]

Tertiary reason. Third, even if we grant to the Thomists that future things are from eternity present to eternity, and therefore are certainly known by God, nevertheless it follows that future things are determinately future, and propositions about the future are determinately true, or determinately false. For if future things are present in eternity, and determinately present so as to

1102. Boethius, De consolatione, prose 3; Horace, Sermones, book 2.

be known, it follows from this that they are future; indeed that they are future prior to being present. For it is not from their being present to eternity that they are future in time; but rather conversely, because they are in their time future, they are also present to eternity. Therefore already the thing, from its own cause, was future, so that it might be able to be present to eternity. But if, considered from its own cause, the thing was neither distinctly future nor distinctly not future, but future or not future confusedly, it would be that nothing else could be present to God in eternity, nor even be an object in His intellect, except that complex under a disjunction, "It will be, or it will not be." For things, just as they are in themselves, are objected to God in that way, nor are they such because they are objected, but rather conversely. From which there is also inferred what Aureolus said - namely, that God does not know that Antichrist will be, but [only] that he will be or will not be - to be manifestly against the faith. For, as Boethius well noted, in the Consolation of Philosophy, prose 3, if there were in God no other foreknowledge than this, what could be called foreknowledge? Or how would God's foreknowledge differ from that ridiculous oracle of Tiresias, in Horace, Book 2 of the Sermones: "Whatever I say, either it will be, or it will not be"? What also has divine providence surpassed human opinion in, if, like men, it indicates things uncertain?

Note against Aureolus. For if there were in God no other foreknowledge than this, what could be called foreknowledge? Or how would the foreknowledge of God differ from that ridiculous oracle of Tiresias (in Horace, Book 2 of the Sermones): "Whatever I say, either it will be, or it will not be"? What also has divine providence surpassed human opinion in, if, like men, it indicates things uncertain?

Caput III - The same truth is proved by a philosophical reason

Besides the reasons which we formed in the preceding chapter - although drawn from natural principles, they drive our adversaries to absurdities against the faith - there are also other reasons, easier indeed and natural, and taken from Aristotle's own doctrine, by which the same our opinion is confirmed.

The first is that which Gregory uses in the place alleged: since Aristotle, Metaphysics IV, text 27, teaches that whoever affirms and denies either speaks the truth, or errs (that is, speaks what is false); and reason itself clearly teaches this. For, since what is false is that which is dissonant from the thing, but what is true is that which is conformable, it cannot be that what is said is not either conformable or dissonant distinctly and determinately to the thing which it enunci -

The first reason is that used by Gregory in the place alleged, who teaches from Aristotle, 4 Metaphysics, text 27, that to affirm and to deny is to say what is true, or to say what is false; and he clearly teaches this. For, since what is false is that which is dissonant from the thing, but what is true is that which is conformable, it cannot be that what is said is not either conformable or dissonant distinctly and determinately to the thing which it enunciates: therefore it will be either false or true, even determinately, and not only true or false confusedly. As Aristotle himself says in the book On Interpretation, chapter 8: therefore, in propositions about the future, one part must be true, the other, namely the contradictory, false. In addition there is what Gregory says: it is not

seen how there could be some medium between contradictories: therefore, between "it will be" and "it will not be," there is no medium; for, if there were, one who says that the thing will be would not rightly be gainsaid by one saying that it will not be, because the whole of what he asserts would not be negated, if there is some medium outside assertion and negation.

But let us illustrate the matter by an example. If someone says, "Peter will sin tomorrow," then, according to Aristotle's sentence, he does not say what is true, nor what is false distinctly, but what is true or false; because the thing is indifferent to be or not be. Likewise, if another says, "Peter will not sin tomorrow," he does not say what is true nor what is false, but what is true or false. Therefore the one does not negate the whole of what the other affirmed, but the enunciation of each remains, as it were, suspended and ambiguous; wherefore, even if one speaks truth and the other falsehood, the one will not contradict the other; and since an enunciation of the future is always indifferent to the true and the false, it can never be the contradictory of another. Therefore the only contradiction in future matters can be of this sort: "It will be" or "it will not be"; "neither will it be, nor will it not be": of which the former is true because it is necessary, the latter false because it is impossible.

The second reason: if nothing is determinate as future, but any thing at all is poised toward being and not being, it follows that he who absolutely and without disjunction affirms something to be going to be, speaks false distinctly and determinately. For to assert that something will be, when the thing itself is indifferent to be or not be, and is no more to be future than not to be future, is false. For from that which the thing is or is not, an enunciation ought to be judged true or false; and whenever a thing is enunciated to be future otherwise than it is future, it is enunciated falsely. Therefore, if it is enunciated distinctly that it will be, when it is not distinctly future, but confusedly future or not future, it follows that it is false, and hence every affirmative proposition about the future would be distinctly and determinately false; therefore, in contradictions about the future, the affirmative is false, and consequently every negating enunciation ought to be distinctly and determinate true. But this, besides being manifestly absurd, openly opposes the doctrine of Aristotle; for in these contradictions he thinks that not one part is true and the other false, but that each is capable of being true or false.

Next, I retort the argument and I prove that each part of the contradiction is false. For if the enunciation affirming is false, because it determinately affirms something that is ambiguous, by the same reason the enunciation denying will be false: because it negates that which is poised toward either.

Third, against him I argue from his own principles: if in universal contradictions, that is, about a universal and common subject, one side is distinctly true, the other false, as Aristotle had taught in the preceding chapters of book 1 On Interpretation and in book 3 at the beginning, then in singulars the same must be said, as will be evident by an example. For this proposition, "Every man will sin mortally tomorrow," and this, "Some man will not sin mortally tomorrow," are contradictories; and, according to Aristotle's sentence, one of these is distinctly false, the other true; for it is a universal contradiction. But if one of these is distinctly false, it is manifest that that universal, "Every man will sin mortally," is false; for it is to be believed that in the whole Church of

God someone will be tomorrow free from mortal sin. Then the other, the particular, ought to be true; and since in a universal affirmative the subject, according to the rules of the logicians, is supposed distributively and, by descent (as they say), copulatively, the falsity of that universal ought to be detected from the fact that some singular is false, it follows that in the contradictory the subject is supposed determinately; and consequently its truth ought to be proved by a disjunctive descent (as they say), from the fact that some singular is distinctly true. For if it were only confusedly true or false, no singular would be true, and therefore neither would that particular be true: all of which are very well known from logic and beyond controversy, and therefore need not be confirmed at greater length. Therefore under this proposition, "Some man will sin mortally," if it is true, there must be some singular, such as "Peter will sin," which is true; and consequently, in singulars about a future contingent, some proposition is distinctly true. It is clear, therefore, that neither according to our faith, nor according to philosophical and natural reason, is Aristotle's sentence, as explained by us above, true.

But let us refute the arguments of Aristotle's sentence. To the first we say that an indifference is indeed necessary, so that things may be said to happen with liberty, and also that an indifference clashes with a determination; but not every indifference is necessary for contingency, nor does any and every indifference to liberty oppose any and every determination. There is therefore a twofold indifference toward either part of the contradiction: one which Aristotle posited and which is rightly explained by two propositions, which they call "of inherence" in this way: the thing is indifferent and suspended toward being and not being, so that in the thing itself it hangs as much toward being as toward not being; and this indeed clashes with a determinate truth of one part, since in the thing with this indifference there is no more being than not being; but in order that there be a determinate and distinct truth, one part is distinctly future. This indifference and suspension I judge not to be necessary for the liberty of free choice (arbitrium): rather I think it impossible and contrary to our faith, as was proved in the preceding chapters. For it is established from the science and prediction of God that, with our liberty preserved, one part is distinctly going to be future; yet this determination in no way injures our liberty; therefore neither does it oppose the indifference which is necessary for liberty, and this will be explained below. For, since a thing will be determinate future from our liberty and will have its origin thence, it can inflict upon liberty no force or necessity. The other indifference is that which is explained by one proposition "of inherence" and another "of possibility" in this way: free choice will sin, but it can, or will be able, not to sin - and conversely. With this indifference it can also be maintained that there is a determination of the future; that is, that one part is distinctly, as a matter of fact, going to be future. For nothing hinders that something be in reality distinctly future, and yet be able not to be: this is sufficient to establish the full liberty of free choice; for, as by the former mode such indifference is impossible, so too is liberty. Therefore nothing is taken away from liberty by our saying that future things are determinate or distinctly true. From which it also follows that God can distinctly know the future things of our free choice, although it is indifferent and free to the opposite. But it must be observed that, when we say that future things are distinct and determinate future with a potency to opposites, this determination is not only in the effect, but is also said with

respect to the cause: not that there is now in the causes something inclining necessarily and by the mode of nature to that part; but that there be something in the cause, with which the cause will in fact act thus, and yet be able to do the opposite; and because the will ought to be anticipated by such a thought from this or that cause, upon the positing of which it will in reality consent, even if it could not consent; and this repugnance is to thought, in which our entire liberty is preserved.

To Aristotle's later argument it is answered: once the truth about the future, or the knowledge of God, is posited, it follows that there is some necessity in the operation, but a consequent, not an antecedent necessity; which takes away nothing of our will's liberty. About which matter, since in Disputation 68 we shall say more things, in order to reconcile the knowledge of God and the truth of it, and of things and of propositions (which is the same), with our free choice, let what has been said so far suffice.

Disputatio LXVII - Whether future conditionals are certainly known by God

Whether future things under a condition are certainly known by God. Disputation 67.

The opinion of certain theologians of our time is as follows. Not less certainly are future things under a condition than absolutely future things known by God: this is proved by authority, in chapter 2. The same sentence is confirmed by reason, in chapter 3. The opposed arguments of the opinion are dissolved, in chapter 4.

Caput I - The opinion of certain theologians of our time

Although the ancient Scholastics made no mention of this controversy, nor did it begin to be disputed in the schools many years ago, nonetheless it is assuredly worthy to be diligently examined: both so that we may treat exactly those matters which are difficult about the knowledge of God, and also so that, with respect to those things about grace and predestination which we shall say below and in I-II, q. 109, we may lay down some firm foundations.

Among the more recent Scholastics there are some who, to the best of their ability, defend that there is in God no certain knowledge of future things under a condition; and there are not a few who also think that the knowledge which Scripture seems to attribute to God about these future things is only a certain conjecture. Especially in this opinion are as many as assert that there is for God a single reason of knowing things that are certainly future, namely, the real presence of them in eternity. For, since these future things are not at any time really going to be, even if some were going to be under a condition, they would in no way be really present to eternity. This opinion can be urged from St. Augustine, in the book On the Predestination of the Saints, chapter 14,[1103] not far from the beginning, where, against certain Massilians, who asserted that to some infants baptism had not been granted, because God had foreknown that they would not act with repentance if they

1103. St. Augustine, De praedestinatione sanctorum, cap. 14.

had lived, he argues from Wisdom 4: "They were taken away lest wickedness should change their understanding, or lest deceitfulness should beguile their soul," thus: He says that "he was taken away" (namely, as one taken away) "according to the perils of this life, not according to the foreknowledge of God; by which He foresaw this, namely what was going to be, not what was not going to be, but what, if those immature for death had been begotten, He would bestow, so that they might be withdrawn from the uncertainty of temptation, because he would sin who would remain in temptation" etc. Therefore, since that prediction was of future things under a condition, as is manifest, Augustine says that that statement is false, not because it is foreknown by God what perils He would provide for them, which our human conjecture seemed to indicate to us; he goes on to say that he said these things, namely that such future things cannot be known by God with certainty. The same is stated plainly by Prosper, to Reginus, in a letter; and to Augustine, in the work which is before his book On the Predestination of the Saints, where, against the same Massilians, he speaks thus: "But in so far as you subject the election of God commonly to the merits of whomsoever, so that, as it were, past things which were not going to be, which are not now going to be, the manners mark out, hence you remove them from the order's kind, because they are not done from things foreknown" etc. Now when the Prophet says that they involve themselves in that absurdity of the kind, that they say "things to be done which have been foreknown are not to be done," he speaks of those future things which, absolutely speaking, are not future in reality, but only under a condition, by which the Massilians used to assign the merits of election: therefore, when he says they are not foreknown by God, he clearly teaches that those things do not have foreknowledge with God.

By reason, moreover, it is proved first that there is in God no decree about future things of this sort under a condition; but God, since by a decree He can know no future of this kind, cannot know future things under a condition. Further, that God has nowhere had a decree about those things will be plain from what has been said above, namely, that to posit in God now one counsel, and again another definition of doing something besides those things which He is absolutely going to do, is inadmissible. For if men not only set down with themselves that which they are in reality going to do, but also that which under a condition - if such and such an occasion should offer - they would do, how much does this pertain to human providence, since those things are doubtful and uncertain? On which account also each prudent man ought to foresee in advance the single occasions which can occur, and what he ought to do in each single case, has decreed for himself with respect to the matter; but since the providence of God is most certain and efficacious, so that He can neither be deceived nor impeded, we shall ascribe to God such conditional decrees in vain, which for various occasions would be otherwise ambivalent and works established by equality.

Only things that are certainly future have, namely, a real presence in eternity. For since these future things are not at any time really going to be, although otherwise under a condition they would be future, they are in no way really present to eternity.

Testimony of St. Augustine. This opinion can be encouraged from Augustine, book 1 De praedestinatione sanctorum, chapter 14, not far from the beginning, where, against certain Massilians who asserted that to certain little ones in their infant age baptism was not granted with

God's consent because God foreknew they would not actually do penance if they had lived, he argues from Wisdom 4, "He was snatched away lest wickedness should change his understanding, or deceit beguile his soul," in this way: "It was said (namely, 'he was snatched away') according to the perils of this present life, not according to the prescience of God, who foreknows what was going to be, not what was not going to be; that is, because for him an untimely death had been granted, in order that he might be withdrawn from temptations whose outcomes were uncertain, not because he was going to sin who, if he had remained, would not have fallen into temptations." Therefore, since that prediction was of futures under a condition - as is manifest - and Augustine says that that was said not because it was foreknown by God, but because the perils of the present life seemed to indicate that to us by human conjecture, it plainly follows, according to Augustine, that futures of this sort cannot be known by God with certainty.

Another testimony of Prosper. The same is clearly found in Prosper to Reginus, in the letter to Augustine set before Augustine's De praedestinatione sanctorum, where, against certain Massilians, he speaks thus: "In so far as they subject election to whatever imaginary merits, so that, besides past things which did not exist, futures which are not future are fabricated, to be foreknown and not foreknown," etc.[1104] When Prosper says that they move within that kind of absurdity as to say that things not to be done are foreknown, he speaks of those futures which in reality are not absolutely future, but only under a condition, which the Massilians were fabricating as merits of election; therefore, when he says that these are not foreknown by God, he clearly teaches that there is not, in God, foreknowledge of those things.

Primum argumentum. But by reason it is proved first: there is in God no decree concerning such future things under a condition; but without a decree of God no future thing can be known: therefore neither can these future things under a condition be known by God. Moreover, that God had no decree concerning those things is evident: for it is superfluous to posit in God one counsel and another determination of doing something, besides those which He is absolutely going to do. For if men do not merely set down with themselves what they are in reality going to do, but also that which under a condition - if such and such an occasion should offer - they would do, this pertains to human providence, because it is doubtful and uncertain: on which account also each prudent man ought to foresee in advance the single occasions which can occur, and what in each single case there is need to do, he determines for himself; but since the providence of God is most certain and most efficacious, so that He can neither be deceived nor impeded, we should ascribe to God such decrees under a condition in vain, which, for various occasions, would otherwise be in suspense and works established by a parity of alternatives.

Secundo confirmatur, quoniam if in any way future things under a condition are known, it is on account of the truth which is found in those propositions, as we have said in the preceding disputation about things absolutely future; but future things under a condition are not distinctly true: therefore they cannot be known with certitude. For if a conditional proposition were true, the

1104. Prosper of Aquitaine, to Reginus, in a letter; and "Ad Augustinum," before Augustine's De praedestinatione sanctorum.

consequence also would be good; for the truth of propositions is the same as the goodness of the consequence; but if the consequence were good, it would also be necessary; but it cannot be necessary, because liberty would be taken away: therefore neither is the proposition true.

Tertio aliqui sic arguit: the knowledge of future things under a condition is not of simple understanding, because it is not possible by a simple solution; nor of vision, because it is not of future things which are really going to be: therefore it is a certain middle knowledge (*scientia media*), which seems fabricated; since all the Scholastics grant to God only those two kinds of knowledge. And if indeed there is in God any knowledge of these future things under a condition, it is only from conjecture, as some prove from that of Matthew 11: "And you, Capharnaum, will you be exalted up to heaven? you will descend even to hell: for if in Sodom there had been done the mighty works which have been done in you, perhaps they would have remained until this day": the particle "perhaps" is of one doubting: wherefore it not obscurely indicates that this knowledge is not certain and infallible, but conjectural after a human fashion. They add, moreover, that some more recent writers say, not only that this knowledge of future things is without foundation, but also that it is altogether useless in those matters for which it seems to have been devised, namely, to reconcile our liberty with divine predestination, lest that be harmed; it conduces in no way at all, and they think that by another, far easier way all things are saved.

Non minus certo futura sub conditione, quam absolute futura, a Deo cognosci, auctoritate probatur.

Caput II - On the same

A view has always seemed preferable to me, opposed to the foregoing opinion, which teaches two things: first, that these future things under a condition are known by God no less certainly than things absolutely future; which can be shown by authority and by reason. Then (since in the matter of predestination and grace many things, which according to the doctrine of the Fathers must necessarily be said, follow upon knowledge under a condition) that it is most useful and most true; for truth always agrees with truth. We shall endeavor to perform the former in this chapter and the following ones; the latter, however, will be seen in their own places.

- Scriptural testimonies. Therefore, first, our opinion seems expressed in many places of Scripture. 1 Kings 23: David consulted the Lord, saying: "If the men of Keilah will deliver me into his hand (namely, Saul's), will Saul come down?" and the Lord replied, "He will come down." And again David: "Will the men of Keilah deliver me and my men into the hand of Saul?" And the Lord said, "They will deliver."[1105] And 3 Kings 11 it is said: "King Solomon loved foreign women from the nations concerning whom the Lord said to the sons of Israel, You shall not go in to them, nor shall they come in to you; surely they will turn away your hearts after their gods."[1106] And Luke 10: "Woe to you, Chorazin; woe to you, Bethsaida; for if

1105. 1 Sam 23:10 - 12.
1106. 1 Kgs 11:1 - 2.

in Tyre and Sidon there had been done the mighty works which have been done in you, long ago they would have repented, sitting in sackcloth and ashes."[1107]

Nor does it matter that, however, in Matthew the sentence has the particle added, "perhaps," from which some think that that prediction of Christ was from conjecture, though most certain after the human manner, which would arise from things themselves considered in every way, as if He were saying: "Thus indeed can be conjectured from the signs and wonders done by me, and from the disposition of the Sidonians and Tyrians." This interpretation, besides its manifest absurdity - since it contains the force of the particle itself according to the common doctrine of the Fathers - does not express it. For St. Jerome, on that of Jeremiah 26, "Do not withhold a word, if perhaps they will listen," says: "The ambiguous word 'perhaps' does not befit the majesty of the Lord; but He speaks according to our affection, that the free will of man may be preserved." The same he plainly taught on that of Ezekiel 2: "And you shall say to them." St. Augustine likewise, on that of Psalm 2, "Lest at any time he be angry," explains: "'Lest perhaps' is not said on account of uncertainty of the prophecy, but on account of those who are admonished, who with doubt are wont to think of God's future wrath"; and Tractate 37 on John, on those words "lest perhaps ...," interprets the same in the same way. So also St. John Chrysostom, homily 78 on Matthew, on that, "The faithful and prudent servant." St. Gregory, homily 9 on Ezekiel, on those words "If perhaps, or if by any means they will hear," says that the particle "perhaps" does not signify doubt or ignorance in God, but the fewness of those who were going to respond.[1108] In the same way therefore in Matthew 11 the particle "perhaps" will indicate the freedom of choice of those who were going to do penance; but by no means doubtfulness or uncertainty of the knowledge and prediction of Christ. For rather, to God there ought altogether to be denied the knowledge of these future things than there should be attributed to Him only a conjectural and some uncertain knowledge, which would be exposed to at least a very small measure of uncertainty and falsity, as we shall show in the following chapter. Finally, St. Ambrose, book 2 De paenitentia, chapter 5, on the aforesaid particle, says thus: "It is not pronounced out of ignorance, but in the divine Scriptures such a manner of speaking is frequently observed, because the diction is simple," which very thing many passages of Scripture confirm. Theodoret also on Jeremiah 26 and Ezekiel 2, on those cited words, and Eusebius, book 6 De praeparatione evangelica, chapter 9, teach that that particle is not a word of ignorance.

If someone should say that these futures which God and the soul of Christ under a condition predicted were not predicted from the knowledge which God Himself and the soul of Christ had concerning them, but were explained only by that manner of speaking, declaring what a prudent man by human conjecture ought to judge about those things, without any foundation would he affirm it. For when David consulted the Lord, he did not do this in order to hear the judgment and conjecture of a prudent man; he sought the most certain oracle of God who cannot be deceived. Then, since Christ rebuked the hardness of Bethsaida and Chorazin by that example of the

1107. Lk 10:13.

1108. St. Jerome, on Jer 26:6; St. Augustine, on Ps 2 and Tractate 37 on John; St. John Chrysostom, Hom. 78 on Matthew; St. Gregory the Great, Hom. 9 on Ezekiel.

Sidonians and Tyrians, He convicted them from what He Himself most certainly knew. For according to human conjecture, it would be little to rebuke them and to prove against them the hardness of their heart on the day of judgment. Moreover, if we examine the force of the Greek particle, as Lansa noted in chapter 47 of the Harmony of the Gospels, it is not that of doubting, but signifies an asseveration, which is the mark of one affirming and seriously asserting something; the same was observed by the Carthusian and by Titelman on Matthew 11. *The same is also proved by the authority of the Fathers*. Of these, omitting others who could be brought forward concerning the knowledge of things absolutely future, Gregory of Nyssa expressly handed on this opinion in the book *On Those Who Are Snatched Away Prematurely*, where he says: "It is very credible that He who knows what is future as well as what is past, prevented the progress of the infant's life to perfection, lest that which evil foresight had observed in one who would live thus might be brought to perfection, and lest for him who would so live by that will and choice, wickedness and vice should become the matter of life." The same thing Porphyry also said, whose opinion Cyril relates and approves, book 3 against Julian. The same also Augustine has in express words, book 2 *De bono perseverantiae*, chapter 9, at the beginning: "Surely," he says, "God could, since He foreknew that they would fall, before that happened, remove them from this life," and a little below he repeats the Lord's sentence about Tyre and Sidon, "who, if they had seen the signs done in Bethsaida, would have done penance"; and immediately he subjoins: "But can we say that even the Tyrians and Sidonians, the mighty works having been done among them, were unwilling to believe, or would not have believed, if they had been done with them?" as if he were saying, by no means. He gives the reason in these words: "The Lord Himself attests that they would have done a penance of great humility if those divine signs of virtues had been done among them." As if he were saying: since the Lord thus predicted, who will dare to affirm the opposite about them? And in book 1 *Ad Simplicianum*, question 2, on the reprobate, he says about the middle: "If He (namely, God) were willing to have mercy even on them, He could call them in such a way as would be apt for them, so that they would be moved and understand and follow": therefore God knew how He could have mercy on them by that special mercy granted only to the predestined. But He could not know that, unless He had with Himself the note of a calling so congruent to their free choice that, if they were called thus, without doubt they would respond. And a little below: "But whomever He has mercy on, He calls him in such a way as He knows to be congruent, that he may not reject the one calling him." This doctrine is so familiar to Augustine that it is superfluous to bring forward more places of his.

Lastly, some Scholastics are wont to be alleged for this opinion; but because they do not treat this controversy expressly, it did not please me to report them; nor, from one or another of their words, to collect this opinion obscurely, since the testimonies both of Scripture and of the Fathers, as has been recited up to now, are so manifest; nor is the reason less clear demonstrating this very thing, as we shall see in the following chapter.

Eadem sententia ratione confirmatur.

Caput III - On the same

Let us confirm our opinion by reason. Before all else it must be supposed that either the knowledge of these future things under a condition is altogether to be denied to God, or a most certain one is to be attributed to Him. For those who so concede it to God as to say it is only some conjecture, in my judgment do Him not a moderate injury. For that God does not know is not a wonder, indeed is necessary, if that which He does not know is nothing. For "that which is not," as Aristotle testifies, "is not known."[1109] Therefore future things under a condition, which truly are not future, nor not future, but "future or not future" (as they say) disjunctively; God will not know to be, nor not to be, but "to be or not to be." But to attribute to God knowledge by conjectures only, and not altogether certain, is surely to assert Him capable of ignorance and error. For if God, by conjecture only, were to apprehend these futures, nothing could hinder that His knowledge should not attain to that which really is going to be, and that He should affirm that to be which would not be going to be. Wherefore nothing also would hinder that He should be deceived: for deception consists in this alone, that someone should assert or think that that will be which in reality is not going to be. Therefore, if the knowledge of God does not of necessity follow upon the things themselves as they are, but something can really lie hidden from Him, however well He should conjecture, His knowledge could be fallible; which is error in belief. Therefore rather the adversaries ought to say that God distinctly knows none of these futures, because nothing is distinctly true; but that He sometimes predicts, not according to the knowledge which He Himself has, but which men are wont to attain by conjecture. Yet from Scripture and the Fathers it already remains sufficiently proved that God, according to His own proper knowledge, not according to human conjecture only, predicted those futures. Now by reason this must be proved, which is of this sort. In the same way does some thing stand to being or not being under a condition, as to...

Confirmatur. In order that we may confirm our opinion, before all else it must be laid down that either we must deny to God altogether any knowledge of these conditional futures, or we must ascribe to Him a most certain and determinate knowledge of them. For those who say that God has only conjectural knowledge of them, in my judgment do Him an injury. That He knows, is not wondrous; rather, if there were anything He did not know, that would be wondrous, as Aristotle bears witness in Posterior Analytics I. Therefore, if futures under a condition are indeed futures - not non-futures, as they say - God will distinctly know that they will be, and not that they will not be. But to ascribe to God knowledge only by conjectures is to affirm ignorance in Him; for, if His knowledge did not attain to that which really would be future, and He were to affirm it to be future when it would not be, there would be nothing to prevent His being deceived; since to be deceived consists precisely in this, namely, to think that to be which in reality is not. Therefore, if God's knowledge does not follow the things themselves as they are, something in reality would be hidden from Him, so that He would form only a conjecture, and thus He could be in error - which is absurd. Therefore, rather must the adversaries say that God knows nothing of these futures, because nothing is distinctly true; but that He sometimes predicts, not according to the knowledge

1109. Aristotle, Posterior Analytics 1.2.

which He Himself has, but according to the knowledge which men are wont to attain by conjecture. Yet from Scripture and the Fathers it already remains sufficiently proved that God, according to His own proper knowledge, not according to human conjecture only, predicted those futures. Now by reason this must be proved, which is of this sort.

Ratio verioris assertionis. In the same way does some thing stand to being or not being under a condition, as to being or not being absolutely: so that, just as there is no middle between "it will be" and "it will not be" absolutely, but one part is distinctly true and the other distinctly false, as was shown in the preceding disputation; so also between "it will be" and "it will not be" under a condition, one is distinctly true and the other distinctly false. Only this differs: that in the former contradiction the effect is posited without a condition, and therefore the future is affirmed absolutely; in the latter, with a condition. For in the former there is posited a cause absolutely, from which the effect is brought forth and is absolutely future in this manner: Peter will be called by me by such a calling, to which he will respond. In the latter, the cause is posited not absolutely but under a condition, and in like manner the effect is asserted only under that same condition, in this manner: If Peter in such an occasion shall be called by such a calling, he will respond; but if by such-and-such, he will not respond. For the quality and condition appended to the cause is poured back upon the effect; in the rest, however, the reasoning of each sort of contradiction seems equal. Therefore, since in absolute futures one part is distinctly true and the other distinctly false, in futures under a condition it must be said in the same way; and all the reasons by which we proved this about absolute futures manifestly convince the same about futures under a condition. For, the truth being posited distinctly on one side of the contradiction, and the infinity of the divine intellect being added, it follows in the same way that God most certainly knows all things under a condition: because no truth which, for that very reason, is intelligible, can be hidden from the infinite perspicacity of the divine intellect. Therefore the knowledge of these futures must be attributed to God no less than of others.

Verum respondent aliqui that there is a difference between propositions about a future absolutely and about a future under a condition: for in contradictions about an absolute future they grant that one part is distinctly true and the other distinctly false; but in contradictions about a future under a condition they deny that one part is always distinctly true and the other distinctly false, but sometimes either part is equally indifferent to be, or not to be - and thus to be true or to be false - as philosophers likewise speak about God, namely, that it is always distinctly true to say absolutely "He will do" or "He will not do," and distinctly false to say the contrary; but not so under a condition. For example, if one were to ask: If God had willed to save Cain, would He have decreed to save Judas? and other such things which we enunciate about God under a condition. The reason of the difference, they say, is this: in absolute futures, when knowledge proposes diverse objects equally, and inclines no more to one than to the other, it cannot happen but that one part alone will be future in reality; for both cannot remain in suspense. But in futures under a condition, since nothing is going to be in reality, we can say that our judgment will remain in suspense toward either part, because there is nothing whence a determination of the future could arise. The solution indeed seems subtle; but, if it be rightly considered, it will also easily appear frivolous.

Respondetur, confutatur primo. First, it falsely says that in us the determination arises from the will alone, not more inclined toward the one part than toward the opposite by cognition. For always, when the will pursues one thing, that is proposed more efficaciously than the opposite, which it leaves aside; but when the opposites are considered equally, the will stays suspended. This is known to all by daily experience, if each man diligently attends to the things which are carried on within. Nevertheless, there is liberty in the will, both so that it need not follow that which is proposed more efficaciously, and so that it may apply the intellect to consider the opposite more efficaciously. But if de facto it follows something, without doubt the intellect considered that more efficaciously; as we shall say more at large in I-II, q. 13, a. 6, and q. 77, a. 2, where we will show that the true opinion of the theologians is that in the intellect of the sinner there always precedes some defect of consideration - which would not be true, if the will were sometimes moved of itself alone without any diversity on the part of the consideration; whence also we shall show below, disputation 98, chapters 6 and 7, that the prevenient grace is not equal in him who actually responds and him who resists.[1110]

Confutatur secundo. Second, even if we grant that the will sometimes, from two things equally proposed and equally considered, follows one, leaving the other, nevertheless it must be conceded that in contradictions of the future under a condition one part is distinctly true and the other false, no less than in absolutes. For a proposition under a condition differs from an absolute only by the condition. Therefore, that purified and completed, the proposition is rendered absolute: therefore the truth which is in the absolute will be in the conditional under the condition. Wherefore, no less in a contradiction under a condition will one part be distinctly true and the other false than in an absolute contradiction. For if now, this thought being posited, such an effect follows, which in reality would not follow from the will alone unless that, or greater, cognition were posited, we cannot deny that that thought together with the will was the cause of that effect; and hence it will be true, if someone were to say of the absolute future, that, this cognition being posited, such an effect will in fact follow. I speak of the least thought which one may choose to assign, along with which the will actually operates: of this therefore it would also be true under a condition, "if such a cognition be posited, the will will so operate," and so of all other conditionals. Therefore, just as in absolutes one part is distinctly true and the other false, so in conditionals it must be said. By this reasoning it remains proved that any thought, along with which free choice will operate absolutely, is the cause of the determination of the will along with the will itself; nor is the will determined of itself alone. But if this were true, as the adversaries contend, that the will sometimes determines itself of itself alone without any causality of the intellect, on account of which they assert that in propositions of the future under a condition there is not always one part true - because the will of itself alone is sometimes determined without any special cognition - then it would follow that, in those conditionals we are now discussing, neither part would be distinctly true.

Tertio refellitur. Third, if we concede to the adversaries that not any thought whatsoever cooperates toward the determination of the will, still, if we speak of that under a condition, one part of the contradiction will be distinctly true and the other false. For the truth of a conditional

1110. St. Thomas, Summa Theologiae I-II, q. 13, a. 6; q. 77, a. 2.

proposition consists in the goodness of the inference: for it is at once a consequence and a proposition; and the truth of it, insofar as it is a proposition, is the goodness of the same, insofar as it is a consequence; and both consist in the connection of the antecedent with the consequent - these things are most well known from the logicians. Wherefore, wherever the conditional consequence is not good but bad, neither will that, as a proposition, be true, but false. Thus it happens whenever a part of the antecedent does not cohere by any order or causality with the consequent, or contrariwise; but both happen together only concomitantly, as if someone should say, "If the chariot moves, Peter moves": this is a good consequence and a true proposition; but if someone should say, "If the Turk is dead, Peter took a wife," the proposition is false and the consequence bad, because there is no connection at all between antecedent and consequent, even if it should happen at the same time both that the Turk die and that Peter take a wife. Therefore, when we say of Peter, "if he were to be prevened by this thought, he would do this," either we assign a cause with which the effect is connected, or not. If we assign the cause of that effect which brings it about, that part is true; but if it is not a cause, it will be false, because there will not be a good consequence, since there will be no connection between such a cognition and the future work of free choice; and the contradictory will be distinctly true, which must be assigned with the negation set thus: "Not, if Peter were to be prevened by this thought, would he be about to do this." For in such conditionals, contradictories are not rightly assigned in another way: wherefore this would not be contradictory - "if Peter were to be prevened by this thought, he would be about to do it," and "if Peter were to be prevened by this thought, he would not be about to do it" - but both would be false, namely, "if Peter were to be prevened by such a calling, he would be about to do it," and "if Peter were to be prevened by such a calling, he would not be about to do it," because to do or not to do would have no connection with that calling, if that neither moved to doing nor to not doing, as we suppose from the adversaries' opinion.

Caput IV - The arguments of the opposing opinion are dissolved

First, we must overturn the foundations of the adversaries which we set down in the first chapter. As to the testimony of St. Augustine, we answer that, when he argues against the Massilians, he is only contending that there were no future merits of infants, who are taken away before their time, foreseen by God, for the sake of which God granted baptism to them or denied it. He understands merits as absolutely future, not under a condition: for, if God absolutely and de facto denied baptism, He denied it on account of absolute merits, not on account of merits future under a condition; for they are not rightly called merits for the sake of which someone obtains reward or punishment. For who would say that someone de facto merited the reward or the punishment which he has, because, if he had had this or that occasion to hand, he would have acted well or ill? Surely no one would doubt that such "merits" are not established: since, if the retribution is absolute, the merit must also be; for that which is not in very deed going to be, how can it be imputed for reward or punishment? This very point, indeed, he examines in the same place against the Massilians. But Augustine also said, upon Wisdom 4: "He was snatched away, lest..." - not "according to the prescience of God"; he understands "absolutely," that is, according to

what was in truth going to be in the boy, not what would have been under a condition. He explains shortly after what that is which was going to be in the boy, and what that is which was not going to be of him, in these words: therefore it is that, dying, the boy is removed, lest he fall into sin - "not because he would sin, if he were to remain in temptation" - which was not going to be. Therefore God knew the boy's being taken away by the swiftness of nature, which was thus absolutely going to be; but He did not know him to be going to sin - he understands this also absolutely; for he did not add, "if he were going to remain in temptation," as one would speak of conditional knowledge; but rather, "because he was not going to remain in temptation," which manifestly pertains to the absolute knowledge of futures. For therefore He did not know him to be going to sin, because he was in reality not going to remain in temptation.[1111]

The grounds of the adversaries, which we set out in the first chapter, will not be hard to overthrow. To the testimony of St. Augustine I answer that he is contending only against the Massilians, that there were no future merits of infants, who are taken away prematurely, foreseen by God on account of which God either granted or denied baptism to them: but he understands merits as absolutely future, not under a condition; because, if God absolutely and in fact denied baptism, He denied it on account of merits absolutely, not on account of merits future under a condition. For merits under a condition are not truly to be called merits on account of which someone attains either reward or punishment. For who would say that someone has de facto merited the reward or the punishment which he has, because, if he had had this or that occasion at hand, he would have done well or ill? Surely everyone would judge such merits to be fictitious; since, if the retribution is absolute, the merit also ought to be: for what in reality is not going to be - how can it be imputed to reward or punishment? This very point St. Augustine objects to the Massilians in the book On Perseverance; and for that reason he said that the statement from Wisdom 4, "He was taken away...," was said "not according to the foreknowledge of God": he means absolute foreknowledge, which could be the cause either of reward or of punishment; but rather it was said according to the dangers of the present life - not because God under a merely probable conjecture would have foreseen that under a condition - but because, in view of the dangers which would befall an infant if he lived, God surely knew that his mind would have to be guarded; nevertheless he said that that statement was not said "according to the foreknowledge of God," because, as we have explained, he understood "foreknowledge" there of the absolute kind, which alone pertains to the notion of merit, about which Augustine was disputing.[1112][1113]

He plainly expounds this meaning in what follows. He (namely God) foreknew that which was going to be, not that which was not going to be; as if he were to say, He foreknew that which absolutely and really was going to occur concerning that boy, not that which was going to occur under a condition; because the latter really was not going to be absolutely. He then explains what it is that was going to be in the boy, and what it is that was not going to be concerning him, in these words: That is, that He was going to bestow on him an untimely death, that he might be withdrawn

1111. Wis 4:11. ("He was taken away, lest wickedness change his understanding, or deceit beguile his soul.")
1112. St. Augustine, De bono perseverantiae, cap. 9 - 10.
1113. Wis 4:11.

from the uncertainty of temptations, not that he was going to sin, he who was not going to remain in temptation. God therefore knew that the boy would be taken away prematurely; this was thus absolutely future; but He did not know him to be going to sin; he understands this also absolutely: for he did not add, "If he were going to remain in temptation," for thus he would be speaking of conditional knowledge; but rather, "because he was not going to remain in temptation," which manifestly pertains to the absolute knowledge of futures; for therefore He did not know him to be going to sin, because he was in reality not going to remain in temptation. For this reason too Prosper, against those same Massilians, said that such merits "under a condition" are fictitious; and therefore he called it a new kind of absurdity to say that things which really are not going to be absolutely, but only under a condition, are foreknown; he understands this of absolute knowledge, such as is necessary to the notion of merit, as we have set forth.[1114]

Now let us come to the arguments. Concerning the first, even Doctors of our own opinion differ in various ways. Some think that God, even under a condition, also decreed with Himself to do this or that, if this or that cause were posited; indeed, from this decree they think all future conditionals are known by God, according to the infinite combinations of causes, in accordance with which He has arranged within Himself all the things which otherwise He would do. This, however, does not persuade me; for, as we have often said, and it will be expressly proved below in Disputation 80, a decree of God about a thing to be done adds nothing at all to His foreknowledge of the thing's bare essence (*essentia*), except a rational respect to the future thing; so that, if He had decreed nothing within Himself, nothing would be lacking to Him except the respect of inference; but this respect we cannot gather except from the fact that the thing itself is going to be. It is otherwise in men, who, by multiplying acts of intellect (*intellectus*) and will (*voluntas*) within themselves, provide and determine what ought to be done in this or that event, whence it comes about that that event will not occur.

Therefore, given this occasion - for example, David's staying at Keilah - even if the Keilahites were of such an affect and disposition that their free choice (*arbitrium*), on that occasion being present, would be moved, if God had not withdrawn His concurrence, to hand over David into the hands of Saul; nevertheless, because it was free to God either to cooperate with them, or, contrary to the inclination of such cognition and free choice thus tempered, to deny them His concurrence, without which they could not will - as He withdrew it from the fire, lest it burn the boys at Babylon - can we really collect, or attribute to God, rather a rational respect of concurring to that to which the calling inclined, than of not concurring, since in reality one outcome is not more future than another? As to those things which are absolutely future, we most rightly say that God decreed to concur, because in reality He is going to concur; but as to conditionally future things, since it is free to Him to do one thing or another, and He does not elicit diverse acts within Himself, but is said, by that sole respect of His essence, to have the notion of the decree of this or that thing, there is no ground on which we could say that He decreed this rather than that.

1114. Prosper of Aquitaine, against the Massilians (Semi-Pelagians).

True reply to the argument: Nevertheless it must be said that God so certainly knows futures under a condition, that even under that condition the decree of God to concur with free choice is to be understood implicitly, in this way. God knows well that, if to Peter on this occasion or that I were to give this or that calling, and I were to cooperate with it according to what that calling would require, and were not miraculously to withdraw my concurrence, such an act would be done; yet I could withdraw it, if it pleased me. But whether God would in that case be going to give or to grant concurrence - He has decreed nothing Himself about this, as was proved above.

For the explanation of which, observe that the calling which we call congruent is so tempered and so agrees with free choice that of itself it inclines it to consent; not indeed so that the will cannot resist, but so that in fact it freely obtains consent from it; which consent, if God were to deny His concurrence, on which every act of ours depends, would not follow in the will; yet there would be violence done to the calling, to which, according to its inward impulse and inclination, the concurrence which it was demanding would be denied. Therefore, when we say, "God knows well that free choice, given such a calling, would consent," and that the proposition is true, we understand: if God, in accordance with what the calling requires, concurs with it and does not deny His cooperation.

From this solution there follows also something else worthy of note: namely, that we speak most rightly concerning the divine will (*voluntas*) when we affirm that, if God had not willed this or that, He would not have decreed that other thing. For instance, we truly say: if God had decreed to preserve Adam in the state of innocence from sin, He would by no means have willed that His Word be incarnate - supposing the truer opinion, which teaches that Christ came in the flesh for no other cause than to redeem Adam together with the whole human race. For since there is a connection between the objects, namely between the Incarnation and the remedy for sin, there is also one between the wills, so that when one is removed, the other likewise is taken away. On the other hand, where there is no connection of wills, because there is likewise none of the objects, the conditional proposition must be denied; for example: "If God had willed to preserve Adam in grace, He would also have willed to make another universe"; or: "If He had decreed to save Pilate, He would also have decreed to save Judas." Surely these propositions must be denied, because there is no connection between the antecedent posited under a condition and the consequent; and where there is no connection, just as there is no good consequence, so neither is there a true proposition, as was shown in chapter 3. And although this proposition is false, it does not follow that those are true which seem to be its contradictories - for in truth they are not - namely: "If God had decreed to save Pilate, He would not save Judas"; or this: "Even if Christ were not to save Pilate, nevertheless He would save Judas." But all these are false, just as the former wholly affirmative one is, nor are they contradictories of it. For in conditionals, contradiction should be assigned by prefixing only the negation, not by denying the other part of the inference, as we also noted in chapter 3; but whenever in a conditional the antecedent is not connected to the consequent, the proposition must be denied and is false, whether the antecedent be affirming or denying, and whether the consequent be of this or of another quality. And thus much on the first argument.

Reply to the second argument: I answer that, for conditional propositions to be true and for the consequence to be good, it is not necessary that they be of necessary truth; it is only required that they be always true, and that that consequence be always good. For that which once is good is always good, as the logicians teach. And just as absolute propositions about a contingent future are from eternity and always true, so also are conditional ones; otherwise there would in God be no knowledge of them at all - for this must be eternal. How the truth of propositions about the future is eternal is gathered from the preceding discussion in chapter 2, and we shall speak further below in article 15. Nevertheless, it sometimes happens that the truth of a conditional proposition is necessary; namely, when from one thing we collect another which follows by natural inference; yet when from thoughts we infer the operations of free choice, we do not infer necessarily, but we truly assert and rightly infer.

Objicitur: But someone will press further in this way: if the consequence is not necessary, it cannot be good, because in it there can be an antecedent true and a consequent false, which is repugnant to a good consequence. For example: if from the fact that Peter is anticipated by such a thought it does not follow necessarily that he will sin; then it can happen that Peter is anticipated by such a thought and does not sin; and thus the antecedent will be true and the consequent false; therefore it will not be a good consequence.

Diluitur: I reply that there are two kinds of consequences. One kind is of those which occur in necessary matter and assume universal propositions; and in these the connection of consequent with antecedent is so necessary that, from the nature of the thing, it is repugnant that the antecedent be true and the consequent false; for it assumes propositions necessary from the nature of the thing, and indicates the consequence as following from the necessity of nature. But when the consequence is from a singular antecedent, and cannot be reduced to universal propositions, it merely indicates that in reality the consequent follows from that antecedent as from a cause, even if it could fail to follow; and, for such a consequence to be good, it is enough if in reality the consequent follows from the antecedent, even if it could fail to follow. But that axiom, "In a good consequence the antecedent cannot be true and the consequent false," is understood when we are dealing with syllogistic form, or another form of arguing, which ought to consist in a certain disposition such that, that being preserved in any matter whatsoever, it is never the case that the antecedent is true and the consequent false. But the conditional of a singular future is not any form of consequence according to a disposition of terms that could be preserved in various matters; rather, from a singular cause it alone gathers that such an effect will follow. Thus, it will be a good consequence when in fact it gathers what will follow; but when in fact that will not follow, it will not be good. Add also that then there would be some variation in the singular cause, that is, in the cognition by which free choice is anticipated, if it did not respond; for if free choice did not respond, the cognition would not be congruent; and that variation is within our power, as is discussed in Disputation 89, chapters 6 and 7, and we shall say more fully below; wherefore the same form would not be preserved entirely, because it would not be entirely the same cognition,

that is, with all its circumstances, as is clear. Accordingly, even in a singular consequence we can say that there is a determinate form such that, that being preserved, it can never be that the antecedent is true and the consequent false.

Someone will ask, finally, what sort of connection there was in that proposition which Elisha said to Joash, king of Israel: "If you had struck five or six times - nay, if you had struck seven times - then you would have struck down Syria unto complete destruction." I answer that the only connection was from promise and from the word of God, who revealed to the prophet that King Joash would strike Syria unto complete destruction, if he himself were to strike the ground with the staff six or seven times; and therefore that proposition was true, not from any other real connection of cause with effect.

Ad tertium argumentum: Concerning the third, the theologians of our time labor greatly to assign this knowledge of conditionally future things under some member of that common division of God's knowledge, namely of simple understanding or of vision. For my part, I would not place it under the knowledge of vision, but under simple understanding (*intelligentia*); for the knowledge of vision seems to be that which is likened to bodily vision, because it is terminated to the thing itself existing; but what is future under a condition is not of this sort; rather, it seems to be a certain simple understanding of these futures under a condition. Or, if it please for the sake of doctrine and clarity to constitute a third member, what harm is there? That the ancient Scholastics who have written hitherto mentioned only the simple knowledge of vision and of simple understanding matters little: both because they did not at all dispute or make mention of this knowledge under a condition; and also because they did not say that all the knowledge of God must be divided only into those two members

They [the ancients] said that knowledge is to be divided; but when they were treating of the knowledge of possibles, they called it simple intelligence; whereas when they were treating of the knowledge of future things, they called it vision on account of the reason stated. What then if we posit another [kind], of which they themselves made no mention, nor did they deny it? Finally, this disagreement is about words and not about things; and in this matter to speak in different ways does not much matter; therefore there is no great need to be anxious about it.

As to what was adduced from Matthew to prove that this knowledge in God is only conjecture, we have already said enough in chapter 2. Therefore it is clear that the opinion is true which attributes to God the knowledge of those future things under a condition. How great its usefulness is will be shown especially in the course of the matter of predestination and grace. I confess indeed that at times many theologians abuse this doctrine, when they think that with it they dissolve the knots of many difficulties, when nevertheless it contributes nothing at all to their solution. Wherefore in our solving of difficulties this doctrine must be employed with such moderation that it may seem not a contrived evasion, but a true and native explication of the difficulty.

Disputatio LXVIII - Whether the prescience of God takes away our free will

Table of contents: - Caput I - The Catholic doctrine is set forth against the heretics. - Caput II - The first argument of Wyclif against our liberty, to which Catholics reply in various ways. - Caput III - Two other solutions of the same argument. - Caput IV - The true solution of Wyclif's argument. - Caput V - Wyclif's later argument against the same liberty. - Caput VI - Therefore future things are known by God with certitude because they are future, not the other way around. - Caput VII - Corollaries of the whole disputation.

Caput I - The Catholic doctrine is set forth against the heretics

Not only in this place, but also below in the treatise on predestination, there will be a dispute about the liberty of our free will. Therefore I judged it worth the effort in this brief chapter to enumerate the errors that have existed on this point, and to set forth and confirm the Catholic doctrine in a few words; for to display our liberty against heretics more at length would be superfluous: both because the matter is most well known and even among the barbarians sufficiently spread abroad; and because certain weighty authors have shown this truth clearly enough from Scripture and the Fathers.[1115]

First, the Stoics asserted in general that all things happen by fate; hence nothing happens freely, but all things by necessity: St. Augustine attributes this error to them in the City of God, book 5, chapter 8. Whether this necessity, in their opinion, has its origin from the very nature of the will itself, or from some extrinsic principle, Augustine does not explain. Yet the verses of the Stoic Cleanthes, reported by Seneca in book 18 of the Letters, which Augustine cites in the same place, seem to indicate that this necessity proceeds from an extrinsic principle which they called fate - either the stellar concourse, or the series of all causes, or the good pleasure of Jove. These are the lines: "To whatever it has pleased [the gods], there is no delay in obeying. I hasten to take up [the command]: do but will me not, I follow grieving, and being wicked I shall suffer to do what to the good it was permitted. The fates lead the willing, they drag the unwilling."

Second, Clement of Rome, book 3 of the Recognitions, reports that Simon Magus was in the same error; and, as the author is St. Augustine in the book On Heresies to Quodvultdeus, chapter 35, Bardesanes too ascribed the changes of men to fate. The Manichee also took away the freedom of choice with respect to sinning, as is clear in St. Jerome's proem against the Pelagians, in St. John Chrysostom, homily 45 on John, and in St. Augustine, in that book On Heresies, chapter 46, and in

1115. Thomas Waldensis, tome 1, book 1, article 1, chapters 21 and following; Alphonsus de Castro, Against the Heresies, s.v. "Fatum"; John Fisher (Roffensis), article 36 against Luther; Ruardus Tapper, article 7; Domingo de Soto, book 1 De natura et gratia, cap. 1; Juan de Vega, book 2 on the Council of Trent, cap. 12 and following; François Feuardent, Annotations on Irenaeus, book 4, cap. 71. See also the Council of Trent, session 6, canons 4 and 6. St. Augustine, De civitate Dei 5.8; Augustine, De haeresibus ad Quodvultdeum 35, 46; Jerome, proemium against the Pelagians; St. John Chrysostom, hom. 45 in John; Augustine, Contra Fortunatum Manichaeum. Seneca, Epistulae Morales, book 18, citing the hymn of Cleanthes: "Ducunt volentem fata, nolentem trahunt." The Council of Constance, final session, condemns Wyclif's propositions.

the book Against Fortunatus the Manichee after the middle; for the Manichees said that our will is forced by a contrary nature to sin, namely by the appetite of the members, which they called the evil mind.

Then John Wyclif taught quite clearly that all things which happen - even those that are done through the free choice of men as well as of angels - happen by absolute necessity. This his error is listed among others in the Council of Constance, in the last session; Thomas Waldensis also mentions it, tome 1, book 1, article 1, chapter 21. And since he teaches that free choice operates by absolute necessity, he plainly indicates that this necessity does not arise from something extrinsic but from fate, from the very native faculty of free choice: indeed, he even asserted that God himself operates by this absolute necessity, as the same Waldensis writes in chapter 32. To them he granted only freedom from coercion, because they act of their own accord from an internal principle, while he altogether denied the liberty of contradiction and contrariety; he adds, nonetheless, that from another ground liberty does not remain in man, namely from the prescience of God, about which a disputation is now undertaken, as the same author reports in that chapter 22 and 25. If there were in man no other necessity than that which is from the knowledge of God, it would not seem an absolute necessity, but only from the supposition of something extrinsic; yet John Wyclif said that there is absolute necessity too.

Following John, some years ago there came Luther, Philip Melanchthon, Calvin, and other heretics of our time: but they do not so openly teach in all things a necessity absolute proceeding from the faculty of our will; for Ruardus, article 7, reports many things word for word from Melanchthon, in which he asserts that, considered in itself, the nature of man is free with respect to external operations, and that this is known by experience; but that with respect to internal affections there is no native liberty at all in the will: that no one can moderate the affection of love or of hatred. He also adds these words from Melanchthon: "If one refers human will to predestination, then neither in external nor in internal works is there any liberty." Roffensis cites like words from Luther, article 36. "These wretched men are deceived by the inconstancy, or, as they call it, contingency of human affairs; for they plunge their foolish eyes into the things themselves and the works of things, nor do they raise them in any way into the sight of God, that they may behold things above things in God; for to us looking down upon the lowest, things appear arbitrary and fortuitous, but to those looking up to the highest, all things are necessary."

There are others who teach that our liberty is hindered by the predestination of God; these we shall report in disputation 99, chapter 1.

Wherefore, in the present disputation, against the heretics we must not only defend absolute liberty, arising from the very nature of the will itself, but we must also show that from the prescience of God there follows no necessity that impedes its liberty to either side; for this heresy, in whatever way it denies liberty in us in deliberated operations, is most grave. Now, since the heretics admit that this extrinsic necessity, which altogether takes away our liberty, proceeds from a twofold source - namely, from the prescience and the will of God - we must treat of each in turn: for each has its own proper difficulty, and they are not to be dissolved in the same way, as some theologians have wrongly thought. About the prescience of God we must treat in this disputation;

but about his will, in disputation 99. But before we come to the contest, let us establish a firm foundation of Catholic truth against all the heretics whom we have so far mentioned, toward which our whole disputation and doctrine should look. Therefore it is this: man's free will, in all his operations, both internal and external which are deliberated, is so freely moved to one side that it can be moved to the contrary; which liberty is not only innate to our will (*voluntas*), but is also not injured by any extrinsic agent; I would add: indeed, it cannot be injured.

That this liberty is altogether uninjured in us is very largely proved by the Doctors at the beginning of the chapter cited, from Scripture, Councils, and the Fathers: to whom I willingly refer the reader. For us, however, the decree of the Council of Trent, session 6, canons 4 and 6, is sufficient, where the Fathers declare that in us, even after sin, there truly remained free will; and hence that we so cooperate unto our justification that we can assent, and that it is in our power to avoid our sins and to do good works. The same liberty is asserted in the same session, chapter 5. Wherefore it is a matter not only of faith that our free choice is not forced by an absolute necessity to act, in such wise that liberty would be impaired and it would not truly be in its power to incline to one side or the other. Hence Thomas Waldensis, tome 1, article 1, chapter 28 and the preceding ones, said that it is not only an error to concede an absolute necessity in the works of free choice, but also to concede any necessity in the works of free choice that takes away the liberty of free choice. He called that necessity absolute which is from the native inclination of the will itself; and that which proceeds from some extrinsic antecedent cause, he called from supposition. I add: not only is our liberty not injured by something extrinsic or by some supposition - be it, for instance, the knowledge of God or his will - but neither can it be injured. Of the knowledge we shall show this in the present disputation; of the will, in disputation 99; although even on that point there will be some discussion among our theologians in that place.

Caput II - The first argument of Wyclif against our liberty, to which Catholics reply in various ways

The first argument of Wyclif against our liberty, to which Catholics reply in various ways.

This argument is found at the end of that chapter 22 of Waldensis, and is of this sort: God foreknew, or foretold, that Peter would sin; therefore Peter will sin: consequently the consequence is good; the antecedent is necessary; therefore the consequent [is necessary]. Wyclif used to say that this argument is so efficacious that he asserted the Armaghan [Doctor] labored for twenty years over its solution, and at last divided it, saying that Christ, in that prediction, could have erred. If that were true, he said, the Armaghan ought also to have affirmed either that God did not know that future, in accordance with Cicero's view, or that, in that matter as in any matter at all in which future things are known, God could be deceived. But Thomas Waldensis vindicates the Armaghan from this calumny, saying that nothing of this sort is found in his writings, and that this imposture is manifest.

To this argument Catholics reply in various ways. Some say that the consequence "God knew, or foretold, that Peter would sin; therefore Peter is going to sin" is good: for the antecedent is always true, whereas the consequent "Peter will sin" can be false; for after Peter has sinned, this proposition "Peter will sin" will no longer be true. But this solution has no force; for when we say "God knew that Peter would sin," we do not understand it for just any time, but for that time at which the thing future is under prescience or predestination; and thus, with the consequent rightly taken, in that consequence both antecedent and consequent are true.

There is a second solution of St. Thomas, which he applies to the second argument in this article, where he says that the antecedent "God knew, or foretold, that Peter would sin" is something absolutely necessary; but the consequent, "Peter will sin," is of the future, inasmuch as it is subject to the knowledge or predestination of God which is contained in the antecedent. This solution is defended by Cajetan and Thomas of Argentina; and they explain it thus: because in the antecedent a verb is set down which signifies some act of soul - of will, or of thought - the consequent is not to be taken according to the being which the thing has in reality, but according to that which it has in the soul; and thus they are in a certain way diverse.

That free choice has remained entirely intact they who were cited at the beginning of the chapter prove at great length from Scripture, Councils, and the Fathers; to them I gladly refer the reader. For us, it is enough to have the definition of the Council of Trent, session 6, canons 4 and 6, where the Fathers declare that in us, even after sin, free will (*liberum arbitrium*) has truly remained; and therefore that we so cooperate in our justification, that we can dissent, and that it is in our power to make our ways evil; the same liberty is asserted in the same session, chapter 5. Therefore it is not only of faith that our free choice is not at work by absolute necessity, but also that we are not driven to act by a fatal necessity as by fate, so that its liberty be harmed, and it truly not be in its power to incline to one or another part. Wherefore Thomas Waldensis, tome 1, article 1, question 28, and the preceding, said that it is not only an error to concede an absolute necessity in the works of free choice, but also to concede a relative necessity which takes away the liberty of free choice; he called "relative" that which would arise from some extrinsic antecedent cause; but "absolute," that which would be from the native inclination of the will itself. He added besides that our liberty is not harmed by any extrinsic [cause], nor by any supposition; nay, not even if such a supposition be posited: for if by some supposition it were harmed, this would be either by the knowledge of God, or by His will. As to knowledge, we shall show it in this disputation; as to the will, in disputation 99; although there too there will be some future debate with our theologians.[1116]

The first argument of Wyclif against our liberty, to which Catholics variously reply, is of this sort. God foreknew, or foretold, that Peter would sin: therefore Peter will sin. The consequence is good; the antecedent is necessary; therefore the consequent is [necessary], namely, that Peter will sin. But what is necessary is not free, because it cannot not be: therefore it is not free for Peter to sin. Wyclif said this argument was so efficacious that he asserted Armacanus labored for twenty years on its solution and, at length overborne, was constrained to say that Christ could have erred

1116. Thomas Waldensis, tome 1, article 1, question 28, and the preceding.

in that prediction. But if it were true that Armacanus said this, he ought also to have affirmed either that God did not know that future, according to Cicero's opinion recalled in disputation 63, chapter 1, or that God could have been deceived in that matter and in any other [matter] of things future. But Thomas Waldensis vindicates Armacanus from this calumny, since nothing of the sort is found in his writings; and therefore he says it is manifest imposture.[1117]

To this argument Catholics variously respond. Some say that this consequence is not good: God knew, or foretold, that Peter would sin: therefore Peter is going to sin. For the antecedent is always true; but the consequent can be false: for after Peter has sinned, that proposition "Peter will sin" will no longer be true. But this solution has no force. For when we say, "God knew that Peter would sin," we do not understand it for just any time, but for a definite one: thus He knew the future sin of Peter as future to this time, as present to another, and as past to yet another; and so just as in this consequence the antecedent is always true, so also is the consequent.

Let there be a second solution, which St. Thomas applies in this article, where he says that the antecedent, "God knew, or foretold, that Peter would sin," is indeed absolutely necessary; but the consequent, "Peter will sin," is necessary insofar as it is subject to the knowledge, or to the predestination, of God which is in the antecedent. Cajetan and the Thomists commonly defend this solution; and they explain it with the holy Doctor in this way. Whenever in the antecedent there is posited some verb signifying an operation of the soul - of the will, or of thought - the consequent is not to be taken according to the being (*esse*) which the thing itself has in itself, but [according to the being it] has in the soul; and these are entirely different. For example, if it be said: the soul understands something; therefore that thing is without matter - the consequence is good, if in the consequent the thing be taken as it has being in the soul through the intellect. And the sense will be: therefore the thing in the intellect has a mode without matter - that is, to be intelligible without matter is attributed to it by the intellect, namely through a species entirely spiritual.

Therefore, in the consequence of the proposed argument, the consequent "Peter will sin" ought to be understood in this way: Peter, as he is in the sight of God, will sin; and in this manner it is as necessary as the antecedent. For everything which is, when it is, is necessary to be - that is, if once we suppose that [the thing] is in the knowledge of God, it is necessary that it be in it.

With this doctrine premised, they answer the argument thus: the antecedent "God knew that Peter would sin" is indeed absolutely necessary, but the consequent "Peter will sin" is not absolutely necessary; it is [necessary] relative to the antecedent, as has been explained. And when they say that the antecedent is absolutely necessary, they do not understand it so that its opposite is by its nature impossible: for thus it is not necessary that God know that Peter would sin, as we shall show below; and if it were necessary in that way, the consequent ought also to be necessary in the same way. They understand, therefore, that the antecedent is absolutely necessary, that is, without any other additament, because when we say, "God knew this would be," we do not refer to anything other than what the terms signify; but when we say in the consequent, "Therefore this will be," it is not necessary, if we attend only to the words themselves. However, insofar as it is subject

1117. On Wyclif's boast about Armacanus and Thomas Waldensis's reply, see Thomas Waldensis, loc. cit.

to the knowledge of God, which must be understood implicitly in the consequent, it is necessary. Thus also Ferrarensis interprets St. Thomas's mind in Contra gentiles, chapter 67, "But yet it must be noted," and notes how the holy Doctor himself also speaks in that chapter.[1118]

Gregory of Rimini impugns this solution, in I Sentences, distinction 38, question 2, article 3, in the solution of a certain argument. First, because it is in vain conceded that the antecedent "God knew that Peter would sin" is necessary; for it is contingent, and by what reason this is true, we shall say in the following chapter. Second, he argues against that solution because the rule which St. Thomas sets down cannot be true. For whenever someone understands that some thing is such, or of such a nature, or of such a property, and truly so understands, it is true, and he cannot be deceived in his knowledge; it is therefore most rightly inferred that the thing is of such a nature, not only in that person's knowledge, but according to itself. Thus, when someone affirms something about the thing, he enunciates it, not as it is in the intellect, but according to itself: for example, from the fact that God understands that man is truly composed of matter and form, it is rightly inferred that therefore in the thing itself, not only in God's intellect, he is so composed. Moreover, the example which is brought forward does not seem apt. For when the intellect understands some thing which consists of matter, it neither affirms nor understands that it is without matter and (as they say) immaterial; for if it were to assert that, the intellect would be deceived. Rather, from the fact that [the thing] is understood by a spiritual intellect, it follows that that thing has in the intellect itself a spiritual mode, which we can enunciate of the thing only insofar as it is in the intellect. Therefore, since the argument which we made at the beginning against the freedom of choice derives from the fact that God truly knows and enunciates of the thing itself according to itself, it infers that the thing is so: namely, if He enunciates, "It will be," therefore it is future; if He enunciates, "Peter will sin," therefore he is going-to-sin. The consequent, then, must be inferred not only with that additament which Thomists were saying - namely, "as it is in the knowledge of God" - but also without it absolutely and according to itself. Third, if that consequent were only inferred with that additament "as it is subject to God's knowledge," it would be a useless consequence and a trifling repetition. For it is the same to draw the inference thus: "God knows that Peter will sin; therefore Peter will sin - and in God's knowledge." But to say "Therefore Peter will sin - in God's knowledge" is entirely the same as the antecedent. Therefore, lest we say that this repetition is being made, it must be said that the consequent is inferred absolutely without any additament, as the thing is in itself future. Pressed by these reasons, some Thomists admit that that rule does not always obtain; and certainly in the proposed difficulty it seems, by the foregoing reasons, to have no place. And if the future thing itself, insofar as it is future according to itself, is inferred in the consequent, the force of the argument still remains: for if the antecedent is necessary, the consequent too ought to be so in the same way.

Cajetan, in this article 13, "As to the second," so that he may defend the rule which the holy Doctor assigned, asserts that it is to be understood formally - that is, when the consequent follows by force of the antecedent insofar as the antecedent signifies an operation of the soul. Now the

1118. See Ferrarensis, Contra gentiles, cap. 67, "Sed tamen advertendum."

proof is that these operations are immanent; therefore they posit nothing in the thing itself about which they are conversant; therefore that which befalls things from these operations does not befall them absolutely, but insofar as they are subjected to those operations.[1119]

True it is, but insufficient. For even if this doctrine of Cajetan is true, it can in no way be accommodated to the solution of the proposed argument. The reason is that it only proves that we cannot absolutely affirm of things something which befalls them solely through the operation of the soul; and so that it may be distinguished what are the things that differ only by reason from the soul's operation - namely, that some nature is universal, and the like. But this little bears on solving the proposed argument. For when Wyclif argues in this way: "God knows that Peter will sin; therefore Peter will sin," he does not infer that sin befits Peter only by the intellect, but he infers that Peter will sin in reality; which indeed most fittingly follows by the force of that consequence. Therefore in the consequent "Peter will sin" there is no need to add what Thomists maintain, namely, "as he is in the intellect of God."

Caput III - Two other solutions to the same argument

There are besides two other solutions of the same sort of scholastics, not without some renown, and even always in the schools employed; which, in my judgment, do not fully satisfy Wyclif's argument. Therefore it pleased me to recount and to impugn them, so that from there we may gather a much easier and truer reply.

First solution. Some answer that the antecedent of that consequence is indeed necessary, and the consequent similarly; but the consequent is necessary only with a necessity of consequence, not with a necessity of the consequent; as in this inference: If he runs, he is moving. The consequent "he is moving" is indeed necessary, but with a necessity only of consequence, because it is necessarily inferred under that antecedent; yet of itself - that is, from the terms - it is not necessary; which is to be necessary with a necessity of the consequent. Thus they reply to the argument.[1120]

Objection against that opinion. But this solution, unless it be explained further, is weak. For someone can very well object that in that example adduced the consequent "he is moving" is necessary by a necessity only of consequence, because it is necessarily inferred under the condition of that antecedent "if he runs"; but just as the antecedent "if he runs" is contingent, and in no way necessary, so also the consequent, if it be considered from the terms, is not necessary, although it follows necessarily under the condition from that antecedent. But in the argument at hand, not only does the consequent follow necessarily from the antecedent, but since the antecedent is necessary and cannot be changed - namely, "God knew that Peter would sin" - it follows that the consequent "Peter will sin" is also necessary in itself, and not only necessarily inferred from the antecedent.

1119. Cajetan, on this article 13, "Quod ad secundum."

1120. Albert the Great, In I Sent., dist. 38, art. 4, ad 1; St. Bonaventure, In I Sent., dist. 38, art. 2, q. 1, in the solution of the arguments; Richard [of Middleton], question last, ad 2; Aegidius, question last, ad 2; Scotus, In I Sent., q. 1, 5, Ad primum pro tertia.

Response of St. Thomas to the objection. But if you reply with St. Thomas in this article, in solution 3, that the consequent is necessary from a supposition - that God has known - and (as they say in the schools) in the composite sense, yet not absolutely and of itself, not with God's knowledge not supposed, which they call the divided sense: this solution too does not please me. For we who defend, according to the Catholic faith, the liberty of free choice must assert it not only absolutely and from the nature of the will, but also that by no extrinsic cause posited is it taken away, so that liberty, which the will has from its nature, cannot be removed by God's knowledge or by His will as some extrinsic cause - something which, with those, cannot rightly be saved in the composite sense. Therefore it remains that we explain how, with the necessity which follows from the supposition of God's knowledge, the consequent is still in the free power of the will, and from that liberty nothing is harmed or diminished.

Second solution. Then others reply that in that consequence, "God knows that Peter will sin; therefore Peter will sin," the antecedent is not necessary but contingent. For God could not know that, if He had decreed to prevent Peter in such a way that he would not sin - which indeed He was most able to do. Therefore, if the antecedent is contingent, it does not follow that the consequent must be necessary. Thus do they solve the proposed argument.[1121]

reply to the argument

But it is contingent; nevertheless, if it is not in anyone's power to remove the antecedent, it is not free to him to prevent the consequent: wherefore it is necessary for him to be moved and to be heated, such that no liberty remains for the opposite.

Example of bodily vision does not remove the difficulty. If, furthermore, someone were to say that from vision no necessity can arise for the thing seen itself - for what a man sees, namely another walking, can in no way compel that man; although it follows well, He sees me walking, therefore I walk, and the antecedent is necessary by the necessity by which a thing, when it is, is said to be necessarily, and the consequent in the same way - still the difficulty does not seem to be satisfied. For if there be question of bodily vision, another so sees me walking that it is in my power to prevent his vision; for, that he may see me, he waits for me to walk. But God so knew from eternity that I would sin, that it is not now free to me either to change or to hinder His knowledge; for He does not wait, but by His knowledge anticipates my will.

But some Thomists say with Ferrarensis, in the place cited above, that this proposition, God knows, is indeed contingent, if it is considered in its terms; but necessary only with the necessity of immutability, namely because the knowledge of God about a true thing cannot be rendered fallible. [1122] To this, however, Cajetan replies, and proves, that the proposition is necessary not only in this way; but also, if the words are of the past tense, it is so necessary that the opposite is impossible, just as the past is necessarily past, so that now by no power could it not have been, nor does it any longer lie in anyone's power; and this seems enough, that the consequent also for the same reason be necessary, and in no way in our power.[1123] Nay rather, even if we say the antecedent with a verb

1121. St. Bonaventure, In I Sent., dist. 38, art. 2, q. 2, in corpore; Albert the Great, loc. cit., art. 4, ad 3; Richard [of Middleton], q. 6, ad 7; Scotus, In I Sent., q. 1, "Ad argumenta 5 quaestionis"; Ockham, q. 1.

1122. Ferrarensis, Contra gentiles, cap. 67, "Sed tamen advertendum." The same solution is related by various Thomists.

of the present tense to be necessary in that way in which whatever is, when it is, it is necessary to be, it seems enough that the consequent for no reason be left now free to us. For the present also is necessarily present, when it is, so that it is no longer in our liberty, as we shall show in the following chapter. Finally, even if that antecedent, God knew that Peter would sin, be only necessary with that necessity of immutability, as Ferrarensis teaches, it follows in the same way that the consequent is no longer in our free choice, as in the subsequent argument of Wyclif we shall object. Therefore, in order that the difficulty of this argument be entirely removed, it is necessary to respond in another way.

I pass over many things which St. Augustine adduces in On free choice of the will, book 3, chapter 4, to resolve the difficulty proposed; for in my judgment they do not satisfy.[1124]

Caput IV - The true solution of Wyclif's argument

The whole difficulty of the proposed argument, and of like ones that can be made, may be explained, and the liberty of our free choice (*liberum arbitrium*) be clearly defended, if certain points, worthy of note, be premised, which will serve not only the present disputation but also many others which we shall treat concerning predestination.

First note a certain doctrine of Anselm, in On the Harmony of Foreknowledge and Predestination, chapter 1, of which Albert mentions; Richard in the same place, question last; Alexander; Holcot; and Thomas Waldensis; Boethius too has indicated it briefly, On Consolation, book 5, prose 4, as we shall report in the next chapter.[1125] Anselm says that there is a twofold necessity by which a thing is said to be, or to be going to be, necessarily: one is antecedent, or preceding; the other is subsequent, or consequent. The preceding necessity arises from a cause which precedes the effect, and makes it to be necessarily. With this necessity, says Anselm, the sun will rise tomorrow; because the cause moves to that effect necessarily. He subjoins that, when we speak of this necessity, thus we ought to speak: "The thing will be, because it must be that it will be"; that is, because the cause cannot do otherwise. But the following, or consequent, necessity is not posited on the part of the cause, nor does it make the thing to be or to be going to be; but it follows upon the thing itself, and upon the effect which we say to be necessary. When Anselm says that this necessity "follows the thing itself," he does not think that it arises from it as an effect from a cause, but only that by a most apt consequence it is inferred from the very position of the thing; and for that reason it could also be called accompanying, because it leaves aside the thing itself of which it is said, and does not precede. In this way we say: what is, when it is, is necessary to be; and the past is necessarily past; and the future is necessarily going to be. For, as Anselm has acutely noted, by this mode of speaking we signify only that it is impossible for a thing to have been and

1123. Cajetan, on this article 13, at "Quod ad secundum," where he argues that past-tense propositions of divine knowing are necessary as the past is necessary.

1124. St. Augustine, De libero arbitrio, III, c. 4.

1125. St. Anselm, De concordia praescientiae et praedestinationis et gratiae, c. 1; Albert the Great, In I Sent., dist. 38, art. 4; Richard of Middleton, ibid., q. last; Alexander of Hales, Summa, P. q. 24, m. 5; Holcot, In II Sent., q. 3, art. 9, toward the end; Thomas Waldensis, Doctrinale antiquitatum fidei, tome 1, book 1, caps. 25 and 28; Boethius, De consolatione, V, prose 4.

not to have been at the same time; and in this sense it must be said that the past is necessarily past. By the same reason it is impossible that something be and not be at the same time; and thus we say that what is, when it is, is necessary to be; and it is impossible that something be going to be and not be going to be at the same time; and so a future thing is said necessarily to be going to be. This doctrine Augustine has delivered briefly, Contra Faustum, book 26, at the end, where he says: "Just as the things future cannot fail to occur, so those which are past could not have failed to have occurred"; and he subjoins the reason: "Because it is not in God's will that there stand anything false that is true." The same was afterwards said by Anselm in these words: "God cannot make it to be that at once what is going to be should not be going to be." For it would follow, as Augustine said in the same place, that something be true by which it is false: for it would be said truly, when it would be said to be going to be, because it would be going to be; and the same would be said falsely, if it were said to be going to be, because it would not be going to be; therefore the same would be true and false. But by this necessity Anselm nowhere says that the sedition in the people is future tomorrow; which example Aristotle adduces in De Interpretatione, book 1, chapter 8, about the naval battle; against which, in my judgment, Anselm in that place proves, from the truth of propositions about the future, that some necessity follows which does not take away liberty - a point which Aristotle did not attain, as we shall see below.[1126] And with both necessities, the preceding and the following, Anselm says that the rising of the sun on the morrow is future: namely, by reason of the cause; and, since it is going to be future, it cannot at once not be going to be future. Hence he collects that these are diverse: a thing's being future - which is necessary; and a thing's being going to be - which is contingent and free, just as it is one thing for wood that is white to be white, and another thing for wood to be white; of which the former is necessary, the latter contingent.

Second, another doctrine of Anselm is to be noted, which Thomas Waldensis often repeats and explains, and which can be wondrously accommodated to our purpose; namely, that that preceding necessity clashes utterly with liberty. For, since this necessity comes from a preceding cause, which inclines in such wise to one part that it cannot to the other, by force of it it is thus necessary that such an effect arise that the opposite cannot be done freely. For liberty is also considered on the part of the cause, with indifference to acting; and this cannot stand with that necessity of the cause. But the consequent necessity, as the same teach, does not clash with liberty, but leaves it altogether unharmed; nay rather, it supposes it. For this necessity is after every effect and the determination of a free cause, and only in this, that what is future cannot at once not be future, and the present cannot not be present, and similarly the past. For when we suppose a thing to be past, or present, or future, we do not suppose that it was, or is, or will be, from any other cause than from a free cause, without any preceding necessity impelling to this. Therefore our liberty is preserved entire, together with the indifference of our will, by which it could have the opposite; we suppose that, in

1126. Aristotle, De interpretatione, I, c. 8 (on the "naval battle"); St. Anselm, De concordia, c. 1; cf. Thomas Waldensis, locc. citt.

fact, it was so, or will be so; which being posited, we then infer that necessity which, since it is later, or at least accompanies the effect placed in reality and is together with it, will necessarily be after the free determination, nor can it in any way harm liberty itself.

Third, let the difference be observed which Anselm continually notes there between the past, on the one hand, and the future, on the other. For the past, not only no longer remains now in potency, or liberty, so that at once the past should not be past; but it further stands thus, that the thing which is past is not present. But with respect to the present and the future, potency and liberty are certainly otherwise disposed. For although there is no potency whereby at once the present not be present, or the future at once not be future, nevertheless there is in our power that the thing which is present not be present, and the thing which is future not be future. Of this Anselm renders reasons which are quite easy. For if something is said to be present, that is because an operation is still to be done, which the agent is free either to do or not to do; and if it be not reduced to act, while the underlying cause remains such as it is, it inclines its operation where it will: therefore, because what you are doing is in operation, it is present; but what has been done is past, and no longer in any way remains dependent upon the same agent; hence it cannot be reduced by him to not having been. But that which, as present, still depends by its operation upon that agent, can, according to his will, cease; and thus it can still, by the same power, not be present; and much more that which is future - since it is something to be done by some agent - still remains dependent upon the power of that agent, so that afterwards it be not brought about; nor has that agent yet done anything of it.

Lastly, it must be premised - what in chapter 6 will be more fully proved by the doctrine of the Fathers and by reason - that the knowledge of vision by which future things are known is not the cause of the things which come after; but, according to our manner of understanding, and as it were by nature, it is posterior. For by the fact that a thing is future, it is known by God; not that by the fact that it is known, it is future. Wherefore, as Anselm well observed in the same chapter, in this manner of speaking, "God knows the sin of His Apostle," which is similar to "God knows that Peter will sin," even if "future" be not added, includes and supposes the future. For since foreknowledge is of future things only, by that very fact that God is said to foreknow something, we suppose that it is going to be. Whatever, therefore, is going to be, follows with this necessity, that, in like manner, it be foreknown to be going to be.

Now the argument of Wyclif is answered. The argument was: God knows that Peter will sin; therefore Peter will sin. The antecedent is necessary; therefore the consequent also. I say: that antecedent, "God knows that Peter will sin," is not necessary of itself and taken of itself and considered in its terms; but only by supposition, that God knows; that is, not by a preceding necessity, but by a following necessity - like that by which what is, when it is, is said to be necessary. The first part rests upon our liberty, as was said above; and the second, that the consequent, "therefore Peter will sin," is necessary by a following necessity, which follows from the very position of the antecedent - has been explained just now. And thus the force of the argument does not in the least prejudice our liberty, as was expounded above and as is defended by Alexander, Albert, Richard, and Thomas Waldensis in the places by us cited.[1127]

This is what is immutable and most certain, which cannot be deceived; and if from it one should wish to infer that the future which God knows is necessarily future in whatever kind of necessity, it must be answered almost in the same way; but this will be treated by us in the following chapter.

Objicitur: Nevertheless someone could press further in this way. Granted that antecedent "God knows," or, "God knew," imposes only that necessity by which, whatever is, when it is, must be, this nevertheless seems sufficient for the consequent in no way to remain in our power. For we said in the third notation that the present and the past, inasmuch as they are outside their causes, necessarily are, so that not only the past cannot not be past, and the present cannot not be present; but also the thing that is past, or the present thing, can no longer not be present or past; and thus it no longer remains in anyone's free power. Therefore, if God has already foreknown, or foreknows, that Peter will sin, it will not be in His power, nor yet in Peter's liberty, for it not to be foreknown. Therefore in the same way the consequent, "Peter will sin," will be necessary indeed with a consequent necessity, yet in such a way that it no longer remains in his power; for if it remains, the antecedent also must remain.

Respondetur: I answer that antecedent "God has foreknown," or, "God foreknows, that Peter will sin," is indeed necessary with a consequent necessity (necessitas sequentis), of the sort we say that whatever is, when it is, must be; but since the foreknowledge of God, in a certain order, presupposes that Peter will sin, and presupposes the thing which it foreknows to be future; for which reason it is said to be foreknowledge with respect only to a future thing; and, universally, every vision-knowledge supposes its own object; it must be said that in the same way it is not in Peter's free choice not to sin, just as it is not in God not to foreknow his sin. For when we say that it is not in Peter's power that God not foreknow his sin, this is only true on the supposition that the sin be future. For he who says that God foreknows Peter's sin supposes that sin to be future, as St. Anselm noted. But once it is supposed that there will be sin, it is not in his power not to sin; because a future, as it is future, is necessarily future; and thus, the supposition being made that God knows something, the opposite cannot occur or be brought about; because the future is

1127. Alexander of Hales, Albert the Great, Richard of Middleton, Thomas Waldensis, as cited in the preceding notes.

already supposed; but if we say that the opposite will in fact come to pass, then the supposition of the knowledge of God is taken away. This, however, does not take away our liberty, because it only brings in that consequent necessity expounded above.

If, moreover, the foreknowledge of God did not presuppose a future sin, and, that posited, the sin would necessarily be inferred, it would plainly follow that the future sin would no longer be under anyone's liberty, just as neither would the knowledge of God. For the knowledge of God would not be in Peter's power, because he could do nothing about that which is eternal, if the future object were not presupposed; nor would it be in God's own power, because whatever is, when it is, is so necessarily that it no longer remains under the working agent's arbitrium, unless it be only that it should not continue further, as was observed in the third notation. And since God cannot be changed from that which He has once begun, nor is it within His power not to continue His knowledge, it would no longer be free for Him not to know that Peter's sin is future; therefore, in consequence, neither would the sin in any way remain in anyone's liberty. But because the foreknowledge of God, as we were saying, presupposes the future thing, even if from foreknowledge it follows that the thing is necessarily future, nevertheless from that no necessity from a created cause arises so as to operate upon the future; since the foreknowledge of God does not forestall the order of a free cause, but in a way follows it, as we said in chapter 6. Therefore only that consequent necessity follows, by which a future, for this very reason, is necessarily future: because, if it is foreknown, "future" already presupposes "future."

Rightly therefore does Bede in the 8th tome, book of Questions, question 13, say: "What then compelled God, that we should appear evil to Him from eternity? Far be it: rather we compelled Him, that He should see us as such"; and he adduces the example which also Boethius uses in De consolatione, prose 6, with these words: "If I see someone lying down, a necessity is not inferred from my seeing for him to lie, but rather a necessity is inferred for me to see; yet this compulsion is not violent, which is said to be against the impulse of the mind; but a certain necessity which accompanies an eternal future."[11281129]

For from the fact itself that a thing is future, it necessarily follows that God foreknow it, that is, that the essence of God be referred to it; not, however, conversely, that from God's foreknowing it the thing be said to be future. Whence St. Augustine in book 3 On Free Choice, chapter 4, from this shows that God's foreknowledge does not take away our liberty, because neither would it be taken away by created foreknowledge: he thinks the account of either foreknowledge to be alike, so that neither can take away our liberty. Whichever way then, nothing else is gathered from what has been said than this, that antecedent "God foreknows that Peter will sin" is necessary with a consequent necessity, which, in a certain order, presupposes a future sin; and hence the consequent "Peter will sin" follows with the same necessity by which Peter is said to be about to sin: in which way neither is in Peter's power; yet it is in his freedom, if he will, to sin or not to sin: but how even the knowledge of God is said to be in his liberty, we shall explain in chapter 6.

1128. Bede, in 8. tom., lib. Quaestionum, q. 13.
1129. Boethius, De consolatione, V, prose 6.

Caput V - The subsequent argument of Wycliffe against the same liberty

To assail also our liberty, Wycliffe, and other heretics, uses the argument adduced to article 13 in St. Thomas, which is of this sort. The foreknowledge of God is most certain, and cannot be deceived: therefore its object cannot turn out otherwise than He has foreknown; for if it should turn out otherwise, His foreknowledge would be deceived: but God foreknows that Peter will sin: therefore Peter will not be able not to sin.

Reply of St. Thomas: In solution 3 he answers that all future things which God knows, referred indeed to the foreknowledge of God, are necessary; considered, however, from their own causes, some of them are free and contingent. Wherefore he asserts that this proposition, "What is foreknown by God is necessary," can be taken in a twofold way; first, of the thing, then of the dictum; or, as is wont to be said in the Schools, in the divided sense and in the composite sense. Taken of the thing and in the divided sense it is false; and in such a sense it means, "Everything which God foreknows is necessary." But taken of the dictum and in the composite sense it is true; and the sense is of this sort: "This whole dictum, 'that it is known by God,' is necessary." Boethius seems to have handed down this doctrine in De consolatione, prose 6, where he replies to the same argument with these words, "The same future, when it is referred to the divine knowing, is necessary; but when its own nature is considered, it appears altogether free and unconditioned."

Lest, however, we seem, on account of this composite sense and from the supposition of the knowledge of God, to impose such a necessity upon our will that at least extrinsically it be injured, and so that we by no means should concede to Melanchthon and the other heretics mentioned in chapter 1; for this reason it is necessary to untie this matter more fully. I answer, therefore, that, in order that the foreknowledge of God cannot be deceived, it is enough that the future object be necessary with a consequent necessity; nor is it required that it be necessary with an antecedent necessity. But the consequent necessity, as was said in the preceding chapter, does not harm liberty; rather, it supposes liberty itself as full and perfect. Therefore, with this necessity it is necessary that everything foreknown by God be future. For when it is said "foreknown," as St. Anselm well noted, the "future" is already presupposed, even if it be not expressed; but that the future be future is necessary, with that consequent necessity by which whatever is must be; with the same necessity, therefore, and not with another, it is necessary that whatever is foreknown by God be future. Thus answers St. Anselm in the work cited, chapter 10; and Vivaldus, and others noted above, allege the same.[1130] And in this way it can be said, in the composite sense, that what is foreknown is necessarily future; so that the composition in such a sense signifies no other necessity than the consequent one, which is on the part of the consequent, not on the part of the cause: but this by no means clashes with the liberty of the will, from which the thing is future. Since, therefore, the foreknowledge of God, as we shall see below, is not the cause of the future thing, but rather, in a certain order, as an object, presupposes the future thing; it follows that the necessity by which the foreknown thing is said to be future is not antecedent from a cause, but consequent to the thing itself, namely from this, that, in order to be foreknown by God, it is already presupposed

1130. St. Anselm, op. cit., cap. 10; Vivaldus; and others noted above.

from full liberty itself to be future. But that the foreknowledge of God should antecede the thing itself in time matters little for imposing an antecedent necessity: for to this there was also need that it be prior in the order of causality. Since, therefore, it is posterior in order, as we shall show in the next chapter, it can infer no antecedent necessity; rather, the necessity of the foreknowledge of God precedes the thing in duration, but posits the thing as present: for just as much from eternity is the thing future as is the foreknowledge of God. Therefore, if the thing is future, as it is future, foreknowledge neither precedes it in the order of causality nor in duration; whence our will can contract no necessity opposed to liberty.

But they see that the foreknowledge of God is much more ancient than the thing itself as present, and so it seems to them that it is not in their power to change that ancient foreknowledge of God. Yet, as I said, duration of time and priority of sequence do not at all hinder the thing foreknown from remaining wholly under the liberty of free choice; indeed, even the very foreknowledge of God is in a certain manner also reckoned as being under it, as will be explained in the next chapter.

This solution too I think I gather from Boethius, book 5 of the Consolation, prose 4: for he proposes in just the way we have framed it the same argument, namely: "Foreknowledge, although it is not a cause imposing necessity for future things to come to pass, is nevertheless a sign that they will necessarily come to pass." That is: although foreknowledge is not the cause of future things, it is nevertheless a sign and a certain cognition thereof, which can in no way be deceived; therefore neither can the thing come to pass otherwise. He replies to this with these words: "In this manner, even if the prior cognition had not been, the necessary outcomes of future things would still be clear: for every sign only points out what is, but does not effect what it designates." As if he were to say: if it follows merely from this, that God foreknew, that all outcomes are necessary, then even if there were no foreknowledge, they would nonetheless be necessary. For the knowledge of God is not the cause that outcomes be; rather it is only a sign showing what they are; but this cannot impose necessity upon a cause that it operate. Wherefore all things which, foreknowledge standing, operate of necessity, would operate of necessity even without it; for knowledge only indicates outcomes from their causes and in no way moves to them. Since, therefore, many effects from their proper causes are contingent and free (as even certain heretics concede), it is manifest that, with the foreknowledge of God existing, it follows that they nonetheless remain free and contingent. Boethius indeed supposes that contingent outcomes are, of themselves, prior to foreknowledge, and thus cannot from it contract any antecedent necessity, although it is rightly inferred that from foreknowledge there follows a consequent necessity, as has been explained.

Objection: But someone will press further: if a future thing remains wholly free and in the power of the agent, so that it can fail to be future, how then can the knowledge of God concerning it be certain and infallible, and not uncertain and fallible?

Note on infallibility and certainty: I answer from the doctrine of Capreolus, on I Sent., dist. 40, q. 1, art. 3, reply to the first against the second conclusion: knowledge can indeed be called either certain or uncertain, fallible or infallible. Infallible is said of that knowledge which cannot understand other than what is, and so cannot be deceived - so that, if it understands that a thing

will be, it cannot at the same time not be. And in the same way it is called certain because it always attains the truth itself. By contrast, uncertain and fallible is said of that knowledge which can sometimes understand the true as false and so be deceived. But the thing itself or the event is ineptly said to be uncertain or certain, fallible or infallible, because the thing itself is not capable of deception; rather the event is said to be necessary or free and contingent; in common parlance it is also called avoidable or unavoidable - inasmuch as it so happens indifferently that it can fail to happen, or it is so determined that it cannot fail to happen.

This supposed, which pertains to a way of speaking and to its propriety, I say to the argument that it is possible at once that the foreknowledge of God be infallible and certain about some future thing, and yet that that thing be going to be freely and avoidably - if we speak of the antecedent necessity or unavoidability which is only on the part of the cause. For if the discourse be of the consequent necessity, then of necessity and unavoidably that foreknown thing will be future. But in order that the knowledge of God be certain, it is enough that the knowledge itself by its infinity always be referred to that which truly will be, even if that will be freely. For since the knowledge of God in a certain way awaits the thing itself - whether it will be future or not - because in a certain order the knowledge of God is posterior to the very future thing, and the intellect of God has such power that no truth can lie hidden from it, but always tends to that which is true, and since every future is either determinately future or not future, it follows that God cannot be deceived or fail in his knowledge. For although the object can turn out otherwise, he, however, by the infinity of his intellect always attends to that to which in fact that cause will incline at the last, and what will come forth from it he can never not know - something which will be set forth more exactly in the next chapter. Wherefore we have reduced the certainty of the knowledge of God to the infinity of his intellect, from which no truth can be hidden, as to its proper cause, in Disputation 65, the last chapter. Therefore a future thing is certainly known by God because it will be future, not the other way round.[1131]

On the concord of divine knowledge with our liberty

Caput VI - That the foundation already laid must be strengthened; against the newer opinion that a thing is or will be because known by God, not conversely

That what we have hitherto said about the concord of the knowledge of God with our liberty may stand firm, it is necessary to confirm more amply that foundation which in the last place of chapter 4 we laid down. For there are some more recent theologians who strive to overthrow it, and who in general try to prove that a thing is, or will be, because it is known by God, not the other way round; and they try to persuade by authority and by reason.

It is proved first from St. Augustine, De civitate Dei, cap. 9, at the end, where he thus speaks about created causes: "Therefore whatever they avail, they most certainly avail; and what they themselves are going to do, they are altogether going to do - those whom he foreknew as going to

1131. Boethius, De consolatione, V, prose 4; Capreolus, In I Sent., dist. 40, q. 1, art. 3; cf. Disputatio 65, cap. ult.

avail and to do, whose foreknowledge cannot be deceived"; and in De Trinitate XV, cap. 13: "It must needs be that scandals come." And Damascene: "He knows not because things are, but therefore things are because he knows." The same is had in De Trinitate VI, cap. 10.[1132] To this add St. Gregory, Moralia, book 20, cap. 23, elsewhere 24: "For whatever things are are not therefore seen from eternity because they are, but therefore they are because they are seen."[1133]

Among the Scholastics too this sentence seems to find supporters: first St. Thomas in this question, art. 8, ad 1, where, replying to the testimony of Origen - by which he seems to assert that the future is a cause of the knowledge which God has of it - he says that this is to be understood according to a cause of consequence only; for rightly it is inferred from the fact that something is future that it is known by God, not in any other way. Thus indeed a cause can rightly be gathered from the effect; therefore it is no wonder if the knowledge of God be inferred from the fact that the thing will be future, even if knowledge be the cause of the future thing.[1134] Next Albertus, on I Sent., dist. 38, art. 3, Bonaventure, q. 1 and 2, and Gregory, q. 2, art. 3, in replying to a certain argument somewhat before the end of the article, teach that the knowledge of God is a cause so that things be future, whereas future things are not causes of the divine knowledge - according (as they say) to the mode of being - but that they are mutually causes for inferring, that is, that from the one the other is well inferred; for example: God knows that Peter will sin; therefore Peter will sin; and conversely - wherein they seem plainly to agree with St. Thomas.[1135]

By reason the same is proved. For if not only from the fact that something is future it would be inferred that it is foreknown by God, but also because it is future, therefore it is foreknown by God, we should have to concede that what is temporal is a cause of the eternal: for a future thing is bounded by time, but the knowledge of God is eternal; nay more, that what is created is a cause of the uncreated: for the knowledge of God is uncreated, but the future thing is created.

Yet, if the common doctrine of the Fathers and sound reason were well weighed, this matter would be outside controversy, if one's mind were intent rather on searching out the truth than on contention. For there are, first of all, indeed splendid testimonies of the Fathers, by which we are taught that certain things are therefore foreknown by God because they will be future, not the other way round (whether, however, on that account a future thing is to be called in some way a cause of the knowledge of God we shall explain in the next chapter). Thus expressly they hand down from the Greeks: Origen on that text Romans 8, "Whom he predestined"; Justin in the book of Questions addressed to the Christians, q. 58; St. John Chrysostom, homily 60 on Matthew, explaining that of Luke 17, "It must needs be that scandals come"; St. John Damascene, Against the Manichees, not far from the end; St. Cyril, book 9 on John, cap. 10, near the end. From the Latins: St. Jerome on Ezekiel 2, "Thus shalt thou say to them," and on Jeremiah 26, "Do not withhold the word"; Boethius, De consolatione, V, prose 3; Bede, tome 8; to which add Augustine, De civitate Dei, cap. 10, near the end, who, although he says only about sin that it is therefore foreknown by God

because it is going to be, not conversely, would hardly have thought otherwise about every future thing - namely, that it is therefore foreknown by God because it will be, not that it will be because it has been foreknown.[1136]

Moreover, we are not satisfied by the testimonies adduced, if with St. Thomas we say that the Fathers spoke only of a cause of consequence; this is manifest: for, as the logicians say, it is one thing that the one follow from the other by an illative or conditional consequence, and another to be inferred by a causal consequence. By an illative and only conditional consequence "future sin" and "the knowledge of God" are reciprocals, because they cohere with one another; hence it follows well: God knows future sin; therefore sin will be; and conversely. Likewise: God knows future sin; that will be; therefore conversely. But by a causal consequence in that manner it certainly cannot be inferred that sin is the cause of knowledge; for who would dare to say: therefore sin will be because God foreknows? And the Fathers cited - Augustine, Bede, and Chrysostom especially, who speak expressly of sin - openly deny this; the others in the same way about whatever future things of the world. And just as the Fathers deny that sin or any thing whatever is therefore going to be because it is foreknown by God, so they assert that it is therefore foreknown because it will be. If, therefore, we take away the causal force from the particle "because" in their mode of speaking, we shall overturn the very meaning which they clearly intend to convey. Wherefore, if the particle "because" signified mere illative consequence, both parties ought to concede it, just as they grant the particle "therefore" or the particle "if." Since, then, the one denies and the other grants it, as we have seen, it follows that the particle "because" is taken in its proper signification and in the mode of a cause which in a certain sense denotes priority; and thus the matter is explained.

Furthermore, among the remaining Fathers, Justin expressly affirms in these words that a thing is future before it is foreknown by God, nay more, that it is the cause of foreknowledge; for thus he says: "The foreseeing is not the cause of that which is future, but that which is future is the cause of the foreseeing." By which words he most expressly affirms that the future is the cause of the foreknowledge; and that it is first future he no less clearly subjoins at once: "For we do not follow the pre-knowledge of what will be, but the pre-knowledge follows what will be." Origen and Jerome, in the places cited, have what is quite like this. It is plain there that they deny in like manner what others affirm; therefore, if the future is not posterior in the order of cause to the pre-knowledge itself, in the same way it ought to be prior to the pre-knowledge: for if the discourse were only of the inference of consequence, pre-knowledge and the future would follow mutually upon one another.[1137]

By reason the same is proved. For it can be fairly proposed to reason that what is known is on that account not what is made, but what is known - at least in the way in which it is known precisely as true in itself. Thus Augustine asserts in De Genesi ad litteram, book 4, cap. 32: "Nor, indeed, can knowledge be the cause of the thing to be known except as it presupposes the thing

1136. Origen, on Romans 8:30; Pseudo-Justin, Quaestiones ad Orthodoxos, q. 58; St. John Chrysostom, Hom. 60 on Matthew, explaining Luke 17:1; St. John Damascene, Contra Manichaeos, near the end; St. Cyril of Alexandria, In Ioan., lib. 9, cap. 10; St. Jerome, on Ezekiel 2 and Jeremiah 26; Boethius, De consolatione, V, prose 3; Bede, tom. 8; St. Augustine, De civitate Dei, V, c. 10 (prope finem).

1137. Pseudo-Justin, Quaestiones ad Orthodoxos, q. 58; Origen and Jerome locis citatis.

itself to be known." Therefore, when we are speaking about the knowledge of vision in God - which is only speculative cognition - the truth that is in the intellect is said to be true because it understands that which is, as it is; and accordingly, when we speak of the divine knowledge of vision concerning future things, the knowledge is set and determined by the thing itself as it will be. Wherefore concerning the knowledge of vision it must be said that it is a sign of the future, but does not make what it signifies; as we alleged above out of Boethius, De consolatione, prose 4. And thus the dictum is made good, that God foreknows a thing because it will be future, not conversely.

But, they will say, the known is prior to the knowledge that knows. I grant this of an object as it stands to cognition when we speak of speculative knowledge; however, if we speak of practical knowledge, which is of the work that is to be done, then the thing known - as an effect - does not precede but rather follows. Thus future things are related to the practical knowledge of God, which certain Scholastics call the knowledge of approbation; for with respect to those things which God decrees by his will to be, they depend upon his will as upon a cause, and, in a certain manner, upon his practical knowledge which dictates and determines what is to be done. But of the knowledge of vision, which presupposes the thing as it will be, whether by the created cause or by the divine will, it is true to say that the future, as future, is not posterior to the vision but rather precedes it in the order of the thing known; and thus it is rightly said that it is foreknown because it will be, not that it will be because it is foreknown.

Therefore Alexander of Hales, Albert, Bonaventure, and Gregory, in the places cited in this chapter, bear witness in this matter.[1138]

They reciprocate only in an illative and merely conditional way: future sin and the knowledge of God cohere mutually; wherefore it follows well, "God knows the future sin; therefore the sin will be," and conversely; likewise, "if God knows the future sin, it will occur," and conversely. But by a causal consequence in this mode one cannot infer sin from knowledge: for no one would dare to say, "therefore there will be a future sin, because God has foreknown it." And the Fathers cited - especially St. Augustine, Bede, and St. John Chrysostom - who speak expressly of sin, deny that a sin is therefore future, or any thing else, because it is foreknown by God; but immediately they assert that it is therefore foreknown, because it is future. They also employ the causal particle "because" in that very sense; otherwise, they would be speaking in an inordinate fashion. Wherefore, if the particle "because" were merely the mark of an illative consequence, they ought to grant both, just as if they were using the particle "therefore," or the particle "if." Since, then, they deny one and concede the other, as we have seen, it follows that the particle "because" is taken in its proper signification, and denotes a manner of cause and, in a way, of priority, as will soon be explained.

Moreover, among the rest of the Fathers, Justin expressly affirms in set words that a thing is first future before it is foreknown by God - indeed, that it is the cause of foreknowledge; thus he says: "Nor is the fore-notion the cause of that which is to be, but that which is to be is the cause of the fore-notion." By which words he plainly affirms that the future is the cause of foreknowledge;

1138. Alexander of Hales; Albert the Great; St. Bonaventure; Gregory (of Rimini), locis ad hunc caput pertinentibus.

and that it is first future he no less clearly subjoins at once: "For it is not that what is to be follows upon the fore-notion; but the fore-notion follows upon what is to be." Origen and St. Jerome have similar statements in the cited places, where it is clear that they deny one thing by the same reason by which they affirm another; and therefore, if the future is not posterior, in the order of cause, to the very fore-notion, by the same token it ought to be prior to the fore-notion. For if the discourse were only about illative consequence, fore-notion and the future would mutually follow one another.[1139]

It is proved by reason: for every knowledge supposes its own object which it knows - not that which it makes, but that which it knows - at least under that aspect under which, as the truth itself, it is known. Thus St. Augustine establishes it, On the Literal Meaning of Genesis IV, c. 32: "For cognition cannot come to be unless what is to be known precede." Although he is speaking of created cognition, he would say the same of the divine, inasmuch as it is speculative: for every intellect in one and the same way is called true, because it understands that something is what is, or that something is not what is not. Therefore the knowledge which God has of possible things supposes those very possibles, as we shall show more fully below in disputation 104; yet it does not make them be possible. By the same reasoning, of the knowledge of vision it must be said that it does not make its object, but supposes it; now future things are the object of the knowledge of vision: therefore they are not future because they are seen; rather, they are seen because they are future. Boethius has expressly taught this in De consolatione, book 5, prose 4 (which we adduced in the preceding chapter), when he says that the foreknowledge of God is a sign of the thing future, but does not effect that which it signifies.[1140]

I said, moreover, that whatever object is known is prior to the knowledge by which it ought to be known. For if we speak of the object of practical knowledge, which is its own work, then, since it is the effect of that knowledge, it does not precede it, but rather follows it. Thus future things are compared with God's practical knowledge, which some Scholastics call the knowledge of approval: for these, just as by God's will, as by a cause, are truly future, so also they depend on His knowledge, which dictates and judges that they be brought about in this or that way; and in the opinion of some it has only the character of a judgment which precedes the will; or, as it pleases others, even the character of a plan which follows the will. But in whatever way, this is not yet the knowledge of vision, by which things are seen to be future; rather, before by it things are understood to be future, it is occupied only with possibles, and, understanding that they can be brought about thus or thus, and at such a time, it judges that it is good, and proposes it to the will, or by the power of the will commands it. Wherefore they are deceived who say that the knowledge of vision, by which future things are known, is both practical and speculative; for it is entirely speculative: what it knows to be future as truly future, it does not make; since this knowledge is understood to exist after the decree of God's will, by which things have that they be future. Prior,

1139. Origen, on Romans 8:30; St. Jerome, in the cited places; Pseudo-Justin, Quaestiones ad Orthodoxos, q. 58.
1140. Boethius, De consolatione, V, prose 4.

therefore, are the knowledge of things as they are possible, and the decree of the will of God that things be future; for these two are the cause of the future, whereas the knowledge of vision is not yet, until the thing is future.[1141]

Therefore Alexander, Albert, St. Bonaventure, and Gregory, in the places pertaining to this chapter, authoritatively maintain the same.

On whether the divine prescience is the cause of future things

Resolution of the authorities and the twofold divine knowledge

Magister.

To the point at hand, those alleged together with the Master in I, dist. 38 rightly admonish that there are two knowledges in God: one of approval, which we have called practical; and they say that this is, in its kind, the cause of future things, and that therefore things are future because they are known. The other is speculative, such as is the knowledge of vision: this, as we have said, cannot be practical; and they say that this is not the cause of future things, nor therefore are things future because they are known.

We have, then, from the opinion of these men, that it is not for this reason that things are future, that they are foreknown to be future; and although Alexander neither asserts nor denies that things are therefore foreknown by God because they are future, nevertheless the Master, Albert, St. Bonaventure, and Gregory - indeed Hugo of St. Victor also - manifestly grant that causal [relation], as will appear in the solution to the contrary argument.[1142]

From these points, first a response is made to the testimonies objected to us at the beginning. To St. Augustine: I say he is not speaking there of the knowledge of vision, by which future things are foreknown, but of practical knowledge, which, as we said, is occupied with possible things as known objects; of this it is rightly said that things are therefore future because they are known by God. For elsewhere the same Augustine, also adduced by us, speaking of the speculative knowledge of vision, openly says that sin is therefore foreknown by God because it is future; and we have shown the same reason holds of a future sin and of any other thing whatsoever: so that, if sin is therefore foreknown because it is future, the same must be said of all future things.[1143]

But if we wish to understand Augustine's testimony in De civitate Dei, cap. 9, of the speculative knowledge of future things, which is properly called foreknowledge (for in that place he does not use the name "knowledge," but "foreknowledge"), we can reply that Augustine did not say simply that foreknowledge is the cause that things be future, but that, as causes most certain, they be said to avail whatever they avail, and be altogether about to be; that the cause, I say, is the

1141. Alexander of Hales, In I Sent., q. 24, m. 2; Albert the Great; St. Bonaventure; Gregory (of Rimini), in the places pertaining to this chapter.

1142. The Master (Peter Lombard), I Sent., dist. 38; Albert the Great; St. Bonaventure; Gregory (of Rimini); Hugo of St. Victor.

1143. St. Augustine, De civitate Dei, V, c. 9; and on speculative knowledge: various places. On sin: compare also his treatment cited earlier.

foreknowledge of God, which cannot be deceived. By these words he only contends to assign the proper cause of the certainty and (so to speak) infallibility of things. For these, as I noted in the preceding chapter, do not befit things, but the intellect, which is properly said to be deceived or not to be deceived; therefore, when things are said to be most certainly future, or causes most certainly about to operate, or altogether about to operate, the cause is the foreknowledge of God, which, says Augustine, cannot be deceived.

And when he says "altogether about to be," he takes the particle "altogether" to mean "most certainly," and he refers the whole to the intellect, as has been explained. Add also that Augustine, in that book XV of De Trinitate, c. 13, did not deny that things are known by God to be future because they are - he understands, in present time. And that is most true: because, although from future things there comes to God from eternity, in our way of understanding, a new mode of knowledge which we call the knowledge of vision (which would not be in God if nothing were to be future, the addition being only in respect of reason), nevertheless from the actual existence and presence of things there does not come to God a new way of knowing, even in our way of understanding, nor even with a merely rational respect added. And thus Augustine contends that by the presence of things nothing is known by God which was not previously known: for from eternity He knows a thing future as related to this time, and the same thing related to another time He knows as present and past. But from the fact that things are future, He knows something from eternity which He would not have known, unless they were to be future - yet with only a respect of reason added. However, when he says that things are therefore because God has known, he is also speaking of the presence of things, of which he says that in God the cause is knowledge - not indeed of future things, which is the knowledge of vision alone and speculative, but of that which is practical and bears upon possibles, as has been explained.

Reply to Gregory: he did not deny that things are known by God to be future because they are future, but [he denied that they are known because] they are present. For he contends that the presence of things is not necessary for things to be known by God, as it is necessary for them to be known by us; nor did he say that things are therefore future because they are known by God, but that they are therefore present; for he was speaking of objective presence, as we noted above in disputation 64, cap. 3; and thus he said most well that things are therefore present in God because they are seen. For the very cognition is the formal reason of their presence.

From the Scholastics, however, whom I adduced for the opposed opinion, only St. Thomas brings a difficulty upon me. For when he treats in that place of the speculative knowledge of vision, he still refuses to concede that things are the cause of God's pre-knowledge; accordingly, that causal statement - "because things are known by God, since they are future" - which he had objected to himself from Origen, he thinks must be understood only of the cause of inferring, because it follows rightly: if some things are future, then they are known by God.[1144]

1144. St. Thomas, ad 1 of this question and article (citing Origen).

Caput VII - Corollaries of the whole Disputation

I say, therefore, perhaps the Angelic Doctor only wished to say what Bl. Bonaventure, Albert, and Gregory, cited at the beginning for the contrary opinion, wanted to say: namely, that future things are not the cause of the knowledge of God as to the mode (as they themselves say) of being, that is, that they are not a physical cause on which that knowledge itself - which is the very substance and essence of God as to existence - depends; which is most true. They add, however, that future things are the cause of God's foreknowledge as to the mode of denomination; which, although St. Thomas does not expressly assert, he would in no wise deny. For the foreknowledge of God, over and above the simple essence, is no elicited act, but the essence itself with only a respect of reason added, which necessarily arises from things future, as they are future; it is called foreknowledge which otherwise is the very substance of God; and, by a respect of reason even to things as possible, it is called knowledge, which the Scholastics call simple intelligence; whereas of future things they call the knowledge of vision, or foreknowledge. Rightly, therefore, it is affirmed that God foreknows future things, and that his substance, or knowledge, has that respect by which it is named foreknowledge, because things are future - whence nothing real accrues to God - as will be more fully demonstrated in disputation 78. Therefore Gregory, in the place cited, and Marsilius, in the first book, question 40, to the fifth argument, plainly teach that the foreknowledge of God is, in a certain order, posterior to future things - as we shall also say in the next chapter - which the holy Doctor would by no means deny; and hence, in this sense, he would concede that proposition, "Therefore future things are foreknown, because they are future." This doctrine is not obscurely indicated by Hugo of St. Victor, On the Sacraments, book 1, part 2, chapter 16, where he says: "If there were no future things, there would be no foreknowledge in God; but from this it would in no wise follow that nothing would be in God; for that which is foreknowledge would be knowledge" - as if to say, the same essence of God would remain which would be the knowledge of things possible; but since it would not have respect to future things, it would not be called foreknowledge: and only the denomination and the respect of reason would be lacking in God. Therefore future things are the cause of denomination, as Albert, Bonaventure, and Gregory said. Wherefore the Master, in that 38th distinction, did not wish to call future things simply the cause of God's foreknowledge, but only said that they are a cause sine qua non; by which mode of causality he did not posit any physical influx into God, but asserted a causality by way of object and the foundation of a relation; and when he said it is a cause sine qua non, he plainly denoted not something accompanying, but something that precedes foreknowledge, or rather that foreknowledge precedes: wherefore even that causality, qualified in this way, must be conceded in his view.[1145]

Then it is plainly clear how little the opposing argument proves. For when we say that a future thing is the cause of God's knowledge, we do not mean that it is a physical cause of something existing really in God, which acts really upon God himself or exerts any influence; but we only say that it is the cause of a respect and of a denomination, on account of which the knowledge of God is called foreknowledge. Wherefore neither is a created thing posited as the true cause of the

1145. Gregory (of Rimini), in I Sent., d. 38; Marsilius (of Inghen), in I, q. 40, ad quintam rationem.

uncreated, nor is anything temporal said to be the cause of something eternal. For although the foreknowledge of God is called eternal, because it is a sufficient foundation for God's knowledge to be called foreknowledge from eternity, and for the thing foreknown to begin to exist in time and in the same to end: nevertheless, it is from eternity future, just as the foreknowledge itself is; but when the thing is said to be the cause of foreknowledge according to denomination and respect of reason, because it is the foundation of that, it is understood to be the cause as it is future, not as it is present. Therefore no temporal thing is designated as the principal cause of anything eternal, nor a created thing of anything uncreated. Moreover, it is manifest that something can be future from eternity, nor does it begin to be future in time, as has been made clear, and has been noted more than once in this disputation.

From the testimony of Hugo of St. Victor we have an evident support for the doctrine proposed. And for this reason the Master, in that 38th distinction, did not wish to call future things simply the cause of God's foreknowledge, but only said that they are a cause sine qua non; and by that mode of causality he did not posit any real influx, but a mode by way of object and the foundation of relation, and he affirmed that it is a cause sine qua non, not denoting something concomitant, but rather something preceding foreknowledge, or foreknowledge itself; wherefore even that causality, so qualified, must be conceded in his view.[1146]

Corollaries of the whole Disputation.

- From the things said in this disputation some points worthy of note can be gathered, which will not moderately illustrate the doctrine delivered to us above. The first is what Gregory taught, in I, dist. 38, question 2, article 3, in the reply to a certain argument near the end, and Marsilius, in the first book, question 40, in the solution of the arguments, to the fifth argument: namely, that it can be in our power that God foreknow future things which from our will are future. They prove this: since the foreknowledge of God supposes that a thing is going to be, and anything is in our power to be future from us, it follows that even the foreknowledge of God, as it is foreknowledge, is in our power - namely, that it be that God foreknow something to be future, or not to be future, and that it be free to us. Yet this is not to be understood in such a way that we say we can change the foreknowledge which once we suppose to be in God from eternity, so that on account of our liberty God be changed from one thing to another; for that cannot be, even if we speak only of the mutation of a respect and of a relation of reason, on account of which we said the knowledge of God is called foreknowledge - not that from this variation alone there would follow in God any intrinsic mutation, for it is only a mutation of a respect of reason, which in its own genus does not repugn to God, as is established elsewhere; but for that reason we cannot change the foreknowledge of God, which, concerning some thing that is to be, we once suppose; because by that very fact by which we say God knows something, we also affirm that very thing to be going to be. For, as in chapter 4 we noted from Anselm, when we assert that God foreknows some thing, by that way of speaking, without any other addition, we also say that the thing

1146. The Master (Peter Lombard), I Sent., dist. 38.

will be. Therefore, since it is necessary that the thing future be future, nor is its opposite in our power, as we also proved in the same chapter, it follows that neither is it set within our liberty that that which is foreknown by God not be foreknown. For although it is also free to us to make future things not be, when they are future, nevertheless when we say "it is in our power that God from eternity foreknow something," we ought to consider the essence of God before we suppose the relation of reason of foreknowledge to future things; and therefore before we suppose that something is to be. Thus, just as in our case it is said to be in our power everything that from our free will is going to be, so that even if from eternity it be future, it is from us and not from another going to be: in the same way we understand it to be in our power that God, who, before a thing be future, does not foreknow it, foresee it from eternity. For if from our liberty we are not going to do that thing, neither would it be from eternity future, nor would God foreknow it; yet in time that respect of reason from which it is called foreknowledge cannot be changed: although the relation of creator and lord can be varied, because the infinite power of the divine intellect is not of such a sort that it await the event in time, but it anticipates it from eternity. For when a thing which is going to be in time is from eternity future, and only one part of a contradiction is distinctly going to be from our will - although the opposite also can be, by which liberty is sufficiently safeguarded, as in disputation 66, chapter 2, was set forth - and that from eternity is referred to the divine intellect as an intelligible object, it follows that that part is foreknown from eternity; and since the divine intellect cannot be deceived, but always understands that part to be future which is future, it follows also that the will in time will do nothing which God has not known from eternity. And thus, although it be in our power that God foreknow some thing, just as that very thing also be future, it is not free to us to change the foreknowledge of God, which we suppose to be of one part of a contradiction, into the other.

This doctrine was touched upon by Gab., in I, dist. 38, q. 1, art. 3, dub. r, and is taught by Boethius, De consolatione, book 5, prose 6; for he says that we cannot change the knowledge of God, "because to whatever purpose we are going to turn, that also he knew from eternity"; he subjoins the reason: "For the divine intellect anticipates all future things." More clearly Hugo of St. Victor, On the Sacraments, book 1, part 2, chapter 18, expressed the same in these words: "If the thing which is called future were not going to be, it would not have been known as future by God, but as not future." And in chapter 17 he teaches that a thing was not first foreknown than future, but was foreknown from eternity, and from eternity future; he speaks, however, of the priority according to duration, for in the order of nature it is prior that the thing be future, as we proved above. Finally, in chapter 22 he says: "It is possible that what is future not be done: and if it were not done, it would never have been future, nor foreseen." From all of which it is also manifest how falsely some of the more recent men have accused the Nominales of the error that they asserted it

to be placed in our liberty to change the knowledge of God, so that what is supposed to be foreknown from eternity then not be foreknown; for neither did they say this, nor dream it: rather, from their doctrine, as we have explained it, the opposite is plainly gathered.[1147]

- Second, there is to be observed a difference between corporeal vision and God's foreknowledge. For although, by the example of corporeal vision, which in no way removes the liberty of the thing beheld, Bede and Boethius most fittingly prove that nothing of our liberty is taken away by divine foreknowledge - because nevertheless corporeal sight only sees the thing present, nor in any way foresees the future; furthermore, what is seen even by free choice is seen as present, and even by the same free choice it is impeded lest it be seen afterward; and therefore the vision can be changed, as the man who freely proposes the object wills; although he cannot bring it about that the sight not behold the thing present, because everything that is, so long as it is, cannot not be, as we explained above; nor afterwards is it in our power that that not be which has been made to be present - yet because divine foreknowledge anticipates the very thing future, and is borne not only to the present but also to the very thing that is from eternity future; and when we suppose something to be foreknown by God, we suppose also that it is future from eternity; nor is it in our power that what is supposed to be future not be future, nor in any way can the knowledge of God, which we once suppose to be, be impeded or changed. For if something is future, it is either to be changed in time, or, if it is not future from eternity, it must be to be changed from eternity. Therefore the foreknowledge of God, which is eternal and follows things even future, and insofar as they are said to be future from eternity, could not itself be changed in time from one thing into another. For if, by a certain order of reason, or as it were of nature, already explained by us, it awaited the event in time, but in fact it anticipates it from eternity: for when a thing which is going to be in time is from eternity future, and one part only of a contradiction is distinctly going to be from our will - although the opposite also can be, by which liberty is sufficiently safeguarded, as was said in disputation 66, chapter 2 - and that is referred from eternity to the divine intellect as an intelligible object, that part is consequently foreknown from eternity; and since the divine intellect cannot be deceived, but always understands that part to be future which is future, it also follows that the will in time will do nothing which God has not known from eternity: and thus, although it is in our power that God foreknow some thing, just as it is in our power that the very thing be future, nevertheless it is not in our freedom to change the foreknowledge of God, which we suppose to be of one part of a contradiction, into the other.
- Fourth, it is gathered from these things - especially from what we noted above in chapter 4 - not only that free choice is free with respect to the future, so that it can do something and not do it, but also that a present action by which someone sins is truly and properly said to sin freely. For although not only the present, insofar as it is already present, cannot be not-

1147. Gab., in I, d. 38, q. 1, a. 3, dub. r; Boethius, De consolatione, V, prose 6; Hugo of St. Victor, De sacramentis, I, part 2, c. 18; likewise c. 17 and c. 22. Ockham, in I, d. 38, q. 1.

present - for a being, insofar as it is, cannot at the same time not be - but also, once a present operation has been posited, there does not remain liberty for it simply not to be (in which we said there is equal cessation for the present and the past, because in both the potency has already been reduced to act, and the operation cannot absolutely be recalled, but can only be impeded for the future), nevertheless in a present and a past operation true liberty is preserved - not because free choice was previously and up to the point of the operation indifferent to the past operation, and similarly to the present operation, but because, prior in nature to operating, the will was free so that it could operate and not operate; and thus, when someone sins, he sins freely. And hence our authors of legislation, whose opinion some Nominales more recently have opposed, teach, contrary to Ockham - who said sometimes that the will in the very instant of eliciting an operation is not able not to elicit it; and some externalists among ourselves think that, in a certain sentence, the Nominales said that, what has once been done, the will could entirely impede the operation; which we have denied above from Anselm in chapter 4 - that it is free, before the nature of the operation as present, and, the present being posited, it cannot at all operate otherwise; but only for the future can it not operate; nevertheless, nothing of liberty is removed from the fault of the one acting, because he operated freely before he acted.

- Third, from what has been said a solution is inferred to the argument on account of which Aristotle, De interpretatione, chapter 8, as some interpret, wished to prove that no singular proposition about a future contingent is true or false; where he argues thus: if any were true, it would have been true from eternity. We concede, therefore, that it would have been true from eternity; but not necessary by a necessity antecedent, rather by a consequent necessity, whereby every future is necessarily future, just as the present is necessarily present; for if something is ever true, it is necessary in some way to be necessary: thus also the proposition about the past is always true and necessary, not by an antecedent necessity but by the consequent, whereby whatever has been is necessarily having been present. And thus that ancient proposition is always true and necessary, not with an antecedent necessity, but with a consequent; for if from eternity it has been true that such a thing will be, it could not be that it not be true that such a thing will be; nevertheless, it does not follow that it could not be that it not be. On the contrary, as we have taught above from Anselm, it was possible not to be that which is future, and if it were not to be, it would never have been future nor foreseen.

It is not so, just as neither with respect to the past: which Almainus also grants; because what is, when it is, it is necessary that it be, and therefore it cannot be free that, while present, it should at the same time not be present; for in this liberty does not consist. But that the present act be free as referred to potency, and the past act similarly, Cajetan does not deny; he grants it on that aforesaid reason, namely, that prior by nature, before the will acts, it is indifferent to either. They agree with Ockham in this opinion thus explicated - Almainus himself, Gregory in the First Book, distinction 38, question 1, article 3, fairly before the middle, Gabriel, question 1, article 1, notes 6 and 8, and

article 2, conclusions 1 and 3; but more clearly in the Second Book, distinction 25, article 1, note 1, and article 3, the last doubt; finally, Maior in the Third Book, distinction 18, question 1, at the end, to the fifth argument.[1148]

Nor in truth do Hugh of St. Victor in Book 1 of De sacramentis, part 5, chapter 18, the Master in II, dist. 25, cap. 2, and Holcot in II, question 3, to the ninth, disagree, except that these three assert that liberty is referred only to the future in time: wherefore, when they say that Peter, who is now sinning, sins freely (for they cannot deny this, nor do they), they think that Peter now sins freely, or merits, because at the preceding time, which this present looked to as future, the will was indifferent: similarly they teach about the past; and thus, in the Summa of the Sentences, tractate 2, chapter 2, and Holcot in the place cited, affirm that an angel in the first instant of his being could not sin, because liberty cannot consist in a single instant only: but they do not deny that in any instant whatsoever the operation could have been free, if some time had preceded on account of which the will would have been indifferent.[1149]

We, however, with Ockham, Gabriel, Gregory, Maior, and Almainus, say that liberty of acting is saved from the first instant in which the creature exists, because the will is of itself prior by nature than it be understood to act, indifferent to either. Wherefore we concede that in the first instant, in which a creature is, it is free for sinning and for not sinning, and in that very instant also its liberty can most excellently be saved. Therefore we all assert that in any other present instant, besides the first, the operation is free, so that it can be sin or merit: except that we defend this liberty from a different head, and therefore about the first instant, in which the will is created, we also think in a different way, as has been explained.

Therefore it appears, as we said at the beginning, that there is no one who denies that he who now sins, sins freely, even if it be true that he who sins, when he sins, by that very fact necessarily sins; and let what we have said about foreknowledge suffice. For what Cajetan and others here dispute, namely whether, if God necessarily operates outwardly, the human will could nonetheless act freely, will be more conveniently examined below in Disputation 101: for this question pertains rather to the will of God than to the intellect, about which in that place it must be said.

Articulus XIV - Whether God knows enunciables

It is asked in the fourteenth place thus. It seems that God does not know enunciables.

1) For to know enunciables belongs to our intellect according as it composes and divides. But in the divine intellect there is no composition. Therefore God does not know enunciables.

2) Further, every cognition is through some likeness. But in God there is no likeness of enunciables, since He is altogether simple. Therefore God does not know enunciables.

1148. Almainus; Gregory, in I Sent., d. 38, q. 1, a. 3; Gabriel, q. 1, ar. 1, notae 6, 8; ar. 2, conclusiones 1, 3; more clearly II, d. 25, ar. 1, nota 1; ar. 3, dub. ult.; Maior, III, d. 18, q. 1, ad quintum.

1149. Hugh of St. Victor, De sacramentis, I, part 5, c. 18; the Master (Peter Lombard), II Sent., dist. 25, cap. 2; Holcot, II, q. 3, ad 9.

But on the contrary: it is said in Psalm 93: "The Lord knows the thoughts of men." But enunciables are contained in the thoughts of men. Therefore God knows enunciables.

I answer that, since the forming of enunciables is within the power of our intellect; but God knows whatever is in His power or in that of the creature, as was said above; it is necessary that God know all the enunciables which we form or can be formed. But just as He knows material things materially, and things composed simply: so He knows enunciables not after the mode of enunciables, namely that in His intellect there be composition or division of enunciables, but He knows each thing by a simple intelligence in understanding the essence of each. For if we, in this very fact that we understand what man is, understood all the things which can be predicated of man. Which indeed does not obtain in our intellect, which runs from one thing to another, because the intelligible species thus represents one thing that it does not represent another. Whence, by understanding what man is, we do not from this very fact understand other things which are in him, but in a divided way according to a certain succession. And on account of this, the things which we understand separately, we must reduce into one by way of forming an enunciation by composition or division. But the species of the divine intellect, namely His essence, suffices to show all things. Whence, by understanding His essence, He knows the essences of all things, and whatever can befall them.

To the first, therefore, it must be said that that reasoning would proceed, if God knew enunciables after the mode of enunciables.

To the second it must be said that the composition of an enunciable signifies that something is of the thing. And thus God, through His own existence, which is His essence, is the likeness of all the things which are signified by enunciables.

The conclusion is that God knows all enunciations and the compositions which the human intellect forms in itself, but without any composition, by a simple intuition alone; just as He understands, also in a spiritual mode, those things which consist of matter. Here the reason had to be assigned, on account of which, although God understands our enunciations and discourses, He Himself neither composes nor discourses; yet we shall show this together of God and of the angels in a few words below in Disputation 222.

Articulus XV - Whether the knowledge of God is variable

Ninety-fourth, it is added, one proceeds thus. It seems that the knowledge of God is variable.[1150]

1) For knowledge is said relatively to the knowable. But those things which import a relation to the creature are said of God according to time, and are varied according to the variation of creatures. Therefore the knowledge of God is variable according to the variation of creatures.

1150. Cf. references adduced sub marginibus: ar. 7, contra; I, d. 38, q. 3, contra 2, art. 5; d. 39, q. 1, ar. 5, ad quintum; De veritate, q. 2, art. 3.

2) Further, whatever God can do, He can know; but God can do more things than He does. Therefore He can know more things than He knows. And thus His knowledge can be varied according to increase and diminution.

3) Further, God knew that Christ would be born. But now He does not know that Christ will be born, because "Christ to be born" is not. Therefore not everything that God knew, He knows. And thus the knowledge of God seems to be variable.

But on the contrary is what is said in James 1, that with God "there is no change nor shadow of alteration."

I answer that, since the knowledge of God is His substance, as is evident from the foregoing: just as His substance is altogether immutable, as was shown above: so it must be that His knowledge be altogether invariable.

Reply to the first: The names "Lord" and "Creator," and the like, import relations to creatures according as they are in themselves. But the knowledge of God imports a relation to creatures according as they are in God: because according to this a thing is understood actually, which is in the intelligent. But created things are in God invariable, in themselves, however, variable. Or it must be said otherwise, that "Lord" and "Creator," and the like, import relations which follow upon acts which are understood to be terminated to the creatures according as they are in themselves; and therefore relations of this sort are predicated of God in a varied manner according to the variation of creatures. But knowledge and love of this sort import relations which follow upon acts that are understood to be in God. And therefore they are predicated in an invariable manner of God.

Reply to the second: God also knows those things which He can do and does not do. Whence, from the fact that He can do more things than He does, it does not follow that He can know more things than He knows, unless this be referred to the knowledge of vision, according to which He is said to know those things which are in effect according to some time. Yet from this, that He knows that some things can be which are not, or even not be which are, it does not follow that His knowledge is variable, but that He knows the variability of things. If, however, there were something which before God had not known and afterwards knew, His knowledge would then be variable: but this cannot be; because whatever is or can be according to any time whatsoever, God in His eternity knows. And therefore from this, that something is posited to be according to any time whatsoever, it must be posited that it has been known from eternity by God. And therefore it ought not to be conceded that God can know more things than He knows: because this proposition implies that previously He did not know, and afterwards knows.

Reply to the third: Some of the ancient Nominales said that the enunciable "Christ is being born" and "Christ will be born" and "Christ is born" are the same, and that the same thing is signified by these three, namely the nativity of Christ: and according to this it would follow that whatever God knew, He knows; since now He knows that Christ is born, which signifies the same as that Christ was to be born. But this opinion is false. First, because the diversity of the parts of speech produces a diversity of enunciables. Next, because it would follow that a proposition, which

once is true, would be always true, which is against the Philosopher; whence he says that this assertion, "Socrates is sitting," is true while he is sitting, the same is false when he rises. And therefore it must be conceded that this is not true, "Whatever God knew, He knows," if it be referred to enunciables: but from this it does not follow that the knowledge of God is variable. For just as, without any variation of the divine knowledge, it is the case that He knows that one and the same thing is at one time, and at another time is not; so, without any variation of the divine knowledge, it is the case that He knows that some enunciable is at one time true and at another false. But the knowledge of God would from this be variable, if He knew enunciables after the mode of enunciables, by composing and dividing, as happens in our intellect: whence our cognition is varied either according to truth and falsity - for instance, if, the thing having been changed, we retain the same opinion about that thing - or according to diverse opinions, if at one time we opine that someone is sitting and afterwards we opine that he is not sitting: of which neither can be in God.

Observations concerning the doctrine of the Article.

The conclusion of the article is, that the knowledge of God cannot be varied. But concerning the title and doctrine, first it must be observed that the question is only about the simple knowledge of the intellect, as from the whole discourse of the article is gathered. St. Thomas proves the conclusion by a twofold reason, one in the body of the article, the other in the solution of the first. The former is of this sort: the knowledge of God is His substance; but this is altogether immutable; therefore likewise His knowledge. The latter reason: God knows things as they are in themselves, but He Himself cannot be changed; therefore neither can the cognition which He has of things. Neither reason seems efficacious to prove what the holy Doctor contends absolutely. For, first, when we say that God knows or cognizes things, we ought not to understand that He is those things formally; but it is said objectively, that is, that they are represented in Him. Then, although the knowledge which God has of things is His very substance, nevertheless it adds a certain notional reference to the things themselves, which is nevertheless not any real mutation in Him.

It is necessarily connoted, insofar as it is called knowledge. Therefore, although someone might say that the knowledge of God varies, he would not thereby of necessity assert that God Himself is changed intrinsically; for the knowledge itself would be said to change only by a change of a reference of reason (respectus rationis).

Moreover, that the knowledge of God connotes a reference of reason to creatures, without which it would not be called knowledge of creatures, is clear. For if no creature were possible, it would not follow by an intrinsic inference that God would not exist, as we have shown at length in disputation 104, chapter 6.[1151] For the reason that God exists is of greater necessity than that creatures be possible; therefore the knowledge of God does not in any way depend upon the possibility of creatures. Nevertheless, on that supposition, God would have no knowledge of creatures; therefore the knowledge of creatures is not altogether the same as the essence (*essentia*) of God, but connotes, over and above the essence, a relation (*relatio*) to creatures, which, since it cannot be

1151. Disput. 104, c. 6.

real - as we shall show in that disputation - follows to be of reason; therefore even if, by the removal of that relation, the knowledge of God were to be changed and creatures were represented in God in a different way, it would not follow that there is any intrinsic change in the divine essence; and much less would any intrinsic change follow from a variation of the knowledge of vision (which is of future things). For the same essence would remain unchanged, even if God had from eternity decreed to create nothing, and yet then there would be in God no foreknowledge of future things, nor would future things be represented in His essence; therefore it is not rightly inferred from a change in some knowledge of God that there is some intrinsic change in God.

Nevertheless, it can be shown in another way, and clearly, that the knowledge which God has of possibles cannot be changed. For if in any way it could vary, the change would be that of that reference of reason: for the divine essence in itself cannot be changed; but that reference cannot vary, because its foundation - upon the positing of which it is said at once to arise - is the very essence of God itself, and the possible creatures; but this foundation cannot fail; therefore neither can that reference be changed. Wherefore, just as creatures cannot fail to be possible, so they cannot fail to be known by God. From which it is also gathered that it is more necessary that God be God, and that those things which are within Him agree with Him, than that He know possible creatures: for knowledge is not without that reference of reason to creatures, nor is it more necessary than that reference; but creatures, even under possible being, are less necessary than God Himself. From this principle indeed we shall also make clear in disputation 144, on the procession of the Word, that that procession which belongs intrinsically to God in no way depends, as on a principle, upon creatures under possible being; nor is the production of the Word per se primarily a knowledge of creatures, but it is terminated to them consequently and secondarily.[1152]

Besides, although St. Thomas does not render the reason why the foreknowledge of future things, which is called in God knowledge of vision, cannot be changed, an excellent one nevertheless is gathered from what has been said above: not that, if the foreknowledge of God were changed, some intrinsic change in God would follow; for this variation of foreknowledge could be understood from a mere change of a reference of reason. For, as we said in disputation 68, chapter 6, and it will be proved in disputation 80, the act (*actus*) of the foreknowledge of God is not some operation elicited by the divine essence itself, but is the very substance (*substantia*) of God, with the mere addition of a reference of reason to future creatures; with that lacking, there would then be no foreknowledge. Therefore, just as, if from eternity there were no future creature, there would be no foreknowledge in God, yet the substance and essence of God would be the same as now; so also, if nothing else hindered, the reference of reason could in time be changed, and hence the foreknowledge be varied, with no intrinsic change wrought in God Himself.

Therefore the reason why foreknowledge cannot be varied, even by a mere variation of a reference of reason, is this: because if that reference could be changed, the change would have to happen in time; and thus in time there would have to begin a reference to future things which would not have been from eternity; or conversely, the reference which was from eternity would in

1152. Disput. 144, on the procession of the Word; cf. also disput. 68, c. 6; disput. 80.

time have to cease. But this can by no reason be; therefore neither can the foreknowledge of God be changed in time; but if it is from eternity, it must remain without variation. This is proven thus. As is said in disputation 66, every proposition about the future is either determinately true or determinately false; and therefore every thing which is truly to be at some time is from eternity to be; and what is not to be is from eternity not to be. Wherefore it cannot happen that something begins in time to be future or not to be future. But everything which is truly future is thereby referred to the intellect (*intellectus*) of God as intelligible, and what is not future, as not intelligible; therefore from eternity the future and the not-future are referred in this manner to the intellect of God. For since the intellect of God is of infinite power, embracing every intelligible, and cannot be borne toward that which is not intelligible, it follows that there is sufficient foundation in the intellect of God and in the thing which is to be, that it be known from eternity, and in the thing which is not to be, that it not be known; which if it were otherwise to come about in time, then from eternity something would have lain hidden from the divine intellect, or would have been falsely known by it. Therefore, if the intellect of God is said to understand something, it cannot but understand it from eternity; wherefore His intellection must needs be unchangeable.

Accordingly, although some reference of reason in God can vary, as the relation of Creator and of Lord, and the relation which foreknowledge connotes, could from eternity have failed to belong to God if from eternity nothing were to be, as we noted in disputation 68, chapter 6; nevertheless, if once we suppose that something is to be, that relation of the knowledge of vision cannot begin in time or vary, because its foundation, which is the future thing, and the infinity of the intellect of God, are eternal. But the reference of Creator and of Lord is founded on an action which passes over into an effect, and begins in time; and therefore it is neither eternal nor immutable.

Nonetheless, for this reason alone can that relation of the knowledge of vision vary - according to the order to diverse enunciations - as St. Thomas teaches in the reply to the third;[1153] because it is called foreknowledge only so long as the thing is future; yet, once it is present or past, it is not called foreknowledge, but knowledge of vision. Therefore this knowledge which is called of vision is altogether immutable, which, beyond the knowledge of simple intelligence, merely adds a reference of reason to a thing with existence, whether it be future, or present, or past. And since God understands a thing according to each difference of time, as it is, He is not said to be changed in the notion of knowledge; for knowledge is then said to be changed either when what was known is not known, or when the opposite is known. But although God is not always said to foreknow, He is nevertheless always said to know that this or that thing will be at this time, and at that time will be present, and at another will be past; and thus perpetually the same knowledge in God perseveres, because there is always the same foundation in the object, and the power in the intellect.

I pass over many other things which Cajetan notes on the third reply; for the things said thus far suffice for the explanation of this difficulty.[1154]

1153. St. Thomas, in the reply to the third objection on this article.
1154. Cajetan, on the reply to the third.

Finally, it must be observed that when we say that the knowledge of vision is eternal, and omnipotence, and other attributes of this sort, connote a reference of reason from eternity, this is not to be understood in such a way that from eternity such a reference actually belongs by our intellect, nor by the divine, because - as we shall say below in disputation 118 - the divine intellect does not form these relations and references of reason. But we say that these attributes are signified by us with an extrinsic reference of reason, because when our intellect sees an eternal foundation in the thing itself, it is wont to conceive such a relation and to name these attributes. Whether, however, in God there is a relation from time to creatures, we said in question 13, article 7; but whether there is some eternal real relation to those same creatures or not, we shall treat in disputation 104, the last chapter.[1155]

Articulus XVI - Whether God has practical knowledge concerning things

To the sixteenth article we proceed thus.

It is objected that: 1) It seems that God does not have speculative knowledge concerning things. For the knowledge of God is the cause of things, as was shown above. But speculative knowledge is not the cause of the things known. Therefore the knowledge of God is not speculative. 2) Besides, speculative knowledge is by abstraction from things; which does not befit the divine knowledge. Therefore the knowledge of God is not speculative.

But on the contrary: Whatever is more noble must be attributed to God; but speculative knowledge is nobler than practical, as is clear from the Philosopher at the beginning of the Metaphysics.[1156] Therefore God has speculative knowledge of things.

I answer that: Some knowledge is speculative only, some practical only, and some according to one aspect speculative, and according to another ...

Objicitur quod Deus de rebus non habeat scientiam speculative. Scientia enim Dei is the cause (*causa efficiens*) of things, as was shown above. But speculative knowledge is not the cause of the things known. Therefore the knowledge of God is not speculative.

Praeterea. Speculative knowledge is by abstraction from things; which does not befit the divine knowledge. Therefore the knowledge of God is not speculative.

But on the contrary: Whatever is more noble must be attributed to God; but speculative knowledge is nobler than practical, as is clear from the Philosopher at the beginning of the Metaphysics.[1157] Therefore God has speculative knowledge of things.

I answer that: Some knowledge is speculative only, some practical only, and some according to one aspect speculative, and according to another practical. For the evidence of this, note that a given knowledge can be called speculative in three ways.

1155. See disput. 118; q. 13, a. 7; disput. 104, cap. ult.
1156. Aristotle, Metaphysics, lib. 6, text 2.
1157. Aristotle, Metaphysics, lib. 6, text 2.

First, on the side of the things known, which are not operable by the knower, as is a man's knowledge of natural or divine things.

Second, in regard to the mode of knowing: for instance, if a builder were to consider a house by defining and dividing and considering its universal predicates. This indeed is to consider operables in a speculative mode, and not according to that according to which they are operable. For the operable is something by the application of form (*forma*) to matter (*materia*), not by the resolution of the composite into universal formal principles.

Third, in regard to the end (*finis*). For the practical intellect differs in end from the speculative, as is said in De anima III: the practical intellect is ordered to the end of operation; but the end of the speculative intellect is the contemplation of truth.[1158] Whence, if a builder were to consider how some house could be made, not ordering it to the end of operation, but only to knowing, this would, as to the end, be a speculative consideration - yet about an operable thing. Therefore the knowledge which is speculative by reason of the very thing known is speculative only. But that which is speculative according to its mode or its end is in a certain respect speculative, and in a certain respect practical; and when it is ordered to the end of operation, it is simply practical.

Accordingly, it must be said that God has of himself speculative knowledge only, for he himself is not operable. But of all other things he has both speculative and practical knowledge. Speculative, indeed, as to the mode: for whatever in things we know speculatively by defining and dividing, all this God knows much more perfectly. But of those things which he can indeed make, and yet in no time makes, he does not have practical knowledge in that sense in which practical knowledge is denominated from the end. But he has practical knowledge of those which he makes at some time. Evils, moreover, although they are not operable by him, nonetheless fall under his practical cognition, inasmuch as he permits or impedes or orders them; just as diseases fall under the physician's practical science, inasmuch as by his art he cures them.

Reply to the first: The knowledge of God is cause, not indeed of himself, but of other things; of some actually, namely of those which at some time come to be; of others virtually, namely of those which he can make and yet never come to be.

Reply to the second: That knowledge be received from things known does not of itself befit speculative knowledge, but per accidens, inasmuch as it is human. To what is urged on the contrary one should say, that about operables perfect knowledge is not had unless they be known inasmuch as they are operable. And therefore, since the knowledge of God is perfect in every way, he must know the things that are operable inasmuch as they are such, and not only inasmuch as they are speculable. Yet this does not depart from the nobility of speculative knowledge, because he sees all other things apart from himself in himself; but himself he knows speculatively, and thus in the speculation of himself his knowledge has both speculative cognition, and the practical cognition of all other things.

1158. Aristotle, De anima, lib. 3, text 49.

The sum of the article is: God has of himself speculative knowledge, not practical; but of other things both practical and speculative; of possibles indeed which will never be, speculative; but of those which will sometime be, practical.

Disputatio LXIX - Circa doctrinam Articuli

- What Scotus held. Caput 1.
- The true opinion. Caput 2.

On the doctrine of this Article

Caput I - What Scotus held

Easy would be, according to the Philosopher's definition, the whole doctrine of this article, had not Scotus rendered it difficult for us. Therefore I shall first set forth his opinion; then, from the things I have set down above in disputation 8, I shall briefly explain what must be said in this matter.[1159]

First then, Scotus in q. 4 of the Prologue. If objection be made against this, to the fourth argument, he thinks it can probably be defended that the knowledge which God has of himself is practical - not because it is about some work to be done, but because it precedes the affection and moves it; and by the same reason some think the same of the clear vision by which God is seen by the blessed: yet afterward, in that question, if the verse be objected, "Licet haec," he thinks it more probable that the knowledge which God has of himself is not practical, although it moves the affection: because, in his view, if it were to be practical, it ought to be the rule of the divine will; but the knowledge which God has cannot be the rule of the will of God, because the will of God is of itself the rule of its operations; therefore it does not have the nature of practical knowledge.

Then Scotus teaches in that same question, in the third article, that none of the knowledge by which God has of other things is practical; and this he proves by the same reason, namely that the intellect is not the rule of the divine will in the production of other things, but the will itself is its own rule. He taught the same in I Sentences, dist. 38, q. 1, though for another reason: namely, that to the notion of practical knowledge it pertains to dictate to the will, or to propose something to be done; but no cognition proposes to God in this manner anything to be done: therefore no cognition in God is practical. Next he proves that no cognition proposes to God in this manner anything to be done. For if some cognition were thus to dictate, it would naturally precede every act of the will; and hence the will could not but will that which the intellect thus proposed: therefore God would of necessity have willed to make the things he made, which is absurd. That if the cognition naturally preceded, the will could not fail to follow it, Scotus does not prove; yet it could be urged thus. For if the intellect of God, which cannot be deceived, in its ultimate resolution were to propose, as a good, the justification of Peter - by what reason could the will resist the intellect? Add that such a

1159. See above Disputatio 8 for Vazquez's prior principles.

judgment, naturally preceding every act of the will, cannot befit God: for there does not seem to be greater reason why it should be proposed to God as good to justify Peter than not to justify him, or rather Peter than John. But it is clear that God willed one rather than the other: therefore not by a proposing judgment, but by his will alone did he thus decree.

Caput II - The true opinion

Grant that the disagreement is of words, not of things, when we deal with the practical or the speculative; yet, as I noted above in disputation 8, these names "practical" and "speculative," like all the rest which theologians and philosophers use, are not to be used by us at will, but according to the common signification among them. If then, as I said in that place, practical cognition is so called, not because it moves the affection or is the rule of its operation (for that seems to be accidental to it), but from this, that it is about some work to be done and as a principle of it: it plainly follows, first, that the knowledge which God has of himself is not practical, because it is not about a work to be done. It further follows that the knowledge which God has of other things is practical and speculative. That is speculative which he has of possible things, inasmuch as it is considered by us after the manner of mere speculation. For although it is about some work, yet on this account it is not about it as to be done, nor is it compared as a directing principle. But that which is about the very things insofar as they can be made, or will sometime be, is practical after the manner of a directing principle.

Moreover, the knowledge of future things can be considered in a twofold way. First, insofar as it is referred to things according to their possible essence, before they are future, after the manner of a certain dictamen and proposition, by which the intellect says that that thing is to be done in this or that way, and in this way it is practical. Then, insofar as it regards the things themselves now as future, and is called the knowledge of vision, and this is wholly speculative: for it presupposes the things themselves as future, and in no way is it a principle of them. Wherefore, in disputation 68, cap. 6, we said that this scientia visionis cannot be at once practical and speculative, but only speculative: which, in the present place, is how it must be taken, as we proved above from an explicit professor; and so let it suffice to have said thus much now.[1160]

But it is necessary to refute Scotus's reasons.

First, as regards the knowledge which God has of himself, we say it is not practical, even if it should move the affection, not because the reason in God proposing the object is not the rule of right action; for neither in us is reason itself the proximate rule, as we showed in I-II, q. 19, a. 3, but the rational nature itself, as it is rational; while the proposing reason is only a rule a posteriori, as we shall say there. And yet in us no one denies that there are many practical cognitions. But the knowledge which God has of himself is not practical, because it is not about a work to be done, which we noted above in disputation 8 is required for the notion of practical knowledge. That it

1160. See Disputatio 68, cap. 6, on the scientia visionis.

moves the affection matters little: for the speculative, too, when it considers a good thing, in regard to which no work is to be done, can move to the love of it; whereas the practical, as we proved in that place, is solely about a work to be done.

Ad rationem, qua probat Scotus scientiam Dei de aliis rebus non esse practicam, quia deberet praevenire naturaliter affectum, etc., Caietan replies in this article that that dictamen or proposition by which a good is proposed to the will, that it is good to do this or that, is not practical: because practical knowledge, in his view, is determined by the affection; wherefore it does not precede it: of this sort is the knowledge of art, which, after the decree of the will about doing the work, directs that the thing be done in this or that way

But Caietan's opinion is false: for who will deny that the dictamen of prudence, and the judgment elicited from deliberation and preceding the will, or the proposition of synderesis, whereby some honest end is proposed and precedes every affection, are practical? For these habits are practical; therefore their operations will be practical. Why then is practical knowledge posited only after the affection, for executing what has been decreed, and not also for moving the affection itself, so that it will something be done? Therefore, by the same token, in God the intellection which naturally precedes every determination of the will, and proposes diverse external works as good, to be done in this or that way, will without doubt be practical - unless that in God the truer solution be this: God proposes various things which he could do; yet although naturally the intellect, before every affection of the will, represents them, it necessarily moves to none of them. For in order that the will be necessarily moved by the intellect, it is not enough that there be no defect on the part of the proposer; it is also required that there be every ratio of the good in the object, by reason of which the will is necessarily moved. Wherefore, since various things are proposed to God which he could do, but in none of them is the will found to have the whole ratio of the good, even if in the divine intellect there be no defect in the proposer, the will can not will this or that; and that which it freely chooses, it does not will because it is proposed to it as the greater good, but because it so wills. For God does not choose one, leaving another, because the one is compared with the other and is preferred as the greater - otherwise than we, when we choose one means by deliberation, another being left aside: which difference we shall explain more fully in I-II, q. 13, a. 6.[1161]

Whether, after the practical judgment by which a thing to be done is proposed to the will, and after the election and affection of the will, there follows another practical act of the intellect after the manner of command (in which Caietan seems to place the operation of art), depends on what we shall say in I-II, q. 17, on the act of command with respect to the motion of other powers. And also, whether in God such an act must be conceded according to our mode of understanding, we shall say below in disputation 87, cap. 2. Be that as it may, whether we say such an act exists, which Caietan thinks is of art, or not; we cannot deny that that judgment which precedes election and the affection of the will, and proposes something to be done, is practical. And thus far concerning the knowledge of God.

1161. St. Thomas, Summa theologiae I-II, q. 13, a. 6; see also I-II, q. 17 on the act of command.

Quaestio XV - De Ideis

After the consideration of the knowledge of God, it remains to consider the ideas. And about this three things are asked.

The Angelic Doctor proceeds with what pertains to the operation of the divine intellect; for it is manifest that the idea of an art is either an operation of the intellect or something of it: and since God is the supreme craftsman of all creatures, it is necessary to posit in his mind, according to our mode of understanding, both the art and the idea of them.

Articulus I - Whether ideas exist

It is objected that ideas are not. For Pseudo-Dionysius says in the seventh chapter of On the Divine Names, that God does not know ...[1162]

1. Further, God does not know things according to an idea. But ideas are not posited for anything except that by them things may be known. Therefore ideas are not.
2. Further, God in himself knows all things, as was said above; but he does not know himself through an idea. Therefore neither does he know other things through an idea.
3. Further, an idea is posited as a principle of knowing and operating; but the divine essence (*essentia*) is a sufficient principle of knowing and operating all things. Therefore it is not necessary to posit ideas.

But on the contrary: St. Augustine says in the book Eighty-Three Questions, question 46, a little from the beginning: "The whole force consists in the ideas, so that unless these be understood, no one can be wise."[1163]

I answer that it is necessary to posit ideas in the divine mind. For "idea" in Greek is said in Latin "form" (*forma*). Hence by ideas are understood the forms of other things existing apart from the things themselves. Now the form of a thing existing apart from the thing itself can be in a twofold way: either such that it be the exemplar of that of which it is called the form; or such that it be a principle of the cognition of the thing itself, according as the forms of knowables are said to be in the knower. And with respect to both it is necessary to posit ideas, which is clear thus. In all things that are not generated by chance, it is necessary that the form be the end of the generation of anything whatsoever. But an agent would not act for the sake of a form unless inasmuch as the likeness of the form is in it. This indeed happens in two ways. In some agents there pre-exists the form of the thing to be made according to natural being (*esse naturale*), as in those which act by nature: as man generates man, and fire fire. In some, however, it pre-exists according to intelligible being (*esse intelligibile*), as in those which act by intellect: as the likeness of a house pre-exists in the mind of the builder; and this can be called the idea of the house, because the craftsman intends

1162. Pseudo-Dionysius, De divinis nominibus, cap. 7. (Only the opening of the first objection is preserved here in this extract.)

1163. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46.

to make the house like to the form which he has conceived in his mind. Since therefore the world was not made by chance, but was made by God acting by intellect (as will be made plain below), it is necessary that in the divine mind there be a form to the likeness of which the world was made. And in this consists the ratio of an idea.

Reply to the first: God does not understand things according to an idea existing outside himself; and thus also Aristotle in Metaphysics, book 3, text 10 (and likewise toward the end of book 3), rejects the opinion of Plato concerning ideas, according as he posited them as existing per se, not in an intellect.[1164]

Reply to the second: Although God by his essence knows himself and other things, nevertheless his essence is an operative principle of other things, not, however, of himself; therefore it has the character of idea, insofar as it is compared to other things, not however insofar as it is compared to God himself.

Reply to the third: God according to his essence is the likeness of all things. Whence an idea in God is nothing other than the essence of God.

Conclusion of the article: In the mind of God are the ideas of creatures. The text of St. Thomas is clear; but for a greater illustration of the doctrine, as is our custom, certain matters must be disputed by us.

Disputatio LXX - In what way creatures are said to exist in God

Caput I - What John Wyclif held

So that the things which must be said about ideas existing in the mind of God may be better understood, it will not a little conduce first to explain the mode in which creatures are said to exist in God: in which matter, although all Catholics and heretics with common consent assert that creatures, such as a stone, a horse, a man, etc., according to their proper natures are not formally the very God, but exist in him only as in a knower, being represented by his very intellection (as will be explained below), nevertheless John Wyclif followed a peculiar error on this point. For as Walden reports, book 10, book 1, article 1, chapter 1 up to 9, he used to assert in proposition 217 and 219 that these two propositions are true: "Every creature is God" and "Whatever you please is God." Moreover these two propositions are referred in the Council of Constance, session 15, among the errors of John Hus, disciple of John Wyclif, where in a certain schedule presented there was contained this conclusion. In the same way, as the same Walden writes in chapters 1 and 2, Wyclif argued as follows: Although it sounds ill to assert that an ass is God, and that any other thing whatsoever is God, and hence many do not admit this mode of speaking unless with the determination "according to the intelligible, or ideal being which a creature has in God," nevertheless simply and without any addition it can be granted; and, as is gathered from that chapter 2, explaining his view further, he said that this proposition, taken in its propriety and

1164. Aristotle, Metaphysics, book 3, text 10; and likewise toward the end of book 3.

logical rigor, is true: "Every creature is God"; yet not conversely, "God is some creature." He rendered the reason according to principles of logic which he fabricated out of his own brain: because the name "creature" of itself signifies any created thing in itself and in its own proper genus; and so also when it is posited on the part of the predicate. But when it is posited on the part of the subject, it supposes for the creature according to intelligible being, as in that proposition, "A creature is God": because, according to the rule of the logicians, "subjects are such as they are determined by their predicates"; that is, subjects are determined and limited by the predicates themselves, which are as it were certain additaments of them. The same he says of any name of a creature in particular, as "man," "ass," etc. From this doctrine he conceded likewise this proposition, "Every creature lives in God," "is coeternal with God," and others of that sort.

This error Manichaeus seems to have taught, as Fulgentius indicates in the book of Replies to the Deacon Ferrandus, question 3, a little after the middle; and Walden openly testifies in the place cited, whom there likewise he himself at great length impugns; but we shall refute him in the following chapter. Moreover Augustine, tractate 1 on John, at those words, "What was made was life in him," strove only against the Manichaean to prove that a stone does not live - as he falsely thought on account of those words of John - but that the idea of the stone existing in God lives, which is God himself.[116511661167]

Caput II - The Catholic truth against Wyclif is proved

Therefore, that we may more clearly refute the error of John Wyclif and confirm the Catholic doctrine, it will be worthwhile to explain what mode of speaking is to be observed, and also what is to be thought concerning the thing itself.

First, as concerns the mode of speaking, I do not see how, according to the true doctrine of logic, that name "creature," or "man" and the like, whenever they are placed on the part of the subject, if the name "God" is placed on the part of the predicate, can be taken to suppose for the creature according to the intelligible and ideal being whereby a creature is said to be in God; whereas, when they are placed on the part of the predicate, and the name "God" on the part of the subject, they are not taken in this way, but for the thing itself considered in its proper genus. For that rule of the logicians, "subjects are such as they are determined by their predicates," is understood when the predicates are such as by that very fact to indicate that the subject is to be taken in a signification other than the common one in which it is used: as when we say, "Man is a name," on the part of the subject "man" is posited, not for the thing, but materially for the word itself. But if we say, "Man is an animal," that predicate does not draw the subject away from its common signification, whereby the word signifies the thing itself which is a man. Likewise, when we say, "Man is a species," the subject "man" does not signify individual men, as if we were to say, "Man is an animal," but the common nature. Predicates of this kind, which change the common signification of a name posited on the part of the subject, are names which the logicians call of second imposition, such as these

1165. Thomas Netter (of Walden), Doctrinale, lib. 10, lib. 1, art. 1, cap. 1 - 9.
1166. Council of Constance, sess. 15 (condemnations of John Hus, including Wyclif's propositions).
1167. St. Augustine, In Iohannis Evangelium tractatus 1, on John 1: "Quod factum est in ipso vita erat."

words "name," "word," "species," or "genus." When, however, on the part of the predicate there is a word of first imposition, that is, which signifies the thing itself, it does not change the common signification of the subject, which is posited for the thing itself signified: as in those propositions, "Man is an animal," "Man is not a stone." Therefore likewise in those propositions, "Man is God," "A creature is God," the predicate cannot extract the subject from its common signification, because it is a name of first imposition; or certainly the same would have to be said of these propositions, "God is a creature," "God is a stone," when the name "God" is put on the part of the subject, namely, that the predicate be understood according to that mode in which it can be predicated of God, to wit, according to intelligible being. For if a predicate of first imposition limits or varies the signification of the subject, it will likewise make the subject vary the predicate. Wherefore, if we inspect the propriety of speaking, the error is manifest in those propositions, "A stone is God," "Any creature whatsoever is God," unless that addition be expressly made: "according to intelligible or ideal being," placed on the part of the subject. But Wyclif erred in this, that he granted those propositions absolutely, not with an apposition; although he asserted that by force of those propositions that is always to be understood which we have set out above is to be added on the part of the subject. Yet he thereby thought that each creature in its proper genus is God; at least he did not expressly deny this.

Primum. The intelligible or ideal being of creatures in God is twofold. One is that which we call formal in the knower, namely, the very formal concept and expressed species by which the thing is known, which in God is nothing other than the one divine essence (*essentia*), insofar as it represents creatures; and according to this, as will be shown in the following disputation, the very divine essence is called the idea of creatures. In this way, a creature according to intelligible being is God himself; and in this sense every creature is said to live in God.

The other intelligible, or ideal, being of creatures in God is objective being, and ought to be explained in God after the same manner as in our cognition. For when I think Rome, there is in my intellect not only that quality which is called "cognition," by which the thing itself is represented, but also the very thing which I think, and which is represented by my cognition; that is, as something represented in the mind. For Rome, however great it is and corporeal, does not enter really into my small and spiritual mind; but it is only represented. Whence it is manifest that something other than the quality itself and the thought is contained within the mind or phantasy, namely, the thing thought - only in such wise that the cognition is present as a quality, while the thing represented is said to be there only objectively and by way of presence. Thus must we, so far as this mortal life permits, philosophize about the divine intellect: namely, that in it not only do we say there are the forms - which is the cognition, and the expressed species of all things, and the formal representations in the divine mind - but also that all creatures and all things known are objectively present; and that in him they have intelligible, or ideal, being.

Scotus calls this a certain diminished being in I, dist. 36, q. 1, in which being, he affirms, the very act of the divine intellect produces things from eternity; which mode of speaking later writers have censured more harshly than it deserves, perhaps not grasping his mind. For neither did he think that things have from eternity any real being outside their causes; but he therefore called that

being of theirs "diminished," because it is only objective being by the operation of the divine intellect. Nor does he deny that all things possible and future are objectively present to the eternal divine intellect.[1168]

This diminished being, together with Scotus, Walden concedes (loc. cit., c. 11), while Gabriel (Biel) variously and without success reproaches Scotus in I, dist. 3, q. 1; and many Thomists, seeking to oppose Scotus, have held that things have had from eternity that diminished being, understanding that being to be something real existing outside their causes - which Scotus never imagined - nor did he teach some act of existence midway between the non-being of the thing and its existence outside its proper causes; but only that possible being of creatures, according as from eternity they are objectively known by God.[116411691170]

Furthermore, Augustine in the same tractate on John, at those words "What was made was life in him," says that the stone, and all other things which were made by God, insofar as they are in him, have life in him; and thus, although absolutely it may be said by us, "the stone lives," nevertheless we must say with Augustine, "the stone lives in God": indeed, in that in which it lives God himself is the life by which it lives. Hence, whoever were to say "the creature, according to the ratio of the idea, is God himself," or "lives with the life of God," would not err; but if he were to say absolutely "according to ideal being it lives the life of God, or is God himself," a distinction must be applied. For "ideal being," or "intelligible being," can be taken in a twofold way, as has been said: either for the formal concept in the mind of the knower - namely, for the divine essence representing creatures, and then the sense would be sound - or for the objective being of the known thing; and then, since the objective being itself is not the thing's own formal essence, but only its representation in the knower, it will not follow that the creature is God, or that it lives the life of God, save by reason of that which is the very divine essence representing it. Therefore, it is better and safer to say with Augustine that creatures are better, and more well said, to live in God than to live God, and to be in God than to be God.

Disputatio LXXI - On ideas

Caput I - Preliminaries concerning the name "idea" and its reception; that ideas of creatures are in God

Before we address the question proposed, two things must briefly be premised. First: according to the doctrine received by all from Augustine, in the work on the Eighty-Three Questions, q. 46, the Greek ἰδέα is the same as what in Latin is "forms" (forma), not just any forms, but the prototype, after the likeness of which something is said to be made, which Augustine called the "original form," and which we commonly in created artisans call the "idea." For it is sufficiently

1168. Scotus, Ordinatio, I, dist. 36, q. 1.
1164. Aristotle, Metaphysics, book 3, text 10; and likewise toward the end of book 3.
1169. Thomas Netter (Walden), loc. cit., cap. 11.
1170. Gabriel Biel, In I Sent., dist. 3, q. 1 (criticizing Scotus).

manifest that that form by which someone conceives inwardly what he is to construct outwardly according to its likeness - so as to build a house or paint an image - is called the idea of the art. Second: without controversy all teach that the ideas of creatures are in the divine mind. Among the philosophers, thus Plato asserts this in the Timaeus; indeed, as Augustine says in that question 46, he was the first who invented the name "idea," though not the first who disputed concerning the matter. For, as Eusebius writes in book XI of the Preparation for the Gospel, Socrates was the first to discourse about ideas, from whom Plato received it - or rather, as Justin testifies in the Paraenetic Oration to the Greeks, he received it from Moses, when the Lord said in Exodus 25: "Look, and make according to the exemplar which was shown you on the mountain." Plato, however, is affirmed by Augustine in City of God XII, c. 26 to have asserted that the ideas are in the mind of God; wherefore either Aristotle did not understand Plato, or interpreted him malignly in order to attack him more freely, when he alleged that Plato posited the ideas as certain universal natures separated, by the participation of which singulars are produced; whereas from Plato's words this is not gathered. The same ideas to be in God are taught by Seneca, Epistle 66. Among the Fathers, in express words Pseudo-Dionysius, in De divinis nominibus, cap. 5, not far from the end; Augustine in the places cited; and in City of God XIV, c. 25; finally, in the Literal Commentary on Genesis, c. 15 and c. 14; and in book VI, q. 19 and q. 46; in which places that saying of John 1, "What was made was life in him," he refers to the ideas and the rationes of things existing in the divine mind. For this reason I do not see that anyone should doubt this mode of speaking.[1171]

What, however, the name "idea" signifies in something existing in God, not all the Schoolmen feel in the same way. The opinion of Scotus in I, dist. 3, q. 1, ad 1, is that, first, the ideas in the divine mind are the creatures themselves objectively existing in it, that is, that diminished being which was explained in the preceding disputation. Next, that the idea of creatures is not the very essence of God, even as it has the ratio of intellection and of a representation common in some respect to creatures. With Scotus agree Ockham in I, dist. 35, q. 5; and Gabriel, q. 5, art. 2, notab. 2, and the like. And they add that an idea is whatever of creatures according to objective being, but that it also connotes the divine essence, because in it they are represented. Their opinion Major de Richelieu judges more probable in the same distinction, q. 1, at the end; and with them sides Richard in I, dist. 36, a. 3, q. a., in this, that he teaches that among the other acceptations the idea can be taken in this way; yet he also concedes that the very divine essence admits the signification of "idea." Altogether, indeed, Durandus in I, dist. 36, q. 5, and Alliacensis in I, q. 6, a. 3, seem to have followed this sentence: for first they teach that creatures objectively existing in the divine mind are perfectly the ideas of things; and then they add that the divine essence is in some way the idea of creatures, but imperfectly: for if it be considered according to those perfections by which it is opposed to creatures as infinite and uncreated, it is in no way an idea, not even an imperfect idea - for in this respect creatures do not imitate it at all; but if according to other respects, such as wisdom, life, and the like, they say it is in some fashion an idea -

1171. Pseudo-Dionysius, De divinis nominibus, cap. 5; St. Augustine, De civitate Dei XII, c. 26; XIV, c. 25; De Genesi ad litteram, c. 14 - 15; VI, q. 19; q. 46; Seneca, Epistula 66; Eusebius, Praeparatio Evangelica, XI; St. Justin Martyr, Oratio paraenetica ad Graecos; Exod. 25:40.

That the essence of God, not a thing objected to the divine intellect, is the idea, is the truer opinion.

Lastly it is urged by the testimony of St. Augustine, On Eighty-Three Diverse Questions, q. 46, where he says that a horse and a man are not constituted by the same reason, that is, not by the same idea. But if the divine essence were the idea, the idea of a man and of a horse - indeed, of all things - would be the same; therefore by the same reason a horse and a man would be constituted. [1172]

The Scholastics, indeed, whom we shall mention below - excepting certain recent authors who follow this opinion - do not so expressly affirm the former part; nevertheless they plainly teach that the idea of creatures is the very essence of God, from which it is manifestly gathered that they held that creatures existing objectively in the divine intellect are not ideas. More recent Thomists, however, not only say that the idea is the divine essence itself, but also expressly affirm that it is not possible for the creatures themselves to exist objectively in the divine mind, as Scotus asserted; and they charge the aforesaid opinion of Scotus with rashness, because it opposes without reason the common consent of the holy Fathers and Doctors. Yet they judge of it too harshly, both because not a few Scholastics, whom in the preceding chapter we reviewed, followed it, and because many testimonies of the Saints against it cannot be produced, as we shall see in this chapter; and also because the aforesaid authors handed down that opinion not without a probable foundation. For the three reasons alleged will not lack their own likelihood and force, as it will appear in the following disputation. Nor indeed, as some of the more recent authors think, does the opinion of Scotus have anything in common with the error of Wiclef, as is evident from what has been said; wherefore they wrongly confound it with his error.

Nevertheless, this opinion of Scotus and of others has always seemed to me less probable. Passing over many reasons of lesser weight that our theologians heap up, I will contend with a single argument, which not only refutes it as false and at the same time confirms our view, but even overturns its foundations as well. And although this argument directly refutes the former part of Scotus's opinion and also confirms the former part of our own, it nevertheless effectively recommends the latter part too. For if it has once been demonstrated that creatures objectively existing in the mind of God are not the ideas of things, it follows that the idea is the very divine essence; for nothing else seems to remain. The argument is as follows.

The idea is that exemplary form which, when the craftsman looks upon it, he produces something else after its likeness. When I say "something else," I indicate that the very thing produced by it must be distinct; for utterly the same thing cannot be the idea of itself, nor can it be its own principle through the intellect. For nothing is said to be made in the likeness of itself or according to its own likeness, but in the likeness of another and according to the likeness of that other. And thus we see that, in the first instance, the idea was said to be some object proposed outwardly to the eyes, which someone might imitate in his work. Wherefore, unless a created craftsman had either outwardly or in his mind some thing distinct, yet similar to the work which he

1172. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46.

is going to make, he would not be said to have an idea or exemplar. For example, if some craftsman had a mind so keen that he saw the very thing he was going to make in precisely the way it would be in the future, and if by that cognition and concept he would make that very thing, he would not be said to have had it as the idea of that work, nor to have made it after its likeness; rather, he would have expressed in his work precisely the same thing that he had in his mind.

Now, however, every created craftsman conceives in his mind what he strives to execute in work, such that it is not the same, but different - yet similar in proportion, figure, and other such features. Just as when a craftsman builds a great house, he has either outwardly, or at least by knowledge, a certain small model of it; or even if he apprehends inwardly the great house itself, to the likeness of which he builds another, he never conceives it in the way in which he afterwards sees it produced. From this it is manifestly gathered that the thing apprehended in the mind of the created craftsman is different from the thing itself made or produced; and thus it is quite properly said that from the very fact of making he forms for himself a new and distinct "image" (idolum). Wherefore it is no wonder if that thing, confusedly conceived in the mind of the craftsman, after the likeness of which the work is to be made, is called the idea; but not so in the mind of God with respect to the very things themselves.

Obiectio. But someone will object in this way: In some respect the thing made and existing outside is distinguished from itself as objected to the divine intellect. For outside it has true real existence; in the intellect, however, it does not have this, but is only apprehended. Therefore this difference will suffice, so that a thing objectively existing in the intellect may be called the idea of itself, as it exists outwardly.

Responsio - I answer that this difference is nothing, such that a thing objected to the intellect should be called an idea.

Secunda conclusio. It remains now that we do the same concerning the latter part, proving against Scotus that the divine essence is the idea of all creatures - that which we said is the common tenet of the theologians. And this is first of all the opinion of St. Thomas, Cajetan, and the Thomists in this article; which is also followed by Alexander,[1173] Albert,[1173] St. Bonaventure,[1173] Giles, [1173] Dionysius,[1173] Capreolus,[1173] Thomas of Argentina,[1173] Ferrariensis on Contra Gentiles,[1173] and Henry of Ghent,[1173] who all agree in this one point.

...such that they teach, or at least clearly suppose, that the divine essence is itself the very idea of creatures, even if they are not sufficiently in agreement about the mode of explaining this opinion, as we shall report in the following disputation. And Richard also, in part, favors this, in I, d. 36, a. 3, q. 2, in that he asserts that the notion of idea can belong to the divine essence; but because he also teaches that it belongs to creatures objectively existing in the mind of God, he is not to be cited in favor of our position. The Major, however, in the place cited above, deems both opinions to be probable.

It is proved first by the authority of the passages of St. Augustine cited in the first chapter of this disputation: where, since he says that creatures live in God, that they are incorruptible, and exist in a much better way than in themselves, without doubt he understands the very divine essence, in so far as it is said to contain them by representation; as we openly drew from his words in the disputation above, chapter 3; but especially from book 6 of the Questions, question 26, and Tractate 1 on John, and City of God XI, chapter 29, where he teaches that the art and the idea of created things live in God with the very life of God, which, as we showed there, can be understood of nothing other than the very divine essence; and in that tractate he expressly proves, against the Manichee, that a stone does not live - as the Manichee falsely inferred from the words of John - but that its idea lives, which is God himself.[1174]

Second, it is proved from Boethius, Consolation of Philosophy III, meter 9, where he calls the idea which God has the supreme exemplar, although this also could in a certain way be explained of the very reality as represented and contained from eternity in the mind of God; for thus it seems in some respect to be the supreme exemplar.[1175]

Third, it is confirmed by Pseudo-Dionysius, who in On the Divine Names, chapter 5, says that the exemplars of things are in God, which Scripture calls predestinations and good wills and that which constitutes and makes all things. And he adds these words: "Just as God, who in his essence surpasses the things that are, both pre-established and brought into the light" - which all can be understood only of the very divine essence; for it is itself the good will, or the predestination, which

constitutes and makes all things. However, Dionysius defines the idea through will, although formally it pertains to intellect, because even the will of God is rightly regulated by the idea itself and by intellect.[1176]

But on the contrary: to the confirmation I say that the divine essence, according to its existence (*esse*), is indeed in a certain way dissimilar to created things; nonetheless, because it represents all things, each creature is said to be made to its imitation, as we shall see in the following disputation; and this representation suffices for its truly to have the notion of idea. Finally, the testimony of St. Augustine alone proves the distinction of the notion of idea in regard to some particular thing: he distinguishes the divine essence, in so far as it is the idea of man, from itself, in so far as it is the idea of a horse, as will also be said there; and this is enough, if Augustine has said that man and horse are not conceived under the same ratio in God.

And at length Richard judges this opinion to be probable. But Cajetan says it is so true that he affirms it is not accidental to the divine essence to exist intrinsically in God so as to bear the true ratio of idea: for even on the impossible concession that it were present only objectively in the intellect of God, it would nonetheless truly have the ratio of idea; just as happens in a created artificer: for the object which the artificer proposes to himself, that by its likeness he may make another thing, is truly for him an idea and exemplary form. In God, however, although a possible creature thus apprehended of itself, as existing, cannot be idea (as was shown in the preceding disputation, because it is altogether the same as that thing; but the idea ought to differ from the work itself), nevertheless the divine essence, known as imitable, can be the idea of creatures, since it is distinguished from them; and it will be idea only for this reason, namely, in so far as it is objectively present to the divine intellect: therefore it is from elsewhere that it happens to exist intrinsically in God.[1177]

From all of which it may be gathered that what Alliacensis added, following the former opinion, is false: namely, that the notion of idea belongs to two of the Persons proceeding in the Trinity, to the Son and to the Holy Spirit, not to the Father nor to the divine essence. Indeed, he says that perhaps the notion of idea more properly belongs to those Persons than to creatures objectively existing [in the mind of God]: for he thinks that it belongs to the ratio of idea to be able to be produced; and because neither the divine essence nor the Father is produced, therefore he assigns that notion only to the Son and the Holy Spirit. He deduces this too from the same principle: for just as he said that creatures, known as producible, are the ideas of that which is to be produced; so also the Son and the Holy Spirit, known in the intellect under a possible existence, will be called the ideas of themselves, since they are to be produced. Therefore from what has been said it follows that this opinion is false, because if a creature previously apprehended is not idea of itself, as producible - as we have hitherto proved - so neither are the Son and the Holy Spirit idea of themselves: for the same reasoning obtains in both cases. Nor indeed did Alliacensis think that the Son and the Holy Spirit are the idea of any creature: for no one would say that unless he were an Arian; nor did Alliacensis dream of such a thing.

1176. Pseudo-Dionysius, De divinis nominibus, c. 5.
1177. Cajetan's clarification is in his commentary on Summa Theologiae I, q. 15, a. 2 (context of the ideas).

Now the foundations of the former opinion collapse easily. For to the first and the second argument of Scotus I reply: although in the mind of a created artificer the very thing objectively present is truly an idea, because it is a form in the likeness of which something is made, nevertheless in God it cannot be so. The reason for the difference is manifest, which we have set forth above in this chapter. Why, however, in the mind of the creating Artificer the Word and the Spirit, as expressed, are not the idea of the art, will also become clear in the following disputation.

Disputatio LXXII - By what reason the essence of God is the idea of creatures

Caput I - Various opinions of the Schoolmen

Since all the Doctors, in favor of the second opinion commemorated in the preceding disputation, with one voice proclaim that the idea of creatures in God is not creatures objectively present to him, but the very divine essence itself, nevertheless in unfolding this pronouncement they vary, nor do all teach things consistent with reason. It pleases me, then, to touch briefly upon the sense of each, so that we may be able to explain this matter more truly and more easily.

First opinion, that of Richard. Richard, in I, d. 36, q. 2, a. 2, among several acceptions of idea which he there reviews, affirms that the essence of God is the idea of creatures for this reason, that it is in reality distinct from them and imitable; and thus he attributes the notion of idea to the divine essence not in so far as it is understood as imitable, but without any order to the intellect. By contrast, St. Thomas, Cajetan, and other more recent Thomists, in article 2 of this question, and Giles in I, d. 36, a. 2, q. 2, ad 2, and Henry of Ghent in Quodlibet IX, q. 3, and Ferrariensis on Contra Gentiles I, chapter 54, teach much more probably that the notion of idea belongs to the divine essence in so far as God understands it as imitable by creatures: for thus it is compared to God as understanding, as a kind of word, or as a kind of intelligible species of creatures representing them, but in so far as it is some object known in a way imitable by creatures, it is the idea of them.[1178]

However, that opinion of Richard is false; this will be evident from what we shall say; both because the divine essence, as it is an object known and only the cause of creatures, is in no way imitable unless in so far as it is cause by cognition; and also because it can be the idea of creatures only for the reason that it is cognition and their word; but in this way it is not something accidental to the essence, that it be in God.

Now since we have that the essence of God is idea in that respect in which it is referred to the intellect, as imitable, it is still difficult to explain how it is imitable by creatures, which seem altogether opposed to it...[1179]

1178. St. Thomas, Summa Theologiae I, q. 15, a. 2; Cajetan ad loc.; Giles of Rome, In I Sent., d. 36, a. 2, q. 2, ad 2; Henry of Ghent, Quodlibet IX, q. 3; Ferrariensis (Francisco de Ferrara), In Contra gentiles, I, c. 54.

1179. The continuation and fuller explanation are taken up in the next chapter of this disputation.

St. Thomas, Giles, and others. On this matter St. Thomas and St. Giles say nothing explicitly. But Henry, Cajetan, Ferrara, and other more recent Thomists cited above say that all creatures are made to the imitation of the divine essence, because in it every perfection of theirs is contained by an eminent rationale, although not formally; and they judge that this is sufficient for it to be the idea of them all: by looking upon it as eminently containing the perfections of creatures, God is said truly to produce any creature after its likeness.

Refellitur primo. Yet this position, if it rests only on the principles thus laid down, seems weak. For when it first asserts that the essence of God by power and by eminent rationale contains any perfection of a creature, it understands the perfections of creatures to be in God as in an equivocal cause, because he can produce them, not by the power of a form of the same rationale which he has in himself, but by reason of a higher nature - just as the sun can produce heat, not by heat, which is a form of the same rationale, but by light, which belongs to a higher nature - which is for the perfection of the creature to be in God eminently, not formally. But on this rationale the essence of God cannot be an idea, just as neither can the light of the sun be assumed as an exemplar form for producing heat. For as no intellect, however perspicacious, by looking at light would be said to produce heat after its likeness, and therefore to have it as the idea of heat, so neither can any intellect, by looking at the essence of God - on the ground that it eminently contains the perfections of creatures - have it as the idea and exemplar form of them. For either the intellect looks at what is formally in the divine essence - and this is altogether dissimilar to creatures; therefore to its imitation no creature can be made - or it looks at that which is in the essence of God eminently, namely the created perfection itself; and this cannot be an idea to the divine intellect: for thus the creature, objectively present to God, would be the idea of itself; therefore we should fall into the position of Scotus and of others impugned in the preceding disputation. And certainly, second, from an inconvenience: if the divine essence, insofar as it contains creatures as seed, were their idea, it would be an idea more imperfect than it could be; for the greater perfection of an idea consists in this, that it be imitable in a more perfect mode: but the essence in this way is imperfectly imitable, since it is only made like to the effect according to that which it contains by power, not according to that which is formally in it.

But if someone should say that the essence of God, insofar as it is cognition and the expressed species of creatures, is their idea in the mind of God, and that creatures are produced after its likeness, because God is their cause by his intellection, insofar as he knows them, not by his substance, insofar as it is - surely this is most true, as we shall demonstrate in the following chapter. Yet that this is not the view of Cajetan, or Henry, is manifest: for when they assert that the essence of God, known as imitable, is the idea of things, they speak of it insofar as it is the primary object of God's cognition, not insofar as it is cognition itself, or the expressed species, or the word of creatures. Then, when Cajetan says that the divine essence, insofar as it is known, for this reason alone would be an idea, even if it were not formally but only objectively in God himself, he plainly speaks of it not as it is cognition of creatures, but as it is a thing only known and the primary object. For if, insofar as it is cognition, it were not in God, it could not itself be the idea of creatures, as is sufficiently clear: therefore he speaks of the divine essence, not insofar as it is cognition, but

insofar as it is, and insofar as by its substance it is the efficient principle of creatures and the primary object of the divine intellect. But on this rationale it has been sufficiently proved that it cannot be an idea imitable by creatures.

The divine essence, insofar as it is cognition and a likeness as it were expressed of creatures, to be their idea, is the more probable opinion.

It is therefore established that the divine essence, insofar as it represents creatures - because it is their cognition, or word - is their idea. For by this rationale alone can creatures imitate it and be made after its likeness. Wherefore the likeness required between an idea and the thing of which it is the idea will not be according to the unity of the same form, as between two white things, but according to representation, as a species or word of some thing is said to be a likeness of that thing, even though at times they are far different in nature and quality.

This view is taught expressly by St. Bonaventure in I Sent., d. 35, a. 1, q. 1, in the body, and by Capreolus; and is gathered from St. Thomas in I Sent., d. 36, q. 1, a. 1, ad 1, and from St. Thomas below, q. 19, a. 4, where he teaches that things are in God as in a cause, according to the mode of a cause; and because he is a cause through the intellect, therefore [they are] in God as in a knower. Therefore, if, as the Thomists admitted, the divine essence is the idea of creatures insofar as it has them eminently in itself as a cause, and is their cause as [one who] knows, it follows by this rationale that it is their idea; and in this sense that statement ought to be explained in this question, article 2, in the solution to the first objection, when he says that the essence of God is the idea of creatures, insofar as it is a likeness or rationale of this or that thing; and in the same way he is to be understood in the body of the article, where he says that the essence of God is the idea of creatures, insofar as it is participable according to some mode of likeness, that is, of representation. [1180] The Thomists, however, were deceived in that they thought that God is the proximate cause of all things by his essence, insofar as it is, not insofar as he understands and wills; which we shall show to be plainly false in disputation 81. Therefore they maintain that in his essence, insofar as it is, the perfections of creatures are contained, as in a cause, by a certain more eminent rationale, and thus [that it is] in some manner imitable by creatures. Hence they also taught above in disputation 60 that God beholds a creature in himself as in a cause, insofar as he is. But since, as we proved there, in that way God could not see creatures in himself, therefore it is necessary that he only behold them in himself as in a mirror, that is, as in the expressed species of them; and because, as we shall say below in disputation 81, God is the proximate cause of creatures through intellect and will, insofar as he understands and wills, not insofar as he is, by stronger reason we must say that his essence is only the idea of creatures, insofar as it is their cognition, and that in this way it is most perfectly imitable.

Moreover, that we may understand this better, the doctrine of St. Bonaventure in the place cited is to be noted, who says that between two things three kinds of likeness can be conceived. The first is of participation; he understands it according to a univocal rationale, whereby each thing formally

1180. St. Bonaventure, In I Sent., d. 35, a. 1, q. 1, in corp.; Capreolus; St. Thomas, In I Sent., d. 36, q. 1, a. 1, ad 1; gathered also from St. Thomas, Summa Theologiae I, q. 19, a. 4.

participates, and this can in no way obtain between God and a creature. The second is of imitation; and this he says is small between God and created things; he understands it according to an analogical rationale, on account of which Durandus in the preceding disputation taught that the essence of God can be the idea of creatures, yet imperfect and only according to some perfections, not according to all. The third, says Bonaventure, is likeness according to expression and representation, such as is between an intelligible or sensible species and the thing itself, or object; for although they are wholly diverse in rationale as to existence, nevertheless by representation and expression they are assimilated. Now this kind of likeness is the more perfect, the more the species itself, or intellection of the thing, is more expressive and proper; and if it be quidditative and of the thing as such, it will be most perfect in its genus of likeness. And since the divine essence in a most perfect way and to the life understands things by a proper and quidditative concept, so that its essence, because it is itself the cognition and the expressed species of creatures, most perfectly represents them, it follows that by this kind of likeness it is most perfectly imitable by them; for thus are they altogether in reality produced, as the divine essence represents them.

I judge this opinion, thus explained, to be much more probable than the others: first, because no other way seems to remain by which, according to the doctrine of the holy Fathers and of the philosophers, we may say that there are ideas of things in the mind of God, as is clear from the refutation of other opinions; second, because by this way there is excellently explained the kind of imitation and perfect likeness which can exist between God and creatures with the necessary distinction between idea and thing, so that the divine essence may be called their idea and exemplar form imitable by them.

But someone will object. If this were so, it would follow that the idea in the mind of a created artisan would not be a thing objectively present to it, as was concluded above in the disputation, but the very word or expressed species. Yet in neither case is it proved that the word itself or the expressed species can be an idea: for an idea seems to be that exemplar form which someone, by looking upon it, fashions another after its likeness. But God is not said so to look upon his own essence, insofar as it is the word of creatures, that by force of this gaze he should do anything in imitation of it; for neither because he looks at his essence, as it is the expressed species of creatures, does he make them, but insofar as he looks at the creatures themselves by his essence as by a species, he immediately produces them. And this is proved much more easily about the word existing in the mind of the artisan: for no artisan, looking at a quality which he has in the thing itself, but only looking at the thing set before him under that quality, makes some work.

I answer: there is a difference between the word itself, or the expressed species in the mind of the artisan, and the divine essence insofar as it is the species and word of creatures. For the word itself in the mind of the artisan is not such that in it the thing be seen and that the artisan operate after its likeness; but by some reflexion it can be known, yet imperfectly: whereas the essence of God is surely first seen by God, because in it, as in a word and species, creatures are seen by God, as was explained above in the disputation. Wherefore an artisan, when he is said to work by an interior idea, ought not first by a reflex operation to intend or to know his own word, but only the thing itself which he apprehends, after whose likeness he ought to exercise the work. But God, in

order to know the creatures which he is about to make, first contemplates his own essence, in which they are, as it were, expressed by a word; because the divine essence is both the primary object, and the word or the species of a secondary object, that is, of creatures. And since, from the fact that the essence of God makes God himself to be one who understands himself, it also renders him one who understands creatures, as we said at article 10, therefore that gaze by which God beholds his own essence seems to be suitable to the notion of idea, so that by looking first to it he is then said to make creatures after its likeness as to expression and representation. Then I answer that it does not belong to the notion of idea that, the artisan looking upon it, he actually perform the work; rather, it suffices that the artisan, or God, have in himself some form which is the principle of a work through the intellect, and that he express the work itself according to the imitation and likeness of that form, in this or that way, whether according to the unity of the same form univocally, or according to representation, as was said. Nevertheless, I do not say that two words are made in the artisan's mind, but that the very object which he proposes to imitate makes the idea. The reason, moreover, why the divine essence is the idea of creatures is not that it is objectively present. The reason, however, for the distinction is manifest, because to the notion of idea there is required also a work which imitates it, proximately or remotely. Now the artisan's work proximately imitates the thing objectively present to the intellect: for that is distinguished from the work, and the intellect from the intelligible; the species, or intellection, is by its nature apt to be denominated as being, as it were, assimilated to its object. Therefore the work imitates only remotely the word or the species existing in the artisan's mind, according to that representation by which it is proximately assimilated. Hence the idea of the work is the work expressly exhibited by the artisan, not the expressed species or the word of that work. But since any creature whatsoever, which is the work of the supreme artisan God, does not imitate an object present to the divine intellect - for this is the creature itself as apprehended in the very mode in which it will be - and therefore does not imitate the species, on this account the objection is removed that what is present to God is not the idea of the creature to be produced. Therefore it follows that whatever creature is to be produced by God imitates the divine essence as it is the expressed species or his word, which it principally has before it, since nothing else existing in the mind of God can be more closely imitated by a thing to be produced.

I confess indeed that the holy Doctor indicates this point somewhat obscurely, namely that the idea in the created artisan's mind is the species of the work which the intellect expresses; not so much that it is something objectively present, as that it is a quality after the manner of a form which we call the word. Yet without doubt the very word is the idea in the artisan's mind; and of this opinion is St. Thomas, as we showed in disputation 39 - to say what seems true. From this doctrine it is gathered, first, that the notion of idea properly is common to the three persons, just as the essence is common: for this is the idea of creatures, which not the Son alone is said properly to bring about, nor is the Father alone said to have made; but through, as it were, the medium of the idea. Yet the notion of idea is attributed to the Son alone according to appropriation, just as the Holy Spirit is called the principle of grace; and in the same way the production of the world is attributed to the Father alone through the Son as through an idea, because art and idea pertain

formally to the intellect, by which the Son is begotten, and the effect of grace to love, by which the Holy Spirit proceeds. Thus also you will understand what St. Thomas says below, q. 45, a. 8, where he teaches that the Son of God is fittingly appropriated as the principle of creatures, since he proceeds through the intellect; for in the reply to the second he says that to the Son alone, by appropriation, belongs the rationale of art and of idea.[1181]

I answer that there is a difference between the word itself, or the expressed species in the mind of the artisan, and the divine essence inasmuch as it is the species and word of creatures: for the word itself in the mind of the artisan is not seen, so that in it the thing may be seen and the artisan may work after its likeness, but it can be known by a certain reflex act, though imperfectly; whereas the essence of God itself is assuredly first seen by God, in which, as in a word and species, creatures are seen by God; as was explained in disputation 60. Wherefore, in order that the artisan be said to work by an interior idea, he ought not first by a reflex operation to gaze upon or know his word, but only upon the thing itself which he apprehends, after the likeness of which the external work ought to be made; but God, in order to know the creatures which he is going to make, first beholds his own essence, in which, as in a word, they are expressed, because the divine essence is at once the primary object, and the word or species of a secondary object, that is, of creatures. And since from the fact that the essence of God makes God himself intelligent of himself, it also renders him intelligent of creatures, as we said in that article 6; therefore that gaze by which God beholds his essence seems to conduce to the rationale of the idea, so that, looking first to it, he is then said to make creatures after its likeness, as to expression and representation.

Then I answer that it does not belong to the rationale of the idea that the artisan, looking to it, be said to imitate it by the work itself as proceeding from such a gaze: but it suffices if the artisan, or God, have in himself some form which is the principle of work through the intellect, and express it to the imitation and likeness of that form in this or that way, whether according to the univocal unity of the form, or according to representation, as was said above: nonetheless, I say that the word in the mind of the artisan is not the idea, but rather the very object which he sets before himself to imitate most closely, not, meanwhile, that the idea be the object; but in God his essence is the idea of creatures, not the thing itself objectively present. The reason for the difference is manifest, because to the rationale of the idea it is also required that the work made imitate it proximately, not remotely: but every work of the artisan imitates most closely the thing objectively present to the intellect; for that is distinguished from the work, and the work is assimilated to the intellect by reason of the very thing objected to it, as was said in the preceding disputation; but the work imitates only remotely the word, or the species existing in the mind of the artisan, by reason of the thing represented, to which it is proximately similar. Therefore the idea of the work is the thing apprehended by the artisan, not the expressed species, or the word of it. But because any creature whatsoever, which is the work of the highest artisan, God, does not imitate the thing objectively present to the divine intellect - for this is the creature itself apprehended in the same way as the very thing is going to be, and the same does not imitate itself - therefore that thing objectively present to God is not the idea of the creature to be produced. It comes about, then, that

1181. St. Thomas, Summa Theologiae I, q. 45, a. 8.

any creature produced by God imitates the divine essence, inasmuch as it is an expressed species, or his word, and holds this as an idea, since nothing else existing in the mind of God can be more closely imitated by the thing produced.

I admit indeed that the holy Doctor in article 2 of this question, to the second reply, not obscurely indicates that the idea in the mind of a created artisan is the form, or species, which the intellect expresses: yet he taught this because he elsewhere also thought that that which is understood is not the thing objectively present, but the inwardly formed quality, which we call the word. Thus, without doubt, the word itself would be the idea in the mind of the artisan; and that St. Thomas held this opinion we showed in disputation 39; but whether it be true was said there. From this doctrine it is gathered, first, that the rationale of the idea is properly common to the three persons, just as the essence is common: for by this the idea of creatures is; wherefore not the Son alone is properly called the idea, nor is the Father alone said to have made this universe looking to the idea, that is, to the Son; but to the Son alone, according to appropriation, is the rationale of idea attributed, just as to the Holy Spirit it is attributed to be the principle of grace; and in the same way to the Father alone is attributed the production of the world through the Son as through an idea, because art and idea pertain formally to the intellect, by which the Son is begotten, and the effect of grace pertains to love, by which the Holy Spirit proceeds. Thus is St. Thomas to be understood below, q. 45, a. 8, where he teaches that it befits the Son of God, by the power of his generation, to be the principle of creatures, since he proceeds through the intellect: for in the reply to the second he says that to the Son alone, by appropriation, belongs the rationale of the word of the artisan's mind, and of the idea of the causes to be produced; which will be explained more fully in its place.[1182]

Secondly it follows that the ideas are in God formally, not only virtually and eminently: for although created things are in God only virtually, or objectively, not formally, these nevertheless are not ideas of the divine intellect, but the very essence of the Godhead itself, which is in God formally, is called idea.

Thirdly it is inferred that the name Idea signifies not only the essence of God, but a respect to creatures, which, according to the common doctrine, which we shall hand down in disputation 104, chapter 6, cannot be real, but of reason.

1182. St. Thomas, Summa Theologiae I, q. 45, a. 8.

Articulus II - Whether there are many ideas

Objicitur that there are not many ideas. For the idea in God is his essence: but the essence of God is only one, therefore the idea also is one.

1. Further, as the idea is a principle of knowing and of working, so are art and wisdom; but in God there are not many arts and wisdoms: therefore neither are there many ideas. If it be said that the ideas are multiplied according to respects to diverse creatures. On the contrary, plurality of ideas is from eternity: if therefore the ideas are many, but the creatures are temporal, then the temporal will be the cause of the eternal.
2. Further, these respects are either according to the thing in creatures only, or also in God: if in creatures only, since creatures are not from eternity, there will not be from eternity a plurality of ideas, if they are multiplied only according to such respects. But if they are really in God, it follows that there is in God another real plurality than the plurality of persons: which is against Damascene saying that in divine things all are one, except ingeneration, generation, and procession.[1183] Therefore there are not many ideas.

But on the contrary: St. Augustine says in the book 83 Questions: "The ideas are certain principal forms, or rationes, of things, stable and unchangeable: because they themselves are not formed, and therefore are eternal, and always in the same way disposed, which are contained by the divine intelligence; yet although they neither arise nor perish, according to them, nevertheless, everything is said to be formed which can arise and perish, and everything which arises and perishes."[1184]

I answer that it is necessary to posit many ideas. For the understanding of this, one must consider that in any effect that is the ultimate end is properly intended by the principal agent: as the order of an army by the general. But that which is best among existing things is the good of the order of the universe, as is clear from the Philosopher in the twelfth of the Metaphysics.[1185] Therefore the order of the universe is properly intended by God, and does not come about per accidens according to a succession of agents, as some said, that God created only the first created thing, which created a second creature, and so on, until so great a multitude of things was produced: according to which opinion God would have had only the idea of the first creature. But if the order of the universe itself is per se created by him and intended by him, it is necessary that he have the idea of the order of the universe. Now the rationale of any whole cannot be had unless there are had the proper rationes of the things out of which the whole is constituted. Thus an architect could not conceive the form of a house unless with him there were the proper rationale of each of its parts. So, therefore, it is necessary that in the divine mind there be proper rationes of all things. Whence St. Augustine says in the same book 83 Questions that singulars were created by

1183. St. John Damascene, De fide orthodoxa, lib. 1, cap. 8; cf. cap. 10, cap. 11.

1184. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46 (medio), tom. 4: "Ideae sunt principales quaedam formae..."

1185. Aristotle, Metaphysics, lib. 12.

God by their proper rationes: whence it follows that in the divine mind there are many ideas. How this does not conflict with the divine simplicity is easy to see, if one considers that the idea of the thing to be made is in the mind of the maker, as the thing understood, not however as the species by which it is understood, which is the form making the intellect in act. For the form of the house in the mind of the builder is something understood by him, to the likeness of which he forms the house in matter. Nor is it against the simplicity of the divine intellect that it understand many things, but it would be against its simplicity if it were formed by many species. Hence there are many ideas in the divine mind, as understood by him. This can be seen in this way. He perfectly knows his own essence: whence he knows it according to every mode by which it is knowable. But it can be known not only according as it is in itself, but according as it is participable according to some mode of likeness by creatures. And each creature has its proper species, according as it in some manner participates in the likeness of the divine essence. Thus, therefore, inasmuch as God knows his essence as thus imitable by such a creature, he knows it as the proper rationale and idea of this creature. And similarly of the others. And thus it is clear that God understands many proper rationes of many things, which are many ideas.

Reply to the first: The idea does not name the divine essence inasmuch as it is essence, but inasmuch as it is the likeness or rationale of this or that thing. Whence according as there are many rationes understood from one essence, according to this there are said to be many ideas.

Reply to the second: Wisdom and art are signified as that by which God understands; but idea, as that which God understands. But God by one intellect understands many things, and not only according as they are in themselves, but also according as they are understood: which is to understand many rationes of things. As the artisan, when he understands the form of the house in matter, is said to understand the house; but when he understands the form of the house as conceived by himself, from the fact that he understands that he understands it, he understands the idea or rationale of the house. But God not only understands many things by his essence, but also understands that he understands many things by his essence: and this to understand is that there be many rationes of things, or many ideas, in his intellect, as understood.

Reply to the third: These respects by which the ideas are multiplied are not caused by the things, but by the divine intellect comparing his essence to things.

Reply to the fourth: The respects multiplying the ideas are not in created things, but in God. Yet they are not real respects, like those by which the persons are distinguished, but respects of the intellect by God.

The conclusion of the article is affirmative, which, by a single disputation together with the whole doctrine of the article, we shall briefly explain: besides this, there is nothing in this article which needs any further explanation.

Disputatio LXXIII - How in God there are many ideas

- In God there are many ideas distinguished only by reason. Caput I.

- The ideas in God are not distinguished by the divine intellect, nor by the human intellect seeing God, but only by that of the wayfarer. Caput II.
- In God there are not said to be many arts or sciences as there are said to be many ideas. Caput III.

Caput I - In God there are many ideas distinguished only by reason

The difficulty proposed has place only in that opinion which we followed in the preceding disputation: namely, that the idea of creatures in God is the very essence of God. For if the sentence of Scotus were true, which says that the ideas are the creatures themselves existing objectively in God, without doubt they would be many.

... that he understands himself to understand; therefore he understands many things by his essence, and this - to understand that there are in his intellect, as understood, many notions or many ideas.

Reply to the third: Those respects by which the ideas are multiplied are not caused by the things, but by the divine intellect comparing its essence with creatures.

Reply to the fourth: The respects multiplying the ideas are not in the things, but in God. They are not, however, the respects by which the persons are distinguished, but respects of the intellect.

The conclusion of the article is affirmative, which we shall briefly explain in a single disputation with chapters; besides this there is nothing in this article that needs any exposition.

On divine ideas

... In what way there are many ideas in God ...

... Caput I ...

From all these authors at least let us gather as certain that in God there are many ideas not distinguished by nature, but only by reason, whether one speak in this or that mode. Moreover, without any additional refinement I do not at all doubt that one can say in God that there are many ideas no less than many ideal notions; for by either mode of speaking there is denoted some order to a distinct intellect, because the name "idea" is relative, and signifies the essence of God - but as related to creatures. And since that relation is of reason, it is said to be multiple in God in the sense in which it is signified by this name; thus there is no reason why we should shrink from the common way of speaking and rather concede that in God there are many ideas of things, than a single idea of many things, as Albert used to say; for we always speak according to our way of naming and conceiving, just as we commonly say that there are many attributes in God. And indeed St. Augustine calls them many when he says in the book of 83 Questions, q. 46: "one notion of the horse, another of the man"; and Pseudo-Dionysius, in that chapter of the Divine Names not far from the end, when he calls the ideas and exemplars of things in God "good wills" and "predestinations."[1186]

Ideas in God are not distinguished by the divine intellect, nor by the human seeing God, but by the wayfarer only.

Caput II - Ideas in God are not distinguished by the divine intellect, nor by the human seeing God, but by the wayfarer only

But among the authors who say that the ideas in God are distinguished only by the operation of the intellect, it does not sufficiently agree whether they are distinguished by the divine intellect, or only by the human. Thomas of Argentina plainly teaches that the distinction of ideas does not come from the human intellect, but only from the divine.[1187] He proves it, indeed, because that which distinguishes cannot be posterior to that which is distinguished; but the ideas are eternal, and the human intellect temporal - therefore they cannot be distinguished by it. All the other arguments are of the same stamp, which can readily be dispelled with a single solution. For they themselves, and others whom we shall enumerate, teach that the divine intellect distinguishes in its essence diverse respects by which the ideas are multiplied; and they teach that nothing prevents God from understanding himself in this way, just as he sees that he is also understood by wayfarers.

To the same view adhere, in part, other theologians not of the least name, when they assert indeed that the ideas are distinguished by the divine intellect, yet do not deny that they can also be distinguished by us. Thus teach Henry, Quodlib. 9, q. 1; Aegidius in the question cited in the preceding chapter, to the first; Capreolus on I, dist. 36, q. 1, art. 1, near the end, to the third, against the second conclusion; and even St. Thomas in this article, ad 2 and ad 3; Cajetan and other recent authors there; more clearly, Contra Gentiles I, c. 54; and Ferrar there. Others too favor this, whom we shall recall in Disputation 118, who teach that the attributes in God are distinguished not only by our reason but also by the divine intellect.[1188]

Yet, in expounding this opinion, the cited Doctors do not agree. For Cajetan - whom some recent authors follow - thinks that the divine essence is distinguished into many ideas, inasmuch as God understands it even by a direct act, yet compared with creatures, that is, as imitable by them. For thus, while by a direct act he apprehends it as imitable by creatures, in it there arises a manifold respect of reason, which is called "ideal." But St. Thomas in that solution to the first objection says that by a direct act God understands his essence, and the creatures in their cause; but when he knows that he understands many things by his essence, he also understands in his intellect many notions of things, or many ideas. By these words he seems to teach that the ideal relations in God arise by a reflex act, when God understands his essence as compared with creatures - and this seems easy to prove. For just as, when by a direct act the human nature is

1186. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46; Pseudo-Dionysius, De divinis nominibus, cap. ... (near the end).

1187. Thomas de Argentina, q. 1, art. 1 (in principio).

1188. Henry of Ghent, Quodlibet IX, q. 1; Aegidius, loc. cit.; Capreolus, In I Sent., dist. 36, q. 1, art. 1; St. Thomas, here ad 2 and ad 3; Cajetan, and others; cf. Contra Gentiles I, c. 54; Ferrar; see also the authors recalled in Disputatio 118 who teach that the attributes in God are distinguished not only by our reason but also by the divine intellect.

understood by us as abstracted from singulars, it does not yet have a respect of reason until we understand it by a reflex act as already understood, so also the divine essence does not yet have the respect of an ideal relation until by a reflex act it is understood as understood.

When we say that a relation of reason arises through a reflex act, we mean whenever that relation arises from the fact that the thing is known as from its foundation: as when a thing is first understood and known to have been understood beforehand, it is then conceived with that respect of reason toward the intellect, by which it is said to be understood - this indeed comes to be by a reflex act. But if a relation of reason arises through the intellect comparing some thing with others which in reality are not referred to them, that relation of comparison does not arise by a reflex act, but by a direct one, by which a thing is compared with another: just as when I conceive God as Creator compared with the creature, I conceive him with a respect which is not real but of reason, having being only through the intellect: thus, therefore, if God were to understand his essence as related to creatures as imitable by them, in that same direct act he would conceive in his essence a respect which would have only such being as to be known.

In this same way - namely, by a direct yet comparative act - there arises a relation of reason in a universal nature for the sole reason that it is conceived by one concept as if one superior to many, with which, as common, it is compared; nor is there need of a reflex act that it be known as previously known, so that such a respect be said to be had in act. For if the intellect compares that nature to inferiors, by that very fact it understands it in act as related - not by a real relation, as is manifest - therefore constituted through the intellect; and since a relation of reason is said to be only in act while it is known, then it will be in act when that thing is compared by the intellect. Moreover, this cognition by which a nature is compared cannot be a simple apprehension, but is a composition; for then the intellect compares when it sees that the nature is in many and agrees with them; but then to "see that it is in many" is when by predication it is conferred and compared with others.

Yet I think that, if the opinion of those were true who assert that the divine essence is distinguished by the divine intellect into many ideas by a direct act, it would need to be said that it is distinguished by reason. For - so says Cajetan - God would understand it as imitable by creatures and, as it were, as related to them. For by the very fact that he conceives it with an order to creatures, it is objected and is known along with a relation to them; and because it is understood as imitable in diverse modes, it is understood with various relations, and hence it is distinguished into many ideas.

Furthermore, I hold that no distinction or relation of reason, which does not befit God by nature of the thing, can befit him through his intellect; this indeed will be expressly proved below in Disputation 118, c. 3. For no distinction of reason or respect is made by an intellect conceiving a thing as it is by a proper and quidditative concept. For he who conceives as distinct what are really individual, and as related what are in reality absolute, does not form a proper concept of the thing. Since, therefore, God by his knowledge so perfectly understands all things as they are, that he in no way at all alters them in his mind, it cannot be - without great imperfection - that he distinguish by reason what are not distinguished in the thing itself, and refer what in reality are not referred.

And although God most perfectly knows that his attributes are distinguished by us, and that some are to be conceived by us as related which in reality are absolute, yet by his intellect they are not presented as they are to us: just as he also himself understands that we know spiritual things by alien concepts, he nevertheless does not form for himself those imperfect concepts of things which we have. It remains, therefore, that we believe the many ideas in God to be distinguished by reason, and the many ideal respects, by our regarding God through the intellect of the wayfarer, not by the divine intellect, nor even by the intellect of one seeing God, inasmuch as he would clearly behold God; as by the same reasoning is gathered, and we shall say more at the place cited. Wherefore this name "idea," which has been imposed by us, by our mode of understanding signifies in God a respect of our reason; and hence above we said that, absolutely speaking, one can concede that there are many ideas in God.

What Thomas of Argentina asserted to prove that the ideas in God cannot be distinguished by our intellect is frivolous. For when we say that there are in God many ideas, we do not mean that they are distinguished by an eternal act, but that from eternity it can be that they be distinguished, if there stand an intellect which compares the essence of God, as imitable by many creatures, with those creatures; and thus, the logician discursively considering, there are in God many ideas from eternity fundamentally, not formally; and the same is to be said of every respect of reason which we attribute to God in time, whenever the foundation is eternal, though not when it is temporal, as we noted also at q. 14, art. 1.

Caput III - In God there are not said to be many arts, or sciences, as there are said to be many ideas

The Scholastics who made mention of this matter, without any controversy, affirm that in God there are not to be said many sciences or arts, even if many ideas are said; they differ, however, in assigning the reason.

First, Alexander, I part, question 23, m. 4, art. 1, alone delivered this reason: because art and science are on the part of the knower and the artificer; but the ideas rather on the part of the things. This reason St. Thomas seems to have further explained in this article, ad 4, namely: because art and wisdom signify as that by which God understands; but the idea signifies that which is understood. Therefore the ideas are rather on the part of the things; but science and art on the part of the knower and artificer. And since God is said by one act to know and to understand all things, therefore his science, wisdom, and art are said to be one; but because he understands many things, in his essence it has the character of an idea; and thus he is said to have many reasons of ideas. This reason is followed also by St. Bonaventure, in I, dist. 35, art. 1, q. 3; by Richard, dist. 36, art. 2; by Durandus, quaest. 4, ad 2, in the first solution; which reason he brings as an argument - yet it does not altogether please me. For one idea is not a thing known, but the very cognition of God, as also from the mind of St. Thomas we showed in Disputation 71, c. 4. Moreover, since both science and idea connote a respect of reason to known objects, therefore, just as the ideal respects

are multiplied from the things and so many ideas are said, why then is not multiplied from the things also that respect whereby there would be many sciences and arts, whereas yet science in God is said to be one?

Second, Aegidius, in I, dist. 36, art. 2, q. 4, ad 4, replies that therefore there are many ideas in God because an idea in its complete formal notion includes a respect to creatures, and thus, by the multiplication of relations, many ideas are said. But science, or art, principally signifies the divine essence, and thus it is said that the respect of reason is from the notion of that, although philosophers commonly say that created science is a quality; the respect, however, is connoted as something that is outside the notion and essence of that. But I for my part do not see this difference, for in the same way the very essence of God in itself is science as it is idea of things; and each, in our mode of naming, is signified with a relation, just as it is also conceived. Why then should the connoted respect more belong to the formal notion of the idea than to the notion of science, so that by it ideas are multiplied, whereas science and art are said to be only one? Moreover, created science, which in reality is referred to its object, is indeed a quality, but one which by its nature is referred to another; only by our reason do we distinguish it into the absolute and the relation, even if in reality these two are not distinct; and we place it in two distinct predicaments. For the distinction and plurality of the predicaments, as we shall say in Disputation 116 and 118, are not to be taken from things really or by their nature distinct, but can be multiplied by our reason alone; just as under the same predicament there are also various predicates constituted as distinct by reason alone.[1189]

Thirdly, therefore, the one, and best, reason why only one science and art are predicated of God, although many ideas are predicated, is that the plurality of ideas is to be taken from the plurality of material objects which are the works of art; but the distinction of science and of art is to be thought of not from the plurality of material objects, but from the diversity of the formal object and of the mode of knowing or proceeding. And this is so true that, although many judge that each science in us is not a simple and single quality, because it is conversant about various conclusions and material objects, nevertheless all grant that one or more qualities are only one science, if they have the same formal object and the same mode of knowing or proceeding; and all think the same of art. And since in us one and the same is called an art which produces many works, because it proceeds in the same way in all the works, nonetheless it contains under itself many exemplars and ideas: just as the same painter, because he proceeds in the same way in all things, is said to have one art; but because, while he makes each work, he beholds various forms, after the likeness of which he paints other images, he is said to have many ideas or exemplars. This, however, must be understood if one takes art for a habit: for sometimes it is taken for the very idea of the art, since it belongs to the art; as Aristotle took it in Metaphysics XII, chapter 4, text 24. Therefore, if the idea is multiplied, art too will be said to be multiplied - but as a particular art, not as the general art which is a habit.[11901191]

1189. Alexander of Hales, I p., q. 23, m. 4, art. 1; St. Thomas, here ad 4; St. Bonaventure, In I Sent., dist. 35, art. 1, q. 3; Richard, dist. 36, art. 2; Durandus, quaest. 4, ad 2, in prima solutione; Aegidius, In I Sent., dist. 36, art. 2, q. 4, ad 4.

1190. Aristotle, Metaphysics XII, c. 4, text 24.

Therefore, since in God there is the same mode of knowing, because all things are known to him of themselves; and the same principle, which is as it were the formal object of science, namely the divine essence, in which God knows all things; there will be in him only one science. And since there is also the same mode of operating by the intellect and will, there will be one and the same art, although he produces diverse effects; yet there will be diverse ideas. For under the same art many ideas can be contained, according to the variety of the works of that art, as has been explained.

This reason I seem to gather from Durandus, on that question 4, ad 1. Indeed, between God the supreme craftsman and other created craftsmen I find this difference: that others, from one and the same idea numerically, which they set before themselves and behold externally so as to imitate it, are wont to make various works, although the interior apprehension which moves to the work is in some way varied; but in God for each of the least things which he himself makes, according to our way of understanding, distinct ideas must be posited. And the reason is that the idea in God is the essence of God as it has the notion of cognition: this, however, is said to be multiplied according to a diverse order to diverse works. But the created craftsman has for his idea some thing set before him externally, which he proposes to himself to imitate; and the same thing serves different works, although apprehended in a different way by the interior thought which immediately directs to the work. Wherefore, if we should call an idea not a thing placed without but something apprehended within, a created craftsman too would have for each work its own idea.[1192]

Finally, it must be observed that the same account is to be given of the exemplar as we have said of the idea: whence, just as in God under one science and art many ideas are said to exist, so too it must be said that there are many exemplars. For exemplar and idea differ only in this, as we shall say in the following article, that the exemplar is the idea of a thing which at some time will be, whereas idea is also said to be of things merely possible and never to be. Although this diversity was introduced only by the Scholastics.

Wherefore I do not approve the opinion of Alexander, who said that the account of exemplar and of art is the same, so that in the same way, the idea being multiplied, art also will be said to be multiplied, but as a particular art, not a general one which is a habit; nor do I approve the opinion of Richard, when he says that there are not many exemplars, but there are indeed many ideas, because, says he, an exemplar is a certain aggregate of many ideas, as a composite seal is an aggregate also of many figures. This opinion I do not approve: for Pseudo-Dionysius, in De divinis nominibus 5, calls the ideas of which he there treats by the Greek name paradeigmata, and in Latin it is rendered Exemplaria. Finally, Richard himself admits that idea and exemplar can be used for the same thing, unless usage and authority contradict, which in my judgment do not in the least oppose what I have said.[1193][1194][1195]

1191. On the multiplication of art as particular habit when the idea is multiplied.

1192. Durandus, Quaestio 4, ad 1.

1193. Pseudo-Dionysius, De divinis nominibus, c. 5; the Greek paradeigmata are rendered "exemplars."

1194. Richard (on the Sentences I, dist. 36), who at length concedes that "idea" and "exemplar" can be used interchangeably.

1195. Alexander of Hales, I p., q. 23, m. 4.

Articulus III - Whether of all things God knows, there are ideas

The third proceeds thus. It seems that not of all things which God knows are there ideas in him.

1. For there is no idea of evil in God, because it would follow that evil is in God. But evils are known by God. Therefore not all things which are known by God are ideas.
2. Moreover. God knows the things which neither are, nor will be, nor have been, as was said above. But of these there are no ideas; because, as Pseudo-Dionysius says in De divinis nominibus, chapter 5, exemplars are the determinate and effective will of God with respect to things. Therefore not of all things which are known by God are there ideas in him.[1196]
3. Moreover. God knows prime matter, which cannot have an idea, since it has no form. Therefore as before.
4. Moreover. It is clear that God knows not only species but also genera, and singulars and accidents. But of these there are not ideas, according to the position of Plato, who first introduced ideas, as St. Augustine says. Therefore not of all things known by God are there ideas in him.[1197]

But on the contrary: Ideas are rationes existing in the divine mind, as is clear from St. Augustine. But of all things which God knows he has proper rationes. Therefore of all things which he knows he has an idea.[1198]

I answer that, since by Plato ideas were posited as the principles of the cognition of things and of their generation, an idea, as it is posited in the divine mind, bears upon both. And inasmuch as it is the principle of the making of things, it can be called an exemplar and pertains to practical cognition; but inasmuch as it is a cognoscitive principle, it is properly called a ratio, and it can also pertain to speculative science. Therefore, inasmuch as it is an exemplar, according to this it bears upon all the things which are made by God in some time. But inasmuch as it is a cognoscitive principle, it bears upon all the things that are known by God, even if they come to be at no time at all, and upon all the things which are known by God according to their proper notion, and according to the fact that they are known by him after the manner of speculation.

Reply to the first: Evil is known by God not by its proper notion, but by the notion of good. And therefore evil has no idea in God, neither inasmuch as idea is an exemplar, nor inasmuch as it is a ratio.

Reply to the second: Of those things which neither are, nor will be, nor have been, God does not have practical cognition, save only virtually. Hence, with respect to such things there is not in God an idea according as idea signifies an exemplar, but only according as it signifies a ratio.

1196. Pseudo-Dionysius, De divinis nominibus, c. 5.
1197. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46, reporting Plato's position.
1198. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46.

Reply to the third: Plato, according to some, posited matter as uncreated, and therefore he did not posit an idea of matter, but a co-cause of matter. But since we assert matter to be created by God, yet not without form, it does indeed have in God an idea - not of itself absolutely - but insofar as it is ordered to form.

It is proceeded thus to the third. It seems that not all the things which God knows are ideas in him. For the evil has no idea in God, because it would follow that evil were in God: but evils are known by God. Therefore not all the things which are known by God are ideas.

1. Moreover. God knows the things which neither are, nor will be, nor have been, as was said above. But of these there are no ideas; because, as Dionysius says in On the Divine Names V, the exemplars are the determinations of the divine will and the efficient principles of things. Therefore not all the things which are known by God are ideas in him.[1199]
2. Moreover. God knows prime matter, which cannot have an idea, since it has no form. Therefore the same as before.
3. Moreover. It is clear that God knows not only species (*species*), but also genera, and singulars and accidents. But of these there are no ideas, according to the position of Plato, who first introduced ideas, as St. Augustine says. Therefore not of all the things known by God are there ideas in him.[1200]

But on the contrary: Ideas are reasons (*rationes*) existing in the divine mind, as is clear through St. Augustine. But of all the things which God knows he has proper reasons. Therefore of all the things he knows he has an idea.[1201]

I answer: since with Plato ideas were posited as principles of the cognition of things and of their generation, the idea - as it is posited in the divine mind - bears itself to each. And according as it is the principle of the making of things, it can be called an exemplar, and pertains to practical cognition; but according as it is a cognitive principle, it is properly called a reason (*ratio*), and can also pertain to speculative science. Therefore, according as it is an exemplar, in this respect it bears upon all the things which are made by God at some time. But according as it is a cognitive principle, it bears upon all the things which are known by God, even if they come to be at no time, and upon all the things which are known by God according to their proper reason and according as they are known by him by way of speculation.

Reply to the first: Evil is known by God not through its own proper reason, but through the reason of the good. And therefore evil has no idea in God, neither according as idea is exemplar, nor according as it is reason.

1199. Pseudo-Dionysius, De divinis nominibus, c. 5.

1200. St. Augustine, De diversis quaestionibus octoginta tribus, q. 46, reporting Plato's position.

1201. St. Augustine, De diversis quaestionibus octoginta tribus, passim (especially q. 46), where ideas are "reasons" in the divine mind.

Reply to the second: Of those things which neither are, nor will be, nor have been, God does not have practical cognition, save virtually only. Hence, with respect to those things, there is no idea in God according as idea signifies an exemplar, but only according as it signifies a reason.

Reply to the third: Plato, according to some, held matter not to be created, and therefore he did not posit the idea of matter to be, but a co-cause of matter. But since we posit matter as created by God, yet not without form, matter does indeed have an idea in God, yet not other than the idea of the composite. For matter according to itself neither has existence (*esse*), nor is it knowable.

Reply to the fourth: Genera cannot have an idea other than the idea of the species, according as idea signifies an exemplar: because a genus is never found except in some species. Similarly also concerning accidents which inseparably accompany the subject: for these come to be together with the subject. But the accidents which supervene upon a subject have a special idea. For the artisan by the form of the house makes all the accidents which from the first accompany the house. But those which supervene upon a house already made, such as paintings or anything else, he makes by some other form. According to Plato, singulars did not have any other idea than the idea of the species. First, because singulars are individuated by matter, which he posited to be uncreated (as some say) and a co-cause of the idea. Next, because the intention of nature consists in species, nor does it produce particulars except that in them species may be preserved. But divine providence extends itself not only to species but also to singulars, as will be said below (q. 22, art. 3).

The conclusion is: Idea, insofar as it is called an exemplar, is only in God with respect to future things; idea, however, as it is a reason, is of all possible things, which will never be: the doctrine of the article and the mind of St. Thomas will be explained in the following disputation.

Disputatio LXXIV - On divine ideas

Around the doctrine of the article (Disputation 74): - Idea and exemplar pertain to practical science; but idea can also pertain to speculative. Caput 1. - Not only of species and genera, but also of individual singulars, there are ideas in God. Caput 2. - Of matter (*materia*) and accidents, which are really distinguished from substance, peculiar ideas must be posited. Caput 3.

Caput I - Idea and exemplar pertain to practical science; but idea can also pertain to speculative

Theologians cross swords over whether idea pertains to the practical science of God, or rather to the speculative: and since the disagreement is of words, not of things, nor is it of great moment, they contend beyond measure. Therefore I will briefly report what each says, and in a few words will also explain what I think in this same chapter.

St. Thomas, in the body of this article, asserts that idea is said in one way to be exemplar, in another way to be called reason. For exemplar is said primarily as it is the principle of a future work, and in this way it pertains to practical science. Then, insofar as it is merely a principle of knowing a thing - and thus (he says) it is more properly called reason - it can also pertain to

speculative science. When he adds the little word "also," he does not indicate that under that consideration, under which it is called reason, it can belong to both sciences, practical and speculative, at once; but he added "also" to denote that the idea, which is called exemplar and thus regards practical science, can likewise belong to speculative science, insofar as it is reason. And therefore in the reply to the second he plainly affirms that there is not in God actually practical science of those things which will never be, but only virtually - that is, a science which, although speculative, can also be practical.

Cajetan, although he does not expressly treat this difficulty in this article, nevertheless seems to explain it with a single remark, when he says that the foundation of this doctrine of St. Thomas consists in what was said above in Question 14, article 16. For he understands those words there in such a way that no science is properly practical unless it presupposes an affection and act of will moving toward the work; and because the science of things merely possible does not, in God, presuppose such an act of will, from his view it will not be actually practical. Yet because it could presuppose such an act if God had decreed to do other things, and then it would be practical, he says that it is now called practical only virtually, not actually.[1202]

This explanation is given by Giles of Rome, Gabriel, and St. Thomas in *De potentia*. But more recent Thomists contend that, with respect to things merely possible, the idea is actually and formally practical. For they judge that it is not necessary to the notion of practical science that an act of will be posterior in order and direct the work from an antecedent affection of producing; and we said above in Disputation 69, chapter 2, that this is the truer opinion. Hence Albert and Durandus expressly teach that every idea is to be reduced to practical science, although not every such idea presupposes such an affection.[12031204]

I embrace this latter opinion as the truer one, and it is plainly gathered from what was said in that disputation. As Gabriel very well notes in that same place, even if from eternity the science and idea of God do not operate but only in time, nevertheless from eternity they are practical; and this must be understood not merely because they will in fact operate in time, but because they could in time operate and produce those things which they are not in fact going to produce.[1205]

Moreover, one must observe what follows from the doctrine laid down above in Disputation 9: namely, that the science and idea which God has of creatures are, in our mode of understanding, at once practical and speculative. For the idea is the very essence of God insofar as it represents creatures; and since it can represent them in a twofold way, either for the sake of speculation alone or also for the sake of work, therefore the science and idea which God has of creatures can pertain both to practical and to speculative science. Hence I do not see on what foundation Ockham, in the First Book, dist. 35, q. 6, said that the idea and science of God belong properly neither to practical nor to speculative science.[1206]

1205. Gabriel Biel, loc. cit., dub. 3.

1206. William of Ockham, In I Sent., dist. 35, q. 6.

Caput II - Not only of species and genera, but also of individuals there are singular ideas in God

Henricus teaches in Quodlibet 7, q. 5 that there are not proper ideas of singulars, but only common ones of species and genera; so that all men would stand as it were under one idea of human nature existing in God: just as some thought that Plato posited, outside of God, one common idea of a nature, from which all singulars would be made; and the same Henricus says in book 3, q. 1, that there is indeed only one idea of a specific nature, yet with diverse respects to each individual.[1207]

But it is far more probable that there are for individuals singular ideas and exemplars. This is expressly taught by St. Bonaventure on the First Book, dist. 35, art. 1, q. 4; by Richard, dist. 36, art. 2, q. 4; by Aegidius, art. 2, q. 4; and by St. Thomas in this article, to the fourth reply. For after he said that, according to Plato, individuals have not a proper idea but a common one, he subjoins: "But divine providence extends not only to species but also to singulars, as will be said below." By these words he willed to teach the contrary position, as if he were saying that proper ideas of each and every individual must be conceded, because providence refers also to singulars; and with greater reason ought they to assert this, who think that the idea is not the very divine essence, but a thing objectively present to the divine intellect. For thus, since singular individuals are present, it follows that there are ideas of singulars in God. Augustine has taught this expressly in Epistle 115 to Nebridius, near the end, where, after he had proposed this same question and said that it is difficult, he finally says that, in order that a man might be made, there was one single reason of man; but in order that a people might be made, there was not only one reason of man, but also of men. He concludes with these words: "If therefore Nebridius is a part of this universe, as he is, and the whole universe consists of parts, the Maker of the universe, God, could not fail to have the reason of the parts."[1208]

Now I judge not only that there are in God ideas of singulars and individuals, but also that there are not, over and above ideas of singulars, any ideas of species or of genera in general distinct merely by reason - a judgment which I understand not only concerning ideas that have the notion of an exemplar of future things, but also concerning ideas of things that are merely possible, even if they pertain to speculative science. And first, as to those ideas which are exemplars or are reduced to practical science, this is plain: for these are principles of things to be made; but nothing else can be produced save an individual; therefore there are no ideas except of singulars. Next, as to the ideas of possibles, even insofar as they look to speculation, the proof is this: God does not have an objective concept of genus or of species distinct from the concept of singulars; for he himself neither distinguishes nor abstracts universal predicates from singulars, but he knows singular things, individual things, as they are, as we shall show in Disputation 118, cap. 2. Therefore it is pointless to assign an idea of species and of genera in general, since the divine essence, which is cognition and thereby the idea of things, is referred to the things themselves only as they are in the

1207. Henricus of Ghent, Quodlibet VII, q. 5; and lib. 3, q. 1.
1208. St. Augustine, Epistola 115 ad Nebridius, near the end.

individual, as has been said. And indeed, just as he knows them as distinct, as in reality they are distinct among themselves, so too we, according to our mode of conceiving, distinguish in his essence and cognition many ideas by our way of understanding. And although we distinguish in things a generic, a specific, and a singular notion, nevertheless this is not sufficient for us to distinguish in God ideas of singular and of universal natures: for in him alone do we distinguish diverse ideas and cognitions from diverse objects, not from us, but as known by him. Therefore, if he does not know, as distinct objects, nature in general and nature in the singular, there ought not in him to be distinguished a twofold cognition or idea.

Caput III - Of matter and of accidents, which are really distinct from substance, peculiar ideas must be posited

St. Thomas teaches openly in this article, to the third reply, that prime matter does not have a proper idea in God, but he judges the idea of matter and of the whole to be the same; and he gives the reason, because matter according to itself does not have existence, since it is pure potency, and it has all its existence from form; wherefore it has nothing of cognoscibility from itself. By these words he insinuates that in God there is no idea of prime matter insofar as it is an exemplar, nor insofar as it is a ratio; and consequently that there is not for it an idea which pertains to speculative science, since from itself it has nothing of cognoscibility.[1209]

This opinion is followed commonly by the Thomists; and Cajetan, in this article, adds that the idea of prime matter which is only a ratio and looks to speculative science is the idea of the whole composite, not of any composite whatsoever, but of body, as body is; but that the idea of prime matter which is practical and is wont to be called exemplar is of the whole composite which matter itself composes according to the entire notion of that composite. The reason of this chapter can be assigned, because prime matter does not have existence in reality except through the whole, which simultaneously contains every generic and specific notion, for operation is terminated to all; therefore it has an idea only insofar as it is an exemplar common with the whole; for an idea in this mode is the principle of the work to which it gives existence, and must first be terminated to the whole. But because speculative cognition can be referred to the generic notion alone, and an idea, as ratio, by the sentence of St. Thomas, pertains to speculative science, prime matter will be said to have an idea or ratio common with that by which it can be known speculatively; but it can be perfectly known to be in something by the form of body in general; therefore the idea, as speculative ratio of matter, is the idea of body, as body is.[1210]

This opinion in part seems to have been followed by Aegidius in the First Book, dist. 35, that fourth question; yet he limits it thus, that there is not a proper idea of prime matter as of a distinct object or ideate, except according to reason; because by the idea which he has, God knows that form is distinguished from matter, not in act (for act does not befit matter according to itself), nor

1209. St. Thomas, in this article, ad 3.
1210. Cajetan, in this article.

as distinct in work (for it is not according to itself), but only by reason. Wherefore in the same manner he seems to concede an idea of matter distinct from the idea of individuals, and likewise of genera and species.[1211]

But assuredly either a proper idea of matter ought altogether to be conceded, or to be denied entirely. For if, as St. Thomas and many of his disciples think, it has no entity from itself, then there will in God be no proper idea of it - neither practical nor speculative. For a practical idea is posited for acting and for a proper effect or work; but in this opinion prime matter is not of this sort, since it has no proper existence. A speculative idea, on the other hand, is for proper cognition and understanding, namely of that which, from itself, has something of entity and of cognoscibility according to its own existence, which is known - not, I say, that it is cognoscible. Therefore in this way there would be no idea of prime matter at all, not only as of a distinct object or work, but not even as distinct by reason; because not even by reason would it be distinguished from form, the two being said to be inseparable. And so the idea of matter would be the idea of the whole composite, and that not only practical, but speculative also - not, as Cajetan thought, of the whole "in general" according to the notion of body, but of the whole singular; for God does not understand anything under a common generic notion abstracted from singulars, as we have said above.

However, if prime matter did have from itself some entity - as I judge it truer in philosophy - then it would have a proper idea not only as it is a ratio pertaining to speculative science, but also as it is called an exemplar and is reduced to practical science; for it needs to be produced as a distinct thing, and it can be known as such. And this Albertus expressly conceded when, on the First Book, dist. 35, art. 4, he asserted that there is in God a proper idea of prime matter.[1212]

Accidents which have a proper entity have a proper speculative idea. For since accidents from themselves have an entity distinct from the subject, it follows that, of accidents really distinct from their subject, there will also be a distinct notion of intelligible object, and consequently a distinct speculative idea - not only of those which, the subject having already been produced, newly supervene, but also of those which are produced together with the subject.

The reason of St. Thomas, namely that the artisan by the form of the house makes all the accidents which from the beginning accompany the house - and therefore that there is no distinct exemplar of those accidents - does not prove the opposite conclusion. For although one and the same exemplar of the house be attributed to the artisan as the principle of the work, nevertheless both in nature and in art the diverse entities of the effects, and their distinct operations according to which they are known, require a diversification of reasons in the exemplar proportioned to them. And God, who knows each thing by a proper light, does not, because he at once makes man together with all that is concreated with him, therefore lack proper exemplars proportioned to those effects; if they have from themselves a distinct entity, they will have also a distinct cognoscibility, and consequently a distinct speculative idea.

1211. Aegidius (Giles of Rome), In I Sent., dist. 35, q. 4.
1212. Albertus (the Great), In I Sent., dist. 35, art. 4.

I, for my part, do not see any sufficient reason why individual accidents, really distinct from their subject, should not have singular ideas even practical ones; for as to speculative ideas, almost all are agreed on this point. And I speak not only of those accidents which supervene to an already made subject, but also of those which, by the very constitution of the subject, are concreated and produced along with it. For just as the exemplar of the whole house is one as to the unity of the work, yet, because within the unity of art and of nature there are diverse entities of effects and operations which spring from the whole, it is not surprising if, while the house is one by a certain ordering of art, nevertheless it include various formalities, and accidents both physical and natural; and so, although in speech we sometimes name one house and one work of the artisan both physical and natural, which, according to the various entities of the physical and natural effects and operations, ought to be multiplied, nevertheless in the exemplar a diversity corresponding to those entities must be posited. And Aegidius, in the place cited, says likewise that those accidents which are concreated with the whole do indeed have a distinct idea so far as cognition is concerned, though not a distinct principle of operation; but those which supervene later have a distinct idea both for cognition and for operation. Wherefore, as to speculative ideas at least, no one can reasonably doubt that there are proper ideas of accidents; and, where the accidents themselves have their own proper production, there is no obstacle to positing for them proper exemplars also in the order of practice.[1213]

Ceterum, as to the question whether the ideas of merely possible things are practical or speculative, I add what pertains by way of conclusion to the foregoing disputation.

- They will not, according to the opinion of certain men, be actually practical by reason of an act of will now supervening - for in their view such an act is not posited - yet they are virtually practical, because they could presuppose such an act, if God had decreed to do otherwise; and then they would be practical in act, though now they are called practical by power, not in act. This explanation is given by Aegidius on the First Book, dist. 36, art. 2, q. 36; by Gabriel on dist. 35, q. 5, art. 3, dub. 4; and by St. Thomas, De potentia, q. 1, art. 5.[1214]
- But more recent Thomists contend that, with respect to things merely possible, the idea is in act and formally practical; for it is not necessary to the notion of practical science that there be an antecedent act of will directing from an affect of making to a work - of which we said above, in Disputation 69, cap. 2, that it is the truer opinion. Wherefore Albertus, on the First Book, dist. 35, art. 8, and Durandus, dist. 36, q. 4, n. 6, expressly teach that every idea is to be reduced to practical science, although not every such idea presupposes such an affect.[1215]
- This opinion as truer I embrace; and it is clearly gathered from what was said in that disputation. And, as Gabriel well noted in that article, dub. 3, even if from eternity the science and idea of God do not operate, but in time, nevertheless from eternity they are practical; understand this not only because in time they will in fact operate, but because they could in time operate and produce those things which they are not going to produce.

1213. Aegidius, loc. cit.
1214. Aegidius, In I Sent., dist. 36, art. 2, q. 36; Gabriel, dist. 35, q. 5, art. 3, dub. 4; St. Thomas, De potentia, q. 1, art. 5.
1215. Albertus, In I Sent., dist. 35, art. 8; Durandus, dist. 36, q. 4, n. 6.

- Finally, it is to be observed that, from the doctrine delivered above in the ninth disputation, the following is deduced: namely, that the science and idea which God has of creatures are at once practical and speculative. For since the idea is the very essence of God as it represents creatures, and since it can represent them in a twofold way, either for the sake of speculation alone or also for the sake of work (as we said there concerning any created practical science, which can consider, for the sake of speculation alone, the very work by reason of which it is called "practical"), therefore the science and idea which God has of creatures can, in our mode of understanding, pertain to practical and to speculative science. Hence I do not know upon what foundation Ockham, in the First Book, dist. 35, q. 6, said that the idea and the science of God properly pertain neither to practical nor to speculative science.[1216]

... Or else the proper idea of matter must simply be denied, inasmuch as prime matter, according to St. Thomas and several of his disciples, has no entity of its own; and thus there will be in God no proper idea of St. Thomas's sort, neither practical nor speculative. For the practical is posited with respect to a diverse and proper effect or work, which, on that opinion, prime matter is not, since it does not have a proper existence (*esse*). The speculative, however, is also posited for the sake of contemplating and understanding that which of itself has some entity and knowability according to existence; for what is known not to be is not said to be knowable. Therefore, in this way there will be no idea of prime matter, not only as of an object actually or operatively distinct, but not even distinct in reason; for neither would it be distinguished in reason from form, so that otherwise the idea of matter would be the idea of the whole composite, not only practical but speculative also - not, as Cajetan thought, of the whole in the generic notion of body, but of the whole singular; since God does not understand anything under the notion of a common genus abstracted from singulars, as was said above. But if prime matter has some entity, as I judge more truly in philosophy, it will have a proper idea not only as a ratio and pertaining to speculative science, but also as called an exemplar and reducible to practical science: for thus it could be produced and known as a distinct thing; and hence Albert expressly granted in God a proper idea of prime matter, in I Sentences, dist. 35, art. 10.[1217]

Finally, concerning accidents St. Thomas teaches, in the solution to the fourth, that those which are with the whole composite do not have a proper idea distinct from the idea of the whole; but the accidents which accrue to the subject once already produced have a proper idea; and although the holy Doctor does not explain whether he is speaking of the idea as it is the practical exemplar of a work, or as it is a speculative ratio, nevertheless his argument plainly indicates that he is speaking only of the practical idea. Thus also Aegidius, in the place cited, says that the accidents which are made together with the whole indeed have an idea actually distinct as to cognition, but not as to operation - that is, a speculative but not a practical [idea]; whereas, he says, other accidents have an idea distinct both as to cognition and as to operation - that is, speculative and practical. About the speculative, no one can doubt; for all admit this of the speculative.

1216. Ockham, In I Sent., dist. 35, q. 6.

1217. Albertus (the Great), In I Sent., dist. 35, art. 10.

But that they do not have a distinct practical idea when they are made together with the subject, St. Thomas proves, because the craftsman is said by one and the same idea to make the house and all its accidents; therefore God likewise will by the same [idea] make the man and all the accidents together with him.

I, however, do not see sufficient reason why singular accidents really distinct from the subject should not have singular ideas, even practical ones; for all admit this of the speculative. And I say this not only of the accidents which accrue to the whole once it has been produced, but also of those which are produced together with it. For the idea, as exemplar, only adds over and above the speculative idea that it is a principle of work by the will. Wherever, therefore, there is a diverse entity which comes to be, there will also be a diverse idea as exemplar. But the accidents which are produced together with the subject have a diverse entity; therefore, while they are coming to be, they will have a diverse becoming and a diverse exemplar idea. That they are produced simultaneously in time with the whole does not hinder their having their own peculiar production, just as they have their own existence; or, if they do not have a diverse existence, they will not have a diverse knowability, and consequently not a distinct speculative idea.

Nor does St. Thomas's reasoning efficaciously prove the opposite; for the idea of the house with all its parts and accidents is said to be one just as the house constructed is one, not by a physical and natural unity, but by the unity of art, which is one only in order; wherefore it is not surprising if one house with various physical and real entities and accidents is said to be made by one idea of art. But we now are speaking of the idea of a physical and natural being, which, according to the various physical entities of the effect and of the work, ought to be multiplied. And the same difference can be shown, and proved also in another way: for the craftsman is said not only by the same artistic idea to make the whole substance of the house and the accidents which accompany it once made, but also by the same idea afterwards he repairs the accidents of the house, if need be, and the accidents which are not made together with the house, but are added to it once already made, are said to be made by the same idea. And yet St. Thomas admits that the accidents which are added to the whole physical composite once produced have a different idea from the idea of the whole. Therefore the accidents of the house are nevertheless afterwards said to be made by the same idea because that [idea] is not physical, but pertains only to order and to the genus of art. Hence the same account is not to be given of the idea of a house and of the idea of a natural being and of its accidents.

Quaestio XVI - On truth

Since, however, science is of truths, after the consideration of the science of God, inquiry must be made concerning truth (*veritas*). About this there are eight questions.

In this sixteenth question the Angelic Doctor treats of truth, and in question 17 of falsity, which are affections of the intellect and of science, so as to show in what way truth is befitting to the divine science, while falsity is altogether repugnant to it; and from that doctrine the attribute of the

truth of our God is also to be explained by us. Moreover, many of the things which in this question and the following are handed down are wont to be disputed expressly by the Philosophers in Metaphysics IV or VI, as also those which were said in question 6 about the notion of goodness. But because the attribute of the truth of God cannot be rightly explained unless first the nature and definition of truth itself is well considered according to itself, it ought not to seem superfluous to anyone that we treat these matters at present. Yet, lest we be forced fruitlessly to repeat the same things, we shall take care that nearly all which the holy Doctor, scattered through several articles of this question and the following, taught, be gathered from a rightly explained definition of truth under these two prior articles into one.

Articulus I - Whether truth is only in the intellect

It is objected first in this way. It seems that truth is not only in the intellect, but rather in things. For Augustine in the book Soliloquies reproves this notification of the true: "True is that which is seen," because according to this, stones which are in the most hidden bosom of the earth would not be true stones, because they are not seen. He also reproves this: "True is that which is as it appears to the knower, if he should will and be able to know"; because according to this it would follow that nothing would be true if no one were able to know. And thus he defines the true: "True is that which is." And so it seems that truth is in things and not in the intellect.[1218]

1. Further, whatever is true is true by truth. If, therefore, truth is in the intellect alone, nothing will be true except according as it is understood; which is the error of the ancient philosophers who said that whatever appears is true. From which it follows that contradictories are simultaneously true, since contradictories seem to be true simultaneously to diverse [people].
2. Further, that because of which each thing [is] is, and that more so, as is clear in Posterior Analytics I. But from the fact that a thing is or is not, an opinion or an utterance is true or false according to the Philosopher in the Predicaments. Therefore truth is more in things than in the intellect.[12191220]

But on the contrary: The Philosopher says in Metaphysics VI that the true and the false are not in things but in the intellect.[1221]

I answer that, just as the good names that in which the appetite tends, so the true names that in which the intellect tends. Now there is this difference between appetite and intellect or any cognition whatsoever: because cognition is according as the known is in the knower; but appetite is according as the one appetiting is inclined toward the thing itself that is appetited. And thus the term of appetite, which is the good, is in the appetible thing; but the term of cognition, which is the true, is in the intellect itself. And as the good is in the thing inasmuch as it has an order toward the

1218. St. Augustine, Soliloquia, lib. 2, cap. 5 (tom. 1).
1219. Aristotle, Posterior Analytics I.
1220. Aristotle, Categories (Praedicamenta).
1221. Aristotle, Metaphysics VI.

appetite, and on this account the notion of goodness is derived from the appetible thing to the appetite - according as the appetite is said to be good insofar as it is of the good - so, since the true is in the intellect inasmuch as it is conformed to the thing understood, it is necessary that the notion of the true be derived from the intellect to the thing understood, so that the thing understood also be called true, according as it has some order to the intellect. Now the thing understood can have an order to the intellect either per se or per accidens. Per se indeed it has an order to the intellect upon which it depends according to its being; but per accidens to the intellect by which it is knowable. Thus, if we say that a house is compared to the intellect of the craftsman per se, per accidens however it is compared to the intellect on which it does not depend. But judgment about a thing is not taken according to that which is in it per accidens, but according to that which is in it per se. Whence each thing is said to be true absolutely according to the order to the intellect upon which it depends. And hence it is that artificial things are said to be true by their order to our intellect; for a "true house" is said to be that which attains to the likeness of the form which is in the mind of the craftsman. And an utterance is said to be true insofar as it is a sign of a true intellect. And likewise natural things are said to be true according as they attain to the likenesses of the species which are in the divine mind; for a "true stone" is said because it attains to the proper nature of a stone according to the preconception of the divine intellect. Thus, therefore, truth is principally in the intellect, but secondarily in things, according as they are compared to the intellect as to their principle. And according to this, truth is notified in diverse modes. For Augustine in the book On True Religion says that truth is that by which what is is shown; and Hilary says that the true is declarative or manifestative of being. And this pertains to truth according as it is in the intellect. But to the truth of the thing according to its order to the intellect pertains Augustine's definition in the same book On True Religion of this sort: "Truth is the supreme likeness of the principle which is without any dissimilitude." And a certain definition of Anselm of this sort: "Truth is a rectitude perceptible only by the mind." For "straight" is that which agrees with the principle. And a certain definition of Avicenna of this sort: "The truth of each thing is the property of its existence which stabilizes it or belongs to it." But that which is said, that truth is the adequation of thing and intellect, can pertain to both.[1222][1223][1224][1225]

Reply to the first: Augustine is speaking of the truth of the thing, and he excludes from the notion of this truth the comparison to our intellect; for what is per accidens is excluded from every definition.

Reply to the second: The ancient philosophers did not say that the species of natural things proceed from any intellect, but that they come forth by chance. And because they considered that the true imports a comparison to intellect, they were compelled to constitute the truth of things in

1222. St. Augustine, De vera religione, c. 36.
1223. St. Hilary, dictum cited.
1224. St. Anselm, Dialogus de veritate.
1225. Avicenna, definition cited.

an order to our intellect. From which inconveniences followed, which the Philosopher pursues in Metaphysics IV. These inconveniences do not occur if we posit that the truth of things consists in a comparison to the divine intellect.[1226]

Reply to the third: Although the truth of our intellect is caused by the thing, nevertheless it is not necessary that it be in the thing prior...

I answer: The term of appetite, which is the good, is in the appetible thing; but the term of cognition, which is the true, is in the intellect itself. And just as the good is in the thing insofar as it has an order to appetite, and on this account the notion of goodness is derived from the appetible thing to the appetite - according as the appetite is called good as it is of the good - so too, since the true is in the intellect inasmuch as it is conformed to the thing understood, it is necessary that the notion of the true be derived from the intellect to the thing understood, so that the thing understood also be said to be true, insofar as it has some order to the intellect.

Now the thing understood can have an order to the intellect either per se or per accidens. Per se, indeed, it has an order to that intellect upon which it depends for its being; per accidens, to that intellect by which it is knowable. Thus, if we say that a house is compared per se to the intellect of the craftsman, it is compared per accidens to an intellect on which it does not depend. But judgment about a thing is not taken according to that which is per accidens, but according to that which is in it per se. Hence each thing is said to be true absolutely according to its order to that intellect upon which it depends. And from this it is that artificial things are said to be true by their order to our intellect; for a house is called true when it attains the likeness of the form which is in the mind of the craftsman. And discourse is called true insofar as it is the sign of a true intellect. In like manner, natural things are said to be true according as they attain to the likenesses of species which are in the divine mind. For a true stone is so called because it attains the proper nature of a stone according to the preconception of the divine intellect. Thus, then, truth is principally in the intellect, from which the notion of truth is derived secondarily into the things themselves.

Reply to the first: St. Augustine speaks of truth as it is in the thing; by which account the definition is excluded of this truth which is in our intellect.

Reply to the second: The ancient philosophers did not say that the species of natural things proceed from any intellect, but that they arise from natural causes. And because they considered that truth imports a comparison to the intellect, they were compelled to constitute the truth of things in an order to our intellect. Whence there followed inconveniences which the Philosopher pursues in Metaphysics IV. These inconveniences do not occur if we posit that the truth of things consists in a comparison to the divine intellect.

Reply to the third: Although the truth of our intellect is caused by the thing, nevertheless it is not necessary that the notion of truth be found in the thing prior, just as neither in medicine is the notion of health found prior to that in an animal. For it is the power of medicine, not its health, that causes health, since it is not an agent univocally. And similarly the being of the thing, not its truth, causes the truth of the intellect. Hence the Philosopher says that true opinion and true

1226. Aristotle, Metaphysics IV.

speech are from this, that the thing is - not from this, that the thing is true. Therefore the conclusion is that truth is primarily indeed in the intellect, from which the notion of truth is secondarily derived into things.

Articulus II - Whether truth is in the intellect composing and dividing

Objection 1. It seems that truth is not only in the intellect composing and dividing. For the Philosopher says in De Anima III that just as the senses concerning proper sensibles are always true, so also is the intellect concerning what a thing is.[1227] But composition and division are neither in sense nor in the intellect knowing what a thing is. Therefore truth is not only in the composition and division of the intellect.

Objection 2. Further, Isaac says in the book On Definitions that truth is the adequation of thing and intellect. But just as the intellect of complexes can be adequate to things, so also the intellect of incomplexes, and even sense which senses the thing as it is. Therefore truth is not only in the composition and division of the intellect.

But on the contrary: The Philosopher says in Metaphysics VI that concerning simples and what a thing is there is no truth, neither in the intellect nor in things.[1228]

I answer: The true (as has been said) according to its primary notion is in the intellect. Now since every thing is true according as it has its proper form of its nature, it is necessary that the intellect, insofar as it is knowing, be true insofar as it has a likeness of the known thing; which likeness is its form insofar as it is knowing. And on this account truth is defined by the conformity of intellect and thing. Hence to know that conformity is to know truth.

By this account sense in no way knows truth. For although sight has the likeness of the visible, nevertheless it does not know the comparison which is between the thing seen and that which it apprehends of it. But the intellect can know its own conformity to the intelligible thing: yet it does not apprehend it when it knows of something what it is; but when it judges the thing to be as is the form which it apprehends about the thing, then first it knows and says the true. And this it does by composing and dividing. For in every proposition some form signified by the predicate is either applied to some thing signified by the subject, or is removed from it. And therefore it is well said that sense is true of some thing, or the intellect is true when knowing what a thing is; but not that it either knows or says the true. And similarly it is with incomplex words.

Therefore truth can be in sense, or in the intellect knowing what a thing is, as in a certain true thing; not, however, as known in a knower - which the name "true" imports. For the perfection of the intellect is the true as known. And therefore, properly speaking, truth is in the intellect composing and dividing, not, however, in sense, nor in the intellect knowing what a thing is.

And hereby the solution to the objections is evident.

Conclusion: Truth is only in the intellect composing and dividing.

1227. Aristotle, De Anima III, c. 6 (text 26).
1228. Aristotle, Metaphysics VI.

There is a twofold difficulty in either article, both in explaining the mind of St. Thomas and also in the doctrine itself. Therefore in the two disputations which follow, as far as can be done, we shall examine both, and shall strive to define the true and proper nature of truth universally.

Disputatio LXXV - Whether the truth of the intellect is only in composition and division

Caput I - The opinion of Ferrarensis and of others

- The opinion of Ferrarensis and of others.
- The aforesaid opinion is refuted, and the opposite is proved especially by the testimony of Aristotle.
- By reasons the latter opinion is proved.
- The arguments of the former opinion are answered.

Since in general truth is thus defined, It is the adequation of intellect and thing, and as St. Thomas says at the end of this article, this definition is to be understood as pertaining both to the intellect and to the thing itself: and therefore not only the intellect, but also any thing which is said to be true per se, indeed truth is assigned by the philosophers as a kind of passion of being, in order that we may better investigate its nature and define it universally; we have judged it necessary to set forth in detail by what manner truth belongs to both the intellect and to all things. Although the controversy seems to be good and to be more on the side of words than of things, nevertheless it ought not to be judged of lesser moment; for from it, once accurately expounded, it will be clear for what cause our God is called the true God, whereas the gods of the Gentiles are rightly called false. Of the Scholastics there are few, and more of them from the school of St. Thomas, who have disputed of this matter; yet not all agree in the same opinion, although each is eager to draw the Holy Doctor into his own view. Wherefore, as far as we can, we shall pursue, not only what is proved to us, but also what is said by others, in our accustomed manner.

Observation for the understanding of the question. It is to be observed first, as Durandus, Hervaeus, and others warn, that since the controversy is about truth in the intellect, it is not to be understood of the power itself which has a certain nature of being; for thus there is a common account of intellect and of other things. Rather the difficulty is about the intellect insofar as it understands; and it is the same to ask in what way truth is in the intellect, as in the intellection itself. Nor, indeed, is the question about intellection insofar as in itself it is a certain entity, but insofar as it is a sign, and is referred to the things which it signifies. On this ground intellection is sometimes called false; although, insofar as it is some thing, it is always true, as will be clear in article 3.

This foundation being posited, the present controversy is the first opinion of Ferrarensis, against Cajetan, cap. 59, and cap. 60, who, from the definition of truth which we recalled in the beginning, infers that truth in the intellect is a conformity with the thing itself, and truth in things

is a conformity with the intellect. Further, that truth, about which there is now controversy, is found in the intellect in a twofold way: in one way, as in that in which there is the true; and in this way he thinks it to be in any simple apprehension of the intellect; indeed some Thomists who follow this opinion say that the same truth is also to be found in the impressed intelligible species, which is a kind of representation; and they think the same about the cognition of any sense, as Ferrarensis expressly taught in the last words of chapter 59.[1229] All of whom seem to have altogether the same reason.

In another way, says Ferrarensis, truth is found in the intellect as knowing truth itself: but thus it is only in composition and in judgment. For by judgment alone one knows that one's concept is conformed to the thing understood; which conformity is truth. Yet on that account he does not deem that truth, in this way, can be in every kind of composition and division; but only in that, in which someone reflexively knows his intellection to be conformed to the thing understood which exists, or can exist, outside the mind. With Ferrarensis agree Soncinas, in 6 Metaphysics, question 17; Capreolus, in the First [Book of the Sentences], distinction 19, question 3, article 1, conclusion 3; Aegidius, Quodlibet 4, question 7, in that at least which he asserts, that the truth of the intellect is found not only in simple apprehension, but also in the very intelligible species.[1230]

Now the former part of this position, in which I said the Doctors alleged above consent, is proved first by two testimonies of Aristotle. One is De Anima III, chapter 6, text 26, where he says thus: "There is speech about something as affirmation; and such speech is always either true or false. But the intellect is not always [so], but that which is of the what-it-is of a thing, accommodated to the form, is true; and it does not say something of something; but just as the vision of the proper object is true, so the intellect which conceives the what-it-is itself (that is, the essence of a thing) is always true, and never false; and on this account it differs from enunciation or speech, because this can be true or false; whereas the intellect about the what-it-is itself cannot be deceived."[1231] That Aristotle speaks of the non-composing intellect is manifest from these words: "And it does not say something of something." Moreover, that he taught the same about sense knowing the proper sensible, Ferrarensis expressly thought Aristotle taught in these words: "But just as the vision of the proper object is true," as if he were saying, just as sense in the cognition of its proper sensible is always true without composition, so also the intellect concerning the quiddity itself of the thing, without enunciation and composition, is always true. He had also taught the same about sense in De Anima II, chapter 6, where he says that the sense concerning its proper sensible is always true; though around the common sensibles it is not deceived, nor around the proper sensibles either, save per accidens it is sometimes deceived.[1232]

1229. Ferrarensis, cap. 59 - 60.

1230. Soncinas, on Metaphysics VI, q. 17; Capreolus, In I Sent., dist. 19, q. 3, art. 1, concl. 3; Aegidius, Quodlibet IV, q. 7.

1231. The paraphrase reproduces the sense of Aristotle's text at De Anima III, c. 6 (text 26), contrasting enunciative truth and the truth of simple cognition.

1232. Aristotle, De Anima II, c. 6.

Another testimony is Metaphysics IX, chapter 12, where he seems to assert that very same thing; we shall cite his words below: for in explaining his mind in that place of De Anima they will be of use for our commentary; so that, to a certain extent, he seems in some way to favor this opinion.[1233]

From three reasons especially the aforesaid opinion seems to be confirmed. The first reason, as if from simple apprehension and from the impressed intelligible species and from the representation itself, it were also conformed with the thing, because it represents the thing itself as it is; therefore that very conformity should not fail to be called truth, unless something prevented it, which would be that truth could not be outside composition: but this cannot be said, since, just as any thing whatsoever, by that very fact that it is, is said to be true - because truth is constituted as a passion of being - and yet its truth is not complex and composite, but simple; so also the intelligible species and the simple apprehension of simples can be true with simple truth, because without composition they represent the thing as it is. Therefore nothing hinders simple truth from being found in them, as in things. And hence, since that definition of truth, namely, the adequation of the intellect to the thing, can fit the intellect by its order to things, and things by their order to the intellect, as St. Thomas teaches in this article at the end, it will surely be possible in this very article to perceive that truth is simple in the intellect, if it is also simple in things themselves; and by the same external reason one may consider it not only as regards the operation of sensing, but also as regards the very sensible species which are received in the faculty itself, and which constitute that power (as they say) in first act.

The second reason: In natural signs or those by institution there is truth, because they are conformed with the things which they signify; by which account smoke is a true sign of fire; gesture and outward bearing are signs of an interior affection - yet without any composition or division. Also a simple name is said to be a true or a false name of a thing. Therefore in any simple cognition of intellect or sense, and in the very impressed species, since in them there are representations which are a kind of signification, truth can be.

The third reason: The cognition by which God and the angels know things is no less true than ours, which consists in composition and division; and yet God and the angels understand by a simple intuition without any complex. Of God this is sufficiently manifest; of the angels it will be proved below in Disputation 123. Therefore in our simple cognition also there can be truth; and hence, too, in the intelligible species; and in the senses the same account seems to hold in all.

The aforesaid opinion is refuted, and the opposite is proved especially by Aristotle's testimonies.

Caput II - The opposite position

[Text begins in the next section.]

... for they say nothing about whether truth is found in composition or outside of it; indeed this opinion seems to be that of St. Thomas. The first part of this opinion, to which I said the Doctors lately cited above agree, is proved first by two testimonies of Aristotle. The one is De Anima III, c.

6, text 26, where he says thus: "Now utterance (dictio) is about something with respect to something, as affirmation; and every utterance is either true or false; but not every intellect is [so], only that which is fitting to the form of what a thing is (ipsius quid est), and it does not say something of something; but as the vision of what is proper to itself is true. But if it says that the man is white or is not, it is not always true; for it holds [of] those that have been composed or divided." These are Aristotle's words, by which he expressly affirms that the intellect which conceives the "what it is," that is, the essence of some thing, is always true and never false, and he says that it differs from enunciation or utterance in that the latter can be either true or false, whereas the intellect with respect to the very "what it is" cannot be deceived. Moreover, that Aristotle is speaking of the non-composing intellect is plainly evident from those words, "and it does not say something of something." Besides, that there is truth in sense when it knows the proper sensible, as Ferrarensis expressly judged that Aristotle taught by those words, "But as the vision of what is proper to itself is true" - as if he were saying: just as sense, in the cognition of its proper sensible, is always true, though without composition, so also the intellect, with respect to the very quidditative reality of the thing, is always true without enunciation and composition - Aristotle had also taught the same about sense in De Anima II, c. 6, text 63, where he had said that sense with respect to proper sensibles, as sight with respect to color and hearing with respect to sound, is not deceived nor mistaken, but is always true, whereas with respect to common sensibles and per accidens it is sometimes deceived. Another testimony is Metaphysics IX, c. 12, where he seems to assert this very thing; we shall cite his words below, for these will serve us, as it were, as the principal commentary for explaining his mind in De Anima III; they are so far from favoring this opinion in any way.

The aforesaid opinion can next be confirmed by three reasons.

First: in the simple apprehension itself and in the intelligible species impressed there is a representation of the thing; and thus there is also some conformity with it, because it represents it as it is: why, then, should not such conformity be called truth, unless perhaps truth were something that could not exist outside composition? But this cannot be said; for just as any thing, insofar as it is, is said to be true, if indeed truth is a passion of being, and yet it is not complex or composed, so also the intelligible species and simple apprehension can be true with a simple truth, because without composition they represent the thing as it is. Therefore truth no less can be in them as it is in things; and hence also that ratio of truth, namely an aptitude or ordination to the thing and to things through the intellect (as St. Thomas teaches at the end), will indeed belong to the intellect if it belongs also to things; and as regards the senses, the same account will be able to be considered.

Second reason: in natural signs or signs there is truth, because there is conformity with the things they signify; thus smoke is a sign of fire, and a gesture is a sign of an interior affection. Yet there is in them no composition or division; nevertheless they are also said to be simply true or false of some thing. Therefore in simple cognition, in the senses, and even in the species themselves there can be truth of representation, which is a certain signification.

1233. Aristotle, Metaphysics IX, c. 12.

Third reason: the cognition by which God and the angels know things is no less true than ours, which consists in composition and division; and yet God and the angels understand by a simple intuition without composition. About God this is sufficiently manifest; about the angels it will be proved below in Disputation 223. Therefore in our simple cognition there can also be truth, and hence also in the intelligible species; and as to the senses, the same account seems to hold in all.

The aforesaid opinion is refuted, and the opposite is proved especially by Aristotle's testimonies.

The opposite position

I judge the opposite opinion to be much truer, namely, that the truth of the intellect is properly found only in composition and division. This was handed down by Cajetan in article 2 of this question, by Hervaeus in Quodlibet III, q. 1, a. 2 and 3, and by Durandus in the first book, dist. 19, q. 5, n. 14.[1234] They speak, however, about the human intellect on the way; whether the same account holds of the angelic and of the divine we shall say in chapter 4, in the solution to the third reason. But we can by testimonies and reasons both establish this opinion and at the same time refute the former along with its foundations. And first the testimonies of Aristotle on behalf of this position are manifest.

The first testimony is in the first book De Interpretatione, c. 1, where, after having taught that words and concepts are signs of things, he immediately adds: "Just as in the soul there are sometimes concepts without truth or falsity, and sometimes of such a sort that one of the two is of necessity attached, so too in the voice it seems to be: for truth and falsity consist in composition." And several other things, by which he openly teaches that truth or falsity is not found in the simple concept nor in the simple word.[1235] The second testimony is c. 3 of the same book and De Anima III, c. 6, text 12, where he affirms the same in express words.[1236]

The third testimony is Metaphysics VI, c. 2, near the end, where he says thus: "And that which is as true is being; not-being, as false; since it is about composition and division, and altogether about the disjunction of contradiction; for truth has affirmation in composition, and negation in division; but falsehood the contradiction of this disjunction." When he says that being is as true, and not-being as false, he does not take these two simply, but as they are in composition and division, of which each seems to contain something within itself; therefore he added the clause "since it is about composition and division," as if he were saying that, because truth and falsehood are found in composition and division and universally in the opposition, or disjunction, of contradiction. He expressed the same thing more clearly a little further down; for when he had said that truth and falsehood are not in things as good and evil are, but are in the mind, he then adds: "But the things around simples and around those which are the what-it-is are not in the mind" - as if he were saying that simple apprehension, such as is of the what-it-is, is not in the mind; and by "mind" he calls not only the intellect, for in it too there is simple apprehension, but a judgment or opinion, a

1234. Cajetan, In Iam, q. 16, a. 2; Hervaeus, Quodlibet III, q. 1, a. 2 - 3; Durandus, In I Sent., dist. 19, q. 5, n. 14.
1235. Aristotle, De Interpretatione I, c. 1.
1236. Aristotle, De Interpretatione I, c. 3; De Anima III, c. 6, text 12.

certain reflex judgment by which one discriminates between opinions; sometimes this name "mind" is used in this way, as you will note, by Damascene, and we shall say the same below, and indeed Aristotle in Ethics VI, c. 9 sometimes uses this name for a judgment, so as thus to explain why truth is not in simple apprehension nor in just any composition, but in that which is with judgment, and has something of what in other places he signified when he said that truth is in the composition whereby something is said to be or not to be, as will be explained below.[1237]

But Ferrarensis replies in cap. 19, solution 5, to this doubt, that wherever Aristotle said that truth and falsehood are in composition and division alone, he did not deny that they also are in the simple intellect; rather, he wished to teach that truth, insofar as known, is only in composition and division: that is, that as an object known it is only in the composing or dividing intellection; and in the same way he expounds the words of St. Thomas in the cited article 2, where he thinks St. Thomas agrees with Aristotle.[1238] This interpretation of Ferrarensis is marvellously approved by some more recent authors; and hence they say that truth is in the intellect even simple, as in that in which the true is; but in the composing and dividing intellect only, as in that which knows the true. Cajetan also mentions this at 2-2, q. "Ad evidentiam," and asserts that at first glance the words of St. Thomas fit very well, but that they are not true; and so, they must be interpreted otherwise than the holy Doctor.[1239] But whatever may be of St. Thomas's mind - leaving aside for now Cajetan's interpretation, which does not please me, nor do I wish to dwell longer on examining it - Aristotle cannot be explained in this way from his own words in that Metaphysics VI, c. 2; and by reason it will become manifest.

First, from the context itself: First, that which Aristotle had said there, that the true and the false are in composition and division alone, he then proves by these words: "For neither falsehood nor truth is in things, as good [is], or as evil [is], but [they are] in the mind; but around simples and around those which are the what-it-is they are not in the mind"; wherein he plainly denies that the true and the false are in things, just as good and evil are. For what Bessarion translated more harshly, "As what is good," in Greek is "as good"; which others render, "Just as good," or "as that which is good"; and the words of Aristotle could be ordered more clearly thus: "For truth and falsity are not in things, as good truly [is], and as evil [is] false." Therefore, since Aristotle says that good and evil are in things, but truth and falsity are in the mind, if he were understood to speak only of the true and the false as they are in the knower, then, by the same account, he denied that truth and falsehood are in things; but about good and evil, nay about any other thing whatsoever, he would have to say entirely the same; for nothing, insofar as known, is in things, but only in the intellect. Now what some say, that by a peculiar account truth is not except in the knower, they neither explain sufficiently nor can it be true; for most properly the true is said of the judgment of

1237. St. John Damascene, De fide orthodoxa IV, c. 9; Aristotle, Nicomachean Ethics VI, c. 9; Aristotle, Metaphysics VI, c. 2.

1238. Ferrarensis, cap. 19, solutio 5; St. Thomas, In Iam, q. 16, a. 2.

1239. Cajetan, In II-II, q. 1, "Ad evidentiam."

him who by a direct act enunciates the thing to be as it is, even if he himself is not certain about that truth, nor advert to whether the judgment about it is true; and most properly the false is said when he enunciates the thing otherwise than it is, even if he should not have a reflex act.

Besides, as Cajetan very well noted against Ferrarensis, truth can not only be in the intellect as known in composition and in judgment, but also in simple apprehension; therefore, although, as judged, it cannot be outside composition and judgment, nevertheless, as known, it can be in simple apprehension; for just as any thing and quiddity can be apprehended by simple cognition, so too the quiddity of truth can be known, whether that be something real, as Ferrarensis seems to teach, or something of reason, as others think.

Finally, it would be a trifling doctrine in Aristotle, if in all those places he had only wished to teach that truth and falsehood, as judged, are only in judgment, and as known, are only in cognition: this is manifest even to the unlearned and unskilled; and, as we said above, he would have said nothing peculiar about truth and falsehood that does not fit other things.

Someone could answer, further, to all these Aristotelian testimonies - and perhaps more probably - that truth is twofold: one complex, and this he understood in the places cited; another simple, and of this he was not speaking there; but that this [simple truth] is in simple cognition, in the intelligible species, and in sense, as the prior opinion said. Nor should this distinction seem to anyone fabricated; for the same Aristotle, De Anima III, c. 6, in the cited text 26, said that in simple intellect and in sense there is truth; although in the same chapter, text 22, he had taught that truth is in composition alone; which two cannot both stand unless that twofold truth, complex and incomplex, be distinguished.

But this solution too has little weight. First, because Aristotle, in the places cited and in many others, when he said that truth is in composition alone, added no limitation or explanation: he therefore understood absolutely any truth whatsoever, when he said universally that outside composition it is not. Next, even if that truth were twofold, nevertheless each would have the common account of truth: therefore, when Aristotle said that truth is not outside composition, he understood not of some [truth], but of every [truth]; just as if someone were to say that "animal" is not in some place, he would not have said this of one species only, but of every [species] as well. Moreover, adversaries without foundation fabricate that, in that third book De Anima, c. 6, Aristotle affirmed that truth is in simple cognition and in sense, and thus posited a twofold truth; although indeed his words at first sight seem to denote that, nevertheless, since he treats the same matter in Metaphysics VI, c. 12, and teaches the opposite there, as we shall immediately see, it must be said that in that same third book De Anima he held altogether the same; whence also it will be clear that those two testimonies of Aristotle, which we adduced for the earlier opinion, are of no force against ours.

We grant, therefore, that in De Anima III, c. 6, text 26, Aristotle is speaking of simple cognition and apprehension of the thing, when he says, "That intellect which is fitted to the form of the what-it-is is true, and it does not say something of something"; but that by these words he did not signify that such an intellect is true with proper truth, but only that it is in that apprehension as something

like those [acts] which, by composing or dividing, say that something is or is not; and he understood this very thing of sense when in the same place he said, "But as the vision of what is proper to itself is true"; which interpretation, if it sprang from my own brain, would be...[1240]

It is rejected first: that there is a twofold truth, one complex; and that Aristotle understood this in the places cited; but another simple, and that he there spoke of this; and that this is in simple cognition, in the intelligible species (*species intelligibilis*), in sense, as the earlier opinion was saying: nor ought this distinction to seem to anyone a mere contrivance. For the same Aristotle, De anima III, c. 6, in the cited text 26, said that in simple intellect and in sense there is truth; while in the same chapter, text 22, he had taught that truth is in composition alone; which two cannot stand together unless that twofold truth, the complex and the incomplex, be distinguished. However, this solution too has little weight.

First, because Aristotle in the places cited, and in many others besides, when he said that truth is in composition alone, added no limitation or explanation: he therefore understood absolutely any truth whatsoever, since he said universally that outside composition there is none.

Second, even if there were a twofold truth, yet each would have the common notion of truth: therefore when Aristotle said that outside composition there is no truth, he understood it not of some, but of all. As if someone were to say that "animal is not in such a place"; he would have said it not of one species only, but of all likewise.

Third, the adversaries without foundation feign that in that third book De anima, c. 6, Aristotle affirmed that truth is in simple cognition and in sense, and therefore established a twofold truth. For although his words at first glance may seem to denote this, nevertheless, since when he treats the same matter in Metaphysics IX, that is, c. 12, he teaches the opposite, as we shall see immediately, it must be said that in the third of De anima he did not have the same sense; whence it will also be established that the two testimonies of Aristotle which we adduced for the former opinion avail nothing against our side.[1241]

We concede therefore that Aristotle, De anima III, c. 6, text 26, speaks of simple cognition and apprehension of the thing, when he says: "The intellect accommodated to the form of the what-it-is itself is true, and does not say anything about which beforehand it speaks"; but by such words he did not signify that the intellect of this sort is true with proper truth, but only that it is in that apprehension as something like that which, by composing or dividing, says that something is or is not; and he understood this very thing of sense when in the same place he said: "But as the vision of what is proper to itself is true"; which interpretation, if it were drawn out of my own brain, might be judged little suited to Aristotle's words; but because Aristotle himself has plainly explained in that sense in Metaphysics IX, c. 12, that this was his meaning, it ought not be doubted.[1242]

Accordingly in that chapter 12, text 22, he openly taught that true and false are in the composition and division of opinion; then concerning simples and non-composites he teaches that in them there is truth, yet not falsehood, but ignorance: because either the thing is apprehended by

1240. Aristotle, De Anima III, c. 6, text 26.
1241. Aristotle, De anima III, c. 6; Aristotle, Metaphysics IX, c. 12.

a simple concept, and the intellect is true; or it is not apprehended, and then the intellect is not deceived unless by composing it enunciates something; but it is ignorant, or does not touch the thing, which is merely to be vacant of intellection. Where Aristotle did not intend to signify that in the apprehension of simples there is found properly truth and not falsity; but only that there is something like truth, which in some manner could be called true, namely to touch and to apprehend: for this is to "say" something, although it is not to enunciate. But there is nothing like the false, since the false is not in not-knowing, but in some act of cognition: wherefore it is rather to be called not to touch, or not to know, than to be in any way deceived.

From this exposition Aphrodisias does not dissent, when he says on these words: "But in simples and in composites this does not occur, nor does true or false exist alike in these and in those (that is, in composites), but in another way; for if it existed alike, they themselves would in no way differ among themselves." Nor is there any interpreter of Aristotle who says that Aristotle conceded proper truth in the mere apprehension of simples.[1243]

Moreover, from Aristotle's very words I show this same genuine exposition of his mind: for he says: "But concerning incomposites, whether it is or is not, are the true and the false; which interrogation contains an affirmative sense with a negating one"; as if he said that in simples there is not found an "is" or "is not," which is composition and division, nor true and false: which sense the translation of Averroes makes manifest. Then Aristotle subjoins the reason: "For it is not composite, so that it be if it is composed, but is not if it is divided: nor, similarly, will there be true and false in those." As if to say, just as there is not composition and division, so also there is not true and false. Immediately there follows: "And just as neither is the true the same in these, so neither is the being itself" - that is, just as in simples there is not the same ratio of truth, so neither the same of being; which in turn he had said a little before. Therefore, since he had asserted that indeed there is a different ratio of falsity and of truth, he explains this diversity in these words: "Surely this is true, but that false: for to touch and to say is to be true: for affirmation and saying are not the same: but not to touch is to be ignorant: it is not, assuredly, to be deceived about what a thing is, except per accidens." That is, in simples each in a certain way is found, namely true and false: but truth is nothing else than to touch or to apprehend the thing, which is a kind of saying. However, because he seemed to concede consequently that in the apprehension of simples there is truth as there is in affirmation and negation, he added that to say, that is, to affirm and to enunciate, are not the same: wherefore although the apprehension of simples is a saying which has a certain shadow of truth, nevertheless it is not an affirmation, in which truth is properly and primarily.

And just as he said that to apprehend itself is as it were true, so then he did not say that not to touch is as it were false, but that it is ignorance: because there is nothing like the false; for it is merely the negation of cognition: but falsity, as also truth, is in some operation and cognition.

1242. Aristotle, Metaphysics IX, c. 12, text 22.
1243. Alexander of Aphrodisias, on De anima III, c. 6.

From these things not only does our opinion remain confirmed, but it has also been sufficiently shown that those two testimonies of Aristotle adduced for the prior opinion avail nothing: what remains is, that we briefly say by what reason he himself in other places said that sense regarding its proper sensible is true. Passing over other interpretations, what he said in De anima III, c. 6, text 63, namely that sense concerning the proper sensible cannot be deceived, in which he marked a difference between the proper and the common sensible, concerning which sense can err, is not to be taken as though it always necessarily so happens: for experience teaches this to be false. Moreover, what some say, that this is to be understood with this moderation, if the potency be rightly disposed and the object rightly applied, does not agree with Aristotle's mind: for by this reason sense could neither err about the proper sensible nor about the common; whereas Aristotle himself says that about the common error happens, not however about the proper. Therefore the best interpreter of that text 63 was Aristotle himself, De anima III, c. 3, text 161, where he moderates the aforesaid sentence with these words: "And therefore it happens that sense indeed of what is proper is true, yet nevertheless very much admits of falsity"; therefore he grants that it can sometimes be deceived. Then after a few words, about the common sensibles he says: "About which especially error and deception can occur by sense": by which words he establishes the difference to be this, that about the proper sensible deception happens with greater difficulty, about the common with greater ease: which is to be understood, other things being equal.[1244]

These things being premised, it remains that we show Aristotle in these places did not concede proper truth in external sense, as was asserted for the prior opinion: and I show it thus. Just as Aristotle himself says that sense concerning the proper sensible is true, so likewise he affirms that concerning the common it is deceived and is false: yet from Aristotle's doctrine falsity and deception cannot be in sense: therefore in that place he did not teach that there is truth in sense. Moreover, that falsity is not in sense is gathered from his doctrine in Metaphysics IX, c. 12, where, as I was just now reporting, he teaches that in the simple cognition and apprehension of the whatness itself the intellect cannot be deceived: and hence in it there is not falsity, but ignorance: therefore much more in sense, which by simple notice perceives its object and in no way composes, deception cannot be.

Evasion. But someone will say: when Aristotle asserts that sense is deceived concerning the common and the per accidens sensible, he calls the very ignorance, or the very not-knowing, by the name of error and deception in a certain broader signification; yet not any positive cognition of sense. But this interpretation does not square with his sentence: because by this account sense concerning the proper sensible not only rarely, as Aristotle contends, but also most frequently could be deceived: because there is always in sense a defect of some notice, since not every sensible is always felt; wherefore by this kind of error sense would always be deceived. Since therefore Aristotle says that never or rarely there is a mistake about the proper sensible, but about the common and the per accidens frequently, it is clear that he speaks of an error and deception which does not consist in a mere negation, but in something positive; and since falsity cannot properly be

1244. Aristotle, De anima III, c. 6, text 63; De anima III, c. 3, text 161.

in sense, it also follows that truth is not properly in it. He therefore calls a cognition in sense true or false, not because in it there is properly truth and falsity, but because it is the cause of a true or false judgment in the intellect.

That very thing Anselm expressly taught in the little work On Truth, c. 6, who, although he asserts that there is truth in many things, which he there takes most broadly, nevertheless denies that truth and falsity are in sense, and he refers both to opinion, which has its origin from external sense itself. Anselm therefore agrees with us, except that he seems to ascribe the judgment of opinion, in which he thinks truth and falsity to be, to the interior sense, which he calls "common," as Aristotle also does in De anima III, c. 3, in that text 161; whereas in truth neither can there be an enunciation in it, nor a judgment of opinion by reason of itself, except insofar as it is conjoined to the intellect: and hence the first root of truth and falsity is the intellect judging something about things.[1245]

Caput III - The posterior opinion is proved by arguments

Now to confirm our opinion by arguments, and at the same time to refute the contrary, is necessary. But it must be premised that the solution of this difficulty most of all depends on the common mode of speaking: for that there is some agreement between the thing apprehended or represented and simple cognition, indeed also between the species (*species intelligibilis*) and the thing represented, no one can doubt: but whether such agreement should be called truth has a question which must be defined solely by the common way of speaking: and although the controversy be about words, yet not about things, as we noted in the first chapter, nevertheless it is not to be despised. This therefore being supposed, our opinion is confirmed by two reasons.

Primary argument showing that in simple apprehension neither truth nor falsity properly exists. The first reason is: words are in the place of cognitions and concepts; therefore as often as the concept is true, the word also which is substituted for it is said to be true; and on the contrary, if the concept be false, the word also corresponding to it is said to be false. By the name "concept" I understand what they call formal, that is, the quality which is the cognition itself of the mind and an operation of the potency; nor however is this quality otherwise denoted by a word, but a word is put in the place of it: for the thing known and conceived is signified by a word; for that is said to be signified by a word, into the cognition of which the sign that signifies it makes someone to come. Now from words we come into the cognition of things, not of the thoughts of those who speak to us, unless when they also wish to indicate to us that they are thinking this or that; for then the thought itself is the signified of the word, not the thing thought. Otherwise, however, the signified is the thing thought, which is wont to be called the objective concept, of which I think Aristotle spoke when in On Interpretation I, c. 1, he said that words are signs of concepts.[1246] Therefore words do not signify things thought remotely, signified first by the very thought which is occupied about them; but they signify proximally the things objectively existing in the intellect of the speaker, as

1245. St. Anselm, De veritate c. 6.
1246. Aristotle, On Interpretation I, c. 1.

we showed above, in the preceding disputation, c. 2. Nevertheless words are substituted in the place of thoughts, that by them the one who speaks may make the hearer understand that which he himself understands, and think that which he thinks. In the same way, when someone by words explains what he himself is thinking, the thought is the thing proximally signified; yet there is another reflex thought upon that, in whose place words are substituted, by which the speaker signifies that he is thinking this or that. Therefore universally words are substituted for thoughts; and consequently, as I was just now saying, truth and falsity correspond in the same way to words and to thoughts.

No simple word, however, outside enunciation is called true or false: for if one hear this word "man," he cannot yet say "it is true" or "it is false": but when he hears an enunciation, he can say "it is true" or "it is false": therefore no simple cognition, to which a simple word answers, is true, of itself, or false.

Solution. Perhaps someone would answer that although in simple words there is not the complex truth of enunciation, by reason of which we are wont to say that the speech uttered by a word is true or false, nevertheless there is simple truth or falsity, by reason of which we are wont to say: "this is a true name of this thing, that however is false." Yet if one rightly consider the mode of speaking by which we say that some name is true or false, he will plainly understand that an enunciation of some sort, the cause of truth, is always involved. We say that a name is true of that thing whose proper name it is, or whose genus it is - by way of example, "rational corporeal creature," namely "man" - as if we were saying "it is true that these names are imposed on these things": and from this their very imposition, according to its proper signification, cannot of itself be a cause of deception and of false enunciation, but only of a true one. If it should happen otherwise at times, the falsity will come from elsewhere than from the name itself. In the same way a person's name is said to be false when someone takes to himself another name than he truly has, either because it is false that this is his name, or because such a name, once assumed, is of itself a cause of deception and of a false enunciation. And in this way names are called true or false from their effect; yet by reason of their own simple signification they are not said to have truth or falsity.[1247]

Hence, moreover, the second argument of the prior opinion is also solved: for we concede that a simple natural sign, such as smoke, a gesture, and the like, is true, not by a simple truth that primarily befits it by an order to the simple thing signified, but because to those who see it, it also signifies, after the manner of an enunciation. For the one who sees smoke not only apprehends fire, but also forthwith judges that it is there. So too from a gesture, indeed even from simple words, the same happens; and for this reason alone is there in them truth or falsity, as in a sign that signifies an enunciation to those who see and hear. But if they altogether signified simply, not by an order to being or not-being, such signs would be called neither true nor false. Wherefore every truth and falsity is referred primarily not only to the intellect, but also to the judgment of reason, so that nothing in signs or in cognition is called true, unless it is an enunciation, or something that has some order to it: and of the rest we shall speak in Disputation 77.

1247. The argument continues on the following page and is completed in the next chunk.

The second reason: in simple apprehension there cannot be falsity, which properly consists in deception, as Aristotle plainly teaches; therefore neither can there be truth: for these two, as even St. Thomas admits, are not opposed as affirmation and negation, but as contraries; but contraries have the same common subject, so that if it implies a contradiction that one of them be in any subject, it also implies that the other be there.[1248]

It is answered: Some reply with Ægidius that the truth of simple apprehension has no contrary; and therefore that falsity is opposed only to the truth of complex enunciation.[1249] Yet, to escape the force of the argument, without foundation they devise a twofold kind of truth: since every truth, even that of simple apprehension, from effect at least can be so named from the truth of enunciation. Accordingly, in this way we can call a simple cognition in some sense true, because from itself it is a cause of truth in a complex enunciation, if something else does not hinder. For he who apprehends some thing, or attains the quiddity of it, has a sufficient principle of a true enunciation and judgment; yet no simple apprehension can be called false from effect, because the apprehension of a thing, as such, is not a cause of a false opinion: wherefore whatever things are said to be false "from effect," we shall say in Disputation 77, chapter 4.

Others reply that even in simple apprehension falsity is found, namely that the apprehension of a man is a true knowledge of a man, but a false knowledge of a lion, or of some other thing. This, however, is ridiculous; for thus there would be no knowledge that would not be false, which is absurd. For although a thing at times is said to be false, this happens only when there is in it some accident, by reason of which it appears to be of another nature than it is: in which way orichalc is called false gold, because it appears to be gold when it is not; a thing which in the simple knowledge of a thing cannot occur, and therefore there is nothing on account of which it may be called false. Moreover, the simple knowledge of a man, if it be compared with an icon, or with another thing, has only the nature of negation and of ignorance; but falsity cannot be in ignorance and negation, as was proved above from Aristotle.

Response is given to the arguments of the prior opinion. Furthermore, let the adversaries concede truth and falsity in simple things: for in works of art those are false which do not agree with the idea of the artist; while those are true which conform rightly. Therefore, from their opinion, there is a falsity simply opposed to a simple truth: which being supposed, the reason set forth above gathers its conclusion well. And indeed St. Thomas, when he said that truth and falsity are contraries, and therefore have a common subject, granted that there is truth and falsity also in simple things: first, indeed, falsity in works of art when they depart from the ideas; then in natural matters, when they depart from the rule, as in works of sin: whether this be so we shall see in Disputation 77, chapter 2.[1250] But if someone should say that in things there is not falsity properly and primarily, but "from effect" and insofar as a thing is a cause of a false opinion, so that it is called false - this surely I myself judge to be truer: and for this very reason why shall we not speak likewise of the truth of things? Wherefore, if in things truth or falsity is only secondary and "from

1248. St. Thomas, Summa Theologiae I, q. 16, a. 4; cf. Aristotle, Metaphysics VI; On Interpretation, ch. 14.
1249. Ægidius Romanus, Quodlibet IV, q. 7.
1250. On the "ideas" in works of art, and "rule" in natural things, see the author's Disputation 77, c. 2.

effect," so far as concerns truth, the same must be said, namely that no simple apprehension, neither primarily nor "from effect," can be called false; another reason will be given, and will be explained in Disputation 77, chapter 4.

To the third, however, I reply with St. Thomas that in the angelic and the divine intellect truth is found primarily, just as in our intellect when it composes and divides and judges of things, even if in none of them there is composition and division, but by a simple intuition it judges concerning things. For in them there is not simple apprehension as in us, who apprehend simply in such a way that that cognition does not reach to judging of the thing, namely to be or not to be, in which judgment truth or falsity is said to be found, not, however, in every composition and division, as is noted in the second chapter of this disputation from the doctrine of Aristotle in Metaphysics VI, chapter 2.[1251]

Now this operation of the intellect, in which there is truth and falsity, is called by Aristotle affirmation and negation, which consist in the part of the intellect concerned with composition and division, when the intellect asserts something or denies it: it is wont to be explained only in the indicative mood; for this does not occur without judgment and assent. For until the intellect apprehending the subject and the predicate in some way sees that they rather agree with each other than not agree, it is not yet said to judge, or to affirm one of the other; and, on the other hand, it is not yet said to deny, until it sees that they rather do not agree with each other than agree: in which assent or dissent of the intellect we shall show that it consists.[1252] Wherefore Aristotle in Ethics VI, chapter 9 distinguishes "deliberation" from opinion and dianoia, which his interpreter renders "thought": he distinguishes, namely, because opinion and dianoia are already an enunciation; but deliberation is not yet an enunciation: for this is the same as affirmation and negation. Hence Aristotle in the Categories, chapter on substance, not far from the end, takes speech and opinion for the same, which he says to be the subject of truth and falsity; and in the last chapter of On Interpretation he assigns contradiction between opinions, which he calls enunciations.[1253] Therefore when he said in Metaphysics VI that truth is in the very division of contradiction, he understood it to be in judgment, or opinion.

But if anyone objects that a composite proposition can exist in the intellect before he himself judges anything: I reply that this can be done only by apprehending mere words; but that the things themselves cannot be connected among themselves by the intellect with the conjunction that is denoted by the indicative, until it knows the predicate to agree more with the subject than its opposite, which is to assent; or knows that it does not agree, which is to dissent.

From what has been said it is inferred in what way there is truth in God by judging, just as in our intellect it is found by enunciating. And since the divine intellect is infinite, and above all intelligence, and therefore cannot but understand and judge every thing as it is, it follows that in

him there is the highest truth, which cannot be deceived or fall into error: about which more was disputed through the whole Question 14. For the knowledge of God looks to this rather than to his essence in this respect.

Disputatio LXXVI - Whether the truth of enunciation is the conformity of the formal concept, or of the objective, with the thing itself

Veritas of the intellect is the conformity (*conformatio*) of the objective concept (*conceptus obiectivus*) with the thing. Caput 1. Corollaries of the foregoing doctrine. Caput 2.

Caput I - The truth of the intellect is the conformity of the objective concept with the thing

From the preceding disputation we have only that truth is the conformity of the enunciating intellect with the thing itself. Yet since in the intellect there is the very quality of cognition, which is called the formal concept (*conceptus formalis*), and the thing known, which is called the objective [concept], it is not sufficiently settled among the Doctors whose conformity, or agreement, is truth.

Therefore the earlier opinion is that of Cajetan on article 2 "ad evidentiam," in the second notation, who holds that truth is the conformity of the formal concept with the thing; whether the formal concept be an expressed species, or the cognition itself.[1254] Thus that quality which represents a thing to be as it is, is said, according to Cajetan's view, to be true because it is conform to the thing which it represents. He proves this opinion by no argument, but seems to assume it as something known; yet it could be recommended in this way. Foundation: Truth is the conformity of the intellect with the thing, in such wise that it is primarily in the intellect itself, and from there is derived to things, as will be explained in the following disputation: therefore it ought to be primarily in the very quality and formal concept, which is in the intellect, by reason of which the thing understood is also in the intellect; for if truth were the conformity of the thing understood with itself, as it is outside, it would be rather the thing understood than the intellect that would be called true: but in fact the intellect is said primarily to be true, and the thing itself secondarily: therefore truth is in the formal concept, not in the objective [concept]. Ægidius seems to have followed this opinion, in Quodlibet 4, question 7; for he teaches that truth is an assimilation of the intellect, which is formally in it.[1255]

The later opinion is more probable, which Durandus has proved, namely, that truth is primarily the agreement of the concept, not formal, but objective, with the thing itself; and this, moreover, is extrinsic, so as to be the conformity of some thing with itself under a diverse mode.[1256] The same opinion is taught quite expressly in the words of Hervaeus in Quodlibet 3, question 1, articles 2 and 3; although some recent writers, misunderstanding him outright, have thought that he was of a

1254. Cajetan, on Summa Theologiae I, q. 16, a. 2, "ad evidentiam," secunda notatio.
1255. Ægidius Romanus, Quodlibet IV, q. 7.
1256. Durandus of St.-Pourçain, In I Sent., d. 19, q. 5; cf. also q. 13.

different opinion from these authors - namely, that truth is the agreement of a thing, either outside the intellect with itself, or as it is in the intellect: for thus nearly do they define truth. However, since in the same article he plainly agrees that truth is not formally in the intellect itself, but in the thing understood, that is, in the objective concept, not because it is conform to the formal concept, but because it is conform to the thing itself existing outside the intellect, there will be no reason to say that he sensed anything other than Durandus.

Hervaeus's words are these: "Therefore judgment - because it is not formally [i.e., because truth is not] in the intellect unless it be in the thing representing, but in the thing understood, nor in the intellect are there relations to the representing, in such manner namely that such a thing be such as its thing represented; but in this, that such a thing is such as it is represented." Therefore, when he says that truth is the agreement of the thing, according to itself, with itself understood; it is the same as if he were to say, on that account what is conceived about the thing is true, because it is conform to the thing according to itself, that is, such as it is in itself, is objected to the intellect; or conversely, it is such according to itself as it is objected to the intellect: for these two come to the same. If Hervaeus had taught the opposite, Durandus without doubt would have refuted it, since he took from him all the things that he taught for sure. And in this sense did Soncinas understand Hervaeus, in book 6 on the Metaphysics, question 17, article 2, at the end.[1257] In the same direction, though not so openly, Henry in his Summa, article 34, question 9, inclines. And indeed Durandus confirms this opinion with two very good reasons, the first of which is as follows.

The conformity, or agreement, of representation, or cognition, with the thing itself - which is called truth - consists in this, that the cognition represent the thing, or be known to be, just as the thing itself is according to itself; for hence the intellect is said to be true, in that it knows a thing to be thus as it is: but such an agreement is primary and per se rather with the thing, or is objective in the intellect, not with the formal concept: therefore in it truth is found primarily. Moreover, that agreement primarily belongs to the thing, insofar as it is objective in the intellect, is proved thus. The intellect is not said to be conformed by its intellection to the things themselves from this, that its intellection is so disposed toward itself as it is in its subject, as the thing in the intellect is disposed toward its real being - this is manifestly false; but from this, that the thing is represented by the intellection just as it is: therefore that in which proximally the intellect and the thing according to itself are found and contained, is primarily the thing represented by the objective cognition: to that, therefore, there primarily intervenes agreement and truth.

The second reason, which Durandus takes from Hervaeus, is of this sort. That is primarily true which is signified by a true enunciation which is in the voice: for an affirmation which is in the voice is not for that reason true in another way than because it is the sign of a true understanding; but words do not signify formal concepts and the very qualities of intellections, but the things conceived, as in the preceding disputation, chapter 3, in the treatment, we have shown: therefore the things objective are primarily true, not, however, the formal concepts. Therefore all other things are said to be true from an order to the truth which primarily befalls the objective concept,

1257. Soncinas, In VI Metaphysicorum, quaest. 17, art. 2, in fine; cf. Henry of Ghent, Summa, a. 34, q. 9.

not only words, but the very qualities of the intellect as well; for these are signs of the objective concept of truth: hence the objective concept is true, because it agrees and is conformed with the thing according to itself.

But an objection is urged against the foregoing opinion in this way: The truth which is in the voice does not consist in the agreement of the thing signified with itself, but of the voice with the thing signified: therefore the truth of the intellect does not consist in the agreement of the objective concept with the thing itself, but of the formal concept with the thing itself represented. I answer: words are, as I said, true secondarily; not because they are conformed to the things signified, but because they signify objective concepts conformed to the things themselves. For truth is primarily in the intellect, and to that extent words are true, insofar as they denote a true intellect.[1248]

Corollaries of the foregoing doctrine.

Caput II - From the foregoing position Durandus and Hervaeus gather certain points worth noting.

The first is that truth is an entity of reason (*ens rationis*): first, because it is in things not according to themselves, existing outside the intellect, but only insofar as they are set before the intellect; and further, because it is an agreement of a thing with itself as standing in a different way; for things are not always conceived in the very way they are. Sometimes, moreover, there is an agreement of a thing with itself conceived in no other way than by intuitive knowledge (as they speak), especially by God Himself; then that agreement and conformity which we call truth will rather be a relation of identity of the same thing to itself than of likeness and agreement; and the intellect will then be said to be true when it has the objective concept of the very thing exactly as the thing itself is.[1258]

But since the truth of the intellect, which primarily belongs to the objective concept, is a relation of reason (*relatio rationis*), it follows also that there is a relation of reason in the formal concept itself, to which truth belongs secondarily. For if in the objective concept, to which truth belongs primarily, there is only a relation of reason, much more will this be so in that to which it belongs secondarily. If, however, falsity and truth belonged primarily to the formal concept, it could easily be defended that truth and falsity are real relations, as is representation itself. Thus Soncinas teaches on the sixth book of the Metaphysics, question 17, article 2, at the end; except that he thinks that sometimes there is a respect of reason, namely when they are toward a non-existing thing. For many Thomists judge that the relation of an existing thing to a non-existing one is only a relation of reason - which, however, is not universally true. For the relation of a productive [cause] to that which can be produced is placed by Aristotle, Metaphysics V, chapter 15, under the second species of relation, and yet it is toward a non-existing thing; about which there is no need to dispute further here.[1259]

1248. St. Thomas, Summa Theologiae I, q. 16, a. 4; cf. Aristotle, Metaphysics VI; On Interpretation, ch. 14.

1258. Durandus, In I Sent., d. 19, q. 5; cf. also q. 13. Hervaeus Natalis, Quodlibet III, q. 1, a. 2 - 3.

1259. Soncinas, In VI Metaphysicorum, quaest. 17, art. 2, in fine; cf. also the remark on relations toward non-existents. Aristotle, Metaphysics V, c. 15 (on the second species of relation).

Secondly, Hervaeus (art. 3) and Durandus (n. 14) note that while certain entities of reason follow upon simple knowledge, other [entities of reason] follow upon enunciation; and yet true and false do not follow upon knowledge, as genus and species do, but upon an enunciation of composition and division. If indeed they understand this in such a way as to think that the relation of truth and falsity is attributed to a thing from the fact that it is understood, not by any and every kind of cognition, but by enunciation alone; and that the relation of genus is attributed to a nature from the fact that it is understood by a simple knowledge which abstracts it from singulars; their doctrine is most true. For the foundation of the relation of genus, from which a relation is conceived in the thing itself, is simple knowledge alone; but the foundation of the relation of truth and falsity is not any sort of knowledge, but enunciation with judgment. Indeed, before someone enunciates a thing, we can never say or understand [it to be] true or false, as was proved in the preceding disputation.[1260]

If, however, they think that a relation of reason itself - whose being consists only in being known - sometimes comes to be by composition and division (as truth and falsity), and sometimes by simple knowledge (as genus and species), they are plainly mistaken. For no entity of reason which is a relation - whether it be truth and falsity, or genus and species - can come to be, or be known (which is the same thing), unless a comparison has been made; because it is conceived after the manner of a relation. But a comparison cannot be made by the intellect without an enunciation, as is evident. I said that a relation is brought about only by enunciation, because an entity of reason which is a negation (as a chimera) and which is a privation (as blindness) can be formed by simple knowledge, since these two are conceived after the likeness of some real being, and on that account are called entities of reason.[1261]

Third, from what has been said there seems to follow what Henry teaches more fully in the Summa, article 34, question 5: namely, that truth is prior in the intellect than in the thing itself. For in things he says it is found only from this, that of themselves they are apt to be understood by the intellect; for which reason it seems that truth exists in things only in potency, not in act.[1262]

Not in act. For when a thing is understood and there is already agreement of the concept with it, then there is truth in act, as was explained above; and in this sense he interprets that statement of Anselm in the work On Truth, chapter 12: "Truth is a rectitude perceptible by the mind alone"; and likewise that common axiom: "The true, or truth, is the object of the intellect"; whence also it is commonly said that nothing is known by the intellect except under the aspect of the true. Finally, from this doctrine he concludes that the truth of God is more principally in His essence, insofar as it has the notion of intelligence, than insofar as it is essence.[1263]

But taken as a whole, unless it be further explained, this doctrine does not please me; and while we leave to be examined in article 5 what he teaches about the truth of God, let us now treat of created truth alone. First, what he says about things - that they are true for this reason alone,

1260. On the dependence of truth and falsity on enunciation with judgment, see Hervaeus, loc. cit.; Durandus, loc. cit.

1261. On entities of reason formed without enunciation (negation and privation), see the common doctrine of the schools.

1262. Henry of Ghent, Summa, a. 34, q. 5.

because they are apt to be known by the intellect - is most true, as will be explained in the following disputation. Next, what he says - that truth is chiefly in the intellect - can be understood in two ways. In one way, just as other relative entities of reason, it has actual being only through a knowing and comparing intellect; and therefore, in the best way in which it can exist, it exists when it is actually known: and in this sense it is most true that truth is chiefly in the composing intellect. But that truth, in this sense, is not in the divine intellect will be shown opportunely in article 5 against Henry himself.

Moreover, although the object of the intellect is the true, that is, that thing to which truth belongs primarily (because by the name "true" we include every composition and division of the intellect to which truth is attributed), nevertheless it cannot be said that the true is the adequate object of the intellect, as the good is said to be of the will - as Ægidius thought wrongly in Quodlibet IV, question 7, and others - but rather being (*ens*), as Scotus rightly taught in I Sentences, distinction 3, question 3, §5.[1264] But against that conclusion - passing over its arguments - this alone can prove it: everything that the intellect understands, it knows not under the aspect of the true, but under the aspect of being. For the intellect is of the false and of the true, just as the will is of the good and of the evil; for the will is of evil, not by pursuit but by flight; the intellect, however, is of the false, not by assent but by dissent. Nay more, sometimes the intellect is of neither the true nor the false, namely in simple apprehension, in which neither true nor false is found, as in the preceding disputation was shown.

Explication of Anselm's words. What Anselm said - that truth is a rectitude perceptible by the mind alone - Henry did not interpret rightly. For Anselm did not for that reason say "perceptible by the mind alone" in order to indicate that truth is brought about only by the operation of the intellect, as other entities of reason are; but to distinguish it from the rectitude of quantity, which is perceived by sense, as is manifestly gathered from Anselm himself in that chapter.

Examination of Henry's doctrine. Although the object of the intellect is the true, that is, that thing to which truth belongs primarily, nevertheless it cannot be said to be the adequate object of the intellect, as the good is of the will; as Ægidius wrongly thought; but rather being, as Scotus rightly taught. But against that conclusion, etc., as above.

Articulus III - Whether the true and being are convertible

Therefore he would judge it to be conform, and hence true: this, then, is that the judgment of assent is always engaged about the true, at least under the aspect of the apparently true.

But about dissent concerning the false, one must speak with a certain proportion as follows: for dissent is a judgment of enunciation by which someone knows the predicate not to agree with the subject. And yet when someone so judges, although in the thing itself it is not so, nevertheless in his own judgment he behaves as if it were so, just as it appears to him; and in the rest the intellect

1263. St. Anselm, De veritate, c. 12.
1264. Ægidius Romanus, Quodlibet IV, q. 7. Scotus, In I Sent., d. 3, q. 3, §5.

in dissent is disposed as was said above about assent concerning the true. But apprehension, which has not yet reached to assent or dissent, is that in which it has not yet appeared that the predicate agrees or does not agree with the subject.

I see well that St. Thomas and Cajetan, in the reply to the third objection of article 3 of this question, interpret otherwise that axiom, "The true is the object of the intellect," about which again in the following disputation, chapter 5, we shall speak. For now these things are enough about articles 1 and 2 of this question, in which we have embraced also those things which St. Thomas treats in the following question, articles 3 and 4.[1265]

Moreover, the things we have said hitherto do not suffice for us to elicit the definition of truth in general. For since truth is the conformity of the intellect with the thing, which can be considered on the part of the intellect with the thing, and on the part of things with the intellect, as St. Thomas noted in article 1, and we have disputed only about that which is the intellect with the thing, the other part of the definition remains thus far only explained. But in what way truth is in things, which pertains to other articles, we shall say in the following disputation, in which likewise it will be proved that the whole nature of truth is to be reduced primarily and properly to the intellect alone.

To the argument, indeed, which at the beginning we made for Cajetan's position, an answer can be given easily. We concede, therefore, that the intellect is primarily true, and that from it the denomination of "true" is derived to things themselves; however, the intellect is not true by some formality inhering in it, but by reason of the object, which it is said to contain in itself by a certain representation, and on this account also the representing quality itself is said to be true, as has been proved.

It is answered further in this way to what is commonly said, namely, that "everything which is known is known under the aspect of the true": so I understand it, namely, that everything to which the intellect gives assent in some way moves the intellect to assent under the aspect of the true; likewise, that the dissent of the intellect concerning the false is conversant in some way under the aspect of the false. For the intellect never assents to any enunciation until it knows the predicate to agree more to the subject than the opposite; and although it may not thus agree to the thing itself, nevertheless the intellect by its assent judges as if it were so; and although in such a direct judgment there is not actually truth, not even as esteemed - for then the intellect would judge with a reflex cognition that its objective concept is conform to the thing itself - nevertheless, as I have said, it so assents to that enunciation that, if above the direct assent it were to exercise a reflex judgment, it would judge it to be conform and hence true. This, therefore, is that the judgment of assent is always conversant about the true, at least under the aspect of the apparently true.

About dissent concerning the false, one must speak proportionally thus: dissent, namely, is a judgment of enunciation by which someone knows the predicate not to agree with the subject; and yet when someone so judges, although in the thing itself it is not so, nevertheless in his own

1265. St. Thomas, and Cajetan, on this question, article 3, reply to obj. 3; see also the discussion announced for the following disputation, cap. 5.

judgment he behaves as if it were so, just as it appears to him; and in the rest the intellect in dissent is disposed as was said above about assent concerning the true. But apprehension, which has not yet reached to assent or dissent, is that in which it has not yet appeared that the predicate agrees or does not agree with the subject.

But to the third [article] one proceeds as follows.

Objicitur 1. It seems that the true and being are not convertible. For the true is properly in the intellect (as was said above), but being is properly in things: therefore they are not convertible.

Objicitur 2. Moreover, that which extends itself to both being and non-being is not convertible with being; but the true extends itself to being and non-being, for the true is that "what is, is," and "what is not, is not": therefore the true and being are not convertible.

Objicitur 3. Moreover, those which are disposed according to prior and posterior do not seem to be convertible; but the true seems to be prior to being, for nothing is understood except under the aspect of the true: therefore they do not seem to be convertible.

But on the contrary: the Philosopher says in Metaphysics II that the disposition of things is the same in being and in truth.[1266]

I answer that, just as the good has the notion of the appetible, so the true has an ordination to cognition. But each thing, insofar as it has being, is so far cognoscible. And for this reason it is said in On the Soul III that "the soul is in a certain way all things according to sense and intellect." Therefore, just as the good is convertible with being, so also is the true. Yet just as the good adds the notion of the appetible over and above being, so also the true adds a comparison to the intellect.

Reply to the first: The true is in things and in the intellect, as has been said; but the true which is in things is convertible with being according to substance, while the true which is in the intellect is convertible with being as the manifestative with the manifested. For this belongs to the ratio of the true, as has been said. Although one could say that being too is in things and in the intellect just as the true is; yet the true is principally in the intellect, and being principally in things.

Reply to the second: Non-being does not have in itself that by which it may be known, but is known insofar as the intellect makes it knowable; hence the true is founded on being, inasmuch as non-being is a certain entity of reason apprehended, namely, by reason.

Reply to the third: When it is said that being cannot be apprehended without the aspect of the true, this can be understood in two ways. In one way, such that being is not apprehended unless the aspect of the true follows upon the apprehension of being; and thus the expression has truth. In another way, it could be understood thus, that being could not be apprehended unless the aspect of the true were apprehended; and this is false. But the true cannot be apprehended unless the aspect of being is apprehended, because being falls under the ratio of the true. And it is similar if we

1266. Aristotle, Metaphysics II, text 4 (tomo 3).

compare the intelligible to being: for being cannot be understood unless it is intelligible. Yet being can be understood in such a way that its intelligibility is not understood. And similarly, being understood is true; not, however, by understanding being is the true understood.

Conclusion of the article: The true is convertible with being, just as also with the good. However, just as the good, over and above the notion of being, also contains the notion of the appetible, so the true not only includes the notion of being, but also a certain ordination to the intellect.

Articulus IV - Whether the good is prior to the true

To the fourth [article] one proceeds thus.

Objicitur 1. It seems that the good is prior to the true according to reason. For that which is more universal is prior according to reason. But the good is more universal than the true: for the true is a certain good, namely, of the intellect: therefore the good is prior according to reason than the true.[1267]

Objicitur 2. Moreover, the good is in things, but the true is in the composition and division of the intellect, as has been said in article 2 of this question. But those things which are in the thing are prior to those which are in the intellect: therefore the good is prior according to reason than the true.

Objicitur 3. Moreover, truth is a certain species of virtue, as is clear in Ethics IV. But virtue is contained under the good; for it is a good quality of the mind, as St. Augustine says against Julian: therefore the good is prior to the true.[1268]

But on the contrary: that which is in more things is prior according to reason. But the true is in some things in which the good is not, namely, in the mathematical [things]: therefore the true is prior to the good.

I answer that, although the good and the true, supposing that they are convertible with being, nevertheless differ in notion. And according to this the true, absolutely speaking, is prior to the good. This appears from two considerations. First, because the true is closer to being, which is prior, than the good is. For the true regards being itself simply and immediately; but the notion of the good follows upon being insofar as it is in some way perfect: for thus it is appetible. Secondly, this appears because cognition naturally precedes appetite. Whence, since the true regards cognition, but the good appetite, the true will be prior to the good according to reason.

Reply to the first: The will and the intellect mutually include one another: for the intellect understands the will, and the will wills that the intellect understand. Thus, therefore, among those things which are ordered to the object of the will, there are also contained the things which are of the intellect, and conversely. Whence, in the order of the appetibles, the good is as the universal,

1267. Aristotle, Physics I, text 49; the gloss about universality; cf. also the remark "the true is a certain good of the intellect."

1268. Aristotle, Ethics IV, c. 7 (tom. 5). St. Augustine, Contra Julianum, l. 6, c. 7 (tom. 7).

and the true as the particular; but in the order of the intelligibles, conversely. From this, therefore, that the true is a certain good, it follows that the good is prior in the order of the appetibles, but not that it is prior simply.

Reply to the second: Something is prior according to reason in this way, that it falls first into the intellect. But the intellect first apprehends being itself, and secondarily apprehends that [such a being] be intelligible; and, thirdly, it apprehends itself to desire being. Whence, first is the ratio of being, second the ratio of truth, third the ratio of the good: although the good is in things.

Reply to the third: The virtue which is called "truth" is not common truth, but a certain truth according to which a man shows himself in words and deeds to be what he is; and "truth of life" is said in a particular way, according as a man, in his life, fulfills that which is ordered for him according to the divine intellect, just as they also say that truth is in other things. But "truth" as instituted in laws is that by which a man keeps what he owes to another according to the order of law. Whence from these particular "truths" one must not proceed to common truth.

Conclusion of the article: Absolutely speaking, the true is prior to the good.

Disputatio LXXVII - In what way truth is in things outside the intellect

Caput I - So that, for an exact explanation of these articles, it is necessary to understand how truth is in things

So that we may arrive at an exact explication of these articles, it is necessary to understand in what way truth is in things; which we have decided to examine under one disputation that embraces the truer doctrine, and also to take up those matters which we have left for dispute from the articles.

In the question proposed, the first opinion is very famous and common, first, that truth is really and intrinsically in things - indeed that it is a passion of being, which is reciprocated with being itself; second, that this truth is a relation of conformity and agreement of things with the divine intellect, upon which, as upon a cause, they depend; third, that in works of art truth is a conformity with the intellect and idea of the artificer. This is the opinion taught by Ferrariensis, and many of the more recent follow it, as he himself says in this chapter.[1269]

It seems, moreover, that this is the opinion of St. Thomas in article 1 of this question: for when he defines truth as the conformity of thing and intellect, he says that, on the side of the thing, there can be taken the truth and conformity of the thing with the intellect, and of the intellect with the thing. But when he explains how a thing compared to an intellect can be called true, he adds that he understands it to be compared of itself only with that intellect upon which it depends, namely, the natural thing with the divine intellect, and the artificial thing with the created intellect of the

1269. Ferrariensis, Contra gentiles, cap. 60 sqq., and passim; the same view is followed by many recent authors who think truth is in things as a conformity to intellect, divine in natural things, and the artificer's in artificial things.

artificer. In his view, therefore, a natural thing will be true because it is like the idea of the divine intellect; and an artificial thing, because it imitates the artisan's idea; and thus, according to both, truth is intrinsic and real in relation to being.

- What Ferrariensis held, cap. 1.
- The preceding opinion is refuted, cap. 2.
- The opinion of Capreolus and Soncinas, cap. 3.
- The more probable position, cap. 4.
- From the foregoing the doctrine of articles 3 and 4 of this question is elucidated, cap. 5.

Moreover, the same St. Thomas in the following question, article 4, affirms that falsity is also in things; for he proves in article 4 of that question that truth and falsity are opposed contrarily; from which he infers in another article that both must be conversant about the same kind of subject. Therefore he grants falsity not only in works of art, but also in natural things: in the former, when they fail from the idea of art - wherefore a house is false which does not have that disposition which the idea of art prescribes; but in the latter, when they fail from the ordination of the divine intellect, which only happens in evil actions, for which reason the act of sin is said to be false, Psalm 4: "Why do you love vanity, and seek a lie?" and on the contrary, the work of virtue is called the "truth of life," John 3. With St. Thomas agrees in all things Cajetan, although in this question, article 6, in response to a doubt he says that things are called true only by an extrinsic denomination, so that there is no truth in things formally, but imitatively (as he says), that is, by fulfillment with respect to the divine intellect, and causally with respect to our speculative intellect; indeed, St. Thomas seems to teach the same.[1270]

This sentence of Ferrariensis can be confirmed first by the authority of Anselm in the little work On Truth, chapters 4 and 8, where he teaches that truth is in an operation of the will, and hence it is said in John 8 of the devil, "He did not stand in the truth"; that it is also in operations not only of virtue, but also of nature, whenever the agent acts according to its nature as it ought.

Finally, a reason is brought, taken from the definition of truth: since truth is the conformity of intellect and thing, St. Thomas in article 1 of this question rightly infers that truth can be taken on the side of things and on the side of intellect. Now that truth which is on the side of things ought to be a conformity not with that intellect which things per accidens regard, but with that which they per se regard; and such is the divine intellect or the artisan's intellect, which are the causes of things: therefore things are called true, because they are conformable either to the intellect of God, or to the intellect of the artisan.[1271]

1270. Cajetan, on article 1 of this question; although in this question, article 6, ad dubium, he says that things are called true by an extrinsic denomination only, so that there is no truth in things formally, but imitatively with respect to the divine intellect, and causally with respect to our speculative intellect.

1271. St. Thomas, article 1 of this question; the argument taken from the definition of truth as conformity of intellect and thing.

Caput II - The preceding opinion is refuted

Yet this opinion does not persuade me in what it asserts in the second and third place; and although, according to the position which I judge more probable, truth ought to be assigned as a property of being in general, so that it always reciprocates with it, nevertheless it must be explained on another ground than that which this opinion assigned.

First, I do not sufficiently understand how the doctrine of St. Thomas in this article is consistent with itself, and with this sentence of Ferrariensis. For he said in article 1 of this question that truth is primarily in the intellect, and thence is derived into the things themselves; but on the contrary, that the good is primarily in things, and thence is diffused into appetite. If this is so, things will be true because they are the cause of a true intellect, not because they themselves are conformable to the intellect. But if truth is as much the conformity of things with intellect as of intellect with things, as the same Doctor says at the end of the first article, and as the Doctors of this former view teach, truth will belong equally and primarily to things and to intellect; nor will it be possible that it be derived by an analogy from the one to the other. Wherefore, although things are said to be true from the relation of suitability with the intellect, nevertheless they will not for that reason be said to be secondarily true by a truth communicated from the intellect. For the intellect is said to be true not absolutely in itself, but from the relation of conformity and suitability with things; yet for that reason it is not said to have truth secondarily communicated from things.

Furthermore, if truth is primarily in the intellect - namely, as a conformity with things - just as health is primarily in the animal itself as the due disposition of humors, and the denomination of truth is derived into the things themselves, as the denomination of health is into medicine; surely in things there will not be said to be truth because there is a suitability and conformity with the intellect, but because things are the cause of the conformity of the intellect with the things themselves, just as the denomination of health in medicine is not from some good disposition existing in medicine itself, but from this, that it is the cause of a good disposition in the animal. Wherefore truth could only be in things either as in a sign, or as in a cause of truth. This difficulty also, which arises from the very words of St. Thomas, will again be treated in article 6 of this question.[1272]

But if the authors mentioned, according to the opinion aforesaid, assert that truth is found equally and primarily in things as in intellect, from a mutual conformity and suitability of the one with the other (which, in my judgment, Ferrariensis felt), they can be impugned by a single reason, which is this. If in things there were found some truth primarily and formally, it would be simple, and without order to enunciation; therefore falsity also would in like manner be found in them, as we inferred in a similar case in Disputation 75, chapter 3; for these two are contrarily opposed, and therefore ought to be conversant about the same subject, as the same St. Thomas admits in the following question, article 4, and as we in the place cited have treated more at large. But in things there is not found primarily and formally a simple falsity; therefore neither a simple truth. And indeed, if there is primarily truth in things, no one doubts that it must be simple. For as there is in

1272. See below, article 6 of this question, where this difficulty arising from St. Thomas's own words is treated again.

those no enunciation, so neither can the truth of enunciation be in them formally and primarily; but secondarily, as in a cause - namely, because they can be the cause of a true or false enunciation; or at least as in a sign.

It remains, therefore, to show that in those [things] there cannot be a simple falsity through a defect from the rule of intellect to which they ought to be conformed, in order that they be true; whence it also will be proved that there is not in things a simple truth. This is shown first in works of art. For if a house were so to fail from the idea that it were not conformed with it, or were so to fail that it did not have all the things by which it ought essentially to be constituted - and thus it is not a false house, because it is not a house; or if it has all the things by which it is essentially constituted, yet remains less polished and perfect than a consummate art required, then it is a true house, but not a good one: for only integrity and consummation are lacking, which, as they are the goodness of a house according to what we said in Disputation 23, not its truth; so the defect of integrity will be malice, not falsity.[1273]

Objicitur. Yet someone will object first that the falsity of a house can happen from this, that its foundations were not laid deep, whence commonly the walls are said to be falsely founded.

Respondetur. I answer: a house without any foundation at all is a true house; for he who would so call it would speak truly; only that it is imperfect, and therefore bad. But it is said to be "falsely founded," and there is found in it a falsity of foundations, yet not without an order to the intellect composing and enunciating; just as when gold or some other thing is called false. It is said to be false "in its foundations," because, as it appears only outwardly, and that house seems and appears to have solid foundations which in truth it does not have; therefore, because it is the cause of a false judgment, it can be said to be falsely founded - a doctrine which will be more fully explained below, when we shall show in what manner falsity is found in certain things.

Secundo objicietur. Then someone will object secondly: if a house made of canvas were so accurately painted that the walls should seem to be constructed of square and polished stones, that will be a false house; therefore, in works of art falsity can be found.

Solutio. I answer in the same way: that would indeed be a true house, if it has the form not of a tent or tabernacle, but of a house. That it has walls of canvas matters little; from this it only follows that it is a canvas-house, which could have been constructed either of straw, or of wood, or of stones. For various matter does not change the form and species of a house. Yet there would be in that canvas-house, painted in such a way, some falsity from this, that it appears to be built of stones, of which in truth it is not; but this falsity would be in it from an order to the intellect judging falsely, as was said in the foregoing argument. It is clear, then, that in works of art neither a simple falsity, and consequently neither a simple truth, is found.

Then in natural things, that a simple falsity cannot be, is shown by this reason. If in some there were such, most of all in sins, as St. Thomas admits; but that defect which is in sins ought to be called not so much falsity as malice. For in the respect that an operation fails, or is contrary to God,

1273. See Disputation 75, chapter 3, for the parallel argument about falsity; and Disputation 23, on integrity and consummation as the goodness, not the truth, of an artifact. Also cf. Summa Theologiae I - II, q.71, a.6.

it is called evil with moral malice, either because it is against the will and precept of God, or because this very thing, which by natural law is against rational nature, is also against nature's very author, as will be explained in 1 - 2, q.71, a.6; but another defect in sins is not found. Therefore in them there is not a falsity properly so called, which is opposed to simple truth. Yet they are sometimes in Scripture called false and lies; but on the contrary, works of virtue are called true, or truth - not because there inheres in them the truth or the simple falsity about which our present controversy is, but because they are the cause of a true or false judgment: for sin so appears to a man that it promises him delight and full joy.

... but in things there is not found primarily and formally simple falsity; therefore neither [is there found] simple truth. Moreover, if in things there is primarily truth, that it must be simple no one doubts. For just as in them there is no enunciation, so neither can the truth of enunciation be in them formally and first, but only secondarily, as in a cause: namely, because they can be a cause of a true or false enunciation, or at least as in a sign.

Therefore, to show that in things there cannot be simple falsity from a defect from the rule of the intellect, with which they ought to be conformed so as to be true; whence it will also be proved that in things there is not simple truth: this is shown first in works of art. For a house, if it so lacks the idea that it is not conformed to it, or so lacks that it does not have all the things by which it ought essentially to be constituted, then it is not such a house, because it is not a house; or it has all the things by which it is essentially constituted, yet remains less polished and perfect than consummate art required, and thus it is a true house, but not a good [one]. For in this case only integrity and consummation are lacking, which, as they are the goodness of the house according to what we have said in Disputation 23, are not its truth; thus the defect of integrity will be badness, not falsity.[1274]

Objicitur. Yet someone will object first, that falsity of a house can occur from the fact that its foundations were not laid deep; whence commonly the walls are said to be falsely founded. I answer: a house without any foundation at all is a true house; for he who should so call it would speak truly; it is only imperfect, and therefore bad. It is said to be "falsely founded," and in those foundations falsity is said to be found, yet not without an order to the intellect composing and enunciating; just as when gold or some other thing is called false. Thus falsity is said to be in the foundations because, in so far as only what is outward is seen and appears, that house is judged by the mind to be such as in reality it is not; and so it is said to be "falsely founded." This will be explained below, in the higher article, in certain points.

Secondly it is objected: if a house were most accurately painted, with squared and set stones and the like, there would be a false house according to art. Solution: in such a case there is not a house, but the representation of a house; if, however, there were a structure which truly has all that essentially constitutes a house, even if its walls were of canvas or wood or stone - for the matter does not change the species of house - then it would be a true house but bad, if by defect of firmness or the like it falls short of the integrity which is the goodness of the house. Nevertheless,

1274. See Disputation 23, on integrity and consummation as the goodness, not the truth, of an artifact.

in the painting or façade there will be falsity, in so far as it appears as if made of those materials of which it really is not; and that falsity is said with an order to the intellect judging falsely, as was said.

In sins, if anywhere most closely, falsity might be shown to occur, as St. Thomas seems to hold; yet the defects in sins are not so much falsity as should rather be called malice. For a thing is said to be false either because it gainsays God, by moral wickedness, or because it is against nature's rule and the rational law, and thereby against the Author of nature; as will be more fully explained in I - II, q.71, a.6: in sins there is not simple falsity; sometimes, however, a false judgment is born in the sinner about the sin, when he thinks he can find in it that wherein his appetite may rest; which, however, does not so happen: on the contrary, in virtue this is found most fully; whence there is a true judgment which the intellect has concerning virtue. Whether, however, that place John 8, "He did not stand in the truth," is to be understood of the truth of virtue and holiness, or rather of that which is opposed to lying, we shall say below, Disputation 227, chapter 3.[1275]

As to Anselm, there is no great need to care much; for in that little work he uses truth with a very broad signification and confounds it with goodness. He says in chapter 12 that it is the rectitude of things, and in chapter 8 the rectitude of operation, not only moral but also natural; for when someone acts as he ought, he invokes truth: whereas goodness and truth are far different. Moreover, he teaches other things that do not seem at all to be much to be approved.

Next, this opinion could be impugned by the first reason which we set forth in Disputation 75, chapter 3, namely, that in simple apprehension there is not truth formally; also by the argument which, in chapter 4 of this disputation, we shall produce in confirmation of our opinion, where likewise the foundation which is usually made for this opinion is discussed. Last, it can be refuted by the testimony of Aristotle, Metaphysics, book 6, chapter 2, where Aristotle says that true and false are not in things, as good and evil are,[1276] which we have more fully explained in Disputation 75, chapter 2.

Caput III - The opinion of Capreolus and Soncinus

The second opinion is that of Capreolus in I, dist. 19, q. 3, art. 1, conclusions 1 and 2, and Soncinus in book 6 of the Metaphysics, q. 17, who teach that truth, whether in the intellect or in things, includes formally not only a relation of conformity and agreement, but also the absolute essence and the being (esse) of that thing to which it is conjoined; but what sort of relation that is, they do not explain in the same way. Capreolus, indeed, as far as I could gather from the places alleged and from art. 3 in the arguments against the second conclusion, seems to affirm that that relation by which, together with the absolute, the notion of truth is completed, is only of reason, which nevertheless has a foundation only in the thing itself; this he proves from St. Thomas in I, dist. 19, q. 5, art. 1, where St. Thomas openly teaches that truth, just as also time and certain other things, is not only something of reason nor only something real, but is to be summed from both.[1277]

1275. John 8; see below, Disputation 227, chapter 3.
1276. Aristotle, Metaphysics 6, chapter 2.

Soncinas, however, asserts that the relation in creatures is real, namely of conformity and agreeableness with the idea of the divine intellect, to which every creature is really referred; but in the divine essence there is a relation of reason, because only by our way of understanding is it referred to its intellect, since it is not really distinguished from it. He adds, moreover, that this relation does not directly pertain to the notion of truth; but by the name truth, according to our way of understanding, it is only consequently denoted, because without that we are unable to understand the absolute notion of truth - a point in which Capreolus does not clearly agree. All these things do not otherwise avail than from certain places of St. Thomas, from which they seem to themselves to be able to deduce them.

But whatever be the case with those, the opinion of St. Thomas, which in the foregoing chapter we have already unfolded, remains firm. Now, however, the opinion of Capreolus and Soncinus is by no means to be embraced. And indeed, as regards specific relation, below we shall show, in confirming our opinion, that it is only of reason, in which we shall agree with Capreolus. Whence we shall also explain there from what source that [conclusion] should be derived. Further, that there is not a real relation to the intellect of God, as Soncinus thought, was proved in the preceding chapter. It remains to be shown, as it is against both in the present, that truth does not include in its notion directly the absolute and the relative, as Capreolus seems to have taught, nor the absolute directly and the relative consequently, as Soncinus thought; which can be persuaded in this way.

Truth, speaking formally, is a certain affection of a thing, or at least an affection is so conceived and denominated; therefore it does not directly and formally include the thing itself of which it is the affection. For although by the concrete name "true," which is verum, there is directly signified the material subject, namely the thing itself which has the relation, while the relation is, as it were, consequent and oblique, nevertheless we ought not on that account to assert that, in the formal notion of truth, the thing itself, the absolute, is included. For this is common to all concrete names of accidents, as "white": to signify directly the subject, and consequently, or obliquely, the form, as whiteness, as we shall probably say below in Disputation 155, chapter 8. Yet for this reason we do not say that it belongs to the notion of the form, namely of whiteness, that the very subject, which is denominated white, be included.

This reasoning not only proves against Capreolus that the absolute thing itself together with that relation of conformity and agreement does not pertain to the notion of truth - since an affection of a thing does not formally include the thing itself of which it is an affection - but also, against Soncinus, shows that the direct signification of truth is only that relation, not the subject itself; similarly we shall say about goodness and moral badness in I - II, q. 20.[1278]

Then those two points which I said need a peculiar confirmation: for they will become clear enough if it is first shown that things are called true or false for no other reason than because they are a cause of a true or false judgment in the intellect. And that - the refutation of the other

1277. St. Thomas, In I Sent., dist. 19, q. 5, art. 1.
1278. Summa Theologiae I - II, q.20.

opinions having already established it, since no other way seems to remain - can be explained and confirmed further by this reason. Whenever some thing is called false, it is not called false taken simply, but with an implicit composition and enunciation being insinuated. For no thing is called false in relation to that which it is, even if it has an imperfect being, but in relation to that which it is not, in which a composition of enunciation is clearly insinuated, by an order to which the thing is called false. For example, we do not call any gold however imperfect "false gold," but we call that thing false gold which, although it has no being of gold at all, nevertheless outwardly appears to be gold. This we call false gold because it is a cause of deception in the intellect, either because it has nothing at all of gold beyond what outwardly appears, or because it has so little that it is rather another thing than gold; it is therefore called false gold because it is falsely judged to be gold.

Aristotle expressed this doctrine, Metaphysics, chapter 19, in these words: "False is said in one way as a false thing; and of this sort, either [false is said] of that which is not composed, or of what it is impossible to compose." There Aristotle refers the falsity of things to composition, either because one thing does not agree with another which nevertheless can agree - as that a man be sitting, if he is walking - or because it cannot agree, as that a diameter be commensurable with the side; and after a few words interposed: "So false things are said either because they are not, or because the appearance produced by them is of what is not." The same he immediately teaches about the notion; namely, that a conception is false when referred to other things than that about which it is true. Therefore one must philosophize about truth in the same way: that is, that gold be called true gold because it is the cause of the true judgment of the enunciation by which it is judged to be gold. Therefore all truth and falsity is in things secondarily, as in a cause; but primarily in the enunciative judgment.

From these it is easy to dissolve the common argument for the prior opinion, namely that truth is defined as conformity or agreement of the intellect with the thing, and the thing with the intellect: for thus indeed is the definition to be taken, not as if there were posited on the part of the thing a prior comparison to the intellect of God or of an artificer, as if to a cause per se; but rather as the comparison is constituted first in the intellect, and then in turn in things, since truth is first perceived in the intellect, as was shown in the head of this disputation; from which it is then denoted and designated as if it were primarily constituted in the intellect and only secondarily in the thing. Therefore from that definition truth is to be explained as primarily residing in the intellect, whose exact explication plainly belongs to this very question; the whole examination of the doctrine of the first article of the questions follows from this, of which alone there still remained a need. Now, then, what remains of this article is to be handled; and the fourth [article] also will be in a few points clarified.

Caput IV - The more probable opinion

Among all the rest the opinion seems to be preferable which teaches not only that truth is not in things formally, but neither primarily do they have it; and hence that they are called true only secondarily and by a denomination derived from the intellect: thus a medicine is called "healthy"

from the health of an animal, which it can effect. This opinion is delivered by Hervaeus, quodlibet 3, art. a; by Durandus, In I, dist. 19, q. 5, n. 14; and Henry seems to follow it in his own, art. 34, q. 5, letters L and M; and it must first be explained by us and then confirmed.[1279] Therefore, it must be understood first that truth in things is not only a relation of reason; for in the intellect also it is of that sort, as in the preceding disputation was said to be shown. But even in the things themselves the denomination of truth is secondarily derived from the intellect, so that only those things are called true or also false which are the cause of a true or false judgment in the intellect, as a medicine is called "healthy" because it is the cause of health. From this doctrine two [consequences] follow. The first is that things are true by an order to the intellect, not because they are conformed to the intellect of God or of the artificer, to whom as to a cause they are per se referred, but because they are a cause of a true judgment in composition or division; and the same, in the same proportion, is to be said about falsity, as will be explained below. The second is that all truth or falsity properly and primarily is in the enunciative judgment in composition and division; and all other things are secondarily called true or false by reason of the truth or falsity of the intellect, either because they are a cause of that (as things), or because they are signs (as voices and other things which naturally signify what is in the intellect), as St. Thomas seems to have taught in this question, article 1. Wherefore the truth of things will not be a relation of conformity or agreement with the intellect of God or of the artificer; but each thing will be called true or false from this, that it is a cause of a true or false judgment. And besides this mode of truth or falsity in things, which St. Thomas in that article also admits, no other must be conceded on account of a comparison of things with the intellect of God and of artificers, as those contend who follow the prior opinion.

Then those two points which I said need a peculiar confirmation: for they will be quite clear if it is first shown that things are called true or false for no other reason than because they are a cause of a true or false judgment in the intellect: a point which, besides being proved from the refutation of other opinions - since no other mode seems to remain - can be further explained and confirmed by this reason. Whenever something is called false, it is not called false taken simply, but with composition and enunciation being tacitly insinuated. No thing is called false in relation to that which it is, even if it has an imperfect being, but in relation to that which it is not, in which the composition of an enunciation is clearly insinuated, by an order to which that thing is called false. For example, we do not call any gold, however imperfect, false gold; but we call that thing false gold which, while it has no being of gold, nevertheless outwardly appears gold. We call this false gold from the fact that it is a cause of deception in the intellect, either because it has nothing at all of gold besides what outwardly appears, or because it has so little that it is rather another thing than gold. Therefore it is called false gold because it is falsely judged to be gold.

Aristotle expressed this doctrine, Metaphysics, chapter 19, in these words: "False is said in one way as a false thing; and of this sort, either [false is said] of what is not composed, or of what it is impossible to compose." There Aristotle refers the falsity of things to composition, either because

1279. Hervaeus Natalis, Quodlibet 3, art. a; Durandus, In I Sent., dist. 19, q. 5, n. 14; Henry of Ghent, art. 34, q. 5, letters L and M.

one thing does not agree with another which nevertheless can agree, as that a man be sitting if he is walking; or because it cannot agree, as that the diameter be commensurable with the side; and after a few words interposed: "So false things are said either because they are not, or because the appearance made by them is of what is not." He immediately teaches the same about the notion: namely, that a conception is false when it is related to other things than to that about which it is true. Therefore, in the same way one must philosophize about truth: namely, that gold be called true gold because it is the cause of the true judgment of the enunciation by which it is judged to be gold. Therefore all truth and falsity is in things secondarily, as in a cause; but primarily in the enunciative judgment.

Caput V - From the preceding the doctrine of articles 3 and 4 of this question is elucidated

What we have said can easily be set forth first, namely, in what way being (ens) and the true (verum) are reciprocal, and how truth is constituted as a passion (*passio*) of being; which matter St. Thomas treats properly in this article 3. However, it must be supposed that truth is not properly a passion of being, according to our present opinion, since we think it is a being of reason (*ens rationis*); indeed, even he who thinks it is a real being ought to assert the same. For a proper passion does not include essentially in its notion the concept of the subject of which it is the passion; but truth, if it is a real being, without doubt includes in its notion the concept of being, and therefore it will not be a passion of that [subject] inasmuch as being is taken as being...

From what has been said, it can easily be explained, first, in what manner being and the true are mutually convertible, and how truth is constituted as, so to speak, a passion (*passio*) of being, about which the Doctor [St. Thomas] properly treats in this article 3. It must be presupposed, however, that truth is not properly a passion of being, especially in our view, since we think it is a being of reason (*ens rationis*); indeed, even those who think it is a real being (*ens reale*) ought to assert the same. For a proper passion does not include essentially in its notion the concept of the subject of which it is the passion; but truth, if it is a real being, without doubt includes in its notion the concept of being, and therefore it will not be a passion of that [subject]. It matters little that it does not include the notion of determinate being, as of gold or of man; for a passion is not constituted of these in particular, but of being in general. Moreover, since it agrees with being, which also agrees with the passions of any subject, therefore it is called a passion of being. And by what reason the true or the truth, which is the same, is converted with being, is clear from the foregoing doctrine. For every thing, referred to that which it itself is, or related to itself, is always the cause of a true judgment and cannot be false; wherefore, although lead is false silver, it is nevertheless true lead; and although it is false gold, it is nevertheless a true thing; but those which are called false are always referred to something else, as we said above.

From these points an argument brought forward for the prior opinion can readily be solved. For when truth is defined as "the conformity or agreement of the intellect with the thing," the definition is not to be taken as those authors of the prior opinion thought, namely, that this conformity be on each side, to wit, of the intellect with the thing, and of the thing with the intellect.

For thus truth would be found equally first in things as in the intellect, as was shown in the first head of the disputation. Rather, the definition must be explained solely on the part of the intellect, as the words more clearly denote; and therefore truth is to be constituted primarily in the intellect, and secondarily in things, not as compared with the intellect of God or of the craftsman as with causes, but with any judging intellect whatsoever, as we explained a little above. We already have, then, the definition of truth placed in the first article fully understood, whose exact explanation we remitted to this place: and the whole doctrine of the first article of the following question, which alone remained from that to be examined, has also been examined. Now we will endeavor in a few heads to elucidate the doctrine of this article the third and of the following fourth.

Next, it must be explained with respect to the solution of the third [objection], by what reason the true is said to be an object of the intellect as the good is of the will: this indeed, besides the explanation which we gave in Disputation 76, chapter 2, can also be most fittingly understood in another way, according to the mind of Cajetan in this article, namely, so that the good be constituted as the object of the will as the formal reason (*ratio formalis*) of what is willed; for nothing moves to pursuit and complacency unless it be apprehended under the notion of good. Truth, however, is not the formal reason in any known object; for this formal reason is entity itself; but [truth] is some consequent condition, that is, a denomination arising from an extrinsic reference to the intellect itself, such as is "intelligible" (*intelligibile*); yet they differ, in that "intelligible" is attributed to any thing in any way understood, whereas the notion of the true only befits things insofar as they can be the cause of a true judgment, according to what was said above in chapter 10. This difference between the good and the true is established by Cajetan in this article, although he does not sufficiently explain the mode in which he understands that the true is only a condition of the object; nevertheless he indicated it briefly when he said that truth is a general condition of the object perfecting the intellect; which could be accommodated to the handed-down doctrine: for by that object the intellect is said to be perfected which is the cause of truth of judgment; by the same reason falsity can also be assigned as a condition of the object of the intellect, yet not so broadly extending nor so perfecting of the intellect as truth, as is gathered from the foregoing doctrine. Wherefore, as Cajetan rightly warns, Scotus's arguments in the first Distinction do not conflict with this doctrine, but rather favor it: for they only prove that the true is not the formal reason of the known object, which we too concede with Cajetan in Disputation 76, chapter 3.

Finally, from the things we have said it can be easily set forth, what order the true and the good have among themselves, about which St. Thomas disputes in article 4 of this question: but first, let us report what St. Thomas asserts. He says, therefore, that the true is prior to the good according to the notion in which he asserts that both are converted with being; and he confirms this by two reasons. First, because the true comes closer to being than the good does; for the true follows the very notion of being simply, whereas the good [follows] the notion of perfect being; but it is prior to be a being than to be perfect; therefore it is prior to be true than to be good. Then he argues thus:

cognition is naturally prior to appetite; but the true is referred to cognition, the good however to appetite; therefore by the same proportion the true is prior to the good. Cajetan follows this doctrine in the same place and explains it briefly.

Yet to me it is not sufficiently proved, for two other reasons. First, because the notion of the good does not follow being insofar as it is perfect, but - as we said above in Disputation 72 - the goodness which is constituted as a passion of being is the same as the consummation and integrity of the thing, not however its convening with another. Therefore, although goodness in a certain signification, in which a thing is said to be fitting to another and is the reason of the object of appetite, follows the notion of perfect being, nevertheless the notion of goodness which is a passion of being follows the notion of being simply, just as any other [passion does]: for it is the very perfection and integrity, which cannot follow the perfect being, since it is rather the reason of perfection; and hence only the prior reason of the preceding opinion remains solved. Then, as is evident from article 1 of question 5 and from article 1 of this question, the notion of the good is in things themselves without any order to the intellect, whether it be taken for the integrity of the thing or even for its convening; truth, however, is only in the judging and enunciating intellect; in things, however, by a certain extrinsic denomination under respect to the intellect, as is proved in this disputation. Therefore rather goodness is prior to truth than the contrary; and from here also the reason of the preceding opinion can be easily dissolved. For although cognition is prior to appetite, nonetheless not for that reason is it effected that the notion of the good is prior to truth. For if we take the good for that which is integral and consummate, whatever being in itself is good, not from an order to appetite; but if it be used for that which is fitting to another, no thing is said to be good from an order to appetite, or from the fact that it can be appetited, but rather from the fact that, being good and fitting to another, it is appetited. Therefore this notion of the good is prior in things than that the things themselves be referred to appetite. Wherefore, although the true be said from an order to the intellect, and intellection be prior to appetite, not for that reason is the true prior to the good: because the good is not said from an order to appetite, as remains proved.

Nevertheless, the doctrine of St. Thomas has an excellent place between the appetible and the intelligible: for these two notions are posited in denomination and extrinsic relation, the one to the intellect, the other to the will; and therefore, just as intellection is prior to appetite, in the same proportion the intelligible, which is said from the intellect, is prior to the appetible, which is named from the appetite of the will. And let this suffice concerning the four prior articles of this question.

Articulus V - Whether God is truth

It is proceeded thus to the fifth. It seems that God is not truth. For truth consists in the composition and division of the intellect; but in God there is not composition and division. Therefore there is not truth there.

Besides. Truth, according to St. Augustine in the book On True Religion, is a likeness of a principle. But God has not a likeness to a principle. Therefore in God there is not truth.

Moreover. Whatever is said of God is said of him as of the first cause of all. Just as the existence (*esse*) of God is the cause of all existence, and his goodness is the cause of all good. If therefore in God there is truth, then every truth will be from him. But that someone sins is true. Therefore this will be from God. Which is clearly false.

But on the contrary: it is said in John 14: "I am the way, the truth, and the life."

I answer that, just as has been said, truth is found in the intellect according as it apprehends the thing as it is, and in the thing according as it has an existence conformable to the intellect. But this is found in the highest degree in God. For his existence is not only conformable to his intellect, but it is his very act of understanding; and his act of understanding is the measure and cause of every other existence and of every other intellect; and he himself is his own existence and understanding. Whence it follows that not only is there truth in him, but that he himself is the supremely and primarily truth.

Reply to the first: Although in the divine intellect there is not composition and division, nevertheless according to his simple intellection he judges about all things and knows all complex [truths]. And thus in his intellect there is truth.

Reply to the second: The truth of our intellect is according as it is conformed to its principle, namely to the things from which it receives cognition; truth also of things is according as they are conformed to their principle, namely to the divine intellect. But this, properly speaking, cannot be said in the divine truth, unless perhaps according as truth is appropriated to the Son, who has a principle. But if we speak of essential truth, it cannot be understood unless the affirmative be resolved into the negative: just as when it is said that the Father is from himself, because he is not from another. And similarly one might say "likeness of a principle" about the divine truth, insofar as, as far as lies on his side, what is his is not dissimilar to his intellect.

Reply to the third: Non-being and privations do not have truth from themselves, but only in the apprehension of the intellect. But every apprehension of the intellect is from God. Whence whatever there is of truth in this, that I say "this man fornicates" is true, is wholly from God. But if it be argued: therefore this fornication is from God, there is a fallacy of accident.

Explanation of the doctrine of the article.

The conclusion of the article is this: In God there is not only truth, but also God himself is the supreme, primary truth. The things which pertain to the truth of God do not need a new disputation, but can be easily deduced from the foregoing doctrine. In God, therefore, truth is found in two ways, or rather he is simply true and is truth itself: in one way, by the reason by which he understands; for thus he has a most certain judgment of himself and of other things, so that he cannot in any way be deceived. In a peculiar way, however, St. Thomas said that God is supremely true, or is truth itself, not as compared with other things which he knows, but with his own essence as known by himself: for the truth of the intellect is the conformity of it with the very thing which it understands; but God's act of understanding is his own essence understood: therefore there is the highest convening between his intellect and the thing understood; and hence [he is] supreme truth.

This reasoning indeed would most excellently prove [the point], if truth consisted in the convening and conformity of the formal concept with the thing known: because in God alone the act of understanding and the thing understood are the same. However, since it was proved in Disputation 76 that truth in the intellect is not the convening of the formal concept with the thing known, but [the convening] of the objective concept, or of the thing known insofar as it is known, with the thing itself according to itself; by another reason indeed I would say that God is the supreme truth in judging, not because there is the supreme unity and convening between the objective concept and the thing itself according to itself - for even in the blessed there is a greatest unity, if indeed the objective concept which they have is God himself, who is seen by them as he is; thus God too would be the supreme truth in judging things - not on account of that unity, but because his intellect, being his very essence, is the first and infallible measure of all things and of every truth of judgment, and he cannot be deceived.

Caput V - On the supreme truth of God in judging, and on the nature of divine truth

Or even concerning other things, whether possible or even future: for the objective concept which he has of them is the things themselves according to themselves. Therefore for this reason God is the supreme truth in judging himself, because it is maximally repugnant that God himself be deceived in the understanding of himself; both on the part of the intellect, which is infinite, and on the part of the thing known, which, since it is the first being, is most necessary. But the intellect of the blessed, with regard to God clearly seen, indeed cannot be deceived; yet not in the same grade of necessity: because not only the intellect, but the very light, is something created; and so the true in judging is not of the same genus of necessity as God himself. God also, in the judgment of other things possible and future, is truth of necessary, maximal necessity, not from the things known, but solely from his very intellect, arising from its infinity: wherefore that doctrine of St. Thomas brought forward above is true, namely, that God is the supreme truth in judging himself, although by another reason it is proved for us.

In a second way God is said to be true in his existence (*esse*), because he is most conformed to the intellect: for, as St. Thomas said in article 1 of this question, the truth of things is the conformity and convening of them with the intellect. However, lest any absurdity follow, this truth in God must thus be explained, that he is not said to be true because he is conformed to some intellect as cause, as the Thomists alleged in the superior disputation on the truth of other things used to say; but because he is referred to the intellect as the object of a true judgment, not only to the intellect of God himself, but also to the intellect of a rational creature. For our God, who is the true God, cannot be the cause and object of a false judgment, whenever he himself is judged in reality to be God and the prince of all. Conversely, Jupiter and Apollo and others whom the pagans worship as gods, for that reason are called such gods, because they are judged to be gods when they are not: just as in the preceding question we said brass is called false gold because by such a judgment it is thought to be gold: by which same reason we showed in that disputation that truth and falsity are found in things.

To these we can add a third mode of truth in God, which is rather called veracity than truth, and is found only in testifying and promising; and in God it is the greatest that can be conceived: since it in every way repugns him to assert what is false, as we shall prove more fully in II - II, question ..., article 3; it also repugns his word and promise that he be unfaithful.[1280] But whether the truth of God is a being of reason (*ens rationis*) or a real being (*ens reale*), is without controversy among the Doctors: for according to the doctrine handed down above it is manifest that it is a certain relation of reason, in whatever way it be taken.

First, concerning the truth of the divine intellect in judging either its own essence or other things, that is plainly evident: for the truth of God in this mode is either the conformity and convening of the divine intelligence with his own essence understood - this respect must altogether be of reason, whether it be considered on the part of the objective concept, or of the formal [concept] to the essence itself. For God's [relation] to himself is not a real respect, unless it be the personal [respect] of one person to another. Likewise, the truth of the divine intellect about other intelligibles, whether future or possible, must also be a relation of reason: because on the part of God there can be no respect to creatures, even to possibles, intrinsic to God by the nature of the thing, as we showed in Disputation 104, chapter six.[1281]

Next, concerning the truth of the divine essence according to existence (*esse*), in whatever way that be defined - whether by an order to the divine intellect alone, or also to the created [intellect], according to the diverse mode set out above - the same is proved. For the divine essence can be referred by the nature of the thing neither to the divine intellect, as we were just saying, nor to any creature, as we shall see in the disputation cited. Wherefore, although Soncinas in the sixth [book] of the Metaphysics, question 17, says that truth in created things is a relation from the nature of the thing to the divine intellect, nevertheless in the divine essence itself he says that truth thus accepted is only a relation of reason.[1282]

Finally, the same is proved regarding truth in testifying: for this is the conformity and convening of the sign with the signified: but such convening, universally, is something of reason: therefore the truth of God, in whatever way it be taken, is only a relation of reason, just as very many other [predicates] which we attribute to God, as has been distinctly noted in its places.

Articulus VI - Whether there is one only truth, according to which all things are true

It seems that there is one only truth according to which all things are true. For according to St. Augustine, nothing is greater than the human mind, except God. But truth is greater than the human mind; otherwise the mind would judge concerning truth. Now it judges all things according to truth, and not according to itself. Therefore God alone is truth. Therefore there is no other truth than God.[1283]

Again, St. Anselm says in the book On Truth, that as time is related to temporal things, so truth to true things: but there is one time of all temporal things. Therefore there is one truth by which all things are true.[1284]

But on the contrary: In Psalm 11 it is said, "Truths are diminished from the sons of men."

I answer that, in a certain way there is one truth by which all things are true, and in a certain way not. For the evidence of which it must be known that when something is predicated univocally of many, that [thing] is found in each of them according to its proper notion, as animal in any species of animal: but when something is said analogically of many, that [thing] is found according to its proper notion in one of them only, from which the others are denominated. Thus "healthy" is said of the animal, and of urine, and of medicine: not that health is save in the animal alone: but from the health of the animal medicine is denominated healthy as being the efficient [cause] of that health; and urine, as being the signifying [sign] of that health. And although health is not in medicine nor in urine, yet in each there is something, by which this [one] produces, and that [other] signifies, health. Now it was said that truth is primarily in the intellect, and secondarily in things, according as they are ordered to the divine intellect. If, therefore, we speak of truth as it exists in the intellect according to its proper notion, thus in many created intellects there are many truths; and in one and the same intellect, according to many things known. Whence the gloss says upon that, Psalm 11: "Truths are diminished from the sons of men," that as from one face of a man there results more likenesses in a mirror, so from one divine truth there result many truths.[1285] But if we speak of truth according as it is in things, thus all are true by one first truth, to which each thing is assimilated according to its entity. And thus, although the essences or forms of things are many, yet one is the truth of the divine intellect, according to which all things are denominated true.

Reply to the first: The soul does not judge of all things according to just any truth whatsoever, but according to the first truth, inasmuch as it results in it as in a mirror, according to first intelligibles. Whence it follows that the first truth is greater than the soul. And yet even created

1283. St. Augustine, passim; cf. the marginal references cited in the text.
1284. St. Anselm, De veritate, cap. 14.
1285. Gloss on Psalm 11: "Diminutae sunt veritates a filiis hominum."

truth, which is in our intellect, is greater than the soul, not simply, but in a certain respect, inasmuch as it is its perfection, just as even science could be said to be greater than the soul. But it is true that nothing subsistent is greater than the rational mind, except God.

Reply to the second: What is said by St. Anselm holds the truth, inasmuch as things are said to be true by a comparison to the divine intellect.

Conclusion and sum of the whole article is: If the discourse be about truth which we said is in the intellect, in which it is found primarily, there are many truths, as there are many intellects: but if about the truth which is in things, there is one only divine truth, from which all things are denominated true.

Articulus VII - Whether created truth is eternal

To the seventh we proceed thus. It seems that created truth is eternal. For St. Augustine says in the book On Free Choice that nothing is more eternal than that the circle has a center, and that two and three are five; but the truth of these is created truth. Therefore created truth is eternal.[1286]

Again, everything that is always is eternal: but universals are everywhere and always. Therefore they are eternal. Therefore also the true, which is the most universal.

Again, that which is true in the present was always true to-be-future. But as the truth of a proposition about the present is created truth, so the truth of a proposition about the future. Therefore some created truth is eternal.

Again, everything which lacks beginning and end is eternal: but the truth of enunciables lacks beginning and end. For if truth begins when before it was not, it will be true that truth is not; and since by some truth it was true, thus truth was before it began. And likewise, if truth be posited to have an end, it follows that it will be [true] after it has ceased: for it will be true that truth is not. Therefore truth is eternal.

But on the contrary is that God alone is eternal, as was held above.

I answer that, the truth of enunciables is nothing other than the truth of the intellect. For an enunciable is in the intellect, and is in the voice. According however as it is in the intellect, it has truth per se: but according as it is in the voice, an enunciable is said to be true insofar as it signifies some truth of the intellect; not because of some truth existing in the enunciable, although in the subject: just as urine is said to be healthy not from a health which is in it, but from the animal's health which it signifies. Likewise too it was said above that things are denominated true by the truth of the intellect. Whence, if no intellect were eternal, no truth would be eternal: but because the divine intellect alone is eternal, in it alone truth has eternity. Nor does it follow on this account that anything else is eternal than God, because the truth of the divine intellect is God himself, as was shown above.

Reply to the first: The reason of the circle, and that two and three are five, have eternity in the divine mind.

1286. St. Augustine, De libero arbitrio, lib. ..., cap. 8 (as cited).

Reply to the second: That something be always and everywhere can be understood in two ways. In one way, because it has in itself that by which it extends itself to every time and to every place, as it befits God to be everywhere and always. In another way, because it has not in itself that by which it is determined to some place or time, as first matter is said to be one, not because it has a form, as man is one from the unity of one form, but by the removal of every formal distinction. And in this mode any universal is said to be everywhere and always, inasmuch as universals abstract from the "here and now"; but from this it does not follow that they are eternal, unless in the intellect of someone who is eternal.

Reply to the third: What now is, which was future before it was, was so because it was in its cause that it should be brought about. Whence, the cause being removed, that future-to-be would not have been. But the first cause alone is eternal. Whence from this it does not follow that the things which are, always were [true], to be future in themselves, unless insofar as in the eternal cause it was, or is, that they will be future. Which cause is God alone.

Reply to the fourth: Because our intellect is not eternal, neither is the truth of enunciables which are formed by us eternal, but at some time it begins: and before a truth of this kind existed, it was true to say that truth was not - not, however, by the truth which did not yet exist, but by another truth, namely by the truth of the divine intellect, whose truth is eternal.

Reply to the fourth: Such a thing is not so, unless by the divine intellect, in which alone truth is eternal; but now it is true to say that then truth did not exist. And this is true only by the truth which now is in our intellect, not, however, by any truth on the side of the thing: because this is a truth about a non-being; but non-being does not of itself have that it be true, but only from an intellect apprehending it. Hence it is true to say "truth did not exist" only insofar as we apprehend its not-being as that which precedes it.

Conclusion: In the divine intellect alone, which alone is eternal, created truth has eternity; concerning the doctrine of this conclusion, and the reason by which he proves it, in the following disputation, cap. 2, we shall say something.

Articulus VIII - Whether truth is immutable

Objicitur: It seems that truth is immutable.

1) Augustine says that truth is not equal to the mind, because the mind is mutable; but truth is not mutable as the mind is.[1287]

2) That which remains after every mutation is immutable, as first matter is ungenerated and incorruptible because it remains after every generation and corruption. But truth remains after every mutation, because after every mutation it is true to say "it is" or "it is not." Therefore truth is immutable.

1287. St. Augustine, De libero arbitrio II, c. 12 (near the end); and De vera religione, c. 30.

3) If the truth of an enunciation is changed, it is changed especially by the change of the thing. But it is not thus changed. For, according to Anselm, truth is a certain rectitude inasmuch as something fulfills that which is of it in the divine mind.[1288] Now this proposition "Socrates sits," received in the divine mind so as to signify that Socrates is sitting, signifies the same even while he is still sitting. Therefore the truth of a proposition is in no way changed.

4) Moreover, where the cause is the same, the effect is the same. But the same thing is the cause of the truth of these three propositions: "Socrates sits," "Socrates will sit," and "Socrates sat." Therefore the truth of these is the same. But it must be that one of these is true. Therefore the truth of these propositions remains immutably. And by the same reasoning that of any other proposition.

But on the contrary: "Truths are diminished from among the sons of men" (Ps 11:2).

Respondeo: I answer that (as was said above) truth is properly in the intellect, while things are said to be true by the truth which is in some intellect. Therefore the mutability of truth is to be considered on the side of the intellect. And the truth of the intellect consists in this, that it have conformity to the things understood. Now this conformity can vary in a twofold way, just as any likeness can vary by a change of either extreme. Hence, in one way, truth varies on the side of the intellect, from the fact that, about a thing remaining in the same state, someone takes up a different opinion. In another way, with the opinion remaining the same, the thing is changed. And in both ways there is a change from true to false. If, therefore, there be some intellect in which there cannot be an alternation of opinions, or whose apprehension cannot be deceived by a thing's slipping away, in that intellect truth is immutable. Such, however, is the divine intellect, as is clear from what has been said above.[1289] Hence the truth of the divine intellect is immutable; but the truth of our intellect is mutable, not because it itself is the subject of mutation, but insofar as our intellect is changed from truth to falsity. For by this very reason forms can be called mutable. But the truth of the divine intellect is that truth according to which natural things are said to be true, which is altogether immutable.

Ad primum: Augustine is speaking of divine truth

Ad secundum: Truth and being are convertible. Hence, just as being is not generated nor corrupted per se, but per accidens, insofar as this or that being is corrupted or generated, as is said in the first book of the Physics, so truth is changed, not so that no truth remain, but because that truth which previously was does not remain

Ad tertium: A proposition has truth not only as other things are said to have truth, insofar as they fulfill that which is ordained about them by the divine intellect, but it is said to have truth in a certain special way, insofar as it signifies the truth of the intellect, which indeed consists in the conformity of the intellect and the thing. When this [truth of the intellect] is withdrawn, the truth of the opinion is changed, and consequently the truth of the proposition. Thus, therefore, this proposition, "Socrates sits," while he is sitting, is true; and there remains the first truth on the side

1288. St. Anselm, De veritate, c. 8 and c. 12.
1289. See above on the divine intellect: I, q. 14, a. 13.

of the thing, insofar as it is a certain significative utterance; and there remains the truth of signification, insofar as it signifies a true opinion. But when Socrates rises, the first truth remains, but the second is changed

Ad quartum: The state of Socrates, which is the cause of the truth of this proposition "Socrates sits," is not in the same way while Socrates is sitting, and after he has sat, and before he will sit. Hence by reason of the truth caused by this, it is otherwise disposed; and it is signified in different ways by propositions about the present, past, and future. Whence it does not follow that, although one of the three propositions is true, the same invariable truth remain

Conclusion: The truth of the divine intellect is immutable; but the truth of our intellect is mutable, not because it itself is the subject of mutation, but because our intellect is changed from truth to falsity; for by this reason forms can be called mutable. But the truth of the divine intellect, according to which natural things are said to be true, is altogether immutable.

Disputatio LXXVIII - On the doctrine of these articles

Caput I - The position of St. Thomas

Difficult indeed does the doctrine of this article 6 appear, when it is compared with that which St. Thomas set forth in article 1 of this question, and which the Thomists commonly follow; a difficulty which we touched upon in part above, disp. 76, cap. 1.[1291] For the explanation of that, there is no need to institute a long disputation, but first to report what he himself taught there, then, from what we have thus far said, to gather what seems more probable.

First, therefore, in this article he clearly teaches that a form is multiplied in various subjects when the subjects are denominated univocally by the form - of this sort is the form of animal and of heat; but that it is not multiplied, even if many things are denominated by it, when the denomination is derived analogically from one to another: as urine and medicine are called "healthy" from one health of an animal. From this most true and universal doctrine the Holy Doctor gathers the conclusion set above in the preceding article, namely, that the truth of the intellect is multiplied, because in individual created intellects a proper truth is found, inasmuch as individual intellects participate in the first truth in themselves, just as from one face many likenesses are derived into a mirror. He does not think, therefore, that this derivation is an extrinsic denomination only from one form; for thus he would not say that truth is multiplied, but rather that individual intellects are called true by one truth of God: but [he holds it] to be a real multiplication of many truths.

Nor, indeed, does it matter that of creatures and of God it is not predicated univocally but analogically, as are all the other names that are said of God and creatures: for those things which are analogically named by one name can sometimes have in themselves a real form of such denomination; and for this reason the name is predicated of them analogically, because those

1291. Vazquez, Disputatio 76, cap. 1.

forms are not of one and the same ratio in individuals, although in some way they are made like. Why, therefore, forms are really multiplied, even if all those things are not signified univocally by the same name, this is the doctrine which is handed on in the first part of the conclusion.

Then from the same doctrine he gathers the latter part of the conclusion, namely, that the truth which we say to be in things, from which they themselves are called true, is not multiplied in individuals, but that all are called true by one truth of God: in which, assuredly, he thinks the same reason of denomination holds by which a thing is called true, and by which medicine and urine are called healthy; but medicine and urine are not called healthy from a health existing in themselves and really multiplied, but from one health of the animal, by an extrinsic respect and denomination: therefore things too are not called true from a truth inhering in themselves, but from some extrinsic truth.

I understand, moreover, that in this sense Anselm's opinion is to be understood, who in the Dialogue on Truth, cap. 14, near the end, asserts that, just as there is one time under which all corruptible things are contained, so there is one eternal truth (he understands God), under which all things, insofar as they are true in accordance with it, are said [to be true]. This very thing St. Thomas teaches in arts. 7 and 8, and the doctrine in art. 1 of this question, as we noted in disp. 76, cap. 1. Anselm proves his view by saying that, if there were truth in things, when those things were changed, it would be changed and destroyed, and would destroy; but this is absurd. By the same reasoning St. Thomas in art. 7 shows truth to be eternal, because there is some eternal intellect - namely the divine - in which it always remains; and in art. 8 [he shows] that truth is immutable, because, although in our intellects it is varied, in the divine [intellect] it always remains in the same way; wherefore, if there were no divine intellect, no truth would remain.

On the other hand, in article 1 of this question, the same St. Thomas teaches that truth in things is the agreement and conformity of them with an intellect, divine or created, to which, as to a cause, they are per se referred. He does not say that the truth of things is an intellectual truth, but that, just as the intellect is said to be true by agreement with things, so also things by conformity with an intellect

Next, in article 1 of the following question, he affirms that in two ways a thing is said to be false: in one way, per accidens, when it is either a sign or a cause of falsity in the intellect; and this mode is by extrinsic denomination; and in the same way he thinks that things can also be called true by an extrinsic denomination. In another way, he says, a thing is false insofar as it falls short of the rule of the intellect of God or of the artisan, upon which it per se depends as on a cause; and the same must be said of truth. Now this latter mode - if it were only by extrinsic denomination - would not differ at all from the former; therefore in disp. 76, cap. 1, I said that the mind of St. Thomas seems to me sufficiently difficult. Certainly, whatever be the case with that, concerning the doctrine of this article and of the two following, we shall briefly subjoin what, from the things said thus far, seems to us more probable; and what Cajetan thinks about this view in his commentary on that article, we already reported in disp. 76, cap. 1.

Caput II - The more probable opinion

Since it has been established in disputations 75 and 76 that truths are primarily in the intellect, secondarily, however, in things - although in the intellect they are also said to be of the order of beings of reason - consequently it must be said, first, that there is not one [single] truth of the intellect, but that it is multiplied according to the very number of intellects; which St. Thomas himself also admits in this article, in which he speaks of individual truth, not only in what we said above about the intellect with respect to diverse enunciations, but even with respect to the same one. For in diverse intellects truth can be multiplied about the same enunciation, because in diverse intellects there are not only different formal concepts with respect to the same enunciation, but also different presentations of the object; for the same thing is not presented in the same way to diverse intellects, but according to diverse formal concepts.

Then from the same doctrine he gathers the posterior part of the conclusion, namely, that with respect to the truth which we say to be in things, from which they themselves are called true, it is not multiplied in individuals, but all are called true from the one truth of God: and in this he certainly thinks there is the same ratio of denomination by which things are called true, and a medicine and urine are called sound; for medicine and urine are not said to be sound from a soundness existing in them and really multiplied, but from the one soundness of the animal by an extrinsic relation and denomination; therefore also things are not called true from a truth inhering in them, but from some extrinsic truth.

But in the second solution he understands in this sense the opinion of Anselm, who in the dialogue De veritate, c. 14, near the end, affirms that just as there is one time under which all corruptible things are contained, so there is one subsisting truth (he means God) by which all things, insofar as they are, are said to be true according to it. This very thing St. Thomas also teaches in articles 7 and 8, and he had taught it in article 1 of this question, as I noted in Disputation 76, cap. 1.[1292]

Moreover, Anselm proves his opinion thus: if there were truth in things, with those changed it would be changed, and with those destroyed it would be destroyed; but this is absurd. By the same reasoning St. Thomas in article 7 shows that truth is eternal, because there is some eternal intellect, namely the divine, in which it always remains; and in article 8 he says that therefore truth is immutable, because although in our intellects it varies, yet in the divine it always perseveres in the same way: wherefore, if there were no divine intellect, no truth would remain.

But on the contrary: in article 1 of this question the same St. Thomas teaches that truth in things is a convenience and conformity of them with the divine intellect, or the artificer, to whom they are referred as to a cause, not that he says it to be the cause of truth in things, but as the intellect is true by agreement with things, so too are things by conformity with the intellect: in which he manifestly indicates that there is in the things themselves an intrinsic truth, and proper to them, as I noted in Disputation 76, cap. 1.

1292. St. Anselm, De veritate, c. 14 (near the end); and St. Thomas, Summa theologiae I, q. 16, a. 7 - 8; and above on a. 1; see also Vazquez, Disputatio 76, cap. 1.

Then in article 1 of the following question he affirms that a thing is said to be false in two ways: in one way per accidens, because either it is a sign or a cause of falsity in the intellect; and this mode is by extrinsic denomination: and by the same reasoning he holds that things can also be called true by extrinsic denomination. In another way, he says, a thing is such insofar as it falls short of the rule of the intellect of God or of the artificer, upon whom it depends of itself as upon a cause; and one ought to say the same of truth. But this latter mode, if it were through extrinsic denomination alone, would differ little or nothing from the former; for that reason, in Disputation 76, cap. 1, I said that the mind of St. Thomas seems to me difficult enough. However that may be, concerning the doctrine of this article and the two following, what seems to us more probable, from the things that have so far been said, we shall briefly subjoin: and what Cajetan thinks on this matter in the commentary on that article 3 we have already reported in Disputation 76, cap. ...[1293]

The more probable opinion

When it has remained proved in Disputations 75 and 76 that truth primarily is in the intellect, secondarily however in things, although in the intellect, whether divine or created, it is a being of reason, consequently it must be said, first, that truth of the intellect is not an eternal truth of the intellect, but is multiplied according to the very number of intellects; which St. Thomas himself also admits in this article: and if we speak of individual truth, not only must what we said be understood regarding diverse enunciations, but even regarding the same one. For in diverse intellects truth can be multiplied about the same enunciation, because in diverse intellects there are not only different formal concepts about the same enunciation, but also different objective concepts: for the same thing is not presented in the same way to diverse intellects, but according to diverse formal concepts, the objective concepts also are diverse, in whose agreement and conformity with the thing itself the truth of the intellect, considered in itself, consists: nevertheless truth about the same enunciation in diverse intellects also is called one truth, namely by the unity of the object and of the thing enunciated.

Second, from the multiplication of things their truth is not multiplied, not because the things themselves are true by an extrinsic truth of God, but because they are true by an extrinsic denomination, from the fact that they are a cause of truth in some intellect: and the same must be said about the falsity of things. Therefore the multiplication of truth can happen not on the part of things, but on the part of the intellect. For the multiplication of a form must be taken on the part of the subject to which it primarily belongs: but truth primarily belongs to the intellect, secondarily to things: nevertheless one thing, or one vocal enunciation, is commonly said to be one truth, namely by the unity of the object or of the sign: and these points belong to article six.

Third, concerning article seven it must be said that every truth is eternal, just as all things according to their essence were also wont to be called eternal, or of eternal truth, not only because the divine intellect is eternal and always judges truly about things, but because the intelligible object has such a connection of extremes and a nonrepugnance according to essence, and an

1293. Cajetan, on I, q. 16, a. 3 (as reported by Vazquez in Disputatio 76, cap. ...).

aptitude between the predicate and the subject, of which kind of enunciations the logicians are wont to speak; in the definition of True they do not name an act, but an aptitude, as "Man is an animal: man is rational," etc. For we only signify that the predicate befits the subject aptly: and thus it can either exist in the nature of things, or when the enunciation is of a future thing. For in this enunciation words signify not only aptitude, but also act, not present but future: but what is future is by nature apt to be understood as future by an intellect, even an eternal one: therefore it is a matter of eternal truth that a thing will be future.

The objection is met, that from our saying that every truth, even of created things, is eternal, it does not follow that something subsists from eternity outside of God: for this truth is called eternal only insofar as things do not of themselves repel being understood from eternity, if there be an eternal intellect, or when there is a connection according to essence and aptitude between the predicate and the subject, of which kind the logicians are wont to speak in enunciations; in the definition they do not say act, but aptitude, as "Man is an animal: man is rational," etc. We only signify that the predicate suitably fits the subject: and thus it can be either to exist in the nature of things, or when the enunciation is of a future thing. For in this enunciation words signify not only aptitude, but also act, not present but future: but what is future is by nature apt to be understood as future by an intellect, even an eternal one: therefore it pertains to eternal truth that a thing be future.

This doctrine, and those which we shall set forth below in Disputation 104, can mutually confirm one another: for we shall say there against Scotus that things are not for that reason possible and do not imply a contradiction because they are understood by God; but rather things are understood by God because in themselves they do not imply a contradiction. Wherefore, prior to the intellect of God, things are said to be in themselves true (as it is wont to be said) causally, insofar as they are apt to be truly understood by some intellect, if there were one.

Finally, concerning article eight it is easily gathered from what has been said that the truth of each thing is immutable, not because the truth of God cannot be changed, or because God himself cannot be changed; but because whatever truth, even a created truth, by this very fact that it is truth, is from eternity in the way we have said: whether it be in necessary enunciations, or even in contingent future ones.

Quaestio XVII - On falsity

Then there is inquiry about falsity. And concerning this four things are asked.

Articulus I - Whether falsity is in things

It is objected first in this way. It seems that falsity is not in things. For St. Augustine says in the book Soliloquies: "If the true is that which is, it will be concluded that the false is nowhere," whatever be opposed.[1294]

Second. "False" is said from "deceiving": but things do not deceive, as Augustine says in the book On True Religion, because they do not present anything other than their own species. Therefore falsity is not found in things.[1295]

Third. True is said of things by comparison to the divine intellect, as was said above: but whatever thing, insofar as it is, imitates God; therefore any thing is true without falsity. And thus no thing is false.

But on the contrary is what Augustine says in the book On True Religion, that every body is a true body, and a false unity, because it imitates unity and is not unity. But any thing imitates the divine unity and falls short of it. Therefore in all things there is falsity.[1295]

I answer: Since true and false are opposed; and opposites are about the same, it is necessary that falsity be inquired into first where truth is first found, that is, in the intellect. But in things neither truth nor falsity exists except by an order to intellect. And because each thing is named simply from that which befits it per se, but according to that which befits it per accidens it is not named except in a qualified way: a thing indeed could be said to be simply false by comparison to that intellect on which it depends and to which it is compared per se, but in order to another intellect, to which it is compared per accidens, it could not be called false except in a qualified way. Now natural things depend on the divine intellect, just as artificial things on the human intellect. Therefore artificial things are called false simply and in themselves insofar as they fall short of the form of art. Hence an artificer is said to make a false work when it falls short of the operation of art. But in things depending on God falsity cannot be found by comparison to the divine intellect, since whatever happens in things proceeds from the ordination of the divine intellect: unless perhaps only in voluntary agents, in whose power it is to withdraw themselves from the ordination of the divine intellect: in which the evil of fault consists, according to which sins themselves are called falsities and lies in the Scriptures, according to that of Psalm 4: "Why do you love vanity and seek after a lie?" Just as, on the contrary, virtuous operation is called the truth of life insofar as it is subject to the order of the divine intellect, as is said in John 3: "He who does the truth comes to the light." But by an order to our intellect, to which natural things are compared per accidens, they can be called false, not simply, but in a qualified way. And this in two ways. In one way, according to the notion of what is signified: so that that be called false in things which is signified or represented by a false speech or intellect: in which way any thing can be called false with respect to that which is not in it: as if we were to say that the diameter is falsely commensurable, as the Philosopher says in the fifth book of the Metaphysics; and as Augustine says in the Soliloquies, that the Tragedian is a false Hector.[12941296] Just as, conversely, each thing can be called true according to that which befits it, in another way by way of cause. And thus a thing is called false which is by nature apt to cause a false opinion of itself. And because it is innate to us to judge of things by those things which outwardly appear of them.

1294. St. Augustine, Soliloquia, lib. 2, c. 8 (toward the end).
1295. St. Augustine, De vera religione, c. 34; Psalm 4:3 (Vulg.); John 3:21.
1295. St. Augustine, De vera religione, c. 34; Psalm 4:3 (Vulg.); John 3:21.
1294. St. Augustine, Soliloquia, lib. 2, c. 8 (toward the end).
1296. Aristotle, Metaphysics V.

Articulus II - Whether there is falsehood in sense

Because our cognition has its rise from sense, which is first and per se of exterior accidents, therefore those things which in their exterior accidents have a likeness of other things are said to be false according to those things; thus gall is false honey, and tin is false silver. And according to this St. Augustine says in the book of the Soliloquies, that we call those things false which we apprehend as very like.[1297] And the Philosopher says in the fifth book of the Metaphysics that those things are called false which are naturally apt to appear either what they are not, or such as they are not.[1298] And in this way also a man is called false, inasmuch as he is a lover of false opinions or utterances, not, however, from the fact that he can feign them; for thus even wise and learned men would be called false, as is said in the fifth book of the Metaphysics.[1298]

First conclusion: Things referred to the intellect to which they are compared per se, namely to the divine intellect, or to the practical intellect of the craftsman, are called false, insofar as they fall short of the form which is the principle of those things.

Second conclusion: Things referred to the speculative intellect, to which they are compared per accidens, are said to be false secundum quid in one of two ways - either by way of a sign, or because they are the cause of a false opinion. Concerning each of these conclusions many things have been said expressly above in Disputation 77.

Place next to the one just treated.

Objicitur 1. It seems that there is no falsehood in sense. For St. Augustine says in the book On True Religion: "If all the bodily senses report as they are affected, I do not know what more we ought to require of them."[1299] And thus it seems that we are not deceived by the senses; therefore falsehood is not in sense.

Objicitur 2. Further, the Philosopher says in the fourth book of the Metaphysics that falsehood is not proper to sense, but to imagination.[1300]

Objicitur 3. Further, in what is incomplex there is neither true nor false, but only in what is complex. But to compose and to divide does not pertain to sense. Therefore falsehood is not in sense.

But on the contrary: St. Augustine says in the Soliloquies: "It appears that in all the senses we are deceived, enticed by a likeness."[1301]

I answer: Falsehood is not to be sought in sense, except in the way in which truth is there. Now truth is not thus in sense that sense knows truth, but inasmuch as it has a true apprehension of sensibles, as was said above. And this indeed happens because it apprehends things as they are. Whence it happens that there is falsehood in sense from this, that it apprehends or judges things

1297. St. Augustine, Soliloquia, lib. 2, c. 6 (at the end).

otherwise than they are. Now it is thus disposed for knowing things, inasmuch as the likeness of things is in sense. But the likeness of a thing is in sense in three ways. In one way, first and per se, as in sight there is a likeness of colors and of the other proper sensibles. In another way per se, but not first: thus in sight there is a likeness of figure or magnitude and of the other common sensibles of all the senses. In a third way, neither first nor per se, but per accidens: thus in sight there is a likeness of a man, not insofar as he is a man, but insofar as it happens to this colored thing to be a man. And with respect to proper sensibles, sense does not have a false cognition, except per accidens and in fewer cases, namely because, on account of an indisposition of the organ, it does not receive fittingly the form of the sensible, just as other passive things by their indisposition receive deficiently the impression of agents. And hence it is that, because of a corruption of the tongue, sweet things seem bitter to the sick. But with respect to common sensibles, and per accidens, there can be a false judgment even in a sense rightly disposed: because sense is not directly referred to those things, but per accidens or consequently, inasmuch as it is referred to other things.

Reply to the first: For sense to be affected is its very sensing. Hence, from the fact that the senses report as they are affected, it follows that we are not deceived in that judgment by which we judge that we sense something; but from the fact that the sense is sometimes affected otherwise than the thing is, it follows that it sometimes reports a thing to us otherwise than it is. And from this we are deceived through sense about the thing, not about the very sensing.

Reply to the second: Falsehood is said not to be proper to sense, because it is not deceived about its proper object. Hence in another translation it is more plainly said that the sense of the proper sensible is not false. But falsehood is attributed to imagination, because it represents the likeness of a thing even when absent. Whence, when someone turns to the likeness of a thing as to the thing itself, falsehood arises from such an apprehension. And hence also the Philosopher says in the fifth book of the Metaphysics that shadows and pictures and dreams are called false, inasmuch as the things do not underlie whose likeness they bear.[1298]

Reply to the third: That argument proceeds as though falsehood were in sense in the same way as in a knower of the true and the false.

First conclusion: In the same manner in which truth is in sense, so too is falsehood - not because it knows truth, but because it has a true apprehension.

Second conclusion: With respect to proper sensibles, sense does not have a false cognition, unless per accidens, and rarely, because of the bad disposition of the organ.

Third conclusion: With respect to common sensibles, there can be a false judgment in sense even when rightly disposed. Concerning these conclusions enough and more than enough has been said above in Disputation 75.

1298. Aristotle, Metaphysics V (text 34).

Articulus III - Whether falsehood is in the intellect

Objicitur 1. It seems that falsehood is not in the intellect. For St. Augustine says in the book of the 83 Questions: "Everyone who is deceived does not understand that in which he is deceived." But a thing is said to be false in some cognition inasmuch as by it we are deceived. Therefore falsehood is not in the intellect.[1302]

Objicitur 2. Further, the Philosopher says in the third book On the Soul that the intellect is always right.[1303] Therefore falsehood is not in the intellect.

But on the contrary: It is said in the third book On the Soul that where there is composition of intellects, there are the true and the false. But composition of intellects is in the intellect. Therefore the true and the false are in the intellect.[1303]

I answer: Just as a thing has existence (*esse*) by its proper form, so a cognitive power has knowing by the likeness of the thing known. Hence, as a natural thing does not fail with respect to that which befits it according to its form - for example, a man does not fail with respect to being a man - yet can fail with respect to certain accidentals or consequents - for example, with respect to having two feet - so too a cognitive power does not fail in knowing with respect to that thing by whose likeness it is informed, but it can fail around something consequent upon it, or accidental to it; as was said, that sight is not deceived about the proper sensible, but about the common sensibles which are related to it consequently, and about the per accidens sensible. Now just as sense is informed directly by the likeness of proper sensibles, so the intellect is informed by the likeness of the quiddity (*quidditas*) of the thing. Hence concerning what a thing is (*quod quid est*) the intellect is not deceived, just as sense is not deceived about proper sensibles. But in composing or dividing it can be deceived, when it attributes to the thing, whose quiddity it understands, something that does not follow upon it, or that is opposed to it. For thus the intellect is disposed for judging about things of this sort, as sense is for judging about common or per accidens sensibles. This difference, however, being preserved which was said above concerning truth, namely that falsehood can be in the intellect not only because the cognition of the intellect is false, but also because the intellect knows falsehood as it knows truth. In sense, however, falsehood is not as a known object, as was said. But because falsehood in the operation of the intellect is per se only about the intellect's composition, per accidens even in the operation of the intellect whereby it knows what a thing is (*quid est*), falsehood can be, inasmuch as there composition of the intellect is mingled in. And this can happen in two ways. In one way, insofar as the intellect attributes the definition of one thing to another; as if it were to attribute the definition of a circle to a man: whence the definition of one thing is false of another. In another way, insofar as it composes together the parts of a definition which cannot be associated at the same time. Thus the definition is not only false with respect to some thing, but false in itself: as if it were to form such a definition,

1302. St. Augustine, De diversis quaestionibus octoginta tribus, q. 32 (in the beginning), tom. 4.
1303. Aristotle, De Anima III.
1303. Aristotle, De Anima III.

"a rational quadruped animal," the intellect is false in defining thus, because it is false in forming this composition, "some rational animal is quadruped"; and on this account, in knowing simple quiddities the intellect cannot be false, but either it is true, or it altogether understands nothing.

Reply to the first: Because the quiddity of a thing is the proper object of the intellect, for this reason we are then properly said to understand something when, reducing it to what it is (*quod quid est*), we so judge concerning it; as happens in demonstrations, in which there is no falsehood. And in this way Augustine's saying is understood: "Everyone who is deceived does not understand that in which he is deceived"; not, however, so that in no operation of the intellect could someone be deceived.

Reply to the second: The intellect is always right insofar as the intellect is of first principles, about which it is not deceived for the same reason for which it is not deceived about what a thing is; for self-evident principles are those which, the terms being understood, are known from the fact that the predicate is posited in the definition of the subject.

Articulus IV - Whether true and false are contraries

It is objected to the fourth as follows. It seems that true and false are not contraries. For true and false are set in opposition as what is and what is not: for true is that which is, as St. Augustine says. But what is and what is not are not opposed as contraries. Therefore true and false are not contraries.

1. Further, one of contraries is not in the other. But the false is in the true. For as St. Augustine says in the book Soliloquies, the tragedian would not be a false Hector if he were not a true tragedian. Therefore true and false are not contraries.[1304]
2. Further, there is no contrariety in God; for nothing is contrary to the divine substance, as St. Augustine says in the twelfth book On the City of God. But falsity is opposed to God: for an idol in Scripture is named a lie, Jeremiah 5; "They have taken hold of a lie," gloss, that is, idols. Therefore true and false are not contraries.[1305]

But on the contrary: The Philosopher, in On Interpretation II, sets a false opinion as contrary to a true one.[1306]

I answer: True and false are opposed as contraries, and not as affirmation and negation, as some have said. To see this clearly, one must know that a negation, precisely as it posits nothing, neither determines to itself any subject; and for this reason it can be said both of being and of non-being, as "not-seeing" and "not-sitting." But privation does not posit anything, yet it does determine for itself a subject: for it is a negation in a subject; thus "blind" is said only of that which is of a nature to see. A contrary, however, both posits something and determines a subject: "black" is a certain species of color. Now the false does posit something. For "false," as the Philosopher says

1304. St. Augustine, Soliloquia, lib. 2, c. 10.
1305. St. Augustine, De civitate Dei, lib. 12 (near the end); cf. Jer 5; Gloss: "idola."
1306. Aristotle, Perihermeneias (On Interpretation) II, cap. ult.

in Metaphysics IV, is when it is said or seems that something is which is not, or is not which is.[1307] For just as the true posits an acceptance adequate to the thing, so the false posits an acceptance not adequate to the thing. Whence it is manifest that true and false are contraries.

Reply to the first: What is in things is the truth of the thing; but what is as apprehended is the truth of the intellect, in which truth is first. Whence also the false is that which is not as apprehended. But to apprehend being and non-being has contrariety, as the Philosopher proves in On Interpretation II: to the opinion "good is good" the contrary is "good is not good."[1306]

Reply to the second: The false is not founded upon a true contrary to itself, just as evil is not founded upon a good contrary to itself, but upon that which is its subject. And this happens in both cases for this reason, that the true and the good are contrary to the false and the evil, and they concur with being. Hence, just as every privation is founded upon a subject which is a being, so every evil is founded upon some good, and every false upon some true.

Reply to the third: Because contraries and privative opposites are naturally about the same, therefore with respect to God as He is considered in Himself, there is nothing contrary - neither by reason of His goodness nor by reason of His truth - since in His intellect no falsity can be. But in our apprehension there is something contrary: for to a true opinion about Him a false opinion is contrary. And thus idols are called "lies" as opposed to the divine truth, inasmuch as a false opinion about idols stands contrary to the true opinion about the unity of God.

Conclusion: True and false are opposed, not as affirmation and negation, as some have said, but as contraries. In this article there is nothing worthy of disputation.

Quaestio XVIII - On the life of God

Since understanding is living, after the consideration of divine knowledge and intellect, we must consider God's life. And about this four points are asked.

Articulus I - Whether living belongs to all natural things

To the first, we proceed thus. It seems that living belongs to all natural things. The Philosopher says in Physics VIII that motion is, as it were, a kind of life to all things existing by nature. But all natural things share in motion. Therefore all natural things share in life.[1308]

1. Further, plants are said to live insofar as they have in themselves the principle of the motion of growth and diminution. But local motion is more perfect and prior by nature than the motion of growth and diminution, as is proved in Physics VIII. Since therefore all natural bodies have some principle of local motion, it seems that all natural bodies live.[1308]

1307. Aristotle, Metaphysics IV, text 27.
1306. Aristotle, Perihermeneias (On Interpretation) II, cap. ult.
1308. Aristotle, Physics VIII.
1308. Aristotle, Physics VIII.

2. Further, among natural bodies the more imperfect are the elements. But life is attributed to them: for "living waters" are spoken of. Therefore, much more do other natural bodies have life.

But on the contrary is what Pseudo-Dionysius says in On the Divine Names VI (not far from the beginning), that plants, according to the last resonance of life, have living; whence it can be gathered that plants obtain the lowest grade of life. But inanimate bodies are below plants. Therefore it does not belong to them to live.[1309]

I answer: From those that manifestly live we can gather of which things living belongs, and of which not. Now living manifestly belongs to animals. For it is said in the book On Plants that life is manifest in animals. Hence, according to that, we must distinguish living things from non-living according as animals are said to live. This, however, is that in which life is first manifested and in which it lastly remains. First, indeed, we say that an animal lives when it begins to have motion from itself; and it is judged that the animal lives as long as such motion appears in it. But when already it does not have any motion from itself, but is moved only by another, then it is called a dead animal through defect of life. Whence it is clear that those properly are living which move themselves according to some species of motion - whether motion be taken properly, as motion is called the act of the imperfect, that is, of what exists in potency; or whether motion be taken in a common way, insofar as motion is called the act of the perfect, as understanding and sensing are said to be moved, as is said in On the Soul III - so that those things are called living which set themselves toward some motion or operation; but those, in whose nature it is not to set themselves toward some motion or operation, cannot be called living except by a certain likeness.[1310]

Reply to the first: The Philosopher's word can be understood either of the first motion, namely of the heavenly bodies, or of motion taken commonly. And in either way motion is called, as it were, the life of natural bodies by likeness and not properly. For the motion of the heaven is in the whole universe of corporeal natures, as the motion of the heart is in an animal, by which life is conserved. Likewise, too, every natural motion bears itself to natural things in such wise as a certain likeness of vital operation. Whence, if the whole corporeal universe were one animal, so that this motion were from an intrinsic mover, as some have supposed, it would follow that motion would be the life of all natural bodies.

Reply to the second: It does not befit heavy and light bodies to be moved except insofar as they are outside the disposition of their nature, for example, when they are outside their proper place. For when they are in their proper and natural place, they are at rest. But plants and other living things are moved with vital motion precisely according as they are in their natural disposition, not, however, in approaching to it or receding from it. Indeed, insofar as they recede from such motion, they recede from natural disposition. And, moreover, heavy and light bodies are moved by an extrinsic mover, either by a generator, which gives the form, or by a remover of an impediment, as is said in Physics VIII. And thus they do not move themselves, as living bodies do.

1309. Pseudo-Dionysius, De divinis nominibus, cap. 6 (near the beginning).
1310. Aristotle, De anima III.

Reply to the third: "Living waters" are said to be those which have a continuous flux. For standing waters, which are not continuous to a source that flows continuously, are called "dead," as the waters of cisterns and pools. And this is said by likeness. For insofar as they seem to move themselves, they have a likeness of life. Yet there is not in them the true notion of life: because they do not have this motion from themselves, but from the cause that generates them; as happens concerning the motion of other heavy and light bodies.

Articulus II - Whether life is a certain operation

To the second, we proceed thus. It seems that life is a certain operation. For nothing is divided except by things which are of its own genus. But living is divided by certain operations, as is evident from the Philosopher in On the Soul II, who distinguishes living by four: namely, to take nourishment, to sense, to move according to place, and to understand. Therefore life is a certain operation.[1311]

1. Further, the active life is said to be other than the contemplative. But the contemplative is not diversified from the active except according to certain operations. Therefore life is a certain operation.
2. Further, to know states a certain operation. But this is life eternal, as is evident from John 17: "This is eternal life, that they may know you, the only true God." Therefore life is an operation.

But on the contrary is what the Philosopher says in On the Soul II: "Living, for living things, is being."[1312]

I answer: As is clear from what has been said, our intellect - which properly knows the quiddity of a thing as its proper object - derives from sense, whose proper objects are external accidents. And hence it is that from those things which outwardly appear of a thing we come to know the essence (*essentia*) of the thing. And because we name something as we know it, as is clear from the foregoing, it follows that for the most part names are imposed from exterior properties to signify the essences of things. Whence names of this sort are at times taken for the proper essences of things, to the signifying of which they were principally imposed; at other times, however, they are taken for the properties from which they are imposed, and this is less proper - if they are so taken.[1313]

But first, as if a life of natural bodies by likeness and not properly so: For the motion of the heaven is, in the whole universe of corporeal natures, as the motion of the heart in an animal, by which life is preserved. Likewise, every natural motion stands thus toward natural things as a

1311. Aristotle, De anima II.
1312. Aristotle, De anima II: "Vivere viventibus est esse."
1313. On the Thomistic doctrine of names imposed from operations to signify essences, cf. Summa theologiae I, q. 13.

certain likeness of vital operation. Hence, if the whole corporeal universe were one animal, so that this motion were from an intrinsic mover, as some have posited, it would follow that motion would be the life of all natural bodies.

Reply to the second: It does not befit heavy and light bodies to be moved, except inasmuch as they are outside the disposition of their nature, as when they are outside their proper place. For when they are in their proper and natural place, they are at rest. But plants and other living things are moved with vital motion precisely insofar as they are in their natural disposition, not, however, in approaching to it or in receding from it. Rather, insofar as they recede from such a motion, they recede from a natural disposition. Besides, heavy and light bodies are moved by an extrinsic mover, either by the generator, which gives form, or by the remover of an impediment, as is said in Physics VIII; and so they do not move themselves as living bodies do.[1314]

Reply to the third: "Living waters" are so called which have a continuous flow. For standing waters, which are not continued to a principle that continually flows, are said to be "dead," as the waters of cisterns and pools. And this is said by a likeness: for insofar as they seem to move, they have a likeness of life. Yet there is not in them the true notion of life; because they do not have this motion from themselves, but from a generating cause, as happens about the motion of other heavy and light things.

It is objected that: 1) It seems that life is a certain operation. For nothing is divided except by things that are of its own genus. But living is divided by certain operations, as is clear from the Philosopher in De anima II, who distinguishes living by four, namely, to use food, to sense, to move according to place, and to understand. Therefore, life is a certain operation.[1315] 2) Moreover, the active life is said to be other than the contemplative. But the contemplative is not diversified from the active except according to certain operations. Therefore life is a certain operation. 3) Moreover, to know God is a certain operation. But this is life, as is clear from John 17: "Now this is eternal life, that they may know you, the only true God." Therefore, life is an operation.

But on the contrary: The Philosopher says in De anima II: "To live, for living things, is to be."[1316]

I answer: As is evident from what has been said, our intellect, which is properly cognitive of the whatness (quidditas) of the thing as its proper object, derives from sense, whose proper objects are external accidents. And hence it is that from those things which outwardly appear of a thing we come to know the essence (essentia) of the thing. And because we name something as we know it, as is clear from the foregoing, it follows that for the most part names are imposed from exterior properties to signify the essences of things. Whence names of this sort are at times taken for the proper essences of things, to the signifying of which they were principally imposed; at other times, however, they are taken for the properties from which they are imposed, and this is less proper - if they are so taken.

1314. Aristotle, Physics VIII, text 32.

1315. Aristotle, De anima II; cf. his division of living by four: to use food, to sense, to move according to place, to understand.

1316. Aristotle, De anima II: "Vivere viventibus est esse."

As is clear, for example, that this name "body" is imposed to signify a certain genus of substances from this, that three dimensions are found in them. And so at times this name "body" is posited to signify the three dimensions, according as body is posited as a species of quantity. Thus, then, must it be said of "life." For the name "life" is taken from something outwardly appearing about a thing, which is "to move oneself"; yet this name was not imposed to signify this, but to signify the substance to which it belongs, by its nature, to move itself, or to act of itself in any way to operation. And according to this, to live is nothing other than to be in such a nature, and "life" signifies this very thing, but in the abstract - just as the name "course" signifies running in the abstract. Hence "living" is not a predication of accident, but of substance. Sometimes, however, "life" is taken - less properly - for the operations of life, from which the name of life is assumed; as the Philosopher says in Ethics IX, that to live principally is to sense or to understand.[1317]

Reply to the first: The Philosopher there takes "to live" for the operation of life. Or it is better to say that "to sense" and "to understand," and the like, are sometimes taken for certain operations, sometimes, however, for the very existence (*esse*) of those so operating. For it is said in Ethics IX that "to live is to sense or to understand," that is, to have the nature for sensing or understanding. And in this way the Philosopher distinguishes living by those four. For in the lower things there are four genera of living beings. Of which some have a nature only for using food, and for the consequences which are growth and generation. Others further for sensing; as is evident in animals that are immobile, like oysters. Others, with these, further for moving themselves according to place, as perfect animals, quadrupeds, winged things, and the like. Others further for understanding, as humans.

Reply to the second: The "works of life" are called those whose principles are in the agents, so as to induce them to such operations. But it happens that in some men there are at work not only natural principles, as are natural powers (potentiae), but also certain superadded things, as are habits inclining to certain genera of operations as by a mode of nature, and making those operations delightful. And from this it is said, as by a kind of likeness, that that operation which is delightful to a man, and to which he is inclined, and in which he is conversant, and he orders his life to it, is called "the life" of the man. Whence some are said to lead a luxurious life, others an honest life. And in this way the contemplative life is distinguished from the active. And in this way too to know God is called eternal life. Whence the solution to the third is evident.

Articulus III - Whether life belongs to God

It is objected that: 1) It seems that life does not belong to God. For things are said to live inasmuch as they move themselves, as has been said. But it does not befit God to be moved. Therefore neither to live.[1318] 2) Moreover, in all things that live there is to be received some principle of living, as is said in De anima II, that the soul is the cause and principle of the living

1317. Aristotle, Nicomachean Ethics IX, c. 9.
1318. Cf. the prior determination that to live is said from self-motion.

body. But God does not have any principle. Therefore it does not befit Him to live.[1319] 3) Moreover, the principle of life in living things among us is the vegetative soul, which is only in corporeal things; therefore to live does not befit incorporeal things.

But on the contrary: It is said in Psalm 83: "My heart and my flesh have exulted in the living God."

I answer: That life is most properly in God is to be considered; for since things are said to live inasmuch as they operate from themselves and not as moved by others, the more perfectly this befits something, the more perfectly life is found in it. Now in movers and moved there are three things found in order. For first the end moves the agent; the principal agent, however, is that which acts through its form. And sometimes it acts through an instrument, which does not act from the power of its own form, but from the power of the principal agent; to which the instrument accords only the execution of the action. Therefore there are some which move themselves without having regard to the form or the end which is in them from nature, but only as to the execution of the motion; but the form by which they act and the end for which they act are determined for them by nature. And such are plants, which, according to a form given them by nature, move themselves according to increase and decrease.

Others, however, further move themselves, not only having regard to the execution of the motion, but also as to the form which is the principle of motion, which they acquire by themselves. And such are animals, whose principle of motion is a form not given by nature but received through sense. Hence, the more perfect a sense they have, the more perfectly they move themselves. For those which have only the sense of touch move themselves only with the motion of dilation and constriction; oysters, for instance, and certain others, move scarcely beyond the motion of plants. But those which have a perfect sensitive power not only for knowing things conjoined and touching, but also for knowing things distant, move themselves afar by progressive motion.

Yet although animals of this sort receive through sense the form which is the principle of motion, nevertheless they do not set for themselves by themselves the end of their operation or of their motion; rather, it is instilled in them by nature, at whose instinct they are moved to act something through the sensible form apprehended. Hence above such animals are those which move themselves even with regard to the end which they set for themselves. And this does not occur except through reason and intellect, whose office it is to know the proportion of the end and that which is to the end, and to order one thing to another. Whence the more perfect mode of living is that of those which have intellect. For these more perfectly move themselves. And this is a sign thereof, that in one and the same man the intellectual power moves the sensitive powers, and the sensitive powers by their command move the organs which execute the motion. Thus too we see in the arts, that the art to which pertains the use of the ship, namely, the steering art, commands that one which imposes the form of the ship; and this one commands that which has execution only in disposing the matter.

1319. Aristotle, De anima II: the soul is the cause and principle of the living body.

But although our intellect acts as to some things, nevertheless some things are set for it by nature, as are the first principles, about which it cannot be otherwise disposed, and the ultimate end, which it cannot not will. Whence, although as to certain things a man moves himself, nevertheless, as to certain things he must be moved by another. Therefore that whose very nature is its understanding, and that which it has naturally is not determined from another, this holds the highest degree of life. And such is God. Hence in God life is most of all. Whence the Philosopher in Metaphysics XII shows that God is intellect, and excludes that He has an understanding that is successive; for the intellectual operation is eternal, since the intellect is most perfect, and always in act.[1320]

Reply to the first: As is said in Metaphysics IX, there is a twofold action: one which passes into exterior matter, as to heat and to cut; another which remains in the agent, as to understand, to sense, and to will. Of which this is the difference: that the first action is not the perfection of the agent that moves, but of the moved thing; the second, however, is the perfection of the agent. Whence, since motion is the act of the movable, the second action, insofar as it is the act of the operator, is called its "motion" by a certain likeness: because as motion is the act of the movable, so such an action is the act of the agent; although motion is the act of the imperfect - namely, of that which is in potency - whereas such action is the act of the perfect, that is, of something existing in act, as is said in De anima III. Therefore, in the way that to understand is a "motion," that which understands is said to move itself. And in this way also Plato posited that God moves Himself - not in the way that motion is the act of the imperfect.[1321]

Reply to the second: That which is God's knowing is His very existence (*esse*) and His understanding and His living. And therefore He so lives that He does not have life from a principle.

Reply to the third: Life in these lower states is received in a corruptible nature which needs generation for the conservation of the species, and nourishment for the conservation of the individual. And on this account in these lower things life is not found without a vegetative soul. But this has no place in incorruptible things.

Articulus IV - Whether all things are life in God

It is objected that: 1) It seems that not all things are life in God. For it is said: "In Him we live, and move, and are" (Acts 17:28). Therefore not all things in Him are life.[1322] 2) Moreover, all things are in God, namely, in the first exemplar; but things exemplified ought to be conformed to the exemplar. Since, then, not all things live in themselves, it seems that not all things are life in God. 3) Moreover, as St. Augustine says in the book On True Religion, any living substance is better than any non-living substance. If, then, those things which do not live in themselves are life in God, it seems that they are truer as things in God than in themselves - which, however, seems false, since in themselves they are in act, but in God in potency. 4) Moreover, since, as Scripture teaches, God

1320. Aristotle, Metaphysics XII; cf. also XIII, on the perfection and eternity of intellectual operation.

1321. On the twofold action, see Aristotle, Metaphysics IX; on action remaining in the agent as perfect act, see De anima III.

1322. Acts 17:28.

knows even the things that are evil according to some time or condition; if all things are life in God, inasmuch as they are known by Him, then even the things that are evil would be life in God - which seems unfitting.

But on the contrary: It is said in John 1: "What was made, in Him was life." But all things other than God were made. Therefore all things in God are life.

I answer: As has been said, the living of God is His very understanding. But in God the intellect, that which is understood, and His very understanding are the same. Whence whatever is in God as understood is something living itself, or His life itself. And therefore, since all things which were made by God are in Him as understood, it follows that all things in Him are life - indeed, the very divine life.

Reply to the first: Creatures are said to "live, move, and be" in God as in the efficient and governing cause; not, however, in such wise that in God there is life, motion, and being as they are in creatures, but that from Him creatures receive their life, motion, and being. Yet all things are said to be "life in God" inasmuch as they are in Him as understood by His intellect.

Ad primum ergo dicendum, quod sicut dicitur in the ninth book of the Metaphysics, there is a twofold action: one which passes over into external matter, as to heat and to cut; another which remains in the agent, as to understand, to sense, and to will. Of which the difference is this: the first action is not the perfection of the agent that moves, but of the thing moved; but the second action is the perfection of the agent. And therefore, because motion is the act of what is mobile, the second action, insofar as it is the act of the operator, is called its motion by this likeness, that as motion is the act of something mobile, so this kind of action is the act of the agent, although motion is the act of something imperfect, that is, existing in potency; but this kind of action is the act of something perfect, that is, existing in act, as is said in On the Soul III. Therefore in the way in which to understand is a motion, that which understands itself is said to move itself. And in this way too Plato held that God moves Himself, not in the way in which motion is the act of what is imperfect

Ad secundum dicendum, quod as God is His own essence (*esse*) and His own understanding, so also He is His own living. And on this account He lives in such a way that He does not have a principle of living

Ad tertium dicendum, quod life in these lower things is received in a corruptible nature, which needs generation for the conservation of the species, and nourishment for the conservation of the individual. And for this reason in these lower things life is not found without a vegetative soul. But this does not have place in incorruptible things

Whether all things are life in God

Ad quartum sic proceditur

Objicitur 1. Videtur quod non omnia sint vita in Deo. Dicitur enim supra, quod vivere dicitur per quandam motus rationem; sed non omnia quae sunt in Deo sunt motus; ergo non omnia in ipso sunt vita.[1324]

Objicitur 2. Praeterea, omnia sunt in Deo sicut in primo exemplari. Sed exemplata debent conformari exemplari. Cum igitur non omnia vivant in seipsis, videtur quod non omnia in Deo sint vita.

Objicitur 3. Praeterea, sicut St. Augustine dicit in the book On True Religion, chapter 19, a living substance is better than any non-living substance. If, therefore, those things which in themselves do not live are life in God, it seems that they are more truly things in God than in themselves; which, however, seems false, since in themselves they are in act, but in God in potency.

Objicitur 4. Praeterea, as things are known by God - both good things, and those which are made according to some time; and also evils; and those things which God can make but will never be made - if, therefore, all things are life in God, insofar as they are known by Him, it seems that even evils, and things that never come to be, are life in God insofar as they are known by Him. Which seems unfitting.

But on the contrary: It is said in John 1:3 - 4, "What was made, in Him was life." But all things except God were made; therefore all things are life in God.

I answer that, as has been said above, the living of God is His understanding. But in God the intellect, and that which is understood, and His very act of understanding are the same. Whence whatever is in God as understood is His very living, or His life. And therefore, since all things that are made by God are in Him as understood, it follows that all things in Him are the very divine life.

Reply to the first: Creatures are said to be in God in a twofold way. In one way, insofar as they are contained and conserved by the divine power, as we say that those things which are in our power "are" in us. And thus creatures are said to be in God even insofar as they are in their proper natures; and in this way the word of the Apostle is to be understood, "In Him we live, move, and are" (Acts 17:28); because even our living, and our being, and our being moved are caused by God. In another way, things are said to be in God as in the knower. And thus they are in God by their proper rationes, which in God are not other than the divine essence. Whence, things insofar as they are thus in God, are the divine essence. And because the divine essence is life, not, however, motion, hence it is that, in this mode of speaking, in God there are not motions but life.

Reply to the second: The exemplata ought to be conformed to the exemplar according to the ratio of the form, not, however, according to the mode of being. For sometimes a form has a different mode of being in the exemplar and in the exemplified. Thus the form of a house in the

1324. Cf. the determination that "to live" is said from self-motion above; and see Aristotle, On the Soul II - III.

mind of the artisan has an immaterial and intelligible being; but in the house which is outside the soul it has a material and sensible being. And hence the rationes of things which do not live in themselves are life in the divine mind, because in the divine mind they have divine being.

Reply to the third: If matter were not of the ratio of natural things, but only form in every way, then natural things would in a truer way be in the divine mind through their proper ideas than in themselves. Wherefore Plato also posited that the separated man was the true man, but the material man is a man by participation. But because matter is of the ratio of natural things, it must be said that natural things more truly have being simply in the divine mind than in themselves, because in the divine mind they have uncreated being, but in themselves created being. But to be this - say, a man or a horse - they more truly have in their proper nature than in the divine mind; because to the truth of man there belongs material being, which they do not have in the divine mind. Thus, a house has a more noble being in the mind of the artisan than in matter; yet, nevertheless, that is more truly called a house which is in matter than that which is in the mind, because this is a house in act, but that is a house in potency.

Reply to the fourth: Although evils are in God's knowledge, insofar as they are comprehended under God's knowledge, nevertheless they are not in God as created by God or conserved by Him, nor as having a ratio in God. For they are known by God by the rationes of goods. Whence it cannot be said that evils are life in God. But those things which according to no time are, can be said to be life in God, according as "to live" names understanding only, insofar as they are understood by God; not, however, according as "to live" imports a principle of operation.

Notatio circa totam quaestionem.

Since St. Thomas is pursuing a disputation on the divine attributes, and after the treatise on the perfections of God which do not consist in operation he has most fully discussed the first operation, namely intellection, and the things that seem to pertain to it, from question 14 to 17, it would seem altogether outside the matter to institute here a question about the life of God, being about to dispute in the following on the operation of the will. For if life be taken for the substantial principle of vital operation, it ought not at this place to have been numbered; but if it be taken for the very operation of life, since in God it is not distinguished from intellection and appetition, it seems vain to treat of it in this question as of a distinct perfection of God. Nevertheless the admirable order of the holy Doctor is observed; and from the beginning of the question and article 3 of it one may gather this. For thus he says at the beginning of the question: "Since to understand is of living things, after the consideration of knowledge and the divine intellect, we must consider about His life." And in the third article he proves that the highest grade of life belongs to God from the mode of understanding which He has; he gathers it thus. Living things, especially animals, differ from non-living things in this, that living things move themselves, whereas the rest are rather moved; and those living things which more perfectly move themselves, more perfectly live. For those which act upon themselves by an apprehended form, such as sensing things, more perfectly move themselves and live than non-sensing things which move themselves only by a form implanted in them by nature. Then those which are endowed with a more perfect sense, and therefore act more perfectly upon themselves - such as animals which sense things at a distance and move themselves

toward those things, namely, perfect animals - also live more perfectly than those which, fastened to rocks and shells, move themselves only by a motion of dilation and constriction, because they sense only things present and conjoined. Finally, those which move themselves to an apprehended end with the due order of means, such as the rational creature, live more perfectly than other animals which, although they impel themselves toward what is distant, do not maintain a proportion of means to an end. Therefore it is clear that the rational creature lives more perfectly, because it more perfectly moves itself; for from a more perfect mode of moving oneself the more perfect life is most rightly inferred. But because the created intellect in certain respects seems to move and determine itself - for from principles previously known it proceeds from within to conclusions, whereas as to the very principles it is determined, after the manner of a natural being, by some extrinsic principle, as is said in the First Part of the Second Part, question 9, article 4[1325] - therefore the highest grade of life cannot belong to it. But God - whose is the excellence and loftiness - is not able to be moved or determined by any extrinsic principle, but has all intellection from Himself; therefore He has life in the most perfect mode.

When St. Thomas says that the created intellect is determined to first principles by an exterior principle, he does not so understand it that, for knowing them, it does not concur nor effect anything; but because there is not in it that whereby it would be rather from itself disposed to think this, than that it be determined thereto; and therefore it is determined by another extrinsic cause; in which it seems to be made like to non-living things, and hence it does not partake of the highest grade of life. We will explain this mode of determination unto first thought in men and angels in the fourth article.

Therefore the holy Doctor treats now of the life of God, in order to prove that it is in God in the most perfect way from the most perfect mode of understanding. Wherefore he is not proceeding out of order, but in an ordered fashion, after the tract on intellection and the knowledge of God, he disputes about His life. What he treats in the whole question is easy and does not need greater discussion, except for that which he treats in the fourth article, namely, how all things are said to live in God; but of this we have said enough and more than enough in disputation 70. Moreover, when we attribute life to God, as other perfections which we see in creatures, we understand it according to an analogical ratio, as we have taught in disputation 22 universally.

Quaestio XIX - On the will of God

In duodecim articulos divisa.

Post considerationem eorum, quae ad divinam scientiam pertinent, considerandum est de his quae pertinent ad the divine will, so that the first consideration be about God's will itself. The second, about those things which absolutely pertain to will. The third, about those things which pertain to intellect in order to will.

Concerning the will itself there are treated twelve articles.

1325. St. Thomas, Summa theologiae I - II, q. 9, a. 4.

Having preserved the due order of nature, St. Thomas treats of the will of God, and of the second immanent operation of God Himself, and of the other affections which, as it were, follow it as virtues: in this question 19, of will in general; question 20, of love; question 21, of justice and mercy, in which also some other affections are touched upon incidentally. Thereafter indeed from question 22 concerning both operations of intellect and will together he treats at length - namely of providence, predestination, and the book of life, and of the beatitude of God - as we shall see there.

Articulus I - Whether in God there is will

Ad primum sic proceditur

Objicitur 1. Videtur quod in Deo non sit voluntas. Objectum enim voluntatis est finis et bonum; sed Deo non est assignare aliquem finem: ergo voluntas non est in Deo.

Objicitur 2. Praeterea, voluntas est appetitus quidam. Appetitus autem, cum sit rei non habentis perfectionem, designat quod deest perfectionem affectatam; ergo voluntas non est in Deo.

Objicitur 3. Praeterea, secundum Philosophum in On the Soul III, the will is a mover that moves. But God is the first unmoved mover, as is proved in Physics VIII. Therefore in God there is no will.[1326]

Sed contra est quod dicit Apostolus, Romans 12: "Ut probetis quae sit voluntas Dei." Ergo in Deo est voluntas.

Respondeo dicendum, in Deo voluntatem esse, sicut et in eo est intellectus. Voluntas enim intellectum consequitur. Sicut enim res naturalis habet esse in actu per suam formam, ita intellectus intelligens actum per suam formam intelligibilem. Quilibet autem res ad suam formam naturalem hanc habet habitudinem, ut quando non habet ipsam, tendat in eam, et quando habet ipsam, quiescat in ea; et idem est de qualibet perfectione naturali quae est bonum naturae. Et haec habitudo ad bonum in rebus carentibus cognitione vocatur appetitus naturalis. Unde et natura intellectualis ad bonum apprehensum per formam intelligibilem similem habitudinem habet, ut scilicet cum habet ipsum quiescat in illo, cum vero non habet, quaerat ipsum; et utrumque pertinet ad voluntatem. Unde in quolibet habente intellectum est voluntas, sicut in quolibet habente sensum est appetitus animalis. Et sic oportet in Deo esse voluntatem, cum sit in eo intellectus. Et sicut suum intelligere est suum esse (*esse*), ita suum velle.

Reply to the first: Although nothing other than God is the end of God, nevertheless He Himself is the end with respect to all things that are from Him; and this through His essence, since through His essence He is good, as was shown above. For the end has the ratio of the good.

1326. Aristotle, On the Soul III; Physics VIII. Biblical citation: Romans 12:2.

Reply to the second: The will in us belongs to the appetitive part, which, although it is named from "appetere" (to seek), nevertheless does not have only an act whereby it seeks what it does not have, but also loves what it has, and delights in it. And in this respect the will is posited in God: because He always has the good which is its object, since He is not other than it according to essence, as was said.

Reply to the third: The will, whose principal object is the good - which, for a created will, is outside the will - must be moved by something. But the object of the divine will is His goodness, which is His essence. Hence, since the will of God is His essence, it is not moved by another, but by itself alone, in that way of speaking in which to understand and to will is called a motion. And in this sense Plato said that the first mover moves itself.

Explicatio articuli.

Conclusio articuli: We affirm - and it is of faith, as the Apostle teaches in Ephesians 1 - "according to the purpose of His will," that there is in God will. In this all agree, not only Catholics but even heretics; for no one who acknowledges God denies that He has will.

St. Thomas. The reason for the conclusion, he has confirmed. St. Thomas proves this reason thus: just as a natural thing is by its own natural form, so the intellect is intelligent by its own intelligible form (*forma intelligibilis*). But a natural thing has to its form this inclination, that, when it does not have it, it should desire it, and when it does have it, it should rest in it - two things which pertain to will (*voluntas*), or to natural appetite (*appetitus naturalis*). Therefore, since God is intelligent, it follows, together with the account of the intelligible form, that He also has an elicited appetite, which is attributed to will.

Dubitatio circa rationem articuli. 13. A doubt concerning the foregoing reason is proposed by Cajetan, because from the natural appetite of things for their form when they lack it, there is not rightly inferred an elicited appetite in a nature that understands or senses for the intelligible or sensible form. For it seems to follow only that in a knowing nature there is a natural and innate appetite, not an elicited one, for having the intelligible or knowable form, when it does not have it, so that by it it may understand or know. From this, however, it does not follow that in an intelligent nature there is will, which is the principle of elicited appetite - as St. Thomas contends.

To satisfy this doubt, Cajetan notes first seven differences between natural appetite and animal appetite. Of these we shall briefly recount only four, which seem to conduce to the explanation of this doubt. The first is that natural appetite is in all things, whereas animal appetite is only in cognoscitives. The second, that natural appetite follows nature as such, but animal appetite follows cognition. The third, that the natural is not an elicited act, but a certain propensity or readiness to receive its perfection, which is called appetite while it lacks that perfection - as we shall say at 1 - 2, q. ult. - whereas animal appetite is an elicited act of the appetitive faculty. The fourth difference, that natural appetite is a particular inclination which each part of a composite shares to its own peculiar perfection; but animal appetite is a universal appetite which tends to the good befitting the

whole, whether by reason of this part or that. And therefore natural appetite is said to be in the several parts for their several perfections; but animal appetite is one, desiring for the whole whatever perfection may belong to it.

Next Cajetan notes that every knowing nature is in act through a cognoscible form, as such - that is, as it presents (the object), by reason of which the thing itself understood is also called a cognoscible form. He therefore answers the doubt that, on St. Thomas's reasoning, the conclusion is rightly proved: for if there is gathered an appetite for the intelligent form as it is intelligent, there is also proved an appetite for the very thing understood as it is understood; but this appetite is elicited, not natural - because the natural is for the form which is the thing's natural perfection, not for the apprehended thing.

But this solution plainly does not satisfy: both because it is not so certain that the apprehended thing is called the intelligible form, and also because, even if we conceded that to Cajetan, on that account alone would it be proved that in an intelligent nature, as it is intelligent, there is an appetite for the intelligible form, and again that you include the thing itself as the object of intellection; there is, I say, an inclination and appetite to understand the thing itself. But the rational appetite, which is elicited - and which alone we are striving to prove - certainly is not for understanding only, but for the thing understood insofar as it is a good, not so that we merely understand it, but also so that we have it, and obtain it as our good.

For my part, I think the Angelic Doctor, by that reasoning, wished not so much to demonstrate the conclusion as to explain, with a certain fitting proportion, the rational appetite in an intelligent nature from the natural appetite in natural things: that, just as the natural appetite - whereby in all things a natural form is followed - is a certain propensity to perfection and to a natural good, so too the rational appetite, which follows cognition, is a certain propensity and inclination to that which is judged and known as a good. Therefore, when it is called a rational or animal appetite - because it follows a perfection placed in apprehension - this is as the natural appetite is for the form which gives the thing its natural being.

And for that reason, in a knowing nature one appetite suffices: for although there are several perfections of the whole according to its various parts, there is nevertheless one faculty which judges all things - whether they be good or evil - and since animal or rational appetite follows that judgment, there will also be one appetite serving the whole composite. By contrast, the natural appetite is manifold, divided among the several parts and directed to the several perfections, because here the appetite is for the natural form insofar as it gives being and natural perfection; and since that is manifold, there must also be manifold appetite for it. Finally, since animal appetite follows the elicited act of cognition, it too is an elicited act of desire or love; whereas the natural, since it follows the form itself and natural being, with proportion preserved, is only a propensity after the manner of a potency, not an elicited act.

But if by reasoning we had to prove what is most well known - namely, that will and elicited appetite are fitting to God - it would be better proved from the rational appetite of creatures. For just as we attribute to God the perfection of an intelligent creature, which is to know and to

understand, abstracting certain imperfections which it has in the creature; so too ought we to attribute rational appetite, which follows propositional judgment and intellect; and in every way, with proportion preserved, yet without imperfection, we ought to philosophize about God and about a rational creature.

Here it was to be noted how the intellect apprehends good, and thus has it for its object, whereas it is commonly said that the object of the intellect is the true, but the good is the object of the will; but this has been explained abundantly enough above in disputation 76, c. 2 and disputation 77, c. 4.

Next is to be noted the teaching which St. Thomas has in reply to the third, where he says that God's will is moved only by His own goodness, not by other things; although He not only wills and has as willed His own goodness, but also other things are said to move the will as objects. Nevertheless the Doctor rightly taught thus, because, as we shall see in article 5, will is moved only by the thing willed which it has as an end, and it desires for its own sake; but it is not said to be moved by means. Therefore, since God regards His own goodness alone as end, His will is said to be moved by it alone. He sets forth plainly the same doctrine in the next article, on reply to the second, about which we shall speak in disputation 82.

Articulus II - Whether God wills other things besides Himself

Objicitur: 1. It seems that God does not will things other than Himself. For the divine willing is His existence (*esse*); but God is not other than Himself; therefore He does not will other than Himself.

1. Moreover, what is willed moves the one willing, as the appetible moves appetite, as is said in On the Soul III.[1327] If therefore God wills something other than Himself, His will will be moved by something other than Himself; which is impossible.
2. Moreover, for whatever will some one thing willed suffices, he seeks nothing beyond that. But God's goodness suffices Him, and His will is satisfied from it; therefore God does not will anything other than Himself.
3. Moreover, the act of will is multiplied according to the things willed. If therefore God wills Himself and other things besides Himself, it follows that the act of His will is multiple, and by consequence His existence, which is His willing. But this is impossible. Therefore He does not will other things besides Himself.

But on the contrary: the Apostle says, 1 Thessalonians 4: "This is the will of God, your sanctification."[1328]

I answer: God not only wills Himself, but also other things besides Himself. This appears from the likeness introduced before. For a natural thing has not only a natural inclination with respect to its own good, so as to acquire it when it does not have it, or to rest in it when it does have it, but

1327. Aristotle, On the Soul III, esp. on the appetible moving appetite.

also, so far as possible, to diffuse its own good into others. Hence we see that every agent, insofar as it is in act and perfect, makes something like itself. And so this too pertains to the very notion of will (*voluntas*): that someone communicate the good which he has to others, in accordance with what is possible. And this pertains especially to the divine will, from which, by a certain likeness, every perfection is derived. Hence natural things, insofar as they are perfect, communicate their good to others; much more does it pertain to the divine will to communicate its own good to others by likeness, according to what is possible. Thus, then, He wills both that He be and that there be others. But He wills Himself as end; other things, however, as ordered to the end: insofar as He grants that even other things should partake of the divine goodness.

Reply to the first: Although the divine willing is His existence according to reality, nevertheless they differ in reason, according to a diverse mode of understanding and signifying, as is clear from what has been said above. For in this expression, "God is," I do not import a relation to another thing, as I do in this expression, "God wills." And therefore, although He is not anything other than Himself, nevertheless He wills something other than Himself.

Reply to the second: In those things which we will on account of the end, the whole reason of moving is the end; from this it is that it moves the will. And this appears most clearly in those things which we will solely on account of an end. For he who wills to take a bitter potion wills nothing in it but health; and this alone is what moves his will. It is otherwise for him who takes a sweet potion, which one can will not only on account of health, but also on account of itself. Hence, since God does not will other things than Himself except on account of the end which is His goodness, as has been said, it does not follow that anything other moves His will except His own goodness. And if He understands other things besides Himself by understanding His own essence, so too He wills other things besides Himself by willing His own goodness.

Reply to the third: From the fact that God's own goodness suffices His will, it does not follow that He wills nothing else, but that He wills nothing else except by reason of His goodness. Thus also the divine intellect, although it is perfect from this very fact that it knows the divine essence, nevertheless in that essence knows other things.

Reply to the fourth: Just as the divine understanding is one, because it sees many things only in one, so the divine willing is one and simple, because it does not will many things except through one, which is His own goodness.

Explicatio articuli. The conclusion is affirmative, and without controversy among all - even heretics: it is proved from that text, 1 Thessalonians 4, "This is the will of God, your sanctification," and from Psalm 113: "He has done all things whatsoever He willed."[1328][1329] St. Thomas further confirms it here, and in Contra Gentiles VIII, chapter 75, from the analogy of a natural being: for just as any natural thing, by its natural appetite, not only desires its own perfection but also craves to communicate it to others, so likewise a rational nature, by rational appetite, desires to

1328. 1 Thessalonians 4:3.
1328. 1 Thessalonians 4:3.
1329. Psalm 135[113B]:11 in the Vulgate numbering: "Omnia quaecumque voluit, fecit."

communicate its own goodness to others. Therefore, since in God there is rational will, it follows that He wills to communicate Himself to others as far as possible, and thus to will things other than Himself.[1330]

Moreover, the clause "according as it is possible," which St. Thomas inserted, his disciples variously explain: Cajetan in this article, and Ferrari in chapter 75. First, they explain it thus: "as far as is possible by God's ordained power," for God does not de facto communicate Himself as much as is possible by His absolute power. But since, according to the mind of the same holy Doctor, God's ordained power is posterior to His will - as he hands down below at q. 5, a. 1, ad 1 - this sense, which Cajetan ascribes to St. Thomas's words, is inept. It is more fittingly said, as I find elsewhere: "It follows that God wills to communicate Himself to others as far as is possible by His ordained power," that is, as far as He Himself wills.

Therefore the second exposition, which Ferrari brings, is pleasing: namely, that the phrase "according as it is possible" is to be understood on the part of the recipients, not of the power, that is, as far as creatures, by a likeness, are capable of partaking.

Articulus III - Whether whatever God wills, He wills from necessity.

Reply to the third: that this is to be understood of a likeness participated and limited of His goodness; for although God within Himself communicates Himself in an infinite mode in the unity of nature, yet outwardly He cannot so communicate Himself, but according to a certain limitation. Wherefore, when St. Thomas says that God wills things other than Himself because He wills to communicate Himself "according as it is possible," he understands that finite mode in which He can outwardly communicate Himself, not the infinite, which is not possible save by an internal communication.

It is objected that everything eternal is necessary; but whatever God wills, He wills from eternity - otherwise His will would be mutable. Therefore whatever He wills, He wills from necessity.

1. Further, God wills things other than Himself inasmuch as He wills His own goodness. But God wills His goodness from necessity; therefore He wills other things than Himself from necessity.
2. Further, whatever is natural to God is necessary; for God is of Himself necessary being, and the principle of all necessity, as was shown above. But it is natural to Him to will whatever He wills, because in God nothing can be besides nature, as is said in the 5th book of the Metaphysics. Therefore whatever He wills, He wills from necessity.
3. Further, "not to be necessary" and "to be able not to be" are equipollent. If, therefore, it is not necessary that God will something of the things which He wills, it is possible also that He not will it, and it is possible that He will that which He does not will. Therefore the divine will is contingent to either part; and thus imperfect, because whatever is contingent is imperfect and mutable.

1330. St. Thomas Aquinas, Summa theologiae I, q. 19, a. 2; Contra Gentiles III (or VIII in some printings), c. 75.

4. Further, from that which is to either part no action follows unless it be inclined to one by something else, as the Commentator says on Physics II, comment 48. If therefore the will of God in some matters is disposed to either part, it follows that it is determined to an effect by something else; and thus it has some prior cause.[1331]

5. Further, whatever God knows, He knows from necessity; but just as the divine knowledge is His essence, so too the divine will. Therefore whatever God wills, He wills from necessity.

But on the contrary: the Apostle says in Ephesians 1, "Who works all things according to the counsel of His will." Now what we do according to counsel of will, we do not will from necessity. Therefore not whatever God wills, He wills from necessity.

I answer: Something is said to be necessary in two ways, namely, absolutely, and by supposition. Something is judged absolutely necessary from the habitude of the terms, either because the predicate is in the definition of the subject (as it is necessary that a man be an animal), or because the subject is of the notion of the predicate (as it is necessary that a number be even or odd). But it is not necessary that Socrates sit. Hence it is not necessary absolutely, but it can be called necessary by supposition. For, supposing that he sits, it is necessary that he sit while he sits.

Accordingly, concerning the things willed by God, it must be considered that that God will something is absolutely necessary; nevertheless this is not true of all the things which He wills. For the divine will has a necessary habitude to His own goodness, which is its proper object. Hence God wills His own goodness to be from necessity, just as our will from necessity wills beatitude. And likewise any other power has a necessary habitude to its proper and principal object, as sight to color, because by its very notion it tends to that.

But God wills things other than Himself inasmuch as they are ordered to His goodness as to an end. Now the things that are for an end we do not will from necessity when we will the end, unless they be such without which the end cannot be. Thus we will food when we will the preservation of life; and a ship when we will to cross the sea. But we do not so will from necessity those things without which the end can be, as a horse for walking, because without this we can go; and the same reason holds in other cases. Hence, since the goodness of God is perfect, and can be without other things, since nothing of perfection accrues to it from other things, it follows that when He wills things other than Himself, this is not necessary absolutely; and yet it is necessary by supposition. For, supposing that He wills, He cannot not will: because His will cannot be changed.

Reply to the first: from this, that God wills from eternity what He wills, it does not follow that it is necessary for Him to will that thing, except by supposition.

Reply to the second: although God from necessity wills His own goodness, nevertheless He does not from necessity will those things which He wills on account of His goodness, because His goodness can be without others.

Reply to the third: it is not natural to God to will any particular thing among the others which He does not will from necessity; nor yet is it unnatural, or contrary to nature; but it is voluntary.

1331. The Commentator (Averroes), on Aristotle's Physics II, comment 48.

Reply to the fourth: some things have from a necessary cause a non-necessary habitude to some effect: and this is on account of a defect of the effect, and not on account of a defect of the cause. Thus the power of the sun has a non-necessary habitude to some of those things which happen here contingently, not on account of a defect of the solar power, but on account of a defect of the effect, which is not necessary, though it proceeds from a cause. And similarly, that God does not from necessity will some of the things which He wills does not arise from a defect of the divine will, but from a defect which befits the thing willed according to its own notion: namely, because it is such that without it the perfect goodness of God can be. That defect, indeed, follows upon every created good.

Reply to the fifth: a cause which is of itself contingent must be determined by something extrinsic to the effect. But the divine will, which of itself has necessity, determines itself to the thing willed, to which it has a non-necessary habitude.

Reply to the sixth: just as the divine existence in itself is necessary, so too the divine willing and the divine knowing. But the divine knowing has a necessary habitude to the things known, not however the divine willing to the things willed. And this is because knowing stands to things according as they are in the knower; whereas the will is compared to things according as they are in themselves. Since therefore all other things have necessity of being according as they are in God, and not according as they are in themselves, God therefore, of whatever things He knows, knows from necessity; but not of whatever things He wills does He will from necessity.

Notationes circa articulum. The conclusion is: The will (*voluntas*) of God necessarily loves His own goodness (*bonitas*), but the other things which He loves on account of His goodness He wills freely. And the reason of St. Thomas is this: although the will of God is referred of necessity to His own goodness itself, which it has as its end (*finis*), nevertheless, when related to creatures, it cannot be borne toward them of necessity. For He regards creatures as means to the end; but means have no necessity of order to the end, except perhaps in the case of those without which the end cannot be; such are not loved necessarily, but freely, even supposing the will to grant the end. But creatures do not have such a necessity of order to God that without them the goodness of God could not consist; therefore God does not will them by necessity. I do not say, by an absolute necessity with no supposition made; but, once a supposition is made that He wills them, He is borne toward them by that necessity by which whatever is, when it is, is necessarily; although otherwise, even willing His own goodness, He ought not on that account to will creatures of necessity.

The first note of Cajetan concerning that reason: first Cajetan notes that only this is proved, namely, that the will of God is necessarily moved to His own goodness so far as concerns specification, not so far as concerns exercise. For St. Thomas compares the goodness of God with beatitude in general, that the divine goodness stands to God's will as beatitude in general stands to the human will; but beatitude moves the human will of necessity only as to specification: therefore the divine goodness too is loved by the will of God necessarily only as to specification. And therefore Cajetan asserts expressly that what is placed in the title of the article is: Whether whatever God wills, He wills by necessity; to wit, supposing the exercise of the act of the will about

its objects. Therefore, he says, the question is about the order of the act of the will to the willed objects, not about the order of the will itself to the objects; and thus there remains only the necessity as to specification. With good reason, therefore, the goodness of God, with respect to the divine will, is compared to beatitude related in general to the will, so that by that comparison the necessity of specification, which alone seemed to remain, might be explained. With Cajetan thinks Ferrariense, Contra Gentiles, c. 81.[1332]

Refutation. I nevertheless judge that St. Thomas is also inquiring and answering about the necessity as to exercise. For he teaches that the will of God freely wills creatures, in such wise that it wills them necessarily on a supposition, namely, that He wills them, by that necessity by which whatever is, when it is, is necessarily; yet absolutely He does not love them of necessity. By these words he clearly understands a necessity as to exercise, whereby the will is said so to will that it cannot not-will. Therefore, since he denies this necessity to the divine will, he signifies that the will of God so freely wills creatures that it can not will them, which is liberty as to exercise. Wherefore, when he teaches that the will of God necessarily wills His own goodness, he is speaking of necessity even as to exercise. I admit indeed that he has not proved this, nor explained it sufficiently, by that example of beatitude, which is loved of necessity only as to specification - that is, is so loved that it cannot be hated; yet it can rightly be proved otherwise, as we shall say in the following disputation.

Second, when St. Thomas says that God necessarily wills creatures on a supposition, it must be observed what he understands by that phrase, On a supposition. Certain Thomists thus explain that supposition: on the supposition that God actually wills Himself as the end of other things, it is necessary that He love other things for Himself. But in this way it follows only that God necessarily loves these or other creatures in general, not these which in fact He loves. This interpretation, however, does not please me, because St. Thomas does not speak of creatures in general, but expressly of those which in fact have been created; and these he asserts are loved by God necessarily on a supposition. Although indeed, when He loves Himself as an end to be obtained, it follows of necessity that He love some creatures to whom He wills to propose Himself as an end to be obtained, nevertheless those need not of necessity be these which in fact have been produced. Of these, however, the Holy Doctor says that they are necessarily loved by God on a supposition; and he explains that he is speaking of that necessity by which that which is, when it is, is said necessarily to be, which is wont to be called necessity on a supposition. Therefore it is in vain that his disciples interpret otherwise that phrase, On a supposition, since he himself expressly expounds himself in the very letter of the text. But why this necessity on a supposition is such that now the will of God cannot be changed, or cease from that which once from eternity He decreed - although we can cease from our will, even if, when we will, by necessity of supposition we necessarily will - may be gathered from what we have said on q. 14, a. 11 and a. 15, and shall say in this question, art. 7.[1333]

Third Cajetan argues against what St. Thomas teaches in this article, namely, that nothing of perfection accrues to the goodness of God from the fact that He also loves other things. For he seems to have taught the contrary in Contra Gentiles I, c. 76, second reason, where he says that

that is perfectly desired or loved which is loved according to its whole virtue; but the virtue of the end is that not only it be loved for itself and in itself, but also that other things be loved for it: therefore that creatures be loved for God pertains to His virtue and perfection.[1334] The same Cajetan replies that this pertains to the perfection of God in a certain manner, not according to intention (as he says), but according to extension; that is, as Ferrariense explains in that same chapter 76, according to extrinsic perfection, not according to intrinsic. For that the end be in itself and for itself, and that other things be loved for it, is not any intrinsic perfection to the end itself; yet extrinsically it is said in a certain manner to be perfected in the notion of an end. But this perfection pertains rather to the creatures which are willed for God, than to God Himself.

Disputatio LXXIX - Whether God necessarily wills all the things which He wills

- Caput I - Opinion of Alexander, St. Thomas, and St. Bonaventure
- Caput II - It is more probable that the will (voluntas) of God is borne necessarily toward possible things, but freely toward future things
- Caput III - Notes for the elucidation of the foregoing doctrine

Caput I - Opinion of Alexander, St. Thomas, and St. Bonaventure

With a single disputation I shall briefly comprise all that the Angelic Doctor handed down in the two preceding articles; but in the proposed question it is certain, and without controversy among the Doctors, that God loves His own goodness, not freely but necessarily - a point which should be understood not only of the necessity of specification, but also of exercise. Whether, however, St. Thomas in article 3 speaks only of the necessity of specification has been noted there. Passing over the reason of that argument which, as we said there, scarcely proves anything other than necessity as to specification, others use this reason: since God is pure act (actus), He ought always actually to love Himself, and not at one time to love, at another not to love. Nevertheless, the matter must be demonstrated more effectively. For even if God is pure act, nonetheless He wills creatures freely ad extra; and from such a free volition He now cannot cease; therefore free will does not conflict with God, even though He is pure act. Wherefore, one must show why liberty does not belong to Him rather with respect to His own goodness than with respect to creatures.

This is shown in two ways. First, because in the goodness of God shines forth every notion of goodness, so that neither in God, nor in the first exercise of loving Himself, can there appear any reason for evil. Therefore, just as for this reason the Blessed, seeing God, love Him of necessity, as we shall see in I - II, q. 5, a. 4, so too God necessarily loves Himself.[1335] Then, if God had not loved Himself from eternity, there would have had to be some mutation in Him, that is, He would have

1332. Ferrarien. r. contra gen. c. 81.
1333. St. Thomas. I, q. 14, a. 11; a. 15; and in this question, art. 7.
1334. 1. contra gen. cap. 76, ratio secunda.
1335. 1 - 2, q. 5, a. 4.

had to be otherwise in Himself than He now is (for now He loves Himself); or, if God now does not love Himself, and could from eternity have loved, in the same way there would have had to be some mutation in Him in order that He love Himself from eternity. For it cannot be understood that the same God, persevering in the same manner, both loves and does not love Himself: remaining the same, He is compared to Himself in the same manner. But in God there cannot be any mutation. Therefore either He does not love Himself of necessity, or He loves Himself of necessity. The former must not be said, for it is manifestly absurd; therefore the latter must be asserted.

But if you say: the same God, remaining wholly the same in Himself, now loves creatures whom He could, remaining the same from eternity, not have loved - therefore likewise He could either love or not love Himself. I answer: at least some necessary mutation occurs in the things loved, that God may be said to love them; for those which, if He had not loved, would not exist, are not in the same way, nor in the same way are compared with the will of God, as will be explained below in this disputation in the following chapter. But in order that He could not love Himself, whom He actually loves, or conversely, that He could love what He would not love, it would not suffice that there be some mutation in other things; rather, in God Himself there would have to be one. For there is necessary a mutation either in the thing willed or in the very one willing. Since therefore in God, in the love of Himself, He is both the thing willed and the one willing, in Him there would have to be a mutation. Moreover, it must be noted that when we say that God loves Himself necessarily, not freely, by "free" is understood that which is equally indifferent to be and not to be. I say this on account of Scotus, who, although he agrees with us in the matter and says that God necessarily loves Himself, nevertheless wishes to call this love free, that is, voluntary from prin-

Caput II - The will of God is borne necessarily toward possible things, yet toward future things freely - this is more probable.

Granted this, which no one denies, that as regards other things outside of God, Alexander in I, p., q. 34, m. 4, and St. Bonaventure in I, d. 45, art. 1, q. 2, think that creatures are not loved by God except as future; in which opinion St. Thomas not slightly inclines them. From this they infer that God is not omni-willing, as He is omnipotent; for He is called omnipotent with respect to all possible things, in that He can produce all possibles; but He is called willing only with respect to future things. They prove this opinion from Psalm 113: "All things whatsoever He willed, He has done": since therefore He has not done all possible things, it follows that He did not will them; for if He had willed, He would have done them.[1336]

Moreover, that this was St. Thomas's opinion seems to be gathered from the first part of art. 3, where, speaking universally and making no distinction, he asserts that creatures are loved by God freely, yet at the same time he affirms that the same are known necessarily. He establishes, however, a difference in the solution to the sixth of the same article: because things are known by God insofar as they are in Him objectively - he speaks of them according to their proper natures - they are loved, however, as they are in themselves, that is, as they exist in some distinction of time;

1336. Alexander of Hales, In I, p., q. 34, m. 4; St. Bonaventure, In I Sent., d. 45, art. 1, q. 2.

and because those things that are necessary are also necessarily known, whereas those which are not necessary at some time are not necessarily loved. He has the same doctrine below, art. 6, ad 2; for, as we set forth at length above in disputation 24, St. Thomas esteems that to no creature, unless existing and as conjoined with existence in some distinction of time, does goodness belong; wherefore since the will, under the mode of complacency and prosecution, is only about the good, it follows that the will of God is not borne toward creatures under possible being and according to essence considered nakedly, but only toward things and creatures future. He has the same in Contra Gentiles I, cap. 81, in the last argument, which opinion we have there explained more fully. The same, in my judgment, was taught by the Ferrarian in Contra Gentiles I, cap. 81, and IV, cap. 13, n. 9; as I expressly drew out in the disputation cited.[1337]

From this opinion truly it follows that creatures are not loved by God necessarily, but only freely; and consequently that He alone necessarily loves Himself. As to creatures this is clear: for God wills future creatures; as for those that are possible, and in no way future, His will is not engaged, so that He wills them wholly freely insofar as He wills them to be future; for just as they are freely future, so also God freely wills them to be future. How, indeed, the will of God is borne toward future creatures, we shall see in chapter 3.

Consistent with this doctrine is what some Thomists assert, namely, that the Holy Spirit does not proceed through any love of creatures, although the same affirm that the Word is begotten by the intellection of them under possible being; for creatures are loved freely, since only future ones are loved, whereas the procession of the Holy Spirit is necessary; but possible creatures are known necessarily, wherefore they think that by the cognition of those the Son of God can be generated - about which, however, we shall speak expressly in disputation 144.

I, however, think with Scotus, in III, dist. 32, the single question at the beginning, that a distinction is necessary in principle: for either the discourse is about the love of simple complacency only, which is wont to be called simple affection; and with this love God wills all possible creatures not freely, but necessarily; or we are speaking of the will and efficacious love, by which He wills to give existence to creatures and to produce them; and with this love He loves possible creatures not necessarily, but freely. I can gather this opinion for myself from the ancient and more recent scholastics, and that it is more probable I will demonstrate briefly: Richard in I, d. 45, art. 1, q. 5, ad ult.; and Dionysius Carthusian, q. 1, toward the end; Scotus in the place cited; and Cajetan below q. 34, art. 6, replying to Scotus's first imagination, teach that possible creatures, insofar as they are possible, without any order to existence, are loved by God. Scotus, however, explains this opinion of the love of simple complacency, which clearly the rest also understand; and very many now from the school of St. Thomas follow it together with Cajetan. We could, moreover, interpret the holy Doctor, so that he would not be speaking of this love of simple complacency, but of efficacious love.

1337. 1 Contra Gentiles, cap. 81; and 4 Contra Gentiles, cap. 13, n. 9.

Caput III - Confirmation of the prior part; and on the necessity or liberty of God's will toward possibles and futures, with replies to difficulties

Not of simple complacency, but of efficacious love.

1. But this is easily proved. For, as we said above, q. 6, art. 3, the good which is posited as a passion of being and able to move affection follows the essences (*essentiae*) of things, not only when conjoined with existence, but even when possible; therefore the will not only can will things existing, but also possible ones, at least with the affection of simple complacency; for anything whatever can please the will according to itself, even if it is not in act future or present.

The prior part is proved. And that this will of complacency is necessary, although the authors cited do not say it expressly, is nevertheless gathered especially from Cajetan, who teaches that with this love of creatures, and of the divine essence itself, the Holy Spirit proceeds simultaneously; which love if it were free, without doubt there could not be a procession of the Holy Spirit, insofar as it is referred to creatures, because the Holy Spirit proceeds necessarily.

God necessarily loves possibles as to exercise. In reason, moreover, it is proved thus: if God were freely to love possible creatures, He could from eternity love them, and not love them, just as also future ones; wherefore, if now He were to choose not to love them, so that He could not have loved them from eternity, there could be some variation either in the essence of God, or in the things themselves: for two extremes which are disposed in the same way cannot be a foundation for contradictory denominations, such as "to love" and "not to love." But no variation can be conceived either in God - as is manifest - or in the things possible, because in the same way they are always necessarily possible; therefore either it must be said that they are necessarily always loved, or necessarily always not loved. But it cannot be said that they are not necessarily loved by God, since there comes to them, as has been said, some goodness by which they can please God; therefore the will of God is borne necessarily toward them as to the specification and the exercise: both because they cannot displease God, and also because they cannot fail to be loved. Add that, if God could both will and not will possible creatures from eternity, He could also in time begin to will anew what before He was unwilling; and this without any variation either in Himself or in the things, which would not be inconsistency, if indeed it were to be done without any variation in God - which, however, no one grants.

A difficult objection. But some object in this way. Prior to the nature by which a thing is future, God is understood as freely willing it, which, without any change either of Himself or of the creature itself, He could not will; therefore as regards possible things, with no change understood either in God or in the things, we can conceive in God both willing and not willing.

It is resolved. I answer that God is never understood to will future creatures unless our intellect conceives at least a future variation; and although it is difficult to explain why rather God is the cause of this than of that - which will be explained in the following disputation - nevertheless, since in the thing itself there is some variation as to what is to be, we can rightly say "God wills this and not that"; but in possible things there is absolutely no variation.

1. Finally, when we understand God to will a thing to be absolutely, and so name Him, we simultaneously understand in Him the order to that which is truly going to be, because we cannot name an act of willing without a respect; and since we refer the will of God to diverse things, it is not surprising if we speak of it in a different way. Therefore, when we refer it to the future, we can say "God wills it to be going to be"; but when we cannot refer it to the future, and yet the thing is truly understood as not future, we say "God does not will it." Some change therefore being posited in the objects, it is necessary that we speak of the will of God in a diverse way; and since no change can be understood about possibles, we must always speak of it in the same way.

Why possibles are loved by God necessarily as to exercise, while we love them not necessarily but freely. Again someone will ask: Why do we say that God is borne by the love of complacency into creatures necessarily as to the exercise, when yet the human will is not borne in this way necessarily, unless into God alone? For thus the human will seems more perfect than the divine. I answer that there is nothing of imperfection for the divine will in that it is borne into creatures in this mode necessarily; rather it proceeds from its greatest perfection. For the created will is therefore borne freely, because in the exercise of its act it can find the ratio of evil; but the divine will, since it has no elicited act, but God by His essence bears Himself into objects, cannot on that score leave free the exercise of willing; therefore all liberty must proceed from the object. Since in possible creatures, as they are good, no ratio of evil can appear, and their goodness according to possible being is necessary, they cannot fail to be referred to the essence (*essentia*) of God as loving; because from themselves they are referred to God by their very nature, and not by an elicited will of God: but those things which by their nature are compared with one another and are referred cannot but always be compared in the same way, unless a change be made in one of them; but in evils there cannot be variation from eternity; and so creatures are compared with God, and God with them, in the same way always: therefore He is always willing, and is necessarily willing. Hence too it comes about that God is not suspended, nor does He in any wise cease, as to possible creatures.

1. But when we say that the will of God is necessarily borne into possible creatures, it is to be understood not only of them insofar as, existing in God, they are said to be God Himself (for this alone would be the will of God being borne into God Himself), but it must be understood of creatures according to their formal being, as they are effected objectively in God. These things on the first part of our opinion are to be set down under the noted objection above in disputation 70 and by the same about the prior part of our sentence.

The latter part is proved. The latter part, however - namely, that by efficacious will creatures are loved by God freely - is also easily proved, because to love, or to will in this way, creatures is nothing other than to will to produce them in some way and to make them exist and to bestow on them what pertains to their being; and there is no necessity for this, since God need not produce creatures; indeed He could produce nothing, just as He could destroy by one single act all produced things. And with this love the will is borne freely into creatures. And there is no Catholic who would deny this, although Wyclif, as we reported above in disputation 70, cap. 1, said that God made all things by absolute necessity; and indeed some think that Aristotle felt this. For a fuller explanation of this matter certain things in the following chapter are to be noted.

Notes for the elucidation of the doctrine of the preceding chapter

1. First, a certain doubt of Cajetan in article 3, around solution 6, must be noted, where St. Thomas teaches that the knowledge (*scientia*) of God has a necessary order to the known objects, but the will to the willed things, not so; from which he infers that creatures are known by God necessarily, but not necessarily loved. If therefore we are to explain the difficulty of Cajetan in this way; let us speak thus. The holy Doctor speaks of creatures only possible, as God necessarily knows them by the knowledge of simple intelligence, and of those thus posited he also says that, as even if simple affection is elicited in respect of them, nevertheless it arises of itself. If it be of creatures future, as he puts it, as only futures are loved, they may seem not necessarily to be, since they were not to be future, nor to be known, nor to be loved.

Cajetan's reply is explained. Cajetan in order to explain the opinion of St. Thomas asserts that the entire proposition "Whatever God knows, He necessarily knows," if it be understood of the knowledge of simple intelligence, is in general true; and of this he thinks St. Thomas is speaking - which I myself also judge to be the case. Hence arises this difference between the intellect and the will, that the intellect by the knowledge of simple intelligence necessarily understands creatures possible, whereas the will does not necessarily love them. He subjoins then another difference between knowledge and will; and indeed it is doubtful: because this being posited, that the object of knowledge, as true, is supposed, whether it be possible or future, the knowledge of God is necessarily borne into it, even as future; for what is true cannot not be so: posited the object, the will of God is ordered by the intellect to the object as good, to which, however, the will does not necessarily tend in itself, whether it be future or free; and thus the mode of the will of God as to future things remains free, whereas knowledge is referred to them necessarily.

1. You object: this being supposed, that things are future, they are necessarily known, and are future; and thus under the same hypothesis it follows that creatures are necessarily loved; since as to future things there is no difference of knowledge and of will. He himself, Cajetan, replies to this: nevertheless there is still a difference, because knowledge, when the supposition is made of future things as object, tends to them simply as to the object; but the

will, as to the same future things, does not tend in the same way as to the object simply according to the good, and God wills to attribute being to them in some way; which follows, as soon as there is that future.

The difference between knowledge of the future and the will of the same is subtle and very true; and this difficult proposition is not...

It is objected that Caietan's reply does not satisfy. First, because if it is true, as Caietan admits, that the will of God also concerns possibles, he does not sufficiently show how possible creatures are not loved necessarily with a simple affect, just as they are necessarily known. Next, the solution is difficult in the opinion of St. Thomas, as we already said above in chapter 1: the Doctor seems to indicate that the will of God is not borne toward creatures under the merely possible order of being, except in order to make them be future in time, because in his view the good is not found in things under a merely possible being. Since therefore some knowledge can be about possibles, but no will, for that reason he is thought to have said that created things are necessarily known by God, but not necessarily loved. But since we said, in accordance with the common opinion even of the Thomists, that things under a merely possible being are necessarily also loved by God with an affect of simple complacency, we must likewise say that knowledge and will, with respect to things as possible, are related in entirely the same way. Yet with respect to the things themselves as future there is a manifest difference, which Cajetan assigns.

Note secondly: the will of God is so free in willing to produce this or that creature, that it could not have begun to will in time, but willed from eternity. Why, however, once the determination of the will has been posited from eternity, it cannot be changed in time, as men are wont to change their wills, we shall say below in article 7.

Moreover, we must assert His liberty in such a way that, on the part of the intellect, nothing peculiar precedes on account of which He should will this rather than that freely, as happens in us. For our will, in the choice of means, is determined only to that which is proposed to it as better, as we shall say in 1 - 2, q. 13, a. 6; and, in the proposal of diverse ends, it is always inclined to that which is proposed more efficaciously, as we shall likewise see there, and in 1 - 2, q. 77, a. 2, and below in this First Part, disputation 98, chapter 7. But the divine intellect proposes all things to God equally as they are in themselves, so that it cannot fail to show as better what is in reality better. And as regards efficacy, it proposes all things in the same way; nevertheless, out of sheer liberty, the light of the will can choose that which is less good. Why, however, when we choose one means rather than another, we ought to choose that which, in the judgment of reason, is proposed as better, but God need not do so, will be said in that question 13, article 6. In this sense true is what Henry taught in his Summa, art. 36, q. 4, and in Quodlibet 8, q. 1, namely, that the will of God is not determined by His knowledge to acting, but rather knowledge is determined by the will.[1338]

When, however, Ferrarensis says in 1 Contra gentiles, chapter 82, that the divine will is determined by the intellect, he does not understand it so that He should will this rather than that - for such a determination would utterly destroy the liberty of the will, because the intellect always

1338. Henricus de Gandavo, Summa, art. 36, q. 4; Quodlibet 8, q. 1.

proposes objects in the same way - but because the will cannot will without a preceding intellection; therefore Ferrarensis said that the will is determined by the intellect, namely, to acting, yet not to willing this rather than that.[1339]

Third, it must be added that Scotus is unjustly rebuked by Cajetan for saying, in I, distinction 39, the only question, according to what has been said, that the first contingent cause is the divine will. Cajetan notes that manner of speaking, because although the divine will is free, nevertheless it ought not to be called contingent, since contingency signifies not only indifference to being and not being, but also mutability, which cannot befit God. Yet this is not sufficiently proved by Cajetan. For when Scotus calls the will of God contingent, he does not call it so because in itself it can be and not be, but because it can will and not will freely. Whether the first root of the liberty of our operations is the divine will, we shall say in disputation 100.

Scotus adds that the divine will, prior by nature to willing to produce anything outside itself, is a potency of contradiction - a point which Cajetan likewise reprehends in article 7 of this question, on the ground that a potency of contradiction is not only indifferent, but is also subject to change, which cannot befit God. I, however, think that the potency of contradiction is sufficiently saved in this, that it is indifferent to willing and not willing; for this is the indifference to either part of a contradiction. And when Scotus considers the divine will prior by nature to willing anything, he speaks consistently within his own doctrine, for just as he posits a distinction in the divine attributes from the nature of the thing, he also posits an order of prior and posterior according to nature - which, however, for the same reason is false; for this priority is real, whereas in God only an order of reason can obtain, just as only a distinction of reason - except among the persons - can be posited.

The will of God, even the efficacious will, is related in no case in a merely negative manner; therefore with respect to nothing can it remain thus. Moreover, that it cannot so be related with respect to things that are not future is clear: for the non-being of any creature whatsoever can be referred to the divine will as to an appetible object, as will be said a little below, namely, that the will itself either supposes the thing or posits it.

If you consider a thing that is not to be future, God cannot have a purely negative bearing toward it; there must be posited some intrinsic variation either in God Himself, or in the things not future: for if both remain in the same way, they will in the same way be referred; but no change can be in God, and it is manifest that there is none in the things themselves not future, since non-future things are in the same way always non-future; therefore they ought always in the same way to be referred to the divine will, namely, either as willed, or as not willed. And the will of God must always either say that it wills them not to be, or that it does not will that they be; therefore the will of God toward non-futures is not of necessity to be merely negative.

He also posits an order of prior and posterior according to nature, which nevertheless for the same reason is false: for this priority is real; but in God there can obtain only an order of reason, just as also only a distinction of reason, except between the persons, can obtain.

1339. Ferrarensis (Franciscus a Ferrara), In Contra Gentiles, lib. 1, cap. 82.

Fourth, one must philosophize thus about the will of God (*voluntas*), that we should never say that with respect to any object it bears itself in a merely negative way; which I judge to be true, not only of the simple will, but also of the efficacious will. For if some thing is to be future that is not a sin, God wills it to be, because He is its cause; but if it is not to be future, God wills it not to be. Wherefore, if God in time confers to someone prevenient grace, He willed to prevent him; but if He does not confer it, He willed not to prevent. Concerning sin, moreover, in God there is an act (*actus*) of displeasure, because that which is against reason cannot but displease God: there is also an efficacious act of the divine will, by which God wills that certain sins not be - namely, those which in time He Himself prevents.

But some approve this position by a certain reason, from this, that God is not in potency to willing: for this manifestly clashes with His perfection, inasmuch as He is pure and utterly simple act. Yet this reason is not efficacious: for just as God could from eternity have had a positive act, by which He would will to produce Peter or an angel, so too He could from eternity not have had it, and this without any variation in God, or potency repugnant to pure act. Why then in the same way could His will not have remained suspended from eternity with respect to non-futures, so as neither to will to do them, nor to will not to do? For this diversity of act of will can befit God without any intrinsic change in Him, as we shall say in the following disputation, solely by a variation of the respect of reason.

I, however, show the same thing by another argument, which I clearly gather from what has been said in this chapter. For if the will of God bore itself negatively, it would be concerning those things which He is never going to do: for those things which He is going to do in time, He Himself decreed and willed from eternity, even specially and individually, as we shall show in disputation 87 and disputation 99; but concerning those things which are not going to be, the will of God cannot bear itself negatively; therefore with respect to none at all can it so remain. Moreover, that with respect to non-futures it cannot so bear itself is clear: for the non-being of any creature whatsoever can be referred to the divine will as to an appetible object, as will be said presently, which the will itself can will. Let us suppose, then, that God wills some thing not to be; then, in order that it be said to bear itself negatively, there is need to understand some intrinsic variation either in God Himself, or in the non-future things: for if both remain in the same way, they will be referred in the same way; but no change can be in God, as is manifest; nor in the very non-future things, because non-futures are always in the same way non-futures: therefore they ought always in the same way to be referred to the divine will, either as willed, or as not willed; and the will of God must always say either that it wills them not to be, or that it does not will that they be. But the will of God with respect to non-futures need not necessarily bear itself negatively, because that not-being, as we were saying above, is a certain appetible, and to that the will of God can will it: therefore, as must be said, the non-futures are willed by God not to be.

This doctrine is exceedingly useful, and has not a little served us in the matter of predestination and reprobation. There is not, then, liberty (*libertas*) in God, as in us, in this, that He can will to do some thing, and cease from every act concerning it; but only in this, that He can will to do, or will not to do. Nor is this doctrine impeded by the fact that God, in some sign of reason, can of Himself

be considered by us as indifferent: for this happens when, in order that He be understood as willing, some reason on the part of the creature must be presupposed: thus, with respect to willing beatitude for us, He is understood as indifferent before He foresees works, as we shall say in disputation 95, chapter two, against Scotus.

From this same doctrine it follows first, that the non-being of a thing, so far as it is a certain evil of the thing itself, does not please God: for if it pleased, the thing would displease, out of whose displeasing the being of that which is its evil would please. It therefore displeases necessarily under this respect, so that under the same it cannot be referred to the divine will as an appetible object of complacency and of love: but under another respect it can please, for in it there is not every ratio of evil. For in the not-being of some thing, in comparison to the rest of the universe, or to the justice or to the power of God, some ratio of good can appear, on account of which it can please God not only by simple complacency, but also by efficacious will, by which He decrees not to make that thing. Likewise, when God denies to someone His grace or glory, it does not please as it is a certain evil of his, because just as the person does not displease, so neither does his evil, as his, please: but it pleases under another respect, under which also it cannot but please, because namely the power of God is shown in it, and mercy also toward the elect, or for another reason, as we shall note in disputation 95, chapter 9.

Then it follows that the liberty of the will of God is not in this, that under the same ratio He can both hate and love some thing; and herein there is necessity as to the specification of simple affections, which is found in us also concerning any object whatsoever; for the same, as it is the same, cannot be the object of hatred and of love: nor is the liberty of God in this, that He can by an act of simple complacency, or of displeasure, love and not love, hate and cease from hatred by suspending the act, which is liberty as to exercise; because what He hates He cannot not hate, and what He loves with simple affection He cannot not love; for some suspension of act does not befall God, as we have shown above. There is, however, liberty in God - and that most perfect - concerning created things as to the exercise of will and of efficacious love in this manner, because God can will to produce Peter and not will to produce him; that is, to have an act of efficacious love, and not to have it, but to cease. This, indeed, we gather from the variety of objects, not from any change in God (for we denied above suspension of act whenever no variety appears either in things or in objects), but from this very fact, that things future, or not future, are referred otherwise to the will of God.

Yet a difference must be observed between our will and God's will: for in us liberty is so as to the exercise, that we can will to do some thing and not will, by ceasing from every act, so that it is not necessary by a positive act to will not to do; but God is so without an act of willing to do some thing, that by that very fact He positively wills not to do it, as was said above.

Disputatio LXXX - Whether the free willing of God is something in Him formally

Caput I - Various opinions of the Scholastics

Since every disputation about God and the divine attributes is so difficult to understand, and much more difficult to explain, that, according to Pseudo-Dionysius and the common judgment of the Fathers, cited above in disputation 22, chapter 5, we conceive by mind, and signify by words, more easily what God is not than what He is; I have always judged especially obscure and most difficult that question which I have now proposed to be examined; for although the human mind can by sure reasoning attain what something is not, nevertheless what it is - even after the manner of human things - cannot be fully known. Now the whole difficulty of the question lies in this, that whereas God so freely wills to produce creatures that He could not have willed, some act of will in Him seems to be necessary, and hence some perfection which befits Him not necessarily but freely - an absurdity that at once appears: on the other hand, if every operation of will abiding in God is necessary, there follows another no less absurd conclusion, namely, that God necessarily wills whatever He wills. In the proposed question, therefore, pressed by the very difficulty of the matter, some more recent Scholastics have judged less rightly with Cajetan; whose opinion I shall report in this chapter and impugn its falsity briefly, so that in what follows I may more easily set forth what is more in accord with reason and with the principles of faith.

Accordingly Cajetan, in article 5, clearly teaches that to will to produce creatures is a perfection intrinsically and formally in God, and free. When he says free, he takes it to be some additament that greatly diminishes the perfection of nature's notion, wherefore he does not judge it absurd to concede to God a free perfection, which so now befits Him that it could from eternity not have befitted Him; which of the necessary perfection of God Himself it is by no means lawful to concede. He gathers this opinion from the mind of St. Thomas in the second article. For St. Thomas's reason by which he proves that God wills creatures - because every perfect thing desires to communicate itself to others - supposes as a perfection in him who communicates himself, not only to be able to communicate himself to others, but also to will actually to communicate himself; therefore, since in God such a perfection cannot be necessary, because He does not communicate Himself to what is outside necessarily, it ought to be free, and consequently of such a sort as can befit God and not befit Him. This opinion some more recent authors follow who, in order to escape every difficulty and absurdity, think it enough to concede that that free will which is posited as some perfection of God is only by a distinction of reason, or at least from the nature of the thing; yet formally to be distinguished from God Himself.

But in whatever way this opinion be explained, it can in no way be defended, and its falsity is excellently shown by Ferrarensis in Contra Gentiles, chapter 71.[1340] However, it can be refuted first thus: if the adversaries concede that that will is an intrinsic perfection in God, yet free in such a

1340. Ferrarensis, In Contra Gentiles, cap. 71.

way that it could have not been in Him, they cannot save this by a distinction of reason alone; for what can be present so as to be absent from another must of necessity be distinguished from it from the nature of the thing, as we shall show in disputation 116, chapter 5. Next, moreover, to assert a distinction from the nature of the thing among those which are in God, except among the persons, is manifestly false, as we shall show in disputations 116 and 120. In addition, however that free will be distinguished from God Himself, if it is intrinsic, it cannot but be God Himself: for whatever is in God is, from the nature of the thing, God Himself, and equal to God Himself; therefore it exists as necessarily as God Himself. It is therefore absurd to say that it could have been in God and yet not be: for thus God Himself, too, would be free in such a way that He could not have been; or at least it must be conceded that there is something in God which by its own nature is not God - something which Bernard deems no less absurd, arguing in Sermon 80 on the Canticle against Gilbert, as we shall report within disputations 116 and 120. The same was condemned by Bernard with the bishops assembled in the Council of Reims, whose acts we shall mention below in disputation 170, chapter 2; for in their symbol of faith, among other things, it is said: "We believe and confess only God," etc., and let us not be said to posit in God any things at all, whether relations, or properties, or singularities or unities, or other things of this sort, to be in God from eternity which are not God. There, since the Fathers plainly define that there is nothing eternal in God which is not God Himself, they condemn Cajetan and others asserting an act of free will in God which could not have been in God from eternity, nor is, from the nature of the thing, God Himself; which definition, although not in all points confirmed by Eugene III, as we shall see in disputation 120, ought nevertheless to be of great authority. Therefore, whether that will be called a perfection simply simple, or not simply simple, if nevertheless it is something intrinsic to God, it cannot so freely befit God that it could have not been in Him.

And indeed, if in God there were some act of free will which could from eternity have not been, it would not seem to be deniable that God could love some things more intensely, others less intensely, not only on the part of the object and of the good willed, but also on the part of the act - which is contrary to the doctrine of St. Thomas below, question 20, articles 3 and 4 - and all agree that this is absurd. Moreover, that this follows is clear: for if in God there is an act which could have not been, neither is that act the very same essence of God; there could also have been various acts, and thus one more perfect and more intense than another.

Finally, just as Cajetan concedes in God a free perfection which is so in God from eternity that it could have not been in Him, by the same token he could concede in like manner a relation (*relatio*) in time from creation, which would befit God freely; because it is no less befitting to God to be from eternity necessarily in the way in which He now is, than to persevere in the same way always; and thus it is against God's simplicity, constancy, and necessity to have something from eternity freely which He could not have, just as it is to have that from time. For although to have from eternity something which He could not have does not argue in God a change from one thing into another (for this can occur only in time), yet it argues a variety which could befall God, and which is no less against His simplicity and constancy and necessity than to have it from time.

Caput II - How the divine will, by which God freely willed to create, befits Him

But a change from one thing to another is against His immutability. But if, with a mere distinction of reason, we can understand a free act which can befit God from eternity and not befit Him, with the same mere distinction we could assert that there comes to Him in time a real relation (*relatio*), without any detriment to His simplicity, and without any true real mutation.

From which it follows that there is not in God indifference and a real potency (*potentia*) toward elicited internal acts; because in truth there is nothing elicited in God which could fail to be elicited. Yet inasmuch as, with respect to producing external creatures, He can freely produce these rather than those - about which again in Disputation 102[1341] - therefore He can freely proceed outwardly to creatures.

The divine willing is the very essence (*essentia*) of God, understood and signified by us in a special way: this is the truer opinion.

It is necessary to dissipate the proposed difficulty, and at the same time to explain how the will (*voluntas*) of God, by which from eternity He freely willed to produce creatures, befits Him. And first, against Cajetan, we must firmly hold as certain that there is not any real perfection of God that is intrinsic to Him which befits Him freely; for that wholly clashes with the divine simplicity and immutability, as has been proved.

Second, this free will of God is not a pure relation and respect of reason to the things willed; for when God is said to will to produce creatures, in this way of speaking not only a respect of reason is signified, but also a vital operation, or the very essence of God after the manner of a vital operation; and accordingly something intrinsic to God is denoted: for no one is said to will by a mere respect of reason.

Third, this free will is not the bare divine essence; for this essence is present to God necessarily, so that it cannot fail to be present; wherefore, if that alone made God one-who-wills to produce creatures, He could not fail to will to produce them; for a form which is necessarily present also necessarily brings forth its effect.

Therefore the will of God, signified by us after the manner of vital acts and elicited affections, although in truth it is the very substance of God, nevertheless includes also a certain respect of reason to future things, which befits God freely, just as the things that are to be freely are future. For since this relation arises from non-necessary foundations, namely from the things themselves and future objects, the very respect likewise befits God freely, not intrinsically, but only by an extrinsic denomination which can befit God and fail to befit Him; nor is that absurd.

Therefore, since the free willing of God includes not only the essence, but also such a respect, if the free will can be present to God and absent from Him, nothing follows that is absurd or that clashes with the divine simplicity and immutability.

1341. Disputatio 102.

In the same way we spoke of prescience in the philosopher's sense in Disputation 68, chapters 3 and 6,[1342] namely that it is the very substance of God, which otherwise is the knowledge of possible creatures, with the addition of a respect of reason alone to future things, of which it is called prescience; so that, if the future things were not, prescience indeed would be lacking to God, but not knowledge. Therefore, if the future things were not, there would not be in God the free will which is signified with that free respect; yet there would be the will of complacency, namely the very divine essence with the necessary respect to possible things, as we said of the knowledge of possible things. This opinion is handed on by Ferrarensis, chapter 75.[1343]

Nor indeed did St. Gregory teach the contrary in 1 d. 47 q. unica after the seventh conclusion, when he said that neither the divine willing by which He wills to do this or that, nor the habitude to those things which He wills to do, is contingent or free, but necessary. For he understands the very essence of God, which is His willing, and the habitude which He has to the things possible in themselves; both of which are necessary, not free. He adds immediately: nevertheless, that willing itself by which He wills to do this or that is contingent willing, or the volition of doing those things; and the habitude is a contingent habitude to those things. The same he teaches concerning prescience: namely, he says that the very essence of God in itself, which is His knowing, is necessary, and that the habitude to things as such is necessary, as we were now saying of God's knowledge; but inasmuch as it is called knowledge of future things with a habitude to those, as future, it is altogether free, because it is referred to those things freely; and by this free relation the knowledge of those things is called free. Neither did Aureolus teach the contrary in 1 d. 47 q. 1 art. 1, whom St. Gregory a little above cited and attempted to refute. For he relates his very words: God produces whatever He produces without being determined by some intrinsic willing to produce what He produces; nevertheless He is said to produce voluntarily, and to produce what He produces, because He wills to produce; for He has it in His power to produce and not to produce. Just as, for example, if fire had in its power and dominion to ignite or not to ignite the straw present, while it ignited it would be said to ignite voluntarily; if one asked why it ignited, the answer would be: because it wills; for "to will" would not express some determinate act, but only the plenitude of power.[1344] Which words, in my judgment, ought neither to be rebuked nor marked as blameworthy; for although God is said to will freely to produce, nevertheless He is not thereby determined in Himself to producing rather than to not producing through some intrinsic act, as to this rather than that act we are more determined by eliciting an intrinsic act, than by another; the divine will, which is His essence, remains intrinsically unchanged in itself, and in itself is in the same mode as if from eternity He had decreed to do nothing. Therefore Aureolus rightly said that God is not determined to producing rather than not producing by some intrinsic willing, that is, by something peculiar which is intrinsic to Himself, as Cajetan falsely supposed; for that which is intrinsically in God does not of itself incline Him more to producing than to not producing. Therefore He is not said to produce freely what He produces because He is freely determined by

1342. Disputatio 68, cap. 3 et 6.
1343. Ferrarensis, cap. 75.
1344. Aureolus, in I Sent., d. 47, q. 1, art. 1.

something peculiar intrinsic to Himself to one part rather than to another, having in Himself intrinsically this rather than that; but He therefore produces freely whatever He produces, because nothing of the things which He does is referred to Himself necessarily.

But in what way God determines Himself to this rather than to that is unspeakable, unless that, in our mode of understanding, we understand the essence of God, which is His will, to have, with respect to future things, a special ratio of will with that respect of reason; and therefore at the beginning of this disputation I said that in this controversy a certain mode of reasoning allows us to understand what is not, for this, in my judgment, we have evidently proved against Cajetan; but what is, and in what way the will is determined, cannot be explained.

We have then, from all that has been said, that the free will of God, by which He wills to communicate Himself outwardly, insofar as it is free, is not some perfection in God; for as such it includes a respect of reason to future creatures. Nor indeed did St. Thomas ever teach that there is some perfection of God to will to communicate Himself to others, as Ferrarensis rightly warns in that same chapter 75;[1345] for he only said that it befits the good, insofar as it is perfect, to do this - that is, to be the proper act of the good and the perfect - to impart its goodness to others; and thus the good, considered not only in itself but as communicating itself to others. Which words, in my judgment, should not be reproved or noted; for although God is said to will freely to produce, nevertheless He is not thereby determined in Himself to producing rather than to not producing.

But someone will object in this way - a very difficult objection. Although the knowledge of God has the ratio of prescience from a relation of reason that comes from future things, from whose variation prescience is defined, nevertheless the free will of God cannot have the ratio of freedom from that relation which comes from the things themselves as future: for the difference is manifest. For prescience, as such, supposes the future thing as its object about which it must be concerned, as was proved in Disputation 68, chapter 6,[1346] because prescience is not the cause of the future, but rather the future thing is in a certain way the cause of it, as is explained there. But free will, already as free, is the cause of the future thing: therefore this rather than that will be, because God has freely decreed that this, and not that, shall be; therefore by the relation coming from future things the will is not called free, for that relation is posterior to the very future things.

Some reply that a free will in God, as free, is first understood before the thing is future, yet not without an order to the future thing as to something posterior and consequent to it. But they grant that the divine essence of itself has more to do with referring the volition of this rather than of that, and they think that from itself it rather refers to this object than to that.

However, this view either falls into the opinion of Cajetan which has been refuted, or it altogether involves a contradiction in itself. For if, of itself, the essence, without any respect of reason or from outside to future things, has more to do with the free volition of this rather than that, it follows that there is in God something which could from eternity not have been, which is absurd. But if it is not without an order to future things, that cannot be real, for the same

1345. Ferrarensis, cap. 75.
1346. Disputatio 68, cap. 6.

inconvenience would follow - namely, that from eternity it could have been that there was not in God the order which there is now: therefore there must be an order of reason, whose foundation is eternal. For just as from eternity a free will can be said, so also from eternity there must be at least the future foundation from which it can be called such. For from the essence alone it would not be said "this rather than that"; for the same thing, insofar as it is the same, must always be related in the same way. From creatures, indeed, it would not be said more a volition of this than of that, unless there were in this creature rather than in that a peculiar ratio; but this cannot be unless one creature is future and the other is not. Therefore the foundation of that relation, from which the will of God is called free, is the future creature.

Moreover, the adversaries admit that a free will is not understood without an order to future things; but what they add - that it is prior to its terminus as to something posterior - contains a manifest contradiction: for a relation cannot be prior to its terminus: therefore the future thing ought at least to be simultaneous with the very volition of God. But that the thing is future before that relation is otherwise proved; because, since it is a relation of reason and its foundation is not the essence of God alone, but the thing itself which is future, whence the denomination is taken, it is clear that the thing is future before that relation.

This knot, in my judgment, is insoluble; for we can scarcely avoid some circle in assigning a reason: because on that account we must not fall into the absurdity of Cajetan, or concede that there is in God some perfection or some absolute act, or something added to the very Godhead itself, which from eternity could be present or not present in God. But that there is not, and no most certain reason can be investigated for it, even if this cannot be easily expressed by word, is difficult to explain.

Nevertheless, he who sees God will feel very differently concerning His free will, insofar as it is the free principle of future things, and, seeing Him as He is, will express it in a single word without these relations of reason. Yet we, to whom it is not permitted to speak otherwise of God than after the manner of the things created, which we see and experience, say that He wills freely, and name Him as it were the free cause, by a certain confused concept. And since in reality the divine essence considered in itself is prior in nature and causality, without the elicited free act which can be present and be absent, than the manner of a free act and decree, nevertheless for this state we understand God as the cause of future things, as if with us He had by some act freely decreed this; because the very essence of God in itself does not have a necessary connection with creatures so that they should be, but is freely compared with them: not because there is in God a free act which can not be in God, but because the act which is necessary in God is freely compared with creatures.

In this manner, although we assign liberty in God by a comparison made with objects and created things, nevertheless we do not assign a sufficient rationale on the part of God why now He should, by an efficacious free act, be referred to these rather than to those things: since, remaining altogether the same in Himself, He could not to will the very things which He wills. Wherefore, although we strive to untie the matter more actually, we cannot escape the aforementioned difficulty.

Yet it remains certain, as I noted in the preceding Disputation, chapter 2,[1347] namely, that we cannot attribute various denominations to the divine will except by a respect to things holding themselves in diverse ways. But with things always, without any variation, it must, in our way of speaking, be compared in the same mode.

Articulus IV - Whether the will of God is the cause of things

To the fourth we proceed thus. It seems that the will of God is not the cause of things. For Pseudo-Dionysius says in the chapter on the Divine Names.[1348]

Objicitur 1. It seems that the will of God is not the cause of things. For Pseudo-Dionysius says that just as our sun, not reasoning or choosing beforehand, but by its very being, illumines all things to participate in the power of its light, so too the divine good, by its very essence, sends forth the rays of the divine goodness to all existing things.[1349] But whatever acts by will, acts by reasoning and by choosing beforehand. Therefore God does not act by will. Therefore the will of God is not the cause of things.

Objicitur 2. Further, that which is by essence is first in any order. Thus, in the order of things ignited, that is first which is fire by essence. But God is the first agent. Therefore He is an agent by His essence, which is His nature. He therefore acts by nature and not by will. Therefore the divine will is not the cause of things.

Objicitur 3. Further, whatever is the cause of something by this, that it is such-and-such, is a cause by nature and not by will. Fire, indeed, is the cause of heating because it is hot; but the artisan is the cause of the house because he wills to make it. But St. Augustine says in On Christian Doctrine, that because God is good, we exist.[1350] Therefore God by His nature is the cause of things and not by will.

Objicitur 4. Further, of one thing there is one cause. But of created things there is one cause, namely the knowledge of God, as was said above.[1351] Therefore the will of God should not be posited as the cause of things.

But on the contrary: it is said in Wisdom 11, "How could anything persist unless you willed it?"

I answer that it is necessary to say that the will of God is the cause of things, and that God acts by will, not by the necessity of nature, as some have thought. This can appear in a threefold way.

First, from the very order of efficient causes. Since both intellect and nature act for the sake of an end, as is proved in the Physics,[1352] it is necessary that what acts by intellect and will be prior to what acts by nature. For, since in the order of agents the first is God, it is necessary that He act by intellect and will, and that the agent by nature be posterior.

1347. Disputatio praecedens, cap. 2.
1348. Dionysius, cap. de Divinis Nominibus.
1349. Pseudo-Dionysius, De Divinis Nominibus, cap. 4.
1350. St. Augustine, De Doctrina Christiana, lib. 1, cap. 32.
1351. Above, on the knowledge of God as the cause of things; cf. q. 14, a. 8.
1352. Aristotle, Physics II.

Second, from the notion of a natural agent, to which it belongs that one effect be produced, because nature operates in one and the same way unless it be impeded. And this is because a thing acts according as it is such; hence, so long as it is such, it produces only such. For every agent by nature has a determinate being. Therefore, since the divine being is not determinate, but contains in itself the whole perfection of being, it cannot be that He act by the necessity of nature unless perhaps He were to cause something indeterminate and infinite in being, which is impossible, as is clear from what has been said above.[1353] Therefore He does not act by the necessity of nature; rather, determinate effects proceed from His infinite perfection according to the determination of His will and of His intellect.

Third, from the relation of effects to their cause. For effects proceed from an efficient cause according to the way in which they preexist in the cause, because every agent produces something like itself. But effects preexist in their cause according to the mode of the cause. Hence, since the divine being is His very understanding, His effects preexist in Him in an intelligible mode, and in an intelligible mode they proceed from Him, and thus consequently in the mode of will. For His inclination toward doing what has been conceived in the intellect pertains to will. Therefore the will of God is the cause of things.

Reply to the first: By those words Dionysius does not intend to exclude election from God simply, but only in a certain respect - namely, inasmuch as He communicates His goodness not to some only but to all; for election imports a certain discrimination.[1349]

Reply to the second: Because the essence of God is His understanding and willing, from the very fact that He acts by His essence, it follows that He acts in the mode of intellect and will.

Reply to the third: The good is the object of will. In this sense, therefore, it is said "because God is good, we exist," inasmuch as His goodness is for Him the reason of willing all other things, as was said above most especially.[1354]

Reply to the fourth: Of one and the same effect, even in us, knowledge is a cause as directing, whereby the form of the work is conceived, and will is a cause as commanding; because a form as it is in the intellect alone is not determined to the fact that it be or not be in the effect unless by will. Hence the speculative intellect says nothing about operating. But power is a cause as executing, because it names the proximate principle of operation. Yet all these in God are one.

Conclusion of the article: Since God acts by will and not by the necessity of nature, the will of God is the cause of things. Certain lighter points, worthy of notation for the clearer exposition of the article, we shall examine in the following Disputation together with the doctrine itself.

1353. The impossibility of an infinite, indeterminate effect as caused by natural necessity has been treated above.
1349. Pseudo-Dionysius, De Divinis Nominibus, cap. 4.
1354. See the preceding Disputation, cap. 2.

Disputatio LXXXI - On God's operating ad extra by will, and on whether will is a more proximate cause than intellect

Caput I - That God operates ad extra by will, not by nature, is certain by Catholic faith

We premise in the title of this question what among Catholics is undoubted - namely, that God operates ad extra not by nature but by will; that is, that the principle of external productions is not the very nature of the deity, insofar as it is, but insofar as He wills. For since the divine essence is considered by us in two ways, first insofar as it gives to God His being, which is altogether natural and necessary; then insofar as it is referred to external things in the mode of free will, we say that it is not the principle of operation insofar as it is the form giving the being of God, as is the form of natural agents, but insofar as He wills, as man and the rational creature operates. And this is the sense of St. Thomas in this article when he said that God acts by will, not by the necessity of nature, as Cajetan here affirms, and Ferrarensis in the second book Against the Gentiles, chapter 23.[1355] From which there follows another sense which the aforesaid words are able to yield - namely, that God acts freely, not necessarily. But the former is prior, which the holy Doctor wished to express. And this was also the position of Justin Martyr in the book On the Explanation of Questions proposed to Christians. For when the gentiles asked whether God operated by His essence, insofar as He is, or insofar as He wills, they answered that God operated by His essence insofar as He is - something which Justin gravely reproves and refutes by that Psalm, "Our God is in heaven; whatever He willed, He has done" (Ps. 113), and by Ephesians 1, "Who works all things according to the counsel of His will." Therefore Justin thinks that the doctrine expressed in Scripture is Catholic, namely, that God operates by will.[1356]

Ferrarensis attributes the contrary to the error of Averroes in the eighth book of the Physics from the Commentary down to that point; but in the book entitled Distinction of Distinctions, Disputation 3, doubts 1 and 2, he seems to teach that God acts by intellect and will together. Concerning Aristotle, indeed, the matter is not certain, whether this error was in him; yet he strongly inclines to it. For although in the book On the World to Alexander, toward the end, he calls God the author of salvation and liberty, there he concedes only this, that God is the remote cause of all things, inasmuch as He governs all things and conserves them by the motion of the first movable, whose care alone he thinks God has immediately. Moreover, since in On the Heavens I and in Physics VIII he holds that the world was eternal and could not have begun in time, he seems to have removed altogether from the midst the action of the first cause - or at least action by intellect and will - in such a way that either the whole universe, as to its perpetual parts, was from itself, or, if from God, it proceeded not by will but by the necessity of nature. For if Aristotle had thought that its being was by the will of God, he would readily have seen that it could have begun in time and was not necessarily from eternity.[1357]

1355. Cajetan (Thomas de Vio), commentary on this article; Ferrarensis, In Contra Gentiles II, cap. 23.

1356. Justin Martyr, Quaestiones et Responsiones ad Orthodoxos (ascribed), quaest. 3; Psalm 113:11 (Vulg. numbering 113:3), "Deus noster in caelo; omnia quaecumque voluit fecit"; Ephesians 1:11, "Qui operatur omnia secundum consilium voluntatis suae."

But to me it seems very probable, with Gregory of Rimini in II Sentences, distinction 1, question 1, article 1, that Aristotle plainly held that the celestial intelligences and elements and whatever he said to be from eternity were not made by God. For Aristotle held that from nothing, nothing is made, Physics I, text 33; wherefore, in text 62 he proves from this that a subject is necessary from which something is made, and therefore that matter is ungenerated.[1358]

St. Thomas proves the Catholic doctrine by three reasons, of which the first is most excellent; the second is that, if God acted ad extra insofar as He is, He would produce another God. But that is impossible; therefore it is impossible that He Himself act by the necessity of nature. Yet against that Cajetan objects that this absurdity is not rightly inferred, because the immediate effect of God could be produced through secondary causes, which He would employ as helpers; and thus it would not be necessary that another God be produced. Still, the same Cajetan replies that the absurdity does follow, because since God would act insofar as He is, He would act according to His whole power and would produce another God, just as within Himself He generates an equal Son; for He produces Him by a necessity of nature, not freely, and the Holy Spirit similarly. For although the principle of the Holy Spirit is will, nevertheless it is not the principle insofar as He wills; because the Father does not therefore spirate because He wills to spirate, as we shall show below, Disputation 160, chapter 3.[1359]

The third reason of St. Thomas is of this sort: effects proceed from a cause according to the way in which they are in the cause; but every creature is in God as in one who understands; therefore it proceeds from Him as He is understanding, and consequently as He is willing. For the explication of this reason Cajetan asserts various things which are not according to the mind of the author; omitting which, the exposition of Ferrarensis pleases me: thus he says, in the second book Against the Gentiles, chapter 23, that in the third reason of St. Thomas that proposition of St. Thomas is to be understood - "An effect proceeds from a cause according to the mode in which that thing, the effect, preexists in the cause" - and that, since the being of God is His very understanding, effects preexist in Him according to an intelligible mode, and proceed thence in an intelligible mode; but this reason, unless it be otherwise strengthened, is not sufficiently efficacious, unless it be elsewhere proved that creatures are in God as in an intelligent cause. For a thing can be in another as in one who understands, which nevertheless is not the cause of that thing as it is understanding: for man is in another as he is understood by that other; yet he is not in an intelligent cause. That creatures truly are in God as in an intelligent cause is established in Question 14.[1360] And truly, if this mode of operating - rationally, that is, by intellection - be noblest, it ought not to be denied to God. Therefore, that God operates by intellect and will, and similarly that His will is the cause of things, must be held.

Voluntas Dei esse propinquiorem causam rerum, quam intellectus. [Heading for the next chapter.]

Caput XXIII - In the third argument he proves that a subject is necessary from which something be made, and therefore that matter is unbegotten; read Gregory of Rimini.

Secondly, one might object further: just as the Sun acts by a necessity of nature and does not produce another sun, but things much inferior, so God would not produce another God. It is answered: nonetheless there is no parity; for the Sun's efficacy is limited by the matter on which it acts and by which it is individuated; but God, when He acts, does not receive from a subject the mode of His action, nor is His action bounded by any matter, but imparts being according to the total amplitude of His causality. Therefore, if He acted by a necessity of nature precisely as He is, He would produce what is equal to Himself - which is impossible. And although in God there is a natural procession, this is not an external production of another God, but the generation of the Son; nor, even though the Holy Spirit proceeds, is the Father the principle of that procession inasmuch as He is will simply, so that He should will to spirate because He wills to spirate; rather, He spirates as Father, as will be shown below in its own place.[1363]

Caput II - Whether the divine will operates more proximately than the intellect

Since, without controversy among the Doctors - as we said in the preceding chapter - God is the cause of things by will (*voluntas*); nevertheless the question is posed, whether the will of God operates the things themselves more proximately than the intellect (*intellectus*), or contrariwise; and in this matter various opinions of theologians are numbered.

First opinion. The first is that which Durandus reports in II Sentences, dist. 45, q. 2, of certain authors: who said that the knowledge of God is the proximate cause of things, but the will a more remote one. They prove this foundation thus: although an exemplar, which is the cause of that which is made, does not have a power of producing and does not reach the effect before the applying cause, yet an exemplar which is efficacious attains the effect more proximately than the applying cause: as that which imprints the form of a seal is the seal itself, which more nearly reaches its very form than the hand applying it; but the knowledge of God is an efficacious exemplar, as a seal imprinting upon things its form, not such as it has in itself, but such as it represents (in this sense we said above, in Disputation 72, that the knowledge of God is the ideas of creatures); therefore knowledge concurs more proximately than will, which is, as it were, the hand applying the seal.[1364]

This opinion does not please Durandus on this one point of causality, because its rationale, if it has any moment, proves too much, namely, that the knowledge of God is a cause more proximate than omnipotence, whereas omnipotence is the most proximate cause of all, as he had taught in the First Book, dist. 38, q. 1, art. 4, ad 4.[1365] But this reason would not disapprove the opinion except on this score, that besides intellect and will in God another power is posited in vain, as an executive one - as there is in us - that would be called omnipotence. We shall show more fully in Disputation

1363. On the procession of the Holy Spirit as not reducible to the will simply as such, see below, Disputatio 160, cap. 3.
1364. See above, Disputatio 72, on divine knowledge as exemplar cause and the ideas of creatures.
1365. St. Thomas, In I Sent., d. 38, q. 1, a. 4, ad 4.

102 that this is not to be set up in God. I do not say only a distinction from the nature of the thing from intellect and will (for I would never concede that distinction in God, unless among the persons), but neither a distinction merely of reason and of our mode of understanding. Nor does St. Thomas in that solution 4 concede that there is to be constituted in God a notion of omnipotence distinct from intellect and will, as we shall say in its proper place.

Nevertheless the aforesaid opinion is not approved by me, because the knowledge of God does not stand as a seal imprinting its figure, but as proposing an object to the will so that it should bring it about; therefore neither does the will stand as the hand applying the seal; for in God the intellect does not operate like a seal imprinting a figure; and there is also a manifest difference, for the seal is of itself the cause of the impressed figure, but the hand applying it is a cause per accidens, as it were accidental, as the hand applying fire to combustible material. Whence, if the seal were applied of itself, in the same manner it would imprint the figure; but the will is certainly not a per accidens cause of the work, and a mere applier, as in a created artificer; therefore the foregoing comparison is alleged in vain.

Second opinion. The second opinion is that the knowledge of God is the more proximate cause in the notion of directing, though not in the notion of moving, as others say: in regard of specification, not in regard of execution. But this mode of comparison is inept; for the intellect in the notion of directing and in regard of specification or object is first and alone, nor can any comparison be made with will in this kind, while, on the contrary, in the notion of moving, and in regard of execution, will alone is the principle. Therefore also, when we inquire here what is the more proximate cause, we understand this in the production of the very thing, in which, since the intellect alone is that which directs, and the will that which moves, that will be the more proximate cause which moves.

Third opinion. The opinion of Durandus in the places cited pleases me, who absolutely says that the proximate cause of the work is the will of God, but the intellect a remote one. And we ought, in the philosophical manner, to think thus concerning the divine intellect and will, just as concerning the intellect and will of a created artificer for the making of a work of art: now, if it is true that such is the order to the execution of the work that first the intellect propose the work and the mode of making it, then the will will that it be done in that mode, and at length execution follow at the nod of the will, with no intervening act of the intellect between the choice of the will and the executing faculty; it follows that in a created artificer the will concurs more proximately to the work than the intellect, although the executing faculty is the most proximate of all. So therefore in God, in our mode of understanding, these things must be assigned: wherefore, if in God there is distinguished the executive power from intellect and will, that will be the proximate cause; but the will will still be more proximate than the intellect.

But if, after the choice of the will, there is an act of the intellect by way of command transferring the impulse of the will to the executive faculties - as the Thomists contend - then the intellect will be a more proximate cause than the will, not indeed inasmuch as it judges something ought to be done, but inasmuch as by command it directs the impulse of the will to the executing faculty, as is manifest; and in this sense Cajetan seems to think, above on q. 14, art. 16, as we noted there, when

he asserts that the act of practical science proceeds from an affection for the work, which it supposes. But whether such acts of command in the intellect after the election of the will are necessary in us, let it be asked in Disputation 87; even if they were necessary in us, they would be posited in God in vain. It remains, therefore, that the divine will be a cause more proximate of the work than the intellect; and because in God an executive faculty distinct from intellect and will is not to be posited, as we shall demonstrate below in Disputation 102, it follows that the will is the proximate cause of all.

Articulus V - Whether it belongs to assign some cause of the divine will

To the fifth we proceed thus.

1. It seems that even of the divine will there is to be assigned some cause. For Augustine says in the book On 83 Questions: Who would dare to say that God made all things irrationally? But for a voluntary agent, that which is the reason of operating is also the cause of willing. Therefore the will of God has some cause.[1366]
2. Further, in those things which are done by one willing, who wills something on account of no cause, no other cause ought to be assigned than the will of the one willing. But the will of God is the cause of all things, as has been shown. If, therefore, there is no cause of His will, it will not be necessary in all natural things to seek any other cause except the divine will alone. And thus all the sciences would be superfluous, which strive to assign the causes of certain effects: which seems inconvenient.
3. Also, what is done by one willing not on account of some cause depends on his simple will. If, therefore, the will of God have no other cause, it follows that all things that come to be depend on His simple will, and have no other cause: which is inconvenient.

But on the contrary is what Augustine says in the book On 83 Questions: Every efficient cause is greater than that which it effects; but nothing is greater than the will of God. Therefore a cause of it is not to be sought.[1367]

I answer that it must be said that in no way does the will of God have a cause. For evidence of which it must be considered that, since will follows upon intellect, in the same way it happens that there be a cause of someone willing that he should will, and of someone understanding that he should understand. Now in the intellect it is thus: if it understand the principle by itself, and the conclusion by itself, the understanding of the principle is the cause of the science of the conclusion. But if the intellect, in the very principle, were to inspect the conclusion, apprehending both by one intuition, in it the science of the conclusion would not be caused by the intellect of the principles; because the same is not the cause of itself; yet still it would understand that the principles are causes of the conclusions. Similarly it is on the part of will, with respect to which the end stands to the things that are for the end as in the intellect the principles to the conclusions. Whence, if

1366. St. Augustine, De diversis quaestionibus octoginta tribus, q. 27.
1367. St. Augustine, De diversis quaestionibus octoginta tribus, q. 27.

someone by one act should will the end, and by another the things that are for the end, to will the end will be for him a cause of willing the things that are for the end; but if by one act he should will the end and the things that are for the end, this cannot be so; because the same is not the cause of itself. And yet it will be true to say that he wills to order the things that are for the end to the end.

But God, just as by one act He understands all things in His essence, so by one act He wills all things by His goodness. Whence, just as in God to understand the cause is not the cause of understanding the effects, but He Himself understands the effects in the cause, so to will the end is not for Him the cause of willing the things that are for the end; yet He wills that the things that are for the end be ordered to the end. Therefore He wills this to be for the sake of that, but not on account of that does He will this.

Reply to the first. The will of God is rational, not because something is to God a cause of willing, but inasmuch as He wills one thing to be for the sake of another.

Reply to the second. Because God wills effects to be so, that they proceed from determinate causes, for this that they may enjoy order among things; it is not superfluous, even with the will of God posited, to seek other causes. It would, however, be superfluous if other causes were sought as first causes and not dependent on the divine will. And thus Augustine speaks in the third book On the Trinity: The vanity of the philosophers was pleased also to attribute other causes to contingent effects, since by no means could they see the cause superior to all the rest, that is, the will of God. [1368]

Reply to the third. Although God wills effects to be on account of causes, yet any effects whatsoever which presuppose some other effect do not depend on the sole will of God, but also on something else; but the first effects depend on the divine will alone. For instance, if we say that God willed man to have hands so as to serve the intellect for performing diverse works, and He also willed him to have an intellect so that man might be what He willed man to be; or again, that He willed man to exist so that he might enjoy Himself, or for the perfection of the universe - these are not reduced to other created ends, but depend upon the divine will alone; whereas subsequent effects are reduced to their created ends according to the order which the same divine will established.

Disputatio LXXXII - Whether any cause, or at least a final reason, can be assigned for the divine will

Caput I - Two opinions of the theologians

The Scholastics with one voice confess that no real cause of the divine will can be assigned, not only no efficient, material, or formal cause (for that is sufficiently made clear), but not even a final cause; which St. Thomas expressly noted in this article. They mean hereby not only that among external, created objects there is no final cause according to the thing itself, but neither can His

1368. St. Augustine, De Trinitate III.

own goodness be the real final cause moving His will from without. The Doctors have proved this well enough by the following consideration: whatever is a real final cause of an act of willing really moves the will toward that which is willed; around the means the end, as willed by a distinct act, is the cause of willing the means, since the will of the end really moves to will the means, and so the end itself, properly and really, would be said to move. But in God there is no such real motion toward an end as if by desire something extrinsic drew Him; rather, His own goodness, understood and loved by one and the same most simple act, is that for the sake of which He wills the order of things, while nothing outside Himself really moves His will. Therefore there is no real final cause of the divine will among things, nor even His own goodness as another really distinct end beyond His very act and essence; rather, as we shall explain, the ratio of end is found according to our manner of conceiving, not as a distinct cause that would move God.

Conclusion of the article is that no final cause of the divine will can be assigned; but the explication thereof, and the doctrine of the whole article, we shall gather in the following Disputation.

the responses to the objections But God, just as by one simple act of the will he wills all things by his goodness, so also, as by one act he understands all things in his essence. Hence, just as in God understanding the cause is not the cause of understanding the effects, but he himself understands the effects in the cause; so willing the end is not the cause of willing the things that are to the end. Yet he does will that the things which are to the end be ordered to the end. Therefore he wills this to be on account of that; but not on account of that does he will this.

Reply to the first: The will of God is rational, not because something is a cause for God's willing, but inasmuch as he wills one thing to be on account of another.

Reply to the second: Since God wills effects to be such that they proceed from determinate causes, in order that order be preserved in things, it is not superfluous, even together with the will of God, to seek other causes. Yet it would be superfluous if other causes were sought as first causes and not dependent on the divine will. And thus speaks St. Augustine in De Trinitate III, chapter 2: "It pleased the vanity of the philosophers to attribute even contingent effects to other causes, when they were altogether unable to see the cause superior to all the rest, that is, the will of God."[1369]

Reply to the third: Since God wills effects to exist on account of causes, any effects which presuppose some other effect do not depend on the will of God alone, but on something else. But first effects depend on the divine will alone; as, for example, if we say that God willed man to have hands so that, by performing diverse works, they might serve the intellect; and he willed him to have an intellect for this, that he might be a man; and he willed him to be a man so that he might enjoy him, or for the completeness of the universe. Which indeed is not to reduce them to other created ends.

1369. St. Augustine, De Trinitate III, c. 2.

Whether some cause, or at least a final reason, can be assigned of the divine will

Two opinions of the theologians

All the Scholastics with one voice confess that no real cause of the divine will can be assigned - not an efficient, nor a material, nor a formal cause (for that is quite established), nor yet a final cause; which St. Thomas openly noted in this article. By this they understand not only that among created objects there is no final cause according to the thing itself, but also that even the divine goodness itself cannot be a final cause according to the thing.

Now the holy Doctor proves this by the following reason. Then something is a real final cause of willing the means when, by a diverse act of willing, the will deals with that end and with the means: for in such a case the end, as willed, is a cause of willing the means, because the will is really moved by the end to the will of the means; and hence the end itself is said metaphorically, in its own way, to move, because by its desire it moves to the desire of the means. But whenever, by the same will, someone desires both the end and the means, there cannot be a real causality of the end with respect to the desire of the means, because the same will is not a real cause of itself. Thus also first principles are then only said really to move to the knowledge of conclusions when one cognition is of the principles and another of the conclusions; but if by the same cognition both are known together, the principles are not said to be a real cause of knowing the conclusion. But God, by the same act of will, wills his goodness as end and creatures as means; therefore neither his goodness nor anything else can be a real cause of his willing.

In this reasoning St. Thomas supposes that the end moves only after the mode of an end to the desire of the means, and that this is its proper causality; which is most true, as will be expressly proved below in II - II, q. 12, a. 2. But if someone contends that the end also moves to desire and love by some causality, nevertheless it is proved no less that there is no real final cause of the will of God. First, it cannot be his goodness, because the good is distinguished from love and from the act of the will concerning that same good; which distinction was necessary if it were to be a real cause; for the same thing cannot be a real cause of itself. Then neither can any creature be [a final cause], because nothing moves the will of God for the sake of itself, but is compared to it as a means; for God is said to love all created things by reason of his own goodness; therefore there is no final cause, according to the thing, of the divine will. Hence St. Thomas gathers that God wills this to be on account of that, yet he does not will this on account of that - propositions that are most true and will be explained below.

There is, however, disagreement among the Doctors whether at least, in our manner of understanding, a reason of willing after the mode of an end can be assigned, on account of which God is said to will something, and to will one thing because he wills another; and not only to will one thing to be on account of another. And the authors are divided into three opinions, two of which I shall recount in this chapter, while the third, which is more probable, in the following.

The first is that of Cajetan in this article, who, to unravel this difficulty and set forth the mind of St. Thomas, distinguishes four propositions. The first is, "This is on account of that." The second, "God wills this to be on account of that." The third, "This is willed by God because that is willed." The fourth, "God wills this because he wills that." He says that the first and second proposition are to be conceded, and, as will become clear below, both are without any controversy. He asserts that the third must also be conceded according to the mind of St. Thomas; but that the fourth is to be altogether denied. From which he infers that there is indeed a reason of the divine will taken passively, yet not actively, that is, that there is a reason among the created objects on account of which it is true to say that something is willed, but not a reason on account of which it is said that God wills something. None of this is proved by Cajetan, nor do I see how what he taught in the end can be defended: for if the third proposition is conceded and a reason of the divine will is assigned passively, then the fourth will also be conceded and a reason of the divine will will be assigned actively. For it is altogether the same to say that a thing is willed by God on account of another, and that God wills some thing on account of another: just as it is the same to say that a thing is understood by me on account of another, and that I understand that on account of another; for the passive voice renders altogether the same sense as the active.

The second opinion is that there is indeed a reason of the will of God, not only his own divine goodness, but also among created objects one [created thing] is a cause of willing another; and thus the Doctors of this position concede that God wills one created object on account of another, and not only wills one to be on account of another. Durandus seems to have taught this; likewise Antonius Cordubensis; and many recent Thomists follow them, thinking this to be the sentence of St. Thomas in Contra gentiles I, chapter 86, where he expressly proves by three reasons that a reason of the divine will is given, although not a cause; and in chapter 87 he begins by saying: "Although indeed some reason of the divine will can be, yet it does not follow that there is any cause of his will"; and not only does he teach in that chapter 86 that the reason of the divine will is his own goodness, but he also assigns a reason among created objects, saying that the good of the universe is the reason on account of which God wills the singular created good; and he also assigns some created reason of the divine will...[13701371]

Caput II - The truer opinion: that for God nothing other than his own goodness is the reason of willing

I hold not only that the third opinion is truer, but I also seem clearly to gather it from St. Thomas; which is this: God indeed wills one created thing to be on account of another, yet he does not will one [created thing] on account of another, but he wills all created things on account of his own goodness; wherefore among created objects there is no reason for God to will another, but only his own goodness is the reason, after the mode of an end, for willing the rest. Alexander handed down this opinion: "The will of God has no reason, if reason is understood to be some end

1370. Durandus, In I Sent., d. 41, q. 2, a. 5; Antonius de Corduba, 9.56, opinione s., p. 2, ad 2, dub.; and many recent Thomists.

1371. St. Thomas, Summa contra gentiles I, c. 86 - 87.

outside," where he concedes a finis, that is, a reason, within God, namely his own goodness, yet not outside; which must be understood of end, not according to the true notion of cause, but insofar as it is conceived as a reason of willing, after the mode of an end; and in this sense he denied there, not only that a cause is given, but even a reason, if "reason" is understood as some end outside.[1372] The same was taught by Henry,[1373] Gabriel,[1374] Driedo,[1375] and Ferrarensis inclines the same way.[1376]

Moreover, this is not obscurely proved from St. Thomas. First, because above, in I, q. 19, a. 3, ad 1, and a. 2, ad 2, he says that the will of God is moved only by his own goodness: certainly he does not understand it as by a final cause which is truly a cause, for this kind of cause the holy Doctor denied universally in this article; therefore he understands that it is moved by no other than by his own goodness as by a reason of willing; for if the will of God could have some other reason of willing than his own goodness, it would be said to be moved by something other than it. Then, after he taught in Contra gentiles, chapters 86 and 87, that among created objects there is some reason of the divine will, when in the present article he says that his goodness is to him the cause of willing other things, from this sentence I argue thus: Either St. Thomas is speaking about a final cause, in which case he is asking whether it itself is a cause and not only a reason after the mode of an end, in our way of understanding; and in this way, just as no created object is a final cause to God, so neither can his own goodness be; because, as he says in this article, since by the same act he wills his own goodness and all created things which are compared to it as means, the goodness of God cannot be a true final cause of willing created objects; and therefore in this article he taught universally that there cannot be to God any final cause according to the thing, although God wills one created thing to be for the sake of another. Or St. Thomas speaks in those two chapters about a cause only in our way of understanding, which is called a reason; and in this way there follows what we contend, namely, that to God there is no cause of willing other than his own goodness, yet that he also cannot speak otherwise: therefore the aforesaid opinion is clearly deduced from the same chapters from which the adversaries tried to confirm their contention.

Thus, then, we ought to speak: "God wills all other things on account of his goodness," that is, because he wills his own goodness; in which is noted not a cause but the final reason of willing. Yet it is not lawful to say, "Among created objects God willed this on account of that," that is, "he willed this because he willed that"; for the latter is not rightly said to be a reason of willing another: whereas it is rightly said, "Among created objects God willed one to be on account of another." But when St. Thomas in this article, I, q. 19, a. 2, after the third conclusion, denies that God wills this for the sake of that, in which denial he seems also to include even the divine goodness, so that things are not said to be willed for the sake of it, he speaks about a cause of willing according to the thing; and in this sense he uses the particle "for the sake of" (propter). But when, conversely, in chapters 86 and 87 Contra gentiles he openly proves that the will of God is not without a reason, and he assigns a reason among created objects, he does not speak of a reason of willing, nor does

1372. Alexander of Hales, Summa I, q. 28, m. 3, a. 3; q. 35, m. 3.

1374. Gabriel Biel, In I Sent., d. 14, q. 1, a. 2, post tertiam conclusionem.
1375. John Driedo, De concordia liberi arbitrii et praedestinationis, cap. 4, ad 4.
1376. Sylvester Ferrariensis, on Contra gentiles, cap. 86 - 87.

he anywhere admit among created objects some one reason for God to will another; rather, he speaks of the reason on account of which one object is said to be for the sake of another; whence he gathers that God does not will created things inordinately and confusedly, but with the due order by which he wills one thing to be for the sake of others, although he does not will one thing on account of another.

By reason this preceding opinion is confirmed and explained; for one must philosophize about the divine will along the lines of the human, namely, that what for the human will is a reason...

... is the reason of willing (*ratio volendi*), so also in the divine [will], in our way of understanding, it must be constituted; for otherwise, without any foundation, we would be philosophizing in another fashion. But only the end (*finis*), and that which is appetible for its own sake, namely the morally good or the pleasant, is for the human will a reason of willing; whereas the useful, and that which has only the notion of means (*medium*), inasmuch as it is a means and useful, is not a reason of willing.

Therefore, in God likewise one must philosophize that only the end is the reason of willing. Moreover, that only the end is the reason of willing is manifest: for the end is that for the sake of which the other things are desired, but a means and the useful, precisely as a means and useful, is not a reason of willing. It is clear, because if it were, especially in comparison with subsequent means, it would not be a reason of willing other means inasmuch as it is a means. First, because as a means it is only useful; but as useful, it is appetible only on account of the higher end which it regards, as a road to it. Then too, because if a means were that for the sake of which something is sought, it would be the honorable or the pleasant; for every end under this aspect is either a morally good or a pleasant good: the useful does not have the goodness of an end, as is clear from the doctrine of the holy Doctor in I, q. 6, a. 6.[1377] And to these add, that the useful, as useful, would not only regard the end, but also the subsequent means, moving the desire towards them, which is absurd. It is therefore established that in us the reason of willing is only the morally good or the pleasant, which truly has the notion of end and of what is appetible for its own sake. Moreover, that no means has the notion of an end with respect to another means must be proved more at length from Aristotle's doctrine in I - II, q. 1, a. 4.[1378] But God's goodness alone is compared to Him under the mode of end, and is appetible for its own sake, whereas all other created things are compared under the mode of means; therefore among those, one is not for God the reason of willing another.

Now when we say that every creature is compared with God as a means and not as an end, it is not to be understood as though a creature were truly a means for God to acquire some end; but because the will whereby God loves creatures presupposes, in the order of reason, God's own will concerning Himself: for He would love no creature unless first, in the order of reason, He loved Himself; and thus creatures please God inasmuch as they are, in a certain way, something of His by participation. This indeed does not prevent God from loving rational creatures with the love of friendship and, in a certain way, for their own sakes, as we shall say in disputation 84, cap. 2; yet it

1377. St. Thomas, Summa theologiae I, q. 6, a. 6.
1378. St. Thomas, Summa theologiae I - II, q. 1, a. 4.

does prevent saying that He loves one creature for the sake of another as for the reason of loving; rather, He loves all things for His own goodness, which is the object primarily willed by God in every act. Wherefore, if one must speak properly, it is not to be said that God wills something created for the sake of another created thing, that is, because He wills another created thing; but that God wills all things for His goodness, that is, because He wills His goodness; and, finally, that He wills one created thing to be for the sake of another. For we too, when we ordinate will the means which in a certain series conduce to the end, are not properly said to will one thing for the sake of another, for example walking for the sake of "attenuation" [slimming]; but we are said to will both for the sake of health; nevertheless, to do one thing for the sake of another, or to will one to be for the sake of another, that is, to serve the acquisition of the latter.

By the way, this doctrine about the end which we have here premised, namely that a single means, inasmuch as it is a means and useful, cannot be an end and that for the sake of which, and thus that there is no intermediate end, but that every end, inasmuch as it is an end, is ultimate in its order, we shall prove expressly in I - II, q. 1, a. 4.[1378]

Assignanda esse instantia prioris, et posterioris in decreto Dei.

Caput III - That instances of the prior and the posterior must be assigned in God's decree

Since God by His singular providence is said to will to dispose and to order all these inferior things, for the reason that He has decreed that one thing be or act for the sake of another, we are accustomed, in our way of understanding, to assign certain instances of the prior and the posterior, by which we posit that God wills or decrees one thing before another; although in reality He at once, by one act, sees and determines all things; or because men, who proceed in an ordered way by discursive deliberation and consultation, are said to determine earlier one thing than another, and in like manner we philosophize about God by the likeness of these. Or else because, even if all are at once in time, nevertheless men sometimes set things in order for themselves, and with that order one thing is said to come first into consultation as the cause, before another.

All the Scholastics, especially the more recent, receive this ordering of the prior and the posterior in our way of understanding, without controversy. I except Gabriel, in III, dist. 2, quaest. unica, art. 3, dub. 3, to Scotus's third argument, who denied these instances and the order of the prior and the posterior in the divine decree, and for that reason said that all things were determined at once; whence, from such an order of the divine decree it does not stand, whether, if Adam had not sinned, Christ would have come, and other things of this sort which are wont to be disputed under a condition cannot be known. Gabriel is followed by Ockham, in I, d. 9, q. 3, who denies these instances in God, although he himself seems to speak only of those which are wont to be assigned, in our way of understanding, concerning the divine processions.[137913801381]

1378. St. Thomas, Summa theologiae I - II, q. 1, a. 4.
1379. Scotus, In III Sent., d. 7, q. 3; d. 19, q. 1.
1380. Gabriel (Biel), In III Sent., d. 2, quaest. unica, art. 3, dub. 3, ad tertiam rationem Scoti.
1381. William of Ockham, In I Sent., d. 9, q. 3.

Moreover, the Fathers have used this common Scholastic phrase, assigning in the divine prescience and predefinition one thing before another, which is to be understood not by duration but by order and a certain habitude of reason. Thus St. Augustine, in many places, especially however in the first book to Simplicianus, q. 2: explaining that word to the Romans (9): "That the purpose of God according to election might stand," he says: "Election does not precede justification, but justification precedes election"; which cannot be understood of the precedence of duration, since in duration election, which is eternal, is prior to justification, which is temporal; Augustine is speaking of election in the divine prescience, as we shall show in disputation 89, cap. 6. And so, according to his view, justification is in the divine prescience before election by an order not of duration, but of reason, and as it were of causality.[1382] Next, we shall report this mode of speaking, "God willed this from that," and, "God chose some to the kingdom of heaven from merits," from Augustine below in disputation 89, cap. 9.

But most clearly the same order of the prior and the posterior has been expressed by Prosper in the Epistle to Augustine which is placed before the books On the Predestination of the Saints, at the end, where, asking Augustine to explain how God's purpose of justifying could arise from the foreknowledge of merits, he says the contrary rather: that the foreknowledge of merits arises from the purpose of justifying. He asks whether one may say uniformly that prescience is from the purpose, although it cannot be distinguished by a temporal distinction; yet he acknowledges that one thing in order supposes another, namely that for this reason God foreknows good merits, because He had the purpose of bestowing them. When he says that the foreknowledge of merits cannot be distinguished from the purpose by a temporal distinction, he understands that no precedence of duration intervenes between them - this is a temporal distinction; for those things which are distinguished in time are also divided by duration. But when he says that in order one thing supposes another, he plainly understands that, of those things which are together in prescience, by order of consideration one precedes another; in which way he affirms that the prescience of merits had its origin from the purpose of justifying, because merits arose from the very grace of justification, as from a future cause.[1383]

In modo distinguendi, et ordinandi instantia rationis in divino decreto varie sentiunt auctores.

Caput IV - That authors differ in the way of distinguishing and ordering the instances of reason in the divine decree

Yet more recent theologians, who everywhere dispute about these instances of reason, differ in establishing the rule by which the order of the prior and the posterior is to be assigned in the divine prescience and decree.

Scotus, on the third book, dist. 7, q. 3, and dist. 19, q. 1, thinks this order should be taken in God's decree after the likeness of ordered human consultation; wherein he spoke very well in this: but he adds that then one proceeds in an ordered way in consultation whenever, after the will of

1382. St. Augustine, Ad Simplicianum, lib. 1, q. 2, on Rom. 9: "Ut secundum electionem propositum Dei maneret."
1383. Prosper of Aquitaine, Epistola ad Augustinum, prefixed to De praedestinatione sanctorum, at the end.

the end, one decrees and wills the things which are closer to the end: he understands "closer" by dignity; and from this he would prove that God, after the love of Himself, most closely willed the Incarnation of His Son; because among other creatures it is closer to the divine goodness: and hence, if it was prior in the divine decree, Christ would have come even if Adam had not sinned.[1379]

But besides the fact that his conclusion is against the manifest testimonies of the Fathers and of Scripture, nor does it in any way commend the divine goodness, as the authors of that opinion suppose; nay rather, it greatly diminishes the charity of God toward the human race; the foundation on which Scotus relies, and from which he would seem to deduce a general rule, is not the first. For, as we shall say in III, q. 1, a. 3, the order in the consultation of means about some end ought not to be assigned by reason of dignity, by which one means is more like to and approaches the end; but according to the order of causality, by which the means conduces to the end. Otherwise, the order of intention or consultation would be one thing, and that of execution another; and what is first in intention is last in execution, as we shall dispute in 89, cap. 7, and say in II - II, q. 1, a. 3. But in execution, for example, that someone be healed, we proceed thus, that first the simples be sought, then from them the drugs be compounded, afterwards they be taken by the sick man, and finally he be cured. In consultation, therefore, one must proceed conversely: for when the will of health is set, which is the willing of the end, the physician is called into consultation, and the chief remedy is chosen, and its series is decided; then it is determined that it be compounded by such a druggist; finally, that such simples be sought, or this is left to the druggist to be sought. So in the construction of a house, and, in every business to be accomplished, the consultation begins in an orderly way from that means in which the execution ends, and it ends at that in which the execution takes its beginning. Therefore the place of what is prior is not according to the nobility of objects, but according to the proximity of causality to the end; it should be assigned in such a way that what more nearly operates toward the attainment of the end be prior in consultation and later in execution. Although therefore the Incarnation of Christ is closer to God's goodness in dignity; yet because it was not closer in causality, as will be proved in III, q. 1, a. 3, it does not follow that God, who wills in an ordered way, before all decreed the future Incarnation; indeed, if Scotus's reason had any weight, it would prove that God could not decree the Incarnation simply, and in some manner after sin, which is absurd. But what we have now said is enough against Scotus.[1384]

Cajetan, however, on III, q. 1, a. 3, sets up three orders of things in God's decree: the first of nature, the second of grace, and the third of the hypostatic union. But, as we showed in that place, this rule of Cajetan contains many contradictions. First, because many things that are natural are involved in the consultation about predestination. Second, because the sin of those crucifying Christ is put by Cajetan in the order of nature, and yet it supposes of necessity the hypostatic union. Third, because all things which are of the order of nature do not have an order with those which are of the order of grace; for that there be so many fish in the sea and beasts on the land is entirely accidental in regard to this, and bears no necessary conjunction with the order of grace;

1379. Scotus, In III Sent., d. 7, q. 3; d. 19, q. 1.
1384. St. Thomas, Summa theologiae III, q. 1, a. 3.

therefore they are not to be placed, as first in rank, in the divine consultation as necessary; rather they of themselves constitute their own order distinct from that [of grace]. But about these things more at length in that place.[1385]

Caput V - These instances are to be assigned according to the order of the objects among themselves

Accordingly, this is the position: the order ought to be assigned only on the part of the objects, so that those which among themselves have an order of causality, joined with the divine consultation, also constitute in it an order and the instances of a prior and posterior, always preserving the rule we have set forth: namely, that the order of execution ought to be contrary to that in consultation and intention; so that thus from it God is said to will one thing before another, because in reality one is for the sake of another, or toward another. But, that we may rightly constitute this order, it must be observed that among created objects one can be compared to another in three ways, according to which three ways more particular rules can be assigned.

First, a subject (*subiectum*) is compared to the form (*forma*) which it ought to receive. I do not speak of the subject which is prime matter and an essential part of a composite, but of the subject which is a certain whole composite, as of man; and of an accidental form, as of grace and glory. Thus, of necessity, in the intention of God the subject must be prior to the form; wherefore prior will be the will of producing man than of justifying him; and in execution likewise; and let this be the first rule. For it is impossible to will, or to decree to give grace to Peter, unless Peter already be understood as going to be. For since grace essentially supposes Peter, Peter cannot but be included in the decree of grace. Nor indeed do we understand that God first decreed to produce grace according to itself abstracted from a subject; for that would be a foolish conception; nor does that ever occur among men. Likewise He did not first decree the hypostatic union in intention, before producing this human nature which was to be assumed. For a union to be effected necessarily also supposes in conception and thought that to which it is to be effected: therefore the moderns are mistaken, who think that God did not first decree to produce Peter, for example, before predestining him by His grace; nor first to decree to produce the humanity of Christ, before to unite it to the Word; but rather, on the contrary, to have produced that from the fact that He decreed to unite it. Whence there would also follow that He first decreed to unite the humanity itself before producing it; and to glorify Peter, for example, and to justify him by His grace, before producing him - which manifestly involves a contradiction. For how can someone will to make a man just, or to deify him, whom he has not yet decreed to produce? It would be enough, if they were to say that God did not first decree to produce man before to glorify him and justify him, nor first to make the humanity of Christ before to unite it.

Wherefore, if it please to dispose these instances in another way, one must say that among the accidental forms of the subject itself, one is in a way the end (*finis*) of the others; as in man glory is the end, for the attainment of which man needs another form or a means; so too in the human

1385. Cajetan (Tommaso de Vio), In IIIam, q. 1, a. 3.

nature of Christ the union was as it were the end, the rest as means. One must therefore say that at least God decreed simultaneously that there be the subject with such a form, which is as it were the end of it, and then the other forms, which are as it were means around the man himself of this kind: for example, that He first willed to establish man for glory, then willed to provide the means for justification. So too He first decreed, from the end of redemption which He willed, to produce the human nature in the Word, so that He might unite it, and then to prepare the means and other forms which would be as it were the ornament of that.

Moreover, that God did not first decree the form which has the ratio of end than the subject has been proved above; and it can also be confirmed: because by the same act of love God wills glory for man; in which love glory is the object desired, but man is the one for whom it is desired. Now it is impossible to will glory without him for whom it is desired; therefore it cannot be willed without the subject. The same holds for the union and for the remaining forms which God decreed to give to some subject. But that He did not first decree the subject to be than the form which has the ratio of end is clear, because He did not will the subject to be made except for that end, and that it should obtain such an effect; therefore He never decreed it to be made prior to the will of the end, but together with it.

It is moreover very much to be observed that a subject which is said to be made for some perfection, which is as it were its end, does not have the ratio of a means with respect to it, and thus is not posterior to such a form, but is the end for whom (finis cui), whereas the form is the end for the sake of which (finis cuius gratia). Now the one who consults has at once an act concerning the end for whom and concerning the end for the sake of which, that is, concerning the perfection which he desires, which is as it were the end for the sake of which - the grace and the good desired - and concerning the subject, which is the end for whom that perfection is desired. And thus God at once wills glory for man and decrees to produce him for glory; although concerning his existence there is an efficacious will, but concerning glory only a simple one. For since He made man for this, that he might attain glory, from this end He willed him to be. And about the humanity of Christ one must philosophize similarly; except that the humanity was also united for another ulterior end, as we shall say in its place: namely, that it might redeem the human race; which end being supposed, straightway God simultaneously decreed, as a suitable means, simultaneously to produce the humanity conjoined to the Word, so that it might be able to satisfy; yet it is never to be said that glory was defined prior to man, or the union with the Word prior to the humanity.

But from that rule which we have just set down - "What is first in execution is last in intention, and conversely" - some argue thus. In execution, at least in the order of causality, the nature to be assumed is produced before it is assumed; and Peter, who is to be glorified and justified, is produced before he is justified and glorified: therefore in the intention of God the decree of glorifying, justifying, and uniting is prior, and from that the nature which is to be glorified, justified, and united is produced.

I answer: first, if the argument had any force, it would also prove that God first decreed to justify or to glorify some man, or to unite a humanity to the Word, before producing him - which is manifestly absurd. For who decrees to glorify or to justify a man before he sees that he will be, or before he wills him to be? For the production of grace essentially supposes a subject, as was said above.

Then I say that that rule holds only in the disposition of means with respect to the end, which means contribute in reality to the attainment of the end, either by way of efficient cause, or of disposition, or by way of merit, whose causality is reduced to the efficient. Therefore, in the disposition of the means to the end this order and series is preserved here: that what is first in execution be last in consultation or intention; and conversely, what is first in intention be last in execution. But the subject, with respect to accidents and to the things which God decreed to do in it - namely, with respect to glorification, justification, union, and the like - does not have the ratio of a means, neither physical, nor moral, nor efficient, nor meritorious. Therefore it is in vain that, from the fact that the subject is produced earlier in execution, the adversaries infer that in consultation and intention it ought to be posterior. Wherefore all the things which God decrees to be done concerning some subject, in the intention of God and in the disposition of the divine will, in a certain order suppose the subject itself about which they are to be done.

Second, one created thing is compared to another as a means to the attainment of it; but a means can be moral by way of merit; and in this case let this be the second rule. Although in the intention of God that be prior to which our merits are compared by way of a means, nonetheless it is not prior in a particular and efficacious intention than that merits be foreseen; but only in a certain intention of simple complacency and inefficacious, by which it pleases God that any man attain by his merits that which He proposes to all as an end. This is to be confirmed and demonstrated very broadly in Disputation 89, chapters 6, 8, and 10; therefore there is no need here for a fuller proof.[1386]

But with a determinate and efficacious will God is said to have chosen in His prescience the merits of grace unto the kingdom of heaven, as St. Augustine often says, and consequently this will supposes merits; and whenever in time something is said to be given out of merits, it is also said by the same Augustine that it was defined by God out of merits, as we shall see there. Wherefore neither did God ever decree with an efficacious will to call, justify, and glorify anyone, unless with the merits of Christ presupposed, by whose virtue in time He was going to call, to justify, and to glorify; otherwise He would have decreed to glorify Peter, to justify, and thus to have predestined Peter before He had seen the merits of Christ, and before He had predestined Christ Himself - which is absurd.

A single a priori reason will suffice: because that which is given on account of another, as on account of merit, is given in view of that, just as we also see among men; for if someone were to give absolutely from himself, not looking to merits, he would not give out of merits. Therefore, since the donation in time is made in view of merits, in eternity the will of giving cannot be

1386. Disputatio 89, cap. 6, 8, 10.

absolute of itself, but in view also of merits, as in that Disputation 89 we shall show more at length; and for that reason God is said in eternity to have chosen the merits of grace, because in view of them He prepared the crown of glory.

Third, one thing is compared to another as its physical cause, on account of which it is said to be; for every cause seems to be for its effect. But, that we may establish a rule of instances concerning these matters, a distinction must be made. Either the effect of some physical cause depends on free choice, or it is altogether natural. An example of the former: the calling of God is given, that man may respond; for this is the physical effect of the calling - not by way of merit, but depending on free choice. In these, therefore, let the third rule be established: although the effect to which the cause is ordered by way of an end ought to be prior in intention, since it is posterior in execution, nevertheless it is not prior in an efficacious and altogether determinate intention, but only in a simple affection of complacency, which is not efficacious; for example, God did not efficaciously decree first that Peter would respond to the calling and consent to grace, than to call him: for thus He would be decreeing the consent of the will without that upon which it depends. [1386]

But that which cannot at all be done without it, God nevertheless decreed from the will by which it pleases Him universally that each man respond to grace, be justified, and observe the law - that this or that grace should go before him; and the preparation of that vocation and grace being foreseen, He decreed to concur with it as He saw him inclined; so that in this way He might preserve entire the liberty of choice. But this is to be proved by us expressly in Disputation 89; therefore let what has been said now suffice.[1387]

Lastly, where the effect is altogether natural, it can be prior in intention in an efficacious will (and let this be the last rule), as when God willed there to be rain so that there might be abundance of grain; we can say that in intention the abundance of grain was prior to the rain, whereas, on the contrary, in execution the rain is prior to the store of grain. For that effect is, as it were, a medium nearer to the end which God wills than the rain itself. It is clear therefore how the instants (*instantia*) of the divine will are to be ordered in decreeing future things. But where in the thing itself there is no connection of effects, in the divine will they have no order, as will immediately be evident.

Caput VI - From the divine will alone, without a connection of things among themselves, instants ought not to be ordered.

Now there are, moreover, certain more recent writers, who, although they think it true that instants must at once be distinguished and ordered according to the connection of the objects and of things among themselves - namely, when in very fact one is referred to another - yet add that an order of instants can also be assigned from the sole order which things have to the divine will. For (so they say) God can by His freedom order one thing to another, even if in very fact it is not referred to that other; therefore, according to that ordering which things receive from the divine

1386. Disputatio 89, cap. 6, 8, 10.
1387. See Disputation 89.

will, the instants can also be ordered in the decree of God. Others add that God so wills some end through certain means that He can bind His will, as it shall have pleased Him, to some one means, even if in very fact the end does not necessarily depend upon such a means. They assert also that then God does not will the end prior to that means; wherefore, if such a means were not going to be, the end would not be going to be: because God has confined the decree concerning the end by such a means. Just as when someone resolves to go to Toledo, but only in a carriage; if that fails, he will not go. Whereas otherwise the will of the end, which is prior to the will of the means, is not taken away by the removal of the will of a given means; and when I speak of an end, I understand the same of some means for the sake of which other means are said to be.

However, it must always be said in the same way: the order of instants in the divine will must be taken from the order of things among themselves, and from that even the ordination of the divine will is to be inferred. For without a change of things among themselves, we cannot grant or infer diverse ordinations of the divine will. Let us suppose, for example, that the merit of Christ has impetrated and obtained glory for us, because in fact He offered the passion for us; and therefore, according to the second rule handed down in the preceding chapter, that God foresaw the merit of Christ and, in view of that, gave us grace; from which we assign such an order, that first the merit of Christ was foreseen, then there was the decree to give grace. Things, however, persevering in the same way - namely, if Christ were to offer Himself for us, and God were in fact to give grace - we could not say that He did not give it in view of the merits, but absolutely from His will alone. For, in order to say that the decree of God is changed or varied, or is otherwise than it now is, there would have to be a variation in Him or in things. But in Him none can occur: for now we suppose that the decree of the free will of God is not an act freely elicited by God which could be present and not present from eternity, as was proved in Disputation 79, chapter 5; therefore on the part of God no variation could have been; nor is there any in things either, as we suppose. Therefore, things remaining in the same order, they cannot be otherwise ordered by the will of God, but the will of God also will remain in the same way.[1388]

Hence, one must always attend to the connection of things among themselves, so that from it we may assign the order of the divine will. Now the connection of things consists most of all in the natural proportion of things, by which they are compared to one another, or in the intention not of God, but of men acting thus; for that a just man established in grace do good works has a proportion of worthiness to eternal life, and of itself is worthy of it; wherefore, if glory is given to him, it is said to be given on account of merits, and that God would not have willed to give otherwise. Then, that someone pray or do good by remitting injuries done to himself, or by having mercy on one in need, has a proportion of congruity with some particular grace which he obtains for himself; and therefore we say that God gave that particular grace in view of good works, not in view of condignity, because the works did not have such a proportion, but of congruity and fittingness.

1388. See Disputation 79, cap. 5.

Wherefore, if Christ were to suffer as He did suffer, and were to do other good works, and grace were given to us, then, in order that it be said not to be given in view of the merits of Christ, but from the mere benignity of God, there would have to be some variation on the part of Christ's merits; otherwise we would say in vain that grace is not given in view of them, as it now is given. Christ therefore would have to suffer and do good in such a way that by His will He would not offer His merits for men in payment of the guilt of others, but would do so absolutely for some other end; for His intention is required in order that He be said to merit for men, as we shall show in the Third Part of St. Thomas, question 19.[1389] But if He should offer them, as in truth He offered them, in payment for sins both past and future, His works cannot but of themselves, and not from the sole will of God, be actually ordered to man's salvation; and thus the will of God cannot but, in view of them, give grace and glory, if in fact He bestows it upon men notwithstanding their sin.

Likewise, in order that God be said to give glory freely and without merits, it is necessary that there be no merits in him to whom glory is given; for if he have merits, and then glory be given to him, it follows that God necessarily willed to give glory on account of merits, as is gathered from the doctrine set forth above. Therefore, it is in vain that the aforesaid Doctors, setting aside the order of things which they have among themselves either by their own nature or by the will of agents, assign various orders of the divine will from the sole nod of God.

Wherefore, although in Scripture and in the holy Fathers various causes of the divine will are sometimes assigned, and in the Incarnation of the Son of God a special cause was expressed, nevertheless all causes from the very order of things among themselves, according to the doctrine here assigned, we shall in their proper place very well deduce; for now it is not permitted to pursue everything, but it suffices to lay certain general foundations which can serve us in various places.

Moreover, even if by the sole variation of a divine act one object were ordered to another, yet those objects would have to have some proportion and causality between themselves; for if there were none, and one did not conduce to the other, we could not say that one is ordered to the other by the will of God. For God does not assume any means unless it really conduces.

It is objected: in such wise, without any change made in things, someone who had previously been bound by a vow can remain absolved, if God by His will alone should so will; therefore by the mere nod of the divine will an order can be constituted in things.

It is answered: Never is any man absolved from a vow until God reveal His will at least to someone; but once the revelation has been made, even if he who vowed be ignorant and by ignorance be bound, nevertheless in very fact he is not bound. But if God should reveal nothing, a man would always of itself be obliged to fulfill the vow; for, the revelation having been made, there would have been a sufficient change that what bound should not bind; that, however, not being made, no change has been made, and so things would remain in the same state. If you say that it suffices for God to have within Himself a free act, so that for that time the vow would not bind, I reply that no such elicited free act is in God, as I noted in that Disputation 79, chapter 2, but only the naked essence of God with an order to created objects; wherefore, if these be not changed, the

1389. St. Thomas, Summa theologiae III, q. 19.

same will will be said to remain. Moreover, even if such an act were in God, so as to have the force of a law, it would have to be intimated or revealed; otherwise it would not dissolve the vow in very fact. But this pertains little to our present purpose.

Concerning, however, the will of the end, whether it can be bound to one means when there are many, so that unless through that one God would not will some end, we shall treat expressly in Disputation 89, chapter 11. And whether the good which God elicits from sin can be in the primary intention of God, so that on account of it He be said to will to permit the sin, although He does not will the sin itself, we shall see in Disputation 93. Now this is to be known: nothing can be primary in God's intention unless the things which it essentially supposes are also in some way willed by God; from which ...

... from which it follows that no good which by its nature supposes sin can be in the primary intention of God, such as punishment, penance, etc.; for one who primarily sets his mind on these two and the like, if he is to bring his intention to effect, is compelled to will the sin which is essentially presupposed by them. For intention necessarily moves toward those things which are essentially necessary. But if any one of those things displeases, then the end itself, or the first means, must needs displease - a point on which we shall treat more at large in its place.

Finally, whether the conditional knowledge which God has about things contributes anything to establishing the order of the divine will absolutely, or whether from it the series which God willed to observe ought to be judged (for many abuse this conditional knowledge, as I said in its own place), we shall show in detail when we shall treat in particular about this or that order, as in Disputation 89, and in the Third Part, q. r. a. 3, and elsewhere as well.[1390]

But this is certain: the knowledge of God of simple intelligence is prior to any knowledge and to will, with which the knowledge of future conditionals can be reckoned; because the operation of will, in its kind, is by nature posterior to the operation of the intellect. Next, the will of God by which He wills something to be future is prior to the knowledge of that same future, as was said in Disputation 68, chapter 6.[1391] Finally, concerning the knowledge and will of diverse things, speech must be had: for example, about the foreknowledge of merits and the will of granting glory; about these matters one must speak in various ways according to the rules delivered above - and let this suffice for this article.

1390. See Disputation 89; and in the Third Part, q. r. a. 3; and elsewhere.
1391. See Disputation 68, cap. 6.

Articulus VI - Whether the will of God is always fulfilled

To the sixth, the procedure is thus. It seems that the will of God is not always fulfilled. For the Apostle says in 1 Timothy 2, that God "wills all men to be saved and to come to the knowledge of the truth." But this does not so come to pass. Therefore the will of God is not always fulfilled.[1392]

1. Further, as knowledge stands to the true, so will stands to the good. But God knows every truth. Therefore He wills every good. Yet not every good comes to be; for many goods could be done which are not done. Therefore the will of God is not always fulfilled.
2. Further, the will of God, since it is the first cause, does not exclude secondary causes, as was said. But the effect of a first cause can be impeded by the defect of a secondary cause, just as the effect of a motive power is impeded on account of the weakness of the shin-bone. Therefore the effect of the divine will can be impeded on account of the defect of secondary causes. Therefore the will of God is not always fulfilled.

But on the contrary: it is said in Psalm 113: "All things whatsoever He willed, He has done."

I answer that it is necessary that the will of God be always fulfilled. For the evidence of which, one must consider that, since an effect is conformed to the agent according to its form, the same ratio obtains in efficient causes as in formal causes. Now in forms it is thus: although something can fail relative to some particular form, nevertheless nothing can fail relative to a universal form. For it is possible that there be something which is not a man or not a living thing; but it is not possible that there be something which is not a being. Hence the same must be held in efficient causes. For something can be brought about outside the order of some particular agent cause; but not outside the order of a certain universal cause, under which all particular causes are contained: because if some particular cause fails as to its effect, this is on account of some other particular cause impeding it; which cause is contained under the order of the universal cause. Whence the effect can in no wise go out beyond the order of a universal cause. And this also is evident in bodily things. For it can be impeded that some star not induce its own effect; yet every effect proceeding from a corporeal cause impeded, in order to be attained in corporeal things, must be reduced through certain intermediate causes to the universal power of the first heaven. Therefore, since the will of God is the universal cause of all things, it is impossible that the divine will should not attain its own effect. Whence that which seems to recede from the divine will according to one order relapses into it according to another. Thus the sinner, who, so far as is in him, departs from the divine will by sinning, falls into the order of the divine will in that, through His justice, he is punished.

Reply to the first: The word of the Apostle, that God "wills all men to be saved," can be understood in three ways. In one way, so that there be accommodated a distribution according to this sense: God wills to be saved all men who are saved; not because there is no man whom He does not will to be saved, but because no one is saved whom He does not will to be saved, as St.

1392. See also St. Thomas, Summa theologiae I, q. 19, a. 6, where this article is treated; and cf. various cross-references noted by the author.

Augustine says.[1393] In a second way, it can be understood so that there be a distribution over the kinds of particulars, and not over each individual of the kinds, according to this sense: God wills of every state of men that there be saved males and females, Jews and Gentiles, small and great; yet not all of each state. In a third way, according to St. John Damascene, it is understood of the antecedent will, not of the consequent will. Which distinction indeed is not taken on the part of the divine will itself, in which there is nothing prior or posterior, but on the part of the things willed. For the understanding of which, one must consider that, insofar as anything is good, thus it is willed by God. But something can be in the first consideration of itself, according to which it is considered absolutely as good or evil, which, however, when considered together with some adjunct which is a consequent consideration of it, has the contrary relation. Thus that a man live is a good; and that a man be killed is an evil, according to the absolute consideration. But if it be added concerning some man that he is a homicide, or is living to the danger of the multitude, thus it is a good that he be killed and an evil that he live. Whence it can be said that a just judge antecedently wills every man to live, but consequently wills the homicide to be hanged. Likewise God antecedently wills every man to be saved, but consequently wills some to be damned according to the exigency of His justice. Nor yet do we simply will that which we antecedently will, but in a certain respect; because will is compared to things according as they are in themselves, but in themselves they are in the particular. Whence we simply will something according as we will that thing considered with all its particular circumstances - which is to will consequently. Whence it can be said that a just judge simply wills the homicide to be hanged, but in a certain respect wills him to live, namely insofar as he is a man. Whence it can more properly be called a will of choice (elective) than an absolute will. And thus it is clear that whatever God simply wills, takes place, although that which He antecedently wills does not take place.[1394]

Reply to the second: The act of the cognitive power is according to the ratio of the known as it is in the knower; but the act of the appetitive power is ordained to things according as they are in themselves. Now whatever can have the ratio of being and of true is all virtually in God, but does not all exist in created things. And therefore God knows every truth, but He does not will every good, unless insofar as He wills Himself, in whom virtually every good exists.

Reply to the third: A first cause can then be impeded from its effect by the defect of a secondary cause when it is not universally first, comprehending under itself all causes; because otherwise the effect could in no manner evade its order. And thus it is concerning the will of God, as has been said.

The conclusion of the article is: The will of God is always fulfilled; St. Thomas proves this from that Psalm 113: "All things whatsoever He willed, He has done, in heaven and on earth"; and Wisdom 12: "All things are subject to Him, when He wills, He is able." Omitting the reasoning of St. Thomas, there is another manifest one: for the will of God is omnipotent, and He operates by

His will; therefore it cannot be impeded by anyone so as not to attain its effect. Concerning the text of St. Thomas there is nothing noteworthy; but the difficulties that concern his doctrine will be examined in the following disputation.

Disputatio LXXXIII - Whether there is in God some will of good pleasure which is not always fulfilled

- From the opinion of Alexander, St. Bonaventure, and others, that every will of good pleasure is fulfilled. Cap. I.
- That God has a will of good pleasure concerning the salvation and right life of all men, the truer opinion asserts. Cap. 2.
- Why this will is called antecedent. Cap. 3.
- In what manner the will which God has antecedently of the salvation of men is absolute, and how nevertheless it is not always fulfilled. Cap. 4.
- The arguments of the prior opinion are dissolved. Cap. 5.

Before we enter upon the disputation, a distinction of the divine will, which St. Thomas establishes in the article of this question, must be premised: namely, that there is a will of sign, and a will of good pleasure. It is called will of sign when God outwardly so acts concerning some thing as to indicate that He has such a will concerning that thing, when nevertheless in truth He does not have it. An example is in all the prophets which contain only a commination of punishment, by which the prophets seemed to signify that God had determined the punishment, when nevertheless in truth that will was not in God. An example is also customarily brought forward of the precept which God placed upon Abraham to immolate his son: since He only willed to furnish an occasion for obedience, not however the immolation of Isaac. In which example and the like, where something on the part of God is enjoined in the mode of a precept, and afterwards He Himself prohibits it from being done, there is indeed a certain will of simple complacency about that thing. For the immolation of Isaac, according to itself, pleased God on account of obedience, since it was a work of virtue and of precept; and from this part it is not solely a will of sign. But because that which outwardly appeared seemed to indicate to Abraham that God willed to command that sacrifice absolutely and not to revoke the precept, from this part it was a will of sign and not of good pleasure; for God had never decreed that, but rather willed the contrary. Now it is a will of good pleasure when there is not only a sign of such a will, but also the very thing of which there is said to be a will in God is pleasing to Him. Such is the will concerning the things which are done by God; for these by that very fact cannot but please God that they be done. But about this distinction more at large in that article.

In the present controversy there are two opposing opinions. The first is that of Alexander,[1395] St. Bonaventure,[1396] Scotus,[1397] the Master,[1398] Marsilius,[1399] Driedo,[1400] and Cajetan;[1401] and of certain others on that word of Paul to Timothy, "God wills all men to be saved," who assert that there is not

1395. Alexander of Hales, Summa theologiae, various places (as cited by the author).

in God a will of good pleasure which is referred proximately to the salvation of all and to the observance of the precepts in all men, so that these, according to themselves, be in very deed willed by God; but that the divine will is terminated proximately only to the means which God gives to all men by which they can be saved, and to the precepts which He delivers to the same, that they may work well. Wherefore they say that both wills referred to the observance of the precepts and to the salvation of men are only will of sign: because by furnishing the means absolutely, and the precepts which He commands them to observe, He seems to indicate ...

It is objected that God seems to have a will of good pleasure regarding the salvation of all and regarding the observance of the precepts, whereas in fact he has it not.

This opinion is favored by St. Augustine to the extent that the testimony of Paul in 1 Timothy 2, "God wills all men to be saved," he never explains of a will of good pleasure, which is truly in God regarding the salvation of all men; rather, by three different ways, by which he plainly denies that there is in God a will of good pleasure concerning the salvation of all. The first exposition is that which he gives in the Enchiridion, chapter 103,[1402] as a distribution which the logicians call "accommodated," as if Paul were saying: No one is saved whom God does not will to save; just as we are wont to say of some teacher, "He teaches all the boys of this city," even if not all are in fact taught. We mean to say, no one in this city is taught except by that teacher. So too is that of John 1 to be understood: "He enlightens every man coming into this world."[1403] Huguentius embraces this exposition in the book De incarnatione et gratia, chapter 31, and Bede and Anselm follow it on that passage of Paul;[14041405] but in the end Augustine himself does not much approve it.

Secondly, he interprets that passage as a distribution which the logicians call "according to the classes of individuals," and the sense is: Out of every class of men God wills men to be saved - of men and women, of little ones, of kings, of poor, etc.; which the letter of the text favors. For, after he had said that prayer should be made "for kings and for all that are in high station," he immediately subjoins the reason, saying: "Who [namely God] wills all men to be saved, and to come to the knowledge of the truth." Both these expositions Augustine has in that chapter 103 of the Enchiridion, and Bede and Anselm follow him on that passage of Paul.[14021405]

A third exposition he himself adduces in chapter 15 of De correptione et gratia, around the middle: "God wills," that is, "he makes that they will that all be saved," according to that of Romans 8, "The Spirit asks for us, that is, the Spirit makes us ask," and of Genesis 22, "Now I know that you

fear God," that is, "Now I have made that you know that you fear God." Augustine's expositions are approved by St. Gregory in I, dist. 46, q. 1; indeed he adds that therefore there is not in God a will regarding the salvation of all men, because he even denies sufficient helps to this end.[1406] But if this is so, God can have no will regarding that end - neither of good pleasure nor even of sign; which does not much differ from the mind of Augustine, who plainly grants that to some sufficient helps are not given, as we shall see below in disp. 97. Yet that foundation is most false, as we will show there; for now at least let us prove that there is only a will of sign, not of good pleasure, regarding their salvation, while still granting sufficient means to all.

This is proved by reason, first, because when someone is able to save another and does not save him, he is plainly convicted of not willing to save him. But God is able to save all, and to bring it about that they live rightly, in such wise that no impediment occur: therefore since he does not do so, it follows that he does not will all to be saved, nor to make it that they live rightly; although, by providing remedies necessary to salvation, he seems to indicate that he wills the salvation of all and their tranquil life.

Then, either that will of good pleasure regarding the salvation of all, which some attribute to God, is efficacious or it is inefficacious, which they call a "velleity." It is not efficacious, since in many it does not have its effect; nor is it inefficacious, for, being imperfect, it cannot suit God. Therefore there is no will of good pleasure in God regarding the salvation of all. From this they infer - Doctors do - that every will of good pleasure in God is efficacious and therefore always fulfilled, and that only that will sometimes lacks its effect which is merely of sign.

But on the contrary:

Caput II - The affirmative thesis: that God has a will of good pleasure regarding the salvation of all and a right life

I, however, judge not only the opposite opinion to be truer - namely, that by a will of good pleasure God wills the salvation of all and a right life - but also far more conformable to Sacred Scripture and to the doctrine of the Fathers, to such an extent that I do not see by what reason anyone would dare deny it. Wherefore, since not all men are saved, nor do all live rightly, it must be necessarily confessed that not every will of good pleasure is always fulfilled. This doctrine is taught, among the Scholastics, first by Durandus in I, dist. 47, q. 1; by the Carthusian on dist. 46, q. 1; by Bartholomaeus Camerarius in the Dialogus Catholicus, cap. 6, §1; and is indicated by St. Thomas in this article, reply to the first objection.[1407][1408][1409][1410] They teach that there is in God not only the sign of this will, but also a will of good pleasure regarding the salvation of all and a right

life; which is what must be proved by us in this chapter alone. For what sort of will it is - whether antecedent or consequent, absolute or under a condition - and how, without any imperfection in God, it can fail of its effect, will be explained in chapters 3 and 4.

Therefore, that there is in God a will of good pleasure regarding the salvation of all and a right life is proved first from Paul in 1 Timothy 2. There, after he had said that prayer should be made for kings, etc., "that we may lead a quiet and tranquil life in all piety and chastity," he immediately added: "For this is good and acceptable before God our Savior, who wills all men to be saved and to come to the knowledge of the truth."[1411] Therefore, in the same way Paul says that God wills all to be saved and to acknowledge the truth, and to act rightly, or to lead a tranquil life; for these are connected. But that men live rightly is a good, and therefore (as Paul says) acceptable before the Savior; therefore it is pleasing to him. Wherefore the will by which he wills all to be saved, to live rightly, and to attain the knowledge of the truth, will be also a will of good pleasure; for what else is it for God to will something by a will of good pleasure than for that thing to be pleasing to him, acceptable and gratifying? Accordingly, when in 1 Thessalonians 4 Paul said, "This is the will of God, your sanctification," he not only expressed a will of sign, but also of good pleasure; for he could have added: "For this is pleasing and acceptable to God."[1412]

Secondly, from the authority of the Fathers this sentence is supported by Prosper in book 2 De vocatione gentium, chapters 19 (alias 7) and 25 (alias 8), although, in the response to the Heads of the Gauls, he with Augustine defends the opposite.[1413] Next, St. John Damascene, book 2 De fide, chapter 29, explaining toward the end that passage 1 Timothy, says as follows: "Nor should this escape us: that God, as preeminent in goodness, primarily wills all men to be saved and to be made partakers of his kingdom (for he did not fashion us for punishment and torments, but for this, that we might be made participants of his own goodness); but, as just, he no less wills that punishment be inflicted on those who sin. And the former is called the antecedent will or good pleasure; the second, the consequent will, and permission arising from our fault. Moreover, there is a twofold kind of permission: one dispensatory and instructive, which looks to our salvation; the other proceeding from despair, which, as we have already said, leads to an extreme and most certain perdition. And concerning those things which are in no wise in our power, we must make determinations; but of those things which rest in our choice, such as are good God primarily wills and holds as pleasing and acceptable."[1414] Here Damascene calls the antecedent and primary will of God, by which he wills all men to be saved and to attain glory, "good pleasure." Then he adds that the good things which are in our power, namely a tranquil and right life, are primarily willed by God and are pleasing; and they cannot be pleasing unless they are acceptable. Therefore, the will regarding them is not only of sign, but also of good pleasure. Wherefore, according to the sentence of Damascene, God has a will of good pleasure not only concerning glory, which is not in our power as our work even though by God's will it depends upon our merits, but also concerning those things

1411. 1 Timothy 2:1 - 4.
1412. 1 Thessalonians 4:3.
1413. Prosper of Aquitaine, De vocatione gentium II, c. 19 (alias 7) and c. 25 (alias 8).
1414. St. John Damascene, De fide orthodoxa II, c. 29 (near the end), on 1 Timothy.

which are in our power, as about good works and a right life; for he said that God's primary intention, which he calls good pleasure, is about both - about the things which are not in our power, and about the things which are placed within our choice.

But St. John Chrysostom speaks excellently, homily 1 on the Epistle to the Ephesians, where he distinguishes in God a primary and a secondary will in the same manner as Damascene distinguishes the antecedent and the consequent, and he expressly indicated that the will of which we now treat is a will of good pleasure by these words: "According to the purpose of his will, in which he took good pleasure; it is as when he would very much have it done: this was his desire - as if someone said, this was his will; for good pleasure (quod ipsi dicimus eudokia) is everywhere the principal will of God. For there is also another will of his; that first is the primary, according to which he does not will sinners to perish. There is also a secondary, according to which he wills those who persist stained in crimes to perish; for it is not necessity that chastises such with punishment, but will. We may see something like this in Paul; namely, when he said, 'I will that all men be as myself,' again, 'I will that younger women marry, bear children,' etc."[1415] Thus he clearly indicated that primary will and immense benevolence in God conjoined with ardent desire for us; for Chrysostom, having expressed that primary will with a double Greek term - eudokia, which signifies good will, or good pleasure, and eunoia, which among other things denotes a certain inclination or ardent affection - manifestly taught that that primary will truly is in God, is his good pleasure, and that it is vehement, as if it were some earnest striving; and hence he said that this eunoia signifies the mighty benignity of God conjoined with ardent desire. Who, then, would not see that all these things by no means can square with a mere will of sign, which is not truly in God?

But by reason also this our sentence is confirmed and more clearly set forth. For, if the salvation and eternal glory of men be considered in itself, and the observance of the precepts and a just life, it cannot but be pleasing to God. First, these things cannot be displeasing; next, regarding them God's will cannot be negatively disposed and, as it were, suspend every act - both which were demonstrated above in disp. 79. Therefore, regarding the salvation of men and a just life, there is in God not only a will of sign, but also of good pleasure; and, as we shall say in the following chapter, this will can rightly be called "desire," as Chrysostom called it. Nor are these objects pleasing to God only when considered under possible being, but also under future being. For it does not please God merely that man be able to keep the law, or be able to be glorified, but that he in fact keep it and be glorified is acceptable to God - not because any given man is de facto going to keep the law or to be glorified, but because this very thing, to keep the law and to be glorified, considered as if it were to be future, cannot but be pleasing to God. Wherefore, those who say that about these there is only a will of sign must needs say that these things are not pleasing and acceptable to God - a manifest absurdity. These points will be made more perspicuous in chapter 4.

Nor indeed is it to be inferred, from the passages of Augustine cited above, that he did not wish to concede this will of God regarding the salvation of all; but also that he did not rightly expound that passage of Paul by any one of those three modes. This is deduced by a single argument from

1415. St. John Chrysostom, Homily 1 on the Epistle to the Ephesians (on "secundum propositum voluntatis suae, in quo ipse beneplacuit").

the text itself. For the Apostle says that it is acceptable before God that all should lead a tranquil and right life, just as that all be saved; but above it was shown that God by a will of good pleasure wills that individual men live rightly; therefore, also, that they be saved. By this reasoning those three interpretations of Augustine are rejected. The third interpretation, namely, "He wills that they be saved, that is, he makes them to will," can be impugned on a special ground: because God does not make that individuals will to be saved and to lead a right life, as is well known; therefore we must fall back upon one of the two preceding senses, namely, either that he himself makes those to will to be saved whoever are saved, or that, as to the several conditions of men, he makes some to will to be saved; and so that third exposition cannot stand of itself.

Therefore the true interpretation of that passage is the one we have reported from Damascene and Chrysostom, and which the Scholastics above named follow: namely, that God wills the salvation and the just life of individual men. This is not understood by Paul - as some of the theologians alleged said - of a will of sign, because, to wit, he at least provides all with sufficient means to salvation, but, as Chrysostom, Damascene, and others whom I cited for the second opinion say, of a will of good pleasure. What the nature of that will is, and how it is not always fulfilled, will be explained in the next two chapters. And finally those two arguments by which the adversaries prove that there is not in God a will of good pleasure regarding the salvation of all will be refuted in chapter 5.

Why this will is called "antecedent."

Caput III - Why this will is called antecedent

It is a division familiar to theologians, that of will into antecedent and consequent, drawn indeed from Damascene and Chrysostom, as has been cited in the preceding chapter - a division most useful for this matter, and to be understood aright. For from the passages of the Fathers just cited, many have seemed to have slipped into some abuse...

Having first recalled their accepted accounts, it is finally worth the effort, following exactly the mind of Damascene, to disentangle the matter. First, those Scholastics listed in the preceding chapter who said that the will which God has touching the salvation of all is only a will of sign, not of good pleasure, and thus distinguish antecedent and consequent so that the former is of good pleasure, the latter of sign, are in error: besides the fact that their foundation is false, as was proved in the preceding chapter, this position also stands against the mind of Damascene and St. John Chrysostom, from whom the celebrated division was taken; and it does not rightly explain why one is called antecedent will and why the other consequent. For these terms are said relatively: antecedent with respect to something later, consequent with respect to something prior. Add that some will, indeed manifold will, which is of good pleasure, is also called antecedent, as will appear below; therefore that way of explaining the division must be rejected.

Second, the most commonly received explanation among more recent theologians is that antecedent will is the same as an inefficacious will, which is commonly called conditional, or velleity; but consequent is efficacious and absolute. Yet this explanation is commonly approved

without any foundation, on the sole ground that some antecedent will, such as is that of the salvation of men and their right life, is inefficacious, as we shall say below. For according to the mind of Damascene (who first received this division from Chrysostom and explained it for us), there is also an antecedent will which is efficacious and utterly absolute, such as is the will of prevening the man by the grace of calling. Moreover, although the will by which God of himself wills the salvation of all men is inefficacious, nevertheless it is by no means under a condition, but is truly an absolute will, although it includes something of a condition, as will be explained in the following chapter: therefore it must now be called not merely velleity but will.

Third, St. Thomas explains this division in three ways in this article, both by the example which he uses and by his doctrine, and he seems to have very well understood the mind of Damascene. He says, then, in the reply to the first objection, that antecedent will is that which is about a thing absolutely and as considered in itself; consequent, however, is that which is about a thing with some circumstance. He gives the example of a judge who, when he considers the man who has slain another or has stolen something, as such, does not will to punish him; indeed the man's punishment, as it is his evil, is most displeasing to him, especially if he be a son or a friend. Yet insofar as he considers his crime, he wills to punish him, and his punishment pleases him. Therefore that will by which the punishment of the man, considered in himself, displeases is antecedent; that, however, by which it pleases because of the crime, is consequent. It is called antecedent because it is about the state of the thing considered according to itself, which is prior; it is called consequent because it bears on the thing with a circumstance, which in this way is something posterior. According to this doctrine there will be called antecedent the will by which it displeases a merchant to throw his goods into the sea; but consequent that by which it pleases to throw them in because of danger to life. And although Damascene in De fide, chapter 29, called antecedent and consequent will of God only with respect to our will, nevertheless in the book against the Manichees he expressly has the doctrine of St. Thomas; therefore let us now set forth what the Fathers think about this matter.[141614171418]

Chrysostom indeed, who was first author of this division and set forth the example for us, did not explain why it is called antecedent, and why consequent: he only asserted a certain primary will, according to which God wills no one to perish; and a secondary, by which he wills those to perish who persist stained in sins. But Damascene, who received the division from Chrysostom and illustrated it by the same example, in a single word expressed the reason why it is called antecedent will and consequent, and since these are spoken relatively, he explained with respect to what they are said antecedent and consequent. "Antecedent," he says, "is the primary will flowing from God himself; that is, existing from God alone in such a way that it takes no occasion from our good or evil deeds. Consequent and secondary will (which he also calls permission) is that which has its rise from our fault." Where it must be observed that not only can that be called consequent which has some origin from our fault, but also that which arises from our good works - such as the efficacious

1416. St. John Damascene, De fide orthodoxa II, c. 29.
1417. St. John Damascene, Contra Manichaeos (near the end).
1418. St. Thomas, Summa theologiae I, q. 19, a. 6, ad 1.

will of giving glory - which he was unwilling to bring into the example, because glory itself is in a certain way willed by God by antecedent will; therefore, that he might assign an example of that which is in no way willed by antecedent will, he brought forward punishment, the will of which takes its whole occasion from us.

Again, he teaches that the punishment which he calls permission is willed by consequent will in a twofold way. For punishment is twofold: one is dispensatory and has the power of instructing, from which indeed God dispenses our salvation and instructs us that we may be more cautious - such is that which brings us to true repentance; the other is of the last punishment; and he says that both are of consequent will, that is, take their occasion from us. For God of himself does not will repentance any more than eternal punishment, but he wills both from us, that is, with fault supposed and foreseen; and on that account repentance is not a good simply, but in a case, or occasioned (as it is said), and similarly redemption: for these suppose fault and disease. From this doctrine it will be proved below in disputation 93 that the permission of sin is not willed by God out of an intention of repentance, and therefore does not pertain to the effect of predestination.

Moreover, the same Damascene, a little before the end of the book against the Manichees, distinguishes primary and secondary will, and explains both thus: "Primary will is that which one wills from himself; but secondary is that which one wills on account of things that happen." Here he defines the two wills from the very things willed; and he thus concludes, that in God the will of goodness, which is of doing good, is primary, because it takes no occasion from us; but the will of justice is secondary, which has its origin from us and from the occasion of those things which happen, namely sins. According to which definition antecedent and consequent will can bear not only on men, but also on all things according to various states, as St. Thomas says. Yet those wills which bear on us must be noted: for they will often come up in disputation. But how, when God is ready of himself to repay punishment to the evil and eternal life to the good, nevertheless he is not said to will by antecedent will punishment, just as he also wills eternal life, we shall say in the following chapter.[1417]

His addendum is what we shall also say in disputation 99, namely, that a third member of the will of God toward us can be distinguished, namely accompanying: thus that antecedent be that by which God, with no foreseen determination of our will, of himself alone wills something concerning us - and to this pertains the simple will of glorifying, insofar as it is on his side, and the efficacious will of calling and prevening by the grace of vocation; accompanying, however, be that by which he efficaciously decrees to concur with us unto the consent which we render to the calling grace; consequent, however, be that by which he now efficaciously decrees, from the foreknowledge of our works, either punishment or even reward. I said that that accompanying will and this consequent are efficacious: for if there be speech of the simple will, by the antecedent will and of himself alone God desires for us beatitude, and that we cooperate with his grace; and therefore, if it did not depend on us, he would concur with us; and this will, in this way, takes no occasion from us: wherefore Damascene not only counts among those things which God wills by antecedent will

1417. St. John Damascene, Contra Manichaeos (near the end).

those which are not in our power, but also those which are in our power, such as our works, as is plain from the words cited. That will, however, by which he efficaciously decrees to glorify us or to concur with us, takes its occasion from us, as will be explained in the same place.

Caput IV - In what way the will by which God has an antecedent will of the salvation of men is absolute, and nevertheless is not always fulfilled

Among antecedent wills, first it must necessarily be granted that there are some altogether absolute and efficacious, if we follow the explanation of Damascene and St. Thomas. For since, according to their opinion, antecedent will with respect to us is that which is from God alone and in no way has its origin from the occasion of our works, that will also will be antecedent by which God decreed to call us by this or that calling, which is altogether absolute and efficacious. For just as he willed to call from his own goodness alone, so also, with nothing hindering, he calls in time: nor does such a will of calling ever lack its effect; although the very calling does not always move our will. For the effect of the calling will is to call in time, at the moment that God has decreed to call. So also, if the opinion is true of some who say that God, before the foreknowledge of any merits, efficaciously decreed to give the glory of predestination, and from this will called, etc., similarly, with no foreplanned determination of human will, from his own goodness alone he determined the goods of his own works; and each will is to be called antecedent, because it has its origin from the will of God alone, not from us; and each will also will be altogether absolute and without any condition, and efficacious. But whether such a will exists in God or not will be amply disputed in disputations 89 and 90.

Moreover, we refute at the same time those who assert that God wills the salvation of all under the condition "if they themselves will."

Furthermore, as we shall show more fully in q. 13, a. 5, there can be no present act of will which cannot be expressed by an indicative verb; nor can it be expressed by the optative verb "I would will"; rather, if there be any act which is present, it is one which would otherwise be if the condition were posited. In any case, there is no present act of will which, as it is such, is not set upon its object as absolutely good, if it be of complacency; or as absolutely evil, if it be of displeasure. This I now show by an easy reason. For just as sight is not moved except to that which participates in the formal ratio of color or light, so neither is the will moved to that which does not in some way participate in the nature of the good; and thus the act of will is not elicited to that which does not participate absolutely in the nature of the good. And just as we say that sight would see something if it were colored, but when it is not colored it does not see nor does it have any act, so when there does not appear something that is good and as such apprehended, the will does not tend to it nor does it have any act with respect to it. In the same way too the intellect, unless it now apprehend some truth, cannot yield assent; he would yield it, if such a truth appeared.

Objicitur: it is objected that just as the intellect is borne toward a thing under a condition and has assent regarding it, so the will could be borne.

Solutio: I respond, first, that if the will or the intellect were borne to an act of each in the same way, then one ought to philosophize thus: that a present act of the intellect is not explained by an optative verb. Understanding is expressed by an indicative, "I understand"; so too the act of the will would be explained by "I will," not by "I would will"; for although "to understand" does not signify a now-existing act, neither does "to will." Then I say that when the intellect considers a thing under a condition, even there it finds its entity and its truth, and therefore it tends to it absolutely. First, there is truth in the connection of antecedent and consequent under a condition, which pertains to the object of the intellect; moreover, when it considers future possibilities and gives conditional assent about a future condition, it apprehends the entity of those things and in like manner represents it; and thus the will can in the present be borne to a thing in suchwise as that which in truth or in fact depends on a condition in the future, insofar as that, according to itself, is good and desirable; so that when they assert that God wills the salvation of all under the condition if they will, they are not indicating a present act of will, but rather a reasoned connection.

Now therefore the controversy is about that antecedent will alone by which God, from himself, wills the salvation of all men, even of the reprobate, and a tranquil life in piety and virtue; which by the consent of all is not efficacious, since in many it is not fulfilled: nevertheless it is not for that reason to be judged as lacking all effect.

Many Scholastics, especially the more recent, consider this to be conditional and they also call it velleity, because, they say, it is referred to an object not considered absolutely, but under a condition: for God desires the salvation and just life of all, if however they themselves will it; and since that object considered under a condition alone moves the will, the act which is in it is not absolute and perfect, but also under a condition; and they call that conditional will or velleity. And they are wont to explain this by the verb of the optative mood, "I would will." Thus Sotus seems to teach on Romans, chapter 9, in the disputation on this matter; and Corduba likewise, book 1, question 5 and question 6 at the beginning, calls it conditional will or velleity; indeed St. Thomas so calls it in the cited place in the reply to the first objection; to which Ambrose, Theophylact, and Oecumenius are also assimilated on that place: "Who wills all men to be saved," 1 Timothy 2; Prosper in the second book On the Vocation of the Gentiles; and Chrysostom, homily 1 on John, in expounding "He enlightens every man"; and Theophylact there.[1419][1420][1421][1422][1423][1424]

It can please, as if it were going to be in very deed; and in this way it can move the will to an act of simple complacency, which is rightly expressed by the verb of the indicative mood, "It pleases (Placet)," not by the verb of the optative alone, "It would please (Placeret)." But this is a simple affection of complacency, which nevertheless virtually contains an efficacious will, yet under a condition, as will soon be explained.

1419. Dominicus Soto, on Romans 9, in the disputation on this matter.
1420. Corduba, lib. 1, q. 5; q. 6 (at the beginning), in the disputation on this matter.
1421. St. Thomas, Summa theologiae I, q. 19, a. 6, ad 1.
1422. St. Ambrose; Theophylact; Oecumenius, on 1 Timothy 2:4.
1423. Prosper of Aquitaine, De vocatione gentium II.
1424. St. John Chrysostom, Homily 1 on John: "Illuminat omnem hominem."

Accordingly, for the sake of explaining this matter, note first that there is a twofold affection of the will. One is that of simple complacency or displeasure, which of itself is inefficacious, as when it displeases someone to throw the merchandise into the sea, and it pleases him to keep them, which nevertheless in fact he throws; and as it displeased Christ to die, and pleased him to preserve life according to itself, although in fact he willed to offer himself to death. Similarly must complacency be spoken of. The other is an affection of efficacious complacency, which so tends to the work as to effect it: such is the will of throwing the merchandise into the sea, and the will by which Christ offered himself to death. Therefore, when we say that God has a will of beneplacitum concerning the salvation of all, glory, justification, and a just life, we do not assert that it is a will and affection of the efficacious kind, but only of simple complacency and inefficacious; not only such as is borne toward all these things insofar as they are possible, but toward them also according to themselves, as if they were going to be and as if conjoined with men. For thus, just as they would please if present, they please when apprehended according to themselves as if they were going to be; and just as with respect to present things that complacency would be called delectation, so also with respect to future things it is called desire. And on that account the Chrysostom cited in cap. 2 said that there is a flaming desire of God concerning the salvation of all. For it is not of the notion of desire that it be of a thing truly future or thought to be future; for of those things which are not going to be, and are believed not going to be, there is wont to be desire. For one condemned to death, who most certainly believes it to be future, desires that it not be; whereas there is only hope of a thing which is thought and believed to be going to be. It is enough, however, if someone apprehends to himself some thing under the mode of the future, so that he can have desire for it. Thus we philosophize concerning God, who, although he certainly knows that many men are not going to be saved nor to live well, nevertheless their salvation and right life according to themselves, and apprehended as future, are pleasing and agreeable to him, so that he may be said, in a human manner, to desire them.

Secondly, for the explanation of this matter, it must be observed that the will of simple affection, concerning some possible thing, known as possible, is in us then inefficacious when the complacency is not of the thing according to every consideration, and some complacency of the opposite concerning the same thing under another consideration prevails and is greater - even if either part lies in our power, as we shall say below. Thus in Christ, to whom death displeased under one consideration, as it was an evil of nature, and under the same consideration life pleased, this complacency and displeasure was inefficacious, because it pleased more under another consideration to die, inasmuch as it was a remedy for the human race and for the praise of God. Therefore the desire of future life was only a simple affection, but the desire of death was greater; and consequently, contrary to that former, it was efficacious. The same is clear in him who throws the merchandise into the sea: it pleases him according to itself to keep the merchandise, and it displeases him to throw them away, but on account of the danger it pleases him more to throw them away. Therefore this latter will is efficacious; the former, however, is inefficacious.

In God we must understand similarly that one will of the same thing under one consideration prevails and is efficacious; but another concerning the same thing under another consideration is inefficacious, and remains as only simple complacency - not because in God there are various acts more or less intense, stronger and weaker; for he is his own most simple essence; but from the effect we philosophize thus, or for this reason we conceive God in a human mode: because, namely, we see that thing not to be done and yet nonetheless to please God. But this proceeds neither from coercion nor from impotence, but from the free will of God; which cannot be explained by us more fully in this life.

Thus therefore, since we see that the salvation of all and a life tranquil according to virtue please God, and nonetheless not all are saved, nor do all live rightly, although God could so dispose things that all should live rightly and be saved; consequently we say that that will concerning the salvation of all and a just life is only of simple complacency, but that another efficacious will of God has prevailed, whereby he willed to leave many men with those helps with which he knew they would not live rightly, and in the end would be condemned, and thus willed to put their liberty to the test. From this indeed, that he did not will to confer greater helps, with which he knew they would act well, it is not concluded that he did not will, or that the salvation and right life of those men displeased him absolutely, as remains explained. Thirdly, for the sake of greater perspicuity it must be noted that the will of simple affection, which under the aspect of complacency is in itself absolute and is explained by indicative words, "It pleases" and "He wills," and deals with a thing without condition and good according to itself, is of such a nature that it virtually contains an efficacious will, which is not an act, yet would be if the condition were posited; and from this side it can be called conditional - not because it is actually borne to the object under a condition, but because from that [simple] will which is present another [will] would arise, if the condition were posited in the object. This is manifest in the same examples. For thus life pleased Christ, and death displeased according to itself, so that, if the precept did not stand in the way, an efficacious will would arise therefrom, or even that very [simple] will would be efficacious, to avoid death and to preserve life. On account of this efficacious will, which is virtually contained in the simple affection and would then exist, we say that Christ would will not to die and to will to live, and would pursue the means to avoid death, unless the precept of dying were imminent. And similarly, he who wills to throw the merchandise would efficaciously will to keep them, unless the peril, which moves more, were present. In the same way God thus by a simple affection wills our salvation, and it so pleases him that, unless sins stood in the way, he would efficaciously will it; and thus even now a life according to virtue and the observance of the precepts are received by simple complacency, so that, if we were willing to respond to the grace that calls, he would efficaciously will to cooperate with us. Therefore, by reason of this will implicit under a condition, we say that God has a conditional will, or (as they say) a velleity; although, considered in itself with respect to these objects taken according to themselves, it is absolute, as has been explained.

Fourthly, finally it is gathered that there is nothing absurd if we say that some absolute will of God, of only simple complacency and inefficacious, is not fulfilled. For from the fact that something pleases God, it is not at once necessary that it be done; just as, on the contrary, sins when done

supremely displease God, and nonetheless are done. But it would be absurd to concede in God a will and efficacious purpose of doing some thing which would have no effect; for that would argue impotence in God. However, that simple affections are not always fulfilled - indeed that some things are done contrary to such a will - implies no imperfection in God. Moreover, from this there is only inferred that God works thus together with the liberty of rational creatures, such that things which are pleasing to him are not of necessity to be attained. Likewise, although he desires by simple affection that the precepts be observed by men, he does not nevertheless efficaciously will to concur with them, when they are unwilling to respond to the gracious call. Hence, from the fact that they do not observe the law, there follows that which displeases God, the opposite of which pleases him.

Caput V - The arguments of the prior opinion are dissolved

Lastly, from the foregoing doctrine the two arguments adduced in the first chapter, by which the adversaries tried to prove that there is in God no will of good pleasure concerning the salvation of all and a right life, are easily dissolved. The first is framed thus: when someone can save another and does not save him, he is convicted of not willing to save him; but God can save all and does not save all; therefore He does not will to save them all.

That we gladly grant. But from this it does not follow that in God there is no will of good pleasure (beneplacitum), and that there is only a will of sign (voluntas signi) concerning the salvation of all. For it often happens that, together with some will of simple complacency (complacentia), or of displeasure, which is a will of good pleasure and not only of sign, someone does not in fact do that which he desires, nor shun that which displeases, even though he can: because he desires it only under one aspect, not under every aspect; and that will is hindered by another contrary, greater will, so that it has no effect. Thus, one who wills to throw merchandise into the sea has the will of retaining them, and desires to preserve them, and can preserve them; it also displeases him in itself to throw them away, and he can refrain from throwing them away; and yet he does not retain them, but throws them away. Similarly, life pleased Christ, and death displeased him in itself; and yet he neither fled death nor preserved life. And although, because a precept was standing, which he could not transgress, he could not flee from death; nevertheless, even if there were no precept, and he were free to do so, he would not flee: because for another reason it pleased him more to die than to live. Therefore, about God one must philosophize in the same way, as we set out above, saving, however, all imperfections, as was explained.

The second argument is this. Such an inefficacious will is imperfect; therefore it is not to be conceded. I answer that this will has no imperfection when one is not bound to have it be efficacious, and for a just cause does not have it efficacious. Wherefore there is no reason why we should not grant to God a similar affection of simple complacency and of good pleasure for a just cause.

A doubt is proposed. But someone will ask: if God denied sufficient helps (auxilia) to some - just as Gregory thinks in the First Book of the Sentences, distinction 46, the sole question, and perhaps St. Augustine also, as we shall say in disputation 97 - could we still attribute to God this will of simple complacency concerning the salvation of all men? I answer that nonetheless it would be the case that in God there would remain the will of good pleasure: for it always pleases God according to itself that men be saved, although it does not please him with a consequent will because of sin. It also pleases God according to itself that any man whatsoever, however destitute he be of the help of grace, live rightly; but whether in fact he confers to all the helps necessary for this, we shall say in the place indicated. We do not say that the salvation and the right life of men please God only insofar as he gives them aids. From the mere fact, however, that he grants helps, and that they are a cause of such an effect, we do not straightway infer that God gives the helps with the intention that man respond. For he himself makes rational nature, which he knows will sin; he also offers occasions and thoughts, from which he knows sin will be in the future; and yet we do not gather from this that he offers them with the intention of sin. We therefore say that God for this reason confers helps with the intention that men respond, because the response according to itself pleases him, and such help by its own nature is ordered to this end, which according to itself pleases God; but because sin displeases God, although he offers occasions and thoughts, it cannot be said that he offers them with the intention that sin should follow. Therefore, since the salvation of man according to itself, and a just life, always please God, even if he were not to confer the means necessary for this end, that antecedent will would remain in God, but in such a way that it would not move him to the means: which happens in us commonly, although for another reason, as is clear from the examples adduced above. For the man who throws out his merchandise does not apply any means to preserve them, although he desires them to be preserved; nor did Christ apply means to live, although it pleased him to live.

Objicitur: But you will object: Just as it pleases God to glorify the just, so also it pleases him to punish the wicked: therefore just as by an antecedent will he wills to make men saved, so also he wills to punish; or, just as that will is consequent, so also will be the will of glorifying. I answer that the difference is manifest. For glory, according to itself, as it is the good of man, pleases God, without considering anything on the part of man; but punishment, according to itself, as it is the evil of man, does not please God, but only insofar as it is the just vindication of sin: and therefore, unless guilt is foreseen, God wills punishment for no one. But before merits are foreseen, of himself alone God desires that men attain beatitude; indeed he even desires that they have merits unto this. This will, therefore, is rightly called antecedent, or primary, having its origin from God alone; whereas that other is consequent, or secondary, drawing its origin from our vice.

Finally, some Scholastics raise a common doubt whether the things which are done against the will of God - such as sins - somehow obey God and his will and providence, or not. Durandus answers that in two ways they can serve God and obey him: first, as matter, just as stones and timbers serve the craftsman for building a house; then, as a secondary agent, as the hand serves for working, and subordinate ministers who execute what the architect ordains. This being supposed, he first teaches that the things which are done against God's antecedent will can obey the

consequent will, and, as matter, serve divine providence: for sins are the matter of divine justice and of punishment, which belong to the consequent will; whereas they were against the antecedent. Secondly, he teaches that in a sin which is from its genus a sin, and is against the antecedent will, the human will does not subserve the divine will as a secondary agent: because God in no way cooperates to sin, nor does the human will do it together with God. He thinks, in fact, that God does not even cooperate to the material of sin in those things which are from their genus sins. Thirdly, he maintains that in a sin which is not from its genus a sin, but from the circumstance of the end, the human will somehow subserves, or cooperates with, the divine will with respect to the substance of the work, not with respect to the evil circumstance of the end. This is Durandus's view.[1425]

A truer reply. I, however, think that sins are not to be distinguished as from their genus or from their circumstance; but that in every sin God cooperates to the substance of the work according to the essence (*essentia*) of nature - as we shall expressly prove against this same Durandus in the Prima Secundae, question 79, article 1 - whereas to the moral malice he in no way cooperates: and thus our will does in some manner subserve the divine in producing the substance of the act - not because it has a precept from God to do that; for this cannot be - but because by its liberty it works together with God, who also concurs to it.

Articulus VII - Whether the will of God is mutable

To the seventh we proceed thus. It seems that the will of God is mutable.[1426]

1. For the Lord says in Genesis 6: "It repents me that I have made man." But whoever repents of what he has done has a mutable will; therefore God has a mutable will.[1427]
2. Moreover, in Jeremiah 18 it is said in the person of the Lord: "I will speak against a nation and against a kingdom, to pluck up and to pull down and to destroy it; but if that nation repents of its evil, I also will repent of the evil that I thought to do to it." Therefore God has a mutable will.
3. Moreover, whatever God does, he does voluntarily; but God does not always do the same things. For at one time he commanded the legal observances to be kept, at another time he forbade them. Therefore he has a mutable will.
4. Moreover, God does not will what he wills by necessity, as was said above. Therefore he can will and not will the same thing. But whatever has potency toward opposites is mutable. Just as what can be and not be is mutable as to substance, and what can be here and not be here is mutable as to place. Therefore God is mutable as to will.

1425. Durandus, in dist. 47, q. 2.

1426. See 1, dist. 39, q. 1, a. x, cor., etc.

1427. See St. Thomas, Summa Theologiae I, q. 19, a. 7, ad 3 - 4; Summa contra Gentiles I, c. 25 (end), and III, c. 98 (end); and later I, q. 30, a. 15.

But on the contrary is what is said in Numbers 23: "God is not as a man, that he should lie, nor as the son of man, that he should be changed."

I answer that the will of God is altogether immutable. But concerning this it must be considered that to change the will is one thing, and to will some change of things is another. For one may with the same will, remaining altogether unmoved, will that now this happen, and later its contrary. But then the will would be changed if someone were to begin to will what previously he did not will, or were to cease willing what he willed. And this indeed cannot occur unless a change is presupposed either on the part of the cognition, or with respect to the dispositions of the substance itself.

Now, since will is of the good, one can begin to will something anew in a twofold way. In one way thus, that he begin anew to judge that thing to be good for himself; and this is not without a change in him - just as when cold arrives, it begins to be good to sit by the fire, which before it was not. In another way thus, that he newly come to know that that is good for him, whereas before he was ignorant of this. For to this end we take counsel, that we may know what is good for us. But it has been shown above that both the substance (*substantia*) of God and His knowledge (*scientia*) are altogether immutable; whence it is necessary that His will (*voluntas*) be altogether immutable.

Reply to the first: The word of the Lord is to be understood metaphorically, according to a likeness taken from us. For when we repent, we destroy what we have done - although this can be without a change of will, since even some man, without any change of will, may will to do something while at the same time intending afterwards to destroy it. Thus, therefore, God is said to have repented according to a likeness of operation, inasmuch as He blotted out by the flood from the face of the earth the man whom He had made.

Reply to the second: The will of God, since it is the first and universal cause, does not exclude intermediate causes, in whose power it lies that certain effects be produced. But because all the intermediate causes do not equal the power of the first cause, many things are in the power, knowledge, and will of God which are not contained under the order of inferior causes, as is the raising of Lazarus. Hence someone, looking to the inferior causes, could say, "Lazarus will not rise"; but looking to the first divine cause, he could say, "Lazarus will rise." And God wills both of these, namely, that something sometimes be future according to the inferior cause, which nevertheless is not future according to the superior cause, and conversely. Thus it must be said that God in some manner pronounces something to be future according to what is contained in the order of inferior causes - e.g., according to the disposition of nature or of merits - which nonetheless does not come to pass, because otherwise it is in the superior, divine cause. Thus when He foretold to Hezekiah, "Set your house in order, for you shall die and not live" (Isa. 38), yet it did not so happen, because from eternity it was otherwise in the divine knowledge and will, which are immutable. On which account St. Gregory says that God changes the sentence, yet He does not change the counsel, namely, of His will. Therefore, when He says, "I will do penance," this is understood to be said metaphorically: for men, when they do not fulfill what they have threatened, seem to repent.[1428]

1428. St. Gregory, Moralia, book 20, chapter 23, in medio.

Reply to the third: From that reasoning it cannot be concluded that God has a mutable will, but only that He wills a change.

Reply to the fourth: Although for God to will something is not absolutely necessary, yet it is necessary ex suppositione, on account of the immutability of the divine will, as was said above.[1429]

Explanation and confirmation of the article.

The conclusion of the article is this: The will of God cannot be changed; and this is to be understood not only of the will by which He necessarily loves Himself and possible creatures, but also of that will by which from eternity He freely decreed to produce creatures. Now this conclusion is of faith from Scripture: Numbers 23: "God is not as man, that he should lie, nor as the son of man, that he should be changed"; Proverbs 19: "Many thoughts are in the heart of a man; but the will of the Lord abides forever."

And hence, whenever in some prophecy the sentence of God is contained which is afterwards changed, it must be understood that it was only comminatory, and that there was not some determined decree in God, nor an efficacious will of good pleasure, but only a will of sign; and about such there is not to be understood a necessary conclusion.

That doctrine is without controversy. But to prove the article's conclusion by a certain reasoning is not so easy; wherefore the Doctors do not agree in assigning it. St. Thomas thus proves it: A change of will can occur under one of two heads: either because the disposition of the one willing is changed - as when fire begins to be good for someone because he grows cold, which before was not good; or because he begins to know something in the object which he previously did not know, and thus his cognition is varied. And both these changes can be reduced to a change of cognition. But neither can God's substance be varied by any disposition, as was demonstrated in Question 9, nor can His knowledge, as we proved in Question 14, article 16. Therefore neither can His will be changed. Concerning this reasoning a doubt is raised by Cajetan in this article; but it is of slighter moment, and he himself easily solves it, and so I pass it over.

But far more efficaciously one can object against this reasoning: for in God there might be diverse wills without its being necessary that the disposition of His substance be varied, nor the knowledge He has of things. Rather, He remains in the same disposition, and knows in every way the same - cognizing creatures under possible existence - before He determined anything concerning them; just as, while He willed that sin would be, so He could have willed it not to be; and so with other things. Therefore, with no variation made either of disposition or of knowledge, solely by His liberty there could be in Him a different will from that which now is. And if from eternity there could have been such, why, without any change of disposition and knowledge, by His liberty alone could there not also in time begin another will than that which was from eternity? In us indeed, just as there could not have been from the beginning of our being some cognition different from what there was, unless from the beginning there had been another cognition in some way diverse, so also it is not surprising if in time volition cannot be changed unless in some way the cognition be changed. Therefore there is a different ratio of our will and the divine.

1429. See above, this question, art. 3.

Ferrariensis, in Contra gentes, cap. 87, proves that the will of God cannot be changed, because if it were changed there would cease to be in God some act which before was; which cannot be without an intrinsic change of Himself. But this has seemed somewhat probable to some; yet besides that Ferrariensis is not here sufficiently consistent with himself - since, as we noted in Disputation 80, cap. 2, he esteems the free act of will in God to be nothing other than the substance of God with only an added respect of reason to creatures, and therefore, in his view, by a mere change of a respect of reason the will of God would be changed - there follows also against him the same absurdity that we above inferred against Cajetan: namely, that there would be in God something formally so free that it could from eternity not have been.

Therefore, supposing the doctrine delivered by us in that disputation - which I think must necessarily be conceded - the article's conclusion can be demonstrated by another easier a posteriori reasoning, the very reasoning by which we proved the same thing above concerning the knowledge of God (q. 14, a. 16). For although the will of God, as free with respect to producing things, adds nothing over and above the essence except a respect of reason, and with this respect the essence is said to be the free will of producing creatures; and hence, if from eternity God had decreed to produce creatures, to Him there would be nothing except that respect of reason; nevertheless in time the will cannot be changed, nor that respect of reason, but if such a respect ought to be in God, from eternity it ought to be - just as we were saying about knowledge, not because any intrinsic change would follow in God, nor even in knowledge itself (which precedes the will), if the respect could be changed in time; but because, since future things are from eternity future, and nothing can in time begin to be future, it follows of necessity that the respect to things to be produced cannot in time begin; just as the thing to be produced, and to be future, cannot in time begin to be future.

A doubt is raised here by Cajetan: after God from eternity willed to produce something, does there remain in Him a potency not to produce, or not to will to produce, since His will cannot be changed? He himself replies, and Ferrariensis likewise (Contra gentes, c. 83), that there does not remain a physical potency, because there is not in act a potency which physically could will the opposite; yet there remains a logical potency, since of itself it is not repugnant that the divine will should will the opposite. Others, however, teach that there remains even a physical potency, because a physical potency is not destroyed by its own act: wherefore, just as the potency which produced something is said to remain although it cannot produce it again, so too in God there remains a physical potency of willing the opposite of what He has willed.

This indeed is true in this sense - and Cajetan did not deny it - namely, that the real power always remains; but not with the habitude to that which it has produced, so that it could produce it again. And in the same way there remains in God His essence, which is the very power of the will for willing; but not with the habitude to the opposite, so that He could now will it.

Further, someone proves thus that the will of God imposes necessity on what He wills: because this conditional is true, "If God wills something, it is"; but every true conditional is necessary. Therefore it follows that everything which God wills is absolutely necessary.

But on the contrary: All the goods that come to be, God wills to be done. If, then, His will imposes necessity on the things willed, it follows that all goods come about by necessity. And thus free choice, and counsel, and all such things perish.

I answer that the divine will imposes necessity on certain things willed, but not on all. Some have wished to assign the reason of this from intermediate causes: because those things which He produces through necessary causes are necessary; but those which He produces through contingent causes are contingent. Yet this does not seem sufficient for a twofold reason. First, because the effect of some first cause is contingent by reason of a second cause in this way: that the effect of the first cause is impeded through the defect of the second cause - thus the power of the sun is impeded on account of the defect of the plant. But no defect of a second cause can impede the divine will from producing its effect. Second, because if the distinction of contingent and necessary were referred only to second causes, it would follow that this were outside the divine intention and will, which is unfitting. And therefore it is better to say that this happens on account of the efficacy of the divine will. For when a cause has been efficacious for acting, the effect follows the cause not only as to that it is, but also as to the mode of its coming-to-be, or of its being. Hence it comes about that, of the things which God wills, some happen necessarily and others contingently, according as He willed them to be or to come about either necessarily or contingently.

Articulus VIII - Whether the will of God imposes necessity upon the things willed

It is asked whether the will of God imposes necessity on the things willed.

It seems that the will of God does impose necessity on the things willed.

1. For St. Augustine says in the Enchiridion: "No one is saved unless God wills him to be saved. And therefore He is to be asked that He will it, because if He wills it, it is necessary that it be done." Therefore the will of God imposes necessity on the things willed.
2. Further, every cause which cannot be impeded produces its effect of necessity: because nature and art, operating in the same way, do not fail unless something impede, as is said in Physics II. But the will of God cannot be impeded, as the Apostle says in Romans: "Who resists His will?" Therefore the will of God imposes necessity on the things willed.
3. Further, that which has necessity from a prior has necessity absolutely. Thus moral necessity, since it is from something prior, is not necessary absolutely, because it is compounded of contraries. But things created are compared to the divine will as to something prior, just as something prior is that from which another has necessity. Therefore the divine will imposes necessity on the things willed.

But on the contrary: All the goods that are done, God wills to be done. If, therefore, His will imposes necessity on the things willed, it follows that all goods come about by necessity. And so free choice, and counsel, and all such things perish.

I answer that the divine will imposes necessity on certain things willed, but not on all. Some have wished to assign the reason of this from intermediate causes: because those things which He produces through necessary causes are necessary, but those which He produces through contingent causes are contingent. Yet this does not seem sufficient, for a twofold reason. First, because the effect of some first cause is contingent on account of a second cause, insofar as the effect of the first cause is impeded through the defect of the second cause - thus the power of the sun is impeded by the defect of the plant. But no defect of a second cause can impede the divine will from producing its effect. Second, because if the distinction of contingent from necessary were referred only to second causes, it would follow that this lay outside the divine intention and will, which is unfitting. And therefore it is better to say that this happens on account of the efficacy of the divine will. For when a cause has been efficacious for acting, the effect follows the cause not only as to that it is, but also as to the mode of coming-to-be or of being. Hence it comes about that those things which God wills occur either necessarily or contingently, according as He has willed them to be or to come about necessarily or contingently.

Others' solution. They say that, although God cannot physically will the opposite, nevertheless there would remain a logical potency; for in itself it is not repugnant that the divine will should will the opposite. Others indeed say that even a physical potency remains, since a physical potency is not destroyed by its proper act; wherefore, just as a potency which has produced something is said to remain, although it cannot produce it again, so in God there remains the physical potency of willing the opposite of what He willed. This is true for this reason, nor did Cajetan deny it, because a power indeed always remains, but not with an aptitude to that which it produced, so that it could produce it again. And in the same way in God His essence remains, which is the very power of the will to will; but not with an aptitude toward the opposite, so that He could now will it.

Thus one proceeds. It seems that the will of God imposes necessity upon the things willed. For St. Augustine says in the Enchiridion: "No one is saved unless the one whom God wills to be saved." And therefore He must be asked to will it, because it is necessary to be done, if He will have willed it."[1]

1. Further, every cause which cannot be impeded produces its effect of necessity; for nature always operates the same unless something impedes, as is said in Physics II.[2] But the will of God cannot be impeded, for the Apostle says to the Romans 9: "For who resists His will?" Therefore the will of God imposes necessity upon the things willed.
2. Further, that which has necessity from a prior is necessary absolutely. Thus for an animal to die is necessary, because it is composed of contraries. But created things are related to the divine will as to something prior, from which they have necessity; since this conditional is true: If God wills something, it is. But every true conditional is necessary. Therefore it follows that whatever God wills is absolutely necessary.

But on the contrary: All the good things that are done, God wills to be done. If therefore His will imposes necessity on the things willed, it follows that all goods occur of necessity. And thus free choice, counsel, and all things of this sort perish.

I answer: One must say that the divine will does impose necessity upon some things willed, but not upon all. Some wished to assign the reason for this from the intermediate causes: because the things which He produces through necessary causes are necessary; but the things which He produces through contingent causes are contingent. But this does not seem to be said sufficiently for two reasons. First, because the effect of a first cause is contingent on account of a second cause, from the fact that the act of the first cause is impeded by the defect of the second cause - thus the power of the sun is impeded by the defect of a plant. But no defect of a second cause can impede the divine will from producing its effect. Second, because if the distinction of contingent from necessary were referred only to second causes, it would follow that this lay outside the divine intention and will, which is unfitting. And therefore it is better to say that this happens on account of the efficacy of the divine will. For when a cause has been efficacious for acting, the effect follows the cause not only as to that it is, but also as to the mode of coming-to-be or of being. Hence it comes about that those things which God wills occur either necessarily or contingently, according as He has willed them to be or to come about necessarily or contingently. Hence He fitted necessary causes, which cannot fail, to certain effects, from which effects follow of necessity; but to other effects He fitted contingent, defectible causes, from which effects occur contingently. Therefore the effects willed by God occur contingently not because the proximate causes are contingent, but because God willed them to occur contingently and prepared contingent causes for them.

Reply to the first: By that word of Augustine necessity in the things willed by God is to be understood not as absolute, but as conditional. For it is necessary for this conditional to be true: If God wills this, it is necessary that this be.

Reply to the second: From this very fact that nothing resists the divine will, it follows not only that the things which God wills to be done are done, but also that they are done contingently or necessarily, as He wills them to be done.

Reply to the third: Posterior things have necessity from prior things according to the mode of the priors; whence also the things which are done by the divine will have such necessity as God wills them to have, namely either absolute or only conditional. And thus not all things are absolutely necessary.

Conclusion: The will of God imposes no necessity upon our free choice; and this is of faith, as is deduced from the things we have said in disputation 68, chapter 1, where we proved that we act so freely that neither by any internal nor by any external necessity is our liberty impaired. But, as we showed there, the knowledge of God fits rightly with our liberty: so here it had to be shown likewise about the will of God, which indeed fits with our liberty.[3]

Articulus IX - Whether the will of God is of evils.

Thus to the ninth one proceeds. It seems that the will of God is of evils. For every good that is done, God wills; but that evils be done is a good. St. Augustine says in the Enchiridion: "Although those things which are evils, insofar as they are evils, are not good; nevertheless that not only they be good, but also that they be evils, is a good."[4] Therefore God wills evils.

1. Further, Pseudo-Dionysius says in On the Divine Names, chapter 3: "There will be evil for all," that is, contributing to the perfection of the universe.[5] And Augustine says in the Enchiridion: "From all things is woven together the admirable beauty of the universe; in which even that which is called evil, being well ordered and set in its place, commends goods more eminently, so that they please more, and are more praiseworthy when they are compared with evils." But God wills all that pertains to the perfection and adornment of the universe, because this is what God chiefly wills in creatures. Therefore God wills evils.[6]
2. Further, "that evils be done" and "that evils not be done" are contradictorily opposed; but God does not will that evils not be done, because since some evils are done, the will of God would not always be fulfilled if He willed that evils not be done. Therefore God wills that evils be done.

But on the contrary is what St. Augustine says in the book of 83 Questions: "By no wise man as author does a man become worse." But God is more excellent than any wise man; much less therefore, with God as author, would someone become worse: yet a thing is done by an author when it is done with him willing. Therefore, if God does not will it, a man does not become worse. But it is certain that by every evil someone becomes worse. Therefore God does not will evils.[7]

I answer: Since the ratio of the good is the ratio of the appetible (as said above), but evil is opposed to the good, it is impossible that some evil, insofar as it is such, be desired either by natural appetite, or animal appetite, or the intellectual appetite which is the will. Nevertheless some evil is desired per accidens, insofar as it is conjoined to some good. And this appears in every appetite. For a natural agent does not intend privation or corruption, but the form to which is conjoined the privation of another form; and the generation of one thing, which is the corruption of another. For the lion killing the deer intends food, to which is conjoined the killing of the animal. Likewise the fornicator intends pleasure, to which is conjoined the deformity of guilt. But the evil which is conjoined to some good is the privation of another good. Therefore an evil would never be sought, not even per accidens, unless the good to which the evil is conjoined were more sought than the good which is deprived through the evil. But God wills no good more than His own goodness. He does, however, will some good more than some other good. Hence the evil of guilt, which deprives the order to the divine good, God in no way wills; but the evil of natural defect or the evil of punishment He wills, by willing some good to which such evil is conjoined. Thus, by willing justice, He wills punishment; and by willing the order of nature to be preserved, He wills that certain things be corrupted naturally.

Reply to the first: Certain persons said that, although God does not will evils, He nevertheless wills that evils be or be done, because, although evils are not good, still that there be evils or that they be done is good. But this is not rightly said, because evil is not ordered to good per se, but per accidens. For it is outside the intention of the sinner that from this there should follow some good; as it was outside the intention of tyrants that, from their persecutions, the patience of the martyrs should be made manifest. And therefore it cannot be said that such an order to good is imported by this, that it is said that it is good that evil be or be done; because nothing is denominated according to that which belongs to it per accidens, but according to that which belongs to it per se.

Reply to the second: Evil does not work to the perfection and beauty of the universe, except per accidens, as has been said. Whence also that which Pseudo-Dionysius says, that "evil contributes to the perfection of the universe," concludes by inducing, as it were, an incongruity.

Reply to the third: Although "that evils be done" and "that evils not be done" are contradictorily opposed, nevertheless "to will that evils be done" and "to will that evils not be done" are not contradictorily opposed, since both are affirmative. God therefore neither wills that evils be done, nor wills that evils not be done; but He wills to permit evils to be done. And this is good.

Exposition of the article. The conclusion of the article is: The will of God is not the fault of evils; it is, however, the punishment of evils. The conclusion is of faith, as will be more broadly proved at I-II, q.79, a.1. But for the explication of the article, Cajetan notes very well that by the name "will" St. Thomas does not understand the faculty itself of willing, nor the act of will in general: for in both ways the will of God is occupied about evils - sins are displeasing to God; and so the divine essence, conceived under the mode of an appetitive faculty, has some act about sins, namely of hatred and displeasure, nor does it comport itself merely negatively toward them. St. Thomas, therefore, understands, as Cajetan says, by "will" the act of complacency and prosecution, which they commonly call affirmative. Moreover, St. Thomas proves that God does not will the evil of guilt because the will cannot be borne toward evil as evil; therefore neither can the will of God be borne toward sin. Concerning that proposition, namely how the will cannot be borne toward evil, we shall speak at greater length at I-II, q.8. Then Cajetan here discusses St. Thomas's reason, how sin is a privation of God; of which there must be exact treatment at I-II, q.71, a.2 and a.6.[8]

Articulus X - Whether God has free choice.

Thus to the tenth one proceeds. It seems that God does not have free choice. For St. Jerome says in a Homily on the Prodigal Son: "God alone is He in whom sin does not fall, nor can fall; other things, since they are of free choice, can be bent to either part."[9]

1. Further, free choice is a faculty of reason and will, by which the good and the evil are chosen; but God does not will evil, as was said above. Therefore free choice is not in God.

But on the contrary is what St. Ambrose says in the book On the Faith: "The Holy Spirit divides to each as He wills" (1 Cor 12:11), "by the free decision of His will, not by the service of necessity."[10]

I answer: We have free choice with respect to those things which we do not will by necessity, nor by natural instinct. For it does not pertain to free choice that we will to be happy, but to natural inclination. Whence other animals also, which are moved to something by natural instinct, are not said to be moved by free choice. Since therefore God wills His own goodness by necessity, but other things not by necessity (as was shown above), with respect to those things which He does not will by necessity, He has free choice.

Reply to the first: Jerome seems to exclude free choice from God not simply, but only as to this, that is, so far as to be turned aside into sin.

Reply to the second: Since the evil of guilt is said by an aversion from the divine goodness, by which God wills all things (as was shown above), it is manifest that it is impossible that He will the evil of guilt. And yet He comports Himself toward opposites, insofar as He can will that this be, or not be. Thus also we, without sinning, can will to sit, and can not will to sit.

Note concerning the article. The conclusion is affirmative, and sufficiently clear from the things which we said above in disputation 79. Concerning the faculty of free choice St. Thomas treats below at q.83, a.5, whether it pertains to the intellect, or to the will, or to both together.[11]

Regarding the reply to the first, only this is to be noted - how those things agree which St. Thomas teaches here and below at q.62, a.8: for to that he plainly consents, that there is truly liberty in this, that man can sin; the same is handed down by St. John Damascene, De fide, chapter 27. Yet in this reply the holy Doctor sets the ability to sin as a defect of liberty. Both, however, must be reconciled in this way: that to be able to sin is a certain part of liberty; and thus, as regards the extension of objects, there is, in him who can sin, a liberty that ranges more widely than in him who cannot; but the liberty of him who cannot sin is simply more perfect. And therefore that ability is called a defect, that is, an imperfection of liberty, as many holy Fathers speak. Wherefore, in him who cannot sin there is the greater liberty, that is, the more perfect - though not the greater according to extension.

The tenth is proceeded thus. It seems that God does not have free will. St. Jerome says in the Homily on the Prodigal Son: "God alone is he in whom sin does not fall, nor can it fall; whereas the rest, since they are of free will, can be bent to either part." Therefore, since in God there is no being bent to either part, free will is not in God.

1. Moreover, free will is the faculty of reason and will by which good and evil are chosen; but God does not will evil, as has been said. Therefore free will is not in God.

But on the contrary: St. Ambrose says in the book On the Faith, "The Holy Spirit divides to each as he wills," that is, by free choice of the will, not by the constraint of necessity.

I answer that free will we have with respect to those things which we do not will of necessity or by natural instinct. For it does not pertain to free will that we will to be happy, but to natural instinct. Whence also the other animals, which are moved to something by natural instinct, are not said to be moved by free will. Therefore, since God wills his own goodness of necessity, but other things not of necessity, he has free will with respect to those things which he does not will of necessity.

Note: What St. Thomas teaches here and below at q.62, a.8, must be reconciled as follows. In one place he plainly concedes that liberty truly consists in that by which man can sin; the same is handed down by St. John Damascene, De fide, c.27. But in the other solution he teaches that this is rather a defect of liberty. Both should be reconciled in this way: that to be able to sin is a part of liberty; and thus, as to extension, there is greater liberty in him who can sin than in him who cannot; but that is imperfect liberty, and therefore is called a defect, that is, an imperfection of liberty, as many holy Fathers speak. Wherefore, in him who cannot sin there is the greater liberty, that is, the more perfect - though not the greater according to extension.

Articulus XI - Whether in God the will of sign ought to be distinguished

The eleventh is proceeded thus. It seems that in God a will of sign (*voluntas signi*) ought not to be distinguished. For just as the will of God is the cause of things, so also is knowledge. But no signs are assigned on the part of the divine knowledge. Therefore neither ought any signs to be assigned on the part of the divine will.

1. Moreover, every sign which does not agree with that of which it is the sign is false. If therefore the signs which are assigned concerning the divine will do not agree with the divine will, they are false; but if they do agree, they are superfluously assigned. Therefore there ought not to be any signs assigned concerning the divine will.

But on the contrary: The will of God is one, since it is the very essence of God; yet sometimes it is signified in the plural, as when it is said, "Great are the works of the Lord, sought out according to all his wills" (Ps 110[111]:2). Therefore it is necessary that sometimes a sign of will be taken for will.

I answer that in God some things are said properly, and some metaphorically, as has been made clear above.[1430] Now when certain human passions are assumed into the divine predication metaphorically, this is done according to a likeness of effect: namely, that which is a sign of such a passion in us is metaphorically signified in God by the name of that passion. Thus, since among us those who are angry are wont to punish, for this reason the punishment itself is a sign of anger. And on this account the punishment itself is signified by the name of anger when it is attributed to God. Likewise, that which is wont to be in us a sign of will is sometimes metaphorically called will

1430. See above, q.13, a.3, especially.

in God. For instance, when someone commands something, it is a sign that he wills that it be done. Whence the divine precept is sometimes metaphorically called the will of God, according to that of Matthew 6: "Thy will be done, as in heaven and on earth."

But this differs between will and anger: anger is never said properly of God, since in its principal concept it includes passion; whereas will is said properly of God. And therefore in God the will that is properly said is distinguished from that which is said metaphorically. The will properly so called is named the will of good pleasure (*voluntas beneplaciti*). The will metaphorically so called is the will of sign (*voluntas signi*), because the sign itself is called "will."

Reply to the first: Knowledge is not the cause of those things that are done, except through will. For the things we know we do not do unless we will. And therefore a sign is not attributed to knowledge as it is attributed to will.

Reply to the second: The "wills" which are called signs of will are called "divine wills" not because they are signs that God wills, but because those things which in us are wont to be signs of willing are in God called "divine wills." Thus punishment is not a sign that there is anger in God; but punishment, from the very fact that in us it is a sign of anger, is called "anger" in God.

Conclusion: In God the will of sign and of good pleasure are to be distinguished.

Articulus XII - Whether the five signs are fittingly posited concerning the divine will

The twelfth is proceeded thus. It seems that the five signs are unfittingly posited concerning the divine will, namely, prohibition, precept, counsel, operation, and permission. For the very same things which God commands us or counsels he sometimes operates in us; and the same things which he forbids he sometimes permits. Therefore they ought not to be divided as opposites.

1. Moreover, God does nothing unless willing, as is said in Wisdom 11. But the will of sign is distinguished from the will of good pleasure. Therefore operation ought not to be comprehended under the will of sign.
2. Moreover, operation and permission commonly pertain to all creatures, for in all things God operates, and in all he permits something to be done. But precept, counsel, and prohibition pertain to the rational creature alone. Therefore they do not fitly come into one division, since they are not of one order.
3. Moreover, evil happens in more modes than good: for good happens in one mode, but evil in all sorts of modes, as is clear from the Philosopher in Ethics II, and from Dionysius in De divinis nominibus IV.[1431] Therefore unfittingly with respect to evils one sign only is assigned, namely prohibition; but with respect to goods two signs, namely counsel and precept.

I answer that those are called signs of will by which we are accustomed to show that we will something. Now one can declare that he wills something either through himself or through another. Through himself indeed, inasmuch as he does something, either directly or indirectly and

1431. Aristotle, Nicomachean Ethics II, c. 6; Pseudo-Dionysius, De divinis nominibus, c. 4.

per accidens. Directly, when he operates something by himself; and as to this it is called the sign "operation." Indirectly, inasmuch as he does not impede an operation; for he who removes an impediment is said to move per accidens, as is said in Physics VIII.[1432] And as to this it is called the sign "permission."

Through another, however, one declares that he wills something inasmuch as he orders another to do something either by necessary inducement - which happens by commanding what one wills, and by prohibiting the contrary - or by persuasive inducement, which pertains to counsel. Because therefore by these modes it is declared that someone wills something, for this reason these five are sometimes named by the name of the divine will, as signs of will. That precept, counsel, and prohibition are called the will of God is evident from that which is said in Matthew 6: "Thy will be done, as in heaven and on earth." But that permission or operation are called the will of God is evident from St. Augustine, who says in the Enchiridion: "Nothing is done unless the Omnipotent wills that it be done, either by permitting it to be done or by doing it."[1433] Or it can be said that permission and operation are referred to the present - permission indeed to evil, but operation to good; and to the future, with respect to necessary good, precept; but with respect to superabundant good, counsel.

Reply to the first: Nothing prevents one and the same matter from being declared in diverse modes that one wills something. Thus many names are found signifying the same thing. Whence nothing prevents the same thing from lying under precept and counsel and operation, prohibition, or permission.

Reply to the second: Just as God can be signified metaphorically to will that which he does not will by will properly taken, so can he metaphorically be signified to will that which he properly wills. Whence nothing prevents about the same thing both the will of good pleasure and the will of sign. But operation is always the same as the will of good pleasure; not, however, precept or counsel - both because this (operation) concerns the present, that (precept or counsel) the future; and because this (operation) is per se an effect of the will, that (precept or counsel) is through another, as has been said.

Reply to the third: The rational creature is master of its act. And therefore concerning it some special signs of the divine will are assigned, inasmuch as God orders the rational creature to act voluntarily and by itself. But other creatures do not act except as moved by the divine operation. And therefore concerning the others there is place only for operation and permission.

Reply to the fourth: All evil of fault, although it happens in many ways, yet agrees in this, that it is discordant with the divine will. And therefore one sign is assigned with respect to evils, namely prohibition. But goods are related in diverse ways to the divine goodness. For some are such without which we cannot attain the fruition of the divine goodness; and with respect to these there

1432. Aristotle, Physics VIII, text 32.
1433. St. Augustine, Enchiridion, c. 95 (at the end), in tom. 3.

is precept. But some are those by which we attain it more perfectly; and with respect to these there is counsel. Or one may say that counsel is not only about better goods to be obtained, but also about lesser evils to be avoided.

Conclusion: By five signs the will of God, which is called "of sign," is recognized; which are enumerated in the text.

Concerning both articles, let what we said above in disputation 83, chapter ..., suffice.[1434]

Quaestio XX - On the love of God

There must next be considered those things which pertain absolutely to the will of God. Now in the appetitive part there are found in us both the passions of the soul, as joy, love, and the like, and the habits of moral virtues, as justice, fortitude, and the like. Whence first we shall consider the love of God. Secondly, the justice of God and his mercy. Concerning the first, four things are asked.

After St. Thomas in the preceding question has treated of the will of God, and in what manner it is borne to objects - whether freely or of necessity, and whether to one on account of another, etc. - he proceeds to dispute about the various affections which correspond to the passions of our appetite and will, and which by scholastic theologians and philosophers are called the passions of the soul: such as love, hatred, joy, delight, etc. Of these, however, he disputes in this question in general, just as in the First Part of the Second (I-II) q.22 he disputes about our passions before he treats of the virtues. Afterwards indeed in this First Part, q.21, he treats of the affections of the will, inasmuch as by us they are studiously and according to virtue constituted, namely of mercy and justice.

Articulus I - Whether love is in God

The first is proceeded thus. It seems that love is not in God. For there is no passion in God. But love is a passion. Therefore love is not in God.

1. Moreover, love, anger, sadness, and the like are divided against one another. But sadness and anger are not said of God except metaphorically. Therefore neither is love.
2. Moreover, Pseudo-Dionysius says in De divinis nominibus IV: Love is a unitive and concretive force. But this cannot have place in God, since he is simple. Therefore in God there is not love.[1435]

But on the contrary: It is said, "God is love" (1 John 4).

I answer that it is necessary to posit love in God. For the first movement of the will (*voluntas*), and of any appetitive power whatsoever, is love. Since the act of the will and of any appetitive power tends to good and to evil, according to their proper objects; but good is the principal, and of

1434. See above, disputation 83, chapter ... (as cited by the author).
1435. Pseudo-Dionysius, De divinis nominibus, c. 4.

itself is the object of will and appetite; whereas evil is secondary and on account of another, inasmuch as it is opposed to the good; it is necessary that the acts of will and appetite which regard the good be naturally prior to those which regard evil; and thus the first movement...[1436]

Concerning both articles let what we said above in Disputation 83, chapter 1, suffice.

Then we must consider those things which absolutely pertain to the will (*voluntas*) of God. Now on the appetitive side there are found in us both the passions of the soul, as joy, love, and the like; and the habits of the moral virtues, as justice, fortitude, and the like. Hence, first we shall consider the love of God. Secondly, the justice and mercy of God.

Regarding the first, four things are asked.

Whether love is in God

Objicitur 1. It seems that there is not love in God. For the cognitive power does not move unless by means of the appetitive; but in God there is no appetitive power distinct from the intellect, as was said above. Therefore in God there is not love.

Objicitur 2. Further, love, anger, and the like are passions in us; but passions do not befit God. Therefore in God there is not love.

Objicitur 3. Further, Pseudo-Dionysius says in On the Divine Names, chapter 4, that love is a unitive and concretive force.[1437] But this cannot have place in God, since he is simple. Therefore in God there is not love.

But on the contrary: It is said, "God is charity" (1 John 4).

I answer that it is necessary to posit love in God. For the first movement of the will (*voluntas*), and of any appetitive power whatsoever, is love. Since the act of the will and of any appetitive power tends to good and to evil, as to their proper objects; but good is more principal and of itself the object of will and appetite, whereas evil is secondary and on account of another, inasmuch as it is opposed to the good; it is necessary that the acts of will and appetite which regard the good be naturally prior to those which regard evil - joy than sadness, and love than hatred. For what is per se is always prior to what is per aliud. Again, what is more common is naturally prior. Hence the intellect has by priority an order to common truth rather than to certain particular truths. Now there are certain acts of the will and appetite which regard the good under some special condition; thus joy and delight are of the present and possessed good; whereas desire and hope are of the good not yet attained. But love regards the good in common, whether it be possessed or not possessed. Hence love is naturally the first act of the will and appetite. And on this account all the other movements of appetite presuppose love as their first root. For no one desires anything except a beloved good; nor does anyone rejoice except in a beloved good. Hatred too is only of that which is contrary to the thing loved. And likewise sadness and the rest of this sort are manifestly referred

1436. The continuation is taken up in the sequel.
1437. Pseudo-Dionysius, De divinis nominibus, c. 4.

to love as to their first principle. Hence, in whatever there is will or appetite, there must be love; for when the first is removed, the others are removed. But it has been shown above that there is will in God. Therefore it is necessary to posit love in him.

Reply to the first: A cognitive power does not move unless by means of the appetitive; and just as in us the universal reason moves by means of particular reason, as is said in De Anima III, so the intellectual appetite, which is called will, moves in us by means of the sensitive appetite. Hence the proximate mover of the body in us is the sensitive appetite. Therefore the act of the sensitive appetite is always accompanied by some transmutation of the body, and especially around the heart, which is the first principle of movement in an animal. Thus then the acts of the sensitive appetite, inasmuch as they have an annexed bodily transmutation, are called passions; but not the acts of the will. Therefore love, and joy, and delight - insofar as they signify acts of the sensitive appetite - are passions; but not insofar as they signify acts of the intellectual appetite. And thus they are posited in God. Hence the Philosopher says in Ethics VII that God rejoices with one simple operation, and by the same reason he loves without passion.[1438]

Reply to the second: In the passions of the sensitive appetite one must consider something quasi-material, namely the bodily transmutation; and something quasi-formal, which is on the part of the appetite. Thus in anger, as is said in De Anima I, the material is an ignition of the blood around the heart, or something of this sort; but the formal is the appetite of vengeance.[1439] Yet again, on the part of that which is formal in some of these there is designated some imperfection; as in desire, which is of a good not possessed; and in sadness, which is of an evil possessed; and the same is the account of anger, which presupposes sadness. But some designate no imperfection, as love and joy. Since therefore none of these befits God according to that which is material in them, as has been said, those which import imperfection cannot befit God even formally, except metaphorically on account of a likeness of effect, as was said above. But those which do not import imperfection are said of God properly, as love and joy, yet without passion, as has been said.

Reply to the third: The act of love always tends to two things, namely to the good which one wills to someone, and to him to whom one wills the good. For to love someone is properly this, to will good to him. Hence in that whereby one loves himself, he wills good to himself; and thus he seeks to unite to himself that good insofar as he can. And for this reason love is called a unitive force even in God, but without composition: because that good which he wills to himself is not other than he himself, who is by his essence good, as has been shown above. But in that wherein one loves another, he wills good to him; and thus he uses him as himself, referring the good to him as to himself. And for this reason love is called a concretive force, because it aggregates another to itself, bearing itself towards him as towards itself. And thus also the divine love is a concretive force without composition, which is in God - insofar as he wills goods to others.

1438. Aristotle, Nicomachean Ethics VII, last chapter.
1439. Aristotle, De anima I; cf. also III, on the sensitive appetites and passions.

Conclusion: It is affirmative, and of faith: "So God loved the world," etc. (John 3:16); "I have loved you with an everlasting charity" (Jeremiah 31:3). These testimonies, and the like concerning the love of God, are to be understood according to the propriety of the expression, without metaphor, as will be made clear in the following disputation.

Articulus II - Whether God loves all things

Objicitur 1. It seems that God does not love all things. For according to Pseudo-Dionysius in On the Divine Names, chapter 4, love places the lover outside himself and in a certain way transfers him into the beloved.[1440] But it is unfitting to say that God is placed outside himself and transferred into other things. Therefore it is unfitting to say that God loves things other than himself.

Objicitur 2. Further, the love of God is eternal. But those things which are other than God are not from eternity except in God. Therefore God does not love them except in himself; but according to the fact that they are in him, they are not other than he. Therefore God does not love things other than himself.

Objicitur 3. Further, there is a twofold love, namely of concupiscence and of friendship. But God does not love irrational creatures with the love of concupiscence, because he needs nothing outside himself; nor yet with the love of friendship, because friendship cannot be had towards irrational things, as is clear from the Philosopher in Ethics VIII.[1441] Therefore God does not love all things.

Objicitur 4. Further, in the Psalm it is said: "You hate all who work iniquity" (Ps 5:6). But nothing is at once both hated and loved. Therefore God does not love all things.

But on the contrary: It is said in Wisdom 11: "You love all things that are, and you hate nothing of the things which you have made."

I answer that God loves all existing things. For all things that exist, insofar as they are, are good. For the very existence (*esse*) of any thing whatsoever is a certain good, and likewise every perfection of it. But it has been shown above that the will of God is the cause of all things. And thus it is necessary that a thing have so much existence, or any good whatsoever, insofar as it is willed by God. Therefore to every thing that exists God wills some good. Hence, since to love is nothing other than to will good to someone, it is manifest that God loves all things that are - not, however, in the same mode as we do. For our will is not the cause of the goodness of things, but is moved by it as by an object; our love, by which we will a good to someone, is not the cause of his goodness, but conversely his goodness, whether true or esteemed, provokes love, by which we will that the good which he has be preserved to him, and that what he does not have be added; and to this we set ourselves to work. But the love of God infuses and creates goodness in things.

1440. Pseudo-Dionysius, De divinis nominibus, c. 4.
1441. Aristotle, Nicomachean Ethics VIII, cc. 2 and 11, on friendship.

Reply to the first: The lover is said to be outside himself and transferred into the beloved insofar as he wills good to the beloved and operates through his providence for him, just as for himself. Hence Pseudo-Dionysius says in the same place in On the Divine Names: One must dare to say the truth, that he also, the cause of all, by the abundance of amative goodness, goes out beyond himself to all existing things, providing for them.[1442]

Reply to the second: Although creatures were not from eternity except in God, yet by the fact that they were from eternity in God, from eternity God knew things in their proper natures. And by the same reason he loved them. Just as we by the likenesses of things which are in us know things existing in themselves.

Reply to the third: Friendship cannot be had except towards rational creatures, in whom there can be mutual love and communication in the works of life, and with whom it can turn out well or ill according to fortune and happiness; and to such properly belongs benevolence. But irrational creatures cannot pertain either to the love of friendship towards God, or to a communication of the intellectual and blessed life whereby God lives. Therefore, properly speaking, God does not love irrational creatures with the love of friendship, but with the love of concupiscence, insofar as he ordains them to rational creatures and also to himself - not as if he needed them, but on account of his goodness and our advantage. For we desire something both for ourselves and for others.

Reply to the fourth: Nothing prevents one and the same thing according to one aspect from being loved, and according to another from being held in hatred. Now God loves sinners insofar as they are beings; for thus they are, and are from him. But insofar as they are sinners, they are not, but fall short of being; and this in them is not from God. Hence in this respect they are held in hatred by him.

The conclusion of the article is: God loves all things that exist. And this also is of faith from Wisdom 11: "You love all things that are, and you hate nothing of the things which you have made." Why St. Thomas adds "that exist," we shall state also in the following disputation.

Disputatio LXXXIV - On the affections of the will of God in general

Caput I - Which affections do not befit God

Among the passions of the soul, or affections of the will, which are wont to be enumerated in general, some without controversy do not befit God; about others, however, there is some difficulty. Now the affections of the soul, whether looking to the concupiscible or to the irascible, are in number particularly, as is gathered from St. Thomas in the First of the Second, question 23 and the following: namely, love and hatred; desire and flight; hope, despair, and fear; joy or delight, and sadness.[1443] Of these, first, desire and flight, insofar as they are referred to one's own

1442. Pseudo-Dionysius, De divinis nominibus, c. 4: "Audendum est autem pro veritate dicere, quod et ipse, omnium causa, per abundantiam amativae bonitatis, extra seipsum fit ad omnia existentia providens."

1443. Cf. St. Thomas, Summa theologiae, I - II, q. 23.

proper good, are not found in God: since, because God possesses every good and for him there is no future, it follows that he can neither desire a good nor flee an evil that will be future; and in this sense St. Thomas speaks in the solution. But if desire and flight of the good and evil of others be compared (for we not only desire good for ourselves, but also for others), thus surely such an affection can be attributed to God. For us he ardently desires the good, that is, that we live justly and piously, as we said in Disputation 83, chapter 2, from St. John Chrysostom; and he flees the opposite, namely a wicked and shameful life, which he sees will be in us.[1444]

Secondly, hope and despair in no way befit God. Some indeed prove this thus: both because hope is of a certain arduous and difficult thing; but for God nothing is of this sort: and also because hope is not about that which is evidently known to be future, since when Paul says in Romans 8, "Hope that is seen is not hope; for what a man sees, why does he hope for? But if we hope for that which we do not see, we wait for it with patience" - but God evidently knows every future. Yet these reasons are not efficacious.

Ad secundum dicendum, quod licet creaturae ab aeterno non fuerint nisi in God, tamen per hoc quod ab aeterno in God fuerint, ab aeterno God knew things in their proper natures. And for the same reason He loved. Just as we too, by the likenesses of things which are in us, know things as they exist in themselves

Ad tertium dicendum, quod friendship (*amicitia*) cannot be had except toward rational creatures, in whom it is possible that there be mutual love returned, and a sharing in the works of life; and to whom it can befall to fare well or ill according to fortune and happiness; and toward them too there is properly benevolence. But irrational creatures cannot pertain either to loving God, or to a sharing of the intellectual and blessed life in which God lives. Therefore, properly speaking, God does not love irrational creatures with the love of friendship, but with the love of concupiscence, inasmuch as He orders them to rational creatures, and also to Himself - not as though He needed them, but on account of His own goodness and our usefulness. For we desire something both for ourselves and for others

Ad quartum dicendum, quod nothing prevents one and the same thing from being loved in one respect and held in hatred in another. Now God loves sinners inasmuch as they are certain natures; for thus they are, and are from Him. But inasmuch as they are sinners, they are not, but fall short of *esse* (existence); and this in them is not from God. Wherefore, in this respect, they are held in hatred by Him

Conclusio articuli est, that God loves all things which exist. This also is of faith from Wisdom 11: "You love all things that are, and You hate nothing of the things You have made" (Sap. 11). Why indeed St. Thomas refers God's love only to existing things, we shall also say in the following disputation.

Inter passiones animi, seu voluntatis affectus, qui generatim enumerari solent, quaedam sine controversia do not befit God; but about others there is somewhat of difficulty. Now the affections of the soul, whether they regard the concupiscible, or the irascible, are in number especially nine,

1444. See Disputatio 83, c. 2; cf. St. John Chrysostom, passim.

as is gathered by St. Thomas: for they are love and hatred, desire and flight, hope and despair, fear, joy or delight, and sadness. Of these, first desire and flight, inasmuch as they are referred to one's own good, are not found in God: because, since God has every good, and nothing is future to Him, it follows that He can neither desire a good nor flee an evil future to Himself; and in this sense St. Thomas speaks in the reply to the second. Nevertheless, if desire and flight be understood with respect to the good and evil of others (for we not only desire a future good for ourselves and flee a future evil for ourselves, but also for others), thus both affections can be attributed to God. For He ardently desires for us the good, namely, that we live justly and piously, as we said in Disputatio 83, cap. 2, from St. John Chrysostom,[1445] and He flees the contrary - namely a wicked and flagitious life - inasmuch as He sees it to be future in us.

Secundo, hope and despair in no way befit God. Certain persons try to prove this in a twofold way: first, because hope is about the arduous and difficult; but for God nothing is of that sort: then also because hope is not about that which is evidently known to be future - for, as Paul says in Romans 8, "Hope that is seen is not hope; for what a man sees, why does he hope for? But if we hope for that which we do not see, we wait for it with patience" - but God evidently knows every future. Yet these reasons are not efficacious.

Prior ratio refellitur: for hope can also be about the easy; it does not differ from desire in that hope is about what is difficult, and desire about whatever future thing; for desire too can be occupied about the difficult, for indeed the more difficult things are, the more ardently we are wont to desire; but because desire can be without believing that what is desired will be, indeed even if someone most firmly believes the opposite will be, he can still have desire; whereas hope cannot be unless what is desired is thought and believed to be future. And this is one account of the difference between these affections.

Reijicitur posterior: that God evidently knows what will be does not hinder these affections from being attributed to Him. For true despair can be of that which is evidently known not to be future. If, for instance, someone by the authority of certain mathematicians hoped that an eclipse, which indeed was going to happen, would not be going to happen, and thus despaired, afterwards when he evidently knows that it will be future, he will despair that it will not be. What Paul says does not gainsay this doctrine: for therefore he denies hope of that which "is seen," because what is now seen, and by the very vision is in a certain manner possessed, is not hoped for; for by the very vision it ought to be possessed. For when something is hoped for, after it is had, it is no longer hoped for. For hope is of a future thing and not yet had. But we contend that that can indeed be hoped for which is indeed known to be future, and that despair about the same can likewise be.

Verior ratio: therefore in God the affections of hope and despair do not obtain, because hope looks to that from which a thing is hoped, as to a superior and more powerful one who can grant what is hoped for; and in this the formal ratio of the object of this affection consists: for no one is

1445. See Disputatio 83, c. 2; cf. St. John Chrysostom, passim.

said properly to hope from himself; and perhaps in this consists the ratio of difficulty which St. Thomas says pertains to the object of hope;[1446] but God can have of none this sort of hope or despair; rather only desire and flight, as was explained above.

Tertio, fear and sadness are not found in God; for these are passions about an evil in a special way. Fear is about a future evil which in some way is believed or is doubted to be future; sadness truly is about a present evil; and although even fear and sadness can be of the evil of a friend, future or present, nevertheless they are of it as apprehended as if it were one's own; and hence our nature is such that it even stirs and moves a passion of the appetite. But although the evil of ours, future or present, displeases God, nevertheless He never apprehends it as if it were His own - which seems necessary for the ratio of fear and sadness about the good of a friend. Some think therefore that there is not in God sadness and pain, because nothing can happen against His will; however, I shall impugn this opinion below in Disputatio 141, cap. 1. Still, we said that in God there is desire of our future good and flight from evil, because for the ratio of these affections it is not necessary that the good or evil be apprehended as one's own. Between fear and flight from future evil this is the difference: that flight can be of an evil which is apprehended as future, even if it is not believed to be future; but fear must be of a future evil which is believed to be future.

Caput II - On the love of God

Now let us speak about the other affections which are attributed to God, none of which include any imperfection in their formal ratio: for those which we say befit God must be assigned so that in their formal ratio they contain no imperfection; but if they have annexed some imperfection, such as the bodily perturbation that is in human affections, that must not be granted to God; yet the nature itself and formal ratio of the affection ought not to be denied to Him. Such, according to the opinion of all, is love (*amor*), which formally is the affection by which we will some good for someone - not considering the account of future or even present, but considering the thing itself according to itself; which, although essentially in every prosecuting affection it is in some way included, as will be explained at I-II, q. 24, art. 1,[1447] nevertheless it can of itself be an act formally distinct from all the others, inasmuch as it tends toward the thing according to itself abstracted from present and future. This therefore is no less properly to be attributed to God than the ratio of will (*voluntas*) and intellect (*intellectus*). For, according to the sentence of Aristotle, Rhetoric II, c. 4, to love is to will a good to someone, and to have complacency in him; therefore, to love no less properly befits God than to will.[1448]

Porro, since in the same act of love there is a twofold respect, as St. Thomas teaches at I, q. 20, art. 4, and Cajetan in the same place, and Ferrarien. against the Gentiles, cap. 91: one respect is toward the thing for which we will a good; the other is toward the good itself which we will - by reason of the former it is called the love of friendship (*amor amicitiae*), by reason of the latter it is called the love of concupiscence; not indeed as a twofold act of love, but in the same act a twofold

1446. St. Thomas, on the object of hope, ad loc. (cf. I-II, q. 40).
1447. St. Thomas, Summa theologiae, I-II, q. 24, a. 1.
1448. Aristotle, Rhetoric II, c. 4.

respect. And since each must necessarily be found in God, if the integral ratio of love agrees to God, there is a difficulty whether the love of God, inasmuch as it is called love of friendship, can be referred to irrational creatures, or only inasmuch as it is love of concupiscence it is terminated to them.

Ratio dubitandi: because that is said to be loved with the love of friendship which is loved for its own sake to which we will a good as it is the good of it; but God wills a good to an irrational creature as its good is not its own; therefore He loves it not with the love of friendship.

I judge, however, that the love of God, inasmuch as it is love of friendship, cannot be referred to irrational things; but it is terminated to them only inasmuch as it is love of concupiscence. This sentence is expressly set down by St. Thomas in this article in the reply to the third; and in Scotus, III, dist. 32, q. 1, ad 2; Durandus, q. 1; Paludanus, q. 3, 2, 3; Gabriel, q. 1, a. 1, note 2 and art. 2, concl. 3; Capreolus, in I, dist. 45, q. 1, art. 1, concl. 11; and it is clearly proved from the doctrine of Aristotle, Ethic. VIII, c. 2, and St. Thomas, Contra gentiles, cap. 91, reason 2: they say that we do not love irrational things with the love of friendship, even if we will some good to them, as the preservation of wine; because the irrational thing and its good is loved as the good of rational beings, for whom by their nature irrational things serve; and therefore Aristotle says that all irrational things are always loved per accidens and therefore, since they are referred to the divine will, they cannot be the object of the love of friendship or of benevolence.[1449] Since love of benevolence is a certain beginning of friendship, as Aristotle says, Ethic. IX, cap. 5, and irrational things therefore cannot be the object of friendship, they cannot even be the object of benevolence; whence, in Ethic. ad Eudemum, lib. 7, cap. 8, Aristotle teaches that love of benevolence is the beginning of friendship: "for it is," he says, "a certain affection by which one desires a good for another because of his virtue, not because of one's own usefulness or pleasure. For otherwise (he says) among the upright there would not be benevolence; rather it would follow," says Aristotle, "that we love beasts with the love of benevolence" - something he rightly judges absurd, and which the manifest fact shows as well. Because sometimes we are affected by beasts fighting in the arena, and yet we do not on that account love them with the love of benevolence or friendship: for we are affected toward them because of our own usefulness or advantage. Therefore, since God loves all inanimate and irrational things not on account of themselves, but because of our usefulness or advantage, it follows that they cannot be the object of the love of friendship and of benevolence, but only of concupiscence. Therefore man alone, with whom true friendship can be entered, can be the object of the love of friendship and benevolence; which is a certain beginning of friendship. This differs from the love of friendship because love can be on the side of one alone toward that with which friendship can be contracted, whereas friendship is a mutual love on both sides of souls, and confirmed by benefits; about which more largely at II-II, q. 23, art. 1, as Aristotle delivers in Ethics IX, cap. 5. For this reason, in Book 3 On Adoration I proved that irrational things cannot be the complete terminus of adoration, just as neither of love as friendship or benevolence.[1450]

1449. Aristotle, Nicomachean Ethics VIII, c. 2; St. Thomas, Contra gentiles, c. 91.
1450. Aristotle, Nicomachean Ethics IX, c. 5; Eudemian Ethics VII, c. 8.

The same, which we have said about love, must be said about the affections of joy and delight: namely, that they must be formally attributed to God, not only about the good of another; for God also rejoices and is delighted about our good; but also about His own good: for this affection is of a present good as present, and therefore God can rejoice not only about our good but about His own good; whereas He has desire only of our good as future, since desire is of a future, but for Himself there is nothing future, as for us.

Caput III - That the affection of hatred befits God

Aliqui nonnulli among the Scholastics raise a controversy whether the affection of hatred (*odium*) can be properly assigned to God. For St. Thomas, I, Contra gentiles, cap. 99, and Ferrarien. there, and Capreolus in I, dist. 45, q. 1, art. 1, concl. 8, teach that in God there is not properly hatred. They prove this first with respect to sin itself; because hatred properly is referred to a subsisting -

They prove this, in the second place, as to the sinner's not being the object of hatred for God, because the will of God cannot be borne toward evil as evil; but to hold someone in hatred is to will him evil as it is his evil: therefore God cannot hate anyone. Wherefore, when God inflicts evil on someone, the will of God is borne toward that evil insofar as it has some notion of good, namely the manifestation of His justice toward sinners. Therefore God rather wills to show His justice than to inflict evil as it is evil. And since Scripture says more often that God hates sin itself and sinners, they think this must be understood metaphorically: because God comports Himself toward sinners like one who hates, when He inflicts evil upon them; whereas toward sin, which He hates, He desires that it not be.

But I, for my part, judge that, according to proper signification, hatred befits God, not only of sin, but also of the sinner: that is, both hatred of abomination and of enmity. And St. Thomas in article 2, to the fourth reply, plainly and without any limitation taught that God hates sinners, not insofar as they are His creatures, but insofar as by sin they fall away from rectitude.[1451] Wherefore I think that all the places of Scripture which attribute hatred to God are to be understood not metaphorically, but properly. But that we may explain and confirm this opinion, a certain division and definition of hatred must be noted, which Cajetan very accurately hands down: one, he says, is hatred of abomination; another, hatred of enmity.[1452] Hatred of abomination is a displeasure at an evil which we ourselves suffer, or others; but hatred of enmity is to will someone an evil, insofar as it is his evil, out of displeasure at the person.

Cajetan then explains the difference between love and hatred, and his observation is indeed noteworthy: for in the same act of love, which is nothing other than to will some good to someone, there are found a twofold respect after the mode of affirmation, pursuit, and complacency. One respect is toward the person, by reason of which it is called love of friendship; the other is toward the thing itself, or toward the good willed to the person, from which it is called love of

1451. St. Thomas, article 2, reply to the fourth (ad 4) on God's hatred of sinners.
1452. Cajetan, In I - II, q. 29, a. 1, on the division of hatred into that of abomination and that of enmity.

concupiscence. And never is there found any act of love, by which we will some good to someone, without these two respects. But that twofold hatred can constitute a twofold act. For hatred of enmity is in one act, by which we will someone an evil, as it is his evil, out of displeasure at the person; and in this act there is a twofold respect, otherwise than in love. There is indeed a respect toward the person, and this is after the mode of negation and flight, and it constitutes the act by reason of displeasure and of hatred of enmity. There is also a respect toward the evil we desire for the person, and that is regarded after the mode of affirmation and complacency, just as love regards the thing desired; yet it does not constitute an act of love, because the respect of complacency toward the person is lacking.

But hatred of abomination is a displeasure at the evil of some person, as when my own death displeases me, or that of a friend; and this act likewise has a twofold respect, one toward the person after the mode of affirmation and complacency, from which it is essentially love of friendship (as we shall say when treating with St. Thomas of contrition), the other toward the evil after the mode of negation and flight, or displeasure, from which it has the notion of hatred of abomination. Therefore to hate something with hatred of abomination is to will that no evil befall someone. Accordingly St. Thomas, defining love and hatred in general, says: love is the consonance of appetite with good; but hatred is the dissonance of appetite with evil, insofar as it appears hurtful and repugnant.[1453]

On these foundations it is easy for me to show that each kind of hatred befits God properly. First indeed, as to hatred of abomination, it ought to be judged indubitable: sin no less properly displeases God, and He would not have it done by man, than He desires justice and a right life for man, and the rest. But sin displeases for a twofold reason, both as contrary to Himself, and as harmful to man: therefore in each way He hates sin, both from complacency in Himself and from complacency in man; just as we hate death - our own or that of a friend - from complacency in ourselves or in our friend. Hence it also easily appears how weak was the first argument of the opposing opinion: for if hatred be of abomination, then according to the notion of hatred it is not necessarily referred to a subsistence, but to evil itself. Indeed, as is clear from the definition, hatred of abomination, when referred to a subsistent thing, bears the notion of complacency and of love, as has been said; yet since it is displeasure at evil itself, it has the true and proper notion of hatred: otherwise neither would we properly be said to hate sin when we grieve over it - which is absurd

Then, as to hatred of enmity, the same is proved: since God not only wills the sinner the punishment, but also wills to him that as it is his evil, and from displeasure at him; therefore He pursues him with hatred of enmity, as is clearly gathered from the very definition of hatred of enmity. Moreover, it is clear that from displeasure at the person God wills that evil. For although the person himself, insofar as he is a man and a creature of God, does not displease God, yet he displeases insofar as he is stained by sins: and for there to be hatred of a creature - that is, to will evil to him - it suffices if the sinner displease in some respect, and by reason of that the affection be moved to will him evil as it is his evil. Nor is it necessary for the notion of hatred of enmity that the

1453. St. Thomas, In I - II, q. 29, a. 1, definition of love and hatred.

evil willed to the person be his evil for the very reason for which the person displeases; but that it truly be his evil, and be so willed out of displeasure at him under this or that aspect. Whence a judge who, because of a crime, punishes someone because it is just, and detests him as a criminal, truly and properly has hatred of enmity - not from displeasure at the person as he is this man, or by some other private reason, but because he is a criminal: and for that reason such hatred is according to virtue.

Moreover, that by inflicting punishment for the crime God wills the sinner an evil as it is his evil is evident: for He inflicts death upon him and other evils, insofar as they have the true notion of punishment; but punishment, as punishment, is the evil of him who suffers it: therefore God wills the sinner evil as it is his evil, and from displeasure at him. This will be made more perspicuous in the solution of the latter argument which Ferrariensis adduced. For explaining that, the doctrine must be observed which we shall set out more fully in the First Part of the Second, question 8, article 4, namely, in what way that common axiom is true: The will is of good alone - "will" here meaning not the faculty, but the affection under the mode of pursuit.[1454] Now it is necessary to distinguish in the object of the will the thing willed and the reason for willing it. If we speak of the thing willed, it is not only good, but also evil as evil, not only another's but also one's own, from displeasure either at another's or at one's own person. But the reason for willing is always some goodness, whether one's own or a friend's. For such is the nature of the will, that it prefers the friend's good to one's own good, and judges that honorable, and according to right reason.

So too in vision: there is the thing that is seen, as a wall; and the reason for seeing, as color; but in a different manner than in the will. For the material which is seen is not seen distinctly and in itself, but through another, namely through color. But the will per se and expressly wills this or that thing, this or that evil; the reason for willing, however, is a goodness conjoined. In this way we can not only distinctly and expressly will evil to another, as it is evil, from displeasure at the person; but even to ourselves, from displeasure at ourselves. With this holy hatred we pursue our very selves when we consider that we have sinned against God; and from displeasure at ourselves we inflict on ourselves the evil of punishment as it is evil; yet the reason for willing this evil is the goodness which we consider in the very infliction of the punishment.

Hence the solution is evident to the later argument of Ferrariensis and of St. Thomas. For when it is commonly said that the will cannot be borne toward evil, and in a special way the divine will: it must be understood thus, that even toward the evil of punishment the will is not borne except by reason of some conjoined goodness; whereas toward the evil of fault, the human will indeed cannot be borne except in the same way; but the divine will in no way can tend thereto, not even under some notion of good. From this, however, it does not follow that God cannot pursue the sinner with hatred of enmity. For man, as a sinner, displeases God; and for that reason God judges it good to inflict punishment on him as it is his evil. Because in this He considers some good: therefore His will can sufficiently be borne toward that evil out of hatred of enmity. And the fact that in it He considers the notion of the good of justice, or something else, does not prevent His willing that evil

1454. St. Thomas, In I - II, q. 8, a. 4, on the axiom "the will is of good" and how the will regards evil of punishment.

from displeasure at the person from being truly and properly hatred of enmity. For to the notion of hatred it is not required that the evil of punishment be willed without any notion of good in it; for this is impossible even in us; and therefore, if that were required, the affection of hatred could not exist in us. It is enough, then, if the evil is expressly willed from displeasure at the person, that the affection truly have the notion of hatred of enmity.

Further, it must be observed that the goodness and benignity of God toward us is so great that we cannot displease Him for any other reason except insofar as we disfigure His image in ourselves by sins; and for this sole reason can He pursue us with hatred and will us evil as our evil. The reason is that we cannot be in any other way adverse and contrary to God than by reason of sin. But one man can in many ways hate another and will him evil from displeasure at him, because in many ways he can deem him his adversary.

Caput IV - On the wrath of God

Whether the affection of wrath properly be found in God is a disputed question; on which matter Lactantius published a special book, in which indeed, chapter 4, he says that Epicurus was in error, in holding that in God there is neither grace, that is, love, nor wrath; wherefore they fashioned God as if without sense, who would neither approve what is good nor punish what is evil: which cannot be ascribed to anything but a stupor and torpor that must be judged insensible.

If the Stoics had denied not only will and providence, but wrath in such a way that they also denied that evils are to be punished, they would have judged perversely indeed. But if they denied the affection of wrath according to proper signification, their opinion would not on that side have deserved any mark of censure: for insofar as they also took away love from God, their error was manifest.

The Stoics' error, according to the same Lactantius, chapter 5: they attributed love to God but denied wrath, lest they posit in Him any perturbation of mind. Wherefore Lactantius thinks that they so removed the vindication of evils from God as to make Him decree nothing against the wicked; which is to make God renounce vengeance upon evils - something Scripture everywhere most plainly proclaims, as Lactantius excellently shows.

Therefore Lactantius, that he might avoid their errors, in many chapters taught that there is in God indeed wrath, but proper wrath, which he held to be nothing other than the will of punishing sins. He rejected the definitions of other philosophers; and in chapter 17 he defines wrath thus: it is a movement of mind that arises to coerce sinners. Since therefore in God there is such an affection, as is plainly gathered from Scripture, he concluded that wrath befits Him according to its proper and formal notion, although, of course, fury and the vicious kind of wrath, and that which is conjoined with perturbation of mind, are not to be attributed to God. Nevertheless the testimonies of Scripture are not to be explained by trope and figure so as to attribute to God wrath and fury together with perturbation.

But far more truly it is held that the affection of wrath is not found in God, not only as to bodily commotion and perturbation, but also as to its own formal notion; and this is the common doctrine of the Theologians and of the Fathers. Among the scholastic writers I have read no other besides St. Thomas in the solution to the second objection of article 2 of this question who expressly teaches this;[1455] but there is none who asserts the opposite, and in the schools the opinion of the Holy Doctor is most received. Among the Fathers indeed there are countless ones who affirm that this affection, like feet, hands, and the other members, must be attributed to God according to a metaphor. In truth, they seem to have had regard not so much to the formal notion of the affection as to the bodily perturbation which is conjoined to it. Thus, among the Greeks: Origen, homily 2 on Judges, chapter 2, toward the end; and on that text of Romans 1, "The wrath of God is revealed"; and book 4 Against Celsus, expounding that of Deuteronomy 23, "He accommodated Himself to your manners"; Epiphanius, Heresy 38, after the middle; St. John Chrysostom, in the sermon on penance, not far from the end, in the tomes; St. Gregory Nazianzen, in the iambic poem 21; St. Basil, on that Psalm 37 "Neither in Thy wrath reprove me," well after the middle; St. Cyril, book 5 Against Julian, after the middle; St. John Damascene, On the Orthodox Faith, book 1, chapter 14. Among the Latins: St. Cyprian, On Mortality, toward the end; St. Ambrose, on that Psalm 37 "O Lord, rebuke me not in Thy fury"; St. Jerome, on that Psalm; St. Augustine, in many places.[1456]

Some [names] contain imperfection, which cannot befit God; wherefore we said above in disputation 22 that all the things said of God, according to the sentence of certain Fathers, are said in some way by transference; yet some in a peculiar way befit God even analogically, which, in their formal notion (*ratio formalis*), however abstract, denote imperfection, as the Angelic Doctor very well observed in the solution to the second objection; for example, temperance, which formally consists in choosing a mean in food and drink and in repressing excessive delectation of taste. It must be said otherwise of wisdom, which, although in man is an accident, yet according to an analogical notion is also properly called the very substance of God wisdom.[1457]

Now then it remains to be seen whether the affection of anger, according to its formal and intrinsic notion, has some imperfection, or not: but this must be judged from the object about which it is conversant. For wisdom is conversant about the true, which can thus be the object of wisdom that is an accident, namely created wisdom, just as of wisdom that is a substance, namely uncreated. But temperance, because it has as its object and matter about which it has a mean, food and drink, cannot properly befit a spirit. Therefore, since anger is conversant about an object

1455. St. Thomas, in this question, article 2, solution to the second objection, explicitly denying wrath in God according to its formal notion.

1456. Greek Fathers: Origen, Hom. 2 on Judges c. 2 (toward the end); on Rom 1 ("Revelatur ira Dei"); Contra Celsum IV, on Deut 23; Epiphanius, Haer. 38 (after the middle); St. John Chrysostom, Sermon on Penance (near the end, in the tomes); St. Gregory Nazianzen, Carmen iambicum 21; St. Basil, on Ps 37 ("Neque in ira tua corripias me," well after the middle); St. Cyril, Contra Julianum V (after the middle); St. John Damascene, De fide orthodoxa I, c. 14. Latin Fathers: St. Cyprian, De mortalitate (toward the end); St. Ambrose, on Ps 37 ("Domine, ne in furore tuo"); St. Jerome, on the same Psalm; St. Augustine, passim.

1457. Aristotle, De anima I, c. 1, text 16; Rhetoric II, c. 2 and c. 4.

which, being comparative and with a certain relation, of necessity includes imperfection, it ought not to be attributed to God according to propriety. This imperfection is clearly gathered from the definition which the philosophers hand down.

First, Aristotle, On the Soul I, c. 1, text 16, hands down a twofold definition of anger: one which he himself calls "by matter," which explains anger through its effect and bodily perturbation, in this way: "Anger is the heat or boiling up of the blood or of the heat about the heart"; the other, which declares the very formal notion of anger, thus: "It is an appetite of inflicting pain in turn upon the adversary."[1457] From this latter definition - itself uncontroverted - it is clear that anger, according to its formal notion, does not befit God, unless we should wish to devise another notion of it without foundation. Now, as St. Thomas well noted and as is gathered from the posterior definition handed down by Aristotle, he who is angry has first suffered sadness or pain inflicted by another, which he seeks to repay to him; but Lactantius contends that anger depends upon such sadness; yet God cannot suffer sadness from another, however much He be offended by sins; therefore, when He punishes sins, He is not properly angry, but by the very effect He so carries Himself as if He were angry. Nor indeed is the foregoing definition Aristotle's alone, although his authority by itself ought to suffice for us; but all the philosophers also embrace it. Of the ancients, indeed, Cicero, whom Lactantius reports in the same book, chapter 17, near the end, says: "Anger is the lust of vengeance." Posidonius, cited by the same Lactantius in the same chapter not far from the end, thus defines it: "A desire of punishing him by whom you think yourself to have been injured." Seneca, On Anger I, c. 2, and II, c. 3, says: "Anger is an incitement of the mind to vengeance proceeding by will and judgment"; and he says that it has its origin from an injury received. St. John Damascene, On the Orthodox Faith I, c. 16, as I adduced at the beginning of the chapter, set down the definition of anger on the side of the matter, whence he assigns several acceptions of it, and in all he establishes the formal notion in this: that it is an appetite of retaliation and vengeance for an injury received. Finally, St. Gregory of Nyssa, Philosophy IV, c. 13, affirms either definition which Aristotle assigned, and that this is the formal one, "an appetite of retaliation." The same was explained by Aristotle, Rhetoric II, c. 2 at the beginning, and c. 4 near the end, when he says: "He who grows angry grieves"; wherefore he says that anger is "an appetite of apparent vengeance with sorrow on account of an apparent contempt shown to oneself or one's own." And this is excellently proved by the example which St. Ambrose uses in the place cited above: for who would say that a judge who, without any - not to say bodily perturbation and commotion of blood - but even without any sadness of mind, inflicts the due punishment of sin upon the delinquent, is angry against the defendant? Therefore, without foundation does Lactantius reject all the definitions which we have enumerated; and he asserts that they define only irascibility and fury, which can befit man alone and are vicious; and he adds: thus therefore did the philosophers define those passions: "Anger is a movement of soul arising to restrain sins"; by this account he defends that in God anger is properly found. He taught this wrongly. For, as we noted at the beginning, when there is a question about some affection, whether it ought to be attributed to God, we speak of that affection according to the common signification of the name among philosophers and those skilled in the art. For we shall say

1457. Aristotle, De anima I, c. 1, text 16; Rhetoric II, c. 2 and c. 4.

in vain that that name signifies something else, in order that we may attribute its signified to God. Wherefore we do not deny that anger belongs to God as Lactantius defines it; but we say that that is not the signification of this name, unless insofar as it is the avenging of a pain inflicted, as has been explained.[1458][1459][1460][1461][1462][1463][1464][1465][1466][1461]

- Note also: the Stoics attributed love to God, but denied anger, lest they should ascribe any perturbation of mind to Him. Wherefore Lactantius thinks that they removed the vengeance of evils from God to such an extent that they said that He harms no one; but if in that way they denied anger to God, they erred plainly: for He Himself too is the avenger of evils, as Lactantius excellently demonstrates, and Scripture proclaims everywhere. Therefore Lactantius, that he might avoid their errors, through many chapters taught that there is in God properly anger, which he judged to be nothing else than a will of punishing the guilty. Rejecting the definitions of other philosophers, in chapter 17 he thus defines anger: "A movement of soul arising to restrain sins." Since therefore in God there is such an affection, as is plainly gathered from Scripture, it follows that to Him belongs anger according to the proper and formal notion, although fury, which is vicious and joined with perturbation, ought not to be attributed to God; for those testimonies of Scripture, wherein wrath and fury are attributed to God with perturbation, as in Psalm 77, "And the Lord awoke as one sleeping, and as a mighty man gorged with wine," he thinks ought to be explained by trope and figure; unless where in that art by the skilled it is wont to be defined: for if it were permitted also to fashion new definitions, I would attribute more things to God than we attribute, and indeed all the things that are found in man and the angels, not according to an equivocal notion, according to which always they contain some imperfection which cannot befit God, but also according to a formal notion; which does not befit God without perturbation, just as St. Thomas expressly asserted when he taught that, according to the formal notion of anger, there is no anger in God.[1467]

1458. Cicero, reported by Lactantius, De ira Dei c. 17 (near the end): "Ira est libido ulciscendi."

1459. Posidonius, cited in Lactantius, De ira Dei c. 17 (shortly before the end).

1461. St. John Damascene, De fide orthodoxa I, c. 16, and at the beginning of the chapter he adduces the definition of anger on the side of the matter, then assigns several acceptions, and in all establishes the formal notion as an appetite of retaliation and vengeance for an injury received. See also De fide orthodoxa I, c. 14 among the loci of the divine names.

Articulus III - Whether God equally loves all things

Objicitur: 1. It seems that God loves all things equally. For it is said in Wisdom 6 that "equal is His care of all." But God's providence about things is from love, with which He loves things: therefore He loves all equally. 2. Further, the love of God is His essence (*essentia*). But the essence of God does not admit of more and less: therefore neither does His love. Therefore He does not love some more than others. 3. Further, as the love of God extends to created things, so do knowledge and will. But God is not said to know some things more than others, nor more to will: therefore neither does He love some more than others.

But on the contrary: St. Augustine says upon John: "God loves all the things which He made; and among them He loves more the rational creatures; and among these more those which are the members of His Only-begotten; and much more His Only-begotten Himself."[1468]

I answer: Since to love is to will good to someone, in a twofold way can something be more or less loved. In one way, on the part of the very act of the will (*actus voluntatis*), which is more or less intense. And thus God does not love some more than others, because He loves all with one and simple act of will, and always in the same way. In another way, on the part of the very good which is willed to someone. And thus we are said to love someone more than another, to whom we will a greater good; although not with a more intense will. And in this way it is necessary to say that God loves one more than another, inasmuch as He wills to one a greater good than to another.

Reply to the first: When it is said that God has equal care for all, it is not because He dispenses equal goods to all, but because with equal wisdom and goodness He administers all.

Reply to the second: That reasoning proceeds about the intention of love on the part of the act of the will, which is the divine essence. But the good which God wills to a creature is not the divine essence. Hence nothing prevents it from being intensified and remitted.

Reply to the third: To understand and to will signify only acts, and they do not include in their signification certain objects, from whose diversity God could be said to know or to will more or less, as was said regarding love.

Explicatio articuli. - First conclusion: On the part of the very affection of the will, God equally loves all; that is, with one and the same, indeed the very same, actual act, unlike us, who love with more and less intense acts. - Second conclusion: On the part of the good which God wills to someone, He loves one more than another, inasmuch as He wills a greater good to one than to another.

This doctrine is most to be observed, especially for the things which we will say below in disputation 89, chapter 15, where we will show that, before foreseen merits, one is not loved or chosen more than another to eternal life; and yet one is more loved and is chosen to grace: which will be clearly proved from the doctrine of this article. The reason indeed is manifest. Since the will

1467. St. Thomas, in this question, article 2, solution to the second objection, expressly denying wrath in God according to its formal notion.

1468. St. Augustine, In Evangelium Ioannis tractatus, on John 9, "Omnia diligit Deus quae fecit..."; cf. also allied loci in his works.

(*voluntas*) of God is His essence, and insofar is said to have the notion (*ratio*) of love or of hatred, as it is referred to this or that object; yet in itself it cannot be greater or lesser; it follows that, on the part of the very act, one is not loved more than another; but the whole inequality must be weighed on the part of the good willed, to which, in the notion of volition, it is referred.

Objicitur primo: It seems that God loves all things equally. For it is said in Wisdom 6 that "care for all is equal before Him." But the providence which God has over things arises from the love by which He loves them; therefore He loves all things equally.

Objicitur secundo: Further, the love of God is His essence (*essentia*). But the essence of God does not admit of more and less; therefore neither does His love. Therefore He does not love some more than others.

Objicitur tertio: Further, just as the love of God extends to created things, so too do His knowledge and will. But God is not said to know some things more than others, nor to will some things more than others. Therefore neither does He love some more than others.

But on the contrary: St. Augustine says on John: "God loves all the things that He has made; and among them He loves more the rational creatures; and among these He loves more those which are the members of His Only-Begotten; and much more His Only-Begotten Himself."[1469]

Respondeo: Since to love is to will good to someone, a thing can be loved more or less in a twofold way. In one way, on the part of the very act of will, which is more or less intense. And thus God does not love some more than others, because He loves all by one simple act of will, which is always similarly disposed. In another way, on the part of the very good which one wills to the beloved. And thus we are said to love someone more than another to whom we will a greater good, even if we do not will it by a more intense act. And in this way it is necessary to say that God loves some more than others, because He wills a greater good to some than to others.

Ad primum ergo dicendum, that it is said that there is "equal care" with God for all things, not because He dispenses equal goods to all, but because by one wisdom and goodness He governs all

Ad secundum dicendum, that this reasoning proceeds as regards the intensity on the part of the act of will, which is the divine essence. But the good which He wills to the creature is not the divine essence. Hence nothing prevents this from being unequal and, so to speak, more or less as to participation

Ad tertium dicendum, that to know and to will in their proper signification denote the act formally, which, on the part of the divine act, is one and simple; yet even in our usage we are said to know something more than another, not because our act of knowing is more intense, but because the thing known is better or more known. In like manner God is said to love more on the side of the good willed to the beloved; and thus the inequality is taken on the part of the object loved, not on the part of the divine act

Explicatio articuli. The prior conclusion is: on the part of the divine will's act, God loves all equally; that is, by the same quality, indeed by the same one and simple act, always similarly disposed - unlike us, who love with more or less intensity. The posterior conclusion is: on the part

of the good willed to the beloved, God loves some more than others, inasmuch as to one He wills a greater good than to another. This doctrine is to be held constantly throughout what follows: any inequality of love in God is to be weighed wholly on the part of the good willed, to which the notion of love is ordered; not on the part of the single, most simple act, in which greater and lesser cannot be.[1470]

Articulus IV - Whether God always loves better things more

D quartum sic proceditur. Videtur quod Deus non semper magis diligat meliora.

1. Manifestum est enim quod Christ is better than the whole human race, since He is God and man. But God loved the human race more than Christ, for it is said in Romans 8: "He spared not His own Son, but delivered Him up for us all." Therefore God does not always love better things more.
2. Further, an angel is better than a man. Hence in Psalm 8 it is said of man: "Thou hast made him a little less than the angels." But God loved man more than the angel; for it is said in Hebrews 2: "Nowhere doth He tak e hold of the angels, but of the seed of Abraham He taketh hold." Therefore God does not always love better things more.
3. Further, Peter was better than John, because he loved Christ more; wherefore the Lord, knowing this to be true, questioned Peter, saying: "Simon, son of John, do you love Me more than these?" (John 21). Yet Christ loved John more than Peter. For, as Augustine says on that passage, by this very sign John is distinguished from the other disciples, not that he alone loved Christ, but that he loved Him more than the others.[1471] Therefore God does not always love better things more.
4. Further, the innocent is better than the penitent, since penance is a second plank after shipwreck, as St. Jerome says.[1472] But God loves the penitent more than the innocent, because He rejoices more over him; for it is said in Luke 15: "I say to you, that there shall be joy in heaven upon one sinner doing penance, more than upon ninety-nine just who need not penance." Therefore God does not always love better things more.
5. Further, a just man who is foreknown (reprobate) is better than a predestined sinner. But God loves the predestined sinner more, because He wills to him a greater good, namely life eternal. Therefore God does not always love better things more.

Sed contra: Every thing loves what is like itself, as is manifest from that which is had in Ecclesiasticus 13: "Every animal loves its like." But something is the better the more it is like God. Therefore better things are loved more by God.

1469. St. Augustine, In Evangelium Ioannis tractatus, on John 9: "Omnia diligit Deus quae fecit..." Tom. 9.

1470. Compare St. Thomas, Summa theologiae I, q. 20, a. 3; and cf. the scholastic axiom that inequality in divine love is only on the side of the good willed, not on the side of the simple divine act.

1471. St. Augustine, Tractates on the Gospel of John, on John 21:15 ff.

1472. St. Jerome, on Isaiah, on that place "Sodom," where he says: "Penance is the second plank after shipwreck."

Respondeo dicendum, that it is necessary to say, in accord with the foregoing, that God loves better things more. For we said that to love more, as regards God, is nothing other than to will a greater good to someone. Now the will of God is the cause of goodness in things. And thus from this very fact certain things are better, that God wills to them a greater good. Whence it follows that He loves better things more.

Ad primum ergo dicendum, that God loves Christ not only more than the whole human race, but even more than the whole universe of creatures; for to Him He willed a greater good, because He gave Him "the name that is above every name" (Phil 2:9), in that He is true God. Nor did His excellence suffer any loss from the fact that God delivered Him up to death for the salvation of the human race; nay rather from this He was made a glorious victor. "The government was placed upon His shoulder" (Isa 9:6)

Ad secundum dicendum, that the human nature assumed by the Word of God (as was said above) God loves more than all the angels, and it is better, especially by reason of the union. But speaking of human nature in general, when compared with the angelic as to the order to grace and glory, there is found an equality; "for the measure of man and of the angel is the same" (cf. Apoc. 21:17). Yet in this respect some angels are found to surpass some men, and some men to surpass some angels. But as to the condition of nature, the angel is better than man. Nor therefore did God assume human nature because He would simply love man more, but because man was in greater need. As a good householder gives something more precious to a sick servant, which he does not give to a healthy son

Ad tertium dicendum, that this question about Peter and John is solved in many ways. Augustine refers it to a mystery, saying that the active life, signified by Peter, loves God more than the contemplative life, signified by John, because it feels more the straits of the present life, and more ardently desires to be delivered from them and to go to God; but the contemplative life God loves more, because He preserves it more: for it is not ended together with the life of the body, as the active life is. Others say that Peter loved Christ more in His members, and thus also was more loved by Christ; whence He entrusted to him the Church. But John loved Christ more in Himself, and thus also was more loved by Him; wherefore He entrusted to him His mother. Others say that it is uncertain which of these loved Christ more with the love of charity, and likewise whom God loved more in order to greater glory of life eternal. Yet Peter is said to have loved more as to a certain promptness or fervor; but John to have been more loved as to certain signs of familiarity which Christ showed him more, on account of his youth and purity. Others say that Christ loved Peter more as to a more excellent gift of charity, but John more as to the gift of intellect. Whence Peter simply was the better and more loved; but John in a certain respect. Nevertheless it seems presumptuous to judge this, since, as it is said in Proverbs 16, "the Lord is the Weigher of spirits," and no other

Ad quartum dicendum, that penitents and innocents stand to one another as excess and excessed. For whether they be innocents or penitents, those are better and more loved who have more of grace. Other things being equal, however, innocence is more worthy and more loved. Yet God is said to rejoice more over the penitent than over the innocent, because for the most part

penitents rise again more cautious, more humble, and more fervent. Whence St. Gregory says in the same place, that a leader in battle loves more the soldier who, after flight, returning, presses the enemy bravely, than him who never fled, nor ever did anything brave; or for another reason, because an equal gift of grace is greater in comparison to a penitent, who had merited punishment, than to an innocent, who had not merited it; just as one hundred marks is a greater gift if they are given to a pauper than if they are given to a king

Ad quintum dicendum, that since the will of God is the cause of goodness in things, the goodness of him who is loved by God must be weighed, at the time in question, according to what good from the divine goodness is to be given to him. Therefore with respect to that time in which, by the divine will, a greater good is to be given to the predestined sinner, he is the better; yet according to some other time he may be worse; for according to some time he is neither good nor evil, nor even existing, prior to conception

Conclusio huius articuli ex praecedenti sequitur, namely: God loves the better more; for such inequality of love in God is not to be taken on the part of the affection in itself, but from the order to the greater and lesser good: hence it follows that the better are more loved by God.

Dubitationes circa articulum.

Dubium I

For whoever loves God is loved by God, John 14: "If anyone love Me, he will keep My word, and My Father will love him"; and he who loves more is more loved. But Peter loved Christ more than the rest of the Apostles; for in John 21, when questioned by Christ whether he loved Him more, he affirmed it thrice, to whose thrice-given answer the Lord subjoined, saying, "Feed My sheep," as if to say: Since you love Me more, feed My sheep. Therefore Peter was more loved by the Lord.[1475] Gabriel, on condition granted, concedes that Peter was more loved by Christ than the other disciples, if he also loved God more. This sentence is favored by Nazianzen, in the oration to Julian the apostate (the ninth), where he calls Peter "the dearest of the Apostles to God," since for him the Lord paid the didrachma; and by St. Cyril of Alexandria, book 12 on John, chapter 64, when he says that Peter had a greater love toward the Lord than the other Apostles.[1476]

On the other hand, St. Jerome, book 1 Against Jovinian, from many titles proves that John the Evangelist was more loved by God; and thus Pseudo - Dionysius in the Ecclesiastical Hierarchy, and Tertullian, in the book On Prescriptions against Heretics, chapter 22, calls John "dearest" or "most beloved." As to the fact that He gave Peter the keys of the kingdom of heaven and the primacy of the Church, St. Jerome says, there is no wonder, since it was given so that the others might listen to him as to their elder. St. Augustine, however, in his last tractate on John, does not dare to decide the case and determine who excelled the other in sanctity and charity; rather, by certain mystical interpretations he tries to reconcile both opinions. Thus also St. Thomas, in this

1475. Proverbs 8:17; John 14:23; John 21:15 - 17. Alexander of Hales, Summa, p. 1, q. 32, m. 4.

1476. St. Gregory of Nazianzus, Oration 9 to Julian the apostate; St. Cyril of Alexandria, Commentary on John, bk. 12, c. 64.

article in the reply to the third objection, and St. Bonaventure, in 3, dist. 32, q. ult., define nothing on this matter; but they interpret the places of Scripture which seem to favor the one or the other, so that Peter loved Christ more strongly, but John more familiarly; as to whose sanctity was greater, they do not decree

Posterior dubitatio is about the solution to the fifth objection: in what sense St. Thomas says that the predestined man at some time is neither good nor evil, since in this mortal life there does not seem to be any mean between these two. Omitting two solutions employed by Cajetan, a third - together with him - answers that this is true of the time in which the predestined was not yet born nor conceived; for then he could be neither good nor evil, not even by original sin.[1479]

Quaestio XXI - On the justice and mercy of God

Post the consideration of the divine love, we must now treat of His justice (*iustitia*) and mercy. And concerning this four things are asked.

In this question the holy Doctor discusses the affections which, according to virtue, befit God, that he might hand down to us exactly whatever pertains to the faculty of the will.

Articulus I - Whether there is justice in God

Ad primum sic proceditur. Videtur quod in Deo non sit justice. Justice is divided contrary to temperance. But temperance is not in God; therefore neither is justice

1. Further, whoever does all things according to the mere freedom of his own will does not act according to justice. But, as the Apostle says ...[1480]

After the consideration of divine love, there must now be a consideration of His justice and mercy. And concerning this it is asked as follows.

Whether there is justice in God

The first is argued as follows:

- It seems that there is not justice in God. The Apostle says to the Ephesians (1): God "works all things according to the counsel of His will"; therefore justice ought not to be attributed to Him.
- Moreover, among the moral virtues some are about passions, as temperance about concupiscences, fortitude about fears and boldnesses, meekness about anger. And such virtues cannot be attributed to God except metaphorically, because in God, as was said

1479. Cajetan, ad Summa theologiae I, q. 20, a. 4, ad 5.
1480. The text alludes to the Apostle (cf. Ephesians 1:11 or Romans 9:19) on God "working all things according to the counsel of His will."

above, there are neither passions nor a sensitive appetite, in which such virtues are as in a subject, as the Philosopher says in Ethics 3. But certain moral virtues are about operations, as justice, for example about giving and expenses are justice and liberality and magnificence, which also are not in the sensitive part but in the will. Therefore nothing prevents these sorts of virtues from being posited in God; yet not about civil actions, but about actions befitting God. For it is ridiculous to praise God according to political virtues, as the Philosopher says in Ethics 10.[1481]

- Moreover, the act of justice is to render what is due; but God is debtor to no one; therefore justice does not befit God.
- Moreover, whatever is in God is His essence; but this does not befit justice. For Boethius says in the book De hebdomadibus, that what is good is the essence, but the just is a good that results from action; therefore justice does not befit God.[1482]

But on the contrary: It is said in Psalm 10: "Just is the Lord, and He has loved justice."

I answer that it must be said that there is a twofold species of justice. One consists in mutual giving and receiving, as what consists in buying and selling and other such communications or exchanges. And this is called by the Philosopher in Ethics 5 the justice that is commutative, or directive of exchanges or communications; and this does not befit God, because, as the Apostle says to the Romans, "Who hath first given to Him, and recompense shall be made to him?" Another, which consists in distributing, and is called distributive justice, according as some governor or dispenser orders to each one according to his dignity. Therefore, just as a fitting order of a family, or of any governed multitude, shows such justice in the ruler; so the order of the universe, which appears both in natural things and in voluntary things, shows God's justice. Whence Pseudo-Dionysius says in On the Divine Names, chapter 8, that "we ought to see in this the true justice of God, that He gives to all their own, according to the dignity of each of the existing things, and preserves the nature of each one in its own proper order and virtue."[1483]

Reply to the first: Among the moral virtues, some are about passions, as temperance about concupiscences, fortitude about fears and boldnesses, meekness about anger. And such virtues cannot be attributed to God except metaphorically, because in God, as was said above, there are neither passions nor a sensitive appetite, in which such virtues are as in a subject, as the Philosopher says in Ethics 3. But certain moral virtues are about operations, as justice, for example about giving and expenses are justice and liberality and magnificence, which also are not in the sensitive part but in the will. Whence nothing prevents these sorts of virtues from being posited in God; yet not about civil actions, but about actions befitting God. For it is ridiculous to praise God according to political virtues, as the Philosopher says in Ethics 10.[1481]

1482. Boethius, De hebdomadibus.
1483. Pseudo-Dionysius, De divinis nominibus, c. 8.
1481. Aristotle, Nicomachean Ethics, bk. 3; bk. 10; cf. bk. 5, c. 4 on commutative justice.

Reply to the second: Since the good understood is the object of the will, it is impossible that God should will anything except what the ratio of His wisdom holds. And this indeed is as the law of justice, according to which His will is right and just. Whence what He does according to His own will He does justly, just as what we do according to law we do justly. But we indeed [act] according to the law of some superior; God, however, is law to Himself.

Reply to the third: To each one it is owed that which is his own. Now a thing is said to be another's which is ordered to that other. Thus a servant is of a lord, and not conversely. For free is that which is the cause of itself. Therefore in the name of "debt" there is imported a certain order of exigency or necessity of something to that to which it is ordered. But a twofold order must be considered in things. One, by which something created is ordered to another created thing, as parts are ordered to the whole, and accidents to substances, and each thing to its own end. Another order, by which all created things are ordered to God. So therefore debt can be attended to in a twofold way in the divine operation: either according to what is owed to God, or according to what is owed to a created thing. And in both ways God renders a debt. For it is a debt to God that in things there be fulfilled what His wisdom and will holds, and what manifests His goodness; and according to this, God's justice regards the becomingness of Himself, according to which He renders to Himself what is owed to Himself. It is also a debt to some created thing that it have that which is ordered to it, as to man that he have hands, and that other animals serve him. And thus also God works justice when He gives to each what is owed to it according to the ratio of its nature and condition. But this debt depends on the first; because this is owed to each, which is ordered to it according to the order of divine wisdom. And although in this way God renders a debt to something, nevertheless He is not a debtor, because He Himself is not ordered to other things, but rather other things to Him. And therefore justice is sometimes said in God to be the becomingness of His goodness; sometimes indeed retribution for merits. And Anselm touches upon both ways when he says: "When you punish the wicked, it is just; because it befits their merits. But when you spare the wicked, it is just; because it is becoming to Your goodness."

Reply to the fourth: Although justice regards an act, nevertheless it is not by this excluded that it be the essence of God; because even that which is of the essence of a thing can be the principle of an action. But "good" does not always regard an act, because something is said to be good not only according to what it does, but also according to what it is perfect in its own essence. And on account of this it is said in the same place that "what is good is the essence," but "what is just is a good [which regards] an end through act": therefore justice is not precluded from God.

From this article a twofold conclusion is commonly elicited. The first is: In God there is no commutative justice. The second is: In God there is distributive justice. However, the mind of St. Thomas, and the truth of both, will be examined in the two following disputations.

Disputatio LXXXV - Whether in God there is commutative justice

Caput I - A recent opinion of certain theologians

- The opinion of certain recent theologians, that commutative justice according to strict propriety is not in God, is the truer view, and is proved by the consent of all the theologians. cap. 2.
- Certain points are premised in confirmation of the preceding opinion. cap. 3.
- It is proved that in God there is not commutative justice according to propriety from the ratio of giving and receiving. cap. 4.
- From the condition of God and of the creature the same is shown. cap. 5.
- That from promise no obligation of justice in the strict sense arises in God. cap. 6.
- The arguments of the prior opinion are solved. cap. 7.

Since the virtue of justice is busied in preserving equality of what is given and what is received, equality is twofold, as we will say in the next disputation: one, which they call arithmetic, which is the equality of one thing with another, as of the given with the received; another, which they call geometric, which is about equality, not of thing with thing, but of one proportion between two things, with another proportion of two other things. At the least, it follows that justice is twofold: one, called commutative, which attends to the arithmetic just between two things; another, distributive, which regards the just between two proportions - of which we will speak severally. Now we inquire concerning the commutative: Whether in God it is found according to strict propriety. This matter indeed, a few years ago, was without controversy, and would always have been so, had not certain more recent [authors] called it into doubt: for, in order to allege the ratio of merit which they call "according to the rigor of justice," both in Christ for the whole human race, and in us with respect to glory, they have not only tried to defend in God a true and proper ratio of commutative justice, but also that the whole ratio of our merits between Christ and us, or between the Father and the Son on the one side, and us on the other, is reduced to it, and that Christ's and our works equally claim that prize; for if God promises or owes the reward by justice, and by the same retribution, then all the ratio of justice ought to consist; for otherwise it would be a kind of injustice not to repay the equal for the equal. For that [he] who labors in one vineyard all day, though his toil is the more worthy in proportion to the dignity of the lord, does not on that account constitute a right of dominion to a debtor of retribution, unless the lord had promised a fixed price; likewise it is not necessary that God by justice should repay the price of the goods of merit, unless He has so taught by His word. To this the Doctors who hold this opinion adduce no distinct doctrine of the scholastic masters, nor do they allege [any].[1484]

1484. The passage alludes to the Gospel parable of the laborers in the vineyard (cf. Matthew 20), and to the thesis that God "works all things according to the counsel of His will" (Ephesians 1:11).

This matter a few years ago was without controversy, and would always have remained so, had not some of the more recent men called it into doubt. For, in order to establish the ratio of merit, which they call according to the strictness of justice, both in Christ on behalf of the whole human race and in us with respect to glory, they have not only tried to defend in God a true and proper notion of commutative justice, but furthermore (if it please God) they have even claimed this to be the very doctrine of St. Thomas and of all his disciples. How true that is will in some degree be shown in the following chapter.

They assert, then, first, that in God there is formally and properly commutative justice; and to confirm this they note that, when some virtue or operation is attributed to God, it is not necessary to assign it to Him together with all the imperfections with which it is found in men. Otherwise neither mercy, which in us is joined with a certain compassion, would properly be in God; nor liberality, because God does not abdicate His goods when He bestows them liberally; nor vindication, because He does not defend Himself or keep Himself unharmed by punishing others; nor knowledge, because He does not reason discursively - although all these in us have the defects we have enumerated. Likewise, because all the things that are predicated of God and of creatures are said analogically, it is therefore necessary to transfer them to God in such a way that they be attributed to Him without any imperfection, and only in that mode of perfection which befits Him.

This foundation laid, they prove their position, first, because Scripture in many places proclaims that God is just; and these passages, for brevity's sake and because they are very well known, I pass over; yet they can be explained in their proper sense without trope or figure, and there is no need to have recourse to a metaphor: rather, they can be understood properly of justice, and we should concede to God justice according to its formal notion, with every imperfection removed; therefore we shall interpret them without metaphor.

Second, if justice, according to its proper character, were not to be ascribed to God, the reason would be that between us and Him, or between Christ and Him, there is no giving and receiving (datum et acceptum). But this does not hinder; for the justice that is in God ought not to be engaged about a giving and a receiving - this imperfection belongs only among men; toward God, however, it is not necessary.

Third, they say that Christ's justice toward God is not of the same kind as the commutative justice that is observed among men; for divine right is of a higher order, not as though the equality of the given and received failed; and, in their view, this same justice is found in the fulfilling of the promises made to God, in the performance of which, according to their opinion, true and proper justice intervenes with equality: only so much does someone pay, and is able to pay, as he has promised. Wherefore, finally, they conclude that Christ's justice toward God is not distinct from religion; nevertheless, His satisfaction, which He offered to God for us, was out of justice according to propriety. The authors of this opinion prove this part by no stronger reason, nor do they confirm it by any Doctors' authority, except only because in the Thomistic school it is commonly said that the Lord Christ satisfied for the human race by the rigor of justice, in the way some scholastics, especially more recent ones, speak; but how Scholastics speak of the rigor of justice, and how they do not, will be shown below.

Caput II - The truer opinion: that commutative justice, according to its proper notion, is not in God; and this is supported by the consent of all the theologians

I for my part judge not only that commutative justice, according to its proper notion, does not befit God; but also that none of the Scholastics, so far as I have read, among those who before our times committed their writings to the press, taught the contrary. Rather, all who made particular mention of this question plainly affirmed that commutative justice, according to propriety, is not in God, although concerning distributive justice there is no small dissension among these very men. This must be proved for me expressly by alleging the Doctors in this chapter, before I bring forward the reasons of this position.

Accordingly, this opinion was taught by Alexander,[1485] by Richard,[1486] by Durandus,[1487] by Paludanus,[1488] by Capreolus,[1489] by St. Thomas in the Contra Gentiles,[1490] and by Ferrarien.[1490] Hostiensis also in his consilium,[1491] Rualdus,[1492] Soto,[1493] and Cajetan in this very article,[1494] and John Bunderius in his Compendium of the Conference, title 6, art. 7, who follows Rualdus. Likewise Gabriel in his Supplement on IV Sentences,[1495] where he says that with respect to good works there is no debt of justice according to propriety. Bonaventure likewise adds that in God absolutely there is no justice as to debt, but only as to the effusion of His goodness.[1496]

To these we may add St. Thomas where he teaches that, as regards our works proceeding even from grace, there is not, simply speaking, justice of ours toward God,[1497] and Conrad in the same place, and again Durandus in II Sentences, d. 17, q. 2, and Ferrarien on the Contra Gentiles.[1490] For all that, it must not be denied, as we shall show at greater length in the same place, that there is, simply speaking, merit on our part before God. But most clearly St. Thomas hands down this doctrine in this very article, and more recent men along with him, where, after he had

1496. St. Bonaventure, IV Sent., d. 46, ar. 2, q. 1, ad 2; and elsewhere on q. 114, where he affirms that in God there is not justice as to debt absolutely, but only as to the outpouring of His goodness (cited as "Bonaventura ... de omni iustitia absolute affirmat, in Deo non esse quoad debitum, sed quoad effluxum tantum bonitatis suae").

1497. St. Thomas Aquinas, I - II q. 114, a. 1 (and cf. a. 5), where he teaches that, simply speaking, there is not justice of our works toward God, even when they proceed from grace (cited as "St. Thomas. 1.2. q.114. ar.1 ... negat 5").

1490. St. Thomas Aquinas, Summa contra Gentiles, cap. 93; with Ferrarien's commentary ad loc. (cited as "S. Tho. Contrag. cap. 93. & ibi Ferrarien.").

distinguished commutative and distributive justice, he says thus of the commutative: "And this does not befit God." If in the solution to the first objection he seems to attribute justice to God, yet not about civil actions; which is not surprising - first, because there he seems to concede distributive justice; next, because not even this does he concede properly, as we shall note below.

But, that we may demonstrate more exactly that this opinion is that of all the Scholastics, and that no one taught the contrary, it will be worth the effort to gather some testimonies which might be alleged for the opposite view, to examine them, and to block the escape routes by which the adversaries are wont to contrive their defense - something which should be considered neither troublesome nor useless, since the opposite opinion, contrary to the common doctrine of the Doctors, has rather easily prevailed. For the matter is of greater moment than at first sight appears, and upon it many points depend which are difficult indeed and worthy of consideration, and which are daily called into question.

Thus, first for the prior opinion one might allege Bartholomaeus de Medina on the First - Second of St. Thomas, q. 114, a. 3,[1498] where he expressly asserts that there is for us before God merit de condigno and of justice, truly and properly; and in the article he affirms that, between our works, insofar as they proceed from grace, and the reward of eternal life, there is commutative justice. Therefore he judges that, properly, there is commutative justice in God. However, the same author explained himself in the same place, in a. 3, ad argumentum Durandi, where he does not dare to concede justice between us and God, but between our merit and the reward; in which he follows the doctrine of Cajetan on a. 1 of that question 114. For there he says that there is indeed, simply speaking, justice between our works and the reward of eternal life, because that is the equality of condignity; but, simply speaking, between us and God there is not justice - which Cajetan plainly said here in this article does not properly befit God: therefore Medina agrees with us, since he does not concede to God the attribute of justice according to propriety, though he says that there is justice between the work and the reward on account of the equality of condignity. Whether indeed these things can cohere, we shall say below. Nor did Francis Romanus will to teach anything else in his book on liberty and the necessity of works, truth 22,[1499] when he says that to our works, as they are from the Holy Spirit, the reward of eternal life is due de condigno according to the true equity of justice: he did not say "according to true and proper justice," but "according to the true equity of justice," which is the true equality of condignity between the works and the reward - such as can intervene between us and God.

Next one can allege Scotus in I Sentences, d. 17, q. 1, "Hic potest,"[1500] and Gabriel in I Sentences, d. 9, q. 1, a. 3, after the first conclusion,[1501] who say that to condign merit the reward is due of justice, yet on account of a promise. But neither does Gabriel nor Scotus lend support to that prior opinion. The first, indeed, because he himself teaches the opposite when disputing about the attribute of divine justice, as we adduced a little earlier: for they deny to God absolutely the

1498. Bartholomaeus de Medina, In I - II q. 114, a. 3; and ad arg. Durandi there.
1499. Franciscus Romanus, De libertate et necessitate operum, veritas 22.
1500. John Duns Scotus, I Sent., d. 17, q. 1, "Hic potest"; cf. also the note that these words are spurious in some editions.
1501. Gabriel Biel, I Sent., d. 9, q. 1, a. 3, post I concl.

attribute of justice according to propriety, not distinguishing between commutative and distributive; nay rather, they remove from God, properly, every kind of justice. And as for those words of Scotus (as is noted in the margin), they are spurious; they are not found in the original. And even if he were to say that all justice arises from a promise - which belongs to a certain fidelity - this is a potential part of justice; it is thereby withdrawn from proper justice, and reduced to fidelity, a certain mode of equity: therefore none of these authors is one who asserts the opposite.

As to what many scholastics say - that Christ satisfied for us by the rigor of justice - that matters little. First, the ancient authors, such as St. Thomas, Alexander, and Bonaventure, do not mean anything else by that way of speaking than what we ourselves say: they teach that the satisfaction of Christ was perfect, that is, needed no accepting grace; but they did not therefore dare to assert that it was according to proper justice, but that it was of equal condignity in the mode of merit, as we shall show in its own place. Then other scholastics, who in this way speak, do not contend that in Christ there was justice toward God properly, but that the equality which He observed in His satisfaction, in the manner and likeness of justice, was according to rigor - that is, that it did not need the liberal acceptation of God, but was of equal condignity to the Lord - which is most true, as we shall see. I except some more recent authors, who contend that even in the satisfaction there was justice according to propriety; it is this opinion that I now set myself to impugn.

But furthermore, the authors of this opinion strive to escape by another subterfuge. They say that those Doctors speak of commutative justice with that imperfection which is found in creatures, and with which it cannot be in God; not, however, without imperfection, as the other attributes that are ascribed to God. But indeed this contrivance, invented as an evasion, plainly has no firm foundation. First, because many of those same authors, when treating with St. Thomas about mercy, do not recognize it in the absolute sense, unless with the imperfection that it has annexed in us, as we shall see from what has been said. Then, because, whereas many of them deny commutative justice, yet without any addition they concede distributive justice, which with imperfection at least repugns less to God than commutative; therefore they concede it in the same way in which they deny commutative - that is, they concede it without imperfection; so too, then, they deny commutative justice without imperfection. Moreover, if on account of imperfection it were permitted to those judging of this matter absolutely to deny to God commutative justice, then by the same latitude one could deny intellect, will, and operations, and various other things - indeed, all the rest of the attributes. Besides, let it be granted, for the sake of argument, that those Doctors, without any addition, absolutely deny commutative justice; they would then be forced to posit some other sort of imperfection annexed to commutative justice, by reason of which this justice could not be in God - an imperfection such that cannot be conceived in other attributes which are ascribed to God; but this cannot be maintained, as will be clear in what follows.

Caput III - Certain preliminaries to shaping the reason for the preceding position

It is necessary, by reasons drawn from principles, briefly to confirm the opinion set forth, and, in summary fashion, to ...

Among the Scholastics, those who thus speak do not contend simply that there is justice between us and God; rather, they hold that there is not justice, which Cajetan plainly said in this article, that it does not befit God properly; therefore Medina feels with us, since he does not grant to God the attribute of justice according to its proper notion, although he says that between works and reward there is justice on account of the equality of condignity. Whether these statements can stand together, we shall say below.[1502][1503] Nor did Franciscus Romanus wish to teach anything else in the book On the Freedom and Necessity of Works, truth 22, when he says that to our works, as they are from the Holy Spirit according to the true equity of justice, the reward of eternal life is due condignly. He did not say "according to the true and proper justice," but "according to the true equity of justice," because there is a true equality of condignity between the works and the reward; yet it is from that sort of justice which can intervene between us and God.[1504]

Next, one could allege Scotus in I, dist. 17, q. 1, "Hic potest"; and Gabriel, in II, dist. 27, q. 1, a. 2, post the first conclusion, who say that to condign merit a reward is due from justice, but on account of a promise. But neither Gabriel nor Scotus lends support to the former opinion. First, because they themselves taught the opposite when they disputed about the attribute of justice in God, as we have alleged a little before: for they deny to God absolutely the attribute of justice according to its proper notion, not distinguishing between commutative and distributive; whence they removed from God every kind of justice properly so called. Then too, those words of Scotus, as is noted in the margin, are supposititious, since they are not found in the original. Moreover, when he says that the whole of justice arises from a promise, which is of a certain fidelity, and this is a potential part of justice, defective with respect to the proper ratio of justice, that obligation of fidelity also can in a certain way be called justice; therefore there is no author who affirms the opposite.[1505]

As to what many Scholastics say, that Christ satisfied for us "by the rigor of justice," that matters little. For first, the more ancient writers, such as St. Thomas, Alexander, and St. Bonaventure, do not use this mode of speaking, but only teach that the satisfaction of Christ was perfect, that is, in no way did it need the liberal acceptation of God, but was altogether of equal condignity by the mode of merit, as we shall say in its place. Then, other Scholastics who do speak in this way do not contend that in Christ there was justice toward God properly so called, but that the equality which He maintained by satisfaction, after the manner and likeness of justice, was according to rigor; that is, it did not need the liberal acceptation of God, but was altogether of equal condignity. This is most true, as we shall say. I except some more recent writers, who contend that even in satisfaction there was justice according to its proper notion, whose opinion I now mean to impugn.

1502. Cajetan, on this article.

1503. Medina, in this question, where he denies the attribute of justice to God according to its proper notion, while conceding equality of condignity between works and reward.

1504. Franciscus Romanus, De libertate et necessitate operum, veritas 22.

1505. Scotus, I Sent., d. 17, q. 1 ("Hic potest"); Gabriel, II Sent., d. 27, q. 1, a. 2, post 1 concl. The words cited from Scotus are noted by the author as spurious and not in the original.

But the adversary still tries to escape the authority of all these. For they say that those authors speak of commutative justice (iustitia commutativa) with the imperfection that is found in creatures, along with which they deny that it exists in God; yet not without imperfection, as the other things that are attributed to God. But that this escape is a fabrication and has no firm foundation is easily gathered.

It is proved, first, because many of these same authors, when disputing with St. Thomas about mercy (misericordia), do not deny it absolutely, but when the imperfection which it has annexed in us is removed, as we shall see in art. 3. Next, because many of them, when they deny the commutative, consequently grant, without any qualification, the distributive (iustitia distributiva), which, with imperfection, no less repugns to God than the commutative. Therefore they grant it in the same way in which they deny the commutative: but they grant it without imperfection; therefore they also deny the commutative without imperfection. In addition, if on account of imperfection it were permitted to disputants in this matter absolutely to deny commutative justice to God, nothing further preventing, it would also be permitted to deny intellect, will, and the operations of each, and finally all the other attributes. Moreover, those Doctors grant the other things to God without any qualification, but they absolutely deny the commutative; therefore they thought there was another kind of imperfection annexed to commutative justice, by reason of which this justice cannot befit God, a kind which the other attributes do not have, as will be explained in the next chapter.

Certain preliminaries in confirmation of the preceding opinion

Before we begin to confirm our opinion, I shall briefly repeat the foundations.

First foundation. I noted elsewhere from St. Thomas that the things which are found in creatures are to be attributed to God in such a way that they are assigned to Him without any imperfection; whereas the affections or operations which, as they are in us, contain imperfection in themselves, can be had in a twofold way: either the imperfection is conjoined to them, not pertaining to their formal notion, or it is essentially included in their notion, however abstractly conceived. In the former way an operation can be attributed to God formally and properly, the imperfection being set aside; as we shall say of mercy, which, without passion or compassion of appetite, according to its formal notion, which is to relieve misery, rightly befits God. From this side anger (ira) did not repugn, as we noted there in chap. 4: for when the imperfection is removed, the formal ratio of the operation is not thereby taken away, since the imperfection is not essentially conjoined to it. But if the imperfection is essentially included in the very formal notion, that act cannot properly befit God: because, since it must be assigned to Him without imperfection, and the formal ratio of such an operation is taken away when that is removed, it follows that it cannot be properly attributed to God.

Second foundation. Yet it must be observed, secondly, that in every created operation, insofar as it is created, some imperfection is essentially included - namely, that it is an act elicited by some faculty and therefore an accident, that it is finite and limited. This, however, does not prevent its

being attributed to God formally and properly. For every created perfection is transferred to God in such a way that it does not befit Him univocally, but analogically and in a higher manner. And in order that we may thus attribute some operation to God properly and formally, it is necessary that, according to the formal ratio abstracted at least analogically, no imperfection be in it. And this happens whenever, on the part of the formal object which the operation regards, imperfection is not essentially included. For if this is included in the object as it is regarded by the act, there results also in the operation itself an essential imperfection, on account of which such an operation cannot fall in God. By this reasoning we excluded anger from God, however much according to an abstract analogical notion: because this affect regards, as its proper object, the avenging of an injury suffered, which cannot befit God. So too it excludes the desire of one's own good and sadness over one's own evil, as St. Thomas notes; the former, as distinguished from love, is about a future good as future, and the latter is about one's own evil. This formal ratio cannot befit God, not even analogically.[1506]

But that God does not reason discursively is certainly not enough, on that account, for science (scientia) not to be attributed to Him according to its proper notion. For the name "science" is said as properly of cognition through discourse as of cognition without it, such as is found in the Angels; although, if you define human science, it is necessary to include discourse. Then too, that science in creatures is an accident and an elicited operation, whereas in God it is His substance, does not hinder His essence, as conceived by us in reference to the knowable object, from being called science most properly, albeit in a higher sense. For since we find in the object the ratio of knowable truth, and this has a relation to the essence of God without any imperfection, it comes about that we most properly call the very essence science.

Thirdly it must be noted, as we also said there, that when we inquire about these affections whether they are properly transferred to God, it must be understood according to the common doctrine of the Philosophers and of God as He is wont to be defined by them commonly. For if it were allowed to fashion new definitions, we ought to deny no affect to God, and rightly too would Lactantius have attributed anger to God. It remains then to see whether, in the object of justice (iustitia), which is commonly assigned to it by the Philosophers, some imperfection is included which is derived into the affect itself, by reason of which it does not properly befit God. Wherefore the adversaries, who, as we saw in chap. 1, assert that the justice of Christ toward God is of a higher notion than in us, and that it is the very virtue of religion (religio), indeed even that by the same reason the observance of a vow which we have made to God pertains to justice, are manifestly mistaken; and at the same time they assert that this is properly special justice. For at their pleasure, and without foundation, they confound virtues which Theologians and Philosophers have distinguished. For who ever denied the doctrine of St. Thomas, who in 2.2, q. 80, a. 1 taught that

1506. The allusion is to St. Thomas's remarks distinguishing desire of one's own good as about future good and sadness as about one's own evil, which, as such, cannot be attributed to God. The author also elsewhere treats mercy as formally be fitting God when passion is removed. St. Thomas: II - II, q. 80, a. 1 is cited below.

there are certain subjective parts of justice, and certain potential parts - he calls subjective parts those which are species of justice retaining the generic notion of it, such as the commutative and distributive - in which the entire and perfect notion of justice is preserved?

Caput IV - That in God there is not commutative justice according to its proper notion; it is proved from the ratio of giving and receiving

The potential parts of justice, indeed, which retain some likeness of justice, because they are toward another, yet do not have the true notion of justice, either because in them there is not the notion of due, or because they fall short of the notion of equality. By equality St. Thomas understands the equality of what is given and what is received; and among these he numbers religion, by which we also pay our vows to God. Therefore the aforesaid Doctors wrongly confound religion and commutative justice with one another. Wherefore, if they say that the justice of Christ toward God is religion, and that from this Christ has satisfied for us, they ought to assert that His satisfaction was not from justice properly so called - as we shall incidentally prove in the following chapter, where we shall give a universal reason why, even if in paying vows we render an equal to God, this payment is not from justice. And we shall show universally that commutative justice cannot be between us and God. Therefore one must philosophize thus about the virtues, and distinguish one from another, lest they be confused at will, but be used according to the common doctrine and acceptation. Wherefore, when justice or another virtue is attributed to God according to its propriety, it must be so attributed that we do not feign new natures and definitions of virtue, but, according to the common and received use, we attribute it to God, always preserving the analogy, as was explained above.

Fourth, when it is asked whether in God there is justice, this is not understood of any and every affection about the objects of justice; for without doubt God loves all the works and objects according to virtue which are in us. Whence He Himself loves the justice which men observe among themselves, and He both commands and exhorts it. But if on this account we should say that in God there is an affection of justice, there would equally have to be conceded in Him temperance and the other moral virtues. Therefore now we ask about justice, whether in God there is the affection of justice between Himself and creatures, so that He should will to preserve between Himself and us the equal and the just, which is the object of justice. And it remains to be proved that justice, as such, contains within itself an imperfection, so that, according to its proper notion, it repugns to be thus in God.

Fifth and finally, against Cajetan and Bartholomew Medina it must be presupposed that in God there is not properly commutative justice, such that there could be ratio between merit and reward. [1507] For these Doctors - by what reason they were able to be induced to assert that justice is properly between the things themselves and not between persons, if the discourse is of justice as a virtue, I do not know - say that it is between, as it were, things, not persons. But Aristotle in Ethics 5

1507. Cajetan, on this article; Bartholomew Medina, in this question, who denies that justice is attributed to God according to its proper notion, while conceding an equality of condignity between works and reward.

supposes that justice is that which constitutes the just and the equal between one man and another; therefore it ought to be between two rational natures and to have common matter about which it constitutes the just and the equal: consequently, the virtue of justice is not between merit and meed; for who would place justice between money and a horse considered collectively? Therefore those who say that the justice of Christ toward God is between merit and reward do not understand the virtue itself, but an equality and the just; or else they must admit that this equality is not the proper object of justice, which is a peculiar virtue, or else they must concede in God Himself the affection of the virtue of justice according to its propriety, if indeed the affection of God is conversant about this equality and observes it. Wherefore, although they concede equality simply according to condignity - which I think they teach and have wished to teach - yet they ought to say that this is not the proper object of justice; since they do not concede to God the affection of this virtue according to its propriety.

With these foundations laid, which in my judgment are most firm, and which in no way can be denied by the adversaries, I shall endeavor to demonstrate by three principal arguments the common position which I set forth in chapter 2.

The first is taken from the very nature of the object of commutative justice, whose formal ratio consists in the equality of what is given and what is received - why it is such. The formal object which is commonly assigned by Theologians and Philosophers to the virtue of commutative justice properly so called, which differs from all other virtues, is the equality of what is given and what is received; but between God and any creature there cannot be equality of what is given and what is received: therefore in God there cannot be the affection of justice properly so called, which is referred to the establishing of this equality between Himself and a creature; and consequently neither the affection of commutative justice properly so called; for this must be conversant about the equality between what is given and what is received.

And indeed the major proposition is St. Thomas in this article, and 2-2, q. 61, art. 3; and Aristotle in Ethics 5, cap. 2, where he distinguishes the special virtue of justice from the general, which he says is found in every virtue, because the special is conversant about three only goods - money, honor, and safety - and in these it establishes equality; and any inequality in these things is special injustice; and unless by this reason we distinguish the special virtue, it follows that in every virtue there is justice properly and in a special mode, or that justice is only a general virtue, since every virtue observes in its operation equality with its rule, that is, with the law and with God. Therefore, since there ought to be special justice, some special just thing must be constituted about which it operates; but this can be nothing other than in those three goods enumerated. And if to do something according to the will of a superior, which pleases him, is a work of special justice, and from such a work an equality of justice is constituted in rendering a wage for it - just as the adversaries say concerning our merits before God - it follows that in every good work there is a giving and a counterpassion, as in any person contracting with another, which demands retribution from justice; and thus every good work will be of special justice, which is to confound all the virtues.[15081509]

Then Aristotle, Ethics 5, cap. 4, assigning the commutative just, says that it is in buying and selling, in business either done voluntarily, as in contracts, or in those that are done to men involuntarily, as in robbery, theft, and the rest. And cap. 5 he teaches that in every commutation, which he says to be the matter and proper object of justice, there is a repassion. For he who receives something from another, by returning money, or some other thing, suffers just so much, by abdicating from himself the dominion, as he from whom he had received something. Nor has any Theologian or philosopher hitherto assigned otherwise the object of commutative justice.

Lastly, since justice ought to be between two who are capable of reason, as from Aristotle and St. Thomas in the places cited in the preceding chapter it has been proved, whenever it is no concern of the one what the other does, no just commutation with him can be properly observed, nor commutative justice. Therefore it is necessary that the thing given and received should be of mutual concern to both, so that special justice may have place between them: thus the truth of the major proposition is evident.[1510]

But the minor is manifest; and this St. Thomas clearly handed down, 1-2, q. 114, art. 1, ad 2; and in this article Driedo in the treatise On the Captivity and Redemption of the Human Race, cap. 2, and in art. 3 perhaps at the beginning, where the Angelic Doctor himself, the Dean of Louvain, and Hosius in the places cited prove it from that of Romans 11: "Who has first given to him, and it will be repaid to him?" To himself, however, Paul does not deny that God can receive nothing of profit from us (although that is most true); but he says that God is prior in the largess of gifts. Paul therefore says: If there is someone who first gave to God, that is, from his own powers has merited something from God, God will repay the reward; as if he said: but there is none; therefore, etc. For that interrogation wrings out a negation, to which he subjoins the cause: "For from him, and through him, and in him are all things" (Rom. 11); as if he said: He Himself is the author of all goods, He promotes and preserves all; none could give to Him first.[151115121513]

St. Thomas much better proves this minor proposition, 1-2, q. 114, art. 1, ad 2, by the testimony of Job 35: "If you act justly, what will you give him, or what will he receive from your hand?" This Job 22 also expressed: "What does it profit God if you are just? or what does it confer on him if your way is blameless?" For God is so above every creature that He needs no created thing, nor does anything outside Himself accrue to His utility, even if it be said to be done to His honor and glory. For honor is a thing in the one who honors, not in the one honored; as also always happens among men. But between the honor of a man and of God there is a great difference: because while a man is honored, even if that honor is in another and he himself is unaware, yet it is useful to him. Wherefore he who takes away honor from him is truly and properly said to inflict damage upon him. But the honor of God, which is said to be in us when we do well or worship Him religiously,

1513. Rom. 11:35 - 36.

certainly is not said to be to the utility of God Himself: therefore He can receive nothing from us which in any wise is of concern to Him; wherefore the proper matter of justice between Himself and us cannot exist.

But if you say that among men only does justice deal with giving and receiving, not, however, between us and God, but that it is of a higher nature; against this is what we noted in the preceding chapter, namely, that when from human things some affection or operation is transferred to divine things, it ought so to be transferred that it be transferred according to the mode of acceptance and the definition. For if it befits us to fashion definitions at will, one could attribute to God even the worst affections. But that we may observe the common definition, the proper ratio of the object, which is commonly assigned to such an affection, must be retained. For this is not only annexed as an accidental to the operation, but is essential and per se; and this being removed, the ratio of the propriety of the affection is taken away, even according to analogy. Besides, all Philosophers say that the object of justice is equalities in what is given and what is received; where this has not been, as between us and God, neither will there be such an object, nor the affection of commutative justice properly so called.

Finally, if from this - that we offer to God our works, which are meritorious with Him - and that He repays eternal life for them, one says that He is engaged about justice in a merely common way, and that He establishes a just equality between us and Himself in things given and received; it follows that before any promise He is bound to this: for if He accepts, He ought to repay; and consequently, if He should deny glory to good works done in grace, He would be unjust; but that He is unjust none will grant, as all admit; therefore to repay for good works done is not according to commutative justice in the ratio of what is given and what is received.[1514]

Some say that it is not enough that the works be of such condignity to the reward, so that God ought, before a promise, to repay out of justice. For if someone labors in the vineyard of another without a pact, even if the labor otherwise is condign to a wage, nevertheless the owner of the vineyard is not bound to pay it: therefore in the same way God is not bound to repay merits out of justice before He has made a pact. But this evasion can easily be cut off: for labor in the vineyard induces an obligation of justice not from a promise and the fidelity of performance, but solely from this, that the owner of the vineyard has accepted the labor into his utility; and because whenever someone labors in the vineyard of another, with the owner ignorant or not consenting, that labor is not counted to redound to the owner's utility, nor is he held to accept it; therefore if he does not pay a wage for it, he does not commit injustice. But if he sees and consents, now he accepts; and without any pact he ought to render the wage; and if he should not render it, he will sin against justice, though not against promise and fidelity. Nor can it be rightly argued from the fact that he who promised and does not fulfill acts unjustly; for if he promised, it is because he consents and has accepted the labor into his utility. Therefore similarly, even if God should not promise, it would suffice that the just man in grace perform good works, which cannot be done without God knowingly consenting and at times commanding. But if God is said to accept them because they are

1514. Margin: "God is not one who repays for merits out of commutative justice."

unto His honor according to His will, it follows that even if He does not expressly promise, by the very fact that they are done according to His will and please Him, they somehow redound to His utility in the way in which they can; wherefore before a promise He ought to repay, if a promise, once made, is thought to establish and preserve justice between works and reward; since after a promise He does not accept more from them than before.

Then on the contrary this very point is shown, and our position is established: since no creature, either by its sins or in any other way, can inflict damage on God which is truly damage of His, therefore neither can it render anything which truly redounds to His utility and compensation; for contraries must be on the same footing of reason. Wherefore, if there is no sin which is properly injustice against God, but only in a certain common way, likewise there will be no compensation made to Him which is properly from justice. But that no damage can be inflicted on God by us is evident, since even by the sins of blasphemy, sacrilege, and hatred, which are directly against Him, God suffers nothing, nor does He either will or lose some advantage. Rather, such sins are set against other virtues than justice - blasphemy against faith, sacrilege against religion, hatred against charity - which most differ from justice properly so called; for if they were set against justice, they would fall into a twofold species of sin, which is absurd. Therefore there is no special species of injustice against God; and thus neither is there commutative justice between God and us in the ratio of giving and receiving.[1515]

What we noted in the preceding chapter, namely, that when an affection or operation is transferred from human to divine matters, it ought to be transferred according to the customary acceptation and definition. For if it were permitted to fashion definitions at will, we could attribute any affection to God. But, in order to observe the common definition, the proper ratio of the object which is commonly assigned to the affection must be retained. For this is not merely an accident annexed to such an operation, but something essential and per se; and, if this be taken away, the proper ratio of such an affection is taken away, even according to analogy. Therefore, since all the philosophers say that the object of justice is an equality in what is given and received, where there has not been a giving and a receiving between us and God, there will not be such an object, nor the affection of proper commutative justice.

Finally, if, from the fact that we offer our works to God, which are meritorious before him, and he retributes for them eternal life, he is said to preserve commutative justice properly and to establish a just equality between us and him in the ratio of giving and receiving, it follows that before any promise he would be obliged to this: for if he receives, he ought to retribute; and consequently, if he were to deny glory to good works done in grace, he would be unjust. But he would not be unjust, if he were to deny it, as all admit: therefore the retribution made to good works is not according to commutative justice in the ratio of giving and receiving.

1515. Cf. Job 35:7; Job 22:2 - 3.

Some say that it is not enough that the works be of themselves condign to such a reward, so that God, before promising, should be bound out of justice to retribute. For if someone labors in another's vineyard without a pact, even if the labor be otherwise condign to a wage, the owner nevertheless does not owe to pay it out of justice: therefore, by the same reason, God does not owe to retribute merits out of justice before he contracts.

But this subterfuge can be easily cut off: for labor in the vineyard induces an obligation of justice not from promise and the fidelity of a pact, but only from this, that the owner of the vineyard has received the labor into his own utility; and because, as often as one labors in another's vineyard with him not knowing or not consenting, that labor is not judged to redound to the owner's utility, nor is he judged to have received it, therefore, if he does not pay a wage for it, he does not commit injustice. But if he sees and consents, he already receives it and, without any pact, owes to retribute a wage; such that, if he does not retribute, he will sin against justice, and not against promise and fidelity; nor can he be accused of falsehood, as one who promises and does not fulfill, but of injustice: because by that very fact that he consented, he received the labor into his own utility. Therefore, similarly, even if God were not to promise, it would suffice, if a just man in grace were to do good works, which could not fail to be done with God knowing and consenting, and sometimes commanding. And if God is said to receive them, because they are done in his honor according to his will, it follows that even if he should not expressly promise, by the very fact that they are done according to his will and are pleasing to him, they in a certain way redound to his utility; in such wise that, if a promise establishes and preserves justice between works and reward, he ought to retribute both before and after the promise, since after the promise he does not receive more from them than before. Wherefore, if a promise in God were to induce some obligation of justice, it would not be for things received; for to these he would be obliged before the works; but it would be an obligation to give what he promised, because from the promise there would arise for us a right against him. But that from a promise justice cannot arise between us and God, we have at length proved above in chapter 6.

Then, from the contrary, this very point is shown, and our opinion is established: because no creature, either by its sins or in any other way, can inflict damage on God such as would be truly a damage of his; therefore it can attribute to him nothing which truly should redound to his utility and compensation: for by a contrary reason the same ought to be the case. Wherefore, as there is no sin which is properly injustice against God, but only in a certain common way, so there will be no compensation itself which is done out of justice properly. That no damage can be inflicted on God by us is clear; because even by sins of blasphemy and sacrilege and hatred, which are directly against him, God suffers nothing, nor does he lose anything useful or advantageous; otherwise these would themselves properly be sins of injustice. But certainly they are not such; rather, they are opposed to other virtues than justice - blasphemy to faith, sacrilege to religion, hatred to charity - which most properly differ from justice; but if they were opposed to justice, they would fall into a twofold species of sin, which is false.

Accordingly, not only in all sins universally is there not found a damage inflicted on God which could be the object of injustice, nor is there a special ratio of injustice against him, but even in sins which are done in a peculiar way against God, the ratio of injustice or of damage inflicted according to propriety cannot be. Whence it is further inferred that neither we nor Christ have satisfied for our sins out of justice properly, if indeed satisfaction out of justice supposes a lesion against it: for no satisfaction takes place unless it reduce some inequality to equality: therefore, where there is no inequality against justice properly, there is no reduction to equality according to justice properly. And this holds not only in satisfaction for any mortal or venial sin, but also in satisfaction for sins which are directly against God.

Wherefore neither penance, which is posited in us for satisfaction for our sin, nor the vengeance which he takes for sins, pertains properly to the virtue of justice. St. Thomas teaches this concerning penance: in the Third Part, q. 85, a. 3, when he asserts that even if penance be a part of justice, nevertheless in it the just simply is not preserved.[1516] Wherefore the common opinion is that penance is not a subjective part, but a potestative part of justice (pars potestativa iustitiae), which fails from the true and proper ratio of justice; as also religion and many others are, as we said in the preceding chapter; and whether indeed it is distinguished from religion, we shall say in its own place. But this is most certain, whether it pertain to religion or not, that it is not justice properly: for a potestative part of justice, such as is also religion, fails from the ratio of proper justice and only retains a certain mode of it. And indeed for this reason St. Thomas judged penance to fail from the ratio of justice, because it is not conversant about the just simply, but according to something, since that which a man renders to God for sin, namely contrition, is not equal, by which reason it is true what we shall say below at 1-2, q. 113, a. 2.[1517] But even if it were altogether equal with a certain condignity, so that by its nature it would not only blot out sin, but also would supply every defect of it without any condonation, nonetheless it would not be justice properly on our part toward God: because from our satisfaction nothing of emolument would accrue to God; just as, on the contrary, from our sin no damage accrues to him, nor any diminution: therefore that our payment is not out of justice, because nothing grows or comes to God of profit from it; and on that account that work is rightly assigned by all not to proper justice, but to religion, which differs from justice.

Moreover, neither is there justice in God properly vindicative, which is reckoned as a certain part of commutative justice in making and vindicating injuries, as is clear even from what has been said, and as St. Thomas witnesses, 2-2, q. 108, a. 2, where he says that it includes two things, both the punishment of the injury done and the removal of the damage inflicted by it, that is, its compensation.[1518] Aristotle agrees in Ethics V, chapters 4 and 5, when he teaches that justice is found in requital, and that there, too, there is found excess and inequality, which he calls a gain when someone has suffered from another; which inequality and excess demand to be reduced to equality according to justice.[1519] But such a thing is not between God and man, as we have

1516. St. Thomas, Summa theologiae, III, q. 85, a. 3.
1517. St. Thomas, Summa theologiae, I-II, q. 113, a. 2.
1518. St. Thomas, Summa theologiae, II-II, q. 108, a. 2.
1519. Aristotle, Nicomachean Ethics, V, cc. 4 - 5.

sufficiently proved: therefore there is not in God justice properly so called in vindicating injuries done to himself. There is the further consideration that, when God retributes to us for merits, he suffers nothing; because he never abdicates dominion of anything, nor can he abdicate to his own loss; but he who pays out of justice, in a manner suffers a re-suffering of himself; for this reason Aristotle said in Ethics V, chapter 5, that in every commutation in which justice is preserved, there is a counterpassion; because each person abdicates from himself as much as he has received. Therefore, since God always remains Lord of that which he retributes, justice according to propriety will not fit.

Especially indeed this very point is proved because St. Thomas, 2-2, q. 80, a. 1, in the body, numbers vindication among the potestative parts of justice, because it falls short of the ratio of proper justice: for he who asks or takes compensation for damage inflicted on himself ought not to have asked it out of justice; and thus the debt, which is of the ratio of justice, ceases, as we shall see below in chapter 6: for justice is considered in paying debts; and therefore he who asks satisfaction does not act out of justice. Add that, when God punishes crimes committed against himself, even then he does not have actually this punitive justice which is a potestative part of justice; for vindication, as we were saying above, tends to remove some damage of those things which cannot befit God: and for this very reason we proved above, in the preceding disputation, chapter 4, that there is no anger in God, because it is not an appetite of vengeance. Then, from the same consideration, it follows that, when we pay our vows to God which we have promised, even if we render an equal thing, because we render only as much as we promised, nonetheless that payment is not out of justice, but out of religion; for nothing accrues to God from it of emolument.

Caput V - The same is shown from the condition of God and the creature

Second, a reason by which our opinion is to be proved is taken from the condition of God and the creature. For the creature is compared with God as a little son with his father, and as a servant with his lord: but between a son and a father, between a servant and a master, there cannot be justice: therefore neither between God and man. Moreover, that between son and father there is not justice is proved from Aristotle in Ethics V, the last chapter, where he teaches that the honor due to parents can never be repaid, but he who obeys as he is able seems good and equitable; he asserts the same of the honor due to God; whence also that common saying has prevailed: We cannot repay equal gratitude to the gods, to teachers, and to parents. Accordingly, whatever owed due is established toward parents, as the support of them with food, is constituted by a certain virtue, namely piety, which is a potestative part of justice, of which St. Thomas treats at 2-2, q. 101; and accordingly it falls short of the ratio of proper justice, because in it the just simply is not found; while toward God religion is established, similarly contained under justice as a potestative part.[1520]

Moreover, in this way it is only proved that, in showing honor and in the support of food, justice cannot be on the part of children toward parents; which suffices for our present purpose, so that we may say the same of God and the creature.

1520. St. Thomas, Summa theologiae, II-II, q. 101.

But Aristotle denies in addition, for another peculiar reason, in Ethics V, chapter 6, that there is justice between son and father, slave and master; which reason in the same way proves that between God and man right of justice is not found, because Aristotle gives it in these words: "There is not justice toward that which is, absolutely speaking, one's own;" adding that the son is in a certain way something of the father and not separated, as being a part of him; "wherefore there is not right of justice toward himself." If one were to say: since there is not injustice toward the things which are one's own, and the son is said to be something of the father, there will not be injustice toward him; wherefore neither will there be justice toward him: for both are toward another who is simply another; but the son, since he is a part of the father, is not other than he. This reason St. Thomas explained in almost these words, 2-2, q. 57, a. 4, and he adds that between wife and husband there is justice simply, because the wife is not a part of the husband, as the son is.[1521]

The second reason, by which our position is to be proved, is taken from the condition of God and the creature. For the creature is compared to God as a small child to a father, and as a servant to a lord; but between son and father, and between servant and lord, there cannot be justice: therefore neither can there be justice between God and man.

Further, that between son and father there is not justice is proved from Aristotle, Ethics VIII, last chapter, where he teaches that the honor owed to parents can never be fully repaid.[1522] Yet he who, as far as he can, pays them obedience, is called good and equitable. The same seems true regarding the honor owed to God and has long prevailed in the common saying that we cannot return equal gratitude to the gods, teachers, and parents. Wherefore, with respect to the worship owed to parents and to the provision of sustenance, there is constituted a certain virtue, namely piety, which is a potential part of justice, of which St. Thomas treats in II - II, q. 101;[1523] and therefore, failing to repay equal gratitude to parents, one does not sin against justice strictly so called, because in such a case religion is constituted, which likewise is contained under justice as a potential part.

But by this route there is only proved that, in the showing of honor and the provision of sustenance, justice cannot exist on the children's part toward their parents: which would be enough for our present purpose, so that we might say the same concerning God and the creature. Yet Aristotle moreover, by a special reason, denies in Ethics V, ch. 6, that there is justice between son and father, and between servant and lord;[1524] which reason in like manner proves that it is not found between God and man. And it is this, which Aristotle renders in these words: "For there is no justice toward one's own, simply speaking; but a son, so long as he is small and not separate, is a part of the father himself; now no one wishes to harm himself; hence there is no injustice toward him." As if he said: since there is no injustice toward things that are one's own, and the son is said to be something of the father, there will not be injustice toward him; wherefore neither will there be justice toward him: for both are toward another who is simply another; but the son, since he is a

1524. Aristotle, Nicomachean Ethics, V, ch. 6.

part of the father, is not other than he. St. Thomas explained this in nearly these words, II - II, q. 57, a. 4, and adds that between wife and husband there is justice simply, because the wife is not a part of the husband, as the son is;[1525] yet he did not set out at length the difference, nor the mode according to which the son is said to be a part of the father. Cajetan, indeed, in that place says that the son is for that reason something of the father, because he is begotten of the same seed; and since between father and son there is a perpetual habit of this kind, therefore there is not between them justice even in the castrense peculium. By the same cause he says there is not injustice if the son kills the father, but a greater sin: because if there cannot be justice between them. Soto, however, more appropriately says in 3 De iustitia, q. 1, last article, around the end, that there cannot be justice between father and son so long as the son is not emancipated: which Aristotle clearly indicated in the place cited when he said, "while he is small and not separate."[1526]

This, however, is to be understood in civil contracts of money or of things which are estimated by money; not, however, in the showing of honors and in the sustaining of life; for from these the son is never released toward his parents, which he owes them out of piety, which is a special virtue toward them. Wherefore, if he afflicts his father with ignominy or kills him, he sins against piety; in which point Cajetan's opinion is not approved by St. Thomas in II - II, q. 101.[1523] And accordingly, since we cannot return equal gratitude to our parents, there is not simply speaking justice toward them; but there is toward their honor and life.

Moreover, regarding monies, as long as the son is not emancipated, according to Aristotle there is no justice in any commutation and mancipation of the castrense peculium; for that later was introduced by the law of the Caesars; under Athenian law in Aristotle's time it was not in use, namely that a son not yet emancipated could have the dominion of any goods whatsoever; wherefore, in Aristotle's time, there was absolutely no dominion of a thing on the son's part, but all was on the father's. Indeed, by the more ancient law of the Gauls the father was lord of all the son's goods which were profectitious and adventitious, though not of the castrense goods, as is reported in the law Cum oportet in the Code, De bonis quae liberis, and in the Institutes, Per personas cuique, and in law 2, ff. De castrensi peculio.[1527] Hence the father also succeeded to the predeceased son in the castrense peculium, not by hereditary right, but by the right of peculium, as though lord of it. Later, however, in that law Cum oportet, and in the section there cited, and in our realm, Partidas 4, tit. 17, laws 5 and 6, it was established that the son should have dominion and usufruct of castrense and quasi-castrense goods, but of adventitious goods he should have dominion only, the father having the usufruct.[1528]

Accordingly, for this reason Aristotle very rightly said that between father and son there could not be justice in commutations, because all the son's goods were the father's, and no one can observe justice toward his own goods in dealing with another, but only toward the goods of

1525. St. Thomas, Summa theologiae, II - II, q. 57, a. 4.

another; nor does anyone in his own goods wrong himself against justice. It follows that between father and son, in money, justice could not at that time be preserved. I pass over the goods of life and of honor, in which by another rationale it cannot be, as we saw above. The same is to be said of servant and lord, because all the servant's goods are the lord's. But between husband and wife there can be justice, since the goods of wife and husband have always been divided and each one's own. Now indeed, by the law of the Caesars, there can be justice in commutations between father and son, even not yet emancipated, in those goods in which the son has both dominion and usufruct, or at least dominion; nor would Aristotle ever have denied this according to the disposition of Caesar's law.

From this principle it is proved that between God and a rational creature there cannot be justice, since they are compared mutually as servant and lord, as son and father - which no one doubts - namely, as a son not yet emancipated, such as he was in Aristotle's time, who had no proper goods which were not the father's. For whatever good a rational creature has in good works, which she is said in a certain way to offer to God in order to receive the reward of those works, is from God as from an author and lord; therefore from those works she cannot constitute God a debtor to herself out of justice, since she gives back to him what she has received from his hand and always holds as preserved by him: no otherwise than a son and a servant cannot by justice oblige to themselves either father or lord by bestowing good things which rather belong to the father or to the lord than to themselves.

But you will say: our works are in a certain respect so ours as not to be God's, because they are, namely, free and human; they receive this condition from us alone; therefore, by that new title, since we offer them to God, we can constitute him a debtor to us out of justice. But since the value of works, for which a recompense is given, depends upon the grace of God, which he liberally gives to us and preserves, even if the ratio of their being free comes from us as from a proper cause - for liberty is only the foundation of merit, yet it does not confer value upon the work - by that title we cannot constitute God our debtor by a meritorious work, of which he himself is the principal author and cause. And by this same reason we shall prove, in III, q. r., a. 2, that Christ could not according to justice properly so called satisfy God by the works of his humanity, because the whole worth proceeded from the very deity sanctifying the humanity and making its works worthy: just as no one can properly satisfy another out of justice with coin of a baser value, if that coin increases in value solely from the creditor's estimation; for thus he would be remitting a good part of the debt. [1529] There is added what, in the preceding chapter, I was saying: from the fact that we act freely and God, together with us and our works, by his grace makes them worthy, we do not thereby make him lord of our works by some new title, nor do we truly attribute anything to him.

Then the same truth is shown from that other title by which we said that a son cannot render to his father an equal in the showing of honors, and on that account there is constituted toward parents a virtue distinct from justice. For in the same way neither can a creature render to God equal honor - whether by "honor" we understand works of any virtue whatsoever, which, in that

1529. See above, caput immediately preceding; and below, III, q. r., a. 2 (within this work), on the satisfaction of Christ.

they are done according to right reason, are said to be pleasing to God and to redound to his honor; or works of the special worship and honor owed to God. For the former do not pertain to justice but to various virtues; the latter pertain to religion, which is distinct from justice. Just as a son, when he honors his father by obeying his will, or by showing him some peculiar honor out of piety, does not thereby merit with him, constituting him a debtor out of justice, but, acting according to various virtues, earns from him a reward only by reason of the dignity of the act; so too, when we merit something from God by good works, we do not therefore hope for a reward from him because we have conferred upon him something equal that would call for compensation out of justice; but because the work is in itself equally worthy of remuneration; and worth is taken from goodness. For it is one thing to merit by good works, but another to contribute something that is an estimable price in a commutation - as we shall say more fully below.[1530]

Caput VI - That no obligation of proper justice arises in God from a promise

There are those who say that it is not contrary to the proper notion of satisfaction out of justice that a pact or promise intervene, so as to defend that Christ satisfied according to justice properly so called, even if the Eternal Father was not necessarily bound to admit that satisfaction before he had promised. They bring an example: Just as one who has a captive taken in a just war is not bound to free him by giving him liberty, even if the slave himself, or another on his behalf, offers an equal price for him, until the owner himself promises to free the slave for that price. For true justice does not require that, even when an equal price is offered, one be able to compel another to contract; but it is enough if they, by mutual will, contract and come to terms, and, the pact being supposed, each must observe justice and equality.

I indeed hold, first, that satisfaction equal for an injury accepted from another ought to be accepted by the creditor. For there is on both sides an obligation requiring it: on the part of him who must satisfy, and on the part of him to whom satisfaction is to be made - yet in a different way. On the part of him to whom satisfaction is owed, there is an obligation of admitting the satisfaction, if it is equal according to the rules of justice; for by the very fact that he does not admit it, he condones the debt - something which holds not only if the satisfaction is made by the debtor himself, but also if it is made by another in his stead. But on the part of him who offers satisfaction, there is not always an obligation of satisfying; for one can satisfy for another gratuitously; nevertheless such an obligation to satisfy must be present in some way.

It follows plainly from what has been said, against the aforesaid Doctors, that no satisfaction offered is equal out of justice, if the creditor can freely reject it; for then the thing offered would not be equal according to the rules of justice.

Therefore, if God did not have to admit Christ's satisfaction, but, it having been offered, could nonetheless justly not remit sin and could punish man himself - as indeed he could - it was not according to the equality of proper justice; yet it was according to the equality of condignity of

1530. Below, on merit and commutation (see the later question and article to which the author refers).

merit, which does not pertain to proper justice, and in that mode it was equal, indeed superabundant, but of such a nature as would not oblige God to admit it: therefore one must speak otherwise of that than of what is in the matter of proper justice.

Confirmation from an inconvenience that would follow: If it was necessary that a promise intervene in order that Christ's satisfaction be perfect and, as they say, according to the strictness of justice, it would follow that Christ could not by his first act have merited for the Fathers of the Old Testament, to whom grace was given and guilt was remitted in hope of the payment which he was to make; for then, before his advent, there was no pact; and again, before his first work in the first instant, likewise no pact could have preceded; therefore, by his first act he could not, according to that strictness, have satisfied for past things.

Moreover, I say: wherever there is some retribution out of justice properly so called, there is a debt to him to whom the retribution is made; and although in the retribution of glory for merits God is debtor to us by his word and promise, nonetheless I think that, between us and him, even his promise being supposed, there is not justice properly so called, but only fidelity, which is a part of the potential parts of justice properly so called. And that there is always a debt to him to whom retribution is made out of justice properly so called is proved first from St. Thomas, 2.2, q. 30, a. 1, who teaches that the potential parts of justice, which fall short of the proper notion of justice, are so constituted because in them either the notion of debt is not found, or they fall short of the notion of equality. Therefore, wherever some virtue orders one toward another from honesty, but not from debt, it cannot, according to St. Thomas, be properly justice. Reason also clearly shows this: for the justice which is observed in contracts and in making amends for injuries is on the part of him who makes retribution for what he has received or carried off; and unless he be bound to that which he pays, he does not, by paying, observe the just, nor reduce inequality to equality. For if he does not owe to pay, it follows that between him and the other there does not intervene any inequality, and hence there is no reduction to just equality when he makes retribution. From which it follows that in God there is no act of justice before a promise, because before that he owes to no one to make any retribution, as is manifest.

But indeed, by promise and by his word God has been constituted a debtor of the reward which he has promised to merits; and, in my judgment, he is not only a debtor truly and properly to himself, but also to us to whom he has promised, as in 1.2, q. 114, a. 1, according to the sentence of the Fathers and the Scholastics, I will show above and prove by argument. When, however, the holy Doctor in that article said that God is not constituted a debtor to us but, by his word, to himself, nonetheless, since he attends to that as to the cause and root of the obligation - if this were true, as the Thomists commonly think - that God, by his word, constituted not us but himself debtor, it would plainly follow that when God makes retribution to us for good works, he would not make retribution out of proper justice. Wherefore, in their judgment, the matter is adjudged thus: that God toward us, in the retribution of merits, does not exercise commutative justice properly so called; for, as we were just saying, he who owes nothing to another and nevertheless gives to him, does not observe justice with him, but is rather liberal.

Yet even if God is debtor to us by his word, he does not render to us by commutative justice properly so called what he has promised, but by fidelity, or truth (*veritas*), which is a potential part of justice, and by a certain decency and proportion of condignity between our merit and eternal life, which also can, in a common way, be called justice, inasmuch as some equality is preserved. And that this may be explained more clearly, the doctrine of St. Thomas is especially to be observed, 2.2, q. 80, a. 1, ad 3, who asserts that fidelity, which arises from a promise, is not a virtue distinct from truth; for fidelity is truth in keeping promises. Wherefore the true and proper notion of perjury - which cannot exist without falsity, as St. Thomas teaches in 2.2, q. 98, a. 1 - is found as much when one does not keep what he promised by oath, as when he affirms something false. And since truth is constituted by the same holy Doctor, in that same place (q. 80), a potential part of justice falling short of the proper notion of justice, fidelity must be set down in the same way. Wherefore Soto taught falsely, in his treatise De tegendo secreto, q. 1, m. 1, and 7, and in De iustitia, q. 2, a. 1, concerning the solution of the first doubt, when he said that fidelity does not pertain to the virtue of truth, but properly to commutative justice.[1531]

However, in very truth, from a promise made to some man who accepts that promise when made, there arises not only an obligation of fidelity or truth, but also of justice; for there is then in question a right to the promised thing for him to whom the promise is made. This I suppose as most certain, against Cajetan on 2.2, q. 88, a. 1, by the common sentence and I strengthen it by reason. For if it induced only an obligation of truth, it would not pass to the heirs; that is, the heirs of the promiser would not be bound to the fulfillment of the promise. For an obligation of truth, as also of a vow and of an oath, must be judged purely personal, and perishes with the promiser and the swearer; but the obligation which passes to the heirs is of justice. Hence there lies an action against the heirs of him who has promised something, according to the formula required in law: if by stipulation, then there is an action ex stipulatu; if by a mere pact, then according to the nature of the pact, as the law and courts admit. Cajetan, therefore, is mistaken when he says that from a promise there arises no obligation of justice, but only of truth and fidelity.

...of buying and selling, and of the commutation of what is given and received; for that such a thing cannot intervene between God and us was shown in chapter 4. Not even, moreover, in the paying of what was promised by way of a gift - for in the payment of this among men justice is observed in this, that there is given only as much as was promised, to him to whom the promise was made, because the thing promised by force of the promise belonged to him by right. Therefore, by this reasoning it is plain that God is not bound by proper justice to pay what He has promised: because, however much God promise us His glory, we always remain under His power, like a slave under the power of his master, who has nothing that is not his master's. If he has received something from his master that is akin to a donation, the master can take it away. Likewise, if a master has promised a garment to a slave remaining in the pristine state of perfect servitude, he ought, out of truth and fidelity, to make payment to him, especially if he has bound himself by an oath. Yet because the slave, to whom he promised, always remains in his power, the master can,

1531. Dominicus Soto, De tegendo secreto, q. 1, m. 1; q. 7; and De iustitia, q. 2, a. 1. Also critiqued against Cajetan on St. Thomas, II - II, q. 88, a. 1.

saving truth and faith, take away the garment once given, or even deny what was promised; that is, unless it would be against fidelity, it would not be against justice. For if that slave remains always in every respect a slave, he does not possess that thing by any right other than that of a slave; and therefore it is his master's.

Accordingly, since every creature, even after God's promise has been made, remains under God's power, as a slave under a lord, by a right of full servitude with respect to all and singular things that it possesses - if God were to take away the glory once bestowed, or to deny what was promised, He would be unfaithful and false, but not unjust; therefore, by fulfilling that which He promised, from the promise alone there arises no obligation of justice between Him and us. It is established, then, that in no respect can there properly be commutative justice (*iustitia*) on God's part toward us, or on our part toward God, whether before the promise or after it. By all of which things confirmed and explained, the common opinion of the Scholastics stands sufficiently firm - namely, that we must speak according to the common and customary acceptation of commutative justice: for it is not permitted to feign new definitions of things, as we premised in chapter 3. There is added, moreover, in confirmation of our opinion, that from the opinion of others, who strive to defend justice properly in God, there arise a thousand difficulties which the intellect cannot grasp: what, then, compels us - leaving the plain and well-trodden way - to enter a rough and difficult one?

Caput VII - The arguments of the prior opinion are solved

We still have left to us to resolve the arguments of the prior opinion. For anyone could easily answer those that are opposed to the doctrine above set forth; but so that their weakness may appear more clearly, we shall say something concerning each. Before all else, however, it is necessary to overthrow the common foundation. We assert, therefore, that whenever some affection or operation is transferred from creatures to God, it must be transferred without imperfection. Now imperfection is twofold: one which is annexed accidentally to the operation, as compassion in mercy; and another which is included essentially on the part of the object, however much it be considered analogically and abstracted. In the former way some affection that is in us can be attributed to God; and thus mercy is attributed to God without compassion, because the formal notion of it is to relieve another's misery. In the latter way, however, some affection which, on the part of its formal object, includes imperfection, such as anger and vengeance, cannot be transferred to God without metaphor, nor properly even according to analogy. We gave the reason for this in chapter 3; moreover, we showed how anger includes that essential imperfection in Disputation 84, chapter 4, on vengeance; and we proved the same point in this disputation, chapter 4.[1532]

By this same reasoning we cannot attribute to God the affection of proper commutative justice, nor of liberality, nor of magnificence: because commutative justice, as we demonstrated in chapter 4, establishes equality around what is given and received, which cannot exist between us and God;

1532. Vazquez, Disputatio 84, cap. 4, De vindicta; and in this Disputatio, cap. 4.

while liberality has to do with largess of money or of what is valued by money, as Aristotle testifies, and St. Thomas too; and magnificence, finally, with great expenditures, as they also teach.[1533] Hence it is foolish, says Aristotle, to ascribe political virtues to God.[1534]

Moreover, St. Thomas in this article, in solution 1, teaches that liberality and magnificence befit God, yet not with respect to civil actions, but with respect to actions proper to Him; by which words he seems to ascribe to God the affections of liberality and magnificence in the bestowal of spiritual goods, and without metaphor; for he had said that temperance and other affections, which are concerned with the moderation of bodily passions, befit God metaphorically. But he does not understand "liberality" and "magnificence" as the special virtues are posited and distinguished from others, but of their affections according to a certain common and general notion. Spiritual things are not the matter of these virtues. For if liberality and magnificence in the largition of spiritual gifts were in God special virtues, just as in us they regard expenditures of money, by the same reasoning in us too these virtues would be constituted as special around spiritual things: for a teacher who teaches great and hidden things would be called "magnificent," and he who without envy communicates his own things to others would be called "liberal" in a peculiar sense. Therefore these virtues in us would not have as their proper matter the expenditure of money.

We say, then, that even if, without metaphor, God is called liberal and magnificent, nevertheless He is not said to be so according to the proper and special notion, but according to a certain common one. And thus the proper notion of liberality and magnificence, as it is distinguished from the metaphorical but not from the common, also regards spiritual "expenditures," and it very well befits God. So too must it be said of justice: for, as Aristotle bears witness, justice in the universe is said of every virtue, since every virtue observes some equality; and thus, as a rather common proverb has it, justice in itself contains all the virtues.[1535] Therefore, wherever someone attends to and observes some equality in his operation, he is said, in a certain common notion, to have justice - not, indeed, improperly and metaphorically, but commonly.

In the same manner science (*scientia*) is ascribed to God properly and without metaphor, although in Him it is without discursus: because, commonly and without metaphor, "science" is said of any evident knowledge. When, however, we deny to God liberality, magnificence, justice, and science properly, we do not understand "properly" as opposed to "metaphorically," but as opposed to "commonly"; that is, we assert that those virtues which are said to be special and distinct from others do not befit God. Likewise, science according to that peculiar mode which includes discursus and is distinguished from the intellect of first principles - which properly befits us alone - is not to be ascribed to God; yet the general notion of knowing does befit Him, without metaphor.

Now to the first argument I reply: when Scripture can conveniently be explained without metaphor, with the nature of things preserved, it must be so expounded; but where an affection or operation repugns God, a metaphor must be admitted. And since it remains proved that the notion

1533. Aristotle, Nicomachean Ethics IV, c. 1; St. Thomas, Summa theologiae, II - II, q. 117; and on magnificence: Aristotle, Nicomachean Ethics IV, c. 2; St. Thomas, Summa theologiae, II - II, q. 134, a. 2.

1534. Aristotle, Nicomachean Ethics X, c. 8.

of proper commutative justice cannot befit God, it remained that Scripture should be understood according to metaphor whenever it calls God "just" or ascribes justice to Him. But because there is a certain general notion of justice, which without metaphor is found in all the virtues, there is no need to flee to metaphor: rather, God will be called "just" by reason of any virtue and rectitude which befits Him; and He is said to be "just" with us either because He is faithful in His promises and pays only as much as He promises - for a promise is a certain part of justice and can be called "justice" by a common name - or He is also said to be "just" because He preserves equality between the worth of merits and the rewards, in which the common notion of justice is found. In this sense it is said at Heb. 6: "For God is not unjust, that He should forget," both by reason of fidelity, because He is not unfaithful, and by reason of equality, because He does not repay less than works deserve; but He would be called "unjust" if He repaid less, either because He did not keep faith or because He did not preserve this equality. Although this latter, of itself, would not altogether repugn God; therefore the justice of God must not be attended to - as Anselm thought in the Proslogion, chapter 10 - only according to the fittingness of His goodness, so that that is called "just" which befits His goodness; but also according to some equality of things among themselves, as has been explained.[1536]

Some, however, argue in order to prove that there is in God commutative justice properly, from that text of Romans 3: "Whom (Christ) God has set forth for the manifestation of His justice"; and from that other passage as well.

Disputatio LXXXVI - On whether distributive justice is proper to God

Caput I - The opinion of certain Theologians

But from that passage to the Romans 5: "As by one man's offense ... so also by the justice of one (namely, of Christ) ...," yet you will find none among the Fathers, nor among more recent interpreters, who by "justice" in those places understands commutative justice, which is toward another. Rather, at Romans 3 by "justice" they understand either the faithfulness of God, who promised justification through Christ, or the justice of grace, by which He justifies the ungodly. For Paul adds, "that He Himself may be just, and a justifier"; or punitive justice, which is not properly commutative in him who punishes an offense committed against himself, as we showed above. And much less at Romans 5 is "justice" understood to mean commutative justice, but sanctity, which Paul there opposes to "offense": so that just as by the offense of one all are constituted sinners, so also by the sanctity of one all are made saints.

Lest, however, our labor seem to someone superfluous in proving that the special virtue of commutative justice which is found in us is not found in God, since we already grant some common rationale of justice and seem to agree with our adversaries, who so concede commutative justice to God as to attribute it to Him without imperfection according to an equality of condignity between

1535. Aristotle, Nicomachean Ethics V, cc. 1 - 2.
1536. St. Anselm, Proslogion, cap. 10.

merits and reward - since they contend that there is a special rationale of commutative justice in God and, consequently, that all the conditions of that justice must be observed just as they are among men in the satisfaction of a debt, from which doctrine many conclusions follow that can scarcely stand, as was shown in cap. 4, §§ 1 and 6 - whereas we, when we say that only according to a common rationale is justice found in God, are not obliged to affirm that all the conditions of proper commutative justice are required for satisfaction to be perfect and for the payment of the reward: rather, in another, easier way, we shall philosophize in their proper places: in I - II, q. 114, a. 1, on the justice of our merits, and in III, q. 1, a. 2, on the satisfaction of Christ for our sins. There, with every perfect equality preserved that could exist between Christ and God, or even between us and God, we shall explain all things rightly, avoiding a thousand difficulties into which it would be necessary to fall if we were to follow the rules of proper commutative justice, as is clear from what has been said in the chapters noted.

It is objected, second: Someone will say that in this way we could also attribute temperance to God without metaphor according to the common rationale which is found in all the affective dispositions of virtue; yet the Holy Doctor in the reply concedes that only metaphorically.

I answer: That it belongs to God only according to metaphor, because temperance, even according to its common rationale, signifies a certain moderation of a passion that arises, which is altogether repugnant to God; and therefore it does not belong to Him without metaphor.

To the second argument I say: If "justice" be transferred to God in a way that does not concern "the given and the received," it remains necessarily only according to the common rationale of justice, because the proper and special rationale of the object is removed, as has been sufficiently proved. And although our affections are to be attributed to God without imperfection, nevertheless since the imperfection is essential - inasmuch as it arises from the formal object of the affection - it cannot properly belong to God. Such is the imperfection of "the given and the received" in commutative justice, if we follow the definition of the Philosophers and of all the Theologians; nor is it lawful to devise new definitions. And these were the reasons in the establishment of the first part of that sentence; but what the adversaries teach in the second and third place they prove by no reason, and we have sufficiently impugned them above.

An Deus conveniat iustitia distributiva. Disp. 86. - The opinion of certain Theologians. cap. 1. - That distributive justice does not properly exist in God is proved by the authority of the Scholastics and of others. cap. 2. - The foregoing sentence is proved by reason. cap. 3. - The adversaries' arguments are dissolved. cap. 4.

Now as to distributive justice, which concerns another kind of equality, I will inquire whether it can properly belong to God. And on this matter there is greater dissension among the Theologians: for not a few, nor of inferior standing, affirm that in God there is distributive justice according to propriety. Thus teach Richard in IV, d. 46, a. 1, q. 1; Capreolus on the First Book, d. 45, q. 1, a. 1, conclusion 14, and a. 3 to the arguments against the same conclusion; Cajetan on this article and II - II, q. 61, a. 4, around the replies; Ferrariensis against cap. 93; Soto, book 3 De iustitia, q. 5, last article to the first, and book 3 De natura et gratia, cap. 7; Hosius in the Confession of Poland, cap.

73, before the middle. What, however, St. Thomas taught on this matter we shall say in the following chapter; for inasmuch as all these, in the same way that they deny commutative justice to be in God, equally affirm that there is distributive justice, and since they deny commutative justice according to propriety, in that same way they concede distributive justice.[1537]

But as to what distributive justice belongs to God, they are not all of the same mind. Richard and Cajetan think that both in the retribution of rewards for good merits and in the infliction of punishments for sins distributive justice is observed by God. Soto, however, thinks that only in the bestowal of rewards; for in punishments commutative justice intervenes. The rest speak more generally, and seem to agree with Richard and Cajetan.

Cajetan proves his opinion thus. For, as to the matter at hand, it pertains to distributive justice to place each thing in its proper rank; but God places each in his own rank, by rendering rewards to good merits and punishments to sins - indeed, in the retribution of reward, because it is said in John 14: "In my Father's house there are many mansions"; but in the infliction of punishment, because in Acts 1, concerning Judas, it is said, "that he might go to his own place": therefore in this God observes distributive justice. Wherefore the affect of this virtue must be attributed to God according to propriety. And this is what Dionysius also seems to have expressed in the same sense, De divinis nominibus 8, near the end, when he says: For the divine justice disposes and determines all things; and, keeping all things not confused among themselves nor mingled, as they are, it gives to all what is fitting to each, according to the dignity which each of the things that are attains. And Cajetan thinks that the Father of the family in Matthew 20 observed this justice when he called the laborers and when he rendered to each a denarius for his labor; for it is a certain likeness of the divine judgment, in which God, according to merits, will appoint to each his reward.[1538]

Secondly, the same opinion is proved because the vice of respect of persons is opposed not to commutative justice but to distributive justice, as is gathered from St. Thomas, II - II, q. 63 throughout. But God is said on the day of judgment to render to each according to his works without respect of persons: therefore He renders out of distributive justice. Otherwise, when Paul said in Romans 2 that God will render to each man justly according to his works, he would not have assigned a relevant reason when he added, "For there is no respect of persons with God"; as if he said: therefore He renders to each justly, because He does not accept a person. Therefore he suggests that God's justice is opposed to respect of persons; wherefore, since such respect is opposed to distributive justice, it follows that in God there is distributive justice.

A third reason is that of Dominic Soto, who, in order to prove his thesis, notes in book 3 De natura et gratia that our good works are to be considered in a twofold way: first, as they proceed from free choice - and thus, he says, they are not meritorious de condigno of eternal life; then, as they are from a just man - and thus they are meritorious de condigno. For although one man may

1537. Richard of St. Victor, In IV Sent., d. 46, a. 1, q. 1; Capreolus, In I Sent., d. 45, q. 1, a. 1, concl. 14, and a. 3 ad contr.; Cajetan, In II - II, q. 61, a. 4; Silvester Ferrariensis, Contra cap. 93; Soto, De iustitia et iure, l. 3, q. 5 (art. ult. ad 1), and De natura et gratia, l. 3, c. 7; Hosius, Confessio fidei Christianae (Polonica), c. 73.

1538. Pseudo-Dionysius, De divinis nominibus, c. 8 (ad fin.); Matthew 20; John 14:2; Acts 1:25; Romans 2:6, 11; St. Thomas, Summa theologiae, II - II, q. 63 (de acceptione personarum).

be able to merit de condigno with respect to another man, even if he be his enemy; nevertheless with respect to God, in view of the man as such and while he is God's enemy, he cannot so merit. And so one man merits with respect to another out of commutative justice, which is not measured by the dignity of the meriting person but by the equality of the work; for commutative justice establishes equality between the given and the received. But with respect to God we merit out of distributive justice; and therefore in such merit the dignity of the person is considered, whether he be a friend of Him with respect to whom he merits. But Soto proves this by no reason; he merely assumes it gratuitously.

Then he confirms his position in book 3 De iustitia by a line of reasoning along these lines. In the retribution of reward God considers both the dignity of persons and merits; but this seems to belong properly to distributive justice: therefore in the rendering of rewards God observes it. Nor does it stand in the way that in such rendering a certain commutative mode is also preserved, inasmuch as to each exactly is a reward rendered for merits, which does not usually happen in public distribution. For this arises from the fact that the reward of eternal life is most cumulative and infinite, so that from that store an exact retribution can be made to each; whereas public goods that must sometimes be distributed are not usually so abundant that they can proportionally compensate all merits equally, but, the proportion only among them being observed, are divided among them.

Caput II - That distributive justice does not properly exist in God is proved by the authority of the Scholastics and of others

But that in punishments God does not observe distributive justice, but commutative justice, Soto proves first from St. Thomas, II - II, q. 108, a. 2; and, secondly, by adding that St. Thomas says that the punishment of sins, as vindictive, pertains to public justice, which is commutative justice. Furthermore, the reason is that in punishments the dignity of the person is not considered, but only the equality between the sin and the punishment; therefore in these God does not observe distributive justice, which considers the dignity of persons, but commutative justice, which considers equality between two things - since, when He punishes, He assigns to sins a punishment that is just and correspondent.

Certain more recent Thomists add that in the retribution of rewards God observes both kinds of justice; for (so they say) He considers our works, and since they proceed from free choice, He repays with eternal life according to a proportion, which pertains to distributive justice - since in that way there is some proportioned equality between our works and eternal life. But if gratuitous things be received - grace and gifts - they say the reward pertains to commutative justice, because between those and the reward there is an equality of thing to thing, which commutative justice regards. Others, however, explain the mind of St. Thomas differently; Victoria is among them.

Now that distributive justice does not properly exist in God is proved far more by the judgment of the Scholastics, who teach that distributive justice does not properly belong to God.

Thus teach St. Bonaventure,[1539] Scotus,[1540] Durandus,[1541] Paludanus,[1542] and the Supplement to the Summa.[1543] Alexander of Hales also agrees.[1544]

What, moreover, St. Thomas's sentence is on this point we shall set forth below; but here it suffices that, in those places already cited, he expressly denies that there is between us and God a justice simply so called, from which it follows that neither commutative nor distributive justice belongs to God according to propriety in regard to us. For if there were any justice simply so called between God and us, at least distributive justice would have to be granted; but St. Thomas explicitly denies such a justice simply so called, as will be explained in its place.

But it is not the same thing to be simply just, that is, in general, and to be by way of repassion; this was the doctrine of Aristotle in Ethics, book V, chapter 5. For the just extends more widely than repassion: there is, namely, some just, to wit distributive, in which there is no repassion, as we shall say more at length in the next chapter.[1545] Yet the first argument objects in this way: the divine judgment is simply just, and in it the just by way of repassion is observed; therefore the simply just and that which is by way of repassion are the same. He replies in these words: To the first, that that form of the divine judgment is attended to according to the notion of commutative justice, namely, insofar as it recompenses rewards for merits and punishments for sins. By which he shows that in God's judgment there is not found the simply just, that is, universally, but such a just, namely commutative, or the form and likeness of such a justice, so as to show in this way that the simply just, that is, universally, is not the same as the just by way of repassion. But if in God's judgment there truly were distributive justice, he would have answered better that in it there is not the simply just, because it is such a just, namely distributive; or, if there be found there commutative at the same time, he ought to have granted that the simply just is found there, that is, universally. Add that, if in the divine judgment, according to the mind of St. Thomas, the form of commutative justice and the mode of that quality is observed, it cannot at the same time observe the mode of commutative (sc. distributive) justice; therefore, since he grants that in it the mode of commutative is observed, he plainly denies not only distributive properly so called, but also some mode and form of that justice, as we shall show in the next chapter.

Thus far we have only explained which Scholastic Doctors follow this opinion; next, however, it is proved for us by the authority of Anselm and Aristotle. First, Anselm in the Proslogion, chapter 10, speaks thus to God: "Thou art just, not because thou renderest a debt, but because thou doest what befits thee as the highest good." But justice properly cannot be without a debt, as was said in the preceding disputation, chapter 6, according to the judgment of St. Thomas also: therefore, since Anselm calls the justice of God his befittingness (decentia), he thinks that in God there is found no justice properly so called, but only in a certain common notion. Wherefore, on Anselm's

1545. Aristotle, Nicomachean Ethics, V, c. 3 - 5.

view, distributive justice will not be in him. And although we say that God is a debtor by reason of a promise, nevertheless, since Anselm says that he is just because he does what befits, he is unwilling to concede on account of the promise any justice in God. And just as in the preceding disputation, chapter 6, we shall prove that from a promise there cannot arise in God a justice of giving and receiving, but only of giving that which is promised, so in the following chapter we shall show that from a promise there does not arise distributive justice in God, if before it there was not a distribution owed according to geometrical equality.[1546]

And in the same place Anselm says: "Only that is just which thou willest; that which thou dost not will is not just": he thinks therefore that justice in God is nothing other than his befittingness; for that befits the majesty of God which he himself wills to be done.

Next, from the doctrine of Aristotle in Ethics, book V, chapter 5, it is most clearly gathered that the judgment of God in inflicting punishment and penalty is not done according to distributive justice, as Soto alleged in the first chapter plainly grants; and since the very same proportion is altogether preserved and the same kind of equality in rendering rewards, as will be evident in the next chapter, it follows that in general the divine judgment does not preserve distributive justice.[1545][1547]

As to punishments, this is plainly gathered from the opinion of Aristotle; for in that chapter he expressly proves against the Pythagoreans that repassion and the simply just are not the same. For they judged that in every just thing there is repassion, and thus that they are wholly the same. Aristotle, however, shows that justice extends more widely than repassion: for there is some just in which there is no repassum, namely distributive. He subjoins therefore these words: "But repassion is accommodated neither to the distributive nor to the emendative (corrective)." And that it does not pertain to the distributive he leaves as known; that it does not pertain to the emendative he proves from this, that if a magistrate has first struck someone, he himself ought not to be struck in return; nevertheless he proves that he is bound to some satisfaction; and hence he proves that there ought to be some repassion there; for he shows most broadly that in all contracts there is repassion.

From this doctrine, which St. Thomas follows in II - II, q. 61, a. 4, it is established that, when God assigns punishments for sins, he does not preserve distributive justice: because the just which he regards is according to repassion; but repassion is not distributive just, nor is it found in it, according to Aristotle and St. Thomas; therefore neither does God, attending to the just according to repassion, regard the distributive just; wherefore neither does he preserve distributive justice.[1548] For this doctrine of Aristotle and St. Thomas we shall assign the best reason in the next chapter; for the present, however, let their authority suffice for us: for hitherto we have not determined to confirm our opinion by reason.

1546. St. Anselm, Proslogion, c. 10.

1548. St. Thomas, Summa theologiae, II - II, q. 61, a. 2, 4.

Caput III - The foregoing opinion is proved by reason

Durandus and Paludanus, who defend the aforesaid opinion, confirm it by this reason. Distributive justice takes its origin from commutative: for if someone who distributes public goods ought to divide them according to just proportion, the reason is that he, by commutative justice toward the commonwealth, is bound to that; but in God no commutative justice is found; therefore neither can distributive, which has its origin thence, be found.[1549][1550]

Yet this reason is weak: for in one who now owes to distribute public goods there precedes no obligation from commutative justice toward the commonwealth, or at least it is not necessary to precede, so that he be obliged by distributive to divide according to the equality of proportion. For when someone binds himself to the commonwealth to a just distribution of common goods, he is not otherwise obliged than to a just division: therefore he only agrees with the republic about the obligation that distributive justice be observed; nor does he owe any other damage, nor to make this good to others, than to those to whom he ought to distribute according to the equality of proportion; and at least the king, who is head of the commonwealth, when by the laws previously established he is obliged to divide the spoils to the soldiers, is held by no other law than that of distributive justice, by which he regards the soldiers; nor did the law established for this purpose introduce any other obligation than that of distributive: therefore it is false what Durandus' argument assumes in the major proposition, namely that the obligation of distributive always arises from the obligation of commutative justice.

Accordingly, a single reason drawn from the definition of distributive justice seems to show this opinion, which is of this sort. The equality which God keeps with us, either in the largess of natural perfections, or in the distribution of rewards or of punishments, is not that of distributive justice: therefore neither is there the distributive justice. The reason, indeed, in my judgment is rightly gathered. For the nature and quality of the habit of justice ought to be weighed from its object; therefore it rightly follows what we inferred: it only needs a proof of the antecedent; which, if it be set forth by a simple declaration, will remain sufficiently confirmed. It is declared therefore in this way.

First, according to the mind of Aristotle in Ethics, chapters 3 and 4 of book V, and of St. Thomas in II - II, q. 61, a. 2; of Cajetan in the same place; of Soto, De iustitia, book 3, q. 5, a. 2; of Paludanus, Durandus, and Richard in the cited places; whose opinion has been approved by the votes of all, since every justice regards the just and the equal as its proper object, and only a twofold kind of equality can be conceived, it follows that there is only a twofold kind of justice. [1545][1548][1547][1551][1549][1550][1552] Now one equality is between two things, and is called by Aristotle and others

arithmetical equality, or of one to one: this commutative justice regards in exchanges and in the reparation of damage, when each one only renders as much as he received, or as much damage as he inflicted. The other is the equality which they call of proportions, and geometrical, because it is not of thing and thing, but of two proportions among themselves. Such is between two to six on one side, and four to twelve on the other: that is, two to six and four to twelve stand in equal proportion. And this equality distributive justice considers and preserves, when it distributes common goods; it preserves, I say, as a minimum between two persons and two things, as Aristotle excellently noted in Ethics, chapter 3; wherefore it establishes the just at a minimum between four terms: namely, between Ajax and his share on one side, and Achilles and his share on the other, so that the share of goods which is assigned to Ajax have the same proportion with the share which is assigned to Achilles as the dignity of Ajax has with the dignity of Achilles. For example, if, when the spoils are divided after a battle, there are given one hundred to the general, and he is in person twice as worthy in the army as the standard-bearer, let there be given fifty to the standard-bearer, and so with the rest: for this is just and equal, that a man's share stand to a man's share as the person to the person.

Whencesoever, moreover, the debt of keeping this equality arises - even if it has its origin from contract - it always pertains to distributive justice, as is taught in II - II, q. 61.[1548]

It is proved by reason the preceding opinion.

First, from the mind of those who defend the aforesaid opinion, namely Bradwardine and Palude, they confirm it by this reasoning. Distributive justice (*iustitia distributiva*) has its origin from commutative: for if someone, distributing public goods, ought to divide them according to just proportion, this is so because he himself by commutative justice (*iustitia commutativa*) is obligated toward the commonwealth to that task; but in God no commutative justice is found: therefore neither can distributive justice, which takes its origin thence, be found. Yet this reasoning is weak. For either in the one who now must distribute public goods there does not precede any obligation from commutative justice toward the commonwealth; or at least it is not necessary that it precede, in order that by distributive justice he be obliged to divide according to the equality of proportion. For when someone obliges himself to the commonwealth for the just distribution of common goods, he is not otherwise obliged than to a just division: therefore he agrees with the commonwealth only concerning the obligation of distributive justice to be observed; nor ought he to make good any other damage, nor to repair it to others, than to those to whom he must distribute according to the equality of proportion. And at least a king, who is the head of the commonwealth, when by the laws he is bound by precept to divide the spoils among the soldiers, is held by no other law than that of distributive justice, in virtue of which he has regard to the soldiers; nor has the law established for this purpose introduced any other obligation than that of distributive justice. Therefore false is that which the reasoning of Durandus assumed in the major proposition, namely that the obligation of distributive justice always arises from an obligation of commutative justice.[1553]

1552. Richard of St. Victor, In IV Sent., d. 46, a. 1, q. 1.
1548. St. Thomas, Summa theologiae, II - II, q. 61, a. 2, 4.

The proper and unique reasoning, taken from the definition of distributive justice, seems to show this opinion. It is such: the equal is that which stands in the same ratio to many things as that which God keeps with us, either in the largition of natural perfections, or in the distribution of rewards or punishments: but this is not of distributive justice; therefore neither is the distribution that keeps merit - of which we spoke - distributive justice. The reasoning indeed collects this correctly from the nature of justice, which requires in its act an equality: yet it needs an antecedent and simple declaration, which, if it has been made, will be sufficiently confirmed. Therefore this matter will be set forth in this way.

Note that there is a double and only genus of justice, as has been proved in the cited places of Aristotle, St. Thomas, Cajetan, and Palude, whose object has been calculated, namely, of what quality it should regard as just, and what its object is; and that the equality of which the ancients thought is twofold: one indeed is the equality of one to one - this is arithmetical equality, and by this ratio, when it alone is considered, there is constituted only commutative justice, when it alone suffices, or when as far as the matter permits, it is preserved. The other is the equality of proportions and of a geometric ratio, but of two, not of one thing to another. Such equality is between two to six, and between four to two - namely, an equal proportion: and this equality distributive justice considers and preserves, when it distributes common goods; it preserves, I say, between two terms at least: namely, between Ajax on the one part and Achilles on the other, in such wise that the same part of goods is given to Ajax as the part which Achilles has in dignity. For example, when the spoils are divided, if Achilles in battle is twice as worthy as the standard-bearer, the standard-bearer should be given fifty when to the general are given one hundred, and so with the rest: for this is just and equal, that a man's share stand to a man's share as the person to the person.[1554]

And whencesoever there arises the debt of keeping this equality - even if it have its origin from contract - it always pertains to distributive justice, as is taught in II - II, q. 61.[1555] We will say more fully in II - II, q. 61, a. 2, because the equality is always the same, and therefore the just is the same (for the just is a certain equal), and the justice will be the same. Distributive justice also considers another equality, or proportion, which is not accommodated to our present purpose, when namely one undivided thing is to be conferred on someone as a benefice: since this cannot be divided, it ought to be given to the more worthy; and if there are several, the more worthy benefice to the more worthy person, and the less worthy to the less worthy: in which also that equality is preserved, not of thing to thing, but of proportion.

Then, for a fuller declaration, it must be noted that it sometimes happens that one who pays a debt under commutative justice has several creditors, and pays all of them justly; then indeed, although by the payment there follows a certain geometric equality and proportion - because as the debt of one stands to the debt of another, so the payment stands to the payment - yet because this equality is secondary, and is not considered by the debtor when he pays the debts, it does not

1553. Durandus, In IV Sent., d. 27, q. 2.
1554. Aristotle, Nicomachean Ethics, V, c. 3 - 5.
1555. St. Thomas, Summa theologiae, II - II, q. 61, a. 2, 4.

constitute distributive justice. For he who renders to individuals what he owes, considers only the equality of one to one, to wit, of that which he pays to that which he owed; and this in each individual; but what proportion they have among themselves, he does not consider; and thus he would pay each one as much when he pays together with others as if he were paying to him alone by himself. Otherwise we would have to assert that, when someone who has many creditors pays in full all that he owes, he observes distributive justice - which no one has said. For the act of restitution, since it is an act of commutative justice by the sentence of all, even of Cajetan himself with St. Thomas in II - II, q. 62, a. 1, when someone does not restore integrally because he is not able, but diminishes the payment with proportion kept: then indeed he keeps both justices. For if to him to whom he owed a hundred he pays fifty; to him to whom he owed fifty he ought to pay twenty-five; in which way, in the first instance he keeps arithmetical equality: for he pays twenty-five because he owes twenty-five, and he pays fifty because he really owes fifty, even if he also owes more: therefore he keeps arithmetical equality in part, because he cannot keep it entirely. Then he keeps geometric equality, in that by the same proportion he diminishes the payment by which the debts exceed themselves: wherefore secondarily he constitutes a geometric equality in what is wanting to the payment. But distributive justice considers no other equality than that of proportion, as has been explained: nor does it attend to how much anyone merits according to himself, but what proportion he has with others. Whence it follows that, when common goods are distributed to many, less comes to each than if they were to be divided among fewer. It also follows that an infinite good cannot be divided with this proportion and equality preserved, as is sufficiently manifest: yet from that infinite some part can be taken in this manner, from which division one should never attend that each receive as much as he by himself merits, but according to the proportion which he has with another in merit.

These points being posited, which among moral philosophers and theologians who have treated of justice are outside controversy, our opinion is clearly proved. For in the divine judgment, arithmetical equality alone is considered by itself, which is between thing and thing; nor does the justice of God attend to this, that it constitute equality of proportion and geometric equality: although from his judgment it secondarily follows: therefore he does not observe the mode of distributive justice, but rather of commutative, so that, if there were no repugnance on other grounds - as was proved in the preceding disputation - God's justice would be commutative, not distributive. Wherefore St. Thomas rightly said that in the divine judgment the form of commutative justice is observed: and therefore neither the mode nor the likeness of distributive justice is in God's judgment; God's justice will not be distributive. Moreover, that God does not attend by his justice to geometric equality is clear first in the largition of natural gifts and perfections: to each thing he assigns that which is connatural and fitting to it; in order to assign which he does not attend to what must be assigned to another, but to what suits the nature of each thing according to itself. Hence he gave to man an upright form, hands and feet of that figure, and the other members, and to the rest of things their perfections: because so the nature of each demanded naturally.[1556]

Then, in the remuneration of reward and in the payment of punishment, which are set in the divine judgment, the same is shown. For whether God render a reward to good merits, he does not attend to what proportion one man has with others, but to what he himself has done, and how much his works deserve; and accordingly he pays to him by reason of the works, just as if he alone were to obtain the reward. Wherefore the blessed do not for this reason receive in the remuneration of reward an equal thing because, as Soto said, an infinite reward is distributed, and thus each one receives not only according to proportion with others, but also equal to his own merits - which does not occur in the distribution of other goods among men: therefore not on this account do the blessed receive a reward equal to their merits; because in truth that which is distributed is not infinite; and if it were infinite, the equality of proportion could not be preserved, as we noted above. Nay more, no common heap of formal beatitude is divided, but to each is given as much of the vision as his works deserve; and only that equality is attended to which is according to the mode of commutative justice, not distributive. Thus in Romans 2 God is said: "Who will render to each one according to his works." In punishments likewise God attends only to how much punishment the sins of each one deserve, according to that of the Apocalypse 18 concerning the punishment of the great harlot: "Render to her as she also hath rendered to you, and double the doubles according to her works. And again, in proportion as she glorified herself and lived in delicacies, so much torment and sorrow give to her." Wherefore God thus punishes each one together with others as if he were alone: because in the distribution of rewards and punishments he attends only to what each one by himself deserves; but what proportion he has with others he does not consider. And for this reason Aristotle and St. Thomas rightly said, in the places cited, that in repayment distributive justice cannot be found, because in it the equality of proportion is not considered, but the equality of what is given and received, which is of one to one; from which merits consist.

From this doctrine the Doctor rightly gathers in II - II, q. 61, a. 4, ad secundum: if someone served the commonwealth, and for his service were to have a stipend, that retribution would not be of distributive justice, but of commutative. "For in distributive (he says) the equality is not attended to between what someone receives and what he gave, but to what another receives according to the mode of the person," as if to say, according to the proportion of the person with the person, not of the service exhibited with the wage. But that many are punished together for sins, and for good merits receive reward, and thus from the payment there result a certain equality of proportion between rewards and persons, matters little, because in the payment this proportion is not considered, but that which is between thing and thing, between merit, namely good or evil, and reward or punishment. Just as when someone pays in full the debts to many creditors, even if there results from thence the equality of proportion; yet because in the payment the debtor does not attend to it while he pays, he does not observe distributive justice, as all admit.

By what we have said it is proved not only that in God distributive justice is not before promise, but also after it: because God never observes equality of proportion, even after a promise; nor does there seem to be any way whereby he could observe it. But before the promise there is also another

common reason on account of which distributive justice cannot be in God: for, as we said in the preceding disputation, cap. 6, no justice properly can be where no obligation intervenes; but God is held by no obligation before he binds himself by his own promise: therefore before the promise no justice, not even distributive, is found in God.

Finally, by this reasoning not only does our opinion remain confirmed and explained, but also the opposite is sufficiently exploded, insofar as it affirms universally that distributive justice properly befits God: yet let us briefly refute certain things which the Doctors of the earlier opinion have said in particular.

First, it is gathered from the foregoing reasoning that Cajetan taught falsely when he said that the head of a household, who paid to each worker his denarius, observed distributive justice; for if it were so, any debtor who paid severally to many creditors the debts would be said to have made restitution according to distributive justice - which no one grants. It is conceded: since restitution is an act of commutative justice, as Cajetan himself admits. For the payment of a denarius for a day's labor pertains to restitution, not from a delict, but from a contract; and the reasoning is the same for either. Then also the head of a household, when he restores to each creditor what he owes, considers nothing but the equality of thing with thing: that is, of labor with wage; but what proportion one with another has, and of the wage of one with that of another, he in no way attends to, as has been said. He is also mistaken when he asserts that even in the payment of the punishment God observes distributive justice: for by authority of Scripture and by reason we have shown the contrary. And Cajetan speaks inconsistently, for the same reasoning holds for the remuneration of rewards and for the payment of punishment.[1557]

Wherefore, secondly, it follows that Soto's opinion does not sufficiently cohere with itself: for when he said rightly that in punishments distributive justice is not attended to, but commutative, he ought by all means to have taught the same concerning the payment of rewards; for in both cases the same equality is considered, as we have explained, and therefore the same justice is observed.[1558]

Thirdly, finally, what other Thomists have said cannot be true. For, as they say, our works, considered as proceeding from free will without gratuitous grace making, are by no means distributed with eternal life; nor, if that were granted, would that equality of proportion between persons be attended to in its retribution, as we have said: for the way in which that would follow cannot be explained; but if some equality were preserved, it would be between thing and thing, which pertains to commutative justice. But what they say - that between works considered in this manner and eternal life there is not equality but proportion - matters little, so that we should say that between them and glory distributive justice is preserved. For this does not regard the proportion of one to one, but the equality of two proportions: that is, of person and office to another person and office: which equality in no way can exist between our works without grace and

1556. On the two equalities and their application, see Aristotle, Nicomachean Ethics, V, c. 3; St. Thomas, II - II, q. 61, a. 2; Cajetan, In II - II, q. 61, a. 2; Peter of Palude, In IV Sent., d. 46, q. 1.

1557. Cajetan, In II - II, q. 62, a. 1; cf. St. Thomas, II - II, q. 62, a. 1.

1558. Domingo de Soto, De iustitia et iure, l. 3.

eternal life. For if there were any proportion, it would be of some gratuitous fittingness: because it would seem congruous that to him who is also outside the grace of God, yet works rightly, God should give eternal life: but this is the equality of one to one, between which only commutative justice can obtain - or, to speak more truly, neither commutative nor distributive; such is the only equality that in this way can be assigned between our works and eternal life; wherefore that Thomist distinction is empty.

Caput IV - The adversaries' arguments are dissolved

But to meet the oppositions of the adversaries is not difficult. To the first, which turns on Cajetan's form, let us pay attention; I say, it contains an evident defect; for it proceeds, as the logicians say, from pure particulars. It is in the second figure, and in a true affirmative premise the other should be negative, so that the middle term, which is in what each is predicated, be distributed in the other. The major is: it pertains to distributive justice to place each one in his place; the minor is: God, by rendering rewards and punishments, places each one in his order; therefore. We say, then, that to place each one in his order, when considered in general, indeed befits distributive justice; but not alone: because commutative justice also effects this, when someone pays to each creditor what is owed. But if they be considered in species, these belong to each justice in its own way: for to distribution it pertains, when in the placing it considers not the equality of thing with thing - of merit with reward or with punishment - alone, but the equality of proportion between persons and rewards, as was said above. Commutative justice, however, also places each in his order, attending only to the equality of thing with thing, namely of merit with reward or with punishment. And since in this way God by his judgment disposes each one in his own place, therefore by his judgment he observes the mode of commutative, not distributive, justice. Nor does the testimony of Dionysius avail anything against our opinion. For what he says, "Divine justice disposes all things, and deter - "

Reply to the first: If we look to the form of Caietan's argument, I say it clearly contains a defect, for, as logicians say, it proceeds from pure particulars. It is in the second figure, and in each premise one affirms amiss, while the other denies what ought to have been the middle term, which in each is the predicate, and in the other should have been distributed: the major is, "It pertains to distributive justice to place each one in his own place"; the minor, "But by rendering rewards and punishments God places each one in his order," where the middle term is "to place each one in his own order." Therefore we say: if "to place each one in his own order" be considered universally, it indeed fits distributive justice, but not exclusively; for commutative justice likewise achieves this, as when someone pays each creditor what is due. If, however, it be considered in species, it befits each kind of justice in its own way: it belongs to distributive justice insofar as, in that placement, it considers not merely the equality of thing to thing, not only of merits to reward or to punishment, but the equality of proportion between persons and rewards, as was said. Commutative justice, on the other hand, also places each one in his order, attending only to the equality of thing to thing,

namely of merit with reward, or with punishment. And since in this way God by his judgment disposes each one in his own place, therefore by his judgment he observes the mode of commutative, not distributive, justice.

But the testimony of Dionysius avails nothing against our opinion. For what he says, "Divine justice disposes all things, and determines; and for 'disponit' another translation has 'distributes', does not prove that there is properly distributive justice in God, about which is the controversy, but that there is a certain distribution and a perfective disposition, which we do not deny. Nay rather, the words of Dionysius that follow clearly indicate that in this distribution God observes the equality of commutative justice, or its mode, for he says: "To the things that are, he gives to all what is accommodated to each." He did not say that, in this distribution of perfections, God attends to the proportion that things have among themselves and their perfections, so as to assign the quality of proportion among them, but to what is accommodated to each. He therefore considers only equality and fittingness, or the proportion between the thing and its perfection; wherefore, since he preserves this equality, which is of one to one and is called arithmetic, he preserves also the mode of commutative, not distributive, justice.

Concerning the doctrine of the second reason, St. Thomas says many things; to recall them will not be unprofitable. Thus he says, in II-II, q. 63, a. 4, that the vice of "acceptance of persons" (acceptio personarum), insofar as it is against distributive justice, has place in judgments. But in the reply to the first article of that question he teaches that this vice can be considered in a twofold way: first with respect to the thing judged, and thus it can have to do both with the matter of commutative and of distributive justice, and the case is common to both; for a judgment can be about a commutation as well as about a distribution to be made. Then, as to the form of the judgment: insofar as the judge, even in the very judgment of commutative justice which he ought to follow, takes from one and gives to another, and thus it is opposed to distributive justice. Therefore we have from St. Thomas that this vice, even if sometimes it is exercised about the matter of commutative justice, yet whenever it is committed in judgment, is against distributive justice.[1559]

However, this should not hinder our position, in which we say that in the divine judgment distributive justice is not observed, but the mode of commutative; in which, even if there were acceptance of persons, God would be acting not against distributive, but against commutative justice. And that nothing hinders, is proved, first, because what St. Thomas teaches - namely, that commutative justice cannot exist unless between two persons and two things of the same, yet in such a way that equality is constituted between them only as thing to thing.

Moreover, what St. Thomas teaches does not hurt our case, because he is plainly speaking of such cases as when in a judgment two persons contend with each other about some thing, yet when anything is acted before a judge, it is not against the right, but so that he himself may receive from the judge what is asked of him: only equality is sought to be constituted between him and the judge, I say, the equality of thing with thing - namely, of what is given with what is received. And thus the vice of accepting persons occurs in judgments. But in God there is no such case. Hence he

1559. St. Thomas, II-II, q. 63, a. 4.

concludes that the judge sins by the vice of accepting persons, and sins against commutative justice. For to the vice of accepting persons it is indeed common to be opposed to distributive justice, but it is not opposed only to that; because even when one judges about commutation, if the judge, because he favors one of the litigants, adjudicates the thing to him, which he ought to have adjudicated to the other, then indeed he sins by accepting persons against commutative justice.

And to make this clear by examples is indeed difficult. For if two were contending about some matter before a judge - as a servant with his master about the wage to be paid, a debtor with a creditor about the price of some thing, finally about any thing whatsoever belonging to either - and the judge were to deny the debt and adjudicate the thing to the creditor, or take away the wage from the servant and declare it to be the master's, and would do this not from ignorance but because he was well affected toward the person of the creditor and of the master, would he not be said to "accept person" against commutative justice, because out of respect for the person, against the right, he did not observe, or did not constitute, the equality between what was given and what was received which he ought to have observed? For this equality, which the judge ought to constitute, was arithmetic between thing and thing; and therefore it pertained to commutative justice. But if, while the judge was dividing common goods, looking to the person, he should assign to someone a greater share than according to the proportion of merits he ought to have had with others: this vice would be opposed to distributive justice, even though from it there would remain to him who made the distribution, to others whom he defrauded of their share, a debt arising from commutative justice, because he would be held to repair the damage. For every obligation of restitution, even when it arises from a violation of distributive justice, pertains to commutative justice, as St. Thomas and Cajetan have very well noted, II-II, q. 62, a. 1.[1560] Therefore it can scarcely be explained, what St. Thomas taught - namely, that acceptance of persons in judgment is opposed to distributive justice, when the judge, against justice, takes from one and gives to another, even when judgment is given concerning the justice of some commutation.

Objection: If you say that then the judge considers two persons, which seems proper to distributive and not to commutative justice; therefore that judgment pertains to distributive justice, and the vice of acceptance of persons is opposed to it.

Solution: I answer that distributive justice considers not only two persons, but two things as well, and between these four it establishes an equality of proportion. But the judge considers only two persons, between whom he ought to set in order commutative justice, because between them alone he must attend to the equality of what is given and what is received; and indeed commutative justice cannot consist unless between two persons and two things of the same, yet in such a way that the equality constituted between them is only as thing to thing.

Moreover, it remains to be observed that the vice of acceptance of persons, which is opposed to justice, is present only where a debt intervenes. Wherefore, even if God were to regard a person in those things which by his grace he bestows out of liberality or in those which by that same grace he condones, since by no law is he bound to the contrary, there would not be the vice of acceptance of

1560. St. Thomas, II-II, q. 62, a. 1; Cajetan, In II-II, q. 62, a. 1.

persons. For what a man gives of his own liberally, or condones, does not pertain to regard of the person, even if he should regard the person. God therefore, if he should regard the person alone and not merits, would not sin by the vice of acceptance of persons against justice; we may in a certain general way say that he "accepts person" because he has the bearing of a judge who in judgment ought not to regard merits, since at times even a judge is held to do so. But since Scripture says that our God is not an acceptor of persons, it denies to God not only the vice opposed to justice, but even any likeness of it in any way; even if he could do this freely, he does not regard persons, but repays according to merits alone, as we set forth above.

Second argument solved: I say then to the argument, that the vice of acceptance of persons is common, that is, it is opposed to both commutative and distributive justice. A judge is said to "accept person" because the equality which, according to justice, he ought to have observed among some persons, he does not observe; but because he is well affected toward some one of them, he bestows more upon him, or punishes him less than he ought. It is opposed to commutative justice when he violates it; to distributive, likewise, when he does not observe it. Concerning this vice, insofar as it is opposed to commutative justice, the Pharisees said to Jesus (Matt. 22): "Master, we know that you are true, and you do not care for anyone; for you do not regard the person of men." For they were asking whether he judged that tribute ought to be paid to Caesar or not, which pertained to commutative justice. And to the Colossians, chapter 3, where, speaking of the reward of the good and of the punishment of the evil, the Apostle says: "He who does wrong will receive what he has done unjustly; God is an acceptor of persons." For it is clear that the punishment of an offense, according to Aristotle and St. Thomas, pertains to commutative justice. And thus that passage of Romans 2, which is brought forward in the argument, ought to be understood, since there the Apostle not only speaks of the reward of the good but also of the punishment of the evil, and he adds: "For there is no acceptance of persons with God." But the passage about acceptance of persons against distributive justice is that of James 2: "Do not hold the faith of our Lord in acceptance of persons." For he is speaking of the distribution of honors and of seats according to the due proportion of persons among themselves; whence he considers the equality of the proportion between persons and things, although by reason of the Christian faith he judges that all are equal and that none is to be despised; but of this elsewhere.

Third argument solved: To the third reason, which is that of Dominic Soto, I answer that it labors under the same defect as the first. For although distributive justice attends to and considers the merits of the person, commutative justice also considers merits, though in a different mode: commutative indeed according to the equality of thing to thing only, that is, of merit and of reward; distributive, however, according to the equality of proportions between persons and merits. And because in the divine judgment the merits of persons are not considered according to the equality of proportion, as we have explained, but according to the equality of merit and retribution, therefore in the divine judgment not the form of distributive but of commutative justice is observed, even in the distribution of rewards. Wherefore the opinion of those is not to be accepted

who teach that Christ, with respect to God, was indeed subject to commutative justice, to which he satisfied for us, but that with respect to Christ God exercised distributive justice; which is mistaken.

Deinde, what the holy Doctor teaches does no harm, because he plainly speaks of cases in which, whenever in a judgment two persons contend with one another over some matter, yet when someone acts before a judge, he does not act against another, but so that he himself may have from the judge what he deserves from him; he only asks that equality be established between himself and the judge - equality, I say, of thing with thing; that is, of wage with reward. But commutative justice is between two persons, about the equality of two things, as we were saying just above.

I say therefore to the argument: the vice of acceptance of persons is common to be opposed to commutative and distributive justice. One is said to accept person when he does not keep the quality which according to justice he ought to keep between some persons; but because he is well disposed toward one of them, he assigns more to him, or he punishes less than he ought. Now it is opposed to commutative justice when one violates it; to distributive justice likewise, when one does not keep it. Of this vice, as it is opposed to commutative justice, we read in Matt. 22: The Pharisees said to Jesus: "We know that you are truthful, and that you do not care about anyone; for you do not regard the person of men." For they were asking him to judge whether tribute was owed to Caesar or not, which pertained to commutative justice. And to the Colossians, chapter 3, where, speaking of the reward of the good and of the punishment of the wicked, the Apostle says: "He who does wrong will receive what he has done unjustly; God is not an acceptor of persons." For it is clear that the punishment of a crime pertains to commutative justice, according to the opinion of Aristotle and St. Thomas, as we saw in the second chapter.[1561] Thus too I would understand that passage to the Romans, chapter 2, which is brought in the argument; for since there the Apostle speaks not only of the reward of the good, but also of the punishment of the wicked, he added: "For there is no acceptance of persons with God." But that saying of James, chapter 2, "Do not have the faith of our Lord with acceptance of persons," is understood of acceptance of persons against distributive justice; for he speaks of the distribution of honors and of seats according to whether he has regarded merits. This, I say, is not to be approved: for the justice which regards merits according to the proportion of one to one cannot be distributive, as has been more than sufficiently proved.

Dubium. But someone will ask, whether distributive justice belongs to God only according to a metaphor, since thus far we have proved that it does not belong properly. Solvitur. I answer, as I said about commutative justice in the preceding disputation, chapter 7: distributive justice belongs to God according to a certain general notion, but not according to its proper [specific] notion, and thus it is to be ascribed to God not merely metaphorically. For since the common notion of justice belongs to God, as we explained there, and God keeps this also by apportioning to each things good and perfections, there will be justice in distribution, that is, distributive justice; yet that peculiar [species], which is constituted as distinct from commutative because of the different kind of

1561. Aristotle; St. Thomas, as we saw above in chapter two.

equality which it observes, does not belong to God; nor does its mode and likeness, as from what has been said is quite clear. Wherefore, when it is asked whether distributive justice belongs to God properly, a distinction must be made. For "properly" is either opposed to "metaphorically," or it is opposed to "commonly." If in the former way, it belongs properly to God; if in the latter, it does not belong.

Articulus II - Whether the justice of God is truth

Objicitur 1. It seems that the justice of God is not truth. For justice is in the will; indeed, it is a rectitude of the will, as Anselm says; but truth is in the intellect according to the Philosopher in Metaphysics VI and Ethics VI. Therefore justice does not pertain to truth.[1562]

Objicitur 2. Moreover, truth according to the Philosopher in Ethics IV is a certain virtue different from justice. Therefore truth does not pertain to the notion of justice.[1563]

But on the contrary: In Psalm 84 it is said, "Mercy and truth have met one another." And there truth is put for justice.

I answer: Truth (*veritas*) consists in the adequation of the intellect and thing, as was said above. Now the intellect which is the cause of the thing is compared to it as rule and measure. Conversely it is with the intellect which receives knowledge from things. Therefore when things are the measure and rule of the intellect, truth consists in this, that the intellect is adequated to the thing, as happens in us. For from the fact that a thing is or is not, our opinion and speech are true or false. But when the intellect is the rule and measure of things, truth consists in this, that things are adequated to the intellect. Thus an artisan is said to make a true work when it accords with art. And as just works stand related to the law, so do artificial works to art; for they have truth when they accord with the art, just as they are just when they accord with the law. Therefore the justice (*iustitia*) of God, which establishes an order in things conformable to the plan of his wisdom, which is his law, is fittingly named truth. And thus also in us there is said to be the truth of justice.

Reply to the first: Justice, as to the law regulating, is in reason or intellect; but as to the command by which works are regulated according to the law, it is in the will.

Reply to the second: The truth of which the Philosopher speaks there is a certain virtue by which someone shows himself to be such in words or deeds as he is; and thus it consists in the conformity of sign to the signified, not in the conformity of effect to cause and rule, as has been said about the truth of justice.

Explicatio articuli. The conclusion of the article is this: The justice of God, which establishes order in things conformable to the plan of his wisdom, which is his law, is fittingly named truth.

Nota nomine veritatis, et quid intelligat St. Thomas. First it is to be observed that St. Thomas did not say that the justice of God, whereby he himself in himself is just, is the truth whereby he in himself is said to be true; for thus he would confound these two attributes with one another; but

1562. Anselm, De veritate, c. 13; Aristotle, Metaphysics VI; Ethics VI.
1563. Aristotle, Ethics IV.

here he took justice for the just and equal which he himself establishes in things; and truth for that by which made things are said to be true, because they are adequated to their rule, namely to God, just as works of art are said to be true because they are conformable to the ideas of the art. He said, therefore, that this just and equal which God establishes in things is rightly called the truth of the things themselves, because they are said to be adequated to their rule, namely the divine intellect.

Then note that not only are the justice and equality which God establishes considered by the adequation of things with the divine intellect, but also by the adequation of the things themselves among themselves. For God is said to keep justice in things not only because he makes them conform to his ideas and, in some way, equal; but because he so orders them among themselves, and assigns to things such perfections, or to merits such rewards, as the things themselves and the merits demanded and were fitting to them. Whether indeed the truth of things, which is called a passion of being, about which St. Thomas here speaks, is taken by conformity with the practical intellect of God as an artisan, we treated at length in disputation 77.

Articulus III - Whether mercy belongs to God

Objicitur 1. It seems that mercy does not belong to God. For mercy is a species of sadness, as Damascene says. But sadness is not in God; therefore neither is mercy.[1564]

Objicitur 2. Moreover, mercy is a relaxation of justice; but God cannot omit that which pertains to his justice. For it is said in 2 Tim. 2: "If we do not believe, he remains faithful; he cannot deny himself." But he would deny himself, as the Gloss says there, if he were to deny his word. Therefore mercy does not belong to God.[1565]

But on the contrary: It is said in Psalm 110: "The Lord is compassionate and merciful."

I answer: Mercy is most of all to be attributed to God, yet according to effect, not according to the affection of passion. For the evidence of this, it must be considered that someone is called merciful as though having a miserable heart, because he is affected by the misery of another with sadness, as if it were his own proper misery. And from this it follows that he works to drive away the misery of another as if it were his own misery, and this is the effect of mercy. Therefore to be saddened at another's misery does not befit God; but to repel another's misery - by which we understand any defect whatever - this most of all befits him. Now defects are not taken away except by the perfection of some goodness. But the first origin of goodness is God, as was shown above.[1566] Yet it is to be considered that to bestow perfections on things pertains indeed to the divine goodness, and to justice, and to liberality, and to mercy, yet according to different notions. For the communication of perfections absolutely considered pertains to goodness, as was shown above. But insofar as perfections are given to things by God according to their proportion, it pertains to

1564. St. John Damascene, De fide orthodoxa, lib. 2, c. 14.
1565. Glossa interlinearis on 2 Tim. 2.
1566. See above, q. 6, a. 4.

justice, as was said above. Insofar, however, as he does not attribute perfections to things for his own utility, but solely on account of his own goodness, it pertains to liberality. Insofar, however, as perfections given to things by God expel every defect, it pertains to mercy.

Reply to the first: That objection proceeds concerning mercy as far as the affection of passion is concerned.

Reply to the second: It must be said that God acts mercifully, not indeed by doing anything against His justice, but by doing something above justice. For example, if to someone to whom one hundred denarii are owed, a person gives two hundred out of his own, he does not act against justice, but acts liberally or mercifully. And likewise if someone remits an offense committed against himself. For he who remits something, in a certain way gives it. Hence the Apostle calls remission a gift, Ephes. 5: "Be giving to one another, as also Christ gave to you." From which it is clear that mercy does not take away justice, but is a certain plenitude of justice. Hence it is said in James 2 that "mercy exalts judgment."

- Explanation of the doctrine of the article. The conclusion of the article is that in God there is properly mercy; and this must be understood in a manner opposite to what we said of justice, namely, that there is in God mercy properly, not only without metaphor, nor only according to its common notion, but also according to the peculiar formal notion of it. I said according to its formal notion, for just as in anger two things are found, as I noted in disputation 84, chapter 4, namely the material - commotion of the blood about the heart - and the formal - an appetite for vengeance and punishment - so also in mercy there is a certain compassion of the sentient part, which is the material; and there is the formal, namely the raising up of another's misery. Therefore St. Thomas says that in God there is mercy not according to the affection of passion, but according to effect, that is, inasmuch as by His effect and in very deed He raises up another's misery. In the same way speak Alexander, 1 p., q. 39, m. 1; Richard, on IV, dist. 46, art. 2, q. 1; Scotus, IV, dist. 2; Durandus, q. 3; Paludanus, q. 1, 2, 3; from whom Richard expressly teaches that that compassion of the appetite is the material of mercy, and does not pertain to the formal notion of it, which the others also not obscurely indicate, since they assign compassion on the part of the appetite: for no Theologian up to now has thought that a passion of the appetite pertains to the formal notion of any virtue or effect of the soul. On the contrary, since the formal ratio of an affection is considered from its object, which is a part and an effect of it, when the aforesaid Doctors say that mercy in God is according to effect, not according to the affection of the appetite, it is as if they were saying that it is indeed in God according to that which is formal, not, however, according to that which is material.[1567]

Scotus, however, raises a doubt whether mercy and justice in God are at least distinct by reason; and he answers that justice in God can be considered in two ways: first, insofar as it is the becomingness of His goodness, and insofar as that is called just which befits the goodness of God;

and in this way justice and mercy are not at all distinct, but mercy is a certain part of justice, because it is becoming that God have mercy. Then, the justice of God can be taken inasmuch as He preserves among things themselves a certain mode of equality, as between merits and rewards; and in this way, he says, justice is distinguished from mercy, because mercy in the creature does not consider the notion and mode of some equality, which justice considers.

Hence Scotus in the cited place, and Richard on IV, dist. 46, art. 2, q. 2, and Alexander, 1 p., q. 39, m. 2, answer another doubt, namely whether justice is prior to mercy; they answer, I say, that if justice is taken in that first way, it is prior to mercy, for God has mercy because mercy befits His goodness; thus justice in this way stands to mercy as the universal to the particular, and this St. Anselm wished to say in the Proslogion, cap. 11, when he says: "Thus therefore is born of Thy justice, Thy mercy, because it is in Thee that Thou art good, that by sparing Thou mayest be good." But if justice is taken in the latter way, insofar as He renders rewards and punishments to merits, mercy is prior to justice. For to have mercy befits God from Himself, and is the operation of the will as primary; but to render punishment and reward takes occasion from us, and is the second and consequent act of the will, as we said in disputation 83. For this reason the Church says: "O God, to whom it is proper to have mercy always and to spare." Proper, I say, because He is moved from Himself to have mercy; but that He punish, He takes occasion from our works.

I, however, think that that becomingness is rather the object of justice than justice's affection itself, such that God with a quasi-reflex act wills to have mercy: because He judges that to be just, that is, becoming and fitting to His goodness, to have the affection of justice; yet the very act of having mercy is a just object. Wherefore even in this way the affections of justice and of mercy are distinguished, and nevertheless in this way mercy will arise from justice, as Anselm rightly said.

Articulus IV - Whether in all the works of God there are mercy and justice

It is objected that not in all the works of God are mercy and justice. For certain works of God are attributed to mercy, as the justification of the ungodly. Certain others, however, to justice, as the damnation of the impious. Hence it is said in James 2: "Judgment without mercy shall be to him that hath not done mercy." Therefore not in every work of God do mercy and justice appear.

1. Further, the Apostle in Romans 15 attributes the conversion of the Jews to justice and truth, but the conversion of the Gentiles to mercy. Therefore not in any work of God is there justice and mercy.
2. Further, many just are afflicted in this world. But this is unjust. Therefore in every work of God there is not justice and mercy.

1567. Alexander of Hales, Summa, 1 p., q. 39, m. 1; Richard of St. Victor, In IV Sent., dist. 46, art. 2, q. 1; John Duns Scotus, In IV Sent., dist. 2; Durandus of St.-Pourçain, In IV Sent., q. 3; Peter of Palude, In IV Sent., q. 1, 2, 3. - Cf. Vázquez, Disputation 84, c. 4.

3. Further, it is the part of justice to render a debt, but of mercy to relieve misery. And thus both justice and mercy presuppose something in their work. But creation presupposes nothing. Therefore in creation there is neither mercy nor justice.

But on the contrary: It is said in Psalm 24: "All the ways of the Lord are mercy and truth."

I answer that it must be said that it is necessary that in every work of God mercy and truth be found. If, however, mercy is taken for the removal of any defect whatsoever; though not every defect can properly be called misery, but only the defect of rational nature, which can be happy. For misery is opposed to happiness. The reason for this necessity is that, since the debt which is rendered by divine justice is either a debt to God, or a debt to some creature, neither can be omitted in any work of God. For God cannot do anything which is not fitting to His wisdom and goodness, according to which mode we said that something is a debt to God. Likewise also, whatever He does in created things, He does according to a fitting order and proportion, in which the notion of justice consists. And thus in every work of God there must be justice. But the work of divine justice always presupposes the work of mercy, and is founded upon it. For nothing is owed to the creature except on account of something preexisting in it or preconsidered. And again, if that is owed to the creature, this will be on account of something prior. And since one cannot proceed to infinity, one must come to something which depends solely on the goodness of the divine will, which is the ultimate end. For instance, if we say that to have hands is a debt to man on account of the rational soul; but to have a rational soul is for this, that he may be a man; and for man to be, is on account of the divine goodness. And thus in every work of God mercy appears with respect to its first root, whose power is preserved in all the consequences and even works more vehemently in them, just as a primary cause exerts a stronger influence than a secondary cause. And for this reason also, the things which are owed to some creature, God from the abundance of His goodness dispenses more liberally than the proportion of the thing demands. For less is that which would suffice to preserve the order of justice than that which the divine goodness confers, which exceeds all proportion of the creature.

Reply to the first: Certain works are attributed to justice and certain to mercy, because in some justice appears more vehemently, in others mercy. And yet in the damnation of the reprobate mercy appears: not indeed by a total remission, but by a certain alleviation, since He punishes short of condignity. And in the justification of the ungodly justice appears, when He remits the faults on account of love, which nevertheless He mercifully infuses. As is read of the Magdalene in Luke 7: "Many sins are forgiven her, because she loved much."

Reply to the second: Justice and mercy of God appear in the conversion of the Jews and of the Gentiles; but a certain reason of justice appears in the conversion of the Jews which does not appear in the conversion of the Gentiles, as that they were saved on account of the promises made to the Fathers.

Reply to the third: In this also, that the just are punished in this world, justice and mercy appear, insofar as by afflictions of this kind certain lighter things are purged in them, and from attachment to earthly things they are raised more to God, according to that of St. Gregory: "The evils which press upon us in this world compel us to go to God."[1568]

Reply to the fourth: Although nothing in the order of things in nature is presupposed to creation, yet something is presupposed in the knowledge of God. And according to this even there is saved there the notion of justice, insofar as a thing is brought into existence according to what is fitting to divine wisdom and goodness. And in a certain way the notion of mercy is saved, inasmuch as a thing is changed from not-being into being.

The doctrine of St. Thomas in this article was taught in a wholly like manner by Alexander, 1 p., q. 39, m. 3, throughout; Scotus on IV, dist. 46, q. 4; Durandus, q. 3; Paludanus, q. 1, art. 3, concl. 3; and the conclusion is easy, for which reason it needs no further explanation.[1569]

Quaestio XXII - On the providence of God

With those things considered which absolutely pertain to the will, we must proceed to those which regard both the intellect and the will together. Of this sort is providence, indeed, with respect to all things; but predestination and reprobation, and the things that follow upon this, with respect specifically to men, in order to eternal salvation. For even after the moral virtues in moral science there is considered prudence, to which providence seems to pertain.

Concerning the providence of God, four things are asked.

From this question up to the twenty-sixth St. Thomas begins to dispute about those operations which in mixed fashion seem to pertain to intellect and will: namely about providence, predestination, and the beatitude of God; for these are either operations of both faculties, intellect and will together, or, if they formally and directly pertain to one, they seem in a certain manner to presuppose the other; as is wont to be said of choice, that it is a will pre-counseled, which formally is an operation of the will, but has a peculiar order to the consulting intellect.

Articulus I - Whether providence befits God

Ad primum sic proceditur

- Objicitur 1: It seems that providence does not befit God. For according to Tully, providence is a part of prudence.[1570] But prudence, since it is well counsel-taking according to the Philosopher in Ethics 6, cannot befit God, who has no doubt whence he would need to take counsel: therefore providence does not befit God.[1571]

1568. St. Gregory the Great, Moralia in Iob, lib. 26, cap. 9.

1569. Alexander of Hales, Summa, 1 p., q. 39, m. 3; John Duns Scotus, In IV Sent., dist. 46, q. 4; Durandus of St.-Pourçain, In IV Sent., q. 3; Peter of Palude, In IV Sent., q. 1, art. 3, concl. 3.

1570. Cicero, De inventione, lib. 2.

- Objicitur 2: Further, whatever is in God is eternal. But providence is not something eternal: for it is about existences which are not eternal, according to St. John Damascene: therefore providence is not in God.[1572]
- Objicitur 3: Further, no composite is in God. But providence seems to be something composite, because it includes in itself will and intellect: therefore providence is not in God.

But on the contrary: Wisdom 14: "But thou, father, rulest all things by providence."[1573]

I answer that it is necessary to posit providence in God. For every good that is in things is created by God, as was shown above. Now in created things there is found a good not only as to the substance of things, but also as to the order of them to an end, and especially to the ultimate end, which is the divine goodness, as was treated above. This good, therefore, of order, existing in created things, is created by God. But since God is the cause of things through his intellect, and thus the reason of each of his effects must pre-exist in him, as is clear from what precedes, it is necessary that the reason of the order of things to an end pre-exist in the divine mind. Now the reason of things to be ordered to an end is properly providence. It is indeed the principal part of prudence, to which the other two parts are ordered, namely memory of the past and understanding of the present, inasmuch as from the past and the things remembered, and the present things understood, we conjecture what is to be provided for in the future. But it is the proper function of prudence, according to the Philosopher in Ethics 6, to order real things to an end, whether with respect to oneself - so a man is called prudent who well orders his acts to the end of his life - or with respect to others subject to him in a household, or a city, or a kingdom; according to which mode it is said in Matthew 24: "A faithful and prudent servant whom the lord has set over his family." According to this mode prudence, or providence, can befit God. For in God himself there is nothing that can be ordered to an end, since he himself is the ultimate end. Therefore it is the very ratio of the order of things to an end that is named providence in God. Whence Boethius in book 4 of the Consolation says that providence is the very divine plan, set in the supreme ruler of all things, which disposes all things.[1574] Now "disposition" can be said both of the reason of the order of things to an end, and of the reason of the order of parts in a whole.

Reply to the first: According to the Philosopher in Ethics 6, prudence is properly preceptive concerning those things about which good counsel is taken, and synesis judges rightly. Whence, although to take counsel does not befit God, insofar as counsel is an inquiry about doubtful matters, nevertheless to give precepts concerning things to be ordered to an end, of which he has the right reason, befits God; according to that of the Psalm: "He has established a precept, and it shall not pass."[1575] And according to this, the ratio of prudence and of providence befits God. Although it can also be said that the very ratio of things to be done is called "counsel" in God, not

1571. Aristotle, Nicomachean Ethics, VI.
1572. St. John Damascene, De fide orthodoxa.
1573. Wisdom 14:3.
1574. Boethius, Consolation of Philosophy, IV, prose 6.
1575. Psalm 148:6 (Vulgate): "Posuit ea in aeternum, et in saeculum saeculi; praeceptum posuit, et non praeteribit."

on account of inquiry, but on account of the certitude of knowledge, to which those who take counsel arrive by inquiring. Whence it is said in Ephesians 1: "Who works all things according to the counsel of his will."[1576]

Reply to the second: To care pertain two things, namely the reason of order, which is called providence, and the disposition and execution of the order, which is called government. Of which the first is eternal, the second temporal.

Reply to the third: Providence is in the intellect, but presupposes the will of the end. For no one gives precepts about things to be done for the sake of an end, unless he wills the end. Whence also prudence presupposes the moral virtues, by which the appetite is disposed toward the good, as is said in Ethics 6. And yet, even if providence in an equal way regarded the divine will and intellect, this would be without detriment to the divine simplicity, since will and intellect in God are the same, as was said above.

Conclusion of the article: In God there is providence. And it is expressly in Scripture, Wisdom 14: "But thou, father, rulest all things by thy providence." Of it, nevertheless, in the following disputation something must be treated.

Disputatio LXXXVII - Whether the providence which God has of things is an operation of the intellect or of the will

- Errors concerning the providence of God. Caput 1.
- Some Scholastics have held that providence, or predestination, is an operation of the intellect. Caput 2.
- According to others, providence, or predestination, is an act of the will. Caput 3.
- The providence of God does not always attain the end for which it ordains and prepares the means. Caput 4.
- Predestination is not a subjective part, but an objective part of providence. Caput 5.
- And the way of providence. Caput 6.

Caput I - Errors about the providence of God

We presuppose in this disputation that in God there is providence, which among Catholics is outside controversy. We inquire, however, whether it pertains to the intellect or to the will. Nevertheless, it will be worthwhile in this chapter briefly to recount the errors that have been advanced concerning the providence of God, and to set forth the Catholic truth.

Passing over the philosophers and others who, denying that God exists, consequently denied his providence regarding created things - against whom we disputed expressly in question 2, article 2 - among those who confess that God exists, there were not lacking those who thought wrongly about his providence toward these inferior things.

1576. Ephesians 1:11.

The first was Epicurus, who altogether denied the providence of God; likewise Democritus and Heraclitus, who, saying that all things happen by the necessity of nature, thought the care and providence of God to be superfluous: thus relate Lactantius, book 1 De ira Dei, chapters 9 and 10, and St. Gregory of Nyssa, book 3 De philosophia, chapter 3.[1577]

The second error was that of Cicero, of whom St. Augustine makes mention, City of God, book 5, chapter 9; and we above recalled it, disputation 64, chapter 1. For, disputing in the second book De divinatione with his brother Quintus, he altogether denied to God the knowledge of future contingents which depend on human free choice; and so he took away providence regarding these effects and operations. For since providence is a care of future things and is concerned with their disposition, as we shall say below, it follows that it cannot be without the foreknowledge of the same. Therefore, he who says that God does not know future things with certitude, must needs admit that he does not have certain providence of those same things either: for by conjectures, such as men have, nothing would repugn that, without certain foreknowledge, he have some care - unless something else of the sort by conjecture could not befit God; as was said in disputation 67. But whether of other things, even the least, which do not arise from free choice, God has providence, Cicero determines nothing. In this error also we showed Aristotle plainly to have been, in that disputation 64, proving that he also denied certain knowledge of future contingents which depend on free choice.

Besides this, however, Aristotle further seems to have denied God's providence concerning individual other things which do not depend on free choice, but are by the concurrence of other causes; just as he also denied God's operation concerning individual things most minute: rather, he thought all things to be done and moved by the motion of the primum mobile. This error the gravest Fathers ascribe to Aristotle: Clement of Alexandria, Stromata, book 5; Epiphanius on the last heresy; St. Gregory Nazianzen, Oration 1 On Theology, which is the 33rd in order, num. 34; St. Ambrose, book 1 De officiis, chapter 13; Theodoret, book 6 De graecarum affectionum curatione; Salvianus, book 1 De providentia; St. Gregory of Nyssa, book 8 De philosophia, chapter 3; and Eusebius, book 15 of the Praeparatio Evangelica, chapter 4, where he reports Atticus the Platonist, who, in a discourse on providence, attacks Aristotle sharply because, against Plato and Moses, he excludes the lower parts of the world, which are under the moon, from God's providence. Wherefore Nazianzen in the place cited rightly calls the providence of God which Aristotle teaches scanty and confined within narrow bounds; of which also he had made mention by suppressing Aristotle's name in Oration 16, which is On the pauperization, and Nicetas too said that this was Aristotle's opinion on that oration of Nazianzen, in those words, "Nay rather," etc.

Yet it is gathered from Aristotle himself, Metaphysics 12, chapter 2, text 37, where he says that God moves the first body, but the rest are moved by it; and in the same book, chapter 9, he asserts that it is absurd that the first mind, namely God, should think about certain things, and that it is better not to see some things than to see them. But in the book De mundo to Alexander, near the end, he more clearly indicates that it most befits God to govern all things, even the least, and to

1577. Lactantius, De ira Dei, I, 9 - 10; St. Gregory of Nyssa, De philosophia, III.

provide for them, saying that he does not do this by himself, but through other causes; as the skilled craftsman by the motion of one cord brings various appearances of things before the eyes, so God, by the motion of one heaven, governs and directs all these lower things. For Aristotle thought it unbecoming that God, in person, should apply himself in particular to producing and governing each single thing; just as it is not seemly that the king of the Persians should himself govern each of the things in his empire, but that, residing in his city of Susa or Ecbatana, he should have them executed by his ministers. Also, in the Magna Moralia, chapter 8, towards the end, he says thus: "If a fortuitous chance were to be attributed to God, he would be unjust, since it frequently happens that wicked men are fortunate and all things turn out well for them; whereas, on the contrary, many adverse things befall the studious, both in goods of fortune and in life."

Nor does it stand in the way that in book 7 of the Ethics to Eudemus, chapter 18, he says that by the divine numen all things are moved, and he also gives the same name to fortune, as if he meant that the events which befall us by chance are done and governed by God and are not fortuitous to him which we say happen to us by chance. For this he could well understand, as he had taught in the book De mundo to Alexander: because all lower causes are moved by God himself remotely by the motion of the first orb, which is moved by him proximally, so that in a certain manner every cause operates as equipped by the divine numen, since it receives the power of God through the mediation of the first heaven. But that God has disposed all these things severally by will and intellect Aristotle did not teach, nor did he intimate elsewhere. Wherefore in that place to Eudemus he does not say that the things which happen to us by chance are not fortuitous to God, since he plainly indicated the opposite in book 2 of the Magna Moralia, so as to vindicate God from injustice. Add also that Aristotle in book 7 to Eudemus posits a twofold fortune, one divine, the other natural; and this latter he seems to deny to divine providence, as we shall say below in I - II, question 9, article 4.

There is another place in Aristotle where he seems to think far otherwise than we have said thus far, namely book 10 of the Ethics, chapter 8, near the end, where he says: "But he who works by mind and cultivates it is disposed best, and he is most a friend to the immortal gods. For if the gods have any care of human affairs, as is thought, it is surely reasonable that they should rejoice with us in that which is best and most akin to them; but this will be mind itself." Yet neither by this testimony can we vindicate Aristotle from every error: first, because he does not grant to God full and perfect care of human affairs, but only some sort, as if he neither cares for nor thinks about those things which are least among men; but only what are greater and most akin to himself - such as he thought the cultivation of mind to be. Next also, because when he grants a care concerning those things which are done by men, namely of those which please God, those who rightly cultivate mind, he does not therefore grant providence; for this is a care and solicitude of future things; but that which Aristotle grants in that chapter is concerned only with present things. By that testimony, therefore, we cannot altogether defend Aristotle.

A third error is attributed to Plato by Marsilius Ficino in the Argument to the Protagoras, and by St. Gregory of Nyssa in book 8 of the Philosophical work, chapters 3 and 4.[1578]

But on the other hand, the one who with his mind honors God by deeds is disposed most excellently, and is a friend of the immortal gods. For if it is thought that the gods take some care of human affairs, it will be in accordance with reason to think that they look after what is best and most their own; but that is the mind itself. Nevertheless, by that testimony we cannot wholly clear Aristotle of every error: both because he did not attribute to God a full and perfect providence with respect to human affairs, but only some certain providence about those things which are the least among men, nor that he should care for or think of them; but rather for loftier things, and those which he thought were especially conjoined to him, namely to cultivate the mind; and also, because when he grants that among those things which are done by men, those please God who worship him rightly, he does not therefore grant that God has care in particular. For this is the care and solicitude of particulars, whereas Aristotle's discourse in that chapter is concerned only with present things. By that testimony, therefore, we cannot altogether defend Aristotle.

A third error is attributed to Plato, namely that he asserted God to provide closely and of himself for universals and incorruptible things, but for the rest through certain intermediate demons. Wherefore Michael Medina thinks that there was none among the philosophers who, destitute of the light of faith, when disputing about the providence of God, did not err, either simply, or in a certain peculiar way; but Plato, in the dialogue Laws, book 10, toward the end most broadly shows that God has providence and care even of the least of things, just as the most perfect craftsman also has knowledge in the art of very small things. These errors are refuted most well, and they disputate elegantly for the providence of God, Ambrose, Chrysostom, Augustine, Salvianus; of which matter Augustine composed several books, and likewise Nyssen; and St. Thomas, Contra Gentiles, from chapter 71 to 75.[1579]

It is therefore a Catholic truth that God has not only knowledge of all future things, as was proved in disputation 64, chapter 1, but also care and will of disposing all things, and of doing them in their time, sin excepted. For since all things, even the least, are made and conserved by God, as we shall say in disputation 173, it follows that he decreed and destined all these from eternity, which he also knew from eternity. But whether providence is called an operation of the intellect (*intellectus*), or of the will (*voluntas*), is to be explained in the following chapters.

This truth is defined universally in Scripture. Wisdom 14: "But thou, O Father, governest all things by providence." And again of the wisdom of God it is said: "Attingens a fine usque ad finem fortiter, disponit omnia suaviter." And in Luke 12 and Matthew 6 there are many things on this matter, which declare God's providence even concerning the least things, as that God has care of the lily which today is, and tomorrow is cast into the oven; that a sparrow does not perish without

1578. Clement of Alexandria, Stromata V; Epiphanius, Panarion (on the last heresy); St. Gregory Nazianzen, Oration 1 On Theology (33rd), n. 34; St. Ambrose, De officiis I, 13; Theodoret, De graecarum affectionum curatione VI; Salvianus, De providentia I; St. Gregory of Nyssa, De philosophia VIII, 3; Eusebius, Praeparatio Evangelica XV, 4; Nicetas on Nazianzen, Oration 16; Aristotle, Metaphysics XII, 2 and 9; De mundo ad Alexandrum; Magna Moralia II and VIII; Ethics to Eudemus VII, 18; Nicomachean Ethics X, 8.

1579. St. Ambrose, De officiis I, 13; St. John Chrysostom, Homily 9 to the people of Antioch; St. Augustine, De civitate Dei IX, X, and De libero arbitrio III; Salvianus, De providentia I; St. Gregory of Nyssa, De philosophia VIII; St. Thomas, Contra Gentiles III, cap. 71 - 75.

the providence of God, and the like. Wherefore it is an indubitable thing among Catholics, indeed even among heretics, although there is some variety in the manner of explaining, as will appear in disputation 99.

Accordingly, the opinion of certain more recent men, who say that God did not predefine by his providence individual works, because he did not predefine certain works of lesser moment, such as the number of flies and their motion toward this or that direction, and that God likewise did not predefine any of our free works, can by me be proved by absolutely no reason, in whatever way it be explained by its authors. For if they say that God had no will in particular about the number of flies and their motion, it is plainly absurd. For thus God would not provide for all the least things, except in general and remotely in their causes, which is the error of Aristotle and Plato already impugned. Then too we would have to say that neither in time does God have the will of concurring with a fly to this or that motion; a fly too would perish without our Father, and a sparrow similarly, which is against Luke 12 and Matthew 6. Or if in time God has a will about these individual works, it follows that he is changed, who in time begins to will something; or it must be said that he willed that from eternity. But if they say that God did not predefine all these things before the foreseen concurrence of the second cause, but together with it, they teach rightly; yet they ought to assert the same of all things, nor is there greater reason why they should assert this about the least things than about the greatest. I understand this, however, regarding things which were to be produced by the concurrence of a second cause; for those which God was going to do by himself, he decreed to do alone, no created cause being foreseen.

But about free human acts the same must be said. For either they assert that God from eternity only had a universal will of concurring with all men, and did not have that will about singular operations; and thus it cannot be defended: because, concurring in time with this cause, through individual works, he has in detail a will of concurring with it, and such concurrence pleases him: therefore he had it from eternity; or, beginning to have it in time, he is changed; or finally we fall into the error of Aristotle, who assigned providence only in general and in a confused way, namely in the causes, providing causes with reference to effects, and caring nothing in detail for them - all of which are absurd. Or they assert that God pre-defined nothing of human acts without the cooperation and concurrence of free choice foreseen; and this we shall show to be most true in disputation 99. Yet for that reason it ought not, nor can it, absolutely be denied that God provided for and pre-defined singulars in particular, in detail, which he was going to do in time; so that the particle "prae" does not signify a precedence of God's causality with respect to ours, but of time with respect to the existence of the effects; but on this matter again in that disputation, chapter 5.

Caput II - Providence (*providentia*), or predestination (*praedestinatio*), to be an operation of the intellect - such was the view of certain Scholastic doctors.

In the question proposed at the beginning the Scholastics vary; and some contend among themselves more than is meet, whereas it is not a great matter, but a small disagreement, namely whether the operation of the intellect, or of the will, or of both together, ought to be called

providence. Likewise, the difficulty about predestination is the same, for predestination, as it is taken by the holy Fathers and Scholastic Doctors, differs from providence only as the special from the universal: for providence regards all things in general; predestination, however, deals only with the grace of justification and with glorification. Wherefore both questions together must be examined by us, as the account is the same for each.

Accordingly, the prior opinion is that providence, or predestination, is an act of the intellect directly, but relative to an act of the will. So teach Alexander (who, although speaking of providence in part, question 26, member 2, says that it pertains to the intellect and to the will, and does not determine to which it should chiefly be reduced, yet in question 28, member 1, article 2, to the second, on predestination, plainly teaches it to be an operation of the intellect); the same Durandus in the First Book, distinction 14, question 1, number 9; St. Thomas and Cajetan, in this article 1, and below in question 23, article 1; Capreolus, in the First Book, distinction 40, question 1, article 1, conclusion 1, and article 2, conclusion 2; to whom Marsilius favors in First Question 41, article 1, in the beginning, when he asserts that providence pertains to knowledge, although afterwards, speaking of predestination in the same article, note 2, corollary 3, he says that three things pertain to predestination, namely knowledge for disposing, will besides, and power for effecting; yet he does not explain which of these is called providence directly.[1580]

This opinion in general, both about providence and about predestination, is proved first: because to provide or to predestine is to order someone to an end; but ordering is an operation of the intellect: therefore to provide and to predestine. Then too, since providence is a part of prudence - for to this pertains to provide for future things, to remember past things, and to know present things - but the operation of prudence pertains to the intellect: therefore so does providence. Hence Boethius said in book 4 On Consolation, prose 6, that providence is the very divine reason, established in the highest ruler of all, which disposes all things.[1581]

However, the authors of this opinion do not defend it in the same way. Alexander and Durandus, with whom Marsilius seems to agree, say that providence, or predestination, is an act of the intellect which precedes the will, and dictates or proposes what the will ought to decree, and is commonly called "judgment"; but others cited judge it to be an act of the intellect after the affection of the will about the means, which they call "imperium" (*imperium*), by which the power of the will and its impetus is borne toward the work, by a kind (so to speak) of insinuation or intimation to the work and to the executing powers; and they think this to be the proper act of prudence, so that to take counsel and to deliver judgment they attribute to other virtues annexed to prudence; certain Thomists do so with the Doctor, in 2-2, q.47, a.8 and 11 throughout, and q.57, a.6, in the body and to the third.

Furthermore, that providence and predestination pertain to the will is taught in the first rank by Bonaventure on the First Book, distinction 40, article 1, question 2; Scotus, question 1, in the beginning; Gregory, question 1, article 1. Thus too St. John Damascene, book 2, On the Faith,

1580. Alexander of Hales, Summa, q.26, memb.2; q.28, memb.1, art.2, ad secundum, De praedestinatione. Durandus, In I Sent., dist. 14, q.1, n.9. St. Thomas and Cajetan on this article 1, and below q.23, a.1. Capreolus, In I Sent., dist. 40, q.1, art. 1, concl.1; art.2, concl.2. Marsilius, In I, q.41, a.1, init.; eod. art., nota 2, coroll. 3.

chapter 29, defines providence in the beginning in a twofold way with these words: "Providence is the procuration of things, which God undertakes"; and again, "Providence is the will of God, by which all things are governed aptly and congruously." To this sentence the Doctors also assent who teach that "imperium" (*imperium*) is an operation of the will, not of the intellect; in which point, however, we shall confute their opinion at 1-2, q.17, a.1. These are Henry, Quodlibet 9, question 6; Bonaventure in 3, distinction 17, article 1, question 1, ad 3; Almain, tract. 3, Moral, chapter 2; St. Jerome ab Angelis, cap. 1, Moral, part 3, text, corollary 3; Ockham in 3, q.12, a.4, conclusion 3. 15821583

By reason they confirm this sentence. For although the name "providence" is sometimes taken for the knowledge of future things, indeed this seems to be the primary signification of the name, by which account Boethius, disputing of divine prescience in the last prose of the Consolation, said that it is better called "praevidentia," rather than "praescientia" or "praefcientia," as we reported above in disputation 64, chapter 1 (so that he is called prudent who sees things from afar, before they come), yet otherwise the more frequent usage is that "providence" is said of one who not only sees future things from afar, but also has due care and action about them, by reason of which he is said to look out for them and to consult rightly; in like manner one is called "prudent" who has taken counsel for his future affairs, nor has an excessive care of his future state. But here we are dealing with providence, not only insofar as it is mere knowledge of future things - for thus it is not a different attribute from knowledge - but insofar as it is about certain things, and about a study of future things according to right disposition. Therefore it is not a judgment by which things are proposed to the will, but rather a study and a purpose of the will. By this argument it is well enough proved against Alexander and the others of his party, that providence is not an operation of the intellect alone by which the will is presented with its object.

Moreover, it is not an operation of the intellect which follows upon the will, with the study, the will moreover, and the power to effect. For neither is such an act proved to be first; since such an operation, even in us, is superfluously posited for the motion of the executing faculty, but it is enough if judgment is followed by an affection in the will, so that the executing faculty may operate in its time, nor does it need another insinuation, indeed it is not capable of it, as I shall show more at large in 1-2, q.13, a.1; therefore neither in God, even in our manner of understanding, ought it to be posited. For in God we distinguish by reason all these operations after the manner of those which in us differ really.

Then, even if in us such an operation really existed, it would not seem to be established in God, in our manner of understanding also. For in us it seems necessary that by a certain insinuation the impetus of the will be carried over to the executing faculties; but in God no such executing faculty is to be posited as distinct from the will, as we shall say in disputation 102: therefore it would be vain in him, merely by reason, to distinguish such an operation of the intellect. Besides, even if in

1583. St. John Damascene, De fide orthodoxa II, 29.

God there were posited that executing faculty diverse from the intellect and the will, yet that insinuation of the will and "imperium" are not aptly suited to God: because God is not accustomed to command either himself or his own faculty; for such a command could not be directed to himself, who constantly can of himself command creatures, which he will make, by his power: because creatures are not properly capable of such "imperium," but in a certain common manner, and metaphorically, are said to obey God, insofar as by the will of God they come to be without any resistance.

How moreover it pertains to prudence not only to prescribe what is to be done, but also to take counsel, nor are the habits of Euboulia, Synesis, and Gnome to be distinguished from prudence, we shall say in 1-2, q.47, art. ...

Furthermore, about the name "Predestination," it must be said in the same way that it evidently signifies a purpose of the will, whereby one wills to effect something, and he is said to "assign a destination" who proposes and determines to lead someone to that end by congruous means. Wherefore both predestination and providence universally signify a purpose of the will about the means with respect to some end.

And although the name Providence more expressly signifies this disposition of means than the name Predestination, nevertheless by usage the name Predestination is now accommodated to signify the eternal purpose of God, whereby He prepares grace for someone unto eternal life, according to the definition of St. Augustine, On the Predestination of the Saints, book 1, chapter 10, at the beginning.[1584]

To the first argument of the prior view it can be replied from the doctrine of Scotus, in the First Book, distinction 6, question 1, and Quodlibet 17, that to ordain is not the work of the intellect alone, which understands one thing to be for the sake of another, but also of the will, which decrees and proposes one thing to another. Wherefore, although providence is the ordination of things and of means to some end, it does not follow that it pertains to the intellect, but rather to the will, which also is said to "ordain," because it pursues the order prescribed by the intellect.[1585] To the second argument I reply that the providence which is said to be the foreknowledge or pre-notion of future things pertains to prudence, and this is an operation of the intellect, of which Boethius clearly seems to have spoken, as we said a little above. Now, however, the question concerns providence as it is conjoined with care and solicitude for things to be done; and this directly indeed pertains to the operation of the will - although it presupposes an act of the intellect, not in any manner whatsoever, but as ordaining and disposing those things which providence strives to carry out. Each of these opinions is probable; and since this controversy concerns not things but words, and in this respect it makes no difference to the dogmas of faith whether we speak in this way or in another, it is not necessary to dwell longer on it.[1586]

Caput IV - Divine providence does not always achieve the end to which it ordains and for which it prepares means

Since providence (*providentia*) is the care which God has for things, and by which He prepares for them the means that they may attain their ends, and since it seems to be the greatest imperfection to apply such weak means that they do not produce their effect, and since any imperfection would be repugnant to divine providence, which is most perfect, it seemed to Cajetan in this article to concern the very honor of the divine name "providence" and its true notion, that it both prepare the means to the end and always attain that end. He proves this by the authority of St. Thomas, who in Contra Gentiles III, chapter 94, and in the following article of this question, ad primum, teaches that there is nothing in the nature of things that escapes the providence of God: but if the providence of God did not always attain the end proposed to itself, many things would escape it; and he adds, "All things that are provided by God come to pass." Wherefore Cajetan judges that the Angelic Doctor, in the places alleged, changed the opinion which earlier he had taught in the First Book, dist. 40, q. 1, a. 2; and in On Truth, q. 6, a. 1.[1587]

I, however, think that this opinion of Cajetan is neither that of St. Thomas nor can it be defended by any reason. Therefore, what pleases me is what Durandus asserts in the First Book, dist. 39, q. 3, and dist. 40, q. 1; Capreolus, dist. 40, q. 1, art. 1, conclusion 2; Marsilius, q. 41, art. 1, at the beginning; Ferrarius on Contra Gentiles III, chapter 94; and St. Thomas in the aforesaid On Truth, q. 6, and in that same dist. 40: namely, that the providence of God does not always attain the end to which it directs things. Durandus proves it thus: a physician is called "provident" who applies the necessary remedies for health, although he does not achieve it. Yet this reason does not prove the same of God's providence, because such a defect cannot occur in God. For a physician can will to effect and to attain some end, and yet not attain it, even if he applies those things which could be applied by diligent providence: but he fails of the attainment of the end either through a defect of knowledge - because, ignorant of the cause of the sickness, he did not apply the better remedies - or because, even if he knew the disease perfectly, he could not find or make the better medicines. Nevertheless, that physician is called provident and prudent, because he omitted no remedy which, according to human art and diligence, could have been applied.

But God, whose knowledge cannot be deceived nor His power impeded - when He does not attain the end to which He ordains things - fails to attain it for another reason: namely, because He has prepared the means for free causes, and, leaving them in their own liberty, He permits them to act, and has decreed to cooperate with them according to their liberty. Indeed, God could, by His providence, so forestall them in their individual acts that none would fail of its end; yet He does not will this, but He provides to individuals the means that are necessary indeed, though not efficacious, for the attainment of the end; and that these means do not have their effect proceeds from the liberty of our will. The matter is illustrated by an example. For in the case of the reprobate, whom God prevents by His grace and at times justifies, He without doubt provides all

1587. Durandus, In I Sent., dist. 39, q. 3; dist. 40, q. 1. Capreolus, In I Sent., dist. 40, q. 1, art. 1, concl. 2. Marsilius, In I, q. 41, a. 1, init. Ferrarius, In Contra Gentiles III, c. 94. St. Thomas, De veritate q. 6; In I Sent., dist. 40, q. 1, a. 2.

the means of grace, that they may obtain eternal life, to which He also directs them; He likewise strives to lead them to repentance, as we shall say in Disputation 97; and yet He does not attain in them the end. Therefore, it is no derogation to providence not to attain universally the end.

For a greater explanation, observe first with Ferrarius that two things can be considered in God's providence on the part of the effect. One is the very application of the means to the end, and this God establishes by His efficacious will before our consent: for the means of the providence of God unto eternal life are those of prevenient grace, which take place in us before consent; and with respect to this effect providence is always fulfilled, and whatever God has provided as a means for someone is always actually bestowed and comes to pass. And in this sense the Holy Doctor said in this question, art. 4, ad secundum, that all things which are provided by God come to pass in the manner in which He has disposed and decreed them. For if He provides prevenient helps, they always come to pass; but if He has provided concomitant helps, they will follow in like manner. For that which God provides He always establishes and decrees with an efficacious will, which indeed is always fulfilled. The other thing in divine providence is the end, which God is not said to "provide," but rather the means to it; and this end divine providence does not always attain, because it leaves the means in the power of the secondary cause, and, according to its liberty, has decreed to cooperate with it, as we shall explain in Disputation 99. This latter, then, is what our opinion asserts, which I do not know by what reason Cajetan could deny. For neither does divine providence in the reprobate attain the end to which God orders them and for which He provides them the means; therefore we rightly say that the providence of God does not always attain the end to which it directs and for which it provides the means.

Note, secondly, that God always attains some end by His providence. For in the reprobate, whom we say to be ordered to beatitude and to be directed by the providence of God, God attains another end proper to Himself: namely, to show the riches of His grace in the vessels of mercy, as we shall show in Disputation 95, chapter nine. What we have said thus far is that divine providence so applies and bestows means to men for some end to be attained by them that sometimes they do not attain it; yet we do not say that God's providence in the application of means is ever without the attainment of some end: it always attains some end, as has been explained. And this is what St. Thomas meant in that question On Truth and in that dist. 40, when he said that providence does not always attain the end to which it ordains. But what he asserts in the second article of this question, ad primum - namely, that nothing escapes God's providence - is not contrary to what we have said; for it is one thing that all things which happen fall under divine providence, and another that every end which divine providence intends should actually come about. The former always happens; the latter can fail.

Thirdly, it should be noted that common providence differs from predestination (*praedestinatio*) in this, that predestination always attains the end to which it is ordered and for which it provides the means - not because by an efficacious will it predetermines the end before the application of the means, as will be proved in Disputation 89, but because it provides such means as it knows by its science will have their effect with respect to the attainment of that end.

Caput V - Predestination is not a subjective but an objective part of providence

Certain things about predestination are usually noted at the beginning of the question; since they are easier, and pertain to predestination insofar as it is compared with providence, it seemed good briefly to set them forth in this chapter.

First, as to the etymology of the name: the verb "to predestine" (praedestinare) is composed of "prae" and "destinare." Now "destinare" signifies, among other things, two: first, to send; then, to set, or to define. And perhaps in all the places where it signifies "to send," it can also be used for "to define." Thus, where soldiers are said to be destined for some place - that is, to be sent - it can signify "to define," in that they are sent. From the former signification St. Thomas derives the name predestination as a certain transmission, so as to denote the sending of a man into life eternal: the same is judged by Durandus in the First Book, Dist. 40, q. 1, art. 5. But Alexander derives the name from the latter signification, which seems the more fitting.[1588]

As for the preposition "prae," Doctors give various senses. Catherinus, in his Opuscule De praedestinatione, cap. 1, asserts that it signifies dignity. Wherefore he says that those are "predestined" who, before others to be saved, are destined in a more dignified manner to glory, whom he himself calls "eminently predestined." These, in his view, are those to whom, before foreseen merits, God decreed to give life eternal, of which we shall speak in disputation 90.[1589] Bartholomew Camerarius, in the Catholic Dialogue, cap. 1, § 2, judges that the particle "prae" also signifies dignity, but in another mode - namely, of those who are saved in relation to the damned - so that these are said to be "before others," that is, before the damned, destined to life eternal.[1590] The more common sentence of the Scholastics, however, is that this "prae" signifies antecedence of duration, so that predestination is the same as predefinition, and the eternal ordering of God before all times. The particle can also signify antecedence of cause with respect to our free choice, so that God is said to predestine or predefine something before our consent even as foreseen; in which sense Damascene seems to have spoken, De fide, the last chapter, and elsewhere; of which again in disputation 99.[1591]

Next, it must be premised, as Driedo very well noted in the tract De concordia praedestinationis et liberi arbitrii et praedestinatione, cap. 1, that the name "predestination" is sometimes employed commonly, sometimes properly: and, in a peculiar way, when commonly accepted it signifies as well the destination of the providence of man to life eternal as to punishment; and thus it also includes reprobation.[1592] Thus St. Augustine takes it in De civitate Dei, when he speaks of those two cities, one predestined to glory, the other to eternal fire; and Prosper agrees in his Responses 14 and 15 to the Capitula of the Gauls; and Fulgentius in book 1 To Monimus, cap. 14 and 30, and very often elsewhere; and the Council of Valence under the Emperor Lothair, c. 3.[1593] Properly, however,

1588. St. Thomas, In I Sent., dist. 40, q. 1, a. 5; Durandus, In I Sent., dist. 40, q. 1, a. 5; Alexander of Hales, Summa, I, p. 4, tr. 28, m. 1, § 2.

1589. St. Ambrose Catharinus, Opusc. de praedestinatione, cap. 1.

1590. Bartholomeus Camerarius, Dialogus Catholicus, cap. 1, § 2.

1591. St. John Damascene, De fide orthodoxa, cap. ult.; see also disputation 99.

1592. Driedo, Tractatus de concordia praedestinationis et liberi arbitrii et praedestinatione, cap. 1.

"predestination" is used for the destination of someone to life eternal; thus Paul to the Romans 8, and elsewhere; and the Council of Trent, the Fathers, and the Scholastics commonly. Therefore, whenever we use the name "predestination" or "predestined" absolutely, we always understand predestination to life; reprobation, however, we never understand unless we add "to death" or "to punishment."[1594]

What, then, this peculiar predestination properly is, as regards grace and as regards the eternal cause - whether it be the will itself only of giving life eternal, or the will of preparing all the means of grace to that end - we shall say in disputation 89, chapter 3. For the present, however, that we may distinguish it from providence taken universally, and that we may show that it is not a subjective part of that [i.e., providence], it is enough to have said in general that predestination properly taken is occupied about grace and glory, or about one of those two.

Whether, indeed, it is a subjective part of providence, Doctors do not seem to feel the same way. Cajetan, below, q. 23, art. 1, teaches that it is not a subjective, but an objective, part - more precisely: for by a "subjective part" of something all understand a species with respect to a genus; therefore he says it is an objective part, because it is occupied about some special object of providence; but not subjective, because it is not a species of providence. He seems to compare predestination with philosophy, as some part of philosophy, namely that which treats about the heaven, with universal philosophy. For this is a certain common science, which contains under itself some parts, not as species, but as it were integral parts. Now this opinion can be proved from the doctrine handed down above in disputation 72, namely, that in God there is only one art, although there are many ideas, because there is a single, according to species, mode of knowing, even if there are many objects which come to be by that art, to which many ideas are assigned. For since in God there seems to be the same mode of providing necessary means to their ends, even if there are different means to different ends, the divine providence, as providence, will be of the same species; and therefore it will not contain under itself this and that providence as species, but as parts of the same providence, because they are occupied about individual objects.

Others, however, think that predestination is a subjective part of providence. Thus think St. Thomas, q. 6 De veritate, art. 1; and in the First Book, Dist. 40, q. 1, art. 2; Durandus; Marsilius; Capreolus in the same distinction, concl. 2; and Bartholomew Camerarius in the Catholic Dialogue, cap. 1, § 4. But by what reason they prove this, I do not see; therefore, although it does not matter very much to speak in this or that mode, to me the sentence of Cajetan is more probable, which St. Thomas not obscurely indicates in I, q. 23, art. 1, at the end.[1595]

See also disputation 72.

Articulus II - Whether all things are subject to divine providence

It is asked whether all things are subject to divine providence.

Objection 1. It seems that not all things are subject to divine providence. For nothing that is provided-for is fortuitous. If therefore all things are provided-for by God, nothing will be fortuitous. And thus chance and fortune perish. But this is against the common opinion.

Objection 2. Further, every wise provider excludes, as far as he can, defect and evil from those whose care he undertakes. But we see many evils in things. Therefore either God cannot prevent them, and so He is not omnipotent, or He does not have care of all things.

Objection 3. Further, those things which come about of necessity do not require providence or prudence. Hence according to the Philosopher in Ethics VI, prudence is right reason about contingent things, about which there is counsel and choice. Since then many things in reality come about of necessity, not all things are subject to providence.

Objection 4. Further, whoever is left to himself is not subject to the providence of any governor. But men are left to themselves by God, according to Ecclesiasticus 15: "God from the beginning made man, and left him in the hand of his own counsel." And especially the wicked, according to that: "He left them according to the desires of their heart." Therefore not all things are subject to divine providence.

Objection 5. Further, the Apostle says, 1 Cor. 9: "Doth God take care for oxen?" And by the same reason for other irrational creatures. Therefore not all things are subject to divine providence.

But on the contrary: It is said of the divine wisdom (Wisdom 8) that "she reacheth from end to end mightily, and ordereth all things sweetly."

I answer that: Some totally denied providence, as Democritus and the Epicureans, positing that the world was made by chance. Others, however, held that only incorruptible things are subject to providence, but corruptible things not according to individuals, but according to species; for thus incorruptible they are. In the person of such it is said in Job 22: "Clouds are his covert, and he walketh about the hinges of the heaven, and he considereth not our things." From the generality of corruptible things Rabbi Moses excepted men, on account of the splendor of the intellect which they participate; but in other corruptible individuals he followed the opinion of others. Yet it is necessary to say that all things are subject to divine providence, not only in the universal but also in the singular, which is clear as follows. Since every agent acts for an end, the ordering of effects to the end extends as far as the causality of the first agent extends. For this happens in the works of some agent, that something should come about not ordered to the intended end, because the effect follows from another cause besides the intention of the agent. But the causality of God, who is the first agent, extends to all beings, not only as to the principles of the species, but also as to the individual principles; not only of incorruptibles, but also of corruptibles. Whence it is necessary that all things which have being in any way be ordered by God to an end, according to the Apostle to the Romans 13: "Those things that are from God are ordered." Since therefore nothing else is the providence of God than the plan of the order of things to an end, as has been said, it is necessary

that all things, insofar as they participate in being, be so far subject to divine providence. Likewise also it was shown above that God knows all things, both universals and particulars. And since His knowledge is compared to things as the knowledge of art to the things made by art (as was said above), it is necessary that all things be subject to His order, just as all things made by art are subject to the order of art.

Reply to the first: The case is otherwise with a universal cause and with a particular cause. For from the order of a particular cause something can depart, not, however, from the order of a universal cause. For nothing is withdrawn from the order of a particular cause unless by means of some other particular cause impeding - for example, wood is hindered from being burned by the action of water. Hence, since all particular causes are included under the universal cause, it is impossible that any effect should escape the order of the universal cause. Inasmuch, therefore, as some effect escapes the order of some particular cause, it is said to be casual or fortuitous with respect to the particular cause; but with respect to the universal cause, from whose order it cannot be withdrawn, it is said to be provided-for. Thus too the meeting of two servants, although it be casual as regards them, is nevertheless provided-for by the master, who knowingly sends them thus to one place, so that the one should be ignorant of the other.

Reply to the second: The case is otherwise with one who has care of something particular, and with the universal provider. For the particular provider excludes defect from that which is subject to his care, as far as he can; but the universal provider permits some defect to occur in something particular, lest the good of the whole be impeded. Hence corruptions and defects in natural things are said to be against a particular nature, yet they are of the intention of universal nature, inasmuch as the defect of one turns to the good of another, or even of the whole universe. For the corruption of one is the generation of another, by which the species is preserved. Since therefore God is the universal provider of the whole being, it pertains to His providence to permit certain defects to be in some particular things, lest the good of the universe be hindered. For if He were to prevent all evils, many goods would be lacking to the universe; there would not be the life of the lion, if there were not the killing of animals; nor would there be the patience of martyrs, if there were not the persecution of tyrants. Whence St. Augustine says in the Enchiridion: "The omnipotent God would in no wise permit any evil in His works, unless He were so omnipotent and good as also to bring good even out of evil."[1596]

Reply to the third: Man is not the establisher of nature, but uses natural things in the works of art and of virtue for his own use. Wherefore the providence of man is only about things contingent which are subject to counsel and choice; but the divine providence, as the institutor of nature and universal order, extends also to necessary things, no less than to contingents.

Reply to the first: It must be said that it is otherwise with a universal cause and with a particular cause. For something can depart from the order of a particular cause, but not from the order of a universal cause. Nothing is withdrawn from the order of a particular cause except by some other particular cause impeding it; thus wood is impeded from burning by the action of water. Hence,

1596. St. Augustine, Enchiridion, cap. 11 (at the beginning), in tom. 34.

since all particular causes are included under a universal cause, it is impossible that any effect escape the order of the universal cause. Therefore, insofar as some effect escapes the order of some particular cause, it is said to be casual or fortuitous with respect to the particular cause; but with respect to the universal cause, from whose order it cannot be withdrawn, it is said to be provided-for. Likewise too, although with respect to them it is, as it were, accidental that servants meet together, nevertheless with respect to the master who knowingly sends them, so that one meet another at a given place, it is provided-for. (And so too all corruptions and defects in natural things are said to be against a particular nature, but yet, as has been set forth above, not against the intention of universal nature.) Universal nature's defect is ordered to the good of another, and thus to the good of the universe. For the corruption of one is the generation of another, by which the species is preserved. Since therefore the universal provider directly intends the good of the whole, it pertains to the universal providence that it permit certain defects in particular things, lest by such evils the goods of the universe be impeded. For if all evils were prevented, many goods would be lacking to the universe; there would not be the life of the lion if there were not the killing of animals; nor would there be the patience of martyrs if there were not the persecution of tyrants. Whence St. Augustine says in the Enchiridion: "The omnipotent God would in no wise permit any evil in His works, unless He were so omnipotent and good as also to bring good even out of evil."

Reply to the third: Man is not the establisher of nature, but uses natural things in the works of art and of virtue for his own use. Wherefore the providence of man is only about things contingent which are subject to counsel and choice; but the divine providence, as the institutor of nature and of the universal order, extends also to necessary things, no less than to contingents.

Reply to the fourth: In that which is said, that God "left man to himself," man is not excluded from divine providence; rather it is shown that operative power is not predetermined for him to one thing, as it is for natural things, which are acted upon only as by another, but do not act of themselves as directing themselves to an end, as rational creatures do by free choice (*liberum arbitrium*), by which they take counsel and choose. Whence it is significantly said: "In the hand of his counsel." But because the very act of free choice is reduced to God as to a cause, it is necessary that those things which come about from free choice be subject to divine providence. For man's providence is contained under God's providence, as a particular cause is under a universal cause. Moreover, over just men God has providence in a certain more excellent way than over the impious, inasmuch as He does not permit contrary events to befall them which would finally impede their salvation. For to those who love God, all things work together for good, as it is said in Romans 8. But from this very fact, that He does not draw the impious back from the evil of fault, He is said to "forsake" them; yet not so that they are totally excluded from His providence - otherwise they would fall into nothing, unless by His providence they were preserved. And from this reasoning it seems that Cicero was moved, who subtracted from divine providence those human affairs about which we take counsel.

Reply to the fifth: Because the rational creature has, through free choice, dominion over its own act, as has been said, it is subject in a certain special way to divine providence, to wit, so that something be imputed to it for guilt or for merit, and that something be rendered to it as

punishment or reward. And as to this point the Apostle removes God's "care" from oxen - not, however, so that individuals of irrational creatures do not pertain to God's providence, as Rabbi Moses supposed.

Observations concerning the doctrine of the article.

The conclusion is that all singular created things are subject to divine providence; however, sins are to be understood as excepted, about which we will say something presently. And this is expressed in Scripture in Wisdom 8, Luke 18, Matthew 6, and Luke 12, as we alleged in the preceding disputation, where we also said in what manner God's care and providence are exercised even about the least things. But since certain matters remain to be noted, the first is that Julius Sirenius taught falsely in book 2 De fato, chapter 25, when he claims that monsters and other continual natural defects occur not only by chance and rashly from second causes which were carried into an opposition to nature, but also by God, who inclined them to the opposite. This is therefore both false and absurd: for although God incline some second causes to some effects and begin to aid them, nevertheless He applies contrary causes by which others are impeded - whence monsters are generated and defects occur. Such monstrous events cannot be fortuitous with respect to God, since they are not outside His intention in applying opposite causes, by which He knows, and even wills, that monsters come forth. Therefore either Sirenius must concede that God does not apply opposite causes, nor concur with them with the purposed will of His own - which would be heretical - or else he cannot say that such effects are themselves fortuitous, since they are according to His intention and will.[1597]

Second, Cajetan treats many things concerning the solution to the second objection, to show in what way sins are permitted by God on account of the good of the universe; and he more perfectly proves that this universe is more perfect in the way in which it now is, sin having been permitted, than it would have been if Adam and the evil angels had persevered in grace.[1598] This, however, they understand not only because now it has Christ, but also that even without sin it would have had Him on account of other goods which have been born from sin, to wit, on account of martyrdom, penance, and the like. We shall discuss this matter somewhat below in disputation 107. Here, however, first it must be said that God did not permit sin from an intention of penance, or of martyrdom, or of other goods which followed from its occasion, because these goods are not of the primary and antecedent will of God, but of the consequent will, which is after sin was foreseen, as we have shown according to the mind of St. John Damascene above in disputation 83, chapter 3; whence also below in disputation 93, chapter 2, we shall prove that in the predestined God does not permit sin from an intention of penance, and therefore the permission of sin is not an effect of predestination.[1599] Then I say that indeed there are many fitting reasons on account of which God is rightly said to have permitted sin, as one may see in St. Thomas; nor would they be lacking, if God had not permitted it. But what in the thing itself and in the universe would be better - let that be God's judgment; although we shall say something of this in the article below.[1600]

1597. Julius Sirenius, De fato, lib. 2, cap. 25.
1598. Cajetanus (Caiet.), on this solution of the second objection.
1599. St. John Damascene, as cited supra, disputatio 83, cap. 3; and infra disputatio 93, cap. 2.

Third it is to be noted, concerning the solution to the second objection, in what way sins are subject to divine providence. Although the Schoolmen speak variously in this matter, nevertheless it seems to me that all have the same opinion. Alexander (2 p., q. 36, m. 4, a. 1) and Durandus (in I, dist. 39, q. 3, num.) say that sins fall under God's providence either because God provides something about them lest they be done, or because, once done, He orders them thus, so that they be matter for penance and instruction; and some think that St. Thomas himself said this in Contra Gentiles, book 3, chapter 71 - although there he only says that God is provident even if His providence does not prevent every evil.[1601] The same St. Thomas (Quæstio de veritate, q. 5, a. 4) and the Ferrarian (3 Contra Gentiles, cap. 7, art. 6 and 3) say that something falls under God's providence in two ways: first, as that for the sake of which God orders other things, and that very thing to something else; and this is the effect of divine providence, which is brought about by it, as the act of generating, to which a potency is ordained by God, and is itself ordained to the production of man. And this is called by St. Thomas a providence of approval, because it is the will approving that thing, or it supposes the will of that thing which is said to fall under providence. Then something is subjected to divine providence not as its effect, but because, once it has been done, God orders it to other things; and in this way sins are subject to divine providence, but not in the prior mode. Therefore, although we say that God's providence has to do with sins, or that sins are subject to providence and fall under it, nevertheless, in order that these be truly said, it is sufficient if sins be as it were the matter about which providence does something. One cannot say, however, that sins are provided-for by God, although they are foreseen and foreknown: for to be provided-for denotes effects of willing and of providence.

For this reason the Holy Doctor said above (q. 14, a. 16) that God has practical knowledge of sins, inasmuch as He permits them, or prevents them, or, once done, orders them; whence it is called practical knowledge of sins, not as of an effect, but as of the matter with respect to which He orders something to be done. On the other hand, when in this article he says that the ordination of an agent into the end extends as far as the agent's causality extends, in order thus to show that God provides all things for the end of happiness which is His, he speaks of those things which the providence of God ordains to come to be, for those are thus to be ordained by God inasmuch as they are done by Him; he does not, however, speak of those things which, once done, are ordered and conduce - such as sins. For to these extends the ordination of divine providence, but not its efficiency.

Articulus III - Whether God immediately provides for all things

It is asked:

1600. St. Thomas, Summa contra Gentiles, III, cap. 71.
1601. St. Thomas, Quaestiones de veritate, q. 5, a. 4; "Ferrarien." on 3 Contra Gentiles, cap. 7, art. 6 and 3.

Objicitur: 1. It seems that God does not immediately provide for all things. For whatever belongs to dignity is to be attributed to God. But to the dignity of a king it pertains that he have ministers, through whose mediation he provide for his subjects. Therefore, much more does God not immediately provide for all things.[1602]

1. Further, to providence pertains to order things to an end. But the end of any thing whatever is its perfection and its good. Now it pertains to any cause whatever to lead its effect to good. Therefore any efficient cause whatever is a cause of the effect of providence. If therefore God immediately provided for all things, all second causes would be taken away.
2. Further, St. Augustine says in the Enchiridion that it is better for certain things to be not known than known, as vile things. And the same is said by the Philosopher in the twelfth book of the Metaphysics. But whatever is better is to be attributed to God. Therefore God does not have immediate providence of certain vile and very small things.[1603]

But on the contrary: It is said in Job 34: "Whom did He set over the earth? or whom did He place over the world which He made?" Upon which St. Gregory says: "He rules the world by Himself, whom He made by Himself."[1604]

I answer: It must be said that two things pertain to providence, namely, the rationale of the order of the things provided-for unto the end, and the execution of this order, which is called governance.

Therefore, as to the first of these, God immediately provides for all things, who in His intellect has the rationale of all things, even the very least; and whatsoever causes He has pre-assigned to certain effects, He gave them the power to produce those effects. Whence it is necessary that He have in His forethought the order of those effects, as pre-contained in His plan.

However, as to the second, there are certain media of divine providence: because He governs lower things through higher, not by reason of any defect of His power, but by reason of the superabundance of His goodness, so as to communicate the dignity of causality even to creatures. And according to this the opinion of Plato is excluded (which St. Gregory of Nyssa relates), asserting a threefold providence: of the highest God, who first and principally provides for spiritual things, and, consequently, for the whole world as to genera, species, and universal causes; the second providence, by which provision is made for singulars of generable and corruptible things - and this he attributes to the "gods who go around the heavens," that is, to separated substances which move the heavenly bodies circularly; the third providence, of human affairs, which he attributed to demons, whom the Platonists posited as intermediates between us and the gods, as St. Augustine relates.[1605]

1602. The marginal cluster of references is abbreviated in the edition.
1603. St. Augustine, Enchiridion; Aristotle, Metaphysics XII.
1604. St. Gregory the Great, Moralia in Iob, lib. 24, cap. 26, ante med.
1605. Gregory of Nyssa, as reported; St. Augustine, De civitate Dei, lib. 9. Also cf. Wisdom 8; Luke 18; Matthew 6; Luke 12.

Reply to the first: That a king have ministers to execute his providence pertains to his dignity. But that he not have a rationale of the things which are to be done by them is from a defect of his own. For every operative knowledge is so much the more perfect, the more it considers particulars, in which is action.

Reply to the second: By the fact that God has immediate providence of all things, second causes are not excluded, which are the executors of this order, as is clear from what has been said.

Reply to the third: For us it is better not to know evils and base things, insofar as by them we are impeded from the consideration of certain better things, since we cannot at once understand many things; and insofar as the thought of evils sometimes turns the will aside into evil. But this has no place in God, who at once sees all things with one intuition, and whose will can in no wise be turned to evil.

Furthermore, it pertains to providence to order things to an end. But the end of anything is its perfection and good. Now it belongs to any cause to lead its effect to the good. Therefore any efficient cause is a cause of the effect of providence. If, then, God provides immediately for all things, all second causes are taken away.

Furthermore, St. Augustine says in the Enchiridion that it is better to be ignorant of certain things than to know them, as of base things. And the Philosopher says the same in the twelfth book of the Metaphysics. But whatever is better must be attributed to God. Therefore God does not have immediate providence of certain base and minimal things.[1606]

But on the contrary: It is said in Job 34: "Who hath set another over the earth? or whom hath he set over the world which he made?" Upon which St. Gregory says: "He governs the world which he himself made, not through a written law, but through himself."[1607]

I answer that two things belong to providence: namely, the plan of the order of things provided for to the end, and the execution of this order, which is called governance.

Accordingly, as to the first of these, God provides immediately for all things, who in his own intellect holds the plan of all things, even the least; and whenever he has set causes over certain effects, he gave to them the power to produce those effects. Hence it is necessary that he should previously have had in his reason the order of those effects.

But as to the second, there are certain means of the divine providence: for he governs lower things through higher, not because of any defect of his power, but because of the superabundance of his goodness, that he might communicate to creatures also the dignity of causality. And according to this is excluded the opinion of Plato (which Gregory of Nyssa reports), who posited a threefold providence: of which the first is, in a first and principal way, about spiritual things and about the world as to being and the universal causes; the second is the providence which is about the species of generable and corruptible things, which he attributes to the "gods," that is, to the

1606. St. Augustine, Enchiridion; Aristotle, Metaphysics XII.
1607. Job 34:13; St. Gregory the Great, Moralia in Iob, lib. 24, cap. 26, ante med.

separated substances that move the heavenly bodies; the third is the providence which is about human affairs, which he attributes to the demons, whom the Platonists posited as something intermediate between us and the gods, as St. Augustine relates.[1608]

Reply to the first: To have ministers pertains to the dignity of a king. But that something not be provided for through ministers, but that the whole order be taken from the king himself, detracts not from dignity but from defect. For knowledge is so much the more perfect, the more it extends itself to particulars; and providence is an act of such consideration. Therefore, although God immediately has the plan of the order, he nevertheless executes many things through second causes as his ministers.

Reply to the second: From the fact that God has immediate providence concerning all things, second causes are not excluded, which are the executors of this order, as is clear from what has been said.

Reply to the third: For us it is better not to know evils and base things, insofar as by them we are impeded from the consideration of certain better things, since we cannot at once understand many things; and insofar as the thought of evils sometimes turns the will aside into evil. But this has no place in God, who at once sees all things with one intuition, and whose will can in no wise be turned to evil.

Dubitatio circa textum articuli. In explaining the mind of St. Thomas, Cajetan raises a doubt about both conclusions, because they do not seem to cohere. For either (as they say) St. Thomas is speaking in both of immediation of power, or of immediation of supposit. If of immediation of power, the latter proposition is false: for God, by an immediation of power, since he governs all things by his own power and not one begged from another, governs all things immediately. But if in one conclusion St. Thomas is speaking of immediation of power, and in the other of immediation of supposit, then in a few words there is a great variety; which indeed does not seem suitable.

To this doubt Cajetan responds, declaring the first conclusion to be true of immediation of power, because God provides for all things by his own power; but the latter of immediation of supposit, because God as supposit is most proximate to any effect, for to all things he is present according to essence; yet he adds that the holy Doctor does not understand it in this way: he speaks, says Cajetan, formally of his own immediation, which in its own genus answers to each of these, namely, to providence and to governance.[1609]

For which reason he notes that between the ruling plan, which is providence, and the things ruled, two sorts of middle reason can intervene. One way, as if it were to supply something which was lacking to the ruling plan: as when the ruling plan assigns to one reason of a human agent what must be done and ordains what must be executed; this is from a defect: for the science of a craftsman is the more perfect, the more he himself applies himself to those particular things in which execution consists. In this way, God is not determined by some created reason as a middle in his providence, or in the ruling plan. He himself by himself applies himself to the least things with

1608. Gregory of Nyssa, as reported; St. Augustine, De civitate Dei, lib. 9.
1609. Cajetan (Thomas de Vio), on this article.

all study and care, just as to the greatest and the universal. In another way, a reason can be middle as minister, not as reason: because, namely, the principal disposer orders all things, even the least and singular, but hands them over to an inferior reason as to a minister; just as skilled artisans hand over even the least things which are to be done to ministers. And in this way God uses a human reason with respect to the reason of his governance and providence, not as a reason, but as a minister. For if a reason intervened, and were middle as a reason, the divine providence and the ruling plan would not reach by its own power proximately to the governance of things, but there would be another power as reason intervening, which is absurd. Yet we rightly say that God has the ruling plan of certain things, namely of human affairs, through some middle, namely through a created reason, not through a reason as reason, but as through a minister; for thus he would dispose things by another power, because what intervenes as a true reason intervenes as a power; but a middle reason intervenes as minister; which is to be middle as a supposit.

Truly admirable is Cajetan's genius, who, endeavoring with his customary subtlety to expound the mind of St. Thomas, quite makes it more difficult. Therefore this interpretation of his is not according to the mind of the Angelic Doctor; this can be gathered quite evidently even from the text of the article itself, which is not very difficult. For there St. Thomas distinguishes in God two acts of will and two of intellect at once. The first, namely, is in God the providence concerning things, which in this first part, question 113, article 6, he called the reason of governance, by which namely God disposes with himself the things which are to be done. Then there is governance itself, the act of intellect and will, by which act he moves to the execution itself. These two St. Thomas seems to distinguish in this article, but most clearly in the following article, 2; for there he teaches that predestination, or providence, which is a certain plan in the intellect of the one who provides and predestines, places or effects nothing in the things provided for or predestined; but the execution of providence has its effect in the things provided for. This execution he teaches to be passive indeed in the effected things, but active in God himself. And he distinguishes in God those two acts of providence and governance after the manner of those which are really diverse in us: for first with us we deliberate what is to be done; then after some time by another act of intellect and will we execute the thing and are moved to the work; and if God by the same act according to the plan by which he provides were to execute, predestination and providence would place something in the effect and in the thing provided for.[1610]

Accordingly, in this article he teaches, as regards providence, which answers to our consultation, that God does not use any middle, because he admits no counselor to himself, but by himself deliberates what is to be done. Therefore the divine providence does not exclude the media which ought, on the side of the effect, to be present so that the thing be done; but of all these God has the plan in his own counsel. For unless he looked to these, his providence would overturn all liberty and the efficacy of created things, as we shall show more fully in Disputation 99. But he admits no one as counselor by whose providence he might be aided in the disposition and provision of things which he has established with himself: and this he wished to teach in the first conclusion of the article.

1610. St. Thomas, Summa theologiae I, q. 23, a. 2; also I, q. 103, a. 6.

But as for the execution, because it tends to the effect and places something in the very thing, and God brings many things about and executes them not by himself alone but with the concurrence of other causes, therefore most rightly St. Thomas said in the latter conclusion that God does not execute all things by himself alone, but many with the intervention of second causes; and in the same way he does not provide for the execution of all things with himself alone, but for the things to be done by means of other second causes. Therefore he does not deny the medium on the side of the counsel, but neither does he deny it on the side of the effect.

A doubt from the doctrine of St. Thomas. But someone will ask whether God governs all things by an immediation of supposit, or by an immediation of power. For it seems that St. Thomas, in I, dist. 37, q. 1, art. 4, ad 4, teaches that God acts more immediately than any other agent. He teaches the same, dist. 2, art. 3, ad quartum; but in Quaestiones de potentia, q. 3, art. 7, at the end, he says that any natural agent is immediate to its own effect.[1611]

The response of certain men. Peter of Bergamo, in the Concordances in the place of the doubts of St. Thomas, dubium 504, responds that God operates with an immediation of power more immediately than second causes, and that second causes operate more immediately with an immediation of supposit. Ferrariense seems to agree in the book Contra gentiles, cap. 70, who thinks there is an immediation of power when an agent operates by its own power, not by the power of another upon whom it depends.[1612]

But I myself think that, if we call this the immediation of power, that an agent is immediate to its effect by an immediation of power, this belongs to God alone: for every created cause depends upon another. But if we say that the immediation of power is when an agent operates not by a power flowing from another, but by a power inborn to itself, many created agents operate by an immediation of power: because from a power conjoined to them the effect proceeds proximely. But some created agents operate mediately, because not by an inherent power, but by one produced by themselves; in this way certain things are said to operate remotely, as fire heats things which are remote by hot vapors emanating from it. God never operates in this way, because his power, which is his very essence, proximely reaches at once to every effect.

But as to the immediation of supposit, it must be said against Cajetan that God does not operate all things by an immediation of supposit, not because according to supposit he is not intimately present in all things and all effects (for those are according to effect, but are not within; but God is within): but because in the order of acting the universal action of God is modified by the concurrence of many second causes, which concur as more proximate, because they are singular and proper causes; and this St. Thomas plainly taught in the second conclusion. Falsely, therefore, did Cajetan say that God therefore acts by an immediation of supposit because he is, as to situation, within every effect, and between him and the effect as to situation and place there does

1611. St. Thomas, In I Sent., dist. 37, q. 1, a. 4, ad 4; In I Sent., dist. 2, a. 3, ad 4; Quaestiones disputatae De potentia, q. 3, a. 7.

1612. Petrus Bergomensis, Concordantiae; Ferrariense, Contra gentiles, cap. 70.

not intervene any supposit. For propinquity of place is not to be considered in the series and order of acting: this is to be considered among the causes themselves, insofar as one is under another, and one determines and modifies another, as has been explained.

Moreover, it is not necessary to distinguish in God, even according to reason, one act of providence and another of governance. For in us in reality there are not two acts, one of providence, by which counsel is taken, and what is to be done is established, and another, when the same thing falls out by chance: because what once we have established with ourselves, we cannot always keep it in mind, nor always consider it, and will. Wherefore, when upon the occasion of a thing occurring it comes back into memory, we deliberate again, and at that present moment take counsel and deliberate what ought to be done, and then we will again and at length execute, not by a multiplication of acts, but by the same established act; and we execute: therefore, since in God there is no defect, if that very act of counsel should not persevere, it would not seem necessary to distinguish a second reason of acting, but God can both provide and with the same act at his own time execute.

We proceed thus to the fourth. It seems that the divine providence imposes necessity on things provided for. For every effect which has some per se cause which already is or has been, from which it follows of necessity, comes about from necessity, as the Philosopher proves in Metaphysics VI. But the providence of God, since it is eternal, has fixed something beforehand, and the effect follows upon it of necessity. For the divine providence cannot be frustrated. Therefore the divine providence imposes necessity on things provided for.[1613]

Furthermore, every provider establishes his work as much as he can that it may not fail. But God is supremely powerful: therefore he attributes firmness of necessity to the things which he has provided.

Furthermore, Boethius says in the fourth book of the Consolation: that fate, proceeding from the immovable principles of providence, has bound the beginnings of the acts of fortune and of the births of men with an indissoluble chain. It seems therefore that providence imposes necessity on the things provided for.

But on the contrary is what Dionysius says, De divinis nominibus, cap. 4: that the divine providence does not corrupt nature, but preserves it. This has a certain regard to the fact that a contingent nature should remain contingent. Therefore the divine providence does not impose necessity on things contingent by excluding contingency.[1614]

I answer that the divine providence imposes necessity upon certain things, but not upon all, as some have believed. For it pertains to providence to order things to an end. Next to the divine goodness, which is the end in things separated, the principal good existing in things themselves is the perfection of the universe. But this would not be, if not all the grades of beings were found in things. Whence it pertains to the divine providence that there be produced many grades of things.

1613. Aristotle, Metaphysics VI.
1614. Pseudo-Dionysius, De divinis nominibus, cap. 4.

And so to certain effects he appointed necessary causes, that they might come forth necessarily; but to other things he gave causes contingent, that they might come forth contingently, according to the condition of proximate causes.

To the first, therefore, it must be said that the effects of the divine providence do not come to be only in such wise that something come about in one way or another, but that something come to be as it befits, or that something come to be contingently or necessarily. And thus the divine providence disposes that it come to be infallibly, and necessarily in necessary things; and contingently in contingent things.

Ceterum, it is not necessary to distinguish in God, even according to a rational distinction, the one act of providence from the other act of government. For if in us there are never distinguished two acts - one of providence, when long before a thing is done counsel is taken about it and it is determined what ought to be done; and another, when the thing itself is done - this happens because that which once we have determined we are not able to retain in mind, nor to consider and to will in act always. Wherefore, when the occasion of doing the thing occurs, we again call to mind that which by consultation was deliberated and provided, and we again will it. But if that first act of providence and counsel were to persevere, there would be no need of another for executing it. As when suddenly an occasion occurs, and, the occasion being present, we briefly consult and deliberate what ought to be done, and we immediately execute it, we do not multiply acts, but by the same act we determine and we execute. Therefore, since in God there is not this defect, but the very same act perseveres continually, it does not seem necessary even according to a rational distinction to distinguish so many acts; rather, by the same act God can provide for future things, and in its time execute them.

To the fourth, we proceed thus. It seems that the divine providence imposes necessity upon the things provided for. For every effect which has some per se cause, which already is or was, from which it follows by necessity, proceeds from necessity, as the Philosopher proves in the sixth book of the Metaphysics.[1615] But the providence of God, since it is eternal, pre-exists; and upon it the effect follows by necessity. For the divine providence cannot be frustrated. Therefore the divine providence imposes necessity upon the things provided for.

1. Further, every provider stabilizes his work as much as he can lest it fail. But God is supremely powerful. Therefore He attributes to the things provided by Himself the firmness of necessity.[1616]
2. Further, Boethius says in the fourth book of the Consolation, near the middle, that fate, proceeding from the immobile beginnings of providence, binds the acts of fortune and the births of men by an indissoluble chain of causes.[1617] Therefore it seems that providence imposes necessity upon the things provided for.

1615. Aristotle, Metaphysics VI, text 7.

1616. An allusion to the manner in which a wise provider secures his work; cf. Boethius, De consolatione philosophiae, IV, prose 6.

1617. Boethius, De consolatione philosophiae, IV, prose 6, near the middle.

But on the contrary: Pseudo-Dionysius says in the fourth chapter of On the Divine Names that to corrupt nature is not of divine providence.[1618] Now it belongs to the nature of certain things that they be contingent. Therefore the divine providence does not impose necessity upon things in such a way as to exclude contingency.

I answer: The divine providence does impose necessity upon some things, but not upon all, as certain persons have thought. For it belongs to providence to order things to an end. Now after the divine goodness, which is an end separated from things, the principal good existing in the things themselves is the perfection of the universe. But this would not be, if all the grades of being were not found in things. Hence it pertains to the divine providence to produce all the grades of beings. And therefore, for certain effects He prepared necessary causes that they might come about necessarily; but for certain others, contingent causes that they might come about contingently, according to the condition of the proximate causes.

Reply to the first: The effect of the divine providence is not merely that something come to be in any sort of way, but that something come to be either contingently or necessarily. And therefore it comes about infallibly and with certainty that, as the divine providence disposes, some things come to be infallibly and necessarily; and it comes about contingently that, as the ratio of divine providence has it, other things come to be contingently.

Reply to the second: In this the order of the divine providence is immobile and certain, namely, that all the things which are provided by Him come about in that mode in which He Himself provides - whether necessarily or contingently.

Reply to the third: That indissolubility and immutability which Boethius touches upon pertains to the certainty of providence, which does not fail either as to its effect, or as to the mode of coming to be which it provided; it does not, however, pertain to the necessity of the effects. And it is to be considered that the necessary and the contingent properly follow upon being as being. Whence the mode of contingency and of necessity falls under the provision of God, who is the universal provider of the whole of being; but it does not fall under the provision of certain particular providers.

Conclusion: The providence of God imposes necessity upon some things, but not upon all. St. Thomas understands this as imposing necessity upon things of nature, but not upon free choice. In this article there is nothing peculiar worthy of disputation or of extended explanation; for the common difficulty about the will of God, or providence, or predestination - how it agrees with the liberty of our free choice - is to be examined by us in Disputation 29.

1618. Pseudo-Dionysius, De divinis nominibus, c. 4.

Quaestio XXIII - On predestination

Praefatio

We now undertake the very difficult disputation about divine predestination, which has long vexed the wit of mortals so severely that the unskilled, thinking about it imprudently, have been driven into a certain despair; while the more learned, inquiring into the cause with excessive zeal and solicitude, when they attempted to fit together human affairs with divine predestination, fell into very great absurdities. We must therefore strive to set forth the truth of divine predestination and of grace, so that neither the hope of salvation be taken away from men, nor anything be detracted from the excellence of grace or of divine predestination - a task which ought to be judged by no means difficult, much less impossible. Both because God has not so disposed human affairs as either to change the nature of men and create them in need of no aid and of no divine grace, or to take away or diminish their liberty; and also because by the diligent study of the Fathers and the Scholastics and by accurate doctrine, it has long since come to pass that, these difficulties having been overcome, the controversy with Catholics now remaining is much easier. But since many things, after the times of the Scholastics, have been called back into question, and various opinions have arisen among them, which each person, for his own part, strives to confirm out of the doctrine of the Fathers - as though those matters too had of old been controverted by them with the heretics - lest the disputation be rendered more obscure to us by less attentive reading, I earnestly beg the reader that, along with me, in turning over and weighing the writings of the Fathers, he spare not his labor. And let him especially direct his mind to this: that, the history being well considered, he carefully examine that about which at that time there was dissension in the Church with the heretics. For from this he will readily gather whether those testimonies that are produced from the Fathers are fitted to the difficulty proposed. But, on the contrary, if he be ignorant of that about which there was then a dispute, he will readily think that many things were defined by the Fathers which did not even come into their minds. Wherefore, if in this matter we should seem to someone more copious than he would wish, let him take it in good part, and set down to the usefulness of the work what another might charge as prolixity. But when there must be arguing from reasons alone, the very force of the arguments will readily show what in each question ought to be chosen as more in agreement with reason.

Of the nature of grace and its various modes. Disputation 88: - What grace through Christ is, c. 1. - How manyfold the aid of grace through Christ is, c. 2. - The opinion of Andreas de Vega and of St. Thomas on operating and cooperating grace, c. 3. - What Gregory of Rimini and other recent writers have thought on this matter, c. 4. - The opinion of Gregory of Rimini is refuted, c. 5. - The true sentence of the Fathers on operating and cooperating grace, c. 6. - The same truth is confirmed by the testimonies of St. Augustine, c. 7. - The testimonies of St. Augustine which Gregory of Rimini improperly adduced are explained, c. 8. - On the various names of operating and cooperating grace, c. 9. - On the helps of grace - efficacious and sufficient - c. 10.

For the sake of a preface, lest through ignorance of that about which the disputation to follow is undertaken we should easily go astray and not discern between Catholic and false doctrine: this material concerning predestination is in a certain way an appendix of the material concerning the grace of God; nor did St. Augustine and the other Fathers of the Church dispute about it otherwise, especially against the Pelagians, than about the very grace of God. For the controversy is common, as we shall see in Disputations 89 and 91. Therefore in this chapter let us set down a definition of the grace of God, and certain of its acceptations, which we shall explain one by one, as much as our present plan requires, in the following chapters; for we shall again treat expressly of this matter elsewhere.

Grace, therefore, is used in three ways by St. Thomas: first, for the affection by which someone is loved by another; next, for a gift given gratis; and finally, for the recompense of a benefit out of gratitude.[1619] Of these, it is according to the second mode that we have to dispute here about the grace of God. For grace in the first mode is called by St. Augustine not so much grace as a preparation for grace (On the Predestination of the Saints, c. 10); while grace in the third mode pertains to merits; how, however, to be "of merits" takes away the notion of grace, about which we have already treated at length, we shall speak in its proper place.

Among the other attributes which, besides intellect and will, are assigned to God, one is predestination, a certain part of providence, about which the holy Doctor treats in this question. But since many other matters seem to pertain closely to predestination - concerning the knowledge of God and His eternal and temporal effects, and concerning what the will of God works in us by the grace of predestination - these we shall handle in order in what follows.

Disputatio LXXXVIII - On the nature of grace and its various modes

Among the things which God bestows by creation itself are also counted art and the knowledge of truth, which God could have denied us by disposing things otherwise. Wherefore, even continual preservation, whereby we are sustained by God and live and breathe the air, the fruits of the earth, and many other things which He Himself bestows on us, could be called grace in this general signification, both because from the beginning He so liberally disposed the causes of all things that thereby things might properly redound to our benefit, and also because, whether miraculously or in some other way, He could have denied us such things without any injustice or ingratitude. When therefore He bestows them, He gives liberally, and for them we ought to give thanks.

This kind of grace, namely of creation and preservation, Pelagius acknowledged, as St. Augustine reports, and as the Fathers of the Council of Milevis with the same Augustine relate, when, retracting his heresy before the Eastern Fathers in the Council of Palestine, he said that grace is necessary for each good work: for he understood the gift of creation and preservation, as those Fathers testify.[1620] They further assert with Augustine and St. Jerome in the Dialogue against

1619. St. Thomas, Summa theologiae I - II, q. 110, a. 1; cf. St. Augustine, De praedestinatione sanctorum, c. 10.

1620. St. Augustine, Epistula 105, near the beginning; Council of Milevis with Augustine, Epistula 95; cf. the Palestinian Council.

the Pelagians and in the epistle to Cyprian, which is the 139th, that the gift of creation can, not without some plausible reason, be called grace, for which so great a benefit we ought to give thanks. There is, however (they say), another grace whereby the predestined are called, justified, glorified, so that we may say: "If God is for us, who is against us?" Then they subjoin: As for that grace whereby we were created men, even if we do not unjustly understand it to be so called, yet it is a wonder if we read it so called in any legitimate prophetic, evangelical, or apostolic writings.

Next, the aforesaid Scholastics, with the exception of Dominic Soto, divide grace into a natural gift and habitual grace whereby we are formally rendered just - a division which is indeed less sufficient, yet seemed adequate to their purpose; for they were treating of the grace in which angels are said to have been created, which is habitual.

But St. Thomas and other Scholastics, omitting any other gift of creation, divide grace through Christ, which by the holy Fathers is commonly called grace, into help and into habitual grace, and into "graces freely given" (gratis datae), of which we shall speak severally in their place.[1621] For us now it is only necessary to define and explain that grace concerning which St. Augustine in epistles 90, 95, and 105, and other Fathers, contended must be conceded against Pelagius. Now this is the help of God which day by day, on each occasion, is offered to us for living rightly and piously, for overcoming and conquering temptations: which is rightly called grace through Christ, or the grace of Christ. For as Augustine says, epistle 105, near the beginning: "For Christ did not die for none, that men might be created, but He died for the ungodly, that they might be justified." As if he were to say: Christ did not merit for us the gifts of creation, but the grace of living rightly. For since the whole merit of Christ's death was consummated, when Augustine asserts that Christ did not die for those who were nothing, that they might be created and come to be, he plainly says that by no other merit did He merit for them the gift of creation; otherwise this grace also could be called "through Christ."

Furthermore, the grace of living rightly, whereby temptations are overcome, Augustine in the places cited and elsewhere often, and the Council of Milevis canons 3 and 5, and Celestine, epistle 1, c. 10, and the Council of Carthage around the time of Boniface, c. 78, call the grace "in which we are justified," or "the grace of justification"; not because by it we are formally rendered just - which some Scholastics unreasonably think that canon to mean of formal and habitual justice - but because, helped by it on each occasion, we are moved and disposed unto justification, or, when justice has once been received, we grow in it. This grace Paul commends in the epistle to the Romans; Augustine and the other Fathers in the places alleged contended about this with Pelagius, whether when disputing about grace or about predestination; never, however, about habitual grace, which Augustine in that epistle 105 calls the grace of the remission of sins. For if someone were to confess that this is necessary, says Augustine, it would not be enough: for one had to confess grace without any merits (understand also impetratory), by which the remission of sins is obtained, as he there asserts; for faith impetrates it.

1621. St. Thomas, Summa theologiae I - II, q. 111; on the "graces freely given," cf. below in their proper place.

Whether moreover this grace of living rightly is only the help of God which is conferred upon the works of the virtues which the Scholastics call infused; or also that which is bestowed upon us for living morally rightly and for conquering temptations; and whether faith is the beginning of every grace or not - of these we shall speak in Disputation 91, chapter 13. Yet I have read no author among those who have committed their writings to the press who thinks that the help of the grace of Christ, of which we must dispute here, is only of an order supernatural according to substance. But Driedo, book 1 On Grace and Free Choice, treatise 2, c. 2, part 1; Dominic Soto, book On Nature and Grace, chapter 2; and Stapleton, book 4 On Justification, chapter 2, by the name "help of grace" understand only the special help of God, freely bestowed upon us through Christ, for living rightly. Therefore, about the grace which also precedes all impetratory merits Augustine disputes against Pelagius. Now this is the help of the grace of God from the first calling all the way to the last. And this is used in two other ways which must be premised for us, that we may understand the way of speaking of the Fathers, especially of Augustine himself.

Caput II - How manyfold is the help of grace through Christ

Grace therefore, of which there has hitherto been speech, is of one sort operating (operans), of another cooperating (cooperans); each of which is also wont to be called by three other names. Operating is also called prevening, exciting, inspiration or infusion; cooperating, however, is also called accompanying, helping, and governance, as will be explained below. Finally, to this division a third member is also wont to be adjoined, namely subsequent grace, which by this single name alone is termed such, although its significations are various; of which in chapter 10 we shall speak.

I observe well that the holy Doctor in I - II, q. 111, a. 2, Albert in II, dist. 26, a. 7, St. Bonaventure, q. 6, Gabriel, q. 1, a. 1, note b, Marsilius in II, q. 17, a. 1, notable 2, Alexander, III, p. q. 69, memb. 3, a. 2 and 3, St. Antoninus, IV, tit. 9, c. 3, § 1, and other Scholastics have accommodated this division also to habitual grace, so that it too be operating and cooperating: yet although by right reason habitual grace can be distinguished and named thus, that division is not used by the holy Fathers. For the grace of the remission of sins (so Augustine calls in epistle 105 what we call habitual or formally justifying) the Fathers nowhere divide into operating and cooperating, as Andreas de Vega rightly noted, book 8 on the Council of Trent, c. 13; rather, the helps themselves of grace, which are conceded to us through Christ, Augustine first of all divided into operating and cooperating - or rather he said that God by His grace works some things in us without us, and some things with us; whence also the name of operating and cooperating grace has been employed. And he uses these very names, in order to show against the Pelagians and the Semi-Pelagians that the beginning of a good life is in us from God alone, as we shall explain in chapters 6 and 7.

But what some say, that habitual grace according to the mind of Augustine can be called operating grace, because it is in us without our meriting it, can easily be refuted from the same Augustine in epistle 105, where he teaches that the grace of the remission of sins is not that grace which Pelagius ought to concede "without merits," because the remission of sins is not given

without the merits of faith, as in Disputation 89, chapter 5, from the same Augustine we shall relate. Moreover, the Fathers divide only that grace into operating and cooperating about which there was controversy with Pelagius; but about habitual grace, and not even about the remission of sins, was there contention with him, as is clear from Augustine's epistles.

The Council of Orange II also makes mention of operating and cooperating grace in canon 9, which is taken from the judgment of Augustine, where it is said: "For as often as we do good, God works in us and with us." By the word "works," referred to the various parts of the period, each grace is signified. For if it be conjoined with the phrase "in us," it denotes operating grace; but if it be conjoined with the phrase "with us, that we may work," cooperating grace is indicated. And in canon 4 the grace of God is called "an infusion and an operation in us," by which it understands operating grace. And in canon 10, which is in Augustine, book 2 Against the Two Epistles of the Pelagians, c. 8, it is said: "Many good things in man are done which man does not do," where operating grace is noted; "No good does man do unless God grants that man do it," where cooperating grace is signified. But in Augustine there are more places, some of which we shall adduce below, where mention is made of each grace.[1622]

Likewise the Council of Trent also makes mention of each in session 6, chapter 5, where it teaches that the beginning of justification must be taken from prevenient grace - thus it calls that which, from Augustine, we commonly call operating. Then it adds: "that is, from His calling, that through His exciting and helping grace they may be disposed, freely assenting and cooperating, to their own justification." Where the Council named operating grace "prevenient" and "exciting"; cooperating, however, it called "helping," and it indicated that this is cooperating, when it said: "assenting and cooperating with it." So too St. Bernard, in the little work On Grace and Free Choice, called them "prevenient" and "accompanying," which the Council called "prevenient" and "helping." Finally, the Church in the Sunday After Easter Collect called operating grace "inspiration," according to the phrase of the Council of Orange II; cooperating, however, it called "governance": "Bestow" (it says) "upon your suppliants, that we may think, by Thy inspiration, the things that are right, and by Thy governance [or: help] accomplish the same: through our Lord..."[1623] Unless perhaps by the name "governance" of grace one understands subsequent grace, according to that of Proverbs 16: "It is for man to prepare the heart, and for the Lord to govern the tongue"; of which in chapter 10 we shall speak.

It is clear enough from what has been said why grace is called operating and cooperating: God works some things in us without us; other things, however, He works with us. But since not a few points are here at issue, I shall set forth briefly the positions by which Andreas de Vega, St. Thomas, and others explain Augustine's phrase, when they speak of grace operating and cooperating.

Accordingly, Vega in book 6 on the Council of Trent, c. 8, says that operating grace in us is holy thoughts and the first motions of the will, whereby man is suddenly moved to the good; and that this grace is called "operating" because God works it in us without us. And that "without us," as

1622. Council of Orange II, can. 4, 9, 10; cf. St. Augustine, Contra duas Epistolas Pelagianorum, l. 2, c. 8.

Augustine wishes it to be understood, he explains thus: namely, that in its production God alone is the physical efficient cause, while man, as far as that production is concerned, is wholly passive. By contrast, he affirms that "cooperating grace" is so called when, with us, God produces the consequent good works and virtuous actions, we now consenting and acting along with the help bestowed.

... for a man is said to move himself to willing or to acting when from one act of will he is moved into others, or into the work itself; and thus grace is said to cooperate with us, and we with grace.

But this interpretation, although in itself it contains true doctrine, nevertheless does not square with the words and meaning of St. Augustine; for in the first consent of the will the free will concurs not only with operating grace, but also with cooperating grace, as is clear from many of his testimonies. And according to his doctrine against Pelagius, which contends that in us there are certain beginnings of merit which God works without us, it is necessary that in the very first free act about the end there be assigned to operating grace the beginning, and also something to cooperating grace. For who will deny that the merits themselves are already of cooperating grace and not without us? For, as was said in that canon 9, which is the sentence of Augustine: "As often as we do good, God works in us and with us, that we may work." It is certain, moreover, that in the first free volition about the end we work a good and meritorious work; therefore God not only works in us (namely, by operating grace) but also with us (namely, by cooperating grace). Accordingly, operating grace, in Augustine's intention against Pelagius, is not located in the free consent alone, even of the first act, but before consent. But of this more at large in chapter 4.

What Gregory of Rimini and other recent men thought about this matter.

Caput IV - What Gregory of Rimini and other recent men thought about this matter

Closer to Augustine's mind seems to come Gregory of Rimini in 3, dist. 28, q. 1, art. 3, to argument 12; and, as one exceedingly versed in Augustine's doctrine, he is followed by many recent authors.[1624] He asserts, therefore, that every work of the intellect and will is done not only by God but also by us as by a second cause efficiently producing it physically. In good works, however, although our will cooperates as a second cause, nevertheless God by his power alone first applies them to free willing, not only by preventing with a previous thought on the part of the intellect and by the first non-deliberate motion of fear or hope or some other affection, but also by impelling it to free consent. Gregory thinks that this impulse and application is a middle thing between the free consent itself, to which the will cooperates, and the first non-deliberate motion of the will, or the thought which on the part of the intellect precedes; and that application he takes Augustine to call the "beginning of a good work," indeed for this reason (he says) God is said "to do" that we may will, and that we may do the good things which we do, and that we may keep the precepts - a phrase which Augustine uses frequently. He confirms this by many testimonies of the same.

1623. Council of Trent, sess. 6, c. 5; St. Bernard, De gratia et libero arbitrio; Roman Missal, Collect of the Sunday after Easter (Quasimodo).

1624. Gregory of Rimini, In II Sent., d. 28, q. 1, a. 3, ad 12; followed by several recent authors.

The first testimony is in the book On Grace and Free Will, chapter 16, where he says: "Surely it is we who will when we will; but he makes us will what is good." And below: "It is certain that we act when we act; but he makes us act, by supplying the most efficacious powers."[1625]

The second testimony is from the same book, in these words: "He works in us without us that we may will; but when we will, and so will as to act, he works with us."[1626]

The third testimony is in the book To Simplicianus, question 2, before the middle: "God grants in one way that we may will, in another that we may have willed. For that we may will is both his and ours: his by calling, ours by following; but that we have willed, he alone grants."[1627]

By which mode of speaking Augustine plainly indicates that God alone in us, without us, makes it to be that we will and that we act. Which would by no account seem true, unless because he himself, intimately present to our will, first applies and moves it, or determines it prior in nature to the accession of that free consent to willing and acting. In this way of speaking Augustine, too, gathers from that text to the Philippians 2: "God is he who works in us both to will and to accomplish according to his good will." He did not say "cooperates," but "works," so that God alone might be understood; yet he does not alone work the free consent. Therefore we must grant that the beginning of that consent is from God alone - namely, that application and impulse to consent, as was explained. On this ground Augustine likewise thinks, in that question 2 on Romans 9: "It is not of him that wills, nor of him that runs, but of God that shows mercy," as if Paul had said, "but of God alone that shows mercy," as Augustine himself most excellently deduces and as we shall explain in chapter 8. But the whole consent cannot be of God alone: it remains, therefore, that it be of God alone according to that prior application.

By reason, moreover, it is proved. For in our consent there are two things: the concurrence of God and of our free choice; but the concurrence of God is prior, as of the first cause, which by its operation first attains to the effect; and that concurrence is from God alone. Therefore there is some beginning of free operation from God alone, besides the holy thought and the first motion of the will.

Confutation of the opinion of Gregory of Rimini.

Caput V - The opinion of Gregory of Rimini is refuted

First argument. Yet that position has no foundation in Augustine or the Fathers, nor indeed in sound reason either a priori or a posteriori, as far as will be possible to show in what follows, against its supporters. First, the a priori reason is manifest: for our free operation of the will is, in reality, such an individual operation that it is said, according to the rationale of a vital and volitional act, to correspond to our will as to its proper cause; and, insofar as it is exercised about such an object, if it is supernatural, to be ascribed to God as author by the help of grace; yet, in whatever of these respects, the free operation itself of the will is so produced that not only can it

1625. St. Augustine, De gratia et libero arbitrio, c. 16.
1626. St. Augustine, De gratia et libero arbitrio, c. 17 (or contiguous context).
1627. St. Augustine, Ad Simplicianum, lib. 1, q. 2 (circa the middle).

not exist and be produced in reality one without the others, but neither can we even understand in the very order of real causality any prior thing in its production that is generic and not specific, nor specific and not particular, rather than generic; even if, in the order of reason, we may consider in the thing produced first the generic rationale of a vital and volitional act, without considering the special aspect about this object. Now, however, we are dealing with the order of a prior and posterior cause which is real, although not of reason only: for if there is any order among the effects of a generating efficient cause, it is found not only in our consideration but in the thing itself. Therefore, since in the very action of our will no prior thing can be assigned as produced by God alone which is an application to consent and the beginning of it, besides the vocation of the intellect and the first non-deliberate motion of the will, nothing else is effected as an application of the will to consent besides a vocation and the first motion itself of the will; which is declared and shown yet more by what follows.

That application to consent is either an operation in God himself - and this cannot be said, because an operation remaining in God is not grace (for grace ought to be in us, since it is a gift which is given to us). Vainly, therefore, would we call that operation operating grace. Or again, in God there cannot be any peculiar operation of applying our free will to works of grace which is not also to works of nature, unless there be in us something about the works of grace which is not also about the works of nature, as is quite clear from what has been said; but in us there is no diversity of operating on the part of application in works of grace and of nature, as will be evident shortly; therefore neither is there in God any peculiar operation around works of grace. Or else that application is some operation in us, as the adversaries admit; but this cannot be anything other than an operation of the intellect or of the will. Moreover, an operation of the intellect other than intellection, and an operation of the will other than willing, cannot be devised. Since, therefore, either God alone applies the will to consent, or he produces in us holy thought and the first non-deliberate motion - this cannot be said, because none of these can be naturally produced without our concurrence. Or he makes the free consent itself - and this also is false, because free consent cannot exist without our free concurrence; yet with free consent there is already cooperating grace, without which we never give consent to a calling. Or, finally, some quality is produced by which the will is ultimately determined to consent; and this seems plainly an invention, since it is posited without foundation. Nay rather, if it is posited for this reason - that God as first cause applies the will to act - then not only must this quality or application be posited in works of grace, but also in all other operations and causes. Why, then, is it peculiar to the will in works of grace? Surely, for inducing Augustine's phrase and that of the other Fathers or of Scripture, it is superfluous, as we shall say below. And in order that we might defend the prior concurrence of God as first cause, it would have to be posited not only in works of grace, but in all others as well.

Second argument. Next, the a posteriori reason is no less efficacious. For, as we shall show more fully in Disputation 99, chapters 3 and 4, from this application - on which, once posited, the adversaries admit that it is not in man's power to resist - it seems to follow that our liberty is altogether impeded. For, once it has been posited, the free choice cannot will and not will; and consequently it does not remain indifferent.

Furthermore, against Gregory stand Scholastics of no mean note, who, although they make mention of this application as distinct from a vocation and from consent itself, nevertheless openly deny it; and foremost is Scotus, in 2, dist. 37, q. 1, a. 5, at the solution of those, and in 4, dist. 49, q. 6, a. 5. I say then more truly, to the point at issue, where he not only teaches that it is not in us, but also that by it our liberty is taken away.[1628] Gabriel agrees in 2, on that same dist. 37, q. 1, art. 1, noteworthy point 1; and Cajetan on q. 14, art. 13, and q. 19, art. 8, who, in order to defend against Scotus that the first cause, though operating necessarily, does not operate our free choice as necessary, teaches that God does not attain the effect before he attains the second cause.[162916301631] This application is also plainly opposed by Ruardus.

The first argument, led a priori, is manifest: because our operation of free will, in reality is so an individual operation that, as to the ratio of vital action and volition, it answers to our will as to its proper cause; and, inasmuch as it is conversant about such an object, if it be supernatural, it is to be attributed to the help of grace and to God as author. Yet, whatever of these ratios you choose, the very operation of the free will is so produced that not only can one of them not really be without the other, nor be produced without the other, but neither, in the very real order of causality, can we understand the generic ratio to be prior in production to the specific, nor the specific or particular to be prior to the generic; although in the order of reason, in the thing produced, we consider first the generic ratio of vital action and of volition, without considering the special determination regarding this object.

But now we are treating of the order of priority according to cause, which is real, although it is not only of reason. For if there is any order among effects of an efficient cause, it is found not only in our consideration but in the very thing. Therefore, since in the very action of our will no ratio can be assigned as produced first by God alone which would be an application (*applicatio*) to consent and the beginning of that [consent] besides the vocation (*vocatio*) of the intellect, the first non-deliberated motion of the will is effected; there is no other application of the will to consent besides the vocation and the first motion of the will itself. This is made yet clearer and is shown in this way.

That application to consent is either an operation in God himself; and this cannot be said, because an operation remaining in God is not grace, for grace ought to be in us, since grace is itself a gift which is made to us. In vain, therefore, would we call that operation "operating grace." Moreover, in God there cannot be some peculiar operation of applying our free choice to the works of grace which is not for the works of nature, unless in us there be something about the works of grace which is not about the works of nature - which from what has been said is sufficiently clear. But in us there is no diversity of operating on the side of application in the works of grace and of nature, as will immediately be evident; therefore neither is there in God any peculiar application to the works of grace.

1628. Scotus, In II Sent., d. 37, q. 1, a. 5; In IV Sent., d. 49, q. 6, a. 5.
1629. Gabriel Biel, In II Sent., d. 37, q. 1, a. 1, notab. 1.
1630. Cajetan, In Iam-IIae, q. 14, a. 13; q. 19, a. 8.
1631. See also Vazquez, Disputatio 99, c. 3 - 4.

The other member is that it is an operation in us: and this is either of the intellect or of the will. But it cannot be anything else than the holy cogitation and the first motion of the will; another cannot be produced. If it effects [something], it also effects it without our consent; it is produced without our free choice, whereby it is applied to consent. And this seems to be nothing other than a cause applying to consent - not only thus in the works of grace, but in all other works; therefore it is not peculiar. For certainly, as we shall show below, God's concurrence with a cause is not only in the works of grace but in all works; and hence it is no less necessary in all than [in the present case].

The second argument, taken a posteriori, is this. For, as I showed above in Disputation 99, chapters 3 and 4, from this application the adversaries admit that we do not resist, but seem to follow; and thus our liberty does not remain indifferent. Those scholastics therefore who are ingenious about this application are driven to say that liberty is altogether impeded, once the application is posited, so that a man, with it posited, cannot not will, and therefore is not free in the very consent; and first of all Scotus, thereafter Gabriel and Cajetan, busy themselves about the solution of these things, and so they turn themselves to the proposition that God does not first attain the effect before he attains the second cause, in order to defend, against Scotus, that the first cause, though operating necessarily, does not operate our free choice as necessary - something plainly opposed by Ruardus.[1632] [1633] [1634]

Ad argumentum. Reply to Gregory: But from what has been said it is plainly clear that the reasoning which Gregory alleges for himself has no force; for it has been shown that the first cause does not attain something first in the effect before the second attains it; which again I will show in Disputation 99, chapter 8, and Disputation 100, chapter 3

Caput VI - The true opinion of the Fathers about operating and cooperating grace

Truly marvellous was the genius of St. Augustine in proving the necessity of grace against Pelagius. Against the Semi-Pelagians, however - men otherwise distinguished and of eminent sanctity, and not so openly wandering from the truth - he acted much more marvellously. Against both, and indeed so powerfully did he do so by the inspiration of holy cogitation that we could neither believe, hope, nor love anything unless we first thought; in that very holy cogitation he recognized the grace of Christ; and from thence he proved not only against Pelagius the necessity of that grace for the whole life of man, but also against the Semi-Pelagians that the beginning of our salvation is not from any of our good works, but that it is from God, which he showed effectively.

Augustine therefore teaches, and those who afterwards followed his doctrine, the operating grace (*gratia operans*), which they say is that God works in us without us, to be this very holy cogitation, which is before consent, and likewise the sudden motion of the will without our liberty, arising from that cogitation, by which we are deterred from evil and provoked to good; and thus the

1632. Scotus, In II Sent., d. 37, q. 1, a. 5; In IV Sent., d. 49, q. 6, a. 5.
1633. Gabriel Biel, In II Sent., d. 37, q. 1, a. 1, notab. 1.
1634. Cajetan, In Iam-IIae, q. 14, a. 13; q. 19, a. 8.

opinion of Gregory of Rimini is excluded. But cooperating grace (*gratia cooperans*), whereby God is said to work with us, they say to be in the free consent, in which merit is already found, either condign of life eternal, or impetratory of some gift. Finally, in every consent which is said to pertain to the help of grace, he judges that the grace of God cooperating is to be found; and hence, against Driedo and others, one must say that in the first free consent about the end, cooperating grace is found.[1636] [1637]

But Bernard most elegantly expressed our reasoning set forth above, in the little book On Grace and Free Will, in a few words. Speaking indeed of grace he says: "To this end she goes before, that thereafter [free] choice may cooperate there, which, having been taken up by both, may be perfected equally by both; so that, in a mixed fashion, not separately, together, not by turns, they may operate for all advancements; not partly grace and partly free choice may perform by an individual work." By which words he teaches not only that one without the other does nothing in consent, but that from the beginning consent proceeds individually from both. How far the sentence of Gregory differs from the sense and the mind of Augustine and of the other Fathers, I will show in the following chapter.

Now from what has been said it plainly follows that the reasoning which Gregory alleges for himself is of no moment: for it has been shown that the first cause does not attain something first in the effect before the second attains it; which again I will show.[1635]

The true sentence of the Fathers about operating and cooperating grace:

It was indeed admirable, the mind of Augustine, in proving the necessity of grace against Pelagius. Against the Semi-Pelagians, moreover - men otherwise notable and of singular sanctity, and not so openly deviating from the truth - much more admirably [he argued]. Against both, and to such a degree, he fashioned this by the inspiration of holy cogitation, that we could believe, hope, or love nothing unless we first thought; in that very holy cogitation he immediately recognized the grace of Christ; and from thence he proved not only against Pelagius the necessity of grace for the whole life of man, but also against the Semi-Pelagians effectively showed that the beginning of our salvation is not from any of our good works, but is from God.

Therefore Augustine teaches, and those who afterwards followed his doctrine, that operating grace is God working in us without us - namely this very holy cogitation which is before consent - and likewise the sudden motion of the will without our liberty, arising from that cogitation, by which we are deterred from evil and called to good; and thus the opinion of Gregory of Rimini is excluded. But cooperating grace, whereby God is said to work with us, they say is in the free consent, in which merit is already found - either condign of life eternal or impetratory of some gift. Lastly, in every consent which is said to pertain to the help of grace, they expressly set cooperating grace; for which reason, against Driedo and others, it must be said that, in the first free consent about the end, cooperating grace is found.

1636. Gregory of Rimini (St. Gregory Ariminensis) is intended.
1637. Johannes Driedo is intended.
1635. See Vazquez, Disputatio 99, c. 3 - 4, 8; Disputatio 100, c. 3.

This indeed is the mind of Augustine and of the rest of the Fathers, as will be evident from the testimonies set forth below. Why they so speak will be explained in chapter 9. But because from those same testimonies of Augustine, by which we shall try to prove this sentence, we will explain those things which Gregory put forward for himself from the same Augustine, therefore in chapter 7 we will recite Augustine's testimonies; now, indeed, from his disciples this sentence is demonstrated.

First, therefore, Anselm, on that text 1 Cor. 15, "But the grace of God with me," says: "Note that the superior mercy first does something in us without us, so that, our subsequent free choice, the good which we seek, may do with us." Which words are those of St. Gregory the Great, Moralia 16, chapter 10 (or 11 by another count), by which it is signified that grace cooperates in that which follows free choice; then indeed it is said to work with us. On the other hand, operating grace is said to be, because God works in us without us before free consent arrives: which can be nothing other than the pious cogitation and the motion not yet deliberated.

Second, most clearly Bernard, in that little work On Grace and Free Will not far from the end, and he himself in this part by no means a small Augustinian, plainly teaches that by our consent we are coadjutors and cooperators of the Holy Spirit and, by merit, heirs of the kingdom; he adds, "By consent, assuredly, voluntary, we are joined to the divine will," by which words he indicates that cooperating grace is then present, when there is free consent of our will, lest we should say that even the least part of that whole pertains to operating grace; for no part of it is that by which we merit. But when we merit, we are already God's coadjutors and meritorious of the kingdom, as Bernard speaks.

Further, he distinctly enough expressed both graces by these words: "Grace itself (to wit, grace) excites free choice when it sows the thought; it heals, changes the affection, strengthens it, that it may lead to act; so that it may not feel defect. Thus before [consent] it works upon free choice, so that it may go before it (namely, when it sows the thought); in the others it accompanies; and it goes before to this very end, that thereafter it may cooperate with itself." What, I ask, could be said more clearly?

For if after the first, which is the mere cogitation which God sows, nothing else remains but the effect and the consent of free choice, and in the first it goes before, that will indeed be prevenient grace, which, according to Augustine, is "God working in us without us," which, by a fitting expression, Bernard called "prevenient," as will be explained below. Then in what remains, namely our consent, there will be accompanying grace, as Bernard calls it, and cooperating; since, as he says, "to this he goes before, that thereafter he himself may, by his accompanying, cooperate with man." But even that prevenient [grace], according to the phrase of Augustine, Bernard also called operating in us. For immediately he says: "Therefore here God works in us three things, that is, to think good, to will, to accomplish. The first indeed (namely, the cogitation) without us; the second (namely, the affection and consent) with us; the third (namely, the act, or the work itself to which he leads) through us." He says, moreover, that a work is done by God through us, because we are as

instruments moved by God interiorly by affection, just as a king is said to work through a minister whom he instructs about the things to be done. Whether truly in the work itself there be another grace which is called subsequent, we shall see in its place.

Thirdly, Prosper also comes in, himself an older disciple of Augustine, who, in De vocatione gentium, book 2, chapter 26 (or, according to another division, chapter 9), after he had said that the grace of God "pre-eminent" in justification (that is, going before) persuades, admonishes, terrifies, incites, gives understanding - which are the works of operating grace - adds: "But also the will of man is adjoined to it [grace], and is conjoined, which to this end has been stirred up by those aids, that it may cooperate with the divine work, and may begin to exercise works of merit, which it hath conceived as zeal from a heavenly seed." By which words, first of all, when he says that our will is "stirred up by aids," he calls those very aids by the name of exciting grace - the very aids by which it was stirred up, namely persuasions, admonitions, terrors, and understanding, which are holy cogitation and the first motion of the will. Afterwards, however, when he says that our will is conjoined and adjoined so as to cooperate with the divine work, namely with operating grace, he denotes that then the will cooperates with grace when it consents. Therefore the whole consent he attributes to cooperating grace, but to operating grace he attributes the other things above enumerated which precede consent.
